Some people burn their loose hair to save it from falling into the hands of sorcerers. This is done by the Patagonians and some of the Victorian tribes. In the Upper Vosges they say that you should never leave the clippings of your hair and nails lying about, but burn them to hinder the sorcerers from using them against you. For the same reason Italian women either burn their loose hairs or throw them into a place where no one is likely to look for them. The almost universal dread of witchcraft induces the West African negroes, the Makololo of South Africa, and the Tahitians to burn or bury their shorn hair. For the same reason the natives of Uap, one of the Caroline Islands, either burn or throw into the sea the clippings of their hair and the parings of their nails. One of the pygmies who roam through the gloomy depths of the vast central African forests has been seen to collect carefully the clippings of his hair in a packet of banana leaves and keep them till next morning, when, the camp breaking up for the day's march, he threw them into the hot ashes of the abandoned fire. Australian aborigines of the Proserpine River, in Queensland, burn a woman's cut hair to prevent it from getting into a man's bag; for if it did, the woman would fall ill. When an English officer had cut off a lock of hair of a Fuegian woman, the men of her party were angry, and one of them, taking the lock away, threw half of it into the fire and swallowed the rest. "Immediately afterwards, placing his hands to the fire, as if to warm them, and looking upwards, he uttered a few words, apparently of invocation: then, looking at us, pointed upwards, and exclaimed, with a tone and gesture of explanation, '*Pecheray, Pecheray.*' After which they cut off some hair from several of the officers who were present, and repeated a similar ceremony." The Thompson Indians used to burn the parings of their nails, because if an enemy got possession of the parings he might bewitch the person to whom they belonged. In the Tyrol many people burn their hair lest the witches should use it to raise thunderstorms; others burn or bury it to prevent the birds from lining their nests with it, which would cause the heads from which the hair came to ache. Cut and combed-out hair is burned in Pomerania and sometimes in Belgium. In Norway the parings of nails are either burned or buried, lest the elves or the Finns should find them and make them into bullets wherewith to shoot the cattle. In Corea all the clippings and combings of the hair of a whole family are carefully preserved throughout the year and then burned in potsherds outside the house on the evening of New Year's Day. At such seasons the streets of Seoul, the capital, present a weird spectacle. They are for the most part silent and deserted, sometimes muffled deep in snow; but through the dusk of twilight red lights glimmer at every door, where little groups are busy tending tiny fires

whose flickering flames cast a ruddy fitful glow on the moving figures. The burning of the hair in these fires is thought to exclude demons from the house for a year; but coupled with this belief may well be, or once have been, a wish to put these relics out of the reach of witches and wizards.

This destruction of the hair and nails plainly involves an inconsistency of thought. The object of the destruction is avowedly to prevent these severed portions of the body from being used by sorcerers. But the possibility of their being so used depends upon the supposed sympathetic connexion between them and the man from whom they were severed. And if this sympathetic connexion still exists, clearly these severed portions cannot be destroyed without injury to the man.

Before leaving this subject, on which I have perhaps dwelt too long, it may be well to call attention to the motive assigned for cutting a young child's hair in Rotti. In that island the first hair is regarded as a danger to the child, and its removal is intended to avert the danger. The reason of this may be that as a young child is almost universally supposed to be in a tabooed or dangerous state, it is necessary, in removing the taboo, to remove also the separable parts of the child's body because they are infected, so to say, by the virus of taboo and as such are dangerous. The cutting of the child's hair would thus be exactly parallel to the destruction of the vessels which have been used by a tabooed person. This view is borne out by a practice, observed by some Australians, of burning off part of a woman's hair after childbirth as well as burning every vessel which has been used by her during her seclusion. Here the burning of the woman's hair seems plainly intended to serve the same purpose as the burning of the vessels used by her; and as the vessels are burned because they are believed to be tainted with a dangerous infection, so, we must suppose, is also the hair. Similarly among the Latuka of central Africa, a woman is secluded for fourteen days after the birth of her child, and at the end of her seclusion her hair is shaved off and burnt. Again, we have seen that girls at puberty are strongly infected with taboo; hence it is not surprising to find that the Ticunas of Brazil tear out all the hair of girls at that period. Once more, the father of twins in Uganda is tabooed for some time after the birth of the children, and during that time he may not dress his hair nor cut his finger nails. This state of taboo lasts until the next war breaks out. When the army is under orders to march, the father of twins has the whole of his body shaved and his nails cut. The shorn hair and the cut nails are then tied up in a ball, which the man takes with him to the war, together with the bark cloth he wore at the ceremonial dances after the birth of the twins. When he has killed a foe, he crams the ball into the dead man's mouth, ties the bark cloth round the neck of the corpse, and leaves them there on the battlefield. The ceremony appears to be intended to rid the man of the taint of taboo which may be supposed to adhere to his hair, nails, and the garment he wore. Hence we can understand the importance attached by many peoples to the first cutting of a child's hair and the elaborate ceremonies by which the operation is accompanied. Again, we can understand why a man should poll his head after a journey. For we have seen that a traveller is often believed to contract a dangerous infection from strangers, and that, therefore, on his return home he is obliged to submit to various purificatory ceremonies before he is allowed to mingle freely with his own people. On my hypothesis the polling of the hair is simply one of these purificatory or disinfectant ceremonies. Certainly this explanation applies to the custom as practised by the Bechuanas, for we are expressly told that "they cleanse or purify themselves after journeys by shaving their heads, etc., lest they should have contracted from strangers some evil by witchcraft or sorcery." The cutting of the hair after a vow may have the same meaning. It is a way of ridding the man of what has been infected by the dangerous state, whether we call it taboo, sanctity, or uncleanness (for all these are only different expressions for the same primitive conception), under which he laboured during the continuance of the

vow. Still more clearly does the meaning of the practice come out in the case of mourners, who cut their hair and nails and use new vessels when the period of their mourning is at an end. This was done in ancient India, obviously for the purpose of purifying such persons from the dangerous influence of death and the ghost to which for a time they had been exposed. Among the Bodos and Dhimals of Assam, when a death has occurred, the family of the deceased is reckoned unclean for three days. At the end of that time they bathe, shave, and are sprinkled with holy water, after which they hold the funeral feast. Here the act of shaving must clearly be regarded as a purificatory rite, like the bathing and sprinkling with holy water. At Hierapolis no man might enter the great temple of Astarte on the same day on which he had seen a corpse; next day he might enter, provided he had first purified himself. But the kinsmen of the deceased were not allowed to set foot in the sanctuary for thirty days after the death, and before doing so they had to shave their heads. At Agweh, on the Slave Coast of West Africa, widows and widowers at the end of their period of mourning wash themselves, shave their heads, pare their nails, and put on new cloths; and the old cloths, the shorn hair, and the nail-parings are all burnt. The Kayans of Borneo are not allowed to cut their hair or shave their temples during the period of mourning; but as soon as the mourning is ended by the ceremony of bringing home a newly severed human head, the barber's knife is kept busy enough. As each man leaves the barber's hands, he gathers up the shorn locks and spitting on them murmurs a prayer to the evil spirits not to harm him. He then blows the hair out of the verandah of the house. Among the Wajagga of East Africa mourners shear their hair under a fruit-bearing banana-tree and lay their shorn locks at the foot of the tree. When the fruit of the tree is ripe, they brew beer with it and invite all the mourners to partake of it, saying, "Come and drink the beer of those hair-bananas." The tribes of British Central Africa destroy the house in which a man has died, and on the day when this is done the mourners have their heads shaved and bury the shorn hair on the site of the house; the Atonga burn it in a new fire made by the rubbing of two sticks. When an Akikuyu woman has, in accordance with custom, exposed her misshapen or prematurely born infant in the wood for the hyaenas to devour, she is shaved on her return by an old woman and given a magic potion to drink; after which she is regarded as clean. Similarly at some Hindoo places of pilgrimage on the banks of rivers men who have committed great crimes or are troubled by uneasy consciences have every hair shaved off by professional barbers before they plunge into the sacred stream, from which "they emerge new creatures, with all the accumulated guilt of a long life effaced." The matricide Orestes is said to have polled his hair after appeasing the angry Furies of his murdered mother.

§ 9. Spittle tabooed.

The same fear of witchcraft which has led so many people to hide or destroy their loose hair and nails has induced other or the same people to treat their spittle in a like fashion. For on the principles of sympathetic magic the spittle is part of the man, and whatever is done to it will have a corresponding effect on him. A Chilote Indian, who has gathered up the spittle of an enemy, will put it in a potato, and hang the potato in the smoke, uttering certain spells as he does so in the belief that his foe will waste away as the potato dries in the smoke. Or he will put the spittle in a frog and throw the animal into an inaccessible, unnavigable river, which will make the victim quake and shake with ague. When a Cherokee sorcerer desires to destroy a man, he gathers up his victim's spittle on a stick and puts it in a joint of wild parsnip, together with seven earthworms beaten to a paste and several splinters from a tree which has been struck by lightning. He then goes into the forest, digs a hole at the foot of a tree which has been struck by lightning, and deposits in the hole the joint of wild parsnip with its contents. Further, he lays seven yellow stones in the hole, then fills in the earth, and makes a fire over the spot to destroy all traces of his work. If the ceremony has been properly carried

out, the man whose spittle has thus been treated begins to feel ill at once; his soul shrivels up and dwindles; and within seven days he is a dead man. In the East Indian island of Siaoou or Siauou, one of the Sangi group, there are witches who by means of hellish charms compounded from the roots of plants can change their shape and bring sickness and misfortune on other folk. These hags also crawl under the houses, which are raised above the ground on posts, and there gathering up the spittle of the inmates cause them to fall ill. If a Wotjobaluk sorcerer cannot get the hair of his foe, a shred of his rug, or something else that belongs to the man, he will watch till he sees him spit, when he will carefully pick up the spittle with a stick and use it for the destruction of the careless spitter. The natives of Urewera, a district in the north island of New Zealand, enjoyed a high reputation for their skill in magic. It was said that they made use of people's spittle to bewitch them. Hence visitors were careful to conceal their spittle, lest they should furnish these wizards with a handle for working them harm. Similarly among some tribes of South Africa no man will spit when an enemy is near, lest his foe should find the spittle and give it to a wizard, who would then mix it with magical ingredients so as to injure the person from whom it fell. Even in a man's own house his saliva is carefully swept away and obliterated for a similar reason. For a like reason, no doubt, the natives of the Marianne Islands use great precautions in spitting and take care never to expectorate near somebody else's house. Negroes of Senegal, the Bissagos Archipelago, and some of the West Indian Islands, such as Guadeloupe and Martinique, are also careful to efface their spittle by pressing it into the ground with their feet, lest a sorcerer should use it to their hurt. Natives of Astrolabe Bay, in German New Guinea, wipe out their spittle for the same reason; and a like dread of sorcery prevents some natives of German New Guinea from spitting on the ground in presence of others. The Telugus say that if a man, rinsing his teeth with charcoal in the mornings, spits on the road and somebody else treads on his spittle, the spitter will be laid up with a sharp attack of fever for two or three days. Hence all who wish to avoid the ailment should at once efface their spittle by sprinkling water on it.

If common folk are thus cautious, it is natural that kings and chiefs should be doubly so. In the Sandwich Islands chiefs were attended by a confidential servant bearing a portable spittoon, and the deposit was carefully buried every morning to put it out of the reach of sorcerers. On the Slave Coast of Africa, for the same reason, whenever a king or chief expectorates, the saliva is scrupulously gathered up and hidden or buried. The same precautions are taken for the same reason with the spittle of the chief of Tabali in Southern Nigeria. At Bulebane, in Senegambia, a French traveller observed a captive engaged, with an air of great importance, in covering over with sand all the spittle that fell from the lips of a native dignitary; the man used a small stick for the purpose. Page-boys, who carry tails of elephants, hasten to sweep up or cover with sand the spittle of the king of Ashantee; an attendant used to perform a similar service for the king of Congo; and a custom of the same sort prevails or used to prevail at the court of the Muata Jamwo in the interior of Angola. In Yap, one of the Caroline Islands, there are two great wizards, the head of all the magicians, whose exalted dignity compels them to lead a very strict life. They may eat fruit only from plants or trees which are grown specially for them. When one of them goes abroad the other must stay at home, for if they were to meet each other on the road, some direful calamity would surely follow. Though they may not smoke tobacco, they are allowed to chew a quid of betel; but that which they expectorate is carefully gathered up, carried away, and burned in a special manner, lest any evil-disposed person should get possession of the spittle and do their reverences a mischief by uttering a curse over it. Among the Guaycurus and Payaguas of Brazil, when a chief spat, the persons about him received his saliva on their hands, probably in order to prevent it from being misused by magicians.

The magical use to which spittle may be put marks it out, like blood or nail-parings, as a suitable material basis for a covenant, since by exchanging their saliva the covenanting parties give each other a guarantee of good faith. If either of them afterwards forswears himself, the other can punish his perfidy by a magical treatment of the perjurer's spittle which he has in his custody. Thus when the Wajagga of East Africa desire to make a covenant, the two parties will sometimes sit down with a bowl of milk or beer between them, and after uttering an incantation over the beverage they each take a mouthful of the milk or beer and spit it into the other's mouth. In urgent cases, when there is no time to stand on ceremony, the two will simply spit into each other's mouth, which seals the covenant just as well.

§ 10. Foods tabooed.

As might have been expected, the superstitions of the savage cluster thick about the subject of food; and he abstains from eating many animals and plants, wholesome enough in themselves, which for one reason or another he fancies would prove dangerous or fatal to the eater. Examples of such abstinence are too familiar and far too numerous to quote. But if the ordinary man is thus deterred by superstitious fear from partaking of various foods, the restraints of this kind which are laid upon sacred or tabooed persons, such as kings and priests, are still more numerous and stringent. We have already seen that the Flamen Dialis was forbidden to eat or even name several plants and animals, and that the flesh diet of Egyptian kings was restricted to veal and goose. In antiquity many priests and many kings of barbarous peoples abstained wholly from a flesh diet. The *Gangas* or fetish priests of the Loango Coast are forbidden to eat or even see a variety of animals and fish, in consequence of which their flesh diet is extremely limited; often they live only on herbs and roots, though they may drink fresh blood. The heir to the throne of Loango is forbidden from infancy to eat pork; from early childhood he is interdicted the use of the *cola* fruit in company; at puberty he is taught by a priest not to partake of fowls except such as he has himself killed and cooked; and so the number of taboos goes on increasing with his years. In Fernando Po the king after installation is forbidden to eat *cocco* (*arum acaule*), deer, and porcupine, which are the ordinary foods of the people. The head chief of the Masai may eat nothing but milk, honey, and the roasted livers of goats; for if he partook of any other food he would lose his power of soothsaying and of compounding charms. The diet of the king of Unyoro in Central Africa was strictly regulated by immemorial custom. He might never eat vegetables, but must live on milk and beef. Mutton he might not touch. The beef he ate must be that of young animals not more than one year old, and it must be spitted and roasted before a wood fire. But he might not drink milk and eat beef at the same meal. He drank milk thrice a day in the dairy, and the milk was always drawn from a sacred herd which was kept for his exclusive use. Nine cows, neither more nor less, were daily brought from pasture to the royal enclosure to be milked for the king. The herding and the milking of the sacred animals were performed according to certain rules prescribed by ancient custom. Amongst the Murrans of Manipur (a district of eastern India, on the border of Burma) "there are many prohibitions in regard to the food, both animal and vegetable, which the chief should eat, and the Murrans say the chief's post must be a very uncomfortable one." Among the hill tribes of Manipur the scale of diet allowed by custom to the *ghennabura* or religious head of a village is always extremely limited. The savoury dog, the tomato, the *murghi*, are forbidden to him. If a man in one of these tribes is wealthy enough to feast his whole village and to erect a memorial stone, he is entitled to become subject to the same self-denying ordinances as the *ghennabura*. He wears the same special clothes, and for the space of a year at least he may not use a drinking horn, but must drink from a bamboo cup. Among the Karennis or Red Karens of Burma a chief attains his position not by hereditary right but in virtue of the observance of taboo. He must abstain from rice and liquor. His mother too must have eschewed these things and lived only

on yams and potatoes while she was with child. During that time she might neither eat meat nor drink water from a common well; and in order to be duly qualified for a chiefship her son must continue these habits. Among the Pshaws and Chewsurs of the Caucasus, whose nominal Christianity has degenerated into superstition and polytheism, there is an annual office which entails a number of taboos on the holder or *dasturi*, as he is called. He must live the whole year in the temple, without going to his house or visiting his wife; indeed he may not speak to any one, except the priests, for fear of defiling himself. Once a week he must bathe in the river, whatever the weather may be, using for the purpose a ladder on which no one else may set foot. His only nourishment is bread and water. In the temple he superintends the brewing of the beer for the festivals. In the village of Tomil, in Yap, one of the Caroline Islands, the year consists of twenty-four months, and there are five men who for a hundred days of the year may eat only fish and taro, may not chew betel, and must observe strict continence. The reason assigned by them for submitting to these restraints is that if they did not act thus the immature girls would attain to puberty too soon.

To explain the ultimate reason why any particular food is prohibited to a whole tribe or to certain of its members would commonly require a far more intimate knowledge of the history and beliefs of the tribe than we possess. The general motive of such prohibitions is doubtless the same which underlies the whole taboo system, namely, the conservation of the tribe and the individual.

§ 11. Knots and Rings tabooed.

We have seen that among the many taboos which the Flamen Dialis at Rome had to observe, there was one that forbade him to have a knot on any part of his garments, and another that obliged him to wear no ring unless it were broken. In like manner Moslem pilgrims to Mecca are in a state of sanctity or taboo and may wear on their persons neither knots nor rings. These rules are probably of kindred significance, and may conveniently be considered together. To begin with knots, many people in different parts of the world entertain a strong objection to having any knot about their person at certain critical seasons, particularly childbirth, marriage, and death. Thus among the Saxons of Transylvania, when a woman is in travail all knots on her garments are untied, because it is believed that this will facilitate her delivery, and with the same intention all the locks in the house, whether on doors or boxes, are unlocked. The Lapps think that a lying-in woman should have no knot on her garments, because a knot would have the effect of making the delivery difficult and painful. In ancient India it was a rule to untie all knots in a house at the moment of childbirth. Roman religion required that women who took part in the rites of Juno Lucina, the goddess of childbirth, should have no knot tied on their persons. In the East Indies this superstition is extended to the whole time of pregnancy; the people believe that if a pregnant woman were to tie knots, or braid, or make anything fast, the child would thereby be constricted or the woman would herself be "tied up" when her time came. Nay, some of them enforce the observance of the rule on the father as well as the mother of the unborn child. Among the Sea Dyaks neither of the parents may bind up anything with string or make anything fast during the wife's pregnancy. Among the Land Dyaks the husband of the expectant mother is bound to refrain from tying things together with rattans until after her delivery. In the Toumbuluh tribe of North Celebes a ceremony is performed in the fourth or fifth month of a woman's pregnancy, and after it her husband is forbidden, among many other things, to tie any fast knots and to sit with his legs crossed over each other. In the Kaitish tribe of central Australia the father of a newborn child goes out into the scrub for three days, away from his camp, leaving his girdle and arm-bands behind him, so that he has nothing tied tightly round any part of his body. This freedom from constriction is supposed to benefit his wife.

In all these cases the idea seems to be that the tying of a knot would, as they say in the East Indies, "tie up" the woman, in other words, impede and perhaps prevent her delivery, or delay her convalescence after the birth. On the principles of homoeopathic or imitative magic the physical obstacle or impediment of a knot on a cord would create a corresponding obstacle or impediment in the body of the woman. That this is really the explanation of the rule appears from a custom observed by the Hos of Togoland in West Africa at a difficult birth. When a woman is in hard labour and cannot bring forth, they call in a magician to her aid. He looks at her and says, "The child is bound in the womb, that is why she cannot be delivered." On the entreaties of her female relations he then promises to loose the bond so that she may bring forth. For that purpose he orders them to fetch a tough creeper from the forest, and with it he binds the hands and feet of the sufferer on her back. Then he takes a knife and calls out the woman's name, and when she answers he cuts through the creeper with a knife, saying, "I cut through to-day thy bonds and thy child's bonds." After that he chops up the creeper small, puts the bits in a vessel of water, and bathes the woman with the water. Here the cutting of the creeper with which the woman's hands and feet are bound is a simple piece of homoeopathic or imitative magic: by releasing her limbs from their bonds the magician imagines that he simultaneously releases the child in her womb from the trammels which impede its birth. For a similar reason, no doubt, among the same people a priest ties up the limbs of a pregnant woman with grass and then unties the knots, saying, "I will now open you." After that the woman has to partake of some maize-porridge in which a ring made of a magic cord had been previously placed by the priest. The intention of this ceremony is probably, on the principles of homoeopathic magic, to ensure for the woman an easy delivery by releasing her from the bonds of grass. The same train of thought underlies a practice observed by some peoples of opening all locks, doors, and so on, while a birth is taking place in the house. We have seen that at such a time the Germans of Transylvania open all the locks, and the same thing is done also in Voigtland and Mecklenburg. In north-western Argyllshire superstitious people used to open every lock in the house at childbirth. The old Roman custom of presenting women with a key as a symbol of an easy delivery perhaps points to the observance of a similar custom. In the island of Salsette near Bombay, when a woman is in hard labour, all locks of doors or drawers are opened with a key to facilitate her delivery. Among the Mandelings of Sumatra the lids of all chests, boxes, pans and so forth are opened; and if this does not produce the desired effect, the anxious husband has to strike the projecting ends of some of the house-beams in order to loosen them; for they think that "everything must be open and loose to facilitate the delivery." At a difficult birth the Battas of Sumatra make a search through the possessions of husband and wife and untie everything that is tied up in a bundle. In some parts of Java, when a woman is in travail, everything in the house that was shut is opened, in order that the birth may not be impeded; not only are doors opened and the lids of chests, boxes, rice-pots, and water-butts lifted up, but even swords are unsheathed and spears drawn out of their cases. Customs of the same sort are practised with the same intention in other parts of the East Indies. In Chittagong, when a woman cannot bring her child to the birth, the midwife gives orders to throw all doors and windows wide open, to uncork all bottles, to remove the bungs from all casks, to unloose the cows in the stall, the horses in the stable, the watchdog in his kennel, to set free sheep, fowls, ducks, and so forth. This universal liberty accorded to the animals and even to inanimate things is, according to the people, an infallible means of ensuring the woman's delivery and allowing the babe to be born. At the moment of childbirth the Chams of Cochin-China hasten to open the stall of the buffaloes and to unyoke the plough, doubtless with the intention of aiding the woman in travail, though the writer who reports the custom is unable to explain it. Among the Singhalese, a few hours before a birth is expected to take place, all the cupboards in the house are unlocked with the express purpose of facilitating the delivery. In

the island of Saghalien, when a woman is in labour, her husband undoes everything that can be undone. He loosens the plaits of his hair and the laces of his shoes. Then he unties whatever is tied in the house or its vicinity. In the courtyard he takes the axe out of the log in which it is stuck; he unfastens the boat, if it is moored to a tree, he withdraws the cartridges from his gun, and the arrows from his crossbow. In Bilaspore a woman's hair is never allowed to remain knotted while she is in the act of giving birth to a child. Among some modern Jews of Roumania it is customary for the unmarried girls of a household to unbraid their hair and let it hang loose on their shoulders while a woman is in hard labour in the house.

Again, we have seen that a Toumbuluh man abstains not only from tying knots, but also from sitting with crossed legs during his wife's pregnancy. The train of thought is the same in both cases. Whether you cross threads in tying a knot, or only cross your legs in sitting at your ease, you are equally, on the principles of homoeopathic magic, crossing or thwarting the free course of things, and your action cannot but check and impede whatever may be going forward in your neighbourhood. Of this important truth the Romans were fully aware. To sit beside a pregnant woman or a patient under medical treatment with clasped hands, says the grave Pliny, is to cast a malignant spell over the person, and it is worse still if you nurse your leg or legs with your clasped hands, or lay one leg over the other. Such postures were regarded by the old Romans as a let and hindrance to business of every sort, and at a council of war or a meeting of magistrates, at prayers and sacrifices, no man was suffered to cross his legs or clasp his hands. The stock instance of the dreadful consequences that might flow from doing one or the other was that of Alcmena, who travailed with Hercules for seven days and seven nights, because the goddess Lucina sat in front of the house with clasped hands and crossed legs, and the child could not be born until the goddess had been beguiled into changing her attitude. It is a Bulgarian superstition that if a pregnant woman is in the habit of sitting with crossed legs, she will suffer much in childbed. In some parts of Bavaria, when conversation comes to a standstill and silence ensues, they say, "Surely somebody has crossed his legs."

The magical effect of knots in trammelling and obstructing human activity was believed to be manifested at marriage not less than at birth. During the Middle Ages, and down to the eighteenth century, it seems to have been commonly held in Europe that the consummation of marriage could be prevented by any one who, while the wedding ceremony was taking place, either locked a lock or tied a knot in a cord, and then threw the lock or the cord away. The lock or the knotted cord had to be flung into water; and until it had been found and unlocked, or untied, no real union of the married pair was possible. Hence it was a grave offence, not only to cast such a spell, but also to steal or make away with the material instrument of it, whether lock or knotted cord. In the year 1718 the parliament of Bordeaux sentenced some one to be burned alive for having spread desolation through a whole family by means of knotted cords; and in 1705 two persons were condemned to death in Scotland for stealing certain charmed knots which a woman had made, in order thereby to mar the wedded happiness of Spalding of Ashintilly. The belief in the efficacy of these charms appears to have lingered in the Highlands of Perthshire down to the end of the eighteenth century, for at that time it was still customary in the beautiful parish of Logierait, between the river Tummel and the river Tay, to unloose carefully every knot in the clothes of the bride and bridegroom before the celebration of the marriage ceremony. When the ceremony was over, and the bridal party had left the church, the bridegroom immediately retired one way with some young men to tie the knots that had been loosed a little before; and the bride in like manner withdrew somewhere else to adjust the disorder of her dress. In some parts of the Highlands it was deemed enough that the bridegroom's left shoe should be without buckle or latchet, "to

prevent witches from depriving him, on the nuptial night, of the power of loosening the virgin zone." We meet with the same superstition and the same custom at the present day in Syria. The persons who help a Syrian bridegroom to don his wedding garments take care that no knot is tied on them and no button buttoned, for they believe that a button buttoned or a knot tied would put it within the power of his enemies to deprive him of his nuptial rights by magical means. In Lesbos the malignant person who would thus injure a bridegroom on his wedding day ties a thread to a bush, while he utters imprecations; but the bridegroom can defeat the spell by wearing at his girdle a piece of an old net or of an old mantilla belonging to the bride in which knots have been tied. The fear of such charms is diffused all over North Africa at the present day. To render a bridegroom impotent the enchanter has only to tie a knot in a handkerchief which he had previously placed quietly on some part of the bridegroom's body when he was mounted on horseback ready to fetch his bride: so long as the knot in the handkerchief remains tied, so long will the bridegroom remain powerless to consummate the marriage. Another way of effecting the same object is to stand behind the bridegroom when he is on horseback, with an open clasp-knife or pair of scissors in your hand and to call out his name; if he imprudently answers, you at once shut the clasp-knife or the pair of scissors with a snap, and that makes him impotent. To guard against this malignant spell the bridegroom's mother will sometimes buy a penknife on the eve of the marriage, shut it up, and then open it just at the moment when her son is about to enter the bridal chamber.

A curious use is made of knots at marriage in the little East Indian island of Rotti. When a man has paid the price of his bride, a cord is fastened round her waist, if she is a maid, but not otherwise. Nine knots are tied in the cord, and in order to make them harder to unloose, they are smeared with wax. Bride and bridegroom are then secluded in a chamber, where he has to untie the knots with the thumb and forefinger of his left hand only. It may be from one to twelve months before he succeeds in undoing them all. Until he has done so he may not look on the woman as his wife. In no case may the cord be broken, or the bridegroom would render himself liable to any fine that the bride's father might choose to impose. When all the knots are loosed, the woman is his wife, and he shews the cord to her father, and generally presents his wife with a golden or silver necklace instead of the cord. The meaning of this custom is not clear, but we may conjecture that the nine knots refer to the nine months of pregnancy, and that miscarriage would be the supposed result of leaving a single knot untied.

The maleficent power of knots may also be manifested in the infliction of sickness, disease, and all kinds of misfortune. Thus among the Hos of Togoland a sorcerer will sometimes curse his enemy and tie a knot in a stalk of grass, saying, "I have tied up So-and-So in this knot. May all evil light upon him! When he goes into the field, may a snake sting him! When he goes to the chase, may a ravening beast attack him! And when he steps into a river, may the water sweep him away! When it rains, may the lightning strike him! May evil nights be his!" It is believed that in the knot the sorcerer has bound up the life of his enemy. Babylonian witches and wizards of old used to strangle their victim, seal his mouth, wrack his limbs, and tear his entrails by merely tying knots in a cord, while at each knot they muttered a spell. But happily the evil could be undone by simply undoing the knots. We hear of a man in one of the Orkney Islands who was utterly ruined by nine knots cast on a blue thread; and it would seem that sick people in Scotland sometimes prayed to the devil to restore them to health by loosing the secret knot that was doing all the mischief. In the Koran there is an allusion to the mischief of "those who puff into the knots," and an Arab commentator on the passage explains that the words refer to women who practise magic by tying knots in cords, and then blowing and spitting upon them. He goes on to relate how, once upon a time, a wicked Jew bewitched the prophet Mohammed himself by tying nine knots on a string, which he then hid in a well. So the prophet fell ill, and nobody knows what

might have happened if the archangel Gabriel had not opportunely revealed to the holy man the place where the knotted cord was concealed. The trusty Ali soon fetched the baleful thing from the well; and the prophet recited over it certain charms, which were specially revealed to him for the purpose. At every verse of the charms a knot untied itself, and the prophet experienced a certain relief. It will hardly be disputed that by tying knots on the string the pestilent Hebrew contrived, if I may say so, to constrict or astringe or, in short, to tie up some vital organ or organs in the prophet's stomach. At least we are informed that something of this sort is done by Australian blackfellows at the present day, and if so, why should it not have been done by Arabs in the time of Mohammed? The Australian mode of operation is as follows. When a blackfellow wishes to settle old scores with another blackfellow, he ties a rope of fibre or bark so tightly round the neck of his slumbering friend as partially to choke him. Having done this he takes out the man's caul-fat from under his short rib, ties up his inside carefully with string, replaces the skin, and having effaced all external marks of the wound, makes off with the stolen fat. The victim on awakening feels no inconvenience, but sooner or later, sometimes months afterwards, while he is hunting or exerting himself violently in some other way, he will feel the string snap in his inside. "Hallo," says he, "somebody has tied me up inside with string!" and he goes home to the camp and dies on the spot. Who can doubt but that in this lucid diagnosis we have the true key to the prophet's malady, and that he too might have succumbed to the wiles of his insidious foe if it had not been for the timely intervention of the archangel Gabriel?

If knots are supposed to kill, they are also supposed to cure. This follows from the belief that to undo the knots which are causing sickness will bring the sufferer relief. But apart from this negative virtue of maleficent knots, there are certain beneficent knots to which a positive power of healing is ascribed. Pliny tells us that some folk cured diseases of the groin by taking a thread from a web, tying seven or nine knots on it, and then fastening it to the patient's groin; but to make the cure effectual it was necessary to name some widow as each knot was tied. The ancient Assyrians seem to have made much use of knotted cords as a remedy for ailments and disease. The cord with its knots, which were sometimes twice seven in number, was tied round the head, neck, or limbs of the patient, and then after a time cut off and thrown away, carrying with it, as was apparently supposed, the aches and pains of the sufferer. Sometimes the magic cord which was used for this beneficent purpose consisted of a double strand of black and white wool; sometimes it was woven of the hair of a virgin kid. A modern Arab cure for fever reported from the ruins of Nineveh is to tie a cotton thread with seven knots on it round the wrist of the patient, who must wear it for seven or eight days or till such time as the fever passes, after which he may throw it away. O'Donovan describes a similar remedy for fever employed among the Turcomans. The enchanter takes some camel hair and spins it into a stout thread, droning a spell the while. Next he ties seven knots on the thread, blowing on each knot before he pulls it tight. This knotted thread is then worn as a bracelet on his wrist by the patient. Every day one of the knots is untied and blown upon, and when the seventh knot is undone the whole thread is rolled up into a ball and thrown into a river, bearing away (as they imagine) the fever with it. The Hos of Togoland in like manner tie strings round a sick man's neck, arms, or legs, according to the nature of the malady; some of the strings are intended to guard him against the influence of "the evil mouth"; others are a protection against the ghosts of the dead. In Argyleshire, threads with three knots on them are still used to cure the internal ailments of man and beast. The witch rubs the sick person or cow with the knotted thread, burns two of the knots in the fire, saying, "I put the disease and the sickness on the top of the fire," and ties the rest of the thread with the single knot round the neck of the person or the tail of the cow, but always so that it may not be seen. A Scotch cure for a sprained leg or arm is to cast nine knots in a black thread and then tie the thread round the suffering limb, while you say:

*“The Lord rade,
And the foal slade;
He lighted
And he righted,
Set joint to joint,
Bone to bone,
And sinew to sinew.
Heal, in the Holy Ghost's name!”*

In Gujarat, if a man takes seven cotton threads, goes to a place where an owl is hooting, strips naked, ties a knot at each hoot, and fastens the knotted thread round the right arm of a man sick of the fever, the malady will leave him.

Again, knots may be used by an enchantress to win a lover and attach him firmly to herself. Thus the love-sick maid in Virgil seeks to draw Daphnis to her from the city by spells and by tying three knots on each of three strings of different colours. So an Arab maiden, who had lost her heart to a certain man, tried to gain his love and bind him to herself by tying knots in his whip; but her jealous rival undid the knots. On the same principle magic knots may be employed to stop a runaway. In Swazieland you may often see grass tied in knots at the side of the footpaths. Every one of these knots tells of a domestic tragedy. A wife has run away from her husband, and he and his friends have gone in pursuit, binding up the paths, as they call it, in this fashion to prevent the fugitive from doubling back over them. When a Swaheli wishes to capture a runaway slave he will sometimes take a string of coco-nut fibre to a wise man and get him to recite a passage of the Koran seven times over it, while at each reading the wizard ties a knot in the string. Then the slave-owner, armed with the knotted string, takes his stand in the door of the house and calls on his slave seven times by name, after which he hangs the string over the door.

The obstructive power of knots and locks as means of barring out evil manifests itself in many ways. Thus on the principle that prevention is better than cure, Zulu hunters immediately tie a knot in the tail of any animal they have killed, because they believe that this will hinder the meat from giving them pains in their stomachs. An ancient Hindoo book recommends that travellers on a dangerous road should tie knots in the skirts of their garments, for this will cause their journey to prosper. Similarly among some Caffre tribes, when a man is going on a doubtful journey, he knots a few blades of grass together that the journey may turn out well. In Laos hunters fancy that they can throw a spell over a forest so as to prevent any one else from hunting there successfully. Having killed game of any kind, they utter certain magical words, while they knot together some stalks of grass, adding, “As I knot this grass, so let no hunter be lucky here.” The virtue of this spell will last, as usually happens in such cases, so long as the stalks remain knotted together. The Yabims of German New Guinea lay a knot in a fishing-boat that is not ready for sea, in order that a certain being called Balum may not embark in it; for he has the power of taking away the fish and weighing down the boat.

In Russia amulets often derive their protective virtue in great measure from knots. Here, for example, is a spell which will warrant its employer against all risk of being shot: “I attach five knots to each hostile, infidel shooter, over arquebuses, bows, and all manner of warlike weapons. Do ye, O knots, bar the shooter from every road and way, lock fast every arquebuse, entangle every bow, involve all warlike weapons, so that the shooters may not reach me with their arquebuses, nor may their arrows attain to me, nor their warlike weapons do me hurt. In my knots lies hid the mighty strength of snakes—from the twelve-headed

snake." A net, from its affluence of knots, has always been considered in Russia very efficacious against sorcerers; hence in some places, when a bride is being dressed in her wedding attire, a fishing-net is flung over her to keep her out of harm's way. For a similar purpose the bridegroom and his companions are often girt with pieces of net, or at least with tight-drawn girdles, for before a wizard can begin to injure them he must undo all the knots in the net, or take off the girdles. But often a Russian amulet is merely a knotted thread. A skein of red wool wound about the arms and legs is thought to ward off agues and fevers; and nine skeins, fastened round a child's neck, are deemed a preservative against scarlatina. In the Tver Government a bag of a special kind is tied to the neck of the cow which walks before the rest of a herd, in order to keep off wolves; its force binds the maw of the ravening beast. On the same principle, a padlock is carried thrice round a herd of horses before they go afield in the spring, and the bearer locks and unlocks it as he goes, saying, "I lock from my herd the mouths of the grey wolves with this steel lock." After the third round the padlock is finally locked, and then, when the horses have gone off, it is hidden away somewhere till late in the autumn, when the time comes for the drove to return to winter quarters. In this case the "firm word" of the spell is supposed to lock up the mouths of the wolves. The Bulgarians have a similar mode of guarding their cattle against wild beasts. A woman takes a needle and thread after dark, and sews together the skirt of her dress. A child asks her what she is doing, and she tells him that she is sewing up the ears, eyes, and jaws of the wolves so that they may not hear, see, or bite the sheep, goats, calves, and pigs. Similarly in antiquity a witch fancied that she could shut the mouths of her enemies by sewing up the mouth of a fish with a bronze needle, and farmers attempted to ward off hail from their crops by tying keys to ropes all round the fields. The Armenians essay to lock the jaws of wolves by uttering a spell, tying seven knots in a shoe-lace, and placing the string between the teeth of a wool-comber, which are probably taken to represent the fangs of a wolf. And an Armenian bride and bridegroom will carry a locked lock on their persons at and after marriage to guard them against those evil influences to which at this crisis of life they are especially exposed. The following mode of keeping an epidemic from a village is known to have been practised among the Balkan Slavs. Two old women proceed to a spot outside the village, the one with a copper kettle full of water, the other with a house-lock and key. The old dame with the kettle asks the other, "Whither away?" The one with the lock answers, "I came to lock the village against mishap," and suiting the action to the words she locks the lock and throws it, together with the key, into the kettle of water. Then she strides thrice round the village, each time repeating the performance with the lock and kettle. To this day a Transylvanian sower thinks he can keep birds from the corn by carrying a lock in the seed-bag. Such magical uses of locks and keys are clearly parallel to the magical use of knots, with which we are here concerned. In Ceylon the Singhalese observe "a curious custom of the threshing-floor called 'Goigote'—the tying of the cultivator's knot. When a sheaf of corn has been threshed out, before it is removed the grain is heaped up and the threshers, generally six in number, sit round it, and taking a few stalks, with the ears of corn attached, jointly tie a knot and bury it in the heap. It is left there until all the sheaves have been threshed, and the corn winnowed and measured. The object of this ceremony is to prevent the devils from diminishing the quantity of corn in the heap." Knots and locks may serve to avert not only devils but death itself. When they brought a woman to the stake at St. Andrews in 1572 to burn her alive for a witch, they found on her a white cloth like a collar, with strings and many knots on the strings. They took it from her, sorely against her will, for she seemed to think that she could not die in the fire, if only the cloth with the knotted strings was on her. When it was taken away, she said, "Now I have no hope of myself." In many parts of England it is thought that a person cannot die so long as any locks are locked or bolts shot in the house. It is therefore a very common practice to undo all locks and bolts when the sufferer is plainly near his end, in order that his agony

may not be unduly prolonged. For example, in the year 1863, at Taunton, a child lay sick of scarlatina and death seemed inevitable. "A jury of matrons was, as it were, empanelled, and to prevent the child 'dying hard' all the doors in the house, all the drawers, all the boxes, all the cupboards were thrown wide open, the keys taken out, and the body of the child placed under a beam, whereby a sure, certain, and easy passage into eternity could be secured." Strange to say, the child declined to avail itself of the facilities for dying so obligingly placed at its disposal by the sagacity and experience of the British matrons of Taunton; it preferred to live rather than give up the ghost just then. A Masai man whose sons have gone out to war will take a hair and tie a knot in it for each of his absent sons, praying God to keep their bodies and souls as firmly fastened together as these knots.

The precise mode in which the virtue of the knot is supposed to take effect in some of these instances does not clearly appear. But in general we may say that in all the cases we have been considering the leading characteristic of the magic knot or lock is that, in strict accordance with its physical nature, it always acts as an impediment, hindrance, or obstacle, and that its influence is maleficent or beneficent according as the thing which it impedes or hinders is good or evil. The obstructive tendency attributed to the knot in spiritual matters appears in a Swiss superstition that if, in sewing a corpse into its shroud, you make a knot on the thread, it will hinder the soul of the deceased on its passage to eternity. In confining a corpse the Highlanders of Scotland used to untie or cut every string in the shroud; else the spirit could not rest. The Germans of Transylvania place a little pillow with the dead in the coffin; but in sewing it they take great care not to make any knot on the thread, for they say that to do so would hinder the dead man from resting in the grave and his widow from marrying again. Among the Pidhircanes, a Ruthenian people on the hem of the Carpathians, when a widow wishes to marry again soon, she unties the knots on her dead husband's grave-clothes before the coffin is shut down on him. This removes all impediments to her future marriage. A Nandi who is starting on a journey will tie a knot in grass by the wayside, as he believes that by so doing he will prevent the people whom he is going to visit from taking their meal till he arrives, or at all events he will ensure that they leave enough food over for him.

The rule which prescribes that at certain magical and religious ceremonies the hair should hang loose and the feet should be bare is probably based on the same fear of trammelling and impeding the action in hand, whatever it may be, by the presence of any knot or constriction, whether on the head or on the feet of the performer. This connexion of ideas comes out clearly in a passage of Ovid, who bids a pregnant woman loosen her hair before she prays to the goddess of childbirth, in order that the goddess may gently loose her teeming womb. It is less easy to say why on certain solemn occasions it appears to have been customary with some people to go with one shoe off and one shoe on. The forlorn hope of two hundred men who, on a dark and stormy night, stole out of Plataea, broke through the lines of the besieging Spartans, and escaped from the doomed city, were shod on the left foot only. The historian who records the fact assumes that the intention was to prevent their feet from slipping in the mud. But if so, why were not both feet unshod or shod? What is good for the one foot is surely good for the other. The peculiar attire of the Plataeans on this occasion had probably nothing to do with the particular state of the ground and the weather at the time when they made their desperate sally, but was an old custom, a form of consecration or devotion, observed by men in any great hazard or grave emergency. Certainly the costume appears to have been regularly worn by some fighting races in antiquity, at least when they went forth to battle. Thus we are told that all the Aetolians were shod only on one foot, "because they were so warlike," and Virgil represents some of the rustic militia of ancient Latium as marching to war, their right feet shod in boots of raw hide, while their left feet were bare. An oracle

warned Pelias, king of Iolcus, to beware of the man with one sandal, and when Jason arrived with a sandal on his right foot but with his left foot bare, the king recognised the hand of fate. The common story that Jason had lost one of his sandals in fording a river was probably invented when the real motive of the costume was forgotten. Again, according to one legend Perseus seems to have worn only one shoe when he went on his perilous enterprise to cut off the Gorgon's head. In certain forms of purification Greek ritual appears to have required that the person to be cleansed should wear a rough shoe on one foot, while the other was unshod. The rule is not mentioned by ancient writers, but may be inferred from a scene painted on a Greek vase, where a man, naked except for a fillet round his head, is seen crouching on the skin of a sacrificial victim, his bare right foot resting on the skin, while his left foot, shod in a rough boot, is planted on the ground in front of him. Round about women with torches and vessels are engaged in performing ceremonies of purification over him. When Dido in Virgil, deserted by Aeneas, has resolved to die, she feigns to perform certain magical rites which will either win back her false lover or bring relief to her wounded heart. In appealing to the gods and the stars, she stands by the altar with her dress loosened and with one foot bare. Among the heathen Arabs the cursing of an enemy was a public act. The maledictions were often couched in the form of a satirical poem, which the poet himself recited with certain solemn formalities. Thus when the young Lebid appeared at the Court of Norman to denounce the Absites, he anointed the hair of his head on one side only, let his garment hang down loosely, and wore but one shoe. This, we are told, was the costume regularly adopted by certain poets on such occasions.

Thus various peoples seem to be of opinion that it stands a man in good stead to go with one foot shod and one foot bare on certain momentous occasions. But why? The explanation must apparently be sought in the magical virtue attributed to knots; for down to recent times, we may take it, shoes have been universally tied to the feet by lachets. Now the magical action of a knot, as we have seen, is supposed to be to bind and restrain not merely the body but the soul, and this action is beneficial or harmful according as the thing which is bound and restrained is evil or good. It is a necessary corollary of this doctrine that to be without knots is to be free and untrammelled, which, by the way, may be the reason why the augur's staff at Rome had to be made from a piece of wood in which there was no knot; it would never do for a divining rod to be spell-bound. Hence we may suppose that the intention of going with one shoe on and one shoe off is both to restrain and to set at liberty, to bind and to unbind. But to bind or unbind whom or what? Perhaps the notion is to rid the man himself of magical restraint, but to lay it on his foe, or at all events on his foe's magic; in short, to bind his enemy by a spell while he himself goes free. This is substantially the explanation which the acute and learned Servius gives of Dido's costume. He says that she went with one shoe on and one shoe off in order that Aeneas might be entangled and herself released. An analogous explanation would obviously apply to all the other cases we have considered, for in all of them the man who wears this peculiar costume is confronted with hostile powers, whether human or supernatural, which it must be his object to lay under a ban.

A similar power to bind and hamper spiritual as well as bodily activities is ascribed by some people to rings. Thus in the Greek island of Carpathus, people never button the clothes they put upon a dead body and they are careful to remove all rings from it; "for the spirit, they say, can even be detained in the little finger, and cannot rest." Here it is plain that even if the soul is not definitely supposed to issue at death from the finger-tips, yet the ring is conceived to exercise a certain constrictive influence which detains and imprisons the immortal spirit in spite of its efforts to escape from the tabernacle of clay; in short the ring, like the knot, acts as a spiritual fetter. This may have been the reason of an ancient Greek maxim, attributed to Pythagoras, which forbade people to wear rings. Nobody might enter the ancient Arcadian

sanctuary of the Mistress at Lycosura with a ring on his or her finger. Persons who consulted the oracle of Faunus had to be chaste, to eat no flesh, and to wear no rings.

On the other hand, the same constriction which hinders the egress of the soul may prevent the entrance of evil spirits; hence we find rings used as amulets against demons, witches, and ghosts. In the Tyrol it is said that a woman in childbed should never take off her wedding-ring, or spirits and witches will have power over her. Among the Lapps, the person who is about to place a corpse in the coffin receives from the husband, wife, or children of the deceased a brass ring, which he must wear fastened to his right arm until the corpse is safely deposited in the grave. The ring is believed to serve the person as an amulet against any harm which the ghost might do to him. The Huzuls of the Carpathians sometimes milk a cow through a wedding-ring to prevent witches from stealing its milk. In India iron rings are often worn as an amulet against disease or to counteract the malignant influence of the planet Saturn. A coral ring is used in Gujarat to ward off the baleful influence of the sun, and in Bengal mourners touch it as a form of purification. A Masai mother who has lost one or more children at an early age will put a copper ring on the second toe of her next infant's right foot to guard it against sickness. Masai men also wear on the middle finger of the right hand a ring made out of the hide of a sacrificial victim; it is supposed to protect the wearer from witchcraft and disease of every kind. We have seen that magic cords are fastened round the wrists of Siamese children to keep off evil spirits; that some people tie strings round the wrists of women in childbed, of convalescents after sickness, and of mourners after a funeral in order to prevent the escape of their souls at these critical seasons; and that with the same intention the Bagobos put brass rings on the wrists or ankles of the sick. This use of wrist-bands, bracelets, and anklets as amulets to keep the soul in the body is exactly parallel to the use of finger-rings which we are here considering. The placing of these spiritual fetters on the wrists is especially appropriate, because some people fancy that a soul resides wherever a pulse is felt beating. How far the custom of wearing finger-rings, bracelets, and anklets may have been influenced by, or even have sprung from, a belief in their efficacy as amulets to keep the soul in the body, or demons out of it, is a question which seems worth considering. Here we are only concerned with the belief in so far as it seems to throw light on the rule that the Flamen Dialis might not wear a ring unless it were broken. Taken in conjunction with the rule which forbade him to have a knot on his garments, it points to a fear that the powerful spirit embodied in him might be trammelled and hampered in its goings-out and comings-in by such corporeal and spiritual fetters as rings and knots. The same fear probably dictated the rule that if a man in bonds were taken into the house of the Flamen Dialis, the captive was to be unbound and the cords to be drawn up through a hole in the roof and so let down into the street. Further, we may conjecture that the custom of releasing prisoners at a festival may have originated in the same train of thought; it might be imagined that their fetters would impede the flow of the divine grace. The custom was observed at the Greek festival of the Thesmophoria, and at the Athenian festival of Dionysus in the city. At the great festival of the Dassera, celebrated in October by the Goorkhas of Nepaul, all the law courts are closed, and all prisoners in gaol are removed from the precincts of the city; but those who are imprisoned outside the city do not have to change their place of confinement at the time of the Dassera. This Nepaulese custom appears strongly to support the explanation here suggested of such gaol-deliveries. For observe that the prisoners are not released, but merely removed from the city. The intention is therefore not to allow them to share the general happiness, but merely to rid the city of their inopportune presence at the festival.

Before quitting the subject of knots I may be allowed to hazard a conjecture as to the meaning of the famous Gordian knot, which Alexander the Great, failing in his efforts to untie it, cut through with his sword. In Gordium, the ancient capital of the kings of Phrygia,

there was preserved a waggon of which the yoke was fastened to the pole by a strip of cornel-bark or a vine-shoot twisted and tied in an intricate knot. Tradition ran that the waggon had been dedicated by Midas, the first king of the dynasty, and that whoever untied the knot would be ruler of Asia. Perhaps the knot was a talisman with which the fate of the dynasty was believed to be bound up in such a way that whenever the knot was loosed the reign of the dynasty would come to an end. We have seen that the magic virtue ascribed to knots is naturally enough supposed to last only so long as they remain untied. If the Gordian knot was the talisman of the Phrygian kings, the local fame it enjoyed, as guaranteeing to them the rule of Phrygia, might easily be exaggerated by distant rumour into a report that the sceptre of Asia itself would fall to him who should undo the wondrous knot.

VI. Tabooed Words

§ 1. Personal Names tabooed.

Unable to discriminate clearly between words and things, the savage commonly fancies that the link between a name and the person or thing denominated by it is not a mere arbitrary and ideal association, but a real and substantial bond which unites the two in such a way that magic may be wrought on a man just as easily through his name as through his hair, his nails, or any other material part of his person. In fact, primitive man regards his name as a vital portion of himself and takes care of it accordingly. Thus, for example, the North American Indian “regards his name, not as a mere label, but as a distinct part of his personality, just as much as are his eyes or his teeth, and believes that injury will result as surely from the malicious handling of his name as from a wound inflicted on any part of his physical organism. This belief was found among the various tribes from the Atlantic to the Pacific, and has occasioned a number of curious regulations in regard to the concealment and change of names. It may be on this account that both Powhatan and Pocahontas are known in history under assumed appellations, their true names having been concealed from the whites until the pseudonyms were too firmly established to be supplanted. Should his prayers have no apparent effect when treating a patient for some serious illness, the shaman sometimes concludes that the name is affected, and accordingly goes to water, with appropriate ceremonies, and christens the patient with a new name, by which he is henceforth to be known. He then begins afresh, repeating the formulas with the new name selected for the patient, in the confident hope that his efforts will be crowned with success.” Some Esquimaux take new names when they are old, hoping thereby to get a new lease of life. The Tolampoos of central Celebes believe that if you write a man's name down you can carry off his soul along with it. On that account the headman of a village appeared uneasy when Mr. A. C. Kruijt wrote down his name. He entreated the missionary to erase it, and was only reassured on being told that it was not his real name but merely his second name that had been put on paper. Again, when the same missionary took down the names of villages from the lips of a woman, she asked him anxiously if he would not thereby take away the soul of the villages and so cause the inhabitants to fall sick. If we may judge from the evidence of language, this crude conception of the relation of names to persons was widely prevalent, if not universal, among the forefathers of the Aryan race. For an analysis of the words for “name” in the various languages of that great family of speech points to the conclusion that “the Celts, and certain other widely separated Aryans, unless we should rather say the whole Aryan family, believed at one time not only that the name was a part of the man, but that it was that part of him which is termed the soul, the breath of life, or whatever you may choose to define it as being.” However this may have been among the primitive Aryans, it is quite certain that many savages at the present day regard their names as vital parts of themselves, and therefore take great pains to conceal their real names, lest these should give to evil-disposed persons a handle by which to injure their owners.

Thus, to begin with the savages who rank at the bottom of the social scale, we are told that the secrecy with which among the Australian aborigines personal names are often kept from general knowledge “arises in great measure from the belief that an enemy, who knows your name, has in it something which he can use magically to your detriment.” “An Australian black,” says another writer, “is always very unwilling to tell his real name, and there is no doubt that this reluctance is due to the fear that through his name he may be injured by sorcerers.” On Herbert River in Queensland the wizards, in order to practise their arts against

some one, "need only to know the name of the person in question, and for this reason they rarely use their proper names in addressing or speaking of each other, but simply their class names." In the tribes of south-eastern Australia "when the new name is given at initiation, the child's name becomes secret, not to be revealed to strangers, or to be mentioned by friends. The reason appears to be that a name is part of a person, and therefore can be made use of to that person's detriment by any who wish to 'catch' him by evil magic." Thus among the Yuin of New South Wales the totem name is said to have been something magical rather than a mere name in our sense, and it was kept secret lest an enemy should injure its bearer by sorcery. The name was revealed to a youth by his father at initiation, but very few other people knew it. Another writer, who knew the Australians well, observes that in many tribes the belief prevails "that the life of an enemy may be taken by the use of his name in incantations. The consequence of this idea is, that in the tribes in which it obtains, the name of the male is given up for ever at the time when he undergoes the first of a series of ceremonies which end in conferring the rights of manhood. In such tribes a man has no name, and when a man desires to attract the attention of any male of his tribe who is out of his boyhood, instead of calling him by name, he addresses him as brother, nephew, or cousin, as the case may be, or by the name of the class to which he belongs. I used to notice, when I lived amongst the Bangerang, that the names which the males bore in infancy were soon almost forgotten by the tribe." It may be questioned, however, whether the writer whom I have just quoted was not deceived in thinking that among these tribes men gave up their individual names on passing through the ceremony of initiation into manhood. It is more in harmony with savage beliefs and practices to suppose either that the old names were retained but dropped out of use in daily life, or that new names were given at initiation and sedulously concealed from fear of sorcery. A missionary who resided among the aborigines at Lake Tyers, in Victoria, informs us that "the blacks have great objections to speak of a person by name. In speaking to each other they address the person spoken to as brother, cousin, friend, or whatever relation the person spoken to bears. Sometimes a black bears a name which we would term merely a nickname, as the left-handed, or the bad-handed, or the little man. They would speak of a person by this name while living, but they would never mention the proper name. I found great difficulty in collecting the native names of the blacks here. I found afterwards that they had given me wrong names; and, on asking the reason why, was informed they had two or three names, but they never mentioned their right name for fear any one got it, then they would die." Amongst the tribes of central Australia every man, woman, and child has, besides a personal name which is in common use, a secret or sacred name which is bestowed by the older men upon him or her soon after birth, and which is known to none but the fully initiated members of the group. This secret name is never mentioned except upon the most solemn occasions; to utter it in the hearing of women or of men of another group would be a most serious breach of tribal custom, as serious as the most flagrant case of sacrilege among ourselves. When mentioned at all, the name is spoken only in a whisper, and not until the most elaborate precautions have been taken that it shall be heard by no one but members of the group. "The native thinks that a stranger knowing his secret name would have special power to work him ill by means of magic."

The same fear seems to have led to a custom of the same sort amongst the ancient Egyptians, whose comparatively high civilisation was strangely dashed and chequered with relics of the lowest savagery. Every Egyptian received two names, which were known respectively as the true name and the good name, or the great name and the little name; and while the good or little name was made public, the true or great name appears to have been carefully concealed. Similarly in Abyssinia at the present day it is customary to conceal the real name which a person receives at baptism and to call him only by a sort of nickname which his mother gives him on leaving the church. The reason for this concealment is that a sorcerer

cannot act upon a person whose real name he does not know. But if he has ascertained his victim's real name, the magician takes a particular kind of straw, and muttering something over it bends it into a circle and places it under a stone. The person aimed at is taken ill at the very moment of the bending of the straw; and if the straw snaps, he dies. A Brahman child receives two names, one for common use, the other a secret name which none but his father and mother should know. The latter is only used at ceremonies such as marriage. The custom is intended to protect the person against magic, since a charm only becomes effectual in combination with the real name. Amongst the Kru negroes of West Africa a man's real name is always concealed from all but his nearest relations; to other people he is known only under an assumed name. The Ewe-speaking people of the Slave Coast "believe that there is a real and material connexion between a man and his name, and that by means of the name injury may be done to the man. An illustration of this has been given in the case of the tree-stump that is beaten with a stone to compass the death of an enemy; for the name of that enemy is not pronounced solely with the object of informing the animating principle of the stump who it is whose death is desired, but through a belief that, by pronouncing the name, the personality of the man who bears it is in some way brought to the stump." The Wolofs of Senegambia are very much annoyed if any one calls them in a loud voice, even by day; for they say that their name will be remembered by an evil spirit and made use of by him to do them a mischief at night. Similarly, the natives of Nias believe that harm may be done to a person by the demons who hear his name pronounced. Hence the names of infants, who are especially exposed to the assaults of evil spirits, are never spoken; and often in haunted spots, such as the gloomy depths of the forest, the banks of a river, or beside a bubbling spring, men will abstain from calling each other by their names for a like reason. Among the hill tribes of Assam each individual has a private name which may not be revealed. Should any one imprudently allow his private name to be known, the whole village is tabooed for two days and a feast is provided at the expense of the culprit. A Manegre, of the upper valley of the Amoor, will never mention his own name nor that of one of his fellows. Only the names of children are an exception to this rule. A Bagobo man of Mindanao, one of the Philippine Islands, never utters his own name from fear of being turned into a raven, because the raven croaks out its own name. The natives of the East Indian island of Buru, and the Manggarais of West Flores are forbidden by custom to mention their own names. When Fafnir had received his death-wound from Sigurd, he asked his slayer what his name was; but the cunning Sigurd concealed his real name and mentioned a false one, because he well knew how potent are the words of a dying man when he curses his enemy by name.

The Indians of Chiloe, a large island off the southern coast of Chili, keep their names secret and do not like to have them uttered aloud; for they say that there are fairies or imps on the mainland or neighbouring islands who, if they knew folk's names, would do them an injury; but so long as they do not know the names, these mischievous sprites are powerless. The Araucanians, who inhabit the mainland of Chili to the north of Chiloe, will hardly ever tell a stranger their names because they fear that he would thereby acquire some supernatural power over themselves. Asked his name by a stranger, who is ignorant of their superstitions, an Araucanian will answer, "I have none." Names taken from plants, birds, or other natural objects are bestowed on the Indians of Guiana at their birth by their parents or the medicine-man, "but these names seem of little use, in that owners have a very strong objection to telling or using them, apparently on the ground that the name is part of the man, and that he who knows the name has part of the owner of that name in his power. To avoid any danger of spreading knowledge of their names, one Indian, therefore, generally addresses another only according to the relationship of the caller and the called, as brother, sister, father, mother, and so on; or, when there is no relationship, as boy, girl, companion, and so on. These terms, therefore, practically form the names actually used by Indians amongst

themselves.” Amongst the Indians of the Goajira peninsula in Colombia it is a punishable offence to mention a man's name; in aggravated cases heavy compensation is demanded. The Indians of Darien never tell their names, and when one of them is asked, “What is your name?” he answers, “I have none.” For example, the Guami of Panama, “like the greater part of the American Indians, has several names, but that under which he is known to his relations and friends is never mentioned to a stranger; according to their ideas a stranger who should learn a man's name would obtain a secret power over him. As to the girls, they generally have no name of their own up to the age of puberty.” Among the Tepehuanes of Mexico a name is a sacred thing, and they never tell their real native names.

In North America superstitions of the same sort are current. “Names bestowed with ceremony in childhood,” says Schoolcraft, “are deemed sacred, and are seldom pronounced, out of respect, it would seem, to the spirits under whose favour they are supposed to have been selected. Children are usually called in the family by some name which can be familiarly used.” The Navajoes of New Mexico are most unwilling to reveal their own Indian names or those of their friends; they generally go by some Mexican names which they have received from the whites. “No Apache will give his name to a stranger, fearing some hidden power may thus be placed in the stranger's hand to his detriment.” The Tonkawe Indians of Texas will give their children Comanche and English names in addition to their native names, which they are unwilling to communicate to others; for they believe that when somebody calls a person by his or her native name after death the spirit of the deceased may hear it, and may be prompted to take revenge on such as disturbed his rest; whereas if the spirit be called by a name drawn from another language, it will pay no heed. Speaking of the Californian Indians, and especially of the Nishinam tribe, a well-informed writer observes: “One can very seldom learn an Indian's and never a squaw's Indian name, though they will tell their American titles readily enough.... No squaw will reveal her own name, but she will tell all her neighbors' that she can think of. For the reason above given many people believe that half the squaws have no names at all. So far is this from the truth that every one possesses at least one and sometimes two or three.” Blackfoot Indians believe that they would be unfortunate in all their undertakings if they were to speak their names. When the Canadian Indians were asked their names, they used to hang their heads in silence or answer that they did not know. When an Ojebway is asked his name, he will look at some bystander and ask him to answer. “This reluctance arises from an impression they receive when young, that if they repeat their own names it will prevent their growth, and they will be small in stature. On account of this unwillingness to tell their names, many strangers have fancied that they either have no names or have forgotten them.”

In this last case no scruple seems to be felt about communicating a man's name to strangers, and no ill effects appear to be dreaded as a consequence of divulging it; harm is only done when a name is spoken by its owner. Why is this? and why in particular should a man be thought to stunt his growth by uttering his own name? We may conjecture that to savages who act and think thus a person's name only seems to be a part of himself when it is uttered with his own breath; uttered by the breath of others it has no vital connexion with him, and no harm can come to him through it. Whereas, so these primitive philosophers may have argued, when a man lets his own name pass his lips, he is parting with a living piece of himself, and if he persists in so reckless a course he must certainly end by dissipating his energy and shattering his constitution. Many a broken-down debauchee, many a feeble frame wasted with disease, may have been pointed out by these simple moralists to their awe-struck disciples as a fearful example of the fate that must sooner or later overtake the profligate who indulges immoderately in the seductive habit of mentioning his own name.

However we may explain it, the fact is certain that many a savage evinces the strongest reluctance to pronounce his own name, while at the same time he makes no objection at all to other people pronouncing it, and will even invite them to do so for him in order to satisfy the curiosity of an inquisitive stranger. Thus in some parts of Madagascar it is *fady* or taboo for a person to tell his own name, but a slave or attendant will answer for him. "Chatting with an old Sakalava while the men were packing up, we happened to ask him his name; whereupon he politely requested us to ask one of his servants standing by. On expressing our astonishment that he should have forgotten this, he told us that it was *fady* (tabooed) for one of his tribe to pronounce his own name. We found this was perfectly true in that district, but it is not the case with the Sakalava a few days farther down the river." The same curious inconsistency, as it may seem to us, is recorded of some tribes of American Indians. Thus we are told that "the name of an American Indian is a sacred thing, not to be divulged by the owner himself without due consideration. One may ask a warrior of any tribe to give his name, and the question will be met with either a point-blank refusal or the more diplomatic evasion that he cannot understand what is wanted of him. The moment a friend approaches, the warrior first interrogated will whisper what is wanted, and the friend can tell the name, receiving a reciprocation of the courtesy from the other." This general statement applies, for example, to the Indian tribes of British Columbia, as to whom it is said that "one of their strangest prejudices, which appears to pervade all tribes alike, is a dislike to telling their names—thus you never get a man's right name from himself; but they will tell each other's names without hesitation." Though it is considered very rude for a stranger to ask an Apache his name, and the Apache will never mention it himself, he will allow his friend at his side to mention it for him. The Abipones of South America thought it a sin in a man to utter his own name, but they would tell each other's names freely; when Father Dobrizhoffer asked a stranger Indian his name, the man would nudge his neighbour with his elbow as a sign that his companion should answer the question. Some of the Malemut Esquimaux of Bering Strait dislike very much to pronounce their own names; if a man be asked his name he will appear confused and will generally turn to a bystander, and request him to mention it for him. In the whole of the East Indian Archipelago the etiquette is the same. As a general rule no one will utter his own name. To enquire, "What is your name?" is a very indelicate question in native society. When in the course of administrative or judicial business a native is asked his name, instead of replying he will look at his comrade to indicate that he is to answer for him, or he will say straight out, "Ask him." The superstition is current all over the East Indies without exception, and it is found also among the Motu and Motumotu tribes of British New Guinea, the Papuans of Finsch Haven in German New Guinea, the Nufoors of Dutch New Guinea, and the Melanesians of the Bismarck Archipelago. Among many tribes of South Africa men and women never mention their names if they can get any one else to do it for them, but they do not absolutely refuse when it cannot be avoided. No Warua will tell his name, but he does not object to being addressed by it. Among the Masai, "when a man is called or spoken to, he is addressed by his father's name, and his own name is only used when speaking to his mother. It is considered unlucky for a man to be addressed by name. The methods employed in finding out what an individual is called seem apt to lead to confusion. If a man is asked his name, he replies by giving that of his father, and to arrive at his own name it is necessary to ask a third person, or to ask him what is the name of his mother. There is no objection to another person mentioning his name even in his presence." We are told that the Wanyamwesi almost always address each other as "Mate" or "Friend," and a man sometimes quite forgets his own name and has to be reminded of it by another. The writer who makes this statement was probably unaware of the reluctance of many savages to utter their own names, and hence he mistook that reluctance for forgetfulness. In Uganda no one will mention his totem. If it is necessary that it should be known, he will ask a bystander

to mention it for him. The Ba-Lua in the Congo region are unwilling to pronounce the name of their tribe; if they are pressed on the subject, they will call on some foreigner to give the required information.

Sometimes the embargo laid on personal names is not permanent; it is conditional on circumstances, and when these change it ceases to operate. Thus when the Nandi men are away on a foray, nobody at home may pronounce the names of the absent warriors; they must be referred to as birds. Should a child so far forget itself as to mention one of the distant ones by name, the mother would rebuke it, saying, "Don't talk of the birds who are in the heavens." Among the Bangala of the Upper Congo, while a man is fishing and when he returns with his catch, his proper name is in abeyance and nobody may mention it. Whatever the fisherman's real name may be, he is called *mwele* without distinction. The reason is that the river is full of spirits, who, if they heard the fisherman's real name, might so work against him that he would catch little or nothing. Even when he has caught his fish and landed with them, the buyer must still not address him by his proper name, but must only call him *mwele*; for even then, if the spirits were to hear his proper name, they would either bear it in mind and serve him out another day, or they might so mar the fish he had caught that he would get very little for them. Hence the fisherman can extract heavy damages from anybody who mentions his name, or can compel the thoughtless speaker to relieve him of the fish at a good price so as to restore his luck. When the Sulka of New Britain are near the territory of their enemies the Gaktei, they take care not to mention them by their proper name, believing that were they to do so, their foes would attack and slay them. Hence in these circumstances they speak of the Gaktei as *o lapsiek*, that is, "the rotten tree-trunks," and they imagine that by calling them that they make the limbs of their dreaded enemies ponderous and clumsy like logs. This example illustrates the extremely materialistic view which these savages take of the nature of words; they suppose that the mere utterance of an expression signifying clumsiness will homoeopathically affect with clumsiness the limbs of their distant foemen. Another illustration of this curious misconception is furnished by a Caffre superstition that the character of a young thief can be reformed by shouting his name over a boiling kettle of medicated water, then clapping a lid on the kettle and leaving the name to steep in the water for several days. It is not in the least necessary that the thief should be aware of the use that is being made of his name behind his back; the moral reformation will be effected without his knowledge.

When it is deemed necessary that a man's real name should be kept secret, it is often customary, as we have seen, to call him by a surname or nickname. As distinguished from the real or primary names, these secondary names are apparently held to be no part of the man himself, so that they may be freely used and divulged to everybody without endangering his safety thereby. Sometimes in order to avoid the use of his own name a man will be called after his child. Thus we are informed that "the Gippsland blacks objected strongly to let any one outside the tribe know their names, lest their enemies, learning them, should make them vehicles of incantation, and so charm their lives away. As children were not thought to have enemies, they used to speak of a man as 'the father, uncle, or cousin of So-and-so,' naming a child; but on all occasions abstained from mentioning the name of a grown-up person." Similarly among the Nufoors of Dutch New Guinea, grown-up persons who are related by marriage may not mention each other's names, but it is lawful to mention the names of children; hence in order to designate a person whose name they may not pronounce they will speak of him or her as the father or mother of So-and-so. The Alfoors of Poso, in Celebes, will not pronounce their own names. Among them, accordingly, if you wish to ascertain a person's name, you ought not to ask the man himself, but should enquire of others. But if this is impossible, for example, when there is no one else near, you should ask him his

child's name, and then address him as the "Father of So-and-so." Nay, these Alfoors are shy of uttering the names even of children; so when a boy or girl has a nephew or niece, he or she is addressed as "Uncle of So-and-so," or "Aunt of So-and-so." In pure Malay society, we are told, a man is never asked his name, and the custom of naming parents after their children is adopted only as a means of avoiding the use of the parents' own names. The writer who makes this statement adds in confirmation of it that childless persons are named after their younger brothers. Among the land Dyaks of northern Borneo children as they grow up are called, according to their sex, the father or mother of a child of their father's or mother's younger brother, or sister, that is, they are called the father or mother of what we should call their first cousin. The Caffres used to think it discourteous to call a bride by her own name, so they would call her "the Mother of So-and-so," even when she was only betrothed, far less a wife and a mother. Among the Kukis and Zemis or Kacha Nagas of Assam parents drop their own names after the birth of a child and are named Father and Mother of So-and-so. Childless couples go by the names of "the childless father," "the childless mother," "the father of no child," "the mother of no child." A Zulu woman may not utter her husband's name; if she speaks to or of him she says, "Father of So-and-so," mentioning the name of one of his children. A Hindoo woman will not name her husband. If she has to refer to him she will designate him as the father of her child or by some other periphrasis. The widespread custom of naming a father after his child has sometimes been supposed to spring from a desire on the father's part to assert his paternity, apparently as a means of obtaining those rights over his children which had previously, under a system of mother-kin, been possessed by the mother. But this explanation does not account for the parallel custom of naming the mother after her child, which seems commonly to co-exist with the practice of naming the father after the child. Still less, if possible, does it apply to the customs of calling childless couples the father and mother of children which do not exist, of naming people after their younger brothers, and of designating children as the uncles and aunts of So-and-so, or as the fathers and mothers of their first cousins. But all these practices are explained in a simple and natural way if we suppose that they originate in a reluctance to utter the real names of persons addressed or directly referred to. That reluctance is probably based partly on a fear of attracting the notice of evil spirits, partly on a dread of revealing the name to sorcerers, who would thereby obtain a handle for injuring the owner of the name.

§ 2. Names of Relations tabooed.

It might naturally be expected that the reserve so commonly maintained with regard to personal names would be dropped or at least relaxed among relations and friends. But the reverse of this is often the case. It is precisely the persons most intimately connected by blood and especially by marriage to whom the rule applies with the greatest stringency. Such people are often forbidden, not only to pronounce each other's names, but even to utter ordinary words which resemble or have a single syllable in common with these names. The persons who are thus mutually debarred from mentioning each other's names are especially husbands and wives, a man and his wife's parents, and a woman and her husband's father. For example, among the Caffres of South Africa a woman may not publicly pronounce the birth-name of her husband or of any of his brothers, nor may she use the interdicted word in its ordinary sense. If her husband, for instance, be called u-Mpaka, from *impaka*, a small feline animal, she must speak of that beast by some other name. Further, a Caffre wife is forbidden to pronounce even mentally the names of her father-in-law and of all her husband's male relations in the ascending line; and whenever the emphatic syllable of any of their names occurs in another word, she must avoid it by substituting either an entirely new word, or, at least, another syllable in its place. Hence this custom has given rise to an almost distinct language among the women, which the Caffres call *Ukuteta Kwabafazi* or "women's

speech.” The interpretation of this “women's speech” is naturally very difficult, “for no definite rules can be given for the formation of these substituted words, nor is it possible to form a dictionary of them, their number being so great—since there may be many women, even in the same tribe, who would be no more at liberty to use the substitutes employed by some others, than they are to use the original words themselves.” A Caffre man, on his side, may not mention the name of his mother-in-law, nor may she pronounce his; but he is free to utter words in which the emphatic syllable of her name occurs. In Northern Nyassaland no woman will speak the name of her husband or even use a word that may be synonymous with it. If she were to call him by his proper name, she believes it would be unlucky and would affect her powers of conception. In like manner women abstain, for superstitious reasons, from using the common names of articles of food, which they designate by terms peculiar to themselves. Among the Kondes, at the north-western end of Lake Nyassa, a woman may not mention the name of her father-in-law; indeed she may not even speak to him nor see him. Among the Barea and Bogos of Eastern Africa a woman never mentions her husband's name; a Bogo wife would rather be unfaithful to him than commit the monstrous sin of allowing his name to pass her lips. Among the Haussas “the first-born son is never called by his parents by his name; indeed they will not even speak with him if other people are present. The same rule holds good of the first husband and the first wife.” In antiquity Ionian women would not call their husbands by their names. While the rites of Ceres were being performed in Rome, no one might name a father or a daughter. Among the South Slavs at the present day husbands and wives will not mention each other's names, and a young wife may not call any of her housemates by their true names; she must invent or at least adopt other names for them. A Kirghiz woman dares not pronounce the names of the older relations of her husband, nor even use words which resemble them in sound. For example, if one of these relations is called Shepherd, she may not speak of sheep, but must call them “the bleating ones”; if his name is Lamb, she must refer to lambs as “the young of the bleating ones.” After marriage an Aino wife may not mention her husband's name; to do so would be deemed equivalent to killing him. Among the Sgaus, a Karen tribe of Burma, children never mention their parents' names. A Toda man may not utter the names of his mother's brother, his grandfather and grandmother, his wife's mother, and of the man from whom he has received his wife, who is usually the wife's father. All these names are tabooed to him in the lifetime of the persons who bear them, and after death the prohibitions are not only maintained but extended. In southern India wives believe that to tell their husband's name or to pronounce it even in a dream would bring him to an untimely end. Further, they may not mention the names of their parents, their parents-in-law, and their brothers-in-law and sisters-in-law. Among the Ojebways husbands and wives never mention each other's names; among the Omahas a man and his father-in-law and mother-in-law will on no account utter each other's names in company. A Dacota “is not allowed to address or to look towards his wife's mother, especially, and the woman is shut off from familiar intercourse with her husband's father and others, and etiquette prohibits them from speaking the names of their relatives by marriage.” “None of their customs,” adds the same writer, “is more tenacious of life than this; and no family law is more binding.” In the Nishinam tribe of California “a husband never calls his wife by name on any account, and it is said that divorces have been produced by no other provocation than that.”

The Battas or Bataks of Sumatra display a great aversion to mentioning their own names and a still greater aversion to mentioning the names of their parents, grandparents, or elder blood-relations. Politeness forbids the putting of direct questions on this subject, so that the investigation of personal identity becomes difficult and laborious. When a Batta expects to be questioned as to his relations, he will usually provide himself with a friend to answer for him. A Batak man may never mention the names of his wife, his daughter-in-law and of his

son-in-law; a woman is most particularly forbidden to mention the name of the man who has married her daughter. Among the Karo-Bataks the forbidden names are those of parents, uncles, aunts, parents-in-law, brothers and sisters, and especially grandparents. Among the Dyaks a child never pronounces the names of his parents, and is angry if any one else does so in his presence. A husband never calls his wife by her name, and she never calls him by his. If they have children, they name each other after them, "Father of So-and-so" and "Mother of So-and-so"; if they have no children they use the pronouns "he" and "she," or an expression such as "he or she whom I love"; and in general, members of a Dyak family do not mention each other's names. Moreover, when the personal names happen also, as they often do, to be names of common objects, the Dyak is debarred from designating these objects by their ordinary names. For instance, if a man or one of his family is called Bintang, which means "star," he must not call a star a star (*bintang*); he must call it a *pariama*. If he or a member of his domestic circle bears the name of Bulan, which means "moon," he may not speak of the moon as the moon (*bulan*); he must call it *penala*. Hence it comes about that in the Dyak language there are two sets of distinct names for many objects. Among the sea Dyaks of Sarawak a man may not pronounce the name of his father-in-law or mother-in-law without incurring the wrath of the spirits. And since he reckons as his father-in-law and mother-in-law not only the father and mother of his own wife, but also the fathers and mothers of his brothers' wives and sisters' husbands, and likewise the fathers and mothers of all his cousins, the number of tabooed names may be very considerable and the opportunities of error correspondingly numerous. To make confusion worse confounded, the names of persons are often the names of common things, such as moon, bridge, barley, cobra, leopard; so that when any of a man's many fathers-in-law and mothers-in-law are called by such names, these common words may not pass his lips. Among the Dyaks of Landak and Tajan it is forbidden to mention the names of parents and grandparents, sometimes also of great-grandparents, whether they are alive or dead. Among the Alfoors or Toradjas of Poso, in central Celebes, you may not pronounce the names of your father, mother, grandparents, and other near relations. But the strictest taboo is on the names of parents-in-law. A son-in-law and a daughter-in-law may not only never mention the names of their parents-in-law, but if the names happen to be ordinary words of the language, they may never allow the words in their common significance to pass their lips. For example, if my father is called Njara ("horse"), I may not speak of him by that name; but in speaking of the animal I am free to use the word horse (*njara*). But if my father-in-law is called Njara, the case is different, for then not only may I not refer to him by his name, but I may not even call a horse a horse; in speaking of the animal I must use some other word. The missionary who reports the custom is acquainted with a man whose mother-in-law rejoices in the name of Ringgi ("rixdollar"). When this man has occasion to refer to real rixdollars, he alludes to them delicately as "large guilders" (*roepia bose*). Another man may not use the ordinary word for water (*oewe*); in speaking of water he employs a word (*owai*) taken from a different dialect. Indeed, among these Alfoors it is the common practice in such cases to replace the forbidden word by a kindred word of the same significance borrowed from another dialect. In this way many fresh terms or new forms of an old word pass into general circulation. Among the Alfoors of Minahassa, in northern Celebes, the custom is carried still further so as to forbid the use even of words which merely resemble the personal names in sound. It is especially the name of a father-in-law which is thus laid under an interdict. If he, for example, is called Kalala, his son-in-law may not speak of a horse by its common name *kawalo*; he must call it a "riding-beast" (*sasakajan*). So among the Alfoors of the island of Buru it is taboo to mention the names of parents and parents-in-law, or even to speak of common objects by words which resemble these names in sound. Thus, if your mother-in-law is called Dalu, which means "betel," you may not ask for betel by its ordinary name, you must ask for "red

mouth" (*mue miha*); if you want betel-leaf, you may not say betel-leaf (*dalu 'mun*), you must say *karon fenna*. In the same island it is also taboo to mention the name of an elder brother in his presence. Transgressions of these rules are punished with fines. In Bolang Mongondo, a district in the west of Celebes, the unmentionable names are those of parents, parents-in-law, uncles and aunts. Among the Alfoors of Halmahera a son-in-law may never use his father-in-law's name in speaking to him; he must simply address him as "Father-in-law." In Sunda it is thought that a particular crop would be spoiled if a man were to mention the names of his father and mother.

Among the Nufoors, as we have seen, persons who are related to each other by marriage are forbidden to mention each other's names. Among the connexions whose names are thus tabooed are wife, mother-in-law, father-in-law, your wife's uncles and aunts and also her grand-uncles and grand-aunts, and the whole of your wife's or your husband's family in the same generation as yourself, except that men may mention the names of their brothers-in-law, though women may not. The taboo comes into operation as soon as the betrothal has taken place and before the marriage has been celebrated. Families thus connected by the betrothal of two of their members are not only forbidden to pronounce each other's names; they may not even look at each other, and the rule gives rise to the most comical scenes when they happen to meet unexpectedly. And not merely the names themselves, but any words that sound like them are scrupulously avoided and other words used in their place. If it should chance that a person has inadvertently uttered a forbidden name, he must at once throw himself on the floor and say, "I have mentioned a wrong name. I throw it through the chinks of the floor in order that I may eat well." In German New Guinea near relations by marriage, particularly father-in-law and daughter-in-law, mother-in-law and son-in-law, as well as brothers-in-law and sisters-in-law, must see as little of each other as possible; they may not converse together and they may not mention each other's names, not even when these names have passed to younger members of the family. Thus if a child is called after its deceased paternal grandfather, the mother may not call her child by its name but must employ another name for the purpose. Among the Yabim, for example, on the south-east coast of German New Guinea, parents-in-law may neither be touched nor named. Even when their names are borne by other people or are the ordinary names of common objects, they may not pass the lips of their sons-in-law and daughters-in-law. Among the western tribes of British New Guinea the principal taboo or *sabi*, as it is there called, concerns the names of relatives by marriage. A man may not mention the name of his wife's father, mother, elder sister, or elder brother, nor the name of any male or female relative of her father or mother, so long as the relative in question is a member of the same tribe as the speaker. The names of his wife's younger brothers and sisters are not tabooed to him. The same law applies to a woman with reference to the names of her husband's relatives. As a general rule, this taboo does not extend outside the tribal boundaries. Hence when a man or woman marries out of his or her tribe, the taboo is usually not applied. And when members of one tribe, who may not pronounce each other's names at home, are away from their own territory, they are no longer strictly bound to observe the prohibition. A breach of the taboo has to be atoned for by the offender paying a fine to the person whose name he has taken in vain. Until that has been done, neither of the parties concerned, if they are males, may enter the men's club-house. In the old times the offended party might recover his social standing by cutting off somebody else's head.

In the western islands of Torres Straits a man never mentioned the personal names of his father-in-law, mother-in-law, brother-in-law, and sister-in-law; and a woman was subject to the same restrictions. A brother-in-law might be spoken of as the husband or brother of some one whose name it was lawful to mention; and similarly a sister-in-law might be called the

wife of So-and-so. If a man by chance used the personal name of his brother-in-law, he was ashamed and hung his head. His shame was only relieved when he had made a present as compensation to the man whose name he had taken in vain. The same compensation was made to a sister-in-law, a father-in-law, and a mother-in-law for the accidental mention of their names. This disability to use the personal names of relatives by marriage was associated with the custom, so common throughout the world, that a man or woman is not allowed to speak to these relatives. If a man wished to communicate with his father-in-law or mother-in-law, he spoke to his wife and she spoke to her parent. When direct communication became absolutely necessary, it was said that a man might talk to his father-in-law or mother-in-law a very little in a low voice. The behaviour towards a brother-in-law was the same. Similar taboos on the names of persons connected by marriage are in force in New Britain and New Ireland. Among the natives who inhabit the coast of the Gazelle Peninsula in New Britain to mention the name of a brother-in-law is the grossest possible affront you can offer to him; it is a crime punishable with death. In the Santa Cruz and Reef Islands a man is forbidden to pronounce the name of his mother-in-law, and he may never see her face so long as he lives. She on her side lies under similar restrictions in regard to him. Further, a man is prohibited from mentioning the name of his son-in-law, though he is allowed to look at him. And if a husband has paid money for his wife to several men, none of these men may ever utter his name or look him in the face. If one of them did by chance look at him, the offended husband would destroy some of the offender's property. In New Caledonia a brother may not mention his sister's name, and she may not mention his. The same rule is observed by male and female cousins in regard to each other's names. In the Banks' Islands, Melanesia, the taboos laid on the names of persons connected by marriage are very strict. A man will not mention the name of his father-in-law, much less the name of his mother-in-law, nor may he name his wife's brother; but he may name his wife's sister—she is nothing to him. A woman may not name her father-in-law, nor on any account her son-in-law. Two people whose children have intermarried are also debarred from mentioning each other's names. And not only are all these persons forbidden to utter each other's names; they may not even pronounce ordinary words which chance to be either identical with these names or to have any syllables in common with them. “A man on one occasion spoke to me of his house as a shed, and when that was not understood, went and touched it with his hand to shew what he meant; a difficulty being still made, he looked round to be sure that no one was near and whispered, not the name of his son's wife, but the respectful substitute for her name, *amen Mulegona*, she who was with his son, and whose name was Tuwarina, Hind-house.” Again, we hear of a native of these islands who might not use the common words for “pig” and “to die,” because these words occurred in the polysyllabic name of his son-in-law; and we are told of another unfortunate who might not pronounce the everyday words for “hand” and “hot” on account of his wife's brother's name, and who was even debarred from mentioning the number “one,” because the word for “one” formed part of the name of his wife's cousin.

It might be expected that similar taboos on the names of relations and on words resembling them would commonly occur among the aborigines of Australia, and that some light might be thrown on their origin and meaning by the primitive modes of thought and forms of society prevalent among these savages. Yet this expectation can scarcely be said to be fulfilled; for the evidence of the observance of such customs in Australia is scanty and hardly of a nature to explain their origin. We are told that there are instances “in which the names of natives are never allowed to be spoken, as those of a father or mother-in-law, of a son-in-law, and some cases arising from a connection with each other's wives.” Among some Victorian tribes, a man never at any time mentioned the name of his mother-in-law, and from the time of his betrothal to his death neither she nor her sisters might ever look at or speak to him. He might not go within fifty yards of their habitation, and when he met them on a path they

immediately left it, clapped their hands, and covering up their heads with their rugs, walked in a stooping posture and spoke in whispers until he had gone by. They might not talk with him, and when he and they spoke to other people in each other's presence, they used a special form of speech which went by the name of "turn tongue." This was not done with any intention of concealing their meaning, for "turn tongue" was understood by everybody. A writer, who enjoyed unusually favourable opportunities of learning the language and customs of the Victorian aborigines, informs us that "A stupid custom existed among them, which they called *knal-oyne*. Whenever a female child was promised in marriage to any man, from that very hour neither he nor the child's mother were permitted to look upon or hear each other speak nor hear their names mentioned by others; for, if they did, they would immediately grow prematurely old and die." Among the Gudangs of Cape York, in Queensland, and the Kowraregas of the Prince of Wales Islands, a man carefully avoids speaking to or even mentioning the name of his mother-in-law, and his wife acts similarly with regard to her father-in-law. "Thus the mother of a person called Nuki—which means water—is obliged to call water by another name." In the Booandik tribe of South Australia persons connected by marriage, except husbands and wives, spoke to each other in a low whining voice, and employed words different from those in common use. Another writer, speaking of the same tribe, says: "Mothers-in-law and sons-in-law studiously avoid each other. A father-in-law converses with his son-in-law in a low tone of voice, and in a phraseology differing somewhat from the ordinary one."

It will perhaps occur to the reader that customs of this latter sort may possibly have originated in the intermarriage of tribes speaking different languages; and there are some Australian facts which seem at first sight to favour this supposition. Thus with regard to the natives of South Australia we are told that "the principal mark of distinction between the tribes is difference of language or dialect; where the tribes intermix greatly no inconvenience is experienced on this account, as every person understands, in addition to his own dialect, that of the neighbouring tribe; the consequence is that two persons commonly converse in two languages, just as an Englishman and German would hold a conversation, each person speaking his own language, but understanding that of the other as well as his own. This peculiarity will often occur in one family through intermarriages, neither party ever thinking of changing his or her dialect for that of the other. Children do not always adopt the language of the mother, but that of the tribe among whom they live." Among some tribes of western Victoria a man was actually forbidden to marry a wife who spoke the same dialect as himself; and during the preliminary visit, which each paid to the tribe of the other, neither was permitted to speak the language of the tribe which he or she was visiting. The children spoke the language of their father and might never mix it with any other. To her children the mother spoke in their father's language, but to her husband she spoke in her own, and he answered her in his; "so that all conversation is carried on between husband and wife in the same way as between an Englishman and a Frenchwoman, each speaking his or her own language. This very remarkable law explains the preservation of so many distinct dialects within so limited a space, even where there are no physical obstacles to ready and frequent communication between the tribes." So amongst the Sakais, an aboriginal race of the Malay Peninsula, a man goes to a considerable distance for a wife, generally to a tribe who speak quite a different dialect. The Indian tribes of French Guiana have each their own dialect and would hardly be able to understand each other, were it not that almost every person marries a wife or a husband of a different tribe, and thus the newcomers serve as interpreters between the tribe in which they live and that in which they were born and brought up. It is well known that the Carib women spoke a language which differed in some respects from that of the men, and the explanation generally given of the difference is that the women preserved the language of a race of whom the men had been exterminated and the women married by the Caribs. This

explanation is not, as some seem to suppose, a mere hypothesis of the learned, devised to clear up a curious discrepancy; it was a tradition current among the Caribs themselves in the seventeenth century, and as such it deserves serious attention. But there are other facts which seem to point to a different explanation. Among the Carayahis, a tribe of Brazilian Indians on the Rio Grande or Araguaya River, the dialect of the women differs from that of the men. For the most part the differences are limited to the form and sound of the words; only a few words seem to be quite distinct in the two dialects. The speech of the women appears to preserve older and fuller forms than that of the men: for instance, "girl" is *yadokoma* in the female speech but *yadôma* in the male; "nail" is *desika* in the mouth of a woman but *desia* in the mouth of a man. However such remarkable differences are to be explained, a little reflection will probably convince us that a mere intermixture of races speaking different tongues could scarcely account for the phenomena of language under consideration. For the reluctance to mention the names or even syllables of the names of persons connected with the speaker by marriage can hardly be separated from the reluctance evinced by so many people to utter their own names or the names of the dead or of chiefs and kings; and if the reticence as to these latter names springs mainly from superstition, we may infer that the reticence as to the former has no better foundation. That the savage's unwillingness to mention his own name is based, at least in part, on a superstitious fear of the ill use that might be made of it by his foes, whether human or spiritual, has already been shewn. It remains to examine the similar usage in regard to the names of the dead and of royal personages.

§ 3. Names of the Dead tabooed.

The custom of abstaining from all mention of the names of the dead was observed in antiquity by the Albanians of the Caucasus, and at the present day it is in full force among many savage tribes. Thus we are told that one of the customs most rigidly observed and enforced amongst the Australian aborigines is never to mention the name of a deceased person, whether male or female; to name aloud one who has departed this life would be a gross violation of their most sacred prejudices, and they carefully abstain from it. The chief motive for this abstinence appears to be a fear of evoking the ghost, although the natural unwillingness to revive past sorrows undoubtedly operates also to draw the veil of oblivion over the names of the dead. Once Mr. Oldfield so terrified a native by shouting out the name of a deceased person, that the man fairly took to his heels and did not venture to shew himself again for several days. At their next meeting he bitterly reproached the rash white man for his indiscretion; "nor could I," adds Mr. Oldfield, "induce him by any means to utter the awful sound of a dead man's name, for by so doing he would have placed himself in the power of the malign spirits." On another occasion, a Watchandie woman having mentioned the name of a certain man, was informed that he had long been dead. At that she became greatly excited and spat thrice to counteract the evil effect of having taken a dead man's name into her lips. This custom of spitting thrice, as Mr. Oldfield afterwards learned, was the regular charm whereby the natives freed themselves from the power of the dangerous spirits whom they had provoked by such a rash act. Among the aborigines of Victoria the dead were very rarely spoken of, and then never by their names; they were referred to in a subdued voice as "the lost one" or "the poor fellow that is no more." To speak of them by name would, it was supposed, excite the malignity of *Couit-gil*, the spirit of the departed, which hovers on earth for a time before it departs for ever towards the setting sun. Once when a Kurnai man was spoken to about a dead friend, soon after the decease, he looked round uneasily and said, "Do not do that, he might hear you and kill me!" If a Kaiabara black dies, his tribespeople never mention his name, but call him *Wurponum*, "the dead," and in order to explain who it is that has died, they speak of his father, mother, brothers, and so forth. Of the tribes on the Lower Murray River we are told that when a person dies "they carefully avoid

mentioning his name; but if compelled to do so, they pronounce it in a very low whisper, so faint that they imagine the spirit cannot hear their voice." Amongst the tribes of Central Australia no one may utter the name of the deceased during the period of mourning, unless it is absolutely necessary to do so, and then it is only done in a whisper for fear of disturbing and annoying the man's spirit which is walking about in ghostly form. If the ghost hears his name mentioned he concludes that his kinsfolk are not mourning for him properly; if their grief were genuine they could not bear to bandy his name about. Touched to the quick by their hard-hearted indifference, the indignant ghost will come and trouble them in dreams. In these tribes no woman may ever again mention the name of a dead person, but the restriction on the male sex is not so absolute, for the name may be mentioned by men of the two subclasses to which the wife's father and wife's brother of the deceased belong. Among some tribes of north-western Australia a dead man's name is never mentioned after his burial and he is only spoken of as "that one"; otherwise they think that he would return and frighten them at night in camp.

The same reluctance to utter the names of the dead appears to prevail among all the Indian tribes of America from Hudson's Bay Territory to Patagonia. Among the Iroquois, for example, the name of the deceased was never mentioned after the period of mourning had expired. The same rule was rigidly observed by the Indians of California and Oregon; its transgression might be punished with a heavy fine or even with death. Thus among the Karok of California we are told that "the highest crime one can commit is the *pet-chi-é-ri*, the mere mention of the dead relative's name. It is a deadly insult to the survivors, and can be atoned for only by the same amount of blood-money paid for wilful murder. In default of that they will have the villain's blood." Amongst the Wintun, also of California, if some one in a group of merry talkers inadvertently mentions the name of a deceased person, "straightway there falls upon all an awful silence. No words can describe the shuddering and heart-sickening terror which seizes upon them at the utterance of that fearful word." Among the Goajiros of Colombia to mention the dead before his kinsmen is a dreadful offence, which is often punished with death; for if it happen on the *rancho* of the deceased, in presence of his nephew or uncle, they will assuredly kill the offender on the spot if they can. But if he escapes, the penalty resolves itself into a heavy fine, usually of two or more oxen. So among the Abipones of Paraguay to mention the departed by name was a serious crime, which often led to blows and bloodshed. When it was needful to refer to such an one, it was done by means of a general phrase such as "he who is no more," eked out with particulars which served to identify the person meant.

A similar reluctance to mention the names of the dead is reported of peoples so widely separated from each other as the Samoyeds of Siberia and the Todas of southern India; the Mongols of Tartary and the Tuaregs of the Sahara; the Ainos of Japan and the Akamba and Nandi of central Africa; the Tinguianes of the Philippines and the inhabitants of the Nicobar Islands, of Borneo, of Madagascar, and of Tasmania. In all cases, even where it is not expressly stated, the fundamental reason for this avoidance is probably the fear of the ghost. That this is the real motive with the Tuaregs of the Sahara we are positively informed. They dread the return of the dead man's spirit, and do all they can to avoid it by shifting their camp after a death, ceasing for ever to pronounce the name of the departed, and eschewing everything that might be regarded as an evocation or recall of his soul. Hence they do not, like the Arabs, designate individuals by adding to their personal names the names of their fathers; they never speak of So-and-so, son of So-and-so; they give to every man a name which will live and die with him. So among some of the Victorian tribes in Australia personal names were rarely perpetuated, because the natives believed that any one who adopted the name of a deceased person would not live long; probably his ghostly namesake was supposed

to come and fetch him away to the spirit-land. The Yabims of German New Guinea, who believe that the spirits of the dead pass their time in the forest eating unpalatable fruits, are unwilling to mention the names of the deceased lest their ghosts should suspend their habitual occupation to come and trouble the living. In Logea, one of the Samarai Archipelago, off the south-eastern end of New Guinea, no custom is observed so strictly as the one which forbids the naming of the dead in presence of their relations. To say to a person "Your fathers are dead," is considered a direct challenge to fight; it is an insult which must be avenged either by the death of the man who pronounced these awful words, or by the death of one of his relatives or friends. The uttering of the names of the dead is, along with homicide, one of the chief causes of war in the island. When it is necessary to refer to a dead man they designate him by such a phrase as "the father of So-and-so," or "the brother of So-and-so." Thus the fear of mentioning the names of the dead gives rise to circumlocutions of precisely the same sort as those which originate in a reluctance to name living people. Among the Klallam Indians of Washington State no person may bear the name of his deceased father, grandfather, or any other direct ancestor in the paternal line. The Masai of eastern Africa are said to resort to a simple device which enables them to speak of the dead freely without risk of the inopportune appearance of the ghost. As soon as a man or woman dies, they change his or her name, and henceforth always speak of him or her by the new name, while the old name falls into oblivion, and to utter it in the presence of a kinsman of the deceased is an insult which calls for vengeance. They assume that the dead man will not know his new name, and so will not answer to it when he hears it pronounced. Ghosts are notoriously dull-witted; nothing is easier than to dupe them. However, according to another and more probable account, the name of a Masai is not changed after his death; it is merely suppressed, and he or she is referred to by a descriptive phrase, such as "my brother," "my uncle," "my sister." To call a dead man by his name is deemed most unlucky, and is never done except with the intention of doing harm to his surviving family, who make great lamentations on such an occasion.

The same fear of the ghost, which moves people to suppress his old name, naturally leads all persons who bear a similar name to exchange it for another, lest its utterance should attract the attention of the ghost, who cannot reasonably be expected to discriminate between all the different applications of the same name. Thus we are told that in the Adelaide and Encounter Bay tribes of South Australia the repugnance to mentioning the names of those who have died lately is carried so far, that persons who bear the same name as the deceased abandon it, and either adopt temporary names or are known by any others that happen to belong to them. The same practice was observed by the aborigines of New South Wales, and is said to be observed by the tribes of the Lower Murray River, and of King George's Sound in western Australia. A similar custom prevails among some of the Queensland tribes; but the prohibition to use the names of the dead is not permanent, though it may last for many years. On the Bloomfield River, when a namesake dies, the survivor is called Tanyu, a word whose meaning is unknown; or else he or she receives a name which refers to the corpse, with the syllable Wau prefixed to it. For example, he may be called Wau-batcha, with reference to the place where the man was buried; or Wau-wotchinyu ("burnt"), with reference to the cremation of the body. And if there should be several people in camp all bearing one of these allusive designations, they are distinguished from each other by the mention of the names of their mothers or other relatives, even though these last have long been dead and gone. Whenever Mr. W. E. Roth, to whom we owe this information, could obtain an explanation of the custom, the reason invariably assigned was a fear that the ghost, hearing himself called by name, might return and cause mischief. In some Australian tribes the change of name thus brought about is permanent; the old name is laid aside for ever, and the man is known by his new name for the rest of his life, or at least until he is obliged to change it again for a like

reason. Among the North American Indians all persons, whether men or women, who bore the name of one who had just died were obliged to abandon it and to adopt other names, which was formally done at the first ceremony of mourning for the dead. In some tribes to the east of the Rocky Mountains this change of name lasted only during the season of mourning, but in other tribes on the Pacific Coast of North America it seems to have been permanent. Amongst the Masai also, when two men of the same tribe bear the same name, and one of them dies, the survivor changes his name.

Sometimes by an extension of the same reasoning all the near relations of the deceased change their names, whatever they may happen to be, doubtless from a fear that the sound of the familiar names might lure back the vagrant spirit to its old home. Thus in some Victorian tribes the ordinary names of all the next of kin were disused during the period of mourning, and certain general terms, prescribed by custom, were substituted for them. To call a mourner by his own name was considered an insult to the departed, and often led to fighting and bloodshed. Among Indian tribes of north-western America near relations of the deceased often change their names "under an impression that spirits will be attracted back to earth if they hear familiar names often repeated." Among the Kiowa Indians the name of the dead is never spoken in the presence of the relatives, and on the death of any member of a family all the others take new names. This custom was noted by Raleigh's colonists on Roanoke Island more than three centuries ago. Among the Lengua Indians of the Gran Chaco in South America not only is a dead man's name never mentioned, but all the survivors change their names also. They say that Death has been among them and has carried off a list of the living, and that he will soon come back for more victims; hence in order to defeat his fell purpose they change their names, believing that on his return Death, though he has got them all on his list, will not be able to identify them under their new names, and will depart to pursue the search elsewhere. So among the Guaycurus of the Gran Chaco, when a death had taken place, the chief used to change the names of every person in the tribe, man and woman, young and old, and it is said to have been wonderful to observe how from that moment everybody remembered his new name just as if he had borne it all his life. Nicobarese mourners take new names in order to escape the unwelcome attentions of the ghost; and for the same purpose they disguise themselves by shaving their heads so that the ghost is unable to recognise them. The Chukchees of Bering Strait believe that the souls of the dead turn into malignant spirits who seek to harm the living. Hence when a mother dies the name of her youngest and dearest child is changed, in order that her ghost may not know the child.

Further, when the name of the deceased happens to be that of some common object, such as an animal, or plant, or fire, or water, it is sometimes considered necessary to drop that word in ordinary speech and replace it by another. A custom of this sort, it is plain, may easily be a potent agent of change in language; for where it prevails to any considerable extent many words must constantly become obsolete and new ones spring up. And this tendency has been remarked by observers who have recorded the custom in Australia, America, and elsewhere. For example, with regard to the Australian aborigines it has been noted that "the dialects change with almost every tribe. Some tribes name their children after natural objects; and when the person so named dies, the word is never again mentioned; another word has therefore to be invented for the object after which the child was called." The writer gives as an instance the case of a man whose name Karla signified "fire"; when Karla died, a new word for fire had to be introduced. "Hence," adds the writer, "the language is always changing." In the Moorunde tribe the name for "teal" used to be *torpool*; but when a boy called Torpool died, a new name (*tilquaitch*) was given to the bird, and the old name dropped out altogether from the language of the tribe. Sometimes, however, such substitutes for common words were only in vogue for a limited time after the death, and were then discarded

in favour of the old words. Thus among the Kowraregas of the Prince of Wales' Islands and the Gudangs of Cape York in Queensland, the names of the dead are never mentioned without great reluctance, so that, for example, when a man named Us, or quartz, died, the name of the stone was changed to *nattam ure*, "the thing which is a namesake," but the original word would gradually return to common use. Again, a missionary, who lived among the Victorian aborigines, remarks that "it is customary among these blacks to disuse a word when a person has died whose name was the same, or even of the same sound. I find great difficulty in getting blacks to repeat such words. I believe this custom is common to all the Victorian tribes, though in course of time the word is resumed again. I have seen among the Murray blacks the dead freely spoken of when they have been dead some time." Again, in the Encounter Bay tribe of South Australia, if a man of the name of Ngnke, which means "water," were to die, the whole tribe would be obliged to use some other word to express water for a considerable time after his decease. The writer who records this custom surmises that it may explain the presence of a number of synonyms in the language of the tribe. This conjecture is confirmed by what we know of some Victorian tribes whose speech comprised a regular set of synonyms to be used instead of the common terms by all members of a tribe in times of mourning. For instance, if a man called Waa ("crow") departed this life, during the period of mourning for him nobody might call a crow a *waa*; everybody had to speak of the bird as a *narrapart*. When a person who rejoiced in the title of Ringtail Opossum (*weearn*) had gone the way of all flesh, his sorrowing relations and the tribe at large were bound for a time to refer to ringtail opossums by the more sonorous name of *manuungkuurt*. If the community were plunged in grief for the loss of a respected female who bore the honourable name of Turkey Bustard, the proper name for turkey bustards, which was *barrim barrim*, went out, and *tillit tillitsh* came in. And so *mutatis mutandis* with the names of Black Cockatoo, Grey Duck, Gigantic Crane, Kangaroo, Eagle, Dingo, and the rest.

A similar custom used to be constantly transforming the language of the Abipones of Paraguay, amongst whom, however, a word once abolished seems never to have been revived. New words, says the missionary Dobrizhoffer, sprang up every year like mushrooms in a night, because all words that resembled the names of the dead were abolished by proclamation and others coined in their place. The mint of words was in the hands of the old women of the tribe, and whatever term they stamped with their approval and put in circulation was immediately accepted without a murmur by high and low alike, and spread like wildfire through every camp and settlement of the tribe. You would be astonished, says the same missionary, to see how meekly the whole nation acquiesces in the decision of a withered old hag, and how completely the old familiar words fall instantly out of use and are never repeated either through force of habit or forgetfulness. In the seven years that Dobrizhoffer spent among these Indians the native word for jaguar was changed thrice, and the words for crocodile, thorn, and the slaughter of cattle underwent similar though less varied vicissitudes. As a result of this habit, the vocabularies of the missionaries teemed with erasures, old words having constantly to be struck out as obsolete and new ones inserted in their place. Similarly, a peculiar feature of the Comanche language is that a portion of the vocabulary is continually changing. If, for example, a person called Eagle or Bison dies, a new name is invented for the bird or beast, because it is forbidden to mention the name of any one who is dead. So amongst the Kiowa Indians all words that suggest the name of a deceased person are dropped for a term of years and other words are substituted for them. The old word may after the lapse of years be restored, but it often happens that the new one keeps its place and the original word is entirely forgotten. Old men sometimes remember as many as three different names which have been successively used for the same thing. The new word is commonly a novel combination of existing roots, or a novel use of a current word, rather than a deliberately invented term.

The Basagala, a cattle-breeding people to the west of Uganda, cease to use a word if it was the name of an influential person who has died. For example, after the death of a chief named Mwenda, which means "nine," the name for the numeral was changed. "On the death of a child, or a warrior, or a woman amongst the Masai, the body is thrown away, and the person's name is buried, *i.e.* it is never again mentioned by the family. Should there be anything which is called by that name, it is given another name which is not like that of the deceased, For instance, if an unimportant person called Ol-onana (he who is soft, or weak, or gentle) were to die, gentleness would not be called *enanai* in that kraal, but it would be called by another name, such as *epolpol* (it is smooth)... If an elder dies leaving children, his name is not buried for his descendants are named after him." From this statement, which is translated from a native account in the Masai language, we may perhaps infer that among the Masai it is as a rule only the childless dead whose names are avoided. In the island of Buru it is unlawful to mention the names of the dead or any words that resemble them in sound. In many tribes of British New Guinea the names of persons are also the names of common things. The people believe that if the name of a deceased person is pronounced, his spirit will return, and as they have no wish to see it back among them the mention of his name is tabooed and a new word is created to take its place, whenever the name happens to be a common term of the language. Thus at Waga-waga, near the south-eastern extremity of New Guinea, the names of the dead become taboo immediately after death, and if they are, as generally happens, the names of common objects, new words must be adopted for these things and the old words are dropped from the language, so long at least as the memory of the dead survives. For example, when a man died whose name Binama meant "hornbill," a new name *ambadina*, literally "the plasterer," was adopted for the bird. Consequently many words are permanently lost or revived with modified or new meanings. The frequent changes of vocabulary caused by this custom are very inconvenient, and nowadays the practice of using foreign words as substitutes is coming more and more into vogue. English profanity now contributes its share to the language of these savages. In the Caroline Islands the ordinary name for pig is *puik*, but in the Paliker district of Ponape the pig is called not *puik* but *man-teitei*, or "the animal that grubs in the soil," for the word *puik* was there tabooed after the death of a man named Puik. "This is a living instance showing how under our very eyes old words are dropping out of use in these isolated dialects and new ones are taking their place." In the Nicobar Islands a similar practice has similarly affected the speech of the natives. "A most singular custom," says Mr. de Roepstorff, "prevails among them which one would suppose must most effectually hinder the 'making of history,' or, at any rate, the transmission of historical narrative. By a strict rule, which has all the sanction of Nicobar superstition, no man's name may be mentioned after his death! To such a length is this carried that when, as very frequently happens, the man rejoiced in the name of 'Fowl,' 'Hat,' 'Fire,' 'Road,' etc., in its Nicobarese equivalent, the use of these words is carefully eschewed for the future, not only as being the personal designation of the deceased, but even as the names of the common things they represent; the words die out of the language, and either new vocables are coined to express the thing intended, or a substitute for the disused word is found in other Nicobarese dialects or in some foreign tongue. This extraordinary custom not only adds an element of instability to the language, but destroys the continuity of political life, and renders the record of past events precarious and vague, if not impossible."

That a superstition which suppresses the names of the dead must cut at the very root of historical tradition has been remarked by other workers in this field. "The Klamath people," observes Mr. A. S. Gatschet, "possess no historic traditions going further back in time than a century, for the simple reason that there was a strict law prohibiting the mention of the person or acts of a deceased individual by *using his name*. This law was rigidly observed among the Californians no less than among the Oregonians, and on its transgression

the death penalty could be inflicted. This is certainly enough to suppress all historical knowledge within a people. How can history be written without names?" Among some of the tribes of New South Wales the simple ditties, never more than two lines long, to which the natives dance, are never transmitted from one generation to another, because, when the rude poet dies, "all the songs of which he was author are, as it were, buried with him, inasmuch as they, in common with his very name, are studiously ignored from thenceforward, consequently they are quite forgotten in a very short space of time indeed. This custom of endeavouring persistently to forget everything which had been in any way connected with the dead entirely precludes the possibility of anything of an historical nature having existence amongst them; in fact the most vital occurrence, if only dating a single generation back, is quite forgotten, that is to say, if the recounting thereof should necessitate the mention of a defunct aboriginal's name." Thus among these simple savages even a sacred bard could not avail to rescue an Australian Agamemnon from the long night of oblivion.

In many tribes, however, the power of this superstition to blot out the memory of the past is to some extent weakened and impaired by a natural tendency of the human mind. Time, which wears out the deepest impressions, inevitably dulls, if it does not wholly efface, the print left on the savage mind by the mystery and horror of death. Sooner or later, as the memory of his loved ones fades slowly away, he becomes more willing to speak of them, and thus their rude names may sometimes be rescued by the philosophic enquirer before they have vanished, like autumn leaves or winter snows, into the vast undistinguished limbo of the past. This was Sir George Grey's experience when he attempted to trace the intricate system of kinship prevalent among the natives of western Australia. He says: "It is impossible for any person, not well acquainted with the language of the natives, and who does not possess great personal influence over them, to pursue an inquiry of this nature; for one of the customs most rigidly observed and enforced amongst them is, never to mention the name of a deceased person, male or female. In an inquiry, therefore, which principally turns upon the names of their ancestors, this prejudice must be every moment violated, and a very great difficulty encountered in the outset. The only circumstance which at all enabled me to overcome this was, that the longer a person has been dead the less repugnance do they evince in uttering his name. I, therefore, in the first instance, endeavoured to ascertain only the oldest names on record; and on subsequent occasions, when I found a native alone, and in a loquacious humour, I succeeded in filling up some of the blanks. Occasionally, round their fires at night, I managed to involve them in disputes regarding their ancestors, and, on these occasions, gleaned much of the information of which I was in want." In some of the Victorian tribes the prohibition to mention the names of the dead remained in force only during the period of mourning; in the Port Lincoln tribe of South Australia it lasted many years. Among the Chinook Indians of North America "custom forbids the mention of a dead man's name, at least till many years have elapsed after the bereavement." In the Twana, Chemakum, and Klallam tribes of Washington State the names of deceased members may be mentioned two or three years after their death. Among the Puyallup Indians the observance of the taboo is relaxed after several years, when the mourners have forgotten their grief; and if the deceased was a famous warrior, one of his descendants, for instance a great-grandson, may be named after him. In this tribe the taboo is not much observed at any time except by the relations of the dead. Similarly the Jesuit missionary Lafitau tells us that the name of the departed and the similar names of the survivors were, so to say, buried with the corpse until, the poignancy of their grief being abated, it pleased the relations to "lift up the tree and raise the dead." By raising the dead they meant bestowing the name of the departed upon some one else, who thus became to all intents and purposes a reincarnation of the deceased, since on the principles of savage philosophy the name is a vital part, if not the soul, of the man. When Father Lafitau arrived at St. Louis to begin work among the Iroquois, his colleagues decided

that in order to make a favourable impression on his flock the new shepherd should assume the native name of his deceased predecessor, Father Brüyas, “the celebrated missionary,” who had lived many years among the Indians and enjoyed their high esteem. But Father Brüyas had been called from his earthly labours to his heavenly rest only four short months before, and it was too soon, in the phraseology of the Iroquois, to “raise up the tree.” However, raised up it was in spite of them; and though some bolder spirits protested that their new pastor had wronged them by taking the name of his predecessor, “nevertheless,” says Father Lafitau, “they did not fail to regard me as himself in another form (*un autre lui-même*), since I had entered into all his rights.”

The same mode of bringing a dead man to life again by bestowing his name upon a living person was practised by the Hurons and other Indian tribes of Canada. An early French traveller in Canada has described the ceremony of resurrection as it was observed by a tribe whom he calls the Attiuoindarons. He says: “The Attiuoindarons practise resurrections of the dead, principally of persons who have deserved well of their country by their remarkable services, so that the memory of illustrious and valiant men revives in a certain way in others. Accordingly they call assemblies for this purpose and hold councils, at which they choose one of them who has the same virtues and qualities, if possible, as he had whom they wish to resuscitate; or at least he must be of irreproachable life, judged by the standard of a savage people. Wishing, then, to proceed to the resurrection they all stand up, except him who is to be resuscitated, to whom they give the name of the deceased, and all letting their hands down very low they pretend to lift him up from the earth, intending by that to signify that they draw the great personage deceased from the grave and restore him to life in the person of this other, who stands up and, after great acclamations of the people, receives the presents which the bystanders offer him. They further hold several feasts in his honour and regard him thenceforth as the deceased whom he represents; and by this means the memory of virtuous men and of good and valiant captains never dies among them.” Among the Hurons the ceremony took place between the death and the great Festival of the Dead, which was usually celebrated at intervals of twelve years. When it was resolved to resuscitate a departed warrior, the members of his family met and decided which of them was to be regarded as an incarnation of the deceased. If the dead man had been a famous chief and leader in war, his living representative and namesake succeeded to his functions. Presents were made to him, and he entertained the whole tribe at a magnificent banquet. His old robes were taken from him, and he was clad in richer raiment. Thereupon a herald proclaimed aloud the mystery of the incarnation. “Let all the people,” he said, “remain silent. Open your ears and shut your mouths. That which I am about to say is of importance. Our business is to resuscitate a dead man and to bring a great captain to life again.” With that he named the dead man and all his posterity, and reminded his hearers of the place and manner of his death. Then turning to him who was to succeed the departed, he lifted up his voice: “Behold him,” he cried, “clad in this beautiful robe. It is not he whom you saw these past days, who was called Nehap. He has given his name to another, and he himself is now called Etouait” (the name of the defunct). “Look on him as the true captain of this nation. It is he whom you are bound to obey; it is he whom you are bound to listen to; it is he whom you are bound to honour.” The new incarnation meanwhile maintained a dignified silence, and afterwards led the young braves out to war in order to prove that he had inherited the courage and virtues as well as the name of the dead chief. The Carrier Indians of British Columbia firmly believe “that a departed soul can, if it pleases, come back to the earth, in a human shape or body, in order to see his friends, who are still alive. Therefore, as they are about to set fire to the pile of wood on which a corpse is laid, a relation of the deceased person stands at his feet, and asks him if he will ever come back among them. Then the priest or magician, with a grave countenance, stands at the head of the corpse, and looks through both his hands on its naked breast, and

then raises them toward heaven, and blows through them, as they say, the soul of the deceased, that it may go and find, and enter into a relative. Or, if any relative is present, the priest will hold both his hands on the head of this person, and blow through them, that the spirit of the deceased may enter into him or her; and then, as they affirm, the first child which this person has will possess the soul of the deceased person." The writer does not say that the infant took the name of the deceased who was born again in it; but probably it did. For sometimes the priest would transfer the soul from a dead to a living person, who in that case took the name of the departed in addition to his own.

Among the Lapps, when a woman was with child and near the time of her delivery, a deceased ancestor or relation (known as a *Jabmek*) used to appear to her in a dream and inform her what dead person was to be born again in her infant, and whose name the child was therefore to bear. If the woman had no such dream, it fell to the father or the relatives to determine the name by divination or by consulting a wizard. Among the Khonds a birth is celebrated on the seventh day after the event by a feast given to the priest and to the whole village. To determine the child's name the priest drops grains of rice into a cup of water, naming with each grain a deceased ancestor. From the movements of the seed in the water, and from observations made on the person of the infant, he pronounces which of his progenitors has reappeared in him, and the child generally, at least among the northern tribes, receives the name of that ancestor. Among the Ewe-speaking peoples of Togo, in West Africa, when a woman is in hard labour, a fetish priest or priestess is called in to disclose the name of the deceased relative who has just been born again into the world in the person of the infant. The name of that relative is bestowed on the child. Among the Yorubas, soon after a child has been born, a priest of Ifa, the god of divination, appears on the scene to ascertain what ancestral soul has been reborn in the infant. As soon as this has been decided, the parents are told that the child must conform in all respects to the manner of life of the ancestor who now animates him or her, and if, as often happens, they profess ignorance, the priest supplies the necessary information. The child usually receives the name of the ancestor who has been born again in him. In Uganda a child is named with much ceremony by its grandfather, who bestows on it the name of one of its ancestors, but never the name of its father. The spirit of the deceased namesake then enters the child and assists him through life. Here the reincarnation of the ancestor appears to be effected by giving his name, and with it his soul, to his descendant. The same idea seems to explain a curious ceremony observed by the Makalaka of South Africa at the naming of a child. The spirit of the ancestor (*motsimo*), whose name the child is to bear, is represented by an elderly kinsman or kinswoman, according as the little one is a boy or a girl. A pretence is made of catching the representative of the spirit, and dragging him or her to the hut of the child's parents. Outside the hut the pretended spirit takes his seat and the skin of an animal is thrown over him. He then washes his hands in a vessel of water, eats some millet-porridge, and washes it down with beer. Meantime the women and girls dance gleefully round him, screaming or singing, and throw copper rings, beads, and so forth as presents into the vessel of water. The men do the same, but without dancing; after that they enter the hut to partake of a feast. The representative of the ancestral spirit now vanishes, and the child thenceforth bears his or her name. This ceremony may be intended to represent the reincarnation of the ancestral spirit in the child.

In the Nicobar Islands the names of dead relatives are tabooed for a generation; but when both their parents are dead, men and women are bound to assume the names of their deceased grandfathers or grandmothers respectively. Perhaps with the names they may be thought to inherit the spirits of their ancestors. Among the Tartars in the Middle Ages the names of the dead might not be uttered till the third generation. Among the Gilyaks of Saghalien no two

persons in the same tribe may bear the same name at the same time; for they think that if a child were to receive the name of a living man, either the child or the man would die within the year. When a man dies, his name may not be uttered until after the celebration of the festival at which they sacrifice a bear for the purpose of procuring plenty of game and fish. At that festival they call out the name of the deceased while they beat the skin of the bear. Thenceforth the name may be pronounced by every one, and it will be bestowed on a child who shall afterwards be born. These customs suggest that the Gilyaks, like other peoples, suppose the namesake of a deceased person to be his or her reincarnation; for their objection to let two living persons bear the same name seems to imply a belief that the soul goes with the name, and therefore cannot be shared by two people at the same time.

Among the Esquimaux of Bering Strait the first child born in a village after some one has died receives the dead person's name, and must represent him in subsequent festivals which are given in his honour. The day before the great feast of the dead the nearest male relative of the deceased goes to the grave and plants before it a stake bearing the crest or badge of the departed. This is the notice served to the ghost to attend the festival. Accordingly he returns from the spirit-land to the grave. Afterwards a song is sung at the grave inviting the ghost to repair to the assembly-house, where the people are gathered to celebrate the festival. The shade accepts the invitation and takes his place, with the other ghosts, in the fire-pit under the floor of the assembly-house. All the time of the festival, which lasts for several days, lamps filled with seal-oil are kept burning day and night in the assembly-house in order to light up the path to the spirit-land and enable the ghosts to find their way back to their old haunts on earth. When the spirits of the dead are gathered in the pit, and the proper moment has come, they all rise up through the floor and enter the bodies of their living namesakes. Offerings of food, drink, and clothes are now made to these namesakes, who eat and drink and wear the clothes on behalf of the ghosts. Finally, the shades, refreshed and strengthened by the banquet, are sent away back to their graves thinly clad in the spiritual essence of the clothes, while the gross material substance of the garments is retained by their namesakes. Here the reincarnation of the dead in the living is not permanent, but merely occasional and temporary. Still a special connexion may well be thought to subsist at all times between the deceased and the living person who bears his or her name.

In some cases the period during which the name of the deceased may not be pronounced seems to bear a close relation to the time during which his mortal remains may be supposed still to hold together. Thus, of some Indian tribes on the north-west coast of America it is said that they may not speak the name of a dead person "until the bones are finally disposed of." Among the Narrinyeri of South Australia the name might not be uttered until the corpse had decayed. In the Encounter Bay tribe of the same country the dead body is dried over a fire, packed up in mats, and carried about for several months among the scenes which had been familiar to the deceased in his life. Next it is placed on a platform of sticks and left there till it has completely decayed, whereupon the next of kin takes the skull and uses it as a drinking-cup. After that the name of the departed may be uttered without offence. Were it pronounced sooner his kinsmen would be deeply offended, and a war might be the result. The rule that the name of the dead may not be spoken until his body has mouldered away seems to point to a belief that the spirit continues to exist only so long as the body does so, and that, when the material frame is dissolved, the spiritual part of the man perishes with it, or goes away, or at least becomes so feeble and incapable of mischief that his name may be bandied about with impunity. This view is to some extent confirmed by the practice of the Arunta tribe in central Australia. We have seen that among them no one may mention the name of the deceased during the period of mourning for fear of disturbing and annoying the ghost, who is believed to be walking about at large. Some of the relations of the dead man, it is true,

such as his parents, elder brothers and sisters, paternal aunts, mother-in-law, and all his sons-in-law, whether actual or possible, are debarred all their lives from taking his name into their lips; but other people, including his wife, children, grandchildren, grandparents, younger brothers and sisters, and father-in-law, are free to name him so soon as he has ceased to walk the earth and hence to be dangerous. Some twelve or eighteen months after his death the people seem to think that the dead man has enjoyed his liberty long enough, and that it is time to confine his restless spirit within narrower bounds. Accordingly a grand battue or ghost-hunt brings the days of mourning to an end. The favourite haunt of the deceased is believed to be the burnt and deserted camp where he died. Here therefore on a certain day a band of men and women, the men armed with shields and spear-throwers, assemble and begin dancing round the charred and blackened remains of the camp, shouting and beating the air with their weapons and hands in order to drive away the lingering spirit from the spot he loves too well. When the dancing is over, the whole party proceed to the grave at a run, chasing the ghost before them. It is in vain that the unhappy ghost makes a last bid for freedom, and, breaking away from the beaters, doubles back towards the camp; the leader of the party is prepared for this manœuvre, and by making a long circuit adroitly cuts off the retreat of the fugitive. Finally, having run him to earth, they trample him down into the grave, dancing and stamping on the heaped-up soil, while with downward thrusts through the air they beat and force him under ground. There, lying in his narrow house, flattened and prostrate under a load of earth, the poor ghost sees his widow wearing the gay feathers of the ring-neck parrot in her hair, and he knows that the time of her mourning for him is over. The loud shouts of the men and women shew him that they are not to be frightened and bullied by him any more, and that he had better lie quiet. But he may still watch over his friends, and guard them from harm, and visit them in dreams.

§ 4. Names of Kings and other Sacred Persons tabooed.

When we see that in primitive society the names of mere commoners, whether alive or dead, are matters of such anxious care, we need not be surprised that great precautions should be taken to guard from harm the names of sacred kings and priests. Thus the name of the king of Dahomey is always kept secret, lest the knowledge of it should enable some evil-minded person to do him a mischief. The appellations by which the different kings of Dahomey have been known to Europeans are not their true names, but mere titles, or what the natives call “strong names” (*nyi-sese*). As a rule, these “strong names” are the first words of sentences descriptive of certain qualities. Thus Agaja, the name by which the fourth king of the dynasty was known, was part of a sentence meaning, “A spreading tree must be lopped before it can be cast into the fire”; and Tegbwesun, the name of the fifth king, formed the first word of a sentence which signified, “No one can take the cloth off the neck of a wild bull.” The natives seem to think that no harm comes of such titles being known, since they are not, like the birth-names, vitally connected with their owners. In the Galla kingdom of Ghera the birth-name of the sovereign may not be pronounced by a subject under pain of death, and common words which resemble it in sound are changed for others. Thus when a queen named Carre reigned over the kingdom, the word *hara*, which means smoke, was exchanged for *unno*; further, *arre*, “ass,” was replaced by *culula*; and *gudare*, “potato,” was dropped and *loccio* substituted for it. Among the Bahima of central Africa, when the king dies, his name is abolished from the language, and if his name was that of an animal, a new appellation must be found for the creature at once. For example, the king is often called a lion; hence at the death of a king named Lion a new name for lions in general has to be coined. Thus in the language of the Bahima the word for “lion” some years ago was *mpologoma*. But when a prominent chief of that name died, the word for lion was changed to *kichunchu*. Again, in the Bahima language the word for “nine” used to

be *mwenda*, a word which occurs with the same meaning but dialectical variations in the languages of other tribes of central and eastern Africa. But when a chief who bore the name Mwenda died, the old name for "nine" had to be changed, and accordingly the word *isaga* has been substituted for it. In Siam it used to be difficult to ascertain the king's real name, since it was carefully kept secret from fear of sorcery; any one who mentioned it was clapped into gaol. The king might only be referred to under certain high-sounding titles, such as "the august," "the perfect," "the supreme," "the great emperor," "descendant of the angels," and so on. In Burma it was accounted an impiety of the deepest dye to mention the name of the reigning sovereign; Burmese subjects, even when they were far from their country, could not be prevailed upon to do so; after his accession to the throne the king was known by his royal titles only. The proper name of the Emperor of China may neither be pronounced nor written by any of his subjects. Coreans were formerly forbidden, under severe penalties, to utter the king's name, which, indeed, was seldom known. When a prince ascends the throne of Cambodia he ceases to be designated by his real name; and if that name happens to be a common word in the language, the word is often changed. Thus, for example, since the reign of King Ang Duong the word *duong*, which meant a small coin, has been replaced by *dom*. In the island of Sunda it is taboo to utter any word which coincides with the name of a prince or chief. The name of the rajah of Bolang Mongondo, a district in the west of Celebes, is never mentioned except in case of urgent necessity, and even then his pardon must be asked repeatedly before the liberty is taken. In the island of Sumba people do not mention the real name of a prince, but refer to him by the name of the first slave whom in his youth he became master of. This slave is regarded by the chief as his second self, and he enjoys practical impunity for any misdeeds he may commit.

Among the Zulus no man will mention the name of the chief of his tribe or the names of the progenitors of the chief, so far as he can remember them; nor will he utter common words which coincide with or merely resemble in sound tabooed names. "As, for instance, the Zungu tribe say *mata* for *manzi* (water), and *inkosta* for *tshanti* (grass), and *embigatdu* for *umkondo* (assegai), and *inyatugo* for *enhlela* (path), because their present chief is Umfan-o inhlela, his father was Manzini, his grandfather Imkondo, and one before him Tshani." In the tribe of the Dwandwes there was a chief called Langa, which means the sun; hence the name of the sun was changed from *langa* to *gala*, and so remains to this day, though Langa died more than a hundred years ago. Once more, in the Xnumayo tribe the word meaning "to herd cattle" was changed from *alusa* or *ayusa* to *kagesa*, because u-Mayusi was the name of the chief. Besides these taboos, which were observed by each tribe separately, all the Zulu tribes united in tabooing the name of the king who reigned over the whole nation. Hence, for example, when Panda was king of Zululand, the word for "a root of a tree," which is *impando*, was changed to *nxabo*. Again, the word for "lies" or "slander" was altered from *amacebo* to *amakwata*, because *amacebo* contains a syllable of the name of the famous King Cetchwayo. These substitutions are not, however, carried so far by the men as by the women, who omit every sound even remotely resembling one that occurs in a tabooed name. At the king's kraal, indeed, it is sometimes difficult to understand the speech of the royal wives, as they treat in this fashion the names not only of the king and his forefathers, but even of his and their brothers back for generations. When to these tribal and national taboos we add those family taboos on the names of connexions by marriage which have been already described, we can easily understand how it comes about that in Zululand every tribe has words peculiar to itself, and that the women have a considerable vocabulary of their own. Members, too, of one family may be debarred from using words employed by those of another. The women of one kraal, for instance, may call a hyaena by its ordinary name; those of the next may use the common substitute; while in a third the substitute may also be unlawful and another term may have to be invented to supply its place. Hence the Zulu

language at the present day almost presents the appearance of being a double one; indeed, for multitudes of things it possesses three or four synonyms, which through the blending of tribes are known all over Zululand.

In Madagascar a similar custom everywhere prevails and has resulted, as among the Zulus, in producing certain dialectic differences in the speech of the various tribes. There are no family names in Madagascar, and almost every personal name is drawn from the language of daily life and signifies some common object or action or quality, such as a bird, a beast, a tree, a plant, a colour, and so on. Now, whenever one of these common words forms the name or part of the name of the chief of the tribe, it becomes sacred and may no longer be used in its ordinary signification as the name of a tree, an insect, or what not. Hence a new name for the object must be invented to replace the one which has been discarded. Often the new name consists of a descriptive epithet or a periphrasis. Thus when the princess Rabodo became queen in 1863 she took the name of Rasoherina. Now *soherina* was the word for the silkworm moth, but having been assumed as the name of the sovereign it could no longer be applied to the insect, which ever since has been called *zany-dandy*, "offspring of silk." So, again, if a chief had or took the name of an animal, say of the dog (*amboa*), and was known as Ramboa, the animal would henceforth be called by another name, probably a descriptive one, such as "the barker" (*famovo*) or "the driver away" (*fandroaka*), etc. In the western part of Imerina there was a chief called Andria-mamba; but *mamba* was one of the names of the crocodile, so the chiefs subjects might not call the reptile by that name and were always scrupulous to use another. It is easy to conceive what confusion and uncertainty may thus be introduced into a language when it is spoken by many little local tribes each ruled by a petty chief with his own sacred name. Yet there are tribes and people who submit to this tyranny of words as their fathers did before them from time immemorial. The inconvenient results of the custom are especially marked on the western coast of the island, where, on account of the large number of independent chieftains, the names of things, places, and rivers have suffered so many changes that confusion often arises, for when once common words have been banned by the chiefs the natives will not acknowledge to have ever known them in their old sense.

But it is not merely the names of living kings and chiefs which are tabooed in Madagascar; the names of dead sovereigns are equally under a ban, at least in some parts of the island. Thus among the Sakalavas, when a king has died, the nobles and people meet in council round the dead body and solemnly choose a new name by which the deceased monarch shall be henceforth known. The new name always begins with *andrian*, "lord," and ends with *arrivou*, "thousand," to signify that the late king ruled over a numerous nation. The body of the name is composed of an epithet or phrase descriptive of the deceased or of his reign. After the new name has been adopted, the old name by which the king was known during his life becomes sacred and may not be pronounced under pain of death. Further, words in the common language which bear any resemblance to the forbidden name also become sacred and have to be replaced by others. For example, after the death of King Makka the word *laka*, which meant a canoe, was abandoned and the word *fiounrâma* substituted for it. When Taoussi died, the word *taoussi*, signifying "beautiful," was replaced by *senga*. For similar reasons the word *ântétsi*, "old," was changed for *matoué*, which properly means "ripe"; the word *voûssi*, "castrated," was dropped and *manapaka*, "cut," adopted in its place; and the word for island (*nossi*) was changed into *varioû*, which signifies strictly "a place where there is rice." Again, when a Sakalava king named Marentoetsa died, two words fell into disuse, namely, the word *mâry* or *màre* meaning "true," and the word *toetsa* meaning "condition." Persons who uttered these forbidden words were looked on not only as grossly rude, but even as felons; they had committed a capital crime. However,

these changes of vocabulary are confined to the district over which the deceased king reigned; in the neighbouring districts the old words continue to be employed in the old sense. Again, among the Bara, another tribe of Madagascar, “the memory of their deceased kings is held in the very highest respect; the name of such kings is considered sacred—too sacred indeed for utterance, and no one is allowed to pronounce it. To such a length is this absurdity carried that the name of any person or thing whatsoever, if it bear a resemblance to the name of the deceased king, is no longer used, but some other designation is given. For instance, there was a king named Andriamasoandro. After his decease the word *masoandro* was no longer employed as the name of the sun, but *mahenika* was substituted for it.” An eminent authority on Madagascar has observed: “A curious fact, which has had a very marked influence on the Malagasy language, is the custom of no longer pronouncing the name of a dead person nor even the words which resemble it in their conclusions. The name is replaced by another. King Ramitra, since his decease, has been called Mahatenatenarivou, ‘the prince who has conquered a thousand foes,’ and a Malagasy who should utter his old name would be regarded as the murderer of the prince, and would therefore be liable to the confiscation of his property, or even to the penalty of death. It is easy accordingly to understand how the Malagasy language, one in its origin, has been corrupted, and how it comes about that at the present day there are discrepancies between the various dialects. In Menabe, since the death of King Vinany, the word *vilany*, meaning a pot, has been replaced by *fiketrehane*, ‘cooking vessel,’ whereas the old word continues in use in the rest of Madagascar. These changes, it is true, hardly take place except for kings and great chiefs.”

The sanctity attributed to the persons of chiefs in Polynesia naturally extended also to their names, which on the primitive view are hardly separable from the personality of their owners. Hence in Polynesia we find the same systematic prohibition to utter the names of chiefs or of common words resembling them which we have already met with in Zululand and Madagascar. Thus in New Zealand the name of a chief is held so sacred that, when it happens to be a common word, it may not be used in the language, and another has to be found to replace it. For example, a chief to the southward of East Cape bore the name of Maripi, which signified a knife, hence a new word (*nekra*) for knife was introduced, and the old one became obsolete. Elsewhere the word for water (*wai*) had to be changed, because it chanced to be the name of the chief, and would have been desecrated by being applied to the vulgar fluid as well as to his sacred person. This taboo naturally produced a plentiful crop of synonyms in the Maori language, and travellers newly arrived in the country were sometimes puzzled at finding the same things called by quite different names in neighbouring tribes. When a king comes to the throne in Tahiti, any words in the language that resemble his name in sound must be changed for others. In former times, if any man were so rash as to disregard this custom and to use the forbidden words, not only he but all his relations were immediately put to death. On the accession of King Otoo, which happened before Vancouver's visit to Tahiti, the proper names of all the chiefs were changed, as well as forty or fifty of the commonest words in the language, and every native was obliged to adopt the new terms, for any neglect to do so was punished with the greatest severity. When a certain king named Tu came to the throne of Tahiti the word *tu*, which means “to stand,” was changed to *tia*; *fetu*, “a star,” became *fetia*; *tui*, “to strike,” was turned into *tiai*, and so on. Sometimes, as in these instances, the new names were formed by merely changing or dropping some letter or letters of the original words; in other cases the substituted terms were entirely different words, whether chosen for their similarity of meaning though not of sound, or adopted from another dialect, or arbitrarily invented. But the changes thus introduced were only temporary; on the death of the king the new words fell into disuse, and the original ones were revived. Similarly in Samoa, when the name of a sacred chief was that of an animal or bird, the name of the

animal or bird was at once changed for another, and the old one might never again be uttered in that chief's district. For example, a sacred Samoan chief was named Pe'a, which means "flying-fox." Hence in his district a flying-fox was no longer called a flying-fox but a "bird of heaven" (*manu langi*).

In ancient Greece the names of the priests and other high officials who had to do with the performances of the Eleusinian mysteries might not be uttered in their lifetime. To pronounce them was a legal offence. The pedant in Lucian tells how he fell in with these august personages hailing along to the police court a ribald fellow who had dared to name them, though well he knew that ever since their consecration it was unlawful to do so, because they had become anonymous, having lost their old names and acquired new and sacred titles. From two inscriptions found at Eleusis it appears that the names of the priests were committed to the depths of the sea; probably they were engraved on tablets of bronze or lead, which were then thrown into deep water in the Gulf of Salamis. The intention doubtless was to keep the names a profound secret; and how could that be done more surely than by sinking them in the sea? what human vision could spy them glimmering far down in the dim depths of the green water? A clearer illustration of the confusion between the incorporeal and the corporeal, between the name and its material embodiment, could hardly be found than in this practice of civilised Greece.

In Togo, a district of West Africa, a secret religious society flourishes under the name of the Yewe order. Both men and women are admitted to it. The teaching and practice of the order are lewd and licentious. Murderers and debtors join it for the sake of escaping from justice, for the members are not amenable to the laws. On being initiated every one receives a new name, and thenceforth his or her old name may never be mentioned by anybody under penalty of a heavy fine. Should the old name be uttered in a quarrel by an uninitiated person, the aggrieved party, who seems to be oftener a woman than a man, pretends to fall into a frenzy, and in this state rushes into the house of the offender, smashes his pots, destroys the grass roof, and tears down the fence. Then she runs away into the forest, where the simple people believe that she is changed into a leopard. In truth she slinks by night into the conventual buildings of the order, and is there secretly kept in comfort till the business is settled. At last she is publicly brought back by the society with great pomp, her body smeared with red earth and adorned with an artificial tail in order to make the ignorant think that she has really been turned into a leopard.

When the name is held to be a vital part of the person, it is natural to suppose that the mightier the person the more potent must be his name. Hence the names of supernatural beings, such as gods and spirits, are commonly believed to be endowed with marvellous virtues, and the mere utterance of them may work wonders and disturb the course of nature. The Warramunga of central Australia believe in a formidable but mythical snake called the Wollunqua, which lives in a pool. When they speak of it amongst themselves they designate it by another name, because they say that, were they to call the snake too often by its real name, they would lose control over the creature, and it would come out of the water and eat them all up. For this reason, too, the sacred books of the Mongols, which narrate the miraculous deeds of the divinities, are allowed to be read only in spring or summer; because at other seasons the reading of them would bring on tempests or snow. When Mr. Campbell was travelling with some Bechuanas, he asked them one morning after breakfast to tell him some of their stories, but they informed him that were they to do so before sunset, the clouds would fall from the heavens upon their heads. The Sulka of New Britain believe in a certain hostile spirit named Kot, to whose wrath they attribute earthquakes, thunder, and lightning. Among the things which provoke his vengeance is the telling of tales and legends by day; stories should be told only at evening or night. Most of the rites of the Navajo Indians may be

celebrated only in winter, when the thunder is silent and the rattlesnakes are hibernating. Were they to tell of their chief gods or narrate the myths of the days of old at any other time, the Indians believe that they would soon be killed by lightning or snake-bites. When Dr. Washington Matthews was in New Mexico, he often employed as his guide and informant a liberal-minded member of the tribe who had lived with Americans and Mexicans and seemed to be free from the superstitions of his fellows. "On one occasion," says Dr. Matthews, "during the month of August, in the height of the rainy season, I had him in my study conversing with him. In an unguarded moment, on his part, I led him into a discussion about the gods of his people, and neither of us had noticed a heavy storm coming over the crest of the Zuñi mountains, close by. We were just talking of Estsanatlehi, the goddess of the west, when the house was shaken by a terrific peal of thunder. He rose at once, pale and evidently agitated, and, whispering hoarsely, 'Wait till Christmas; they are angry,' he hurried away. I have seen many such evidences of the deep influence of this superstition on them." Among the Iroquois the rehearsal of tales of wonder formed the chief entertainment at the fireside in winter. But all the summer long, from the time when the trees began to bud in spring till the red leaves of autumn began to fall, these marvellous stories were hushed and historical traditions took their place. Other Indian tribes also will only tell their mythic tales in winter, when the snow lies like a pall on the ground, and lakes and rivers are covered with sheets of ice; for then the spirits underground cannot hear the stories in which their names are made free with by merry groups gathered round the fire. The Yabims of German New Guinea tell their magical tales especially at the time when the yams have been gathered and are stored in the houses. Such tales are told at evening by the light of the fire to a circle of eager listeners, the narrative being broken from time to time with a song in which the hearers join. The telling of these stories is believed to promote the growth of the crops. Hence each tale ends with a wish that there may be many yams, that the taro may be big, the sugar-cane thick, and the bananas long.

Among the Kwakiutl Indians of British Columbia the superstition about names has affected in a very curious way the social structure of the tribe. The nobles have two different sets of names, one for use in winter and the other in summer. Their winter names are those which were given them at initiation by their guardian spirits, and as these spirits appear to their devotees only in winter, the names which they bestowed on the Indians may not be pronounced in summer. Conversely the summer names may not be used in winter. The change from summer to winter names takes place from the moment when the spirits are supposed to be present, and it involves a complete transformation of the social system; for whereas during summer the people are grouped in clans, in winter they are grouped in societies, each society consisting of all persons who have been initiated by the same spirit and have received from him the same magical powers. Thus among these Indians the fundamental constitution of society changes with the seasons: in summer it is organised on a basis of kin, in winter on a basis of spiritual affinity: for one half the year it is civil, for the other half religious.

§ 5. Names of Gods tabooed.

Primitive man creates his gods in his own image. Xenophanes remarked long ago that the complexion of negro gods was black and their noses flat; that Thracian gods were ruddy and blue-eyed; and that if horses, oxen, and lions only believed in gods and had hands wherewith to portray them, they would doubtless fashion their deities in the form of horses, and oxen, and lions. Hence just as the furtive savage conceals his real name because he fears that sorcerers might make an evil use of it, so he fancies that his gods must likewise keep their true names secret, lest other gods or even men should learn the mystic sounds and thus be able to conjure with them. Nowhere was this crude conception of the secrecy and magical

virtue of the divine name more firmly held or more fully developed than in ancient Egypt, where the superstitions of a dateless past were embalmed in the hearts of the people hardly less effectually than the bodies of cats and crocodiles and the rest of the divine menagerie in their rock-cut tombs. The conception is well illustrated by a story which tells how the subtle Isis wormed his secret name from Ra, the great Egyptian god of the sun. Isis, so runs the tale, was a woman mighty in words, and she was weary of the world of men, and yearned after the world of the gods. And she meditated in her heart, saying, "Cannot I by virtue of the great name of Ra make myself a goddess and reign like him in heaven and earth?" For Ra had many names, but the great name which gave him all power over gods and men was known to none but himself. Now the god was by this time grown old; he slobbered at the mouth and his spittle fell upon the ground. So Isis gathered up the spittle and the earth with it, and kneaded thereof a serpent and laid it in the path where the great god passed every day to his double kingdom after his heart's desire. And when he came forth according to his wont, attended by all his company of gods, the sacred serpent stung him, and the god opened his mouth and cried, and his cry went up to heaven. And the company of gods cried, "What aileth thee?" and the gods shouted, "Lo and behold!" But he could not answer; his jaws rattled, his limbs shook, the poison ran through his flesh as the Nile floweth over the land. When the great god had stilled his heart, he cried to his followers, "Come to me, O my children, offspring of my body. I am a prince, the son of a prince, the divine seed of a god. My father devised my name; my father and my mother gave me my name, and it remained hidden in my body since my birth, that no magician might have magic power over me. I went out to behold that which I have made, I walked in the two lands which I have created, and lo! something stung me. What it was, I know not. Was it fire? was it water? My heart is on fire, my flesh trembleth, all my limbs do quake. Bring me the children of the gods with healing words and understanding lips, whose power reacheth to heaven." Then came to him the children of the gods, and they were very sorrowful. And Isis came with her craft, whose mouth is full of the breath of life, whose spells chase pain away, whose word maketh the dead to live. She said, "What is it, divine Father? what is it?" The holy god opened his mouth, he spake and said, "I went upon my way, I walked after my heart's desire in the two regions which I have made to behold that which I have created, and lo! a serpent that I saw not stung me. Is it fire? is it water? I am colder than water, I am hotter than fire, all my limbs sweat, I tremble, mine eye is not steadfast, I behold not the sky, the moisture bedeweth my face as in summer-time." Then spake Isis, "Tell me thy name, divine Father, for the man shall live who is called by his name." Then answered Ra, "I created the heavens and the earth, I ordered the mountains, I made the great and wide sea, I stretched out the two horizons like a curtain. I am he who openeth his eyes and it is light, and who shutteth them and it is dark. At his command the Nile riseth, but the gods know not his name. I am Khepera in the morning, I am Ra at noon, I am Tum at eve." But the poison was not taken away from him; it pierced deeper, and the great god could no longer walk. Then said Isis to him, "That was not thy name that thou spakest unto me. Oh tell it me, that the poison may depart; for he shall live whose name is named." Now the poison burned like fire, it was hotter than the flame of fire. The god said, "I consent that Isis shall search into me, and that my name shall pass from my breast into hers." Then the god hid himself from the gods, and his place in the ship of eternity was empty. Thus was the name of the great god taken from him, and Isis, the witch, spake, "Flow away poison, depart from Ra. It is I, even I, who overcome the poison and cast it to the earth; for the name of the great god hath been taken away from him. Let Ra live and let the poison die." Thus spake great Isis, the queen of the gods, she who knows Ra and his true name.

Thus we see that the real name of the god, with which his power was inextricably bound up, was supposed to be lodged, in an almost physical sense, somewhere in his breast, from which it could be extracted by a sort of surgical operation and transferred with all its supernatural

powers to the breast of another. In Egypt attempts like that of Isis to appropriate the power of a high god by possessing herself of his name were not mere legends told of the mythical beings of a remote past; every Egyptian magician aspired to wield like powers by similar means. For it was believed that he who possessed the true name possessed the very being of god or man, and could force even a deity to obey him as a slave obeys his master. Thus the art of the magician consisted in obtaining from the gods a revelation of their sacred names, and he left no stone unturned to accomplish his end. When once a god in a moment of weakness or forgetfulness had imparted to the wizard the wondrous lore, the deity had no choice but to submit humbly to the man or pay the penalty of his contumacy. In one papyrus we find the god Typhon thus adjured: "I invoke thee by thy true names, in virtue of which thou canst not refuse to hear me"; and in another the magician threatens Osiris that if the god does not do his bidding he will name him aloud in the port of Busiris. So in the Lucan the Thessalian witch whom Sextus Pompeius consulted before the battle of Pharsalia threatens to call up the Furies by their real names if they will not do her bidding. In modern Egypt the magician still works his old enchantments by the same ancient means; only the name of the god by which he conjures is different. The man who knows "the most great name" of God can, we are told, by the mere utterance of it kill the living, raise the dead, transport himself instantly wherever he pleases, and perform any other miracle. Similarly among the Arabs of North Africa at the present day "the power of the name is such that when one knows the proper names the jinn can scarcely help answering the call and obeying; they are the servants of the magical names; in this case the incantation has a constraining quality which is for the most part very strongly marked. When Ibn el Hâdjedj et-Tlemsânî relates how the jinn yielded up their secrets to him, he says, 'I once met the seven kings of the jinn in a cave and I asked them to teach me the way in which they attack men and women, causing them to fall sick, smiting them, paralysing them, and the like. They all answered me: "If it were anybody but you we would teach that to nobody, but you have discovered the bonds, the spells, and the names which compel us; were it not for the names by which you have constrained us, we would not have answered to your call." ' ' So, too, "the Chinese of ancient times were dominated by the notion that beings are intimately associated with their names, so that a man's knowledge of the name of a spectre might enable him to exert power over the latter and to bend it to his will."

The belief in the magic virtue of divine names was shared by the Romans. When they sat down before a city, the priests addressed the guardian deity of the place in a set form of prayer or incantation, inviting him to abandon the beleaguered city and come over to the Romans, who would treat him as well as or better than he had ever been treated in his old home. Hence the name of the guardian deity of Rome was kept a profound secret, lest the enemies of the republic might lure him away, even as the Romans themselves had induced many gods to desert, like rats, the falling fortunes of cities that had sheltered them in happier days. Nay, the real name, not merely of its guardian deity, but of the city itself, was wrapt in mystery and might never be uttered, not even in the sacred rites. A certain Valerius Soranus, who dared to divulge the priceless secret, was put to death or came to a bad end. In like manner, it seems, the ancient Assyrians were forbidden to mention the mystic names of their cities; and down to modern times the Cheremiss of the Caucasus keep the names of their communal villages secret from motives of superstition.

If the reader has had the patience to follow this long and perhaps tedious examination of the superstitions attaching to personal names, he will probably agree that the mystery in which the names of royal personages are so often shrouded is no isolated phenomenon, no arbitrary expression of courtly servility and adulation, but merely the particular application of a

general law of primitive thought, which includes within its scope common folk and gods as well as kings and priests.

§ 6. Common Words tabooed.

But personal names are not the only words which superstitious fears have banished from everyday use. In many cases similar motives forbid certain persons at certain times to call common things by common names, thus obliging them either to refrain from mentioning these things altogether or to designate them by special terms or phrases reserved for such occasions. A consideration of these cases follows naturally on an examination of the taboos imposed upon personal names; for personal names are themselves very often ordinary terms of the language, so that an embargo laid on them necessarily extends to many expressions current in the commerce of daily life. And though a survey of some of the interdicts on common words is not strictly necessary for our immediate purpose, it may serve usefully to complete our view of the transforming influence which superstition has exercised on language. I shall make no attempt to subject the examples to a searching analysis or a rigid classification, but will set them down as they come in a rough geographical order. And since my native land furnishes as apt instances of the superstition as any other, we may start on our round from Scotland.

In the Atlantic Ocean, about six leagues to the west of Gallon Head in the Lewis, lies a small group of rocky islets known as the Flannan Islands. Sheep and wild fowl are now their only inhabitants, but remains of what are described as Druidical temples and the title of the Sacred Isles given them by Buchanan suggest that in days gone by piety or superstition may have found a safe retreat from the turmoil of the world in these remote solitudes, where the dashing of the waves and the strident scream of the sea-birds are almost the only sounds that break the silence. Once a year, in summer-time, the inhabitants of the adjacent lands of the Lewis, who have a right to these islands, cross over to them to fleece their sheep and kill the wild fowl for the sake both of their flesh and their feathers. They regard the islands as invested with a certain sanctity, and have been heard to say that none ever yet landed in them but found himself more disposed to devotion there than anywhere else. Accordingly the fowlers who go thither are bound, during the whole of the time that they ply their business, to observe very punctiliously certain quaint customs, the transgression of which would be sure, in their opinion, to entail some serious inconvenience. When they have landed and fastened their boat to the side of a rock, they clamber up into the island by a wooden ladder, and no sooner are they got to the top, than they all uncover their heads and make a turn sun-ways round about, thanking God for their safety. On the biggest of the islands are the ruins of a chapel dedicated to St. Flannan. When the men come within about twenty paces of the altar, they all strip themselves of their upper garments at once and betake themselves to their devotions, praying thrice before they begin fowling. On the first day the first prayer is offered as they advance towards the chapel on their knees; the second is said as they go round the chapel; and the third is said in or hard by the ruins. They also pray thrice every evening, and account it unlawful to kill a fowl after evening prayers, as also to kill a fowl at any time with a stone. Another ancient custom forbids the crew to carry home in the boat any suet of the sheep they slaughter in the islands, however many they may kill. But what here chiefly concerns us is that so long as they stay on the islands they are strictly forbidden to use certain common words, and are obliged to substitute others for them. Thus it is absolutely unlawful to call the island of St. Kilda, which lies thirty leagues to the southward, by its proper Gaelic name of Hirt; they must call it only "the high country." They may not so much as once name the islands in which they are fowling by the ordinary name of Flannan; they must speak only of "the country." "There are several other things that must not be called by their common names: *e.g.* *visk*, which in the language of the natives signifies water, they call burn; a rock,

which in their language is *creg*, must here be called *cruey*, *i.e.* hard; shore in their language expressed by *claddach*, must here be called *vah*, *i.e.* a cave; sour in their language is expressed *gort*, but must here be called *gaire*, *i.e.* sharp; slippery, which is expressed *bog*, must be called soft; and several other things to this purpose." When Highlanders were in a boat at sea, whether sailing or fishing, they were forbidden to call things by the names by which they were known on land. Thus the boat-hook should not be called a *croman*, but a *chliob*; a knife not *sgian*, but "the sharp one" (*a ghiar*); a seal not *ròn*, but "the bald beast" (*béisd mhaol*); a fox not *sionnach*, but "the red dog" (*madadh ruadh*); the stone for anchoring the boat not *clach*, but "hardness" (*cruaidh*). This practice now prevails much more on the east coast than on the west, where it may be said to be generally extinct. It is reported to be carefully observed by the fishermen about the Cromarty Firth. Among the words tabooed by fishermen in the north of Scotland when they are at sea are minister, salmon, hare, rabbit, rat, pig, and porpoise. At the present day if some of the boats that come to the herring-fishing at Wick should meet a salmon-boat from Reay in Caithness, the herring-men will not speak to, nor even look at, the salmon-fishers.

When Shetland fishermen are at sea, they employ a nomenclature peculiar to the occasion, and hardly anything may be mentioned by its usual name. The substituted terms are mostly of Norwegian origin, for the Norway men were reported to be good fishers. In setting their lines the Shetland fishermen are bound to refer to certain objects only by some special words or phrases. Thus a knife is then called a *skunie* or *tullie*; a church becomes *buanhoos* or *banehoos*; a minister is *upstanda* or *haydeen* or *prestingolva*; the devil is *da auld chield*, *da sorrow*, *da ill-healt* (health), or *da black tief*; a cat is *kirser*, *fitting*, *vengla*, or *foodin*. On the north-east coast of Scotland there are some villages, of which the inhabitants never pronounce certain words and family names when they are at sea; each village has its peculiar aversion to one or more of these words, among which are "minister," "kirk," "swine," "salmon," "trout," and "dog." When a church has to be referred to, as often happens, since some of the churches serve as land-marks to the fishermen at sea, it is spoken of as the "bell-hoose" instead of the "kirk." A minister is called "the man wi' the black quyte." It is particularly unlucky to utter the word "sow" or "swine" or "pig" while the line is being baited; if any one is foolish enough to do so, the line is sure to be lost. In some villages on the coast of Fife a fisherman who hears the ill-omened word spoken will cry out "Cold iron." In the village of Buckie there are some family names, especially Ross, and in a less degree Coull, which no fisherman will pronounce. If one of these names be mentioned in the hearing of a fisherman, he spits or, as he calls it, "chiffs." Any one who bears the dreaded name is called a "chiffer-oot," and is referred to only by a circumlocution such as "The man it diz so in so," or "the laad it lives at such and such a place." During the herring-season men who are unlucky enough to inherit the tabooed names have little chance of being hired in the fishing-boats; and sometimes, if they have been hired before their names were known, they have been refused their wages at the end of the season, because the boat in which they sailed had not been successful, and the bad luck was set down to their presence in it. Although in Scotland superstitions of this kind appear to be specially incident to the callings of fishermen and fowlers, other occupations are not exempt from them. Thus in the Outer Hebrides the fire of a kiln is not called fire (*teine*) but *aingeal*. Such a fire, it is said, is a dangerous thing, and ought not to be referred to except by a euphemism. "Evil be to him who called it fire or who named fire in the kiln. It was considered the next thing to setting it on fire." Again, in some districts of Scotland a brewer would have resented the use of the word "water" in reference to the work in which he was engaged. "Water be your part of it," was the common retort. It was supposed that the use of the word would spoil the brewing. The Highlanders say that when you meet a hobgoblin, and the fiend asks what is the name of your dirk, you should not call it a dirk (*biodag*), but "my

father's sister" (*piuthar m'athar*) or "my grandmother's sister" (*piuthar mo sheanamhair*) or by some similar title. If you do not observe this precaution, the goblin will lay such an enchantment on the blade that you will be unable to stab him with it; the dirk will merely make a tinkling noise against the soft impalpable body of the fiend.

Manx fishermen think it unlucky to mention a horse or a mouse on board a fishing-boat. The fishermen of Dieppe on board their boats will not speak of several things, for instance priests and cats. German huntsmen, from motives of superstition, call everything by names different from those in common use. In some parts of Bavaria the farmer will not mention a fox by its proper name, lest his poultry-yard should suffer from the ravages of the animal. So instead of *Fuchs* he calls the beast *Loinl*, *Henoloinl*, *Henading*, or *Henabou*. In Prussia and Lithuania they say that in the month of December you should not call a wolf a wolf but "the vermin" (*das Gewürm*), otherwise you will be torn in pieces by the werewolves. In various parts of Germany it is a rule that certain animals may not be mentioned by their proper names in the mystic season between Christmas and Twelfth Night. Thus in Thüringen they say that if you would be spared by the wolves you must not mention their name at this time. In Mecklenburg people think that were they to name a wolf on one of these days the animal would appear. A shepherd would rather mention the devil than the wolf at this season; and we read of a farmer who had a bailiff named Wolf, but did not dare to call the man by his name between Christmas and Twelfth Night, referring to him instead as Herr Undeert (Mr. Monster). In Quatzow, a village of Mecklenburg, there are many animals whose common names are disused at this season and replaced by others: thus a fox is called "long-tail," and a mouse "leg-runner" (*Boenlöper*). Any person who disregards the custom has to pay a fine. In the Mark of Brandenburg they say that between Christmas and Twelfth Night you should not speak of mice as mice but as *dinger*; otherwise the field-mice would multiply excessively. According to the Swedish popular belief, there are certain animals which should never be spoken of by their proper names, but must always be signified by euphemisms and kind allusions to their character. Thus, if you speak slightly of the cat or beat her, you must be sure not to mention her name; for she belongs to the hellish crew, and is a friend of the mountain troll, whom she often visits. Great caution is also needed in talking of the cuckoo, the owl, and the magpie, for they are birds of witchery. The fox must be called "blue-foot," or "he that goes in the forest"; and rats are "the long-bodied," mice "the small grey," and the seal "brother Lars." Swedish herd-girls, again, believe that if the wolf and the bear be called by other than their proper and legitimate names, they will not attack the herd. Hence they give these brutes names which they fancy will not hurt their feelings. The number of endearing appellations lavished by them on the wolf is legion; they call him "golden tooth," "the silent one," "grey legs," and so on; while the bear is referred to by the respectful titles of "the old man," "grandfather," "twelve men's strength," "golden feet," and more of the same sort. Even inanimate things are not always to be called by their usual names. For instance, fire is sometimes to be called "heat" (*hetta*) not *eld* or *ell*; water for brewing must be called *lag* or *löu*, not *vatn*, else the beer would not turn out so well. The Huzuls of the Carpathians, a pastoral people, who dread the ravages of wild beasts on their flocks and herds, are unwilling to mention the bear by his proper name, so they call him respectfully "the little uncle" or "the big one." In like manner and for similar reasons they name the wolf "the little one" and the serpent "the long one." They may not say that wool is scalded, or in the heat of summer the sheep would rub themselves till their sides were raw; so they merely say that the wool is warmed. The Lapps fear to call the bear by his true name, lest he should ravage their herds; so they speak of him as "the old man with the coat of skin," and in cooking his flesh to furnish a meal they may not refer to the work they are engaged in as "cooking," but must designate it by a special term. The Finns speak of the bear as "the apple of the wood," "beautiful honey-paw," "the pride of the thicket," "the old

man," and so on. And in general a Finnish hunter thinks that he will have poor sport if he calls animals by their real names; the beasts resent it. The fox and the hare are only spoken of as "game," and the lynx is termed "the forest cat," lest it should devour the sheep. Esthonian peasants are very loth to mention wild beasts by their proper names, for they believe that the creatures will not do so much harm if only they are called by other names than their own. Hence they speak of the bear as "broad foot" and the wolf as "grey coat."

The natives of Siberia are unwilling to call a bear a bear; they speak of him as "the little old man," "the master of the forest," "the sage," "the respected one." Some who are more familiar style him "my cousin." The Kamtchatkans reverence the whale, the bear, and the wolf from fear, and never mention their names when they meet them, believing that they understand human speech. Further, they think that mice also understand the Kamtchatkan language; so in autumn, when they rob the field-mice of the bulbs which these little creatures have laid up in their burrows as a store against winter, they call everything by names different from the ordinary ones, lest the mice should know what they were saying. Moreover, they leave odds and ends, such as old rags, broken needles, cedar-nuts, and so forth, in the burrows, to make the mice think that the transaction has been not a robbery but a fair exchange. If they did not do that, they fancy that the mice would go and drown or hang themselves out of pure vexation; and then what would the Kamtchatkans do without the mice to gather the bulbs for them? They also speak kindly to the animals, and beg them not to take it ill, explaining that what they do is done out of pure friendship. The Cherokee Indians regard the rattlesnake as a superior being and take great pains not to offend him. They never say that a man has been bitten by a snake but that he has been "scratched by a briar." In like manner, when an eagle has been shot for a ceremonial dance, it is announced that "a snowbird has been killed." The purpose is to deceive the spirits of rattlesnakes or eagles which might be listening. The Esquimaux of Bering Strait think that some animals can hear and understand what is said of them at a distance. Hence, when a hunter is going out to kill bears he will speak of them with the greatest respect and give out that he is going to hunt some other beast. Thus the bears will be deceived and taken unawares. Among the Esquimaux of Baffin Land, women in mourning may not mention the names of any animals. Among the Thompson Indians of British Columbia, children may not name the coyote or prairie wolf in winter, lest he should turn on his back and so bring cold weather.

The Arabs call a man who has been bitten by a snake "the sound one"; leprosy or the scab they designate "the blessed disease"; the left side they name "the lucky side"; they will not speak of a lion by his right name, but refer to him as for example "the fox." In Africa the lion is alluded to with the same ceremonious respect as the wolf and the bear in northern Europe and Asia. The Arabs of Algeria, who hunt the lion, speak of him as Mr. John Johnson (Johan-ben-el-Johan), because he has the noblest qualities of man and understands all languages. Hence, too, the first huntsman to catch sight of the beast points at him with his finger and says, "He is not there"; for if he were to say "He is there," the lion would eat him up. Except under dire necessity the Waziguas of eastern Africa never mention the name of the lion from fear of attracting him. They call him "the owner of the land" or "the great beast." The negroes of Angola always use the word *ngana* ("sir") in speaking of the same noble animal, because they think that he is "fetish" and would not fail to punish them for disrespect if they omitted to do so. Bushmen and Bechuanas both deem it unlucky to speak of the lion by his proper name; the Bechuanas call him "the boy with the beard." During an epidemic of smallpox in Mombasa, British East Africa, it was noticed that the people were unwilling to mention the native name (*ndui*) of the disease. They referred to it either as "grains of corn" (*tete*) or simply as "the bad disease." So the Chinese of Amoy are averse to speak of fever by its proper name; they prefer to call it "beggar's disease," hoping thereby to make the demons of

fever imagine that they despise it and that therefore it would be useless to attack them. Some of the natives of Nigeria dread the owl as a bird of ill omen and are loth to mention its name, preferring to speak of it by means of a circumlocution such as “the bird that makes one afraid.” The Herero think that if they see a snake and call it by its name, the reptile will sting them, but that if they call it a strap (*omuvia*) it will lie still. When Nandi warriors are out on an expedition, they may not call a knife a knife (*chepkeswet*); they must call it “an arrow for bleeding cattle” (*loñget*); and none of the party may utter the usual word employed in greeting males. In Madagascar there seems to be an aversion to pronouncing the word for lightning (*vàratra*); the word for mud (*fòtaka*) is sometimes substituted for it. Again, it is strictly forbidden to mention the word for crocodile (*màmba*) near some rivers of Madagascar; and if clothes should be wetted in certain other rivers of the island, you may not say that they are wet (*lèna*); you must say that they are on fire (*may*) or that they are drinking water (*misòtro ràno*). A certain spirit, who used to inhabit a lake in Madagascar, entertained a rooted aversion to salt, so that whenever the thing was carried past the lake in which he resided it had to be called by another name, or it would all have been dissolved and lost. The persons whom he inspired had to veil their references to the obnoxious article under the disguise of “sweet peppers.” In a West African story we read of a man who was told that he would die if ever the word for salt was pronounced in his hearing. The fatal word was pronounced, and die he did sure enough, but he soon came to life again with the help of a magical wooden pestle of which he was the lucky possessor.

In India the animals whose names are most commonly tabooed are the snake and the tiger, but the same tribute of respect is paid to other beasts also. Sayids and Mussulmans of high rank in northern India say that you should never call a snake by its proper name, but always describe it either as a tiger (*sher*) or a string (*rassi*). In Telingana the euphemistic name for a snake, which should always be employed, is worm or insect (*purugu*); if you call a cobra by its proper name, the creature will haunt you for seven years and bite you at the first opportunity. Ignorant Bengalee women will not mention a snake or a thief by their proper names at night, for fear that one or other might appear. When they have to allude to a serpent, they call it “the creeping thing”; when they speak of a thief, they say “the unwelcome visitor.” Other euphemisms for the snake in northern India are “maternal uncle” and “rope.” They say that if a snake bites you, you should not mention its name, but merely observe “A rope has touched me.” Natives of Travancore are careful not to speak disrespectfully of serpents. A cobra is called “the good lord” (*nalla tambiran*) or “the good snake” (*nalla pambu*). While the Malayalies of the Shervaray Hills are hunting the tiger, they speak of the beast only as “the dog.” The Canarese of southern India call the tiger either “the dog” or “the jackal”; they think that if they called him by his proper name, he would be sure to carry off one of them. The jungle people of northern India, who meet the tiger in his native haunts, will not pronounce his name, but speak of him as “the jackal” (*gídar*), or “the beast” (*janwar*), or use some other euphemistic term. In some places they treat the wolf and the bear in the same fashion. The Pankas of South Mirzapur will not name the tiger, bear, camel, or donkey by their proper names; the camel they call “long neck.” Other tribes of the same district only scruple to mention certain animals in the morning. Thus, the Kharwars, a Dravidian tribe, will not name a pig, squirrel, hare, jackal, bear, monkey, or donkey in the morning hours; if they have to allude to these animals at that time, they call them by special names. For instance, they call the hare “the four-footed one” or “he that hides in the rocks”; while they speak of the bear as *jigariya*, which being interpreted means “he with the liver of compassion.” If the Bhuiyars are absolutely obliged to refer to a monkey or a bear in the morning, they speak of the monkey as “the tree-climber” and the bear as “the eater of white ants.” They would not mention a crocodile. Among the Pataris the matutinal title of the bear is “the hairy creature.” The Kols, a Dravidian race of northern India, will not speak of death

or beasts of prey by their proper names in the morning. Their name for the tiger at that time of day is "he with the claws," and for the elephant "he with the teeth." The forests of the Sundarbans, the district at the mouth of the Ganges, are full of man-eating tigers and the annual loss of life among the woodcutters is heavy. Here accordingly the ferocious animal is not called a tiger but a jackal (*çial*).

In Annam the fear inspired by tigers, elephants, and other wild animals induces the people to address these creatures with the greatest respect as "lord" or "grandfather," lest the beasts should take umbrage and attack them. The tiger reigns supreme in the forests of Tonquin and Cochin-China, and the peasants honour him as a maleficent deity. In talking of him they always call him *ong*, which means monsieur or grandfather. They are convinced that if they dared to speak of him disrespectfully, he would avenge the insult. In Siam there are many people who would never venture to utter the words tiger or crocodile in a spot where these terrible creatures might be in hiding, lest the sound of their names should attract the attention of the beasts towards the speakers. When the Malays of Patani Bay in Siam are in the jungle and think there is a tiger near, they will either speak of him in complimentary terms as the "grandfather of the woods" or only mention him in a whisper. In Laos, while a man is out hunting elephants he is obliged to give conventional names to all common objects, which creates a sort of special language for elephant-hunters. So when the Chams and Orang-Glaï of Indo-China are searching for the precious eagle-wood in the forest, they must employ an artificial jargon to designate most objects of everyday life; thus, for example, fire is called "the red," a she-goat becomes "a spider," and so on. Some of the terms which compose the jargon are borrowed from the dialects of neighbouring tribes. When the Mentras or aborigines of Malacca are searching for what they call *gaharu* (*lignum aloes*) they are obliged to use a special language, avoiding the words in ordinary use. At such times they call *gaharu* by the name of *tabak*, and they speak of a snake as "the long animal" and of the elephant as "the great animal." They have also to observe a number of other taboos, particularly in the matter of diet. If a man has found a promising *gaharu* tree, and on going home dreams that the guardian spirit of the tree (*hantu gaharu*) demands a human victim as the price of his property, the dreamer will try next day to catch somebody asleep and to smear his forehead with lime. This is a sign to the guardian spirit of the tree, who accordingly carries away the soul of the sleeper to the land of the dead by means of a fever or other ailment, whereas the original dreamer gets a good supply of aloes wood.

At certain seasons of the year parties of Jakuns and Binuas go out to seek for camphor in the luxuriant forests of their native country, which is the narrow southern extremity of the Malay Peninsula, the Land's End of Asia. They are absent for three or four months together, and during the whole of this time the use of the ordinary Malay language is forbidden to them, and they have to speak a special language called by them the *bassa kapur* (camphor language) or *pantang kapur*. Indeed not only have the searchers to employ this peculiar language, but even the men and women who stay at home in the villages are obliged to speak it while the others are away looking for the camphor. They believe that a spirit presides over the camphor trees, and that without propitiating him they could not obtain the precious gum; the shrill cry of a species of cicada, heard at night, is supposed to be the voice of the spirit. If they failed to employ the camphor language, they think that they would have great difficulty in finding the camphor trees, and that even when they did find them the camphor would not yield itself up to the collector. The camphor language consists in great part of words which are either Malayan or of Malay origin; but it also contains many words which are not Malayan but are presumed to be remains of the original Jakun dialects now almost extinct in these districts. The words derived from Malayan are formed in many cases by merely substituting a descriptive phrase for the common term. Thus instead of rice they say "grass

fruit”; instead of gun they say “far sounding”; the epithet “short-legged” is substituted for hog; hair is referred to as “leaves,” and so on. So when the Battas or Bataks of Sumatra have gone out to search for camphor, they must abandon the speech of daily life as soon as they reach the camphor forest. For example, if they wish to speak of the forest they may not use the ordinary word for it (*hoetan*), but must call it *kerrengettetdoeng*. When they have fixed on a spot in which to try their luck, they set up a booth and clear a space in front of it to serve as a place of sacrifice. Here, after summoning the camphor spirit (*berroe ni kapoer*) by playing on a flute, they offer sacrifice to him repeatedly. Then they lie down to dream of the place where camphor is to be found. If this succeeds, the leader goes and chooses the tree. When it has been cut down to the accompaniment of certain spells or incantations, one of the men runs and wraps the top of the fallen tree in a garment to prevent the camphor from escaping from the trunk before they have secured it. Then the tree is cleft and split up in the search for the camphor crystals, which are to be found in the fibres of the wood. Similarly, when the Kayans of Borneo are searching for camphor, they talk a language invented solely for their use at this time. The camphor itself is never mentioned by its proper name, but is always referred to as “the thing that smells”; and all the tools employed in collecting the drug receive fanciful names. Unless they conform to this rule they suppose that the camphor crystals, which are found only in the crevices of the wood, will elude them. The Malanau tribes of Borneo observe the same custom very strictly, believing that the crystals would immediately dissolve if they spoke anything but the camphor language. For example, the common Malanau word for “return” is *muli*, but in presence of a camphor tree they say *beteku*. Again, “to hide” is *palim* in the Malanau language, but when they are looking for camphor they say *krian*. In like manner, all common names for implements and food are exchanged for others. In some tribes the camphor-seekers may never mention the names of chiefs and influential men; if they broke this rule, they would find no camphor in the trees.

In the western states of the Malay Peninsula the chief industry is tin-mining, and odd ideas prevail among the natives as to the nature and properties of the ore. They regard it as alive and growing, sometimes in the shape of a buffalo, which makes its way from place to place underground. Ore of inferior quality is excused on the score of its tender years; it will no doubt improve as it grows older. Not only is the tin believed to be under the protection and command of certain spirits who must be propitiated, but it is even supposed to have its own special likes and dislikes for certain persons and things. Hence the Malays deem it advisable to treat tin ore with respect, to consult its convenience, nay, to conduct the business of mining in such a way that the ore may, as it were, be extracted without its own knowledge. When such are their ideas about the mineral it is no wonder that the miners scruple to employ certain words in the mines, and replace them by others which are less likely to give offence to the ore or its guardian spirits. Thus, for example, the elephant must not be called an elephant but “the tall one who turns himself about”; and in like manner special words, different from those in common use, are employed by the miners to designate the cat, the buffalo, the snake, the centipede, tin sand, metallic tin, and lemons. Lemons are particularly distasteful to the spirits; they may not be brought into the mines. Again, the Malay wizard, who is engaged in snaring pigeons with the help of a decoy-bird and a calling-tube, must on no account call things by their common names. The tiny conical hut, in which he sits waiting for the wild pigeons to come fluttering about him, goes by the high-sounding name of the Magic Prince, perhaps with a delicate allusion to its noble inmate. The calling-tube is known as Prince Distraction, doubtless on account of the extraordinary fascination it exercises on the birds. The decoy-pigeon receives the name of the Squatting Princess, and the rod with a noose at the end of it, which serves to catch the unwary birds, is disguised under the title of Prince Invitation. Everything, in fact, is on a princely scale, so far at least as words can make it so. The very nooses destined to be slipped over the necks or legs of the little struggling

prisoners are dignified by the title of King Solomon's necklaces and armlets; and the trap into which the birds are invited to walk is variously described as King Solomon's Audience Chamber, or a Palace Tower, or an Ivory Hall carpeted with silver and railed with amalgam. What pigeon could resist these manifold attractions, especially when it is addressed by the respectful title of Princess Kapor or Princess Sarap or Princess Puding? Again, the fisher-folk on the east coast of the Malay Peninsula, like their brethren in Scotland, are reluctant to mention the names of birds or beasts while they are at sea. All animals then go by the name of *cheweh*, a meaningless word which is believed not to be understood by the creatures to whom it refers. Particular kinds of animals are distinguished by appropriate epithets; the pig is "the grunting *cheweh*," the buffalo is "the *cheweh* that says *uak*," the snipe is "the *cheweh* that cries *kek-kek*," and so on. In this respect the fishermen of Patani Bay class together sea spirits, Buddhist monks, beasts, and reptiles; these are all *cheweh* and their common names may not be mentioned at sea. But, curiously enough, they lay no such embargo on the names of fish and birds, except the vulture and domestic fowls and ducks. At sea the vulture is named "bald head," the tiger "striped," the snake "weaver's sword," the horse "fast," and a species of monkey "long tail." The human foot is called "tortoise," and a Buddhist monk "yellow" on account of the colour of his robe. These Malay fishermen are at least as unwilling to speak of a Buddhist monk at sea as Scotch fishermen are to mention a minister in similar circumstances. If one of them mentions a monk, his mates will fall on him and beat him; whereas for other slips of the tongue they think it enough to throw a little bilgewater over the back of the transgressor and to say, "May the ill-luck be dismissed!" The use of this special language is even more obligatory by night than by day. On shore the fishermen make very merry over those lubberly landsmen who cannot talk correctly at sea. In like manner Achinese fishermen, in northern Sumatra, employ a special vocabulary when they are at sea. Thus they may not call a mountain a mountain, or mountain-high billows would swamp the boat; they refer to it as "high ground." They may not speak of an elephant by its proper name of *gadjah*, but must call it *pò meurah*. If a man wishes to say that something is clear, he must not use the ordinary word for clear (*lheuëh*) because it bears the meaning also of "free," "loose"; and the utterance of such a word might enable the fish to get free from the net and escape. Instead of *lheuëh* he must therefore employ the less dangerous synonym *leungka*. In like manner, we are told, among the fishermen of the north coast of Java whole lists of words might be compiled which are tabooed at sea and must be replaced by others.

In Sumatra the spirits of the gold mines are treated with as much deference as the spirits of the tin-mines in the Malay Peninsula. Tin, ivory, and the like may not be brought by the miners to the scene of their operations, for at the scent of such things the spirits of the mine would cause the gold to vanish. For the same reason it is forbidden to refer to certain things by their proper names, and in speaking of them the miners must use other words. In some cases, for example in removing the grains of the gold, a deep silence must be observed; no commands may be given or questions asked, probably because the removal of the precious metal is regarded as a theft which the spirits would punish if they caught the thieves in the act. Certainly the Dyaks believe that gold has a soul which seeks to avenge itself on men who dig the precious metal. But the angry spirit is powerless to harm miners who observe certain precautions, such as never to bathe in a river with their faces turned up stream, never to sit with their legs dangling, and never to tie up their hair. Again, a Sumatran who fancies that there is a tiger or a crocodile in his neighbourhood, will speak of the animal by the honourable title of "grandfather" for the purpose of propitiating the creature. In the forest a Karo-Batak refers to a tiger as "Grandfather to whom the wood belongs," "he with the striped coat," or "the roving trap." Among the Gayos of Sumatra it is forbidden to mention the name of small-pox in the house of a man who is suffering from the disease; and the words for ugly,

red, stinking, unlucky, and so forth are forbidden under the same circumstances. The disease is referred to under the title of "prince of the averters of misfortune." So long as the hunting season lasts, the natives of Nias may not name the eye, the hammer, stones, and in some places the sun by their true names; no smith may ply his trade in the village, and no person may go from one village to another to have smith's work done for him. All this, with the exception of the rule about not naming the eye and the sun, is done to prevent the dogs from growing stiff, and so losing the power of running down the game. During the rice-harvest in Nias the reapers seldom speak to each other, and when they do so, it is only in whispers. Outside the field they must speak of everything by names different from those in common use, which gives rise to a special dialect or jargon known as "field speech." It has been observed that some of the words in this jargon resemble words in the language of the Battas of Sumatra. While these rice-reapers of Nias are at work they may not address each other by their names; they must use only such general terms as "man," "woman," "girl," "old man," and "old woman." The word for "fire" may not pass their lips; instead of it they must use the word for "cold." Other words tabooed to them during the harvest are the words for "smoke" and "stone." If a reaper wishes to ask another for his whetstone to sharpen his knife, he must speak of it as a "fowl's egg." In Java when people suspect that a tiger or crocodile is near, they avoid the use of the proper name of the beast and refer to him as "the old lord" or "grandfather." Similarly, men who are watching a plantation to protect it from wild boars speak of these animals as "handsome men" (*wong bagus*). When after harvest the unhusked rice is to be brought into the barn, the barn is not called a barn but "the dark storehouse." Serious epidemics may not be mentioned by their true names; thus smallpox is called the "pretty girl" (*lara bagus*). The Javanese are particularly careful to eschew certain common words at evening or night. Thus the snake is then called a "tree-root"; the venomous centipede is referred to as the "red ant"; oil is spoken of as "water"; and so forth. And when leaves and herbs are being gathered for use in medicine they are regularly designated by other than their ordinary names.

The Alfoors or Toradjas of Poso, in Celebes, are forbidden by custom to speak the ordinary language when they are at work in the harvest-field. At such times they employ a secret language which is said to agree with the ordinary one only in this, that in it some things are designated by words usually applied in a different sense, or by descriptive phrases or circumlocutions. Thus instead of "run" they say "limp"; instead of "hand" they say "that with which one reaches"; instead of "foot" they say "that with which one limps"; and instead of "ear" they say "that with which one hears." Again, in the field-speech "to drink" becomes "to thrust forward the mouth"; "to pass by" is expressed by "to nod with the head"; a gun is "a fire-producer"; and wood is "that which is carried on the shoulder." The writer who reports the custom was formerly of opinion that this secret language was designed to avoid attracting the attention of evil spirits to the ripe rice; but further enquiry has satisfied him that the real reason for adopting it is a wish not to frighten the soul of the rice by revealing to it the alarming truth that it is about to be cut, carried home, boiled, and eaten. It is just the words referring to these actions, he tells us, which are especially tabooed and replaced by others. Beginning with a rule of avoiding a certain number of common words, the custom has grown among people of the Malay stock till it has produced a complete language for use in the fields. In Minahassa also this secret field-speech consists in part of phrases or circumlocutions, of which many are said to be very poetical. But it is not only on the harvest field that the Toradja resorts to the use of a secret language from superstitious motives. In the great primaeval forest he feels ill at ease, for well he knows the choleric temper of the spirits who inhabit the giant trees of the wood, and that were he to excite their wrath they would assuredly pay him out in one way or other, it might be by carrying off his soul and so making him ill, it might be by crushing him flat under a falling tree. These touchy beings particularly

dislike to hear certain words pronounced, and accordingly on his way through the forest the Toradja takes care to avoid the offensive terms and to substitute others for them. Thus he will not call a dog a dog, but refers to it as "the hairy one"; a buffalo is spoken of as "thick hide"; a cooking pot becomes "that which is set down"; the hair of the head is alluded to as "betel"; goats and pigs are "the folk under the house"; a horse is "long nose"; and deer are "denizens of the fell." If he is rash or careless enough to utter a forbidden word in the forest, a short-tempered tree-spirit will fetch him such a bang on the head that the blood will spout from his nose and mouth. Again, when the weather is fine and the Toradja wishes it to continue so, he is careful not to utter the word "rain," for if he did so the rain would fancy he was called for and would obligingly present himself. Indeed, in the district of Pakambia, which is frequently visited by heavy storms, the word "rain" may not be mentioned throughout the year lest it should provoke a tempest; the unmentionable thing is there delicately alluded to as "tree-blossoms."

When a Bugineese or Macassar man is at sea and sailing past a place which he believes to be haunted by evil spirits, he keeps as quiet as he can; but if he is obliged to speak he designates common things and actions, such as water, wind, fire, cooking, eating, the rice-pot, and so forth, by peculiar terms which are neither Bugineese nor Macassar, and therefore cannot be understood by the evil spirits, whose knowledge of languages is limited to these two tongues. However, according to another and later account given by the same authority, it appears that many of the substituted terms are merely figurative expressions or descriptive phrases borrowed from the ordinary language. Thus the word for water is replaced by a rare word meaning "rain"; a rice-pot is called a "black man"; boiled rice is "one who is eaten"; a fish is a "tree-leaf"; a fowl is "one who lives in a poultry hatch"; and an ape is a "tree-dweller." Natives of the island of Saleyer, which lies off the south coast of Celebes, will not mention the name of their island when they are making a certain sea-passage; and in sailing they will never speak of a fair wind by its proper name. The reason in both cases is a fear of disturbing the evil spirits. When natives of the Sapoodi Archipelago, to the north-east of Java, are at sea they will never say that they are near the island of Sapoodi, for if they did so they would be carried away from it by a head wind or by some other mishap. When Galelareese sailors are crossing over to a land that is some way off, say one or two days' sail, they do not remark on any vessels that may heave in sight or any birds that may fly past; for they believe that were they to do so they would be driven out of their course and not reach the land they are making for. Moreover, they may not mention their own ship, or any part of it. If they have to speak of the bow, for example, they say "the beak of the bird"; starboard is named "sword," and larboard "shield." The inhabitants of Ternate and of the Sangi Islands deem it very dangerous to point at distant objects or to name them while they are at sea. Once while sailing with a crew of Ternate men a European asked one of them the name of certain small islands which they had passed. The man had been talkative before, but the question reduced him to silence. "Sir," he said, "that is a great taboo; if I told you we should at once have wind and tide against us, and perhaps suffer a great calamity. As soon as we come to anchor I will tell you the name of the islands." The Sangi Islanders have, besides the ordinary language, an ancient one which is only partly understood by some of the people. This old language is often used by them at sea, as well as in popular songs and certain heathen rites. The reason for resorting to it on shipboard is to hinder the evil spirits from overhearing and so frustrating the plans of the voyagers. The Nufoors of Dutch New Guinea believe that if they were to mention the name of an island to which the bow of their vessel was pointing, they would be met by storm, rain, or mist which would drive them from their course.

In some parts of Sunda it is taboo or forbidden to call a goat a goat; it must be called a "deer under the house." A tiger may not be spoken of as a tiger; he must be referred to as "the supple one," "the one there," "the honourable," "the whiskered one," and so on. Neither a wild boar nor a mouse may be mentioned by its proper name; a boar must be called "the beautiful one" (masculine) and the mouse "the beautiful one" (feminine). When the people are asked what would be the consequence of breaking a taboo, they generally say that the person or thing would suffer for it, either by meeting with a mishap or by falling ill. But some say they do not so much fear a misfortune as experience an indefinite feeling, half fear, half reverence, towards an institution of their forefathers. Others can assign no reason for observing the taboos, and cut enquiry short by saying that "It is so because it is so." When the Kenyahs of Borneo are about to poison the fish of a section of the river with the *tuba* root, they always speak of the matter as little as possible and use the most indirect and fanciful modes of expression. Thus they will say, "There are many leaves fallen here," meaning that there are many fish in the river. And they will not breathe the name of the *tuba* root; if they must refer to it, they call it *pakat abong*, where *abong* is the name of a strong-smelling root something like *tuba*, and *pakat* means "to agree upon"; so that *pakat abong* signifies "what we have agreed to call *abong*." This concealment of the truth deceives all the bats, birds, and insects, which might otherwise overhear the talk of the men and inform the fish of the deep-laid plot against them. These Kenyahs also fear the crocodile and do not like to mention it by name, especially if one be in sight; they refer to the beast as "the old grandfather." When small-pox invades a village of the Sakarang Dyaks in Borneo, the people desert the place and take refuge in the jungle. In the daytime they do not dare to stir or to speak above a whisper, lest the spirits should see or hear them. They do not call the small-pox by its proper name, but speak of it as "jungle leaves" or "fruit" or "the chief," and ask the sufferer, "Has he left you?" and the question is put in a whisper lest the spirit should hear. Natives of the Philippines were formerly prohibited from speaking of the chase in the house of a fisherman and from speaking of fishing in the house of a hunter; journeying by land they might not talk of marine matters, and sailing on the sea they might not talk of terrestrial matters.

When we survey the instances of this superstition which have now been enumerated, we can hardly fail to be struck by the number of cases in which a fear of spirits, or of other beings regarded as spiritual and intelligent, is assigned as the reason for abstaining in certain circumstances from the use of certain words. The speaker imagines himself to be overheard and understood by spirits, or animals, or other beings whom his fancy endows with human intelligence; and hence he avoids certain words and substitutes others in their stead, either from a desire to soothe and propitiate these beings by speaking well of them, or from a dread that they may understand his speech and know what he is about, when he happens to be engaged in that which, if they knew of it, would excite their anger or their fear. Hence the substituted terms fall into two classes according as they are complimentary or enigmatic; and these expressions are employed, according to circumstances, for different and even opposite reasons, the complimentary because they will be understood and appreciated, and the enigmatic because they will not. We can now see why persons engaged in occupations like fishing, fowling, hunting, mining, reaping, and sailing the sea, should abstain from the use of the common language and veil their meaning in strange words and dark phrases. For they have this in common that all of them are encroaching on the domain of the elemental beings, the creatures who, whether visible or invisible, whether clothed in fur or scales or feathers, whether manifesting themselves in tree or stone or running stream or breaking wave, or hovering unseen in the air, may be thought to have the first right to those regions of earth and sea and sky into which man intrudes only to plunder and destroy. Thus deeply imbued with a sense of the all-pervading life and intelligence of nature, man at a certain stage of his intellectual development cannot but be visited with fear or compunction, whether he is killing

wild fowl among the stormy Hebrides, or snaring doves in the sultry thickets of the Malay Peninsula; whether he is hunting the bear in Lapland snows, or the tiger in Indian jungles, or hauling in the dripping net, laden with silvery herring, on the coast of Scotland; whether he is searching for the camphor crystals in the shade of the tropical forest, or extracting the red gold from the darksome mine, or laying low with a sweep of his sickle the yellow ears on the harvest field. In all these his depredations on nature, man's first endeavour apparently is by quietness and silence to escape the notice of the beings whom he dreads; but if that cannot be, he puts the best face he can on the matter by dissembling his foul designs under a fair exterior, by flattering the creatures whom he proposes to betray, and by so guarding his lips, that, though his dark ambiguous words are understood well enough by his fellows, they are wholly unintelligible to his victims. He pretends to be what he is not, and to be doing something quite different from the real business in hand. He is not, for example, a fowler catching pigeons in the forest; he is a Magic Prince or King Solomon himself inviting fair princesses into his palace tower or ivory hall. Such childish pretences suffice to cheat the guileless creatures whom the savage intends to rob or kill, perhaps they even impose to some extent upon himself; for we can hardly dis sever them wholly from those forms of sympathetic magic in which primitive man seeks to effect his purpose by imitating the thing he desires to produce, or even by assimilating himself to it. It is hard indeed for us to realise the mental state of a Malay wizard masquerading before wild pigeons in the character of King Solomon; yet perhaps the make-believe of children and of the stage, where we see the players daily forgetting their real selves in their passionate impersonation of the shadowy realm of fancy, may afford us some glimpse into the workings of that instinct of imitation or mimicry which is deeply implanted in the constitution of the human mind.

VII. Our Debt To The Savage

It would be easy to extend the list of royal and priestly taboos, but the instances collected in the preceding pages may suffice as specimens. To conclude this part of our subject it only remains to state summarily the general conclusions to which our enquiries have thus far conducted us. We have seen that in savage or barbarous society there are often found men to whom the superstition of their fellows ascribes a controlling influence over the general course of nature. Such men are accordingly adored and treated as gods. Whether these human divinities also hold temporal sway over the lives and fortunes of their adorers, or whether their functions are purely spiritual and supernatural, in other words, whether they are kings as well as gods or only the latter, is a distinction which hardly concerns us here. Their supposed divinity is the essential fact with which we have to deal. In virtue of it they are a pledge and guarantee to their worshippers of the continuance and orderly succession of those physical phenomena upon which mankind depends for subsistence. Naturally, therefore, the life and health of such a god-man are matters of anxious concern to the people whose welfare and even existence are bound up with his; naturally he is constrained by them to conform to such rules as the wit of early man has devised for averting the ills to which flesh is heir, including the last ill, death. These rules, as an examination of them has shewn, are nothing but the maxims with which, on the primitive view, every man of common prudence must comply if he would live long in the land. But while in the case of ordinary men the observance of the rules is left to the choice of the individual, in the case of the god-man it is enforced under penalty of dismissal from his high station, or even of death. For his worshippers have far too great a stake in his life to allow him to play fast and loose with it. Therefore all the quaint superstitions, the old-world maxims, the venerable saws which the ingenuity of savage philosophers elaborated long ago, and which old women at chimney corners still impart as treasures of great price to their descendants gathered round the cottage fire on winter evenings—all these antique fancies clustered, all these cobwebs of the brain were spun about the path of the old king, the human god, who, immeshed in them like a fly in the toils of a spider, could hardly stir a limb for the threads of custom, "light as air but strong as links of iron," that crossing and recrossing each other in an endless maze bound him fast within a network of observances from which death or deposition alone could release him.

Thus to students of the past the life of the old kings and priests teems with instruction. In it was summed up all that passed for wisdom when the world was young. It was the perfect pattern after which every man strove to shape his life; a faultless model constructed with rigorous accuracy upon the lines laid down by a barbarous philosophy. Crude and false as that philosophy may seem to us, it would be unjust to deny it the merit of logical consistency. Starting from a conception of the vital principle as a tiny being or soul existing in, but distinct and separable from, the living being, it deduces for the practical guidance of life a system of rules which in general hangs well together and forms a fairly complete and harmonious whole. The flaw—and it is a fatal one—of the system lies not in its reasoning, but in its premises; in its conception of the nature of life, not in any irrelevancy of the conclusions which it draws from that conception. But to stigmatise these premises as ridiculous because we can easily detect their falseness, would be ungrateful as well as unphilosophical. We stand upon the foundation reared by the generations that have gone before, and we can but dimly realise the painful and prolonged efforts which it has cost humanity to struggle up to the point, no very exalted one after all, which we have reached. Our gratitude is due to the nameless and forgotten toilers, whose patient thought and active exertions have largely made us what we are. The amount of new knowledge which one age, certainly which one man, can

add to the common store is small, and it argues stupidity or dishonesty, besides ingratitude, to ignore the heap while vaunting the few grains which it may have been our privilege to add to it. There is indeed little danger at present of undervaluing the contributions which modern times and even classical antiquity have made to the general advancement of our race. But when we pass these limits, the case is different. Contempt and ridicule or abhorrence and denunciation are too often the only recognition vouchsafed to the savage and his ways. Yet of the benefactors whom we are bound thankfully to commemorate, many, perhaps most, were savages. For when all is said and done our resemblances to the savage are still far more numerous than our differences from him; and what we have in common with him, and deliberately retain as true and useful, we owe to our savage forefathers who slowly acquired by experience and transmitted to us by inheritance those seemingly fundamental ideas which we are apt to regard as original and intuitive. We are like heirs to a fortune which has been handed down for so many ages that the memory of those who built it up is lost, and its possessors for the time being regard it as having been an original and unalterable possession of their race since the beginning of the world. But reflection and enquiry should satisfy us that to our predecessors we are indebted for much of what we thought most our own, and that their errors were not wilful extravagances or the ravings of insanity, but simply hypotheses, justifiable as such at the time when they were propounded, but which a fuller experience has proved to be inadequate. It is only by the successive testing of hypotheses and rejection of the false that truth is at last elicited. After all, what we call truth is only the hypothesis which is found to work best. Therefore in reviewing the opinions and practices of ruder ages and races we shall do well to look with leniency upon their errors as inevitable slips made in the search for truth, and to give them the benefit of that indulgence which we ourselves may one day stand in need of; *cum excusatione itaque veteres audiendi sunt*.

Note. Not To Step Over Persons And Things.

The superstition that harm is done to a person or thing by stepping over him or it is very widely spread. Thus the Galelareese think that if a man steps over your fishing-rod or your arrow, the fish will not bite when you fish with that rod, and the game will not be hit by that arrow when you shoot it. They say it is as if the implements merely skimmed past the fish or the game. Similarly, if a Highland sportsman saw a person stepping over his gun or fishing-rod, he presumed but little on that day's diversion. When a Dacota had bad luck in hunting, he would say that a woman had been stepping over some part of the animal which he revered. Amongst many South African tribes it is considered highly improper to step over a sleeper; if a wife steps over her husband he cannot hit his enemy in war; if she steps over his assegais, they are from that time useless, and are given to boys to play with. The Baganda think that if a woman steps over a man's weapons, they will not aim straight and will not kill, unless they have been first purified. The Nandi of British East Africa hold that to step over a snare or trap is to court death and must be avoided at all risks; further, they are of opinion that if a man were to step over a pot, he would fall to pieces whenever the pot were broken. The people of the Lower Congo deem that to step over a person's body or legs will cause ill-luck to that person and they are careful not to do so, especially in passing men who are holding a palaver. At such times a passer-by will shuffle his feet along the ground without lifting them in order that he may not be charged with bringing bad luck on any one. On the other hand among the Wajagga of East Africa grandchildren leap over the corpse of their grandfather, when it is laid out, expressing a wish that they may live to be as old as he. In Laos hunters are careful never to step over their weapons. The Tepehuanes of Mexico believe that if anybody steps over them, they will not be able to kill another deer in their lives. Some of the Australian aborigines are seriously alarmed if a woman steps over them as they lie asleep on the ground. In the tribes about Maryborough in Queensland, if a woman steps over anything

that belongs to a man he will throw it away. In New Caledonia it is thought to endanger a canoe if a woman steps over the cable. Everything that a Samoyed woman steps over becomes unclean and must be fumigated. Malagasy porters believe that if a woman strides over their poles, the skin will certainly peel off the shoulders of the bearers when next they take up the burden. The Cherokees fancy that to step over a vine causes it to wither and bear no fruit. The Ba-Pendi and Ba-thonga of South Africa think that if a woman steps over a man's legs, they will swell and he will not be able to run. According to the South Slavonians, the most serious maladies may be communicated to a person by stepping over him, but they can afterwards be cured by stepping over him in the reverse direction. The belief that to step over a child hinders it from growing is found in France, Belgium, Germany, Austria, and Syria; in Syria, Germany, and Bohemia the mischief can be remedied by stepping over the child in the opposite direction.

Part III. The Dying God

(Originally published in Volume IV)

Preface

With this third part of *The Golden Bough* we take up the question, Why had the King of the Wood at Nemi regularly to perish by the hand of his successor? In the first part of the work I gave some reasons for thinking that the priest of Diana, who bore the title of King of the Wood beside the still lake among the Alban Hills, personated the great god Jupiter or his duplicate Dianus, the deity of the oak, the thunder, and the sky. On this theory, accordingly, we are at once confronted with the wider and deeper question, Why put a man-god or human representative of deity to a violent death? Why extinguish the divine light in its earthly vessel instead of husbanding it to its natural close? My general answer to that question is contained in the present volume. If I am right, the motive for slaying a man-god is a fear lest with the enfeeblement of his body in sickness or old age his sacred spirit should suffer a corresponding decay, which might imperil the general course of nature and with it the existence of his worshippers, who believe the cosmic energies to be mysteriously knit up with those of their human divinity. Hence, if there is any measure of truth in this theory, the practice of putting divine men and particularly divine kings to death, which seems to have been common at a particular stage in the evolution of society and religion, was a crude but pathetic attempt to disengage an immortal spirit from its mortal envelope, to arrest the forces of decomposition in nature by retrenching with ruthless hand the first ominous symptoms of decay. We may smile if we please at the vanity of these and the like efforts to stay the inevitable decline, to bring the relentless revolution of the great wheel to a stand, to keep youth's fleeting roses for ever fresh and fair; but perhaps in spite of every disillusionment, when we contemplate the seemingly endless vistas of knowledge which have been opened up even within our own generation, many of us may cherish in our heart of hearts a fancy, if not a hope, that some loophole of escape may after all be discovered from the iron walls of the prison-house which threaten to close on and crush us; that, groping about in the darkness, mankind may yet chance to lay hands on "that golden key that opes the palace of eternity," and so to pass from this world of shadows and sorrow to a world of untroubled light and joy. If this is a dream, it is surely a happy and innocent one, and to those who would wake us from it we may murmur with Michael Angelo,

"Però non mi destar, deh! parla basso."

J. G. FRAZER.

Cambridge,

I. The Mortality Of The Gods

At an early stage of his intellectual development man deems himself naturally immortal, and imagines that were it not for the baleful arts of sorcerers, who cut the vital thread prematurely short, he would live for ever. The illusion, so flattering to human wishes and hopes, is still current among many savage tribes at the present day, and it may be supposed to have prevailed universally in that Age of Magic which appears to have everywhere preceded the Age of Religion. But in time the sad truth of human mortality was borne in upon our primitive philosopher with a force of demonstration which no prejudice could resist and no sophistry dissemble. Among the manifold influences which combined to wring from him a reluctant assent to the necessity of death must be numbered the growing influence of religion, which by exposing the vanity of magic and of all the extravagant pretensions built on it gradually lowered man's proud and defiant attitude towards nature, and taught him to believe that there are mysteries in the universe which his feeble intellect can never fathom, and forces which his puny hands can never control. Thus more and more he learned to bow to the inevitable and to console himself for the brevity and the sorrows of life on earth by the hope of a blissful eternity hereafter. But if he reluctantly acknowledged the existence of beings at once superhuman and supernatural, he was as yet far from suspecting the width and the depth of the gulf which divided him from them. The gods with whom his imagination now peopled the darkness of the unknown were indeed admitted by him to be his superiors in knowledge and in power, in the joyous splendour of their life and in the length of its duration. But, though he knew it not, these glorious and awful beings were merely, like the spectre of the Brocken, the reflections of his own diminutive personality exaggerated into gigantic proportions by distance and by the mists and clouds upon which they were cast. Man in fact created gods in his own likeness and being himself mortal he naturally supposed his creatures to be in the same sad predicament. Thus the Greenlanders believed that a wind could kill their most powerful god, and that he would certainly die if he touched a dog. When they heard of the Christian God, they kept asking if he never died, and being informed that he did not, they were much surprised, and said that he must be a very great god indeed. In answer to the enquiries of Colonel Dodge, a North American Indian stated that the world was made by the Great Spirit. Being asked which Great Spirit he meant, the good one or the bad one, "Oh, neither of *them*" replied he, "the Great Spirit that made the world is dead long ago. He could not possibly have lived as long as this." A tribe in the Philippine Islands told the Spanish conquerors that the grave of the Creator was upon the top of Mount Cabunian. Heitsi-eibib, a god or divine hero of the Hottentots, died several times and came to life again. His graves are generally to be met with in narrow defiles between mountains. When the Hottentots pass one of them, they throw a stone on it for good luck, sometimes muttering "Give us plenty of cattle." The grave of Zeus, the great god of Greece, was shewn to visitors in Crete as late as about the beginning of our era. The body of Dionysus was buried at Delphi beside the golden statue of Apollo, and his tomb bore the inscription, "Here lies Dionysus dead, the son of Semele." According to one account, Apollo himself was buried at Delphi; for Pythagoras is said to have carved an inscription on his tomb, setting forth how the god had been killed by the python and buried under the tripod. The ancient god Cronus was buried in Sicily, and the graves of Hermes, Aphrodite, and Ares were shewn in Hermopolis, Cyprus, and Thrace.

The great gods of Egypt themselves were not exempt from the common lot. They too grew old and died. For like men they were composed of body and soul, and like men were subject to all the passions and infirmities of the flesh. Their bodies, it is true, were fashioned of more ethereal mould, and lasted longer than ours, but they could not hold out for ever against the

siege of time. Age converted their bones into silver, their flesh into gold, and their azure locks into lapis-lazuli. When their time came, they passed away from the cheerful world of the living to reign as dead gods over dead men in the melancholy world beyond the grave. Even their souls, like those of mankind, could only endure after death so long as their bodies held together; and hence it was as needful to preserve the corpses of the gods as the corpses of common folk, lest with the divine body the divine spirit should also come to an untimely end. At first their remains were laid to rest under the desert sands of the mountains, that the dryness of the soil and the purity of the air might protect them from putrefaction and decay. Hence one of the oldest titles of the Egyptian gods is "they who are under the sands." But when at a later time the discovery of the art of embalming gave a new lease of life to the souls of the dead by preserving their bodies for an indefinite time from corruption, the deities were permitted to share the benefit of an invention which held out to gods as well as to men a reasonable hope of immortality. Every province then had the tomb and mummy of its dead god. The mummy of Osiris was to be seen at Mendes; Thinis boasted of the mummy of Anhour; and Heliopolis rejoiced in the possession of that of Toumou. But while their bodies lay swathed and bandaged here on earth in the tomb, their souls, if we may trust the Egyptian priests, shone as bright stars in the firmament. The soul of Isis sparkled in Sirius, the soul of Horus in Orion, and the soul of Typhon in the Great Bear. But the death of the god did not involve the extinction of his sacred stock; for he commonly had by his wife a son and heir, who on the demise of his divine parent succeeded to the full rank, power, and honours of the godhead. The high gods of Babylon also, though they appeared to their worshippers only in dreams and visions, were conceived to be human in their bodily shape, human in their passions, and human in their fate; for like men they were born into the world, and like men they loved and fought and died.

One of the most famous stories of the death of a god is told by Plutarch. It runs thus. In the reign of the emperor Tiberius a certain schoolmaster named Epitherses was sailing from Greece to Italy. The ship in which he had taken his passage was a merchantman and there were many other passengers on board. At evening, when they were off the Echinadian Islands, the wind died away, and the vessel drifted close in to the island of Paxos. Most of the passengers were awake and many were still drinking wine after dinner, when suddenly a voice hailed the ship from the island, calling upon Thamus. The crew and passengers were taken by surprise, for though there was an Egyptian pilot named Thamus on board, few knew him even by name. Twice the cry was repeated, but Thamus kept silence. However, at the third call he answered, and the voice from the shore, now louder than ever, said, "When you are come to Palodes, announce that the Great Pan is dead." Astonishment fell upon all, and they consulted whether it would be better to do the bidding of the voice or not. At last Thamus resolved that, if the wind held, he would pass the place in silence, but if it dropped when they were off Palodes he would give the message. Well, when they were come to Palodes, there was a great calm; so Thamus standing in the stern and looking towards the land cried out, as he had been bidden, "The Great Pan is dead." The words had hardly passed his lips when a loud sound of lamentation broke on their ears, as if a multitude were mourning. This strange story, vouched for by many on board, soon got wind at Rome, and Thamus was sent for and questioned by the emperor Tiberius himself, who caused enquiries to be made about the dead god. In modern times, also, the annunciation of the death of the Great Pan has been much discussed and various explanations of it have been suggested. On the whole the simplest and most natural would seem to be that the deity whose sad end was thus mysteriously proclaimed and lamented was the Syrian god Tammuz or Adonis, whose death is known to have been annually bewailed by his followers both in Greece and in his native Syria. At Athens the solemnity fell at midsummer, and there is no improbability in the view that in a Greek island a band of worshippers of Tammuz should have been

celebrating the death of their god with the customary passionate demonstrations of sorrow at the very time when a ship lay becalmed off the shore, and that in the stillness of the summer night the voices of lamentation should have been wafted with startling distinctness across the water and should have made on the minds of the listening passengers a deep and lasting impression. However that may be, stories of the same kind found currency in western Asia down to the Middle Ages. An Arab writer relates that in the year 1063 or 1064 a.d., in the reign of the caliph Caiem, a rumour went abroad through Bagdad, which soon spread all over the province of Irac, that some Turks out hunting in the desert had seen a black tent, where many men and women were beating their faces and uttering loud cries, as it is the custom to do in the East when some one is dead. And among the cries they distinguished these words, "The great King of the Jinn is dead, woe to this country!" In consequence of this a mysterious threat was circulated from Armenia to Chuzistan that every town which did not lament the dead King of the Jinn should utterly perish. Again, in the year 1203 or 1204 a.d. a fatal disease, which attacked the throat, raged in parts of Mosul and Irac, and it was divulged that a woman of the Jinn called Umm 'Uncūd or "Mother of the Grape-cluster" had lost her son, and that all who did not lament for him would fall victims to the epidemic. So men and women sought to save themselves from death by assembling and beating their faces, while they cried out in a lamentable voice, "O mother of the Grape-cluster, excuse us; the Grape-cluster is dead; we knew it not."

II. The Killing Of The Divine King

§ 1. Preference for a Violent Death.

If the high gods, who dwell remote from the fret and fever of this earthly life, are yet believed to die at last, it is not to be expected that a god who lodges in a frail tabernacle of flesh should escape the same fate, though we hear of African kings who have imagined themselves immortal by virtue of their sorceries. Now primitive peoples, as we have seen, sometimes believe that their safety and even that of the world is bound up with the life of one of these god-men or human incarnations of the divinity. Naturally, therefore, they take the utmost care of his life, out of a regard for their own. But no amount of care and precaution will prevent the man-god from growing old and feeble and at last dying. His worshippers have to lay their account with this sad necessity and to meet it as best they can. The danger is a formidable one; for if the course of nature is dependent on the man-god's life, what catastrophes may not be expected from the gradual enfeeblement of his powers and their final extinction in death? There is only one way of averting these dangers. The man-god must be killed as soon as he shews symptoms that his powers are beginning to fail, and his soul must be transferred to a vigorous successor before it has been seriously impaired by the threatened decay. The advantages of thus putting the man-god to death instead of allowing him to die of old age and disease are, to the savage, obvious enough. For if the man-god dies what we call a natural death, it means, according to the savage, that his soul has either voluntarily departed from his body and refuses to return, or more commonly that it has been extracted, or at least detained in its wanderings, by a demon or sorcerer. In any of these cases the soul of the man-god is lost to his worshippers; and with it their prosperity is gone and their very existence endangered. Even if they could arrange to catch the soul of the dying god as it left his lips or his nostrils and so transfer it to a successor, this would not effect their purpose; for, dying of disease, his soul would necessarily leave his body in the last stage of weakness and exhaustion, and so enfeebled it would continue to drag out a languid, inert existence in any body to which it might be transferred. Whereas by slaying him his worshippers could, in the first place, make sure of catching his soul as it escaped and transferring it to a suitable successor; and, in the second place, by putting him to death before his natural force was abated, they would secure that the world should not fall into decay with the decay of the man-god. Every purpose, therefore, was answered, and all dangers averted by thus killing the man-god and transferring his soul, while yet at its prime, to a vigorous successor.

Some of the reasons for preferring a violent death to the slow death of old age or disease are obviously as applicable to common men as to the man-god. Thus the Mangaians think that "the spirits of those who die a natural death are excessively feeble and weak, as their bodies were at dissolution; whereas the spirits of those who are slain in battle are strong and vigorous, their bodies not having been reduced by disease." The Barongo believe that in the world beyond the grave the spirits of their dead ancestors appear with the exact form and lineaments which their bodies exhibited at the moment of death; the spirits are young or old according as their bodies were young or old when they died; there are baby spirits who crawl about on all fours. The Lengua Indians of the Gran Chaco are persuaded that the souls of the departed correspond exactly in form and characteristics to the bodies which they quitted at death; thus a tall man is tall, a short man is short, and a deformed man is deformed in the spirit-land, and the disembodied soul of a child remains a child, it never develops into an adult. Hence they burn the body of a murderer and scatter the ashes to the winds, thinking that this treatment will prevent his spirit from assuming human shape in the other world. So,

too, the Naga tribes of Manipur hold that the ghost of a dead man is an exact image of the deceased as he was at the moment of death, with his scars, tattoo marks, mutilations, and all the rest. The Baganda think that the ghosts of men who were mutilated in life are mutilated in like manner after death; so to avoid that shame they will rather die with all their limbs than lose one by amputation and live. Hence, men sometimes prefer to kill themselves or to be killed before they grow feeble, in order that in the future life their souls may start fresh and vigorous as they left their bodies, instead of decrepit and worn out with age and disease. Thus in Fiji, "self-immolation is by no means rare, and they believe that as they leave this life, so they will remain ever after. This forms a powerful motive to escape from decrepitude, or from a crippled condition, by a voluntary death." Or, as another observer of the Fijians puts it more fully, "the custom of voluntary suicide on the part of the old men, which is among their most extraordinary usages, is also connected with their superstitions respecting a future life. They believe that persons enter upon the delights of their elysium with the same faculties, mental and physical, that they possess at the hour of death, in short, that the spiritual life commences where the corporeal existence terminates. With these views, it is natural that they should desire to pass through this change before their mental and bodily powers are so enfeebled by age as to deprive them of their capacity for enjoyment. To this motive must be added the contempt which attaches to physical weakness among a nation of warriors, and the wrongs and insults which await those who are no longer able to protect themselves. When therefore a man finds his strength declining with the advance of age, and feels that he will soon be unequal to discharge the duties of this life, and to partake in the pleasures of that which is to come, he calls together his relations, and tells them that he is now worn out and useless, that he sees they are all ashamed of him, and that he has determined to be buried." So on a day appointed they used to meet and bury him alive. In *Vaté*, one of the New Hebrides, the aged were buried alive at their own request. It was considered a disgrace to the family of an old chief if he was not buried alive. Of the Kamants, a Jewish tribe in Abyssinia, it is reported that "they never let a person die a natural death, but that if any of their relatives is nearly expiring, the priest of the village is called to cut his throat; if this be omitted, they believe that the departed soul has not entered the mansions of the blessed." The old Greek philosopher Heraclitus thought that the souls of those who die in battle are purer than the souls of those who die of disease.

Among the Chiriguanos, a tribe of South American Indians on the river Pilcomayo, when a man was at the point of death his nearest relative used to break his spine by a blow of an axe, for they thought that to die a natural death was the greatest misfortune that could befall a man. Whenever a Payagua Indian of Paraguay, or a Guayana of south-eastern Brazil, grew weary of life, a feast was made, and amid the revelry and dancing the man was gummed and feathered with the plumage of many-coloured birds. A huge jar had been previously fixed in the ground to be ready for him; in this he was placed, the mouth of the jar was covered with a heavy lid of baked clay, the earth was heaped over it, and thus "he went to his doom more joyful and gladsome than to his first nuptials." Among the Koryaks of north-eastern Asia, when a man felt that his last hour was come, superstition formerly required that he should either kill himself or be killed by a friend, in order that he might escape the Evil One and deliver himself up to the Good God. Similarly among the Chukchees of the same region, when a man's strength fails and he is tired of life, he requests his son or other near relation to despatch him, indicating the manner of death he prefers to die. So, on a day appointed, his friends and neighbours assemble, and in their presence he is stabbed, strangled, or otherwise disposed of according to his directions. The turbulent Angamis are the most warlike and bloodthirsty of the wild head-hunting tribes in the valley of the Brahmapootra. Among them, when a warrior dies a natural death, his nearest male relative takes a spear and wounds the corpse by a blow on the head, in order that the man may be received with honour in the other

world as one who has died in battle. The heathen Norsemen believed that only those who fell fighting were received by Odin in Valhalla; hence it appears to have been customary to wound the dying with a spear, in order to secure their admission to the happy land. The custom may have been a mitigation of a still older practice of slaughtering the sick. We know from Procopius that among the Heruli, a Teutonic tribe, the sick and old were regularly slain at their own request and then burned on a pyre. The Wends used to kill their aged parents and other kinsfolk, and having killed them they boiled and ate their bodies; and the old folks preferred to die thus rather than to drag out a weary life of weakness and decrepitude.

§ 2. Kings killed when their Strength fails.

But it is with the death of the god-man—the divine king or priest—that we are here especially concerned. The mystic kings of Fire and Water in Cambodia are not allowed to die a natural death. Hence when one of them is seriously ill and the elders think that he cannot recover, they stab him to death. The people of Congo believed, as we have seen, that if their pontiff the Chitomé were to die a natural death, the world would perish, and the earth, which he alone sustained by his power and merit, would immediately be annihilated. Accordingly when he fell ill and seemed likely to die, the man who was destined to be his successor entered the pontiff's house with a rope or a club and strangled or clubbed him to death. A fuller account of this custom is given by an old Italian writer as follows: "Let us pass to the death of the magicians, who often die a violent death, and that for the most part voluntarily. I shall speak only of the head of this crew, from whom his followers take example. He is called Ganga Chitome, being reputed god of the earth. The first-fruits of all the crops are offered to him as his due, because they are thought to be produced by his power, and not by nature at the bidding of the Most High God. This power he boasts he can impart to others, when and to whom he pleases. He asserts that his body cannot die a natural death, and therefore when he knows he is near the end of his days, whether it is brought about by sickness or age, or whether he is deluded by the demon, he calls one of his disciples to whom he wishes to communicate his power, in order that he may succeed him. And having made him tie a noose to his neck he commands him to strangle him, or to knock him on the head with a great cudgel and kill him. His disciple obeys and sends him a martyr to the devil, to suffer torments with Lucifer in the flames for ever. This tragedy is enacted in public, in order that his successor may be manifested, who hath the power of fertilising the earth, the power having been imparted to him by the deceased; otherwise, so they say, the earth would remain barren, and the world would perish. Oh too great foolishness and palpable blindness of the gentiles, to enlighten the eye of whose mind there would be needed the very hand of Christ whereby he opened the bodily eyes of him that had been born blind! I know that in my time one of these magicians was cast into the sea, another into a river, a mother put to death with her son, and many more seized by our orders and banished." The Ethiopian kings of Meroe were worshipped as gods; but whenever the priests chose, they sent a messenger to the king, ordering him to die, and alleging an oracle of the gods as their authority for the command. This command the kings always obeyed down to the reign of Ergamenes, a contemporary of Ptolemy II., King of Egypt. Having received a Greek education which emancipated him from the superstitions of his countrymen, Ergamenes ventured to disregard the command of the priests, and, entering the Golden Temple with a body of soldiers, put the priests to the sword.

Customs of the same sort appear to have prevailed in this region down to modern times. Thus we are told that in Fazoql, a district in the valley of the Blue Nile, to the west of Abyssinia, it was customary, as late as the middle of the nineteenth century, to hang a king who was no longer beloved. His relatives and ministers assembled round him, and announced that as he no longer pleased the men, the women, the asses, the oxen, and the fowls of the country, it was better he should die. Once on a time, when a king was unwilling to take the hint, his own

wife and mother urged him so strongly not to disgrace himself by disregarding the custom, that he submitted to his fate and was strung up in the usual way. In some tribes of Fazoql the king had to administer justice daily under a certain tree. If from sickness or any other cause he was unable to discharge this duty for three whole days, he was hanged on the tree in a noose, which contained two razors so arranged that when the noose was drawn tight by the weight of the king's body they cut his throat. At Fazolglou an annual festival, which partook of the nature of a Saturnalia, was preceded by a formal trial of the king in front of his house. The judges were the chief men of the country. The king sat on his royal stool during the trial, surrounded by armed men, who were ready to carry out a sentence of death. A little way off a jackal and a dog were tied to a post. The conduct of the king during his year of office was discussed, complaints were heard, and if the verdict was unfavourable, the king was executed and his successor chosen from among the members of his family. But if the monarch was acquitted, the people at once paid their homage to him afresh, and the dog or the jackal was killed in his stead. This custom lasted down to the year 1837 or 1838, when king Yassin was thus condemned and executed. His nephew Assusa was compelled under threats of death to succeed him in the office. Afterwards it would seem that the death of the dog was regularly accepted as a substitute for the death of the king. At least this may be inferred from a later account of the Fazoql practice, which runs thus: "The meaning of another of their customs is quite obscure. At a certain time of the year they have a kind of carnival, where every one does what he likes best. Four ministers of the king then bear him on an anqareb out of his house to an open space of ground; a dog is fastened by a long cord to one of the feet of the anqareb. The whole population collects round the place, streaming in on every side. They then throw darts and stones at the dog, till he is killed, after which the king is again borne into his house."

A custom of putting their divine kings to death at the first symptoms of infirmity or old age prevailed until lately, if indeed it is even now extinct and not merely dormant, among the Shilluk of the White Nile, and in recent years it has been carefully investigated by Dr. C. G. Seligmann, to whose researches I am indebted for the following detailed information on the subject. The Shilluk are a tribe or nation who inhabit a long narrow fringe of territory on the western bank of the White Nile from Kaka in the north to Lake No in the south, as well as a strip on the eastern bank of the river, which stretches from Fashoda to Taufikia and for some thirty-five miles up the Sobat River. The country of the Shilluk is almost entirely in grass, hence the principal wealth of the people consists in their flocks and herds, but they also grow a considerable quantity of the species of millet which is known as durra. But though the Shilluk are mainly a pastoral people, they are not nomadic, but live in many settled villages. The tribe at present numbers about forty thousand souls, and is governed by a single king (*ret*), whose residence is at Fashoda. His subjects take great care of him, and hold him in much honour. In the old days his word was law and he was not suffered to go forth to battle. At the present day he still keeps up considerable state and exercises much authority; his decisions on all matters brought before him are readily obeyed; and he never moves without a bodyguard of from twelve to twenty men. The reverence which the Shilluk pay to their king appears to arise chiefly from the conviction that he is a reincarnation of the spirit of Nyakang, the semi-divine hero who founded the dynasty and settled the tribe in their present territory, to which he is variously said to have conducted them either from the west or from the south. Tradition has preserved the pedigree of the kings from Nyakang to the present day. The number of kings recorded between Nyakang and the father of the reigning monarch is twenty, distributed over twelve generations; but Dr. Seligmann is of opinion that many more must have reigned, and that the genealogy of the first six or seven kings, as given to him, has been much abbreviated. There seems to be no reason to doubt the historical character of all of them, though myths have gathered like clouds round the persons of Nyakang and his

immediate successors. The Shilluk about Kodok (Fashoda) think of Nyakang as having been a man in appearance and physical qualities, though unlike his royal descendants of more recent times he did not die but simply disappeared. His holiness is manifested especially by his relation to Jüok, the great god of the Shilluk, who created man and is responsible for the order of nature. Jüok is formless and invisible and like the air he is everywhere at once. He is far above Nyakang and men alike, but he is not worshipped directly, and it is only through the intercession of Nyakang, whose favour the Shilluk secure by means of sacrifices, that Jüok can be induced to send the needed rain for the cattle and the crops. In his character of rain-giver Nyakang is the great benefactor of the Shilluk. Their country, baked by the burning heat of the tropical sun, depends entirely for its fertility on the waters of heaven, for the people do not resort to artificial irrigation. When the rain falls, then the grass sprouts, the millet grows, the cattle thrive, and the people have food to eat. Drought brings famine and death in its train. Nyakang is said not only to have brought the Shilluk into their present land, but to have made them into a nation of warriors, divided the country among them, regulated marriage, and made the laws. The religion of the Shilluk at the present time consists mainly of the worship paid to this semi-divine hero, the traditionary ancestor of their kings. There seems to be no reason to doubt that the traditions concerning him are substantially correct; in all probability he was simply a man whom the superstition of his fellows in his own and subsequent ages has raised to the rank of a deity. No less than ten shrines are dedicated to his worship; the three most famous are at Fashoda, Akurwa, and Fenikang. They consist of one or more huts enclosed by a fence; generally there are several huts within the enclosure, one or more of them being occupied by the guardians of the shrine. These guardians are old men, who not only keep the hallowed spot scrupulously clean, but also act as priests, killing the sacrificial victims which are brought to the shrine, sharing their flesh, and taking the skins for themselves. All the shrines of Nyakang are called graves of Nyakang (*kengo Nyakang*), though it is well known that nobody is buried there. Sacred spears are kept in all of them and are used to slaughter the victims offered in sacrifice at the shrines. The originals of these spears are said to have belonged to Nyakang and his companions, but they have disappeared and been replaced by others.

Two great ceremonies are annually performed at the shrines of Nyakang: one of them is intended to ensure the fall of rain, the other is celebrated at harvest. At the rain-making ceremony, which is held before the rains at the beginning of the month *alabor*, a bullock is slain with a sacred spear before the door of the shrine, while the king stands by praying in a loud voice to Nyakang to send down the refreshing showers on the thirsty land. As much of the blood of the victim as possible is collected in a gourd and thrown into the river, perhaps as a rain-charm. This intention of the sacrifice comes out more plainly in a form of the ritual which is said to be observed at Ashop. There the sacrificial bullock is speared high up in the flank, so that the wound is not immediately fatal. Then the wounded animal is allowed and indeed encouraged to walk to and from the river before it sinks down and dies. In the blood that streams from its side on the ground the people may see a symbol of the looked-for rain. Care is taken not to break the bones of the animal, and they, like the blood, are thrown into the river. At the annual rain-making ceremony a cow is also dedicated to Nyakang: it is not killed but added to the sacred herd of the shrine. The other great annual ceremony observed at the shrines of Nyakang falls at harvest. When the millet has been reaped, every one brings a portion of the grain to a shrine of Nyakang, where it is ground into flour, which is made into porridge with water fetched from the river. Then some of the porridge is poured out on the threshold of the hut which the spirit of Nyakang is supposed to inhabit; some of it is smeared on the outer walls of the building; and some of it is emptied out on the ground outside. Even before harvest it is customary to bring some of the ripening grain from the fields and to thrust it into the thatch of the huts in the shrines, no doubt in order to secure the

blessing of Nyakang on the crops. Sacrifices are also offered at these shrines for the benefit of sick people. A sufferer will bring or send a sheep to the nearest sanctuary, where the guardians will slaughter the animal with a sacred spear and pray for the patient's recovery.

It is a fundamental article of the Shilluk creed that the spirit of the divine or semi-divine Nyakang is incarnate in the reigning king, who is accordingly himself invested to some extent with the character of a divinity. But while the Shilluk hold their kings in high, indeed religious reverence and take every precaution against their accidental death, nevertheless they cherish "the conviction that the king must not be allowed to become ill or senile, lest with his diminishing vigour the cattle should sicken and fail to bear their increase, the crops should rot in the fields, and man, stricken with disease, should die in ever increasing numbers." To prevent these calamities it used to be the regular custom with the Shilluk to put the king to death whenever he shewed signs of ill-health or failing strength. One of the fatal symptoms of decay was taken to be an incapacity to satisfy the sexual passions of his wives, of whom he has very many, distributed in a large number of houses at Fashoda. When this ominous weakness manifested itself, the wives reported it to the chiefs, who are popularly said to have intimated to the king his doom by spreading a white cloth over his face and knees as he lay slumbering in the heat of the sultry afternoon. Execution soon followed the sentence of death. A hut was specially built for the occasion: the king was led into it and lay down with his head resting on the lap of a nubile virgin: the door of the hut was then walled up; and the couple were left without food, water, or fire to die of hunger and suffocation. This was the old custom, but it was abolished some five generations ago on account of the excessive sufferings of one of the kings who perished in this way. He survived his companion for some days, and in the interval was so distressed by the stench of her putrefying body that he shouted to the people, whom he could hear moving outside, never again to let a king die in this prolonged and exquisite agony. After a time his cries died away into silence; death had released him from his sufferings; but since then the Shilluk have adopted a quicker and more merciful mode of executing their kings. What the exact form of execution has been in later times Dr. Seligmann found it very difficult to ascertain, though with regard to the fact of the execution he tells us that there is not the least doubt. It is said that the chiefs announce his fate to the king, and that afterwards he is strangled in a hut which has been specially built for the occasion.

From Dr. Seligmann's enquiries it appears that not only was the Shilluk king liable to be killed with due ceremony at the first symptoms of incipient decay, but even while he was yet in the prime of health and strength he might be attacked at any time by a rival and have to defend his crown in a combat to the death. According to the common Shilluk tradition any son of a king had the right thus to fight the king in possession and, if he succeeded in killing him, to reign in his stead. As every king had a large harem and many sons, the number of possible candidates for the throne at any time may well have been not inconsiderable, and the reigning monarch must have carried his life in his hand. But the attack on him could only take place with any prospect of success at night; for during the day the king surrounded himself with his friends and bodyguards, and an aspirant to the throne could hardly hope to cut his way through them and strike home. It was otherwise at night. For then the guards were dismissed and the king was alone in his enclosure with his favourite wives, and there was no man near to defend him except a few herdsmen, whose huts stood a little way off. The hours of darkness were therefore the season of peril for the king. It is said that he used to pass them in constant watchfulness, prowling round his huts fully armed, peering into the blackest shadows, or himself standing silent and alert, like a sentinel on duty, in some dark corner. When at last his rival appeared, the fight would take place in grim silence, broken only by the

clash of spears and shields, for it was a point of honour with the king not to call the herdsmen to his assistance.

When the king did not perish in single combat, but was put to death on the approach of sickness or old age, it became necessary to find a successor for him. Apparently the successor was chosen by the most powerful chiefs from among the princes (*niäret*), the sons either of the late king or of one of his predecessors. Details as to the mode of election are lacking. So far as Dr. Seligmann could ascertain, the kings elect shewed no reluctance to accept the fatal sovereignty; indeed he was told a story of a man who clamoured to be made king for only one day, saying that he was perfectly ready to be killed after that. The age at which the king was killed would seem to have commonly been between forty and fifty. To the improvident and unimaginative savage the prospect of being put to death at the end of a set time, whether long or short, has probably few terrors; and if it has any, we may suspect that they are altogether outweighed in his mind by the opportunities for immediate enjoyment of all kinds which a kingdom affords to his unbridled appetites and passions.

An important part of the solemnities attending the accession of a Shilluk king appears to be intended to convey to the new monarch the divine spirit of Nyakang, which has been transmitted from the founder of the dynasty to all his successors on the throne. For this purpose a sacred four-legged stool and a mysterious object which bears the name of Nyakang himself are brought with much solemnity from the shrine of Nyakang at Akurwa to the small village of Kwom near Fashoda, where the king elect and the chiefs await their arrival. The thing called Nyakang is said to be of cylindrical shape, some two or three feet long by six inches broad. The chief of Akurwa informed Dr. Seligmann that the object in question is a rude wooden figure of a man, which was fashioned long ago at the command of Nyakang in person. We may suppose that it represents the divine king himself and that it is, or was formerly, supposed to house his spirit, though the chief of Akurwa denied to Dr. Seligmann that it does so now. Be that as it may, the object plays a prominent part at the installation of a new king. When the men of Akurwa arrive at Kwom with the sacred stool and the image of Nyakang, as we may call it, they engage in a sham fight with the men who are waiting for them with the king elect. The weapons used on both sides are simply stalks of millet. Being victorious in the mock combat, the men of Akurwa escort the king to Fashoda, and some of them enter the shrine of Nyakang with the stool. After a short time they bring the stool forth again and set it on the ground outside of the sacred enclosure. Then the image of Nyakang is placed on the stool; the king elect holds one leg of the stool and an important chief holds another. The king is surrounded by a crowd of princes and nobles, and near him stand two of his paternal aunts and two of his sisters. After that a bullock is killed and its flesh eaten by the men of certain families called *ororo*, who are said to be descended from the third of the Shilluk kings. Then the Akurwa men carry the image of Nyakang into the shrine, and the *ororo* men place the king elect on the sacred stool, where he remains seated for some time, apparently till sunset. When he rises, the Akurwa men carry the stool back into the shrine, and the king is escorted to three new huts, where he stays in seclusion for three days. On the fourth night he is conducted quietly, almost stealthily, to his royal residence at Fashoda, and next day he shews himself publicly to his subjects. The three new huts in which he spent the days of his seclusion are then broken up and their fragments cast into the river. The installation of a new king generally takes place about the middle of the dry season; and it is said that the men of Akurwa tarry at Fashoda with the image of Nyakang till about the beginning of the rains. Before they leave Fashoda they sacrifice a bullock, and at every waddy or bed of a stream that they cross they kill a sheep.

Like Nyakang himself, their founder, each of the Shilluk kings after death is worshipped at a shrine, which is erected over his grave, and the grave of a king is always in the village where

he was born. The tomb-shrine of a king resembles the shrine of Nyakang, consisting of a few huts enclosed by a fence; one of the huts is built over the king's grave, the others are occupied by the guardians of the shrine. Indeed the shrines of Nyakang and the shrines of the kings are scarcely to be distinguished from each other, and the religious rituals observed at all of them are identical in form and vary only in matters of detail, the variations being due apparently to the far greater sanctity attributed to the shrines of Nyakang. The grave-shrines of the kings are tended by certain old men or women, who correspond to the guardians of the shrines of Nyakang. They are usually widows or old men-servants of the deceased king, and when they die they are succeeded in their office by their descendants. Moreover, cattle are dedicated to the grave-shrines of the kings and sacrifices are offered at them just as at the shrines of Nyakang. Thus when the millet crop threatens to fail or a murrain to break out among the cattle, either Nyakang himself or one of his successors on the throne will appear to somebody in a dream and demand a sacrifice. The dream is reported to the king, who thereupon at once sends a cow and a bullock to one or more of the shrines of Nyakang, if it was he who appeared in the vision, or to the grave-shrine of the particular king whom the dreamer saw in his dream. The bullock is then sacrificed and the cow added to the sacred herd belonging to the shrine. Further, the harvest ceremony which is performed at the shrines of Nyakang is usually, though not necessarily, performed also at the grave-shrines of the kings; and, lastly, sick folk send animals to be sacrificed as offerings on their behalf at the shrines of the kings just as they send them to the shrines of Nyakang.

Sick people have, indeed, a special reason for sacrificing to the spirits of the dead kings in the hope of recovery, inasmuch as one of the commonest causes of sickness, according to the Shilluk, is the entrance of one of these royal spirits into the body of the sufferer, whose first care, therefore, is to rid himself as quickly as possible of his august but unwelcome guest. Apparently, however, it is only the souls of the early kings who manifest themselves in this disagreeable fashion. Dr. Seligmann met with a woman, for example, who had been ill and who attributed her illness to the spirit of Dag, the second of the Shilluk kings, which had taken possession of her body. But a sacrifice of two sheep had induced the spirit to quit her, and she wore anklets of beads, with pieces of the ears of the sheep strung on them, which she thought would effectually guard her against the danger of being again possessed by the soul of the dead king. Nor is it only in sickness that the souls of dead kings are thought to take possession of the bodies of the living. Certain men and women, who bear the name of *ajuago*, are believed to be permanently possessed by the spirit of one or other of the early kings, and in virtue of this inspiration they profess to heal the sick and do a brisk trade in amulets. The first symptom of possession may take the form of illness or of a dream from which the sleeper awakes trembling and agitated. A long and complicated ceremony follows to abate the extreme force of the spiritual manifestations in the new medium, for were these to continue in their first intensity he would not dare to approach his women. But whichever of the dead kings may manifest himself to the living, whether in dreams or in the form of bodily possession, his spirit is deemed, at least by many of the Shilluk, to be identical with that of Nyakang; they do not clearly distinguish, if indeed they distinguish at all, between the divine spirit of the founder of the dynasty and its later manifestations in all his royal successors.

In general the principal element in the religion of the Shilluk would seem to be the worship which they pay to their sacred or divine kings, whether dead or alive. These are believed to be animated by a single divine spirit, which has been transmitted from the semi-mythical, but probably in substance historical, founder of the dynasty through all his successors to the present day. Yet the divine spirit, as Dr. Seligmann justly observes, is clearly not thought of as congenital in the members of the royal house; it is only conveyed to each king on his accession by means of the mysterious object called Nyakang, in which, as Dr. Seligmann

with great probability conjectures, the holy spirit of Nyakang may be supposed to reside. Hence, regarding their kings as incarnate divinities on whom the welfare of men, of cattle, and of the corn implicitly depends, the Shilluk naturally pay them the greatest respect and take every care of them; and however strange it may seem to us, their custom of putting the divine king to death as soon as he shews signs of ill-health or failing strength springs directly from their profound veneration for him and from their anxiety to preserve him, or rather the divine spirit by which he is animated, in the most perfect state of efficiency: nay, we may go further and say that their practice of regicide is the best proof they can give of the high regard in which they hold their kings. For they believe, as we have seen, that the king's life or spirit is so sympathetically bound up with the prosperity of the whole country, that if he fell ill or grew senile the cattle would sicken and cease to multiply, the crops would rot in the fields, and men would perish of widespread disease. Hence, in their opinion, the only way of averting these calamities is to put the king to death while he is still hale and hearty, in order that the divine spirit which he has inherited from his predecessors may be transmitted in turn by him to his successor while it is still in full vigour and has not yet been impaired by the weakness of disease and old age. In this connexion the particular symptom which is commonly said to seal the king's death-warrant is highly significant; when he can no longer satisfy the passions of his numerous wives, in other words, when he has ceased, whether partially or wholly, to be able to reproduce his kind, it is time for him to die and to make room for a more vigorous successor. Taken along with the other reasons which are alleged for putting the king to death, this one suggests that the fertility of men, of cattle, and of the crops is believed to depend sympathetically on the generative power of the king, so that the complete failure of that power in him would involve a corresponding failure in men, animals, and plants, and would thereby entail at no distant date the entire extinction of all life, whether human, animal, or vegetable. No wonder, that with such a danger before their eyes the Shilluk should be most careful not to let the king die what we should call a natural death of sickness or old age. It is characteristic of their attitude towards the death of the kings that they refrain from speaking of it as death: they do not say that a king has died but simply that he has "gone away" like his divine ancestors Nyakang and Dag, the two first kings of the dynasty, both of whom are reported not to have died but to have disappeared. The similar legends of the mysterious disappearance of early kings in other lands, for example at Rome and in Uganda, may well point to a similar custom of putting them to death for the purpose of preserving their life.

On the whole the theory and practice of the divine kings of the Shilluk correspond very nearly to the theory and practice of the priests of Nemi, the Kings of the Wood, if my view of the latter is correct. In both we see a series of divine kings on whose life the fertility of men, of cattle, and of vegetation is believed to depend, and who are put to death, whether in single combat or otherwise, in order that their divine spirit may be transmitted to their successors in full vigour, uncontaminated by the weakness and decay of sickness or old age, because any such degeneration on the part of the king would, in the opinion of his worshippers, entail a corresponding degeneration on mankind, on cattle, and on the crops. Some points in this explanation of the custom of putting divine kings to death, particularly the method of transmitting their divine souls to their successors, will be dealt with more fully in the sequel. Meantime we pass to other examples of the general practice.

The Dinka are a congeries of independent tribes in the valley of the White Nile, whose territory, lying mostly on the eastern bank of the river and stretching from the sixth to the twelfth degree of North Latitude, has been estimated to comprise between sixty and seventy thousand square miles. They are a tall long-legged people rather slender than fat, with curly hair and a complexion of the deepest black. Though ill-fed, they are strong and healthy and in

general reach a great age. The nation embraces a number of independent tribes, and each tribe is mainly composed of the owners of cattle; for the Dinka are essentially a pastoral people, passionately devoted to the care of their numerous herds of oxen, though they also keep sheep and goats, and the women cultivate small quantities of millet (*durra*) and sesame. The tribes have no political union. Each village forms a separate community, pasturing its herds together in the same grass-land. With the change of the seasons the people migrate with their flocks and herds to and from the banks of the Nile. In summer, when the plains near the great river are converted into swamps and covered with clouds of mosquitoes, the herdsmen and their families drive their beasts to the higher land of the interior, where the animals find firm ground, abundant fodder, and pools of water at which to slake their thirst in the fervour of the noonday heat. Here in the clearings of the forest the community takes up its abode, each family dwelling by itself in one or more conical huts enclosed by a strong fence of stakes and thorn-bushes. It is in the patches of open ground about these dwellings that the women grow their scanty crops of millet and sesame. The mode of tillage is rude. The stumps of the trees which have been felled are left standing to a height of several feet; the ground is hacked by the help of a tool between a hoe and a spade, and the weeds are uprooted with the hand. Such as it is, the crop is exposed to the ravages of apes and elephants by night and of birds by day. The hungry blacks do not always wait till the corn is ripe, but eat much of it while the ears are still green. The cattle are kept in separate parks (*murahs*) away from the villages. It is in the season of the summer rains that the Dinka are most happy and prosperous. Then the cattle find sweet grass, plentiful water, coolness and shade in the forest; then the people subsist in comfort on the milk of their flocks and herds, supplementing it with the millet which they reap and the wild fruits which they gather in the forest; then they brew the native beer, then they marry and dance by night under the bright moon of the serene tropical sky. But in autumn a great change passes over the life of the community. When October has come, the rains are over, the grass of the pastures is eaten down or withered, the pools are dry; thirst compels the whole village, with its lowing herds and bleating flocks, to migrate to the neighbourhood of the river. Now begins a time of privation and suffering. There is no grass for the cattle save in some marshy spots, where the herdsman must fight his rivals in order to win a meagre supply of fodder for his starveling beasts. There is no milk for the people, no fruits on the trees, except a bitter sort of acorns, from which a miserable flour is ground to stay the pangs of hunger. The lean and famished natives are driven to fish in the river for the tubers of water-lilies, to grub in the earth for roots, to boil the leaves of trees, and as a last resource to drink the blood drawn from the necks of their wretched cattle. The gaunt appearance of the people at this season fills the beholder with horror. The herds are decimated by famine, but even more beasts perish by dysentery and other diseases when the first rains cause the fresh grass to sprout.

It is no wonder that the rain, on which the Dinka are so manifestly dependent for their subsistence, should play a great part in their religion and superstition. They worship a supreme being whose name of *Dengdit* means literally Great Rain. It was he who created the world and established the present order of things, and it is he who sends down the rain from the "rain-place," his home in the upper regions of the air. But according to the Niel Dinka this great being was once incarnate in human form. Born of a woman, who descended from the sky, he became the ancestor of a clan which has the rain for its totem; for the recent researches of Dr. C. G. Seligmann have proved that every Dinka tribe is divided into a number of clans, each of which reveres as its totem a species of animals or plants or other natural objects, such as rain or fire. Animal totems seem to be the commonest; amongst them are the lion, the elephant, the crocodile, the hippopotamus, the fox, the hyaena, and a species of small birds called *amur*, clouds of which infest the cornfields and do great damage to the crops. Each clan speaks of its totemic animal or plant as its ancestor and refrains from

injuring and eating it. Men of the Crocodile clan, for example, call themselves “Brothers of the Crocodile,” and will neither kill nor eat the animal; indeed they will not even eat out of any vessel which has held crocodile flesh. And as they do not injure crocodiles, so they imagine that their crocodile kinsfolk will not injure them; hence men of this clan swim freely in the river, even by night, without fear of being attacked by the dangerous reptiles. And when the totem is a carnivorous animal, members of the clan may propitiate it by killing sheep and throwing out the flesh to be devoured by their animal brethren either on the outskirts of the village or in the river. Members of the Small Bird (*amur*) clan perform ceremonies to prevent the birds from injuring the crops. The relationship between a clan and its animal ancestor or totem is commonly explained by a legend that in the beginning an ancestress gave birth to twins, one of whom was the totemic animal and the other the human ancestor. Like most totemic clans, the clans of the Dinka are exogamous, that is, no man may marry a woman of his own clan. The descent of the clans is in the paternal line; in other words, every man and woman belongs to his or her father's clan, not to that of his or her mother. But the Rain clan of the Niel Dinka has for its ancestor, as we have seen, the supreme god himself, who deigned to be born of a woman and to live for a long time among men, ruling over them, till at last he grew very old and disappeared appropriately, like Romulus, in a great storm of rain. Shrines erected in his honour appear to be scattered all over the Dinka country and offerings are made at them.

Perhaps without being unduly rash we may conjecture that the great god of the Dinka, who gives them the rain, was indeed, what tradition represents him as having been, a man among men, in fact a human rain-maker, whom at his death the superstition of his fellows promoted to the rank of a deity above the clouds. Be that as it may, the human rain-maker (*bain*) is a very important personage among the Dinka to this day; indeed the men in authority whom travellers dub chiefs or sheikhs are in fact the actual or potential rain-makers of the tribe or community. Each of them is believed to be animated by the spirit of a great rain-maker, which has come down to him through a succession of rain-makers; and in virtue of this inspiration a successful rain-maker enjoys very great power and is consulted on all important matters. For example, in the Bor tribe of Dinka at the present time there is an old but active rain-maker named Biyordit, who is reputed to have immanent in him a great and powerful spirit called Lerpiu, and by reason of this reputation he exercises immense influence over all the Dinka of the Bor and Tain tribes. While the mighty spirit Lerpiu is supposed to be embodied in the rain-maker, it is also thought to inhabit a certain hut which serves as a shrine. In front of the hut stands a post to which are fastened the horns of many bullocks that have been sacrificed to Lerpiu; and in the hut is kept a very sacred spear which bears the name of Lerpiu and is said to have fallen from heaven six generations ago. As fallen stars are also called Lerpiu, we may suspect that an intimate connexion is supposed to exist between meteorites and the spirit which animates the rain-maker; nor would such a connexion seem unnatural to the savage, who observes that meteorites and rain alike descend from the sky. In spring, about the month of April, when the new moon is a few days old, a sacrifice of bullocks is offered to Lerpiu for the purpose of inducing him to move Dengdit, the great heavenly rain-maker, to send down rain on the parched and thirsty earth. Two bullocks are led twice round the shrine and afterwards tied by the rain-maker to the post in front of it. Then the drums beat and the people, old and young, men and women, dance round the shrine and sing, while the beasts are being sacrificed, “Lerpiu, our ancestor, we have brought you a sacrifice. Be pleased to cause rain to fall.” The blood of the bullocks is collected in a gourd, boiled in a pot on the fire, and eaten by the old and important people of the clan. The horns of the animals are attached to the post in front of the shrine.

In spite, or rather in virtue, of the high honour in which he is held, no Dinka rain-maker is allowed to die a natural death of sickness or old age; for the Dinka believe that if such an untoward event were to happen, the tribe would suffer from disease and famine, and the herds would not yield their increase. So when a rain-maker feels that he is growing old and infirm, he tells his children that he wishes to die. Among the Agar Dinka a large grave is dug and the rain-maker lies down in it on his right side with his head resting on a skin. He is surrounded by his friends and relatives, including his younger children; but his elder children are not allowed to approach the grave lest in their grief and despair they should do themselves a bodily injury. For many hours, generally for more than a day, the rain-maker lies without eating or drinking. From time to time he speaks to the people, recalling the past history of the tribe, reminding them how he has ruled and advised them, and instructing them how they are to act in the future. Then, when he has concluded his admonition, he tells them that it is finished and bids them cover him up. So the earth is thrown down on him as he lies in the grave, and he soon dies of suffocation. Such, with minor variations, appears to be the regular end of the honourable career of a rain-maker in all the Dinka tribes. The Khor-Adar Dinka told Dr. Seligmann that when they have dug the grave for their rain-maker they strangle him in his house. The father and paternal uncle of one of Dr. Seligmann's informants had both been rain-makers and both had been killed in the most regular and orthodox fashion. Even if a rain-maker is quite young he will be put to death should he seem likely to perish of disease. Further, every precaution is taken to prevent a rain-maker from dying an accidental death, for such an end, though not nearly so serious a matter as death from illness or old age, would be sure to entail sickness on the tribe. As soon as a rain-maker is killed, his valuable spirit is supposed to pass to a suitable successor, whether a son or other near blood relation.

In the Central African kingdom of Unyoro down to recent years custom required that as soon as the king fell seriously ill or began to break up from age, he should die by his own hand; for, according to an old prophecy, the throne would pass away from the dynasty if ever the king were to die a natural death. He killed himself by draining a poisoned cup. If he faltered or were too ill to ask for the cup, it was his wife's duty to administer the poison. When the king of Kibanga, on the Upper Congo, seems near his end, the sorcerers put a rope round his neck, which they draw gradually tighter till he dies. If the king of Gingero happens to be wounded in war, he is put to death by his comrades, or, if they fail to kill him, by his kinsfolk, however hard he may beg for mercy. They say they do it that he may not die by the hands of his enemies. The Jukos are a heathen tribe of the Benue river, a great tributary of the Niger. In their country "the town of Gatri is ruled by a king who is elected by the big men of the town as follows. When in the opinion of the big men the king has reigned long enough, they give out that 'the king is sick'—a formula understood by all to mean that they are going to kill him, though the intention is never put more plainly. They then decide who is to be the next king. How long he is to reign is settled by the influential men at a meeting; the question is put and answered by each man throwing on the ground a little piece of stick for each year he thinks the new king should rule. The king is then told, and a great feast prepared, at which the king gets drunk on guinea-corn beer. After that he is speared, and the man who was chosen becomes king. Thus each Juko king knows that he cannot have very many more years to live, and that he is certain of his predecessor's fate. This, however, does not seem to frighten candidates. The same custom of king-killing is said to prevail at Quonde and Wukari as well as at Gatri." In the three Hausa kingdoms of Gobir, Katsina, and Daura, in Northern Nigeria, as soon as a king shewed signs of failing health or growing infirmity, an official who bore the title of Killer of the Elephant (*kariagiwa*) appeared and throttled him by holding his windpipe. The king elect was afterwards conducted to the centre of the town, called Head of the Elephant (*kan giwa*), where he was made to lie down on a bed. Then a black ox was slaughtered and its blood allowed to pour all over his body. Next the ox was flayed, and the

remains of the dead king, which had been disembowelled and smoked for seven days over a slow fire, were wrapt up in the hide and dragged along the ground to the place of burial, where they were interred in a circular pit. After his bath of ox blood the new king had to remain for seven days in his mother's house, undergoing ablutions daily. On the eighth day he was conducted in state to his palace. In the kingdom of Daura the new monarch had moreover to step over the corpse of his predecessor.

The Matiamvo is a great king or emperor in the interior of Angola. One of the inferior kings of the country, by name Challa, gave to a Portuguese expedition the following account of the manner in which the Matiamvo comes by his end. "It has been customary," he said, "for our Matiamvos to die either in war or by a violent death, and the present Matiamvo must meet this last fate, as, in consequence of his great exactions, he has lived long enough. When we come to this understanding, and decide that he should be killed, we invite him to make war with our enemies, on which occasion we all accompany him and his family to the war, when we lose some of our people. If he escapes unhurt, we return to the war again and fight for three or four days. We then suddenly abandon him and his family to their fate, leaving him in the enemy's hands. Seeing himself thus deserted, he causes his throne to be erected, and, sitting down, calls his family around him. He then orders his mother to approach; she kneels at his feet; he first cuts off her head, then decapitates his sons in succession, next his wives and relatives, and, last of all, his most beloved wife, called Anacullo. This slaughter being accomplished, the Matiamvo, dressed in all his pomp, awaits his own death, which immediately follows, by an officer sent by the powerful neighbouring chiefs, Caniquinha and Canica. This officer first cuts off his legs and arms at the joints, and lastly he cuts off his head; after which the head of the officer is struck off. All the potentates retire from the encampment, in order not to witness his death. It is my duty to remain and witness his death, and to mark the place where the head and arms have been deposited by the two great chiefs, the enemies of the Matiamvo. They also take possession of all the property belonging to the deceased monarch and his family, which they convey to their own residence. I then provide for the funeral of the mutilated remains of the late Matiamvo, after which I retire to his capital and proclaim the new government. I then return to where the head, legs, and arms have been deposited, and, for forty slaves, I ransom them, together with the merchandise and other property belonging to the deceased, which I give up to the new Matiamvo, who has been proclaimed. This is what has happened to many Matiamvos, and what must happen to the present one."

It appears to have been a Zulu custom to put the king to death as soon as he began to have wrinkles or grey hairs. At least this seems implied in the following passage written by one who resided for some time at the court of the notorious Zulu tyrant Chaka, in the early part of the nineteenth century: "The extraordinary violence of the king's rage with me was mainly occasioned by that absurd nostrum, the hair oil, with the notion of which Mr. Farewell had impressed him as being a specific for removing all indications of age. From the first moment of his having heard that such a preparation was attainable, he evinced a solicitude to procure it, and on every occasion never forgot to remind us of his anxiety respecting it; more especially on our departure on the mission his injunctions were particularly directed to this object. It will be seen that it is one of the barbarous customs of the Zoolas in their choice or election of their kings that he must neither have wrinkles nor grey hairs, as they are both distinguishing marks of disqualification for becoming a monarch of a warlike people. It is also equally indispensable that their king should never exhibit those proofs of having become unfit and incompetent to reign; it is therefore important that they should conceal these indications so long as they possibly can. Chaka had become greatly apprehensive of the approach of grey hairs; which would at once be the signal for him to prepare to make his exit

from this sublunary world, it being always followed by the death of the monarch.” The writer to whom we are indebted for this instructive anecdote of the hair-oil omits to specify the mode in which a grey-haired and wrinkled Zulu chief used “to make his exit from this sublunary world”; but on analogy we may conjecture that he did so by the simple and perfectly sufficient process of being knocked on the head.

The custom of putting kings to death as soon as they suffered from any personal defect prevailed two centuries ago in the Caffre kingdom of Sofala, to the north of the present Zululand. We have seen that these kings of Sofala, each of whom bore the official name of Quiteve, were regarded as gods by their people, being entreated to give rain or sunshine, according as each might be wanted. Nevertheless a slight bodily blemish, such as the loss of a tooth, was considered a sufficient cause for putting one of these god-men to death, as we learn from the following passage of an old Portuguese historian: “It was formerly the custom of the kings of this land to commit suicide by taking poison when any disaster or natural physical defect fell upon them, such as impotence, infectious disease, the loss of their front teeth, by which they were disfigured, or any other deformity or affliction. To put an end to such defects they killed themselves, saying that the king should be free from any blemish, and if not, it was better for his honour that he should die and seek another life where he would be made whole, for there everything was perfect. But the Quiteve who reigned when I was in those parts would not imitate his predecessors in this, being discreet and dreaded as he was; for having lost a front tooth he caused it to be proclaimed throughout the kingdom that all should be aware that he had lost a tooth and should recognise him when they saw him without it, and if his predecessors killed themselves for such things they were very foolish, and he would not do so; on the contrary, he would be very sorry when the time came for him to die a natural death, for his life was very necessary to preserve his kingdom and defend it from his enemies; and he recommended his successors to follow his example.” The same historian tells us that “near the kingdom of Quiteve is another of which Sedanda is king, the laws and customs of which are very similar to those of Quiteve, all these Kaffirs being of the same nation, and these two kingdoms having formerly been one, as I shall relate hereafter. When I was in Sofala it happened that King Sedanda was seized with a severe and contagious leprosy, and seeing that his complaint was incurable, having named the prince who was to succeed him, he took poison and died, according to the custom of those kings when they are afflicted with any physical deformity.”

The king of Sofala who dared to survive the loss of his front tooth was thus a bold reformer like Ergamenes, king of Ethiopia. We may conjecture that the ground for putting the Ethiopian kings to death was, as in the case of the Zulu and Sofala kings, the appearance on their person of any bodily defect or sign of decay; and that the oracle which the priests alleged as the authority for the royal execution was to the effect that great calamities would result from the reign of a king who had any blemish on his body; just as an oracle warned Sparta against a “lame reign,” that is, the reign of a lame king. It is some confirmation of this conjecture that the kings of Ethiopia were chosen for their size, strength, and beauty long before the custom of killing them was abolished. To this day the Sultan of Wadai must have no obvious bodily defect, and the king of Angoy cannot be crowned if he has a single blemish, such as a broken or a filed tooth or the scar of an old wound. According to the Book of Acaill and many other authorities no king who was afflicted with a personal blemish might reign over Ireland at Tara. Hence, when the great King Cormac Mac Art lost one eye by an accident, he at once abdicated. It is only natural, therefore, to suppose, especially with the other African examples before us, that any bodily defect or symptom of old age appearing on the person of the Ethiopian monarch was the signal for his execution. At a later time it is recorded that if the king of Ethiopia became maimed in any part of his body all his courtiers

had to suffer the same mutilation. But this rule may perhaps have been instituted at the time when the custom of killing the king for any personal defect was abolished; instead of compelling the king to die because, for example, he had lost a tooth, all his subjects would be obliged to lose a tooth, and thus the invidious superiority of the subjects over the king would be cancelled. A rule of this sort is still observed in the same region at the court of the Sultans of Darfur. When the Sultan coughs, every one makes the sound *ts ts* by striking the tongue against the root of the upper teeth; when he sneezes, the whole assembly utters a sound like the cry of the jeko; when he falls off his horse, all his followers must fall off likewise; if any one of them remains in the saddle, no matter how high his rank, he is laid on the ground and beaten. At the court of the king of Uganda in central Africa, when the king laughs, every one laughs; when he sneezes, every one sneezes; when he has a cold, every one pretends to have a cold; when he has his hair cut, so has everybody. At the court of Boni in Celebes it is a rule that whatever the king does all the courtiers must do. If he stands, they stand; if he sits, they sit; if he falls off his horse, they fall off their horses; if he bathes, they bathe, and passers-by must go into the water in the dress, good or bad, which they happen to have on. When the emperor of China laughs, the mandarins in attendance laugh also; when he stops laughing, they stop; when he is sad, their countenances are chopfallen; “you would say that their faces are on springs, and that the emperor can touch the springs and set them in motion at pleasure.” But to return to the death of the divine king.

Many days' journey to the north-east of Abomey, the old capital of Dahomey, lies the kingdom of Eyeo. “The Eyeos are governed by a king, no less absolute than the king of Dahomy, yet subject to a regulation of state, at once humiliating and extraordinary. When the people have conceived an opinion of his ill-government, which is sometimes insidiously infused into them by the artifice of his discontented ministers, they send a deputation to him with a present of parrots' eggs, as a mark of its authenticity, to represent to him that the burden of government must have so far fatigued him that they consider it full time for him to repose from his cares and indulge himself with a little sleep. He thanks his subjects for their attention to his ease, retires to his own apartment as if to sleep, and there gives directions to his women to strangle him. This is immediately executed, and his son quietly ascends the throne upon the usual terms of holding the reins of government no longer than whilst he merits the approbation of the people.” About the year 1774, a king of Eyeo, whom his ministers attempted to remove in the customary manner, positively refused to accept the proffered parrots' eggs at their hands, telling them that he had no mind to take a nap, but on the contrary was resolved to watch for the benefit of his subjects. The ministers, surprised and indignant at his recalcitrancy, raised a rebellion, but were defeated with great slaughter, and thus by his spirited conduct the king freed himself from the tyranny of his councillors and established a new precedent for the guidance of his successors. However, the old custom seems to have revived and persisted until late in the nineteenth century, for a Catholic missionary, writing in 1884, speaks of the practice as if it were still in vogue. Another missionary, writing in 1881, thus describes the usage of the Egbas and the Yorubas of west Africa: “Among the customs of the country one of the most curious is unquestionably that of judging and punishing the king. Should he have earned the hatred of his people by exceeding his rights, one of his councillors, on whom the heavy duty is laid, requires of the prince that he shall ‘go to sleep,’ which means simply ‘take poison and die.’ If his courage fails him at the supreme moment, a friend renders him this last service, and quietly, without betraying the secret, they prepare the people for the news of the king's death. In Yoruba the thing is managed a little differently. When a son is born to the king of Oyo, they make a model of the infant's right foot in clay and keep it in the house of the elders (*ogboni*). If the king fails to observe the customs of the country, a messenger, without speaking a word, shews him his child's foot. The king knows what that means. He takes poison and goes to sleep.” The old

Prussians acknowledged as their supreme lord a ruler who governed them in the name of the gods, and was known as God's Mouth (*Kirwaido*). When he felt himself weak and ill, if he wished to leave a good name behind him, he had a great heap made of thorn-bushes and straw, on which he mounted and delivered a long sermon to the people, exhorting them to serve the gods and promising to go to the gods and speak for the people. Then he took some of the perpetual fire which burned in front of the holy oak-tree, and lighting the pile with it burned himself to death.

We need not doubt the truth of this last tradition. Fanaticism or the mere love of notoriety has led men in other ages and other lands to court death in the flames. In antiquity the mountebank Peregrinus, after bidding for fame in the various characters of a Christian martyr, a shameless cynic, and a rebel against Rome, ended his disreputable and vainglorious career by publicly burning himself at the Olympic festival in the presence of a crowd of admirers and scoffers, among whom was the satirist Lucian. Buddhist monks in China sometimes seek to attain Nirvana by the same method, the flame of their religious zeal being fanned by a belief that the merit of their death redounds to the good of the whole community, while the praises which are showered upon them in their lives, and the prospect of the honours and worship which await them after death, serve as additional incentives to suicide. The beautiful mountains of Tien-tai, in the district of Tai-chow, are, or were till lately, the scene of many such voluntary martyrdoms. The victims are monks who, weary of the vanities of earth, have withdrawn even from their monasteries and spent years alone in one or other of the hermitages which are scattered among the ravines and precipices of this wild and secluded region. Their fancy having been wrought and their resolution strung to the necessary pitch by a life of solitude and brooding contemplation, they announce their intention and fix the day of their departure from this world of shadows, always choosing for that purpose a festival which draws a crowd of worshippers and pilgrims to one of the many monasteries of the district. Advertisements of the approaching solemnity are posted throughout the country, and believers are invited to attend and assist the martyrs with their prayers. From three to five monks are said thus to commit themselves to the flames every year at Tien-tai. They prepare by fasting and ablution for the last fiery trial of their faith. An upright chest containing a seat is placed in a brick furnace, and the space between the chest and the walls of the furnace is filled with fuel. The doomed man takes his seat in the chest; the door is shut on him and barred; fire is applied to the combustibles, and consumes the candidate for heaven. When all is over, the charred remains are raked together, worshipped, and reverently buried in a dagoba or shrine destined for the preservation and worship of the relics of saints. The victims, it is said, are not always voluntary. In remote districts unscrupulous priests have been known to stupefy a clerical brother with drugs and then burn him publicly, an unwilling martyr, as a means of spreading the renown of the monastery and thereby attracting the alms of the faithful. On the twenty-eighth of January 1888 the Spiritual-hill monastery, distant about a day's journey from the city of Wen-chow, witnessed the voluntary death by fire of two monks who bore the euphonious names of Perceptive-intelligence and Effulgent-glamour. Before they entered the furnaces, the spectators prayed them to become after death the spiritual guardians of the neighbourhood, to protect it from all evil influences, and to grant luck in trade, fine seasons, plentiful harvests, and every other blessing. The martyrs complaisantly promised to comply with these requests, and were thereupon worshipped as living Buddhas, while a stream of gifts poured into the coffers of the monastery. Among the Esquimaux of Bering Strait a shaman has been known to burn himself alive in the expectation of returning to life with much stronger powers than he had possessed before.

But the suicides by fire of Chinese Buddhists and Esquimaux sorcerers have been far surpassed by the frenzies of Christian fanaticism. In the seventeenth century the internal

troubles of their unhappy country, viewed in the dim light of prophecy, created a widespread belief among the Russian people that the end of the world was at hand, and that the reign of Antichrist was about to begin. We know from Scripture that the old serpent, which is the devil, has been or will be shut up under lock and key for a thousand years, and that the number of the Beast is six hundred and sixty-six. A simple mathematical calculation, based on these irrefragable data, pointed to the year one thousand six hundred and sixty-six as the date when the final consummation of all things and the arrival of the Beast in question might be confidently anticipated. When the year came and went and still, to the general surprise, the animal failed to put in an appearance, the calculations were revised, it was discovered that an error had crept into them, and the world was respited for another thirty-three years. But though opinions differed as to the precise date of the catastrophe, the pious were unanimous in their conviction of its proximity. Accordingly some of them ceased to till their fields, abandoned their houses, and on certain nights of the year expected the sound of the last trump in coffins which they took the precaution of closing, lest their senses, or what remained of them, should be overpowered by the awful vision of the Judgment Day.

It would have been well if the delusion of their disordered intellects had stopped there. Unhappily in many cases it went much further, and suicide, universal suicide, was preached by fervent missionaries as the only means to escape the snares of Antichrist and to pass from the sins and sorrows of this fleeting world to the eternal joys of heaven. Whole communities hailed with enthusiasm the gospel of death, and hastened to put its precepts in practice. An epidemic of suicide raged throughout northern and north-eastern Russia. At first the favourite mode of death was by starvation. In the forest of Vetloug, for example, an old man founded an establishment for the use of religious suicides. It was a building without doors and windows. The aspirants to heaven were lowered into it through a hole in the roof, the hatch was battened down on them, and men armed with clubs patrolled the outer walls to prevent the prisoners from escaping. Hundreds of persons thus died a lingering death. At first the sounds of devotion issued from the walls; but as time went on these were replaced by entreaties for food, prayers for mercy, and finally imprecations on the miscreant who had lured these misguided beings to destruction and on the parents who had brought them into the world to suffer such exquisite torments. Thus death by famine was attended by some obvious disadvantages. It was slow: it opened the door to repentance: it occasionally admitted of rescue. Accordingly death by fire was preferred as surer and more expeditious. Priests, monks, and laymen scoured the villages and hamlets preaching salvation by the flames, some of them decked in the spoils of their victims; for the motives of the preachers were often of the basest sort. They did not spare even the children, but seduced them by promises of the gay clothes, the apples, the nuts, the honey they would enjoy in heaven. Sometimes when the people hesitated, these infamous wretches decided the wavering minds of their dupes by a false report that the troops were coming to deliver them up to Antichrist, and so to rob them of a blissful eternity. Then men, women, and children rushed into the flames. Sometimes hundreds, and even thousands, thus perished together. An area was enclosed by barricades, fuel was heaped up in it, the victims huddled together, fire set to the whole, and the sacrifice consummated. Any who in their agony sought to escape were driven or thrown back into the flames, sometimes by their own relations. These sinister fires generally blazed at night, reddening the sky till daybreak. In the morning nothing remained but charred bodies gnawed by prowling dogs; but the stench of burnt human flesh poisoned the air for days afterwards.

As the Christians expected the arrival of Antichrist in the year 1666, so the Jews cheerfully anticipated the long-delayed advent of their Messiah in the same fateful year. A Jew of Smyrna, by name Sabatei-Sevi, availed himself of this general expectation to pose as the Messiah in person. He was greeted with enthusiasm. Jews from many parts of Europe

hastened to pay their homage and, what was still better, their money to the future deliverer of his country, who in return parcelled out among them, with the greatest liberality, estates in the Holy Land which did not belong to him. But the alternative of death by impalement or conversion to Mohammedanism, which the Sultan submitted to his consideration, induced him to revise his theological opinions, and on looking into the matter more closely he discovered that his true mission in life was to preach the total abolition of the Jewish religion and the substitution for it of Islam.

§ 3. Kings killed at the End of a Fixed Term.

In the cases hitherto described, the divine king or priest is suffered by his people to retain office until some outward defect, some visible symptom of failing health or advancing age, warns them that he is no longer equal to the discharge of his divine duties; but not until such symptoms have made their appearance is he put to death. Some peoples, however, appear to have thought it unsafe to wait for even the slightest symptom of decay and have preferred to kill the king while he was still in the full vigour of life. Accordingly, they have fixed a term beyond which he might not reign, and at the close of which he must die, the term fixed upon being short enough to exclude the probability of his degenerating physically in the interval. In some parts of southern India the period fixed was twelve years. Thus, according to an old traveller, in the province of Quilacare, about twenty leagues to the north-east of Cape Comorin, "there is a Gentile house of prayer, in which there is an idol which they hold in great account, and every twelve years they celebrate a great feast to it, whither all the Gentiles go as to a jubilee. This temple possesses many lands and much revenue: it is a very great affair. This province has a king over it, who has not more than twelve years to reign from jubilee to jubilee. His manner of living is in this wise, that is to say: when the twelve years are completed, on the day of this feast there assemble together innumerable people, and much money is spent in giving food to Bramans. The king has a wooden scaffolding made, spread over with silken hangings: and on that day he goes to bathe at a tank with great ceremonies and sound of music, after that he comes to the idol and prays to it, and mounts on to the scaffolding, and there before all the people he takes some very sharp knives, and begins to cut off his nose, and then his ears, and his lips, and all his members, and as much flesh off himself as he can; and he throws it away very hurriedly until so much of his blood is spilled that he begins to faint, and then he cuts his throat himself. And he performs this sacrifice to the idol, and whoever desires to reign other twelve years and undertake this martyrdom for love of the idol, has to be present looking on at this: and from that place they raise him up as king."

The king of Calicut, on the Malabar coast, bears the title of Samorin or Samory, which in the native language is said to mean "God on earth." He "pretends to be of a higher rank than the Brahmans, and to be inferior only to the invisible gods; a pretention that was acknowledged by his subjects, but which is held as absurd and abominable by the Brahmans, by whom he is only treated as a Sudra." Formerly the Samorin had to cut his throat in public at the end of a twelve years' reign. But towards the end of the seventeenth century the rule had been modified as follows: "Many strange customs were observed in this country in former times, and some very odd ones are still continued. It was an ancient custom for the Samorin to reign but twelve years, and no longer. If he died before his term was expired, it saved him a troublesome ceremony of cutting his own throat, on a publick scaffold erected for the purpose. He first made a feast for all his nobility and gentry, who are very numerous. After the feast he saluted his guests, and went on the scaffold, and very decently cut his own throat in the view of the assembly, and his body was, a little while after, burned with great pomp and ceremony, and the grandees elected a new Samorin. Whether that custom was a religious or a civil ceremony, I know not, but it is now laid aside. And a new custom is followed by the

modern Samorins, that jubilee is proclaimed throughout his dominions, at the end of twelve years, and a tent is pitched for him in a spacious plain, and a great feast is celebrated for ten or twelve days, with mirth and jollity, guns firing night and day, so at the end of the feast any four of the guests that have a mind to gain a crown by a desperate action, in fighting their way through 30 or 40,000 of his guards, and kill the Samorin in his tent, he that kills him succeeds him in his empire. In anno 1695, one of those jubilees happened, and the tent pitched near Pennany, a seaport of his, about fifteen leagues to the southward of Calicut. There were but three men that would venture on that desperate action, who fell in, with sword and target, among the guard, and, after they had killed and wounded many, were themselves killed. One of the desperados had a nephew of fifteen or sixteen years of age, that kept close by his uncle in the attack on the guards, and, when he saw him fall, the youth got through the guards into the tent, and made a stroke at his Majesty's head, and had certainly despatched him if a large brass lamp which was burning over his head had not marred the blow; but, before he could make another, he was killed by the guards; and, I believe, the same Samorin reigns yet. I chanced to come that time along the coast and heard the guns for two or three days and nights successively."

The English traveller, whose account I have quoted, did not himself witness the festival he describes, though he heard the sound of the firing in the distance. Fortunately, exact records of these festivals and of the number of men who perished at them have been preserved in the archives of the royal family at Calicut. In the latter part of the nineteenth century they were examined by Mr. W. Logan, with the personal assistance of the reigning king, and from his work it is possible to gain an accurate conception both of the tragedy and of the scene where it was periodically enacted down to 1743, when the ceremony took place for the last time.

The festival at which the king of Calicut staked his crown and his life on the issue of battle was known as the *Maha Makham* or Great Sacrifice. It fell every twelfth year, when the planet Jupiter was in retrograde motion in the sign of the Crab, and it lasted twenty-eight days, culminating at the time of the eighth lunar asterism in the month of Makaram. As the date of the festival was determined by the position of Jupiter in the sky, and the interval between two festivals was twelve years, which is roughly Jupiter's period of revolution round the sun, we may conjecture that the splendid planet was supposed to be in a special sense the king's star and to rule his destiny, the period of its revolution in heaven corresponding to the period of his reign on earth. However that may be, the ceremony was observed with great pomp at the Tirunavayi temple, on the north bank of the Ponnani River. The spot is close to the present railway line. As the train rushes by, you can just catch a glimpse of the temple, almost hidden behind a clump of trees on the river bank. From the western gateway of the temple a perfectly straight road, hardly raised above the level of the surrounding rice-fields and shaded by a fine avenue, runs for half a mile to a high ridge with a precipitous bank, on which the outlines of three or four terraces can still be traced. On the topmost of these terraces the king took his stand on the eventful day. The view which it commands is a fine one. Across the flat expanse of the rice-fields, with the broad placid river winding through them, the eye ranges eastward to high tablelands, their lower slopes embowered in woods, while afar off looms the great chain of the western Ghats, and in the furthest distance the Neilgherries or Blue Mountains, hardly distinguishable from the azure of the sky above.

But it was not to the distant prospect that the king's eyes naturally turned at this crisis of his fate. His attention was arrested by a spectacle nearer at hand. For all the plain below was alive with troops, their banners waving gaily in the sun, the white tents of their many camps standing sharply out against the green and gold of the rice-fields. Forty thousand fighting men or more were gathered there to defend the king. But if the plain swarmed with soldiers, the road that cuts across it from the temple to the king's stand was clear of them. Not a soul

was stirring on it. Each side of the way was barred by palisades, and from the palisades on either hand a long hedge of spears, held by strong arms, projected into the empty road, their blades meeting in the middle and forming a glittering arch of steel. All was now ready. The king waved his sword. At the same moment a great chain of massy gold, enriched with bosses, was placed on an elephant at his side. That was the signal. On the instant a stir might be seen half a mile away at the gate of the temple. A group of swordsmen, decked with flowers and smeared with ashes, has stepped out from the crowd. They have just partaken of their last meal on earth, and they now receive the last blessings and farewells of their friends. A moment more and they are coming down the lane of spears, hewing and stabbing right and left at the spearmen, winding and turning and writhing among the blades as if they had no bones in their bodies. It is all in vain. One after the other they fall, some nearer the king, some further off, content to die, not for the shadow of a crown, but for the mere sake of approving their dauntless valour and swordsmanship to the world. On the last days of the festival the same magnificent display of gallantry, the same useless sacrifice of life was repeated again and again. Yet perhaps no sacrifice is wholly useless which proves that there are men who prefer honour to life.

“It is a singular custom in Bengal,” says an old native historian of India, “that there is little of hereditary descent in succession to the sovereignty. There is a throne allotted for the king; there is, in like manner, a seat or station assigned for each of the *amirs*, *wazirs*, and *mansabdars*. It is that throne and these stations alone which engage the reverence of the people of Bengal. A set of dependents, servants, and attendants are annexed to each of these situations. When the king wishes to dismiss or appoint any person, whosoever is placed in the seat of the one dismissed is immediately attended and obeyed by the whole establishment of dependents, servants, and retainers annexed to the seat which he occupies. Nay, this rule obtains even as to the royal throne itself. Whoever kills the king, and succeeds in placing himself on that throne, is immediately acknowledged as king; all the *amirs*, *wazirs*, soldiers, and peasants instantly obey and submit to him, and consider him as being as much their sovereign as they did their former prince, and obey his orders implicitly. The people of Bengal say, ‘We are faithful to the throne; whoever fills the throne we are obedient and true to it.’” A custom of the same sort formerly prevailed in the little kingdom of Passier, on the northern coast of Sumatra. The old Portuguese historian De Barros, who informs us of it, remarks with surprise that no wise man would wish to be king of Passier, since the monarch was not allowed by his subjects to live long. From time to time a sort of fury seized the people, and they marched through the streets of the city chanting with loud voices the fatal words, “The king must die!” When the king heard that song of death he knew that his hour had come. The man who struck the fatal blow was of the royal lineage, and as soon as he had done the deed of blood and seated himself on the throne he was regarded as the legitimate king, provided that he contrived to maintain his seat peaceably for a single day. This, however, the regicide did not always succeed in doing. When Fernão Peres d'Andrade, on a voyage to China, put in at Passier for a cargo of spices, two kings were massacred, and that in the most peaceable and orderly manner, without the smallest sign of tumult or sedition in the city, where everything went on in its usual course, as if the murder or execution of a king were a matter of everyday occurrence. Indeed, on one occasion three kings were raised to the dangerous elevation and followed each other on the dusty road of death in a single day. The people defended the custom, which they esteemed very laudable and even of divine institution, by saying that God would never allow so high and mighty a being as a king, who reigned as his vicegerent on earth, to perish by violence unless for his sins he thoroughly deserved it. Far away from the tropical island of Sumatra a rule of the same sort appears to have obtained among the old Slavs. When the captives Gunn and Jarmerik contrived to slay the king and queen of the Slavs and made their escape, they were pursued by the barbarians,

who shouted after them that if they would only come back they would reign instead of the murdered monarch, since by a public statute of the ancients the succession to the throne fell to the king's assassin. But the flying regicides turned a deaf ear to promises which they regarded as mere baits to lure them back to destruction; they continued their flight, and the shouts and clamour of the barbarians gradually died away in the distance.

When kings were bound to suffer death, whether at their own hands or at the hands of others, on the expiration of a fixed term of years, it was natural that they should seek to delegate the painful duty, along with some of the privileges of sovereignty, to a substitute who should suffer vicariously in their stead. This expedient appears to have been resorted to by some of the princes of Malabar. Thus we are informed by a native authority on that country that "in some places all powers both executive and judicial were delegated for a fixed period to natives by the sovereign. This institution was styled *Thalavettiparothiam* or authority obtained by decapitation. *Parothiam* is the name of a supreme authority of those days. The name of the office is still preserved in the Cochin state, where the village headman is called a *Parathiakaran*. This *Thalavettiparothiam* was a terrible but interesting institution. It was an office tenable for five years during which its bearer was invested with supreme despotic powers within his jurisdiction. On the expiry of the five years the man's head was cut off and thrown up in the air amongst a large concourse of villagers, each of whom vied with the other in trying to catch it in its course down. He who succeeded was nominated to the post for the next five years." A similar delegation of the duty of dying for his country was perhaps practised by the Sultans of Java. At least such a custom would explain a strange scene which was witnessed at the court of one of these sultans by the famous traveller Ibn Batuta, a native of Tangier, who visited the East Indies in the first half of the fourteenth century. He says: "During my audience with the Sultan I saw a man who held in his hand a knife like that used by a grape-gleaner. He placed it on his own neck and spoke for a long time in a language which I did not understand. After that he seized the knife with both hands at once and cut his throat. His head fell to the ground, so sharp was the blade and so great the force with which he used it. I remained dumbfounded at his behaviour, but the Sultan said to me, 'Does any one do like that in your country?' I answered, 'Never did I see such a thing.' He smiled and replied, 'These people are our slaves, and they kill themselves for love of us.' Then he commanded that they should take away him who had slain himself and should burn him. The Sultan's officers, the grandees, the troops, and the common people attended the cremation. The sovereign assigned a liberal pension to the children of the deceased, to his wife, and to his brothers; and they were highly honoured because of his conduct. A person, who was present at the audience when the event I have described took place, informed me that the speech made by the man who sacrificed himself set forth his devotion to the monarch. He said that he wished to immolate himself out of affection for the sovereign, as his father had done for love of the prince's father, and as his grandfather had done out of regard for the prince's grandfather." We may conjecture that formerly the sultans of Java, like the kings of Quilacare and Calicut, were bound to cut their own throats at the end of a fixed term of years, but that at a later time they deputed the painful, though glorious, duty of dying for their country to the members of a certain family, who received by way of recompense ample provision during their life and a handsome funeral at death.

A similar mode of religious suicide seems to have been often adopted in India, especially in Malabar, during the Middle Ages. Thus we are told by Friar Jordanus that in the Greater India, by which he seems to mean Malabar and the neighbouring regions, many sacrifice themselves to the idols. When they are sick or involved in misfortune, they vow themselves to the idol in case they are delivered. Then, when they have recovered, they fatten themselves for one or two years; and when another festival comes round, they cover themselves with

flowers, crown themselves with white garlands, and go singing and playing before the idol, when it is carried through the land. There, after they have shown off a great deal, they take a sword with two handles, like those used in currying leather, put it to the back of their neck, and cutting strongly with both hands sever their heads from their bodies before the idol. Again, Nicolo Conti, who travelled in the East in the early part of the fifteenth century, informs us that in the city of Cambaita “many present themselves who have determined upon self immolation, having on their neck a broad circular piece of iron, the fore part of which is round and the hinder part extremely sharp. A chain attached to the fore part hangs suspended upon the breast, into which the victims, sitting down with their legs drawn up and their neck bent, insert their feet. Then, on the speaker pronouncing certain words, they suddenly stretch out their legs, and at the same time drawing up their neck, cut off their own head, yielding up their lives as a sacrifice to their idols. These men are regarded as saints.” Among the Jaintias or Syntengs, a Khasi tribe of Assam, human sacrifices used to be annually offered on the *Sandhi* day in the month of Ashwin. Persons often came forward voluntarily and presented themselves as victims. This they generally did by appearing before the Rajah on the last day of Shravan and declaring that the goddess had called them to herself. After due enquiry, if the would-be victim were found suitable, it was customary for the Rajah to present him with a golden anklet and to give him permission to live as he chose and to do what he liked, the royal treasury undertaking to pay compensation for any damage he might do in the exercise of his remarkable privileges. But the enjoyment of these privileges was very short. On the day appointed the voluntary victim, after bathing and purifying himself, was dressed in new attire, daubed with red sandal-wood and vermilion, and bedecked with garlands. Thus arrayed, he sat for a time in meditation and prayer on a dais in front of the goddess; then he made a sign with his finger, and the executioner, after uttering the usual formulas, cut off his head, which was thereafter laid before the goddess on a golden plate. The lungs were cooked and eaten by such *Kandra Yogis* as were present, and it is said that the royal family partook of a small quantity of rice cooked in the blood of the victim. The ceremony was usually witnessed by crowds of spectators who assembled from all parts of the neighbouring hills. When the supply of voluntary victims fell short, emissaries were sent out to kidnap strangers from other territories, and it was the practice of such man-hunts that led to the annexation of the Jaintia country by the British.

When once kings, who had hitherto been bound to die a violent death at the end of a term of years, conceived the happy thought of dying by deputy in the persons of others, they would very naturally put it in practice; and accordingly we need not wonder at finding so popular an expedient, or traces of it, in many lands. Thus, for example, the Bhuiyas are an aboriginal race of north-eastern India, and one of their chief seats is Keonjhur. At the installation of a Rajah of Keonjhur a ceremony is observed which has been described as follows by an English officer who witnessed it: “Then the sword, a very rusty old weapon, is placed in the Raja's hands, and one of the Bhuiyas, named Anand Kopat, comes before him, and kneeling sideways, the Raja touches him on the neck as if about to strike off his head, and it is said that in former days there was no fiction in this part of the ceremony. The family of the Kopat hold their lands on the condition that the victim when required shall be produced. Anand, however, hurriedly arose after the accolade and disappeared. He must not be seen for three days; then he presents himself again to the Raja as miraculously restored to life.” Here the custom of putting the king's proxy to death has dwindled, probably under English influence, to a mere pretence; but elsewhere it survives, or survived till recent times, in full force. Cassange, a native state in the interior of Angola, is ruled by a king, who bears the title of Jaga. When a king is about to be installed in office, some of the chiefs are despatched to find a human victim, who may not be related by blood or marriage to the new monarch. When he comes to the king's camp, the victim is provided with everything he requires, and all his

orders are obeyed as promptly as those of the sovereign. On the day of the ceremony the king takes his seat on a perforated iron stool, his chiefs, councillors, and the rest of the people forming a great circle round about him. Behind the king sits his principal wife, together with all his concubines. An iron gong, with two small bells attached to it, is then struck by an official, who continues to ring the bells during the ceremony. The victim is then introduced and placed in front of the king, but with his back towards him. Armed with a scimitar the king then cuts open the man's back, extracts his heart, and having taken a bite out of it, spits it out and gives it to be burned. The councillors meantime hold the victim's body so that the blood from the wound spouts against the king's breast and belly, and, pouring through the hole in the iron stool, is collected by the chiefs in their hands, who rub their breasts and beards with it, while they shout, "Great is the king and the rites of the state!" After that the corpse is skinned, cut up, and cooked with the flesh of an ox, a dog, a hen, and some other animals. The meal thus prepared is served first to the king, then to the chiefs and councillors, and lastly to all the people assembled. Any man who refused to partake of it would be sold into slavery together with his family. The distinction with which the human victim is here treated before his execution suggests that he is a substitute for the king.

Scandinavian traditions contain some hints that of old the Swedish kings reigned only for periods of nine years, after which they were put to death or had to find a substitute to die in their stead. Thus Aun or On, king of Sweden, is said to have sacrificed to Odin for length of days and to have been answered by the god that he should live so long as he sacrificed one of his sons every ninth year. He sacrificed nine of them in this manner, and would have sacrificed the tenth and last, but the Swedes would not allow him. So he died and was buried in a mound at Upsala. Another indication of a similar tenure of the crown occurs in a curious legend of the disposition and banishment of Odin. Offended at his misdeeds, the other gods outlawed and exiled him, but set up in his place a substitute, Oller by name, a cunning wizard, to whom they accorded the symbols both of royalty and of godhead. The deputy bore the name of Odin, and reigned for nearly ten years, when he was driven from the throne, while the real Odin came to his own again. His discomfited rival retired to Sweden and was afterwards slain in an attempt to repair his shattered fortunes. As gods are often merely men who loom large through the mists of tradition, we may conjecture that this Norse legend preserves a confused reminiscence of ancient Swedish kings who reigned for nine or ten years together, then abdicated, delegating to others the privilege of dying for their country. The great festival which was held at Upsala every nine years may have been the occasion on which the king or his deputy was put to death. We know that human sacrifices formed part of the rites.

§ 4. Octennial Tenure of the Kingship.

There are some grounds for believing that the reign of many ancient Greek kings was limited to eight years, or at least that at the end of every period of eight years a new consecration, a fresh outpouring of the divine grace, was regarded as necessary in order to enable them to discharge their civil and religious duties. Thus it was a rule of the Spartan constitution that every eighth year the ephors should choose a clear and moonless night and sitting down observe the sky in silence. If during their vigil they saw a meteor or shooting star, they inferred that the king had sinned against the deity, and they suspended him from his functions until the Delphic or Olympic oracle should reinstate him in them. This custom, which has all the air of great antiquity, was not suffered to remain a dead letter even in the last period of the Spartan monarchy; for in the third century before our era a king, who had rendered himself obnoxious to the reforming party, was actually deposed on various trumped-up charges, among which the allegation that the ominous sign had been seen in the sky took a prominent place. When we compare this custom with the evidence to be presently adduced of an eight

years' tenure of the kingship in Greece, we shall probably agree with K. O. Müller that the quaint Spartan practice was much more than a mere antiquarian curiosity; it was the attenuated survival of an institution which may once have had great significance, and it throws an important light on the restrictions and limitations anciently imposed by religion on the Dorian kingship. What exactly was the import of a meteor in the opinion of the old Dorians we can hardly hope to determine; one thing only is clear, they regarded it as a portent of so ominous and threatening a kind that its appearance under certain circumstances justified and even required the deposition of their king. This exaggerated dread of so simple a natural phenomenon is shared by many savages at the present day; and we shall hardly err in supposing that the Spartans inherited it from their barbarous ancestors, who may have watched with consternation, on many a starry night among the woods of Germany, the flashing of a meteor through the sky. It may be well, even at the cost of a digression, to illustrate this primitive superstition by examples.

Thus, shooting stars and meteors are viewed with apprehension by the natives of the Andaman Islands, who suppose them to be lighted faggots hurled into the air by the malignant spirit of the woods in order to ascertain the whereabouts of any unhappy wight in his vicinity. Hence if they happen to be away from their camp when the meteor is seen, they hide themselves and remain silent for a little before they venture to resume the work they were at; for example, if they are out fishing they will crouch at the bottom of the boat. The natives of the Tully River in Queensland believe falling stars to be the fire-sticks carried about by the spirits of dead enemies. When they see one shooting through the air they take it as a sign that an enemy is near, and accordingly they shout and make as much noise as they can; next morning they all go out in the direction in which the star fell and look for the tracks of their foe. The Turrbal tribe of Queensland thought that a falling star was a medicine-man flying through the air and dropping his fire-stick to kill somebody; if there was a sick man in the camp, they regarded him as doomed. The Ngarigo of New South Wales believed the fall of a meteor to betoken the place where their foes were mustering for war. The Kaitish tribe of central Australia imagine that the fall of a star marks the whereabouts of a man who has killed another by means of a magical pointing-stick or bone. If a member of any group has been killed in this way, his friends watch for the descent of a meteor, march in that direction, slay an enemy there, and leave his body lying on the ground. The friends of the murdered man understand what has happened, and bury his body where the star fell; for they recognise the spot by the softness of the earth. The Mara tribe of northern Australia suppose a falling star to be one of two hostile spirits, father and son, who live up in the sky and come down occasionally to do harm to men. In this tribe the profession of medicine-man is strictly hereditary in the stock which has the falling star for its totem; if these wizards had ever developed into kings, the descent of a meteor at certain times might have had the same fatal significance for them as for the kings of Sparta. The Tau Islands, to the west of the Bismarck Archipelago, make war in the direction in which they have observed a star to fall, probably for a reason like that which induces the Kaitish to do the same.

When the Baronga of south Africa see a shooting star they spit on the ground to avert the evil omen, and cry, "Go away! go away all alone!" By this they mean that the light, which is so soon to disappear, is not to take them with it, but to go and die by itself. So when a Masai perceives the flash of a meteor he spits several times and says, "Be lost! go in the direction of the enemy!" after which he adds, "Stay away from me." The Namaquas "are greatly afraid of the meteor which is vulgarly called a falling star, for they consider it a sign that sickness is coming upon the cattle, and to escape it they will immediately drive them to some other parts of the country. They call out to the star how many cattle they have, and beg of it not to send sickness." The Bechuanas are also much alarmed at the appearance of a meteor. If they

happen to be dancing in the open air at the time, they will instantly desist and retire hastily to their huts. The Ewe negroes of Guinea regard a falling star as a powerful divinity, and worship it as one of their national gods, by the name of Nyikpla or Nyigbla. In their opinion the falling star is especially a war-god who marches at the head of the host and leads it to victory, riding like Castor and Pollux on horseback. But he is also a rain-god, and the showers are sent by him from the sky. Special priests are devoted to his worship, with a chief priest at their head, who resides in the capital. They are known by the red staves which they carry and by the high-pointed caps, woven of threads and palm-leaves, which they wear on their heads. In times of drought they call upon their god by night with wild howls. Once a year an ox is sacrificed to him at the capital, and the priests consume the flesh. On this occasion the people smear themselves with the pollen of a certain plant and go in procession through the towns and villages, singing, dancing, and beating drums.

By some Indians of California meteors were called "children of the moon," and whenever young women saw one of them they fell to the ground and covered their heads, fearing that, if the meteor saw them, their faces would become ugly and diseased. The Tarahumares of Mexico fancy that a shooting star is a dead sorcerer coming to harm a man who harmed him in life. Hence when they see one they huddle together and scream for terror. When a German traveller was living with the Bororos of central Brazil, a splendid meteor fell, spreading dismay through the Indian village. It was believed to be the soul of a dead medicine-man, who suddenly appeared in this form to announce that he wanted meat, and that, as a preliminary measure, he proposed to visit somebody with an attack of dysentery. Its appearance was greeted with yells from a hundred throats: men, women, and children swarmed out of their huts like ants whose nest has been disturbed; and soon watch-fires blazed, round which at a little distance groups of dusky figures gathered, while in the middle, thrown into strong relief by the flickering light of the fire, two red-painted sorcerers reeled and staggered in a state of frantic excitement, snorting and spitting towards the quarter of the sky where the meteor had run its brief but brilliant course. Pressing his right hand to his yelling mouth, each of them held aloft in his extended left, by way of propitiating the angry star, a bundle of cigarettes. "There!" they seemed to say, "all that tobacco will we give to ward off the impending visitation. Woe to you, if you do not leave us in peace." The Lengua Indians of the Gran Chaco also stand in great fear of meteors, imagining them to be stones hurled from heaven at the wicked sorcerers who have done people to death by their charms. When the Abipones beheld a meteor flashing or heard thunder rolling in the sky, they imagined that one of their medicine-men had died, and that the flash of light and the peal of thunder were part of his funeral honours.

When the Laughlan Islanders see a shooting star they make a great noise, for they think it is the old woman who lives in the moon coming down to earth to catch somebody, who may relieve her of her duties in the moon while she goes away to the happy spirit-land. In Vedic India a meteor was believed to be the embodiment of a demon, and on its appearance certain hymns or incantations, supposed to possess the power of killing demons, were recited for the purpose of expiating the prodigy. To this day in India, when women see a falling star, they spit thrice to scare the demon. Some of the Esthonians at the present time regard shooting stars as evil spirits. It is a Mohammedan belief that falling stars are demons or jinn who have attempted to scale the sky, and, being repulsed by the angels with stones, are hurled headlong, flaming, from the celestial vault. Hence every true believer at sight of a meteor should say, "I take refuge with God from the stoned devil."

A widespread superstition, of which some examples have already been given, associates meteors or falling stars with the souls of the dead. Often they are believed to be the spirits of the departed on their way to the other world. The Maoris imagine that at death the soul leaves

the body and goes to the nether world in the form of a falling star. The Kingsmill Islanders deemed a shooting star an omen of death to some member of the family which occupied the part of the council-house nearest to the point of the sky whence the meteor took its flight. If the star was followed by a train of light, it foretold the death of a woman; if not, the death of a man. When the Wotjobaluk tribe of Victoria see a shooting star, they think it is falling with the heart of a man who has been caught by a sorcerer and deprived of his fat. One evening when Mr. Howitt was talking with an Australian black, a bright meteor was seen shooting through the sky. The native watched it and remarked, "An old blackfellow has fallen down there." Among the Yerrunthally tribe of Queensland the ideas on this subject were even more definite. They thought that after death they went to a place away among the stars, and that to reach it they had to climb up a rope; when they had clambered up they let go the rope, which, as it fell from heaven, appeared to people on earth as a falling star. The natives of the Prince of Wales Islands, off Queensland, are much afraid of shooting stars, for they believe them to be ghosts which, in breaking up, produce young ones of their own kind. The natives of the Gazelle Peninsula in New Britain think that meteors are the souls of people who have been murdered or eaten; so at the sight of a meteor flashing they cry out, "The ghost of a murdered man!" According to the Sulka of New Britain meteors are souls which have been flung into the air in order to plunge into the sea; and the train of light which they leave behind them is a burning tail of dry coco-nut leaves which has been tied to them by other souls, in order to help them to wing their way through the air. The Caffres of South Africa often say that a shooting star is the sign of the death of some chief, and at sight of it they will spit on the ground as a mark of friendly feeling towards the dead man. Similarly the Ababua of the Congo valley think that a chief will die in the village into which a star appears to fall, unless the danger of death be averted by a particular dance. In the opinion of the Masai, the fall of a meteor signifies the death of some one; at sight of it they pray that the victim may be one of their enemies. The Wambugwe of eastern Africa fancy that the stars are men, of whom one dies whenever a star is seen to fall. The Tinneh Indians and the Tchiglit Esquimaux of north-western America believe that human life on earth is influenced by the stars, and they take a shooting star to be a sign that some one has died. The Lolos, an aboriginal tribe of western China, hold that for each person on earth there is a corresponding star in the sky. Hence when a man is ill, they sacrifice wine to his star and light four and twenty lamps outside of his room. On the day after the funeral they dig a hole in the chamber of death and pray the dead man's star to descend and be buried in it. If this precaution were not taken, the star might fall and hit somebody and hurt him very much. In classical antiquity there was a popular notion that every human being had his own star in the sky, which shone bright or dim according to his good or evil fortune, and fell in the form of a meteor when he died.

Superstitions of the same sort are still commonly to be met with in Europe. Thus in some parts of Germany they say that at the birth of a man a new star is set in the sky, and that as it burns brilliantly or faintly he grows rich or poor; finally when he dies it drops from the sky in the likeness of a shooting star. Similarly in Brittany, Transylvania, Bohemia, the Abruzzi, the Romagna, and the Esthonian island of Oesel it is thought by some that every man has his own particular star in the sky, and that when it falls in the shape of a meteor he expires. A like belief is entertained by Polish Jews. In Styria they say that when a shooting star is seen a man has just died, or a poor soul been released from purgatory. The Esthonians believe that if any one sees a falling star on New Year's night he will die or be visited by a serious illness that year. In Belgium and many parts of France the people suppose that a meteor is a soul which has just quitted the body, sometimes that it is specially the soul of an unbaptized infant or of some one who has died without absolution. At sight of it they say that you should cross yourself and pray, or that if you wish for something while the star is falling you will be sure to get it. Among the Vosges Mountains in the warm nights of July it is not uncommon to see

whole showers of shooting stars. It is generally agreed that these stars are souls, but some difference of opinion exists as to whether they are souls just taking leave of earth, or tortured by the fires of purgatory, or on their passage from purgatory to heaven. The last and most cheering of these views is held by the French peasantry of Beauce and Perche and by the Italian peasantry of the Abruzzi, and charitable people pray for the deliverance of a soul at the sight of a falling star. The downward direction of its flight might naturally suggest a different goal; and accordingly other people have seen in the transient flame of a meteor the descent of a soul from heaven to be born on earth. In the Punjaub, for example, Hindoos believe that the length of a soul's residence in the realms of bliss is exactly proportioned to the sums which the man distributed in charity during his life; and that when these are exhausted his time in heaven is up, and down he comes. In Polynesia a shooting star was held to be the flight of a spirit, and to presage the birth of a great prince. The Mandans of north America fancied that the stars were dead people, and that when a woman was brought to bed a star fell from heaven, and entering into her was born as a child. On the Biloch frontier of the Punjaub each man is held to have his star, and he may not journey in particular directions when his star is in certain positions. If duty compels him to travel in the forbidden direction, he takes care before setting out to bury his star, or rather a figure of it cut out of cloth, so that it may not see what he is doing.

Which, if any, of these superstitions moved the barbarous Dorians of old to depose their kings whenever at a certain season a meteor flamed in the sky, we cannot say. Perhaps they had a vague general notion that its appearance signified the dissatisfaction of the higher powers with the state of the commonwealth; and since in primitive society the king is commonly held responsible for all untoward events, whatever their origin, the natural course was to relieve him of duties which he had proved himself incapable of discharging. But it may be that the idea in the minds of these rude barbarians was more definite. Possibly, like some people in Europe at the present day, they thought that every man had his star in the sky, and that he must die when it fell. The king would be no exception to the rule, and on a certain night of a certain year, at the end of a cycle, it might be customary to watch the sky in order to mark whether the king's star was still in the ascendant or near its setting. The appearance of a meteor on such a night—of a star precipitated from the celestial vault—might prove for the king not merely a symbol but a sentence of death. It might be the warrant for his execution.

If the tenure of the regal office was formerly limited among the Spartans to eight years, we may naturally ask, why was that precise period selected as the measure of a king's reign? The reason is probably to be found in those astronomical considerations which determined the early Greek calendar. The difficulty of reconciling lunar with solar time is one of the standing puzzles which has taxed the ingenuity of men who are emerging from barbarism. Now an octennial cycle is the shortest period at the end of which sun and moon really mark time together after overlapping, so to say, throughout the whole of the interval. Thus, for example, it is only once in every eight years that the full moon coincides with the longest or shortest day; and as this coincidence can be observed with the aid of a simple dial, the observation is naturally one of the first to furnish a base for a calendar which shall bring lunar and solar times into tolerable, though not exact, harmony. But in early days the proper adjustment of the calendar is a matter of religious concern, since on it depends a knowledge of the right seasons for propitiating the deities whose favour is indispensable to the welfare of the community. No wonder, therefore, that the king, as the chief priest of the state, or as himself a god, should be liable to deposition or death at the end of an astronomical period. When the great luminaries had run their course on high, and were about to renew the heavenly race, it might well be thought that the king should renew his divine energies, or prove them

unabated, under pain of making room for a more vigorous successor. In southern India, as we have seen, the king's reign and life terminated with the revolution of the planet Jupiter round the sun. In Greece, on the other hand, the king's fate seems to have hung in the balance at the end of every eight years, ready to fly up and kick the beam as soon as the opposite scale was loaded with a falling star.

The same train of thought may explain an ancient Greek custom which appears to have required that a homicide should be banished his country, and do penance for a period of eight or nine years. With the beginning of a new cycle or great year, as it was called, it might be thought that all nature was regenerate, all old scores wiped out. According to Pindar, the dead whose guilt had been purged away by an abode of eight years in the nether world were born again on earth in the ninth year as glorious kings, athletes, and sages. The doctrine may well be an old popular belief rather than a mere poetical fancy. If so, it would supply a fresh reason for the banishment of a homicide during the years that the angry ghost of his victim might at any moment issue from its prison-house and pounce on him. Once the perturbed spirit had been happily reborn, he might be supposed to forgive, if not to forget, the man who had done him an injury in a former life.

Whatever its origin may have been, the cycle of eight years appears to have coincided with the normal length of the king's reign in other parts of Greece besides Sparta. Thus Minos, king of Cnossus in Crete, whose great palace has been unearthed in recent years, is said to have held office for periods of eight years together. At the end of each period he retired for a season to the oracular cave on Mount Ida, and there communed with his divine father Zeus, giving him an account of his kingship in the years that were past, and receiving from him instructions for his guidance in those which were to come. The tradition plainly implies that at the end of every eight years the king's sacred powers needed to be renewed by intercourse with the godhead, and that without such a renewal he would have forfeited his right to the throne. We may surmise that among the solemn ceremonies which marked the beginning or the end of the eight years' cycle the sacred marriage of the king with the queen played an important part, and that in this marriage we have the true explanation of the strange legend of Pasiphae and the bull. It was said that Pasiphae, the wife of King Minos, fell in love with a wondrous white bull which rose from the sea, and that in order to gratify her unnatural passion the artist Daedalus constructed a hollow wooden cow, covered with a cow's hide, in which the love-sick queen was hidden while the bull mounted it. The result of their union was the Minotaur, a monster with the body of a man and the head of a bull, whom the king shut up in the labyrinth, a building full of such winding and intricate passages that the prisoner might roam in it for ever without finding the way out. The legend appears to reflect a mythical marriage of the sun and moon, which was acted as a solemn rite by the king and queen of Cnossus, wearing the masks of a bull and cow respectively. To a pastoral people a bull is the most natural type of vigorous reproductive energy, and as such is a fitting emblem of the sun. Islanders who, like many of the Cretans, see the sun daily rising from the sea, might readily compare him to a white bull issuing from the waves. Indeed, we are expressly told that the Cretans called the sun a bull. Similarly in ancient Egypt the sacred bull Mnevis of Heliopolis (the City of the Sun) was deemed an incarnation of the Sun-god, and for thousands of years the kings of Egypt delighted to be styled "mighty bull"; many of them inscribed the title on their *serekh* or cognisance, which set forth their names in their character of descendants of Horus. The identification of Pasiphae, "she who shines on all," with the moon was made long ago by Pausanias, who saw her image along with that of the sun in a sanctuary on that wild rocky coast of Messenia where the great range of Taygetus descends seaward in a long line of naked crags. The horns of the waxing or waning moon naturally suggest the resemblance of the luminary to a white cow; hence the ancients represented the

goddess of the moon drawn by a team of white cattle. When we remember that at the court of Egypt the king and queen figured as god and goddess in solemn masquerades, where the parts of animal-headed deities were played by masked men and women, we need have no difficulty in imagining that similar dramas may have been performed at the court of a Cretan king, whether we suppose them to have been imported from Egypt or to have had an independent origin.

The stories of Zeus and Europa, and of Minos and Britomartis or Dictynna appear to be only different expressions of the same myth, different echoes of the same custom. The moon rising from the sea was the fair maiden Europa coming across the heaving billows from the far eastern land of Phoenicia, borne or pursued by her suitor the solar bull. The moon setting in the western waves was the coy Britomartis or Dictynna, who plunged into the sea to escape the warm embrace of her lover Minos, himself the sun. The story how the drowning maiden was drawn up in a fisherman's net may well be, as some have thought, the explanation given by a simple seafaring folk of the moon's reappearance from the sea in the east after she had sunk into it in the west. To the mythical fancy of the ancients the moon was a coy or a wanton maiden, who either fled from or pursued the sun every month till the fugitive was overtaken and the lovers enjoyed each other's company at the time when the luminaries are in conjunction, namely, in the interval between the old and the new moon. Hence on the principles of sympathetic magic that interval was considered the time most favourable for human marriages. When the sun and moon are wedded in the sky, men and women should be wedded on earth. And for the same reason the ancients chose the interlunar day for the celebration of the Sacred Marriages of gods and goddesses. Similar beliefs and customs based on them have been noted among other peoples. It is likely, therefore, that a king and queen who represented the sun and moon may have been expected to exercise their conjugal rights above all at the time when the moon was thought to rest in the arms of the sun. However that may have been, it would be natural that their union should be consummated with unusual solemnity every eight years, when the two great luminaries, so to say, meet and mark time together once more after diverging from each other more or less throughout the interval. It is true that sun and moon are in conjunction once every month, but every month their conjunction takes place at a different point in the sky, until eight revolving years have brought them together again in the same heavenly bridal chamber where first they met.

Without being unduly rash we may surmise that the tribute of seven youths and seven maidens whom the Athenians were bound to send to Minos every eight years had some connexion with the renewal of the king's power for another octennial cycle. Traditions varied as to the fate which awaited the lads and damsels on their arrival in Crete; but the common view appears to have been that they were shut up in the labyrinth, there to be devoured by the Minotaur, or at least to be imprisoned for life. Perhaps they were sacrificed by being roasted alive in a bronze image of a bull, or of a bull-headed man, in order to renew the strength of the king and of the sun, whom he personated. This at all events is suggested by the legend of Talos, a bronze man who clutched people to his breast and leaped with them into the fire, so that they were roasted alive. He is said to have been given by Zeus to Europa, or by Hephaestus to Minos, to guard the island of Crete, which he patrolled thrice daily. According to one account he was a bull, according to another he was the sun. Probably he was identical with the Minotaur, and stripped of his mythical features was nothing but a bronze image of the sun represented as a man with a bull's head. In order to renew the solar fires, human victims may have been sacrificed to the idol by being roasted in its hollow body or placed on its sloping hands and allowed to roll into a pit of fire. It was in the latter fashion that the Carthaginians sacrificed their offspring to Moloch. The children were laid on the hands of a calf-headed image of bronze, from which they slid into a fiery oven, while the people danced

to the music of flutes and timbrels to drown the shrieks of the burning victims. The resemblance which the Cretan traditions bear to the Carthaginian practice suggests that the worship associated with the names of Minos and the Minotaur may have been powerfully influenced by that of a Semitic Baal. In the tradition of Phalaris, tyrant of Agrigentum, and his brazen bull we may have an echo of similar rites in Sicily, where the Carthaginian power struck deep roots.

But perhaps the youths and maidens who were sent across the sea to Cnossus had to perform certain religious duties before they were cast into the fiery furnace. The same cunning artist Daedalus who planned the labyrinth and contrived the wooden cow for Pasiphae was said to have made a dance for Ariadne, daughter of Minos. It represented youths and maidens dancing in ranks, the youths armed with golden swords, the maidens crowned with garlands. Moreover, when Theseus landed with Ariadne in Delos on his return from Crete, he and the young companions whom he had rescued from the Minotaur are said to have danced a mazy dance in imitation of the intricate windings of the labyrinth; on account of its sinuous turns the dance was called "the Crane." Taken together, these two traditions suggest that the youths and maidens who were sent to Cnossus had to dance in the labyrinth before they were sacrificed to the bull-headed image. At all events there are good grounds for thinking that there was a famous dance which the ancients regularly associated with the Cretan labyrinth.

Among the Romans that dance appears to have been known from the earliest times by the name of Troy or the Game of Troy. Tradition ran that it was imported into Italy by Aeneas, who transmitted it through his son Ascanius to the Alban kings, who in their turn handed it down to the Romans. It was performed by bands of armed youths on horseback. Virgil compares their complicated evolutions to the windings of the Cretan labyrinth; and that the comparison is more than a mere poetical flourish appears from a drawing on a very ancient Etruscan vase found at Tragliatella. The drawing represents a procession of seven beardless warriors dancing, accompanied by two armed riders on horseback, who are also beardless. An inscription proves that the scene depicted is the Game of Troy; and attached to the procession is a figure of the Cretan labyrinth, the pattern of which is well known from coins of Cnossus on which it is often represented. The same pattern, identified by an inscription, "*Labyrinthus, hic habitat Minotaurus,*" is scratched on a wall at Pompeii; and it is also worked in mosaic on the floor of Roman apartments, with the figures of Theseus and the Minotaur in the middle. Roman boys appear to have drawn the very same pattern on the ground and to have played a game on it, probably a miniature Game of Troy. Labyrinths of similar type occur as decorations on the floors of old churches, where they are known as "the Road of Jerusalem"; they were used for processions. The garden mazes of the Renaissance were modelled on them. Moreover, they are found very commonly in the north of Europe, marked out either by raised bands of turf or by rows of stones. Such labyrinths may be seen in Norway, Sweden, Denmark, Finland, the south coast of Russian Lappland, and even in Iceland. They go by various names, such as Babylon, Wieland's House, Trojeborg, Tröburg, and so forth, some of which clearly indicate their connexion with the ancient Game of Troy. They are used for children's games.

A dance or game which has thus spread over Europe and survived in a fashion to modern times must have been very popular, and bearing in mind how often with the decay of old faiths the serious rites and pageants of grown people have degenerated into the sports of children, we may reasonably ask whether Ariadne's Dance or the Game of Troy may not have had its origin in religious ritual. The ancients connected it with Cnossus and the Minotaur. Now we have seen reason to hold, with many other scholars, that Cnossus was the seat of a great worship of the sun, and that the Minotaur was a representative or embodiment of the sun-god. May not, then, Ariadne's dance have been an imitation of the sun's course in the

sky? and may not its intention have been, by means of sympathetic magic, to aid the great luminary to run his race on high? We have seen that during an eclipse of the sun the Chilcotin Indians walk in a circle, leaning on staves, apparently to assist the labouring orb. In Egypt also the king, who embodied the sun-god, seems to have solemnly walked round the walls of a temple for the sake of helping the sun on his way. If there is any truth in this conjecture, it would seem to follow that the sinuous lines of the labyrinth which the dancers followed in their evolutions may have represented the ecliptic, the sun's apparent annual path in the sky. It is some confirmation of this view that on coins of Cnossus the sun or a star appears in the middle of the labyrinth, the place which on other coins is occupied by the Minotaur.

On the whole the foregoing evidence, slight and fragmentary as it is, points to the conclusion that at Cnossus the king represented the sun-god, and that every eight years his divine powers were renewed at a great festival, which comprised, first, the sacrifice of human victims by fire to a bull-headed image of the sun, and, second, the marriage of the king disguised as a bull to the queen disguised as a cow, the two personating respectively the sun and the moon.

Whatever may be thought of these speculations, we know that many solemn rites were celebrated by the ancient Greeks at intervals of eight years. Amongst them, two deserve to be noticed here, because it has been recently suggested, with some appearance of probability, that they were based on an octennial tenure of the kingship. One was the Festival of the Crowning at Delphi; the other was the Festival of the Laurel-bearing at Thebes. In their general features the two festivals seem to have resembled each other very closely. Both represented dramatically the slaying of a great water-dragon by a god or hero; in both, the lad who played the part of the victorious god or hero crowned his brows with a wreath of sacred laurel and had to submit to a penance and purification for the slaughter of the beast. At Delphi the legendary slayer of the dragon was Apollo; at Thebes he was Cadmus. At both places the legendary penance for the slaughter seems to have been servitude for eight years. The evidence for the rites of the Delphic festival is fairly complete, but for the Theban festival it has to be eked out by vase-paintings, which represent Cadmus crowned with laurel preparing to attack the dragon or actually in combat with the monster, while goddesses bend over the champion, holding out wreaths of laurel to him as the mede of victory. It is true that in historical times Apollo appears to have ousted Cadmus from the festival, though not from the myth. But at Thebes the god was plainly a late intruder, for his temple lay outside the walls, whereas the most ancient sanctuaries stood in the oldest part of the city, the low hill which took its name of Cadmea from the genuine Theban hero Cadmus. It is not impossible that at Delphi also, and perhaps at other places where the same drama was acted, Apollo may have displaced an old local hero in the honourable office of dragon-slayer.

Both at Thebes and at Delphi the dragon guarded a spring, the water of which was probably deemed oracular. At Delphi the sacred spring may have been either Cassotis or the more famed Castaly, which issues from a narrow gorge, shut in by rocky walls of tremendous height, a little to the east of Apollo's temple. The waters of both were thought to be endowed with prophetic power. Probably, too, the monster was supposed to keep watch and ward over the sacred laurel, from which the victor in the combat wreathed his brows; for in vase-paintings the Theban dragon appears coiled beside the holy tree, and Euripides describes the Delphic dragon as covered by a leafy laurel. At all oracular seats of Apollo his priestess drank of the sacred spring and chewed the sacred laurel before she prophesied. Thus it would seem that the dragon, which at Delphi is expressly said to have been the guardian of the oracle, had in its custody both the instruments of divination, the holy tree and the holy water. We are reminded of the dragon or serpent, slain by Hercules, which guarded the golden apples of the Hesperides in the happy garden. But at Delphi the oldest sacred tree appears, as Mr. A. B. Cook has pointed out, to have been not a laurel but an oak. For we are told that

originally the victors in the Pythian games at Delphi wore crowns of oak leaves, since the laurel had not yet been created. Now, like the Festival of Crowning, the Pythian games were instituted to commemorate the slaughter of the dragon; like it they were originally held every eighth year; the two festivals were celebrated nearly at the same time of the year; and the representative of Apollo in the one and the victors in the other were adorned with crowns made from the same sacred laurel. In short, the two festivals appear to have been in origin substantially identical; the distinction between them may have arisen when the Delphians decided to hold the Pythian games every fourth, instead of every eighth year. We may fairly suppose, therefore, that the leaf-crowned victors in the Pythian games, like the laurel-wreathed boy in the Festival of Crowning, formerly acted the part of the god himself. But if in the beginning these actors in the sacred drama wore wreaths of oak instead of laurel, it seems to follow that the deity whom they personated was the oak-god Zeus rather than the laurel-god Apollo; from which again we may infer that Delphi was a sanctuary of Zeus and the oak before it became the shrine of Apollo and the laurel.

But why should the crown of oak have ceased to be the badge of victory? and why should a wreath of laurel have taken its place? The abandonment of the oak crown may have been a consequence of the disappearance of the oak itself from the neighbourhood of Delphi; in Greece, as in Italy, the deciduous trees have for centuries been retreating up the mountain sides before the advance of the evergreens. When the last venerable oak, the rustling of whose leaves in the breeze had long been listened to as oracular, finally succumbed through age, or was laid low by a storm, the priests may have cast about for a tree of another sort to take its place. Yet they sought it neither in the lower woods of the valley nor in the dark forests which clothe the upper slopes of Parnassus above the frowning cliffs of Delphi. Legend ran that after the slaughter of the dragon, Apollo had purged himself from the stain of blood in the romantic Vale of Tempe, where the Peneus flows smoothly in a narrow defile between the lofty wooded steeps of Olympus and Ossa. Here the god crowned himself with a laurel wreath, and thither accordingly at the Festival of Crowning his human representative went to pluck the laurel for his brows. The custom, though doubtless ancient, can hardly have been original. We must suppose that in the beginning the dragon-guarded tree, whether an oak or a laurel, grew at Delphi itself. But why should the laurel be chosen as a substitute for the oak? Mr. A. B. Cook has suggested a plausible answer. The laurel leaf resembles so closely the leaf of the ilex or holm-oak in both shape and colour that an untrained observer may easily confuse the two. The upper surface of both is a dark glossy green, the lower surface shews a lighter tint. Nothing, therefore, could be more natural than to make the new wreath out of leaves which looked so like the old oak leaves that the substitution might almost pass undetected.

Whether at Thebes, as at Delphi, the laurel had ousted the oak from the place of honour at the festival of the Slaying of the Dragon, we cannot say. The oak has long disappeared from the low hills and flat ground in the neighbourhood of Thebes, but as late as the second century of our era there was a forest of ancient oaks not many miles off at the foot of Mount Cithaeron.

It has been conjectured that in ancient days the persons who wore the wreath of laurel or oak at the octennial festivals of Delphi and Thebes were no other than the priestly kings, who personated the god, slew their predecessors in the guise of dragons, and reigned for a time in their stead. The theory certainly cannot be demonstrated, but there is a good deal of analogy in its favour. An eight years' tenure of the kingship at Delphi and Thebes would accord with the similar tenure of the office at Sparta and Cnossus. And if the kings of Cnossus disguised themselves as bulls, there seems no reason why the kings of Delphi and Thebes should not have personated dragons or serpents. In all these cases the animal whose guise the king assumed would be sacred to the royal family. At first the relation of the beast to the man

would be direct and simple; the creature would be revered for some such reason as that for which a savage respects a certain species of animals, for example, because he believes that his ancestors were beasts of the same sort, or that the souls of his dead are lodged in them. In later times the sanctity of the species would be explained by saying that a god had at some time, and for some reason or other, assumed the form of the animal. It is probably not without significance that in Greek mythology the gods in general, and Zeus in particular, are commonly said to have submitted to this change of shape for the purpose of prosecuting a love adventure. Such stories may well reflect a custom of a Sacred Marriage at which the actors played the parts of the worshipful animals. With the growth of culture these local worships, the relics of a barbarous age, would be explained away by tales of the loves of the gods, and, gradually falling out of practice, would survive only as myths.

It is said that at the festival of the Wolf-god Zeus, held every nine years on the Wolf-mountain in Arcadia, a man tasted of the bowel of a human victim mixed with the bowels of animals, and having tasted it he was turned into a wolf, and remained a wolf for nine years, when he changed back again into a man if in the interval he had abstained from eating human flesh. The tradition points to the existence of a society of cannibal wolf-worshippers, one or more of whom personated, and were supposed to embody, the sacred animal for periods of nine years together. Their theory and practice would seem to have agreed with those of the Human Leopard Societies of western Africa, whose members disguise themselves in the skins of leopards with sharp claws of steel. In that guise they attack and kill men in order to eat their flesh or to extract powerful charms from their bodies. Their mode of gaining recruits is like that of the Greek Wolf Society. When a visitor came to a village inhabited by a Leopard Society, "he was invited to partake of food, in which was mixed a small quantity of human flesh. The guest all unsuspectingly partook of the repast, and was afterwards told that human flesh formed one of the ingredients of the meal, and that it was then necessary that he should join the society, which was invariably done." As the ancient Greeks thought that a man might be turned into a wolf, so these negroes believe that he can be changed into a leopard; and, like the Greeks, some of them fancy that if the transformed man abstains during his transformation from preying on his fellows he can regain his human shape, but that if he once laps human blood he must remain a leopard for ever.

The hypothesis that the ancient kings of Thebes and Delphi had for their sacred animal the serpent or dragon, and claimed kinship with the creature, derives some countenance from the tradition that at the end of their lives Cadmus and his wife Harmonia quitted Thebes and went to reign over a tribe of Encheleans or Eel-men in Illyria, where they were both finally transformed into dragons or serpents. To the primitive mind an eel is a water-serpent; it can hardly, therefore, be an accident that the serpent-killer afterwards reigned over a tribe of eel-men and himself became a serpent at last. Moreover, according to one account, his wife Harmonia was a daughter of the very dragon which he slew. The tradition would fit in well with the hypothesis that the dragon or serpent was the sacred animal of the old royal house of Thebes, and that the kingdom fell to him who slew his predecessor and married his daughter. We have seen reason to think that such a mode of succession to the throne was common in antiquity. The story of the final transformation of Cadmus and Harmonia into snakes may be a relic of a belief that the souls of the dead kings and queens of Thebes transmigrated into the bodies of serpents, just as Caffre kings turn at death into boa-constrictors or deadly black snakes. Indeed the notion that the souls of the dead lodge in serpents is widely spread in Africa and Madagascar. Other African tribes believe that their dead kings and chiefs turn into lions, leopards, hyaenas, pythons, hippopotamuses, or other creatures, and the animals are respected and spared accordingly. In like manner the Semang and other wild tribes of the Malay Peninsula imagine that the souls of their chiefs, priests, and magicians transmigrate at

death into the bodies of certain wild beasts, such as elephants, tigers, and rhinoceroses, and that in their bestial form the dead men extend a benign protection to their living human kinsfolk. Even during their lifetime kings in rude society sometimes claim kinship with the most formidable beasts of the country. Thus the royal family of Dahomey specially worships the leopard; some of the king's wives are distinguished by the title of Leopard Wives, and on state occasions they wear striped cloths to resemble the animal. One king of Dahomey, on whom the French made war, bore the name of Shark; hence in art he was represented sometimes with a shark's body and a human head, sometimes with a human body and the head of a shark. The Trocadero Museum at Paris contains the wooden images of three kings of Dahomey who reigned during the nineteenth century, and who are all represented partly in human and partly in animal form. One of them, Guezo, bore the surname of the Cock, and his image represents him as a man covered with feathers. His son Guelelé, who succeeded him on the throne, was surnamed the Lion, and his effigy is that of a lion rampant with tail raised and hair on his body, but with human feet and hands. Guelelé was succeeded on the throne by his son Behanzin, who was surnamed the Shark, and his effigy portrays him standing upright with the head and body of a fish, the fins and scales being carefully represented, while his arms and legs are those of a man. Again, a king of Benin was called Panther, and a bronze statue of him, now in the Anthropological Museum at Berlin, represents him with a panther's whiskers. Such portraits furnish an exact parallel to what I conceive to be the true story of the Minotaur. On the Gold Coast of Africa a powerful ruler is commonly addressed as "O Elephant!" or "O Lion!" and one of the titles of the king of Ashantee, mentioned at great ceremonies, is *borri*, the name of a venomous snake. It has been argued that King David belonged to a serpent family, and that the brazen serpent, which down to the time of Hezekiah was worshipped with fumes of burning incense, represented the old sacred animal of his house. In Europe the bull, the serpent, and the wolf would naturally be on the list of royal beasts.

If the king's soul was believed to pass at death into the sacred animal, a custom might arise of keeping live creatures of the species in captivity and revering them as the souls of dead rulers. This would explain the Athenian practice of keeping a sacred serpent on the Acropolis and feeding it with honey cakes; for the serpent was identified with Erichthonius or Erechtheus, one of the ancient kings of Athens, of whose palace some vestiges have been discovered in recent times. The creature was supposed to guard the citadel. During the Persian invasion a report that the serpent had left its honey-cake untasted was one of the strongest reasons which induced the people to abandon Athens to the enemy; they thought that the holy reptile had forsaken the city. Again, Cecrops, the first king of Athens, is said to have been half-serpent and half-man; in art he is represented as a man from the waist upwards, while the lower part of his body consists of the coils of a serpent. It has been suggested that like Erechtheus he was identical with the serpent on the Acropolis. Once more, we are told that Cychreus gained the kingdom of Salamis by slaying a snake which ravaged the island, but that after his death he, like Cadmus, appeared in the form of the reptile. Some said that he was a man who received the name of Snake on account of his cruelty. Such tales may preserve reminiscences of kings who assumed the style of serpents in their lifetime and were believed to transmigrate into serpents after death. Like the dragons of Thebes and Delphi, the Athenian serpent appears to have been conceived as a creature of the waters; for the serpent-man Erechtheus was identified with the water-god Poseidon, and in his temple, the Erechtheum, where the serpent lived, there was a tank which went by the name of "the sea of Erechtheus."

If the explanation of the eight years' cycle which I have adopted holds good for Thebes and Delphi, the octennial festivals held at these places probably had some reference to the sun and

moon, and may have comprised a sacred marriage of these luminaries. The solar character of Apollo, whether original or adventitious, lends some countenance to this view, but at both Delphi and Thebes the god was apparently an intruder who usurped the place of an older god or hero at the festival. At Thebes that older hero was Cadmus. Now Cadmus was a brother of Europa, who appears to have been a personification of the moon conceived in the form of a cow. He travelled westward seeking his lost sister till he came to Delphi, where the oracle bade him give up the search and follow a cow which had the white mark of the full moon on its flank; wherever the cow fell down exhausted, there he was to take up his abode and found a city. Following the cow and the directions of the oracle he built Thebes. Have we not here in another form the myth of the moon pursued and at last overtaken by the sun? and the famous wedding of Cadmus and Harmonia, to attend which all the gods came down from heaven, may it not have been at once the mythical marriage of the great luminaries and the ritual marriage of the king and queen of Thebes masquerading, like the king and queen of Cnossus, in the character of the lights of heaven at the octennial festival which celebrated and symbolised the conjunction of the sun and moon after their long separation, their harmony after eight years of discord? A better name for the bride at such a wedding could hardly have been chosen than Harmonia.

This theory is supported by a remarkable feature of the festival. At the head of the procession, immediately in front of the Laurel-bearer, walked a youth who carried in his hands a staff of olive-wood draped with laurels and flowers. To the top of the staff was fastened a bronze globe, with smaller globes hung from it; to the middle of the staff were attached a globe of medium size and three hundred and sixty-five purple ribbands, while the lower part of the staff was swathed in a saffron pall. The largest globe, we are told, signified the sun, the smaller the moon, and the smallest the stars, and the purple ribbands stood for the course of the year, being equal in number to the days comprised in it. The choir of virgins who followed the Laurel-bearer singing hymns may have represented the Muses, who are said to have sung and played at the marriage of Cadmus and Harmonia; down to late times the very spot in the market-place was shewn where they had discoursed their heavenly music. We may conjecture that the procession of the Laurel-bearing was preceded by a dramatic performance of the Slaying of the Dragon, and that it was followed by a pageant representative of the nuptials of Cadmus and Harmonia in the presence of the gods. On this hypothesis Harmonia, the wife of Cadmus, is only another form of his sister Europa, both of them being personifications of the moon. Accordingly in the Samothracian mysteries, in which the marriage of Cadmus and Harmonia appears to have been celebrated, it was Harmonia and not Europa whose wanderings were dramatically represented. The gods who quitted Olympus to grace the wedding by their presence were probably represented in the rites, whether celebrated at Thebes or in Samothrace, by men and women attired as deities. In like manner at the marriage of a Pharaoh the courtiers masqueraded in the likeness of the animal-headed Egyptian gods.

Within historical times the great Olympic festival was always held at intervals of four, not of eight, years. Yet it too would seem to have been based on the octennial cycle. For it always fell on a full moon, at intervals of fifty and of forty-nine lunar months alternately. Thus the total number of lunar months comprised in two successive Olympiads was ninety-nine, which is precisely the number of lunar months in the octennial cycle. It is possible that, as K. O. Müller conjectured, the Olympic games may, like the Pythian, have originally been celebrated at intervals of eight instead of four years. If that was so, analogy would lead us to infer that the festival was associated with a mythical marriage of the sun and moon. A reminiscence of such a marriage appears to survive in the legend that Endymion, the son of the first king of Elis, had fifty daughters by the Moon, and that he set his sons to run a race

for the kingdom at Olympia. For, as scholars have already perceived, Endymion is the sunken sun overtaken by the moon below the horizon, and his fifty daughters by her are the fifty lunar months of an Olympiad or, more strictly speaking, of every alternate Olympiad. If the Olympic festival always fell, as many authorities have maintained, at the first full moon after the summer solstice, the time would be eminently appropriate for a marriage of the luminaries, since both of them might then be conceived to be at the prime of their vigour.

It has been ingeniously argued by Mr. A. B. Cook that the Olympic victors in the chariot-race were the lineal successors of the old rulers, the living embodiments of Zeus, whose claims to the kingdom were decided by a race, as in the legend of Endymion and his sons, and who reigned for a period of four, perhaps originally of eight years, after which they had again, like Oenomaus, to stake their right to the throne on the issue of a chariot-race. Certainly the four-horse car in which they raced assimilated them to the sun-god, who was commonly supposed to drive through the sky in a similar fashion; while the crown of sacred olive which decked their brows likened them to the great god Zeus himself, whose glorious image at Olympia wore a similar wreath. But if the olive-crowned victor in the men's race at Olympia represented Zeus, it becomes probable that the olive-crowned victor in the girls' race, which was held every fourth year at Olympia in honour of Hera, represented in like manner the god's wife; and that in former days the two together acted the part of the god and goddess in that sacred marriage of Zeus and Hera which is known to have been celebrated in many parts of Greece. This conclusion is confirmed by the legend that the girls' race was instituted by Hippodamia in gratitude for her marriage with Pelops; for if Pelops as victor in the chariot-race represented Zeus, his bride would naturally play the part of Hera. But under the names of Zeus and Hera the pair of Olympic victors would seem to have really personated the Sun and Moon, who were the true heavenly bridegroom and bride of the ancient octennial festival. In the decline of ancient civilisation the old myth of the marriage of the great luminaries was revived by the crazy fanatic and libertine, the emperor Heliogabalus, who fetched the image of Astarte, regarded as the moon-goddess, from Carthage to Rome and wedded it to the image of the Syrian sun-god, commanding all men at Rome and throughout Italy to celebrate with joy and festivity the solemn nuptials of the God of the Sun with the Goddess of the Moon.

§ 5. Funeral Games.

But a different and at first sight inconsistent explanation of the Olympic festival deserves to be considered. Some of the ancients held that all the great games of Greece—the Olympic, the Nemean, the Isthmian, and the Pythian—were funeral games celebrated in honour of the dead. Thus the Olympic games were supposed to have been founded in honour of Pelops, the great legendary hero, who had a sacred precinct at Olympia, where he was honoured above all the other heroes and received annually the sacrifice of a black ram. Once a year, too, all the lads of Peloponnese are said to have lashed themselves on his grave at Olympia, till the blood streamed down their backs as a libation to the departed hero. Similarly at Roman funerals the women scratched their faces till they bled for the purpose, as Varro tells us, of pleasing the ghosts with the sight of the flowing blood. So, too, among the aborigines of Australia mourners sometimes cut and hack themselves and allow the streaming blood to drip on the dead body of their kinsman or into the grave. Among the eastern islanders of Torres Straits in like manner youths who had lately been initiated and girls who had attained to puberty used to have the lobes of their ears cut as a mourning ceremony, and the flowing blood was allowed to drip on the feet of the corpse as a mark of pity or sorrow; moreover, young adults of both sexes had patterns cut in their flesh with a sharp shell so that the blood fell on the dead body. The similarity of these savage rites to the Greek custom observed at the grave of Pelops suggests that the tomb was not a mere cenotaph, but that it contained the

actual remains of the dead hero, though these have not been discovered by the German excavators of Olympia. In like manner the Nemean games are said to have been celebrated in honour of the dead Opheltes, whose grave was shewn at Nemea. According to tradition, the Isthmian games were instituted in honour of the dead Melicertes, whose body had been washed ashore at the Isthmus of Corinth. It is said that when this happened a famine fell upon the Corinthians, and an oracle declared that the evil would not cease until the people paid due obsequies to the remains of the drowned Melicertes and honoured him with funeral games. The Corinthians complied with the injunction for a short time; but as soon as they omitted to celebrate the games, the famine broke out afresh, and the oracle informed them that the honours paid to Melicertes must be eternal. Lastly, the Pythian games are said to have been celebrated in honour of the dead dragon or serpent Python.

These Greek traditions as to the funeral origin of the great games are strongly confirmed by Greek practice in historical times. Thus in the Homeric age funeral games, including chariot-races, foot-races, wrestling, boxing, spear-throwing, quoit-throwing, and archery, were celebrated in honour of dead kings and heroes at their barrows. In the fifth century before Christ, when Miltiades, the victor of Marathon, died in the Thracian Chersonese, the people offered sacrifices to him as their founder and instituted equestrian and athletic games in his honour, in which no citizen of Lampsacus was allowed to contend. Near the theatre at Sparta there were two graves; one contained the bones of the gallant Leonidas which had been brought back from the pass of Thermopylae to rest in Spartan earth; the other held the dust of King Pausanias, who commanded the Greek armies on the great day when they routed the Persian host at Plataea, but who lived to tarnish his laurels and to die a traitor's death. Every year speeches were spoken over these graves and games were held in which none but Spartans might compete. Perhaps in the case of Pausanias the games were intended rather to avert his anger than to do him honour; for we are told that wizards were fetched even from Italy to lay the traitor's unquiet ghost. Again, when the Spartan general Brasidas, defending Amphipolis in Thrace against the Athenians, fell mortally wounded before the city and just lived, like Wolfe on the Heights of Abraham, to learn that his men were victorious, all the allies in arms followed the dead soldier to the grave; and the grateful citizens fenced his tomb about, sacrificed to him as a hero, and decreed that his memory should be honoured henceforth with games and annual sacrifices. So, too, when Timoleon, the saviour of Syracuse, died in the city which he had delivered from tyrants within and defended against enemies without, vast multitudes of men and women, crowned with garlands and clad in clean raiment, attended all that was mortal of their benefactor to the funeral pyre, the voices of praise and benediction mingling with the sound of lamentations and sobs; and when at last the bier was laid on the pyre a herald chosen for his sonorous voice proclaimed that the people of Syracuse were burying Timoleon, and that they would honour him for all time to come with musical, equestrian, and athletic games, because he had put down the tyrants, conquered the foreign foe, rebuilt the cities that had been laid waste, and restored their free constitutions to the Sicilians. In dedicating the great Mausoleum at Halicarnassus to the soul of her dead husband Mausolus, his widow Artemisia instituted a contest of eloquence in his memory, prizes of money and other valuables being offered to such as should pronounce the most splendid panegyrics on the departed. Isocrates himself is said to have entered for the prize but to have been vanquished by his pupil Theopompus. Alexander the Great prepared to pay honour to his dead friend Hephaestion by celebrating athletic and musical contests on a greater scale than had ever been witnessed before, and for this purpose he actually assembled three thousand competitors, who shortly afterwards contended at the funeral games of the great conqueror himself.

Nor were the Greeks in the habit of instituting games in honour only of a few distinguished individuals; they sometimes established them to perpetuate the memory or to appease the ghosts of large numbers of men who had perished on the field of battle or been massacred in cold blood. When the Carthaginians and Tyrrhenians together had beaten the Phocaeans in a sea-fight, they landed their prisoners near Agylla in Etruria and stoned them all to death. After that, whenever the people of Agylla or their oxen or their sheep passed the scene of the massacre, they were attacked by a strange malady, which distorted their bodies and deprived them of the use of their limbs. So they consulted the Delphic oracle, and the priestess told them that they must offer great sacrifices to the dead Phocaeans and institute equestrian and athletic games in their honour, no doubt to appease the angry ghosts of the murdered men, who were supposed to be doing the mischief. At Plataea down to the second century of our era might be seen the graves of the men who fell in the great battle with the Persians. Sacrifices were offered to them every year with great solemnity. The chief magistrate of Plataea, clad in a purple robe, washed with his own hands the tombstones and anointed them with scented oil. He slaughtered a black bull over a burning pyre and called upon the dead warriors to come and partake of the banquet and the blood. Then filling a bowl of wine and pouring a libation he said, "I drink to the men who died for the freedom of Greece." Moreover, games were celebrated every fourth year in honour of these heroic dead, the principal prizes being offered for a race in armour. At Athens funeral games were held in the Academy to commemorate the men slain in war who were buried in the neighbouring Ceramicus, and sacrifices were offered to them at a pit: the games were superintended and the sacrifices offered by the Polemarch or minister of war.

Similar honours have been paid to the spirits of the departed by many other peoples both ancient and modern. Thus in antiquity the Thracians burned or buried their dead, and having raised mounds over their remains they held games of all kinds on the spot, assigning the principal prizes to victory in single combat. At Rome funeral games were celebrated and gladiators fought in honour of distinguished men who had just died. The games were sometimes held in the forum. Thus in the year 216 b.c., when Marcus Aemilius Lepidus died, who had been twice consul, his three sons celebrated funeral games in the forum for three days, and two-and-twenty pairs of gladiators fought on the occasion. Again, in the year 200 b.c. funeral games were held for four days in the forum, and five-and-twenty pairs of gladiators fought in honour of the deceased M. Valerius Laevinus, the expense of the ceremonies being defrayed by the two sons of the dead man. Once more, when the Pontifex Maximus, Publicius Licinius Crassus, died at the beginning of the year 183 b.c., funeral games were celebrated in his honour for three days, a hundred and twenty gladiators fought, and the ceremonies concluded with a banquet, for which the tables were spread in the forum. These games and combats were doubtless intended to please and soothe the ghost of the recently departed, just as we saw that Roman women lacerated their faces for a similar purpose. Similarly, when the Southern Nicobarese dig up the bones of their dead, clean them, and bury them again, they hold a feast at which sham-fights with quarter-staves take place "to gratify the departed spirit." In Futuna, an island of the South Pacific, when a death has taken place friends express their grief by cutting their faces, breast, and arms with shells, and at the funeral festival which follows pairs of boxers commonly engage in combats by way of honouring the deceased. In Laos, a province of Siam, boxers are similarly engaged to bruise each other at the festival which takes place when the remains of a chief or other important person are cremated. The festival lasts three days, but it is while the pyre is actually blazing that the combatants are expected to batter each other's heads with the utmost vigour. Among the Kirghiz the anniversary of the death of a rich man is celebrated with a great feast and with horse-races, shooting-matches, and wrestling-matches. It is said that thousands of sheep and hundreds of horses, besides slaves, coats of mail, and a great many other objects, are

sometimes distributed as prizes among the winners. The Bashkirs, a Tartar people of mixed extraction, bury their dead, and always end the obsequies with horse-races. Among some of the North American Indians contests in running, shooting, and so forth formed part of the funeral celebration.

The Bedouins of the Sinaitic peninsula observe a great annual festival at the grave of the prophet Salih, and camel-races are included in the ceremonies. At the end of the races a procession takes place round the prophet's grave, after which the sacrificial victims are led to the door of the mortuary chapel, their ears are cut off, and the doorposts are smeared with their streaming blood. The custom of holding funeral games in honour of the dead appears to be common among the people of the Caucasus. Thus in Circassia the anniversary of the death of a distinguished warrior or chief is celebrated for years with horse-races, foot-races, and various kinds of martial and athletic exercises, for which prizes are awarded to the successful competitors. Among the Chewsurs, another people of the Caucasus, horse-races are held at the funeral of a rich man, and prizes of cattle and sheep are given to the winners; poorer folk content themselves with a competition in shooting and with more modest prizes. Similar celebrations take place on the anniversary of the death. In like manner shooting-matches form a feature of an annual Festival of All Souls, when the spirits of departed Chewsurs are believed to revisit their old village. Adults and children alike take part in the matches, the adults shooting with guns and the children with bows and arrows. The prizes consist of loaves, stockings, gloves, and so forth. Among the Abchases, another people of the Caucasus, two years after a death a memorial feast is held in honour of the deceased, at which animals are killed and measures taken to appease the soul of the departed. For they believe that if the ghost is discontented he can injure them and their property. The horse of the deceased figures prominently at the festival. After the guests have feasted at a long table spread in the open air, the young men perform evolutions on horseback which are said to recall the tournaments of the Middle Ages, and children of eight or nine years of age ride races on horseback.

Thus it appears that many different peoples have been in the habit of holding games, including horse-races, in honour of the dead; and as the ancient Greeks unquestionably did so within historical times for men whose existence is as little open to question as that of Wellington and Napoleon, we cannot dismiss as improbable the tradition that the Olympic and perhaps other great Greek games were instituted to commemorate real men who once lived, died, and were buried on the spot where the festivals were afterwards held. When the person so commemorated had been great and powerful in his lifetime, his ghost would be deemed great and powerful after death, and the games celebrated in his honour might naturally attract crowds of spectators. The need of providing food and accommodation for the multitude which assembled on these occasions would in turn draw numbers of hucksters and merchants to the spot, and thus what in its origin had been a solemn religious ceremony might gradually assume more and more the character of a fair, that is, of a concourse of people brought together mainly for purposes of trade and amusement. This theory might account for the origin not only of the Olympic and other Greek games, but also for that of the great fairs or public assemblies of ancient Ireland which have been compared, not without reason, to the Greek games. Indeed the two most famous of these Irish festivals, in which horse-races played a prominent part, are actually said to have been instituted in honour of the dead. Most celebrated of all was the fair of Tailltiu or Tailltin, held at a place in the county of Meath which is now called Teltown on the Blackwater, midway between Navan and Kells. The festival lasted for a fortnight before Lammas (the first of August) and a fortnight after it. Among the manly sports and contests which formed a leading feature of the fair horse-races held the principal place. But trade was not neglected, and among the wares brought to market were marriageable women, who, according to a tradition which survived into the nineteenth

century, were bought and sold as wives for one year. The very spot where the marriages took place is still pointed out by the peasantry; they call it "Marriage Hollow." Multitudes flocked to the fair not only from all parts of Ireland, but even from Scotland; it is officially recorded that in the year 1169 a.d. the horses and chariots alone, exclusive of the people on foot, extended in a continuous line for more than six English miles, from Tailltin to Mullach-Aiti, now the Hill of Lloyd near Kells. The Irish historians relate that the fair of Tailltin was instituted by Lug in honour of his foster-mother Tailltiu, whom he buried under a great sepulchral mound on the spot, ordering that a commemorative festival with games and sports should be celebrated there annually for ever. The other great fair of ancient Ireland was held only once in three years at Carman, now called Wexford, in Leinster. It began on Lammas Day (the first of August) and lasted six days. A horse-race took place on each day of the festival. In different parts of the green there were separate markets for victuals, for cattle and horses, and for gold and precious stuffs of the merchants. Harpers harped and pipers piped for the entertainment of the crowds, and in other parts of the fair bards recited in the ears of rapt listeners old romantic tales of forays and cattle-raids, of battles and murders, of love and courtship and marriage. Prizes were awarded to the best performers in every art. In the Book of Ballymote the fair of Carman or Garman is said to have been founded in accordance with the dying wish of a chief named Garman, who was buried on the spot, after begging that a fair of mourning (*aenach n-guba*) should be instituted for him and should bear his name for ever. "It was considered an institution of great importance, and among the blessings promised to the men of Leinster from holding it and duly celebrating the established games, were plenty of corn, fruit and milk, abundance of fish in their lakes and rivers, domestic prosperity, and immunity from the yoke of any other province. On the other hand, the evils to follow from the neglect of this institution were to be failure and early greyness on them and their kings."

Nor were these two great fairs the only ancient Irish festivals of the sort which are reported to have been founded in honour of the dead. The annual fair at Emain is said to have been established to lament the death of Queen Macha of the Golden Hair, who had her palace on the spot. In short "most of the great meetings, by whatever name known, had their origin in funeral games. Tara, Tailltenn, Tlachtga, Ushnagh, Cruachan, Emain Macha and other less prominent meeting-places, are well known as ancient pagan cemeteries, in all of which many illustrious semi-historical personages were interred: and many sepulchral monuments remain in them to this day." "There was a notion that Carman was a cemetery, that there kings and queens had been buried, and that the games and horse-races, which formed the principal attraction of the fair, had been instituted in honour of the dead folk on whose graves the feet of the assembled multitude were treading. The same view is taken of the fairs of Tailltiu and Cruachan: Tailltiu and Cruachan were cemeteries before they served periodically as places of assembly for business and pleasure." The tombs of the first kings of Ulster were at Tailltin.

If we ask whether the tradition as to the funeral origin of these great Irish fairs is true or false, it is important to observe the date at which they were commonly celebrated. The date was the first of August, or Lughnasadh, that is, the *nasadh* or games of Lug, as the day is still called in every part of Ireland. This was the date of the great fair of Cruachan as well as of Tailltin and Carman. Now the first of August is our Lammas Day, a name derived from the Anglo-Saxon *hlafmaesse*, that is, "Loaf-mass" or "Bread-mass," and the name marks the day as a mass or feast of thanksgiving for the first-fruits of the corn-harvest, which in England and Ireland usually ripen about that time. The feast "seems to have been observed with bread of new wheat, and therefore in some parts of England, and even in some near Oxford, the tenants are bound to bring in wheat of that year to their lord, on or before the first of August." But if the festival of the first of August was in its origin an offering of the first-

fruits of the corn-harvest, we can easily understand the great importance which the ancient Irish attached to it, and why they should have thought that its observance ensured a plentiful crop of corn as well as abundance of fruit and milk and fish, whereas the neglect of the festival would entail the failure of these things and cause the hair of their kings to turn prematurely grey. For it is a widespread custom among primitive agricultural peoples to offer the first-fruits of the harvest to divine beings, whether gods or spirits, before any person may eat of the new crops, and wherever such customs are observed we may assume that an omission to offer the first-fruits must be supposed to endanger the crops and the general prosperity of the community, by exciting the wrath of the gods or spirits, who conceive themselves to be robbed of their dues. Now among the divine beings who are thus propitiated the souls of dead ancestors take in many tribes a prominent or even exclusive place, and that these ancestors are not creations of the mythical fancy but were once men of flesh and blood is sometimes demonstrated by the substantial evidence of their skulls, to which the offerings are made and in which the spirits are supposed to take up their abode for the purpose of partaking of the food presented to them. Sometimes the ceremony is designated by the expressive name of "feeding the dead."

All this tends to support the traditional explanation of the great Irish fairs held at the beginning of August, when the first corn is ripe; for if these festivals were indeed celebrated, as they are said to have been, at cemeteries where kings and other famous men were buried, and if the horse-races and other games, which formed the most prominent feature of the celebrations, were indeed instituted, as they are said to have been, in honour of dead men and women, we can perfectly understand why the observance of the festivals and the games was supposed to ensure a plentiful harvest and abundance of fruit and fish, whereas the neglect to celebrate them was believed to entail the failure of these things. So long as the spirits of the dead men and women, who were buried on the spot, received the homage of their descendants in the shape of funeral games and perhaps of first-fruits, so long would they bless their people with plenty by causing the earth to bring forth its fruits, the cows to yield milk, and the waters to swarm with fish; whereas if they deemed themselves slighted and neglected, they would avenge their wrongs by cutting off the food supply and afflicting the people with dearth and other calamities. Among these threatened calamities the premature greyness of the kings is specially mentioned, and was probably deemed not the least serious; for we have seen that the welfare of the whole people is often deemed to be bound up with the physical vigour of the king, and that the appearance of grey hairs on his head and wrinkles on his face is sometimes viewed with apprehension and proves the signal for putting him to death. Similarly the Abchases of the Caucasus imagine that if they do not honour a dead man by horse-races and other festivities, his ghost will be angry with them and visit his displeasure on their persons and their property. In this connexion it is significant that the celebration of the Isthmian games at Corinth in honour of the dead Melicertes is said to have been instituted for the purpose of staying a famine, and that the intermission of the games was immediately followed by a fresh visitation of the calamity. Analogy suggests that the famine may have been ascribed to the anger of the ghost of Melicertes at the neglect of his funeral honours.

Thus on the whole the theory of the funeral origin of the great Greek games is supported not only by Greek tradition and Greek custom but by the evidence of parallel customs observed in many lands. Yet the theory seems hardly adequate to explain all the features in the legends of the foundation and early history of the Olympic games. For if these contests were instituted merely to please and propitiate the soul of a prince named Pelops who was buried on the spot, what are we to make of the tradition that the foot-race was founded in order to determine the successor to the kingdom? or of the similar, though not identical, tradition that

the kingdom and the hand of the king's daughter were awarded as the prize to him who could vanquish the king in a chariot race, while death was the penalty inflicted on the beaten charioteer? Such legends can hardly have been pure fictions; they probably reflect some real custom observed at Olympia. We may perhaps combine them with the tradition of the funeral origin of the games by supposing that victory in the race entitled the winner to reign as a divine king, the embodiment of a god, for a term of years, whether four or eight years according to the interval between successive celebrations of the festival; that when the term had expired the human god must again submit his title to the crown to the hazard of a race for the purpose of proving that his bodily vigour was unimpaired; that if he failed to do so he lost both his kingdom and his life; and lastly that the spirits of these divine kings, like those of the divine kings of the Shilluk, were worshipped with sacrifices at their graves and were thought to delight in the spectacle of the games which reminded them of the laurels they had themselves won long ago, amid the plaudits of a vast multitude, in the sunshine and dust of the race-course, before they joined the shadowy company of ghosts in the darkness and silence of the tomb. The theory would explain the existence of the sacred precinct of Pelops at Olympia, where the black rams, the characteristic offerings to the dead, were sacrificed to the hero, and where the young men lashed themselves till the blood dripped from their backs on the ground—a sight well-pleasing to the grim bloodthirsty ghost lurking unseen below. Perhaps, too, the theory may explain the high mound, at some distance from Olympia, which passed for the grave of the suitors of Hippodamia, to whose shades Pelops is said to have sacrificed as to heroes every year. It is possible that the men buried in this great barrow were not, as tradition had it, the suitors who contended in the chariot-race for the hand of Hippodamia and being defeated were slain by her relentless father; they may have been men who, like Pelops himself, had won the kingdom and a bride in the chariot-race, and, after enjoying the regal dignity and posing as incarnate deities for a term of years, had been finally defeated in the race and put to death.

Whatever may be thought of these speculations, the great Olympic festival cannot have been, like our Lammas, a harvest festival: the quadrennial period of the celebration and the season of the year at which it fell, about halfway between the corn-reaping of early summer and the vintage of mid-autumn, alike exclude the supposition and alike point to an astronomical, not an agricultural, basis of the solemnity. Accordingly we seem driven to conclude that if the winners, male and female, in the Olympic games indeed represented divinities, these divinities must have been personifications of astronomical, not agricultural, powers; in short that the victors posed as embodiments of the Sun and Moon, then at the prime of their radiant power and glory, whose meeting in the heavenly bridechamber of the sky after years of separation was mimicked and magically promoted by the nuptials of their human representatives on earth.

§ 6. The Slaughter of the Dragon.

In the foregoing discussion it has been suggested that Delphi, Thebes, Salamis, and Athens were once ruled by kings who had, in modern language, a serpent or dragon for their crest, and were believed to migrate at death into the bodies of the beasts. But these legends of the dragon admit of another and, at first sight at least, discrepant explanation. It is difficult to separate them from those similar tales of the slaughter of a great dragon which are current in many lands, and have commonly been interpreted as nature-myths, in other words, as personifications of physical phenomena. Of such tales the oldest known versions are the ancient Babylonian and the ancient Indian. The Babylonian myth relates how in the beginning the mighty god Marduk fought and killed the great dragon Tiamat, an embodiment of the *primaeval* watery chaos, and how after his victory he created the present heaven and earth by splitting the huge carcase of the monster into halves and setting one of them up to

form the sky, while the other half apparently he used to fashion the earth. Thus the story is a myth of creation. In language which its authors doubtless understood literally, but which more advanced thinkers afterwards interpreted figuratively, it describes how confusion was reduced to order, how a cosmos emerged from chaos. The account of creation given in the first chapter of Genesis, which has been so much praised for its simple grandeur and sublimity, is merely a rationalised version of the old myth of the fight with the dragon, a myth which for crudity of thought deserves to rank with the quaint fancies of the lowest savages.

Again, the Indian myth embodied in the hymns of the Rigveda tells how the strong and valiant god Indra conquered a great dragon or serpent named Vṛtra, which had obstructed the waters so that they could not flow. He slew the monster with his bolt, and then the pent-up springs gushed in rivers to the sea. And what he did once, he continues to do. Again and again he renews the conflict; again and again he slays the dragon and releases the imprisoned waters. Prayers are addressed to him that he would be pleased to do so in the future. Even priests on earth sometimes associate themselves with Indra in his battles with the dragon. The worshipper is said to have placed the bolt in the god's hands, and the sacrifice is spoken of as having helped the weapon to slay the monster. Thus the feat attributed to Indra would seem to be a mythical account not so much of creation as of some regularly recurring phenomenon. It has been plausibly interpreted as a description of the bursting of the first storms of rain and thunder after the torrid heat of an Indian summer. At such times all nature, exhausted by the drought, longs for coolness and moisture. Day after day men and cattle may be tormented by the sight of clouds that gather and then pass away without disburdening themselves of their contents. At last the long-drawn struggle between the rival forces comes to a crisis. The sky darkens, thunder peals, lightning flashes, and the welcome rain descends in sheets, drenching the parched earth and flooding the rivers. Such a battle of the elements might well present itself to the primitive mind in the guise of a conflict between a maleficent dragon of drought and a beneficent god of thunder and rain. The cloud-dragon has swallowed the waters and keeps them shut up in the black coils of his sinuous body; the god cleaves the monster's belly with his thunder-bolt, and the imprisoned waters escape, in the form of dripping rain and rushing stream.

In other countries a similar myth might, with appropriate variations of detail, express in like manner the passage of one season into another. For example, in more rigorous climates the dragon might stand for the dreary winter and the dragon-slayer for the genial summer. The myths of Apollo and the Python, of St. George and the Dragon have thus been interpreted as symbolising the victory of summer over winter. Similarly it has been held with much probability that the Babylonian legend of Marduk and Tiamat reflects the annual change which transforms the valley of the Euphrates in spring. During the winter the wide Babylonian plain, flooded by the heavy rains, looks like a sea, for which the Babylonian word is *tiamtu*, *tiamat*. Then comes the spring, when with the growing power of the sun the clouds vanish, the waters subside, and dry land and vegetation appear once more. On this hypothesis the dragon Tiamat represents the clouds, the rain, the floods of winter, while Marduk stands for the vernal or summer sun which dispels the powers of darkness and moisture.

But if the combat of Marduk and Tiamat was primarily a mythical description of the Babylonian spring, it would seem that its cosmogonical significance as an account of creation must have been an after-thought. The early philosophers who meditated on the origin of things may have pictured to themselves the creation or evolution of the world on the analogy of the great changes which outside the tropics pass over the face of nature every year. In these changes it is not hard to discern or to imagine a conflict between two hostile forces or principles, the principle of construction or of life and the principle of destruction or of death,

victory inclining now to the one and now to the other, according as winter yields to spring or summer fades into autumn. It would be natural enough to suppose that the same mighty rivals which still wage war on each other had done so from the beginning, and that the formation of the universe as it now exists had resulted from the shock of their battle. On this theory the creation of the world is repeated every spring, and its dissolution is threatened every autumn: the one is proclaimed by summer's gay heralds, the opening flowers; the other is whispered by winter's sad harbingers, the yellow leaves. Here as elsewhere the old creed is echoed by the poet's fancy:—

*“Non alios prima crescentis origine mundi
Inluxisse dies aliumve habuisse tenorem
Crediderim: ver illud erat, ver magnus agebat*

*Orbis, et hibernis parcebant flatibus Euri:
Cum primae lucem pecudes hausere, virumque
Ferrea progenies duris caput extulit arvis,
Inmissaeque ferae silvis et sidera caelo.”*

Thus the ceremonies which in many lands have been performed to hasten the departure of winter or stay the flight of summer are in a sense attempts to create the world afresh, to “re-mould it nearer to the Heart's desire.” But if we would set ourselves at the point of view of the old sages who devised means so feeble to accomplish a purpose so immeasurably vast, we must divest ourselves of our modern conceptions of the immensity of the universe and of the pettiness and insignificance of man's place in it. We must imagine the infinitude of space shrunk to a few miles, the infinitude of time contracted to a few generations. To the savage the mountains that bound the visible horizon, or the sea that stretches away to meet it, is the world's end. Beyond these narrow limits his feet have never strayed, and even his imagination fails to conceive what lies across the waste of waters or the far blue hills. Of the future he hardly thinks, and of the past he knows only what has been handed down to him by word of mouth from his savage forefathers. To suppose that a world thus circumscribed in space and time was created by the efforts or the fiat of a being like himself imposes no great strain on his credulity; and he may without much difficulty imagine that he himself can annually repeat the work of creation by his charms and incantations. And once a horde of savages had instituted magical ceremonies for the renewal or preservation of all things, the force of custom and tradition would tend to maintain them in practice long after the old narrow ideas of the universe had been superseded by more adequate conceptions, and the tribe had expanded into a nation.

Neither in Babylonia nor in India, indeed, so far as I am aware, is there any direct evidence that the story of the Slaughter of the Dragon was ever acted as a miracle-play or magical rite for the sake of bringing about those natural events which it describes in figurative language. But analogy leads us to conjecture that in both countries the myth may have been recited, if not acted, as an incantation, for the purpose I have indicated. At Babylon the recitation may have formed part of the great New Year festival of Marduk, which under the name of Zagnuk was celebrated with great pomp about the vernal equinox. In this connexion it may not be without significance that one version of the Babylonian legend of creation has been found inscribed on a tablet, of which the reverse exhibits an incantation intended to be recited for the purification of the temple of E-zida in Borsippa. Now E-zida was the temple of Nabu or Nebo, a god closely associated, if not originally identical, with Marduk; indeed Hammurabi, the great king of Babylon, dedicated the temple in question to Marduk and not to Nabu. It seems not improbable, therefore, that the creation legend, in which Marduk played so important a part, was recited as an incantation at the purification of the temple E-zida. The

ceremony perhaps took place at the Zagmuk festival, when the image of Nabu was solemnly brought in procession from his temple in Borsippa to the great temple of Marduk in Babylon. Moreover, it was believed that at this great festival the fates were determined by Marduk or Nabu for the ensuing year. Now, the creation myth relates how, after he had slain the dragon, Marduk wrested the tablets of destiny from Ningu, the paramour of Tiamat, sealed them with a seal, and laid them on his breast. We may conjecture that the dramatic representation of this incident formed part of the annual determination of the fates at Zagmuk. In short, it seems probable that the whole myth of creation was annually recited and acted at this great spring festival as a charm to dispel the storms and floods of winter, and to hasten the coming of summer.

Wherever sacred dramas of this sort were acted as magical rites for the regulation of the seasons, it would be natural that the chief part should be played by the king, at first in his character of head magician, and afterwards as representative and embodiment of the beneficent god who vanquishes the powers of evil. If, therefore, the myth of the Slaughter of the Dragon was ever acted with this intention, the king would appropriately figure in the play as the victorious champion, while the defeated monster would be represented by an actor of inferior rank. But it is possible that under certain circumstances the distribution of parts in the drama might be somewhat different. Where the tenure of the regal office was limited to a fixed time, at the end of which the king was inexorably put to death, the fatal part of the dragon might be assigned to the monarch as the representative of the old order, the old year, or the old cycle which was passing away, while the part of the victorious god or hero might be supported by his successor and executioner.

An hypothesis of this latter sort would to a certain extent reconcile the two apparently discrepant interpretations of the myth which have been discussed in the preceding pages, and which for the sake of distinction may be called the totemic and the cosmological interpretations respectively. The serpent or dragon might be the sacred animal or totem of the royal house at the same time that it stood mythically for certain cosmological phenomena, whether moisture or drought, cold or heat, winter or summer. In like manner any other species of animal which served as the totem of the royal family might simultaneously possess a cosmological significance as the symbol of an elemental power. Thus at Cnossus, as we have seen reason to think, the bull was at once the king's crest and an emblem of the sun. Similarly in Egypt the hawk was the symbol both of the sun and of the king. The oldest royal capital known to us was Hieraconpolis or Hawk-town, and the first Egyptian king of whom we hear had for his only royal title the name of hawk. At the same time the hawk was with the Egyptians an emblem of the sun. Hawks were kept in the sun-god's temple, and the deity himself was commonly represented in art as a man with a hawk's head and the disc of the sun above it. However, I am fully sensible of the slipperiness and uncertainty of the ground I am treading, and it is with great diffidence that I submit these speculations to the judgment of my readers. The subject of ancient mythology is involved in dense mists which it is not always possible to penetrate and illumine even with the lamp of the Comparative Method. Demonstration in such matters is rarely, if ever, attainable; the utmost that a candid enquirer can claim for his conclusions is a reasonable degree of probability. Future researches may clear up the obscurity which still rests on the myth of the Slaughter of the Dragon, and may thereby ascertain what measure of truth, if any, there is in the suggested interpretations.

§ 7. Triennial Tenure of the Kingship.

In the province of Lagos, which forms part of Southern Nigeria, the Ijebu tribe of the Yoruba race is divided into two branches, which are known respectively as the Ijebu Ode and the Ijebu Remon. The Ode branch of the tribe is ruled by a chief who bears the title of Awujale

and is surrounded by a great deal of mystery. Down to recent times his face might not be seen even by his own subjects, and if circumstances obliged him to communicate with them he did so through a screen which hid him from view. The other or Remon branch of the Ijebu tribe is governed by a chief, who ranks below the Awujale. Mr. John Parkinson was informed that in former times this subordinate chief used to be killed with ceremony after a rule of three years. As the country is now under British protection the custom of putting the chief to death at the end of a three years' reign has long been abolished, and Mr. Parkinson was unable to ascertain any particulars on the subject.

§ 8. Annual Tenure of the Kingship.

At Babylon, within historical times, the tenure of the kingly office was in practice lifelong, yet in theory it would seem to have been merely annual. For every year at the festival of Zagmuk the king had to renew his power by seizing the hands of the image of Marduk in his great temple of Esagil at Babylon. Even when Babylon passed under the power of Assyria, the monarchs of that country were expected to legalise their claim to the throne every year by coming to Babylon and performing the ancient ceremony at the New-year festival, and some of them found the obligation so burdensome that rather than discharge it they renounced the title of king altogether and contented themselves with the humbler one of Governor. Further, it would appear that in remote times, though not within the historical period, the kings of Babylon or their barbarous predecessors forfeited not merely their crown but their life at the end of a year's tenure of office. At least this is the conclusion to which the following evidence seems to point. According to the historian Berosus, who as a Babylonian priest spoke with ample knowledge, there was annually celebrated in Babylon a festival called the Sacaea. It began on the sixteenth day of the month Lous, and lasted for five days. During these five days masters and servants changed places, the servants giving orders and the masters obeying them. A prisoner condemned to death was dressed in the king's robes, seated on the king's throne, allowed to issue whatever commands he pleased, to eat, drink, and enjoy himself, and to lie with the king's concubines. But at the end of the five days he was stripped of his royal robes, scourged, and hanged or impaled. During his brief term of office he bore the title of Zoganes. This custom might perhaps have been explained as merely a grim jest perpetrated in a season of jollity at the expense of an unhappy criminal. But one circumstance—the leave given to the mock king to enjoy the king's concubines—is decisive against this interpretation. Considering the jealous seclusion of an oriental despot's harem we may be quite certain that permission to invade it would never have been granted by the despot, least of all to a condemned criminal, except for the very gravest cause. This cause could hardly be other than that the condemned man was about to die in the king's stead, and that to make the substitution perfect it was necessary he should enjoy the full rights of royalty during his brief reign. There is nothing surprising in this substitution. The rule that the king must be put to death either on the appearance of any symptom of bodily decay or at the end of a fixed period is certainly one which, sooner or later, the kings would seek to abolish or modify. We have seen that in Ethiopia, Sofala, and Eyeo the rule was boldly set aside by enlightened monarchs; and that in Calicut the old custom of killing the king at the end of twelve years was changed into a permission granted to any one at the end of the twelve years' period to attack the king, and, in the event of killing him, to reign in his stead; though, as the king took care at these times to be surrounded by his guards, the permission was little more than a form. Another way of modifying the stern old rule is seen in the Babylonian custom just described. When the time drew near for the king to be put to death (in Babylon this appears to have been at the end of a single year's reign) he abdicated for a few days, during which a temporary king reigned and suffered in his stead. At first the temporary king may have been an innocent person, possibly a member of the king's own family; but with the growth of civilisation the sacrifice of an

innocent person would be revolting to the public sentiment, and accordingly a condemned criminal would be invested with the brief and fatal sovereignty. In the sequel we shall find other examples of a dying criminal representing a dying god. For we must not forget that, as the case of the Shilluk kings clearly shews, the king is slain in his character of a god or a demigod, his death and resurrection, as the only means of perpetuating the divine life unimpaired, being deemed necessary for the salvation of his people and the world.

If at Babylon before the dawn of history the king himself used to be slain at the festival of the Sacaea, it is natural to suppose that the Sacaea was no other than Zagmuk or Zakmuk, the great New-year festival at which down to historical times the king's power had to be formally renewed by a religious ceremony in the temple of Marduk. The theory of the identity of the festivals is indeed strongly supported by many considerations and has been accepted by some eminent scholars, but it has to encounter a serious chronological difficulty, since Zagmuk fell about the equinox in spring, whereas the Sacaea according to Berossus was held on the sixteenth of the month Lous, which was the tenth month of the Syro-Macedonian calendar and appears to have nearly coincided with July. The question of the sameness or difference of these festivals will be discussed later on. Here it is to be observed that Zagmuk was apparently celebrated in Assyria as well as in Babylonia. For at the end of his great inscription Esarhaddon, king of Assyria, expresses a wish that it may be granted to him to muster all his riding-horses and so forth every year at Zagmuk in his palace. But whether the power of the Assyrian kings had, like that of the Babylonian monarchs, to be annually renewed at this festival, we do not know. However, a trace of an annual tenure of the kingly office in Assyria may perhaps, as Dr. C. Brockelmann thinks, be detected in the rule that an Assyrian king regularly gave his name only to a single year of his reign, while all the other years were named after certain officers and provincial governors, about thirty in number, who were appointed for this purpose and succeeded each other according to a fixed rotation. But we know too little about the institution of the *limu* or eponymate to allow us to press this argument for an annual tenure of the kingship in Assyria. A reminiscence of Zagmuk seems to linger in the belief of the Yezidis that on New-year's day God sits on his throne arranging the decrees for the coming year, assigning to dignitaries their various offices, and delivering to them their credentials under his signature and seal.

The view that at Babylon the condemned prisoner who wore the royal robes was slain as a substitute for the king may be supported by the practice of West Africa, where at the funeral of a king slaves used sometimes to be dressed up as ministers of state and then sacrificed in that character instead of the real ministers, their masters, who purchased for a sum of money the privilege of thus dying by proxy. Such vicarious sacrifices were witnessed by Catholic missionaries at Porto Novo on the Slave Coast.

A vestige of a practice of putting the king to death at the end of a year's reign appears to have survived in the festival called Macahity, which used to be celebrated in Hawaii during the last month of the year. About a hundred years ago a Russian voyager described the custom as follows: "The taboo Macahity is not unlike to our festival of Christmas. It continues a whole month, during which the people amuse themselves with dances, plays, and sham-fights of every kind. The king must open this festival wherever he is. On this occasion his majesty dresses himself in his richest cloak and helmet, and is paddled in a canoe along the shore, followed sometimes by many of his subjects. He embarks early, and must finish his excursion at sun-rise. The strongest and most expert of the warriors is chosen to receive him on his landing. This warrior watches the canoe along the beach; and as soon as the king lands, and has thrown off his cloak, he darts his spear at him, from a distance of about thirty paces, and the king must either catch the spear in his hand, or suffer from it: there is no jesting in the business. Having caught it, he carries it under his arm, with the sharp end downwards, into

the temple or heavoo. On his entrance, the assembled multitude begin their sham-fights, and immediately the air is obscured by clouds of spears, made for the occasion with blunted ends. Hamamea [the king] has been frequently advised to abolish this ridiculous ceremony, in which he risks his life every year; but to no effect. His answer always is, that he is as able to catch a spear as any one on the island is to throw it at him. During the Macahity, all punishments are remitted throughout the country; and no person can leave the place in which he commences these holidays, let the affair be ever so important.”

§ 9. Diurnal Tenure of the Kingship.

That a king should regularly have been put to death at the close of a year's reign will hardly appear improbable when we learn that to this day there is still a kingdom in which the reign and the life of the sovereign are limited to a single day. In Ngoio, a province of the ancient kingdom of Congo in West Africa, the rule obtains that the chief who assumes the cap of sovereignty is always killed on the night after his coronation. The right of succession lies with the chief of the Musurongo; but we need not wonder that he does not exercise it, and that the throne stands vacant. “No one likes to lose his life for a few hours' glory on the Ngoio throne.”

III. The Slaying Of The King In Legend

If a custom of putting kings to death at the end of a set term has prevailed in many lands, it is natural enough that reminiscences of it should survive in tradition long after the custom itself has been abolished. In the *High History of the Holy Graal* we read how Lancelot roamed through strange lands and forests seeking adventures till he came to a fair and wide plain lying without a city that seemed of right great lordship. As he rode across the plain the people came forth from the city to welcome him with the sound of flutes and viols and many instruments of music. When he asked them what meant all this joy, “ ‘Sir,’ said they, ‘all this joy is made along of you, and all these instruments of music are moved to joy and sound of gladness for your coming.’ ‘But wherefore for me?’ saith Lancelot. ‘That shall you know well betimes,’ say they. ‘This city began to burn and to melt in one of the houses from the very same hour that our king was dead, nor might the fire be quenched, nor ever will be quenched until such time as we have a king that shall be lord of the city and of the honour thereunto belonging, and on New Year's Day behoveth him to be crowned in the midst of the fire, and then shall the fire be quenched, for otherwise may it never be put out nor extinguished. Wherefore have we come to meet you to give you the royalty, for we have been told that you are a good knight.’ ‘Lords,’ saith Lancelot, ‘of such a kingdom have I no need, and God defend me from it.’ ‘Sir,’ say they, ‘you may not be defended thereof, for you come into this land at hazard, and great grief would it be that so good a land as you see this is were burnt and melted away by the default of one single man, and the lordship is right great, and this will be right great worship to yourself, that on New Year's Day you should be crowned in the fire and thus save this city and this great people, and thereof shall you have great praise.’ Much marvelleth Lancelot of this that they say. They come round about him on all sides and lead him into the city. The ladies and damsels are mounted to the windows of the great houses and make great joy, and say the one to another, ‘Look at the new king here that they are leading in. Now will he quench the fire on New Year's Day.’ ‘Lord!’ say the most part, ‘what great pity is it of so comely a knight that he shall end on such-wise!’ ‘Be still!’ say the others. ‘Rather should there be great joy that so fair city as is this should be saved by his death, for prayer will be made throughout all the kingdom for his soul for ever!’ Therewith they lead him to the palace with right great joy and say that they will crown him. Lancelot found the palace all strown with rushes and hung about with curtains of rich cloths of silk, and the lords of the city all apparelled to do him homage. But he refuseth right stoutly, and saith that their king nor their lord will he never be in no such sort. Thereupon behold you a dwarf that entereth into the city, leading one of the fairest dames that be in any kingdom, and asketh whereof this joy and this murmuring may be. They tell him they are fain to make the knight king, but that he is not minded to allow them, and they tell him the whole manner of the fire. The dwarf and the damsel are alighted, then they mount up to the palace. The dwarf calleth the provosts of the city and the greater lords. ‘Lords,’ saith he, ‘sith that this knight is not willing to be king, I will be so willingly, and I will govern the city at your pleasure and do whatsoever you have devised to do.’ ‘In faith, sith that the knight refuseth this honour and you desire to have it, willingly will we grant it you, and he may go his way and his road, for herein do we declare him wholly quit.’ Therewithal they set the crown on the dwarf's head, and Lancelot maketh great joy thereof. He taketh his leave, and they commend him to God, and so remounteth he on his horse and goeth his way through the midst of the city all armed. The dames and damsels say that he would not be king for that he had no mind to die so soon.”

A story of the same sort is told of Ujjain, the ancient capital of Malwa in western India, where the renowned King Vikramaditya is said to have held his court, gathering about him a circle of poets and scholars. Tradition has it that once on a time an arch-fiend, with a legion of devils at his command, took up his abode in Ujjain, the inhabitants of which he vexed and devoured. Many had fallen a prey to him, and others had abandoned the country to save their lives. The once populous city was fast being converted into a desert. At last the principal citizens, meeting in council, besought the fiend to reduce his rations to one man a day, who would be duly delivered up to him in order that the rest might enjoy a day's repose. The demon closed with the offer, but required that the man whose turn it was to be sacrificed should mount the throne and exercise the royal power for a single day, all the grandees of the kingdom submitting to his commands, and everybody yielding him the most absolute obedience. Necessity obliged the citizens to accept these hard terms; their names were entered on a list; every day one of them in his turn ruled from morning to night, and was then devoured by the demon.

Now it happened by great good luck that a caravan of merchants from Gujerat halted on the banks of a river not far from the city. They were attended by a servant who was no other than Vikramaditya. At nightfall the jackals began to howl as usual, and one of them said in his own tongue, "In two hours a human corpse will shortly float down this river, with four rubies of great price at his belt, and a turquois ring on his finger. He who will give me that corpse to devour will bear sway over the seven lands." Vikramaditya, knowing the language of birds and beasts, understood what the jackal said, gave the corpse to the beast to devour, and took possession of the ring and the rubies. Next day he entered the town, and, traversing the streets, observed a troop of horse under arms, forming a royal escort, at the door of a potter's house. The grandees of the city were there, and with them was the garrison. They were in the act of inducing the son of the potter to mount an elephant and proceed in state to the palace. But strange to say, instead of being pleased at the honour conferred on their son, the potter and his wife stood on the threshold weeping and sobbing most bitterly. Learning how things stood, the chivalrous Vikramaditya was touched with pity, and offered to accept the fatal sovereignty instead of the potter's son, saying that he would either deliver the people from the tyranny of the demon or perish in the attempt. Accordingly he donned the kingly robes, assumed all the badges of sovereignty, and, mounting the elephant, rode in great pomp to the palace, where he seated himself on the throne, while the dignitaries of the kingdom discharged their duties in his presence. At night the fiend arrived as usual to eat him up. But Vikramaditya was more than a match for him, and after a terrific combat the fiend capitulated and agreed to quit the city. Next morning the people on coming to the palace were astonished to find Vikramaditya still alive. They thought he must be no common mortal, but some superhuman being, or the descendant of a great king. Grateful to him for their deliverance they bestowed the kingdom on him, and he reigned happily over them.

According to one account, the dreadful being who ravaged Ujjain and devoured a king every day was the bloodthirsty goddess Kali. When she quitted the city she left behind her two sisters, whose quaint images still frown on the spectator from the pillared portal known as Vikramaditya's Gate at Ujjain. To these her sisters she granted the privilege of devouring as many human beings as they pleased once every twelve years. That tribute they still exact, though the European in his blindness attributes the deaths to cholera. But in addition seven girls and five buffaloes were to be sacrificed to them every year, and these sacrifices used to be offered regularly until the practice was put down by the English Government. It is said that the men who gave their five-year-old daughters to be slain received grants of land as a reward of their piety. Nowadays only buffaloes are killed at the Daçaratha festival, which is held in October on the ninth day of the month Açvina. The heads of the animals are buried at

Vikramaditya's gateway, and those of the last year's victims are taken up. The girls who would formerly have been sacrificed are now released, but they are not allowed to marry, and their fathers still receive grants of lands just as if the cruel sacrifice had been consummated. The persistence of these bloody rites at Ujjain down to recent times raises a presumption that the tradition of the daily sacrifice of a king in the same city was not purely mythical.

It is worth while to consider another of the stories which are told of King Vikramaditya. His birth is said to have been miraculous, for his father was Gandharva-Sena, who was the son of the great god Indra. One day Gandharva-Sena had the misfortune to offend his divine father, who was so angry that he cursed his son and banished him from heaven to earth, there to remain under the form of an ass by day and of a man by night until a powerful king should burn his ass's body, after which Gandharva-Sena would regain his proper shape and return to the upper world. All this happened according to the divine word. In the shape of an ass the son of the god rendered an important service to the King of Dhara, and received the hand of the king's daughter as his reward. By day he was an ass and ate hay in the stables; by night he was a man and enjoyed the company of the princess his wife. But the king grew tired of the taunts of his enemies, as well as of the gibes which were levelled by unfeeling wits at his asinine son-in-law. So one night, while Gandharva-Sena in human shape was with his wife, the king got hold of the ass's body which his son-in-law had temporarily quitted, and throwing it on a fire burned it to ashes. On the instant Gandharva-Sena appeared to him, and thanking him for undoing the spell announced that he was about to return to heaven, but that his wife was with child by him, and that she would bring forth a son who would bear the name of Vikramaditya and be endowed with the strength of a thousand elephants. The deserted wife was filled with sorrow at his departure, and died in giving birth to Vikramaditya.

This story belongs to a widely diffused type of tale which in England is known by the name of Beauty and the Beast. It relates how a beast, doffing its animal shape, lives as a human husband or wife with a human spouse. Often, though not always, their marriage has a tragic ending. The couple live lovingly together for years and children are born to them. But it is a condition of their union that the transformed husband or wife should never be reminded of his or her old life in furry, feathered, or finny form. At last one unhappy day the fairy spouse finds his or her beast skin, which had been carefully hidden away by her or his loving partner; or husband and wife quarrel and the real man or woman taunts the other with her or his kinship with the beasts. The sight of the once familiar skin awakens old memories and stirs yearnings that had been long suppressed: the cruel words undo the kindness of years. The sometime animal resumes its native shape and disappears, and the human husband or wife is left lamenting. Sometimes, as in the story of Gandharva-Sena, the destruction of the beast's skin causes the fairy mate to vanish for ever; sometimes it enables him or her to remain thenceforth in human form with the human wife or husband. Tales of this sort are told by savages in many parts of the world, and many of them have survived in the folk-lore of civilised peoples. With their implied belief that beasts can turn into men or men into beasts, they must clearly have originated among savages who see nothing incredible in such transformations.

Now it is to be observed that stories of this sort are told by savage tribes to explain why they abstain from eating certain creatures. The reason they assign for the abstinence is that they themselves are descended from a creature of that sort, who was changed for a time into human shape and married a human husband or wife. Thus in the rivers of Sarawak there is a certain fish called a *puttin*, which some of the Dyaks will on no account eat, saying that if they did so they would be eating their relations. Tradition runs that a solitary old man went

out fishing and caught a *puttin*, which he dragged out of the water and laid down in his boat. On turning round he perceived that it had changed into a very pretty girl. He thought she would make a charming wife for his son, so he took her home and brought her up till she was of an age to marry. She consented to be his son's wife, but cautioned her husband to use her well. Some time after marriage, however, he was angry and struck her. She screamed and rushed away into the water, leaving behind her a beautiful daughter who became the mother of the race. Other Dyak tribes tell similar stories of their ancestors. Thus the Sea Dyaks relate how the white-headed hawk married a Sea Dyak woman, and how he gave all his daughters in marriage to the various omen-birds. Hence if a Sea Dyak kills an omen-bird by mistake, he wraps it in a cloth and buries it carefully in the earth along with rice, flesh, and money, entreating the bird not to be vexed, and to forgive him, because it was all an accident. Again, a Kalamantan chief and all his people refrain from killing and eating deer of a certain species (*cervulus muntjac*), because one of their ancestors became a deer of that kind, and as they cannot distinguish his incarnation from common deer they spare them all. In these latter cases the legends explaining the kinship of the men with the animals are not given in full; we can only conjecture, therefore, that they conform to the type here discussed.

The Sea Dyaks also tell a story of the same sort to explain how they first came to plant rice and to revere the omen-birds which play so important a part in Dyak life. Long, long ago, so runs the tale, when rice was yet unknown, and the Dyaks lived on tapioca, yams, potatoes, and such fruits as they could procure, a handsome young chief named Siu went out into the forest with his blow-pipe to shoot birds. He wandered without seeing a bird or meeting an animal till the sun was sinking in the west. Then he came to a wild fig-tree covered with ripe fruit, which a swarm of birds of all kinds were busy pecking at. Never in his life had he seen so many birds together! It seemed as if all the fowls of the forest were gathered in the boughs of that tree. He killed a great many with the poisoned darts of his blow-pipe, and putting them in his basket started for home. But he lost his way in the wood, and the night had fallen before he saw the lights and heard the usual sounds of a Dyak house. Hiding his blow-pipe and the dead birds in the jungle, he went up the ladder into the house, but what was his surprise to find it apparently deserted. There was no one in the long verandah, and of the people whose voices he had heard a minute before not one was to be seen. Only in one of the many rooms, dimly lighted, he found a beautiful girl, who prepared for him his evening meal. Now though Siu did not know it, the house was the house of the great Singalang Burong, the Ruler of the Spirit World. He could turn himself and his followers into any shape. When they went forth against an enemy they took the form of birds for the sake of speed, and flew over the tall trees, the broad rivers, and even the sea. But in his own house and among his own people Singalang Burong appeared as a man. He had eight daughters, and the girl who cooked Siu's food for him was the youngest. The reason why the house was so still and deserted was that the people were in mourning for some of their relatives who had just been killed, and the men had gone out to take human heads in revenge. Siu stayed in the house for a week, and then the girl, whose pet name was Bunsu Burong or "the youngest of the bird family," agreed to marry him; but she said he must promise never to kill or hurt a bird or even to hold one in his hands; for if he did, she would be his wife no more. Siu promised, and together they returned to his people.

There they lived happily, and in time Siu's wife bore him a son whom they named Seragunting. One day when the boy had grown wonderfully tall and strong for his years and was playing with his fellows, a man brought some birds which he had caught in a trap. Forgetting the promise he had made to his wife, Siu asked the man to shew him the birds, and taking one of them in his hand he stroked it. His wife saw it and was sad at heart. She took the pitchers and went as though she would fetch water from the well. But she never came

back. Siu and his son sought her, sorrowing, for days. At last after many adventures they came to the house of the boy's grandfather, Singalang Burong, the Ruler of the Spirit World. There they found the lost wife and mother, and there they stayed for a time. But the heart of Siu yearned to his old home. He would fain have persuaded his wife to return with him, but she would not. So at last he and his son went back alone. But before he went he learned from his father-in-law how to plant rice, and how to revere the sacred birds and to draw omens from them. These birds were named after the sons-in-law of the Ruler of the Spirit World and were the appointed means whereby he made known his wishes to mankind. That is how the Sea Dyaks learned to plant rice and to honour the omen-birds.

Stories of the same kind meet us on the west coast of Africa. Thus the Tshi-speaking negroes of the Gold Coast are divided into a number of great families or clans, mostly named after animals or plants, and the members of a clan refrain from eating animals of the species whose name they bear. In short, the various animals or plants are the totems of their respective clans. Now some of the more recent of these clans possess traditions of their origin, and in such cases the founder of the family, from whom the name is derived, is always represented as having been a beast, bird, or fish, which possessed the power of assuming human shape at will. Thus, for instance, at the town of Chama there resides a family or clan who take their name from the *sarfu* or horse-mackerel, which they may not eat because they are descended from a horse-mackerel. One day, so runs the story, a native of Chama who had lost his wife was walking sadly on the beach, when he met a beautiful young woman whom he persuaded to be his wife. She consented, but told him that her home lay in the sea, that her people were fishes, and that she herself was a fish, and she made him swear that he would never allude to her old home and kinsfolk. All went well for a time till her husband took a second wife, who quarrelled with the first wife and taunted her with being a fish. That grieved her so that she bade her husband good-bye and plunged into the sea with her youngest child in her arms. But she left her two elder children behind, and from them are descended the Horse-mackerel people of Chama. A similar story is told of another family in the town of Appam. Their ancestor caught a fine fish of the sort called *appei*, which turned into a beautiful woman and became his wife. But she told him that in future neither they nor their descendants might eat the *appei* fish or else they would at once return to the sea. The family, duly observing the prohibition, increased and multiplied till they occupied the whole country, which was named after them Appeim or Appam.

We may surmise that stories of this sort, wherever found, had a similar origin; in other words, that they reflect and are intended to explain a real belief in the kinship of certain families with certain species of animals. Hence if the name totemism may be used to include all such beliefs and the practices based on them, the origin of this type of story may be said to be totemic. Now, wherever the totemic clans have become exogamous, that is, wherever a man is always obliged to marry a woman of a totem different from his own, it is obvious that husband and wife will always have to observe different totemic taboos, and that a want of respect shewn by one of them for the sacred animal or plant of the other would tend to domestic jars, which might often lead to the permanent separation of the spouses, the offended wife or husband returning to her or his native clan of the fish-people, the bird-people, or what not. That, I take it, was the origin of the sad story of the man or woman happily mated with a transformed animal and then parted for ever. Such tales, if I am right, were not wholly fictitious. Totemism may have broken many loving hearts. But when that ancient system of society had fallen into disuse, and the ideas on which it was based had ceased to be understood, the quaint stories of mixed marriages to which it had given birth would not be at once forgotten. They would continue to be told, no longer indeed as myths explanatory of custom, but merely as fairy tales for the amusement of the listeners. The

barbarous features of the old legends, which now appeared too monstrously incredible even for story-tellers, would be gradually discarded and replaced by others which fitted in better with the changed beliefs of the time. Thus in particular the animal husband or animal wife of the story might drop the character of a beast to assume that of a fairy. This is the stage of decay exhibited by the two most famous tales of the class in question, the Greek fable of Cupid and Psyche and the Indian story of King Pururavas and the nymph Urvashi, though in the latter we can still detect hints that the fairy wife was once a bird-woman.

It would, no doubt, be a mistake to suppose that totemism, or a system of taboos resembling it, must have existed wherever such stories are told; for it is certain that popular tales spread by diffusion from tribe to tribe and nation to nation, till they may be handed down by oral tradition among people who neither practise nor even understand the customs in which the stories originated. Yet the legend of the miraculous parentage of Vikramaditya may very well have been based on the existence at Ujjain of a line of rajahs who had the ass for their crest or totem. Such a custom is not without analogy in India. The crest of the Maharajah of Nagpur is a cobra with a human face under its expanded hood, surrounded by all the insignia of royalty. Moreover, the Rajah and the chief members of his family always wear turbans so arranged that they resemble a coiled serpent with its head projecting over the wearer's brow. To explain this serpent badge a tale is told which conforms to the type of Beauty and the Beast. Once upon a time a Nag or serpent named Pundarika took upon himself the likeness of a Brahman, and repaired in that guise to the house of a real Brahman at Benares, in order to perfect himself in a knowledge of the sacred books. The teacher was so pleased with the progress made by his pupil that he gave him his only child, the beautiful Parvati, to wife. But the subtle serpent, though he could assume any form at pleasure, was unable to rid himself of his forked tongue and foul breath. To conceal these personal blemishes from his wife he always slept with his back to her. One night, however, she got round him and discovered his unpleasant peculiarities. She questioned him sharply, and to divert her attention he proposed that they should make a pilgrimage to Juggernaut. The idea of visiting that fashionable watering-place so raised the lady's spirits that she quite forgot to pursue the enquiry. However, on their way home her curiosity revived, and she repeated her questions under circumstances which rendered it impossible for the serpent, as a tender husband, to evade them, though well he knew that the disclosure he was about to make would sever him, the immortal, at once and for ever from his mortal wife. He related the wondrous tale, and, plunging into a pool, disappeared from sight. His poor wife was inconsolable at his hurried departure, and in the midst of her grief and remorse her child was born. But instead of rejoicing at the birth, she made for herself a funeral pyre and perished in the flames. At that moment a Brahman appeared on the scene, and perceived the forsaken babe lying sheltered and guarded by a great hooded snake. It was the serpent father protecting his child. Addressing the Brahman, he narrated his history, and foretold that the child should be called Phani-Makuta Raya, that is, "the snake crowned," and that he should reign as rajah over the country to be called Nagpur. That is why the rajahs of Nagpur have the serpent for their crest. Again, the rajahs of Manipur trace their descent from a divine snake. At his installation a rajah of Manipur used to have to pass with great solemnity between two massive dragons of stone which stood in front of the coronation house. Somewhere inside the building was a mysterious chamber, and in the chamber was a pipe, which, according to the popular belief, led down to the depths of a cavern where dwells the snake god, the ancestor of the royal family. The length and prosperity of the rajah's reign were believed to depend on the length of time he could sit on the pipe enduring the fiery breath of his serpentine forefather in the place below. Women are specially devoted to the worship of the ancestral snake, and great reverence is paid them in virtue of their sacred office.

The parallelism between the legends of Nagpur and Ujjain may be allowed to strengthen my conjecture that, if we have a race of royal serpents in the one place, there may well have been a race of royal asses in the other; indeed such dynasties have perhaps not been so rare as might be supposed.

IV. The Supply Of Kings

Tales of the foregoing sort might be dismissed as fictions designed to amuse a leisure hour, were it not for their remarkable agreement with beliefs and customs which, as we have seen, still exist, or are known to have existed in former times. That agreement can hardly be accidental. We seem to be justified, therefore, in assuming that stories of the kind really rest on a basis of facts, however much these facts may have been distorted or magnified in passing through the mind of the story-teller, who is naturally more concerned to amuse than instruct his hearers. Even the legend of a line of kings of whom each reigned for a single day, and was sacrificed at night for the good of the people, will hardly seem incredible when we remember that to this day a kingdom is held on a similar tenure in west Africa, though under modern conditions the throne stands vacant. And while it would be vain to rely on such stories for exact historical details, yet they may help us in a general way to understand the practical working of an institution which to civilised men seems at first sight to belong to the cloudland of fancy rather than to the sober reality of the workaday world. Remark, for example, how in these stories the supply of kings is maintained. In the Indian tradition all the men of the city are put on a list, and each of them, when his turn comes, is forced to reign for a day and to die the death. It is not left to his choice to decide whether he will accept the fatal sovereignty or not. In the *High History of the Holy Grail* the mode of filling the vacant throne is different. A stranger, not a citizen, is seized and compelled to accept office. In the end, no doubt, the dwarf volunteers to be king, thus saving Lancelot's life; but the narrative plainly implies that if a substitute had not thus been found, Lancelot would have been obliged, whether he would or not, to wear the crown and to perish in the fire.

In thus representing the succession to a throne as compulsory, the stories may well preserve a reminiscence of a real custom. To us, indeed, who draw our ideas of kingship from the hereditary and highly privileged monarchies of civilised Europe, the notion of thrusting the crown upon reluctant strangers or common citizens of the lowest rank is apt to appear fantastic and absurd. But that is merely because we fail to realise how widely the modern type of kingship has diverged from the ancient pattern. In early times the duties of sovereignty are more conspicuous than its privileges. At a certain stage of development the chief or king is rather the minister or servant than the ruler of his people. The sacred functions which he is expected to discharge are deemed essential to the welfare, and even the existence, of the community, and at any cost some one must be found to perform them. Yet the burdens and restrictions of all sorts incidental to the early kingship are such that not merely in popular tales, but in actual practice, compulsion has sometimes been found necessary to fill vacancies, while elsewhere the lack of candidates has caused the office to fall into abeyance, or even to be abolished altogether. And where death stared the luckless monarch in the face at the end of a brief reign of a few months or days, we need not wonder that gaols had to be swept and the dregs of society raked to find a king.

Yet we should doubtless err if we supposed that under such hard conditions men could never be found ready and even eager to accept the sovereignty. A variety of causes has led the modern nations of western Europe to set on human life—their own life and that of others—a higher value than is put upon it by many other races. The result is a fear of death which is certainly not shared in the same degree of intensity by some peoples whom we in our self-complacency are accustomed to regard as our inferiors. Among the causes which thus tend to make us cowards may be numbered the spread of luxury and the doctrines of a gloomy theology, which by proclaiming the eternal damnation and excruciating torments of the vast

majority of mankind has added incalculably to the dread and horror of death. The growth of humaner sentiments, which seldom fails to effect a corresponding amelioration in the character even of the gods, has indeed led many Protestant divines of late years to temper the rigour of the divine justice with a large infusion of mercy by relegating the fires of hell to a decent obscurity or even extinguishing them altogether. But these lurid flames appear to blaze as fiercely as ever in the more conservative theology of the Catholic Church.

It would be easy to accumulate evidence of the indifference or apathy exhibited in presence of death by races whom we commonly brand as lower. A few examples must here suffice. Speaking of the natives of India an English writer observes: "We place the highest value on life, while they, being blessed with a comfortable fatalism, which assumes that each man's destiny is written on his forehead in invisible characters, and being besides untroubled with any doubts or thoughts as to the nature of their reception in the next world, take matters of life and death a great deal more unconcernedly, and, compared with our ideas, they may be said to present an almost apathetic indifference on these subjects." To the same effect another English writer remarks that "the absence of that fear of death, which is so powerful in the hearts of civilised men, is the most remarkable trait in the Hindu character." Among the natives of Annam, according to a Catholic missionary, "the subject of death has nothing alarming for anybody. In presence of a sick man people will speak of his approaching end and of his funeral as readily as of anything else. Hence we never need to take the least verbal precaution in warning the sick to prepare themselves to receive the last sacraments. Some time ago I was summoned to a neophyte whose death, though certain, was still distant. On entering the house I found a woman seated at his bedside sewing the mourning dresses of the family. Moreover, the carpenter was fitting together the boards of the coffin quite close to the door of the house, so that the dying man could observe the whole proceeding from his bed. The worthy man superintended personally all these details and gave directions for each of the operations. He even had for his pillow part of the mourning costume which was already finished. I could tell you a host of anecdotes of the same sort." Among these people it is a mark of filial piety to present a father or mother with a coffin; the presentation is the occasion of a family festival to which all friends are invited. Pupils display their respect for their masters in the same fashion. Bishop Masson, whose letter I have just quoted, was himself presented with a fine coffin by some of his converts as a New Year gift and a token of their respect and affection; they invited his attention particularly to the quality of the wood and the beauty of the workmanship.

With regard to the North American Indians a writer who knew them well has said that among them "the idea of immortality is strongly dwelt upon. It is not spoken of as a supposition or a mere belief, not fixed. It is regarded as an actuality,—as something known and approved by the judgment of the nation. During the whole period of my residence and travels in the Indian country, I never knew and never heard of an Indian who did not believe in it, and in the reappearance of the body in a future state. However mistaken they are on the subject of accountabilities for acts done in the present life, no small part of their entire mythology, and the belief that sustains the man in his vicissitudes and wanderings here, arises from the anticipation of ease and enjoyment in a future condition, after the soul has left the body. The resignation, nay, the alacrity with which an Indian frequently lies down and surrenders life, is to be ascribed to this prevalent belief. He does not fear to go to a land which, all his life long, he has heard abounds in rewards without punishments." Another traveller, who saw much of the South American Indians, asserts that they surpass the beasts in their insensibility to hardship and pain, never complaining in sickness nor even when they are being killed, and exhibiting in their last moments an apathetic indifference untroubled by any misgiving as to the future.

Wholesale butcheries of human beings were perpetrated till lately in the name of religion in the west African kingdom of Dahomey. As to the behaviour of the victims we are told that "almost invariably, those doomed to die exhibit the greatest coolness and unconcern. The natural dread of death which the instinct of self-preservation has implanted in every breast, often leads persons who are liable to be seized for immolation to endeavour to escape; but once they are seized and bound, they resign themselves to their fate with the greatest apathy. This is partly due to the less delicate nervous system of the negro; but one reason, and that not the least, is that they have nothing to fear. As has been said, they have but to undergo a surgical operation and a change of place of residence; there is no uncertain future to be faced, and, above all, there is an entire absence of that notion of a place of terrible punishment which makes so many Europeans cowards when face to face with death." One of the earliest European settlers on the coast of Brazil has remarked on the indifference exhibited by the Indian prisoners who were about to be massacred by their enemies. He conversed with the captives, men young, strong, and handsome. To his question whether they did not fear the death that was so near and so appalling, they replied with laughter and mockery. When he spoke of ransoming them from their foes, they jeered at the cowardice of Europeans. The Khonds of India practised an extensive system of human sacrifice, of which we shall hear more in the sequel. The victims, known as Meriahs, were kept for years to be sacrificed, and their manner of death was peculiarly horrible, since they were hacked to pieces or slowly roasted alive. Yet when these destined victims were rescued by the English officers who were engaged in putting down the custom, they generally availed themselves of any opportunity to escape from their deliverers and returned to their fate. In Uganda there were formerly many sacrificial places where human victims used to be slaughtered or burned to death, sometimes in hundreds, from motives of superstition. "Those who have taken part in these executions bear witness how seldom a victim, whether man or woman, raised his voice to protest or appeal against the treatment meted out to him. The victims went to death (so they thought) to save their country and race from some calamity, and they laid down their lives without a murmur or a struggle."

But it is not merely that men of other races and other religions submit to inevitable death with an equanimity which modern Europeans in general cannot match; they often actually seek and find it for reasons which seem to us wholly inadequate. The motives which lead them to sacrifice their lives are very various. Among them religious fanaticism has probably been one of the commonest, and in the preceding pages we have met with many instances of voluntary deaths incurred under its powerful impulse. But more secular motives, such as loyalty, revenge, and an excessive sensibility on the point of honour, have also driven multitudes to throw away their lives with a levity which may strike the average modern Englishman as bordering on insanity. It may be well to illustrate this comparative indifference to death by a few miscellaneous examples drawn from different races. Thus, when the king of Benin died and was about to be lowered into the earth, his favourites and servants used to compete with each other for the privilege of being buried alive with his body in order that they might attend and minister to him in the other world. After the dispute was settled and the tomb had closed over the dead and the living, sentinels were set to watch it day and night. Next day the sepulchre would be opened and some one would call down to the entombed men to know what they were doing and whether any of them had gone to serve the king. The answer was commonly, "No, not yet." The third day the same question would be put, and a voice would reply that so-and-so had gone to join his Majesty. The first to die was deemed the happiest. In four or five days when no answer came up to the question, and all was silent in the grave, the heir to the throne was informed, and he signalled his accession by kindling a fire on the tomb, roasting flesh at it, and distributing the meat to the people. The daughter of a Mbaya chief in South America, having been happily baptized at the very point of death, was

accorded Christian burial in the church by the Jesuit missionary who had rescued her like a brand from the burning. But an old heathen woman of the tribe took it sadly to heart that her chief's daughter should not be honoured with the usual human sacrifices. So, drawing an Indian aside, she implored him to be so kind as to knock her on the head, that she might go and serve her young mistress in the Land of Souls. The savage obligingly complied with her request, and the whole horde begged the missionary that her body might be buried with that of the chief's daughter. The Jesuit sternly refused. He informed them that the girl was now with the angels, and stood in need of no such attendant. As for the old woman, he observed grimly that she had gone to a very different place and would move in a very different circle of society. When Otho committed suicide after the battle of Bedriacum, some of his soldiers slew themselves at his pyre, and their example was afterwards followed by many of their comrades in the armies which had marched with Otho to meet Vitellius; their motive was not fear of the conqueror, but purely loyalty and devotion to their emperor.

In the East that indifference to human life which seems so strange to the Western mind often takes a peculiar form. A man will sometimes kill himself merely in order to be revenged on his foe, believing that his ghost will haunt and torment the survivor, or expecting that punishment of some sort will overtake the wretch who drove him to this extreme step. Among some peoples etiquette requires that if a man commits suicide for this purpose, his enemy should at once follow his example. To take a single example. There is a caste of robbers in southern India among whom "the law of retaliation prevails in all its rigour. If a quarrel takes place, and somebody tears out his own eye or kills himself, his adversary must do the same either to himself or to one of his relations. The women carry this barbarity still further. For a slight affront put on them, a sharp word said to them, they will go and smash their head against the door of her who offended them, and the latter is obliged immediately to do the same. If a woman poisons herself by drinking the juice of a poisonous herb, the other woman who drove her to this violent death must poison herself likewise; else her house will be burned, her cattle carried off, and injuries of all kinds done her until satisfaction is given. They extend this cruelty even to their own children. Not long ago, a few steps from the church in which I have the honour to write to you, two of these barbarians having quarrelled, one of them ran to his house, took from it a child of about four years, and crushed its head between two stones in the presence of his enemy. The latter, without exhibiting any emotion, took his nine-years' old daughter, and, plunging a dagger into her breast, said, 'Your child was only four years old, mine was nine years old. Give me a victim to equal her.' 'Certainly,' replied the other, and seeing at his side his eldest son, who was ready to be married, he stabbed him four or five times with his dagger; and, not content with shedding the blood of his two sons, he killed his wife too, in order to oblige his enemy to murder his wife in like manner. Lastly, a little girl and a baby at the breast had also their throats cut, so that in a single day seven persons were sacrificed to the vengeance of two bloodthirsty men, more cruel than the most ferocious brutes. I have actually in my church a young man who sought refuge among us, wounded by a spear-thrust which his father inflicted on him in order to kill him and thus oblige his foe to slay his own son in like manner. The barbarian had already stabbed two of his children on other occasions for the same purpose. Such atrocious examples will seem to you to partake more of fable than of truth; but believe me that far from exaggerating, I could produce many others not less tragical."

The same contempt of death which many races have exhibited in modern times was displayed in antiquity by the hardy natives of Europe before Christianity had painted the world beyond the grave in colours at which even their bold spirits quailed. Thus, for example, at their banquets the rude Thracians used to suspend a halter over a movable stone and cast lots among themselves. The man on whom the lot fell mounted the stone with a scimitar in his

hand and thrust his head into the noose. A comrade then rolled the stone from under him, and while he did so the other attempted to sever the rope with his scimitar. If he succeeded he dropped to the ground and was saved; if he failed, he was hanged, and his dying struggles were greeted with peals of laughter by his fellows, who regarded the whole thing as a capital joke. The Greek traveller Posidonius, who visited Gaul early in the first century before our era, records that among the Celts men were to be found who for a sum of money or a number of jars of wine, which they distributed among their kinsmen or friends, would allow themselves to be publicly slaughtered in a theatre. They lay down on their backs upon a shield and a man came and cut their throats with a sword.

A Greek author, Euphorion of Chalcis, who lived in the age when the eyes of all the world were turned on the great conflict between Rome and Carthage for the mastery of the Mediterranean, tells us that at Rome it was customary to advertise for men who would consent to be beheaded with an axe in consideration of receiving a sum of five *minae*, or about twenty pounds of our money, to be paid after their death to their heirs. Apparently there was no lack of applicants for this hard-earned bounty; for we are informed that several candidates would often compete for the privilege, each of them arguing that he had the best right to be cudgelled to death. Why were these men invited to be beheaded for twenty pounds a piece? and why in response to the invitation did they gratuitously, as it would seem, express their readiness to suffer a much more painful death than simple decapitation? The reasons are not stated by Euphorion in the brief extract quoted from his work by Athenaeus, the Greek writer who has also preserved for us the testimony of Posidonius to the Gallic recklessness of life. But the connexion in which Athenaeus cites both these passages suggests that the intention of the Roman as of the Gallic practice was merely to minister to the brutal pleasure of the spectators; for he inserts his account of the customs in a dissertation on banquets, and he had just before described how hired ruffians fought and butchered each other at Roman dinner-parties for the amusement of the tipsy guests. Or perhaps the men were wanted to be slaughtered at funerals, for we know that at Rome a custom formerly prevailed of sacrificing human beings at the tomb: the victims were commonly captives or slaves, but they may sometimes have been obtained by advertisement from among the class of needy freemen. Such wretches in bidding against each other may have pleaded as a reason for giving them the preference that they really deserved for their crimes to die a slow and painful death under the cudgel of the executioner. This explanation of the custom, which I owe to my friend Mr. W. Wyse, is perhaps the most probable. But it is also possible, though the language of Euphorion does not lend itself so well to this interpretation, that a cudgelling preceded decapitation as part of the bargain. If that was so, it would seem that the men were wanted to die as substitutes for condemned criminals; for in old Rome capital punishment was regularly inflicted in this fashion, the malefactors being tied up to a post and scourged with rods before they were beheaded with an axe. There is nothing improbable in the view that persons could be hired to suffer the extreme penalty of the law instead of the real culprits. We shall see that a voluntary substitution of the same sort is reported on apparently good authority to be still occasionally practised in China. However, it is immaterial to our purpose whether these men perished to save others, to adorn a funeral, or merely to gratify the Roman lust for blood. The one thing that concerns us is that in the great age of Rome there were to be found Romans willing, nay, eager to barter their lives for a paltry sum of money of which they were not even to have the enjoyment. No wonder that men made of that stuff founded a great empire, and spread the terror of the Roman arms from the Grampians to the tropics.

The comparative indifference with which the Chinese regard their lives is attested by the readiness with which they commit suicide on grounds which often seem to the European extremely trifling. A still more striking proof of their apathy in this respect is furnished by the

readiness with which in China a man can be induced to suffer death for a sum of money to be paid to his relatives. Thus, for example, "one of the most wealthy of the aboriginal tribes, called Shurii-Kia-Miau, is remarkable for the practice of a singular and revolting religious ceremony. The people possess a large temple, in which is an idol in the form of a dog. They resort to this shrine on a certain day every year to worship. At this annual religious festival it is, I believe, customary for the wealthy members of the tribe to entertain their poorer brethren at a banquet given in honour of one who has agreed, for a sum of money paid to his family, to allow himself to be offered as a sacrifice on the altar of the dog idol. At the end of the banquet the victim, having drunk wine freely, is put to death before the idol. This people believe that, were they to neglect this rite, they would be visited with pestilence, famine, or the sword." Further, it is said that in China a man condemned to death can procure a substitute, who, for a small sum, will voluntarily consent to be executed in his stead. The money goes to the substitute's kinsfolk, and since to increase the family prosperity at the expense of personal suffering is regarded by the Chinese as an act of the highest virtue, there is reported to be, just as there used to be in ancient Rome, quite a competition among the candidates for death. Such a substitution is even recognised by the Chinese authorities, except in the case of certain grave crimes, as for instance parricide. The local mandarin is probably not averse to the arrangement, for he is said to make a pecuniary profit by the transaction, engaging a substitute for a less sum than he received from the condemned man, and pocketing the difference.

The foregoing evidence may suffice to convince us that we should commit a grievous error were we to judge all men's love of life by our own, and to assume that others cannot hold cheap what we count so dear. We shall never understand the long course of human history if we persist in measuring mankind in all ages and in all countries by the standard, perhaps excellent but certainly narrow, of the modern English middle class with their love of material comfort and "their passionate, absorbing, almost bloodthirsty clinging to life." That class, of which I may say, in the words of Matthew Arnold, that I am myself a feeble unit, doubtless possesses many estimable qualities, but among them can hardly be reckoned the rare and delicate gift of historical imagination, the power of entering into the thoughts and feelings of men of other ages and other countries, of conceiving that they may regulate their life by principles which do not square with ours, and may throw it away for objects which to us might seem ridiculously inadequate.

To return, therefore, to the point from which we started, we may safely assume that in some races, and at some periods of history, though certainly not in the well-to-do classes of England to-day, it might be easy to find men who would willingly accept a kingdom with the certainty of being put to death after a reign of a year or less. Where men are ready, as they have been in Gaul, in Rome, and in China, to yield up their lives at once for a paltry sum of which they are themselves to reap no benefit, would they not be willing to purchase at the same price a year's tenure of a throne? Among people of that sort the difficulty would probably be not so much to find a candidate for the crown as to decide between the conflicting claims of a multitude of competitors. In point of fact we have heard of a Shilluk clamouring to be made king on condition of being killed at the end of a brief reign of a single day, and we have read how in Malabar a crowd scrambled for the bloody head which entitled the lucky man who caught it to be decapitated after five years of unlimited enjoyment, and how at Calicut many men used to rush cheerfully on death, not for a kingship of a year, or even of an hour, but merely for the honour of displaying their valour in a fruitless attack on the king.

V. Temporary Kings

In some places the modified form of the old custom of regicide which appears to have prevailed at Babylon has been further softened down. The king still abdicates annually for a short time and his place is filled by a more or less nominal sovereign; but at the close of his short reign the latter is no longer killed, though sometimes a mock execution still survives as a memorial of the time when he was actually put to death. To take examples. In the month of Méac (February) the king of Cambodia annually abdicated for three days. During this time he performed no act of authority, he did not touch the seals, he did not even receive the revenues which fell due. In his stead there reigned a temporary king called Sdach Méac, that is, King February. The office of temporary king was hereditary in a family distantly connected with the royal house, the sons succeeding the fathers and the younger brothers the elder brothers, just as in the succession to the real sovereignty. On a favourable day fixed by the astrologers the temporary king was conducted by the mandarins in triumphal procession. He rode one of the royal elephants, seated in the royal palanquin, and escorted by soldiers who, dressed in appropriate costumes, represented the neighbouring peoples of Siam, Annam, Laos, and so on. In place of the golden crown he wore a peaked white cap, and his regalia, instead of being of gold encrusted with diamonds, were of rough wood. After paying homage to the real king, from whom he received the sovereignty for three days, together with all the revenues accruing during that time (though this last custom has been omitted for some time), he moved in procession round the palace and through the streets of the capital. On the third day, after the usual procession, the temporary king gave orders that the elephants should trample under foot the "mountain of rice," which was a scaffold of bamboo surrounded by sheaves of rice. The people gathered up the rice, each man taking home a little with him to secure a good harvest. Some of it was also taken to the king, who had it cooked and presented to the monks.

In Siam on the sixth day of the moon in the sixth month (the end of April) a temporary king is appointed, who for three days enjoys the royal prerogatives, the real king remaining shut up in his palace. This temporary king sends his numerous satellites in all directions to seize and confiscate whatever they can find in the bazaar and open shops; even the ships and junks which arrive in harbour during the three days are forfeited to him and must be redeemed. He goes to a field in the middle of the city, whither they bring a gilded plough drawn by gaily-decked oxen. After the plough has been anointed and the oxen rubbed with incense, the mock king traces nine furrows with the plough, followed by aged dames of the palace scattering the first seed of the season. As soon as the nine furrows are drawn, the crowd of spectators rushes in and scrambles for the seed which has just been sown, believing that, mixed with the seed-rice, it will ensure a plentiful crop. Then the oxen are unyoked, and rice, maize, sesame, sago, bananas, sugar-cane, melons, and so on, are set before them; whatever they eat first will, it is thought, be dear in the year following, though some people interpret the omen in the opposite sense. During this time the temporary king stands leaning against a tree with his right foot resting on his left knee. From standing thus on one foot he is popularly known as King Hop; but his official title is Phaya Phollathep, "Lord of the Heavenly Hosts." He is a sort of Minister of Agriculture; all disputes about fields, rice, and so forth, are referred to him. There is moreover another ceremony in which he personates the king. It takes place in the second month (which falls in the cold season) and lasts three days. He is conducted in procession to an open place opposite the Temple of the Brahmans, where there are a number of poles dressed like May-poles, upon which the Brahmans swing. All the while that they swing and dance, the Lord of the Heavenly Hosts has to stand on one foot upon a seat which is made of bricks plastered over, covered with a white cloth, and hung with tapestry. He is supported by

a wooden frame with a gilt canopy, and two Brahmans stand one on each side of him. The dancing Brahmans carry buffalo horns with which they draw water from a large copper caldron and sprinkle it on the spectators; this is supposed to bring good luck, causing the people to dwell in peace and quiet, health and prosperity. The time during which the Lord of the Heavenly Hosts has to stand on one foot is about three hours. This is thought "to prove the dispositions of the Devattas and spirits." If he lets his foot down "he is liable to forfeit his property and have his family enslaved by the king; as it is believed to be a bad omen, portending destruction to the state, and instability to the throne. But if he stand firm he is believed to have gained a victory over evil spirits, and he has moreover the privilege, ostensibly at least, of seizing any ship which may enter the harbour during these three days, and taking its contents, and also of entering any open shop in the town and carrying away what he chooses."

Such were the duties and privileges of the Siamese King Hop down to about the middle of the nineteenth century or later. Under the reign of the late enlightened monarch this quaint personage was to some extent both shorn of the glories and relieved of the burden of his office. He still watches, as of old, the Brahmans rushing through the air in a swing suspended between two tall masts, each some ninety feet high; but he is allowed to sit instead of stand, and, although public opinion still expects him to keep his right foot on his left knee during the whole of the ceremony, he would incur no legal penalty were he, to the great chagrin of the people, to put his weary foot to the ground. Other signs, too, tell of the invasion of the East by the ideas and civilisation of the West. The thoroughfares that lead to the scene of the performance are blocked with carriages: lamp-posts and telegraph posts, to which eager spectators cling like monkeys, rise above the dense crowd; and, while a tatterdemalion band of the old style, in gaudy garb of vermilion and yellow, bangs and tootles away on drums and trumpets of an antique pattern, the procession of barefooted soldiers in brilliant uniforms steps briskly along to the lively strains of a modern military band playing "Marching through Georgia."

On the first day of the sixth month, which was regarded as the beginning of the year, the king and people of Samarcand used to put on new clothes and cut their hair and beards. Then they repaired to a forest near the capital where they shot arrows on horseback for seven days. On the last day the target was a gold coin, and he who hit it had the right to be king for one day. In Upper Egypt on the first day of the solar year by Coptic reckoning, that is, on the tenth of September, when the Nile has generally reached its highest point, the regular government is suspended for three days and every town chooses its own ruler.

This temporary lord wears a sort of tall fool's cap and a long flaxen beard, and is enveloped in a strange mantle. With a wand of office in his hand and attended by men disguised as scribes, executioners, and so forth, he proceeds to the Governor's house. The latter allows himself to be deposed; and the mock king, mounting the throne, holds a tribunal, to the decisions of which even the governor and his officials must bow. After three days the mock king is condemned to death; the envelope or shell in which he was encased is committed to the flames, and from its ashes the Fellaah creeps forth. The custom perhaps points to an old practice of burning a real king in grim earnest. In Uganda the brothers of the king used to be burned, because it was not lawful to shed the royal blood.

The Mohammedan students of Fez, in Morocco, are allowed to appoint a sultan of their own, who reigns for a few weeks, and is known as *Sultan t-tulba*, "the Sultan of the Scribes." This brief authority is put up for auction and knocked down to the highest bidder. It brings some substantial privileges with it, for the holder is freed from taxes thenceforward, and he has the right of asking a favour from the real sultan. That favour is seldom refused; it usually consists in the release of a prisoner. Moreover, the agents of the student-sultan levy fines on the

shopkeepers and householders, against whom they trump up various humorous charges. The temporary sultan is surrounded with the pomp of a real court, and parades the streets in state with music and shouting, while a royal umbrella is held over his head. With the so-called fines and free-will offerings, to which the real sultan adds a liberal supply of provisions, the students have enough to furnish forth a magnificent banquet; and altogether they enjoy themselves thoroughly, indulging in all kinds of games and amusements. For the first seven days the mock sultan remains in the college; then he goes about a mile out of the town and encamps on the bank of the river, attended by the students and not a few of the citizens. On the seventh day of his stay outside the town he is visited by the real sultan, who grants him his request and gives him seven more days to reign, so that the reign of "the Sultan of the Scribes" nominally lasts three weeks. But when six days of the last week have passed the mock sultan runs back to the town by night. This temporary sultanhip always falls in spring, about the beginning of April. Its origin is said to have been as follows. When Mulai Rasheed II. was fighting for the throne in 1664 or 1665, a certain Jew usurped the royal authority at Taza. But the rebellion was soon suppressed through the loyalty and devotion of the students. To effect their purpose they resorted to an ingenious stratagem. Forty of them caused themselves to be packed in chests which were sent as a present to the usurper. In the dead of night, while the unsuspecting Jew was slumbering peacefully among the packing-cases, the lids were stealthily raised, the brave forty crept forth, slew the usurper, and took possession of the city in the name of the real sultan, who, to mark his gratitude for the help thus rendered him in time of need, conferred on the students the right of annually appointing a sultan of their own. The narrative has all the air of a fiction devised to explain an old custom, of which the real meaning and origin had been forgotten.

A custom of annually appointing a mock king for a single day was observed at Lostwithiel in Cornwall down to the sixteenth century. On "little Easter Sunday" the freeholders of the town and manor assembled together, either in person or by their deputies, and one among them, as it fell to his lot by turn, gaily attired and gallantly mounted, with a crown on his head, a sceptre in his hand, and a sword borne before him, rode through the principal street to the church, dutifully attended by all the rest on horseback. The clergyman in his best robes received him at the churchyard stile and conducted him to hear divine service. On leaving the church he repaired, with the same pomp, to a house provided for his reception. Here a feast awaited him and his suite, and being set at the head of the table he was served on bended knees, with all the rites due to the estate of a prince. The ceremony ended with the dinner, and every man returned home.

Sometimes the temporary king occupies the throne, not annually, but once for all at the beginning of each reign. Thus in the kingdom of Jambi, in Sumatra, it is the custom that at the beginning of a new reign a man of the people should occupy the throne and exercise the royal prerogatives for a single day. The origin of the custom is explained by a tradition that there were once five royal brothers, the four elder of whom all declined the throne on the ground of various bodily defects, leaving it to their youngest brother. But the eldest occupied the throne for one day, and reserved for his descendants a similar privilege at the beginning of every reign. Thus the office of temporary king is hereditary in a family akin to the royal house. In Bilaspur it seems to be the custom, after the death of a Rajah, for a Brahman to eat rice out of the dead Rajah's hand, and then to occupy the throne for a year. At the end of the year the Brahman receives presents and is dismissed from the territory, being forbidden apparently to return. "The idea seems to be that the spirit of the Rájá enters into the Bráhman who eats the *khír* (rice and milk) out of his hand when he is dead, as the Brahman is apparently carefully watched during the whole year, and not allowed to go away." The same or a similar custom is believed to obtain among the hill states about Kangra. The custom of

banishing the Brahman who represents the king may be a substitute for putting him to death. At the installation of a prince of Carinthia a peasant, in whose family the office was hereditary, ascended a marble stone which stood surrounded by meadows in a spacious valley; on his right stood a black mother-cow, on his left a lean ugly mare. A rustic crowd gathered about him. Then the future prince, dressed as a peasant and carrying a shepherd's staff, drew near, attended by courtiers and magistrates. On perceiving him the peasant called out, "Who is this whom I see coming so proudly along?" The people answered, "The prince of the land." The peasant was then prevailed on to surrender the marble seat to the prince on condition of receiving sixty pence, the cow and mare, and exemption from taxes. But before yielding his place he gave the prince a light blow on the cheek.

Some points about these temporary kings deserve to be specially noticed before we pass to the next branch of the evidence. In the first place, the Cambodian and Siamese examples shew clearly that it is especially the divine or magical functions of the king which are transferred to his temporary substitute. This appears from the belief that by keeping up his foot the temporary king of Siam gained a victory over the evil spirits, whereas by letting it down he imperilled the existence of the state. Again, the Cambodian ceremony of trampling down the "mountain of rice," and the Siamese ceremony of opening the ploughing and sowing, are charms to produce a plentiful harvest, as appears from the belief that those who carry home some of the trampled rice, or of the seed sown, will thereby secure a good crop. Moreover, when the Siamese representative of the king is guiding the plough, the people watch him anxiously, not to see whether he drives a straight furrow, but to mark the exact point on his leg to which the skirt of his silken robe reaches; for on that is supposed to hang the state of the weather and the crops during the ensuing season. If the Lord of the Heavenly Hosts hitches up his garment above his knee, the weather will be wet and heavy rains will spoil the harvest. If he lets it trail to his ankle, a drought will be the consequence. But fine weather and heavy crops will follow if the hem of his robe hangs exactly half-way down the calf of his leg. So closely is the course of nature, and with it the weal or woe of the people, dependent on the minutest act or gesture of the king's representative. But the task of making the crops grow, thus deputed to the temporary kings, is one of the magical functions regularly supposed to be discharged by kings in primitive society. The rule that the mock king must stand on one foot upon a raised seat in the rice-field was perhaps originally meant as a charm to make the crop grow high; at least this was the object of a similar ceremony observed by the old Prussians. The tallest girl, standing on one foot upon a seat, with her lap full of cakes, a cup of brandy in her right hand and a piece of elm-bark or linden-bark in her left, prayed to the god Waizganthos that the flax might grow as high as she was standing. Then, after draining the cup, she had it refilled, and poured the brandy on the ground as an offering to Waizganthos, and threw down the cakes for his attendant sprites. If she remained steady on one foot throughout the ceremony, it was an omen that the flax crop would be good; but if she let her foot down, it was feared that the crop might fail. The same significance perhaps attaches to the swinging of the Brahmans, which the Lord of the Heavenly Hosts had formerly to witness standing on one foot. On the principles of homoeopathic or imitative magic it might be thought that the higher the priests swing the higher will grow the rice. For the ceremony is described as a harvest festival, and swinging is practised by the Letts of Russia with the avowed intention of influencing the growth of the crops. In the spring and early summer, between Easter and St. John's Day (the summer solstice), every Lettish peasant is said to devote his leisure hours to swinging diligently; for the higher he rises in the air the higher will his flax grow that season. The gilded plough with which the Siamese mock king opens the ploughing may be compared with the bronze ploughs which the Etruscans employed at the ceremony of founding cities; in both cases the use of bare iron was probably forbidden on superstitious grounds.

In the foregoing cases the temporary king is appointed annually in accordance with a regular custom. But in other cases the appointment is made only to meet a special emergency, such as to relieve the real king from some actual or threatened evil by diverting it to a substitute, who takes his place on the throne for a short time. The history of Persia furnishes instances of such occasional substitutes for the Shah. Thus Shah Abbas the Great, the most eminent of all the kings of Persia, who reigned from 1586 to 1628 a.d., being warned by his astrologers in the year 1591 that a serious danger impended over him, attempted to avert the omen by abdicating the throne and appointing a certain unbeliever named Yusoofee, probably a Christian, to reign in his stead. The substitute was accordingly crowned, and for three days, if we may trust the Persian historians, he enjoyed not only the name and the state but the power of the king. At the end of his brief reign he was put to death: the decree of the stars was fulfilled by this sacrifice; and Abbas, who reascended his throne in a most propitious hour, was promised by his astrologers a long and glorious reign. Again, Shah Sufi II., who reigned from 1668 to 1694 a.d., was crowned a second time and changed his name to Sulaiman or Soliman under the following circumstances: "The King, a few days after, was out of danger, but the matter was to restore him to perfect health. Having been always in a languishing condition, and his physicians never able to discover the cause of his distemper, he suspected that their ignorance retarded his recovery, and two or three of them were therefore ill treated. At length the other physicians, fearing it might be their own turn next, bethought themselves, that Persia being at the same time afflicted with a scarcity of provisions and the King's sickness, the fault must be in the astrologers, who had not chosen a favourable hour when the King was set upon the throne, and therefore persuaded him that the ceremony must be perform'd again, and he change his name in a more lucky minute. The King and his council approving of their notion, the physicians and astrologers together expected the first unfortunate day, which, according to their superstition, was to be followed in the evening by a propitious hour. Among the Gavres, or original Persians, Worshippers of Fire, there are some who boast their descent from the Rustans, who formerly reigned over Persia and Parthia. On the morning of the aforesaid unlucky day, they took one of these Gavres of that Blood-royal, and having plac'd him on the throne, with his back against a figure that represented him to the life, all the great men of the court came to attend him, as if he had been their king, performing all that he commanded. This scene lasted till the favourable hour, which was a little before sun-setting, and then an officer of the court came behind and cut off the head of the wooden statue with his cymiter, the Gaure then starting up and running away. That very moment the King came into the hall, and the Sofy's cap being set on his head, and his sword girt to his side, he sat down on the throne, changing his name for that of Soliman, which was perform'd with the usual ceremonies, the drums beating and trumpets sounding as before. It was requisite to act this farce, in order to satisfy the law, which requires that in order to change his name and take possession of the throne again he must expel a prince that had usurped it upon some pretensions; and therefore they made choice of a Gaure, who pretended to be descended from the ancient kings of Persia, and was besides of a different religion from that of the government."

VI. Sacrifice Of The King's Son

A point to notice about the temporary kings described in the foregoing chapter is that in two places (Cambodia and Jambi) they come of a stock which is believed to be akin to the royal family. If the view here taken of the origin of these temporary kingships is correct, we can easily understand why the king's substitute should sometimes be of the same race as the king. When the king first succeeded in getting the life of another accepted as a sacrifice instead of his own, he would have to shew that the death of that other would serve the purpose quite as well as his own would have done. Now it was as a god or demigod that the king had to die; therefore the substitute who died for him had to be invested, at least for the occasion, with the divine attributes of the king. This, as we have just seen, was certainly the case with the temporary kings of Siam and Cambodia; they were invested with the supernatural functions, which in an earlier stage of society were the special attributes of the king. But no one could so well represent the king in his divine character as his son, who might be supposed to share the divine afflatus of his father. No one, therefore, could so appropriately die for the king and, through him, for the whole people, as the king's son.

According to tradition, Aun or On, King of Sweden, sacrificed nine of his sons to Odin at Upsala in order that his own life might be spared. After he had sacrificed his second son he received from the god an answer that he should live so long as he gave him one of his sons every ninth year. When he had sacrificed his seventh son, he still lived, but was so feeble that he could not walk but had to be carried in a chair. Then he offered up his eighth son, and lived nine years more, lying in his bed. After that he sacrificed his ninth son, and lived another nine years, but so that he drank out of a horn like a weaned child. He now wished to sacrifice his only remaining son to Odin, but the Swedes would not allow him. So he died and was buried in a mound at Upsala. The poet Thiodolf told the king's history in verse:—

“In Upsal's town the cruel king
Slaughtered his sons at Odin's shrine—
Slaughtered his sons with cruel knife,
To get from Odin length of life.
He lived until he had to turn
His toothless mouth to the deer's horn;
And he who shed his children's blood
Sucked through the ox's horn his food.
At length fell Death has tracked him down,
Slowly but sure, in Upsal's town.”

In ancient Greece there seems to have been at least one kingly house of great antiquity of which the eldest sons were always liable to be sacrificed in room of their royal sires. When Xerxes was marching through Thessaly at the head of his mighty host to attack the Spartans at Thermopylae, he came to the town of Alus. Here he was shewn the sanctuary of Laphystian Zeus, about which his guides told him a strange tale. It ran somewhat as follows. Once upon a time the king of the country, by name Athamas, married a wife Nephele, and had by her a son called Phrixus and a daughter named Helle. Afterwards he took to himself a second wife called Ino, by whom he had two sons, Learchus and Melicertes. But his second wife was jealous of her step-children, Phrixus and Helle, and plotted their death. She went about very cunningly to compass her bad end. First of all she persuaded the women of the country to roast the seed corn secretly before it was committed to the ground. So next year no crops came up and the people died of famine. Then the king sent messengers to the oracle at

Delphi to enquire the cause of the dearth. But the wicked step-mother bribed the messenger to give out as the answer of the god that the dearth would never cease till the children of Athamas by his first wife had been sacrificed to Zeus. When Athamas heard that, he sent for the children, who were with the sheep. But a ram with a fleece of gold opened his lips, and speaking with the voice of a man warned the children of their danger. So they mounted the ram and fled with him over land and sea. As they flew over the sea, the girl slipped from the animal's back, and falling into water was drowned. But her brother Phrixus was brought safe to the land of Colchis, where reigned a child of the Sun. Phrixus married the king's daughter, and she bore him a son Cytisorus. And there he sacrificed the ram with the golden fleece to Zeus the God of Flight; but some will have it that he sacrificed the animal to Laphystian Zeus. The golden fleece itself he gave to his wife's father, who nailed it to an oak tree, guarded by a sleepless dragon in a sacred grove of Ares. Meanwhile at home an oracle had commanded that King Athamas himself should be sacrificed as an expiatory offering for the whole country. So the people decked him with garlands like a victim and led him to the altar, where they were just about to sacrifice him when he was rescued either by his grandson Cytisorus, who arrived in the nick of time from Colchis, or by Hercules, who brought tidings that the king's son Phrixus was yet alive. Thus Athamas was saved, but afterwards he went mad, and mistaking his son Learchus for a wild beast shot him dead. Next he attempted the life of his remaining son Melicertes, but the child was rescued by his mother Ino, who ran and threw herself and him from a high rock into the sea. Mother and son were changed into marine divinities, and the son received special homage in the isle of Tenedos, where babes were sacrificed to him. Thus bereft of wife and children the unhappy Athamas quitted his country, and on enquiring of the oracle where he should dwell was told to take up his abode wherever he should be entertained by wild beasts. He fell in with a pack of wolves devouring sheep, and when they saw him they fled and left him the bleeding remnants of their prey. In this way the oracle was fulfilled. But because King Athamas had not been sacrificed as a sin-offering for the whole country, it was divinely decreed that the eldest male scion of his family in each generation should be sacrificed without fail, if ever he set foot in the town-hall, where the offerings were made to Laphystian Zeus by one of the house of Athamas. Many of the family, Xerxes was informed, had fled to foreign lands to escape this doom; but some of them had returned long afterwards, and being caught by the sentinels in the act of entering the town-hall were wreathed as victims, led forth in procession, and sacrificed. These instances appear to have been notorious, if not frequent; for the writer of a dialogue attributed to Plato, after speaking of the immolation of human victims by the Carthaginians, adds that such practices were not unknown among the Greeks, and he refers with horror to the sacrifices offered on Mount Lycaeus and by the descendants of Athamas.

The suspicion that this barbarous custom by no means fell into disuse even in later days is strengthened by a case of human sacrifice which occurred in Plutarch's time at Orchomenus, a very ancient city of Boeotia, distant only a few miles across the plain from the historian's birthplace. Here dwelt a family of which the men went by the name of Psoloeis or "Sooty," and the women by the name of Oleae or "Destructive." Every year at the festival of the Agrionia the priest of Dionysus pursued these women with a drawn sword, and if he overtook one of them he had the right to slay her. In Plutarch's lifetime the right was actually exercised by a priest Zoilus. Now the family thus liable to furnish at least one human victim every year was of royal descent, for they traced their lineage to Minyas, the famous old king of Orchomenus, the monarch of fabulous wealth, whose stately treasury, as it is called, still stands in ruins at the point where the long rocky hill of Orchomenus melts into the vast level expanse of the Copaic plain. Tradition ran that the king's three daughters long despised the other women of the country for yielding to the Bacchic frenzy, and sat at home in the king's house scornfully plying the distaff and the loom, while the rest, wreathed with flowers, their

dishevelled locks streaming to the wind, roamed in ecstasy the barren mountains that rise above Orchomenus, making the solitude of the hills to echo to the wild music of cymbals and tambourines. But in time the divine fury infected even the royal damsels in their quiet chamber; they were seized with a fierce longing to partake of human flesh, and cast lots among themselves which should give up her child to furnish a cannibal feast. The lot fell on Leucippe, and she surrendered her son Hippasus, who was torn limb from limb by the three. From these misguided women sprang the Oleae and the Psoloeis, of whom the men were said to be so called because they wore sad-coloured raiment in token of their mourning and grief.

Now this practice of taking human victims from a family of royal descent at Orchomenus is all the more significant because Athamas himself is said to have reigned in the land of Orchomenus even before the time of Minyas, and because over against the city there rises Mount Laphystius, on which, as at Alus in Thessaly, there was a sanctuary of Laphystian Zeus, where, according to tradition, Athamas purposed to sacrifice his two children Phrixus and Helle. On the whole, comparing the traditions about Athamas with the custom that obtained with regard to his descendants in historical times, we may fairly infer that in Thessaly and probably in Boeotia there reigned of old a dynasty of which the kings were liable to be sacrificed for the good of the country to the god called Laphystian Zeus, but that they contrived to shift the fatal responsibility to their offspring, of whom the eldest son was regularly destined to the altar. As time went on, the cruel custom was so far mitigated that a ram was accepted as a vicarious sacrifice in room of the royal victim, provided always that the prince abstained from setting foot in the town-hall where the sacrifices were offered to Laphystian Zeus by one of his kinsmen. But if he were rash enough to enter the place of doom, to thrust himself wilfully, as it were, on the notice of the god who had good-naturedly winked at the substitution of a ram, the ancient obligation which had been suffered to lie in abeyance recovered all its force, and there was no help for it but he must die. The tradition which associated the sacrifice of the king or his children with a great dearth points clearly to the belief, so common among primitive folk, that the king is responsible for the weather and the crops, and that he may justly pay with his life for the inclemency of the one or the failure of the other. Athamas and his line, in short, appear to have united divine or magical with royal functions; and this view is strongly supported by the claims to divinity which Salmoneus, the brother of Athamas, is said to have set up. We have seen that this presumptuous mortal professed to be no other than Zeus himself, and to wield the thunder and lightning, of which he made a trumpery imitation by the help of tinkling kettles and blazing torches. If we may judge from analogy, his mock thunder and lightning were no mere scenic exhibition designed to deceive and impress the beholders; they were enchantments practised by the royal magician for the purpose of bringing about the celestial phenomena which they feebly mimicked.

Among the Semites of Western Asia the king, in a time of national danger, sometimes gave his own son to die as a sacrifice for the people. Thus Philo of Byblus, in his work on the Jews, says: "It was an ancient custom in a crisis of great danger that the ruler of a city or nation should give his beloved son to die for the whole people, as a ransom offered to the avenging demons; and the children thus offered were slain with mystic rites. So Cronus, whom the Phoenicians call Israel, being king of the land and having an only-begotten son called Jeoud (for in the Phoenician tongue Jeoud signifies 'only-begotten'), dressed him in royal robes and sacrificed him upon an altar in a time of war, when the country was in great danger from the enemy." When the king of Moab was besieged by the Israelites and hard beset, he took his eldest son, who should have reigned in his stead, and offered him for a burnt offering on the wall.

But amongst the Semites the practice of sacrificing their children was not confined to kings. In times of great calamity, such as pestilence, drought, or defeat in war, the Phoenicians used to sacrifice one of their dearest to Baal. "Phoenician history," says an ancient writer, "is full of such sacrifices." The writer of a dialogue ascribed to Plato observes that the Carthaginians immolated human beings as if it were right and lawful to do so, and some of them, he adds, even sacrificed their own sons to Baal. When Gelo, tyrant of Syracuse, defeated the Carthaginians in the great battle of Himera he required as a condition of peace that they should sacrifice their children to Baal no longer. But the barbarous custom was too inveterate and too agreeable to Semitic modes of thought to be so easily eradicated, and the humane stipulation of the Greek despot probably remained a dead letter. At all events the history of this remarkable people, who combined in so high a degree the spirit of commercial enterprise with a blind attachment to a stern and gloomy religion, is stained in later times with instances of the same cruel superstition. When the Carthaginians were defeated and besieged by Agathocles, they ascribed their disasters to the wrath of Baal; for whereas in former times they had been wont to sacrifice to him their own offspring, they had latterly fallen into the habit of buying children and rearing them to be victims. So, to appease the angry god, two hundred children of the noblest families were picked out for sacrifice, and the tale of victims was swelled by not less than three hundred more who volunteered to die for the fatherland. They were sacrificed by being placed, one by one, on the sloping hands of the brazen image, from which they rolled into a pit of fire. Childless people among the Carthaginians bought children from poor parents and slaughtered them, says Plutarch, as if they were lambs or chickens; and the mother had to stand by and see it done without a tear or a groan, for if she wept or moaned she lost all the credit and the child was sacrificed none the less. But all the place in front of the image was filled with a tumultuous music of fifes and drums to drown the shrieks of the victims. Infants were publicly sacrificed by the Carthaginians down to the proconsulate of Tiberius, who crucified the priests on the trees beside their temples. Yet the practice still went on secretly in the lifetime of Tertullian.

Among the Canaanites or aboriginal inhabitants of Palestine, whom the invading Israelites conquered but did not exterminate, the grisly custom of burning their children in honour of Baal or Moloch seems to have been regularly practised. To the best representatives of the Hebrew people, the authors of their noble literature, such rites were abhorrent, and they warned their fellow-countrymen against participating in them. "When thou art come into the land which the Lord thy God giveth thee, thou shalt not learn to do after the abominations of those nations. There shall not be found with thee any one that maketh his son or his daughter to pass through the fire, one that useth divination, one that practiseth augury, or an enchanter, or a sorcerer, or a charmer, or a consulter with a familiar spirit, or a wizard, or a necromancer. For whosoever doeth these things is an abomination unto the Lord: and because of these abominations the Lord thy God doth drive them out from before thee." Again we read: "And thou shalt not give any of thy seed to pass through the fire to Molech." Whatever effect these warnings may have had in the earlier days of Israelitish history, there is abundant evidence that in later times the Hebrews lapsed, or rather perhaps relapsed, into that congenial mire of superstition from which the higher spirits of the nation struggled—too often in vain—to rescue them. The Psalmist laments that his erring countrymen "mingled themselves with the nations, and learned their works: and they served their idols; which became a snare unto them: yea, they sacrificed their sons and their daughters unto demons, and shed innocent blood, even the blood of their sons and of their daughters, whom they sacrificed unto the idols of Canaan; and the land was polluted with blood." When the Hebrew annalist has recorded how Shalmaneser, king of Assyria, besieged Samaria for three years and took it and carried Israel away into captivity, he explains that this was a divine punishment inflicted on his people for having fallen in with the evil ways of the Canaanites.

They had built high places in all their cities, and set up pillars and sacred poles (*asherim*) upon every high hill and under every green tree; and there they burnt incense after the manner of the heathen. "And they forsook all the commandments of the Lord their God, and made them molten images, even two calves, and made an Asherah, and worshipped all the host of heaven, and served Baal. And they caused their sons and their daughters to pass through the fire, and used divination and enchantments." At Jerusalem in these days there was a regularly appointed place where parents burned their children, both boys and girls, in honour of Baal or Moloch. It was in the valley of Hinnom, just outside the walls of the city, and bore the name, infamous ever since, of Tophet. The practice is referred to again and again with sorrowful indignation by the prophets. The kings of Judah set an example to their people by burning their own children at the usual place. Thus of Ahaz, who reigned sixteen years at Jerusalem, we are told that "he burnt incense in the valley of Hinnom, and burnt his children in the fire." Again, King Manasseh, whose long reign covered fifty-five years, "made his children to pass through the fire in the valley of Hinnom." Afterwards in the reign of the good king Josiah the idolatrous excesses of the people were repressed, at least for a time, and among other measures of reform Tophet was defiled by the King's orders, "that no man might make his son or his daughter to pass through the fire to Molech." Whether the place was ever used again for the same dark purpose as before does not appear. Long afterwards, under the sway of a milder faith, there was little in the valley to recall the tragic scenes which it had so often witnessed. Jerome describes it as a pleasant and shady spot, watered by the rills of Siloam and laid out in delightful gardens.

It would be interesting, though it might be fruitless, to enquire how far the Hebrew prophets and psalmists were right in their opinion that the Israelites learned these and other gloomy superstitions only through contact with the old inhabitants of the land, that the primitive purity of faith and morals which they brought with them from the free air of the desert was tainted and polluted by the grossness and corruption of the heathen in the fat land of Canaan. When we remember, however, that the Israelites were of the same Semitic stock as the population they conquered and professed to despise, and that the practice of human sacrifice is attested for many branches of the Semitic race, we shall, perhaps, incline to surmise that the chosen people may have brought with them into Palestine the seeds which afterwards sprang up and bore such ghastly fruit in the valley of Hinnom. It is at least significant of the prevalence of such customs among the Semites that no sooner were the native child-burning Israelites carried off by King Shalmaneser to Assyria than their place was taken by colonists who practised precisely the same rites in honour of deities who probably differed in little but name from those revered by the idolatrous Hebrews. "The Sepharvites," we are told, "burnt their children in the fire to Adrammelech and Anammelech, the gods of Sepharvaim." The pious Jewish historian, who saw in Israel's exile God's punishment for sin, has suggested no explanation of that mystery in the divine economy which suffered the Sepharvites to continue on the same spot the very same abominations for which the erring Hebrews had just been so signally chastised.

We have still to ask which of their children the Semites picked out for sacrifice; for that a choice was made and some principle of selection followed, may be taken for granted. A people who burned all their children indiscriminately would soon extinguish themselves, and such an excess of piety is probably rare, if not unknown. In point of fact it seems, at least among the Hebrews, to have been only the firstborn child that was doomed to the flames. The prophet Micah asks, in a familiar passage, "Wherewith shall I come before the Lord, and bow myself before the high God? shall I come before him with burnt offerings, with calves of a year old? Will the Lord be pleased with thousands of rams, or with ten thousands of rivers of oil? shall I give my firstborn for my transgression, the fruit of my body for the sin of my

soul?" These were the questions which pious and doubting hearts were putting to themselves in the days of the prophet. The prophet's own answer is not doubtful. "He hath shewed thee, O man, what is good; and what doth the Lord require of thee, but to do justly and to love mercy, and to walk humbly with thy God?" It is a noble answer and one which only elect spirits in that or, perhaps, in any age have given. In Israel the vulgar answer was given on bloody altars and in the smoke and flames of Tophet, and the form in which the prophet's question is cast—"Shall I give my firstborn for my transgression?"—shews plainly on which of the children the duty of atoning for the sins of their father was supposed to fall. A passage in Ezekiel points no less clearly to the same conclusion. The prophet represents God as saying, "I gave them statutes that were not good, and judgments wherein they should not live; and I polluted them in their own gifts, in that they caused to pass through the fire all that openeth the womb, that I might make them desolate." That the writer was here thinking specially of the sacrifice of children is proved by his own words a little later on. "When ye offer your gifts, when ye make your sons to pass through the fire, do ye pollute yourselves with all your idols, unto this day?" Further, that by the words "to pass through the fire all that openeth the womb" he referred only to the firstborn can easily be shewn by the language of Scripture in reference to that law of the consecration of firstlings which Ezekiel undoubtedly had in his mind when he wrote this passage. Thus we find that law enunciated in the following terms: "And the Lord spake unto Moses, saying, Sanctify unto me all the firstborn, whatsoever openeth the womb among the children of Israel, both of man and of beast: it is mine." Again, it is written: "Thou shalt set apart unto the Lord all that openeth the womb, and every firstling which thou hast that cometh of a beast; the males shall be the Lord's." Once more: "All that openeth the womb is mine; and all thy cattle that is male, the firstlings of ox and sheep." This ancient Hebrew custom of the consecration to God of all male firstlings, whether of man or beast, was merely the application to the animal kingdom of the law that all first fruits whatsoever belong to the deity and must be made over to him or his representatives. That general law is thus stated by the Hebrew legislator: "Thou shalt not delay to offer of the abundance of thy fruits, and of thy liquors. The firstborn of thy sons shalt thou give unto me. Likewise shalt thou do with thine oxen, and with thy sheep: seven days it shall be with its dam; and on the eighth day thou shalt give it me."

Thus the god of the Hebrews plainly regarded the first-born of men and the firstlings of animals as his own, and required that they should be made over to him. But how? Here a distinction was drawn between sheep, oxen, and goats on the one hand and men and asses on the other; the firstlings of the former were always sacrificed, the firstlings of the latter were generally redeemed. "The firstling of an ox, or the firstling of a sheep, or the firstling of a goat, thou shalt not redeem; they are holy: thou shalt sprinkle their blood upon the altar, and shalt burn their fat for an offering made by fire for a sweet savour unto the Lord." The flesh went to the Levites, who consumed it, no doubt, instead of the deity whom they represented. On the other hand, the ass was not sacrificed by the Israelites, probably because they did not eat the animal themselves, and hence concluded that God did not do so either. In the matter of diet the taste of gods generally presents a striking resemblance to that of their worshippers. Still the firstling ass, like all other firstlings, was sacred to the deity, and since it was not sacrificed to him, he had to receive an equivalent for it. In other words, the ass had to be redeemed, and the price of the redemption was a lamb which was burnt as a vicarious sacrifice instead of the ass, on the hypothesis, apparently, that roast lamb is likely to be more palatable to the Supreme Being than roast donkey. If the ass was not redeemed, it had to be killed by having its neck broken. The firstlings of other unclean animals and of men were redeemed for five shekels a head, which were paid to the Levites.

We can now readily understand why so many of the Hebrews, at least in the later days of their history, sacrificed their firstborn children, and why tender-hearted parents, whose affection for their offspring exceeded their devotion to the deity, may often have been visited with compunction, and even tormented with feelings of bitter self-reproach and shame at their carnal weakness in suffering the beloved son to live, when they saw others, with an heroic piety which they could not emulate, calmly resigning their dear ones to the fire, through which, as they firmly believed, they passed to God, to reap, perhaps, in endless bliss in heaven the reward of their sharp but transient sufferings on earth. From infancy they had been bred up in the belief that the firstborn was sacred to God, and though they knew that he had waived his right to them in consideration of the receipt of five shekels a head, they could, hardly view this as anything but an act of gracious condescension, of generous liberality on the part of the divinity who had stooped to accept so trifling a sum instead of the life which really belonged to him. "Surely," they might argue, "God would be better pleased if we were to give him not the money but the life, not the poor paltry shekels, but what we value most, our first and best-loved child. If we hold that life so dear, will not he also? It is his. Why should we not give him his own?" It was in answer to anxious questions such as these, and to quite truly conscientious scruples of this sort that the prophet Micah declared that what God required of his true worshippers was not sacrifice but justice and mercy and humility. It is the answer of morality to religion—of the growing consciousness that man's duty is not to propitiate with vain oblations those mysterious powers of the universe of which he can know little or nothing, but to be just and merciful in his dealings with his fellows and to humbly trust, though he cannot know, that by acting thus he will best please the higher powers, whatever they may be.

But while morality ranges itself on the side of the prophet, it may be questioned whether history and precedent were not on the side of his adversaries. If the firstborn of men and cattle were alike sacred to God, and the firstborn of cattle were regularly sacrificed, while the firstborn of men were ransomed by a money payment, has not this last provision the appearance of being a later mitigation of an older and harsher custom which doomed firstborn children, like firstling lambs and calves and goats, to the altar or the fire? The suspicion is greatly strengthened by the remarkable tradition told to account for the sanctity of the firstborn. When Israel was in bondage in Egypt, so runs the tradition, God resolved to deliver them from captivity, and to lead them to the Promised Land. But the Egyptians were loth to part with their bondmen and thwarted the divine purpose by refusing to let the Israelites go. Accordingly God afflicted these cruel taskmasters with one plague after another, but all in vain, until at last he made up his mind to resort to a strong measure, which would surely have the desired effect. At dead of night he would pass through the land killing all the firstborn of the Egyptians, both man and beast; not one of them would be left alive in the morning. But the Israelites were warned of what was about to happen and told to keep indoors that night, and to put a mark on their houses, so that when he passed down the street on his errand of slaughter, God might know them at sight from the houses of the Egyptians and not turn in and massacre the wrong children and animals. The mark was to be the blood of a lamb smeared on the lintel and side posts of the door. In every house the lamb, whose red blood was to be the badge of Israel that night, as the white scarves were the badge of the Catholics on the night of St. Bartholomew, was to be killed at evening and eaten by the household, with very peculiar rites, during the hours of darkness while the butchery was proceeding: none of the flesh was to see the morning light: whatever the family could not eat was to be burned with fire. All this was done. The massacre of Egyptian children and animals was successfully perpetrated and had the desired effect; and to commemorate this great triumph God ordained that all the firstborn of man and beast among the Israelites should be sacred to him ever afterwards in the manner already described, the edible animals to be sacrificed, and the

uneatable, especially men and asses, to be ransomed by a substitute or by a pecuniary payment of so much a head. And a festival was to be celebrated every spring with rites exactly like those which were observed on the night of the great slaughter. The divine command was obeyed, and the festival thus instituted was the Passover.

The one thing that looms clear through the haze of this weird tradition is the memory of a great massacre of firstborn. This was the origin, we are told, both of the sanctity of the firstborn and of the feast of the Passover. But when we are further told that the people whose firstborn were slaughtered on that occasion were not the Hebrews but their enemies, we are at once met by serious difficulties. Why, we may ask, should the Israelites kill the firstlings of their cattle for ever because God once killed those of the Egyptians? and why should every Hebrew father have to pay God a ransom for his firstborn child because God once slew all the firstborn children of the Egyptians? In this form the tradition offers no intelligible explanation of the custom. But it at once becomes clear and intelligible when we assume that in the original version of the story it was the Hebrew firstborn that were slain; that in fact the slaughter of the firstborn children was formerly, what the slaughter of the firstborn cattle always continued to be, not an isolated butchery but a regular custom, which with the growth of more humane sentiments was afterwards softened into the vicarious sacrifice of a lamb and the payment of a ransom for each child. Here the reader may be reminded of another Hebrew tradition in which the sacrifice of the firstborn child is indicated still more clearly. Abraham, we are informed, was commanded by God to offer up his firstborn son Isaac as a burnt sacrifice, and was on the point of obeying the divine command, when God, content with this proof of his faith and obedience, substituted for the human victim a ram, which Abraham accordingly sacrificed instead of his son. Putting the two traditions together and observing how exactly they dovetail into each other and into the later Hebrew practice of actually sacrificing the firstborn children by fire to Baal or Moloch, we can hardly resist the conclusion that, before the practice of redeeming them was introduced, the Hebrews, like the other branches of the Semitic race, regularly sacrificed their firstborn children by the fire or the knife. The Passover, if this view is right, was the occasion when the awful sacrifice was offered; and the tradition of its origin has preserved in its main outlines a vivid memory of the horrors of these fearful nights. They must have been like the nights called Evil on the west coast of Africa, when the people kept indoors, because the executioners were going about the streets and the heads of the human victims were falling in the king's palace. But seen in the lurid light of superstition or of legend they were no common mortals, no vulgar executioners, who did the dreadful work at the first Passover. The Angel of Death was abroad that night; into every house he entered, and a sound of lamentation followed him as he came forth with his dripping sword. The blood that bespattered the lintel and door-posts would at first be the blood of the firstborn child of the house; and when the blood of a lamb was afterwards substituted, we may suppose that it was intended not so much to appease as to cheat the ghastly visitant. Seeing the red drops in the doorway he would say to himself, "That is the blood of their child. I need not turn in there. I have many yet to slay before the morning breaks grey in the east." And he would pass on in haste. And the trembling parents, as they clasped their little one to their breast, might fancy that they heard his footfalls growing fainter and fainter down the street. In plain words, we may surmise that the slaughter was originally done by masked men, like the Mumbo Jumbos and similar figures of west Africa, who went from house to house and were believed by the uninitiated to be the deity or his divine messengers come in person to carry off the victims. When the leaders had decided to allow the sacrifice of animals instead of children, they would give the people a hint that if they only killed a lamb and smeared its blood on the door-posts, the bloodthirsty but near-sighted deity would never know the difference.

The attempt to outwit a malignant and dangerous spirit is common, and might be illustrated by many examples. Some instances will be noticed in a later part of this work. Here a single one may suffice. The Malays believe in a Spectral Huntsman, who ranges the forest with a pack of ghostly dogs, and whose apparition bodes sickness or death. Certain birds which fly in flocks by night uttering a loud and peculiar note are supposed to follow in his train. Hence when Perak peasants hear the weird sound, they run out and make a clatter with a knife on a wooden platter, crying, "Great-grandfather, bring us their hearts!" The Spectral Huntsman, hearing these words, will take the supplicants for followers of his own asking to share his bag. So he will spare the household and pass on, and the tumult of the wild hunt will die away in the darkness and the distance.

If this be indeed the origin of the Passover and of the sanctity of the firstborn among the Hebrews, the whole of the Semitic evidence on the subject is seen to fall into line at once. The children whom the Carthaginians, Phoenicians, Canaanites, Moabites, Sepharvites, and probably other branches of the Semitic race burnt in the fire would be their firstborn only, although in general ancient writers have failed to indicate this limitation of the custom. For the Moabites, indeed, the limitation is clearly indicated, if not expressly stated, when we read that the king of Moab offered his eldest son, who should have reigned after him, as a burnt sacrifice on the wall. For the Phoenicians it comes out less distinctly in the statement of Porphyry that the Phoenicians used to sacrifice one of their dearest to Baal, and in the legend recorded by Philo of Byblus that Cronus sacrificed his only-begotten son. We may suppose that the custom of sacrificing the firstborn both of men and animals was a very ancient Semitic institution, which many branches of the race kept up within historical times; but that the Hebrews, while they maintained the custom in regard to domestic cattle, were led by their loftier morality to discard it in respect of children, and to replace it by a merciful law that firstborn children should be ransomed instead of sacrificed.

The conclusion that the Hebrew custom of redeeming the firstborn is a modification of an older custom of sacrificing them has been mentioned by some very distinguished scholars only to be rejected on the ground, apparently, of its extreme improbability. To me the converging lines of evidence which point to this conclusion seem too numerous and too distinct to be thus lightly brushed aside. And the argument from improbability can easily be rebutted by pointing to other peoples who are known to have practised or to be still practising a custom of the same sort. In some tribes of New South Wales the firstborn child of every woman was eaten by the tribe as part of a religious ceremony. Among the aborigines on the lower portions of the Paroo and Warrego rivers, which join the Darling River in New South Wales, girls used to become wives when they were mere children and to be mothers at fourteen, and the old custom was to kill the firstborn child by strangulation. Again, among the tribes about Maryborough in Queensland a girl's first child was almost always exposed and left to perish. In the tribes about Beltana, in South Australia, girls were married at fourteen, and it was customary to destroy their firstborn. The natives of Rook, an island off the east coast of New Guinea, used to kill all their firstborn children; they prided themselves on their humanity in burying the murdered infants instead of eating them as their barbarous neighbours did. They spared the second child but killed the third, and so on alternately with the rest of their offspring. Chinese history reports that in a state called Khai-muh, to the east of Yueh, it was customary to devour the firstborn sons, and further, that to the west of Kiaochi or Tonquin "there was a realm of man-eaters, where the firstborn son was, as a rule, chopped into pieces and eaten, and his younger brothers were nevertheless regarded to have fulfilled their fraternal duties towards him. And if he proved to be appetizing food, they sent some of his flesh to their chieftains, who, exhilarated, gave the father a reward." In India, down to the beginning of the nineteenth century, the custom of sacrificing a firstborn child to

the Ganges was common. Again, we are told that among the Hindoos “the firstborn has always held a peculiarly sacred position, especially if born in answer to a vow to parents who have long been without offspring, in which case sacrifice of the child was common in India. The Mairs used to sacrifice a firstborn son to Mata, the small-pox goddess.”

The Borans, on the southern borders of Abyssinia, propitiate a sky-spirit called Wak by sacrificing their children and cattle to him. Among them when a man of any standing marries, he becomes a Raba, as it is called, and for a certain period after marriage, probably four to eight years, he must leave any children that are born to him to die in the bush. No Boran cares to contemplate the fearful calamities with which Wak would visit him if he failed to discharge this duty. After he ceases to be a Raba, a man is circumcised and becomes a Gudda. The sky-spirit has no claim on the children born after their father's circumcision, but they are sent away at a very early age to be reared by the Wata, a low caste of hunters. They remain with these people till they are grown up, and then return to their families. In this remarkable custom it would appear that the circumcision of the father is regarded as an atoning sacrifice which redeems the rest of his children from the spirit to whom they would otherwise belong. The obscure story told by the Israelites to explain the origin of circumcision seems also to suggest that the custom was supposed to save the life of the child by giving the deity a substitute for it. Again, the Kerre, Banna, and Bashada, three tribes in the valley of the Omo River, to the south of Abyssinia, are in the habit of strangling their firstborn children and throwing the bodies away. The Kerre cast the bodies into the river Omo, where they are devoured by crocodiles; the other two tribes leave them in the forest to be eaten by the hyaenas. The only explanation they give of the custom is that it was decreed by their ancestors. Captain C. H. Stigand enquired into the practice very carefully and was told that “for a certain number of years after marriage children would be thrown away, and after that they would be kept. The number of the first children who were strangled, and the period of years during which this was done, appears to be variable, but I could not understand what regulated it. There was one point, however, about which they were certain, and that was that the first-born of all, rich, poor, high and low, had to be strangled and thrown away. The chief of the Kerre said, ‘If I had a child now, it would have to be thrown away,’ laughing as if it were a great joke. What amused him really was that I should be so interested in their custom.” So far as Captain Stigand could ascertain, there is no idea of sacrificing the children to the crocodiles by throwing them into the river. If a Kerre man has a first child born to him while he is on a journey away from the river, he will throw the infant away in the forest. In Uganda if the firstborn child of a chief or any important person is a son, the midwife strangles it and reports that the infant was still-born. “This is done to ensure the life of the father; if he has a son born first he will soon die, and the child inherit all he has.” Amongst the people of Senjero in eastern Africa we are told that many families must offer up their firstborn sons as sacrifices, because once upon a time, when summer and winter were jumbled together in a bad season, and the fruits of the earth would not ripen, the soothsayers enjoined it. At that time a great pillar of iron is said to have stood at the entrance of the capital, which in accordance with the advice of the soothsayers was broken down by order of the king, whereupon the seasons became regular again. To avert the recurrence of such a calamity the wizards commanded the king to pour human blood once a year on the base of the broken shaft of the pillar, and also upon the throne. Since then certain families have been obliged to deliver up their firstborn sons, who were sacrificed at an appointed time. Among some tribes of south-eastern Africa there is a rule that when a woman's husband has been killed in battle and she marries again, the first child she gives birth to after her second marriage must be put to death, whether she has it by her first or her second husband. Such a child is called “the child of the assegai,” and if it were not killed, death or an accident would be sure to befall the second spouse, and the woman herself would be barren. The notion is that the woman must

have had some share in the misfortune that overtook her first husband, and that the only way of removing the malign influence is to slay “the child of the assegai.”

The heathen Russians often sacrificed their firstborn to the god Perun. It is said that on Mag Slacht or “plain of prostrations,” near the present village of Ballymagauran, in the County Cavan, there used to stand a great idol called Cromm Cruach, covered with gold, to which the ancient Irish sacrificed “the firstlings of every issue and the chief scions of every clan” in order to obtain plenty of corn, honey, and milk. Round about the golden image, which was spoken of as the king idol of Erin, stood twelve other idols of stone. The Kutonaqa Indians of British Columbia worship the sun and sacrifice their firstborn children to him. When a woman is with child she prays to the sun, saying, “I am with child. When it is born I shall offer it to you. Have pity upon us.” Thus they expect to secure health and good fortune for their families. Among the Coast Salish Indians of the same region the first child is often sacrificed to the sun in order to ensure the health and prosperity of the whole family. The Indians of Florida sacrificed their firstborn male children. Among the Indians of north Carolina down to the early part of the eighteenth century a remarkable ceremony was performed, which seems to be most naturally interpreted as a modification of an older custom of putting the king's son to death, perhaps as a substitute for his father. It is thus described by a writer of that period: “They have a strange custom or ceremony amongst them, to call to mind the persecutions and death of the kings their ancestors slain by their enemies at certain seasons, and particularly when the savages have been at war with any nation, and return from their country without bringing home some prisoners of war, or the heads of their enemies. The king causes as a perpetual remembrance of all his predecessors to beat and wound the best beloved of all his children with the same weapons wherewith they had been kill'd in former times, to the end that by renewing the wound, their death should be lamented afresh. The king and his nation being assembled on these occasions, a feast is prepared, and the Indian who is authorised to wound the king's son, runs about the house like a distracted person crying and making a most hideous noise all the time with the weapon in his hand, wherewith he wounds the king's son; this he performs three several times, during which interval he presents the king with victuals or *cassena*, and it is very strange to see the Indian that is thus struck never offers to stir till he is wounded the third time, after which he falls down backwards stretching out his arms and legs as if he had been ready to expire; then the rest of the king's sons and daughters, together with the mother and vast numbers of women and girls, fall at his feet and lament and cry most bitterly. During this time the king and his retinue are feasting, yet with such profound silence for some hours, that not one word or even a whisper is to be heard amongst them. After this manner they continue till night, which ends in singing, dancing, and the greatest joy imaginable.” In this account the description of the frantic manner assumed by the person whose duty it was to wound the king's son reminds us of the frenzy of King Athamas when he took or attempted the lives of his children. The same feature is said to have characterised the sacrifice of children in Peru. “When any person of note was sick and the priest said he must die, they sacrificed his son, desiring the idol to be satisfied with him and not to take away his father's life. The ceremonies used at these sacrifices were strange, for they behaved themselves like mad men. They believed that all calamities were occasioned by sin, and that sacrifices were the remedy.” An early Spanish historian of the conquest of Peru, in describing the Indians of the Peruvian valleys between San-Miguel and Caxamalca, records that “they have disgusting sacrifices and temples of idols which they hold in great veneration; they offer them their most precious possessions. Every month they sacrifice their own children and smear with the blood of the victims the face of the idols and the doors of the temples.” In Puruha, a province of Quito, it used to be customary to sacrifice the firstborn children to the gods. Their remains were dried, enclosed in vessels of metal or stone, and kept in the houses. The Ximanas and Cauxanas, two Indian

tribes in the upper valley of the Amazon, kill all their firstborn children. If the firstborn is a girl, the Lengua Indians invariably put it to death.

Among the ancient Italian peoples, especially of the Sabine stock, it was customary in seasons of great peril or public calamity, as when the crops had failed or a pestilence was raging, to vow that they would sacrifice to the gods every creature, whether man or beast, that should be born in the following spring. To the creatures thus devoted to sacrifice the name of "the sacred spring" was applied. "But since," says Festus, "it seemed cruel to slay innocent boys and girls, they were kept till they had grown up, then veiled and driven beyond the boundaries." Several Italian peoples, for example the Piceni, Samnites, and Hirpini, traced their origin to a "sacred spring," that is, to the consecrated youth who had swarmed off from the parent stock in consequence of such a vow. When the Romans were engaged in a life-and-death struggle with Hannibal after their great defeat at the Trasimene Lake, they vowed to offer a "sacred spring" if victory should attend their arms and the commonwealth should retrieve its shattered fortunes. But the vow extended only to all the offspring of sheep, goats, oxen, and swine that should be brought forth on Italian mountains, plains, and meadows the following spring. On a later occasion, when the Romans pledged themselves again by a similar vow, it was decided that by the "sacred spring" should be meant all the cattle born between the first day of March and the last day of April. Although in later times the Italian peoples appear to have resorted to measures of this sort only in special emergencies, there was a tradition that in former times the consecration of the firstborn to the gods had been an annual custom. Accordingly, it seems not impossible that originally the Italians may, like the Hebrews and perhaps the Semites in general, have been in the habit of dedicating all the firstborn, whether of man or beast, and sacrificing them at a great festival in spring. The custom of the "sacred spring" was not confined to the Italians, but was practised by many other peoples, both Greeks and barbarians, in antiquity.

Thus it would seem that a custom of putting to death all firstborn children has prevailed in many parts of the world. What was the motive which led people to practise a custom which to us seems at once so cruel and so foolish? It cannot have been the purely prudential consideration of adjusting the numbers of the tribe to the amount of the food-supply; for, in the first place, savages do not take such thought for the morrow, and, in the second place, if they did, they would be likely to kill the later born children rather than the firstborn. The foregoing evidence suggests that the custom may have been practised by different peoples from different motives. With the Semites, the Italians, and their near kinsmen the Irish the sacrifice or at least the consecration of the firstborn seems to have been viewed as a tribute paid to the gods, who were thus content to receive a part though they might justly have claimed the whole. In some cases the death of the child appears to be definitely regarded as a substitute for the death of the father, who obtains a new lease of life by the sacrifice of his offspring. This comes out clearly in the tradition of Aun, King of Sweden, who sacrificed one of his sons every nine years to Odin in order to prolong his own life. And in Peru also the son died that the father might live. But in some cases it would seem that the child has been killed, not so much as a substitute for the father, as because it is supposed to endanger his life by absorbing his spiritual essence or vital energy. In fact, a belief in the transmigration or rebirth of souls has operated to produce a regular custom of infanticide, especially infanticide of the firstborn. At Whydah, on the Slave coast of West Africa, where the doctrine of reincarnation is firmly held, it has happened that a child has been put to death because the fetish doctors declared it to be the king's father come to life again. The king naturally could not submit to be pushed from the throne by his predecessor in this fashion; so he compelled his supposed parent to return to the world of the dead from which he had very inopportunistically effected his escape. The Hindoos are of opinion that a man is literally reborn in the person of his son.

Thus in the *Laws of Manu* we read that “the husband, after conception by his wife, becomes an embryo and is born again of her; for that is the wifehood of a wife, that he is born again by her.” Hence after the birth of a son the father is clearly in a very delicate position. Since he is his own son, can he himself, apart from his son, be said to exist? Does he not rather die in his own person as soon as he comes to life in the person of his son? This appears to be the opinion of the subtle Hindoo, for in some sections of the Khattris, a mercantile caste of the Punjab, funeral rites are actually performed for the father in the fifth month of his wife's pregnancy. But apparently he is allowed, by a sort of legal fiction, to come to life again in his own person; for after the birth of his first son he is formally remarried to his wife, which may be regarded as a tacit admission that in the eye of the law at least he is alive.

Now to people who thus conceive the relation of father and son it is plain that fatherhood must appear a very dubious privilege; for if you die in begetting a son, can you be quite sure of coming to life again? His existence is at the best a menace to yours, and at the worst it may involve your extinction. The danger seems to lie especially in the birth of your first son; if only you can tide that over, you are, humanly speaking, safe. In fact, it comes to this, Are you to live? or is he? It is a painful dilemma. Parental affection urges you to die that he may live. Self-love whispers, “Live and let him die. You are in the flower of your age. You adorn the circle in which you move. You are useful, nay, indispensable, to society. He is a mere babe. He never will be missed.” Such a train of thought, preposterous as it seems to us, might easily lead to a custom of killing the firstborn.

Further, the same notion of the rebirth of the father in his eldest son would explain the remarkable rule of succession which prevailed in Polynesia and particularly in Tahiti, where as soon as the king had a son born to him he was obliged to abdicate the throne in favour of the infant. Whatever might be the king's age, his influence in the state, or the political situation of affairs, no sooner was the child born than the monarch became a subject: the infant was at once proclaimed the sovereign of the people: the royal name was conferred upon him, and his father was the first to do him homage, by saluting his feet and declaring him king. All matters, however, of importance which concerned either the internal welfare or the foreign relations of the country continued to be transacted by the father and his councillors; but every edict was issued in the name and on the behalf of the youthful monarch, and though the whole of the executive government might remain in the hands of the father, he only acted as regent for his son, and was regarded as such by the nation. The lands and other sources of revenue were appropriated to the maintenance of the infant ruler, his household, and his attendants; the insignia of royal authority were transferred to him, and his father rendered him all those marks of humble respect which he had hitherto exacted from his subjects. This custom of succession was not confined to the family of the sovereign, it extended also to the nobles and the landed gentry; they, too, had to resign their rank, honours, and possessions on the birth of a son. A man who but yesterday was a baron, not to be approached by his inferiors till they had ceremoniously bared the whole of the upper part of their bodies, was to-day reduced to the rank of a mere commoner with none to do him reverence, if in the night time his wife had given birth to a son, and the child had been suffered to live. The father indeed still continued to administer the estate, but he did so for the benefit of the infant, to whom it now belonged, and to whom all the marks of respect were at once transferred.

This singular usage becomes intelligible if the spirit of the father was supposed to quit him at the birth of his first son and to reappear in the infant. Such a belief and such a practice would, it is obvious, supply a powerful motive to infanticide, since a father could not rear his firstborn son without thereby relinquishing the honours and possessions to which he had been accustomed. The sacrifice was a heavy one, and we need not wonder if many men refused to

make it. Certainly infanticide was practised in Polynesia to an extraordinary extent. The first missionaries estimated that not less than two-thirds of the children were murdered by their parents, and this estimate has been confirmed by a careful enquirer. It would seem that before the introduction of Christianity there was not a single mother in the islands who was not also a murderess, having imbrued her hands in the blood of her offspring. Three native women, the eldest not more than forty years of age, happened once to be in a room where the conversation turned on infanticide, and they confessed to having destroyed not less than twenty-one infants between them. It would doubtless be a gross mistake to lay the whole blame of these massacres on the doctrine of reincarnation, but we can hardly doubt that it instigated a great many. Once more we perceive the fatal consequences that may flow in practice from a theoretical error.

In some places the abdication of the father does not take place until the son is grown up. This was the general practice in Fiji. In Raratonga as soon as a son reached manhood, he would fight and wrestle with his father for the mastery, and if he obtained it he would take forcible possession of the farm and drive his parent in destitution from home. Among the Corannas of South Africa the youthful son of a chief is hardly allowed to walk, but has to idle away his time in the hut and to drink much milk in order that he may grow strong. When he has attained to manhood his father produces two short, bullet-headed sticks and presents one to his son, while he keeps the other for himself. Armed with these weapons the two often fight, and when the son succeeds in knocking his parent down he is acknowledged chief of the kraal. But such customs probably do not imply the theory of rebirth; they may only be applications of the principle that might is right. Still they would equally supply the father with a motive for killing the infant son who, if suffered to live, would one day strip him of his rank and possessions.

Perhaps customs of this sort have left traces of themselves in Greek myth and legend. Cronus or Saturn, as the Romans called him, is said to have been the youngest son of the sky-god Uranus, and to have mutilated his father and reigned in his stead as king of gods and men. Afterwards he was warned by an oracle that he himself should be deposed by his son. To prevent that catastrophe Cronus swallowed his children, one after the other, as soon as they were born. Only the youngest of them, Zeus, was saved through a trick of his mother's, and in time he fulfilled the oracle by banishing his father and sitting on his throne. But Zeus in his turn was told that his wife Metis would give birth to a son who would supplant him in the kingdom of heaven. Accordingly, to rid himself of his future rival he resorted to a device like that which his father Cronus had employed for a similar purpose. Only instead of waiting till the child was born and then devouring it, he made assurance doubly sure by swallowing his wife with the unborn babe in her womb. Such barbarous myths become intelligible if we suppose that they took their rise among people who were accustomed to see grown-up sons supplanting their fathers by force, and fathers murdering and perhaps eating their infants in order to secure themselves against their future rivalry. We have met with instances of savage tribes who are said to devour their firstborn children.

The legend that Laius, king of Thebes, exposed his infant son Oedipus, who afterwards slew his father and sat on the throne, may well be a reminiscence of a state of things in which father and son regularly plotted against each other. The other feature of the story, to wit the marriage of Oedipus with the widowed queen, his mother, fits in very well with the rule which has prevailed in some countries that a valid title to the throne is conferred by marriage with the late king's widow. That custom probably arose, as I have endeavoured to shew, in an age when the blood-royal ran in the female line, and when the king was a man of another family, often a stranger and foreigner, who reigned only in virtue of being the consort of a native princess, and whose sons never succeeded him on the throne. But in process of time,

when fathers had ceased to regard the birth of a son as a menace to their life, or at least to their regal power, kings would naturally scheme to secure the succession for their own male offspring, and this new practice could be reconciled with the old one by marrying the king's son either to his own sister or, after his father's decease, to his stepmother. We have seen marriage with a stepmother actually enjoined for this very purpose by some of the Saxon kings. And on this hypothesis we can understand why the custom of marriage with a full or a half sister has prevailed in so many royal families. It was introduced, we may suppose, for the purpose of giving the king's son the right of succession hitherto enjoyed, under a system of female kinship, either by the son of the king's sister or by the husband of the king's daughter; for under the new rule the heir to the throne united both these characters, being at once the son of the king's sister and, through marriage with his own sister, the husband of the king's daughter. Thus the custom of brother and sister marriage in royal houses marks a transition from female to male descent of the crown. In this connexion it may be significant that Cronus and Zeus themselves married their full sisters Rhea and Hera, a tradition which naturally proved a stone of stumbling to generations who had forgotten the ancient rule of policy which dictated such incestuous unions, and who had so far inverted the true relations of gods and men as to expect their deities to be edifying models of the new virtues instead of warning examples of the old vices. They failed to understand that men create their gods in their own likeness, and that when the creator is a savage, his creatures the gods are savages also.

With the preceding evidence before us we may safely infer that a custom of allowing a king to kill his son, as a substitute or vicarious sacrifice for himself, would be in no way exceptional or surprising, at least in Semitic lands, where indeed religion seems at one time to have recommended or enjoined every man, as a duty that he owed to his god, to take the life of his eldest son. And it would be entirely in accordance with analogy if, long after the barbarous custom had been dropped by others, it continued to be observed by kings, who remain in many respects the representatives of a vanished world, solitary pinnacles that topple over the rising waste of waters under which the past lies buried. We have seen that in Greece two families of royal descent remained liable to furnish human victims from their number down to a time when the rest of their fellow countrymen and countrywomen ran hardly more risk of being sacrificed than passengers in Cheapside at present run of being hurried into St. Paul's or Bow Church and immolated on the altar. A final mitigation of the custom would be to substitute condemned criminals for innocent victims. Such a substitution is known to have taken place in the human sacrifices annually offered in Rhodes to Baal, and we have seen good grounds for believing that the criminal, who perished on the cross or the gallows at Babylon, died instead of the king in whose royal robes he had been allowed to masquerade for a few days.

VII. Succession To The Soul

To the view that in early times, and among barbarous races, kings have frequently been put to death at the end of a short reign, it may be objected that such a custom would tend to the extinction of the royal family. The objection may be met by observing, first, that the kingship is often not confined to one family, but may be shared in turn by several; second, that the office is frequently not hereditary, but is open to men of any family, even to foreigners, who may fulfil the requisite conditions, such as marrying a princess or vanquishing the king in battle; and, third, that even if the custom did tend to the extinction of a dynasty, that is not a consideration which would prevent its observance among people less provident of the future and less heedful of human life than ourselves. Many races, like many individuals have indulged in practices which must in the end destroy them. Not to mention such customs as collective suicide and the prohibition of marriage, both of which may be set down to religious mania, we have seen that the Polynesians killed two-thirds of their children. In some parts of East Africa the proportion of infants massacred at birth is said to be the same. Only children born in certain presentations are allowed to live. The Jagas, a conquering tribe in Angola, are reported to have put to death all their children, without exception, in order that the women might not be cumbered with babies on the march. They recruited their numbers by adopting boys and girls of thirteen or fourteen years of age, whose parents they had killed and eaten. Among the Mbaya Indians of South America the women used to murder all their children except the last, or the one they believed to be the last. If one of them had another child afterwards, she killed it. We need not wonder that this practice entirely destroyed a branch of the Mbaya nation, who had been for many years the most formidable enemies of the Spaniards. Among the Lengua Indians of the Gran Chaco the missionaries discovered what they describe as "a carefully planned system of racial suicide, by the practice of infanticide by abortion, and other methods." Nor is infanticide the only mode in which a savage tribe commits suicide. A lavish use of the poison ordeal may be equally effective. Some time ago a small tribe named Uwet came down from the hill country, and settled on the left branch of the Calabar river in West Africa. When the missionaries first visited the place, they found the population considerable, distributed into three villages. Since then the constant use of the poison ordeal has almost extinguished the tribe. On one occasion the whole population took poison to prove their innocence. About half perished on the spot, and the remnant, we are told, still continuing their superstitious practice, must soon become extinct. With such examples before us we need not hesitate to believe that many tribes have felt no scruple or delicacy in observing a custom which tends to wipe out a single family. To attribute such scruples to them is to commit the common, the perpetually repeated mistake of judging the savage by the standard of European civilisation. If any of my readers set out with the notion that all races of men think and act much in the same way as educated Englishmen, the evidence of superstitious belief and custom collected in the volumes of this work should suffice to disabuse him of so erroneous a prepossession.

The explanation here given of the custom of killing divine persons assumes, or at least is readily combined with, the idea that the soul of the slain divinity is transmitted to his successor. Of this transmission I have no direct proof except in the case of the Shilluk, among whom the practice of killing the divine king prevails in a typical form, and with whom it is a fundamental article of faith that the soul of the divine founder of the dynasty is immanent in every one of his slain successors. But if this is the only actual example of such a belief which I can adduce, analogy seems to render it probable that a similar succession to the soul of the slain god has been supposed to take place in other instances, though direct evidence of it is

wanting. For it has been already shewn that the soul of the incarnate deity is often supposed to transmigrate at death into another incarnation; and if this takes place when the death is a natural one, there seems no reason why it should not take place when the death has been brought about by violence. Certainly the idea that the soul of a dying person may be transmitted to his successor is perfectly familiar to primitive peoples. In Nias the eldest son usually succeeds his father in the chieftainship. But if from any bodily or mental defect the eldest son is disqualified for ruling, the father determines in his lifetime which of his sons shall succeed him. In order, however, to establish his right of succession, it is necessary that the son upon whom his father's choice falls shall catch in his mouth or in a bag the last breath, and with it the soul, of the dying chief. For whoever catches his last breath is chief equally with the appointed successor. Hence the other brothers, and sometimes also strangers, crowd round the dying man to catch his soul as it passes. The houses in Nias are raised above the ground on posts, and it has happened that when the dying man lay with his face on the floor, one of the candidates has bored a hole in the floor and sucked in the chief's last breath through a bamboo tube. When the chief has no son, his soul is caught in a bag, which is fastened to an image made to represent the deceased; the soul is then believed to pass into the image.

Amongst the Takilis or Carrier Indians of North-West America, when a corpse was burned the priest pretended to catch the soul of the deceased in his hands, which he closed with many gesticulations. He then communicated the captured soul to the dead man's successor by throwing his hands towards and blowing upon him. The person to whom the soul was thus communicated took the name and rank of the deceased. On the death of a chief the priest thus filled a responsible and influential position, for he might transmit the soul to whom he would, though doubtless he generally followed the regular line of succession. In Guatemala, when a great man lay at the point of death, they put a precious stone between his lips to receive the parting soul, and this was afterwards kept as a memorial by his nearest kinsman or most intimate friend. Algonquin women who wished to become mothers flocked to the side of a dying person in the hope of receiving and being impregnated by the passing soul. Amongst the Seminoles of Florida when a woman died in childbed the infant was held over her face to receive her parting spirit. When infants died within a month or two of birth, the Huron Indians did not lay them in bark coffins on poles, as they did with other corpses, but buried them beside the paths, in order that they might secretly enter into the wombs of passing women and be born again. The Tonquinese cover the face of a dying person with a handkerchief, and at the moment when he breathes his last, they fold up the handkerchief carefully, thinking that they have caught the soul in it. The Romans caught the breath of dying friends in their mouths, and so received into themselves the soul of the departed. The same custom is said to be still practised in Lancashire.

On the seventh day after the death of a king of Gingiro the sorcerers bring to his successor, wrapt in a piece of silk, a worm which they say comes from the nose of the dead king; and they make the new king kill the worm by squeezing its head between his teeth. The ceremony seems to be intended to convey the spirit of the deceased monarch to his successor. The Danakil or Afars of eastern Africa believe that the soul of a magician will be born again in the first male descendant of the man who was most active in attending on the dying magician in his last hours. Hence when a magician is ill he receives many attentions. In Uganda the spirit of the king who had been the last to die manifested itself from time to time in the person of a priest, who was prepared for the discharge of this exalted function by a peculiar ceremony. When the body of the king had been embalmed and had lain for five months in the tomb, which was a house built specially for it, the head was severed from the body and laid in an ant-hill. Having been stript of flesh by the insects, the skull was washed in a particular

river (the Ndyabuworu) and filled with native beer. One of the late king's priests then drank the beer out of the skull and thus became himself a vessel meet to receive the spirit of the deceased monarch. The skull was afterwards replaced in the tomb, but the lower jaw was separated from it and deposited in a jar; and this jar, being swathed in bark-cloth and decorated with beads so as to look like a man, henceforth represented the late king. A house was built for its reception in the shape of a beehive and divided into two rooms, an inner and an outer. Any person might enter the outer room, but in the inner room the spirit of the dead king was supposed to dwell. In front of the partition was set a throne covered with lion and leopard skins, and fenced off from the rest of the chamber by a rail of spears, shields, and knives, most of them made of copper and brass, and beautifully worked. When the priest, who had fitted himself to receive the king's spirit, desired to converse with the people in the king's name, he went to the throne and addressing the spirit in the inner room informed him of the business in hand. Then he smoked one or two pipes of tobacco, and in a few minutes began to rave, which was a sign that the spirit had entered into him. In this condition he spoke with the voice and made known the wishes of the late king. When he had done so, the spirit left him and returned into the inner room, and he himself departed a mere man as before. Every year at the new moon of September the king of Sofala in eastern Africa used to perform obsequies for the kings, his predecessors, on the top of a high mountain, where they were buried. In the course of the lamentations for the dead, the soul of the king who had died last used to enter into a man who imitated the deceased monarch, both in voice and gesture. The living king conversed with this man as with his dead father, consulting him in regard to the affairs of the kingdom and receiving his oracular replies. These examples shew that provision is often made for the ghostly succession of kings and chiefs. In the Hausa kingdom of Daura, in Northern Nigeria, where the kings used regularly to be put to death on the first symptoms of failing health, the new king had to step over the corpse of his predecessor and to be bathed in the blood of a black ox, the skin of which then served as a shroud for the body of the late king. The ceremony may well have been intended to convey the spirit of the dead king to his successor. Certainly we know that many primitive peoples attribute a magical virtue to the act of stepping over a person.

Sometimes it would appear that the spiritual link between a king and the souls of his predecessors is formed by the possession of some part of their persons. In southern Celebes, as we have seen, the regalia often consist of corporeal portions of deceased rajahs, which are treasured as sacred relics and confer the right to the throne. Similarly among the Sakalavas of southern Madagascar a vertebra of the neck, a nail, and a lock of hair of a deceased king are placed in a crocodile's tooth and carefully kept along with the similar relics of his predecessors in a house set apart for the purpose. The possession of these relics constitutes the right to the throne. A legitimate heir who should be deprived of them would lose all his authority over the people, and on the contrary a usurper who should make himself master of the relics would be acknowledged king without dispute. It has sometimes happened that a relation of the reigning monarch has stolen the crocodile teeth with their precious contents, and then had himself proclaimed king. Accordingly, when the Hovas invaded the country, knowing the superstition of the natives, they paid less attention to the living king than to the relics of the dead, which they publicly exhibited under a strong guard on pretext of paying them the honours that were their due. In antiquity, when a king of the Panebian Libyans died, his people buried the body but cut off the head, and having covered it with gold they dedicated it in a sanctuary. Among the Masai of East Africa, when an important chief has been dead and buried for a year, his eldest son or other successor removes the skull of the deceased, while he at the same time offers a sacrifice and a libation with goat's blood, milk, and honey. He then carefully secretes the skull, the possession of which is understood to confirm him in power and to impart to him some of the wisdom of his predecessor. When the

Alake or king of Abeokuta in West Africa dies, the principal men decapitate his body, and placing the head in a large earthen vessel deliver it to the new sovereign; it becomes his fetish and he is bound to pay it honours. Similarly, when the Jaga or King of Cassange, in Angola, has departed this life, an official extracts a tooth from the deceased monarch and presents it to his successor, who deposits it along with the teeth of former kings in a box, which is the sole property of the crown and without which no Jaga can legitimately exercise the regal power. Sometimes, in order apparently that the new sovereign may inherit more surely the magical and other virtues of the royal line, he is required to eat a piece of his dead predecessor. Thus at Abeokuta not only was the head of the late king presented to his successor, but the tongue was cut out and given him to eat. Hence, when the natives wish to signify that the sovereign reigns, they say, "He has eaten the king." A custom of the same sort is still practised at Ibadan, a large town in the interior of Lagos, West Africa. When the king dies his head is cut off and sent to his nominal suzerain, the Alafin of Oyo, the paramount king of Yoruba land; but his heart is eaten by his successor. This ceremony was performed a few years ago at the accession of a new king of Ibadan.

Taking the whole of the preceding evidence into account, we may fairly suppose that when the divine king or priest is put to death his spirit is believed to pass into his successor. In point of fact we have seen that among the Shilluk of the White Nile, who regularly kill their divine kings, every king on his accession has to perform a ceremony which appears designed to convey to him the same sacred and worshipful spirit which animated all his predecessors, one after the other, on the throne.

VIII. The Killing Of The Tree-Spirit

§ 1. The Whitsuntide Mummers.

It remains to ask what light the custom of killing the divine king or priest sheds upon the special subject of our enquiry. In the first part of this work we saw reason to suppose that the King of the Wood at Nemi was regarded as an incarnation of a tree-spirit or of the spirit of vegetation, and that as such he would be endowed, in the belief of his worshippers, with a magical power of making the trees to bear fruit, the crops to grow, and so on. His life must therefore have been held very precious by his worshippers, and was probably hedged in by a system of elaborate precautions or taboos like those by which, in so many places, the life of the man-god has been guarded against the malignant influence of demons and sorcerers. But we have seen that the very value attached to the life of the man-god necessitates his violent death as the only means of preserving it from the inevitable decay of age. The same reasoning would apply to the King of the Wood; he, too, had to be killed in order that the divine spirit, incarnate in him, might be transferred in its integrity to his successor. The rule that he held office till a stronger should slay him might be supposed to secure both the preservation of his divine life in full vigour and its transference to a suitable successor as soon as that vigour began to be impaired. For so long as he could maintain his position by the strong hand, it might be inferred that his natural force was not abated; whereas his defeat and death at the hands of another proved that his strength was beginning to fail and that it was time his divine life should be lodged in a less dilapidated tabernacle. This explanation of the rule that the King of the Wood had to be slain by his successor at least renders that rule perfectly intelligible. It is strongly supported by the theory and practice of the Shilluk, who put their divine king to death at the first signs of failing health, lest his decrepitude should entail a corresponding failure of vital energy on the corn, the cattle, and men. Moreover, it is countenanced by the analogy of the Chitomé, upon whose life the existence of the world was supposed to hang, and who was therefore slain by his successor as soon as he shewed signs of breaking up. Again, the terms on which in later times the King of Calicut held office are identical with those attached to the office of King of the Wood, except that whereas the former might be assailed by a candidate at any time, the King of Calicut might only be attacked once every twelve years. But as the leave granted to the King of Calicut to reign so long as he could defend himself against all comers was a mitigation of the old rule which set a fixed term to his life, so we may conjecture that the similar permission granted to the King of the Wood was a mitigation of an older custom of putting him to death at the end of a definite period. In both cases the new rule gave to the god-man at least a chance for his life, which under the old rule was denied him; and people probably reconciled themselves to the change by reflecting that so long as the god-man could maintain himself by the sword against all assaults, there was no reason to apprehend that the fatal decay had set in.

The conjecture that the King of the Wood was formerly put to death at the expiry of a fixed term, without being allowed a chance for his life, will be confirmed if evidence can be adduced of a custom of periodically killing his counterparts, the human representatives of the tree-spirit, in Northern Europe. Now in point of fact such a custom has left unmistakable traces of itself in the rural festivals of the peasantry. To take examples.

At Niederpörling, in Lower Bavaria, the Whitsuntide representative of the tree-spirit—the *Pfingstl* as he was called—was clad from top to toe in leaves and flowers. On his head he wore a high pointed cap, the ends of which rested on his shoulders, only two holes being left in it for his eyes. The cap was covered with water-flowers and surmounted with a nosegay of

peonies. The sleeves of his coat were also made of water-plants, and the rest of his body was enveloped in alder and hazel leaves. On each side of him marched a boy holding up one of the *Pfingstl's* arms. These two boys carried drawn swords, and so did most of the others who formed the procession. They stopped at every house where they hoped to receive a present; and the people, in hiding, soused the leaf-clad boy with water. All rejoiced when he was well drenched. Finally he waded into the brook up to his middle; whereupon one of the boys, standing on the bridge, pretended to cut off his head. At Wurmlingen, in Swabia, a score of young fellows dress themselves on Whit-Monday in white shirts and white trousers, with red scarves round their waists and swords hanging from the scarves. They ride on horseback into the wood, led by two trumpeters blowing their trumpets. In the wood they cut down leafy oak branches, in which they envelop from head to foot him who was the last of their number to ride out of the village. His legs, however, are encased separately, so that he may be able to mount his horse again. Further, they give him a long artificial neck, with an artificial head and a false face on the top of it. Then a May-tree is cut, generally an aspen or beech about ten feet high; and being decked with coloured handkerchiefs and ribbons it is entrusted to a special "May-bearer." The cavalcade then returns with music and song to the village. Amongst the personages who figure in the procession are a Moorish king with a sooty face and a crown on his head, a Dr. Iron-Beard, a corporal, and an executioner. They halt on the village green, and each of the characters makes a speech in rhyme. The executioner announces that the leaf-clad man has been condemned to death, and cuts off his false head. Then the riders race to the May-tree, which has been set up a little way off. The first man who succeeds in wrenching it from the ground as he gallops past keeps it with all its decorations. The ceremony is observed every second or third year.

In Saxony and Thüringen there is a Whitsuntide ceremony called "chasing the Wild Man out of the bush," or "fetching the Wild Man out of the Wood." A young fellow is enveloped in leaves or moss and called the Wild Man. He hides in the wood and the other lads of the village go out to seek him. They find him, lead him captive out of the wood, and fire at him with blank muskets. He falls like dead to the ground, but a lad dressed as a doctor bleeds him, and he comes to life again. At this they rejoice, and, binding him fast on a waggon, take him to the village, where they tell all the people how they have caught the Wild Man. At every house they receive a gift. In the Erzgebirge the following custom was annually observed at Shrovetide about the beginning of the seventeenth century. Two men disguised as Wild Men, the one in brushwood and moss, the other in straw, were led about the streets, and at last taken to the market-place, where they were chased up and down, shot and stabbed. Before falling they reeled about with strange gestures and spirted blood on the people from bladders which they carried. When they were down the huntsmen placed them on boards and carried them to the ale-house, the miners marching beside them and winding blasts on their mining tools as if they had taken a noble head of game. A very similar Shrovetide custom is still observed near Schluckenau in Bohemia. A man dressed up as a Wild Man is chased through several streets till he comes to a narrow lane across which a cord is stretched. He stumbles over the cord and, falling to the ground, is overtaken and caught by his pursuers. The executioner runs up and stabs with his sword a bladder filled with blood which the Wild Man wears round his body; so the Wild Man dies, while a stream of blood reddens the ground. Next day a straw-man, made up to look like the Wild Man, is placed on a litter, and, accompanied by a great crowd, is taken to a pool into which it is thrown by the executioner. The ceremony is called "burying the Carnival."

In Semic (Bohemia) the custom of beheading the King is observed on Whit-Monday. A troop of young people disguise themselves; each is girt with a girdle of bark and carries a wooden sword and a trumpet of willow-bark. The King wears a robe of tree-bark adorned with

flowers, on his head is a crown of bark decked with flowers and branches, his feet are wound about with ferns, a mask hides his face, and for a sceptre he has a hawthorn switch in his hand. A lad leads him through the village by a rope fastened to his foot, while the rest dance about, blow their trumpets, and whistle. In every farmhouse the King is chased round the room, and one of the troop, amid much noise and outcry strikes with his sword a blow on the King's robe of bark till it rings again. Then a gratuity is demanded. The ceremony of decapitation, which is here somewhat slurred over, is carried out with a greater semblance of reality in other parts of Bohemia. Thus in some villages of the Königgrätz district on Whit-Monday the girls assemble under one lime-tree and the young men under another, all dressed in their best and tricked out with ribbons. The young men twine a garland for the Queen, and the girls another for the King. When they have chosen the King and Queen they all go in procession, two and two, to the ale-house, from the balcony of which the crier proclaims the names of the King and Queen. Both are then invested with the insignia of their office and are crowned with the garlands, while the music plays up. Then some one gets on a bench and accuses the King of various offences, such as ill-treating the cattle. The King appeals to witnesses and a trial ensues, at the close of which the judge, who carries a white wand as his badge of office, pronounces a verdict of "Guilty" or "Not guilty." If the verdict is "Guilty," the judge breaks his wand, the King kneels on a white cloth, all heads are bared, and a soldier sets three or four hats, one above the other, on his Majesty's head. The judge then pronounces the word "Guilty" thrice in a loud voice, and orders the crier to behead the King. The crier obeys by striking off the King's hats with his wooden sword.

But perhaps, for our purpose, the most instructive of these mimic executions is the following Bohemian one, which has been in part described already. In some places of the Pilsen district (Bohemia) on Whit-Monday the King is dressed in bark, ornamented with flowers and ribbons; he wears a crown of gilt paper and rides a horse, which is also decked with flowers. Attended by a judge, an executioner, and other characters, and followed by a train of soldiers, all mounted, he rides to the village square, where a hut or arbour of green boughs has been erected under the May-trees, which are firs, freshly cut, peeled to the top, and dressed with flowers and ribbons. After the dames and maidens of the village have been criticised and a frog beheaded, in the way already described, the cavalcade rides to a place previously determined upon, in a straight, broad street. Here they draw up in two lines and the King takes to flight. He is given a short start and rides off at full speed, pursued by the whole troop. If they fail to catch him he remains King for another year, and his companions must pay his score at the ale-house in the evening. But if they overtake and catch him he is scourged with hazel rods or beaten with the wooden swords and compelled to dismount. Then the executioner asks, "Shall I behead this King?" The answer is given, "Behead him"; the executioner brandishes his axe, and with the words, "One, two, three, let the King headless be!" he strikes off the King's crown. Amid the loud cries of the bystanders the King sinks to the ground; then he is laid on a bier and carried to the nearest farmhouse.

In most of the personages who are thus slain in mimicry it is impossible not to recognise representatives of the tree-spirit or spirit of vegetation, as he is supposed to manifest himself in spring. The bark, leaves, and flowers in which the actors are dressed, and the season of the year at which they appear, shew that they belong to the same class as the Grass King, King of the May, Jack-in-the-Green, and other representatives of the vernal spirit of vegetation which we examined in the first part of this work. As if to remove any possible doubt on this head, we find that in two cases these slain men are brought into direct connexion with May-trees, which are the impersonal, as the May King, Grass King, and so forth, are the personal representatives of the tree-spirit. The drenching of the *Pfingstl* with water and his wading up

to the middle into the brook are, therefore, no doubt rain-charms like those which have been already described.

But if these personages represent, as they certainly do, the spirit of vegetation in spring, the question arises, Why kill them? What is the object of slaying the spirit of vegetation at any time and above all in spring, when his services are most wanted? The only probable answer to this question seems to be given in the explanation already proposed of the custom of killing the divine king or priest. The divine life, incarnate in a material and mortal body, is liable to be tainted and corrupted by the weakness of the frail medium in which it is for a time enshrined; and if it is to be saved from the increasing enfeeblement which it must necessarily share with its human incarnation as he advances in years, it must be detached from him before, or at least as soon as, he exhibits signs of decay, in order to be transferred to a vigorous successor. This is done by killing the old representative of the god and conveying the divine spirit from him to a new incarnation. The killing of the god, that is, of his human incarnation, is therefore merely a necessary step to his revival or resurrection in a better form. Far from being an extinction of the divine spirit, it is only the beginning of a purer and stronger manifestation of it. If this explanation holds good of the custom of killing divine kings and priests in general, it is still more obviously applicable to the custom of annually killing the representative of the tree-spirit or spirit of vegetation in spring. For the decay of plant life in winter is readily interpreted by primitive man as an enfeeblement of the spirit of vegetation; the spirit has, he thinks, grown old and weak and must therefore be renovated by being slain and brought to life in a younger and fresher form. Thus the killing of the representative of the tree-spirit in spring is regarded as a means to promote and quicken the growth of vegetation. For the killing of the tree-spirit is associated always (we must suppose) implicitly, and sometimes explicitly also, with a revival or resurrection of him in a more youthful and vigorous form. So in the Saxon and Thüringen custom, after the Wild Man has been shot he is brought to life again by a doctor; and in the Wurmlingen ceremony there figures a Dr. Iron-Beard, who probably once played a similar part; certainly in another spring ceremony, which will be described presently, Dr. Iron-Beard pretends to restore a dead man to life. But of this revival or resurrection of the god we shall have more to say anon.

The points of similarity between these North European personages and the subject of our enquiry—the King of the Wood or priest of Nemi—are sufficiently striking. In these northern maskers we see kings, whose dress of bark and leaves, along with the hut of green boughs and the fir-trees under which they hold their court, proclaim them unmistakably as, like their Italian counterpart, Kings of the Wood. Like him they die a violent death, but like him they may escape from it for a time by their bodily strength and agility; for in several of these northern customs the flight and pursuit of the king is a prominent part of the ceremony, and in one case at least if the king can outrun his pursuers he retains his life and his office for another year. In this last case the king in fact holds office on condition of running for his life once a year, just as the King of Calicut in later times held office on condition of defending his life against all comers once every twelve years, and just as the priest of Nemi held office on condition of defending himself against any assault at any time. In every one of these instances the life of the god-man is prolonged on condition of his shewing, in a severe physical contest of fight or flight, that his bodily strength is not decayed, and that, therefore, the violent death, which sooner or later is inevitable, may for the present be postponed. With regard to flight it is noticeable that flight figured conspicuously both in the legend and in the practice of the King of the Wood. He had to be a runaway slave in memory of the flight of Orestes, the traditional founder of the worship; hence the Kings of the Wood are described by an ancient writer as “both strong of hand and fleet of foot.” Perhaps if we knew the ritual of the Arician grove fully we might find that the king was allowed a chance for his life by flight, like his

Bohemian brother. I have already conjectured that the annual flight of the priestly king at Rome (*regifugium*) was at first a flight of the same kind; in other words, that he was originally one of those divine kings who are either put to death after a fixed period or allowed to prove by the strong hand or the fleet foot that their divinity is vigorous and unimpaired. One more point of resemblance may be noted between the Italian King of the Wood and his northern counterparts. In Saxony and Thüringen the representative of the tree-spirit, after being killed, is brought to life again by a doctor. This is exactly what legend affirmed to have happened to the first King of the Wood at Nemi, Hippolytus or Virbius, who after he had been killed by his horses was restored to life by the physician Aesculapius. Such a legend tallies well with the theory that the slaying of the King of the Wood was only a step to his revival or resurrection in his successor.

§ 2. Mock Human Sacrifices.

In the preceding discussion it has been assumed that the mock killing of the Wild Man and of the King in North European folk-custom is a modern substitute for an ancient custom of killing them in earnest. Those who best know the tenacity of life possessed by folk-custom and its tendency, with the growth of civilisation, to dwindle from solemn ritual into mere pageant and pastime, will be least likely to question the truth of this assumption. That human sacrifices were commonly offered by the ancestors of the civilised races of North Europe, Celts, Teutons, and Slavs, is certain. It is not, therefore, surprising that the modern peasant should do in mimicry what his forefathers did in reality. We know as a matter of fact that in other parts of the world mock human sacrifices have been substituted for real ones. Thus in Minahassa, a district of Celebes, human victims used to be regularly sacrificed at certain festivals, but through Dutch influence the custom was abolished and a sham sacrifice substituted for it. The victim was seated in a chair and all the usual preparations were made for sacrificing him, but at the critical moment, when the chief priest had heaved up his flashing swords (for he wielded two of them) to deal the fatal stroke, his assistants sprang forward, their hands wrapt in cloths, to grasp and arrest the descending blades. The precaution was necessary, for the priest was wound up to such a pitch of excitement that if left alone he might have consummated the sacrifice. Afterwards an effigy, made out of the stem of a banana-tree, was substituted for the human victim; and the blood, which might not be wanting, was supplied by fowls. Near the native town of Luba, in western Busoga, a district of central Africa, there is a sacred tree of the species known as *Parinarium*. Its glossy white trunk shoots up to a height of a hundred feet before it sends out branches. The tree is surrounded by small fetish huts and curious arcades. Once when the dry season was drawing to an end and the new crops were not yet ripe, the Basoga suffered from hunger. So they came to the sacred tree in canoes, of which the prows were decked with wreaths of yellow acacia blossom and other flowers. Landing on the shore they stripped themselves of their clothing and wrapped ropes made of green creepers and leaves round their arms and necks. At the foot of the tree they danced to an accompaniment of song. Then a little girl, about ten years old, was brought and laid at the base of the tree as if she were to be sacrificed. Every detail of the sacrifice was gone through in mimicry. A slight cut was made in the child's neck, and she was then caught up and thrown into the lake, where a man stood ready to save her from drowning. By native custom the girl on whom this ceremony had been performed was dedicated to a life of perpetual virginity. Captain Bourke was informed by an old chief that the Indians of Arizona used to offer human sacrifices at the Feast of Fire when the days are shortest. The victim had his throat cut, his breast opened, and his heart taken out by one of the priests. This custom was abolished by the Mexicans, but for a long time afterwards a modified form of it was secretly observed as follows. The victim, generally a young man, had his throat cut, and blood was allowed to flow freely; but the medicine-men

sprinkled “medicine” on the gash, which soon healed up, and the man recovered. So in the ritual of Artemis at Halae in Attica, a man's throat was cut and the blood allowed to gush out, but he was not killed. At the funeral of a chief in Nias slaves are sacrificed; a little of their hair is cut off, and then they are beheaded. The victims are generally purchased for the purpose, and their number is proportioned to the wealth and power of the deceased. But if the number required is excessively great or cannot be procured, some of the chiefs own slaves undergo a sham sacrifice. They are told, and believe, that they are about to be decapitated; their heads are placed on a log and their necks struck with the back of a sword. The fright drives some of them crazy. When a Hindoo has killed or ill-treated an ape, a bird of prey of a certain kind, or a cobra capella, in the presence of the worshippers of Vishnu, he must expiate his offence by the pretended sacrifice and resurrection of a human being. An incision is made in the victim's arm, the blood flows, he grows faint, falls, and feigns to die. Afterwards he is brought to life by being sprinkled with blood drawn from the thigh of a worshipper of Vishnu. The crowd of spectators is fully convinced of the reality of this simulated death and resurrection. The Malayans, a caste of Southern India, act as devil dancers for the purpose of exorcising demons who have taken possession of people. One of their ceremonies, “known as *ucchav[-e]li*, has several forms, all of which seem to be either survivals, or at least imitations of human sacrifice. One of these consists of a mock living burial of the principal performer, who is placed in a pit, which is covered with planks, on the top of which a sacrifice is performed, with a fire kindled with jack wood (*Artocarpus integrifolia*) and a plant called erinna. In another variety, the Malayan cuts his left forearm, and smears his face with the blood thus drawn.” In Samoa, where every family had its god incarnate in one or more species of animals, any disrespect shewn to the worshipful animal, either by members of the kin or by a stranger in their presence, had to be atoned for by pretending to bake one of the family in a cold oven as a burnt sacrifice to appease the wrath of the offended god. For example, if a stranger staying in a household whose god was incarnate in cuttle-fish were to catch and cook one of these creatures, or if a member of the family had been present where a cuttle-fish was eaten, the family would meet in solemn conclave and choose a man or woman to go and lie down in a cold oven, where he would be covered over with leaves, just as if he were really being baked. While this mock sacrifice was being carried out the family prayed: “O bald-headed Cuttle-fish! forgive what has been done, it was all the work of a stranger.” If they had not thus abased themselves before the divine cuttle-fish, he would undoubtedly have come and been the death of somebody by making a cuttle-fish to grow in his inside.

Sometimes, as in Minahassa, the pretended sacrifice is carried out, not on a living person, but on an effigy. At the City of the Sun in ancient Egypt three men used to be sacrificed every day, after the priests had stripped and examined them, like calves, to see whether they were without blemish and fit for the altar. But King Amasis ordered waxen images to be substituted for the human victims. An Indian law-book, the *Calica Puran*, prescribes that when the sacrifice of lions, tigers, or human beings is required, an image of a lion, tiger, or man shall be made with butter, paste, or barley meal, and sacrificed instead. Some of the Gonds of India formerly offered human sacrifices; they now sacrifice straw-men, which are found to answer the purpose just as well. Colonel Dalton was told that in some of their villages the Bhagats “annually make an image of a man in wood, put clothes and ornaments on it, and present it before the altar of a Mahádeo. The person who officiates as priest on the occasion says: ‘O Mahádeo, we sacrifice this man to you according to ancient customs. Give us rain in due season, and a plentiful harvest.’ Then with one stroke of the axe the head of the image is struck off, and the body is removed and buried.” Formerly, when a Siamese army was about to take the field a condemned criminal representing the enemy was put to death, but a humane king caused a puppet to be substituted for the man. The effigy is felled by the

blow of an axe, and if it drops at the first stroke, the omen is favourable. In the East Indian island of Siao or Siau, one of the Sangi group, a child stolen from a neighbouring island used to be sacrificed every year to the spirit of a volcano in order that there might be no eruption. The victim was slowly tortured to death in the temple by a priestess, who cut off the child's ears, nose, fingers, and so on, then consummated the sacrifice by splitting open the breast. The spectacle was witnessed by hundreds of people, and feasting and cock-fighting went on for nine days afterwards. In course of time the annual human victim was replaced by a wooden puppet, which was cut to pieces in the same manner. The Kayans of Borneo used to kill slaves at the death of a chief and nail them to the tomb, in order that they might accompany the chief on his long journey to the other world and paddle the canoe in which he must travel. This is no longer done, but instead they put up a wooden figure of a man at the head and another of a woman at the foot of the chief's coffin as it lies in state before the funeral. And a small wooden image of a man is usually fixed on the top of the tomb to row the canoe for the dead chief. In ancient times human sacrifices used to be offered at the graves of Mikados and princes of Japan, the personal attendants of the deceased being buried alive within the precincts of the tomb. But a humane emperor ordered that clay images should thenceforth be substituted for live men and women. One of these images is now in the British Museum. The Toboongkoos of central Celebes, who are reported still to carry home as trophies the heads of their slain enemies, resort to the following cure for certain kinds of sickness. The heathen priestess cuts the likeness of a human head out of the sheath of a sago-leaf and sets it up on three sticks in the courtyard of the house. The patient, arrayed in his or her best clothes, is then brought down into the court and remains there while women dance and sing round the artificial head, and men perform sham fights with shield, spear, and bow, just as they did, or perhaps still do, when they have brought back a human head from a raid. After that the sick man is taken back to the house, and an improvement in his health is confidently expected. In this ceremony the sham head is doubtless a substitute for a real one.

With these mock sacrifices of human lives we may compare mimic sacrifices of other kinds. In southern India, as in many parts of the world, it used to be customary to sacrifice joints of the fingers on certain occasions. Thus among the Morasas, when a grandchild was born in the family, the wife of the eldest son of the grandfather must have the last two joints of the third and fourth fingers of her right hand amputated at a temple of Bhairava. The amputation was performed by the village carpenter with a chisel. Nowadays, the custom having been forbidden by the English Government, the sacrifice is performed in mimicry. Some people stick gold or silver pieces with flour paste to the ends of their fingers and then cut or pull them off. Others tie flowers round the fingers that used to be amputated, and go through a pantomime of cutting the fingers by putting a chisel on the joint and then taking it away. Others again twist gold wires in the shape of rings round their fingers. These the carpenter removes and appropriates. In Niué or Savage Island, in the South Pacific, the following custom continued till lately to be observed. When a boy was a few weeks old the men assembled, and a feast was made. On the village square an awning was rigged up, and the child was laid on the ground under it. An old man then approached it, and performed the operation of circumcision on the infant in dumb show with his forefinger. No child was regarded as a full-born member of the tribe till he had been subjected to this rite. The natives say that real circumcision was never performed in their island; but as it was commonly practised in Fiji, Tonga, and Samoa, we may assume that its imitation in Niué was a substitute, introduced at some time or other, for the actual operation. Similarly when an adult Hindoo joins the sect of the Daira or Mahadev Mohammedans in Mysore, a mock rite of circumcision is performed on him instead of the real operation. A betel leaf is wrapped round the male member of the neophyte and the loose end of the leaf is snipped off instead of the prepuce.

§ 3. Burying the Carnival.

Thus far I have offered an explanation of the rule which required that the priest of Nemi should be slain by his successor. The explanation claims to be no more than probable; our scanty knowledge of the custom and of its history forbids it to be more. But its probability will be augmented in proportion to the extent to which the motives and modes of thought which it assumes can be proved to have operated in primitive society. Hitherto the god with whose death and resurrection we have been chiefly concerned has been the tree-god. But if I can shew that the custom of killing the god and the belief in his resurrection originated, or at least existed, in the hunting and pastoral stage of society, when the slain god was an animal, and that it survived into the agricultural stage, when the slain god was the corn or a human being representing the corn, the probability of my explanation will have been considerably increased. This I shall attempt to do in the sequel, and in the course of the discussion I hope to clear up some obscurities which still remain, and to answer some objections which may have suggested themselves to the reader.

We start from the point at which we left off—the spring customs of European peasantry. Besides the ceremonies already described there are two kindred sets of observances in which the simulated death of a divine or supernatural being is a conspicuous feature. In one of them the being whose death is dramatically represented is a personification of the Carnival; in the other it is Death himself. The former ceremony falls naturally at the end of the Carnival, either on the last day of that merry season, namely Shrove Tuesday, or on the first day of Lent, namely Ash Wednesday. The date of the other ceremony—the Carrying or Driving out of Death, as it is commonly called—is not so uniformly fixed. Generally it is the fourth Sunday in Lent, which hence goes by the name of Dead Sunday; but in some places the celebration falls a week earlier, in others, as among the Czechs of Bohemia, a week later, while in certain German villages of Moravia it is held on the first Sunday after Easter. Perhaps, as has been suggested, the date may originally have been variable, depending on the appearance of the first swallow or some other herald of the spring. Some writers regard the ceremony as Slavonic in its origin. Grimm thought it was a festival of the New Year with the old Slavs, who began their year in March. We shall first take examples of the mimic death of the Carnival, which always falls before the other in the calendar.

At Frosinone, in Latium, about half-way between Rome and Naples, the dull monotony of life in a provincial Italian town is agreeably broken on the last day of the Carnival by the ancient festival known as the *Radica*. About four o'clock in the afternoon the town band, playing lively tunes and followed by a great crowd, proceeds to the Piazza del Plebiscito, where is the Sub-Prefecture as well as the rest of the Government buildings. Here, in the middle of the square, the eyes of the expectant multitude are greeted by the sight of an immense car decked with many-coloured festoons and drawn by four horses. Mounted on the car is a huge chair, on which sits enthroned the majestic figure of the Carnival, a man of stucco about nine feet high with a rubicund and smiling countenance. Enormous boots, a tin helmet like those which grace the heads of officers of the Italian marine, and a coat of many colours embellished with strange devices, adorn the outward man of this stately personage. His left hand rests on the arm of the chair, while with his right he gracefully salutes the crowd, being moved to this act of civility by a string which is pulled by a man who modestly shrinks from publicity under the mercy-seat. And now the crowd, surging excitedly round the car, gives vent to its feelings in wild cries of joy, gentle and simple being mixed up together and all dancing furiously the *Saltarello*. A special feature of the festival is that every one must carry in his hand what is called a *radica* (“root”), by which is meant a huge leaf of the aloe or rather the agave. Any one who ventured into the crowd without such a leaf would be unceremoniously hustled out of it, unless indeed he bore as a substitute a large cabbage at the

end of a long stick or a bunch of grass curiously plaited. When the multitude, after a short turn, has escorted the slow-moving car to the gate of the Sub-Prefecture, they halt, and the car, jolting over the uneven ground, rumbles into the courtyard. A hush now falls on the crowd, their subdued voices sounding, according to the description of one who has heard them, like the murmur of a troubled sea. All eyes are turned anxiously to the door from which the Sub-Prefect himself and the other representatives of the majesty of the law are expected to issue and pay their homage to the hero of the hour. A few moments of suspense and then a storm of cheers and hand-clapping salutes the appearance of the dignitaries, as they file out and, descending the staircase, take their place in the procession. The hymn of the Carnival is now thundered out, after which, amid a deafening roar, aloe leaves and cabbages are whirled aloft and descend impartially on the heads of the just and the unjust, who lend fresh zest to the proceedings by engaging in a free fight. When these preliminaries have been concluded to the satisfaction of all concerned, the procession gets under weigh. The rear is brought up by a cart laden with barrels of wine and policemen, the latter engaged in the congenial task of serving out wine to all who ask for it, while a most internecine struggle, accompanied by a copious discharge of yells, blows, and blasphemy, goes on among the surging crowd at the cart's tail in their anxiety not to miss the glorious opportunity of intoxicating themselves at the public expense. Finally, after the procession has paraded the principal streets in this majestic manner, the effigy of Carnival is taken to the middle of a public square, stripped of his finery, laid on a pile of wood, and burnt amid the cries of the multitude, who thundering out once more the song of the Carnival fling their so-called "roots" on the pyre and give themselves up without restraint to the pleasures of the dance.

In the Abruzzi a pasteboard figure of the Carnival is carried by four grave-diggers with pipes in their mouths and bottles of wine slung at their shoulder-belts. In front walks the wife of the Carnival, dressed in mourning and dissolved in tears. From time to time the company halts, and while the wife addresses the sympathising public, the grave-diggers refresh the inner man with a pull at the bottle. In the open square the mimic corpse is laid on a pyre, and to the roll of drums, the shrill screams of the women, and the gruffer cries of the men a light is set to it. While the figure burns, chestnuts are thrown about among the crowd. Sometimes the Carnival is represented by a straw-man at the top of a pole which is borne through the town by a troop of mummers in the course of the afternoon. When evening comes on, four of the mummers hold out a quilt or sheet by the corners, and the figure of the Carnival is made to tumble into it. The procession is then resumed, the performers weeping crocodile tears and emphasising the poignancy of their grief by the help of saucepans and dinner bells. Sometimes, again, in the Abruzzi the dead Carnival is personified by a living man who lies in a coffin, attended by another who acts the priest and dispenses holy water in great profusion from a bathing tub. In Malta the death of the Carnival used to be mourned by women on the last day of the merry festival. Clad from head to foot in black mantles, they carried through the streets of the city the linen effigy of a corpse, stuffed with straw or hay and decked with leaves and oranges. As they carried it, they chanted dirges, stopping after every verse to howl like professional mourners. The custom came to an end about the year 1737.

At Lerida, in Catalonia, the funeral of the Carnival was witnessed by an English traveller in 1877. On the last Sunday of the Carnival a grand procession of infantry, cavalry, and maskers of many sorts, some on horseback and some in carriages, escorted the grand car of His Grace Pau Pi, as the effigy was called, in triumph through the principal streets. For three days the revelry ran high, and then at midnight on the last day of the Carnival the same procession again wound through the streets, but under a different aspect and for a different end. The triumphal car was exchanged for a hearse, in which reposed the effigy of his dead Grace: a troop of maskers, who in the first procession had played the part of Students of Folly with

many a merry quip and jest, now, robed as priests and bishops, paced slowly along holding aloft huge lighted tapers and singing a dirge. All the mummers wore crape, and all the horsemen carried blazing flambeaux. Down the high street, between the lofty, many-storeyed and balconied houses, where every window, every balcony, every housetop was crammed with a dense mass of spectators, all dressed and masked in fantastic gorgeousness, the procession took its melancholy way. Over the scene flashed and played the shifting cross-lights and shadows from the moving torches: red and blue Bengal lights flared up and died out again; and above the trampling of the horses and the measured tread of the marching multitude rose the voices of the priests chanting the requiem, while the military bands struck in with the solemn roll of the muffled drums. On reaching the principal square the procession halted, a burlesque funeral oration was pronounced over the defunct Pau Pi, and the lights were extinguished. Immediately the devil and his angels darted from the crowd, seized the body and fled away with it, hotly pursued by the whole multitude, yelling, screaming, and cheering. Naturally the fiends were overtaken and dispersed; and the sham corpse, rescued from their clutches, was laid in a grave that had been made ready for its reception. Thus the Carnival of 1877 at Lerida died and was buried.

A ceremony of the same sort is observed in Provence on Ash Wednesday. An effigy called Caramantran, whimsically attired, is drawn in a chariot or borne on a litter, accompanied by the populace in grotesque costumes, who carry gourds full of wine and drain them with all the marks, real or affected, of intoxication. At the head of the procession are some men disguised as judges and barristers, and a tall gaunt personage who masquerades as Lent; behind them follow young people mounted on miserable hacks and attired as mourners who pretend to bewail the fate that is in store for Caramantran. In the principal square the procession halts, the tribunal is constituted, and Caramantran placed at the bar. After a formal trial he is sentenced to death amid the groans of the mob; the barrister who defended him embraces his client for the last time: the officers of justice do their duty: the condemned is set with his back to a wall and hurried into eternity under a shower of stones. The sea or a river receives his mangled remains. At Lussac in the department of Vienne young people, attired in long mourning robes and with woebegone countenances, carry an effigy down to the river on Ash Wednesday and throw it into the river, crying, "Carnival is dead! Carnival is dead!" Throughout nearly the whole of the Ardennes it was and still is customary on Ash Wednesday to burn an effigy which is supposed to represent the Carnival, while appropriate verses are sung round about the blazing figure. Very often an attempt is made to fashion the effigy in the likeness of the husband who is reputed to be least faithful to his wife of any in the village. As might perhaps have been anticipated, the distinction of being selected for portraiture under these painful circumstances has a slight tendency to breed domestic jars, especially when the portrait is burnt in front of the house of the gay deceiver whom it represents, while a powerful chorus of caterwauls, groans, and other melodious sounds bears public testimony to the opinion which his friends and neighbours entertain of his private virtues. In some villages of the Ardennes a young man of flesh and blood, dressed up in hay and straw, used to act the part of Shrove Tuesday (*Mardi Gras*), as the personification of the Carnival is often called in France after the last day of the period which he personates. He was brought before a mock tribunal, and being condemned to death was placed with his back to a wall, like a soldier at a military execution, and fired at with blank cartridges. At Vrigne-aux-Bois one of these harmless buffoons, named Thierry, was accidentally killed by a wad that had been left in a musket of the firing-party. When poor Shrove Tuesday dropped under the fire, the applause was loud and long, he did it so naturally; but when he did not get up again, they ran to him and found him a corpse. Since then there have been no more of these mock executions in the Ardennes. In Franche-Comté people used to make an effigy of Shrove Tuesday on Ash Wednesday, and carry it about the streets to the accompaniment of songs.

Then they brought it to the public square, where the offender was tried in front of the town-hall. Judges muffled in old red curtains and holding big books in their hands pronounced sentence of death. The mode of execution varied with the place. Sometimes it was burning, sometimes drowning, sometimes decapitation. In the last case the effigy was provided with tubes of blood, which spouted gore at the critical moment, making a profound impression on the minds of children, some of whom wept bitterly at the sight. Meantime the onlookers uttered piercing cries and appeared to be plunged in the deepest grief. The proceedings generally wound up in the evening with a ball, which the young married people were obliged to provide for the public entertainment; otherwise their slumbers were apt to be disturbed by the discordant notes of a cat's concert chanted under their windows.

In Normandy on the evening of Ash Wednesday it used to be the custom to hold a celebration called the Burial of Shrove Tuesday. A squalid effigy scantily clothed in rags, a battered old hat crushed down on his dirty face, his great round paunch stuffed with straw, represented the disreputable old rake who after a long course of dissipation was now about to suffer for his sins. Hoisted on the shoulders of a sturdy fellow, who pretended to stagger under the burden, this popular personification of the Carnival promenaded the streets for the last time in a manner the reverse of triumphal. Preceded by a drummer and accompanied by a jeering rabble, among whom the urchins and all the tag-rag and bobtail of the town mustered in great force, the figure was carried about by the flickering light of torches to the discordant din of shovels and tongs, pots and pans, horns and kettles, mingled with hootings, groans, and hisses. From time to time the procession halted, and a champion of morality accused the broken-down old sinner of all the excesses he had committed and for which he was now about to be burned alive. The culprit, having nothing to urge in his own defence, was thrown on a heap of straw, a torch was put to it, and a great blaze shot up, to the delight of the children who frisked round it screaming out some old popular verses about the death of the Carnival. Sometimes the effigy was rolled down the slope of a hill before being burnt. At Saint-Lô the ragged effigy of Shrove Tuesday was followed by his widow, a big burly lout dressed as a woman with a crape veil, who emitted sounds of lamentation and woe in a stentorian voice. After being carried about the streets on a litter attended by a crowd of maskers, the figure was thrown into the River Vire. The final scene has been graphically described by Madame Octave Feuillet as she witnessed it in her childhood some fifty years ago. "My parents invited friends to see, from the top of the tower of Jeanne Couillard, the funeral procession passing. It was there that, quaffing lemonade—the only refreshment allowed because of the fast—we witnessed at nightfall a spectacle of which I shall always preserve a lively recollection. At our feet flowed the Vire under its old stone bridge. On the middle of the bridge lay the figure of Shrove Tuesday on a litter of leaves, surrounded by scores of maskers dancing, singing, and carrying torches. Some of them in their motley costumes ran along the parapet like fiends. The rest, worn out with their revels, sat on the posts and dozed. Soon the dancing stopped, and some of the troop, seizing a torch, set fire to the effigy, after which they flung it into the river with redoubled shouts and clamour. The man of straw, soaked with resin, floated away burning down the stream of the Vire, lighting up with its funeral fires the woods on the bank and the battlements of the old castle in which Louis XI. and Francis I. had slept. When the last glimmer of the blazing phantom had vanished, like a falling star, at the end of the valley, every one withdrew, crowd and maskers alike, and we quitted the ramparts with our guests. As we returned home my father sang gaily the old popular song:—

*"Shrove Tuesday is dead and his wife has got
His shabby pocket-handkerchief and his cracked old pot.*

*Sing high, sing low,
Shrove Tuesday will come back no more."*

'He will come back! He will come back!' we cried warmly, clapping our hands; and he did come back next year, and I think I should see him still if, after the lapse of half a century, I returned to the land of my birth."

In Upper Brittany the burial of Shrove Tuesday or the Carnival is sometimes performed in a ceremonious manner. Four young fellows carry a straw-man or one of their companions, and are followed by a funeral procession. A show is made of depositing the pretended corpse in the grave, after which the bystanders make believe to mourn, crying out in melancholy tones, "Ah! my poor little Shrove Tuesday!" The boy who played the part of Shrove Tuesday bears the name for the whole year. At Lesneven in Lower Brittany it was formerly the custom on Ash Wednesday to burn a straw-man, covered with rags, after he had been promenaded about the town. He was followed by a representative of Shrove Tuesday clothed with sardines and cods' tails. At Pontaven in Finistère an effigy representing the Carnival used to be thrown from the quay into the sea on the morning of Ash Wednesday. At La Rochelle the porters and sailors carried about a man of straw representing Shrove Tuesday, then burned it on Ash Wednesday and flung the ashes into the sea. In Saintonge and Aunis, which correspond roughly to the modern departments of Charente, children used to drown or burn a figure of the Carnival on the morning of Ash Wednesday. The beginning of Lent in England was formerly marked by a custom which has now fallen into disuse. A figure, made up of straw and cast-off clothes, was drawn or carried through the streets amid much noise and merriment; after which it was either burnt, shot at, or thrown down a chimney. This image went by the name of Jack o' Lent, and was by some supposed to represent Judas Iscariot.

A Bohemian form of the custom of "Burying the Carnival" has been already described. The following Swabian form is obviously similar. In the neighbourhood of Tübingen on Shrove Tuesday a straw-man, called the Shrovetide Bear, is made up; he is dressed in a pair of old trousers, and a fresh black-pudding or two squirts filled with blood are inserted in his neck. After a formal condemnation he is beheaded, laid in a coffin, and on Ash Wednesday is buried in the churchyard. This is called "Burying the Carnival." Amongst some of the Saxons of Transylvania the Carnival is hanged. Thus at Braller on Ash Wednesday or Shrove Tuesday two white and two chestnut horses draw a sledge on which is placed a straw-man swathed in a white cloth; beside him is a cart-wheel which is kept turning round. Two lads disguised as old men follow the sledge lamenting. The rest of the village lads, mounted on horseback and decked with ribbons, accompany the procession, which is headed by two girls crowned with evergreen and drawn in a waggon or sledge. A trial is held under a tree, at which lads disguised as soldiers pronounce sentence of death. The two old men try to rescue the straw-man and to fly with him, but to no purpose; he is caught by the two girls and handed over to the executioner, who hangs him on a tree. In vain the old men try to climb up the tree and take him down; they always tumble down, and at last in despair they throw themselves on the ground and weep and howl for the hanged man. An official then makes a speech in which he declares that the Carnival was condemned to death because he had done them harm, by wearing out their shoes and making them tired and sleepy. At the "Burial of Carnival" in Lechrain, a man dressed as a woman in black clothes is carried on a litter or bier by four men; he is lamented over by men disguised as women in black clothes, then thrown down before the village dung-heap, drenched with water, buried in the dung-heap, and covered with straw. Similarly in Schörzingen, near Schömberg, the "Carnival (Shrovetide) Fool" was carried all about the village on a bier, preceded by a man dressed in white, and followed by a devil who was dressed in black and carried chains, which he clanked. One of the train collected gifts. After the procession the Fool was buried under straw and dung. In

Rottweil the “Carnival Fool” is made drunk on Ash Wednesday and buried under straw amid loud lamentation. In Wurmlingen the Fool is represented by a young fellow enveloped in straw, who is led about the village by a rope as a “Bear” on Shrove Tuesday and the preceding day. He dances to the flute. Then on Ash Wednesday a straw-man is made, placed on a trough, carried out of the village to the sound of drums and mournful music, and buried in a field. In Altdorf and Weingarten on Ash Wednesday the Fool, represented by a straw-man, is carried about and then thrown into the water to the accompaniment of melancholy music. In other villages of Swabia the part of fool is played by a live person, who is thrown into the water after being carried about in procession. At Balwe, in Westphalia, a straw-man is made on Shrove Tuesday and thrown into the river amid rejoicings. This is called, as usual, “Burying the Carnival.” At Burgebrach, in Bavaria, it used to be customary, as a public pastime, to hold a sort of court of justice on Ash Wednesday. The accused was a straw-man, on whom was laid the burden of all the notorious transgressions that had been committed in the course of the year. Twelve chosen maidens sat in judgment and pronounced sentence, and a single advocate pleaded the cause of the public scapegoat. Finally the effigy was burnt, and thus all the offences that had created a scandal in the community during the year were symbolically atoned for. We can hardly doubt that this custom of burning a straw-man on Ash Wednesday for the sins of a whole year is only another form of the custom, observed on the same day in so many other places, of burning an effigy which is supposed to embody and to be responsible for all the excesses committed during the licence of the Carnival.

In Greece a ceremony of the same sort was witnessed at Pylos by Mr. E. L. Tilton in 1895. On the evening of the first day of the Greek Lent, which fell that year on the twenty-fifth of February, an effigy with a grotesque mask for a face was borne about the streets on a bier, preceded by a mock priest with long white beard. Other functionaries surrounded the bier and two torch-bearers walked in advance. The procession moved slowly to melancholy music played by a pipe and drum. A final halt was made in the public square, where a circular space was kept clear of the surging crowd. Here a bonfire was kindled, and round it the priest led a wild dance to the same droning music. When the frenzy was at its height, the chief performer put tow on the effigy and set fire to it, and while it blazed he resumed his mad career, brandishing torches and tearing off his venerable beard to add fuel to the flames. On the evening of Shrove Tuesday the Esthonians make a straw figure called *metsik* or “wood-spirit”; one year it is dressed with a man's coat and hat, next year with a hood and a petticoat. This figure is stuck on a long pole, carried across the boundary of the village with loud cries of joy, and fastened to the top of a tree in the wood. The ceremony is believed to be a protection against all kinds of misfortune.

Sometimes at these Shrovetide or Lenten ceremonies the resurrection of the pretended dead person is enacted. Thus, in some parts of Swabia on Shrove Tuesday Dr. Iron-Beard professes to bleed a sick man, who thereupon falls as dead to the ground; but the doctor at last restores him to life by blowing air into him through a tube. In the Harz Mountains, when Carnival is over, a man is laid on a baking-trough and carried with dirges to a grave; but in the grave a glass of brandy is buried instead of the man. A speech is delivered and then the people return to the village-green or meeting-place, where they smoke the long clay pipes which are distributed at funerals. On the morning of Shrove Tuesday in the following year the brandy is dug up and the festival begins by every one tasting the spirit which, as the phrase goes, has come to life again.

§ 4. Carrying out Death.

The ceremony of “Carrying out Death” presents much the same features as “Burying the Carnival”; except that the carrying out of Death is generally followed by a ceremony, or at

least accompanied by a profession, of bringing in Summer, Spring, or Life. Thus in Middle Franken, a province of Bavaria, on the fourth Sunday in Lent, the village urchins used to make a straw effigy of Death, which they carried about with burlesque pomp through the streets, and afterwards burned with loud cries beyond the bounds. The Frankish custom is thus described by a writer of the sixteenth century: "At Mid-Lent, the season when the church bids us rejoice, the young people of my native country make a straw image of Death, and fastening it to a pole carry it with shouts to the neighbouring villages. By some they are kindly received, and after being refreshed with milk, peas, and dried pears, the usual food of that season, are sent home again. Others, however, treat them with anything but hospitality; for, looking on them as harbingers of misfortune, to wit of death, they drive them from their boundaries with weapons and insults." In the villages near Erlangen, when the fourth Sunday in Lent came round, the peasant girls used to dress themselves in all their finery with flowers in their hair. Thus attired they repaired to the neighbouring town, carrying puppets which were adorned with leaves and covered with white cloths. These they took from house to house in pairs, stopping at every door where they expected to receive something, and singing a few lines in which they announced that it was Mid-Lent and that they were about to throw Death into the water. When they had collected some trifling gratuities they went to the river Regnitz and flung the puppets representing Death into the stream. This was done to ensure a fruitful and prosperous year; further, it was considered a safeguard against pestilence and sudden death. At Nuremberg girls of seven to eighteen years of age go through the streets bearing a little open coffin, in which is a doll hidden under a shroud. Others carry a beech branch, with an apple fastened to it for a head, in an open box. They sing, "We carry Death into the water, it is well," or "We carry Death into the water, carry him in and out again." In other parts of Bavaria the ceremony took place on the Saturday before the fifth Sunday in Lent, and the performers were boys or girls, according to the sex of the last person who died in the village. The figure was thrown into water or buried in a secret place, for example under moss in the forest, that no one might find Death again. Then early on Sunday morning the children went from house to house singing a song in which they announced the glad tidings that Death was gone. In some parts of Bavaria down to 1780 it was believed that a fatal epidemic would ensue if the custom of "Carrying out Death" were not observed.

In some villages of Thuringen, on the fourth Sunday of Lent, the children used to carry a puppet of birchen twigs through the village, and then threw it into a pool, while they sang, "We carry the old Death out behind the herdsman's old house; we have got Summer, and Kroden's (?) power is destroyed." At Debschwitz or Dobschwitz, near Gera, the ceremony of "Driving out Death" is or was annually observed on the first of March. The young people make up a figure of straw or the like materials, dress it in old clothes, which they have begged from houses in the village, and carry it out and throw it into the river. On returning to the village they break the good news to the people, and receive eggs and other victuals as a reward. The ceremony is or was supposed to purify the village and to protect the inhabitants from sickness and plague. In other villages of Thuringen, in which the population was originally Slavonic, the carrying out of the puppet is accompanied with the singing of a song, which begins, "Now we carry Death out of the village and Spring into the village." At the end of the seventeenth and beginning of the eighteenth century the custom was observed in Thuringen as follows. The boys and girls made an effigy of straw or the like materials, but the shape of the figure varied from year to year. In one year it would represent an old man, in the next an old woman, in the third a young man, and in the fourth a maiden, and the dress of the figure varied with the character it personated. There used to be a sharp contest as to where the effigy was to be made, for the people thought that the house from which it was carried forth would not be visited with death that year. Having been made, the puppet was fastened to a pole and carried by a girl if it represented an old man, but by a boy if it represented an old

woman. Thus it was borne in procession, the young people holding sticks in their hands and singing that they were driving out Death. When they came to water they threw the effigy into it and ran hastily back, fearing that it might jump on their shoulders and wring their necks. They also took care not to touch it, lest it should dry them up. On their return they beat the cattle with the sticks, believing that this would make the animals fat or fruitful. Afterwards they visited the house or houses from which they had carried the image of Death, where they received a dole of half-boiled peas. The custom of "Carrying out Death" was practised also in Saxony. At Leipsic the bastards and public women used to make a straw effigy of Death every year at Mid-Lent. This they carried through all the streets with songs and shewed it to the young married women. Finally they threw it into the river Parthe. By this ceremony they professed to make the young wives fruitful, to purify the city, and to protect the inhabitants for that year from plague and other epidemics.

Ceremonies of the same sort are observed at Mid-Lent in Silesia. Thus in many places the grown girls with the help of the young men dress up a straw figure with women's clothes and carry it out of the village towards the setting sun. At the boundary they strip it of its clothes, tear it in pieces, and scatter the fragments about the fields. This is called "Burying Death." As they carry the image out, they sing that they are about to bury death under an oak, that he may depart from the people. Sometimes the song runs that they are bearing death over hill and dale to return no more. In the Polish neighbourhood of Gross-Strehlitz the puppet is called Goik. It is carried on horseback and thrown into the nearest water. The people think that the ceremony protects them from sickness of every sort in the coming year. In the districts of Wohlau and Guhrau the image of Death used to be thrown over the boundary of the next village. But as the neighbours feared to receive the ill-omened figure, they were on the look-out to repel it, and hard knocks were often exchanged between the two parties. In some Polish parts of Upper Silesia the effigy, representing an old woman, goes by the name of Marzana, the goddess of death. It is made in the house where the last death occurred, and is carried on a pole to the boundary of the village, where it is thrown into a pond or burnt. At Polkwitz the custom of "Carrying out Death" fell into abeyance; but an outbreak of fatal sickness which followed the intermission of the ceremony induced the people to resume it. Some of the Moravians of Silesia make three puppets on this occasion: one represents a man, another a bride, and the third a bridesmaid. The first is carried by the boys, the two last by the girls. Formerly these effigies were torn to pieces at a brook; now they are brought home again. In this last custom two of the figures are clearly conceived as bride and bridegroom.

In Bohemia the children go out with a straw-man, representing Death, to the end of the village, where they burn it, singing—

*"Now carry we Death out of the village,
The new Summer into the village,
Welcome, dear Summer,
Green little corn."*

At Tabor in Bohemia the figure of Death is carried out of the town and flung from a high rock into the water, while they sing—

*"Death swims on the water,
Summer will soon be here,
We carried Death away for you,
We brought the Summer.
And do thou, O holy Marketa,*

*Give us a good year
For wheat and for rye."*

In other parts of Bohemia they carry Death to the end of the village, singing—

*"We carry Death out of the village,
And the New Year into the village.
Dear Spring, we bid you welcome,
Green grass, we bid you welcome."*

Behind the village they erect a pyre, on which they burn the straw figure, reviling and scoffing at it the while. Then they return, singing—

*"We have carried away Death,
And brought Life back.
He has taken up his quarters in the village,
Therefore sing joyous songs."*

In some German villages of Moravia, as in Jassnitz and Seitendorf, the young folk assemble on the third Sunday in Lent and fashion a straw-man, who is generally adorned with a fur cap and a pair of old leathern hose, if such are to be had. The effigy is then hoisted on a pole and carried by the lads and lasses out into the open fields. On the way they sing a song, in which it is said that they are carrying Death away and bringing dear Summer into the house, and with Summer the May and the flowers. On reaching an appointed place they dance in a circle round the effigy with loud shouts and screams, then suddenly rush at it and tear it to pieces with their hands. Lastly, the pieces are thrown together in a heap, the pole is broken, and fire is set to the whole. While it burns the troop dances merrily round it, rejoicing at the victory won by Spring; and when the fire has nearly died out they go to the householders to beg for a present of eggs wherewith to hold a feast, taking care to give as a reason for the request that they have carried Death out and away.

The preceding evidence shews that the effigy of Death is often regarded with fear and treated with marks of hatred and abhorrence. Thus the anxiety of the villagers to transfer the figure from their own to their neighbours' land, and the reluctance of the latter to receive the ominous guest, are proof enough of the dread which it inspires. Further, in Lusatia and Silesia the puppet is sometimes made to look in at the window of a house, and it is believed that some one in the house will die within the year unless his life is redeemed by the payment of money. Again, after throwing the effigy away, the bearers sometimes run home lest Death should follow them, and if one of them falls in running, it is believed that he will die within the year. At Chrudim, in Bohemia, the figure of Death is made out of a cross, with a head and mask stuck at the top, and a shirt stretched out on it. On the fifth Sunday in Lent the boys take this effigy to the nearest brook or pool, and standing in a line throw it into the water. Then they all plunge in after it; but as soon as it is caught no one more may enter the water. The boy who did not enter the water or entered it last will die within the year, and he is obliged to carry the Death back to the village. The effigy is then burned. On the other hand, it is believed that no one will die within the year in the house out of which the figure of Death has been carried; and the village out of which Death has been driven is sometimes supposed to be protected against sickness and plague. In some villages of Austrian Silesia on the Saturday before Dead Sunday an effigy is made of old clothes, hay, and straw, for the purpose of driving Death out of the village. On Sunday the people, armed with sticks and straps, assemble before the house where the figure is lodged. Four lads then draw the effigy by cords through the village amid exultant shouts, while all the others beat it with their sticks and straps. On reaching a field which belongs to a neighbouring village they lay down the figure,

cudgel it soundly, and scatter the fragments over the field. The people believe that the village from which Death has been thus carried out will be safe from any infectious disease for the whole year. In Slavonia the figure of Death is cudgelled and then rent in two. In Poland the effigy, made of hemp and straw, is flung into a pool or swamp with the words "The devil take thee."

§ 5. Sawing the Old Woman.

The custom of "Sawing the Old Woman," which is or used to be observed in Italy, France, and Spain on the fourth Sunday in Lent, is doubtless, as Grimm supposes, merely another form of the custom of "Carrying out Death." A great hideous figure representing the oldest woman of the village was dragged out and sawn in two, amid a prodigious noise made with cow-bells, pots and pans, and so forth. In Palermo the representation used to be still more lifelike. At Mid-Lent an old woman was drawn through the streets on a cart, attended by two men dressed in the costume of the *Compagnia de' Bianchi*, a society or religious order whose function it was to attend and console prisoners condemned to death. A scaffold was erected in a public square; the old woman mounted it, and two mock executioners proceeded, amid a storm of huzzas and hand-clapping, to saw through her neck, or rather through a bladder of blood which had been previously fitted to it. The blood gushed out and the old woman pretended to swoon and die. The last of these mock executions took place in 1737. In Florence, during the fifteenth and sixteenth centuries, the Old Woman was represented by a figure stuffed with walnuts and dried figs and fastened to the top of a ladder. At Mid-Lent this effigy was sawn through the middle under the *Loggie* of the Mercato Nuovo, and as the dried fruits tumbled out they were scrambled for by the crowd. A trace of the custom is still to be seen in the practice, observed by urchins, of secretly pinning paper ladders to the shoulders of women of the lower classes who happen to shew themselves in the streets on the morning of Mid-Lent. A similar custom is observed by urchins in Rome; and at Naples on the first of April boys cut strips of cloth into the shape of saws, smear them with gypsum, and strike passers-by with their "saws" on the back, thus imprinting the figure of a saw upon their clothes. At Montalto, in Calabria, boys go about at Mid-Lent with little saws made of cane and jeer at old people, who therefore generally stay indoors on that day. The Calabrian women meet together at this time and feast on figs, chestnuts, honey, and so forth; this they call "Sawing the Old Woman"—a reminiscence probably of a custom like the old Florentine one. In Lombardy the Thursday of Mid-Lent is known as the Day of the Old Wives (*il giorno delle vecchie*). The children run about crying out for the oldest woman, whom they wish to burn; and failing to possess themselves of the original, they make a puppet representing her, which in the evening is consumed on a bonfire. On the Lake of Garda the blaze of light flaring at different points on the hills produces a picturesque effect.

In Berry, a region of central France, the custom of "Sawing the Old Woman" at Mid-Lent used to be popular, and has probably not wholly died out even now. Here the name of "Fairs of the old Wives" was given to certain fairs held in Lent, at which children were made to believe that they would see the Old Woman of Mid-Lent split or sawn asunder. At Argenton and Cluis-Dessus, when Mid-Lent has come, children of ten or twelve years of age scour the streets with wooden swords, pursue the old crones whom they meet, and even try to break into the houses where ancient dames are known to live. Passers-by, who see the children thus engaged, say, "They are going to cut or sabre the Old Woman." Meantime the old wives take care to keep out of sight as much as possible. When the children of Cluis-Dessus have gone their rounds, and the day draws towards evening, they repair to Cluis-Dessous, where they mould a rude figure of an old woman out of clay, hew it in pieces with their wooden swords, and throw the bits into the river. At Bourges on the same day, an effigy representing an old woman was formerly sawn in two on the crier's stone in a public square. About the middle of

the nineteenth century, in the same town and on the same day, hundreds of children assembled at the Hospital "to see the old woman split or divided in two." A religious service was held in the building on this occasion, which attracted many idlers. In the streets it was not uncommon to hear cries of "Let us cleave the Old Wife! let us cleave the oldest woman of the ward!" At Tulle, on the day of Mid-Lent, the people used to enquire after the oldest woman in the town, and to tell the children that at mid-day punctually she was to be sawn in two at Puy-Saint-Clair.

In Barcelona on the fourth Sunday in Lent boys run about the streets, some with saws, others with billets of wood, others again with cloths in which they collect gratuities. They sing a song in which it is said that they are looking for the oldest woman of the city for the purpose of sawing her in two in honour of Mid-Lent; at last, pretending to have found her, they saw something in two and burn it. A like custom is found amongst the South Slavs. In Lent the Croats tell their children that at noon an old woman is being sawn in two outside the gates; and in Carniola also the saying is current that at Mid-Lent an old woman is taken out of the village and sawn in two. The North Slavonian expression for keeping Mid-Lent is *bábu rezati*, that is, "sawing the Old Wife." In the Graubünden Canton of Switzerland, on *Invocavit* Sunday, grown people used to assemble in the ale-house and there saw in two a straw puppet which they called Mrs. Winter or the Ugly Woman (*bagorda*), while the children in the streets teased each other with wooden saws.

Among the gypsies of south-eastern Europe the custom of "sawing the Old Woman in two" is observed in a very graphic form, not at Mid-Lent, but on the afternoon of Palm Sunday. The Old Woman, represented by a puppet of straw dressed in women's clothes, is laid across a beam in some open place and beaten with clubs by the assembled gypsies, after which it is sawn in two by a young man and a maiden, both of whom wear a disguise. While the effigy is being sawn through, the rest of the company dance round it singing songs of various sorts. The remains of the figure are finally burnt, and the ashes thrown into a stream. The ceremony is supposed by the gypsies themselves to be observed in honour of a certain Shadow Queen; hence Palm Sunday goes by the name Shadow Day among all the strolling gypsies of eastern and southern Europe. According to the popular belief, this Shadow Queen, of whom the gypsies of to-day have only a very vague and confused conception, vanishes underground at the appearance of spring, but comes forth again at the beginning of winter to plague mankind during that inclement season with sickness, hunger, and death. Among the vagrant gypsies of southern Hungary the effigy is regarded as an expiatory and thank offering made to the Shadow Queen for having spared the people during the winter. In Transylvania the gypsies who live in tents clothe the puppet in the cast-off garments of the woman who has last become a widow. The widow herself gives the clothes gladly for this purpose, because she thinks that being burnt they will pass into the possession of her departed husband, who will thus have no excuse for returning from the spirit-land to visit her. The ashes are thrown by the Transylvanian gypsies on the first graveyard that they pass on their journey. In this gypsy custom the equivalence of the effigy of the Old Woman to the effigy of Death in the customs we have just been considering comes out very clearly, thus strongly confirming the opinion of Grimm that the practice of "sawing the Old Woman" is only another form of the practice of "carrying out Death."

The same perhaps may be said of a somewhat different form which the custom assumes in parts of Spain and Italy. In Spain it is sometimes usual on Ash Wednesday to fashion an effigy of stucco or pasteboard representing a hideous old woman with seven legs, wearing a crown of sorrel and spinach, and holding a sceptre in her hand. The seven skinny legs stand for the seven weeks of the Lenten fast which begins on Ash Wednesday. This monster, proclaimed Queen of Lent amid the chanting of lugubrious songs, is carried in triumph

through the crowded streets and public places. On reaching the principal square the people put out their torches, cease shouting, and disperse. Their revels are now ended, and they take a vow to hold no more merry meetings until all the legs of the old woman have fallen one by one and she has been beheaded. The effigy is then deposited in some place appointed for the purpose, where the public is admitted to see it during the whole of Lent. Every week, on Saturday evening, one of the Queen's legs is pulled off; and on Holy Saturday, when from every church tower the joyous clangour of the bells proclaims the glad tidings that Christ is risen, the mutilated body of the fallen Queen is carried with great solemnity to the principal square and publicly beheaded.

A custom of the same sort prevails in various parts of Italy. Thus in the Abruzzi they hang a puppet of tow, representing Lent, to a cord, which stretches across the street from one window to another. Seven feathers are attached to the figure, and in its hand it grasps a distaff and spindle. Every Saturday in Lent one of the seven feathers is plucked out, and on Holy Saturday, while the bells are ringing, a string of chestnuts is burnt for the purpose of sending Lent and its meagre fare to the devil. In houses, too, it is usual to amuse children by cutting the figure of an old woman with seven legs out of pasteboard and sticking it beside the chimney. The old woman represents Lent, and her seven legs are the seven weeks of the fast; every Saturday one of the legs is amputated. At Mid-Lent the effigy is cut through the middle, and the part of which the feet have been already amputated is removed. Sometimes the figure is stuffed with sweets, dried fruits, and halfpence, for which the street urchins scramble when the puppet is bisected. In the Sorrentine peninsula Lent is similarly represented by the effigy of a wrinkled old hag with a spindle and distaff, which is fastened to a balcony or a window. Attached to the figure is an orange with as many feathers stuck into it as there are weeks in Lent, and at the end of each week one of the feathers is plucked out. At Mid-Lent the puppet is sawn in two, an operation which is sometimes attended by a gush of blood from a bladder concealed in the interior of the figure. Any old women who shew themselves in the streets on that day are exposed to jibes and jests, and may be warned that they ought to remain at home. At Castellammare, to the south of Naples, an English lady observed a rude puppet dangling from a string which spanned one of the narrow streets of the old town, being fastened at either end, high overhead, to the upper part of the many-storied houses. The puppet, about a foot long, was dressed all in black, rather like a nun, and from the skirts projected five or six feathers which bore a certain resemblance to legs. A peasant being asked what these things meant, replied with Italian vagueness, "It is only Lent." Further enquiries, however, elicited the information that at the end of every week in Lent one of the feather legs was pulled off the puppet, and that the puppet was finally destroyed on the last day of Lent.

§ 6. Bringing in Summer.

In the preceding ceremonies the return of Spring, Summer, or Life, as a sequel to the expulsion of Death, is only implied or at most announced. In the following ceremonies it is plainly enacted. Thus in some parts of Bohemia the effigy of Death is drowned by being thrown into the water at sunset; then the girls go out into the wood and cut down a young tree with a green crown, hang a doll dressed as a woman on it, deck the whole with green, red, and white ribbons, and march in procession with their *Líto* (Summer) into the village, collecting gifts and singing—

*"Death swims in the water,
Spring comes to visit us,
With eggs that are red,
With yellow pancakes.*

*We carried Death out of the village,
We are carrying Summer into the village.”*

In many Silesian villages the figure of Death, after being treated with respect, is stript of its clothes and flung with curses into the water, or torn to pieces in a field. Then the young folk repair to a wood, cut down a small fir-tree, peel the trunk, and deck it with festoons of evergreens, paper roses, painted egg-shells, motley bits of cloth, and so forth. The tree thus adorned is called Summer or May. Boys carry it from house to house singing appropriate songs and begging for presents. Among their songs is the following:—

*“We have carried Death out,
We are bringing the dear Summer back,
The Summer and the May
And all the flowers gay.”*

Sometimes they also bring back from the wood a prettily adorned figure, which goes by the name of Summer, May, or the Bride; in the Polish districts it is called Dziejanna, the goddess of spring.

At Eisenach on the fourth Sunday in Lent young people used to fasten a straw-man, representing Death, to a wheel, which they trundled to the top of a hill. Then setting fire to the figure they allowed it and the wheel to roll down the slope. Next they cut a tall fir-tree, tricked it out with ribbons, and set it up in the plain. The men then climbed the tree to fetch down the ribbons. In Upper Lusatia the figure of Death, made of straw and rags, is dressed in a veil furnished by the last bride and a shirt provided by the house in which the last death took place. Thus arrayed the figure is stuck on the end of a long pole and carried at full speed by the tallest and strongest girl, while the rest pelt the effigy with sticks and stones. Whoever hits it will be sure to live through the year. In this way Death is carried out of the village and thrown into the water or over the boundary of the next village. On their way home each one breaks a green branch and carries it gaily with him till he reaches the village, when he throws it away. Sometimes the young people of the next village, upon whose land the figure has been thrown, run after them and hurl it back, not wishing to have Death among them. Hence the two parties occasionally come to blows.

In these cases Death is represented by the puppet which is thrown away, Summer or Life by the branches or trees which are brought back. But sometimes a new potency of life seems to be attributed to the image of Death itself, and by a kind of resurrection it becomes the instrument of the general revival. Thus in some parts of Lusatia women alone are concerned in carrying out Death, and suffer no male to meddle with it. Attired in mourning, which they wear the whole day, they make a puppet of straw, clothe it in a white shirt, and give it a broom in one hand and a scythe in the other. Singing songs and pursued by urchins throwing stones, they carry the puppet to the village boundary, where they tear it in pieces. Then they cut down a fine tree, hang the shirt on it, and carry it home singing. On the Feast of Ascension the Saxons of Braller, a village of Transylvania, not far from Hermannstadt, observe the ceremony of “Carrying out Death” in the following manner. After morning service all the school-girls repair to the house of one of their number, and there dress up the Death. This is done by tying a threshed-out sheaf of corn into a rough semblance of a head and body, while the arms are simulated by a broomstick thrust through it horizontally. The figure is dressed in the holiday attire of a young peasant woman, with a red hood, silver brooches, and a profusion of ribbons at the arms and breast. The girls bustle at their work, for soon the bells will be ringing to vespers, and the Death must be ready in time to be placed at the open window, that all the people may see it on their way to church. When vespers are over, the longed-for moment has come for the first procession with the Death to begin; it is a

privilege that belongs to the school-girls alone. Two of the older girls seize the figure by the arms and walk in front: all the rest follow two and two. Boys may take no part in the procession, but they troop after it gazing with open-mouthed admiration at the "beautiful Death." So the procession goes through all the streets of the village, the girls singing the old hymn that begins—

*"Gott mein Vater, deine Liebe
Reicht so weit der Himmel ist,"*

to a tune that differs from the ordinary one. When the procession has wound its way through every street, the girls go to another house, and having shut the door against the eager prying crowd of boys who follow at their heels, they strip the Death and pass the naked truss of straw out of the window to the boys, who pounce on it, run out of the village with it without singing, and fling the dilapidated effigy into the neighbouring brook. This done, the second scene of the little drama begins. While the boys were carrying away the Death out of the village, the girls remained in the house, and one of them is now dressed in all the finery which had been worn by the effigy. Thus arrayed she is led in procession through all the streets to the singing of the same hymn as before. When the procession is over they all betake themselves to the house of the girl who played the leading part. Here a feast awaits them from which also the boys are excluded. It is a popular belief that the children may safely begin to eat gooseberries and other fruit after the day on which Death has thus been carried out; for Death, which up to that time lurked especially in gooseberries, is now destroyed. Further, they may now bathe with impunity out of doors. Very similar is the ceremony which, down to recent years, was observed in some of the German villages of Moravia. Boys and girls met on the afternoon of the first Sunday after Easter, and together fashioned a puppet of straw to represent Death. Decked with bright-coloured ribbons and cloths, and fastened to the top of a long pole, the effigy was then borne with singing and clamour to the nearest height, where it was stripped of its gay attire and thrown or rolled down the slope. One of the girls was next dressed in the gauds taken from the effigy of Death, and with her at its head the procession moved back to the village. In some villages the practice is to bury the effigy in the place that has the most evil reputation of all the country-side: others throw it into running water.

In the Lusatian ceremony described above, the tree which is brought home after the destruction of the figure of Death is plainly equivalent to the trees or branches which, in the preceding customs, were brought back as representatives of Summer or Life, after Death had been thrown away or destroyed. But the transference of the shirt worn by the effigy of Death to the tree clearly indicates that the tree is a kind of revivification, in a new form, of the destroyed effigy. This comes out also in the Transylvanian and Moravian customs: the dressing of a girl in the clothes worn by the Death, and the leading her about the village to the same song which had been sung when the Death was being carried about, shew that she is intended to be a kind of resuscitation of the being whose effigy has just been destroyed. These examples therefore suggest that the Death whose demolition is represented in these ceremonies cannot be regarded as the purely destructive agent which we understand by Death. If the tree which is brought back as an embodiment of the reviving vegetation of spring is clothed in the shirt worn by the Death which has just been destroyed, the object certainly cannot be to check and counteract the revival of vegetation: it can only be to foster and promote it. Therefore the being which has just been destroyed—the so-called Death—must be supposed to be endowed with a vivifying and quickening influence, which it can communicate to the vegetable and even the animal world. This ascription of a life-giving virtue to the figure of Death is put beyond a doubt by the custom, observed in some places, of taking pieces of the straw effigy of Death and placing them in the fields to make the crops grow, or in the manger to make the cattle thrive. Thus in Spachendorf, a village of Austrian

Silesia, the figure of Death, made of straw, brushwood, and rags, is carried with wild songs to an open place outside the village and there burned, and while it is burning a general struggle takes place for the pieces, which are pulled out of the flames with bare hands. Each one who secures a fragment of the effigy ties it to a branch of the largest tree in his garden, or buries it in his field, in the belief that this causes the crops to grow better. In the Troppau district of Austrian Silesia the straw figure which the boys make on the fourth Sunday in Lent is dressed by the girls in woman's clothes and hung with ribbons, necklace, and garlands. Attached to a long pole it is carried out of the village, followed by a troop of young people of both sexes, who alternately frolic, lament, and sing songs. Arrived at its destination—a field outside the village—the figure is stripped of its clothes and ornaments; then the crowd rushes at it and tears it to bits, scuffling for the fragments. Every one tries to get a wisp of the straw of which the effigy was made, because such a wisp, placed in the manger, is believed to make the cattle thrive. Or the straw is put in the hens' nest, it being supposed that this prevents the hens from carrying away their eggs, and makes them brood much better. The same attribution of a fertilising power to the figure of Death appears in the belief that if the bearers of the figure, after throwing it away, beat cattle with their sticks, this will render the beasts fat or prolific. Perhaps the sticks had been previously used to beat the Death, and so had acquired the fertilising power ascribed to the effigy. We have seen, too, that at Leipsic a straw effigy of Death was shewn to young wives to make them fruitful.

It seems hardly possible to separate from the May-trees the trees or branches which are brought into the village after the destruction of the Death. The bearers who bring them in profess to be bringing in the Summer, therefore the trees obviously represent the Summer; indeed in Silesia they are commonly called the Summer or the May, and the doll which is sometimes attached to the Summer-tree is a duplicate representative of the Summer, just as the May is sometimes represented at the same time by a May-tree and a May Lady. Further, the Summer-trees are adorned like May-trees with ribbons and so on; like May-trees, when large, they are planted in the ground and climbed up; and like May-trees, when small, they are carried from door to door by boys or girls singing songs and collecting money. And as if to demonstrate the identity of the two sets of customs the bearers of the Summer-tree sometimes announce that they are bringing in the Summer and the May. The customs, therefore, of bringing in the May and bringing in the Summer are essentially the same; and the Summer-tree is merely another form of the May-tree, the only distinction (besides that of name) being in the time at which they are respectively brought in; for while the May-tree is usually fetched in on the first of May or at Whitsuntide, the Summer-tree is fetched in on the fourth Sunday in Lent. Therefore, if the May-tree is an embodiment of the tree-spirit or spirit of vegetation, the Summer-tree must likewise be an embodiment of the tree-spirit or spirit of vegetation. But we have seen that the Summer-tree is in some cases a revivification of the effigy of Death. It follows, therefore, that in these cases the effigy called Death must be an embodiment of the tree-spirit or spirit of vegetation. This inference is confirmed, first, by the vivifying and fertilising influence which the fragments of the effigy of Death are believed to exercise both on vegetable and on animal life; for this influence, as we saw in the first part of this work, is supposed to be a special attribute of the tree-spirit. It is confirmed, secondly, by observing that the effigy of Death is sometimes decked with leaves or made of twigs, branches, hemp, or a threshed-out sheaf of corn; and that sometimes it is hung on a little tree and so carried about by girls collecting money, just as is done with the May-tree and the May Lady, and with the Summer-tree and the doll attached to it. In short we are driven to regard the expulsion of Death and the bringing in of Summer as, in some cases at least, merely another form of that death and revival of the spirit of vegetation in spring which we saw enacted in the killing and resurrection of the Wild Man. The burial and resurrection of the Carnival is probably another way of expressing the same idea. The interment of the

representative of the Carnival under a dung-heap is natural, if he is supposed to possess a quickening and fertilising influence like that ascribed to the effigy of Death. The Esthonians, indeed, who carry the straw figure out of the village in the usual way on Shrove Tuesday, do not call it the Carnival, but the Wood-spirit (*Metsik*), and they clearly indicate the identity of the effigy with the wood-spirit by fixing it to the top of a tree in the wood, where it remains for a year, and is besought almost daily with prayers and offerings to protect the herds; for like a true wood-spirit the *Metsik* is a patron of cattle. Sometimes the *Metsik* is made of sheaves of corn.

Thus we may fairly conjecture that the names Carnival, Death, and Summer are comparatively late and inadequate expressions for the beings personified or embodied in the customs with which we have been dealing. The very abstractness of the names bespeaks a modern origin; for the personification of times and seasons like the Carnival and Summer, or of an abstract notion like death, is hardly primitive. But the ceremonies themselves bear the stamp of a dateless antiquity; therefore we can hardly help supposing that in their origin the ideas which they embodied were of a more simple and concrete order. The notion of a tree, perhaps of a particular kind of tree (for some savages have no word for tree in general), or even of an individual tree, is sufficiently concrete to supply a basis from which by a gradual process of generalisation the wider idea of a spirit of vegetation might be reached. But this general idea of vegetation would readily be confounded with the season in which it manifests itself; hence the substitution of Spring, Summer, or May for the tree-spirit or spirit of vegetation would be easy and natural. Again, the concrete notion of the dying tree or dying vegetation would by a similar process of generalisation glide into a notion of death in general; so that the practice of carrying out the dying or dead vegetation in spring, as a preliminary to its revival, would in time widen out into an attempt to banish Death in general from the village or district. The view that in these spring ceremonies Death meant originally the dying or dead vegetation of winter has the high support of W. Mannhardt; and he confirms it by the analogy of the name Death as applied to the spirit of the ripe corn. Commonly the spirit of the ripe corn is conceived, not as dead, but as old, and hence it goes by the name of the Old Man or the Old Woman. But in some places the last sheaf cut at harvest, which is generally believed to be the seat of the corn spirit, is called "the Dead One": children are warned against entering the corn-fields because Death sits in the corn; and, in a game played by Saxon children in Transylvania at the maize harvest, Death is represented by a child completely covered with maize leaves.

§ 7. Battle of Summer and Winter.

Sometimes in the popular customs of the peasantry the contrast between the dormant powers of vegetation in winter and their awakening vitality in spring takes the form of a dramatic contest between actors who play the parts respectively of Winter and Summer. Thus in the towns of Sweden on May Day two troops of young men on horseback used to meet as if for mortal combat. One of them was led by a representative of Winter clad in furs, who threw snowballs and ice in order to prolong the cold weather. The other troop was commanded by a representative of Summer covered with fresh leaves and flowers. In the sham fight which followed the party of Summer came off victorious, and the ceremony ended with a feast. Again, in the region of the middle Rhine, a representative of Summer clad in ivy combats a representative of Winter clad in straw or moss and finally gains a victory over him. The vanquished foe is thrown to the ground and stripped of his casing of straw, which is torn to pieces and scattered about, while the youthful comrades of the two champions sing a song to commemorate the defeat of Winter by Summer. Afterwards they carry about a summer garland or branch and collect gifts of eggs and bacon from house to house. Sometimes the champion who acts the part of Summer is dressed in leaves and flowers and wears a chaplet

of flowers on his head. In the Palatinate this mimic conflict takes place on the fourth Sunday in Lent. All over Bavaria the same drama used to be acted on the same day, and it was still kept up in some places down to the middle of the nineteenth century or later. While Summer appeared clad all in green, decked with fluttering ribbons, and carrying a branch in blossom or a little tree hung with apples and pears, Winter was muffled up in cap and mantle of fur and bore in his hand a snow-shovel or a flail. Accompanied by their respective retinues dressed in corresponding attire, they went through all the streets of the village, halting before the houses and singing staves of old songs, for which they received presents of bread, eggs, and fruit. Finally, after a short struggle, Winter was beaten by Summer and ducked in the village well or driven out of the village with shouts and laughter into the forest. In some parts of Bavaria the boys who play the parts of Winter and Summer act their little drama in every house that they visit, and engage in a war of words before they come to blows, each of them vaunting the pleasures and benefits of the season he represents and disparaging those of the other. The dialogue is in verse. A few couplets may serve as specimens:—

Summer

*“Green, green are meadows wherever I pass
And the mowers are busy among the grass.”*

Winter

*“White, white are the meadows wherever I go,
And the sledges glide hissing across the snow.”*

Summer

*“I’ll climb up the tree where the red cherries glow,
And Winter can stand by himself down below.”*

Winter

*“With you I will climb the cherry-tree tall,
Its branches will kindle the fire in the hall.”*

Summer

*“O Winter, you are most uncivil
To send old women to the devil.”*

Winter

*“By that I make them warm and mellow,
So let them bawl and let them bellow.”*

Summer

*“I am the Summer in white array,
I’m chasing the Winter far, far away.”*

Winter

*“I am the Winter in mantle of furs,
I’m chasing the Summer o’er bushes and burs.”*

Summer

*“Just say a word more, and I’ll have you banned
At once and for ever from Summer land.”*

Winter

*“O Summer, for all your bluster and brag,
You'd not dare to carry a hen in a bag.”*

Summer

*“O Winter, your chatter no more can I stay,
I'll kick and I'll cuff you without delay.”*

Here ensues a scuffle between the two little boys, in which Summer gets the best of it, and turns Winter out of the house. But soon the beaten champion of Winter peeps in at the door and says with a humbled and crestfallen air:—

*“O Summer, dear Summer, I'm under your ban,
For you are the master and I am the man.”*

To which Summer replies:—

*“'Tis a capital notion, an excellent plan,
If I am the master and you are the man.
So come, my dear Winter, and give me your hand,
We'll travel together to Summer Land.”*

At Goepfritz in Lower Austria, two men personating Summer and Winter used to go from house to house on Shrove Tuesday, and were everywhere welcomed by the children with great delight. The representative of Summer was clad in white and bore a sickle; his comrade, who played the part of Winter, had a fur-cap on his head, his arms and legs were swathed in straw, and he carried a flail. In every house they sang verses alternately. At Drömling in Brunswick, down to the present time, the contest between Summer and Winter is acted every year at Whitsuntide by a troop of boys and a troop of girls. The boys rush singing, shouting, and ringing bells from house to house to drive Winter away; after them come the girls singing softly and led by a May Bride, all in bright dresses and decked with flowers and garlands to represent the genial advent of spring. Formerly the part of Winter was played by a straw-man which the boys carried with them; now it is acted by a real man in disguise. In Wachtl and Brodek, a German village and a little German town of Moravia, encompassed by Slavonic people on every side, the great change that comes over the earth in spring is still annually mimicked. The long village of Wachtl, with its trim houses and farmyards, nestles in a valley surrounded by pretty pine-woods. Here, on a day in spring, about the time of the vernal equinox, an elderly man with a long flaxen beard may be seen going from door to door. He is muffled in furs, with warm gloves on his hands and a bearskin cap on his head, and he carries a threshing flail. This is the personification of Winter. With him goes a younger beardless man dressed in white, wearing a straw hat trimmed with gay ribbons on his head, and carrying a decorated May-tree in his hands. This is Summer. At every house they receive a friendly greeting and recite a long dialogue in verse, Winter punctuating his discourse with his flail, which he brings down with rude vigour on the backs of all within reach. Amongst the Slavonic population near Ungarisch Brod, in Moravia, the ceremony took a somewhat different form. Girls dressed in green marched in procession round a May-tree. Then two others, one in white and one in green, stepped up to the tree and engaged in a dialogue. Finally, the girl in white was driven away, but returned afterwards clothed in green, and the festival ended with a dance.

On May Day it used to be customary in almost all the large parishes of the Isle of Man to choose from among the daughters of the wealthiest farmers a young maiden to be Queen of May. She was dressed in the gayest attire and attended by about twenty others, who were called maids of honour. She had also a young man for her captain with a number of inferior officers under him. In opposition to her was the Queen of Winter, a man attired as a woman,

with woollen hoods, fur tippetts, and loaded with the warmest and heaviest clothes, one upon another. Her attendants were habited in like manner, and she too had a captain and troop for her defence. Thus representing respectively the beauty of spring and the deformity of winter they set forth from their different quarters, the one preceded by the dulcet music of flutes and violins, the other by the harsh clatter of cleavers and tongs. In this array they marched till they met on a common, where the trains of the two mimic sovereigns engaged in a mock battle. If the Queen of Winter's forces got the better of their adversaries and took her rival prisoner, the captive Queen of Summer was ransomed for as much as would pay the expenses of the festival. After this ceremony, Winter and her company retired and diverted themselves in a barn, while the partisans of Summer danced on the green, concluding the evening with a feast, at which the Queen and her maids sat at one table and the captain and his troop at another. In later times the person of the Queen of May was exempt from capture, but one of her slippers was substituted and, if captured, had to be ransomed to defray the expenses of the pageant. The procession of the Summer, which was subsequently composed of little girls and called the Maceboard, outlived that of its rival the Winter for some years; but both have now long been things of the past.

Among the central Esquimaux of North America the contest between representatives of summer and winter, which in Europe has long degenerated into a mere dramatic performance, is still kept up as a magical ceremony of which the avowed intention is to influence the weather. In autumn, when storms announce the approach of the dismal Arctic winter, the Esquimaux divide themselves into two parties called respectively the ptarmigans and the ducks, the ptarmigans comprising all persons born in winter, and the ducks all persons born in summer. A long rope of sealskin is then stretched out, and each party laying hold of one end of it seeks by tugging with might and main to drag the other party over to its side. If the ptarmigans get the worst of it, then summer has won the game and fine weather may be expected to prevail through the winter. In this ceremony it is clearly assumed that persons born in summer have a natural affinity with warm weather, and therefore possess a power of mitigating the rigour of winter, whereas persons born in winter are, so to say, of a cold and frosty disposition and can thereby exert a refrigerating influence on the temperature of the air. In spite of this natural antipathy between the representatives of summer and winter, we may be allowed to conjecture that in the grand tug of war the ptarmigans do not pull at the rope with the same hearty goodwill as the ducks, and that thus the genial influence of summer commonly prevails over the harsh austerity of winter. The Indians of Canada seem also to have imagined that persons are endowed with distinct natural capacities according as they are born in summer or winter, and they turned the distinction to account in much the same fashion as the Esquimaux. When they wearied of the long frosts and the deep snow which kept them prisoners in their huts and prevented them from hunting, all of them who were born in summer rushed out of their houses armed with burning brands and torches which they hurled against the One who makes Winter; and this was supposed to produce the desired effect of mitigating the cold. But those Indians who were born in winter abstained from taking part in the ceremony, for they believed that if they meddled with it the cold would increase instead of diminishing. We may surmise that in the corresponding European ceremonies, which have just been described, it was formerly deemed necessary that the actors, who played the parts of Winter and Summer, should have been born in the seasons which they personated.

Every year on the Monday after the spring equinox boys and girls attired in gay costume flock at a very early hour into Zurich from the country. The girls, generally clad in white, are called *Mareiëlis* and carry two and two a small May tree or a wreath decked with flowers and ribbons. Thus they go in bands from house to house, jingling the bells which are attached to

the wreath and singing a song, in which it is said that the *Mareielis* dance because the leaves and the grass are green and everything is bursting into blossom. In this way they are supposed to celebrate the triumph of Summer and to proclaim his coming. The boys are called *Böggen*. They generally wear over their ordinary clothes a shirt decked with many-coloured ribbons, tall pointed paper caps on their heads, and masks before their faces. In this quaint costume they cart about through the streets effigies made of straw and other combustible materials which are supposed to represent Winter. At evening these effigies are burned in various parts of the city. The ceremony was witnessed at Zurich on Monday, April 20th, 1903, by my friend Dr. J. Sutherland Black, who has kindly furnished me with some notes on the subject. The effigy of Winter was a gigantic figure composed in great part, as it seemed, of cotton-wool. This was laid on a huge pyre, about thirty feet high, which had been erected on the Stadthausplatz close to the lake. In presence of a vast concourse of people fire was set to the pyre and all was soon in a blaze, while the town bells rang a joyous peal. As the figure gradually consumed in the flames, the mechanism enclosed in its interior produced a variety of grotesque effects, such as the gushing forth of bowels. At last nothing remained of the effigy but the iron backbone; the crowd slowly dispersed, and the fire brigade set to work to quench the smouldering embers. In this ceremony the contest between Summer and Winter is rather implied than expressed, but the significance of the rite is unmistakable.

§ 8. Death and Resurrection of Kostrubonko.

In Russia funeral ceremonies like those of “Burying the Carnival” and “Carrying out Death” are celebrated under the names, not of Death or the Carnival, but of certain mythic figures, Kostrubonko, Kostroma, Kupalo, Lada, and Yarilo. These Russian ceremonies are observed both in spring and at midsummer. Thus “in Little Russia it used to be the custom at Eastertide to celebrate the funeral of a being called Kostrubonko, the deity of the spring. A circle was formed of singers who moved slowly around a girl who lay on the ground as if dead, and as they went they sang,—

*‘Dead, dead is our Kostrubonko!
Dead, dead is our dear one!’*

until the girl suddenly sprang up, on which the chorus joyfully exclaimed,—

*‘Come to life, come to life has our Kostrubonko!
Come to life, come to life has our dear one!’ ”*

On the Eve of St. John (Midsummer Eve) a figure of Kupalo is made of straw and “is dressed in woman's clothes, with a necklace and a floral crown. Then a tree is felled, and, after being decked with ribbons, is set up on some chosen spot. Near this tree, to which they give the name of Marena [Winter or Death], the straw figure is placed, together with a table, on which stand spirits and viands. Afterwards a bonfire is lit, and the young men and maidens jump over it in couples, carrying the figure with them. On the next day they strip the tree and the figure of their ornaments, and throw them both into a stream.” On St. Peter's Day, the twenty-ninth of June, or on the following Sunday, “the Funeral of Kostroma” or of Lada or of Yarilo is celebrated in Russia. In the Governments of Penza and Simbirsk the funeral used to be represented as follows. A bonfire was kindled on the twenty-eighth of June, and on the next day the maidens chose one of their number to play the part of Kostroma. Her companions saluted her with deep obeisances, placed her on a board, and carried her to the bank of a stream. There they bathed her in the water, while the oldest girl made a basket of lime-tree bark and beat it like a drum. Then they returned to the village and ended the day with processions, games, and dances. In the Murom district Kostroma was represented by a straw figure dressed in woman's clothes and flowers. This was laid in a trough and carried with

songs to the bank of a lake or river. Here the crowd divided into two sides, of which the one attacked and the other defended the figure. At last the assailants gained the day, stripped the figure of its dress and ornaments, tore it in pieces, trod the straw of which it was made under foot, and flung it into the stream; while the defenders of the figure hid their faces in their hands and pretended to bewail the death of Kostroma. In the district of Kostroma the burial of Yarilo was celebrated on the twenty-ninth or thirtieth of June. The people chose an old man and gave him a small coffin containing a Priapus-like figure representing Yarilo. This he carried out of the town, followed by women chanting dirges and expressing by their gestures grief and despair. In the open fields a grave was dug, and into it the figure was lowered amid weeping and wailing, after which games and dances were begun, "calling to mind the funeral games celebrated in old times by the pagan Slavonians." In Little Russia the figure of Yarilo was laid in a coffin and carried through the streets after sunset surrounded by drunken women, who kept repeating mournfully, "He is dead! he is dead!" The men lifted and shook the figure as if they were trying to recall the dead man to life. Then they said to the women, "Women, weep not. I know what is sweeter than honey." But the women continued to lament and chant, as they do at funerals. "Of what was he guilty? He was so good. He will arise no more. O how shall we part from thee? What is life without thee? Arise, if only for a brief hour. But he rises not, he rises not." At last the Yarilo was buried in a grave.

§ 9. Death and Revival of Vegetation.

These Russian customs are plainly of the same nature as those which in Austria and Germany are known as "Carrying out Death." Therefore if the interpretation here adopted of the latter is right, the Russian Kostrubonko, Yarilo, and the rest must also have been originally embodiments of the spirit of vegetation, and their death must have been regarded as a necessary preliminary to their revival. The revival as a sequel to the death is enacted in the first of the ceremonies described, the death and resurrection of Kostrubonko. The reason why in some of these Russian ceremonies the death of the spirit of vegetation is celebrated at midsummer may be that the decline of summer is dated from Midsummer Day, after which the days begin to shorten, and the sun sets out on his downward journey—

*"To the darksome hollows
Where the frosts of winter lie."*

Such a turning-point of the year, when vegetation might be thought to share the incipient though still almost imperceptible decay of summer, might very well be chosen by primitive man as a fit moment for resorting to those magic rites by which he hopes to stay the decline, or at least to ensure the revival, of plant life.

But while the death of vegetation appears to have been represented in all, and its revival in some, of these spring and midsummer ceremonies, there are features in some of them which can hardly be explained on this hypothesis alone. The solemn funeral, the lamentations, and the mourning attire, which often characterise these rites, are indeed appropriate at the death of the beneficent spirit of vegetation. But what shall we say of the glee with which the effigy is often carried out, of the sticks and stones with which it is assailed, and the taunts and curses which are hurled at it? What shall we say of the dread of the effigy evinced by the haste with which the bearers scamper home as soon as they have thrown it away, and by the belief that some one must soon die in any house into which it has looked? This dread might perhaps be explained by a belief that there is a certain infectiousness in the dead spirit of vegetation which renders its approach dangerous. But this explanation, besides being rather strained, does not cover the rejoicings which often attend the carrying out of Death. We must therefore recognise two distinct and seemingly opposite features in these ceremonies: on the one hand, sorrow for the death, and affection and respect for the dead; on the other hand, fear and

hatred of the dead, and rejoicings at his death. How the former of these features is to be explained I have attempted to shew: how the latter came to be so closely associated with the former is a question which I shall try to answer in the sequel.

Before we quit these European customs to go farther afield, it will be well to notice that occasionally the expulsion of Death or of a mythic being is conducted without any visible representative of the personage expelled. Thus at Königshain, near Görlitz in Silesia, all the villagers, young and old, used to go out with straw torches to the top of a neighbouring hill, called *Todtenstein* (Death-stone), where they lit their torches, and so returned home singing, "We have driven out Death, we are bringing back Summer." In Albania young people light torches of resinous wood on Easter Eve, and march in procession through the village brandishing them. At last they throw the torches into the river, saying, "Ha, Kore, we fling you into the river, like these torches, that you may return no more." Some say that the intention of the ceremony is to drive out winter; but Kore is conceived as a malignant being who devours children.

§ 10. Analogous Rites in India.

In the Kanagra district of India there is a custom observed by young girls in spring which closely resembles some of the European spring ceremonies just described. It is called the *Ralî Ka melâ*, or fair of Ralî, the *Ralî* being a small painted earthen image of Siva or Pârvatî. The custom is in vogue all over the Kanagra district, and its celebration, which is entirely confined to young girls, lasts through most of Chet (March-April) up to the Sankrânt of Baisâkh (April). On a morning in March all the young girls of the village take small baskets of *dûb* grass and flowers to an appointed place, where they throw them in a heap. Round this heap they stand in a circle and sing. This goes on every day for ten days, till the heap of grass and flowers has reached a fair height. Then they cut in the jungle two branches, each with three prongs at one end, and place them, prongs downwards, over the heap of flowers, so as to make two tripods or pyramids. On the single uppermost points of these branches they get an image-maker to construct two clay images, one to represent Siva, and the other Pârvatî. The girls then divide themselves into two parties, one for Siva and one for Pârvatî, and marry the images in the usual way, leaving out no part of the ceremony. After the marriage they have a feast, the cost of which is defrayed by contributions solicited from their parents. Then at the next Sankrânt (Baisâkh) they all go together to the river-side, throw the images into a deep pool, and weep over the place, as though they were performing funeral obsequies. The boys of the neighbourhood often tease them by diving after the images, bringing them up, and waving them about while the girls are crying over them. The object of the fair is said to be to secure a good husband.

That in this Indian ceremony the deities Siva and Pârvatî are conceived as spirits of vegetation seems to be proved by the placing of their images on branches over a heap of grass and flowers. Here, as often in European folk-custom, the divinities of vegetation are represented in duplicate, by plants and by puppets. The marriage of these Indian deities in spring corresponds to the European ceremonies in which the marriage of the vernal spirits of vegetation is represented by the King and Queen of May, the May Bride, Bridegroom of the May, and so forth. The throwing of the images into the water, and the mourning for them, are the equivalents of the European customs of throwing the dead spirit of vegetation under the name of Death, Yarilo, Kostroma, and the rest, into the water and lamenting over it. Again, in India, as often in Europe, the rite is performed exclusively by females. The notion that the ceremony helps to procure husbands for the girls can be explained by the quickening and fertilising influence which the spirit of vegetation is believed to exert upon the life of man as well as of plants.

§ 11. The Magic Spring.

The general explanation which we have been led to adopt of these and many similar ceremonies is that they are, or were in their origin, magical rites intended to ensure the revival of nature in spring. The means by which they were supposed to effect this end were imitation and sympathy. Led astray by his ignorance of the true causes of things, primitive man believed that in order to produce the great phenomena of nature on which his life depended he had only to imitate them, and that immediately by a secret sympathy or mystic influence the little drama which he acted in forest glade or mountain dell, on desert plain or wind-swept shore, would be taken up and repeated by mightier actors on a vaster stage. He fancied that by masquerading in leaves and flowers he helped the bare earth to clothe herself with verdure, and that by playing the death and burial of winter he drove that gloomy season away, and made smooth the path for the footsteps of returning spring. If we find it hard to throw ourselves even in fancy into a mental condition in which such things seem possible, we can more easily picture to ourselves the anxiety which the savage, when he first began to lift his thoughts above the satisfaction of his merely animal wants, and to meditate on the causes of things, may have felt as to the continued operation of what we now call the laws of nature. To us, familiar as we are with the conception of the uniformity and regularity with which the great cosmic phenomena succeed each other, there seems little ground for apprehension that the causes which produce these effects will cease to operate, at least within the near future. But this confidence in the stability of nature is bred only by the experience which comes of wide observation and long tradition; and the savage, with his narrow sphere of observation and his short-lived tradition, lacks the very elements of that experience which alone could set his mind at rest in face of the ever-changing and often menacing aspects of nature. No wonder, therefore, that he is thrown into a panic by an eclipse, and thinks that the sun or the moon would surely perish, if he did not raise a clamour and shoot his puny shafts into the air to defend the luminaries from the monster who threatens to devour them. No wonder he is terrified when in the darkness of night a streak of sky is suddenly illumined by the flash of a meteor, or the whole expanse of the celestial arch glows with the fitful light of the Northern Streamers. Even phenomena which recur at fixed and uniform intervals may be viewed by him with apprehension, before he has come to recognise the orderliness of their recurrence. The speed or slowness of his recognition of such periodic or cyclic changes in nature will depend largely on the length of the particular cycle. The cycle, for example, of day and night is everywhere, except in the polar regions, so short and hence so frequent that men probably soon ceased to discompose themselves seriously as to the chance of its failing to recur, though the ancient Egyptians, as we have seen, daily wrought enchantments to bring back to the east in the morning the fiery orb which had sunk at evening in the crimson west. But it was far otherwise with the annual cycle of the seasons. To any man a year is a considerable period, seeing that the number of our years is but few at the best. To the primitive savage, with his short memory and imperfect means of marking the flight of time, a year may well have been so long that he failed to recognise it as a cycle at all, and watched the changing aspects of earth and heaven with a perpetual wonder, alternately delighted and alarmed, elated and cast down, according as the vicissitudes of light and heat, of plant and animal life, ministered to his comfort or threatened his existence. In autumn when the withered leaves were whirled about the forest by the nipping blast, and he looked up at the bare boughs, could he feel sure that they would ever be green again? As day by day the sun sank lower and lower in the sky, could he be certain that the luminary would ever retrace his heavenly road? Even the waning moon, whose pale sickle rose thinner and thinner every night over the rim of the eastern horizon, may have excited in his mind a fear lest, when it had wholly vanished, there should be moons no more.

These and a thousand such misgivings may have thronged the fancy and troubled the peace of the man who first began to reflect on the mysteries of the world he lived in, and to take thought for a more distant future than the morrow. It was natural, therefore, that with such thoughts and fears he should have done all that in him lay to bring back the faded blossom to the bough, to swing the low sun of winter up to his old place in the summer sky, and to restore its orb'd fulness to the silver lamp of the waning moon. We may smile at his vain endeavours if we please, but it was only by making a long series of experiments, of which some were almost inevitably doomed to failure, that man learned from experience the futility of some of his attempted methods and the fruitfulness of others. After all, magical ceremonies are nothing but experiments which have failed and which continue to be repeated merely because, for reasons which have already been indicated, the operator is unaware of their failure. With the advance of knowledge these ceremonies either cease to be performed altogether or are kept up from force of habit long after the intention with which they were instituted has been forgotten. Thus fallen from their high estate, no longer regarded as solemn rites on the punctual performance of which the welfare and even the life of the community depend, they sink gradually to the level of simple pageants, mummeries, and pastimes, till in the final stage of degeneration they are wholly abandoned by older people, and, from having once been the most serious occupation of the sage, become at last the idle sport of children. It is in this final stage of decay that most of the old magical rites of our European forefathers linger on at the present day, and even from this their last retreat they are fast being swept away by the rising tide of those multitudinous forces, moral, intellectual, and social, which are bearing mankind onward to a new and unknown goal. We may feel some natural regret at the disappearance of quaint customs and picturesque ceremonies, which have preserved to an age often deemed dull and prosaic something of the flavour and freshness of the olden time, some breath of the springtime of the world; yet our regret will be lessened when we remember that these pretty pageants, these now innocent diversions, had their origin in ignorance and superstition; that if they are a record of human endeavour, they are also a monument of fruitless ingenuity, of wasted labour, and of blighted hopes; and that for all their gay trappings—their flowers, their ribbons, and their music—they partake far more of tragedy than of farce.

The interpretation which, following in the footsteps of W. Mannhardt, I have attempted to give of these ceremonies has been not a little confirmed by the discovery, made since this book was first written, that the natives of Central Australia regularly practise magical ceremonies for the purpose of awakening the dormant energies of nature at the approach of what may be called the Australian spring. Nowhere apparently are the alternations of the seasons more sudden and the contrasts between them more striking than in the deserts of Central Australia, where at the end of a long period of drought the sandy and stony wilderness, over which the silence and desolation of death appear to brood, is suddenly, after a few days of torrential rain, transformed into a landscape smiling with verdure and peopled with teeming multitudes of insects and lizards, of frogs and birds. The marvellous change which passes over the face of nature at such times has been compared even by European observers to the effect of magic; no wonder, then, that the savage should regard it as such in very deed. Now it is just when there is promise of the approach of a good season that the natives of Central Australia are wont especially to perform those magical ceremonies of which the avowed intention is to multiply the plants and animals they use as food. These ceremonies, therefore, present a close analogy to the spring customs of our European peasantry not only in the time of their celebration, but also in their aim; for we can hardly doubt that in instituting rites designed to assist the revival of plant life in spring our primitive forefathers were moved, not by any sentimental wish to smell at early violets, or pluck the rather primrose, or watch yellow daffodils dancing in the breeze, but by the very practical

consideration, certainly not formulated in abstract terms, that the life of man is inextricably bound up with that of plants, and that if they were to perish he could not survive. And as the faith of the Australian savage in the efficacy of his magic rites is confirmed by observing that their performance is invariably followed, sooner or later, by that increase of vegetable and animal life which it is their object to produce, so, we may suppose, it was with European savages in the olden time. The sight of the fresh green in brake and thicket, of vernal flowers blowing on mossy banks, of swallows arriving from the south, and of the sun mounting daily higher in the sky, would be welcomed by them as so many visible signs that their enchantments were indeed taking effect, and would inspire them with a cheerful confidence that all was well with a world which they could thus mould to suit their wishes. Only in autumn days, as summer slowly faded, would their confidence again be dashed by doubts and misgivings at symptoms of decay, which told how vain were all their efforts to stave off forever the approach of winter and of death.

Note A. Chinese Indifference To Death

Lord Avebury kindly allows me to print the letter of Mr. M. W. Lampson, referred to above. It runs as follows:—

Foreign Office, *August 7, 1903.*

Dear Lord Avebury—As the result of enquiries I hear from a Mr. Eames, a lawyer who practised for some years at Shanghai and has considerable knowledge of Chinese matters, that for a small sum a substitute can be found for execution. This is recognised by the Chinese authorities, with certain exceptions, as for instance parricide. It is even asserted that the local Taotai gains pecuniarily by this arrangement, as he is as a rule not above obtaining a substitute for the condemned man for a less sum than was paid him by the latter.

It is, I believe, part of the doctrine of Confucius that it is one of the highest virtues to increase the family prosperity at the expense of personal suffering. According to Eames, the Chinamen [*sic*] looks upon execution in another man's stead in this light, and consequently there is quite a competition for such a "substitution."

Should you wish to get more definite information, the address is: W. Eames, Esq., c/o Norman Craig, Inner Temple, E.C.

The only man in this department who has actually been out to China is at present away. But on his return I will ask him about it.—

Yours sincerely,

Miles W. Lampson.

On this subject Lord Avebury had stated: "It is said that in China, if a rich man is condemned to death, he can sometimes purchase a willing substitute at a very small expense." In regard to his authority for this statement Lord Avebury wrote to me (August 10, 1903): "I believe my previous information came from Sir T. Wade, but I have been unable to lay my hand on his letter, and do not therefore like to state it as a fact." Sir Thomas Wade was English Ambassador at Peking, and afterwards Professor of Chinese at Cambridge.

On the same subject Mr. Valentine Chirol, editor of the foreign department of *The Times*, wrote to me as follows:—

Queen Anne's Mansions, Westminster, S.W.,

August 21st, 1905.

Dear Sir—I shall be very glad to do what I can to obtain for you the information you require. It was a surprise to me to hear that the accuracy of the statement was called in question. It is certainly a matter of common report in China that the practice exists. The difficulty, I conceive, will be to obtain evidence enabling one to quote concrete cases. My own impression is that the practice is quite justifiable according to Chinese ethics when life is given up from motives of filial piety, that is to say in order to relieve the wants of indigent parents, or to defray the costs of ancestral rights [*sic*]. Your general thesis that life is less valued and more readily sacrificed by some races than by modern Europeans seems to be beyond dispute. Surely the Japanese practice of *sepuku*, or *harikari*, as it is vulgarly called, is a case in point. Life is risked, as in duelling, by Europeans, for the mere point of honour, but it is never deliberately laid down in satisfaction of the exigencies of the social code. I will

send you whatever information I can obtain when it reaches me, but that will not of course be for some months.—Yours truly,

Valentine Chirol.

P.S.—A friend of mine who has just been here entirely confirms my own belief as to the accuracy of your statement, and tells me he has himself seen several Imperial Decrees in the *Peking Gazette*, calling provincial authorities to order for having allowed specific cases of substitution to occur, and ordering the death penalty to be carried out in a more severe form on the original culprits as an extra punishment for obtaining substitutes. He has promised to look up some of these Impe. Decrees on his return to China, and send me translations. I am satisfied personally that his statement is conclusive.

V. C.

On the same subject I have received the following letter from Mr. J. O. P. Bland, for fourteen years correspondent of *The Times* in China:—

The Clock House, Shepperton,

March 22nd, 1911.

Dear Professor Frazer—My friend Mr. Valentine Chirol, writing the other day from Crete on his way East, asked me to communicate with you on the subject of your letter of the 3rd ulto., namely, the custom, alleged to exist in China, of procuring substitutes for persons condemned to death, the substitutes' families or relatives receiving compensation in cash.

To speak of this as a custom is to exaggerate the frequency of a class of incident which has undoubtedly been recorded in China and of which there has been mention in Imperial Decrees. I am sorry to say that I have not my file of the *Peking Gazette* here, for immediate reference, but I am writing to my friend Mr. Backhouse in Peking, and have no doubt but that he will be able to give chapter and verse of instances thus recorded. I had expected to find cases of the kind recorded in Mr. Werner's recently-published "Descriptive Sociology" of the Chinese (Spencerian publications), but have not been able to do so in the absence of an index to that voluminous work. More than one of the authors whom he quotes have certainly referred to cases of substitution for death-sentence prisoners. Parker, for instance ("China Past and Present," page 378), asserts that substitutes were to be had in Canton at the reasonable price of fifty taels (say £10). Dr. Matignon (in "Superstition, Crime et Misère en Chine," page 113) says that filial piety is a frequent motive. The negative opinion of Professors Giles and de Groot is entitled to consideration, but cannot be regarded as any more conclusive than the views expressed by Professor Giles on the question of infanticide which are outweighed by a mass of direct proof of eye-witnesses.

In a country where men submit voluntarily to mutilation and grave risk of death for a comparatively small gain to themselves and their relatives, where women commit suicide in hundreds to escape capture by invaders or strangers, where men and women alike habitually sacrifice their life for the most trivial motives of revenge or distress, it need not greatly surprise us that some should be found, especially among the wretchedly poor class, willing to give up their life in order to relieve their families of want or otherwise to "acquire merit."

The most important thing, I think, in expressing any opinion about the Chinese, is to remember the great extent and heterogeneous elements of the country, and to abstain from any sweeping generalisations based on isolated acts or events.—Yours very truly,

J. O. P. Bland.

As the practice in question involves a grave miscarriage of justice, the discovery of which might entail serious consequences on the magistrate who connived at it, we need not wonder that it is generally hushed up, and that no instances of it should come to the ears of many Europeans resident in China. My friend Professor H. A. Giles of Cambridge in conversation expressed himself quite incredulous on the subject, and Professor J. J. M. de Groot of Leyden wrote to me (January 31, 1902) to the same effect. The Rev. Dr. W. T. A. Barber, Headmaster of the Leys School, Cambridge, and formerly a missionary in China, wrote to me (January 30, 1902): "As to the possibility that a man condemned to death may secure a substitute on payment of a moderate sum of money, we used to hear that this was the case; but I have no proof that would justify you in using the fact." Another experienced missionary, the Rev. W. A. Cornaby, wrote to Dr. Barber: "I have heard of no such custom in capital crimes. The man in whose house a fire starts may, and often does, pay another to receive the blows and three days in a cangue. But unless where 'foreign riots' were the case, and a previously condemned criminal handy, I should hardly think it possible. Every precaution is taken that no one is beheaded but the man who cannot possibly be let off. The expense on the county mandarin is over £100 in 'stationery expenses' with higher courts." On this I would observe that if every execution costs the local mandarin so dear, he must be under a strong temptation to get the expenses out of the prisoner whenever he can do so without being detected.

With regard to the custom, mentioned by Mr. Cornaby, of procuring substitutes for corporal punishment, we are told that in China there are men who earn a livelihood by being thrashed instead of the real culprits. But they bribe the executioner to lay on lightly; otherwise their constitution could not long resist the tear and wear of so exhausting a profession. Thus the theory and practice of vicarious suffering are well understood in China.

Note B. Swinging As A Magical Rite

The custom of swinging has been practised as a religious or rather magical rite in various parts of the world, but it does not seem possible to explain all the instances of it in the same way. People appear to have resorted to the practice from different motives and with different ideas of the benefit to be derived from it. In the text we have seen that the Letts, and perhaps the Siamese, swing to make the crops grow tall. The same may be the intention of the ceremony whenever it is specially observed at harvest festivals. Among the Buginese and Macassars of Celebes, for example, it used to be the custom for young girls to swing one after the other on these occasions. At the great Dassera festival of Nepaul, which immediately precedes the cutting of the rice, swings and kites come into fashion among the young people of both sexes. The swings are sometimes hung from boughs of trees, but generally from a cross-beam supported on a framework of tall bamboos. Among the Dyaks of Sarawak a feast is held at the end of harvest, when the soul of the rice is secured to prevent the crops from rotting away. On this occasion a number of old women rock to and fro on a rude swing suspended from the rafters. A traveller in Sarawak has described how he saw many tall swings erected and Dyaks swinging to and fro on them, sometimes ten or twelve men together on one swing, while they chanted in monotonous, dirge-like tones an invocation to the spirits that they would be pleased to grant a plentiful harvest of sago and fruit and a good fishing season.

In the East Indian island of Bengkali elaborate and costly ceremonies are performed to ensure a good catch of fish. Among the rest an hereditary priestess, who bears the royal title of Djindjang Rajah, works herself up by means of the fumes of incense and so forth into that state of mental disorder which with many people passes for a symptom of divine inspiration. In this pious frame of mind she is led by her four handmaids to a swing all covered with yellow and hung with golden bells, on which she takes her seat amid the jingle of the bells. As she rocks gently to and fro in the swing, she speaks in an unknown tongue to each of the sixteen spirits who have to do with the fishing. In order to procure a plentiful supply of game the Tinneh Indians of North-West America perform a magical ceremony which they call "the young man bounding or tied." They pinion a man tightly, and having hung him by the head and heels from the roof of the hut, rock him backwards and forwards.

Thus we see that people swing in order to procure a plentiful supply of fish and game as well as good crops. In such cases the notion seems to be that the ceremony promotes fertility, whether in the vegetable or the animal kingdom; though why it should be supposed to do so, I confess myself unable to explain. There seem to be some reasons for thinking that the Indian rite of swinging on hooks run through the flesh of the performer is also resorted to, at least in some cases, from a belief in its fertilising virtue. Thus Hamilton tells us that at Karwar, on the west coast of India, a feast is held at the end of May or beginning of June in honour of the infernal gods, "with a divination or conjuration to know the fate of the ensuing crop of corn." Men were hung from a pole by means of tenter-hooks inserted in the flesh of their backs; and the pole with the men dangling from it was then dragged for more than a mile over ploughed ground from one sacred grove to another, preceded by a young girl who carried a pot of fire on her head. When the second grove was reached, the men were let down and taken off the hooks, and the girl fell into the usual prophetic frenzy, after which she unfolded to the priests the revelation with which she had just been favoured by the terrestrial gods. In each of the groves a shapeless black stone, daubed with red lead to stand for a mouth, eyes, and ears, appears to have represented the indwelling divinity. Sometimes this custom of

swinging on hooks, which is known among the Hindoos as *Churuk Puja*, seems to be intended to propitiate demons. Some Santals asked Mr. V. Ball to be allowed to perform it because their women and children were dying of sickness, and their cattle were being killed by wild beasts; they believed that these misfortunes befell them because the evil spirits had not been appeased. These same Santals celebrate a swinging festival of a less barbarous sort about the month of February. Eight men sit in chairs and rotate round posts in a sort of revolving swing, like the merry-go-rounds which are so dear to children at English fairs. At the Nauroz and Eed festivals in Dardistan the women swing on ropes suspended from trees. During the rainy season in Behar young women swing in their houses, while they sing songs appropriate to the season. The period during which they indulge in this pastime, if a mere pastime it be, is strictly limited; it begins with a festival which usually falls on the twenty-fifth of the month Jeyt and ends with another festival which commonly takes place on the twenty-fifth of the month Asin. No one would think of swinging at any other time of the year. It is possible that this last custom may be nothing more than a pastime meant to while away some of the tedious hours of the inclement season; but its limitation to a certain clearly-defined portion of the year seems rather to point to a religious or magical origin. Possibly the intention may once have been to drive away the rain. We shall see immediately that swinging is sometimes resorted to for the purpose of expelling the powers of evil. About the middle of March the Hindoos observe a swinging festival of a different sort in honour of the god Krishna, whose image is placed in the seat or cradle of a swing and then, just when the dawn is breaking, rocked gently to and fro several times. The same ceremony is repeated at noon and at sunset. In the Rigveda the sun is called, by a natural metaphor, "the golden swing in the sky," and the expression helps us to understand a ceremony of Vedic India. A priest sat in a swing and touched with the span of his right hand at once the seat of the swing and the ground. In doing so he said, "The great lord has united himself with the great lady, the god has united himself with the goddess." Perhaps he meant to indicate in a graphic way that the sun had reached that lowest point of its course where it was nearest to the earth. In this connexion it is of interest to note that in the Esthonian celebration of St. John's Day or the summer solstice swings play, along with bonfires, the most prominent part. Girls sit and swing the whole night through, singing old songs to explain why they do so. For legend tells of an Esthonian prince who wooed and won an Islandic princess. But a wicked enchanter spirited away the lover to a desert island, where he languished in captivity, till his lady-love contrived to break the magic spell that bound him. Together they sailed home to Esthonia, which they reached on St. John's Day, and burnt their ship, resolved to stray no longer in far foreign lands. The swings in which the Esthonian maidens still rock themselves on St. John's Day are said to recall the ship in which the lovers tossed upon the stormy sea, and the bonfires commemorate the burning of it. When the fires have died out, the swings are laid aside and never used again either in the village or at the solitary alehouse until spring comes round once more. Here it is natural to connect both swings and bonfires with the apparent course of the sun, who reaches the highest and turning point of his orbit on St. John's Day. Bonfires and swings perhaps were originally charms intended to kindle and speed afresh on its heavenly road "the golden swing in the sky." Among the Letts of South Livonia and Curland the summer solstice is the occasion of a great festival of flowers, at which the people sing songs with the constant refrain of *lihgo, lihgo*. It has been proposed to derive the word *lihgo* from the Lettish verb *ligot*, "to swing," with reference to the sun swinging in the sky at this turning-point of his course.

At Tengaroeng, in Eastern Borneo, the priests and priestesses receive the inspiration of the spirits seated in swings and rocking themselves to and fro. Thus suspended in the air they appear to be in a peculiarly favourable position for catching the divine afflatus. One end of

the plank which forms the seat of the priest's swing is carved in the rude likeness of a crocodile's head; the swing of the priestess is similarly ornamented with a serpent's head.

Again, swings are used for the cure of sickness, but it is the doctor who rocks himself in them, not the patient. In North Borneo the Dyak medicine man will sometimes erect a swing in front of the sick man's house and sway backwards and forwards on it for the purpose of kicking away the disease, frightening away evil spirits, and catching the stray soul of the sufferer. Clearly in his passage through the air the physician is likely to collide with the disease and the evil spirits, both of which are sure to be loitering about in the neighbourhood of the patient, and the rude shock thus given to the malady and the demons may reasonably be expected to push or hustle them away. At Tengaroeng, in Eastern Borneo, a traveller witnessed a ceremony for the expulsion of an evil spirit in which swinging played a part. After four men in blue shirts bespangled with stars, and wearing coronets of red cloth decorated with beads and bells, had sought diligently for the devil, gabbling about on the floor and grunting withal, three hideous hags dressed in faded red petticoats were brought in with great pomp, carried on the shoulders of Malays, and took their seats, amid solemn silence, on the cradle of a swing, the ends of which were carved to represent the head and tail of a crocodile. Not a sound escaped from the crowd of spectators during this awe-inspiring ceremony; they regarded the business as most serious. The venerable dames then rocked to and fro on the swing, fanning themselves languidly with Chinese paper fans. At a later stage of the performance they and three girls discharged burning arrows at a sort of altar of banana leaves, maize, and grass. This completed the discomfiture of the devil.

The Athenians in antiquity celebrated an annual festival of swinging. Boards were hung from trees by ropes, and people sitting on them swung to and fro, while they sang songs of a loose or voluptuous character. The swinging went on both in public and private. Various explanations were given of the custom; the most generally received was as follows. When Bacchus came among men to make known to them the pleasures of wine, he lodged with a certain Icarus or Icarus, to whom he revealed the precious secret and bade him go forth and carry the glad tidings to all the world. So Icarus loaded a waggon with wine-skins, and set out on his travels, the dog Maera running beside him. He came to Attica, and there fell in with shepherds tending their sheep, to whom he gave of the wine. They drank greedily, but when some of them fell down dead drunk, their companions thought the stranger had poisoned them with intent to steal the sheep; so they knocked him on the head. The faithful dog ran home and guided his master's daughter Erigone to the body. At sight of it she was smitten with despair and hanged herself on a tree beside her dead father, but not until she had prayed that, unless the Athenians should avenge her sire's murder, their daughters might die the same death as she. Her curse was fulfilled, for soon many Athenian damsels hanged themselves for no obvious reason. An oracle informed the Athenians of the true cause of this epidemic of suicide; so they sought out the bodies of the unhappy pair and instituted the swinging festival to appease Erigone; and at the vintage they offered the first of the grapes to her and her father.

Thus the swinging festival at Athens was regarded by the ancients as an expiation for a suicide or suicides by hanging. This opinion is strongly confirmed by a statement of Varro, that it was unlawful to perform funeral rites in honour of persons who had died by hanging, but that in their case such rites were replaced by a custom of swinging images, as if in imitation of the death they had died. Servius says that the Athenians, failing to find the bodies of Icarus and Erigone on earth, made a pretence of seeking them in the air by swinging on ropes hung from trees; and he seems to have regarded the custom of swinging as a purification by means of air. This explanation probably comes very near the truth; indeed if we substitute "souls" for "bodies" in the wording of it we may almost accept it as exact. It

might be thought that the souls of persons who had died by hanging were, more than the souls of the other dead, hovering in the air, since their bodies were suspended in air at the moment of death. Hence it would be considered needful to purge the air of these vagrant spirits, and this might be done by swinging persons or things to and fro, in order that by their impact they might disperse and drive away the baleful ghosts. Thus the custom would be exactly analogous, on the one hand, to the practice of the Malay medicine-man, who swings to and fro in front of the patient's house in order to chase away the disease, or to frighten away evil spirits, or to catch the stray soul of the sick man, and, on the other hand, to the practice of the Central Australian aborigines who beat the air with their weapons and hands in order to drive the lingering ghost away to the grave. At Rome swinging seems to have formed part of the great Latin festival (*Feriae Latinae*), and its origin was traced to a search in the air for the body or even the soul of King Latinus, who had disappeared from earth after the battle with Mezentius, King of Caere.

Yet on the other hand there are circumstances which point to an intimate association, both at Athens and Rome, of these swinging festivals with an intention of promoting the growth of cultivated plants. Such circumstances are the legendary connexion of the Athenian festival with Bacchus, the custom of offering the first-fruits of the vintage to Erigone and Icarius, and at Rome the practice of hanging masks on trees at the time of sowing and in order to make the grapes grow better. Perhaps we can reconcile the two apparently discrepant effects attributed to swinging as a means of expiation on the one side and of fertilisation on the other, by supposing that in both cases the intention is to clear the air of dangerous influences, whether these are ghosts of the unburied dead or spiritual powers inimical to the growth of plants. Independent of both appears to be the notion that the higher you swing the higher will grow the crops. This last is homoeopathic or imitative magic pure and simple, without any admixture of the ideas of purification or expiation.

In modern Greece and Italy the custom of swinging as a festal rite, whatever its origin may be, is still observed in some places. At the small village of Koukoura in Elis an English traveller observed peasants swinging from a tree in honour of St. George, whose festival it was. On the Tuesday after Easter the maidens of Seriphos play their favourite game of the swing. They hang a rope from one wall to another of the steep, narrow, filthy street, and putting some clothes on it swing one after the other, singing as they swing. Young men who try to pass are called upon to pay toll in the shape of a penny, a song, and a swing. The words which the youth sings are generally these: "The gold is swung, the silver is swung, and swung too is my love with the golden hair"; to which the girl replies, "Who is it that swings me that I may gild him with my favour, that I may work him a fez all covered with pearls?" In the Greek island of Karpathos the villagers assemble at a given place on each of the four Sundays before Easter, a swing is erected, and the women swing one after the other, singing death wails such as they chant round the mimic tombs in church on the night of Good Friday. On Christmas Day peasant girls in some villages of Calabria fasten ropes to iron rings in the ceiling and swing on them, while they sing certain songs prescribed by custom for the occasion. The practice is regarded not merely as an amusement but also as an act of devotion. "It is a custom in Cadiz, when Christmas comes, to fasten swings in the courtyards of houses, and even in the houses themselves when there is no room for them outside. In the evenings lads and lasses assemble round the swings and pass the time happily in swinging amid joyous songs and cries. The swings are taken down when Carnival is come." The observance of the custom at Christmas, that is, at the winter solstice, suggests that in Calabria and Spain, as in Esthonia, the pastime may originally have been a magical rite designed to assist the sun in climbing the steep ascent to the top of the summer sky. If this were so, we might surmise that the gold and the golden hair mentioned by youths and maidens of

Seriphos as they swing refer to “the golden swing in the sky,” in other words to the sun whose golden lamp swings daily across the blue vault of heaven.

However that may be, it would seem that festivals of swinging are especially held in spring. This is true, for example, of North Africa, where such festivals are common. At some places in that part of the world the date of the swinging is the time of the apricots; at others it is said to be the spring equinox. In some places the festival lasts three days, and fathers who have had children born to them within the year bring them and swing them in the swings. In Corea “the fifth day of the fifth moon is called *Tano-nal*. Ancestors are then worshipped, and swings are put up in the yards of most houses for the amusement of the people. The women on this day may go about the streets; during the rest of the year they may go out only after dark. Dressed in their prettiest clothes, they visit the various houses and amuse themselves swinging. The swing is said to convey the idea of keeping cool in the approaching summer. It is one of the most popular feasts of the year.” Perhaps the reason here assigned for swinging may explain other instances of the custom; on the principles of homoeopathic magic the swinging may be regarded as a means of ensuring a succession of cool refreshing breezes during the oppressive heat of the ensuing summer.

Part IV. Adonis Attis Osiris

(Originally published in Volumes V and VI)

Book First. Adonis

I. The Myth of Adonis

The spectacle of the great changes which annually pass over the face of the earth has powerfully impressed the minds of men in all ages, and stirred them to meditate on the causes of transformations so vast and wonderful. Their curiosity has not been purely disinterested; for even the savage cannot fail to perceive how intimately his own life is bound up with the life of nature, and how the same processes which freeze the stream and strip the earth of vegetation menace him with extinction. At a certain stage of development men seem to have imagined that the means of averting the threatened calamity were in their own hands, and that they could hasten or retard the flight of the seasons by magic art. Accordingly they performed ceremonies and recited spells to make the rain to fall, the sun to shine, animals to multiply, and the fruits of the earth to grow. In course of time the slow advance of knowledge, which has dispelled so many cherished illusions, convinced at least the more thoughtful portion of mankind that the alternations of summer and winter, of spring and autumn, were not merely the result of their own magical rites, but that some deeper cause, some mightier power, was at work behind the shifting scenes of nature. They now pictured to themselves the growth and decay of vegetation, the birth and death of living creatures, as effects of the waxing or waning strength of divine beings, of gods and goddesses, who were born and died, who married and begot children, on the pattern of human life.

Thus the old magical theory of the seasons was displaced, or rather supplemented, by a religious theory. For although men now attributed the annual cycle of change primarily to corresponding changes in their deities, they still thought that by performing certain magical rites they could aid the god, who was the principle of life, in his struggle with the opposing principle of death. They imagined that they could recruit his failing energies and even raise him from the dead. The ceremonies which they observed for this purpose were in substance a dramatic representation of the natural processes which they wished to facilitate; for it is a familiar tenet of magic that you can produce any desired effect by merely imitating it. And as they now explained the fluctuations of growth and decay, of reproduction and dissolution, by the marriage, the death, and the rebirth or revival of the gods, their religious or rather magical dramas turned in great measure on these themes. They set forth the fruitful union of the powers of fertility, the sad death of one at least of the divine partners, and his joyful resurrection. Thus a religious theory was blended with a magical practice. The combination is familiar in history. Indeed, few religions have ever succeeded in wholly extricating themselves from the old trammels of magic. The inconsistency of acting on two opposite principles, however it may vex the soul of the philosopher, rarely troubles the common man; indeed he is seldom even aware of it. His affair is to act, not to analyse the motives of his action. If mankind had always been logical and wise, history would not be a long chronicle of folly and crime.

Of the changes which the seasons bring with them, the most striking within the temperate zone are those which affect vegetation. The influence of the seasons on animals, though great, is not nearly so manifest. Hence it is natural that in the magical dramas designed to dispel winter and bring back spring the emphasis should be laid on vegetation, and that trees and plants should in them more prominently than beasts and birds. Yet the two sides of life, the vegetable and the animal, were not dissociated in the minds of those who observed the ceremonies. Indeed they commonly believed that the tie between the animal and the vegetable world was even closer than it really is; hence they often combined the dramatic representation of reviving plants with a real or a dramatic union of the sexes for the purpose

of furthering at the same time and by the same act the multiplication of fruits, of animals, and of men. To them the principle of life and fertility, whether animal or vegetable, was one and indivisible. To live and to cause to live, to eat food and to beget children, these were the primary wants of men in the past, and they will be the primary wants of men in the future so long as the world lasts. Other things may be added to enrich and beautify human life, but unless these wants are first satisfied, humanity itself must cease to exist. These two things, therefore, food and children, were what men chiefly sought to procure by the performance of magical rites for the regulation of the seasons.

Nowhere, apparently, have these rites been more widely and solemnly celebrated than in the lands which border the Eastern Mediterranean. Under the names of Osiris, Tammuz, Adonis, and Attis, the peoples of Egypt and Western Asia represented the yearly decay and revival of life, especially of vegetable life, which they personified as a god who annually died and rose again from the dead. In name and detail the rites varied from place to place: in substance they were the same. The supposed death and resurrection of this oriental deity, a god of many names but of essentially one nature, is the subject of the present inquiry. We begin with Tammuz or Adonis.

The worship of Adonis was practised by the Semitic peoples of Babylonia and Syria, and the Greeks borrowed it from them as early as the seventh century before Christ. The true name of the deity was Tammuz: the appellation of Adonis is merely the Semitic *Adon*, "lord," a title of honour by which his worshippers addressed him. In the Hebrew text of the Old Testament the same name Adonai, originally perhaps Adoni, "my lord," is often applied to Jehovah. But the Greeks through a misunderstanding converted the title of honour into a proper name. While Tammuz or his equivalent Adonis enjoyed a wide and lasting popularity among peoples of the Semitic stock, there are grounds for thinking that his worship originated with a race of other blood and other speech, the Sumerians, who in the dawn of history inhabited the flat alluvial plain at the head of the Persian Gulf and created the civilization which was afterwards called Babylonian. The origin and affinities of this people are unknown; in physical type and language they differed from all their neighbours, and their isolated position, wedged in between alien races, presents to the student of mankind problems of the same sort as the isolation of the Basques and Etruscans among the Aryan peoples of Europe. An ingenious, but unproved, hypothesis would represent them as immigrants driven from central Asia by that gradual desiccation which for ages seems to have been converting once fruitful lands into a waste and burying the seats of ancient civilization under a sea of shifting sand. Whatever their place of origin may have been, it is certain that in Southern Babylonia the Sumerians attained at a very early period to a considerable pitch of civilization; for they tilled the soil, reared cattle, built cities, dug canals, and even invented a system of writing, which their Semitic neighbours in time borrowed from them. In the pantheon of this ancient people Tammuz appears to have been one of the oldest, though certainly not one of the most important figures. His name consists of a Sumerian phrase meaning "true son" or, in a fuller form, "true son of the deep water," and among the inscribed Sumerian texts which have survived the wreck of empires are a number of hymns in his honour, which were written down not later than about two thousand years before our era but were almost certainly composed at a much earlier time.

In the religious literature of Babylonia Tammuz appears as the youthful spouse or lover of Ishtar, the great mother goddess, the embodiment of the reproductive energies of nature. The references to their connexion with each other in myth and ritual are both fragmentary and obscure, but we gather from them that every year Tammuz was believed to die, passing away from the cheerful earth to the gloomy subterranean world, and that every year his divine mistress journeyed in quest of him "to the land from which there is no returning, to the house

of darkness, where dust lies on door and bolt.” During her absence the passion of love ceased to operate: men and beasts alike forgot to reproduce their kinds: all life was threatened with extinction. So intimately bound up with the goddess were the sexual functions of the whole animal kingdom that without her presence they could not be discharged. A messenger of the great god Ea was accordingly despatched to rescue the goddess on whom so much depended. The stern queen of the infernal regions, Allatu or Eresh-Kigal by name, reluctantly allowed Ishtar to be sprinkled with the Water of Life and to depart, in company probably with her lover Tammuz, that the two might return together to the upper world, and that with their return all nature might revive.

Laments for the departed Tammuz are contained in several Babylonian hymns, which liken him to plants that quickly fade. He is

*“A tamarisk that in the garden has drunk no water,
Whose crown in the field has brought forth no blossom.
A willow that rejoiced not by the watercourse,
A willow whose roots were torn up.
A herb that in the garden had drunk no water.”*

His death appears to have been annually mourned, to the shrill music of flutes, by men and women about midsummer in the month named after him, the month of Tammuz. The dirges were seemingly chanted over an effigy of the dead god, which was washed with pure water, anointed with oil, and clad in a red robe, while the fumes of incense rose into the air, as if to stir his dormant senses by their pungent fragrance and wake him from the sleep of death. In one of these dirges, inscribed *Lament of the Flutes for Tammuz*, we seem still to hear the voices of the singers chanting the sad refrain and to catch, like far-away music, the wailing notes of the flutes:—

*“At his vanishing away she lifts up a lament,
‘Oh my child!’ at his vanishing away she lifts up a lament;
‘My Damu!’ at his vanishing away she lifts up a lament.
‘My enchanter and priest!’ at his vanishing away she lifts up a lament,
At the shining cedar, rooted in a spacious place,
In Eanna, above and below, she lifts up a lament.
Like the lament that a house lifts up for its master, lifts she up a lament,
Like the lament that a city lifts up for its lord, lifts she up a lament.
Her lament is the lament for a herb that grows not in the bed,
Her lament is the lament for the corn that grows not in the ear.
Her chamber is a possession that brings not forth a possession,
A weary woman, a weary child, forspent.
Her lament is for a great river, where no willows grow,
Her lament is for a field, where corn and herbs grow not.
Her lament is for a pool, where fishes grow not.
Her lament is for a thicket of reeds, where no reeds grow.
Her lament is for woods, where tamarisks grow not.
Her lament is for a wilderness where no cypresses (?) grow.
Her lament is for the depth of a garden of trees, where honey and wine grow not.
Her lament is for meadows, where no plants grow.
Her lament is for a palace, where length of life grows not.”*

The tragical story and the melancholy rites of Adonis are better known to us from the descriptions of Greek writers than from the fragments of Babylonian literature or the brief reference of the prophet Ezekiel, who saw the women of Jerusalem weeping for Tammuz at

the north gate of the temple. Mirrored in the glass of Greek mythology, the oriental deity appears as a comely youth beloved by Aphrodite. In his infancy the goddess hid him in a chest, which she gave in charge to Persephone, queen of the nether world. But when Persephone opened the chest and beheld the beauty of the babe, she refused to give him back to Aphrodite, though the goddess of love went down herself to hell to ransom her dear one from the power of the grave. The dispute between the two goddesses of love and death was settled by Zeus, who decreed that Adonis should abide with Persephone in the under world for one part of the year, and with Aphrodite in the upper world for another part. At last the fair youth was killed in hunting by a wild boar, or by the jealous Ares, who turned himself into the likeness of a boar in order to compass the death of his rival. Bitterly did Aphrodite lament her loved and lost Adonis. The strife between the divine rivals for the possession of Adonis appears to be depicted on an Etruscan mirror. The two goddesses, identified by inscriptions, are stationed on either side of Jupiter, who occupies the seat of judgment and lifts an admonitory finger as he looks sternly towards Persephone. Overcome with grief the goddess of love buries her face in her mantle, while her pertinacious rival, grasping a branch in one hand, points with the other at a closed coffer, which probably contains the youthful Adonis. In this form of the myth, the contest between Aphrodite and Persephone for the possession of Adonis clearly reflects the struggle between Ishtar and Allatu in the land of the dead, while the decision of Zeus that Adonis is to spend one part of the year under ground and another part above ground is merely a Greek version of the annual disappearance and reappearance of Tammuz.

II. Adonis in Syria

The myth of Adonis was localized and his rites celebrated with much solemnity at two places in Western Asia. One of these was Byblus on the coast of Syria, the other was Paphos in Cyprus. Both were great seats of the worship of Aphrodite, or rather of her Semitic counterpart, Astarte; and of both, if we accept the legends, Cinyras, the father of Adonis, was king. Of the two cities Byblus was the more ancient; indeed it claimed to be the oldest city in Phoenicia, and to have been founded in the early ages of the world by the great god El, whom Greeks and Romans identified with Cronus and Saturn respectively. However that may have been, in historical times it ranked as a holy place, the religious capital of the country, the Mecca or Jerusalem of the Phoenicians. The city stood on a height beside the sea, and contained a great sanctuary of Astarte, where in the midst of a spacious open court, surrounded by cloisters and approached from below by staircases, rose a tall cone or obelisk, the holy image of the goddess. In this sanctuary the rites of Adonis were celebrated. Indeed the whole city was sacred to him, and the river Nahr Ibrahim, which falls into the sea a little to the south of Byblus, bore in antiquity the name of Adonis. This was the kingdom of Cinyras. From the earliest to the latest times the city appears to have been ruled by kings, assisted perhaps by a senate or council of elders. The first of the kings of whom we have historical evidence was a certain Zekar-baal. He reigned about a century before Solomon; yet from that dim past his figure stands out strangely fresh and lifelike in the journal of an Egyptian merchant or official named Wen-Ammon, which has fortunately been preserved in a papyrus. This man spent some time with the king at Byblus, and received from him, in return for rich presents, a supply of timber felled in the forests of Lebanon. Another king of Byblus, who bore the name of Sibitti-baal, paid tribute to Tiglath-pileser III., king of Assyria, about the year 739 b.c. Further, from an inscription of the fifth or fourth century before our era we learn that a king of Byblus, by name Yehaw-melech, son of Yehar-baal, and grandson of Adom-melech or Uri-melech, dedicated a pillared portico with a carved work of gold and a bronze altar to the goddess, whom he worshipped under the name of Baalath Gebal, that is, the female Baal of Byblus.

The names of these kings suggest that they claimed affinity with their god Baal or Moloch, for Moloch is only a corruption of *melech*, that is, "king." Such a claim at all events appears to have been put forward by many other Semitic kings. The early monarchs of Babylon were worshipped as gods in their lifetime. Mesha, king of Moab, perhaps called himself the son of his god Kemosh. Among the Aramean sovereigns of Damascus, mentioned in the Bible, we find more than one Ben-hadad, that is, "son of the god Hadad," the chief male deity of the Syrians; and Josephus tells us that down to his own time, in the first century of our era, Ben-hadad I., whom he calls simply Adad, and his successor, Hazael, continued to be worshipped as gods by the people of Damascus, who held processions daily in their honour. Some of the kings of Edom seem to have gone a step farther and identified themselves with the god in their lifetime; at all events they bore his name Hadad without any qualification. King Barrekub, who reigned over Samal in North-Western Syria in the time of Tiglath-pileser (745-727 b.c.) appears from his name to have reckoned himself a son of Rekub-el, the god to whose favour he deemed himself indebted for the kingdom. The kings of Tyre traced their descent from Baal, and apparently professed to be gods in their own person. Several of them bore names which are partly composed of the names of Baal and Astarte; one of them bore the name of Baal pure and simple. The Baal whom they personated was no doubt Melcarth, "the king of the city," as his name signifies, the great god whom the Greeks identified with Hercules; for the equivalence of the Baal of Tyre both to Melcarth and to

Hercules is placed beyond the reach of doubt by a bilingual inscription, in Phoenician and Greek, which was found in Malta.

In like manner the kings of Byblus may have assumed the style of Adonis; for Adonis was simply the divine Adon or "lord" of the city, a title which hardly differs in sense from Baal ("master") and Melech ("king"). This conjecture would be confirmed if one of the kings of Byblus actually bore, as Renan believed, the name of Adom-melech, that is, Adonis Melech, the Lord King. But, unfortunately, the reading of the inscription in which the name occurs is doubtful. Some of the old Canaanite kings of Jerusalem appear to have played the part of Adonis in their lifetime, if we may judge from their names, Adoni-bezek and Adoni-zedek, which are divine rather than human titles. Adoni-zedek means "lord of righteousness," and is therefore equivalent to Melchizedek, that is, "king of righteousness," the title of that mysterious king of Salem and priest of God Most High, who seems to have been neither more nor less than one of these same Canaanitish kings of Jerusalem. Thus if the old priestly kings of Jerusalem regularly played the part of Adonis, we need not wonder that in later times the women of Jerusalem used to weep for Tammuz, that is, for Adonis, at the north gate of the temple. In doing so they may only have been continuing a custom which had been observed in the same place by the Canaanites long before the Hebrews invaded the land. Perhaps the "sacred men," as they were called, who lodged within the walls of the temple at Jerusalem down almost to the end of the Jewish kingdom, may have acted the part of the living Adonis to the living Astarte of the women. At all events we know that in the cells of these strange clergy women wove garments for the *asherim*, the sacred poles which stood beside the altar and which appear to have been by some regarded as embodiments of Astarte. Certainly these "sacred men" must have discharged some function which was deemed religious in the temple at Jerusalem; and we can hardly doubt that the prohibition to bring the wages of prostitution into the house of God, which was published at the very same time that the men were expelled from the temple, was directed against an existing practice. In Palestine as in other Semitic lands the hire of sacred prostitutes was probably dedicated to the deity as one of his regular dues: he took tribute of men and women as of flocks and herds, of fields and vineyards and oliveyards.

But if Jerusalem had been from of old the seat of a dynasty of spiritual potentates or Grand Lamas, who held the keys of heaven and were revered far and wide as kings and gods in one, we can easily understand why the upstart David chose it for the capital of the new kingdom which he had won for himself at the point of the sword. The central position and the natural strength of the virgin fortress need not have been the only or the principal inducements which decided the politic monarch to transfer his throne from Hebron to Jerusalem. By serving himself heir to the ancient kings of the city he might reasonably hope to inherit their ghostly repute along with their broad acres, to wear their nimbus as well as their crown. So at a later time when he had conquered Ammon and captured the royal city of Rabbah, he took the heavy gold crown of the Ammonite god Milcom and placed it on his own brows, thus posing as the deity in person. It can hardly, therefore, be unreasonable to suppose that he pursued precisely the same policy at the conquest of Jerusalem. And on the other side the calm confidence with which the Jebusite inhabitants of that city awaited his attack, jeering at the besiegers from the battlements, may well have been born of a firm trust in the local deity rather than in the height and thickness of their grim old walls. Certainly the obstinacy with which in after ages the Jews defended the same place against the armies of Assyria and Rome sprang in large measure from a similar faith in the God of Zion.

Be that as it may, the history of the Hebrew kings presents some features which may perhaps, without straining them too far, be interpreted as traces or relics of a time when they or their predecessors played the part of a divinity, and particularly of Adonis, the divine lord of the

land. In life the Hebrew king was regularly addressed as *Adoni-ham-melech*, "My Lord the King," and after death he was lamented with cries of *Hoi ahi! Hoi Adon!* "Alas my brother! alas Lord!" These exclamations of grief uttered for the death of a king of Judah were, we can hardly doubt, the very same cries which the weeping women of Jerusalem uttered in the north porch of the temple for the dead Tammuz. However, little stress can be laid on such forms of address, since *Adon* in Hebrew, like "lord" in English, was a secular as well as a religious title. But whether identified with Adonis or not, the Hebrew kings certainly seem to have been regarded as in a sense divine, as representing and to some extent embodying Jehovah on earth. For the king's throne was called the throne of Jehovah; and the application of the holy oil to his head was believed to impart to him directly a portion of the divine spirit. Hence he bore the title of Messiah, which with its Greek equivalent Christ means no more than "the Anointed One." Thus when David had cut off the skirt of Saul's robe in the darkness of a cave where he was in hiding, his heart smote him for having laid sacrilegious hands upon *Adoni Messiah Jehovah*, "my Lord the Anointed of Jehovah."

Like other divine or semi-divine rulers the Hebrew kings were apparently held answerable for famine and pestilence. When a dearth, caused perhaps by a failure of the winter rains, had visited the land for three years, King David inquired of the oracle, which discreetly laid the blame not on him but on his predecessor Saul. The dead king was indeed beyond the reach of punishment, but his sons were not. So David had seven of them sought out, and they were hanged before the Lord at the beginning of barley harvest in spring: and all the long summer the mother of two of the dead men sat under the gallows-tree, keeping off the jackals by night and the vultures by day, till with the autumn the blessed rain came at last to wet their dangling bodies and fertilize the barren earth once more. Then the bones of the dead were taken down from the gibbet and buried in the sepulchre of their fathers. The season when these princes were put to death, at the beginning of barley harvest, and the length of time they hung on the gallows, seem to show that their execution was not a mere punishment, but that it partook of the nature of a rain-charm. For it is a common belief that rain can be procured by magical ceremonies performed with dead men's bones, and it would be natural to ascribe a special virtue in this respect to the bones of princes, who are often expected to give rain in their life. When the Israelites demanded of Samuel that he should give them a king, the indignant prophet, loth to be superseded by the upstart Saul, called on the Lord to send thunder and rain, and the Lord did so at once, though the season was early summer and the reapers were at work in the wheat-fields, a time when in common years no rain falls from the cloudless Syrian sky. The pious historian who records the miracle seems to have regarded it as a mere token of the wrath of the deity, whose voice was heard in the roll of thunder; but we may surmise that in giving this impressive proof of his control of the weather Samuel meant to hint gently at the naughtiness of asking for a king to do for the fertility of the land what could be done quite as well and far more cheaply by a prophet.

In Israel the excess as well as the deficiency of rain seems to have been set down to the wrath of the deity. When the Jews returned to Jerusalem from the great captivity and assembled for the first time in the square before the ruined temple, it happened that the weather was very wet, and as the people sat shelterless and drenched in the piazza they trembled at their sin and at the rain. In all ages it has been the strength or the weakness of Israel to read the hand of God in the changing aspects of nature, and we need not wonder that at such a time and in so dismal a scene, with a lowering sky overhead, the blackened ruins of the temple before their eyes, and the steady drip of the rain over all, the returned exiles should have been oppressed with a double sense of their own guilt and of the divine anger. Perhaps, though they hardly knew it, memories of the bright sun, fat fields, and broad willow-fringed rivers of Babylon, which had been so long their home, lent a deeper shade of sadness to the austerity

of the Judean landscape, with its gaunt grey hills stretching away, range beyond range, to the horizon, or dipping eastward to the far line of sombre blue which marks the sullen waters of the Dead Sea.

In the days of the Hebrew monarchy the king was apparently credited with the power of making sick and making whole. Thus the king of Syria sent a leper to the king of Israel to be healed by him, just as scrofulous patients used to fancy that they could be cured by the touch of a French or English king. However, the Hebrew monarch, with more sense than has been shown by his royal brothers in modern times, professed himself unable to work any such miracle. "Am I God," he asked, "to kill and to make alive, that this man doth send unto me to recover a man of his leprosy?" On another occasion, when pestilence ravaged the country and the excited fancy of the plague-stricken people saw in the clouds the figure of the Destroying Angel with his sword stretched out over Jerusalem, they laid the blame on King David, who had offended the touchy and irascible deity by taking a census. The prudent monarch bowed to the popular storm, acknowledged his guilt, and appeased the angry god by offering burnt sacrifices on the threshing-floor of Araunah, one of the old Jebusite inhabitants of Jerusalem. Then the angel sheathed his flashing sword, and the shrieks of the dying and the lamentations for the dead no longer resounded in the streets.

To this theory of the sanctity, nay the divinity of the Hebrew kings it may be objected that few traces of it survive in the historical books of the Bible. But the force of the objection is weakened by a consideration of the time and the circumstances in which these books assumed their final shape. The great prophets of the eighth and the seventh centuries by the spiritual ideals and the ethical fervour of their teaching had wrought a religious and moral reform perhaps unparalleled in history. Under their influence an austere monotheism had replaced the old sensuous worship of the natural powers: a stern Puritanical spirit, an unbending rigour of mind, had succeeded to the old easy supple temper with its weak compliances, its wax-like impressionability, its proclivities to the sins of the flesh. And the moral lessons which the prophets inculcated were driven home by the political events of the time, above all by the ever-growing pressure of the great Assyrian empire on the petty states of Palestine. The long agony of the siege of Samaria must have been followed with trembling anxiety by the inhabitants of Judea, for the danger was at their door. They had only to lift up their eyes and look north to see the blue hills of Ephraim, at whose foot lay the beleaguered city. Its final fall and the destruction of the northern kingdom could not fail to fill every thoughtful mind in the sister realm with sad forebodings. It was as if the sky had lowered and thunder muttered over Jerusalem. Thenceforth to the close of the Jewish monarchy, about a century and a half later, the cloud never passed away, though once for a little it seemed to lift, when Sennacherib raised the siege of Jerusalem and the watchers on the walls beheld the last of the long line of spears and standards disappearing, the last squadron of the blue-coated Assyrian cavalry sweeping, in a cloud of dust, out of sight.

It was in this period of national gloom and despondency that the two great reformations of Israel's religion were accomplished, the first by king Hezekiah, the second a century later by king Josiah. We need not wonder then that the reformers who in that and subsequent ages composed or edited the annals of their nation should have looked as sourly on the old unreformed paganism of their forefathers as the fierce zealots of the Commonwealth looked on the far more innocent pastimes of Merry England; and that in their zeal for the glory of God they should have blotted many pages of history lest they should perpetuate the memory of practices to which they traced the calamities of their country. All the historical books passed through the office of the Puritan censor, and we can hardly doubt that they emerged from it stript of many gay feathers which they had flaunted when they went in. Among the shed plumage may well have been the passages which invested human beings, whether kings

or commoners, with the attributes of deity. Certainly no pages could seem to the censor more rankly blasphemous; on none, therefore, was he likely to press more firmly the official sponge.

But if Semitic kings in general and the kings of Byblus in particular often assumed the style of Baal or Adonis, it follows that they may have mated with the goddess, the Baalath or Astarte of the city. Certainly we hear of kings of Tyre and Sidon who were priests of Astarte. Now to the agricultural Semites the Baal or god of a land was the author of all its fertility; he it was who produced the corn, the wine, the figs, the oil, and the flax, by means of his quickening waters, which in the arid parts of the Semitic world are oftener springs, streams, and underground flow than the rains of heaven. Further, "the life-giving power of the god was not limited to vegetative nature, but to him also was ascribed the increase of animal life, the multiplication of flocks and herds, and, not least, of the human inhabitants of the land. For the increase of animate nature is obviously conditioned, in the last resort, by the fertility of the soil, and primitive races, which have not learned to differentiate the various kinds of life with precision, think of animate as well as vegetable life as rooted in the earth and sprung from it. The earth is the great mother of all things in most mythological philosophies, and the comparison of the life of mankind, or of a stock of men, with the life of a tree, which is so common in Semitic as in other primitive poetry, is not in its origin a mere figure. Thus where the growth of vegetation is ascribed to a particular divine power, the same power receives the thanks and homage of his worshippers for the increase of cattle and of men. Firstlings as well as first-fruits were offered at the shrines of the Baalim, and one of the commonest classes of personal names given by parents to their sons or daughters designates the child as the gift of the god." In short, "the Baal was conceived as the male principle of reproduction, the husband of the land which he fertilised." So far, therefore, as the Semite personified the reproductive energies of nature as male and female, as a Baal and a Baalath, he appears to have identified the male power especially with water and the female especially with earth. On this view plants and trees, animals and men, are the offspring or children of the Baal and Baalath.

If, then, at Byblus and elsewhere, the Semitic king was allowed, or rather required, to personate the god and marry the goddess, the intention of the custom can only have been to ensure the fertility of the land and the increase of men and cattle by means of homoeopathic magic. There is reason to think that a similar custom was observed from a similar motive in other parts of the ancient world, and particularly at Nemi, where both the male and the female powers, the Dianus and Diana, were in one aspect of their nature personifications of the life-giving waters.

The last king of Byblus bore the ancient name of Cinyras, and was beheaded by Pompey the Great for his tyrannous excesses. His legendary namesake Cinyras is said to have founded a sanctuary of Aphrodite, that is, of Astarte, at a place on Mount Lebanon, distant a day's journey from the capital. The spot was probably Aphaca, at the source of the river Adonis, half-way between Byblus and Baalbec; for at Aphaca there was a famous grove and sanctuary of Astarte which Constantine destroyed on account of the flagitious character of the worship. The site of the temple has been discovered by modern travellers near the miserable village which still bears the name of Afka at the head of the wild, romantic, wooded gorge of the Adonis. The hamlet stands among groves of noble walnut-trees on the brink of the lyn. A little way off the river rushes from a cavern at the foot of a mighty amphitheatre of towering cliffs to plunge in a series of cascades into the awful depths of the glen. The deeper it descends, the ranker and denser grows the vegetation, which, sprouting from the crannies and fissures of the rocks, spreads a green veil over the roaring or murmuring stream in the tremendous chasm below. There is something delicious, almost intoxicating, in the freshness

of these tumbling waters, in the sweetness and purity of the mountain air, in the vivid green of the vegetation. The temple, of which some massive hewn blocks and a fine column of Syenite granite still mark the site, occupied a terrace facing the source of the river and commanding a magnificent prospect. Across the foam and the roar of the waterfalls you look up to the cavern and away to the top of the sublime precipices above. So lofty is the cliff that the goats which creep along its ledges to browse on the bushes appear like ants to the spectator hundreds of feet below. Seaward the view is especially impressive when the sun floods the profound gorge with golden light, revealing all the fantastic buttresses and rounded towers of its mountain rampart, and falling softly on the varied green of the woods which clothe its depths. It was here that, according to the legend, Adonis met Aphrodite for the first or the last time, and here his mangled body was buried. A fairer scene could hardly be imagined for a story of tragic love and death. Yet, sequestered as the valley is and must always have been, it is not wholly deserted. A convent or a village may be observed here and there standing out against the sky on the top of some beetling crag, or clinging to the face of a nearly perpendicular cliff high above the foam and the din of the river; and at evening the lights that twinkle through the gloom betray the presence of human habitations on slopes which might seem inaccessible to man. In antiquity the whole of the lovely vale appears have been dedicated to Adonis, and to this day it is haunted by his memory; for the heights which shut it in are crested at various points by ruined monuments of his worship, some of them overhanging dreadful abysses, down which it turns the head dizzy to look and see the eagles wheeling about their nests far below. One such monument exists at Ghineh. The face of a great rock, above a roughly hewn recess, is here carved with figures of Adonis and Aphrodite. He is portrayed with spear in rest, awaiting the attack of a bear, while she is seated in an attitude of sorrow. Her grief-stricken figure may well be the mourning Aphrodite of the Lebanon described by Macrobius, and the recess in the rock is perhaps her lover's tomb. Every year, in the belief of his worshippers, Adonis was wounded to death on the mountains, and every year the face of nature itself was dyed with his sacred blood. So year by year the Syrian damsels lamented his untimely fate, while the red anemone, his flower, bloomed among the cedars of Lebanon, and the river ran red to the sea, fringing the winding shores of the blue Mediterranean, whenever the wind set inshore, with a sinuous, band of crimson.

III. Adonis in Cyprus

The island of Cyprus lies but one day's sail from the coast of Syria. Indeed, on fine summer evenings its mountains may be descried looming low and dark against the red fires of sunset. With its rich mines of copper and its forests of firs and stately cedars, the island naturally attracted a commercial and maritime people like the Phoenicians; while the abundance of its corn, its wine, and its oil must have rendered it in their eyes a Land of Promise by comparison with the niggardly nature of their own rugged coast, hemmed in between the mountains and the sea. Accordingly they settled in Cyprus at a very early date and remained there long after the Greeks had also established themselves on its shores; for we know from inscriptions and coins that Phoenician kings reigned at Citium, the Chittim of the Hebrews, down to the time of Alexander the Great. Naturally the Semitic colonists brought their gods with them from the mother-land. They worshipped Baal of the Lebanon, who may well have been Adonis, and at Amathus on the south coast they instituted the rites of Adonis and Aphrodite, or rather Astarte. Here, as at Byblus, these rites resembled the Egyptian worship of Osiris so closely that some people even identified the Adonis of Amathus with Osiris. The Tyrian Melcarth or Moloch was also worshipped at Amathus, and the tombs discovered in the neighbourhood prove that the city remained Phoenician to a late period.

But the great seat of the worship of Aphrodite and Adonis in Cyprus was Paphos on the south-western side of the island. Among the petty kingdoms into which Cyprus was divided from the earliest times until the end of the fourth century before our era Paphos must have ranked with the best. It is a land of hills and billowy ridges, diversified by fields and vineyards and intersected by rivers, which in the course of ages have carved for themselves beds of such tremendous depth that travelling in the interior is difficult and tedious. The lofty range of Mount Olympus (the modern Troodos), capped with snow the greater part of the year, screens Paphos from the northerly and easterly winds and cuts it off from the rest of the island. On the slopes of the range the last pine-woods of Cyprus linger, sheltering here and there monasteries in scenery not unworthy of the Apennines. The old city of Paphos occupied the summit of a hill about a mile from the sea; the newer city sprang up at the harbour some ten miles off. The sanctuary of Aphrodite at Old Paphos (the modern Kuklia) was one of the most celebrated shrines in the ancient world. From the earliest to the latest times it would seem to have preserved its essential features unchanged. For the sanctuary is represented on coins of the Imperial age, and these representations agree closely with little golden models of a shrine which were found in two of the royal graves at Mycenae. Both on the coins and in the models we see a façade surmounted by a pair of doves and divided into three compartments or chapels, of which the central one is crowned by a lofty superstructure. In the golden models each chapel contains a pillar standing in a pair of horns: the central superstructure is crowned by two pairs of horns, one within the other; and the two side chapels are in like manner crowned each with a pair of horns and a single dove perched on the outer horn of each pair. On the coins each of the side chapels contains a pillar or candelabra-like object: the central chapel contains a cone and is flanked by two high columns, each terminating in a pair of ball-topped pinnacles, with a star and crescent appearing between the tops of the columns. The doves are doubtless the sacred doves of Aphrodite or Astarte, and the horns and pillars remind us of the similar religious emblems which have been found in the great prehistoric palace of Cnossus in Crete, as well as on many monuments of the Mycenaean or Minoan age of Greece. If antiquaries are right in regarding the golden models as copies of the Paphian shrine, that shrine must have suffered little

outward change for more than a thousand years; for the royal graves at Mycenae, in which the models were found, can hardly be of later date than the twelfth century before our era.

Thus the sanctuary of Aphrodite at Paphos was apparently of great antiquity. According to Herodotus, it was founded by Phoenician colonists from Ascalon; but it is possible that a native goddess of fertility was worshipped on the spot before the arrival of the Phoenicians, and that the newcomers identified her with their own Baalath or Astarte, whom she may have closely resembled. If two deities were thus fused in one, we may suppose that they were both varieties of that great goddess of motherhood and fertility whose worship appears to have been spread all over Western Asia from a very early time. The supposition is confirmed as well by the archaic shape of her image as by the licentious character of her rites; for both that shape and those rites were shared by her with other Asiatic deities. Her image was simply a white cone or pyramid. In like manner, a cone was the emblem of Astarte at Byblus, of the native goddess whom the Greeks called Artemis at Perga in Pamphylia, and of the sun-god Heliogabalus at Emesa in Syria. Conical stones, which apparently served as idols, have also been found at Golgi in Cyprus, and in the Phoenician temples of Malta; and cones of sandstone came to light at the shrine of the "Mistress of Torquoise" among the barren hills and frowning precipices of Sinai. The precise significance of such an emblem remains as obscure as it was in the time of Tacitus. It appears to have been customary to anoint the sacred cone with olive oil at a solemn festival, in which people from Lycia and Caria participated. The custom of anointing a holy stone has been observed in many parts of the world; for example, in the sanctuary of Apollo at Delphi. To this day the old custom appears to survive at Paphos, for "in honour of the Maid of Bethlehem the peasants of Kuklia anointed lately, and probably still anoint each year, the great corner-stones of the ruined Temple of the Paphian Goddess. As Aphrodite was supplicated once with cryptic rites, so is Mary entreated still by Moslems as well as Christians, with incantations and passings through perforated stones, to remove the curse of barrenness from Cypriote women, or increase the manhood of Cypriote men." Thus the ancient worship of the goddess of fertility is continued under a different name. Even the name of the old goddess is retained in some parts of the island; for in more than one chapel the Cypriote peasants adore the mother of Christ under the title Panaghia Aphroditessa.

In Cyprus it appears that before marriage all women were formerly obliged by custom to prostitute themselves to strangers at the sanctuary of the goddess, whether she went by the name of Aphrodite, Astarte, or what not. Similar customs prevailed in many parts of Western Asia. Whatever its motive, the practice was clearly regarded, not as an orgy of lust, but as a solemn religious duty performed in the service of that great Mother Goddess of Western Asia whose name varied, while her type remained constant, from place to place. Thus at Babylon every woman, whether rich or poor, had once in her life to submit to the embraces of a stranger at the temple of Mylitta, that is, of Ishtar or Astarte, and to dedicate to the goddess the wages earned by this sanctified harlotry. The sacred precinct was crowded with women waiting to observe the custom. Some of them had to wait there for years. At Heliopolis or Baalbec in Syria, famous for the imposing grandeur of its ruined temples, the custom of the country required that every maiden should prostitute herself to a stranger at the temple of Astarte, and matrons as well as maids testified their devotion to the goddess in the same manner. The emperor Constantine abolished the custom, destroyed the temple, and built a church in its stead. In Phoenician temples women prostituted themselves for hire in the service of religion, believing that by this conduct they propitiated the goddess and won her favour. "It was a law of the Amorites, that she who was about to marry should sit in fornication seven days by the gate." At Byblus the people shaved their heads in the annual mourning for Adonis. Women who refused to sacrifice their hair had to give themselves up to

strangers on a certain day of the festival, and the money which they thus earned was devoted to the goddess. This custom may have been a mitigation of an older rule which at Byblus as elsewhere formerly compelled every woman without exception to sacrifice her virtue in the service of religion. I have already suggested a reason why the offering of a woman's hair was accepted as an equivalent for the surrender of her person. We are told that in Lydia all girls were obliged to prostitute themselves in order to earn a dowry; but we may suspect that the real motive of the custom was devotion rather than economy. The suspicion is confirmed by a Greek inscription found at Tralles in Lydia, which proves that the practice of religious prostitution survived in that country as late as the second century of our era. It records of a certain woman, Aurelia Aemilia by name, not only that she herself served the god in the capacity of a harlot at his express command, but that her mother and other female ancestors had done the same before her; and the publicity of the record, engraved on a marble column which supported a votive offering, shows that no stain attached to such a life and such a parentage. In Armenia the noblest families dedicated their daughters to the service of the goddess Anaitis in her temple at Acilisena, where the damsels acted as prostitutes for a long time before they were given in marriage. Nobody scrupled to take one of these girls to wife when her period of service was over. Again, the goddess Ma was served by a multitude of sacred harlots at Comana in Pontus, and crowds of men and women flocked to her sanctuary from the neighbouring cities and country to attend the biennial festivals or to pay their vows to the goddess.

If we survey the whole of the evidence on this subject, some of which has still to be laid before the reader, we may conclude that a great Mother Goddess, the personification of all the reproductive energies of nature, was worshipped under different names but with a substantial similarity of myth and ritual by many peoples of Western Asia; that associated with her was a lover, or rather series of lovers, divine yet mortal, with whom she mated year by year, their commerce being deemed essential to the propagation of animals and plants, each in their several kind; and further, that the fabulous union of the divine pair was simulated and, as it were, multiplied on earth by the real, though temporary, union of the human sexes at the sanctuary of the goddess for the sake of thereby ensuring the fruitfulness of the ground and the increase of man and beast. And if the conception of such a Mother Goddess dates, as seems probable, from a time when the institution of marriage was either unknown or at most barely tolerated as an immoral infringement of old communal rights, we can understand both why the goddess herself was regularly supposed to be at once unmarried and unchaste, and why her worshippers were obliged to imitate her more or less completely in these respects. For had she been a divine wife united to a divine husband, the natural counterpart of their union would have been the lawful marriage of men and women, and there would have been no need to resort to a system of prostitution or promiscuity in order to effect those purposes which, on the principles of homoeopathic magic, might in that case have been as well or better attained by the legitimate intercourse of the sexes in matrimony. Formerly, perhaps, every woman was obliged to submit at least once in her life to the exercise of those marital rights which at a still earlier period had theoretically belonged in permanence to all the males of the tribe. But in course of time, as the institution of individual marriage grew in favour, and the old communism fell more and more into discredit, the revival of the ancient practice even for a single occasion in a woman's life became ever more repugnant to the moral sense of the people, and accordingly they resorted to various expedients for evading in practice the obligation which they still acknowledged in theory. One of these evasions was to let the woman offer her hair instead of her person; another apparently was to substitute an obscene symbol for the obscene act. But while the majority of women thus contrived to observe the forms of religion without sacrificing their virtue, it was still thought necessary to the general welfare that a certain number of them should discharge the old obligation in the

old way. These became prostitutes either for life or for a term of years at one of the temples: dedicated to the service of religion, they were invested with a sacred character, and their vocation, far from being deemed infamous, was probably long regarded by the laity as an exercise of more than common virtue, and rewarded with a tribute of mixed wonder, reverence, and pity, not unlike that which in some parts of the world is still paid to women who seek to honour their Creator in a different way by renouncing the natural functions of their sex and the tenderest relations of humanity. It is thus that the folly of mankind finds vent in opposite extremes alike harmful and deplorable.

At Paphos the custom of religious prostitution is said to have been instituted by King Cinyras, and to have been practised by his daughters, the sisters of Adonis, who, having incurred the wrath of Aphrodite, mated with strangers and ended their days in Egypt. In this form of the tradition the wrath of Aphrodite is probably a feature added by a later authority, who could only regard conduct which shocked his own moral sense as a punishment inflicted by the goddess instead of as a sacrifice regularly enjoined by her on all her devotees. At all events the story indicates that the princesses of Paphos had to conform to the custom as well as women of humble birth.

The legendary history of the royal and priestly family of the Cinyrads is instructive. We are told that a Syrian man, by name Sandacus, migrated to Cilicia, married Pharnace, daughter of Megassares, king of Hyria, and founded the city of Celenderis. His wife bore him a son, Cinyras, who in time crossed the sea with a company of people to Cyprus, wedded Metharme, daughter of Pygmalion, king of the island, and founded Paphos. These legends seem to contain reminiscences of kingdoms in Cilicia and Cyprus which passed in the female line, and were held by men, sometimes foreigners, who married the hereditary princesses. There are some indications that Cinyras was not in fact the founder of the temple at Paphos. An older tradition ascribed the foundation to a certain Aerias, whom some regarded as a king, and others as the goddess herself. Moreover, Cinyras or his descendants at Paphos had to reckon with rivals. These were the Tamirads, a family of diviners who traced their descent from Tamiras, a Cilician augur. At first it was arranged that both families should preside at the ceremonies, but afterwards the Tamirads gave way to the Cinyrads. Many tales were told of Cinyras, the founder of the dynasty. He was a priest of Aphrodite as well as a king, and his riches passed into a proverb. To his descendants, the Cinyrads, he appears to have bequeathed his wealth and his dignities; at all events, they reigned as kings of Paphos and served the goddess as priests. Their dead bodies, with that of Cinyras himself, were buried in the sanctuary. But by the fourth century before our era the family had declined and become nearly extinct. When Alexander the Great expelled a king of Paphos for injustice and wickedness, his envoys made search for a member of the ancient house to set on the throne of his fathers. At last they found one of them living in obscurity and earning his bread as a market gardener. He was in the very act of watering his beds when the king's messengers carried him off, much to his astonishment, to receive the crown at the hands of their master. Yet if the dynasty decayed, the shrine of the goddess, enriched by the offerings of kings and private persons, maintained its reputation for wealth down to Roman times. When Ptolemy Auletes, king of Egypt, was expelled by his people in 57 b.c., Cato offered him the priesthood of Paphos as a sufficient consolation in money and dignity for the loss of a throne.

Among the stories which were told of Cinyras, the ancestor of these priestly kings and the father of Adonis, there are some that deserve our attention. In the first place, he is said to have begotten his son Adonis in incestuous intercourse with his daughter Myrrha at a festival of the corn-goddess, at which women robed in white were wont to offer corn-wreaths as first-fruits of the harvest and to observe strict chastity for nine days. Similar cases of incest with a daughter are reported of many ancient kings. It seems unlikely that such reports are without

foundation, and perhaps equally improbable that they refer to mere fortuitous outbursts of unnatural lust. We may suspect that they are based on a practice actually observed for a definite reason in certain special circumstances. Now in countries where the royal blood was traced through women only, and where consequently the king held office merely in virtue of his marriage with an hereditary princess, who was the real sovereign, it appears to have often happened that a prince married his own sister, the princess royal, in order to obtain with her hand the crown which otherwise would have gone to another man, perhaps to a stranger. May not the same rule of descent have furnished a motive for incest with a daughter? For it seems a natural corollary from such a rule that the king was bound to vacate the throne on the death of his wife, the queen, since he occupied it only by virtue of his marriage with her. When that marriage terminated, his right to the throne terminated with it and passed at once to his daughter's husband. Hence if the king desired to reign after his wife's death, the only way in which he could legitimately continue to do so was by marrying his daughter, and thus prolonging through her the title which had formerly been his through her mother.

In this connexion it is worth while to remember that at Rome the Flamen Dialis was bound to vacate his priesthood on the death of his wife, the Flaminica. The rule would be intelligible if the Flaminica had originally been the more important functionary of the two, and if the Flamen held office only by virtue of his marriage with her. Elsewhere I have shown reason to suppose that he and his wife represented an old line of priestly kings and queens, who played the parts of Jupiter and Juno, or perhaps rather Dianus and Diana, respectively. If the supposition is correct, the custom which obliged him to resign his priesthood on the death of his wife seems to prove that of the two deities whom they personated, the goddess, whether named Juno or Diana, was indeed the better half. But at Rome the goddess Juno always played an insignificant part; whereas at Nemi her old double, Diana, was all-powerful, casting her mate, Dianus or Virbius, into deep shadow. Thus a rule which points to the superiority of the Flaminica over the Flamen, appears to indicate that the divine originals of the two were Dianus and Diana rather than Jupiter and Juno; and further, that if Jupiter and Juno at Rome stood for the principle of father-kin, or the predominance of the husband over the wife, Dianus and Diana at Nemi stood for the older principle of mother-kin, or the predominance of the wife in matters of inheritance over the husband. If, then, I am right in holding that the kingship at Rome was originally a plebeian institution and descended through women, we must conclude that the people who founded the sanctuary of Diana at Nemi were of the same plebeian stock as the Roman kings, that they traced descent in the female line, and that they worshipped a great Mother Goddess, not a great Father God. That goddess was Diana; her maternal functions are abundantly proved by the votive offerings found at her ancient shrine among the wooded hills. On the other hand, the patricians, who afterwards invaded the country, brought with them father-kin in its strictest form, and consistently enough paid their devotions rather to Father Jove than to Mother Juno.

A parallel to what I conjecture to have been the original relation of the Flaminica to her husband the Flamen may to a certain extent be found among the Khasis of Assam, who preserve to this day the ancient system of mother-kin in matters of inheritance and religion. For among these people the propitiation of deceased ancestors is deemed essential to the welfare of the community, and of all their ancestors they revere most the primaeval ancestress of the clan. Accordingly in every sacrifice a priest must be assisted by a priestess; indeed, we are told that he merely acts as her deputy, and that she "is without doubt a survival of the time when, under the matriarchate, the priestess was the agent for the performance of all religious ceremonies." It does not appear that the priest need be the husband of the priestess; but in the Khyrim State, where each division has its own goddess to whom sacrifices are offered, the priestess is the mother, sister, niece, or other maternal relation of

the priest. It is her duty to prepare all the sacrificial articles, and without her assistance the sacrifice cannot take place. Here, then, as among the ancient Romans on my hypothesis, we have the superiority of the priestess over the priest based on a corresponding superiority of the goddess or divine ancestress over the god or divine ancestor; and here, as at Rome, a priest would clearly have to vacate office if he had no woman of the proper relationship to assist him in the performance of his sacred duties.

Further, I have conjectured that as representatives of Jupiter and Juno respectively the Flamen and Flaminica at Rome may have annually celebrated a Sacred Marriage for the purpose of ensuring the fertility of the powers of nature. This conjecture also may be supported by an analogous custom which is still observed in India. We have seen how among the Oraons, a primitive hill-tribe of Bengal, the marriage of the Sun and the Earth is annually celebrated by a priest and priestess who personate respectively the god of the Sun and the goddess of the Earth. The ceremony of the Sacred Marriage has been described more fully by a Jesuit missionary, who was intimately acquainted with the people and their native religion. The rite is celebrated in the month of May, when the *sal* tree is in bloom, and the festival takes its native name (*khaddi*) from the flower of the tree. It is the greatest festival of the year. "The object of this feast is to celebrate the mystical marriage of the Sun-god (*Bhagawan*) with the Goddess-earth (*Dharti-mai*), to induce them to be fruitful and give good crops." At the same time all the minor deities or demons of the village are propitiated, in order that they may not hinder the beneficent activity of the Sun God and the Earth Goddess. On the eve of the appointed day no man may plough his fields, and the priest, accompanied by some of the villagers, repairs to the sacred grove, where he beats a drum and invites all the invisible guests to the great feast that will await them on the morrow. Next morning very early, before cock-crow, an acolyte steals out as quietly as possible to the sacred spring to fetch water in a new earthen pot. This holy water is full of all kinds of blessings for the crops. The priest has prepared a place for it in the middle of his house surrounded by cotton threads of diverse colours. So sacred is the water that it would be defiled and lose all its virtue, were any profane eye to fall on it before it entered the priest's house. During the morning the acolyte and the priest's deputy go round from house to house collecting victims for the sacrifice. In the afternoon the people all gather at the sacred grove, and the priest proceeds to consummate the sacrifice. The first victims to be immolated are a white cock for the Sun God and a black hen for the Earth Goddess; and as the feast is the marriage of these great deities the marriage service is performed over the two fowls before they are hurried into eternity. Amongst other things both birds are marked with vermilion just as a bride and bridegroom are marked at a human marriage; and the earth is also smeared with vermilion, as if it were a real bride, on the spot where the sacrifice is offered. Sacrifices of fowls or goats to the minor deities or demons follow. The bodies of the victims are collected by the village boys, who cook them on the spot; all the heads go to the sacrificers. The gods take what they can get and are more or less thankful. Meantime the acolyte has collected flowers of the *sal* tree and set them round the place of sacrifice, and he has also fetched the holy water from the priest's house. A procession is now formed and the priest is carried in triumph to his own abode. There his wife has been watching for him, and on his arrival the two go through the marriage ceremony, applying vermilion to each other in the usual way "to symbolise the mystical marriage of the Sun-god with the Earth-goddess." Meantime all the women of the village are standing on the thresholds of their houses each with a winnowing-fan in her hand. In the fan are two cups, one empty to receive the holy water, and the other full of rice-beer for the consumption of the holy man. As he arrives at each house, he distributes flowers and holy water to the happy women, and enriches them with a shower of blessings, saying, "May your rooms and granary be filled with rice, that the priest's name may be great." The holy water which he leaves at each house is sprinkled on the seeds that have been kept to sow next year's

crop. Having thus imparted his benediction to the household the priest swigs the beer; and as he repeats his benediction and his potation at every house he is naturally dead-drunk by the time he gets to the end of the village. "By that time every one has taken copious libations of rice-beer, and all the devils of the village seem to be let loose, and there follows a scene of debauchery baffling description—all these to induce the Sun and the Earth to be fruitful."

Thus the people of Cyprus and Western Asia in antiquity were by no means singular in their belief that the profligacy of the human sexes served to quicken the fruits of the earth.

Cinyras is said to have been famed for his exquisite beauty and to have been wooed by Aphrodite herself. Thus it would appear, as scholars have already observed, that Cinyras was in a sense a duplicate of his handsome son Adonis, to whom the inflammable goddess also lost her heart. Further, these stories of the love of Aphrodite for two members of the royal house of Paphos can hardly be dissociated from the corresponding legend told of Pygmalion, the Phoenician king of Cyprus, who is said to have fallen in love with an image of Aphrodite and taken it to his bed. When we consider that Pygmalion was the father-in-law of Cinyras, that the son of Cinyras was Adonis, and that all three, in successive generations, are said to have been concerned in a love-intrigue with Aphrodite, we can hardly help concluding that the early Phoenician kings of Paphos, or their sons, regularly claimed to be not merely the priests of the goddess but also her lovers, in other words, that in their official capacity they personated Adonis. At all events Adonis is said to have reigned in Cyprus, and it appears to be certain that the title of Adonis was regularly borne by the sons of all the Phoenician kings of the island. It is true that the title strictly signified no more than "lord"; yet the legends which connect these Cyprian princes with the goddess of love make it probable that they claimed the divine nature as well as the human dignity of Adonis. The story of Pygmalion points to a ceremony of a sacred marriage in which the king wedded the image of Aphrodite, or rather of Astarte. If that was so, the tale was in a sense true, not of a single man only, but of a whole series of men, and it would be all the more likely to be told of Pygmalion, if that was a common name of Semitic kings in general, and of Cyprian kings in particular.

Pygmalion, at all events, is known as the name of the famous king of Tyre from whom his sister Dido fled; and a king of Citium and Idalium in Cyprus, who reigned in the time of Alexander the Great, was also called Pygmalion, or rather Pumiyathon, the Phoenician name which the Greeks corrupted into Pygmalion. Further, it deserves to be noted that the names Pygmalion and Astarte occur together in a Punic inscription on a gold medallion which was found in a grave at Carthage; the characters of the inscription are of the earliest type. As the custom of religious prostitution at Paphos is said to have been founded by King Cinyras and observed by his daughters, we may surmise that the kings of Paphos played the part of the divine bridegroom in a less innocent rite than the form of marriage with a statue; in fact, that at certain festivals each of them had to mate with one or more of the sacred harlots of the temple, who played Astarte to his Adonis. If that was so, there is more truth than has commonly been supposed in the reproach cast by the Christian fathers that the Aphrodite worshipped by Cinyras was a common whore. The fruit of their union would rank as sons and daughters of the deity, and would in time become the parents of gods and goddesses, like their fathers and mothers before them. In this manner Paphos, and perhaps all sanctuaries of the great Asiatic goddess where sacred prostitution was practised, might be well stocked with human deities, the offspring of the divine king by his wives, concubines, and temple harlots. Any one of these might probably succeed his father on the throne or be sacrificed in his stead whenever stress of war or other grave junctures called, as they sometimes did, for the death of a royal victim. Such a tax, levied occasionally on the king's numerous progeny for the good of the country, would neither extinguish the divine stock nor break the father's heart, who divided his paternal affection among so many. At all events, if, as there seems reason to

believe, Semitic kings were often regarded at the same time as hereditary deities, it is easy to understand the frequency of Semitic personal names which imply that the bearers of them were the sons or daughters, the brothers or sisters, the fathers or mothers of a god, and we need not resort to the shifts employed by some scholars to evade the plain sense of the words. This interpretation is confirmed by a parallel Egyptian usage; for in Egypt, where the kings were worshipped as divine, the queen was called "the wife of the god" or "the mother of the god," and the title "father of the god" was borne not only by the king's real father but also by his father-in-law. Similarly, perhaps, among the Semites any man who sent his daughter to swell the royal harem may have been allowed to call himself "the father of the god."

If we may judge by his name, the Semitic king who bore the name of Cinyras was, like King David, a harper; for the name of Cinyras is clearly connected with the Greek *cinyra*, "a lyre," which in its turn comes from the Semitic *kinnor*, "a lyre," the very word applied to the instrument on which David played before Saul. We shall probably not err in assuming that at Paphos as at Jerusalem the music of the lyre or harp was not a mere pastime designed to while away an idle hour, but formed part of the service of religion, the moving influence of its melodies being perhaps set down, like the effect of wine, to the direct inspiration of a deity. Certainly at Jerusalem the regular clergy of the temple prophesied to the music of harps, of psalteries, and of cymbals; and it appears that the irregular clergy also, as we may call the prophets, depended on some such stimulus for inducing the ecstatic state which they took for immediate converse with the divinity. Thus we read of a band of prophets coming down from a high place with a psaltery, a timbrel, a pipe, and a harp before them, and prophesying as they went. Again, when the united forces of Judah and Ephraim were traversing the wilderness of Moab in pursuit of the enemy, they could find no water for three days, and were like to die of thirst, they and the beasts of burden. In this emergency the prophet Elisha, who was with the army, called for a minstrel and bade him play. Under the influence of the music he ordered the soldiers to dig trenches in the sandy bed of the waterless waddy through which lay the line of march. They did so, and next morning the trenches were full of the water that had drained down into them underground from the desolate, forbidding mountains on either hand. The prophet's success in striking water in the wilderness resembles the reported success of modern dowsers, though his mode of procedure was different. Incidentally he rendered another service to his countrymen. For the skulking Moabites from their lairs among the rocks saw the red sun of the desert reflected in the water, and taking it for the blood, or perhaps rather for an omen of the blood, of their enemies, they plucked up heart to attack the camp and were defeated with great slaughter.

Again, just as the cloud of melancholy which from time to time darkened the moody mind of Saul was viewed as an evil spirit from the Lord vexing him, so on the other hand the solemn strains of the harp, which soothed and composed his troubled thoughts, may well have seemed to the hag-ridden king the very voice of God or of his good angel whispering peace. Even in our own day a great religious writer, himself deeply sensitive to the witchery of music, has said that musical notes, with all their power to fire the blood and melt the heart, cannot be mere empty sounds and nothing more; no, they have escaped from some higher sphere, they are outpourings of eternal harmony, the voice of angels, the Magnificat of saints. It is thus that the rude imaginings of primitive man are transfigured and his feeble lispings echoed with a rolling reverberation in the musical prose of Newman. Indeed the influence of music on the development of religion is a subject which would repay a sympathetic study. For we cannot doubt that this, the most intimate and affecting of all the arts, has done much to create as well as to express the religious emotions, thus modifying more or less deeply the fabric of belief to which at first sight it seems only to minister. The

musician has done his part as well as the prophet and the thinker in the making of religion. Every faith has its appropriate music, and the difference between the creeds might almost be expressed in musical notation. The interval, for example, which divides the wild revels of Cybele from the stately ritual of the Catholic Church is measured by the gulf which severs the dissonant clash of cymbals and tambourines from the grave harmonies of Palestrina and Handel. A different spirit breathes in the difference of the music.

The legend which made Apollo the friend of Cinyras may be based on a belief in their common devotion to the lyre. But what function, we may ask, did string music perform in the Greek and the Semitic ritual? Did it serve to rouse the human mouthpiece of the god to prophetic ecstasy? or did it merely ban goblins and demons from the holy places and the holy service, drawing as it were around the worshippers a magic circle within which no evil thing might intrude? In short, did it aim at summoning good or banishing evil spirits? was its object inspiration or exorcism? The examples drawn from the lives or legends of Elisha and David prove that with the Hebrews the music of the lyre might be used for either purpose; for while Elisha employed it to tune himself to the prophetic pitch, David resorted to it for the sake of exorcising the foul fiend from Saul. With the Greeks, on the other hand, in historical times, it does not appear that string music served as a means of inducing the condition of trance or ecstasy in the human mouthpieces of Apollo and the other oracular gods; on the contrary, its sobering and composing influence, as contrasted with the exciting influence of flute music, is the aspect which chiefly impressed the Greek mind. The religious or, at all events, the superstitious man might naturally ascribe the mental composure wrought by grave, sweet music to a riddance of evil spirits, in short to exorcism; and in harmony with this view, Pindar, speaking of the lyre, says that all things hateful to Zeus in earth and sea tremble at the sound of music. Yet the association of the lyre with the legendary prophet Orpheus as well as with the oracular god Apollo seems to hint that in early days its strains may have been employed by the Greeks, as they certainly were by the Hebrews, to bring on that state of mental exaltation in which the thick-coming fancies of the visionary are regarded as divine communications. Which of these two functions of music, the positive or the negative, the inspiring or the protective, predominated in the religion of Adonis we cannot say; perhaps the two were not clearly distinguished in the minds of his worshippers.

A constant feature in the myth of Adonis was his premature and violent death. If, then, the kings of Paphos regularly personated Adonis, we must ask whether they imitated their divine prototype in death as in life. Tradition varied as to the end of Cinyras. Some thought that he slew himself on discovering his incest with his daughter; others alleged that, like Marsyas, he was defeated by Apollo in a musical contest and put to death by the victor. Yet he cannot strictly be said to have perished in the flower of his youth if he lived, as Anacreon averred, to the ripe age of one hundred and sixty. If we must choose between the two stories, it is perhaps more likely that he died a violent death than that he survived to an age which surpassed that of Thomas Parr by eight years, though it fell far short of the antediluvian standard. The life of eminent men in remote ages is exceedingly elastic and may be lengthened or shortened, in the interests of history, at the taste and fancy of the historian.

IV. Sacred Men and Women

§ 1. An Alternative Theory.

In the preceding chapter we saw that a system of sacred prostitution was regularly carried on all over Western Asia, and that both in Phoenicia and in Cyprus the practice was specially associated with the worship of Adonis. As the explanation which I have adopted of the custom has been rejected in favour of another by writers whose opinions are entitled to be treated with respect, I shall devote the present chapter to a further consideration of the subject, and shall attempt to gather, from a closer scrutiny and a wider survey of the field, such evidence as may set the custom and with it the worship of Adonis in a clearer light. At the outset it will be well to examine the alternative theory which has been put forward to explain the facts.

It has been proposed to derive the religious prostitution of Western Asia from a purely secular and precautionary practice of destroying a bride's virginity before handing her over to her husband in order that "the bridegroom's intercourse should be safe from a peril that is much dreaded by men in a certain stage of culture." Among the objections which may be taken to this view are the following:—

- (1) The theory fails to account for the deeply religious character of the customs as practised in antiquity all over Western Asia. That religious character appears from the observance of the custom at the sanctuaries of a great goddess, the dedication of the wages of prostitution to her, the belief of the women that they earned her favour by prostituting themselves, and the command of a male deity to serve him in this manner.
- (2) The theory fails to account for the prostitution of married women at Heliopolis and apparently also at Babylon and Byblus; for in describing the practice at the two latter places our authorities, Herodotus and Lucian, speak only of women, not of virgins. In Israel also we know from Hosea that young married women prostituted themselves at the sanctuaries on the hilltops under the shadow of the sacred oaks, poplars, and terebinths. The prophet makes no mention of virgins participating in these orgies. They may have done so, but his language does not imply it: he speaks only of "your daughters" and "your daughters-in-law." The prostitution of married women is wholly inexplicable on the hypothesis here criticized. Yet it can hardly be separated from the prostitution of virgins, which in some places at least was carried on side by side with it.
- (3) The theory fails to account for the repeated and professional prostitution of women in Lydia, Pontus, Armenia, and apparently all over Palestine. Yet this habitual prostitution can in its turn hardly be separated from the first prostitution in a woman's life. Or are we to suppose that the first act of unchastity is to be explained in one way and all the subsequent acts in quite another? that the first act was purely secular and all the subsequent acts purely religious?
- (4) The theory fails to account for the *Ḳedeshim* ("sacred men") side by side with the *Ḳedeshoth* ("sacred women") at the sanctuaries; for whatever the religious functions of these "sacred men" may have been, it is highly probable that they were analogous to those of the "sacred women" and are to be explained in the same way.
- (5) On the hypothesis which I am considering we should expect to find the man who deflowers the maid remunerated for rendering a dangerous service; and so in fact we commonly find him remunerated in places where the supposed custom is really practised. But

in Western Asia it was just the contrary. It was the woman who was paid, not the man; indeed, so well was she paid that in Lydia and Cyprus the girls earned dowries for themselves in this fashion. This clearly shows that it was the woman, and not the man, who was believed to render the service. Or are we to suppose that the man had to pay for rendering a dangerous service?

These considerations seem to prove conclusively that whatever the remote origin of these Western Asiatic customs may have been, they cannot have been observed in historical times from any such motive as is assumed by the hypothesis under discussion. At the period when we have to do with them the customs were to all appearance purely religious in character, and a religious motive must accordingly be found for them. Such a motive is supplied by the theory I have adopted, which, so far as I can judge, adequately explains all the known facts.

At the same time, in justice to the writers whose views I have criticized, I wish to point out that the practice from which they propose to derive the sacred prostitution of Western Asia has not always been purely secular in character. For, in the first place, the agent employed is sometimes reported to be a priest; and, in the second place, the sacrifice of virginity has in some places, for example at Rome and in parts of India, been made directly to the image of a male deity. The meaning of these practices is very obscure, and in the present state of our ignorance on the subject it is unsafe to build conclusions on them. It is possible that what seems to be a purely secular precaution may be only a degenerate form of a religious rite; and on the other hand it is possible that the religious rite may go back to a purely physical preparation for marriage, such as is still observed among the aborigines of Australia. But even if such an historical origin could be established, it would not explain the motives from which the customs described in this volume were practised by the people of Western Asia in historical times. The true parallel to these customs is the sacred prostitution which is carried on to this day by dedicated women in India and Africa. An examination of these modern practices may throw light on the ancient customs.

§ 2. Sacred Women in India.

In India the dancing-girls dedicated to the service of the Tamil temples take the name of *deva-dasis*, "servants or slaves of the gods," but in common parlance they are spoken of simply as harlots. Every Tamil temple of note in Southern India has its troop of these sacred women. Their official duties are to dance twice a day, morning and evening, in the temple, to fan the idol with Tibetan ox-tails, to dance and sing before it when it is borne in procession, and to carry the holy light called *Kumbarti*. Inscriptions show that in a.d. 1004 the great temple of the Chola king Rajaraja at Tanjore had attached to it four hundred "women of the temple," who lived at free quarters in the streets round about it and were allowed land free of taxes out of its endowment. From infancy they are trained to dance and sing. In order to obtain a safe delivery expectant mothers will often vow to dedicate their child, if she should prove to be a girl, to the service of God. Among the weavers of Tiru-kalli-kundram, a little town in the Madras Presidency, the eldest daughter of every family is devoted to the temple. Girls thus made over to the deity are formally married, sometimes to the idol, sometimes to a sword, before they enter on their duties; from which it appears that they are often, if not regularly, regarded as the wives of the god. Among the Kaikolans, a large caste of Tamil weavers who are spread all over Southern India, at least one girl in every family should be dedicated to the temple service. The ritual, as it is observed at the initiation of one of these girls in Coimbatore, includes "a form of nuptial ceremony. The relations are invited for an auspicious day, and the maternal uncle, or his representative, ties a gold band on the girl's forehead, and, carrying her, places her on a plank before the assembled guests. A Brahman priest recites the *mantrams*, and prepares the sacred fire (*hōmam*). The uncle is presented

with new cloths by the girl's mother. For the actual nuptials a rich Brahman, if possible, and, if not, a Brahman of more lowly status is invited. A Brahman is called in, as he is next in importance to, and the representative of the idol. It is said that, when the man who is to receive her first favours, joins the girl, a sword must be placed, at least for a few minutes, by her side." When one of these dancing-girls dies, her body is covered with a new cloth which has been taken for the purpose from the idol, and flowers are supplied from the temple to which she belonged. No worship is performed in the temple until the last rites have been performed over her body, because the idol, being deemed her husband, is held to be in that state of ceremonial pollution common to human mourners which debars him from the offices of religion. In Mahratta such a female devotee is called Murlī. Common folk believe that from time to time the shadow of the god falls on her and possesses her person. At such times the possessed woman rocks herself to and fro, and the people occasionally consult her as a soothsayer, laying money at her feet and accepting as an oracle the words of wisdom or folly that drop from her lips. Nor is the profession of a temple prostitute adopted only by girls. In Tulava, a district of Southern India, any woman of the four highest castes who wearies of her husband or, as a widow and therefore incapable of marriage, grows tired of celibacy, may go to a temple and eat of the rice offered to the idol. Thereupon, if she is a Brahman, she has the right to live either in the temple or outside of its precincts, as she pleases. If she decides to live in it, she gets a daily allowance of rice, and must sweep the temple, fan the idol, and confine her amours to the Brahmans. The male children of these women form a special class called Moylar, but are fond of assuming the title of Stanikas. As many of them as can find employment hang about the temple, sweeping the areas, sprinkling them with cow-dung, carrying torches before the gods, and doing other odd jobs. Some of them, debarred from these holy offices, are reduced to the painful necessity of earning their bread by honest work. The daughters are either brought up to live like their mothers or are given in marriage to the Stanikas. Brahman women who do not choose to live in the temples, and all the women of the three lower castes, cohabit with any man of pure descent, but they have to pay a fixed sum annually to the temple.

In Travancore a dancing-girl attached to a temple is known as a *Dâsî*, or *Dêvadâsî*, or *Dêvaratiâl*, "a servant of God." The following account of her dedication and way of life deserves to be quoted because, while it ignores the baser side of her vocation, it brings clearly out the idea of her marriage to the deity. "Marriage in the case of a *Dêvaratiâl* in its original import is a renunciation of ordinary family life and a consecration to the service of God. With a lady-nurse at a Hospital, or a sister at a Convent, a *Dêvadâsî* at a Hindu shrine, such as she probably was in the early ages of Hindu spirituality, would have claimed favourable comparison. In the ceremonial of the dedication-marriage of the *Dâsî*, elements are not wanting which indicate a past quite the reverse of disreputable. The girl to be married is generally from six to eight years in age. The bridegroom is the presiding deity of the local temple. The ceremony is done at his house. The expenses of the celebration are supposed to be partly paid from his funds. To instance the practice at the Suchîndram temple, a *Yôga* or meeting of the chief functionaries of the temple arranges the preliminaries. The girl to be wedded bathes and goes to the temple with two pieces of cloth, a *tâli*, betel, areca-nut, etc. These are placed by the priest at the feet of the image. The girl sits with the face towards the deity. The priest kindles the sacred fire and goes through all the rituals of the *Tirukkalyânâ* festival. He then initiates the bride into the *Panchâkshara mantra*, if in a Saiva temple, and the *Ashtâkshara*, if in a Vaishnava temple. On behalf of the divine bridegroom, he presents one of the two cloths she has brought as offering and ties the *Tâli* around her neck. The practice, how old it is not possible to say, is then to take her to her house where the usual marriage festivities are celebrated for four days. As in Brahminical marriages, the *Nalunku* ceremony, *i.e.* the rolling of a cocoanut by the bride to the

bridegroom and *vice versa* a number of times to the accompaniment of music, is gone through, the temple priest playing the bridegroom's part. Thenceforth she becomes the wife of the deity in the sense that she formally and solemnly dedicates the rest of her life to his service with the same constancy and devotion that a faithful wife united in holy matrimony shows to her wedded lord. The life of a *Dēvadāsī* bedecked with all the accomplishments that the muses could give was one of spotless purity. Even now she is maintained by the temple. She undertakes fasts in connection with the temple festivals, such as the seven days' fast for the *Apamārgam* ceremony. During the period of this fast, strict continence is enjoined; she is required to take only one meal, and that within the temple—in fact to live and behave at least for a term, in the manner ordained for her throughout life. Some of the details of her daily work seem interesting; she attends the *Dīpāradhana*, the waving of lighted lamps in front of the deity at sunset every day; sings hymns in his praise, dances before his presence, goes round with him in his processions with lights in hand. After the procession, she sings a song or two from Jayadēva's *Gītagōvinda* and with a few lullaby hymns, her work for the night is over. When she grows physically unfit for these duties, she is formally invalidated by a special ceremony, *i.e.* *Tōtuviaikkuka*, or the laying down of the ear-pendants. It is gone through at the Maha Raja's palace, whereafter she becomes a *Tāikkizhavi* (old mother), entitled only to a subsistence-allowance. When she dies, the temple contributes to the funeral expenses. On her death-bed, the priest attends and after a few ceremonies immediately after death, gets her bathed with saffron-powder.”

§ 3. Sacred Men and Women in West Africa.

Still more instructive for our present purpose are the West African customs. Among the Ewe-speaking peoples of the Slave Coast “recruits for the priesthood are obtained in two ways, viz. by the affiliation of young persons, and by the direct consecration of adults. Young people of either sex dedicated or affiliated to a god are termed *kosio*, from *kono*, ‘unfruitful,’ because a child dedicated to a god passes into his service and is practically lost to his parents, and *si*, ‘to run away.’ As the females become the ‘wives’ of the god to whom they are dedicated, the termination *si* in *vōdu-si* [another name for these dedicated women], has been translated ‘wife’ by some Europeans; but it is never used in the general acceptance of that term, being entirely restricted to persons consecrated to the gods. The chief business of the female *kosi* is prostitution, and in every town there is at least one institution in which the best-looking girls, between ten and twelve years of age, are received. Here they remain for three years, learning the chants and dances peculiar to the worship of the gods, and prostituting themselves to the priests and the inmates of the male seminaries; and at the termination of their novitiate they become public prostitutes. This condition, however, is not regarded as one for reproach; they are considered to be married to the god, and their excesses are supposed to be caused and directed by him. Properly speaking, their libertinage should be confined to the male worshippers at the temple of the god, but practically it is indiscriminate. Children who are born from such unions belong to the god.” These women are not allowed to marry since they are deemed the wives of a god.

Again, in this part of Africa “the female *Kosio* of Dañh-gbi, or *Dañh-sio*, that is, the wives, priestesses, and temple prostitutes of Dañh-gbi, the python-god, have their own organization. Generally they live together in a group of houses or huts inclosed by a fence, and in these inclosures the novices undergo their three years of initiation. Most new members are obtained by the affiliation of young girls; but any woman whatever, married or single, slave or free, by publicly simulating possession, and uttering the conventional cries recognized as indicative of possession by the god, can at once join the body, and be admitted to the habitations of the order. The person of a woman who has joined in this manner is inviolable, and during the period of her novitiate she is forbidden, if single, to enter the house of her parents, and, if

married, that of her husband. This inviolability, while it gives women opportunities of gratifying an illicit passion, at the same time serves occasionally to save the persecuted slave, or neglected wife, from the ill-treatment of the lord and master; for she has only to go through the conventional form of possession and an asylum is assured." The python-god marries these women secretly in his temple, and they father their offspring on him; but it is the priests who consummate the union.

For our purpose it is important to note that a close connexion is apparently supposed to exist between the fertility of the soil and the marriage of these women to the serpent. For the time when new brides are sought for the reptile-god is the season when the millet is beginning to sprout. Then the old priestesses, armed with clubs, run frantically through the streets shrieking like mad women and carrying off to be brides of the serpent any little girls between the ages of eight and twelve whom they may find outside of the houses. Pious people at such times will sometimes leave their daughters at their doors on purpose that they may have the honour of being dedicated to the god. The marriage of wives to the serpent-god is probably deemed necessary to enable him to discharge the important function of making the crops to grow and the cattle to multiply; for we read that these people "invoke the snake in excessively wet, dry, or barren seasons; on all occasions relating to their government and the preservation of their cattle; or rather, in one word, in all necessities and difficulties, in which they do not apply to their new batch of gods." Once in a bad season the Dutch factor Bosman found the King of Whydah in a great rage. His Majesty explained the reason of his discomposure by saying "that that year he had sent much larger offerings to the snake-house than usual, in order to obtain a good crop; and that one of his vice-roys (whom he shewed me) had desired him afresh, in the name of the priests, who threatened a barren year, to send yet more. To which he answered that he did not intend to make any further offerings this year; and if the snake would not bestow a plentiful harvest on them, he might let it alone; for (said he) I cannot be more damaged thereby, the greatest part of my corn being already rotten in the field."

The Akikuyu of British East Africa "have a custom which reminds one of the West African python-god and his wives. At intervals of, I believe, several years the medicine-men order huts to be built for the purpose of worshipping a river snake. The snake-god requires wives, and women or more especially girls go to the huts. Here the union is consummated by the medicine-men. If the number of females who go to the huts voluntarily is not sufficient, girls are seized and dragged there. I believe the offspring of such a union is said to be fathered by God (Ngai): at any rate there are children in Kikuyu who are regarded as the children of God."

Among the negroes of the Slave Coast there are, as we have seen, male *kosio* as well as female *kosio*; that is, there are dedicated men as well as dedicated women, priests as well as priestesses, and the ideas and customs in regard to them seem to be similar. Like the women, the men undergo a three years' novitiate, at the end of which each candidate has to prove that the god accepts him and finds him worthy of inspiration. Escorted by a party of priests he goes to a shrine and seats himself on a stool that belongs to the deity. The priests then anoint his head with a mystic decoction and invoke the god in a long and wild chorus. During the singing the youth, if he is acceptable to the deity, trembles violently, simulates convulsions, foams at the mouth, and dances in a frenzied style, sometimes for more than an hour. This is the proof that the god has taken possession of him. After that he has to remain in a temple without speaking for seven days and nights. At the end of that time, he is brought out, a priest opens his mouth to show that he may now use his tongue, a new name is given him, and he is fully ordained. Henceforth he is regarded as the priest and medium of the deity whom he serves, and the words which he utters in that morbid state of mental excitement which passes

for divine inspiration, are accepted by the hearers as the very words of the god spoken by the mouth of the man. Any crime which a priest committed in a state of frenzy used to remain unpunished, no doubt because the act was thought to be the act of the god. But this benefit of clergy was so much abused that under King Gezo the law had to be altered; and although, while he is still possessed by the god, the inspired criminal is safe, he is now liable to punishment as soon as the divine spirit leaves him. Nevertheless on the whole among these people "the person of a priest or priestess is sacred. Not only must a layman not lay hands on or insult one; he must be careful not even to knock one by accident, or jostle against one in the street. The Abbé Bouche relates that once when he was paying a visit to the chief of Agweh, one of the wives of the chief was brought into the house by four priestesses, her face bloody, and her body covered with stripes. She had been savagely flogged for having accidentally trodden upon the foot of one of them; and the chief not only dared not give vent to his anger, but had to give them a bottle of rum as a peace-offering."

Among the Tshi-speaking peoples of the Gold Coast, who border on the Ewe-speaking peoples of the Slave Coast to the west, the customs and beliefs in regard to the dedicated men and dedicated women, the priests and priestesses, are very similar. These persons are believed to be from time to time possessed or inspired by the deity whom they serve; and in that state they are consulted as oracles. They work themselves up to the necessary pitch of excitement by dancing to the music of drums; each god has his special hymn, sung to a special beat of the drum, and accompanied by a special dance. It is while thus dancing to the drums that the priest or priestess lets fall the oracular words in a croaking or guttural voice which the hearers take to be the voice of the god. Hence dancing has an important place in the education of priests and priestesses; they are trained in it for months before they may perform in public. These mouthpieces of the deity are consulted in almost every concern of life and are handsomely paid for their services. "Priests marry like any other members of the community, and purchase wives; but priestesses are never married, nor can any 'head money' be paid for a priestess. The reason appears to be that a priestess belongs to the god she serves, and therefore cannot become the property of a man, as would be the case if she married one. This prohibition extends to marriage only, and a priestess is not debarred from sexual commerce. The children of a priest or priestess are not ordinarily educated for the priestly profession, one generation being usually passed over, and the grandchildren selected. Priestesses are ordinarily most licentious, and custom allows them to gratify their passions with any man who may chance to take their fancy." The ranks of the hereditary priesthood are constantly recruited by persons who devote themselves or who are devoted by their relations or masters to the profession. Men, women, and even children can thus become members of the priesthood. If a mother has lost several of her children by death, she will not uncommonly vow to devote the next born to the service of the gods; for in this way she hopes to save the child's life. So when the child is born it is set apart for the priesthood, and on arriving at maturity generally fulfils the vow made by the mother and becomes a priest or priestess. At the ceremony of ordination the votary has to prove his or her vocation for the sacred life in the usual way by falling into or simulating convulsions, dancing frantically to the beat of drums, and speaking in a hoarse unnatural voice words which are deemed to be the utterance of the deity temporarily lodged in the body of the man or woman.

§ 4. Sacred Women in Western Asia.

Thus in Africa, and sometimes if not regularly in India, the sacred prostitutes attached to temples are regarded as the wives of the god, and their excesses are excused on the ground that the women are not themselves, but that they act under the influence of divine inspiration. This is in substance the explanation which I have given of the custom of sacred prostitution as it was practised in antiquity by the peoples of Western Asia. In their licentious intercourse

at the temples the women, whether maidens or matrons or professional harlots, imitated the licentious conduct of a great goddess of fertility for the purpose of ensuring the fruitfulness of fields and trees, of man and beast; and in discharging this sacred and important function the women were probably supposed, like their West African sisters, to be actually possessed by the goddess. The hypothesis at least explains all the facts in a simple and natural manner; and in assuming that women could be married to gods it assumes a principle which we know to have been recognized in Babylon, Assyria, and Egypt. At Babylon a woman regularly slept in the great bed of Bel or Marduk, which stood in his temple on the summit of a lofty pyramid; and it was believed that the god chose her from all the women of Babylon and slept with her in the bed. However, unlike the Indian and West African wives of gods, this spouse of the Babylonian deity is reported by Herodotus to have been chaste. Yet we may doubt whether she was so; for these wives or perhaps paramours of Bel are probably to be identified with the wives or votaries of Marduk mentioned in the code of Hammurabi, and we know from the code that female votaries of the gods might be mothers and married to men. At Babylon the sun-god Shamash as well as Marduk had human wives formerly dedicated to his service, and they like the votaries of Marduk might have children. It is significant that a name for these Babylonian votaries was *kadishtu*, which is the same word as *kedesha*, "consecrated woman," the regular Hebrew word for a temple harlot. It is true that the law severely punished any disrespect shown to these sacred women; but the example of West Africa warns us that a formal respect shown to such persons, even when it is enforced by severe penalties, need be no proof at all of their virtuous character. In Egypt a woman used to sleep in the temple of Ammon at Thebes, and the god was believed to visit her. Egyptian texts often mention her as "the divine consort," and in old days she seems to have usually been the Queen of Egypt herself. But in the time of Strabo, at the beginning of our era, these consorts or concubines of Ammon, as they were called, were beautiful young girls of noble birth, who held office only till puberty. During their term of office they prostituted themselves freely to any man who took their fancy. After puberty they were given in marriage, and a ceremony of mourning was performed for them as if they were dead. When they died in good earnest, their bodies were laid in special graves.

§ 5. Sacred Men in Western Asia.

As in West Africa the dedicated women have their counterpart in the dedicated men, so it was in Western Asia; for there the sacred men (*kedeshim*) clearly corresponded to the sacred women (*kedeshoth*), in other words, the sacred male slaves of the temples were the complement of the sacred female slaves. And as the characteristic feature of the dedicated men in West Africa is their supposed possession or inspiration by the deity, so we may conjecture was it with the sacred male slaves (the *kedeshim*) of Western Asia; they, too, may have been regarded as temporary or permanent embodiments of the deity, possessed from time to time by his divine spirit, acting in his name, and speaking with his voice. At all events we know that this was so at the sanctuary of the Moon among the Albanians of the Caucasus. The sanctuary owned church lands of great extent peopled by sacred slaves, and it was ruled by a high-priest, who ranked next after the king. Many of these slaves were inspired by the deity and prophesied; and when one of them had been for some time in this state of divine frenzy, wandering alone in the forest, the high-priest had him caught, bound with a sacred chain, and maintained in luxury for a year. Then the poor wretch was led out, anointed with unguents, and sacrificed with other victims to the Moon. The mode of sacrifice was this. A man took a sacred spear, and thrust it through the victim's side to the heart. As he staggered and fell, the rest observed him closely and drew omens from the manner of his fall. Then the body was dragged or carried away to a certain place, where all his fellows stood upon it by way of purification. In this custom the prophet, or rather the maniac, was plainly supposed to

be moon-struck in the most literal sense, that is, possessed or inspired by the deity of the Moon, who was perhaps thought by the Albanians, as by the Phrygians, to be a male god, since his chosen minister and mouthpiece was a man, not a woman. It can hardly therefore be deemed improbable that at other sanctuaries of Western Asia, where sacred men were kept, these ministers of religion should have discharged a similar prophetic function, even though they did not share the tragic fate of the moon-struck Albanian prophet. Nor was the influence of these Asiatic prophets confined to Asia. In Sicily the spark which kindled the devastating Servile War was struck by a Syrian slave, who simulated the prophetic ecstasy in order to rouse his fellow-slaves to arms in the name of the Syrian goddess. To inflame still more his inflammatory words this ancient Mahdi ingeniously interlarded them with real fire and smoke, which by a common conjurer's trick he breathed from his lips.

In like manner the Hebrew prophets were believed to be temporarily possessed and inspired by a divine spirit who spoke through them, just as a divine spirit is supposed by West African negroes to speak through the mouth of the dedicated men his priests. Indeed the points of resemblance between the prophets of Israel and West Africa are close and curious. Like their black brothers, the Hebrew prophets employed music in order to bring on the prophetic trance; like them, they received the divine spirit through the application of a magic oil to their heads; like them, they were apparently distinguished from common people by certain marks on the face; and like them they were consulted not merely in great national emergencies but in the ordinary affairs of everyday life, in which they were expected to give information and advice for a small fee. For example, Samuel was consulted about lost asses, just as a Zulu diviner is consulted about lost cows; and we have seen Elisha acting as a dowser when water ran short. Indeed, we learn that the old name for a prophet was a seer, a word which may be understood to imply that his special function was divination rather than prophecy in the sense of prediction. Be that as it may, prophecy of the Hebrew type has not been limited to Israel; it is indeed a phenomenon of almost world-wide occurrence; in many lands and in many ages the wild, whirling words of frenzied men and women have been accepted as the utterances of an indwelling deity. What does distinguish Hebrew prophecy from all others is that the genius of a few members of the profession wrested this vulgar but powerful instrument from baser uses, and by wielding it in the interest of a high morality rendered a service of incalculable value to humanity. That is indeed the glory of Israel, but it is not the side of prophecy with which we are here concerned.

More to our purpose is to note that prophecy of the ordinary sort appears to have been in vogue at Byblus, the sacred city of Adonis, centuries before the life-time of the earliest Hebrew prophet whose writings have come down to us. When the Egyptian traveller, Wen-Ammon, was lingering in the port of Byblus, under the King's orders to quit the place, the spirit of God came on one of the royal pages or henchmen, and in a prophetic frenzy he announced that the King should receive the Egyptian stranger as a messenger sent from the god Ammon. The god who thus took possession of the page and spoke through him was probably Adonis, the god of the city. With regard to the office of these royal pages we have no information; but as ministers of a sacred king and liable to be inspired by the deity, they would naturally be themselves sacred; in fact they may have belonged to the class of sacred slaves or *kedeshim*. If that was so it would confirm the conclusion to which the foregoing investigation points, namely, that originally no sharp line of distinction existed between the prophets and the *kedeshim*; both were "men of God," as the prophets were constantly called; in other words, they were inspired mediums, men in whom the god manifested himself from time to time by word and deed, in short temporary incarnations of the deity. But while the prophets roved freely about the country, the *kedeshim* appear to have been regularly attached to a sanctuary; and among the duties which they performed at the shrines there were

clearly some which revolted the conscience of men imbued with a purer morality. What these duties were, we may surmise partly from the behaviour of the sons of Eli to the women who came to the tabernacle, partly from the beliefs and practices as to “holy men” which survive to this day among the Syrian peasantry.

Of these “holy men” we are told that “so far as they are not impostors, they are men whom we would call insane, known among the Syrians as *mejnûn*, possessed by a *jinn* or spirit. They often go in filthy garments, or without clothing. Since they are regarded as intoxicated by deity, the most dignified men, and of the highest standing among the Moslems, submit to utter indecent language at their bidding without rebuke, and ignorant Moslem women do not shrink from their approach, because in their superstitious belief they attribute to them, as men possessed by God, a divine authority which they dare not resist. Such an attitude of compliance may be exceptional, but there are more than rumours of its existence. These ‘holy men’ differ from the ordinary derwishes whom travellers so often see in Cairo, and from the ordinary madmen who are kept in fetters, so that they may not do injury to themselves and others. But their appearance, and the expressions regarding them, afford some illustrations of the popular estimate of ancient seers, or prophets, in the time of Hosea: ‘The prophet is a fool, the man that hath the spirit is mad’; and in the time of Jeremiah, the man who made himself a prophet was considered as good as a madman.” To complete the parallel these vagabonds “are also believed to be possessed of prophetic power, so that they are able to foretell the future, and warn the people among whom they live of impending danger.”

We may conjecture that with women a powerful motive for submitting to the embraces of the “holy men” is a hope of obtaining offspring by them. For in Syria it is still believed that even dead saints can beget children on barren women, who accordingly resort to their shrines in order to obtain the wish of their hearts. For example, at the Baths of Solomon in Northern Palestine, blasts of hot air escape from the ground; and one of them, named Abu Rabah, is a famous resort of childless wives who wish to satisfy their maternal longings. They let the hot air stream up over their bodies and really believe that children born to them after such a visit are begotten by the saint of the shrine. But the saint who enjoys the highest reputation in this respect is St. George. He reveals himself at his shrines which are scattered all over the country; at each of them there is a tomb or the likeness of a tomb. The most celebrated of these sanctuaries is at Kalat el Hosn in Northern Syria. Barren women of all sects, including Moslems, resort to it. “There are many natives who shrug their shoulders when this shrine is mentioned in connection with women. But it is doubtless true that many do not know what seems to be its true character, and who think that the most puissant saint, as they believe, in the world can give them sons.” “But the true character of the place is beginning to be recognized, so that many Moslems have forbidden their wives to visit it.”

§ 6. Sons of God.

Customs like the foregoing may serve to explain the belief, which is not confined to Syria, that men and women may be in fact and not merely in metaphor the sons and daughters of a god; for these modern saints, whether Christian or Moslem, who father the children of Syrian mothers, are nothing but the old gods under a thin disguise. If in antiquity as at the present day Semitic women often repaired to shrines in order to have the reproach of barrenness removed from them—and the prayer of Hannah is a familiar example of the practice, we could easily understand not only the tradition of the sons of God who beget children on the daughters of men, but also the exceedingly common occurrence of the divine titles in Hebrew names of human beings. Multitudes of men and women, in fact, whose mothers had resorted to holy places in order to procure offspring, would be regarded as the actual children of the god and would be named accordingly. Hence Hannah called her infant Samuel, which

means “name of God” or “his name is God”; and probably she sincerely believed that the child was actually begotten in her womb by the deity. The dedication of such children to the service of God at the sanctuary was merely giving back the divine son to the divine father. Similarly in West Africa, when a woman has got a child at the shrine of Agbasia, the god who alone bestows offspring on women, she dedicates him or her as a sacred slave to the deity.

Thus in the Syrian beliefs and customs of to-day we probably have the clue to the religious prostitution practised in the very same regions in antiquity. Then as now women looked to the local god, the Baal or Adonis of old, the Abu Rabah or St. George of to-day, to satisfy the natural craving of a woman's heart; and then as now, apparently, the part of the local god was played by sacred men, who in personating him may often have sincerely believed that they were acting under divine inspiration, and that the functions which they discharged were necessary for the fertility of the land as well as for the propagation of the human species. The purifying influence of Christianity and Mohammedanism has restricted such customs within narrow limits; even under Turkish rule they are now only carried on in holes and corners. Yet if the practice has dwindled, the principle which it embodies appears to be fundamentally the same; it is a desire for the continuance of the species, and a belief that an object so natural and legitimate can be accomplished by divine power manifesting itself in the bodies of men and women.

The belief in the physical fatherhood of God has not been confined to Syria in ancient and modern times. Elsewhere many men have been counted the sons of God in the most literal sense of the word, being supposed to have been begotten by his holy spirit in the wombs of mortal women. Here I shall merely illustrate the creed by a few examples drawn from classical antiquity. Thus in order to obtain offspring women used to resort to the great sanctuary of Aesculapius, situated in a beautiful upland valley, to which a path, winding through a long wooded gorge, leads from the bay of Epidaurus. Here the women slept in the holy place and were visited in dreams by a serpent; and the children to whom they afterwards gave birth were believed to have been begotten by the reptile. That the serpent was supposed to be the god himself seems certain; for Aesculapius repeatedly appeared in the form of a serpent, and live serpents were kept and fed in his sanctuaries for the healing of the sick, being no doubt regarded as his incarnations. Hence the children born to women who had thus visited a sanctuary of Aesculapius were probably fathered on the serpent-god. Many celebrated men in classical antiquity were thus promoted to the heavenly hierarchy by similar legends of a miraculous birth. The famous Aratus of Sicyon was certainly believed by his countrymen to be a son of Aesculapius; his mother is said to have got him in intercourse with a serpent. Probably she slept either in the shrine of Aesculapius at Sicyon, where a figurine of her was shown seated on a serpent, or perhaps in the more secluded sanctuary of the god at Titane, not many miles off, where the sacred serpents crawled among ancient cypresses on the hill-top which overlooks the narrow green valley of the Asopus with the white turbid river rushing in its depths. There, under the shadow of the cypresses, with the murmur of the Asopus in her ears, the mother of Aratus may have conceived, or fancied she conceived, the future deliverer of his country. Again, the mother of Augustus is said to have got him by intercourse with a serpent in a temple of Apollo; hence the emperor was reputed to be the son of that god. Similar tales were told of the Messenian hero Aristomenes, Alexander the Great, and the elder Scipio: all of them were reported to have been begotten by snakes. In the time of Herod a serpent, according to Aelian, in like manner made love to a Judean maid. Can the story be a distorted rumour of the parentage of Christ?

In India even stone serpents are credited with a power of bestowing offspring on women. Thus the Komatis of Mysore “worship *Nāga* or the serpent god. This worship is generally

confined to women and is carried on on a large scale once a year on the fifth day of the bright fortnight of Srávana (July and August). The representations of serpents are cut in stone slabs and are set up round an *Asvattha* tree on a platform, on which is also generally planted a margosa tree. These snakes in stones are set up in performance of vows and are said to be specially efficacious in curing bad sores and other skin diseases and in giving children. The women go to such places for worship with milk, fruits, and flowers on the prescribed day which is observed as a feast day." They wash the stones, smear them with turmeric, and offer them curds and fruits. Sometimes they search out the dens of serpents and pour milk into the holes for the live reptiles.

§ 7. Reincarnation of the Dead.

The reason why snakes were so often supposed to be the fathers of human beings is probably to be found in the common belief that the dead come to life and revisit their old homes in the shape of serpents.

This notion is widely spread in Africa, especially among tribes of the Bantu stock. It is held, for example, by the Zulus, the Thonga, and other Caffre tribes of South Africa; by the Ngoni of British Central Africa; by the Wabondei, the Masai, the Suk, the Nandi, and the Akikuyu of German and British East Africa; and by the Dinkas of the Upper Nile. It prevails also among the Betsileo and other tribes of Madagascar. Among the Iban or Sea Dyaks of Borneo a man's guardian spirit (*Tua*) "has its external manifestation in a snake, a leopard or some other denizen of the forest. It is supposed to be the spirit of some ancestor renowned for bravery or some other virtue who at death has taken an animal form. It is a custom among the Iban when a person of note in the tribe dies, not to bury the body but to place it on a neighbouring hill or in some solitary spot above ground. A quantity of food is taken to the place every day, and if after a few days the body disappears, the deceased is said to have become a *Tua* or guardian spirit. People who have been suffering from some chronic complaint often go to such a tomb, taking with them an offering to the soul of the deceased to obtain his help. To such it is revealed in a dream what animal form the honoured dead has taken. The most frequent form is that of a snake. Thus when a snake is found in a Dyak house it is seldom killed or driven away; food is offered to it, for it is a guardian spirit who has come to inquire after the welfare of its clients and bring them good luck. Anything that may be found in the mouth of such a snake is taken and kept as a charm." Similarly in Kiriwina, an island of the Trobriands Group, to the east of New Guinea, "the natives regarded the snake as one of their ancestral chiefs, or rather as the abode of his spirit, and when one was seen in a house it was believed that the chief was paying a visit to his old home. The natives considered this as an ill omen and so always tried to persuade the animal to depart as soon as possible. The honours of a chief were paid to the snake: the natives passed it in a crouching posture, and as they did so, saluted it as a chief of high rank. Native property was presented to it as an appeasing gift, accompanied by prayers that it would not do them any harm, but would go away quickly. They dared not kill the snake, for its death would bring disease and death upon those who did so."

Where serpents are thus viewed as ancestors come to life, the people naturally treat them with great respect and often feed them with milk, perhaps because milk is the food of human babes and the reptiles are treated as human beings in embryo, who can be born again from women. Thus "the Zulu-Caffres imagine that their ancestors generally visit them under the form of serpents. As soon, therefore, as one of these reptiles appears near their dwellings, they hasten to salute it by the name of *father*, place bowls of milk in its way, and turn it back gently, and with the greatest respect." Among the Masai of East Africa, "when a medicine-man or a rich person dies and is buried, his soul turns into a snake as soon as his body rots; and the snake

goes to his children's kraal to look after them. The Masai in consequence do not kill their sacred snakes, and if a woman sees one in her hut, she pours some milk on the ground for it to lick, after which it will go away." Among the Nandi of British East Africa, "if a snake goes on to the woman's bed, it may not be killed, as it is believed that it personifies the spirit of a deceased ancestor or relation, and that it has been sent to intimate to the woman that her next child will be born safely. Milk is put on the ground for it to drink, and the man or his wife says: '... If thou wantest the call, come, thou art being called.' It is then allowed to leave the house. If a snake enters the houses of old people they give it milk, and say: 'If thou wantest the call, go to the huts of the children,' and they drive it away." This association of the serpent, regarded as an incarnation of the dead, both with the marriage bed and with the huts of young people, points to a belief that the deceased person who is incarnate in the snake may be born again as a human child into the world. Again, among the Suk of British East Africa "it seems to be generally believed that a man's spirit passes into a snake at death. If a snake enters a house, the spirit of the dead man is believed to be very hungry. Milk is poured on to its tracks, and a little meat and tobacco placed on the ground for it to eat. It is believed that if no food is given to the snake one or all of the members of the household will die. It, however, may none the less be killed if encountered outside the house, and if at the time of its death it is inhabited by the spirit of a dead man, 'that spirit dies also.' " The Akikuyu of British East Africa, who similarly believe that snakes are *ngoma* or spirits of the departed, "do not kill a snake but pour out honey and milk for it to drink, which they say it licks up and then goes its way. If a man causes the death of a snake he must without delay summon the senior Elders in the village and slaughter a sheep, which they eat and cut a *rukwaru* from the skin of its right shoulder for the offender to wear on his right wrist; if this ceremony is neglected he, his wife and his children will die." Among the Baganda the python god Selwanga had his temple on the shore of the lake Victoria Nyanza, where he dwelt in the form of a live python. The temple was a hut of the ordinary conical shape with a round hole in the wall, through which the sinuous deity crawled out and in at his pleasure. A woman lived in the temple, and it was her duty to feed the python daily with fresh milk from a wooden bowl, which she held out to the divine reptile while he drained it. The serpent was thought to be the giver of children; hence young couples living in the neighbourhood always came to the shrine to ensure the blessing of the god on their union, and childless women repaired from long distances to be relieved by him from the curse of barrenness. It is not said that this python god embodied the soul of a dead ancestor, but it may have been so; his power of bestowing offspring on women suggests it.

The Romans and Greeks appear to have also believed that the souls of the dead were incarnate in the bodies of serpents. Among the Romans the regular symbol of the *genius* or guardian spirit of every man was a serpent, and in Roman houses serpents were lodged and fed in such numbers that if their swarms had not been sometimes reduced by conflagrations there would have been no living for them. In Greek legend Cadmus and his wife Harmonia were turned at death into snakes. When the Spartan king Cleomenes was slain and crucified in Egypt, a great serpent coiled round his head on the cross and kept off the vultures from his face. The people regarded the prodigy as a proof that Cleomenes was a son of the gods. Again, when Plotinus lay dying, a snake crawled from under his bed and disappeared into a hole in the wall, and at the same moment the philosopher expired. Apparently superstition saw in these serpents the souls of the dead men. In Greek religion the serpent was indeed the regular symbol or attribute of the worshipful dead, and we can hardly doubt that the early Greeks, like the Zulus and other African tribes at the present day, really believed the soul of the departed to be lodged in the reptile. The sacred serpent which lived in the Erechtheum at Athens, and was fed with honey-cakes once a month, may have been supposed to house the soul of the dead king Erechtheus, who had reigned in his lifetime on the same

spot. Perhaps the libations of milk which the Greeks poured upon graves were intended to be drunk by serpents as the embodiments of the deceased; on two tombstones found at Tegea a man and a woman are respectively represented holding out to a serpent a cup which may be supposed to contain milk. We have seen that various African tribes feed serpents with milk because they imagine the reptiles to be incarnations of their dead kinsfolk; and the Dinkas, who practise the custom, also pour milk on the graves of their friends for some time after the burial. It is possible that a common type in Greek art, which exhibits a woman feeding a serpent out of a saucer, may have been borrowed from a practice of thus ministering to the souls of the departed.

Further, at the sowing festival of the Thesmophoria, held by Greek women in October, it was customary to throw cakes and pigs to serpents, which lived in caverns or vaults sacred to the corn-goddess Demeter. We may guess that the serpents thus propitiated were deemed to be incarnations of dead men and women, who might easily be incommoded in their earthy beds by the operations of husbandry. What indeed could be more disturbing than to have the roof of the narrow house shaken and rent over their heads by clumsy oxen dragging a plough up and down on the top of it? No wonder that at such times it was thought desirable to appease them with offerings. Sometimes, however, it is not the dead but the Earth Goddess herself who is disturbed by the husbandman. An Indian prophet at Priest Rapids, on the Middle Columbia River, dissuaded his many followers from tilling the ground because "it is a sin to wound or cut, tear up or scratch our common mother by agricultural pursuits." "You ask me," said this Indian sage, "to plough the ground. Shall I take a knife and tear my mother's bosom? You ask me to dig for stone. Shall I dig under her skin for her bones? You ask me to cut grass and hay and sell it and be rich like white men. But how dare I cut off my mother's hair?" The Baigas, a primitive Dravidian tribe of the Central Provinces in India, used to practise a fitful and migratory agriculture, burning down patches of jungle and sowing seed in the soil fertilized by the ashes after the breaking of the rains. "One explanation of their refusal to till the ground is that they consider it a sin to lacerate the breast of their mother earth with a ploughshare." In China the disturbance caused to the earth-spirits by the operations of digging and ploughing was so very serious that Chinese philosophy appears to have contemplated a plan for allowing the perturbed spirits a close time by forbidding the farmer to put his spade or his plough into the ground except on certain days, when the earth-spirits were either not at home or kindly consented to put up with some temporary inconvenience for the good of man. This we may infer from a passage in a Chinese author who wrote in the first century of our era. "If it is true," he says, "that the spirits who inhabit the soil object to it being disturbed and dug up, then it is proper for us to select special good days for digging ditches and ploughing our fields. (But this is never done); it therefore follows that the spirits of the soil, even though really annoyed when it is disturbed, pass over such an offence if man commits it without evil intent. As he commits it merely to ensure his rest and comfort, the act cannot possibly excite any anger against him in the perfect heart of those spirits; and this being the case, they will not visit him with misfortune even if he do not choose auspicious days for it. But if we believe that the earth-spirits cannot excuse man on account of the object he pursues, and detest him for annoying them by disturbing the ground, what advantage then can he derive from selecting proper days for doing so?" What advantage indeed? In that case the only logical conclusion is, with the Indian prophet, to forbid agriculture altogether, as an impious encroachment on the spiritual world. Few peoples, however, who have once contracted the habit of agriculture are willing to renounce it out of a regard for the higher powers; the utmost concession which they are willing to make to religion in the matter is to prohibit agricultural operations at certain times and seasons, when the exercise of them would be more than usually painful to the earth-spirits. Thus in Bengal the chief festival in honour of Mother Earth is held at the end of the hot season, when she is

supposed to suffer from the impurity common to women, and during that time all ploughing, sowing, and other work cease. On a certain day of the year, when offerings are made to the Earth, the Ewe farmer of West Africa will not hoe the ground, and the Ewe weaver will not drive a sharp stake into it, "because the hoe and the stake would wound the Earth and cause her pain." When Ratumaimbulu, the god who made fruit-trees to blossom and bear fruit, came once a year to Fiji, the people had to live very quietly for a month lest they should disturb him at his important work. During this time they might not plant nor build nor sail about nor go to war; indeed most kinds of work were forbidden. The priests announced the time of the god's arrival and departure. These periods of rest and quiet would seem to be the Indian and Fijian Lent.

Thus behind the Greek notion that women may conceive by a serpent-god seems to lie the belief that they can conceive by the dead in the form of serpents. If such a belief was ever held, it would be natural that barren women should resort to graves in order to have their wombs quickened, and this may explain why they visited the shrine of the serpent-god Aesculapius for that purpose; the shrine was perhaps at first a grave. It is significant that in Syria the shrines of St. George, to which childless women go to get offspring, always include a tomb or the likeness of one; and further, that in the opinion of Syrian peasants at the present day women may, without intercourse with a living man, bear children to a dead husband, a dead saint, or a jinnee. In the East Indies also it is still commonly believed that spirits can consort with women and beget children on them. The Olo Ngadjoe of Borneo imagine that albinos are the offspring of the spirit of the moon by mortal women, the pallid hue of the human children naturally reflecting the pallor of their heavenly father.

Such beliefs are closely akin to the idea, entertained by many peoples, that the souls of the dead may pass directly into the wombs of women and be born again as infants. Thus the Hurons used to bury little children beside the paths in the hope that their souls might enter the passing squaws and be born again; and similarly some negroes of West Africa throw the bodies of infants into the bush in order that their souls may choose a new mother from the women who pass by. Among the tribes of the Lower Congo "a baby is always buried near the house of its mother, never in the bush. They think that, if the child is not buried near its mother's house, she will be unlucky and never have any more children." The notion probably is that the dead child, buried near its mother's house, will enter into her womb and be born again, for these people believe in the reincarnation of the dead. They think that "the only new thing about a child is its body. The spirit is old and formerly belonged to some deceased person, or it may have the spirit of some living person." For example, if a child is like its mother, father, or uncle, they imagine that it must have the spirit of the relative whom it resembles, and that therefore the person whose soul has thus been abstracted by the infant will soon die. Among the Bangalas, a tribe of cannibals in Equatorial Africa, to the north of the Congo, a woman was one day seen digging a hole in the public road. Her husband entreated a Belgian officer to let her alone, promising to mend the road afterwards, and explaining that his wife wished to become a mother. The good-natured officer complied with his request and watched the woman. She continued to dig till she had uncovered a little skeleton, the remains of her first-born, which she tenderly embraced, humbly entreating the dead child to enter into her and give her again a mother's joy. The officer rightly did not smile. The Bagishu, a Bantu tribe of Mount Elgon, in the Uganda Protectorate, practise the custom of throwing out their dead "except in the case of the youngest child or the old grandfather or grandmother, for whom, like the child, a prolonged life on earth is desired.... When it is desired to perpetuate on the earth the life of some old man or woman, or that of some young baby, the corpse is buried inside the house or just under the eaves, until another child is born to the nearest relation of the corpse. This child, male or female, takes the name

of the corpse, and the Bagishu firmly believe that the spirit of the dead has passed into this new child and lives again on earth. The remains are then dug up and thrown out into the open.”

Again, just as measures are adopted to facilitate the rebirth of good ghosts, so on the other hand precautions are taken to prevent the rebirth of bad ones. Thus, with regard to the Baganda of Central Africa we read that, “while the present generation know the cause of pregnancy, the people in the earlier times were uncertain as to its real cause, and thought that it was possible to conceive without any intercourse with the male sex. Hence their precautions in passing places where either a suicide had been burnt, or a child born feet first had been buried. Women were careful to throw grass or sticks on such a spot, for by so doing they thought that they could prevent the ghost of the dead from entering into them, and being reborn.” The fear of being got with child by such ghosts was not confined to married women, it was shared by all women alike, whether young or old, whether married or single; and all of them sought to avert the danger in the same way. And Baganda women imagined that without the help of the other sex they could be impregnated not only by these unpleasant ghosts but also by the flower of the banana. If while a woman was busy in her garden under the shadow of the banana trees, a great purple bloom chanced to fall from one of the trees on her back or shoulders, it was quite enough, in the opinion of the Baganda, to get her with child; and were a wife accused of adultery because she gave birth to a child who could not possibly have been begotten by her husband, she had only to father the infant on a banana flower to be honourably acquitted of the charge. The reason why this remarkable property was ascribed to the bloom of the banana would seem to be that ghosts of ancestors were thought to haunt banana groves, and that the afterbirths of children, which the Baganda regarded as twins of the children, were commonly buried at the root of the trees. What more natural than that a ghost should lurk in each flower, and dropping adroitly in the likeness of a blossom on a woman's back effect a lodgment in her womb?

Again, when a child dies in Northern India it is usually buried under the threshold of the house, “in the belief that as the parents tread daily over its grave, its soul will be reborn in the family. Here, as Mr. Rose suggests, we reach an explanation of the rule that children of Hindus are buried, not cremated. Their souls do not pass into the ether with the smoke of the pyre, but remain on earth to be reincarnated in the household.” In the Punjab this belief in the reincarnation of dead infants gives rise to some quaint or pathetic customs. Thus, “in the Hissar District, Bishnois bury dead infants at the threshold, in the belief that it would facilitate the return of the soul to the mother. The practice is also in vogue in the Kangra District, where the body is buried in front of the back door. In some places it is believed that, if the child dies in infancy and the mother drops her milk for two or three days on the ground, the soul of the child comes back to be born again. For this purpose milk diluted with water is placed in a small earthen pot and offered to the dead child's spirit for three consecutive evenings. There is also a belief in the Ambala and Gujrat Districts that if jackals and dogs dig out the dead body of the child and bring it towards the town or village, it means that the child will return to its mother, but if they take it to some other side, the soul will reincarnate in some other family. For this purpose, the second day after the infant's death, the mother goes out early in the morning to see whether the dogs have brought the body towards the village. When the child is being taken away for burial the mother cuts off and preserves a piece of its garment with a view to persuade the soul to return to her. Barren women or those who have lost children in infancy tear a piece off the clothing of a dead child and stitch it to their wearing apparel, believing that the soul of the child will return to them instead of its own mother. On this account, people take great care not to lose the clothes of dead children, and some bury them in the house.” In Bilaspore “a still-born child, or one who has passed away

before the *Chhatti* (the sixth day, the day of purification) is not taken out of the house for burial, but is placed in an earthen vessel and is buried in the doorway or in the yard of the house. Some say that this is done in order that the mother may bear another child." Here in Bilaspore the people have devised a very simple way of identifying a dead person when he or she is born again as an infant. When anybody dies, they mark the body with soot or oil, and the next baby born in the family with a similar mark is hailed as the departed come to life again. Among the Kois of the Godavari district, in Southern India, the dead are usually burnt, but the bodies of children and of young men and women are buried. If a child dies within a month of its birth, it is generally buried close to the house "so that the rain, dripping from the eaves, may fall upon the grave, and thereby cause the parents to be blessed with another child." Apparently it is supposed that the soul of the dead child, refreshed and revived by the rain, will pass again into the mother's womb. Indian criminal records contain many cases in which "the ceremonial killing of a male child has been performed as a cure for barrenness, the theory being that the soul of the murdered boy becomes reincarnated in the woman, who performs the rite with a desire to secure offspring. Usually she effects union with the spirit of the child by bathing over its body or in the water in which the corpse has been washed. Cases have recently occurred in which the woman actually bathed in the blood of the child."

On the fifth day after a death the Gonds perform the ceremony of bringing back the soul. They go to the bank of a river, call aloud the name of the deceased, and entering the water catch a fish or an insect. This creature they then take home and place among the sainted dead of the family, supposing that in this manner the spirit of the departed has been brought back to the house. Sometimes the fish or insect is eaten in the belief that it will be thus reborn as a child. This last custom explains the widely diffused story of virgins who have conceived by eating of a plant or an animal or merely by taking it to their bosom. In all such cases we may surmise that the plant or animal was thought to contain the soul of a dead person, which thus passed into the virgin's womb and was born again as an infant. Among the South Slavs childless women often resort to a grave in which a pregnant woman is buried. There they bite some grass from the grave, invoke the deceased by name, and beg her to give them the fruit of her womb. After that they take a little of the mould from the grave and carry it about with them thenceforth under their girdle. Apparently they imagine that the soul of the unborn infant is in the grass or the mould and will pass from it into their body.

Among the Kai of German New Guinea, "impossible as it may be thought, it is yet a fact that women here and there deny in all seriousness the connexion between sexual intercourse and pregnancy. Of course most people are clear as to the process. The ignorance of some individuals is perhaps based on the consideration that not uncommonly married women remain childless for years or for life. Finally, the animistic faith contributes its share to support the ignorance." In some islands of Southern Melanesia the natives appear similarly to believe that sexual intercourse is not necessary to impregnation, and that a woman can conceive through the simple passage into her womb of a spirit-animal or a spirit-fruit without the help of a man. In the island of Mota, one of the Banks' group, "the course of events is usually as follows: a woman sitting down in her garden or in the bush or on the shore finds an animal or fruit in her loincloth. She takes it up and carries it to the village, where she asks the meaning of the appearance. The people say that she will give birth to a child who will have the characters of this animal or even, it appeared, would be himself or herself the animal. The woman then takes the creature back to the place where she had found it and places it in its proper home; if it is a land animal on the land; if a water animal in the pool or stream from which it had probably come. She builds up a wall round it and goes to feed and visit it every day. After a time the animal will disappear, and it is believed that that is because the animal has at the time of its disappearance entered into the woman. It seemed quite clear that there

was no belief in physical impregnation on the part of the animal, nor of the entry of a material object in the form of the animal into her womb, but so far as I could gather, an animal found in this way was regarded as more or less supernatural, a spirit animal and not one material, from the beginning. It has happened in the memory of an old man now living in Mota that a woman who has found an animal in her loincloth has carried it carefully in her closed hands to the village, but that when she opened her hands to show it to the people, the animal has gone, and in this case it was believed that the entry had taken place while the woman was on her way from the bush to the village.... When the child is born it is regarded as being in some sense the animal or fruit which had been found and tended by the mother. The child may not eat the animal during the whole of its life, and if it does so, will suffer serious illness, if not death. If it is a fruit which has been found, the child may not eat this fruit or touch the tree on which it grows, the latter restriction remaining in those cases in which the fruit is inedible.... I inquired into the idea at the bottom of the prohibition of the animal as food, and it appeared to be that the person would be eating himself. It seemed that the act would be regarded as a kind of cannibalism. It was evident that there is a belief in the most intimate relation between the person and all individuals of the species with which he is identified.

“A further aspect of the belief in the animal nature of a child is that it partakes of the physical and mental characters of the animal with which it is identified. Thus, if the animal found has been a sea-snake, and this is a frequent occurrence, the child would be weak, indolent and slow; if an eel, there will be a similar disposition; if a hermit crab, the child will be hot-tempered; if a flying fox, it will also be hot-tempered and the body will be dark; if a brush turkey, the disposition will be good; if a lizard, the child will be soft and gentle; if a rat, thoughtless, hasty and intemperate. If the object found has been a fruit, here also the child will partake of its nature. In the case of a wild Malay apple (*malmalagaviga*) the child will have a big belly, and a person with this condition will be asked, ‘Do you come from the *malmalagaviga*?’ Again, if the fruit is one called *womarakaraqat*, the child will have a good disposition.

“In the island of Motlav not far from Mota they have the same belief that if a mother has found an animal in her dress, the child will be identified with that animal and will not be allowed to eat it. Here again the child is believed to have the characters of the animal, and two instances given were that a child identified with a yellow crab will have a good disposition and be of a light colour, while if a hermit crab has been found, the child will be angry and disagreeable. In this island a woman who desires her child to have certain characters will frequent a place where she will be likely to encounter the animal which causes the appearance of these characters. Thus, if she wants to have a light coloured child, she will go to a place where there are light coloured crabs.”

Throughout a large part of Australia, particularly in the Centre, the North, and the West, the aborigines hold that the commerce of the human sexes is not necessary to the production of children; indeed many of them go further and deny that sexual intercourse is the real cause of the propagation of the species. Among the Arunta, Kaitish, Luritcha, Ilpirra and other tribes, who roam the barren steppes of Central Australia, it appears to be a universal article of belief that every person is the reincarnation of a deceased ancestor, and that the souls of the dead pass directly into the wombs of women, who give them birth without the need of commerce with the other sex. They think that the spirits of the departed gather and dwell at particular spots, marked by a natural feature such as a rock or a tree, and that from these lurking-places they dart out and enter the bodies of passing women or girls. When a woman feels her womb quickened, she knows that a spirit has made its way into her from the nearest abode of the dead. This is their regular explanation of conception and childbirth. “The natives, one and all in these tribes, believe that the child is the direct result of the entrance into the mother of an

ancestral spirit individual. They have no idea of procreation as being associated with sexual intercourse, and firmly believe that children can be born without this taking place." The spots where the souls thus congregate waiting to be born again are usually the places where the remote ancestors of the dream-time are said to have passed into the ground; that is, they are the places where the forefathers of the tribe are supposed to have died or to have been buried. For example, in the Warramunga tribe the ancestor of the Black-snake clan is said to have left many spirits of Black-snake children in the rocks and trees which border a certain creek. Hence no woman at the present day dares to strike one of these trees with an axe, being quite convinced that the blow would release one of the spirit-children, who would at once enter her body. They imagine that the spirit is no larger than a grain of sand, and that it enters the woman through her navel and grows into a child in her womb. Again, at several places in the wide territory of the Arunta tribe there are certain stones which are in like manner thought to be the abode of souls awaiting rebirth. Hence the stones are called "child-stones." In one of them there is a hole through which the spirit-children look out for passing women, and it is firmly believed that a visit to the stone would result in conception. If a young woman is obliged to pass near the stone and does not wish to have a child, she will carefully disguise her youth, pulling a wry face and hobbling along on a stick. She will bend herself double like a very old woman, and imitating the cracked voice of age she will say, "Don't come to me, I am an old woman." Nay, it is thought that women may conceive by the stone without visiting it. If a man and his wife both wish for a child, the husband will tie his hair-girdle round the stone, rub it, and mutter a direction to the spirits to give heed to his wife. And it is believed that by performing a similar ceremony a malicious man can cause women and even children at a distance to be pregnant.

Such beliefs are not confined to the tribes of Central Australia but prevail among all the tribes from Lake Eyre northwards to the sea and the Gulf of Carpentaria. Thus the Mungarai say that in the far past time their old ancestors walked about the country, making all the natural features of the landscape and leaving spirit-children behind them where they stopped. These children emanated from the bodies of the ancestors, and they still wait at various spots looking out for women into whom they may go and be born. For example, near McMinn's bar on the Roper River there is a large gum tree full of spirit-children, who all belong to one particular totem and are always agog to enter into women of that totem. Again, at Crescent Lagoon an ancestor, who belonged to the thunder totem, deposited numbers of spirit-children; and if a woman of the Gnaritjbellan subclass so much as dips her foot in the water, one of the spirit-children passes up her leg and into her body and in due time is born as a child, who has thunder for its totem. Or if the woman stoops and drinks water, one of the sprites will enter her through the mouth. Again, there are lagoons along the Roper River where red lilies grow; and the water is full of spirit-children which were deposited there by a kangaroo man. So when women of the Gnaritjbellan subclass wade into the water to gather lilies, little sprites swarm up their legs and are born as kangaroo children. Again, in the territory of the Nullakun tribe there is a certain spring where a man once deposited spirit-children of the rainbow totem; and to this day when a woman of the right totem comes to drink at the spring, the spirit of a rainbow child will dart into her and be born. Once more, in the territory of the Yungman tribe the trees and stones near Elsey Creek are full of spirit-children who belong to the sugar-bag (honeycomb) totem; and these sugar-bag children are constantly entering into the right women and being born into the world.

The natives of the Tully River in Queensland do not recognize sexual intercourse as a cause of conception in women, though curiously enough they do recognize it as the cause of conception in all animals, and pride themselves on their superiority to the brutes in that they are not indebted for the continuance of their species to such low and vulgar means. The true

causes of conception in a woman, according to them, are four in number. First, she may have received a particular species of black bream from a man whom the European in his ignorance would call the father; this she may have roasted and sat over the fire inhaling the savoury smell of the roast fish. That is quite sufficient to get her with child. Or, secondly, she may have gone out on purpose to catch a certain kind of bull-frog, and if she succeeds in capturing it, that again is a full and satisfactory explanation of her pregnancy. Thirdly, some man may have told her to conceive a child, and the mere command produces the desired effect. Or, fourth and lastly, she may have simply dreamed that the child was put into her, and the dream necessarily works its own fulfilment. Whatever white men may think about the matter, these are the real causes why babies are born among the blacks on the Tully River. About Cape Bedford in Queensland the natives believe that babies are sent by certain long-haired spirits, with two sets of eyes in the front and back of their heads, who live in the dense scrub and underwood. The children are made in the far west where the sun goes down, and they are made not in the form of infants but full grown; but on their passage from the sunset land to the wombs they are changed into the shape of spur-winged plovers, if they are girls, or of pretty snakes, if they are boys. So when the cry of a plover is heard by night, the blacks prick up their ears and say, "Hallo! there is a baby somewhere about." And if a woman is out in the bush searching for food and sees one of the pretty snakes, which are really baby boys on the look out for mothers, she will call out to her mates, and they will come running and turn over stones, and leaves, and logs in the search for the snake; and if they cannot find it they know that it has gone into the woman and that she will soon give birth to a baby boy. On the Pennefather River in Queensland the being who puts babies into women is called Anje-a. He takes a lump of mud out of one of the mangrove swamps, moulds it into the shape of an infant, and insinuates it into a woman's womb. You can never see him, for he lives in the depths of the woods, among the rocks, and along the mangrove swamps; but sometimes you can hear him laughing there to himself, and when you hear him you may know that he has got a baby ready for somebody. Among the tribes of the Cairns district in North Queensland "the acceptance of food from a man by a woman was not merely regarded as a marriage ceremony, but as the actual cause of conception."

Similarly among the Australian tribes of the Northern Territory, about Port Darwin and the Daly River, especially among the Larrekiya and Wogait, "conception is not regarded as a direct result of cohabitation." The old men of the Wogait say that there is an evil spirit who takes babies from a big fire and puts them in the wombs of women, who must give birth to them. In the ordinary course of events, when a man is out hunting and kills game or collects other food, he gives it to his wife and she eats it, believing that the game or other food will cause her to conceive and bring forth a child. When the child is born, it may on no account partake of the food which caused conception in the mother until it has got its first teeth. A similar belief that conception is caused by the food which a woman eats is held by some tribes of Western Australia. On this subject Mr. A. R. Brown reports as follows: "In the Ingarda tribe at the mouth of the Gascoyne River, I found a belief that a child is the product of some food of which the mother has partaken just before her first sickness in pregnancy. My principal informant on this subject told me that his father had speared a small animal called *bandaru*, probably a bandicoot, but now extinct in this neighbourhood. His mother ate the animal, with the result that she gave birth to my informant. He showed me the mark in his side where, as he said, he had been speared by his father before being eaten by his mother. A little girl was pointed out to me as being the result of her mother eating a domestic cat, and her brother was said to have been produced from a bustard.... The bustard was one of the totems of the father of these two children and, therefore, of the children themselves. This, however, seems to have been purely accidental. In most cases the animal to which conception is due is not one of the father's totems. The species that is thus connected with an individual

by birth is not in any way sacred to him. He may kill or eat it; he may marry a woman whose conceptional animal is of the same species, and he is not by the accident of his birth entitled to take part in the totemic ceremonies connected with it.

“I found traces of this same belief in a number of tribes north of the Ingarda, but everywhere the belief seemed to be sporadic; that is to say, some persons believed in it and others did not. Some individuals could tell the animal or plant from which they or others were descended, while others did not know or in some cases denied that conception was so caused. There were to be met with, however, some beliefs of the same character. A woman of the Buduna tribe said that native women nowadays bear half-caste children because they eat bread made of white flour. Many of the men believed that conception is due to sexual intercourse, but as these natives have been for many years in contact with the whites this cannot be regarded as satisfactory evidence of the nature of their original beliefs.

“In some tribes further to the north I found a more interesting and better organised system of beliefs. In the Kariera, Ñamal, and Injibandi tribes the conception of a child is believed to be due to the agency of a particular man, who is not the father. This man is the *wororu* of the child when it is born. There were three different accounts of how the *wororu* produces conception, each of them given to me on several different occasions. According to the first, the man gives some food, either animal or vegetable, to the woman, and she eats this and becomes pregnant. According to the second, the man when he is out hunting kills an animal, preferably a kangaroo or an emu, and as it is dying he tells its spirit or ghost to go to a particular woman. The spirit of the dead animal goes into the woman and is born as a child. The third account is very similar to the last. A hunter, when he has killed a kangaroo or an emu, takes a portion of the fat of the dead animal which he places on one side. This fat turns into what we may speak of as a spirit-baby, and follows the man to his camp. When the man is asleep at night the spirit-baby comes to him and he directs it to enter a certain woman who thus becomes pregnant. When the child is born the man acknowledges that he sent it, and becomes its *wororu*. In practically every case that I examined, some forty in all, the *wororu* of a man or woman was a person standing to him or her in the relation of father's brother own or tribal. In one case a man had a *wororu* who was his father's sister. The duties of a man to his *wororu* are very vaguely defined. I was told that a man ‘looks after’ his *wororu*, that is, performs small services for him, and, perhaps, gives him food. The conceptional animal or plant is not the totem of either the child or the *wororu*. The child has no particular magical connection with the animal from which he is derived. In a very large number of cases that animal is either the kangaroo or the emu.”

Thus it appears that a childlike ignorance as to the physical process of procreation still prevails to some extent among certain rude races of mankind, who are accordingly driven to account for it in various fanciful ways such as might content the curiosity of children. We may safely assume that formerly a like ignorance was far more widely spread than it is now; indeed in the long ages which elapsed before any portion of mankind emerged from savagery, it is probable that the true cause of childbirth was universally unknown, and that people made shift to explain the mystery by some such theories as are still current among the savage or barbarous races of Central Africa, Melanesia, and Australia. A little reflection on the conditions of savage life may satisfy us that the ignorance is by no means so surprising as it may seem at first sight to a civilized observer, or, to put it otherwise, that the true cause of the birth of children is not nearly so obvious as we are apt to think. Among low savages, such as all men were originally, it is customary for boys and girls to cohabit freely with each other under the age of puberty, so that they are familiar with a commerce of the sexes which is not and cannot be attended with the birth of children. It is, therefore, not very wonderful that they should confidently deny the connexion of sexual intercourse with the production of offspring.

Again, the long interval of time which divides the act of conception from the first manifest symptoms of pregnancy might easily disguise from the heedless savage the vital relation between the two. These considerations may remove or lessen the hesitation which civilized man naturally feels at admitting that a considerable part or even the whole of his species should ever have doubted or denied what seems to him one of the most obvious and elementary truths of nature.

In the light of the foregoing evidence, stories of the miraculous birth of gods and heroes from virgin mothers lose much of the glamour that encircled them in days of old, and we view them simply as relics of superstition surviving like fossils to tell us of a bygone age of childlike ignorance and credulity.

§ 8. Sacred Stocks and Stones among the Semites.

Traces of beliefs and customs like the foregoing may perhaps be detected among the ancient Semites. When the prophet Jeremiah speaks of the Israelites who said to a stock or to a tree (for in Hebrew the words are the same), "Thou art my father," and to a stone, "Thou hast brought me forth," it is probable that he was not using vague rhetorical language, but denouncing real beliefs current among his contemporaries. Now we know that at all the old Canaanite sanctuaries, including the sanctuaries of Jehovah down to the reformations of Hezekiah and Josiah, the two regular objects of worship were a sacred stock and a sacred stone, and that these sanctuaries were the seats of profligate rites performed by sacred men (*kedeshim*) and sacred women (*kedeshoth*). Is it not natural to suppose that the stock and stone which the superstitious Israelites regarded as their father and mother were the sacred stock (*asherah*) and the sacred stone (*massebah*) of the sanctuary, and that the children born of the loose intercourse of the sexes at these places were believed to be the offspring or emanations of these uncouth but worshipful idols in which, as in the sacred trees and stones of Central Australia, the souls of the dead may have been supposed to await rebirth? On this view the sacred men and women who actually begot or bore the children were deemed the human embodiments of the two divinities, the men perhaps personating the sacred stock, which appears to have been a tree stripped of its branches, and the women personating the sacred stone, which seems to have been in the shape of a cone, an obelisk, or a pillar.

These conclusions are confirmed by the result of recent researches at Gezer, an ancient Canaanitish city, which occupied a high, isolated point on the southern border of Ephraim, between Jerusalem and the sea. Here the English excavations have laid bare the remains of a sanctuary with the sacred stone pillars or obelisks (*masseboth*) still standing in a row, while between two of them is set a large socketed stone, beautifully squared, which perhaps contained the sacred stock or pole (*asherah*). In the soil which had accumulated over the floor of the temple were found vast numbers of male emblems rudely carved out of soft limestone; and tablets of terra-cotta, representing in low relief the mother-goddess, were discovered throughout the strata. These objects were no doubt votive-offerings presented by the worshippers to the male and female deities who were represented by the sacred stock and the sacred stones; and their occurrence in large quantities raises a strong presumption that the divinities of the sanctuary were a god and goddess regarded as above all sources of fertility. The supposition is further strengthened by a very remarkable discovery. Under the floor of the temple were found the bones of many new-born children, none more than a week old, buried in large jars. None of these little bodies showed any trace of mutilation or violence; and in the light of the customs practised in many other lands we seem to be justified in conjecturing that the infants were still-born or died soon after birth, and that they were buried by their parents in the sanctuary in the hope that, quickened by the divine power, they might enter again into the mother's womb and again be born into the world. If the souls of

these buried babes were supposed to pass into the sacred stocks and stones and to dart from them into the bodies of would-be mothers who resorted to the sanctuary, the analogy with Central Australia would be complete. That the analogy is real and not fanciful is strongly suggested by the modern practice of Syrian women who still repair to the shrines of saints to procure offspring, and who still look on "holy men" as human embodiments of divinity. In this, as in many other dark places of superstition, the present is the best guide to the interpretation of the past; for while the higher forms of religious faith pass away like clouds, the lower stand firm and indestructible like rocks. The "sacred men" of one age are the dervishes of the next, the Adonis of yesterday is the St. George of to-day.

V. The Burning of Melcarth

If a custom of putting a king or his son to death in the character of a god has left small traces of itself in Cyprus, an island where the fierce zeal of Semitic religion was early tempered by Greek humanity, the vestiges of that gloomy rite are clearer in Phoenicia itself and in the Phoenician colonies, which lay more remote from the highways of Grecian commerce. We know that the Semites were in the habit of sacrificing some of their children, generally the first-born, either as a tribute regularly due to the deity or to appease his anger in seasons of public danger and calamity. If commoners did so, is it likely that kings, with all their heavy responsibilities, could exempt themselves from this dreadful sacrifice for the fatherland? In point of fact, history informs us that kings steeled themselves to do as others did. It deserves to be noticed that if Mesha, king of Moab, who sacrificed his eldest son by fire, claimed to be a son of his god, he would no doubt transmit his divinity to his offspring; and further, that the same sacrifice is said to have been performed in the same way by the divine founder of Byblus, the great seat of the worship of Adonis. This suggests that the human representatives of Adonis formerly perished in the flames. At all events, a custom of periodically burning the chief god of the city in effigy appears to have prevailed at Tyre and in the Tyrian colonies down to a late time, and the effigy may well have been a later substitute for a man. For Melcarth, the great god of Tyre, was identified by the Greeks with Hercules, who is said to have burned himself to death on a great pyre, ascending up to heaven in a cloud and a peal of thunder. The common Greek legend, immortalized by Sophocles, laid the scene of the fiery tragedy on the top of Mount Oeta, but another version transferred it significantly to Tyre itself. Combined with the other evidence which I shall adduce, this latter tradition raises a strong presumption that an effigy of Hercules, or rather of Melcarth, was regularly burned at a great festival in Tyre. That festival may have been the one known as "the awakening of Hercules," which was held in the month of Peritius, answering nearly to January. The name of the festival suggests that the dramatic representation of the death of the god on the pyre was followed by a semblance of his resurrection. The mode in which the resurrection was supposed to be effected is perhaps indicated by the statement of a Greek writer that the Phoenicians used to sacrifice quails to Hercules, because Hercules on his journey to Libya had been slain by Typhon and brought to life again by Iolaus, who held a quail under his nose: the dead god snuffed at the bird and revived. According to another account Iolaus burnt a quail alive, and the dead hero, who loved quails, came to life again through the savoury smell of the roasted bird. This latter tradition seems to point to a custom of burning the quails alive in the Phoenician sacrifices to Melcarth. A festival of the god's resurrection might appropriately be held in spring, when the quails migrate northwards across the Mediterranean in great bands, and immense numbers of them are netted for the market. In the month of March the birds return to Palestine by myriads in a single night, and remain to breed in all the open plains, marshes, and cornfields. Certainly a close connexion seems to have subsisted between quails and Melcarth; for legend ran that Asteria, the mother of the Tyrian Hercules, that is, of Melcarth, was transformed into a quail. It was probably to this annual festival of the death and resurrection of Melcarth that the Carthaginians were wont to send ambassadors every year to Tyre, their mother-city.

In Gades, the modern Cadiz, an early colony of Tyre on the Atlantic coast of Spain, there was an ancient, famous, and wealthy sanctuary of Hercules, the Tyrian Melcarth. Indeed the god was said to be buried on the spot. No image stood in his temple, but a perpetual fire burned on the altar, and incense was offered by white-robed priests, with bare feet and shorn heads, who were bound to chastity. Neither women nor pigs might pollute the holy place by their

presence. In later times many distinguished Romans went on pilgrimage to this remote shrine on the Atlantic shore when they were about to embark on some perilous enterprise, and they returned to it to pay their vows when their petitions had been granted. One of the last things Hannibal himself did before he marched on Italy was to repair to Gades and offer up to Melcarth prayers which were never to be answered. Soon after he dreamed an ominous dream. Now it would appear that at Gades, as at Tyre, though no image of Melcarth stood in the temple, an effigy of him was made up and burned at a yearly festival. For a certain Cleon of Magnesia related how, visiting Gades, he was obliged to sail away from the island with the rest of the multitude in obedience to the command of Hercules, that is, of Melcarth, and how on their return they found a monstrous man of the sea stranded on the beach and burning; for the god, they were told, had struck him with a thunderbolt. We may conjecture that at the annual festival of Melcarth strangers were obliged to quit the city, and that in their absence the mystery of burning the god was consummated. What Cleon and the rest saw on their return to Gades would, on this hypothesis, be the smouldering remains of a gigantic effigy of Melcarth in the likeness of a man riding on a sea-horse, just as he is represented on coins of Tyre. In like manner the Greeks portrayed the sea-god Melicertes, whose name is only a slightly altered form of Melcarth, riding on a dolphin or stretched on the beast's back.

At Carthage, the greatest of the Tyrian colonies, a reminiscence of the custom of burning a deity in effigy seems to linger in the story that Dido or Elissa, the foundress and queen of the city, stabbed herself to death upon a pyre, or leaped from her palace into the blazing pile, to escape the fond importunities of one lover or in despair at the cruel desertion of another. We are told that Dido was worshipped as a goddess at Carthage so long as the country maintained its independence. Her temple stood in the centre of the city shaded by a grove of solemn yews and firs. The two apparently contradictory views of her character as a queen and a goddess may be reconciled if we suppose that she was both the one and the other; that in fact the queen of Carthage in early days, like the queen of Egypt down to historical times, was regarded as divine, and had, like human deities elsewhere, to die a violent death either at the end of a fixed period or whenever her bodily and mental powers began to fail. In later ages the stern old custom might be softened down into a pretence by substituting an effigy for the queen or by allowing her to pass through the fire unscathed. A similar modification of the ancient rule appears to have been allowed at Tyre itself, the mother-city of Carthage. We have seen reason to think that the kings of Tyre, from whom Dido was descended, claimed to personate the god Melcarth, and that the deity was burned either in effigy or in the person of a man at an annual festival. Now in the same chapter in which Ezekiel charges the king of Tyre with claiming to be a god, the prophet describes him as walking "up and down amidst the stones of fire." The description becomes at once intelligible if we suppose that in later times the king of Tyre compounded for being burnt in the fire by walking up and down on hot stones, thereby saving his life at the expense perhaps of a few blisters on his feet. It is possible that when all went well with the commonwealth, children whom strict law doomed to the furnace of Moloch may also have been mercifully allowed to escape on condition of running the fiery gauntlet. At all events, a religious rite of this sort has been and is still practised in many parts of the world: the performers solemnly pace through a furnace of heated stones or glowing wood-ashes in the presence of a multitude of spectators. Examples of the custom have been adduced in another part of this work. Here I will cite only one. At Castabala, in Southern Cappadocia, there was worshipped an Asiatic goddess whom the Greeks called the Perasian Artemis. Her priestesses used to walk barefoot over a fire of charcoal without sustaining any injury. That this rite was a substitute for burning human beings alive or dead is suggested by the tradition which placed the adventure of Orestes and the Tauric Artemis at Castabala; for the men or women sacrificed to the Tauric Artemis were first put to the sword and then burned in a pit of sacred fire. Among the Carthaginians another

trace of such a practice may perhaps be detected in the story that at the desperate battle of Himera, fought from dawn of day till late in the evening, the Carthaginian king Hamilcar remained in the camp and kept sacrificing holocausts of victims on a huge pyre; but when he saw his army giving way before the Greeks, he flung himself into the flames and was burned to death. Afterwards his countrymen sacrificed to him and erected a great monument in his honour at Carthage, while lesser monuments were reared to his memory in all the Punic colonies. In public emergencies which called for extraordinary measures a king of Carthage may well have felt bound in honour to sacrifice himself in the old way for the good of his country. That the Carthaginians regarded the death of Hamilcar as an act of heroism and not as a mere suicide of despair, is proved by the posthumous honours they paid him.

The foregoing evidence, taken altogether, raises a strong presumption, though it cannot be said to amount to a proof, that a practice of burning a deity, and especially Melcarth, in effigy or in the person of a human representative, was observed at an annual festival in Tyre and its colonies. We can thus understand how Hercules, in so far as he represented the Tyrian god, was believed to have perished by a voluntary death on a pyre. For on many a beach and headland of the Aegean, where the Phoenicians had their trading factories, the Greeks may have watched the bale-fires of Melcarth blazing in the darkness of night, and have learned with wonder that the strange foreign folk were burning their god. In this way the legend of the voyages of Hercules and his death in the flames may be supposed to have originated. Yet with the legend the Greeks borrowed the custom of burning the god; for at the festivals of Hercules a pyre used to be kindled in memory of the hero's fiery death on Mount Oeta. We may surmise, though we are not expressly told, that an effigy of Hercules was regularly burned on the pyre.

VI. The Burning of Sandan

§ 1. The Baal of Tarsus.

In Cyprus the Tyrian Melcarth was worshipped side by side with Adonis at Amathus, and Phoenician inscriptions prove that he was revered also at Idalium and Larnax Lapethus. At the last of these places he seems to have been regarded by the Greeks as a marine deity and identified with Poseidon. A remarkable statue found at Amathus may represent Melcarth in the character of the lion-slayer, a character which the Greeks bestowed on Hercules. The statue in question is of colossal size, and exhibits a thick-set, muscular, hirsute deity of almost bestial aspect, with goggle eyes, huge ears, and a pair of stumpy horns on the top of his head. His beard is square and curly: his hair falls in three pigtales on his shoulders: his brawny arms appear to be tattooed. A lion's skin, clasped by a buckle, is knotted round his loins; and he holds the skin of a lioness in front of him, grasping a hind paw with each hand, while the head of the beast, which is missing, hung down between his legs. A fountain must have issued from the jaws of the lioness, for a rectangular hole, where the beast's head should be, communicates by a channel with another hole in the back of the statue. Greek artists working on this or a similar barbarous model produced the refined type of the Grecian Hercules with the lion's scalp thrown like a cowl over his head. Statues of him have been found in Cyprus, which represent intermediate stages in this artistic evolution. But there is no proof that in Cyprus the Tyrian Melcarth was burned either in effigy or in the person of a human representative.

On the other hand, there is clear evidence of the observance of such a custom in Cilicia, the country which lies across the sea from Cyprus, and from which the worship of Adonis, according to tradition, was derived. Whether the Phoenicians ever colonized Cilicia or not is doubtful, but at all events the natives of the country, down to late times, worshipped a male deity who, in spite of a superficial assimilation to a fashionable Greek god, appears to have been an Oriental by birth and character. He had his principal seat at Tarsus, in a plain of luxuriant fertility and almost tropical climate, tempered by breezes from the snowy range of Tarsus on the north and from the sea on the south. Though Tarsus boasted of a school of Greek philosophy which at the beginning of our era surpassed those of Athens and Alexandria, the city apparently remained in manners and spirit essentially Oriental. The women went about the streets muffled up to the eyes in Eastern fashion, and Dio Chrysostom reproaches the natives with resembling the most dissolute of the Phoenicians rather than the Greeks whose civilization they aped. On the coins of the city they assimilated their native deity to Zeus by representing him seated on a throne, the upper part of his body bare, the lower limbs draped in a flowing robe, while in one hand he holds a sceptre, which is topped sometimes with an eagle but often with a lotus flower. Yet his foreign nature is indicated both by his name and his attributes; for in Aramaic inscriptions on the coins he bears the name of the Baal of Tarsus, and in one hand he grasps an ear of corn and a bunch of grapes. These attributes clearly mark him out as a god of fertility in general, who conferred on his worshippers the two things which they prized above all other gifts of nature, the corn and the wine. He was probably therefore a Semitic, or at all events an Oriental, rather than a Greek deity. For while the Semite cast all his gods more or less in the same mould, and expected them all to render him nearly the same services, the Greek, with his keener intelligence and more pictorial imagination, invested his deities with individual characteristics, allotting to each of them his or her separate function in the divine economy of the world. Thus he

assigned the production of the corn to Demeter, and that of the grapes to Dionysus; he was not so unreasonable as to demand both from the same hard-worked deity.

§ 2. The God of Ibreez.

Now the suspicion that the Baal of Tarsus, for all his posing in the attitude of Zeus, was really an Oriental is confirmed by a remarkable rock-hewn monument which is to be seen at Ibreez in Southern Cappadocia. Though the place is distant little more than fifty miles from Tarsus as the crow flies, yet the journey on horseback occupies five days; for the great barrier of the Taurus mountains rises like a wall between. The road runs through the famous pass of the Cilician Gates, and the scenery throughout is of the grandest Alpine character. On all sides the mountains tower skyward, their peaks sheeted in a dazzling pall of snow, their lower slopes veiled in the almost inky blackness of dense pine-forests, torn here and there by impassable ravines, or broken into prodigious precipices of red and grey rock which border the narrow valley for miles. The magnificence of the landscape is enhanced by the exhilarating influence of the brisk mountain air, all the more by contrast with the sultry heat of the plain of Tarsus which the traveller has left behind. When he emerges from the defile on the wide open tableland of Anatolia he feels that in a sense he has passed out of Asia, and that the highroad to Europe lies straight before him. The great mountains on which he now looks back formed for centuries the boundary between the Christian West and the Mohammedan East; on the southern side lay the domain of the Caliphs, on the northern side the Byzantine Empire. The Taurus was the dam that long repelled the tide of Arab invasion; and though year by year the waves broke through the pass of the Cilician Gates and carried havoc and devastation through the tableland, the reflux waters always retired to the lower level of the Cilician plains. A line of beacon lights stretching from the Taurus to Constantinople flashed to the Byzantine capital tidings of the approach of the Moslem invaders.

The village of Ibreez is charmingly situated at the northern foot of the Taurus, some six or seven miles south of the town of Eregli, the ancient Cybistra. From the town to the village the path goes through a richly cultivated district of wheat and vines along green lanes more lovely than those of Devonshire, lined by thick hedges and rows of willow, poplar, hazel, hawthorn, and huge old walnut-trees, where in early summer the nightingales warble on every side. Ibreez itself is embowered in the verdure of orchards, walnuts, and vines. It stands at the mouth of a deep ravine enclosed by great precipices of red rock. From the western of these precipices a river clear as crystal, but of a deep blue tint, bursts in a powerful jet, and being reinforced by a multitude of springs becomes at once a raging impassable torrent foaming and leaping with a roar of waters over the rocks in its bed. A little way from the source a branch of the main stream flows in a deep narrow channel along the foot of a reddish weather-stained rock which rises sheer from the water. On its face, which has been smoothed to receive them, are the sculptures. They consist of two colossal figures, representing a god adored by his worshipper. The deity, some fourteen feet high, is a bearded male figure, wearing on his head a high pointed cap adorned with several pairs of horns, and plainly clad in a short tunic, which does not reach his knees and is drawn in at the waist by a belt. His legs and arms are bare; the wrists are encircled by bangles or bracelets. His feet are shod in high boots with turned-up toes. In his right hand he holds a vine-branch laden with clusters of grapes, and in his raised left hand he grasps a bunch of bearded wheat, such as is still grown in Cappadocia; the ears of corn project above his fingers, while the long stalks hang down to his feet. In front of him stands the lesser figure, some eight feet high. He is clearly a priest or king, more probably perhaps both in one. His rich vestments contrast with the simple costume of the god. On his head he wears a round but not pointed cap, encircled by flat bands and ornamented in front with a rosette or bunch of jewels, such as is still worn by Eastern princes. He is draped from the neck to the ankles in a long robe heavily fringed at

the bottom, over which is thrown a shawl or mantle secured at the breast by a clasp of precious stones. Both robe and shawl are elaborately carved with patterns in imitation of embroidery. A heavy necklace of rings or beads encircles the neck; a bracelet or bangle clasps the one wrist that is visible; the feet are shod in boots like those of the god. One or perhaps both hands are raised in the act of adoration. The large aquiline nose, like the beak of a hawk, is a conspicuous feature in the face both of the god and of his worshipper; the hair and beard of both are thick and curly.

The situation of this remarkable monument resembles that of Aphaca on the Lebanon; for in both places we see a noble river issuing abruptly from the rock to spread fertility through the rich vale below. Nowhere, perhaps, could man more appropriately revere those great powers of nature to whose favour he ascribes the fruitfulness of the earth, and through it the life of animate creation. With its cool bracing air, its mass of verdure, its magnificent stream of pure ice-cold water—so grateful in the burning heat of summer—and its wide stretch of fertile land, the valley may well have been the residence of an ancient prince or high-priest, who desired to testify by this monument his devotion and gratitude to the god. The seat of this royal or priestly potentate may have been at Cybistra, the modern Eregli, now a decayed and miserable place straggling amid orchards and gardens full of luxuriant groves of walnut, poplar, willow, mulberry, and oak. The place is a paradise of birds. Here the thrush and the nightingale sing full-throated, the hoopoe waves his crested top-knot, the bright-hued woodpeckers flit from bough to bough, and the swifts dart screaming by hundreds through the air. Yet a little way off, beyond the beneficent influence of the springs and streams, all is desolation—in summer an arid waste broken by great marshes and wide patches of salt, in winter a broad sheet of stagnant water, which as it dries up with the growing heat of the sun exhales a poisonous malaria. To the west, as far as the eye can see, stretches the endless expanse of the dreary Lycaonian plain, barren, treeless, and solitary, till it fades into the blue distance, or is bounded afar off by abrupt ranges of jagged volcanic mountains, on which in sunshiny weather the shadows of the clouds rest, purple and soft as velvet. No wonder that the smiling luxuriance of the one landscape, sharply contrasting with the bleak sterility of the other, should have rendered it in the eyes of primitive man a veritable garden of God.

Among the attributes which mark out the deity of Ibreez as a power of fertility the horns on his high cap should not be overlooked. They are probably the horns of a bull; for to primitive cattle-breeders the bull is the most natural emblem of generative force. At Carchemish, the great Hittite capital on the Euphrates, a relief has been discovered which represents a god or a priest clad in a rich robe, and wearing on his head a tall horned cap surmounted by a disc. Sculptures found at the palace of Euyuk in North-Western Cappadocia prove that the Hittites worshipped the bull and sacrificed rams to it. Similarly the Greeks conceived the vine-god Dionysus in the form of a bull.

§ 3. Sandan of Tarsus.

That the god of Ibreez, with the grapes and corn in his hands, is identical with the Baal of Tarsus, who bears the same emblems, may be taken as certain. But what was his name? and who were his worshippers? The Greeks apparently called him Hercules; at least in Byzantine times the neighbouring town of Cybistra adopted the name of Heraclea, which seems to show that Hercules was deemed the principal deity of the place. Yet the style and costume of the figures at Ibreez prove unquestionably that the god was an Oriental. If any confirmation of this view were needed, it is furnished by the inscriptions carved on the rock beside the sculptures, for these inscriptions are composed in the peculiar system of hieroglyphics now known as Hittite. It follows, therefore, that the deity worshipped at Tarsus and Ibreez was a god of the Hittites, that ancient and little-known people who occupied the centre of Asia

Minor, invented a system of writing, and extended their influence, if not their dominion, at one time from the Euphrates to the Aegean. From the lofty and arid tablelands of the interior, a prolongation of the great plateau of Central Asia, with a climate ranging from the most burning heat in summer to the most piercing cold in winter, these hardy highlanders seem to have swept down through the mountain-passes and established themselves at a very early date in the rich southern lowlands of Syria and Cilicia. Their language and race are still under discussion, but a great preponderance of opinion appears to declare that neither the one nor the other was Semitic.

In the inscription attached to the colossal figure of the god at Ibreez two scholars have professed to read the name of Sandan or Sanda. Be that as it may, there are independent grounds for thinking that Sandan, Sandon, or Sandes may have been the name of the Cappadocian and Cilician god of fertility. For the god of Ibreez in Cappadocia appears, as we saw, to have been identified by the Greeks with Hercules, and we are told that a Cappadocian and Cilician name of Hercules was Sandan or Sandes. Now this Sandan or Hercules is said to have founded Tarsus, and the people of the city commemorated him at an annual or, at all events, periodical festival by erecting a fine pyre in his honour. Apparently at this festival, as at the festival of Melcarth, the god was burned in effigy on his own pyre. For coins of Tarsus often exhibit the pyre as a conical structure resting on a garlanded altar or basis, with the figure of Sandan himself in the midst of it, while an eagle with spread wings perches on the top of the pyre, as if about to bear the soul of the burning god in the pillar of smoke and fire to heaven. In like manner when a Roman emperor died leaving a son to succeed him on the throne, a waxen effigy was made in the likeness of the deceased and burned on a huge pyramidal pyre, which was reared upon a square basis of wood; and from the summit of the blazing pile an eagle was released for the purpose of carrying to heaven the soul of the dead and deified emperor. The Romans may have borrowed from the East a grandiose custom which savours of Oriental adulation rather than of Roman simplicity.

The type of Sandan or Hercules, as he is portrayed on the coins of Tarsus, is that of an Asiatic deity standing on a lion. It is thus that he is represented on the pyre, and it is thus that he appears as a separate figure without the pyre. From these representations we can form a fairly accurate conception of the form and attributes of the god. They exhibit him as a bearded man standing on a horned and often winged lion. Upon his head he wears a high pointed cap or mitre, and he is clad sometimes in a long robe, sometimes in a short tunic. On at least one coin his feet are shod in high boots with flaps. At his side or over his shoulder are slung a sword, a bow-case, and a quiver, sometimes only one or two of them. His right hand is raised and sometimes holds a flower. His left hand grasps a double-headed axe, and sometimes a wreath either in addition to the axe or instead of it; but the double-headed axe is one of Sandan's most constant attributes.

§ 4. The Gods of Boghaz-Keui.

Now a deity of almost precisely the same type figures prominently in the celebrated group of Hittite sculptures which is carved on the rocks at Boghaz-Keui in North-Western Cappadocia. The village of Boghaz-Keui, that is, "the village of the defile," stands at the mouth of a deep, narrow, and picturesque gorge in a wild upland valley, shut in by rugged mountains of grey limestone. The houses are built on the lower slopes of the hills, and a stream issuing from the gorge flows past them to join the Halys, which is distant about ten hours' journey to the west. Immediately above the modern village a great ancient city, enclosed by massive fortification walls, rose on the rough broken ground of the mountainside, culminating in two citadels perched on the tops of precipitous crags. The walls are still standing in many places to a height of twelve feet or more. They are about fourteen feet thick and consist of an outer and

inner facing built of large blocks with a core of rubble between them. On the outer side they are strengthened at intervals of about a hundred feet by projecting towers or buttresses, which seem designed rather as architectural supports than as military defences. The masonry, composed of large stones laid in roughly parallel courses, resembles in style that of the walls of Mycenae, with which it may be contemporary; and the celebrated Lion-gate at Mycenae has its counterpart in the southern gate of Boghaz-Keui, which is flanked by a pair of colossal stone lions executed in the best style of Hittite art. The eastern gate is adorned on its inner side with the figure of a Hittite warrior or Amazon carved in high relief. A dense undergrowth of stunted oak coppice now covers much of the site. The ruins of a large palace or temple, built of enormous blocks of stone, occupy a terrace in a commanding situation within the circuit of the walls. This vast city, some four or five miles in circumference, appears to have been the ancient Pteria, which Croesus, king of Lydia, captured in his war with Cyrus. It was probably the capital of a powerful Hittite empire before the Phrygians made their way from Europe into the interior of Asia Minor and established a rival state to the west of the Halys.

From the village of Boghaz-Keui a steep and rugged path leads up hill to a sanctuary, distant about a mile and a half to the east. Here among the grey limestone cliffs there is a spacious natural chamber or hall of roughly oblong shape, roofed only by the sky, and enclosed on three sides by high rocks. One of the short sides is open, and through it you look out on the broken slopes beyond and the more distant mountains, which make a graceful picture set in a massy frame. The length of the chamber is about a hundred feet; its breadth varies from twenty-five to fifty feet. A nearly level sward forms the floor. On the right-hand side, as you face inward, a narrow opening in the rock leads into another but much smaller chamber, or rather corridor, which would seem to have been the inner sanctuary or Holy of Holies. It is a romantic spot, where the deep shadows of the rocks are relieved by the bright foliage of walnut-trees and by the sight of the sky and clouds overhead. On the rock-walls of both chamber are carved the famous bas-reliefs. In the outer sanctuary these reliefs represent two great processions which defile along the two long sides of the chamber and meet face to face on the short wall at the inner end. The figures on the left-hand wall are for the most part men clad in the characteristic Hittite costume, which consists of a high pointed cap, shoes with turned-up toes, and a tunic drawn in at the waist and falling short of the knees. The figures on the right-hand wall are women wearing tall, square, flat-topped bonnets with ribbed sides; their long dresses fall in perpendicular folds to their feet, which are shod in shoes like those of the men. On the short wall, where the processions meet, the greater size of the central figures, as well as their postures and attributes, mark them out as divine. At the head of the male procession marches or is carried a bearded deity clad in the ordinary Hittite costume of tall pointed cap, short tunic, and turned-up shoes; but his feet rest on the bowed heads of two men, in his right hand he holds on his shoulder a mace or truncheon topped with a knob, while his extended left hand grasps a symbol, which apparently consists of a trident surmounted by an oval with a cross-bar. Behind him follows a similar, though somewhat smaller, figure of a man, or perhaps rather of a god, carrying a mace or truncheon over his shoulder in his right hand, while with his left he holds aloft a long sword with a flat hilt; his feet rest not on two men but on two flat-topped pinnacles, which perhaps represent mountains. At the head of the female procession and facing the great god who is borne on the two men, stands a goddess on a lioness or panther. Her costume does not differ from that of the women: her hair hangs down in a long plait behind: in her extended right hand she holds out an emblem to touch that of the god. The shape and meaning of her emblem are obscure. It consists of a stem with two pairs of protuberances, perhaps leaves or branches, one above the other, the whole being surmounted, like the emblem of the god, by an oval with a cross-bar. Under the outstretched arms of the two deities appear the front parts of two animals, which

have been usually interpreted as bulls but are rather goats; each of them wears on its head the high conical Hittite cap, and its body is concealed by that of the deity. Immediately behind the goddess marches a smaller and apparently youthful male figure, standing like her upon a lioness or panther. He is beardless and wears the Hittite dress of high pointed cap, short tunic, and shoes with turned-up toes. A crescent-hilted sword is girt at his side; in his left hand he holds a double-headed axe, and in his right a staff topped by an armless doll with the symbol of the cross-barred oval instead of a head. Behind him follow two women, or rather perhaps goddesses, resembling the goddess at the head of the procession, but with different emblems and standing not on a lioness but on a single two-headed eagle with outspread wings.

The entrance to the smaller chamber is guarded on either side by the figure of a winged monster carved on the rock; the bodies of both figures are human, but one of them has the head of a dog, the other the head of a lion. In the inner sanctuary, to which this monster-guarded passage leads, the walls are also carved in relief. On one side we see a procession of twelve men in Hittite costume marching with curved swords in their right hands. On the opposite wall is a colossal erect figure of a deity with a human head and a body curiously composed of four lions, two above and two below, the latter standing on their heads. The god wears the high conical Hittite hat: his face is youthful and beardless like that of the male figure standing on the lioness in the large chamber; and the ear turned to the spectator is pierced with a ring. From the knees downwards the legs, curiously enough, are replaced by a device which has been interpreted as the tapering point of a great dagger or dirk with a midrib. To the right of this deity a square panel cut in the face of the rock exhibits a group of two figures in relief. The larger of the two figures closely resembles the youth on the lioness in the outer sanctuary. His chin is beardless; he wears the same high pointed cap, the same short tunic, the same turned-up shoes, the same crescent-hilted sword, and he carries a similar armless doll in his right hand. But his left arm encircles the neck of the smaller figure, whom he seems to clasp to his side in an attitude of protection. The smaller figure thus embraced by the god is clearly a priest or priestly king. His face is beardless; he wears a skull-cap and a long mantle reaching to his feet with a sort of chasuble thrown over it. The crescent-shaped hilt of a sword projects from under his mantle. The wrist of his right arm is clasped by the god's left hand; in his left hand the priest holds a crook or pastoral staff which ends below in a curl. Both the priest and his protector are facing towards the lion-god. In an upper corner of the panel behind them is a divine emblem composed of a winged disc resting on what look like two Ionic columns, while between them appear three symbols of doubtful significance. The figure of the priest or king in this costume, though not in this attitude, is a familiar one; for it occurs twice in the outer sanctuary and is repeated twice at the great Hittite palace of Euyuk, distant about four and a half hours' ride to the north-east of Boghaz-Keui. In the outer sanctuary at Boghaz-Keui we see the priest marching in the procession of the men, and holding in one hand his curled staff, or *lituus*, and in the other a symbol like that of the goddess on the lioness: above his head appears the winged disc without the other attributes. Moreover he occupies a conspicuous place by himself on the right-hand wall of the outer sanctuary, quite apart from the two processions, and carved on a larger scale than any of the other figures in them. Here he stands on two heaps, perhaps intended to represent mountains, and he carries in his right hand the emblem of the winged disc supported on two Ionic columns with the other symbols between them, except that the central symbol is replaced by a masculine figure wearing a pointed cap and a long robe decorated with a dog-tooth pattern. On one of the reliefs at the palace of Euyuk we see the priest with his characteristic dress and staff followed by a priestess, each of them with a hand raised as if in adoration: they are approaching the image of a bull which stands on a high pedestal with an altar before it. Behind them a priest leads a flock of rams to the sacrifice. On another relief at Euyuk the priest, similarly attired and followed by a priestess, is approaching a seated goddess and

apparently pouring a libation at her feet. Both these scenes doubtless represent acts of worship paid in the one case to a goddess, in the other to a bull.

We have still to inquire into the meaning of the rock-carvings at Boghaz-Keui. What are these processions which are meeting? Who are the personages represented? and what are they doing? Some have thought that the scene is historical and commemorates a great event, such as a treaty of peace between two peoples or the marriage of a king's son to a king's daughter. But to this view it has been rightly objected that the attributes of the principal figures prove them to be divine or priestly, and that the scene is therefore religious or mythical rather than historical. With regard to the two personages who head the processions and hold out their symbols to each other, the most probable opinion appears to be that they stand for the great Asiatic goddess of fertility and her consort, by whatever names these deities were known; for under diverse names a similar divine couple appears to have been worshipped with similar rites all over Western Asia. The bearded god who, grasping a trident in his extended left hand, heads the procession of male figures is probably the Father deity, the great Hittite god of the thundering sky, whose emblems were the thunderbolt and the bull; for the trident which he carries may reasonably be interpreted as a thunderbolt. The deity is represented in similar form on two stone monuments of Hittite art which were found at Zenjirli in Northern Syria and at Babylon respectively. On both we see a bearded male god wearing the usual Hittite costume of tall cap, short tunic, and shoes turned up at the toes: a crescent-hilted sword is girt at his side: his hands are raised: in the right he holds a single-headed axe or hammer, in the left a trident of wavy lines, which is thought to stand for forked lightning or a bundle of thunderbolts. On the Babylonian slab, which bears a long Hittite inscription, the god's cap is ornamented with a pair of horns. The horns on the cap are probably those of a bull; for on another Hittite monument, found at Malatia on the Euphrates, there is carved a deity in the usual Hittite costume standing on a bull and grasping a trident or thunderbolt in his left hand, while facing him stands a priest clad in a long robe, holding a crook or curled staff in one hand and pouring a libation with the other. The Hittite thunder-god is also known to us from a treaty of alliance which about the year 1290 b.c. was contracted between Hattusil, King of the Hittites, and Rameses II., King of Egypt. By a singular piece of good fortune we possess copies of this treaty both in the Hittite and in the Egyptian language. The Hittite copy was found some years ago inscribed in cuneiform characters on a clay tablet at Boghaz-Keui; two copies of the treaty in the Egyptian language are engraved on the walls of temples at Thebes. From the Egyptian copies, which have been read and translated, we gather that the thunder-god was the principal deity of the Hittites, and that the two Hittite seals which were appended to the treaty exhibited the King embraced by the thunder-god and the Queen embraced by the sun-goddess of Aenna. This Hittite divinity of the thundering sky appears to have long survived at Doliche in Commagene, for in later Roman art he reappears under the title of Jupiter Dolichenus, wearing a Phrygian cap, standing on a bull, and wielding a double axe in one hand and a thunderbolt in the other. In this form his worship was transported from his native Syrian home by soldiers and slaves, till it had spread over a large part of the Roman empire, especially on the frontiers, where it flourished in the camps of the legions. The combination of the bull with the thunderbolt as emblems of the deity suggests that the animal may have been chosen to represent the sky-god for the sake not merely of its virility but of its voice; for in the peal of thunder primitive man may well have heard the bellowing of a celestial bull.

The goddess who at the head of the procession of women confronts the great sky-god in the sanctuary at Boghaz-Keui is generally recognized as the divine Mother, the great Asiatic goddess of life and fertility. The tall flat-topped hat with perpendicular grooves which she wears, and the lioness or panther on which she stands, remind us of the turreted crown and

lion-drawn car of Cybele, who was worshipped in the neighbouring land of Phrygia across the Halys. So Atargatis, the great Syrian goddess of Hierapolis-Bambyce, was portrayed sitting on lions and wearing a tower on her head. At Babylon an image of a goddess whom the Greeks called Rhea had the figures of two lions standing on her knees.

But in the rock-hewn sculptures of Boghaz-Keui, who is the youth with the tall pointed cap and double axe who stands on a lioness or panther immediately behind the great goddess? His figure is all the more remarkable because he is the only male who interrupts the long procession of women. Probably he is at once the divine son and the divine lover of the goddess; for we shall find later on that in Phrygian mythology Attis united in himself both these characters. The lioness or panther on which he stands marks his affinity with the goddess, who is supported by a similar animal. It is natural that the lion-goddess should have a lion-son and a lion-lover. For we may take it as probable that the Oriental deities who are represented standing or sitting in human form on the backs of lions and other animals were originally indistinguishable from the beasts, and that the complete separation of the bestial from the human or divine shape was a consequence of that growth of knowledge and of power which led man in time to respect himself more and the brutes less. The hybrid gods of Egypt with their human bodies and animal heads form an intermediate stage in this evolution of anthropomorphic deities out of beasts.

We may now perhaps hazard a conjecture as to the meaning of that strange colossal figure in the inner shrine at Boghaz-Keui with its human head and its body composed of lions. For it is to be observed that the head of the figure is youthful and beardless, and that it wears a tall pointed cap, thus resembling in both respects the youth with the double-headed axe who stands on a lion in the outer sanctuary. We may suppose that the leonine figure in the inner shrine sets forth the true mystic, that is, the old savage nature of the god who in the outer shrine presented himself to his worshippers in the decent semblance of a man. To the chosen few who were allowed to pass the monster-guarded portal into the Holy of Holies, the awful secret may have been revealed that their god was a lion, or rather a lion-man, a being in whom the bestial and human natures mysteriously co-existed. The reader may remember that on the rock beside this leonine divinity is carved a group which represents a god with his arm twined round the neck of his priest in an attitude of protection, holding one of the priest's hands in his own. Both figures are looking and stepping towards the lion-monster, and the god is holding out his right hand as if pointing to it. The scene may represent the deity revealing the mystery to the priest, or preparing him to act his part in some solemn rite for which all his strength and courage will be needed. He seems to be leading his minister onward, comforting him with an assurance that no harm can come near him while the divine arm is around him and the divine hand clasps his. Whither is he leading him? Perhaps to death. The deep shadows of the rocks which fall on the two figures in the gloomy chasm may be an emblem of darker shadows soon to fall on the priest. Yet still he grasps his pastoral staff and goes forward, as though he said, "Yea, though I walk through the valley of the shadow of death, I will fear no evil; for thou art with me: thy rod and thy staff they comfort me."

If there is any truth in these guesses—for they are little more—the three principal figures in the processional scene at Boghaz-Keui represent the divine Father, the divine Mother, and the divine Son. But we have still to ask, What are they doing? That they are engaged in the performance of some religious rite seems certain. But what is it? We may conjecture that it is the rite of the Sacred Marriage, and that the scene is copied from a ceremony which was periodically performed in this very place by human representatives of the deities. Indeed, the solemn meeting of the male and female figures at the head of their respective processions obviously suggests a marriage, and has been so interpreted by scholars, who, however,

regarded it as the historical wedding of a prince and princess instead of the mystic union of a god and goddess, overlooking or explaining away the symbols of divinity which accompany the principal personages. We may suppose that at Boghaz-Keui, as at many other places in the interior of Asia Minor, the government was in the hands of a family who combined royal with priestly functions and personated the gods whose names they bore. Thus at Pessinus in Phrygia, as we shall see later on, the priests of Cybele bore the name of her consort Attis, and doubtless represented him in the ritual. If this was so at Boghaz-Keui, we may surmise that the chief pontiff and his family annually celebrated the marriage of the divine powers of fertility, the Father God and the Mother Goddess, for the purpose of ensuring the fruitfulness of the earth and the multiplication of men and beasts. The principal parts in the ceremony would naturally be played by the pontiff himself and his wife, unless indeed they preferred for good reasons to delegate the onerous duty to others. That such a delegation took place is perhaps suggested by the appearance of the pontiff himself in a subordinate place in the procession, as well as by his separate representation in another place, as if he were in the act of surveying the ceremony from a distance. The part of the divine Son at the rite would fitly devolve upon one of the high-priest's own offspring, who may well have been numerous. For it is probable that here, as elsewhere in Asia Minor, the Mother Goddess was personated by a crowd of sacred harlots, with whom the spiritual ruler may have been required to consort in his character of incarnate deity. But if the personation of the Son of God at the rites laid a heavy burden of suffering on the shoulders of the actor, it is possible that the representative of the deity may have been drawn, perhaps by lot, from among the numerous progeny of the consecrated courtesans; for these women, as incarnations of the Mother Goddess, were probably supposed to transmit to their offspring some portion of their own divinity. Be that as it may, if the three principal personages in the processional scene at Boghaz-Keui are indeed the Father, the Mother, and the Son, the remarkable position assigned to the third of them in the procession, where he walks behind his Mother alone in the procession of women, appears to indicate that he was supposed to be more closely akin to her than to his Father. From this again we may conjecturally infer that mother-kin rather than father-kin was the rule which regulated descent among the Hittites. The conjecture derives some support from Hittite archives, for the names of the Great Queen and the Queen Mother are mentioned along with that of the King in state documents. The other personages who figure in the procession may represent human beings masquerading in the costumes and with the attributes of deities. Such, for example, are the two female figures who stand on a double-headed eagle; the two male figures stepping on what seem to be two mountains; and the two winged beings in the procession of men, one of whom may be the Moon-god, for he wears a crescent on his head.

§ 5. Sandan and Baal at Tarsus.

Whatever may be thought of these speculations, one thing seems fairly clear and certain. The figure which I have called the divine Son at Boghaz-Keui is identical with the god Sandan, who appears on the pyre at Tarsus. In both personages the costume, the attributes, the attitude are the same. Both represent a man clad in a short tunic with a tall pointed cap on his head, a sword at his side, a double-headed axe in his hand, and a lion or panther under his feet. Accordingly, if we are right in identifying him as the divine Son at Boghaz-Keui, we may conjecture that under the name of Sandan he bore the same character at Tarsus. The conjecture squares perfectly with the title of Hercules, which the Greeks bestowed on Sandan; for Hercules was the son of Zeus, the great father-god. Moreover, we have seen that the Baal of Tarsus, with the grapes and the corn in his hand, was assimilated to Zeus. Thus it would appear that at Tarsus as at Boghaz-Keui there was a pair of deities, a divine Father and a divine Son, whom the Greeks identified with Zeus and Hercules respectively. If the Baal of Tarsus was a god of fertility, as his attributes clearly imply, his identification with Zeus

would be natural, since it was Zeus who, in the belief of the Greeks, sent the fertilizing rain from heaven. And the identification of Sandan with Hercules would be equally natural, since the lion and the death on the pyre were features common to both. Our conclusion then is that it was the divine Son, the lion-god, who was burned in effigy or in the person of a human representative at Tarsus, and perhaps at Boghaz-Keui. Semitic parallels suggest that the victim who played the part of the Son of God in the fiery furnace ought in strictness to be the king's son. But no doubt in later times an effigy would be substituted for the man.

§ 6. Priestly Kings of Olba.

Unfortunately we know next to nothing of the kings and priests of Tarsus. In Greek times we hear of an Epicurean philosopher of the city, Lysias by name, who was elected by his fellow-citizens to the office of Crown-wearer, that is, to the priesthood of Hercules. Once raised to that dignity, he would not lay it down again, but played the part of tyrant, wearing a white robe edged with purple, a costly cloak, white shoes, and a golden wreath of laurel. He truckled to the mob by distributing among them the property of the wealthy, while he put to death such as refused to open their money-bags to him. Though we cannot distinguish in this account between the legal and the illegal exercise of authority, yet we may safely infer that the priesthood of Hercules, that is of Sandan, at Tarsus continued down to late times to be an office of great dignity and power, not unworthy to be held in earlier times by the kings themselves. Scanty as is our information as to the kings of Cilicia, we hear of two whose names appear to indicate that they stood in some special relation to the divine Sandan. One of them was Sandu'arri, lord of Kundi and Sizu, which have been identified with Anchiale and Sis in Cilicia. The other was Sanda-sarme, who gave his daughter in marriage to Ashurbanipal, king of Assyria. It would be in accordance with analogy if the kings of Tarsus formerly held the priesthood of Sandan and claimed to represent him in their own person.

We know that the whole of Western or Mountainous Cilicia was ruled by kings who combined the regal office with the priesthood of Zeus, or rather of a native deity whom, like the Baal of Tarsus, the Greeks assimilated to their own Zeus. These priestly potentates had their seat at Olba, and most of them bore the name either of Teucer or of Ajax, but we may suspect that these appellations are merely Greek distortions of native Cilician names. Teucer (*Teukros*) may be a corruption of Tark, Trok, Tarku, or Troko, all of which occur in the names of Cilician priests and kings. At all events, it is worthy of notice that one, if not two, of these priestly Teucers had a father called Tarkuaris, and that in a long list of priests who served Zeus at the Corycian cave, not many miles from Olba, the names Tarkuaris, Tarkumbios, Tarkimos, Trokoarbasis, and Trokombigremis, besides many other obviously native names, occur side by side with Teucer and other purely Greek appellations. In like manner the Teucrids, who traced their descent from Zeus and reigned at Salamis in Cyprus, may well have been a native dynasty, who concocted a Greek pedigree for themselves in the days when Greek civilization was fashionable. The legend which attributed the foundation of the Cyprian Salamis to Teucer, son of Telamon, appears to be late and unknown to Homer. Moreover, a cruel form of human sacrifice which was practised in the city down to historical times savours rather of Oriental barbarity than of Greek humanity. Led or driven by the youths, a man ran thrice round the altar; then the priest stabbed him in the throat with a spear and burned his body whole on a heaped-up pyre. The sacrifice was offered in the month of Aphrodite to Diomedes, who along with Agraulus, daughter of Cecrops, had a temple at Salamis. A temple of Athena stood within the same sacred enclosure. It is said that in olden times the sacrifice was offered to Agraulus, and not to Diomedes. According to another account it was instituted by Teucer in honour of Zeus. However that may have been, the barbarous custom lasted down to the reign of Hadrian, when Diphilus, king of Cyprus, abolished or rather mitigated it by substituting the sacrifice of an ox for that of a man. On the

hypothesis here suggested we must suppose that these Greek names of divine or heroic figures at the Cyprian Salamis covered more or less similar figures of the Asiatic pantheon. And in the Salaminian burnt-sacrifice of a man we may perhaps detect the original form of the ceremony which in historical times appears to have been performed upon an image of Sandan or Hercules at Tarsus. When an ox was sacrificed instead of a man, the old sacrificial rites would naturally continue to be observed in all other respects exactly as before: the animal would be led thrice round the altar, stabbed with a spear, and burned on a pyre. Now at the Syrian Hierapolis the greatest festival of the year bore the name of the Pyre or the Torch. It was held at the beginning of spring. Great trees were then cut down and planted in the court of the temple: sheep, goats, birds, and other creatures were hung upon them: sacrificial victims were led round: then fire was set to the whole, and everything was consumed in the flames. Perhaps here also the burning of animals was a substitute for the burning of men. When the practice of human sacrifice becomes too revolting to humanity to be tolerated, its abolition is commonly effected by substituting either animals or images for living men or women. At Salamis certainly, and perhaps at Hierapolis, the substitutes were animals: at Tarsus, if I am right, they were images. In this connexion the statement of a Greek writer as to the worship of Adonis in Cyprus deserves attention. He says that as Adonis had been honoured by Aphrodite, the Cyprians after his death cast live doves on a pyre to him, and that the birds, flying away from the flames, fell into another pyre and were consumed. The statement seems to be a description of an actual custom of burning doves in sacrifice to Adonis. Such a mode of honouring him would be very remarkable, since doves were commonly sacred to his divine mistress Aphrodite or Astarte. For example, at the Syrian Hierapolis, one of the chief seats of her worship, these birds were so holy that they might not even be touched. If a man inadvertently touched a dove, he was unclean or tabooed for the rest of the day. Hence the birds, never being molested, were so tame that they lived with the people in their houses, and commonly picked up their food fearlessly on the ground. Can the burning of the sacred bird of Aphrodite in the Cyprian worship of Adonis have been a substitute for the burning of a sacred man who personated the lover of the goddess?

If, as many scholars think, Tark or Tarku was the name, or part of the name, of a great Hittite deity, sometimes identified as the god of the sky and the lightning, we may conjecture that Tark or Tarku was the native name of the god of Olba, whom the Greeks called Zeus, and that the priestly kings who bore the name of Teucer represented the god Tark or Tarku in their own persons. This conjecture is confirmed by the observation that Olba, the ancient name of the city, is itself merely a Grecized form of Oura, the name which the place retains to this day. The situation of the town, moreover, speaks strongly in favour of the view that it was from the beginning an aboriginal settlement, though in after days, like so many other Asiatic cities, it took on a varnish of Greek culture. For it stood remote from the sea on a lofty and barren tableland, with a rigorous winter climate, in the highlands of Cilicia.

Great indeed is the contrast between the bleak windy uplands of Western or Rugged Cilicia, as the ancients called it, and the soft luxuriant lowlands of Eastern Cilicia, where winter is almost unknown and summer annually drives the population to seek in the cool air of the mountains a refuge from the intolerable heat and deadly fevers of the plains. In Western Cilicia, on the other hand, a lofty tableland, ending in a high sharp edge on the coast, rises steadily inland till it passes gradually into the chain of heights which divide it from the interior. Looked at from the sea it resembles a great blue wave swelling in one uniform sweep till its crest breaks into foam in the distant snows of the Taurus. The surface of the tableland is almost everywhere rocky and overgrown, in the intervals of the rocks, with dense, thorny, almost impenetrable scrub. Only here and there in a hollow or glen the niggardly soil allows of a patch of cultivation; and here and there fine oaks and planes, towering over the

brushwood, clothe with a richer foliage the depth of the valleys. None but wandering herdsmen with their flocks now maintain a precarious existence in this rocky wilderness. Yet the ruined towns which stud the country prove that a dense population lived and thrived here in antiquity, while numerous remains of wine-presses and wine-vats bear witness to the successful cultivation of the grape. The chief cause of the present desolation is lack of water; for wells are few and brackish, perennial streams hardly exist, and the ancient aqueducts, which once brought life and fertility to the land, have long been suffered to fall into disrepair.

But for ages together the ancient inhabitants of these uplands earned their bread by less reputable means than the toil of the husbandman and the vinedresser. They were buccaneers and slavers, scouring the high seas with their galleys and retiring with their booty to the inaccessible fastnesses of their mountains. In the decline of Greek power all over the East the pirate communities of Cilicia grew into a formidable state, recruited by gangs of desperadoes and broken men who flocked to it from all sides. The holds of these robbers may still be seen perched on the brink of the profound ravines which cleave the tableland at frequent intervals. With their walls of massive masonry, their towers and battlements, overhanging dizzy depths, they are admirably adapted to bid defiance to the pursuit of justice. In antiquity the dark forests of cedar, which clothed much of the country and supplied the pirates with timber for their ships, must have rendered access to these fastnesses still more difficult. The great gorge of the Lamas River, which eats its way like a sheet of forked lightning into the heart of the mountains, is dotted every few miles with fortified towns, some of them still magnificent in their ruins, dominating sheer cliffs high above the stream. They are now the haunt only of the ibex and the bear. Each of these communities had its own crest or badge, which may still be seen carved on the corners of the mouldering towers. No doubt, too, it blazoned the same crest on the hull, the sails, or the streamers of the galley which, manned with a crew of ruffians, it sent out to prey upon the rich merchantmen in the Golden Sea, as the corsairs called the highway of commerce between Crete and Africa.

A staircase cut in the rock connects one of these ruined castles with the river in the glen, a thousand feet below. But the steps are worn and dangerous, indeed impassable. You may go for miles along the edge of these stupendous cliffs before you find a way down. The paths keep on the heights, for in many of its reaches the gully affords no foothold even to the agile nomads who alone roam these solitudes. At evening the winding course of the river may be traced for a long distance by a mist which, as the heat of the day declines, rises like steam from the deep gorge and hangs suspended in a wavy line of fleecy cloud above it. But even more imposing than the ravine of the Lamas is the terrific gorge known as the *Sheitan dere* or Devil's Glen near the Corycian cave. Prodigious walls of rock, glowing in the intense sunlight, black in the shadow, and spanned by a summer sky of the deepest blue, hem in the dry bed of a winter torrent, choked with rocks and tangled with thickets of evergreens, among which the oleanders with their slim stalks, delicate taper leaves, and bunches of crimson blossom stand out conspicuous.

The ruins of Olba, among the most extensive and remarkable in Asia Minor, were discovered in 1890 by Mr. J. Theodore Bent. But three years before another English traveller had caught a distant view of its battlements and towers outlined against the sky like a city of enchantment or dreams. Standing at a height of nearly six thousand feet above the sea, the upper town commands a free, though somewhat uniform, prospect for immense distances in all directions. The sea is just visible far away to the south. On these heights the winter is long and severe. Snow lies on the ground for months. No Greek would have chosen such a site for a city, so bleak and chill, so far from blue water; but it served well for a fastness of brigands. Deep gorges, one of them filled for miles with tombs, surround it on all sides, rendering fortification walls superfluous. But a great square tower, four stories high, rises conspicuous

on the hill, forming a landmark and earning for this upper town the native name of *Jebel Hissar*, or the Mountain of the Castle. A Greek inscription cut on the tower proves that it was built by Teucer, son of Tarkuaris, one of the priestly potentates of Olba. Among other remains of public buildings the most notable are forty tall Corinthian columns of the great temple of Olbian Zeus. Though coarse in style and corroded by long exposure to frost and snow, these massive pillars, towering above the ruins, produce an imposing effect. That the temple of which they formed part belonged indeed to Olbian Zeus is shown by a Greek inscription found within the sacred area, which records that the pent-houses on the inner side of the boundary wall were built by King Seleucus Nicator and repaired for Olbian Zeus by "the great high-priest Teucer, son of Zenophanes." About two hundred yards from this great temple are standing five elegant granite columns of a small temple dedicated to the goddess Fortune. Further, the remains of two theatres and many other public buildings attest the former splendour of this mountain city. An arched colonnade, of which some Corinthian columns are standing with their architraves, ran through the town; and an ancient paved road, lined with tombs and ruins, leads down hill to a lower and smaller city two or three miles distant. It is this lower town which retains the ancient name of Oura. Here the principal ruins occupy an isolated fir-clad height bounded by two narrow ravines full of rock-cut tombs. Below the town the ravines unite and form a fine gorge, down which the old road passed seaward.

§ 7. The God of the Corycian Cave.

Nothing yet found at Olba throws light on the nature of the god who was worshipped there under the Greek name of Zeus. But at two places near the coast, distant only some fourteen or fifteen miles from Olba, a deity also called Zeus by the Greeks was revered in natural surroundings of a remarkable kind, which must have stood in close relation with the worship, and are therefore fitted to illustrate it. In both places the features of the landscape are of the same general cast, and at one of them the god was definitely identified with the Zeus of Olba. The country here consists of a tableland of calcareous rock rent at intervals by those great chasms which are characteristic of a limestone formation. Similar fissures, with the accompaniment of streams or rivers which pour into them and vanish under ground, are frequent in Greece, and may be observed in our own country near Ingleborough in Yorkshire. Fossil bones of extinct animals are often found embedded in the stalagmite or breccia of limestone caves. For example, the famous Kent's Hole near Torquay contained bones of the mammoth, rhinoceros, lion, hyaena, and bear; and red osseous breccias, charged with the bones of quadrupeds which have long disappeared from Europe, are common in almost all the countries bordering on the Mediterranean. Western Cilicia is richer in Miocene deposits than any other part of Anatolia, and the limestone gorges of the coast near Olba are crowded with fossil oysters, corals, and other shells. Here, too, within the space of five miles the limestone plateau is rent by three great chasms, which Greek religion associated with Zeus and Typhon. One of these fissures is the celebrated Corycian cave.

To visit this spot, invested with the double charm of natural beauty and legendary renown, you start from the dead Cilician city of Corycus on the sea, with its ruined walls, towers, and churches, its rock-hewn houses and cisterns, its shattered mole, its island-fortress, still imposing in decay. Viewed from the sea, this part of the Cilician coast, with its long succession of white ruins, relieved by the dark wooded hills behind, presents an appearance of populousness and splendour. But a nearer approach reveals the nakedness and desolation of the once prosperous land. Following the shore westward from Corycus for about an hour you come to a pretty cove enclosed by wooded heights, where a spring of pure cold water bubbles up close to the sea, giving to the spot its name of *Tatlu-su*, or the Sweet Water. From this bay a steep ascent of about a mile along an ancient paved road leads inland to a plateau.

Here, threading your way through a labyrinth or petrified sea of jagged calcareous rocks, you suddenly find yourself on the brink of a vast chasm which yawns at your feet. This is the Corycian cave. In reality it is not a cave but an immense hollow or trough in the plateau, of oval shape and perhaps half a mile in circumference. The cliffs which enclose it vary from one hundred to over two hundred feet in depth. Its uneven bottom slopes throughout its whole length from north to south, and is covered by a thick jungle of trees and shrubs—myrtles, pomegranates, carobs, and many more, kept always fresh and green by rivulets, underground water, and the shadow of the great cliffs. A single narrow path leads down into its depths. The way is long and rough, but the deeper you descend the denser grows the vegetation, and it is under the dappled shade of whispering leaves and with the purling of brooks in your ears that you at last reach the bottom. The saffron which of old grew here among the bushes is no longer to be found, though it still flourishes in the surrounding district. This luxuriant bottom, with its rich verdure, its refreshing moisture, its grateful shade, is called Paradise by the wandering herdsmen. They tether their camels and pasture their goats in it and come hither in the late summer to gather the ripe pomegranates. At the southern and deepest end of this great cliff-encircled hollow you come to the cavern proper. The ruins of a Byzantine church, which replaced a heathen temple, partly block the entrance. Inwards the cave descends with a gentle slope into the bowels of the earth. The old path paved with polygonal masonry still runs through it, but soon disappears under sand. At about two hundred feet from its mouth the cave comes to an end, and a tremendous roar of subterranean water is heard. By crawling on all fours you may reach a small pool arched by a dripping stalactite-hung roof, but the stream which makes the deafening din is invisible. It was otherwise in antiquity. A river of clear water burst from the rock, but only to vanish again into a chasm. Such changes in the course of streams are common in countries subject to earthquakes and to the disruption caused by volcanic agency. The ancients believed that this mysterious cavern was haunted ground. In the rumble and roar of the waters they seemed to hear the clash of cymbals touched by hands divine.

If now, quitting the cavern, we return by the same path to the summit of the cliffs, we shall find on the plateau the ruins of a town and of a temple at the western edge of the great Corycian chasm. The wall of the holy precinct was built within a few feet of the precipices, and the sanctuary must have stood right over the actual cave and its subterranean waters. In later times the temple was converted into a Christian church. By pulling down a portion of the sacred edifice Mr. Bent had the good fortune to discover a Greek inscription containing a long list of names, probably those of the priests who superintended the worship. One name which meets us frequently in the list is *Zas*, and it is tempting to regard this as merely a dialectical form of *Zeus*. If that were so, the priests who bore the name might be supposed to personate the god. But many strange and barbarous-looking names, evidently foreign, occur in the list, and *Zas* may be one of them. However, it is certain that *Zeus* was worshipped at the Corycian cave; for about half a mile from it, on the summit of a hill, are the ruins of a larger temple, which an inscription proves to have been dedicated to Corycian *Zeus*.

But *Zeus*, or whatever native deity masqueraded under his name, did not reign alone in the deep dell. A more dreadful being haunted a still more awful abyss which opens in the ground only a hundred yards to the east of the great Corycian chasm. It is a circular cauldron, about a quarter of a mile in circumference, resembling the Corycian chasm in its general character, but smaller, deeper, and far more terrific in appearance. Its sides overhang and stalactites droop from them. There is no way down into it. The only mode of reaching the bottom, which is covered with vegetation, would be to be lowered at the end of a long rope. The nomads call this chasm *Purgatory*, to distinguish it from the other which they name *Paradise*. They say that there is a subterranean passage between the two, and that the smoke of a fire kindled in

the Corycian cave may be seen curling out of the other. The one ancient writer who expressly mentions this second and more grisly cavern is Mela, who says that it was the lair of the giant Typhon, and that no animal let down into it could live. Aeschylus puts into the mouth of Prometheus an account of "the earth-born Typhon, dweller in Cilician caves, dread monster, hundred-headed," who in his pride rose up against the gods, hissing destruction from his dreadful jaws, while from his Gorgon eyes the lightning flashed. But him a flaming levin bolt, crashing from heaven, smote to the very heart, and now he lies, shrivelled and scorched, under the weight of Etna by the narrow sea. Yet one day he will belch a fiery hail, a boiling angry flood, rivers of flame, to devastate the fat Sicilian fields. This poetical description of the monster, confirmed by a similar passage of Pindar, clearly proves that Typhon was conceived as a personification of those active volcanoes which spout fire and smoke to heaven as if they would assail the celestial gods. The Corycian caverns are not volcanic, but the ancients apparently regarded them as such, else they would hardly have made them the den of Typhon.

According to one legend Typhon was a monster, half man and half brute, begotten in Cilicia by Tartarus upon the goddess Earth. The upper part of him was human, but from the loins downward he was an enormous snake. In the battle of the gods and giants, which was fought out in Egypt, Typhon hugged Zeus in his snaky coils, wrested from him his crooked sword, and with the blade cut the sinews of the god's hands and feet. Then taking him on his back he conveyed the mutilated deity across the sea to Cilicia, and deposited him in the Corycian cave. Here, too, he hid the severed sinews, wrapt in a bear's skin. But Hermes and Aegipan contrived to steal the missing thews and restore them to their divine owner. Thus made whole and strong again, Zeus pelted his beaten adversary with thunderbolts, drove him from place to place, and at last overwhelmed him under Mount Etna. And the spots where the hissing bolts fell are still marked by jets of flame.

It is possible that the discovery of fossil bones of large extinct animals may have helped to localize the story of the giant at the Corycian cave. Such bones, as we have seen, are often found in limestone caverns, and the limestone gorges of Cilicia are in fact rich in fossils. The Arcadians laid the scene of the battle of the gods and the giants in the plain of Megalopolis, where many bones of mammoths have come to light, and where, moreover, flames have been seen to burst from the earth and even to burn for years. These natural conditions would easily suggest a fable of giants who had fought the gods and had been slain by thunderbolts; the smouldering earth or jets of flame would be regarded as the spots where the divine lightnings had struck the ground. Hence the Arcadians sacrificed to thunder and lightning. In Sicily, too, great quantities of bones of mammoths, elephants, hippopotamuses, and other animals long extinct in the island have been found, and have been appealed to with confidence by patriotic Sicilians as conclusive evidence of the gigantic stature of their ancestors or predecessors. These remains of huge unwieldy creatures which once trampled through the jungle or splashed in the rivers of Sicily may have contributed with the fires of Etna to build up the story of giants imprisoned under the volcano and vomiting smoke and flame from its crater. "Tales of giants and monsters, which stand in direct connexion with the finding of great fossil bones, are scattered broadcast over the mythology of the world. Huge bones, found at Punto Santa Elena, in the north of Guayaquil, have served as a foundation for the story of a colony of giants who dwelt there. The whole area of the Pampas is a great sepulchre of enormous extinct animals; no wonder that one great plain should be called the 'Field of the giants,' and that such names as 'the hill of the giant,' 'the stream of the animal,' should be guides to the geologist in his search for fossil bones."

About five miles to the north-east of the Corycian caverns, but divided from them by many deep gorges and impassable rocks, is another and very similar chasm. It may be reached in

about an hour and a quarter from the sea by an ancient paved road, which ascends at first very steeply and then gently through bush-clad and wooded hills. Thus you come to a stretch of level ground covered with the well-preserved ruins of an ancient town. Remains of fortresses constructed of polygonal masonry, stately churches, and many houses, together with numerous tombs and reliefs, finely chiselled in the calcareous limestone of the neighbourhood, bear witness to the extent and importance of the place. Yet it is mentioned by no ancient writer. Inscriptions prove that its name was Kanyteldeis or Kanytelideis, which still survives in the modern form of Kanidiwan. The great chasm opens in the very heart of the city. So crowded are the ruins that you do not perceive the abyss till you are within a few yards of it. It is almost a complete circle, about a quarter of a mile wide, three-quarters of a mile in circumference, and uniformly two hundred feet or more in depth. The cliffs go sheer down and remind the traveller of the great quarries at Syracuse. But like the Corycian caves, the larger of which it closely resembles, the huge fissure is natural; and its bottom, like theirs, is overgrown with trees and vegetation. Two ways led down into it in antiquity, both cut through the rock. One of them was a tunnel, which is now obstructed; the other is still open. Remains of columns and hewn stones in the bottom of the chasm seem to show that a temple once stood there. But there is no cave at the foot of the cliffs, and no stream flows in the deep hollow or can be heard to rumble underground. A ruined tower of polygonal masonry, which stands on the southern edge of the chasm, bears a Greek inscription stating that it was dedicated to Olbian Zeus by the priest Teucer, son of Tarkuaris. The letters are beautifully cut in the style of the third century before Christ. We may infer that at the time of the dedication the town belonged to the priestly kings of Olba, and that the great chasm was sacred to Olbian Zeus.

What, then, was the character of the god who was worshipped under the name of Zeus at these two great natural chasms? The depth of the fissures, opening suddenly and as it were without warning in the midst of a plateau, was well fitted to impress and awe the spectator; and the sight of the rank evergreen vegetation at their bottom, fed by rivulets or underground water, must have presented a striking contrast to the grey, barren, rocky wilderness of the surrounding tableland. Such a spot must have seemed to simple folk a paradise, a garden of God, the abode of higher powers who caused the wilderness to blossom, if not with roses, at least with myrtles and pomegranates for man, and with grass and underwood for his flocks. So to the Semite, as we saw, the Baal of the land is he who fertilizes it by subterranean water rather than by rain from the sky, and who therefore dwells in the depths of earth rather than in the height of heaven. In rainless countries the sky-god is deprived of one of the principal functions which he discharges in cool cloudy climates like that of Europe. He has, in fact, little or nothing to do with the water-supply, and has therefore small excuse for levying a water-rate on his worshippers. Not, indeed, that Cilicia is rainless; but in countries bordering on the Mediterranean the drought is almost unbroken through the long months of summer. Vegetation then withers: the face of nature is scorched and brown: most of the rivers dry up; and only their white stony beds, hot to the foot and dazzling to the eye, remain to tell where they flowed. It is at such seasons that a green hollow, a shady rock, a murmuring stream, are welcomed by the wanderer in the South with a joy and wonder which the untravelled Northerner can hardly imagine. Never do the broad slow rivers of England, with their winding reaches, their grassy banks, their grey willows mirrored with the soft English sky in the placid stream, appear so beautiful as when the traveller views them for the first time after leaving behind him the aridity, the heat, the blinding glare of the white southern landscape, set in seas and skies of caerulean blue.

We may take it, then, as probable that the god of the Corycian and Olbian caverns was worshipped as a source of fertility. In antiquity, when the river, which now roars

underground, still burst from the rock in the Corycian cave, the scene must have resembled Ibreez, where the god of the corn and the vine was adored at the source of the stream; and we may compare the vale of Adonis in the Lebanon, where the divinity who gave his name to the river was revered at its foaming cascades. The three landscapes had in common the elements of luxuriant vegetation and copious streams leaping full-born from the rock. We shall hardly err in supposing that these features shaped the conception of the deities who were supposed to haunt the favoured spots. At the Corycian cave the existence of a second chasm, of a frowning and awful aspect, might well suggest the presence of an evil being who lurked in it and sought to undo the beneficent work of the good god. Thus we should have a fable of a conflict between the two, a battle of Zeus and Typhon.

On the whole we conclude that the Olbian Zeus, worshipped at one of these great limestone chasms, and clearly identical in nature with the Corycian Zeus, was also identical with the Baal of Tarsus, the god of the corn and the vine, who in his turn can hardly be separated from the god of Ibreez. If my conjecture is right the native name of the Olbian Zeus was Tark or Trok, and the priestly Teucers of Olba represented him in their own persons. On that hypothesis the Olbian priests who bore the name of Ajax embodied another native deity of unknown name, perhaps the father or the son of Tark. A comparison of the coin-types of Tarsus with the Hittite monuments of Ibreez and Boghaz-Keui led us to the conclusion that the people of Tarsus worshipped at least two distinct gods, a father and a son, the father-god being known to the Semites as Baal and to the Greeks as Zeus, while the son was called Sandan by the natives, but Hercules by the Greeks. We may surmise that at Olba the names of Teucer and Ajax designated two gods who corresponded in type to the two gods of Tarsus; and if the lesser figure at Ibreez, who appears in an attitude of adoration before the deity of the corn and the vine, could be interpreted as the divine Son in presence of the divine Father, we should have in all three places the same pair of deities, represented probably in the flesh by successive generations of priestly kings. But the evidence is far too slender to justify us in advancing this hypothesis as anything more than a bare conjecture.

§ 8. Cilician Goddesses.

So far, the Cilician deities discussed have been males; we have as yet found no trace of the great Mother Goddess who plays so important a part in the religion of Cappadocia and Phrygia, beyond the great dividing range of the Taurus. Yet we may suspect that she was not unknown in Cilicia, though her worship certainly seems to have been far less prominent there than in the centre of Asia Minor. The difference may perhaps be interpreted as evidence that mother-kin and hence the predominance of Mother Goddesses survived, in the bleak highlands of the interior, long after a genial climate and teeming soil had fostered the growth of a higher civilization, and with it the advance from female to male kinship, in the rich lowlands of Cilicia. Be that as it may, Cilician goddesses with or without a male partner are known to have been revered in various parts of the country.

Thus at Tarsus itself the goddess 'Atheh was worshipped along with Baal; their effigies are engraved on the same coins of the city. She is represented wearing a veil and seated upon a lion, with her name in Aramaic letters engraved beside her. Hence it would seem that at Tarsus, as at Boghaz-Keui, the Father God mated with a lion-goddess like the Phrygian Cybele or the Syrian Atargatis. Now the name Atargatis is a Greek rendering of the Aramaic 'Athar-'atheh, a compound word which includes the name of the goddess of Tarsus. Thus in name as well as in attributes the female partner of the Baal of Tarsus appears to correspond to Atargatis, the Syrian Mother Goddess whose image, seated on a lion or lions, was worshipped with great pomp and splendour at Hierapolis-Bambyce near the Euphrates. May we go a step farther and find a correspondence between the Baal of Tarsus and the husband-

god of Atargatis at Hierapolis-Bambyce? That husband-god, like the Baal of Tarsus, was identified by the Greeks with Zeus, and Lucian tells us that the resemblance of his image to the images of Zeus was in all respects unmistakable. But his image, unlike those of Zeus, was seated upon bulls. In point of fact he was probably Hadad, the chief male god of the Syrians, who appears to have been a god of thunder and fertility; for at Baalbec in the Lebanon, where the ruined temple of the Sun is the most imposing monument bequeathed to the modern world by Greek art in its decline, his image grasped in his left hand a thunderbolt and ears of corn, and a colossal statue of the deity, found near Zenjirli in Northern Syria, represents him with a bearded human head and horns, the emblem of strength and fertility. A similar god of thunder and lightning was worshipped from early times by the Babylonians and Assyrians; he bore the similar name of Adad and his emblems appear to have been a thunderbolt and a bull. On an Assyrian relief his image is represented as that of a bearded man clad in a short tunic, wearing a cap with two pairs of horns, and grasping an axe in his right hand and a thunderbolt in his left. His resemblance to the Hittite god of the thundering sky was therefore very close. An alternative name for this Babylonian and Assyrian deity was Ramman, an appropriate term, derived from a verb *ramâmu* to “scream” or “roar.” Now we have seen that the god of Ibreez, whose attributes tally with those of the Baal of Tarsus, wears a cap adorned with bull's horns; that the Father God at Boghaz-Keui, meeting the Mother Goddess on her lioness, is attended by an animal which according to the usual interpretation is a bull; and that the bull itself was worshipped, apparently as an emblem of fertility, at Euyuk near Boghaz-Keui. Thus at Tarsus and Boghaz-Keui, as at Hierapolis-Bambyce, the Father God and the Mother Goddess would seem to have had as their sacred animals or emblems the bull and the lion respectively. In later times, under Greek influence, the goddess was apparently exchanged for, or converted into, the Fortune of the City, who appears on coins of Tarsus as a seated woman with veiled and turreted head, grasping ears of corn and a poppy in her hand. Her lion is gone, but a trace of him perhaps remains on a coin which exhibits the throne of the goddess adorned with a lion's leg. In general it would seem that the goddess Fortune, who figures commonly as the guardian of cities in the Greek East, especially in Syria, was nothing but a disguised form of Gad, the Semitic god of fortune or luck, who, though the exigencies of grammar required him to be masculine, is supposed to have been often merely a special aspect of the great goddess Astarte or Atargatis conceived as the patroness and protector of towns. In Oriental religion such permutations or combinations need not surprise us. To the gods all things are possible. In Cyprus the goddess of love wore a beard, and Alexander the Great sometimes disported himself in the costume of Artemis, while at other times he ransacked the divine wardrobe to figure in the garb of Hercules, of Hermes, and of Ammon. The change of the goddess 'Atheh of Tarsus into Gad or Fortune would be easy if we suppose that she was known as Gad-'Atheh, “Luck of 'Atheh,” which occurs as a Semitic personal name. In like manner the goddess of Fortune at Olba, who had her small temple beside the great temple of Zeus, may have been originally the consort of the native god Tark or Tarku.

Another town in Cilicia where an Oriental god and goddess appear to have been worshipped together was Mallus. The city was built on a height in the great Cilician plain near the mouth of the river Pyramus. Its coins exhibit two winged deities, a male and a female, in a kneeling or running attitude. On some of the coins the male deity is represented, like Janus, with two heads facing opposite ways, and with two pairs of wings, while beneath him is the forepart of a bull with a human head. The obverse of the coins which bear the female deity displays a conical stone, sometimes flanked by two bunches of grapes. This conical stone, like those of other Asiatic cities, was probably the emblem of a Mother Goddess, and the bunches of grapes indicate her fertilizing powers. The god with the two heads and four wings can hardly be any other than the Phoenician El, whom the Greeks called Cronus; for El was

characterized by four eyes, two in front and two behind, and by three pairs of wings. A discrepancy in the number of wings can scarcely be deemed fatal to the identification. The god may easily have moulted some superfluous feathers on the road from Phoenicia to Mallus. On later coins of Mallus these quaint Oriental deities disappear, and are replaced by corresponding Greek deities, particularly by a head of Cronus on one side and a figure of Demeter, grasping ears of corn, on the other. The change doubtless sprang from a wish to assimilate the ancient native divinities to the new and fashionable divinities of the Greek pantheon. If Cronus and Demeter, the harvest god and goddess, were chosen to supplant El and his female consort, the ground of the choice must certainly have been a supposed resemblance between the two pairs of deities. We may assume, therefore, that the discarded couple, El and his wife, had also been worshipped by the husbandman as sources of fertility, the givers of corn and wine. One of these later coins of Mallus exhibits Dionysus sitting on a vine laden with ripe clusters, while on the obverse is seen a male figure guiding a yoke of oxen as if in the act of ploughing. These types of the vine-god and the ploughman probably represent another attempt to adapt the native religion to changed conditions, to pour the old Asiatic wine into new Greek bottles. The barbarous monster with the multiplicity of heads and wings has been reduced to a perfectly human Dionysus. The sacred but deplorable old conical stone no longer flaunts proudly on the coins; it has retired to a decent obscurity in favour of a natural and graceful vine. It is thus that a truly progressive theology keeps pace with the march of intellect. But if these things were done by the apostles of culture at Mallus, we cannot suppose that the clergy of Tarsus, the capital, lagged behind their provincial brethren in their efforts to place the ancient faith upon a sound modern basis. The fruit of their labours seems to have been the more or less nominal substitution of Zeus, Fortune, and Hercules for Baal, 'Atheh, and Sandan.

We may suspect that in like manner the Sarpedonian Artemis, who had a sanctuary in South-Eastern Cilicia, near the Syrian border, was really a native goddess parading in borrowed plumes. She gave oracular responses by the mouth of inspired men, or more probably of women, who in their moments of divine ecstasy may have been deemed incarnations of her divinity. Another even more transparently Asiatic goddess was Perasia, or Artemis Perasia, who was worshipped at Hieropolis-Castabala in Eastern Cilicia. The extensive ruins of the ancient city, now known as Bodroum, cover the slope of a hill about three-quarters of a mile to the north of the river Pyramus. Above them towers the acropolis, built on the summit of dark grey precipices, and divided from the neighbouring mountain by a deep cutting in the rock. A mediaeval castle, built of hewn blocks of reddish-yellow limestone, has replaced the ancient citadel. The city possessed a large theatre, and was traversed by two handsome colonnades, of which some columns are still standing among the ruins. A thick growth of brushwood and grass now covers most of the site, and the place is wild and solitary. Only the wandering herdsmen encamp near the deserted city in winter and spring. The neighbourhood is treeless; yet in May magnificent fields of wheat and barley gladden the eye, and in the valleys the clover grows as high as the horses' knees. The ambiguous nature of the goddess who presided over this City of the Sanctuary (*Hieropolis*) was confessed by a puzzled worshipper, a physician named Lucius Minius Claudianus, who confided his doubts to the deity herself in some very indifferent Greek verses. He wisely left it to the goddess to say whether she was Artemis, or the Moon, or Hecate, or Aphrodite, or Demeter. All that we know about her is that her true name was Perasia, and that she was in the enjoyment of certain revenues. Further, we may reasonably conjecture that at the Cilician Castabala she was worshipped with rites like those which were held in honour of her namesake Artemis Perasia at another city of the same name, Castabala in Cappadocia. There, as we saw, the priestesses of the goddess walked over fire with bare feet unscathed. Probably the same impressive ceremony was performed before a crowd of worshippers in the Cilician Castabala

also. Whatever the exact meaning of the rite may have been, the goddess was in all probability one of those Asiatic Mother Goddesses to whom the Greeks often applied the name of Artemis. The immunity enjoyed by the priestess in the furnace was attributed to her inspiration by the deity. In discussing the nature of inspiration or possession by a deity, the Syrian philosopher Jamblichus notes as one of its symptoms a total insensibility to pain. Many inspired persons, he tells us, "are not burned by fire, the fire not taking hold of them by reason of the divine inspiration; and many, though they are burned, perceive it not, because at the time they do not live an animal life. They pierce themselves with skewers and feel nothing. They gash their backs with hatchets, they slash their arms with daggers, and know not what they do, because their acts are not those of mere men. For impassable places become passable to those who are filled with the spirit. They rush into fire, they pass through fire, they cross rivers, like the priestess at Castabala. These things prove that under the influence of inspiration men are beside themselves, that their senses, their will, their life are those neither of man nor of beast, but that they lead another and a diviner life instead, whereby they are inspired and wholly possessed." Thus in traversing the fiery furnace the priestesses of Perasia were believed to be beside themselves, to be filled with the goddess, to be in a real sense incarnations of her divinity.

A similar touchstone of inspiration is still applied by some villagers in the Himalayan districts of North-Western India. Once a year they worship Airi, a local deity, who is represented by a trident and has his temples on lonely hills and desolate tracts. At his festival the people seat themselves in a circle about a bonfire. A kettle-drum is beaten, and one by one his worshippers become possessed by the god and leap with shouts round the flames. Some brand themselves with heated iron spoons and sit down in the fire. Such as escape unhurt are believed to be truly inspired, while those who burn themselves are despised as mere pretenders to the divine frenzy. Persons thus possessed by the spirit are called Airi's horses or his slaves. During the revels, which commonly last about ten days, they wear red scarves round their heads and receive alms from the faithful. These men deem themselves so holy that they will let nobody touch them, and they alone may touch the sacred trident, the emblem of their god. In Western Asia itself modern fanatics still practise the same austerities which were practised by their brethren in the days of Jamblichus. "Asia Minor abounds in dervishes of different orders, who lap red-hot iron, calling it their 'rose,' chew coals of living fire, strike their heads against solid walls, stab themselves in the cheek, the scalp, the temple, with sharp spikes set in heavy weights, shouting 'Allah, Allah,' and always consistently avowing that during such frenzy they are entirely insensible to pain."

§ 9. The Burning of Cilician Gods.

On the whole, then, we seem to be justified in concluding that under a thin veneer of Greek humanity the barbarous native gods of Cilicia continued long to survive, and that among them the great Asiatic goddess retained a place, though not the prominent place which she held in the highlands of the interior down at least to the beginning of our era. The principle that the inspired priest or priestess represents the deity in person appears, if I am right, to have been recognized at Castabala and at Olba, as well as at the sanctuary of Sarpedonian Artemis. There can be no intrinsic improbability, therefore, in the view that at Tarsus also the divine triad of Baal, 'Atheh, and Sandan may also have been personated by priests and priestesses, who, on the analogy of Olba and of the great sanctuaries in the interior of Asia Minor, would originally be at the same time kings and queens, princes and princesses. Further, the burning of Sandan in effigy at Tarsus would, on this hypothesis, answer to the walk of the priestess of Perasia through the furnace at Castabala. Both were perhaps mitigations of a custom of putting the priestly king or queen, or another member of the royal family, to death by fire.

VII. Sardanapalus and Hercules

§ 1. The Burning of Sardanapalus.

The theory that kings or princes were formerly burned to death at Tarsus in the character of gods is singularly confirmed by another and wholly independent line of argument. For, according to one account, the city of Tarsus was founded not by Sandan but by Sardanapalus, the famous Assyrian monarch whose death on a great pyre was one of the most famous incidents in Oriental legend. Near the sea, within a day's march of Tarsus, might be seen in antiquity the ruins of a great ancient city named Anchiale, and outside its walls stood a monument called the monument of Sardanapalus, on which was carved in stone the figure of the monarch. He was represented snapping the fingers of his right hand, and the gesture was explained by an accompanying inscription, engraved in Assyrian characters, to the following effect:—"Sardanapalus, son of Anacyndaraxes, built Anchiale and Tarsus in one day. Eat, drink, and play, for everything else is not worth that," by which was implied that all other human affairs were not worth a snap of the fingers. The gesture may have been misinterpreted and the inscription mistranslated, but there is no reason to doubt the existence of such a monument, though we may conjecture that it was of Hittite rather than Assyrian origin; for, not to speak of the traces of Hittite art and religion which we have found at Tarsus, a group of Hittite monuments has been discovered at Marash, in the upper valley of the Pyramus. The Assyrians may have ruled over Cilicia for a time, but Hittite influence was probably much deeper and more lasting. The story that Tarsus was founded by Sardanapalus may well be apocryphal, but there must have been some reason for his association with the city. On the present hypothesis that reason is to be found in the traditional manner of his death. To avoid falling into the hands of the rebels, who laid siege to Nineveh, he built a huge pyre in his palace, heaped it up with gold and silver and purple raiment, and then burnt himself, his wife, his concubines, and his eunuchs in the fire. The story is false of the historical Sardanapalus, that is, of the great Assyrian king Ashurbanipal, but it is true of his brother Shamashshumukin. Being appointed king of Babylon by Ashurbanipal, he revolted against his suzerain and benefactor, and was besieged by him in his capital. The siege was long and the resistance desperate, for the Babylonians knew that they had no mercy to expect from the ruthless Assyrians. But they were decimated by famine and pestilence, and when the city could hold out no more, King Shamashshumukin, determined not to fall alive into the hands of his offended brother, shut himself up in his palace, and there burned himself to death, along with his wives, his children, his slaves, and his treasures, at the very moment when the conquerors were breaking in the gates. Not many years afterwards the same tragedy was repeated at Nineveh itself by Saracus or Sinsharishkun, the last king of Assyria. Besieged by the rebel Nabopolassar, king of Babylon, and by Cyaxares, king of the Medes, he burned himself in his palace. That was the end of Nineveh and of the Assyrian empire. Thus Greek history preserved the memory of the catastrophe, but transferred it from the real victims to the far more famous Ashurbanipal, whose figure in after ages loomed vast and dim against the setting sun of Assyrian glory.

§ 2. The Burning of Croesus.

Another Oriental monarch who prepared at least to die in the flames was Croesus, king of Lydia. Herodotus tells how the Persians under Cyrus captured Sardes, the Lydian capital, and took Croesus alive, and how Cyrus caused a great pyre to be erected, on which he placed the captive monarch in fetters, and with him twice seven Lydian youths. Fire was then applied to the pile, but at the last moment Cyrus relented, a sudden shower extinguished the flames, and

Croesus was spared. But it is most improbable that the Persians, with their profound reverence for the sanctity of fire, should have thought of defiling the sacred element with the worst of all pollutions, the contact of dead bodies. Such an act would have seemed to them sacrilege of the deepest dye. For to them fire was the earthly form of the heavenly light, the eternal, the infinite, the divine; death, on the other hand, was in their opinion the main source of corruption and uncleanness. Hence they took the most stringent precautions to guard the purity of fire from the defilement of death. If a man or a dog died in a house where the holy fire burned, the fire had to be removed from the house and kept away for nine nights in winter or a month in summer before it might be brought back; and if any man broke the rule by bringing back the fire within the appointed time, he might be punished with two hundred stripes. As for burning a corpse in the fire, it was the most heinous of all sins, an invention of Ahriman, the devil; there was no atonement for it, and it was punished with death. Nor did the law remain a dead letter. Down to the beginning of our era the death penalty was inflicted on all who threw a corpse or cow-dung on the fire, nay, even on such as blew on the fire with their breath. It is hard, therefore, to believe that a Persian king should have commanded his subjects to perpetrate a deed which he and they viewed with horror as the most flagitious sacrilege conceivable.

Another and in some respects truer version of the story of Croesus and Cyrus has been preserved by two older witnesses—namely, by the Greek poet Bacchylides, who was born some forty years after the event, and by a Greek artist who painted the scene on a red-figured vase about, or soon after, the time of the poet's birth. Bacchylides tells us that when the Persians captured Sardes, Croesus, unable to brook the thought of slavery, caused a pyre to be erected in front of his courtyard, mounted it with his wife and daughters, and bade a page apply a light to the wood. A bright blaze shot up, but Zeus extinguished it with rain from heaven, and Apollo of the Golden Sword wafted the pious king and his daughters to the happy land beyond the North Wind. In like manner the vase-painter clearly represents the burning of Croesus as a voluntary act, not as a punishment inflicted on him by the conqueror. He lets us see the king enthroned upon the pyre with a wreath of laurel on his head and a sceptre in one hand, while with the other he is pouring a libation. An attendant is in the act of applying to the pile two objects which have been variously interpreted as torches to kindle the wood or whisks to sprinkle holy water. The demeanour of the king is solemn and composed: he seems to be performing a religious rite, not suffering an ignominious death.

Thus we may fairly conclude with some eminent modern scholars that in the extremity of his fortunes Croesus prepared to meet death like a king or a god in the flames. It was thus that Hercules, from whom the old kings of Lydia claimed to be sprung, ascended from earth to heaven: it was thus that Zimri, king of Israel, passed beyond the reach of his enemies: it was thus that Shamashshumukin, king of Babylon, escaped a brother's vengeance: it was thus that the last king of Assyria expired in the ruins of his capital; and it was thus that, sixty-six years after the capture of Sardes, the Carthaginian king Hamilcar sought to retrieve a lost battle by a hero's death.

Semiramis herself, the legendary queen of Assyria, is said to have burnt herself on a pyre out of grief at the death of a favourite horse. Since there are strong grounds for regarding the queen in her mythical aspect as a form of Ishtar or Astarte, the legend that Semiramis died for love in the flames furnishes a remarkable parallel to the traditionary death of the love-lorn Dido, who herself appears to be simply an Avatar of the same great Asiatic goddess. When we compare these stories of the burning of Semiramis and Dido with each other and with the historical cases of the burning of Oriental monarchs, we may perhaps conclude that there was a time when queens as well as kings were expected under certain circumstances, perhaps on the death of their consort, to perish in the fire. The conclusion can hardly be deemed

extravagant when we remember that the practice of burning widows to death survived in India under English rule down to a time within living memory.

At Jerusalem itself a reminiscence of the practice of burning kings, alive or dead, appears to have lingered as late as the time of Isaiah, who says: "For Tophet is prepared of old; yea, for the king it is made ready; he hath made it deep and large: the pile thereof is fire and much wood; the breath of the Lord, like a stream of brimstone, doth kindle it." We know that "great burnings" were regularly made for dead kings of Judah, and it can hardly be accidental that the place assigned by Isaiah to the king's pyre is the very spot in the Valley of Hinnom where the first-born children were actually burned by their parents in honour of Moloch "the King." The exact site of the Valley of Hinnom is disputed, but all are agreed in identifying it with one of the ravines which encircle or intersect Jerusalem; and according to some eminent authorities it was the one called by Josephus the Tyropoeon. If this last identification is correct, the valley where the children were burned on a pyre lay immediately beneath the royal palace and the temple. Perhaps the young victims died for God and the king.

With the "great burnings" for dead Jewish kings it seems worth while to compare the great burnings still annually made for dead Jewish Rabbis at the lofty village of Meiron in Galilee, the most famous and venerated place of pilgrimage for Jews in modern Palestine. Here the tombs of the Rabbis are hewn out of the rock, and here on the thirtieth of April, the eve of May Day, multitudes of pilgrims, both men and women, assemble and burn their offerings, which consist of shawls, scarfs, handkerchiefs, books, and the like. These are placed in two stone basins on the top of two low pillars, and being drenched with oil and ignited they are consumed to ashes amid the loud applause, shouts, and cries of the spectators. A man has been known to pay as much as two thousand piastres for the privilege of being allowed to open the ceremony by burning a costly shawl. On such occasions the solemn unmoved serenity of the Turkish officials, who keep order, presents a striking contrast to the intense excitement of the Jews. This curious ceremony may be explained by the widespread practice of burning property for the use and benefit of the dead. So, to take a single instance, the tyrant Periander collected the finest raiment of all the women in Corinth and burned it in a pit for his dead wife, who had sent him word by necromancy that she was cold and naked in the other world, because the clothes he buried with her had not been burnt. In like manner, perhaps, garments and other valuables may have been consumed on the pyre for the use of the dead kings of Judah. In Siam, the corpse of a king or queen is burned in a huge structure resembling a permanent palace, which with its many-gabled and high-pitched roofs and multitudinous tinselled spires, soaring to a height of over two hundred feet, sometimes occupies an area of about an acre. The blaze of such an enormous catafalque may resemble, even if it far surpasses, the "great burnings" for the Jewish kings.

§ 3. Purification by Fire.

These events and these traditions seem to prove that under certain circumstances Oriental monarchs deliberately chose to burn themselves to death. What were these circumstances? and what were the consequences of the act? If the intention had merely been to escape from the hands of a conqueror, an easier mode of death would naturally have been chosen. There must have been a special reason for electing to die by fire. The legendary death of Hercules, the historical death of Hamilcar, and the picture of Croesus enthroned in state on the pyre and pouring a libation, all combine to indicate that to be burnt alive was regarded as a solemn sacrifice, nay, more than that, as an apotheosis which raised the victim to the rank of a god. For it is to be remembered that Hamilcar as well as Hercules was worshipped after death. Fire, moreover, was regarded by the ancients as a purgative so powerful that properly applied it could burn away all that was mortal of a man, leaving only the divine and immortal

spirit behind. Hence we read of goddesses who essayed to confer immortality on the infant sons of kings by burning them in the fire by night; but their beneficent purpose was always frustrated by the ignorant interposition of the mother or father, who peeping into the room saw the child in the flames and raised a cry of horror, thus disconcerting the goddess at her magic rites. This story is told of Isis in the house of the king of Byblus, of Demeter in the house of the king of Eleusis, and of Thetis in the house of her mortal husband Peleus. In a slightly different way the witch Medea professed to give back to the old their lost youth by boiling them with a hell-broth in her magic cauldron; and when Pelops had been butchered and served up at a banquet of the gods by his cruel father Tantalus, the divine beings, touched with pity, plunged his mangled remains in a kettle, from which after decoction he emerged alive and young. "Fire," says Jamblichus, "destroys the material part of sacrifices, it purifies all things that are brought near it, releasing them from the bonds of matter and, in virtue of the purity of its nature, making them meet for communion with the gods. So, too, it releases us from the bondage of corruption, it likens us to the gods, it makes us meet for their friendship, and it converts our material nature into an immaterial." Thus we can understand why kings and commoners who claimed or aspired to divinity should choose death by fire. It opened to them the gates of heaven. The quack Peregrinus, who ended his disreputable career in the flames at Olympia, gave out that after death he would be turned into a spirit who would guard men from the perils of the night; and, as Lucian remarked, no doubt there were plenty of fools to believe him. According to one account, the Sicilian philosopher Empedocles, who set up for being a god in his lifetime, leaped into the crater of Etna in order to establish his claim to godhead. There is nothing incredible in the tradition. The crack-brained philosopher, with his itch for notoriety, may well have done what Indian fakirs and the brazen-faced mountebank Peregrinus did in antiquity, and what Russian peasants and Chinese Buddhists have done in modern times. There is no extremity to which fanaticism or vanity, or a mixture of the two, will not impel its victims.

§ 4. The Divinity of Lydian Kings.

But apart from any general notions of the purificatory virtues of fire, the kings of Lydia seem to have had a special reason for regarding death in the flames as their appropriate end. For the ancient dynasty of the Heraclids which preceded the house of Croesus on the throne traced their descent from a god or hero whom the Greeks called Hercules; and this Lydian Hercules appears to have been identical in name and in substance with the Cilician Hercules, whose effigy was regularly burned on a great pyre at Tarsus. The Lydian Hercules bore the name of Sandon; the Cilician Hercules bore the name of Sandan, or perhaps rather of Sandon, since Sandon is known from inscriptions and other evidence to have been a Cilician name. The characteristic emblems of the Cilician Hercules were the lion and the double-headed axe; and both these emblems meet us at Sardes in connexion with the dynasty of the Heraclids. For the double-headed axe was carried as part of the sacred regalia by Lydian kings from the time of the legendary queen Omphale down to the reign of Candaules, the last of the Heraclid kings. It is said to have been given to Omphale by Hercules himself, and it was apparently regarded as a palladium of the Heraclid sovereignty; for after the dotard Candaules ceased to carry the axe himself, and had handed it over to the keeping of a courtier, a rebellion broke out, and the ancient dynasty of the Heraclids came to an end. The new king Gyges did not attempt to carry the old emblem of sovereignty; he dedicated it with other spoils to Zeus in Caria. Hence the image of the Carian Zeus bore an axe in his hand and received the epithet of Labrandeus, from *labrys*, the Lydian word for "axe." Such is Plutarch's account; but we may suspect that Zeus, or rather the native god whom the Greeks identified with Zeus, carried the axe long before the time of Candaules. If, as is commonly supposed, the axe was the symbol of the Asiatic thunder-god, it would be an appropriate emblem in the hand of kings, who are so

often expected to make rain, thunder, and lightning for the good of their people. Whether the kings of Lydia were bound to make thunder and rain we do not know; but at all events, like many early monarchs, they seem to have been held responsible for the weather and the crops. In the reign of Meles the country suffered severely from dearth, so the people consulted an oracle, and the deity laid the blame on the kings, one of whom had in former years incurred the guilt of murder. The soothsayers accordingly declared that King Meles, though his own hands were clean, must be banished for three years in order that the taint of bloodshed should be purged away. The king obeyed and retired to Babylon, where he lived three years. In his absence the kingdom was administered by a deputy, a certain Sadyattes, son of Cadys, who traced his descent from Tylon. As to this Tylon we shall hear more presently. Again, we read that the Lydians rejoiced greatly at the assassination of Spermus, another of their kings, "for he was very wicked, and the land suffered from drought in his reign." Apparently, like the ancient Irish and many modern Africans, they laid the drought at the king's door, and thought that he only got what he deserved under the knife of the assassin.

With regard to the lion, the other emblem of the Cilician Hercules, we are told that the same king Meles, who was banished because of a dearth, sought to make the acropolis of Sardes impregnable by carrying round it a lion which a concubine had borne to him. Unfortunately at a single point, where the precipices were such that it seemed as if no human foot could scale them, he omitted to carry the beast, and sure enough at that very point the Persians afterwards clambered up into the citadel. Now Meles was one of the old Heraclid dynasty who boasted their descent from the lion-hero Hercules; hence the carrying of a lion round the acropolis was probably a form of consecration intended to place the stronghold under the guardianship of the lion-god, the hereditary deity of the royal family. And the story that the king's concubine gave birth to a lion's whelp suggests that the Lydian kings not only claimed kinship with the beast, but posed as lions in their own persons and passed off their sons as lion-cubs. Croesus dedicated at Delphi a lion of pure gold, perhaps as a badge of Lydia, and Hercules with his lion's skin is a common type on coins of Sardes.

Thus the death, or the attempted death, of Croesus on the pyre completes the analogy between the Cilician and the Lydian Hercules. At Tarsus and at Sardes we find the worship of a god whose symbols were the lion and the double-headed axe, and who was burned on a great pyre, either in effigy or in the person of a human representative. The Greeks called him Hercules, but his native name was Sandan or Sandon. At Sardes he seems to have been personated by the kings, who carried the double-axe and perhaps wore, like their ancestor Hercules, the lion's skin. We may conjecture that at Tarsus also the royal family aped the lion-god. At all events we know that Sandan, the name of the god, entered into the names of Cilician kings, and that in later times the priests of Sandan at Tarsus wore the royal purple.

§ 5. Hittite Gods at Tarsus and Sardes.

Now we have traced the religion of Tarsus back by a double thread to the Hittite religion of Cappadocia. One thread joins the Baal of Tarsus, with his grapes and his corn, to the god of Ibreez. The other thread unites the Sandan of Tarsus, with his lion and his double axe, to the similar figure at Boghaz-Keui. Without being unduly fanciful, therefore, we may surmise that the Sandon-Hercules of Lydia was also a Hittite god, and that the Heraclid dynasty of Lydia were of Hittite blood. Certainly the influence, if not the rule, of the Hittites extended to Lydia; for at least two rock-carvings accompanied by Hittite inscriptions are still to be seen in the country. Both of them attracted the attention of the ancient Greeks. One of them represents a god or warrior in Hittite costume armed with a spear and bow. It is carved on the face of a grey rock, which stands out conspicuous on a bushy hillside, where an old road runs through a glen from the valley of the Hermus to the valley of the Cayster. The place is now

called Kara-Bel. Herodotus thought that the figure represented the Egyptian king and conqueror Sesostris. The other monument is a colossal seated figure of the Mother of the Gods, locally known in antiquity as Mother Plastene. It is hewn out of the solid rock and occupies a large niche in the face of a cliff at the steep northern foot of Mount Sipylus. Thus it would seem that at some time or other the Hittites carried their arms to the shores of the Aegean. There is no improbability, therefore, in the view that a Hittite dynasty may have reigned at Sardes.

§ 6. The Resurrection of Tylon.

The burning of Sandan, like that of Melcarth, was probably followed by a ceremony of his resurrection or awakening, to indicate that the divine life was not extinct, but had only assumed a fresher and purer form. Of that resurrection we have, so far as I am aware, no direct evidence. In default of it, however, there is a tale of a local Lydian hero called Tylon or Tylus, who was killed and brought to life again. The story runs thus. Tylon or Tylus was a son of Earth. One day as he was walking on the banks of the Hermus a serpent stung and killed him. His distressed sister Moire had recourse to a giant named Damasen, who attacked and slew the serpent. But the serpent's mate culled a herb, "the flower of Zeus" in the woods, and bringing it in her mouth put it to the lips of the dead serpent, which immediately revived. In her turn Moire took the hint and restored her brother Tylon to life by touching him with the same plant. A similar incident occurs in many folk-tales. Serpents are often credited with a knowledge of life-giving plants. But Tylon seems to have been more than a mere hero of fairy-tales. He was closely associated with Sardes, for he figures on the coins of the city along with his champion Damasen or Masnes, the dead serpent, and the life-giving branch. And he was related in various ways to the royal family of Lydia; for his daughter married Cotys, one of the earliest kings of the country, and a descendant of his acted as regent during the banishment of King Meles. It has been suggested that the story of his death and resurrection was acted as a pageant to symbolize the revival of plant life in spring. At all events, a festival called the Feast of the Golden Flower was celebrated in honour of Persephone at Sardes, probably in one of the vernal months, and the revival of the hero and of the goddess may well have been represented together. The Golden Flower of the Festival would then be the "flower of Zeus" of the legend, perhaps the yellow crocus of nature or rather her more gorgeous sister, the Oriental saffron. For saffron grew in great abundance at the Corycian cave of Zeus; and it is an elegant conjecture, if it is nothing more, that the very name of the place meant "the Crocus Cave." However, on the coins of Sardes the magical plant seems to be a branch rather than a blossom, a Golden Bough rather than a Golden Flower.

VIII. Volcanic Religion

§ 1. The Burning of a God.

Thus it appears that a custom of burning a god in effigy or in the person of a human representative was practised by at least two peoples of Western Asia, the Phoenicians and the Hittites. Whether they both developed the custom independently, or whether one of them adopted it from the other, we cannot say. And their reasons for celebrating a rite which to us seems strange and monstrous are also obscure. In the preceding inquiry some grounds have been adduced for thinking that the practice was based on a conception of the purifying virtue of fire, which, by destroying the corruptible and perishable elements of man, was supposed to fit him for union with the imperishable and the divine. Now to people who created their gods in their own likeness, and imagined them subject to the same law of decadence and death, the idea would naturally occur that fire might do for the gods what it was believed to do for men, that it could purge them of the taint of corruption and decay, could sift the mortal from the immortal in their composition, and so endow them with eternal youth. Hence a custom might arise of subjecting the deities themselves, or the more important of them, to an ordeal of fire for the purpose of refreshing and renovating those creative energies on the maintenance of which so much depended. To the coarse apprehension of the uninstructed and unsympathetic observer the solemn rite might easily wear a very different aspect. According as he was of a pious or of a sceptical turn of mind, he might denounce it as a sacrilege or deride it as an absurdity. "To burn the god whom you worship," he might say, "is the height of impiety and of folly. If you succeed in the attempt, you kill him and deprive yourselves of his valuable services. If you fail, you have mortally offended him, and sooner or later he will visit you with his severe displeasure." To this the worshipper, if he was patient and polite, might listen with a smile of indulgent pity for the ignorance and obtuseness of the critic. "You are much mistaken," he might observe, "in imagining that we expect or attempt to kill the god whom we adore. The idea of such a thing is as repugnant to us as to you. Our intention is precisely the opposite of that which you attribute to us. Far from wishing to destroy the deity, we desire to make him live for ever, to place him beyond the reach of that process of degeneration and final dissolution to which all things here below appear by their nature to be subject. He does not die in the fire. Oh no! Only the corruptible and mortal part of him perishes in the flames: all that is incorruptible and immortal of him will survive the purer and stronger for being freed from the contagion of baser elements. That little heap of ashes which you see there is not our god. It is only the skin which he has sloughed, the husk which he has cast. He himself is far away, in the clouds of heaven, in the depths of earth, in the running waters, in the tree and the flower, in the corn and the vine. We do not see him face to face, but every year he manifests his divine life afresh in the blossoms of spring and the fruits of autumn. We eat of his broken body in bread. We drink of his shed blood in the juice of the grape."

§ 2. The Volcanic Region of Cappadocia.

Some such train of reasoning may suffice to explain, though naturally not to justify, the custom which we bluntly call the burning of a god. Yet it is worth while to ask whether in the development of the practice these general considerations may not have been reinforced or modified by special circumstances; for example, by the natural features of the country where the custom grew up. For the history of religion, like that of all other human institutions, has been profoundly affected by local conditions, and cannot be fully understood apart from them. Now Asia Minor, the region where the practice in question appears to have been widely diffused, has from time immemorial been subjected to the action of volcanic forces on

a great scale. It is true that, so far as the memory of man goes back, the craters of its volcanoes have been extinct, but the vestiges of their dead or slumbering fires are to be seen in many places, and the country has been shaken and rent at intervals by tremendous earthquakes. These phenomena cannot fail to have impressed the imagination of the inhabitants, and thereby to have left some mark on their religion.

Among the extinct volcanoes of Anatolia the greatest is Mount Argæus, in the centre of Cappadocia, the heart of the old Hittite country. It is indeed the highest point of Asia Minor, and one of the loftiest mountains known to the ancients; for in height it falls not very far short of Mount Blanc. Towering abruptly in a huge pyramid from the plain, it is a conspicuous object for miles on miles. Its top is white with eternal snow, and in antiquity its lower slopes were clothed with dense forests, from which the inhabitants of the treeless Cappadocian plains drew their supply of timber. In these woods, and in the low grounds at the foot of the mountain, the languishing fires of the volcano manifested themselves as late as the beginning of our era. The ground was treacherous. Under a grassy surface there lurked pits of fire, into which stray cattle and unwary travellers often fell. Experienced woodmen used great caution when they went to fell trees in the forest. Elsewhere the soil was marshy, and flames were seen to play over it at night. Superstitious fancies no doubt gathered thick around these perilous spots, but what shape they took we cannot say. Nor do we know whether sacrifices were offered on the top of the mountain, though a curious discovery may perhaps be thought to indicate that they were. Sharp and lofty pinnacles of red porphyry, inaccessible to the climber, rise in imposing grandeur from the eternal snow of the summit, and here Mr. Tozer found that the rock had been perforated in various places with human habitations. One such rock-hewn dwelling winds inward for a considerable distance; rude niches are hollowed in its sides, and on its roof and walls may be seen the marks of tools. The ancients certainly did not climb mountains for pleasure or health, and it is difficult to imagine that any motive but superstition should have led them to provide dwellings in such a place. These rock-cut chambers may have been shelters for priests charged with the performance of religious or magical rites on the summit.

§ 3. Fire-Worship in Cappadocia.

Under the Persian rule Cappadocia became, and long continued to be, a great seat of the Zoroastrian fire-worship. In the time of Strabo, about the beginning of our era, the votaries of that faith and their temples were still numerous in the country. The perpetual fire burned on an altar, surrounded by a heap of ashes, in the middle of the temple; and the priests daily chanted their liturgy before it, holding in their hands a bundle of myrtle rods and wearing on their heads tall felt caps with cheek-pieces which covered their lips, lest they should defile the sacred flame with their breath. It is reasonable to suppose that the natural fires which burned perpetually on the outskirts of Mount Argæus attracted the devotion of the disciples of Zoroaster, for elsewhere similar fires have been the object of religious reverence down to modern times. Thus at Jualamukhi, on the lower slopes of the Himalayas, jets of combustible gas issue from the earth; and a great Hindoo temple, the resort of many pilgrims, is built over them. The perpetual flame, which is of a reddish hue and emits an aromatic perfume, rises from a pit in the fore-court of the sanctuary. The worshippers deliver their gifts, consisting usually of flowers, to the attendant fakirs, who first hold them over the flame and then cast them into the body of the temple. Again, Hindoo pilgrims make their way with great difficulty to Baku on the Caspian, in order to worship the everlasting fires which there issue from the beds of petroleum. The sacred spot is about ten miles to the north-east of the city. An English traveller, who visited Baku in the middle of the eighteenth century, has thus described the place and the worship. "There are several ancient temples built with stone, supposed to have been all dedicated to fire; most of them are arched vaults, not above ten to

fifteen feet high. Amongst others there is a little temple, in which the Indians now worship; near the altar, about three feet high, is a large hollow cane, from the end of which issues a blue flame, in colour and gentleness not unlike a lamp that burns with spirits, but seemingly more pure. These Indians affirm that this flame has continued ever since the flood, and they believe it will last to the end of the world; that if it was resisted or suppressed in that place, it would rise in some other. Here are generally forty or fifty of these poor devotees, who come on a pilgrimage from their own country, and subsist upon wild sallary, and a kind of Jerusalem artichoke, which are very good food, with other herbs and roots, found a little to the northward. Their business is to make expiation, not for their own sins only, but for those of others; and they continue the longer time, in proportion to the number of persons for whom they have engaged to pray. They mark their foreheads with saffron, and have a great veneration for a red cow." Thus it would seem that a purifying virtue is attributed to the sacred flame, since pilgrims come to it from far to expiate sin.

§ 4. The Burnt Land of Lydia.

Another volcanic region of Asia Minor is the district of Lydia, to which, on account of its remarkable appearance, the Greeks gave the name of the Burnt Land. It lies to the east of Sardes in the upper valley of the Hermus, and covers an area of about fifty miles by forty. As described by Strabo, the country was wholly treeless except for the vines, which produced a wine inferior to none of the most famous vintages of antiquity. The surface of the plains was like ashes; the hills were composed of black stone, as if they had been scorched by fire. Some people laid the scene of Typhon's battle with the gods in this Black Country, and supposed that it had been burnt by the thunderbolts hurled from heaven at the impious monster. The philosophic Strabo, however, held that the fires which had wrought this havoc were subterranean, not celestial, and he pointed to three craters, at intervals of about four miles, each in a hill of scoriae which he supposed to have been once molten matter ejected by the volcanoes. His observation and his theory have both been confirmed by modern science. The three extinct volcanoes to which he referred are still conspicuous features of the landscape. Each is a black cone of loose cinders, scoriae, and ashes, with steep sides and a deep crater. From each a flood of rugged black lava has flowed forth, bursting out at the foot of the cone, and then rushing down the dale to the bed of the Hermus. The dark streams follow all the sinuosities of the valleys, their sombre hue contrasting with the rich verdure of the surrounding landscape. Their surface, broken into a thousand fantastic forms, resembles a sea lashed into fury by a gale, and then suddenly hardened into stone. Regarded from the geological point of view, these black cones of cinders and these black rivers of lava are of comparatively recent formation. Exposure to the weather for thousands of years has not yet softened their asperities and decomposed them into vegetable mould; they are as hard and ungenial as if the volcanic stream had ceased to flow but yesterday. But in the same district there are upwards of thirty other volcanic cones, whose greater age is proved by their softened forms, their smoother sides, and their mantle of vegetation. Some of them are planted with vineyards to their summits. Thus the volcanic soil is still as favourable to the cultivation of the vine as it was in antiquity. The relation between the two was noted by the ancients. Strabo compares the vines of the Burnt Land with the vineyards of Catania fertilized by the ashes of Mount Etna; and he tells us that some ingenious persons explained the fire-born Dionysus as a myth of the grapes fostered by volcanic agency.

§ 5. The Earthquake God.

But the inhabitants of these regions were reminded of the slumbering fires by other and less agreeable tokens than the generous juice of their grapes. For not the Burnt Land only but the country to the south, including the whole valley of the Maeander, was subject to frequent and

violent shocks of earthquake. The soil was loose, friable, and full of salts, the ground hollow, undermined by fire and water. In particular the city of Philadelphia was a great centre of disturbance. The shocks there, we are told, were continuous. The houses rocked, the walls cracked and gaped; the few inhabitants were kept busy repairing the breaches or buttressing and propping the edifices which threatened to tumble about their ears. Most of the citizens, indeed, had the prudence to dwell dispersed on their farms. It was a marvel, says Strabo, that such a city should have any inhabitants at all, and a still greater marvel that it should ever have been built. However, by a wise dispensation of Providence, the earthquakes which shook the foundations of their houses only strengthened those of their faith. The people of Apameia, whose town was repeatedly devastated, paid their devotions with great fervour to Poseidon, the earthquake god. Again, the island of Santorin, in the Greek Archipelago, has been for thousands of years a great theatre of volcanic activity. On one occasion the waters of the bay boiled and flamed for four days, and an island composed of red-hot matter rose gradually, as if hoisted by machinery, above the waves. It happened that the sovereignty of the seas was then with the Rhodians, those merchant-princes whose prudent policy, strict but benevolent oligarchy, and beautiful island-city, rich with accumulated treasures of native art, rendered them in a sense the Venetians of the ancient world. So when the ebullition and heat of the eruption had subsided, their sea-captains landed in the new island, and founded a sanctuary of Poseidon the Establisher or Securer, a complimentary epithet often bestowed on him as a hint not to shake the earth more than he could conveniently help. In many places people sacrificed to Poseidon the Establisher, in the hope that he would be as good as his name and not bring down their houses on their heads.

Another instance of a Greek attempt to quiet the perturbed spirit underground is instructive, because similar efforts are still made by savages in similar circumstances. Once when a Spartan army under King Agesipolis had taken the field, it chanced that the ground under their feet was shaken by an earthquake. It was evening, and the king was at mess with the officers of his staff. No sooner did they feel the shock than, with great presence of mind, they rose from their dinner and struck up a popular hymn in honour of Poseidon. The soldiers outside the tent took up the strain, and soon the whole army joined in the sacred melody. It is not said whether the flute-band, which always played the Spartan redcoats into action, accompanied the deep voices of the men with its shrill music. At all events, the intention of this service of praise, addressed to the earth-shaking god, can only have been to prevail on him to stop. I have spoken of the Spartan redcoats because the uniform of Spartan soldiers was red. As they fought in an extended, not a deep, formation, a Spartan line of battle must always have been, what the British used to be, a thin red line. It was in this order, and no doubt with the music playing and the sun flashing on their arms, that they advanced to meet the Persians at Thermopylae. Like Cromwell's Ironsides, these men could fight as well as sing psalms.

If the Spartans imagined that they could stop an earthquake by a soldiers' chorus, their theory and practice resembled those of many other barbarians. Thus the people of Timor, in the East Indies, think that the earth rests on the shoulder of a mighty giant, and that when he is weary of bearing it on one shoulder he shifts it to the other, and so causes the ground to quake. At such times, accordingly, they all shout at the top of their voices to let him know that there are still people on the earth; for otherwise they fear lest, impatient of his burden, he might tip it into the sea. The Manichaeans held a precisely similar theory of earthquakes, except that according to them the weary giant transferred his burden from one shoulder to the other at the end of every thirty years, a view which, at all events, points to the observation of a cycle in the recurrence of earthquake shocks. But we are not told that these heretics reduced an absurd theory to an absurd practice by raising a shout in order to remind the earth-shaker of the

inconvenience he was putting them to. However, both the theory and the practice are to be found in full force in various parts of the East Indies. When the Balinese and the Sundanese feel an earthquake they cry out, "Still alive," or "We still live," to acquaint the earth-shaking god or giant with their existence. The natives of Leti, Moa, and Lakor, islands of the Indian Archipelago, imagine that earthquakes are caused by Grandmother Earth in order to ascertain whether her descendants are still to the fore. So they make loud noises for the purpose of satisfying her grandmotherly solicitude. The Tami of German New Guinea ascribe earthquakes to a certain old Panku who sits under a great rock; when he stirs, the earth quakes. If the shock lasts a long time they beat on the ground with palm-branches, saying, "You down there! easy a little! We men are still here." The Shans of Burma are taught by Buddhist monks that under the world there sleeps a great fish with his tail in his mouth, but sometimes he wakes, bites his tail, and quivering with pain causes the ground to quiver and shake likewise. That is the cause of great earthquakes. But the cause of little earthquakes is different. These are produced by little men who live underground and sometimes feeling lonely knock on the roof of the world over their heads; these knockings we perceive as slight shocks of earthquakes. When Shans feel such a shock, they run out of their houses, kneel down, and answer the little men saying, "We are here! We are here!" Earthquakes are common in the Pampa del Sacramento of Eastern Peru. The Conibos, a tribe of Indians on the left bank of the great Ucayali River, attribute these disturbances to the creator, who usually resides in heaven, but comes down from time to time to see whether the work of his hands still exists. The result of his descent is an earthquake. So when one happens, these Indians rush out of their huts with extravagant gestures shouting, as if in answer to a question, "A moment, a moment, here I am, father, here I am!" Their intention is, no doubt, to assure their heavenly father that they are still alive, and that he may return to his mansion on high with an easy mind. They never remember the creator nor pay him any heed except at an earthquake. In Africa the Atonga tribe of Lake Nyassa used to believe that an earthquake was the voice of God calling to inquire whether his people were all there. So when the rumble was heard underground they all shouted in answer, "Ye, ye," and some of them went to the mortars used for pounding corn and beat on them with pestles. They thought that if any one of them did not thus answer to the divine call he would die. In Ourwira the people think that an earthquake is caused by a dead sultan marching past underground; so they stand up to do him honour, and some raise their hands to the salute. Were they to omit these marks of respect to the deceased, they would run the risk of being swallowed up alive. The Baganda of Central Africa used to attribute earthquakes to a certain god named Musisi, who lived underground and set the earth in a tremor when he moved about. At such times persons who had fetishes to hand patted them and begged the god to be still; women who were with child patted their bellies to keep the god from taking either their own life or that of their unborn babes; others raised a shrill cry to induce him to remain quiet.

When the Bataks of Sumatra feel an earthquake they shout "The handle! The handle!" The meaning of the cry is variously explained. Some say that it contains a delicate allusion to the sword which is thrust up to the hilt into the body of the demon or serpent who shakes the earth. Thus explained the words are a jeer or taunt levelled at that mischievous being. Others say that when Batara-guru, the creator, was about to fashion the earth he began by building a raft, which he commanded a certain Naga-padoha to support. While he was hard at work his chisel broke, and at the same moment Naga-padoha budged under his burden. Therefore Batara-guru said, "Hold hard a moment! The handle of the chisel is broken off." And that is why the Bataks call out "The handle of the chisel" during an earthquake. They believe that the deluded Naga-padoha will take the words for the voice of the creator, and that he will hold hard accordingly.

When the earth quakes in some parts of Celebes, it is said that all the inhabitants of a village will rush out of their houses and grub up grass by handfuls in order to attract the attention of the earth-spirit, who, feeling his hair thus torn out by the roots, will be painfully conscious that there are still people above ground. So in Samoa, during shocks of earthquake, the natives sometimes ran and threw themselves on the ground, gnawed the earth, and shouted frantically to the earthquake god Mafuie to desist lest he should shake the earth to pieces. They consoled themselves with the thought that Mafuie has only one arm, saying, "If he had two, what a shake he would give!" The Bagobos of the Philippine Islands believe that the earth rests on a great post, which a large serpent is trying to remove. When the serpent shakes the post, the earth quakes. At such times the Bagobos beat their dogs to make them howl, for the howling of the animals frightens the serpent, and he stops shaking the post. Hence so long as an earthquake lasts the howls of dogs may be heard to proceed from every house in a Bagobo village. The Tongans think that the earth is supported on the prostrate form of the god Móooi. When he is tired of lying in one posture, he tries to turn himself about, and that causes an earthquake. Then the people shout and beat the ground with sticks to make him lie still. During an earthquake the Burmese make a great uproar, beating the walls of their houses and shouting, to frighten away the evil genius who is shaking the earth. On a like occasion and for a like purpose some natives of the Gazelle Peninsula in New Britain beat drums and blow on shells. The Dorasques, an Indian tribe of Panama, believed that the volcano of Chiriqui was inhabited by a powerful spirit, who, in his anger, caused an earthquake. At such times the Indians shot volleys of arrows in the direction of the volcano to terrify him and make him desist. Some of the Peruvian Indians regarded an earthquake as a sign that the gods were thirsty, so they poured water on the ground. In Ashantee several persons used to be put to death after an earthquake; they were slain as a sacrifice to Sasabonsun, the earthquake god, in the hope of satiating his cruelty for a time. Houses which had been thrown down or damaged by an earthquake were sprinkled with human blood before they were rebuilt. When part of the wall of the king's house at Coomassie was knocked down by an earthquake, fifty young girls were slaughtered, and the mud to be used in the repairs was kneaded with their blood.

An English resident in Fiji attributed a sudden access of piety in Kantavu, one of the islands, to a tremendous earthquake which destroyed many of the natives. The Fijians think that their islands rest on a god, who causes earthquakes by turning over in his sleep. So they sacrifice to him things of great value in order that he may turn as gently as possible. In Nias a violent earthquake has a salutary effect on the morals of the natives. They suppose that it is brought about by a certain Bato Bedano, who intends to destroy the earth because of the iniquity of mankind. So they assemble and fashion a great image out of the trunk of a tree. They make offerings, they confess their sins, they correct the fraudulent weights and measures, they vow to do better in the future, they implore mercy, and if the earth has gaped, they throw a little gold into the fissure. But when the danger is over, all their fine vows and promises are soon forgotten.

We may surmise that in those Greek lands which have suffered severely from earthquakes, such as Achaia and the western coasts of Asia Minor, Poseidon was worshipped not less as an earthquake god than as a sea-god. It is to be remembered that an earthquake is often accompanied by a tremendous wave which comes rolling in like a mountain from the sea, swamping the country far and wide; indeed on the coasts of Chili and Peru, which have often been devastated by both, the wave is said to be even more dreaded than the earthquake. The Greeks often experienced this combination of catastrophes, this conspiracy, as it were, of earth and sea against the life and works of man. It was thus that Helice, on the coast of Achaia, perished with all its inhabitants on a winter night, overwhelmed by the billows; and

its destruction was set down to the wrath of Poseidon. Nothing could be more natural than that to people familiar with the twofold calamity the dreadful god of the earthquake and of the sea should appear to be one and the same. The historian Diodorus Siculus observes that Peloponnese was deemed to have been in ancient days the abode of Poseidon, that the whole country was in a manner sacred to him, and that every city in it worshipped him above all the gods. The devotion to Poseidon he explains partly by the earthquakes and floods by which the land has been visited, partly by the remarkable chasms and subterranean rivers which are a conspicuous feature of its limestone mountains.

§ 6. The Worship of Mephitic Vapours.

But eruptions and earthquakes, though the most tremendous, are not the only phenomena of volcanic regions which have affected the religion of the inhabitants. Poisonous mephitic vapours and hot springs, which abound especially in volcanic regions, have also had their devotees, and both are, or were formerly, to be found in those western districts of Asia Minor with which we are here concerned. To begin with vapours, we may take as an illustration of their deadly effect the Guevo Upas, or Valley of Poison, near Batur in Java. It is the crater of an extinct volcano, about half a mile in circumference, and from thirty to thirty-five feet deep. Neither man nor beast can descend to the bottom and live. The ground is covered with the carcasses of tigers, deer, birds, and even the bones of men, all killed by the abundant emanations of carbonic acid gas which exhale from the soil. Animals let down into it die in a few minutes. The whole range of hills is volcanic. Two neighbouring craters constantly emit smoke. In another crater of Java, near the volcano Talaga Bodas, the sulphureous exhalations have proved fatal to tigers, birds, and countless insects; and the soft parts of these creatures, such as fibres, muscles, hair, and skin, are well preserved, while the bones are corroded or destroyed.

The ancients were acquainted with such noxious vapours in their own country, and they regarded the vents from which they were discharged as entrances to the infernal regions. The Greeks called them places of Pluto (*Plutonia*) or places of Charon (*Charonia*). In Italy the vapours were personified as a goddess, who bore the name of Mefitis and was worshipped in various parts of the peninsula. She had a temple in the famous valley of Amsanctus in the land of the Hirpini, where the exhalations, supposed to be the breath of Pluto himself, were of so deadly a character that all who set foot on the spot died. The place is a glen, partly wooded with chestnut trees, among limestone hills, distant about four miles from the town of Frigento. Here, under a steep shelving bank of decomposed limestone, there is a pool of dark ash-coloured water, which continually bubbles up with an explosion like distant thunder. A rapid stream of the same blackish water rushes into the pool from under the barren rocky hill, but the fall is not more than a few feet. A little higher up are apertures in the ground, through which warm blasts of sulphuretted hydrogen are constantly issuing with more or less noise, according to the size of the holes. These blasts are no doubt what the ancients deemed the breath of Pluto. The pool is now called *Mefite* and the holes *Mefitinelle*. On the other side of the pool is a smaller pond called the *Coccao*, or Cauldron, because it appears to be perpetually boiling. Thick masses of mephitic vapour, visible a hundred yards off, float in rapid undulations on its surface. The exhalations given off by these waters are sometimes fatal, especially when they are borne on a high wind. But as the carbonic acid gas does not naturally rise more than two or three feet from the ground, it is possible in calm weather to walk round the pools, though to stoop is difficult and to fall would be dangerous. The ancient temple of Mefitis has been replaced by a shrine of the martyred Santa Felicita.

Similar discharges of poisonous vapours took place at various points in the volcanic district of Caria, and were the object of superstitious veneration in antiquity. Thus at the village of

Thymbria there was a sacred cave which gave out deadly emanations, and the place was deemed a sanctuary of Charon. A similar cave might be seen at the village of Acharaca near Nysa, in the valley of the Maeander. Here, below the cave, there was a fine grove with a temple dedicated to Pluto and Persephone. The place was sacred to Pluto, yet sick people resorted to it for the restoration of their health. They lived in the neighbouring village, and the priests prescribed for them according to the revelations which they received from the two deities in dreams. Often the priests would take the patients to the cave and leave them there for days without food. Sometimes the sufferers themselves were favoured with revelations in dreams, but they always acted under the spiritual direction of the priests. To all but the sick the place was unapproachable and fatal. Once a year a festival was held in the village, and then afflicted folk came in crowds to be rid of their ailments. About the hour of noon on that day a number of athletic young men, their naked bodies greased with oil, used to carry a bull up to the cave and there let it go. But the beast had not taken a few steps into the cavern before it fell to the ground and expired: so deadly was the vapour.

Another Plutonian sanctuary of the same sort existed at Hierapolis, in the upper valley of the Maeander, on the borders of Lydia and Phrygia. Here under a brow of the hill there was a deep cave with a narrow mouth just large enough to admit the body of a man. A square space in front of the cave was railed off, and within the railing there hung so thick a cloudy vapour that it was hardly possible to see the ground. In calm weather people could step up to the railing with safety, but to pass within it was instant death. Bulls driven into the enclosure fell to the earth and were dragged out lifeless; and sparrows, which spectators by way of experiment allowed to fly into the mist, dropped dead at once. Yet the eunuch priests of the Great Mother Goddess could enter the railed-off area with impunity; nay more, they used to go up to the very mouth of the cave, stoop, and creep into it for a certain distance, holding their breath; but there was a look on their faces as if they were being choked. Some people ascribed the immunity of the priests to the divine protection, others to the use of antidotes.

§ 7. The Worship of Hot Springs.

The mysterious chasm of Hierapolis, with its deadly mist, has not been discovered in modern times; indeed it would seem to have vanished even in antiquity. It may have been destroyed by an earthquake. But another marvel of the Sacred City remains to this day. The hot springs with their calcareous deposit, which, like a wizard's wand, turns all that it touches to stone, excited the wonder of the ancients, and the course of ages has only enhanced the fantastic splendour of the great transformation scene. The stately ruins of Hierapolis occupy a broad shelf or terrace on the mountain-side commanding distant views of extraordinary beauty and grandeur, from the dark precipices and dazzling snows of Mount Cadmus away to the burnt summits of Phrygia, fading in rosy tints into the blue of the sky. Hills, broken by wooded ravines, rise behind the city. In front the terrace falls away in cliffs three hundred feet high into the desolate treeless valley of the Lycus. Over the face of these cliffs the hot streams have poured or trickled for thousands of years, encrusting them with a pearly white substance like salt or driven snow. The appearance of the whole is as if a mighty river, some two miles broad, had been suddenly arrested in the act of falling over a great cliff and transformed into white marble. It is a petrified Niagara. The illusion is strongest in winter or in cool summer mornings when the mist from the hot springs hangs in the air, like a veil of spray resting on the foam of the waterfall. A closer inspection of the white cliff, which attracts the traveller's attention at a distance of twenty miles, only adds to its beauty and changes one illusion for another. For now it seems to be a glacier, its long pendent stalactites looking like icicles, and the snowy whiteness of its smooth expanse being tinged here and there with delicate hues of blue, rose and green, all the colours of the rainbow. These petrified cascades of Hierapolis are among the wonders of the world. Indeed they have probably been without a rival in their kind

ever since the famous white and pink terraces or staircases of Rotomahana in New Zealand were destroyed by a volcanic eruption.

The hot springs which have wrought these miracles at Hierapolis rise in a large deep pool among the vast and imposing ruins of the ancient city. The water is of a greenish-blue tint, but clear and transparent. At the bottom may be seen the white marble columns of a beautiful Corinthian colonnade, which must formerly have encircled the sacred pool. Shimmering through the green-blue water they look like the ruins of a Naiad's palace. Clumps of oleanders and pomegranate-trees overhang the little lake and add to its charm. Yet the enchanted spot has its dangers. Bubbles of carbonic acid gas rise incessantly from the bottom and mount like flickering particles of silver to the surface. Birds and beasts which come to drink of the water are sometimes found dead on the bank, stifled by the noxious vapour; and the villagers tell of bathers who have been overpowered by it and drowned, or dragged down, as they say, to death by the water-spirit.

The streams of hot water, no longer regulated by the care of a religious population, have for centuries been allowed to overflow their channels and to spread unchecked over the tableland. By the deposit which they leave behind they have raised the surface of the ground many feet, their white ridges concealing the ruins and impeding the footstep, except where the old channels, filled up solidly to the brim, now form hard level footpaths, from which the traveller may survey the strange scene without quitting the saddle. In antiquity the husbandmen used purposely to lead the water in rills round their lands, and thus in a few years their fields and vineyards were enclosed with walls of solid stone. The water was also peculiarly adapted for the dyeing of woollen stuffs. Tinged with dyes extracted from certain roots, it imparted to cloths dipped in it the finest shades of purple and scarlet.

We cannot doubt that Hierapolis owed its reputation as a holy city in great part to its hot springs and mephitic vapours. The curative virtue of mineral and thermal springs was well known to the ancients, and it would be interesting, if it were possible, to trace the causes which have gradually eliminated the superstitious element from the use of such waters, and so converted many old seats of volcanic religion into the medicinal baths of modern times. It was an article of Greek faith that all hot springs were sacred to Hercules. "Who ever heard of cold baths that were sacred to Hercules?" asks Injustice in Aristophanes; and Justice admits that the brawny hero's patronage of hot baths was the excuse alleged by young men for sprawling all day in the steaming water when they ought to have been sweating in the gymnasium. Hot springs were said to have been first produced for the refreshment of Hercules after his labours; some ascribed the kindly thought and deed to Athena, others to Hephaestus, and others to the nymphs. The warm water of these sources appears to have been used especially to heal diseases of the skin; for a Greek proverb, "the itch of Hercules," was applied to persons in need of hot baths for the scab. On the strength of his connexion with medicinal springs Hercules set up as a patron of the healing art. In heaven, if we can trust Lucian, he even refused to give place to Aesculapius himself, and the difference between the two deities led to a very unseemly brawl. "Do you mean to say," demanded Hercules of his father Zeus, in a burst of indignation, "that this apothecary is to sit down to table before me?" To this the apothecary replied with much acrimony, recalling certain painful episodes in the private life of the burly hero. Finally the dispute was settled by Zeus, who decided in favour of Aesculapius on the ground that he died before Hercules, and was therefore entitled to rank as senior god.

Among the hot springs sacred to Hercules the most famous were those which rose in the pass of Thermopylae, and gave to the defile its name of the Hot Gates. The warm baths, called by the natives "the Pots," were enlarged and improved for the use of invalids by the wealthy

sophist Herodes Atticus in the second century of our era. An altar of Hercules stood beside them. According to one story, the hot springs were here produced for his refreshment by the goddess Athena. They exist to this day apparently unchanged, although the recession of the sea has converted what used to be a narrow pass into a wide, swampy flat, through which the broad but shallow, turbid stream of the Sperchius creeps sluggishly seaward. On the other side the rugged mountains descend in crags and precipices to the pass, their grey rocky sides tufted with low wood or bushes wherever vegetation can find a foothold, and their summits fringed along the sky-line with pines. They remind a Scotchman of the "crags, knolls, and mounds confusedly hurled" in which Ben Venue comes down to the Silver Strand of Loch Katrine. The principal spring bursts from the rocks just at the foot of the steepest and loftiest part of the range. After forming a small pool it flows in a rapid stream eastward, skirting the foot of the mountains. The water is so hot that it is almost painful to hold the hands in it, at least near the source, and steam rises thickly from its surface along the course of the brook. Indeed the clouds of white steam and the strong sulphurous smell acquaint the traveller with his approach to the famous spot before he comes in sight of the springs. The water is clear, but has the appearance of being of a deep sea-blue or sea-green colour. This appearance it takes from the thick, slimy deposits of blue-green sulphur which line the bed of the stream. From its source the blue, steaming, sulphur-reeking brook rushes eastward for a few hundred yards at the foot of the mountain, and is then joined by the water of another spring, which rises much more tranquilly in a sort of natural bath among the rocks. The sides of this bath are not so thickly coated with sulphur as the banks of the stream; hence its water, about two feet deep, is not so blue. Just beyond it there is a second and larger bath, which, from its square shape and smooth sides, would seem to be in part artificial. These two baths are probably the Pots mentioned by ancient writers. They are still used by bathers, and a few wooden dressing-rooms are provided for the accommodation of visitors. Some of the water is conducted in an artificial channel to turn a mill about half a mile off at the eastern end of the pass. The rest crosses the flat to find its way to the sea. In its passage it has coated the swampy ground with a white crust, which sounds hollow under the tread.

We may conjecture that these remarkable springs furnished the principal reason for associating Hercules with this district, and for laying the scene of his fiery death on the top of the neighbouring Mount Oeta. The district is volcanic, and has often been shaken by earthquakes. Across the strait the island of Euboea has suffered from the same cause and at the same time; and on its southern shore sulphureous springs, like those of Thermopylae, but much hotter and more powerful, were in like manner dedicated to Hercules. The strong medicinal qualities of the waters, which are especially adapted for the cure of skin diseases and gout, have attracted patients in ancient and modern times. Sulla took the waters here for his gout; and in the days of Plutarch the neighbouring town of Aedeptus, situated in a green valley about two miles from the springs, was one of the most fashionable resorts of Greece. Elegant and commodious buildings, an agreeable country, and abundance of fish and game united with the health-giving properties of the baths to draw crowds of idlers to the place, especially in the prime of the glorious Greek spring, the height of the season at Aedeptus. While some watched the dancers dancing or listened to the strains of the harp, others passed the time in discourse, lounging in the shade of cloisters or pacing the shore of the beautiful strait with its prospect of mountains beyond mountains immortalized in story across the water. Of all this Greek elegance and luxury hardly a vestige remains. Yet the healing springs flow now as freely as of old. In the course of time the white and yellow calcareous deposit which the water leaves behind it, has formed a hillock at the foot of the mountains, and the stream now falls in a steaming cascade from the face of the rock into the sea. Once, after an earthquake, the springs ceased to flow for three days, and at the same time the hot springs of Thermopylae dried up. The incident proves the relation of these Baths of Hercules on both

sides of the strait to each other and to volcanic agency. On another occasion a cold spring suddenly burst out beside the hot springs of Aedepsus, and as its water was supposed to be peculiarly beneficial to health, patients hastened from far and near to drink of it. But the generals of King Antigonus, anxious to raise a revenue, imposed a tax on the use of the water; and the spring, as if in disgust at being turned to so base a use, disappeared as suddenly as it had come.

The association of Hercules with hot springs was not confined to Greece itself. Greek influence extended it to Sicily, Italy, and even to Dacia. Why the hero should have been chosen as the patron of thermal waters, it is hard to say. Yet it is worth while, perhaps, to remember that such springs combine in a manner the twofold and seemingly discordant principles of water and fire, of fertility and destruction, and that the death of Hercules in the flames seems to connect him with the fiery element. Further, the apparent conflict of the two principles is by no means as absolute as at first sight we might be tempted to suppose; for heat is as necessary as moisture to the support of animal and vegetable life. Even volcanic fires have their beneficent aspect, since their products lend a more generous flavour to the juice of the grape. The ancients themselves, as we have seen, perceived the connexion between good wine and volcanic soil, and proposed more or less seriously to interpret the vine-god Dionysus as a child of the fire. As a patron of hot springs Hercules combined the genial elements of heat and moisture, and may therefore have stood, in one of his many aspects, for the principle of fertility.

In Syria childless women still resort to hot springs in order to procure offspring from the saint or the jinnee of the waters. This, for example, they do at the famous hot springs in the land of Moab which flow through a wild gorge into the Dead Sea. In antiquity the springs went by the Greek name of Callirrhoe, the Fair-flowing. It was to them that the dying Herod, weighed down by a complication of disorders which the pious Jews traced to God's vengeance, repaired in the vain hope of arresting or mitigating the fatal progress of disease. The healing waters brought no alleviation of his sufferings, and he retired to Jericho to die. The hot springs burst in various places from the sides of a deep romantic ravine to form a large and rapid stream of lukewarm water, which rushes down the depths of the lynn, dashing and foaming over boulders, under the dense shade of tamarisk-trees and cane-brakes, the rocks on either bank draped with an emerald fringe of maidenhair fern. One of the springs falls from a high rocky shelf over the face of a cliff which is tinted bright yellow by the sulphurous water. The lofty crags which shut in the narrow chasm are bold and imposing in outline and varied in colour, for they range from red sandstone through white and yellow limestone to black basalt. The waters issue from the line where the sandstone and limestone meet. Their temperature is high, and from great clefts in the mountain-sides you may see clouds of steam rising and hear the rumbling of the running waters. The bottom of the glen is clothed and half choked with rank vegetation; for, situated far below the level of the sea, the hot ravine is almost African in climate and flora. Here grow dense thickets of canes with their feathery tufts that shake and nod in every passing breath of wind: here the oleander flourishes with its dark-green glossy foliage and its beautiful pink blossoms: here tall date-palms rear their stately heads wherever the hot springs flow. Gorgeous flowers, too, carpet the ground. Splendid orobanches, some pinkish purple, some bright yellow, grow in large tufts, each flower-stalk more than three feet high, and covered with blossoms from the ground upwards. An exquisite rose-coloured geranium abounds among the stones; and where the soil is a little richer than usual it is a mass of the night-scented stock, while the crannies of the rocks are gay with scarlet ranunculus and masses of sorrel and cyclamen. Over all this luxuriant vegetation flit great butterflies of brilliant hues. Looking down the far-stretching gorge to its

mouth you see in the distance the purple hills of Judah framed between walls of black basaltic columns on the one side and of bright red sandstone on the other.

Every year in the months of April and May the Arabs resort in crowds to the glen to benefit by the waters. They take up their quarters in huts made of the reeds which they cut in the thickets. They bathe in the steaming water, or allow it to splash on their bodies as it gushes in a powerful jet from a crevice in the rocks. But before they indulge in these ablutions, the visitors, both Moslem and Christian, propitiate the spirit or genius of the place by sacrificing a sheep or goat at the spring and allowing its red blood to tinge the water. Then they bathe in what they call the Baths of Solomon. Legend runs that Solomon the Wise made his bathing-place here, and in order to keep the water always warm he commanded the jinn never to let the fire die down. The jinn obey his orders to this day, but sometimes they slacken their efforts, and then the water runs low and cool. When the bathers perceive that, they say, "O Solomon, bring green wood, dry wood," and no sooner have they said so than the water begins to gurgle and steam as before. Sick people tell the saint or sheikh, who lives invisible in the springs, all about their ailments; they point out to him the precise spot that is the seat of the malady, it may be the back, or the head, or the legs; and if the heat of the water diminishes, they call out, "Thy bath is cold, O sheikh, thy bath is cold!" whereupon the obliging sheikh stokes up the fire, and out comes the water boiling. But if in spite of their remonstrances the temperature of the spring continues low, they say that the sheikh has gone on pilgrimage, and they shout to him to hasten his return. Barren Moslem women also visit these hot springs to obtain children, and they do the same at the similar baths near Kerak. At the latter place a childless woman has been known to address the spirit of the waters saying, "O sheikh Solomon, I am not yet an old woman; give me children." The respect thus paid by Arab men and women to the sheikh Solomon at his hot springs may help us to understand the worship which at similar spots Greek men and women used to render to the hero Hercules. As the ideal of manly strength he may have been deemed the father of many of his worshippers, and Greek wives may have gone on pilgrimage to his steaming waters in order to obtain the wish of their hearts.

§ 8. The Worship of Volcanoes in other Lands.

How far these considerations may serve to explain the custom of burning Hercules, or gods identified with him, in effigy or in the person of a human being, is a question which deserves to be considered. It might be more easily answered if we were better acquainted with analogous customs in other parts of the world, but our information with regard to the worship of volcanic phenomena in general appears to be very scanty. However, a few facts may be noted.

The largest active crater in the world is Kirauea in Hawaii. It is a huge cauldron, several miles in circumference and hundreds of feet deep, the bottom of which is filled with boiling lava in a state of terrific ebullition; from the red surge rise many black cones or insulated craters belching columns of grey smoke or pyramids of brilliant flame from their roaring mouths, while torrents of blazing lava roll down their sides to flow into the molten, tossing sea of fire below. The scene is especially impressive by night, when flames of sulphurous blue or metallic red sweep across the heaving billows of the infernal lake, casting a broad glare on the jagged sides of the insulated craters, which shoot up eddying streams of fire with a continuous roar, varied at frequent intervals by loud detonations, as spherical masses of fusing lava or bright ignited stones are hurled into the air. It is no wonder that so appalling a spectacle should have impressed the imagination of the natives and filled it with ideas of the dreadful beings who inhabit the fiery abyss. They considered the great crater, we are told, as the primaeval abode of their volcanic deities: the black cones that rise like islands from the

burning lake appeared to them the houses where the gods often amused themselves by playing at draughts: the roaring of the furnaces and the crackling of the flames were the music of their dance; and the red flaming surge was the surf wherein they played, sportively swimming on the rolling wave.

For these fearful divinities they had appropriate names; one was the King of Steam or Vapour, another the Rain of Night, another the Husband of Thunder, another the Child of War with a Spear of Fire, another the Fiery-eyed Canoe-breaker, another the Red-hot Mountain holding or lifting Clouds, and so on. But above them all was the great goddess Pélé. All were dreaded: they never journeyed on errands of mercy but only to receive offerings or to execute vengeance; and their arrival in any place was announced by the convulsive trembling of the earth, by the lurid light of volcanic eruption, by the flash of lightning, and the clap of thunder. The whole island was bound to pay them tribute or support their temples and devotees; and whenever the chiefs or people failed to send the proper offerings, or incurred their displeasure by insulting them or their priests or breaking the taboos which should be observed round about the craters, they filled the huge cauldron on the top of Kirauea with molten lava, and spouted the fiery liquid on the surrounding country; or they would march to some of their other houses, which mortals call craters, in the neighbourhood of the sinners, and rushing forth in a river or column of fire overwhelm the guilty. If fishermen did not bring them enough fish from the sea, they would go down, kill all the fish, fill the shoals with lava, and so destroy the fishing-grounds. Hence, when the volcano was in active eruption or threatened to break out, the people used to cast vast numbers of hogs, alive or dead, into the craters or into the rolling torrent of lava in order to appease the gods and arrest the progress of the fiery stream. To pluck certain sacred berries, which grow on the mountain, to dig sand on its slopes, or to throw stones into the crater were acts particularly offensive to the deities, who would instantly rise in volumes of smoke, crush the offender under a shower of stones, or so involve him in thick darkness and rain that he could never find his way home. However, it was lawful to pluck and eat of the sacred berries, if only a portion of them were first offered to the goddess Pélé. The offerer would take a branch laden with clusters of the beautiful red and yellow berries, and standing on the edge of the abyss and looking towards the place where the smoke rose in densest volumes, he would say, "Pélé, here are your berries: I offer some to you, some I also eat." With that he would throw some of the berries into the crater and eat the rest. A kind of brittle volcanic glass, of a dark-olive colour and semi-transparent, is found on the mountain in the shape of filaments as fine as human hair; the natives call it the hair of the goddess Pélé. Worshippers used to cast locks of their own hair into the crater of Kirauea as an offering to the dreadful goddess who dwelt in it. She had also a temple at the bottom of a valley, where stood a number of rude stone idols wrapt in white and yellow cloth. Once a year the priests and devotees of Pélé assembled there to perform certain rites and to feast on hogs, dogs, and fruit, which the pious inhabitants of Hamakua brought to the holy place in great abundance. This annual festival was intended to propitiate the volcanic goddess and thereby to secure the country from earthquakes and floods of molten lava. The goddess of the volcano was supposed to inspire people, though to the carnal eye the inspiration resembled intoxication. One of these inspired priestesses solemnly affirmed to an English missionary that she was the goddess Pélé herself and as such immortal. Assuming a haughty air, she said, "I am Pélé; I shall never die; and those who follow me, when they die, if part of their bones be taken to Kirauea (the name of the volcano), will live with me in the bright fires there." For "the worshippers of Pélé threw a part of bones of their dead into the volcano, under the impression that the spirits of the deceased would then be admitted to the society of the volcanic deities, and that their influence would preserve the survivors from the ravages of volcanic fire."

This last belief may help to explain a custom, which some peoples have observed, of throwing human victims into volcanoes. The intention of such a practice need not be simply to appease the dreadful volcanic spirits by ministering to their fiendish lust of cruelty; it may be a notion that the souls of the men or women who have been burnt to death in the crater will join the host of demons in the fiery furnace, mitigate their fury, and induce them to spare the works and the life of man. But, however we may explain the custom, it has been usual in various parts of the world to throw human beings as well as less precious offerings into the craters of active volcanoes. Thus the Indians of Nicaragua used to sacrifice men, women, and children to the active volcano Massaya, flinging them into the craters: we are told that the victims went willingly to their fate. In the island of Siao, to the north of Celebes, a child was formerly sacrificed every year in order to keep the volcano Goowoong Awoo quiet. The poor wretch was tortured to death at a festival which lasted nine days. In later times the place of the child has been taken by a wooden puppet, which is hacked to pieces in the same way. The Galelareese of Halmahera say that the Sultan of Ternate used annually to require some human victims, who were cast into the crater of the volcano to save the island from its ravages. In Java the volcano Bromo or Bromok is annually worshipped by people who throw offerings of coco-nuts, plantains, mangoes, rice, chickens, cakes, cloth, money, and so forth into the crater. To the Tenggereese, an aboriginal heathen tribe inhabiting the mountains of which Bromo is the central crater, the festival of making offerings to the volcano is the greatest of the year. It is held at full moon in the twelfth month, the day being fixed by the high priest. Each household prepares its offerings the night before. Very early in the morning the people set out by moonlight for Mount Bromo, men, women, and children all arrayed in their best. Before they reach the mountain they must cross a wide sandy plain, where the spirits of the dead are supposed to dwell until by means of the Festival of the Dead they obtain admittance to the volcano. It is a remarkable sight to see thousands of people streaming across the level sands from three different directions. They have to descend into it from the neighbouring heights, and the horses break into a gallop when, after the steep descent, they reach the level. The gay and varied colours of the dresses, the fantastic costumes of the priests, the offerings borne along, the whole lit up by the warm beams of the rising sun, lend to the spectacle a peculiar charm. All assemble at the foot of the crater, where a market is held for offerings and refreshments. The scene is a lively one, for hundreds of people must now pay the vows which they made during the year. The priests sit in a long row on mats, and when the high priest appears the people pray, saying, "Bromo, we thank thee for all thy gifts and benefits with which thou ever blessest us, and for which we offer thee our thank-offerings to-day. Bless us, our children, and our children's children." The prayers over, the high priest gives a signal, and the whole multitude arises and climbs the mountain. On reaching the edge of the crater, the pontiff again blesses the offerings of food, clothes, and money, which are then thrown into the crater. Yet few of them reach the spirits for whom they are intended; for a swarm of urchins now scrambles down into the crater, and at more or less risk to life and limb succeeds in appropriating the greater part of the offerings. The spirits, defrauded of their dues, must take the will for the deed. Tradition says that once in a time of dearth a chief vowed to sacrifice one of his children to the volcano, if the mountain would bless the people with plenty of food. His prayer was answered, and he paid his vow by casting his youngest son as a thank-offering into the crater.

On the slope of Mount Smeroe, another active volcano in Java, there are two small idols, which the natives worship and pray to when they ascend the mountain. They lay food before the images to obtain the favour of the god of the volcano. In antiquity people cast into the craters of Etna vessels of gold and silver and all kinds of victims. If the fire swallowed up the offerings, the omen was good; but if it rejected them, some evil was sure to befall the offerer.

These examples suggest that a custom of burning men or images may possibly be derived from a practice of throwing them into the craters of active volcanoes in order to appease the dreaded spirits or gods who dwell there. But unless we reckon the fires of Mount Argaeus in Cappadocia and of Mount Chimaera in Lycia, there is apparently no record of any mountain in Western Asia which has been in eruption within historical times. On the whole, then, we conclude that the Asiatic custom of burning kings or gods was probably in no way connected with volcanic phenomena. Yet it was perhaps worth while to raise the question of the connexion, even though it has received only a negative answer. The whole subject of the influence which physical environment has exercised on the history of religion deserves to be studied with more attention than it has yet received.

IX. The Ritual of Adonis

Thus far we have dealt with the myth of Adonis and the legends which associated him with Byblus and Paphos. A discussion of these legends led us to the conclusion that among Semitic peoples in early times, Adonis, the divine lord of the city, was often personated by priestly kings or other members of the royal family, and that these his human representatives were of old put to death, whether periodically or occasionally, in their divine character. Further, we found that certain traditions and monuments of Asia Minor seem to preserve traces of a similar practice. As time went on, the cruel custom was apparently mitigated in various ways; for example, by substituting an effigy or an animal for the man, or by allowing the destined victim to escape with a merely make-believe sacrifice. The evidence of all this is drawn from a variety of scattered and often ambiguous indications: it is fragmentary, it is uncertain, and the conclusions built upon it inevitably partake of the weakness of the foundation. Where the records are so imperfect, as they happen to be in this branch of our subject, the element of hypothesis must enter largely into any attempt to piece together and interpret the disjointed facts. How far the interpretations here proposed are sound, I leave to future inquiries to determine.

From dim regions of the past, where we have had to grope our way with small help from the lamp of history, it is a relief to pass to those later periods of classical antiquity on which contemporary Greek writers have shed the light of their clear intelligence. To them we owe almost all that we know for certain about the rites of Adonis. The Semites who practised the worship have said little about it; at all events little that they said has come down to us. Accordingly, the following account of the ritual is derived mainly from Greek authors who saw what they describe; and it applies to ages in which the growth of humane feeling had softened some of the harsher features of the worship.

At the festivals of Adonis, which were held in Western Asia and in Greek lands, the death of the god was annually mourned, with a bitter wailing, chiefly by women; images of him, dressed to resemble corpses, were carried out as to burial and then thrown into the sea or into springs; and in some places his revival was celebrated on the following day. But at different places the ceremonies varied somewhat in the manner and apparently also in the season of their celebration. At Alexandria images of Aphrodite and Adonis were displayed on two couches; beside them were set ripe fruits of all kinds, cakes, plants growing in flower-pots, and green bowers twined with anise. The marriage of the lovers was celebrated one day, and on the morrow women attired as mourners, with streaming hair and bared breasts, bore the image of the dead Adonis to the sea-shore and committed it to the waves. Yet they sorrowed not without hope, for they sang that the lost one would come back again. The date at which this Alexandrian ceremony was observed is not expressly stated; but from the mention of the ripe fruits it has been inferred that it took place in late summer. In the great Phoenician sanctuary of Astarte at Byblus the death of Adonis was annually mourned, to the shrill wailing notes of the flute, with weeping, lamentation, and beating of the breast; but next day he was believed to come to life again and ascend up to heaven in the presence of his worshippers. The disconsolate believers, left behind on earth, shaved their heads as the Egyptians did on the death of the divine bull Apis; women who could not bring themselves to sacrifice their beautiful tresses had to give themselves up to strangers on a certain day of the festival, and to dedicate to Astarte the wages of their shame.

This Phoenician festival appears to have been a vernal one, for its date was determined by the discoloration of the river Adonis, and this has been observed by modern travellers to occur in

spring. At that season the red earth washed down from the mountains by the rain tinges the water of the river, and even the sea, for a great way with a blood-red hue, and the crimson stain was believed to be the blood of Adonis, annually wounded to death by the boar on Mount Lebanon. Again, the scarlet anemone is said to have sprung from the blood of Adonis, or to have been stained by it; and as the anemone blooms in Syria about Easter, this may be thought to show that the festival of Adonis, or at least one of his festivals, was held in spring. The name of the flower is probably derived from Naaman ("darling"), which seems to have been an epithet of Adonis. The Arabs still call the anemone "wounds of the Naaman." The red rose also was said to owe its hue to the same sad occasion; for Aphrodite, hastening to her wounded lover, trod on a bush of white roses; the cruel thorns tore her tender flesh, and her sacred blood dyed the white roses for ever red. It would be idle, perhaps, to lay much weight on evidence drawn from the calendar of flowers, and in particular to press an argument so fragile as the bloom of the rose. Yet so far as it counts at all, the tale which links the damask rose with the death of Adonis points to a summer rather than to a spring celebration of his passion. In Attica, certainly, the festival fell at the height of summer. For the fleet which Athens fitted out against Syracuse, and by the destruction of which her power was permanently crippled, sailed at midsummer, and by an ominous coincidence the sombre rites of Adonis were being celebrated at the very time. As the troops marched down to the harbour to embark, the streets through which they passed were lined with coffins and corpse-like effigies, and the air was rent with the noise of women wailing for the dead Adonis. The circumstance cast a gloom over the sailing of the most splendid armament that Athens ever sent to sea. Many ages afterwards, when the Emperor Julian made his first entry into Antioch, he found in like manner the gay, the luxurious capital of the East plunged in mimic grief for the annual death of Adonis: and if he had any presentiment of coming evil, the voices of lamentation which struck upon his ear must have seemed to sound his knell.

The resemblance of these ceremonies to the Indian and European ceremonies which I have described elsewhere is obvious. In particular, apart from the somewhat doubtful date of its celebration, the Alexandrian ceremony is almost identical with the Indian. In both of them the marriage of two divine beings, whose affinity with vegetation seems indicated by the fresh plants with which they are surrounded, is celebrated in effigy, and the effigies are afterwards mourned over and thrown into the water. From the similarity of these customs to each other and to the spring and midsummer customs of modern Europe we should naturally expect that they all admit of a common explanation. Hence, if the explanation which I have adopted of the latter is correct, the ceremony of the death and resurrection of Adonis must also have been a dramatic representation of the decay and revival of plant life. The inference thus based on the resemblance of the customs is confirmed by the following features in the legend and ritual of Adonis. His affinity with vegetation comes out at once in the common story of his birth. He was said to have been born from a myrrh-tree, the bark of which bursting, after a ten month' gestation, allowed the lovely infant to come forth. According to some, a boar rent the bark with his tusk and so opened a passage for the babe. A faint rationalistic colour was given to the legend by saying that his mother was a woman named Myrrh, who had been turned into a myrrh-tree soon after she had conceived the child. The use of myrrh as incense at the festival of Adonis may have given rise to the fable. We have seen that incense was burnt at the corresponding Babylonian rites, just as it was burnt by the idolatrous Hebrews in honour of the Queen of Heaven, who was no other than Astarte. Again, the story that Adonis spent half, or according to others a third, of the year in the lower world and the rest of it in the upper world, is explained most simply and naturally by supposing that he represented vegetation, especially the corn, which lies buried in earth half the year and reappears above ground the other half. Certainly of the annual phenomena of nature there is none which suggests so obviously the idea of death and resurrection as the disappearance and

reappearance of vegetation in autumn and spring. Adonis has been taken for the sun; but there is nothing in the sun's annual course within the temperate and tropical zones to suggest that he is dead for half or a third of the year and alive for the other half or two-thirds. He might, indeed, be conceived as weakened in winter, but dead he could not be thought to be; his daily reappearance contradicts the supposition. Within the Arctic Circle, where the sun annually disappears for a continuous period which varies from twenty-four hours to six months according to the latitude, his yearly death and resurrection would certainly be an obvious idea; but no one except the unfortunate astronomer Bailly has maintained that the Adonis worship came from the Arctic regions. On the other hand, the annual death and revival of vegetation is a conception which readily presents itself to men in every stage of savagery and civilization; and the vastness of the scale on which this ever-recurring decay and regeneration takes place, together with man's intimate dependence on it for subsistence, combine to render it the most impressive annual occurrence in nature, at least within the temperate zones. It is no wonder that a phenomenon so important, so striking, and so universal should, by suggesting similar ideas, have given rise to similar rites in many lands. We may, therefore, accept as probable an explanation of the Adonis worship which accords so well with the facts of nature and with the analogy of similar rites in other lands. Moreover, the explanation is countenanced by a considerable body of opinion amongst the ancients themselves, who again and again interpreted the dying and reviving god as the reaped and sprouting grain.

The character of Tammuz or Adonis as a corn-spirit comes out plainly in an account of his festival given by an Arabic writer of the tenth century. In describing the rites and sacrifices observed at the different seasons of the year by the heathen Syrians of Harran, he says: "Tammuz (July). In the middle of this month is the festival of el-Bûgât, that is, of the weeping women, and this is the Tâ-uz festival, which is celebrated in honour of the god Tâ-uz. The women bewail him, because his lord slew him so cruelly, ground his bones in a mill, and then scattered them to the wind. The women (during this festival) eat nothing which has been ground in a mill, but limit their diet to steeped wheat, sweet vetches, dates, raisins, and the like." Tâ-uz, who is no other than Tammuz, is here like Burns's John Barleycorn—

*"They wasted o'er a scorching flame
The marrow of his bones;
But a miller us'd him worst of all—
For he crush'd him between two stones."*

This concentration, so to say, of the nature of Adonis upon the cereal crops is characteristic of the stage of culture reached by his worshippers in historical times. They had left the nomadic life of the wandering hunter and herdsman far behind them; for ages they had been settled on the land, and had depended for their subsistence mainly on the products of tillage. The berries and roots of the wilderness, the grass of the pastures, which had been matters of vital importance to their ruder forefathers, were now of little moment to them: more and more their thoughts and energies were engrossed by the staple of their life, the corn; more and more accordingly the propitiation of the deities of fertility in general and of the corn-spirit in particular tended to become the central feature of their religion. The aim they set before themselves in celebrating the rites was thoroughly practical. It was no vague poetical sentiment which prompted them to hail with joy the rebirth of vegetation and to mourn its decline. Hunger, felt or feared, was the mainspring of the worship of Adonis.

It has been suggested by Father Lagrange that the mourning for Adonis was essentially a harvest rite designed to propitiate the corn-god, who was then either perishing under the sickles of the reapers, or being trodden to death under the hoofs of the oxen on the threshing-floor. While the men slew him, the women wept crocodile tears at home to appease his

natural indignation by a show of grief for his death. The theory fits in well with the dates of the festivals, which fell in spring or summer; for spring and summer, not autumn, are the seasons of the barley and wheat harvests in the lands which, worshipped Adonis. Further, the hypothesis is confirmed by the practice of the Egyptian reapers, who lamented, calling upon Isis, when they cut the first corn; and it is recommended by the analogous customs of many hunting tribes, who testify great respect for the animals which they kill and eat.

Thus interpreted the death of Adonis is not the natural decay of vegetation in general under the summer heat or the winter cold; it is the violent destruction of the corn by man, who cuts it down on the field, stamps it to pieces on the threshing-floor, and grinds it to powder in the mill. That this was indeed the principal aspect in which Adonis presented himself in later times to the agricultural peoples of the Levant, may be admitted; but whether from the beginning he had been the corn and nothing but the corn, may be doubted. At an earlier period he may have been to the herdsman, above all, the tender herbage which sprouts after rain, offering rich pasture to the lean and hungry cattle. Earlier still he may have embodied the spirit of the nuts and berries which the autumn woods yield to the savage hunter and his squaw. And just as the husbandman must propitiate the spirit of the corn which he consumes, so the herdsman must appease the spirit of the grass and leaves which his cattle munch, and the hunter must soothe the spirit of the roots which he digs, and of the fruits which he gathers from the bough. In all cases the propitiation of the injured and angry sprite would naturally comprise elaborate excuses and apologies, accompanied by loud lamentations at his decease whenever, through some deplorable accident or necessity, he happened to be murdered as well as robbed. Only we must bear in mind that the savage hunter and herdsman of those early days had probably not yet attained to the abstract idea of vegetation in general; and that accordingly, so far as Adonis existed for them at all, he must have been the *Adon* or lord of each individual tree and plant rather than a personification of vegetable life as a whole. Thus there would be as many Adonises as there were trees and shrubs, and each of them might expect to receive satisfaction for any damage done to his person or property. And year by year, when the trees were deciduous, every Adonis would seem to bleed to death with the red leaves of autumn and to come to life again with the fresh green of spring.

We have seen reason to think that in early times Adonis was sometimes personated by a living man who died a violent death in the character of the god. Further, there is evidence which goes to show that among the agricultural peoples of the Eastern Mediterranean, the corn-spirit, by whatever name he was known, was often represented, year by year, by human victims slain on the harvest-field. If that was so, it seems likely that the propitiation of the corn-spirit would tend to fuse to some extent with the worship of the dead. For the spirits of these victims might be thought to return to life in the ears which they had fattened with their blood, and to die a second death at the reaping of the corn. Now the ghosts of those who have perished by violence are surly and apt to wreak their vengeance on their slayers whenever an opportunity offers. Hence the attempt to appease the souls of the slaughtered victims would naturally blend, at least in the popular conception, with the attempt to pacify the slain corn-spirit. And as the dead came back in the sprouting corn, so they might be thought to return in the spring flowers, waked from their long sleep by the soft vernal airs. They had been laid to their rest under the sod. What more natural than to imagine that the violets and the hyacinths, the roses and the anemones, sprang from their dust, were empurpled or incarnadined by their blood, and contained some portion of their spirit?

*"I sometimes think that never blows so red
The Rose as where some buried Caesar bled;
That every Hyacinth the Garden wears
Dropt in her Lap from some once lovely Head.*

*“And this reviving Herb whose tender Green
Fledges the River-Lip on which we lean—
Ah, lean upon it lightly, for who knows
From what once lovely Lip it springs unseen?”*

In the summer after the battle of Landen, the most sanguinary battle of the seventeenth century in Europe, the earth, saturated with the blood of twenty thousand slain, broke forth into millions of poppies, and the traveller who passed that vast sheet of scarlet might well fancy that the earth had indeed given up her dead. At Athens the great Commemoration of the Dead fell in spring about the middle of March, when the early flowers are in bloom. Then the dead were believed to rise from their graves and go about the streets, vainly endeavoring to enter the temples and the dwellings, which were barred against these perturbed spirits with ropes, buckthorn, and pitch. The name of the festival, according to the most obvious and natural interpretation, means the Festival of Flowers, and the title would fit well with the substance of the ceremonies if at that season the poor ghosts were indeed thought to creep from the narrow house with the opening flowers. There may therefore be a measure of truth in the theory of Renan, who saw in the Adonis worship a dreamy voluptuous cult of death, conceived not as the King of Terrors, but as an insidious enchanter who lures his victims to himself and lulls them into an eternal sleep. The infinite charm of nature in the Lebanon, he thought, lends itself to religious emotions of this sensuous, visionary sort, hovering vaguely between pain and pleasure, between slumber and tears. It would doubtless be a mistake to attribute to Syrian peasants the worship of a conception so purely abstract as that of death in general. Yet it may be true that in their simple minds the thought of the reviving spirit of vegetation was blent with the very concrete notion of the ghosts of the dead, who come to life again in spring days with the early flowers, with the tender green of the corn and the many-tinted blossoms of the trees. Thus their views of the death and resurrection of nature would be coloured by their views of the death and resurrection of man, by their personal sorrows and hopes and fears. In like manner we cannot doubt that Renan's theory of Adonis was itself deeply tinged by passionate memories, memories of the slumber akin to death which sealed his own eyes on the slopes of the Lebanon, memories of the sister who sleeps in the land of Adonis never again to wake with the anemones and the roses.

X. The Gardens of Adonis

Perhaps the best proof that Adonis was a deity of vegetation, and especially of the corn, is furnished by the gardens of Adonis, as they were called. These were baskets or pots filled with earth, in which wheat, barley, lettuces, fennel, and various kinds of flowers were sown and tended for eight days, chiefly or exclusively by women. Fostered by the sun's heat, the plants shot up rapidly, but having no root they withered as rapidly away, and at the end of eight days were carried out with the images of the dead Adonis, and flung with them into the sea or into springs.

These gardens of Adonis are most naturally interpreted as representatives of Adonis or manifestations of his power; they represented him, true to his original nature, in vegetable form, while the images of him, with which they were carried out and cast into the water, portrayed him in his later human shape. All these Adonis ceremonies, if I am right, were originally intended as charms to promote the growth or revival of vegetation; and the principle by which they were supposed to produce this effect was homoeopathic or imitative magic. For ignorant people suppose that by mimicking the effect which they desire to produce they actually help to produce it; thus by sprinkling water they make rain, by lighting a fire they make sunshine, and so on. Similarly, by mimicking the growth of crops they hope to ensure a good harvest. The rapid growth of the wheat and barley in the gardens of Adonis was intended to make the corn shoot up; and the throwing of the gardens and of the images into the water was a charm to secure a due supply of fertilizing rain. The same, I take it, was the object of throwing the effigies of Death and the Carnival into water in the corresponding ceremonies of modern Europe. Certainly the custom of drenching with water a leaf-clad person, who undoubtedly personifies vegetation, is still resorted to in Europe for the express purpose of producing rain. Similarly the custom of throwing water on the last corn cut at harvest, or on the person who brings it home (a custom observed in Germany and France, and till quite lately in England and Scotland), is in some places practised with the avowed intent to procure rain for the next year's crops. Thus in Wallachia and amongst the Roumanians in Transylvania, when a girl is bringing home a crown made of the last ears of corn cut at harvest, all who meet her hasten to throw water on her, and two farm-servants are placed at the door for the purpose; for they believe that if this were not done, the crops next year would perish from drought. So amongst the Saxons of Transylvania, the person who wears the wreath made of the last corn cut is drenched with water to the skin; for the wetter he is, the better will be next year's harvest, and the more grain there will be threshed out. Sometimes the wearer of the wreath is the reaper who cut the last corn. In Northern Euboea, when the corn-sheaves have been piled in a stack, the farmer's wife brings a pitcher of water and offers it to each of the labourers that he may wash his hands. Every man, after he has washed his hands, sprinkles water on the corn and on the threshing-floor, expressing at the same time a wish that the corn may last long. Lastly, the farmer's wife holds the pitcher slantingly and runs at full speed round the stack without spilling a drop, while she utters a wish that the stack may endure as long as the circle she has just described. At the spring ploughing in Prussia, when the ploughmen and sowers returned in the evening from their work in the fields, the farmer's wife and the servants used to splash water over them. The ploughmen and sowers retorted by seizing every one, throwing them into the pond, and ducking them under the water. The farmer's wife might claim exemption on payment of a forfeit, but every one else had to be ducked. By observing this custom they hoped to ensure a due supply of rain for the seed. Also after harvest in Prussia, the person who wore a wreath made of the last corn cut was drenched with water, while a prayer was uttered that "as the corn had sprung up and

multiplied through the water, so it might spring up and multiply in the barn and granary.” At Schlanow, in Brandenburg, when the sowers return home from the first sowing they are drenched with water “in order that the corn may grow.” In Anhalt on the same occasion the farmer is still often sprinkled with water by his family; and his men and horses, and even the plough, receive the same treatment. The object of the custom, as people at Arensdorf explained it, is “to wish fertility to the fields for the whole year.” So in Hesse, when the ploughmen return with the plough from the field for the first time, the women and girls lie in wait for them and slyly drench them with water. Near Naaburg, in Bavaria, the man who first comes back from sowing or ploughing has a vessel of water thrown over him by some one in hiding. At Hettingen in Baden the farmer who is about to begin the sowing of oats is sprinkled with water, in order that the oats may not shrivel up. Before the Tusayan Indians of North America go out to plant their fields, the women sometimes pour water on them; the reason for doing so is that “as the water is poured on the men, so may water fall on the planted fields.” The Indians of Santiago Tepehuacan steep the seed of the maize in water before they sow it, in order that the god of the waters may bestow on the fields the needed moisture.

The opinion that the gardens of Adonis are essentially charms to promote the growth of vegetation, especially of the crops, and that they belong to the same class of customs as those spring and midsummer folk-customs of modern Europe which I have described elsewhere, does not rest for its evidence merely on the intrinsic probability of the case. Fortunately we are able to show that gardens of Adonis (if we may use the expression in a general sense) are still planted, first, by a primitive race at their sowing season, and, second, by European peasants at midsummer. Amongst the Oraons and Mundas of Bengal, when the time comes for planting out the rice which has been grown in seed-beds, a party of young people of both sexes go to the forest and cut a young Karma-tree, or the branch of one. Bearing it in triumph they return dancing, singing, and beating drums, and plant it in the middle of the village dancing-ground. A sacrifice is offered to the tree; and next morning the youth of both sexes, linked arm-in-arm, dance in a great circle round the Karma-tree, which is decked with strips of coloured cloth and sham bracelets and necklets of plaited straw. As a preparation for the festival, the daughters of the headman of the village cultivate blades of barley in a peculiar way. The seed is sown in moist, sandy soil, mixed with turmeric, and the blades sprout and unfold of a pale-yellow or primrose colour. On the day of the festival the girls take up these blades and carry them in baskets to the dancing-ground, where, prostrating themselves reverentially, they place some of the plants before the Karma-tree. Finally, the Karma-tree is taken away and thrown into a stream or tank. The meaning of planting these barley blades and then presenting them to the Karma-tree is hardly open to question. Trees are supposed to exercise a quickening influence upon the growth of crops, and amongst the very people in question—the Mundas or Mundaris—“the grove deities are held responsible for the crops.” Therefore, when at the season for planting out the rice the Mundas bring in a tree and treat it with so much respect, their object can only be to foster thereby the growth of the rice which is about to be planted out; and the custom of causing barley blades to sprout rapidly and then presenting them to the tree must be intended to subserve the same purpose, perhaps by reminding the tree-spirit of his duty towards the crops, and stimulating his activity by this visible example of rapid vegetable growth. The throwing of the Karma-tree into the water is to be interpreted as a rain-charm. Whether the barley blades are also thrown into the water is not said; but if my interpretation of the custom is right, probably they are so. A distinction between this Bengal custom and the Greek rites of Adonis is that in the former the tree-spirit appears in his original form as a tree; whereas in the Adonis worship he appears in human form, represented as a dead man, though his vegetable nature is indicated by the

gardens of Adonis, which are, so to say, a secondary manifestation of his original power as a tree-spirit.

Gardens of Adonis are cultivated also by the Hindoos, with the intention apparently of ensuring the fertility both of the earth and of mankind. Thus at Oodeypoor in Rajputana a festival is held "in honour of Gouri, or Isani, the goddess of abundance, the Isis of Egypt, the Ceres of Greece. Like the Rajpoot Saturnalia, which it follows, it belongs to the vernal equinox, when nature in these regions proximate to the tropic is in the full expanse of her charms, and the matronly Gouri casts her golden mantle over the verdant Vassanti, personification of spring. Then the fruits exhibit their promise to the eye; the kohil fills the ear with melody; the air is impregnated with aroma, and the crimson poppy contrasts with the spikes of golden grain to form a wreath for the beneficent Gouri. Gouri is one of the names of Isa or Parvati, wife of the greatest of the gods, Mahadeva or Iswara, who is conjoined with her in these rites, which almost exclusively appertain to the women. The meaning of *gouri* is 'yellow,' emblematic of the ripened harvest, when the votaries of the goddess adore her effigies, which are those of a matron painted the colour of ripe corn." The rites begin when the sun enters the sign of the Ram, the opening of the Hindoo year. An image of the goddess Gouri is made of earth, and a smaller one of her husband Iswara, and the two are placed together. A small trench is next dug, barley is sown in it, and the ground watered and heated artificially till the grain sprouts, when the women dance round it hand in hand, invoking the blessing of Gouri on their husbands. After that the young corn is taken up and distributed by the women to the men, who wear it in their turbans. Every wealthy family, or at least every subdivision of the city, has its own image. These and other rites, known only to the initiated, occupy several days, and are performed within doors. Then the images of the goddess and her husband are decorated and borne in procession to a beautiful lake, whose deep blue waters mirror the cloudless Indian sky, marble palaces, and orange groves. Here the women, their hair decked with roses and jessamine carry the image of Gouri down a marble staircase to the water's edge, and dance round it singing hymns and love-songs. Meantime the goddess is supposed to bathe in the water. No men take part in the ceremony; even the image of Iswara, the husband-god, attracts little attention. In these rites the distribution of the barley shoots to the men, and the invocation of a blessing on their husbands by the wives, point clearly to the desire of offspring as one motive for observing the custom. The same motive probably explains the use of gardens of Adonis at the marriage of Brahmans in the Madras Presidency. Seeds of five or nine sorts are mixed and sown in earthen pots, which are made specially for the purpose and are filled with earth. Bride and bridegroom water the seeds both morning and evening for four days; and on the fifth day the seedlings are thrown, like the real gardens of Adonis, into a tank or river.

In the Himalayan districts of North-Western India the cultivators sow barley, maize, pulse, or mustard in a basket of earth on the twenty-fourth day of the fourth month (*Asárh*), which falls about the middle of July. Then on the last day of the month they place amidst the new sprouts small clay images of Mahadeo and Parvati and worship them in remembrance of the marriage of those deities. Next day they cut down the green stalks and wear them in their head-dress. Similar is the barley feast known as *Jâyî* or *Jawâra* in Upper India and as *Bhujariya* in the Central Provinces. On the seventh day of the light half of the month *Sâwan* grains of barley are sown in a pot of manure, and spring up so quickly that by the end of the month the vessel is full of long, yellowish-green stalks. On the first day of the next month, *Bhâdon*, the women and girls take the stalks out, throw the earth and manure into water, and distribute the plants among their male friends, who bind them in their turbans and about their dress. At *Sargal* in the Central Provinces of India this ceremony is observed about the middle of September. None but women may take part in it, though crowds of men come to look on.

Some little time before the festival wheat or other grain has been sown in pots ingeniously constructed of large leaves, which are held together by the thorns of a species of acacia. Having grown up in the dark, the stalks are of a pale colour. On the day appointed these gardens of Adonis, as we may call them, are carried towards a lake which abuts on the native city. The women of every family or circle of friends bring their own pots, and having laid them on the ground they dance round them. Then taking the pots of sprouting corn they descend to the edge of the water, wash the soil away from the pots, and distribute the young plants among their friends. At the temple of the goddess Padmavati, near Pandharpur in the Bombay Presidency, a Nine Nights' festival is held in the bright half of the month Ashvin (September-October). At this time a bamboo frame is hung in front of the image, and from it depend garlands of flowers and strings of wheaten cakes. Under the frame the floor in front of the pedestal is strewn with a layer of earth in which wheat is sown and allowed to sprout. A similar rite is observed in the same month before the images of two other goddesses, Ambabai and Lakhubai, who also have temples at Pandharpur.

In some parts of Bavaria it is customary to sow flax in a pot on the last three days of the Carnival; from the seed which grows best an omen is drawn as to whether the early, the middle, or the late sowing will produce the best crop. In Sardinia the gardens of Adonis are still planted in connexion with the great Midsummer festival which bears the name of St. John. At the end of March or on the first of April a young man of the village presents himself to a girl, and asks her to be his *comare* (gossip or sweetheart), offering to be her *compare*. The invitation is considered as an honour by the girl's family, and is gladly accepted. At the end of May the girl makes a pot of the bark of the cork-tree, fills it with earth, and sows a handful of wheat and barley in it. The pot being placed in the sun and often watered, the corn sprouts rapidly and has a good head by Midsummer Eve (St. John's Eve, the twenty-third of June). The pot is then called *Erme* or *Nenneri*. On St. John's Day the young man and the girl, dressed in their best, accompanied by a long retinue and preceded by children gambolling and frolicking, move in procession to a church outside the village. Here they break the pot by throwing it against the door of the church. Then they sit down in a ring on the grass and eat eggs and herbs to the music of flutes. Wine is mixed in a cup and passed round, each one drinking as it passes. Then they join hands and sing "Sweethearts of St. John" (*Compare e comare di San Giovanni*) over and over again, the flutes playing the while. When they tire of singing they stand up and dance gaily in a ring till evening. This is the general Sardinian custom. As practised at Ozieri it has some special features. In May the pots are made of cork-bark and planted with corn, as already described. Then on the Eve of St. John the windowsills are draped with rich cloths, on which the pots are placed, adorned with crimson and blue silk and ribbons of various colours. On each of the pots they used formerly to place a statuette or cloth doll dressed as a woman, or a Priapus-like figure made of paste; but this custom, rigorously forbidden by the Church, has fallen into disuse. The village swains go about in a troop to look at the pots and their decorations and to wait for the girls, who assemble on the public square to celebrate the festival. Here a great bonfire is kindled, round which they dance and make merry. Those who wish to be "Sweethearts of St. John" act as follows. The young man stands on one side of the bonfire and the girl on the other, and they, in a manner, join hands by each grasping one end of a long stick, which they pass three times backwards and forwards across the fire, thus thrusting their hands thrice rapidly into the flames. This seals their relationship to each other. Dancing and music go on till late at night. The correspondence of these Sardinian pots of grain to the gardens of Adonis seems complete, and the images formerly placed in them answer to the images of Adonis which accompanied his gardens.

Customs of the same sort are observed at the same season in Sicily. Pairs of boys and girls become gossips of St. John on St. John's Day by drawing each a hair from his or her head and performing various ceremonies over them. Thus they tie the hairs together and throw them up in the air, or exchange them over a potsherd, which they afterwards break in two, preserving each a fragment with pious care. The tie formed in the latter way is supposed to last for life. In some parts of Sicily the gossips of St. John present each other with plates of sprouting corn, lentils, and canary seed, which have been planted forty days before the festival. The one who receives the plate pulls a stalk of the young plants, binds it with a ribbon, and preserves it among his or her greatest treasures, restoring the platter to the giver. At Catania the gossips exchange pots of basil and great cucumbers; the girls tend the basil, and the thicker it grows the more it is prized.

In these midsummer customs of Sardinia and Sicily it is possible that, as Mr. R. Wunsch supposes, St. John has replaced Adonis. We have seen that the rites of Tammuz or Adonis were commonly celebrated about midsummer; according to Jerome, their date was June. And besides their date and their similarity in respect of the pots of herbs and corn, there is another point of affinity between the two festivals, the heathen and the Christian. In both of them water plays a prominent part. At his midsummer festival in Babylon the image of Tammuz, whose name is said to mean "true son of the deep water," was bathed with pure water: at his summer festival in Alexandria the image of Adonis, with that of his divine mistress Aphrodite, was committed to the waves; and at the midsummer celebration in Greece the gardens of Adonis were thrown into the sea or into springs. Now a great feature of the midsummer festival associated with the name of St. John is, or used to be, the custom of bathing in the sea, springs, rivers, or the dew on Midsummer Eve or the morning of Midsummer Day. Thus, for example, at Naples there is a church dedicated to St. John the Baptist under the name of St. John of the Sea (*S. Giovan a mare*); and it was an old practice for men and women to bathe in the sea on St. John's Eve, that is, on Midsummer Eve, believing that thus all their sins were washed away. In the Abruzzi water is still supposed to acquire certain marvellous and beneficent properties on St. John's Night. They say that on that night the sun and moon bathe in the water. Hence many people take a bath in the sea or in a river at that season, especially at the moment of sunrise. At Castiglione a Casauria they go before sunrise to the Pescara River or to springs, wash their faces and hands, then gird themselves with twigs of bryony (*vitalba*) and twine the plant round their brows, in order that they may be free from pains. At Pescina boys and girls wash each other's faces in a river or a spring, then exchange kisses, and become gossips. The dew, also, that falls on St. John's Night is supposed in the Abruzzi to benefit whatever it touches, whether it be water, flowers, or the human body. For that reason people put out vessels of water on the window-sills or the terraces, and wash themselves with the water in the morning in order to purify themselves and escape headaches and colds. A still more efficacious mode of accomplishing the same end is to rise at the peep of dawn, to wet the hands in the dewy grass, and then to rub the moisture on the eyelids, the brow, and the temples, because the dew is believed to cure maladies of the head and eyes. It is also a remedy for diseases of the skin. Persons who are thus afflicted should roll on the dewy grass. When patients are prevented by their infirmity or any other cause from quitting the house, their friends will gather the dew in sheets or tablecloths and so apply it to the suffering part. At Marsala in Sicily there is a spring of water in a subterranean grotto called the Grotto of the Sibyl. Beside it stands a church of St. John, which has been supposed to occupy the site of a temple of Apollo. On St. John's Eve, the twenty-third of June, women and girls visit the grotto, and by drinking of the prophetic water learn whether their husbands have been faithful to them in the year that is past, or whether they themselves will wed in the year that is to come. Sick people, too, imagine that by bathing in the water, drinking of it, or ducking thrice in it in the name of the Trinity, they will

be made whole. At Chiaramonte in Sicily the following custom is observed on St. John's Eve. The men repair to one fountain and the women to another, and dip their heads thrice in the water, repeating at each ablution certain verses in honour of St. John. They believe that this is a cure or preventive of the scald. When Petrarch visited Cologne, he chanced to arrive in the town on St. John's Eve. The sun was nearly setting, and his host at once led him to the Rhine. A strange sight there met his eyes, for the banks of the river were covered with pretty women. The crowd was great but good-humoured. From a rising ground on which he stood the poet saw many of the women, girt with fragrant herbs, kneel down on the water's edge, roll their sleeves up above their elbows, and wash their white arms and hands in the river, murmuring softly some words which the Italian did not understand. He was told that the custom was a very old one, much honoured in the observance; for the common folk, especially the women, believed that to wash in the river on St. John's Eve would avert every misfortune in the coming year. On St. John's Eve the people of Copenhagen used to go on pilgrimage to a neighbouring spring, there to heal and strengthen themselves in the water. In Spain people still bathe in the sea or roll naked in the dew of the meadows on St. John's Eve, believing that this is a sovereign preservative against diseases of the skin. To roll in the dew on the morning of St. John's Day is also esteemed a cure for diseases of the skin in Normandy and Perigord. In Perigord a field of hemp is especially recommended for the purpose, and the patient should rub himself with the plants on which he has rolled. At Ciotat in Provence, while the midsummer bonfire blazed, young people used to plunge into the sea and splash each other vigorously. At Vitrolles they bathed in a pond in order that they might not suffer from fever during the year, and at Saint-Maries they watered the horses to protect them from the itch. A custom of drenching people on this occasion with water formerly prevailed in Toulon, Marseilles, and other towns of the south of France. The water was squirted from syringes, poured on the heads of passers-by from windows, and so forth. From Europe the practice of bathing in rivers and springs on St. John's Day appears to have passed with the Spaniards to the New World.

It may perhaps be suggested that this wide-spread custom of bathing in water or dew on Midsummer Eve or Midsummer Day is purely Christian in origin, having been adopted as an appropriate mode of celebrating the day dedicated to the Baptist. But in point of fact the custom is older than Christianity, for it was denounced and forbidden as a heathen practice by Augustine, and to this day it is practised at midsummer by the Mohammedan peoples of North Africa. We may conjecture that the Church, unable to put down this relic of paganism, followed its usual policy of accommodation by bestowing on the rite of a Christian name and acquiescing, with a sigh, in its observance. And casting about for a saint to supplant a heathen patron of bathing, the Christian doctors could hardly have hit upon a more appropriate successor than St. John the Baptist.

But into whose shoes did the Baptist step? Was the displaced deity really Adonis, as the foregoing evidence seems to suggest? In Sardinia and Sicily it may have been so, for in these islands Semitic influence was certainly deep and probably lasting. The midsummer pastimes of Sardinian and Sicilian children may therefore be a direct continuation of the Carthaginian rites of Tammuz. Yet the midsummer festival seems too widely spread and too deeply rooted in Central and Northern Europe to allow us to trace it everywhere to an Oriental origin in general and to the cult of Adonis in particular. It has the air of a native of the soil rather than of an exotic imported from the East. We shall do better, therefore, to suppose that at a remote period similar modes of thought, based on similar needs, led men independently in many distant lands, from the North Sea to the Euphrates, to celebrate the summer solstice with rites which, while they differed in some things, yet agreed closely in others; that in historical times a wave of Oriental influence, starting perhaps from Babylonia, carried the Tammuz or Adonis

form of the festival westward till it met with native forms of a similar festival; and that under pressure of the Roman civilization these different yet kindred festivals fused with each other and crystallized into a variety of shapes, which subsisted more or less separately side by side, till the Church, unable to suppress them altogether, stripped them so far as it could of their grosser features, and dexterously changing the names allowed them to pass muster as Christian. And what has just been said of the midsummer festivals probably applies, with the necessary modifications, to the spring festivals also. They, too, seem to have originated independently in Europe and the East, and after ages of separation to have amalgamated under the sway of the Roman Empire and the Christian Church. In Syria, as we have seen, there appears to have been a vernal celebration of Adonis; and we shall presently meet with an undoubted instance of an Oriental festival of spring in the rites of Attis. Meantime we must return for a little to the midsummer festival which goes by the name of St. John.

The Sardinian practice of making merry round a great bonfire on St. John's Eve is an instance of a custom which has been practised at the midsummer festival from time immemorial in many parts of Europe. That custom has been more fully dealt with by me elsewhere. The instances which I have cited in other parts of this work seem to indicate a connexion of the midsummer bonfire with vegetation. For example, both in Sweden and Bohemia an essential part of the festival is the raising of a May-pole or Midsummer-tree, which in Bohemia is burned in the bonfire. Again, in a Russian midsummer ceremony a straw figure of Kupalo, the representative of vegetation, is placed beside a May-pole or Midsummer-tree and then carried to and fro across a bonfire. Kupalo is here represented in duplicate, in tree-form by the Midsummer-tree, and in human form by the straw effigy, just as Adonis was represented both by an image and a garden of Adonis; and the duplicate representatives of Kupalo, like those of Adonis, are finally cast into water. In the Sardinian and Sicilian customs the Gossips or Sweethearts of St. John probably answer, on the one hand to Adonis and Astarte, on the other to the King and Queen of May. In the Swedish province of Blekinge part of the midsummer festival is the election of a Midsummer Bride, who chooses her bridegroom; a collection is made for the pair, who for the time being are looked upon as man and wife. Such Midsummer pairs may be supposed, like the May pairs, to stand for the powers of vegetation or of fertility in general: they represent in flesh and blood what the images of Siva or Mahadeo and Parvati in the Indian ceremonies, and the images of Adonis and Aphrodite in the Alexandrian ceremony, set forth in effigy.

The reason why ceremonies whose aim is to foster the growth of vegetation should thus be associated with bonfires; why in particular the representative of vegetation should be burned in the likeness of a tree, or passed across the fire in effigy or in the form of a living couple, has been discussed by me elsewhere. Here it is enough to have adduced evidence of such association, and therefore to have obviated the objection which might have been raised to my theory of the Sardinian custom, on the ground that the bonfires have nothing to do with vegetation. One more piece of evidence may here be given to prove the contrary. In some parts of Germany and Austria young men and girls leap over midsummer bonfires for the express purpose of making the hemp or flax grow tall. We may, therefore, assume that in the Sardinian custom the blades of wheat and barley which are forced on in pots for the midsummer festival, and which correspond so closely to the gardens of Adonis, form one of those widely-spread midsummer ceremonies, the original object of which was to promote the growth of vegetation, and especially of the crops. But as, by an easy extension of ideas, the spirit of vegetation was believed to exercise a beneficent and fertilizing influence on human as well as animal life, the gardens of Adonis would be supposed, like the May-trees or May-boughs, to bring good luck, and more particularly perhaps offspring, to the family or to the person who planted them; and even after the idea had been abandoned that they operated

actively to confer prosperity, they might still be used to furnish omens of good or evil. It is thus that magic dwindles into divination. Accordingly we find modes of divination practised at midsummer which resemble more or less closely the gardens of Adonis. Thus an anonymous Italian writer of the sixteenth century has recorded that it was customary to sow barley and wheat a few days before the festival of St. John (Midsummer Day) and also before that of St. Vitus; and it was believed that the person for whom they were sown would be fortunate, and get a good husband or a good wife, if the grain sprouted well; but if it sprouted ill, he or she would be unlucky. In various parts of Italy and all over Sicily it is still customary to put plants in water or in earth on the Eve of St. John, and from the manner in which they are found to be blooming or fading on St. John's Day omens are drawn, especially as to fortune in love. Amongst the plants used for this purpose are *Ciuri di S. Giovanni* (St. John's wort?) and nettles. In Prussia two hundred years ago the farmers used to send out their servants, especially their maids, to gather St. John's wort on Midsummer Eve or Midsummer Day (St. John's Day). When they had fetched it, the farmer took as many plants as there were persons and stuck them in the wall or between the beams; and it was thought that he or she whose plant did not bloom would soon fall sick or die. The rest of the plants were tied in a bundle, fastened to the end of a pole, and set up at the gate or wherever the corn would be brought in at the next harvest. The bundle was called *Kupole*: the ceremony was known as Kupole's festival; and at it the farmer prayed for a good crop of hay, and so forth. This Prussian custom is particularly notable, inasmuch as it strongly confirms the opinion that Kupalo (doubtless identical with Kupole) was originally a deity of vegetation. For here Kupalo is represented by a bundle of plants specially associated with midsummer in folk-custom; and her influence over vegetation is plainly signified by placing her vegetable emblem over the place where the harvest is brought in, as well as by the prayers for a good crop which are uttered on the occasion. This furnishes a fresh argument in support of the view that the Death, whose analogy to Kupalo, Yarilo, and the rest I have shown elsewhere, originally personified vegetation, more especially the dying or dead vegetation of winter. Further, my interpretation of the gardens of Adonis is confirmed by finding that in this Prussian custom the very same kind of plants is used to form the gardens of Adonis (as we may call them) and the image of the deity. Nothing could set in a stronger light the truth of the theory that the gardens of Adonis are merely another manifestation of the god himself.

In Sicily gardens of Adonis are still sown in spring as well as in summer, from which we may perhaps infer that Sicily as well as Syria celebrated of old a vernal festival of the dead and risen god. At the approach of Easter, Sicilian women sow wheat, lentils, and canary-seed in plates, which they keep in the dark and water every two days. The plants soon shoot up; the stalks are tied together with red ribbons, and the plates containing them are placed on the sepulchres which, with the effigies of the dead Christ, are made up in Catholic and Greek churches on Good Friday, just as the gardens of Adonis were placed on the grave of the dead Adonis. The practice is not confined to Sicily, for it is observed also at Cosenza in Calabria, and perhaps in other places. The whole custom—sepulchres as well as plates of sprouting grain—may be nothing but a continuation, under a different name, of the worship of Adonis.

Nor are these Sicilian and Calabrian customs the only Easter ceremonies which resemble the rites of Adonis. "During the whole of Good Friday a waxen effigy of the dead Christ is exposed to view in the middle of the Greek churches and is covered with fervent kisses by the thronging crowd, while the whole church rings with melancholy, monotonous dirges. Late in the evening, when it has grown quite dark, this waxen image is carried by the priests into the street on a bier adorned with lemons, roses, jessamine, and other flowers, and there begins a grand procession of the multitude, who move in serried ranks, with slow and solemn step,

through the whole town. Every man carries his taper and breaks out into doleful lamentation. At all the houses which the procession passes there are seated women with censers to fumigate the marching host. Thus the community solemnly buries its Christ as if he had just died. At last the waxen image is again deposited in the church, and the same lugubrious chants echo anew. These lamentations, accompanied by a strict fast, continue till midnight on Saturday. As the clock strikes twelve, the bishop appears and announces the glad tidings that 'Christ is risen,' to which the crowd replies, 'He is risen indeed,' and at once the whole city bursts into an uproar of joy, which finds vent in shrieks and shouts, in the endless discharge of carronades and muskets, and the explosion of fire-works of every sort. In the very same hour people plunge from the extremity of the fast into the enjoyment of the Easter lamb and neat wine."

In like manner the Catholic Church has been accustomed to bring before its followers in a visible form the death and resurrection of the Redeemer. Such sacred dramas are well fitted to impress the lively imagination and to stir the warm feelings of a susceptible southern race, to whom the pomp and pageantry of Catholicism are more congenial than to the colder temperament of the Teutonic peoples. The solemnities observed in Sicily on Good Friday, the official anniversary of the Crucifixion, are thus described by a native Sicilian writer. "A truly moving ceremony is the procession which always takes place in the evening in every commune of Sicily, and further the Deposition from the Cross. The brotherhoods took part in the procession, and the rear was brought up by a great many boys and girls representing saints, both male and female, and carrying the emblems of Christ's Passion. The Deposition from the Cross was managed by the priests. The coffin with the dead Christ in it was flanked by Jews armed with swords, an object of horror and aversion in the midst of the profound pity excited by the sight not only of Christ but of the Mater Dolorosa, who followed behind him. Now and then the 'mysteries' or symbols of the Crucifixion went in front. Sometimes the procession followed the 'three hours of agony' and the 'Deposition from the Cross.' The 'three hours' commemorated those which Jesus Christ passed upon the Cross. Beginning at the eighteenth and ending at the twenty-first hour of Italian time two priests preached alternately on the Passion. Anciently the sermons were delivered in the open air on the place called the Calvary: at last, when the third hour was about to strike, at the words *emisit spiritum* Christ died, bowing his head amid the sobs and tears of the bystanders. Immediately afterwards in some places, three hours afterwards in others, the sacred body was unnailed and deposited in the coffin. In Castronuovo, at the Ave Maria, two priests clad as Jews, representing Joseph of Arimathea and Nicodemus, with their servants in costume, repaired to the Calvary, preceded by the Company of the Whites. There, with doleful verses and chants appropriate to the occasion, they performed the various operations of the Deposition, after which the procession took its way to the larger church.... In Salaparuta the Calvary is erected in the church. At the preaching of the death, the Crucified is made to bow his head by means of machinery, while guns are fired, trumpets sound, and amid the silence of the people, impressed by the death of the Redeemer, the strains of a melancholy funeral march are heard. Christ is removed from the Cross and deposited in the coffin by three priests. After the procession of the dead Christ the burial is performed, that is, two priests lay Christ in a fictitious sepulchre, from which at the mass of Easter Saturday the image of the risen Christ issues and is elevated upon the altar by means of machinery." Scenic representations of the same sort, with variations of detail, are exhibited at Easter in the Abruzzi, and probably in many other parts of the Catholic world.

When we reflect how often the Church has skilfully contrived to plant the seeds of the new faith on the old stock of paganism, we may surmise that the Easter celebration of the dead and risen Christ was grafted upon a similar celebration of the dead and risen Adonis, which,

as we have seen reason to believe, was celebrated in Syria at the same season. The type, created by Greek artists, of the sorrowful goddess with her dying lover in her arms, resembles and may have been the model of the *Pietà* of Christian art, the Virgin with the dead body of her divine Son in her lap, of which the most celebrated example is the one by Michael Angelo in St. Peter's. That noble group, in which the living sorrow of the mother contrasts so wonderfully with the languor of death in the son, is one of the finest compositions in marble. Ancient Greek art has bequeathed to us few works so beautiful, and none so pathetic.

In this connexion a well-known statement of Jerome may not be without significance. He tells us that Bethlehem, the traditionary birthplace of the Lord, was shaded by a grove of that still older Syrian Lord, Adonis, and that where the infant Jesus had wept, the lover of Venus was bewailed. Though he does not expressly say so, Jerome seems to have thought that the grove of Adonis had been planted by the heathen after the birth of Christ for the purpose of defiling the sacred spot. In this he may have been mistaken. If Adonis was indeed, as I have argued, the spirit of the corn, a more suitable name for his dwelling-place could hardly be found than Bethlehem, "the House of Bread," and he may well have been worshipped there at his House of Bread long ages before the birth of Him who said, "I am the bread of life." Even on the hypothesis that Adonis followed rather than preceded Christ at Bethlehem, the choice of his sad figure to divert the allegiance of Christians from their Lord cannot but strike us as eminently appropriate when we remember the similarity of the rites which commemorated the death and resurrection of the two. One of the earliest seats of the worship of the new god was Antioch, and at Antioch, as we have seen, the death of the old god was annually celebrated with great solemnity. A circumstance which attended the entrance of Julian into the city at the time of the Adonis festival may perhaps throw some light on the date of its celebration. When the emperor drew near to the city he was received with public prayers as if he had been a god, and he marvelled at the voices of a great multitude who cried that the Star of Salvation had dawned upon them in the East. This may doubtless have been no more than a fulsome compliment paid by an obsequious Oriental crowd to the Roman emperor. But it is also possible that the rising of a bright star regularly gave the signal for the festival, and that as chance would have it the star emerged above the rim of the eastern horizon at the very moment of the emperor's approach. The coincidence, if it happened, could hardly fail to strike the imagination of a superstitious and excited multitude, who might thereupon hail the great man as the deity whose coming was announced by the sign in the heavens. Or the emperor may have mistaken for a greeting to himself the shouts which were addressed to the star. Now Astarte, the divine mistress of Adonis, was identified with the planet Venus, and her changes from a morning to an evening star were carefully noted by the Babylonian astronomers, who drew omens from her alternate appearance and disappearance. Hence we may conjecture that the festival of Adonis was regularly timed to coincide with the appearance of Venus as the Morning or Evening Star. But the star which the people of Antioch saluted at the festival was seen in the East; therefore, if it was indeed Venus, it can only have been the Morning Star. At Aphaca in Syria, where there was a famous temple of Astarte, the signal for the celebration of the rites was apparently given by the flashing of a meteor, which on a certain day fell like a star from the top of Mount Lebanon into the river Adonis. The meteor was thought to be Astarte herself, and its flight through the air might naturally be interpreted as the descent of the amorous goddess to the arms of her lover. At Antioch and elsewhere the appearance of the Morning Star on the day of the festival may in like manner have been hailed as the coming of the goddess of love to wake her dead leman from his earthy bed. If that were so, we may surmise that it was the Morning Star which guided the wise men of the East to Bethlehem, the hallowed spot which heard, in the language of Jerome, the weeping of the infant Christ and the lament for Adonis.

Book Second. Attis

I. The Myth and Ritual of Attis

Another of those gods whose supposed death and resurrection struck such deep roots into the faith and ritual of Western Asia is Attis. He was to Phrygia what Adonis was to Syria. Like Adonis, he appears to have been a god of vegetation, and his death and resurrection were annually mourned and rejoiced over at a festival in spring. The legends and rites of the two gods were so much alike that the ancients themselves sometimes identified them. Attis was said to have been a fair young shepherd or herdsman beloved by Cybele, the Mother of the Gods, a great Asiatic goddess of fertility, who had her chief home in Phrygia. Some held that Attis was her son. His birth, like that of many other heroes, is said to have been miraculous. His mother, Nana, was a virgin, who conceived by putting a ripe almond or a pomegranate in her bosom. Indeed in the Phrygian cosmogony an almond figured as the father of all things, perhaps because its delicate lilac blossom is one of the first heralds of the spring, appearing on the bare boughs before the leaves have opened. Such tales of virgin mothers are relics of an age of childish ignorance when men had not yet recognized the intercourse of the sexes as the true cause of offspring. That ignorance, still shared by the lowest of existing savages, the aboriginal tribes of central Australia, was doubtless at one time universal among mankind. Even in later times, when people are better acquainted with the laws of nature, they sometimes imagine that these laws may be subject to exceptions, and that miraculous beings may be born in miraculous ways by women who have never known a man. In Palestine to this day it is believed that a woman may conceive by a jinnee or by the spirit of her dead husband. There is, or was lately, a man at Nebk who is currently supposed to be the offspring of such a union, and the simple folk have never suspected his mother's virtue. Two different accounts of the death of Attis were current. According to the one he was killed by a boar, like Adonis. According to the other he unmanned himself under a pine-tree, and bled to death on the spot. The latter is said to have been the local story told by the people of Pessinus, a great seat of the worship of Cybele, and the whole legend of which the story forms a part is stamped with a character of rudeness and savagery that speaks strongly for its antiquity. Both tales might claim the support of custom, or rather both were probably invented to explain certain customs observed by the worshippers. The story of the self-mutilation of Attis is clearly an attempt to account for the self-mutilation of his priests, who regularly castrated themselves on entering the service of the goddess. The story of his death by the boar may have been told to explain why his worshippers, especially the people of Pessinus, abstained from eating swine. In like manner the worshippers of Adonis abstained from pork, because a boar had killed their god. After his death Attis is said to have been changed into a pine-tree.

The worship of the Phrygian Mother of the Gods was adopted by the Romans in 204 b.c. towards the close of their long struggle with Hannibal. For their drooping spirits had been opportunely cheered by a prophecy, alleged to be drawn from that convenient farrago of nonsense, the Sibylline Books, that the foreign invader would be driven from Italy if the great Oriental goddess were brought to Rome. Accordingly ambassadors were despatched to her sacred city Pessinus in Phrygia. The small black stone which embodied the mighty divinity was entrusted to them and conveyed to Rome, where it was received with great respect and installed in the temple of Victory on the Palatine Hill. It was the middle of April when the goddess arrived, and she went to work at once. For the harvest that year was such as had not been seen for many a long day, and in the very next year Hannibal and his veterans embarked for Africa. As he looked his last on the coast of Italy, fading behind him in the distance, he could not foresee that Europe, which had repelled the arms, would yet yield to the gods, of

the Orient. The vanguard of the conquerors had already encamped in the heart of Italy before the rearguard of the beaten army fell sullenly back from its shores.

We may conjecture, though we are not told, that the Mother of the Gods brought with her the worship of her youthful lover or son to her new home in the West. Certainly the Romans were familiar with the Galli, the emasculated priests of Attis, before the close of the Republic. These unsexed beings, in their Oriental costume, with little images suspended on their breasts, appear to have been a familiar sight in the streets of Rome, which they traversed in procession, carrying the image of the goddess and chanting their hymns to the music of cymbals and tambourines, flutes and horns, while the people, impressed by the fantastic show and moved by the wild strains, flung alms to them in abundance, and buried the image and its bearers under showers of roses. A further step was taken by the Emperor Claudius when he incorporated the Phrygian worship of the sacred tree, and with it probably the orgiastic rites of Attis, in the established religion of Rome. The great spring festival of Cybele and Attis is best known to us in the form in which it was celebrated at Rome; but as we are informed that the Roman ceremonies were also Phrygian, we may assume that they differed hardly, if at all, from their Asiatic original. The order of the festival seems to have been as follows.

On the twenty-second day of March, a pine-tree was cut in the woods and brought into the sanctuary of Cybele, where it was treated as a great divinity. The duty of carrying the sacred tree was entrusted to a guild of Tree-bearers. The trunk was swathed like a corpse with woollen bands and decked with wreaths, of violets, for violets were said to have sprung from the blood of Attis, as roses and anemones from the blood of Adonis; and the effigy of a young man, doubtless Attis himself, was tied to the middle of the stem. On the second day of the festival, the twenty-third of March, the chief ceremony seems to have been a blowing of trumpets. The third day, the twenty-fourth of March, was known as the Day of Blood: the Archigallus or high-priest drew blood from his arms and presented it as an offering. Nor was he alone in making this bloody sacrifice. Stirred by the wild barbaric music of clashing cymbals, rumbling drums, droning horns, and screaming flutes, the inferior clergy whirled about in the dance with wagging heads and streaming hair, until, rapt into a frenzy of excitement and insensible to pain, they gashed their bodies with potsherds or slashed them with knives in order to bespatter the altar and the sacred tree with their flowing blood. The ghastly rite probably formed part of the mourning for Attis and may have been intended to strengthen him for the resurrection. The Australian aborigines cut themselves in like manner over the graves of their friends for the purpose, perhaps, of enabling them to be born again. Further, we may conjecture, though we are not expressly told, that it was on the same Day of Blood and for the same purpose that the novices sacrificed their virility. Wrought up to the highest pitch of religious excitement they dashed the severed portions of themselves against the image of the cruel goddess. These broken instruments of fertility were afterwards reverently wrapt up and buried in the earth or in subterranean chambers sacred to Cybele, where, like the offering of blood, they may have been deemed instrumental in recalling Attis to life and hastening the general resurrection of nature, which was then bursting into leaf and blossom in the vernal sunshine. Some confirmation of this conjecture is furnished by the savage story that the mother of Attis conceived by putting in her bosom a pomegranate sprung from the severed genitals of a man-monster named Agdestis, a sort of double of Attis.

If there is any truth in this conjectural explanation of the custom, we can readily understand why other Asiatic goddesses of fertility were served in like manner by eunuch priests. These feminine deities required to receive from their male ministers, who personated the divine lovers, the means of discharging their beneficent functions: they had themselves to be impregnated by the life-giving energy before they could transmit it to the world. Goddesses

thus ministered to by eunuch priests were the great Artemis of Ephesus and the great Syrian Astarte of Hierapolis, whose sanctuary, frequented by swarms of pilgrims and enriched by the offerings of Assyria and Babylonia, of Arabia and Phoenicia, was perhaps in the days of its glory the most popular in the East. Now the unsexed priests of this Syrian goddess resembled those of Cybele so closely that some people took them to be the same. And the mode in which they dedicated themselves to the religious life was similar. The greatest festival of the year at Hierapolis fell at the beginning of spring, when multitudes thronged to the sanctuary from Syria and the regions round about. While the flutes played, the drums beat, and the eunuch priests slashed themselves with knives, the religious excitement gradually spread like a wave among the crowd of onlookers, and many a one did that which he little thought to do when he came as a holiday spectator to the festival. For man after man, his veins throbbing with the music, his eyes fascinated by the sight of the streaming blood, flung his garments from him, leaped forth with a shout, and seizing one of the swords which stood ready for the purpose, castrated himself on the spot. Then he ran through the city, holding the bloody pieces in his hand, till he threw them into one of the houses which he passed in his mad career. The household thus honoured had to furnish him with a suit of female attire and female ornaments, which he wore for the rest of his life. When the tumult of emotion had subsided, and the man had come to himself again, the irrevocable sacrifice must often have been followed by passionate sorrow and lifelong regret. This revulsion of natural human feeling after the frenzies of a fanatical religion is powerfully depicted by Catullus in a celebrated poem.

The parallel of these Syrian devotees confirms the view that in the similar worship of Cybele the sacrifice of virility took place on the Day of Blood at the vernal rites of the goddess, when the violets, supposed to spring from the red drops of her wounded lover, were in bloom among the pines. Indeed the story that Attis unmanned himself under a pine-tree was clearly devised to explain why his priests did the same beside the sacred violet-wreathed tree at his festival. At all events, we can hardly doubt that the Day of Blood witnessed the mourning for Attis over an effigy of him which was afterwards buried. The image thus laid in the sepulchre was probably the same which had hung upon the tree. Throughout the period of mourning the worshippers fasted from bread, nominally because Cybele had done so in her grief for the death of Attis, but really perhaps for the same reason which induced the women of Harran to abstain from eating anything ground in a mill while they wept for Tammuz. To partake of bread or flour at such a season might have been deemed a wanton profanation of the bruised and broken body of the god. Or the fast may possibly have been a preparation for a sacramental meal.

But when night had fallen, the sorrow of the worshippers was turned to joy. For suddenly a light shone in the darkness: the tomb was opened: the god had risen from the dead; and as the priest touched the lips of the weeping mourners with balm, he softly whispered in their ears the glad tidings of salvation. The resurrection of the god was hailed by his disciples as a promise that they too would issue triumphant from the corruption of the grave. On the morrow, the twenty-fifth day of March, which was reckoned the vernal equinox, the divine resurrection was celebrated with a wild outburst of glee. At Rome, and probably elsewhere, the celebration took the form of a carnival. It was the Festival of Joy (*Hilaria*). A universal licence prevailed. Every man might say and do what he pleased. People went about the streets in disguise. No dignity was too high or too sacred for the humblest citizen to assume with impunity. In the reign of Commodus a band of conspirators thought to take advantage of the masquerade by dressing in the uniform of the Imperial Guard, and so, mingling with the crowd of merrymakers, to get within stabbing distance of the emperor. But the plot miscarried. Even the stern Alexander Severus used to relax so far on the joyous day

as to admit a pheasant to his frugal board. The next day, the twenty-sixth of March, was given to repose, which must have been much needed after the varied excitements and fatigues of the preceding days. Finally, the Roman festival closed on the twenty-seventh of March with a procession to the brook Almo. The silver image of the goddess, with its face of jagged black stone, sat in a wagon drawn by oxen. Preceded by the nobles walking barefoot, it moved slowly, to the loud music of pipes and tambourines, out by the Porta Capena, and so down to the banks of the Almo, which flows into the Tiber just below the walls of Rome. There the high-priest, robed in purple, washed the wagon, the image, and the other sacred objects in the water of the stream. On returning from their bath, the wain and the oxen were strewn with fresh spring flowers. All was mirth and gaiety. No one thought of the blood that had flowed so lately. Even the eunuch priests forgot their wounds.

Such, then, appears to have been the annual solemnization of the death and resurrection of Attis in spring. But besides these public rites, his worship is known to have comprised certain secret or mystic ceremonies, which probably aimed at bringing the worshipper, and especially the novice, into closer communication with his god. Our information as to the nature of these mysteries and the date of their celebration is unfortunately very scanty, but they seem to have included a sacramental meal and a baptism of blood. In the sacrament the novice became a partaker of the mysteries by eating out of a drum and drinking out of a cymbal, two instruments of music which figured prominently in the thrilling orchestra of Attis. The fast which accompanied the mourning for the dead god may perhaps have been designed to prepare the body of the communicant for the reception of the blessed sacrament by purging it of all that could defile by contact the sacred elements. In the baptism the devotee, crowned with gold and wreathed with fillets, descended into a pit, the mouth of which was covered with a wooden grating. A bull, adorned with garlands of flowers, its forehead glittering with gold leaf, was then driven on to the grating and there stabbed to death with a consecrated spear. Its hot reeking blood poured in torrents through the apertures, and was received with devout eagerness by the worshipper on every part of his person and garments, till he emerged from the pit, drenched, dripping, and scarlet from head to foot, to receive the homage, nay the adoration, of his fellows as one who had been born again to eternal life and had washed away his sins in the blood of the bull. For some time afterwards the fiction of a new birth was kept up by dieting him on milk like a new-born babe. The regeneration of the worshipper took place at the same time as the regeneration of his god, namely at the vernal equinox. At Rome the new birth and the remission of sins by the shedding of bull's blood appear to have been carried out above all at the sanctuary of the Phrygian goddess on the Vatican Hill, at or near the spot where the great basilica of St. Peter's now stands; for many inscriptions relating to the rites were found when the church was being enlarged in 1608 or 1609. From the Vatican as a centre this barbarous system of superstition seems to have spread to other parts of the Roman empire. Inscriptions found in Gaul and Germany prove that provincial sanctuaries modelled their ritual on that of the Vatican. From the same source we learn that the testicles as well as the blood of the bull played an important part in the ceremonies. Probably they were regarded as a powerful charm to promote fertility and hasten the new birth.

II. Attis As a God of Vegetation

The original character of Attis as a tree-spirit is brought out plainly by the part which the pine-tree plays in his legend, his ritual, and his monuments. The story that he was a human being transformed into a pine-tree is only one of those transparent attempts at rationalizing old beliefs which meet us so frequently in mythology. The bringing in of the pine-tree from the woods, decked with violets and woollen bands, is like bringing in the May-tree or Summer-tree in modern folk-custom; and the effigy which was attached to the pine-tree was only a duplicate representative of the tree-spirit Attis. After being fastened to the tree, the effigy was kept for a year and then burned. The same thing appears to have been sometimes done with the May-pole; and in like manner the effigy of the corn-spirit, made at harvest, is often preserved till it is replaced by a new effigy at next year's harvest. The original intention of such customs was no doubt to maintain the spirit of vegetation in life throughout the year. Why the Phrygians should have worshipped the pine above other trees we can only guess. Perhaps the sight of its changeless, though sombre, green cresting the ridges of the high hills above the fading splendour of the autumn woods in the valleys may have seemed to their eyes to mark it out as the seat of a diviner life, of something exempt from the sad vicissitudes of the seasons, constant and eternal as the sky which stooped to meet it. For the same reason, perhaps, ivy was sacred to Attis; at all events, we read that his eunuch priests were tattooed with a pattern of ivy leaves. Another reason for the sanctity of the pine may have been its usefulness. The cones of the stone-pine contain edible nut-like seeds, which have been used as food since antiquity, and are still eaten, for example, by the poorer classes in Rome. Moreover, a wine was brewed from these seeds, and this may partly account for the orgiastic nature of the rites of Cybele, which the ancients compared to those of Dionysus. Further, pine-cones were regarded as symbols or rather instruments of fertility. Hence at the festival of the Thesmophoria they were thrown, along with pigs and other agents or emblems of fecundity, into the sacred vaults of Demeter for the purpose of quickening the ground and the wombs of women.

Like tree-spirits in general, Attis was apparently thought to wield power over the fruits of the earth or even to be identical with the corn. One of his epithets was "very fruitful": he was addressed as the "reaped green (or yellow) ear of corn"; and the story of his sufferings, death, and resurrection was interpreted as the ripe grain wounded by the reaper, buried in the granary, and coming to life again when it is sown in the ground. A statue of him in the Lateran Museum at Rome clearly indicates his relation to the fruits of the earth, and particularly to the corn; for it represents him with a bunch of ears of corn and fruit in his hand, and a wreath of pine-cones, pomegranates, and other fruits on his head, while from the top of his Phrygian cap ears of corn are sprouting. On a stone urn, which contained the ashes of an Archigallus or high-priest of Attis, the same idea is expressed in a slightly different way. The top of the urn is adorned with ears of corn carved in relief, and it is surmounted by the figure of a cock, whose tail consists of ears of corn. Cybele in like manner was conceived as a goddess of fertility who could make or mar the fruits of the earth; for the people of Augustodunum (Autun) in Gaul used to cart her image about in a wagon for the good of the fields and vineyards, while they danced and sang before it, and we have seen that in Italy an unusually fine harvest was attributed to the recent arrival of the Great Mother. The bathing of the image of the goddess in a river may well have been a rain-charm to ensure an abundant supply of moisture for the crops. Or perhaps, as Mr. Hepding has suggested, the union of Cybele and Attis, like that of Aphrodite and Adonis, was dramatically represented at the festival, and the subsequent bath of the goddess was a ceremonial purification of the bride,

such as is often observed at human marriages. In like manner Aphrodite is said to have bathed after her union with Adonis, and so did Demeter after her intercourse with Poseidon. Hera washed in the springs of the river Burrha after her marriage with Zeus; and every year she recovered her virginity by bathing in the spring of Canathus. However that may be, the rules of diet observed by the worshippers of Cybele and Attis at their solemn fasts are clearly dictated by a belief that the divine life of these deities manifested itself in the fruits of the earth, and especially in such of them as are actually hidden by the soil. For while the devotees were allowed to partake of flesh, though not of pork or fish, they were forbidden to eat seeds and the roots of vegetables, but they might eat the stalks and upper parts of the plants.

III. Attis As The Father God

The name Attis appears to mean simply “father.” This explanation, suggested by etymology, is confirmed by the observation that another name for Attis was Papas; for Papas has all the appearance of being a common form of that word for “father” which occurs independently in many distinct families of speech all the world over. Similarly the mother of Attis was named Nana, which is itself a form of the world-wide word for “mother.” “The immense list of such words collected by Buschmann shows that the types *pa* and *ta*, with the similar forms *ap* and *at*, preponderate in the world as names for ‘father,’ while *ma* and *na*, *am* and *an*, preponderate as names for ‘mother.’ ”

Thus the mother of Attis is only another form of his divine mistress the great Mother Goddess, and we are brought back to the myth that the lovers were mother and son. The story that Nana conceived miraculously without commerce with the other sex shows that the Mother Goddess of Phrygia herself was viewed, like other goddesses of the same primitive type, as a Virgin Mother. That view of her character does not rest on a perverse and mischievous theory that virginity is more honourable than matrimony. It is derived, as I have already indicated, from a state of savagery in which the mere fact of paternity was unknown. That explains why in later times, long after the true nature of paternity had been ascertained, the Father God was often a much less important personage in mythology than his divine partner the Mother Goddess. With regard to Attis in his paternal character it deserves to be noticed that the Bithynians used to ascend to the tops of the mountains and there call upon him under the name of Papas. The custom is attested by Arrian, who as a native of Bithynia must have had good opportunities of observing it. We may perhaps infer from it that the Bithynians conceived Attis as a sky-god or heavenly father, like Zeus, with whom indeed Arrian identifies him. If that were so, the story of the loves of Attis and Cybele, the Father God and the Mother Goddess, might be in one of its aspects a particular version of the widespread myth which represents Mother Earth fertilized by Father Sky; and, further, the story of the emasculation of Attis would be parallel to the Greek legend that Cronus castrated his father, the old sky-god Uranus, and was himself in turn castrated by his own son, the younger sky-god Zeus. The tale of the mutilation of the sky-god by his son has been plausibly explained as a myth of the violent separation of the earth and sky, which some races, for example the Polynesians, suppose to have originally clasped each other in a close embrace. Yet it seems unlikely that an order of eunuch priests like the Galli should have been based on a purely cosmogonic myth: why should they continue for all time to be mutilated because the sky-god was so in the beginning? The custom of castration must surely have been designed to meet a constantly recurring need, not merely to reflect a mythical event which happened at the creation of the world. Such a need is the maintenance of the fruitfulness of the earth, annually imperilled by the changes of the seasons. Yet the theory that the mutilation of the priests of Attis and the burial of the severed parts were designed to fertilize the ground may perhaps be reconciled with the cosmogonic myth if we remember the old opinion, held apparently by many peoples, that the creation of the world is year by year repeated in that great transformation which depends ultimately on the annual increase of the sun's heat. However, the evidence for the celestial aspect of Attis is too slight to allow us to speak with any confidence on this subject. A trace of that aspect appears to survive in the star-spangled cap which he is said to have received from Cybele, and which is figured on some monuments supposed to represent him. His identification with the Phrygian moon-god Men Tyrannus points in the same direction, but is probably due rather to the religious speculation of a later age than to genuine popular tradition.

IV. Human Representatives of Attis

From inscriptions it appears that both at Pessinus and Rome the high-priest of Cybele regularly bore the name of Attis. It is therefore a reasonable conjecture that he played the part of his namesake, the legendary Attis, at the annual festival. We have seen that on the Day of Blood he drew blood from his arms, and this may have been an imitation of the self-inflicted death of Attis under the pine-tree. It is not inconsistent with this supposition that Attis was also represented at these ceremonies by an effigy; for instances can be shown in which the divine being is first represented by a living person and afterwards by an effigy, which is then burned or otherwise destroyed. Perhaps we may go a step farther and conjecture that this mimic killing of the priest, accompanied by a real effusion of his blood, was in Phrygia, as it has been elsewhere, a substitute for a human sacrifice which in earlier times was actually offered. Sir W. M. Ramsay, whose authority on all questions relating to Phrygia no one will dispute, is of opinion that at these Phrygian ceremonies "the representative of the god was probably slain each year by a cruel death, just as the god himself died." We know from Strabo that the priests of Pessinus were at one time potentates as well as priests; they may, therefore, have belonged to that class of divine kings or popes whose duty it was to die each year for their people and the world. The name of Attis, it is true, does not occur among the names of the old kings of Phrygia, who seem to have borne the names of Midas and Gordias in alternate generations; but a very ancient inscription carved in the rock above a famous Phrygian monument, which is known as the Tomb of Midas, records that the monument was made for, or dedicated to, King Midas by a certain Ates, whose name is doubtless identical with Attis, and who, if not a king himself, may have been one of the royal family. It is worthy of note also that the name Atys, which, again, appears to be only another form of Attis, is recorded as that of an early king of Lydia; and that a son of Croesus, king of Lydia, not only bore the name Atys but was said to have been killed, while he was hunting a boar, by a member of the royal Phrygian family, who traced his lineage to King Midas and had fled to the court of Croesus because he had unwittingly slain his own brother. Scholars have recognized in this story of the death of Atys, son of Croesus, a mere double of the myth of Attis; and in view of the facts which have come before us in the present inquiry it is a remarkable circumstance that the myth of a slain god should be told of a king's son. May we conjecture that the Phrygian priests who bore the name of Attis and represented the god of that name were themselves members, perhaps the eldest sons, of the royal house, to whom their fathers, uncles, brothers, or other kinsmen deputed the honour of dying a violent death in the character of gods, while they reserved to themselves the duty of living, as long as nature allowed them, in the humbler character of kings? If this were so, the Phrygian dynasty of Midas may have presented a close parallel to the Greek dynasty of Athamas, in which the eldest sons seem to have been regularly destined to the altar. But it is also possible that the divine priests who bore the name of Attis may have belonged to that indigenous race which the Phrygians, on their irruption into Asia from Europe, appear to have found and conquered in the land afterwards known as Phrygia. On the latter hypothesis the priests may have represented an older and higher civilization than that of their barbarous conquerors. Be that as it may, the god they personated was a deity of vegetation whose divine life manifested itself especially in the pine-tree and the violets of spring; and if they died in the character of that divinity, they corresponded to the mummers who are still slain in mimicry by European peasants in spring, and to the priest who was slain long ago in grim earnest on the wooded shore of the Lake of Nemi.

V. The Hanged God

A reminiscence of the manner in which these old representatives of the deity were put to death is perhaps preserved in the famous story of Marsyas. He was said to be a Phrygian satyr or Silenus, according to others a shepherd or herdsman, who played sweetly on the flute. A friend of Cybele, he roamed the country with the disconsolate goddess to soothe her grief for the death of Attis. The composition of the Mother's Air, a tune played on the flute in honour of the Great Mother Goddess, was attributed to him by the people of Celaenae in Phrygia. Vain of his skill, he challenged Apollo to a musical contest, he to play on the flute and Apollo on the lyre. Being vanquished, Marsyas was tied up to a pine-tree and flayed or cut limb from limb either by the victorious Apollo or by a Scythian slave. His skin was shown at Celaenae in historical times. It hung at the foot of the citadel in a cave from which the river Marsyas rushed with an impetuous and noisy tide to join the Maeander. So the Adonis bursts full-born from the precipices of the Lebanon; so the blue river of Ibreez leaps in a crystal jet from the red rocks of the Taurus; so the stream, which now rumbles deep underground, used to gleam for a moment on its passage from darkness to darkness in the dim light of the Corycian cave. In all these copious fountains, with their glad promise of fertility and life, men of old saw the hand of God and worshipped him beside the rushing river with the music of its tumbling waters in their ears. At Celaenae, if we can trust tradition, the piper Marsyas, hanging in his cave, had a soul for harmony even in death; for it is said that at the sound of his native Phrygian melodies the skin of the dead satyr used to thrill, but that if the musician struck up an air in praise of Apollo it remained deaf and motionless.

In this Phrygian satyr, shepherd, or herdsman who enjoyed the friendship of Cybele, practised the music so characteristic of her rites, and died a violent death on her sacred tree, the pine, may we not detect a close resemblance to Attis, the favourite shepherd or herdsman of the goddess, who is himself described as a piper, is said to have perished under a pine-tree, and was annually represented by an effigy hung, like Marsyas, upon a pine? We may conjecture that in old days the priest who bore the name and played the part of Attis at the spring festival of Cybele was regularly hanged or otherwise slain upon the sacred tree, and that this barbarous custom was afterwards mitigated into the form in which it is known to us in later times, when the priest merely drew blood from his body under the tree and attached an effigy instead of himself to its trunk. In the holy grove at Upsala men and animals were sacrificed by being hanged upon the sacred trees. The human victims dedicated to Odin were regularly put to death by hanging or by a combination of hanging and stabbing, the man being strung up to a tree or a gallows and then wounded with a spear. Hence Odin was called the Lord of the Gallows or the God of the Hanged, and he is represented sitting under a gallows tree. Indeed he is said to have been sacrificed to himself in the ordinary way, as we learn from the weird verses of the *Havamal*, in which the god describes how he acquired his divine power by learning the magic runes:

*“I know that I hung on the windy tree
For nine whole nights,
Wounded with the spear, dedicated to Odin,
Myself to myself.”*

The Bagobos of Mindanao, one of the Philippine Islands, used annually to sacrifice human victims for the good of the crops in a similar way. Early in December, when the constellation Orion appeared at seven o'clock in the evening, the people knew that the time had come to clear their fields for sowing and to sacrifice a slave. The sacrifice was presented to certain

powerful spirits as payment for the good year which the people had enjoyed, and to ensure the favour of the spirits for the coming season. The victim was led to a great tree in the forest; there he was tied with his back to the tree and his arms stretched high above his head, in the attitude in which ancient artists portrayed Marsyas hanging on the fatal tree. While he thus hung by the arms, he was slain by a spear thrust through his body at the level of the armpits. Afterwards the body was cut clean through the middle at the waist, and the upper part was apparently allowed to dangle for a little from the tree, while the under part wallowed in blood on the ground. The two portions were finally cast into a shallow trench beside the tree. Before this was done, anybody who wished might cut off a piece of flesh or a lock of hair from the corpse and carry it to the grave of some relation whose body was being consumed by a ghoulish. Attracted by the fresh corpse, the ghoulish would leave the mouldering old body in peace. These sacrifices have been offered by men now living.

In Greece the great goddess Artemis herself appears to have been annually hanged in effigy in her sacred grove of Condylea among the Arcadian hills, and there accordingly she went by the name of the Hanged One. Indeed a trace of a similar rite may perhaps be detected even at Ephesus, the most famous of her sanctuaries, in the legend of a woman who hanged herself and was thereupon dressed by the compassionate goddess in her own divine garb and called by the name of Hecate. Similarly, at Melite in Phthia, a story was told of a girl named Aspalis who hanged herself, but who appears to have been merely a form of Artemis. For after her death her body could not be found, but an image of her was discovered standing beside the image of Artemis, and the people bestowed on it the title of Hecaerge or Far-shooter, one of the regular epithets of the goddess. Every year the virgins sacrificed a young goat to the image by hanging it, because Astypalis was said to have hanged herself. The sacrifice may have been a substitute for hanging an image or a human representative of Artemis. Again, in Rhodes the fair Helen was worshipped under the title of Helen of the Tree, because the queen of the island had caused her handmaids, disguised as Furies, to string her up to a bough. That the Asiatic Greeks sacrificed animals in this fashion is proved by coins of Ilium, which represent an ox or cow hanging on a tree and stabbed with a knife by a man, who sits among the branches or on the animal's back. At Hierapolis also the victims were hung on trees before they were burnt. With these Greek and Scandinavian parallels before us we can hardly dismiss as wholly improbable the conjecture that in Phrygia a man-god may have hung year by year on the sacred but fatal tree.

The tradition that Marsyas was flayed and that his skin was exhibited at Celaenae down to historical times may well reflect a ritual practice of flaying the dead god and hanging his skin upon the pine as a means of effecting his resurrection, and with it the revival of vegetation in spring. Similarly, in ancient Mexico the human victims who personated gods were often flayed and their bloody skins worn by men who appear to have represented the dead deities come to life again. When a Scythian king died, he was buried in a grave along with one of his concubines, his cup-bearer, cook, groom, lacquey, and messenger, who were all killed for the purpose, and a great barrow was heaped up over the grave. A year afterwards fifty of his servants and fifty of his best horses were strangled; and their bodies, having been disembowelled and cleaned out, were stuffed with chaff, sewn up, and set on scaffolds round about the barrow, every dead man bestriding a dead horse, which was bitted and bridled as in life. These strange horsemen were no doubt supposed to mount guard over the king. The setting up of their stuffed skins might be thought to ensure their ghostly resurrection.

That some such notion was entertained by the Scythians is made probable by the account which the mediaeval traveller de Plano Carpini gives of the funeral customs of the Mongols. The traveller tells us that when a noble Mongol died, the custom was to bury him seated in the middle of a tent, along with a horse saddled and bridled, and a mare and her foal. Also

they used to eat another horse, stuff the carcase with straw, and set it up on poles. All this they did in order that in the other world the dead man might have a tent to live in, a mare to yield milk, and a steed to ride, and that he might be able to breed horses. Moreover, the bones of the horse which they ate were burned for the good of his soul. When the Arab traveller Ibn Batuta visited Peking in the fourteenth century, he witnessed the funeral of an emperor of China who had been killed in battle. The dead sovereign was buried along with four young female slaves and six guards in a vault, and an immense mound like a hill was piled over him. Four horses were then made to run round the hillock till they could run no longer, after which they were killed, impaled, and set up beside the tomb. When an Indian of Patagonia dies, he is buried in a pit along with some of his property. Afterwards his favourite horse, having been killed, skinned, and stuffed, is propped up on sticks with its head turned towards the grave. At the funeral of a chief four horses are sacrificed, and one is set up at each corner of the burial-place. The clothes and other effects of the deceased are burned; and to conclude all, a feast is made of the horses' flesh. The Scythians certainly believed in the existence of the soul after death and in the possibility of turning it to account. This is proved by the practice of one of their tribes, the Taurians of the Crimea, who used to cut off the heads of their prisoners and set them on poles over their houses, especially over the chimneys, in order that the spirits of the slain men might guard the dwellings. Some of the savages of Borneo allege a similar reason for their favourite custom of taking human heads. "The custom," said a Kayan chief, "is not horrible. It is an ancient custom, a good, beneficent custom, bequeathed to us by our fathers and our fathers' fathers; it brings us blessings, plentiful harvests, and keeps off sickness and pains. Those who were once our enemies, hereby become our guardians, our friends, our benefactors." Thus to convert dead foes into friends and allies all that is necessary is to feed and otherwise propitiate their skulls at a festival when they are brought into the village. "An offering of food is made to the heads, and their spirits, being thus appeased, cease to entertain malice against, or to seek to inflict injury upon, those who have got possession of the skull which formerly adorned the now forsaken body." When the Sea Dyaks of Sarawak return home successful from a head-hunting expedition, they bring the head ashore with much ceremony, wrapt in palm leaves. "On shore and in the village, the head, for months after its arrival, is treated with the greatest consideration, and all the names and terms of endearment of which their language is capable are abundantly lavished on it; the most dainty morsels, culled from their abundant though inelegant repast, are thrust into its mouth, and it is instructed to hate its former friends, and that, having been now adopted into the tribe of its captors, its spirit must be always with them; sirih leaves and betel-nut are given to it, and finally a cigar is frequently placed between its ghastly and pallid lips. None of this disgusting mockery is performed with the intention of ridicule, but all to propitiate the spirit by kindness, and to procure its good wishes for the tribe, of whom it is now supposed to have become a member." Amongst these Dyaks the "Head-Feast," which has been just described, is supposed to be the most beneficial in its influence of all their feasts and ceremonies. "The object of them all is to make their rice grow well, to cause the forest to abound with wild animals, to enable their dogs and snares to be successful in securing game, to have the streams swarm with fish, to give health and activity to the people themselves, and to ensure fertility to their women. All these blessings, the possessing and feasting of a fresh head are supposed to be the most efficient means of securing. The very ground itself is believed to be benefited and rendered fertile, more fertile even than when the water in which fragments of gold presented by the Rajah have been washed, has been sprinkled over it."

In like manner, if my conjecture is right, the man who represented the father-god of Phrygia used to be slain and his stuffed skin hung on the sacred pine in order that his spirit might work for the growth of the crops, the multiplication of animals, and the fertility of women. So at Athens an ox, which appears to have embodied the corn-spirit, was killed at an annual

sacrifice, and its hide, stuffed with straw and sewn up, was afterwards set on its feet and yoked to a plough as if it were ploughing, apparently in order to represent, or rather to promote, the resurrection of the slain corn-spirit at the end of the threshing. This employment of the skins of divine animals for the purpose of ensuring the revival of the slaughtered divinity might be illustrated by other examples. Perhaps the hide of the bull which was killed to furnish the regenerating bath of blood in the rites of Attis may have been put to a similar use.

VI. Oriental Religions in the West

The worship of the Great Mother of the Gods and her lover or son was very popular under the Roman Empire. Inscriptions prove that the two received divine honours, separately or conjointly, not only in Italy, and especially at Rome, but also in the provinces, particularly in Africa, Spain, Portugal, France, Germany, and Bulgaria. Their worship survived the establishment of Christianity by Constantine; for Symmachus records the recurrence of the festival of the Great Mother, and in the days of Augustine her effeminate priests still paraded the streets and squares of Carthage with whitened faces, scented hair, and mincing gait, while, like the mendicant friars of the Middle Ages, they begged alms from the passers-by. In Greece, on the other hand, the bloody orgies of the Asiatic goddess and her consort appear to have found little favour. The barbarous and cruel character of the worship, with its frantic excesses, was doubtless repugnant to the good taste and humanity of the Greeks, who seem to have preferred the kindred but gentler rites of Adonis. Yet the same features which shocked and repelled the Greeks may have positively attracted the less refined Romans and barbarians of the West. The ecstatic frenzies, which were mistaken for divine inspiration, the mangling of the body, the theory of a new birth and the remission of sins through the shedding of blood, have all their origin in savagery, and they naturally appealed to peoples in whom the savage instincts were still strong. Their true character was indeed often disguised under a decent veil of allegorical or philosophical interpretation, which probably sufficed to impose upon the rapt and enthusiastic worshippers, reconciling even the more cultivated of them to things which otherwise must have filled them with horror and disgust.

The religion of the Great Mother, with its curious blending of crude savagery with spiritual aspirations, was only one of a multitude of similar Oriental faiths which in the later days of paganism spread over the Roman Empire, and by saturating the European peoples with alien ideals of life gradually undermined the whole fabric of ancient civilization. Greek and Roman society was built on the conception of the subordination of the individual to the community, of the citizen to the state; it set the safety of the commonwealth, as the supreme aim of conduct, above the safety of the individual whether in this world or in a world to come. Trained from infancy in this unselfish ideal, the citizens devoted their lives to the public service and were ready to lay them down for the common good; or if they shrank from the supreme sacrifice, it never occurred to them that they acted otherwise than basely in preferring their personal existence to the interests of their country. All this was changed by the spread of Oriental religions which inculcated the communion of the soul with God and its eternal salvation as the only objects worth living for, objects in comparison with which the prosperity and even the existence of the state sank into insignificance. The inevitable result of this selfish and immoral doctrine was to withdraw the devotee more and more from the public service, to concentrate his thoughts on his own spiritual emotions, and to breed in him a contempt for the present life which he regarded merely as a probation for a better and an eternal. The saint and the recluse, disdainful of earth and rapt in ecstatic contemplation of heaven, became in popular opinion the highest ideal of humanity, displacing the old ideal of the patriot and hero who, forgetful of self, lives and is ready to die for the good of his country. The earthly city seemed poor and contemptible to men whose eyes beheld the City of God coming in the clouds of heaven. Thus the centre of gravity, so to say, was shifted from the present to a future life, and however much the other world may have gained, there can be little doubt that this one lost heavily by the change. A general disintegration of the body politic set in. The ties of the state and the family were loosened: the structure of society tended to resolve itself into its individual elements and thereby to relapse into barbarism; for

civilization is only possible through the active co-operation of the citizens and their willingness to subordinate their private interests to the common good. Men refused to defend their country and even to continue their kind. In their anxiety to save their own souls and the souls of others, they were content to leave the material world, which they identified with the principle of evil, to perish around them. This obsession lasted for a thousand years. The revival of Roman law, of the Aristotelian philosophy, of ancient art and literature at the close of the Middle Ages, marked the return of Europe to native ideals of life and conduct, to saner, manlier views of the world. The long halt in the march of civilization was over. The tide of Oriental invasion had turned at last. It is ebbing still.

Among the gods of eastern origin who in the decline of the ancient world competed against each other for the allegiance of the West was the old Persian deity Mithra. The immense popularity of his worship is attested by the monuments illustrative of it which have been found scattered in profusion all over the Roman Empire. In respect both of doctrines and of rites the cult of Mithra appears to have presented many points of resemblance not only to the religion of the Mother of the Gods but also to Christianity. The similarity struck the Christian doctors themselves and was explained by them as a work of the devil, who sought to seduce the souls of men from the true faith by a false and insidious imitation of it. So to the Spanish conquerors of Mexico and Peru many of the native heathen rites appeared to be diabolical counterfeits of the Christian sacraments. With more probability the modern student of comparative religion traces such resemblances to the similar and independent workings of the mind of man in his sincere, if crude, attempts to fathom the secret of the universe, and to adjust his little life to its awful mysteries. However that may be, there can be no doubt that the Mithraic religion proved a formidable rival to Christianity, combining as it did a solemn ritual with aspirations after moral purity and a hope of immortality. Indeed the issue of the conflict between the two faiths appears for a time to have hung in the balance. An instructive relic of the long struggle is preserved in our festival of Christmas, which the Church seems to have borrowed directly from its heathen rival. In the Julian calendar the twenty-fifth of December was reckoned the winter solstice, and it was regarded as the Nativity of the Sun, because the day begins to lengthen and the power of the sun to increase from that turning-point of the year. The ritual of the nativity, as it appears to have been celebrated in Syria and Egypt, was remarkable. The celebrants retired into certain inner shrines, from which at midnight they issued with a loud cry, "The Virgin has brought forth! The light is waxing!" The Egyptians even represented the new-born sun by the image of an infant which on his birthday, the winter solstice, they brought forth and exhibited to his worshippers. No doubt the Virgin who thus conceived and bore a son on the twenty-fifth of December was the great Oriental goddess whom the Semites called the Heavenly Virgin or simply the Heavenly Goddess; in Semitic lands she was a form of Astarte. Now Mithra was regularly identified by his worshippers with the Sun, the Unconquered Sun, as they called him; hence his nativity also fell on the twenty-fifth of December. The Gospels say nothing as to the day of Christ's birth, and accordingly the early Church did not celebrate it. In time, however, the Christians of Egypt came to regard the sixth of January as the date of the Nativity, and the custom of commemorating the birth of the Saviour on that day gradually spread until by the fourth century it was universally established in the East. But at the end of the third or the beginning of the fourth century the Western Church, which had never recognized the sixth of January as the day of the Nativity, adopted the twenty-fifth of December as the true date, and in time its decision was accepted also by the Eastern Church. At Antioch the change was not introduced till about the year 375 a.d.

What considerations led the ecclesiastical authorities to institute the festival of Christmas? The motives for the innovation are stated with great frankness by a Syrian writer, himself a

Christian. "The reason," he tells us, "why the fathers transferred the celebration of the sixth of January to the twenty-fifth of December was this. It was a custom of the heathen to celebrate on the same twenty-fifth of December the birthday of the Sun, at which they kindled lights in token of festivity. In these solemnities and festivities the Christians also took part. Accordingly when the doctors of the Church perceived that the Christians had a leaning to this festival, they took counsel and resolved that the true Nativity should be solemnized on that day and the festival of the Epiphany on the sixth of January. Accordingly, along with this custom, the practice has prevailed of kindling fires till the sixth." The heathen origin of Christmas is plainly hinted at, if not tacitly admitted, by Augustine when he exhorts his Christian brethren not to celebrate that solemn day like the heathen on account of the sun, but on account of him who made the sun. In like manner Leo the Great rebuked the pestilent belief that Christmas was solemnized because of the birth of the new sun, as it was called, and not because of the nativity of Christ.

Thus it appears that the Christian Church chose to celebrate the birthday of its Founder on the twenty-fifth of December in order to transfer the devotion of the heathen from the Sun to him who was called the Sun of Righteousness. If that was so, there can be no intrinsic improbability in the conjecture that motives of the same sort may have led the ecclesiastical authorities to assimilate the Easter festival of the death and resurrection of their Lord to the festival of the death and resurrection of another Asiatic god which fell at the same season. Now the Easter rites still observed in Greece, Sicily, and Southern Italy bear in some respects a striking resemblance to the rites of Adonis, and I have suggested that the Church may have consciously adapted the new festival to its heathen predecessor for the sake of winning souls to Christ. But this adaptation probably took place in the Greek-speaking rather than in the Latin-speaking parts of the ancient world; for the worship of Adonis, while it flourished among the Greeks, appears to have made little impression on Rome and the West. Certainly it never formed part of the official Roman religion. The place which it might have taken in the affections of the vulgar was already occupied by the similar but more barbarous worship of Attis and the Great Mother. Now the death and resurrection of Attis were officially celebrated at Rome on the twenty-fourth and twenty-fifth of March, the latter being regarded as the spring equinox, and therefore as the most appropriate day for the revival of a god of vegetation who had been dead or sleeping throughout the winter. But according to an ancient and widespread tradition Christ suffered on the twenty-fifth of March, and accordingly some Christians regularly celebrated the Crucifixion on that day without any regard to the state of the moon. This custom was certainly observed in Phrygia, Cappadocia, and Gaul, and there seem to be grounds for thinking that at one time it was followed also in Rome. Thus the tradition which placed the death of Christ on the twenty-fifth of March was ancient and deeply rooted. It is all the more remarkable because astronomical considerations prove that it can have had no historical foundation. The inference appears to be inevitable that the passion of Christ must have been arbitrarily referred to that date in order to harmonize with an older festival of the spring equinox. This is the view of the learned ecclesiastical historian Mgr. Duchesne, who points out that the death of the Saviour was thus made to fall upon the very day on which, according to a widespread belief, the world had been created. But the resurrection of Attis, who combined in himself the characters of the divine Father and the divine Son, was officially celebrated at Rome on the same day. When we remember that the festival of St. George in April has replaced the ancient pagan festival of the Parilia; that the festival of St. John the Baptist in June has succeeded to a heathen Midsummer festival of water; that the festival of the Assumption of the Virgin in August has ousted the festival of Diana; that the feast of All Souls in November is a continuation of an old heathen feast of the dead; and that the Nativity of Christ himself was assigned to the winter solstice in December because that day was deemed the Nativity of the Sun; we can hardly be thought rash or

unreasonable in conjecturing that the other cardinal festival of the Christian church—the solemnization of Easter—may have been in like manner, and from like motives of edification, adapted to a similar celebration of the Phrygian god Attis at the vernal equinox.

At least it is a remarkable coincidence, if it is nothing more, that the Christian and the heathen festivals of the divine death and resurrection should have been solemnized at the same season and in the same places. For the places which celebrated the death of Christ at the spring equinox were Phrygia, Gaul, and apparently Rome, that is, the very regions in which the worship of Attis either originated or struck deepest root. It is difficult to regard the coincidence as purely accidental. If the vernal equinox, the season at which in the temperate regions the whole face of nature testifies to a fresh outburst of vital energy, had been viewed from of old as the time when the world was annually created afresh in the resurrection of a god, nothing could be more natural than to place the resurrection of the new deity at the same cardinal point of the year. Only it is to be observed that if the death of Christ was dated on the twenty-fifth of March, his resurrection, according to Christian tradition, must have happened on the twenty-seventh of March, which is just two days later than the vernal equinox of the Julian calendar and the resurrection of Attis. A similar displacement of two days in the adjustment of Christian to heathen celebrations occurs in the festivals of St. George and the Assumption of the Virgin. However, another Christian tradition, followed by Lactantius and perhaps by the practice of the Church in Gaul, placed the death of Christ on the twenty-third and his resurrection on the twenty-fifth of March. If that was so, his resurrection coincided exactly with the resurrection of Attis.

In point of fact it appears from the testimony of an anonymous Christian, who wrote in the fourth century of our era, that Christians and pagans alike were struck by the remarkable coincidence between the death and resurrection of their respective deities, and that the coincidence formed a theme of bitter controversy between the adherents of the rival religions, the pagans contending that the resurrection of Christ was a spurious imitation of the resurrection of Attis, and the Christians asserting with equal warmth that the resurrection of Attis was a diabolical counterfeit of the resurrection of Christ. In these unseemly bickerings the heathen took what to a superficial observer might seem strong ground by arguing that their god was the older and therefore presumably the original, not the counterfeit, since as a general rule an original is older than its copy. This feeble argument the Christians easily rebutted. They admitted, indeed, that in point of time Christ was the junior deity, but they triumphantly demonstrated his real seniority by falling back on the subtlety of Satan, who on so important an occasion had surpassed himself by inverting the usual order of nature.

Taken altogether, the coincidences of the Christian with the heathen festivals are too close and too numerous to be accidental. They mark the compromise which the Church in the hour of its triumph was compelled to make with its vanquished yet still dangerous rivals. The inflexible Protestantism of the primitive missionaries, with their fiery denunciations of heathendom, had been exchanged for the supple policy, the easy tolerance, the comprehensive charity of shrewd ecclesiastics, who clearly perceived that if Christianity was to conquer the world it could do so only by relaxing the too rigid principles of its Founder, by widening a little the narrow gate which leads to salvation. In this respect an instructive parallel might be drawn between the history of Christianity and the history of Buddhism. Both systems were in their origin essentially ethical reforms born of the generous ardour, the lofty aspirations, the tender compassion of their noble Founders, two of those beautiful spirits who appear at rare intervals on earth like beings come from a better world to support and guide our weak and erring nature. Both preached moral virtue as the means of accomplishing what they regarded as the supreme object of life, the eternal salvation of the individual soul, though by a curious antithesis the one sought that salvation in a blissful

eternity, the other in a final release from suffering, in annihilation. But the austere ideals of sanctity which they inculcated were too deeply opposed not only to the frailties but to the natural instincts of humanity ever to be carried out in practice by more than a small number of disciples, who consistently renounced the ties of the family and the state in order to work out their own salvation in the still seclusion of the cloister. If such faiths were to be nominally accepted by whole nations or even by the world, it was essential that they should first be modified or transformed so as to accord in some measure with the prejudices, the passions, the superstitions of the vulgar. This process of accommodation was carried out in after ages by followers who, made of less ethereal stuff than their masters, were for that reason the better fitted to mediate between them and the common herd. Thus as time went on, the two religions, in exact proportion to their growing popularity, absorbed more and more of those baser elements which they had been instituted for the very purpose of suppressing. Such spiritual decadences are inevitable. The world cannot live at the level of its great men. Yet it would be unfair to the generality of our kind to ascribe wholly to their intellectual and moral weakness the gradual divergence of Buddhism and Christianity from their primitive patterns. For it should never be forgotten that by their glorification of poverty and celibacy both these religions struck straight at the root not merely of civil society but of human existence. The blow was parried by the wisdom or the folly of the vast majority of mankind, who refused to purchase a chance of saving their souls with the certainty of extinguishing the species.

VII. Hyacinth

Another mythical being who has been supposed to belong to the class of gods here discussed is Hyacinth. He too has been interpreted as the vegetation which blooms in spring and withers under the scorching heat of the summer sun. Though he belongs to Greek, not to Oriental mythology, some account of him may not be out of place in the present discussion.

According to the legend, Hyacinth was the youngest and handsomest son of the ancient king Amyclas, who had his capital at Amyclae in the beautiful vale of Sparta. One day playing at quoits with Apollo, he was accidentally killed by a blow of the god's quoit. Bitterly the god lamented the death of his friend. The hyacinth—"that sanguine flower inscribed with woe"—sprang from the blood of the hapless youth, as anemones and roses from the blood of Adonis, and violets from the blood of Attis: like these vernal flowers it heralded the advent of another spring and gladdened the hearts of men with the promise of a joyful resurrection. The flower is usually supposed to be not what we call a hyacinth, but a little purple iris with the letters of lamentation (AI, which in Greek means "alas") clearly inscribed in black on its petals. In Greece it blooms in spring after the early violets but before the roses. One spring, when the hyacinths were in bloom, it happened that the red-coated Spartan regiments lay encamped under the walls of Corinth. Their commander gave the Amyclean battalion leave to go home and celebrate as usual the festival of Hyacinth in their native town. But the sad flower was to be to these men an omen of death; for they had not gone far before they were enveloped by clouds of light-armed foes and cut to pieces.

The tomb of Hyacinth was at Amyclae under a massive altar-like pedestal, which supported an archaic bronze image of Apollo. In the left side of the pedestal was a bronze door, and through it offerings were passed to Hyacinth, as to a hero or a dead man, not as to a god, before sacrifices were offered to Apollo at the annual Hyacinthian festival. Bas-reliefs carved on the pedestal represented Hyacinth and his maiden sister Polyboea caught up to heaven by a company of goddesses. The annual festival of the Hyacinthia was held in the month of Hecatombeus, which seems to have corresponded to May. The ceremonies occupied three days. On the first the people mourned for Hyacinth, wearing no wreaths, singing no paeans, eating no bread, and behaving with great gravity. It was on this day probably that the offerings were made at Hyacinth's tomb. Next day the scene was changed. All was joy and bustle. The capital was emptied of its inhabitants, who poured out in their thousands to witness and share the festivities at Amyclae. Boys in high-girt tunics sang hymns in honour of the god to the accompaniment of flutes and lyres. Others, splendidly attired, paraded on horseback in the theatre: choirs of youths chanted their native ditties: dancers danced: maidens rode in wicker carriages or went in procession to witness the chariot races: sacrifices were offered in profusion: the citizens feasted their friends and even their slaves. This outburst of gaiety may be supposed to have celebrated the resurrection of Hyacinth and perhaps also his ascension to heaven, which, as we have seen, was represented on his tomb. However, it may be that the ascension took place on the third day of the festival; but as to that we know nothing. The sister who went to heaven with him was by some identified with Artemis or Persephone.

It is highly probable, as Erwin Rohde perceived, that Hyacinth was an old aboriginal deity of the underworld who had been worshipped at Amyclae long before the Dorians invaded and conquered the country. If that was so, the story of his relation to Apollo must have been a comparatively late invention, an attempt of the newcomers to fit the ancient god of the land into their own mythical system, in order that he might extend his protection to them. On this

theory it may not be without significance that sacrifices at the festival were offered to Hyacinth, as to a hero, before they were offered to Apollo. Further, on the analogy of similar deities elsewhere, we should expect to find Hyacinth coupled, not with a male friend, but with a female consort. That consort may perhaps be detected in his sister Polyboea, who ascended to heaven with him. The new myth, if new it was, of the love of Apollo for Hyacinth would involve a changed conception of the aboriginal god, which in its turn must have affected that of his spouse. For when Hyacinth came to be thought of as young and unmarried there was no longer room in his story for a wife, and she would have to be disposed of in some other way. What was easier for the myth-maker than to turn her into his unmarried sister? However we may explain it, a change seems certainly to have come over the popular idea of Hyacinth; for whereas on his tomb he was portrayed as a bearded man, later art represented him as the pink of youthful beauty. But it is perhaps needless to suppose that the sisterly relation of Polyboea to him was a late modification of the myth. The stories of Cronus and Rhea, of Zeus and Hera, of Osiris and Isis, remind us that in old days gods, like kings, often married their sisters, and probably for the same reason, namely, to ensure their own title to the throne under a rule of female kinship which treated women and not men as the channel in which the blood royal flowed. It is not impossible that Hyacinth may have been a divine king who actually reigned in his lifetime at Amyclae and was afterwards worshipped at his tomb. The representation of his triumphal ascent to heaven in company with his sister suggests that, like Adonis and Persephone, he may have been supposed to spend one part of the year in the under-world of darkness and death, and another part in the upper-world of light and life. And as the anemones and the sprouting corn marked the return of Adonis and Persephone, so the flowers to which he gave his name may have heralded the ascension of Hyacinth.

Book Third. Osiris

I. The Myth Of Osiris

In ancient Egypt the god whose death and resurrection were annually celebrated with alternate sorrow and joy was Osiris, the most popular of all Egyptian deities; and there are good grounds for classing him in one of his aspects with Adonis and Attis as a personification of the great yearly vicissitudes of nature, especially of the corn. But the immense vogue which he enjoyed for many ages induced his devoted worshippers to heap upon him the attributes and powers of many other gods; so that it is not always easy to strip him, so to say, of his borrowed plumes and to restore them to their proper owners. In the following pages I do not pretend to enumerate and analyse all the alien elements which thus gathered round the popular deity. All that I shall attempt to do is to peel off these accretions and to exhibit the god, as far as possible, in his primitive simplicity. The discoveries of recent years in Egypt enable us to do so with more confidence now than when I first addressed myself to the problem many years ago.

The story of Osiris is told in a connected form only by Plutarch, whose narrative has been confirmed and to some extent amplified in modern times by the evidence of the monuments. Of the monuments which illustrate the myth or legend of Osiris the oldest are a long series of hymns, prayers, incantations, and liturgies, which have been found engraved in hieroglyphics on the walls, passages, and galleries of five pyramids at Sakkara. From the place where they were discovered these ancient religious records are known as the Pyramid Texts. They date from the fifth and sixth dynasties, and the period of time during which they were carved on the pyramids is believed to have been roughly a hundred and fifty years from about the year 2625 b.c. onward. But from their contents it appears that many of these documents were drawn up much earlier; for in some of them there are references to works which have perished, and in others there are political allusions which seem to show that the passages containing them must have been composed at a time when the Northern and Southern Kingdoms were still independent and hostile states and had not yet coalesced into a single realm under the sway of one powerful monarch. As the union of the kingdoms appears to have taken place about three thousand four hundred years before our era, the whole period covered by the composition of the Pyramid Texts probably did not fall short of a thousand years. Thus the documents form the oldest body of religious literature surviving to us from the ancient world, and occupy a place in the history of Egyptian language and civilization like that which the Vedic hymns and incantations occupy in the history of Aryan speech and culture.

The special purpose for which these texts were engraved on the pyramids was to ensure the eternal life and felicity of the dead kings who slept beneath these colossal monuments. Hence the dominant note that sounds through them all is an insistent, a passionate protest against the reality of death: indeed the word death never occurs in the Pyramid Texts except to be scornfully denied or to be applied to an enemy. Again and again the indomitable assurance is repeated that the dead man did not die but lives. "King Teti has not died the death, he has become a glorious one in the horizon." "Ho! King Unis! Thou didst not depart dead, thou didst depart living." "Thou hast departed that thou mightest live, thou hast not departed that thou mightest die." "Thou diest not." "This King Pepi dies not." "Have ye said that he would die? He dies not; this King Pepi lives for ever." "Live! Thou shalt not die." "Thou livest, thou livest, raise thee up." "Thou diest not, stand up, raise thee up." "O lofty one among the Imperishable Stars, thou perishest not eternally." Thus for Egyptian kings death was swallowed up in victory; and through their tears Egyptian mourners might ask, like Christian

mourners thousands of years afterwards, "O death, where is thy sting? O grave, where is thy victory?"

Now it is significant that in these ancient documents, though the myth or legend of Osiris is not set forth at length, it is often alluded to as if it were a matter of common knowledge. Hence we may legitimately infer the great antiquity of the Osirian tradition in Egypt. Indeed so numerous are the allusions to it in the Pyramid Texts that by their help we could reconstruct the story in its main outlines even without the narrative of Plutarch. Thus the discovery of these texts has confirmed our belief in the accuracy and fidelity of the Greek writer, and we may accept his account with confidence even when it records incidents or details which have not yet been verified by a comparison with original Egyptian sources. The tragic tale runs thus:

Osiris was the offspring of an intrigue between the earth-god Seb (Keb or Geb, as the name is sometimes transliterated) and the sky-goddess Nut. The Greeks identified his parents with their own deities Cronus and Rhea. When the sun-god Ra perceived that his wife Nut had been unfaithful to him, he declared with a curse that she should be delivered of the child in no month and no year. But the goddess had another lover, the god Thoth or Hermes, as the Greeks called him, and he playing at draughts with the moon won from her a seventy-second part of every day, and having compounded five whole days out of these parts he added them to the Egyptian year of three hundred and sixty days. This was the mythical origin of the five supplementary days which the Egyptians annually inserted at the end of every year in order to establish a harmony between lunar and solar time. On these five days, regarded as outside the year of twelve months, the curse of the sun-god did not rest, and accordingly Osiris was born on the first of them. At his nativity a voice rang out proclaiming that the Lord of All had come into the world. Some say that a certain Pamylen heard a voice from the temple at Thebes bidding him announce with a shout that a great king, the beneficent Osiris, was born. But Osiris was not the only child of his mother. On the second of the supplementary days she gave birth to the elder Horus, on the third to the god Set, whom the Greeks called Typhon, on the fourth to the goddess Isis, and on the fifth to the goddess Nephthys. Afterwards Set married his sister Nephthys, and Osiris married his sister Isis.

Reigning as a king on earth, Osiris reclaimed the Egyptians from savagery, gave them laws, and taught them to worship the gods. Before his time the Egyptians had been cannibals. But Isis, the sister and wife of Osiris, discovered wheat and barley growing wild, and Osiris introduced the cultivation of these grains amongst his people, who forthwith abandoned cannibalism and took kindly to a corn diet. Moreover, Osiris is said to have been the first to gather fruit from trees, to train the vine to poles, and to tread the grapes. Eager to communicate these beneficent discoveries to all mankind, he committed the whole government of Egypt to his wife Isis, and travelled over the world, diffusing the blessings of civilization and agriculture wherever he went. In countries where a harsh climate or niggardly soil forbade the cultivation of the vine, he taught the inhabitants to console themselves for the want of wine by brewing beer from barley. Loaded with the wealth that had been showered upon him by grateful nations, he returned to Egypt, and on account of the benefits he had conferred on mankind he was unanimously hailed and worshipped as a deity. But his brother Set (whom the Greeks called Typhon) with seventy-two others plotted against him. Having taken the measure of his good brother's body by stealth, the bad brother Typhon fashioned and highly decorated a coffer of the same size, and once when they were all drinking and making merry he brought in the coffer and jestingly promised to give it to the one whom it should fit exactly. Well, they all tried one after the other, but it fitted none of them. Last of all Osiris stepped into it and lay down. On that the conspirators ran and slammed the lid down on him, nailed it fast, soldered it with molten lead, and flung the coffer into the Nile. This

happened on the seventeenth day of the month Athyr, when the sun is in the sign of the Scorpion, and in the eight-and-twentieth year of the reign or the life of Osiris. When Isis heard of it she sheared off a lock of her hair, put on mourning attire, and wandered disconsolately up and down, seeking the body.

By the advice of the god of wisdom she took refuge in the papyrus swamps of the Delta. Seven scorpions accompanied her in her flight. One evening when she was weary she came to the house of a woman, who, alarmed at the sight of the scorpions, shut the door in her face. Then one of the scorpions crept under the door and stung the child of the woman that he died. But when Isis heard the mother's lamentation, her heart was touched, and she laid her hands on the child and uttered her powerful spells; so the poison was driven out of the child and he lived. Afterwards Isis herself gave birth to a son in the swamps. She had conceived him while she fluttered in the form of a hawk over the corpse of her dead husband. The infant was the younger Horus, who in his youth bore the name of Harpocrates, that is, the child Horus. Him Buto, the goddess of the north, hid from the wrath of his wicked uncle Set. Yet she could not guard him from all mishap; for one day when Isis came to her little son's hiding-place she found him stretched lifeless and rigid on the ground: a scorpion had stung him. Then Isis prayed to the sun-god Ra for help. The god hearkened to her and staid his bark in the sky, and sent down Thoth to teach her the spell by which she might restore her son to life. She uttered the words of power, and straightway the poison flowed from the body of Horus, air passed into him, and he lived. Then Thoth ascended up into the sky and took his place once more in the bark of the sun, and the bright pomp passed onward jubilant.

Meantime the coffer containing the body of Osiris had floated down the river and away out to sea, till at last it drifted ashore at Byblus, on the coast of Syria. Here a fine *erica*-tree shot up suddenly and enclosed the chest in its trunk. The king of the country, admiring the growth of the tree, had it cut down and made into a pillar of his house; but he did not know that the coffer with the dead Osiris was in it. Word of this came to Isis and she journeyed to Byblus, and sat down by the well, in humble guise, her face wet with tears. To none would she speak till the king's handmaidens came, and then she greeted kindly, and braided their hair, and breathed on them from her own divine body a wondrous perfume. But when the queen beheld the braids of her handmaidens' hair and smelt the sweet smell that emanated from them, she sent for the stranger woman and took her into her house and made her the nurse of her child. But Isis gave the babe her finger instead of her breast to suck, and at night she began to burn all that was mortal of him away, while she herself in the likeness of a swallow fluttered round the pillar that contained her dead brother, twittering mournfully. But the queen spied what she was doing and shrieked out when she saw her child in flames, and thereby she hindered him from becoming immortal. Then the goddess revealed herself and begged for the pillar of the roof, and they gave it her, and she cut the coffer out of it, and fell upon it and embraced it and lamented so loud that the younger of the king's children died of fright on the spot. But the trunk of the tree she wrapped in fine linen, and poured ointment on it, and gave it to the king and queen, and the wood stands in a temple of Isis and is worshipped by the people of Byblus to this day. And Isis put the coffer in a boat and took the eldest of the king's children with her and sailed away. As soon as they were alone, she opened the chest, and laying her face on the face of her brother she kissed him and wept. But the child came behind her softly and saw what she was about, and she turned and looked at him in anger, and the child could not bear her look and died; but some say that it was not so, but that he fell into the sea and was drowned. It is he whom the Egyptians sing of at their banquets under the name of Maneros. But Isis put the coffer by and went to see her son Horus at the city of Buto, and Typhon found the coffer as he was hunting a boar one night by the light of a full moon. And he knew the body, and rent it into fourteen pieces, and scattered them abroad. But Isis sailed up and

down the marshes in a shallop made of papyrus, looking for the pieces; and that is why when people sail in shallows made of papyrus, the crocodiles do not hurt them, for they fear or respect the goddess. And that is the reason, too, why there are many graves of Osiris in Egypt, for she buried each limb as she found it. But others will have it that she buried an image of him in every city, pretending it was his body, in order that Osiris might be worshipped in many places, and that if Typhon searched for the real grave he might not be able to find it. However, the genital member of Osiris had been eaten by the fishes, so Isis made an image of it instead, and the image is used by the Egyptians at their festivals to this day. "Isis," writes the historian Diodorus Siculus, "recovered all the parts of the body except the genitals; and because she wished that her husband's grave should be unknown and honoured by all who dwell in the land of Egypt, she resorted to the following device. She moulded human images out of wax and spices, corresponding to the stature of Osiris, round each one of the parts of his body. Then she called in the priests according to their families and took an oath of them all that they would reveal to no man the trust she was about to repose in them. So to each of them privately she said that to them alone she entrusted the burial of the body, and reminding them of the benefits they had received she exhorted them to bury the body in their own land and to honour Osiris as a god. She also besought them to dedicate one of the animals of their country, whichever they chose, and to honour it in life as they had formerly honoured Osiris, and when it died to grant it obsequies like his. And because she would encourage the priests in their own interest to bestow the aforesaid honours, she gave them a third part of the land to be used by them in the service and worship of the gods. Accordingly it is said that the priests, mindful of the benefits of Osiris, desirous of gratifying the queen, and moved by the prospect of gain, carried out all the injunctions of Isis. Wherefore to this day each of the priests imagines that Osiris is buried in his country, and they honour the beasts that were consecrated in the beginning, and when the animals die the priests renew at their burial the mourning for Osiris. But the sacred bulls, the one called Apis and the other Mnevis, were dedicated to Osiris, and it was ordained that they should be worshipped as gods in common by all the Egyptians; since these animals above all others had helped the discoverers of corn in sowing the seed and procuring the universal benefits of agriculture."

Such is the myth or legend of Osiris, as told by Greek writers and eked out by more or less fragmentary notices or allusions in native Egyptian literature. A long inscription in the temple at Denderah has preserved a list of the god's graves, and other texts mention the parts of his body which were treasured as holy relics in each of the sanctuaries. Thus his heart was at Athribis, his backbone at Busiris, his neck at Letopolis, and his head at Memphis. As often happens in such cases, some of his divine limbs were miraculously multiplied. His head, for example, was at Abydos as well as at Memphis, and his legs, which were remarkably numerous, would have sufficed for several ordinary mortals. In this respect, however, Osiris was nothing to St. Denys, of whom no less than seven heads, all equally genuine, are extant.

According to native Egyptian accounts, which supplement that of Plutarch, when Isis had found the corpse of her husband Osiris, she and her sister Nephthys sat down beside it and uttered a lament which in after ages became the type of all Egyptian lamentations for the dead. "Come to thy house," they wailed, "Come to thy house. O god On! come to thy house, thou who hast no foes. O fair youth, come to thy house, that thou mayest see me. I am thy sister, whom thou lovest; thou shalt not part from me. O fair boy, come to thy house.... I see thee not, yet doth my heart yearn after thee and mine eyes desire thee. Come to her who loves thee, who loves thee, Unnefer, thou blessed one! Come to thy sister, come to thy wife, to thy wife, thou whose heart stands still. Come to thy housewife. I am thy sister by the same mother, thou shalt not be far from me. Gods and men have turned their faces towards thee

and weep for thee together.... I call after thee and weep, so that my cry is heard to heaven, but thou hearest not my voice; yet am I thy sister, whom thou didst love on earth; thou didst love none but me, my brother! my brother!" This lament for the fair youth cut off in his prime reminds us of the laments for Adonis. The title of Unnefer or "the Good Being" bestowed on him marks the beneficence which tradition universally ascribed to Osiris; it was at once his commonest title and one of his names as king.

The lamentations of the two sad sisters were not in vain. In pity for her sorrow the sun-god Ra sent down from heaven the jackal-headed god Anubis, who, with the aid of Isis and Nephthys, of Thoth and Horus, pieced together the broken body of the murdered god, swathed it in linen bandages, and observed all the other rites which the Egyptians were wont to perform over the bodies of the departed. Then Isis fanned the cold clay with her wings: Osiris revived, and thenceforth reigned as king over the dead in the other world. There he bore the titles of Lord of the Underworld, Lord of Eternity, Ruler of the Dead. There, too, in the great Hall of the Two Truths, assisted by forty-two assessors, one from each of the principal districts of Egypt, he presided as judge at the trial of the souls of the departed, who made their solemn confession before him, and, their heart having been weighed in the balance of justice, received the reward of virtue in a life eternal or the appropriate punishment of their sins. The confession or rather profession which the *Book of the Dead* puts in the mouth of the deceased at the judgment-bar of Osiris sets the morality of the ancient Egyptians in a very favourable light. In rendering an account of his life the deceased solemnly protested that he had not oppressed his fellow-men, that he had made none to weep, that he had done no murder, neither committed fornication nor borne false witness, that he had not falsified the balance, that he had not taken the milk from the mouths of babes, that he had given bread to the hungry and water to the thirsty, and had clothed the naked. In harmony with these professions are the epitaphs on Egyptian graves, which reveal, if not the moral practice, at least the moral ideals of those who slept beneath them. Thus, for example, a man says in his epitaph: "I gave bread to the hungry and clothes to the naked, and ferried across in my own boat him who could not pass the water. I was a father to the orphan, a husband to the widow, a shelter from the wind to them that were cold. I am one that spake good and told good. I earned my substance in righteousness." Those who had done thus in their mortal life and had been acquitted at the Great Assize, were believed to dwell thenceforth at ease in a land where the corn grew higher than on earth, where harvests never failed, where trees were always green, and wives for ever young and fair.

We are not clearly informed as to the fate which the Egyptians supposed to befall the wicked after death. In the scenes which represent the Last Judgment there is seen crouching beside the scales, in which the heart of the dead is being weighed, a monstrous animal known as the "Eater of the Dead." It has the head of a crocodile, the trunk of a lion, and the hinder parts of a hippopotamus. Some think that the souls of those whose hearts had been weighed in the balance and found wanting were delivered over to this grim monster to be devoured; but this view appears to be conjectural. "Generally the animal seems to have been placed there simply as guardian of the entrance to the Fields of the Blessed, but sometimes it is likened to Set. Elsewhere it is said that the judges of the dead slay the wicked and drink their blood. In brief, here also we have conflicting statements, and can only gather that there seems to have been no general agreement among the dwellers in the Valley of the Nile as to the ultimate lot of the wicked."

In the resurrection of Osiris the Egyptians saw the pledge of a life everlasting for themselves beyond the grave. They believed that every man would live eternally in the other world if only his surviving friends did for his body what the gods had done for the body of Osiris. Hence the ceremonies observed by the Egyptians over the human dead were an exact copy of

those which Anubis, Horus, and the rest had performed over the dead god. "At every burial there was enacted a representation of the divine mystery which had been performed of old over Osiris, when his son, his sisters, his friends were gathered round his mangled remains and succeeded by their spells and manipulations in converting his broken body into the first mummy, which they afterwards reanimated and furnished with the means of entering on a new individual life beyond the grave. The mummy of the deceased was Osiris; the professional female mourners were his two sisters Isis and Nephthys; Anubis, Horus, all the gods of the Osirian legend gathered about the corpse." In this solemn drama of death and resurrection the principal part was played by the celebrant, who represented Horus the son of the dead and resuscitated Osiris. He formally opened the eyes and mouth of the dead man by rubbing or pretending to rub them four times with the bleeding heart and thigh of a sacrificed bull; after which a pretence was made of actually opening the mouth of the mummy or of the statue with certain instruments specially reserved for the purpose. Geese and gazelles were also sacrificed by being decapitated; they were supposed to represent the enemies of Osiris, who after the murder of the divine man had sought to evade the righteous punishment of their crime but had been detected and beheaded.

Thus every dead Egyptian was identified with Osiris and bore his name. From the Middle Kingdom onwards it was the regular practice to address the deceased as "Osiris So-and-So," as if he were the god himself, and to add the standing epithet "true of speech," because true speech was characteristic of Osiris. The thousands of inscribed and pictured tombs that have been opened in the valley of the Nile prove that the mystery of the resurrection was performed for the benefit of every dead Egyptian; as Osiris died and rose again from the dead, so all men hoped to arise like him from death to life eternal. In an Egyptian text it is said of the departed that "as surely as Osiris lives, so shall he live also; as surely as Osiris did not die, so shall he not die; as surely as Osiris is not annihilated, so shall he too not be annihilated." The dead man, conceived to be lying, like Osiris, with mangled body, was comforted by being told that the heavenly goddess Nut, the mother of Osiris, was coming to gather up his poor scattered limbs and mould them with her own hands into a form immortal and divine. "She gives thee thy head, she brings thee thy bones, she sets thy limbs together and puts thy heart in thy body." Thus the resurrection of the dead was conceived, like that of Osiris, not merely as spiritual but also as bodily. "They possess their heart, they possess their senses, they possess their mouth, they possess their feet, they possess their arms, they possess all their limbs."

If we may trust Egyptian legend, the trials and contests of the royal house did not cease with the restoration of Osiris to life and his elevation to the rank of presiding deity in the world of the dead. When Horus the younger, the son of Osiris and Isis, was grown to man's estate, the ghost of his royal and murdered father appeared to him and urged him, like another Hamlet, to avenge the foul unnatural murder upon his wicked uncle. Thus encouraged, the youth attacked the miscreant. The combat was terrific and lasted many days. Horus lost an eye in the conflict and Set suffered a still more serious mutilation. At last Thoth parted the combatants and healed their wounds; the eye of Horus he restored by spitting on it. According to one account the great battle was fought on the twenty-sixth day of the month of Thoth. Foiled in open war, the artful uncle now took the law of his virtuous nephew. He brought a suit of bastardy against Horus, hoping thus to rob him of his inheritance and to get possession of it himself; nay, not content with having murdered his good brother, the unnatural Set carried his rancour even beyond the grave by accusing the dead Osiris of certain high crimes and misdemeanours. The case was tried before the supreme court of the gods in the great hall at Heliopolis. Thoth, the god of wisdom, pleaded the cause of Osiris, and the august judges decided that "the word of Osiris was true." Moreover, they pronounced

Horus to be the true-begotten son of his father. So that prince assumed the crown and mounted the throne of the lamented Osiris. However, according to another and perhaps later version of the story, the victory of Horus over his uncle was by no means so decisive, and their struggles ended in a compromise, by which Horus reigned over the Delta, while Set became king of the upper valley of the Nile from near Memphis to the first cataract. Be that as it may, with the accession of Horus began for the Egyptians the modern period of the world, for on his throne all the kings of Egypt sat as his successors.

These legends of a contest for the throne of Egypt may perhaps contain a reminiscence of real dynastical struggles which attended an attempt to change the right of succession from the female to the male line. For under a rule of female kinship the heir to the throne is either the late king's brother, or the son of the late king's sister, while under a rule of male kinship the heir to the throne is the late king's son. In the legend of Osiris the rival heirs are Set and Horus, Set being the late king's brother, and Horus the late king's son; though Horus indeed united both claims to the crown, being the son of the king's sister as well as of the king. A similar attempt to shift the line of succession seems to have given rise to similar contests at Rome.

Thus according to what seems to have been the general native tradition Osiris was a good and beloved king of Egypt, who suffered a violent death but rose from the dead and was henceforth worshipped as a deity. In harmony with this tradition he was regularly represented by sculptors and painters in human and regal form as a dead king, swathed in the wrappings of a mummy, but wearing on his head a kingly crown and grasping in one of his hands, which were left free from the bandages, a kingly sceptre. Two cities above all others were associated with his myth or memory. One of them was Busiris in Lower Egypt, which claimed to possess his backbone; the other was Abydos in Upper Egypt, which gloried in the possession of his head. Encircled by the nimbus of the dead yet living god, Abydos, originally an obscure place, became from the end of the Old Kingdom the holiest spot in Egypt; his tomb there would seem to have been to the Egyptians what the Church of the Holy Sepulchre at Jerusalem is to Christians. It was the wish of every pious man that his dead body should rest in hallowed earth near the grave of the glorified Osiris. Few indeed were rich enough to enjoy this inestimable privilege; for, apart from the cost of a tomb in the sacred city, the mere transport of mummies from great distances was both difficult and expensive. Yet so eager were many to absorb in death the blessed influence which radiated from the holy sepulchre that they caused their surviving friends to convey their mortal remains to Abydos, there to tarry for a short time, and then to be brought back by river and interred in the tombs which had been made ready for them in their native land. Others had cenotaphs built or memorial tablets erected for themselves near the tomb of their dead and risen Lord, that they might share with him the bliss of a joyful resurrection.

Hence from the earliest ages of Egyptian history Abydos would seem to have been a city of the dead rather than of the living; certainly there is no evidence that the place was ever of any political importance. No less than nine of the most ancient kings of Egypt known to us were buried here, for their tombs have been discovered and explored within recent years. The royal necropolis lies on the edge of the desert about a mile and a half from the temple of Osiris. Of the graves the oldest is that of King Khent, the second or third king of the first dynasty. His reign, which fell somewhere between three thousand four hundred and three thousand two hundred years before our era, seems to have marked an epoch in the history of Egypt, for under him the costume, the figure drawing, and the hieroglyphics all assumed the character which they thenceforth preserved to the very end of Egyptian nationality. Later ages identified him with Osiris in a more intimate sense than that in which the divine title was lavished on every dead king and indeed on every dead man; for his tomb was actually

converted into the tomb of Osiris and as such received in great profusion the offerings of the faithful. Somewhere between the twenty-second and the twenty-sixth dynasty a massive bier of grey granite was placed in the sepulchral chamber. On it, cut in high relief, reposes a shrouded figure of the dead Osiris. He lies at full length, with bare and upturned face. On his head is the White Crown of Upper Egypt; in his hands, which issue from the shroud, he holds the characteristic emblems of the god, the sceptre and the scourge. At the four corners of the bier are perched four hawks, representing the four children of Horus, each with their father's banner, keeping watch over the dead god, as they kept watch over the four quarters of the world. A fifth hawk seems to have been perched on the middle of the body of Osiris, but it had been broken off before the tomb was discovered in recent years, for only the bird's claws remain in position. Finely carved heads of lions, one at each corner of the bier, with the claws to match below, complete the impressive monument. The scene represented is unquestionably the impregnation of Isis in the form of a hawk by the dead Osiris; the Copts who dismantled the shrine appear to have vented their pious rage on the figure of the hawk Isis by carrying it off or smashing it. If any doubt could exist as to the meaning of these sculptured figures, it would be set at rest by the ancient inscriptions attached to them. Over against the right shoulder of the shrouded figure, who lies stretched on the bier, are carved in hieroglyphics the words, "Osiris, the Good Being, true of speech"; and over against the place where the missing hawk perched on the body of the dead god is carved the symbol of Isis. Two relics of the ancient human occupants of the tomb escaped alike the fury of the fanatics and the avarice of the plunderers who pillaged and destroyed it. One of the relics is a human skull, from which the lower jawbone is missing; the other is an arm encircled by gorgeous jewelled bracelets of gold, turquoises, amethysts, and dark purple lapis lazuli. The former may be the head of King Khent himself; the latter is almost certainly the arm of his queen. One of the bracelets is composed of alternate plaques of gold and turquoise, each ornamented with the figure of a hawk perched on the top of it. The hawk was the sacred bird or crest of the earliest dynasties of Egyptian kings. The figure of a hawk was borne before the king as a standard on solemn occasions: the oldest capital of the country known to us was called Hawk-town: there the kings of the first dynasty built a temple to the hawk: there in modern times has been found a splendid golden head of a hawk dating from the Ancient Empire; and on the life-like statue of King Chephren of the third dynasty we see a hawk with out-spread wings protecting the back of the monarch's head. From the earliest to the latest times of Egyptian civilization "the Hawk" was the epithet of the king of Egypt and of the king alone; it took the first place in the list of his titles. The sanctity of the bird may help us to understand why Isis took the form of a hawk in order to mate with her dead husband; why the queen of Egypt wore on her arm a bracelet adorned with golden hawks; and why in the holy sepulchre the four sons of Horus were represented in the likeness of hawks keeping watch over the effigy of their divine grandfather.

The legend recorded by Plutarch which associated the dead Osiris with Byblus in Phoenicia is doubtless late and probably untrustworthy. It may have been suggested by the resemblance which the worship of the Egyptian Osiris bore to the worship of the Phoenician Adonis in that city. But it is possible that the story has no deeper foundation than a verbal misunderstanding. For Byblus is not only the name of a city, it is the Greek word for papyrus; and as Isis is said after the death of Osiris to have taken refuge in the papyrus swamps of the Delta, where she gave birth to and reared her son Horus, a Greek writer may perhaps have confused the plant with the city of the same name. However that may have been, the association of Osiris with Adonis at Byblus gave rise to a curious tale. It is said that every year the people beyond the rivers of Ethiopia used to write a letter to the women of Byblus informing them that the lost and lamented Adonis was found. This letter they enclosed in an earthen pot, which they sealed and sent floating down the river to the sea. The waves carried the pot to Byblus, where

every year it arrived at the time when the Syrian women were weeping for their dead Lord. The pot was taken up from the water and opened: the letter was read; and the weeping women dried their tears, because the lost Adonis was found.

II. The Official Egyptian Calendar

A useful clue to the original nature of a god or goddess is often furnished by the season at which his or her festival is celebrated. Thus, if the festival falls at the new or the full moon, there is a certain presumption that the deity thus honoured either is the moon or at least has lunar affinities. If the festival is held at the winter or summer solstice, we naturally surmise that the god is the sun, or at all events that he stands in some close relation to that luminary. Again, if the festival coincides with the time of sowing or harvest, we are inclined to infer that the divinity is an embodiment of the earth or of the corn. These presumptions or inferences, taken by themselves, are by no means conclusive; but if they happen to be confirmed by other indications, the evidence may be regarded as fairly strong.

Unfortunately, in dealing with the Egyptian gods we are in a great measure precluded from making use of this clue. The reason is not that the dates of the festivals are always unknown, but that they shifted from year to year, until after a long interval they had revolved through the whole course of the seasons. This gradual revolution of the festal Egyptian cycle resulted from the employment of a calendar year which neither corresponded exactly to the solar year nor was periodically corrected by intercalation. The solar year is equivalent to about three hundred and sixty-five and a quarter days; but the ancient Egyptians, ignoring the quarter of a day, reckoned the year at three hundred and sixty-five days only. Thus each of their calendar years was shorter than the true solar year by about a quarter of a day. In four years the deficiency amounted to one whole day; in forty years it amounted to ten days; in four hundred years it amounted to a hundred days; and so it went on increasing until after a lapse of four times three hundred and sixty-five, or one thousand four hundred and sixty solar years, the deficiency amounted to three hundred and sixty-five days, or a whole Egyptian year. Hence one thousand four hundred and sixty solar years, or their equivalent, one thousand four hundred and sixty-one Egyptian years, formed a period or cycle at the end of which the Egyptian festivals returned to those points of the solar year at which they had been celebrated in the beginning. In the meantime they had been held successively on every day of the solar year, though always on the same day of the calendar.

Thus the official calendar was completely divorced, except at rare and long intervals, from what may be called the natural calendar of the shepherd, the husbandman, and the sailor—that is, from the course of the seasons in which the times for the various labours of cattle-breeding, tillage, and navigation are marked by the position of the sun in the sky, the rising or setting of the stars, the fall of rain, the growth of pasture, the ripening of the corn, the blowing of certain winds, and so forth. Nowhere, perhaps, are the events of this natural calendar better marked or more regular in their recurrence than in Egypt; nowhere accordingly could their divergence from the corresponding dates of the official calendar be more readily observed. The divergence certainly did not escape the notice of the Egyptians themselves, and some of them apparently attempted successfully to correct it. Thus we are told that the Theban priests, who particularly excelled in astronomy, were acquainted with the true length of the solar year, and harmonized the calendar with it by intercalating a day every few, probably every four, years. But this scientific improvement was too deeply opposed to the religious conservatism of the Egyptian nature to win general acceptance. “The Egyptians,” said Geminus, a Greek astronomer writing about 77 b.c., “are of an opposite opinion and purpose from the Greeks. For they neither reckon the years by the sun nor the months and days by the moon, but they observe a peculiar system of their own. They wish, in fact, that the sacrifices should not always be offered to the gods at the same time of the year,

but that they should pass through all the seasons of the year, so that the summer festival should in time be celebrated in winter, in autumn, and in spring. For that purpose they employ a year of three hundred and sixty-five days, composed of twelve months of thirty days each, with five supplementary days added. But they do not add the quarter of a day for the reason I have given—namely, in order that their festivals may revolve.” So attached, indeed, were the Egyptians to their old calendar, that the kings at their consecration were led by the priest of Isis at Memphis into the holy of holies, and there made to swear that they would maintain the year of three hundred and sixty-five days without intercalation.

The practical inconvenience of a calendar which marked true time only once in about fifteen hundred years might be calmly borne by a submissive Oriental race like the ancient Egyptians, but it naturally proved a stumbling-block to the less patient temperament of their European conquerors. Accordingly in the reign of King Ptolemy III. Euergetes a decree was passed that henceforth the movable Egyptian year should be converted into a fixed solar year by the intercalation of one day at the end of every four years, “in order that the seasons may do their duty perpetually according to the present constitution of the world, and that it may not happen, through the shifting of the star by one day in four years, that some of the public festivals which are now held in the winter should ever be celebrated in the summer, and that other festivals now held in the summer should hereafter be celebrated in the winter, as has happened before, and must happen again if the year of three hundred and sixty-five days be retained.” The decree was passed in the year 239 or 238 b.c. by the high priests, scribes, and other dignitaries of the Egyptian church assembled in convocation at Canopus; but we cannot doubt that the measure, though it embodied native Egyptian science, was prompted by the king or his Macedonian advisers. This sage attempt to reform the erratic calendar was not permanently successful. The change may indeed have been carried out during the reign of the king who instituted it, but it was abandoned by the year 196 b.c. at latest, as we learn from the celebrated inscription known as the Rosetta stone, in which a month of the Macedonian calendar is equated to the corresponding month of the movable Egyptian year. And the testimony of Geminus, which I have cited, proves that in the following century the festivals were still revolving in the old style.

The reform which the Macedonian king had vainly attempted to impose upon his people was accomplished by the practical Romans when they took over the administration of the country. The expedient by which they effected the change was a simple one; indeed it was no other than that to which Ptolemy Euergetes had resorted for the same purpose. They merely intercalated one day at the end of every four years, thus equalizing within a small fraction four calendar years to four solar years. Henceforth the official and the natural calendars were in practical agreement. The movable Egyptian year had been converted into the fixed Alexandrian year, as it was called, which agreed with the Julian year in length and in its system of intercalation, though it differed from that year in retaining the twelve equal Egyptian months and five supplementary days. But while the new calendar received the sanction of law and regulated the business of government, the ancient calendar was too firmly established in popular usage to be at once displaced. Accordingly it survived for ages side by side with its modern rival. The spread of Christianity, which required a fixed year for the due observance of its festivals, did much to promote the adoption of the new Alexandrian style, and by the beginning of the fifth century the ancient movable year of Egypt appears to have been not only dead but forgotten.

III. The Calendar of the Egyptian Farmer

§ 1. The Rise and Fall of the Nile.

If the Egyptian farmer of the olden time could thus get no help, except at the rarest intervals, from the official or sacerdotal calendar, he must have been compelled to observe for himself those natural signals which marked the times for the various operations of husbandry. In all ages of which we possess any records the Egyptians have been an agricultural people, dependent for their subsistence on the growth of the corn. The cereals which they cultivated were wheat, barley, and apparently sorghum (*Holcus sorghum*, Linnaeus), the *doora* of the modern fellaheen. Then as now the whole country, with the exception of a fringe on the coast of the Mediterranean, was almost rainless, and owed its immense fertility entirely to the annual inundation of the Nile, which, regulated by an elaborate system of dams and canals, was distributed over the fields, renewing the soil year by year with a fresh deposit of mud washed down from the great equatorial lakes and the mountains of Abyssinia. Hence the rise of the river has always been watched by the inhabitants with the utmost anxiety; for if it either falls short of or exceeds a certain height, dearth and famine are the inevitable consequences. The water begins to rise early in June, but it is not until the latter half of July that it swells to a mighty tide. By the end of September the inundation is at its greatest height. The country is now submerged, and presents the appearance of a sea of turbid water, from which the towns and villages, built on higher ground, rise like islands. For about a month the flood remains nearly stationary, then sinks more and more rapidly, till by December or January the river has returned to its ordinary bed. With the approach of summer the level of the water continues to fall. In the early days of June the Nile is reduced to half its ordinary breadth; and Egypt, scorched by the sun, blasted by the wind that has blown from the Sahara for many days, seems a mere continuation of the desert. The trees are choked with a thick layer of grey dust. A few meagre patches of vegetables, watered with difficulty, struggle painfully for existence in the immediate neighbourhood of the villages. Some appearance of verdure lingers beside the canals and in the hollows from which the moisture has not wholly evaporated. The plain appears to pant in the pitiless sunshine, bare, dusty, ash-coloured, cracked and seamed as far as the eye can see with a network of fissures. From the middle of April till the middle of June the land of Egypt is but half alive, waiting for the new Nile.

For countless ages this cycle of natural events has determined the annual labours of the Egyptian husbandman. The first work of the agricultural year is the cutting of the dams which have hitherto prevented the swollen river from flooding the canals and the fields. This is done, and the pent-up waters released on their beneficent mission, in the first half of August. In November, when the inundation has subsided, wheat, barley, and sorghum are sown. The time of harvest varies with the district, falling about a month later in the north than in the south. In Upper or Southern Egypt barley is reaped at the beginning of March, wheat at the beginning of April, and sorghum about the end of that month.

It is natural to suppose that these various events of the agricultural year were celebrated by the Egyptian farmer with some simple religious rites designed to secure the blessing of the gods upon his labours. These rustic ceremonies he would continue to perform year after year at the same season, while the solemn festivals of the priests continued to shift, with the shifting calendar, from summer through spring to winter, and so backward through autumn to summer. The rites of the husbandman were stable because they rested on direct observation of nature: the rites of the priest were unstable because they were based on a false calculation. Yet many of the priestly festivals may have been nothing but the old rural festivals disguised

in the course of ages by the pomp of sacerdotalism and severed, by the error of the calendar, from their roots in the natural cycle of the seasons.

§ 2. Rites of Irrigation.

These conjectures are confirmed by the little we know both of the popular and of the official Egyptian religion. Thus we are told that the Egyptians held a festival of Isis at the time when the Nile began to rise. They believed that the goddess was then mourning for the lost Osiris, and that the tears which dropped from her eyes swelled the impetuous tide of the river. Hence in Egyptian inscriptions Isis is spoken of as she “who maketh the Nile to swell and overflow, who maketh the Nile to swell in his season.” Similarly the Toradjas of Central Celebes imagine that showers of rain are the tears shed by the compassionate gods in weeping for somebody who is about to die; a shower in the morning is to them an infallible omen of death. However, an uneasy suspicion would seem to have occurred to the Egyptians that perhaps after all the tears of the goddess might not suffice of themselves to raise the water to the proper level; so in the time of Rameses II. the king used on the first day of the flood to throw into the Nile a written order commanding the river to do its duty, and the submissive stream never failed to obey the royal mandate. Yet the ancient belief survives in a modified form to this day. For the Nile, as we saw, begins to rise in June about the time of the summer solstice, and the people still attribute its increased volume to a miraculous drop which falls into the river on the night of the seventeenth of the month. The charms and divinations which they practise on that mystic night in order to ascertain the length of their own life and to rid the houses of bugs may well date from a remote antiquity. Now if Osiris was in one of his aspects a god of the corn, nothing could be more natural than that he should be mourned at midsummer. For by that time the harvest was past, the fields were bare, the river ran low, life seemed to be suspended, the corn-god was dead. At such a moment people who saw the handiwork of divine beings in all the operations of nature might well trace the swelling of the sacred stream to the tears shed by the goddess at the death of the beneficent corn-god her husband.

And the sign of the rising waters on earth was accompanied by a sign in heaven. For in the early days of Egyptian history, some three or four thousand years before the beginning of our era, the splendid star of Sirius, the brightest of all the fixed stars, appeared at dawn in the east just before sunrise about the time of the summer solstice, when the Nile begins to rise. The Egyptians called it Sothis, and regarded it as the star of Isis, just as the Babylonians deemed the planet Venus the star of Astarte. To both peoples apparently the brilliant luminary in the morning sky seemed the goddess of life and love come to mourn her departed lover or spouse and to wake him from the dead. Hence the rising of Sirius marked the beginning of the sacred Egyptian year, and was regularly celebrated by a festival which did not shift with the shifting official year. The first day of the first month Thoth was theoretically supposed to date from the heliacal rising of the bright star, and in all probability it really did so when the official or civil year of three hundred and sixty-five days was first instituted. But the miscalculation which has been already explained had the effect of making the star to shift its place in the calendar by one day in four years. Thus if Sirius rose on the first of Thoth in one year, it would rise on the second of Thoth four years afterwards, on the third of Thoth eight years afterwards, and so on until after the lapse of a Siroic or Sothic period of fourteen hundred and sixty solar years the first of Thoth again coincided with the heliacal rising of Sirius. This observation of the gradual displacement of the star in the calendar has been of the utmost importance for the progress of astronomy, since it led the Egyptians directly to the determination of the approximately true length of the solar year and thus laid the basis of our modern calendar; for the Julian calendar, which we owe to Caesar, was founded on the Egyptian theory, though not on the Egyptian practice. It was therefore a fortunate moment for

the world when some pious Egyptian, thousands of years ago, identified for the first time the bright star of Sirius with his goddess; for the identification induced his countrymen to regard the heavenly body with an attention which they would never have paid to it if they had known it to be nothing but a world vastly greater than our own and separated from it by an inconceivable, if not immeasurable, abyss of space.

The cutting of the dams and the admission of the water into the canals and fields is a great event in the Egyptian year. At Cairo the operation generally takes place between the sixth and the sixteenth of August, and till lately was attended by ceremonies which deserve to be noticed, because they were probably handed down from antiquity. An ancient canal, known by the name of the *Khalij*, formerly passed through the native town of Cairo. Near its entrance the canal was crossed by a dam of earth, very broad at the bottom and diminishing in breadth upwards, which used to be constructed before or soon after the Nile began to rise. In front of the dam, on the side of the river, was reared a truncated cone of earth called the *'arooseh* or "bride," on the top of which a little maize or millet was generally sown. This "bride" was commonly washed down by the rising tide a week or a fortnight before the cutting of the dam. Tradition runs that the old custom was to deck a young virgin in gay apparel and throw her into the river as a sacrifice to obtain a plentiful inundation. Certainly human sacrifices were offered for a similar purpose by the *Wajagga* of German East Africa down to recent years. These people irrigate their fields by means of skilfully constructed channels, through which they conduct the water of the mountain brooks and rivers to the thirsty land. They imagine that the spirits of their forefathers dwell in the rocky basins of these rushing streams, and that they would resent the withdrawal of the water to irrigate the fields if compensation were not offered to them. The water-rate paid to them consisted of a child, uncircumcised and of unblemished body, who was decked with ornaments and bells and thrown into the river to drown, before they ventured to draw off the water into the irrigation channel. Having thrown him in, his executioners shewed a clean pair of heels, because they expected the river to rise in flood at once on receipt of the water-rate. In similar circumstances the *Njamus* of British East Africa sacrifice a sheep before they let the water of the stream flow into the ditch or artificial channel. The fat, dung, and blood of the animal are sprinkled at the mouth of the ditch and in the water; thereupon the dam is broken down and the stream pours into the ditch. The sacrifice may only be offered by a man of the *Il Mayek* clan, and for two days afterwards he wears the skin of the beast tied round his head. No one may quarrel with this man while the water is irrigating the crops, else the people believe that the water would cease to flow in the ditch; more than that, if the men of the *Il Mayek* clan were angry and sulked for ten days, the water would dry up permanently for that season. Hence the *Il Mayek* clan enjoys great consideration in the tribe, since the crops are thought to depend on their good will and good offices. Ten elders assist at the sacrifice of the sheep, though they may take no part in it. They must all be of a particular age; and after the ceremony they may not cohabit with their wives until harvest, and they are obliged to sleep at night in their granaries. Curiously enough, too, while the water is irrigating the fields, nobody may kill waterbuck, eland, oryx, zebra, rhinoceros, or hippopotamus. Anybody caught red-handed in the act of breaking this game-law would at once be cast out of the village.

Whether the "bride" who used to figure at the ceremony of cutting the dam in Cairo was ever a live woman or not, the intention of the practice appears to have been to marry the river, conceived as a male power, to his bride the corn-land, which was soon to be fertilized by his water. The ceremony was therefore a charm to ensure the growth of the crops. As such it probably dated, in one form or another, from ancient times. Dense crowds assembled to witness the cutting of the dam. The operation was performed before sunrise, and many people spent the preceding night on the banks of the canal or in boats lit with lamps on the river,

while fireworks were displayed and guns discharged at frequent intervals. Before sunrise a great number of workmen began to cut the dam, and the task was accomplished about an hour before the sun appeared on the horizon. When only a thin ridge of earth remained, a boat with an officer on board was propelled against it, and breaking through the slight barrier descended with the rush of water into the canal. The Governor of Cairo flung a purse of gold into the boat as it passed. Formerly the custom was to throw money into the canal. The populace used to dive after it, and several lives were generally lost in the scramble. This practice also would seem to have been ancient, for Seneca tells us that at a place called the Veins of the Nile, not far from Philae, the priests used to cast money and offerings of gold into the river at a festival which apparently took place at the rising of the water. At Cairo the time-honoured ceremony came to an end in 1897, when the old canal was filled up. An electric tramway now runs over the spot where for countless ages crowds of worshippers or holiday-makers had annually assembled to witness the marriage of the Nile.

§ 3. Rites of Sowing.

The next great operation of the agricultural year in Egypt is the sowing of the seed in November, when the water of the inundation has retreated from the fields. With the Egyptians, as with many peoples of antiquity, the committing of the seed to the earth assumed the character of a solemn and mournful rite. On this subject I will let Plutarch speak for himself. "What," he asks, "are we to make of the gloomy, joyless, and mournful sacrifices, if it is wrong either to omit the established rites or to confuse and disturb our conceptions of the gods by absurd suspicions? For the Greeks also perform many rites which resemble those of the Egyptians and are observed about the same time. Thus at the festival of the Thesmophoria in Athens women sit on the ground and fast. And the Boeotians open the vaults of the Sorrowful One, naming that festival sorrowful because Demeter is sorrowing for the descent of the Maiden. The month is the month of sowing about the setting of the Pleiades. The Egyptians call it Athyr, the Athenians Pyanepsion, the Boeotians the month of Demeter. Theopompus informs us that the western peoples consider and call the winter Cronus, the summer Aphrodite, and the spring Persephone, and they believe that all things are brought into being by Cronus and Aphrodite. The Phrygians imagine that the god sleeps in winter and wakes in summer, and accordingly they celebrate with Bacchic rites the putting him to bed in winter and his awakening in summer. The Paphlagonians allege that he is bound fast and shut up in winter, but that he stirs and is set free in spring. And the season furnishes a hint that the sadness is for the hiding of those fruits of the earth which the ancients esteemed, not indeed gods, but great and necessary gifts bestowed by the gods in order that men might not lead the life of savages and of wild beasts. For it was that time of year when they saw some of the fruits vanishing and falling from the trees, while they sowed others grudgingly and with difficulty, scraping the earth with their hands and huddling it up again, on the uncertain chance that what they deposited in the ground would ever ripen and come to maturity. Thus they did in many respects like those who bury and mourn their dead. And just as we say that a purchaser of Plato's books purchases Plato, or that an actor who plays the comedies of Menander plays Menander, so the men of old did not hesitate to call the gifts and products of the gods by the names of the gods themselves, thereby honouring and glorifying the things on account of their utility. But in after ages simple folk in their ignorance applied to the gods statements which only held true of the fruits of the earth, and so they came not merely to say but actually to believe that the growth and decay of plants, on which they subsisted, were the birth and the death of gods. Thus they fell into absurd, immoral, and confused ways of thinking, though all the while the absurdity of the fallacy was manifest. Hence Xenophanes of Colophon declared that if the Egyptians deemed their gods divine they should not weep for them, and that if they wept for them they should not deem them

divine. ‘For it is ridiculous,’ said he, ‘to lament and pray that the fruits would be good enough to grow and ripen again in order that they may again be eaten and lamented.’ But he was wrong, for though the lamentations are for the fruits, the prayers are addressed to the gods, as the causes and givers of them, that they would be pleased to make fresh fruits to spring up instead of those that perish.”

In this interesting passage Plutarch expresses his belief that the worship of the fruits of the earth was the result of a verbal misapprehension or disease of language, as it has been called by a modern school of mythologists, who explain the origin of myths in general on the same easy principle of metaphors misunderstood. Primitive man, on Plutarch's theory, firmly believed that the fruits of the earth on which he subsisted were not themselves gods but merely the gifts of the gods, who were the real givers of all good things. Yet at the same time men were in the habit of bestowing on these divine products the names of their divine creators, either out of gratitude or merely for the sake of brevity, as when we say that a man has bought a Shakespeare or acted Molière, when we mean that he has bought the works of Shakespeare or acted the plays of Molière. This abbreviated mode of expression was misunderstood in later times, and so people came to look upon the fruits of the earth as themselves divine instead of as being the work of divinities: in short, they mistook the creature for the creator. In like manner Plutarch would explain the Egyptian worship of animals as reverence done not so much to the beasts themselves as to the great god who displays the divine handiwork in sentient organisms even more than in the most beautiful and wonderful works of inanimate nature.

The comparative study of religion has proved that these theories of Plutarch are an inversion of the truth. Fetishism, or the view that the fruits of the earth and things in general are divine or animated by powerful spirits, is not, as Plutarch imagined, a late corruption of a pure and primitive theism, which regarded the gods as the creators and givers of all good things. On the contrary, fetishism is early and theism is late in the history of mankind. In this respect Xenophanes, whom Plutarch attempts to correct, displayed a much truer insight into the mind of the savage. To weep crocodile tears over the animals and plants which he kills and eats, and to pray them to come again in order that they may be again eaten and again lamented—this may seem absurd to us, but it is precisely what the savage does. And from his point of view the proceeding is not at all absurd but perfectly rational and well calculated to answer his ends. For he sincerely believes that animals and fruits are tenanted by spirits who can harm him if they please, and who cannot but be put to considerable inconvenience by that destruction of their bodies which is unfortunately inseparable from the processes of mastication and digestion. What more natural, therefore, than that the savage should offer excuses to the beasts and the fruits for the painful necessity he is under of consuming them, and that he should endeavour to alleviate their pangs by soft words and an air of respectful sympathy, in order that they may bear him no grudge, and may in due time come again to be again eaten and again lamented? Judged by the standard of primitive manners the attitude of the walrus to the oysters was strictly correct:—

“*‘I weep for you,’ the Walrus said:
‘I deeply sympathize.’
With sobs and tears he sorted out
Those of the largest size,
Holding his pocket-handkerchief
Before his streaming eyes.*”

Many examples of such hypocritical lamentations for animals, drawn not from the fancy of a playful writer but from the facts of savage life, could be cited. Here I shall quote the general

statement of a writer on the Indians of British Columbia, because it covers the case of vegetable as well as of animal food. After describing the respectful welcome accorded by the Stlatlum Indians to the first "sock-eye" salmon which they have caught in the season, he goes on: "The significance of these ceremonies is easy to perceive when we remember the attitude of the Indians towards nature generally, and recall their myths relating to the salmon, and their coming to their rivers and streams. Nothing that the Indian of this region eats is regarded by him as mere food and nothing more. Not a single plant, animal, or fish, or other object upon which he feeds, is looked upon in this light, or as something he has secured for himself by his own wit and skill. He regards it rather as something which has been voluntarily and compassionately placed in his hands by the goodwill and consent of the 'spirit' of the object itself, or by the intercession and magic of his culture-heroes; to be retained and used by him only upon the fulfilment of certain conditions. These conditions include respect and reverent care in the killing or plucking of the animal or plant and proper treatment of the parts he has no use for, such as the bones, blood, and offal; and the depositing of the same in some stream or lake, so that the object may by that means renew its life and physical form. The practices in connection with the killing of animals and the gathering of plants and fruits all make this quite clear, and it is only when we bear this attitude of the savage towards nature in mind that we can hope to rightly understand the motives and purposes of many of his strange customs and beliefs."

We can now understand why among many peoples of antiquity, as Plutarch tells us, the time of sowing was a time of sorrow. The laying of the seed in the earth was a burial of the divine element, and it was fitting that like a human burial it should be performed with gravity and the semblance, if not the reality, of sorrow. Yet they sorrowed not without hope, perhaps a sure and certain hope, that the seed which they thus committed with sighs and tears to the ground would yet rise from the dust and yield fruit a hundredfold to the reaper. "They that sow in tears shall reap in joy. He that goeth forth and weepeth, bearing precious seed, shall doubtless come again with rejoicing, bringing his sheaves with him."

§ 4. Rites of Harvest.

The Egyptian harvest, as we have seen, falls not in autumn but in spring, in the months of March, April, and May. To the husbandman the time of harvest, at least in a good year, must necessarily be a season of joy: in bringing home his sheaves he is requited for his long and anxious labours. Yet if the old Egyptian farmer felt a secret joy at reaping and garnering the grain, it was essential that he should conceal the natural emotion under an air of profound dejection. For was he not severing the body of the corn-god with his sickle and trampling it to pieces under the hoofs of his cattle on the threshing-floor? Accordingly we are told that it was an ancient custom of the Egyptian corn-reapers to beat their breasts and lament over the first sheaf cut, while at the same time they called upon Isis. The invocation seems to have taken the form of a melancholy chant, to which the Greeks gave the name of *Maneros*. Similar plaintive strains were chanted by corn-reapers in Phoenicia and other parts of Western Asia. Probably all these doleful ditties were lamentations for the corn-god killed by the sickles of the reapers. In Egypt the slain deity was Osiris, and the name *Maneros* applied to the dirge appears to be derived from certain words meaning "Come to thy house," which often occur in the lamentations for the dead god.

Ceremonies of the same sort have been observed by other peoples, probably for the same purpose. Thus we are told that among all vegetables corn (*selu*), by which is apparently meant maize, holds the first place in the household economy and the ceremonial observance of the Cherokee Indians, who invoke it under the name of "the Old Woman" in allusion to a myth that it sprang from the blood of an old woman killed by her disobedient sons. "Much

ceremony accompanied the planting and tending of the crop. Seven grains, the sacred number, were put into each hill, and these were not afterwards thinned out. After the last working of the crop, the priest and an assistant—generally the owner of the field—went into the field and built a small enclosure in the centre. Then entering it, they seated themselves upon the ground, with heads bent down, and while the assistant kept perfect silence the priest, with rattle in hand, sang songs of invocation to the spirit of the corn. Soon, according to the orthodox belief, a loud rustling would be heard outside, which they would know was caused by the ‘Old Woman’ bringing the corn into the field, but neither must look up until the song was finished. This ceremony was repeated on four successive nights, after which no one entered the field for seven other nights, when the priest himself went in, and, if all the sacred regulations had been properly observed, was rewarded by finding young ears upon the stalks. The corn ceremonies could be performed by the owner of the field himself, provided he was willing to pay a sufficient fee to the priest in order to learn the songs and ritual. Care was always taken to keep a clean trail from the field to the house, so that the corn might be encouraged to stay at home and not go wandering elsewhere. Most of these customs have now fallen into disuse excepting among the old people, by many of whom they are still religiously observed. Another curious ceremony, of which even the memory is now almost forgotten, was enacted after the first working of the corn, when the owner or priest stood in succession at each of the four corners of the field and wept and wailed loudly. Even the priests are now unable to give a reason for this performance, which may have been a lament for the bloody death of Selu,” the Old Woman of the Corn. In these Cherokee practices the lamentations and the invocations of the Old Woman of the Corn resemble the ancient Egyptian customs of lamenting over the first corn cut and calling upon Isis, herself probably in one of her aspects an Old Woman of the Corn. Further, the Cherokee precaution of leaving a clear path from the field to the house resembles the Egyptian invitation to Osiris, “Come to thy house.” So in the East Indies to this day people observe elaborate ceremonies for the purpose of bringing back the Soul of the Rice from the fields to the barn. The Nandi of British East Africa perform a ceremony in September when the eleusine grain is ripening. Every woman who owns a plantation goes out with her daughters into the cornfields and makes a bonfire of the branches and leaves of certain trees (the *Solanum campylanthum* and *Lantana salvifolia*). After that they pluck some of the eleusine, and each of them puts one grain in her necklace, chews another and rubs it on her forehead, throat, and breast. “No joy is shown by the womenfolk on this occasion, and they sorrowfully cut a basketful of the corn which they take home with them and place in the loft to dry.”

Just as the Egyptians lamented at cutting the corn, so the Karok Indians of California lament at hewing the sacred wood for the fire in the assembly-room. The wood must be cut from a tree on the top of the highest hill. In lopping off the boughs the Indian weeps and sobs piteously, shedding real tears, and at the top of the tree he leaves two branches and a top-knot, resembling a man's head and outstretched arms. Having descended from the tree, he binds the wood in a faggot and carries it back to the assembly-room, blubbering all the way. If he is asked why he thus weeps at cutting and fetching the sacred fuel, he will either give no answer or say simply that he does it for luck. We may suspect that his real motive is to appease the wrath of the tree-spirit, many of whose limbs he has amputated, though he took care to leave him two arms and a head.

The conception of the corn-spirit as old and dead at harvest is very clearly embodied in a custom observed by the Arabs of Moab. When the harvesters have nearly finished their task and only a small corner of the field remains to be reaped, the owner takes a handful of wheat tied up in a sheaf. A hole is dug in the form of a grave, and two stones are set upright, one at the head and the other at the foot, just as in an ordinary burial. Then the sheaf of wheat is laid

at the bottom of the grave, and the sheikh pronounces these words, "The old man is dead." Earth is afterwards thrown in to cover the sheaf, with a prayer, "May Allah bring us back the wheat of the dead."

IV. The Official Festivals of Osiris

§ 1. The Festival at Sais.

Such, then, were the principal events of the farmer's calendar in ancient Egypt, and such the simple religious rites by which he celebrated them. But we have still to consider the Osirian festivals of the official calendar, so far as these are described by Greek writers or recorded on the monuments. In examining them it is necessary to bear in mind that on account of the movable year of the old Egyptian calendar the true or astronomical dates of the official festivals must have varied from year to year, at least until the adoption of the fixed Alexandrian year in 30 b.c. From that time onward, apparently, the dates of the festivals were determined by the new calendar, and so ceased to rotate throughout the length of the solar year. At all events Plutarch, writing about the end of the first century, implies that they were then fixed, not movable; for though he does not mention the Alexandrian calendar, he clearly dates the festivals by it. Moreover, the long festal calendar of Esne, an important document of the Imperial age, is obviously based on the fixed Alexandrian year; for it assigns the mark for New Year's Day to the day which corresponds to the twenty-ninth of August, which was the first day of the Alexandrian year, and its references to the rising of the Nile, the position of the sun, and the operations of agriculture are all in harmony with this supposition. Thus we may take it as fairly certain that from 30 b.c. onwards the Egyptian festivals were stationary in the solar year.

Herodotus tells us that the grave of Osiris was at Sais in Lower Egypt, and that there was a lake there upon which the sufferings of the god were displayed as a mystery by night. This commemoration of the divine passion was held once a year: the people mourned and beat their breasts at it to testify their sorrow for the death of the god; and an image of a cow, made of gilt wood with a golden sun between its horns, was carried out of the chamber in which it stood the rest of the year. The cow no doubt represented Isis herself, for cows were sacred to her, and she was regularly depicted with the horns of a cow on her head, or even as a woman with the head of a cow. It is probable that the carrying out of her cow-shaped image symbolized the goddess searching for the dead body of Osiris; for this was the native Egyptian interpretation of a similar ceremony observed in Plutarch's time about the winter solstice, when the gilt cow was carried seven times round the temple. A great feature of the festival was the nocturnal illumination. People fastened rows of oil-lamps to the outside of their houses, and the lamps burned all night long. The custom was not confined to Sais, but was observed throughout the whole of Egypt.

This universal illumination of the houses on one night of the year suggests that the festival may have been a commemoration not merely of the dead Osiris but of the dead in general, in other words, that it may have been a night of All Souls. For it is a widespread belief that the souls of the dead revisit their old homes on one night of the year; and on that solemn occasion people prepare for the reception of the ghosts by laying out food for them to eat, and lighting lamps to guide them on their dark road from and to the grave. The following instances will illustrate the custom.

§ 2. Feasts of All Souls.

The Esquimaux of St. Michael and the lower Yukon River in Alaska hold a festival of the dead every year at the end of November or the beginning of December, as well as a greater festival at intervals of several years. At these seasons, food, drink, and clothes are provided for the returning ghosts in the *kashim* or clubhouse of the village, which is illuminated with

oil lamps. Every man or woman who wishes to honour a dead friend sets up a lamp on a stand in front of the place which the deceased used to occupy in the clubhouse. These lamps, filled with seal oil, are kept burning day and night till the festival is over. They are believed to light the shades on their return to their old home and back again to the land of the dead. If any one fails to put up a lamp in the clubhouse and to keep it burning, the shade whom he or she desires to honour could not find its way to the place and so would miss the feast. On the eve of the festival the nearest male relation goes to the grave and summons the ghost by planting there a small model of a seal spear or of a wooden dish, according as the deceased was a man or a woman. The badges of the dead are marked on these implements. When all is ready, the ghosts gather in the fire-pit under the clubhouse, and ascending through the floor at the proper moment take possession of the bodies of their namesakes, to whom the offerings of food, drink, and clothing are made for the benefit of the dead. Thus each shade obtains the supplies he needs in the other world. The dead who have none to make offerings to them are believed to suffer great destitution. Hence the Esquimaux fear to die without leaving behind them some one who will sacrifice to their spirits, and childless people generally adopt children lest their shades should be forgotten at the festivals. When a person has been much disliked, his ghost is sometimes purposely ignored, and that is deemed the severest punishment that could be inflicted upon him. After the songs of invitation to the dead have been sung, the givers of the feast take a small portion of food from every dish and cast it down as an offering to the shades; then each pours a little water on the floor so that it runs through the cracks. In this way they believe that the spiritual essence of all the food and water is conveyed to the souls. The remainder of the food is afterwards distributed among the people present, who eat of it heartily. Then with songs and dances the feast comes to an end, and the ghosts are dismissed to their own place. Dances form a conspicuous feature of the great festival of the dead, which is held every few years. The dancers dance not only in the clubhouse but also at the graves and on the ice, if the deceased met their death by drowning.

The Indians of California used to observe annual ceremonies of mourning for the dead, at some of which the souls of the departed were represented by living persons. Ten or more men would prepare themselves to play the part of the ghosts by fasting for several days, especially by abstaining from flesh. Disguised with paint and soot, adorned with feathers and grasses, they danced and sang in the village or rushed about in the forest by night with burning torches in their hands. After a time they presented themselves to the relations of the deceased, who looked upon these maskers as in very truth their departed friends and received them accordingly with an outburst of lamentation, the old women scratching their own faces and smiting their breasts with stones in token of mourning. These masquerades were generally held in February. During their continuance a strict fast was observed in the village. Among the Konkaus of California the dance of the dead is always held about the end of August and marks their New Year's Day. They collect a large quantity of food, clothing, baskets, ornaments, and whatever else the spirits are supposed to need in the other world. These they hang on a semicircle of boughs or small trees, cut and set in the ground leafless. In the centre burns a great fire, and hard by are the graves. The ceremony begins at evening and lasts till daybreak. As darkness falls, men and women sit on the graves and wail for the dead of the year. Then they dance round the fire with frenzied yells and whoops, casting from time to time the offerings into the flames. All must be consumed before the first faint streaks of dawn glimmer in the East. The Choctaws used to have a great respect for their dead. They did not bury their bodies but laid them on biers made of bark and supported by forked sticks about fifteen feet high. When the worms had consumed the flesh, the skeleton was dismembered, any remains of muscles and sinews were buried, and the bones were deposited in a box, the skull being reddened with ochre. The box containing the bones was then carried to the common burial ground. In the early days of November the tribe celebrated a great festival

which they called the Festival of the Dead or of the Souls; every family then gathered in the common burial ground, and there with weeping and lamentation visited the boxes which contained the mouldering relics of their dead. On returning from the graveyard they held a great banquet, which ended the festival. Some of the Pueblo Indians of New Mexico "believe that on a certain day (in August, I think) the dead rise from their graves and flit about the neighbouring hills, and on that day all who have lost friends carry out quantities of corn, bread, meat, and such other good things of this life as they can obtain, and place them in the haunts frequented by the dead, in order that the departed spirits may once more enjoy the comforts of this nether world. They have been encouraged in this belief by the priests, who were in the habit of sending out and appropriating to themselves all these things, and then making the poor simple Indians believe that the dead had eaten them."

The Miztecs of Mexico believed that the souls of the dead came back in the twelfth month of every year, which corresponded to our November. On this day of All Souls the houses were decked out to welcome the spirits. Jars of food and drink were set on a table in the principal room, and the family went forth with torches to meet the ghosts and invite them to enter. Then returning themselves to the house they knelt around the table, and with eyes bent on the ground prayed the souls to accept of the offerings and to procure the blessings of the gods upon the family. Thus they remained on bended knees and with downcast eyes till the morning, not daring to look at the table lest they should offend the spirits by spying on them at their meal. With the first beams of the sun they rose, glad at heart. The jars of food which had been presented to the dead were given to the poor or deposited in a secret place. The Indians of Santiago Tepehuacan believe that the souls of their dead return to them on the night of the eighteenth of October, the festival of St. Luke, and they sweep the roads in order that the ghosts may find them clean on their passage.

Again, the natives of Sumba, an East Indian island, celebrate a New Year's festival, which is at the same time a festival of the dead. The graves are in the middle of the village, and at a given moment all the people repair to them and raise a loud weeping and wailing. Then after indulging for a short time in the national pastimes they disperse to their houses, and every family calls upon its dead to come back. The ghosts are believed to hear and accept the invitation. Accordingly betel and areca nuts are set out for them. Victims, too, are sacrificed in front of every house, and their hearts and livers are offered with rice to the dead. After a decent interval these portions are distributed amongst the living, who consume them and banquet gaily on flesh and rice, a rare event in their frugal lives. Then they play, dance, and sing to their heart's content, and the festival which began so lugubriously ends by being the merriest of the year. A little before daybreak the invisible guests take their departure. All the people turn out of their houses to escort them a little way. Holding in one hand the half of a coco-nut, which contains a small packet of provisions for the dead, and in the other hand a piece of smouldering wood, they march in procession, singing a drawling song to the accompaniment of a gong and waving the lighted brands in time to the music. So they move through the darkness till with the last words of the song they throw away the coco-nuts and the brands in the direction of the spirit-land, leaving the ghosts to wend their way thither, while they themselves return to the village.

In Kiriwina, one of the Trobriand Islands, to the east of New Guinea, the spirits of the ancestors are believed to revisit their native village in a body once a year after the harvest has been got in. At this time the men perform special dances, the people openly display their valuables, spread out on platforms, and great feasts are made for the spirits. On a certain night, when the moon is at the full, all the people raise a great shout and so drive away the spirits to the spirit land. The Sea Dyaks of Borneo celebrate a great festival in honour of the dead at irregular intervals, it may be one or more years after the death of a particular person.

All who have died since the last feast was held, and have not yet been honoured by such a celebration, are remembered at this time; hence the number of persons commemorated may be great, especially if many years have elapsed since the last commemoration service. The preparations last many weeks: food and drink and all other necessaries are stored in plenty, and the whole neighbourhood for miles round is invited to attend. On the eve of the feast the women take bamboo splints and fashion out of them little models of various useful articles, and these models are hung over the graves for the use of the dead in the other world. If the feast is held in honour of a man, the things manufactured in his behoof will take the form of a bamboo gun, a shield, a war-cap, and so on; if it is a woman who is commemorated, little models of a loom, a fish-basket, a winnowing-fan and such like things will be provided for her spirit; and if it is a child for whom the rite is performed, toys of various kinds will be made ready for the childish ghost. Finally, to stay the appetite of ghosts who may be too sharp-set to wait for the formal banquet in the house, a supply of victuals is very considerably placed outside the house on which the hungry spirits may fall to without delay. The dead arrive in a boat from the other world; for living Dyaks generally travel by river, from which it necessarily follows that Dyak ghosts do so likewise. The ship in which the ghostly visitors voyage to the land of the living is not much to look at, being in appearance nothing but a tiny boat made out of a bamboo which has been used to cook rice. Even this is not set floating on the river but is simply thrown away under the house. Yet through the incantations uttered by the professional wailing-woman the bark is wafted away to the spirit world and is there converted into a large war-canoe. Gladly the ghosts embark and sail away as soon as the final summons comes. It always comes in the evening, for it is then that the wailer begins to croon her mournful ditties; but the way is so long that the spirits do not arrive in the house till the day is breaking. To refresh them after their weary journey a bamboo full of rice-spirit awaits them; and this they partake of by deputy, for a brave old man, who does not fear the face of ghosts, quaffs the beverage in their stead amid the joyful shouts of the spectators. On the morning after the feast the living pay the last offices of respect to the dead. Monuments made of ironwood, the little bamboo articles, and food of all kinds are set upon the graves. In consideration of these gifts the ghosts now relinquish all claims on their surviving relatives, and henceforth earn their own living by the sweat of their brow. Before they take their final departure they come to eat and drink in the house for the last time.

Thus the Dyak festival of the dead is not an annual welcome accorded to all the souls of ancestors; it is a propitiatory ceremony designed to secure once for all the eternal welfare of the recently departed, or at least to prevent their ghosts from returning to infest and importune the living. The same is perhaps the intention of the "soul departure" (*Kathi Kasham*) festival which the Tangkul Nagas of Manipur, in Assam, celebrate every year about the end of January. At this great feast the dead are represented by living men, chosen on the ground of their likeness to the departed, who are decked with ornaments and treated as if they were in truth the deceased persons come to life again. In that character they dance together in the large open space of the village, they are fed by the female relations, and they go from house to house, receiving presents of cloth. The festival lasts ten days, but the great day is the ninth. Huge torches of pinewood are made ready to be used that evening when darkness has fallen. The time of departure of the dead is at hand. Their living representatives are treated to a last meal in the houses, and they distribute farewell presents to the sorrowing kinsfolk, who have come to bid them good-bye. When the sun has set, a procession is formed. At the head of it march men holding aloft the flaring, sputtering torches. Then follow the elders armed and in martial array, and behind them stalk the representatives of the dead, with the relations of the departed crowding and trooping about them. Slowly and mournfully the sad procession moves, with loud lamentations, through the darkness to a spot at the north end of the village

which is overshadowed by a great tree. The light of the torches is to guide the souls of the dead to their place of rest; the warlike array of the elders is to guard them from the perils and dangers of the way. At the village boundary the procession stops and the torch-bearers throw down their torches. At the same moment the spirits of the dead are believed to pass into the dying flambeaux and in that guise to depart to the far country. There is therefore no further need for their living representatives, who are accordingly stripped of all their finery on the spot. When the people return home, each family is careful to light a pine torch and set it burning on a stone in the house just inside the front door; this they do as a precaution to prevent their own souls from following the spirits of the dead to the other world. The expense of thus despatching the dead to their long home is very great; when the head of a family dies, debts may be incurred and rice-fields and houses sold to defray the cost of carriage. Thus the living impoverish themselves in order to enrich the dead.

The Oraons or Uraons of Bengal feast their dead every year on a day in January. This ceremony is called the Great Marriage, because by it the bones of the deceased are believed to be mysteriously reunited to each other. The Oraons treat the bones of the dead differently according to the dates of their death in the agricultural year. The bones of those who died before the seeds have sprouted in the fields are burnt, and the few charred bones which have not been reduced to ashes are gathered in an earthen pot. With the bones in the pot are placed offerings of rice, native gin, and money, and then they carry the urn to the river, where the bones of their forefathers repose. But the bones of all who die after the seeds have sprung up and before the end of harvest may not be taken to the river, because the people believe that were that to be done the crops would suffer. These bones are therefore put away in a pot under a stone near the house till the harvest is over. Then on the appointed day in January they are all collected. A banquet is given in honour of the dead, and then both men and women form a procession to accompany the bones to their last resting-place in the sands of the river. But first the relics of mortality are carried from house to house in the village, and each family pours rice and gin into the urn which contains the bones of its dead. Then the procession sets out for the river, men and women dancing, singing, beating drums, and weeping, while the earthen pots containing the bones are passed from hand to hand and dance with the jiggling steps of the dancers. When they are yet some way from the spot, the bearers of the urns run forward and bury them in the sand of the river. When the rest come up, they all bathe and the Great Marriage is over.

In the Bilaspore district of the Central Provinces, India, "the festival known as the Fortnight of the Manes—*Pitr Pāk*—occurs about September. It is believed that during this fortnight it is the practice of all the departed to come and visit their relatives. The homes are therefore cleaned, and the spaces in front of the house are plastered and painted in order to be pleasing to those who are expected. It is believed that the departed will return on the very date on which they went away. A father who left on the fourth, be it the fourth of the dark half or the light half of the moon, will return to visit his family on the fourth of the Fortnight of the Manes. On that day cakes are prepared, and with certain ceremony these are offered to the unseen hovering spirit. Their implicit belief is that the spirit will partake of the essence of the food, and that which remains—the material portion—may be eaten by members of the family. The souls of women, it is said, will all come on the ninth of the fortnight. On the thirteenth come those who have met with a violent death and who lost their lives by a fall, by snake-bite, or any other unusual cause. During the Fortnight of the Manes a woman is not supposed to put on new bangles and a man is not permitted to shave. In short, this is a season of sad remembrances, an annual festival for the departed."

The Bghais, a Karen tribe of Burma, hold an annual feast for the dead at the new moon which falls near the end of August or the beginning of September. All the villagers who have lost

relatives within the last three years take part in it. Food and drink are set out on tables for the ghosts, and new clothes for them are hung up in the room. All being ready, the people beat gongs and begin to weep. Each one calls upon the relation whom he has lost to come and eat. When the dead are thought to have arrived, the living address them, saying, "You have come to me, you have returned to me. It has been raining hard, and you must be wet. Dress yourselves, clothe yourselves with these new garments, and all the companions that are with you. Eat betel together with all that accompany you, all your friends and associates, and the long dead. Call them all to eat and drink." The ghosts having finished their repast, the people dry their tears and sit down to eat what is left. More food is then prepared and put into a basket, and at cock-crow next morning the contents of the basket are thrown out of the house, while the living weep and call upon their dead as before. The Hkamies, a hill tribe of North Aracan, hold an important festival every year in honour of departed spirits. It falls after harvest and is called "the opening of the house of the dead." When a person dies and has been burnt, the ashes are collected and placed in a small house in the forest together with his spear or gun, which has first been broken. These little huts are generally arranged in groups near a village, and are sometimes large enough to be mistaken for one. After harvest all the relations of the deceased cook various kinds of food and take them with pots of liquor distilled from rice to the village of the dead. There they open the doors of the houses, and having placed the food and drink inside they shut them again. After that they weep, eat, drink, and return home.

The great festival of the dead in Cambodia takes place on the last day of the month Phatrabot (September-October), but ever since the moon began to wane everybody has been busy preparing for it. In every house cakes and sweetmeats are set out, candles burn, incense sticks smoke, and the whole is offered to the ancestral shades with an invocation which is thrice repeated: "O all you our ancestors who are departed, deign to come and eat what we have prepared for you, and to bless your posterity and make it happy." Fifteen days afterwards many little boats are made of bark and filled with rice, cakes, small coins, smoking incense sticks, and lighted candles. At evening these are set floating on the river, and the souls of the dead embark in them to return to their own place. The living now bid them farewell. "Go to the lands," they say, "go to the fields you inhabit, to the mountains, under the stones which are your abodes. Go away! return! In due time your sons and your grandsons will think of you. Then you will return, you will return, you will return." The river is now covered with twinkling points of fire. But the current soon bears them away, and as they vanish one by one in the darkness the souls depart with them to the far country. In Tonquin, as in Sumba, the dead revisit their kinsfolk and their old homes at the New Year. From the hour of midnight, when the New Year begins, no one dares to shut the door of his house for fear of excluding the ghosts, who begin to arrive at that time. Preparations have been made to welcome and refresh them after their long journey. Beds and mats are ready for their weary bodies to repose upon, water to wash their dusty feet, slippers to comfort them, and canes to support their feeble steps. Candles burn on the domestic altar, and pastilles diffuse a fragrant odour. The people bow before the unseen visitors and beseech them to remember and bless their descendants in the coming year. Having discharged this pious duty they abstain from sweeping the houses for three days lest the dust should incommode the ghosts.

In Annam one of the most important festivals of the year is the festival of Têt, which falls on the first three days of the New Year. It is devoted to the worship of ancestors. Everybody, even the poorest, must provide a good meal for the souls of his dead at this time and must himself eat and drink heartily. Some families, in order to discharge this pious duty, run into debt for the whole year. In the houses everything is put in order, washed, and scoured for the reception of the dear and distinguished guests. A tall bamboo pole is set up in the front of every house and allowed to stand there for seven days. A small basket containing areca, betel,

and leaves of gilt paper is fastened to the pole. The erection of the pole is a sacred rite which no family omits to perform, though why they do so few people can say. Some, however, allege that the posts are intended to guide the ancestral spirits to their old homes. The ceremony of the reception of the shades takes place at nightfall on the last day of the year. The house of the head of the family is then decked with flowers, and in the room which serves as a domestic chapel the altar of the ancestors is surrounded with flowers, among which the lotus, the emblem of immortality, is most conspicuous. On a table are set red candles, perfumes, incense, sandal-wood, and plates full of bananas, oranges, and other fruits. The relations crouch before the altar, and kneeling at the foot of it the head of the house invokes the name of the family which he represents. Then in solemn tones he recites an incantation, mentioning the names of his most illustrious ancestors and marking time with the strokes of a hammer upon a gong, while crackers are exploded outside the room. After that, he implores the ancestral shades to protect their descendants and invites them to a repast, which is spread for them on a table. Round this table he walks, serving the invisible guests with his own hands. He distributes to them smoking balls of rice in little china saucers, and pours tea or spirits into each little cup, while he murmurs words of invitation and compliment. When the ghosts have eaten and drunk their fill, the head of the family returns to the altar and salutes them for the last time. Finally, he takes leaves of yellow paper, covered with gold and silver spangles, and throws them into a brazier placed at the foot of the ancestral tablets. These papers represent imaginary bars of gold and silver which the living send to the dead. Cardboard models of houses, furniture, jewels, clothes, of everything in short that the ghosts can need in the other world, are despatched to them in like manner in the flames. Then the family sits down to table and feasts on the remains of the ghostly banquet.

But in Annam it is not merely the spirits of ancestors who are thus feasted and supplied with all the necessaries of life. The poor ghosts of those who died without leaving descendants or whose bodies were left unburied are not forgotten by the pious Annamites. But these spirits come round at a different time of year from the others. The seventh month of the year is set apart for expiatory sacrifices destined to benefit these unhappy beings, and that is why in Annam nobody should marry or be betrothed in that month. The great day of the month is the fifteenth, which is called the Festival of the Souls. On that day the ghosts in question are set free by the lord of the underworld, and they come prowling about among the living. They are exceedingly dangerous, especially to children. Hence in order to appease their wrath and prevent them from entering the houses every family takes care to put out offerings for them in the street. Before every house on that night you may see candles lighted, paper garments of many colours, paper hats, paper boots, paper furniture, ingots of gold and silver paper, all hanging in tempting array from a string, while plates of food and cups of tea and rice-spirit stand ready for the use of hungry and thirsty souls. The theory is that the ghosts will be so busy consuming the victuals, appropriating the deceitful riches, and trying on the paper coats, hats, and boots that they will have neither the leisure nor the inclination to intrude upon the domestic circle indoors. At seven o'clock in the evening fire is put to the offerings, and the paper wardrobe, furniture, and money soon vanish crackling in the flames. At the same moment, peeping in at a door or window, you may see the domestic ancestral altar brilliantly illuminated. As for the food, it is supposed to be thrown on the fire or on the ground for the use of the ghosts, but practically it is eaten by vagabonds and beggars, who scuffle for the booty.

In Cochinchina the ancestral spirits are similarly propitiated and fed on the first day of the New Year. The tablets which represent them are placed on the domestic altar, and the family prostrate themselves before these emblems of the departed. The head of the family lights sticks of incense on the altar and prays the shades of his forefathers to accept the offerings

and be favourable to their descendants. With great gravity he waits upon the ghosts, passing dishes of food before the ancestral tablets and pouring out wine and tea to slake the thirst of the spirits. When the dead are supposed to be satisfied with the shadowy essence of the food, the living partake of its gross material substance. In Siam and Japan also the souls of the dead revisit their families for three days in every year, and the lamps which the Japanese kindle in multitudes on that occasion to light the spirits on their way have procured for the festival the name of the Feast of Lanterns. It is to be observed that in Siam, as in Tonquin and Sumba, the return of the ghosts takes place at the New Year.

The Chewsurs of the Caucasus believe that the souls of the departed revisit their old homes on the Saturday night of the second week in Lent. This gathering of the dead is called the "Assembly of Souls." The people spare no expense to treat the unseen guests handsomely. Beer is brewed and loaves of various shapes baked specially for the occasion. The Armenians celebrate the memory of the dead on many days of the year, burning incense and lighting tapers in their honour. One of their customs is to keep a "light of the dead" burning all night in the house in order that the ghosts may be able to enter. For if the spirits find the house dark, they spit down the chimney and depart, cursing the churlish inmates.

Early in April every year the Dahomans of West Africa "set a table, as they term it, and invite friends to eat with the deceased relatives, whose spirits are supposed to move round and partake of the good things of this life. Even my interpreter, Madi-Ki Lemon, who pretends to despise the belief in fetish, sets a table to his ancestors, and will tell you that his grand- or great-grandfather, Corporal Lemon, makes a meal on this occasion which will last him till the next annual feast." The Barea and apparently the Kunama, two heathen tribes who lead a settled agricultural life to the north of Abyssinia, celebrate every year a festival in the month of November. It is a festival of thanksgiving for the completion of the harvest, and at the same time a commemoration and propitiation of the dead. Every house prepares much beer for the occasion, and a small pot of beer is set out for each deceased member of the household. After standing for two days in the house the beer which was devoted to the dead is drunk by the living. At these festivals all the people of a district meet in a special place, and there pass the time in games and dances. Among the Barea the festive gatherings are held in a sacred grove. We are told that "he who owes another a drubbing on this day can pay his debt with impunity; for it is a day of peace when all feuds are in abeyance." Wild honey may not be gathered till the festival has been held. Apparently the festival is a sort of Saturnalia, such as is celebrated elsewhere at the end of harvest. At that season there is food and to spare for the dead as well as the living.

Among peoples of the Aryan stock, so far back as we can trace their history, the worship and propitiation of the dead seem to have formed a principal element of the popular religion; and like so many other races they appear to have believed that once a year the souls of their departed kinsfolk revisited their old homes and expected to be refreshed with abundance of good cheer by their surviving relations. This belief gave rise to the custom of celebrating an annual Feast of All Souls, which has come down to us from a dateless antiquity and is still observed year by year, with rites of primitive simplicity, in some parts of Europe. Such a festival was held every year in spring by the old Iranians. The celebration fell at the end of the year and lasted ten days, namely the last five days of the last month and the five following supplementary days, which were regularly inserted to make up a year of three hundred and sixty-five days; for the old Iranian, like the old Egyptian, year was a vague year of twelve months of thirty days each, with five supplementary days added at the end for the sake of bringing it into apparent, though not real, harmony with the sun's annual course in the sky. According to one calculation the ten days of the festival corresponded to the last days of February, but according to another they fell in March; in later ages the Parsees assigned them

to the time of the spring equinox. The name of the festival was Hamaspathmaedaya. From a passage in the *Zend-Avesta*, the ancient sacred book of the Iranians, we learn that on the ten nights of the festival the souls of the dead (the Fravashis) were believed to go about the village asking the people to do them reverence, to pray to them, to meditate on them, and to furnish them with meat and clothes, while at the same time they promised that blessings should rest on the pious householder who complied with their request. The Arab geographer Albiruni, who flourished about the year one thousand of our era, tells us that among the Persians of his time the last five days of the month Aban were called Farwardajan. "During this time," he says, "people put food in the halls of the dead and drink on the roofs of the houses, believing that the spirits of their dead during these days come out from the places of their reward or their punishment, that they go to the dishes laid out for them, imbibe their strength and suck their taste. They fumigate their houses with juniper, that the dead may enjoy its smell. The spirits of the pious men dwell among their families, children, and relations, and occupy themselves with their affairs, although invisible to them." He adds that there was a controversy among the Persians as to the date of this festival of the dead, some maintaining that the five days during which it lasted were the last five days of the month Aban, whereas others held that they were the five supplementary days which were inserted between the months Aban and Adhar. The dispute, he continues, was settled by the adoption of all ten days for the celebration of the feast.

Similar beliefs as to the annual return of the dead survive to this day in many parts of Europe and find expression in similar customs. The day of the dead or of All Souls, as we call it, is commonly the second of November. Thus in Lower Brittany the souls of the departed come to visit the living on the eve of that day. After vespers are over, the priests and choir walk in procession, "the procession of the charnel-house," chanting a weird dirge in the Breton tongue. Then the people go home, gather round the fire, and talk of the departed. The housewife covers the kitchen table with a white cloth, sets out cider, curds, and hot pancakes on it, and retires with the family to rest. The fire on the hearth is kept up by a huge log known as "the log of the dead" (*kef ann Anaon*). Soon doleful voices outside in the darkness break the stillness of night. It is the "singers of death" who go about the streets waking the sleepers by a wild and melancholy song, in which they remind the living in their comfortable beds to pray for the poor souls in pain. All that night the dead warm themselves at the hearth and feast on the viands prepared for them. Sometimes the awe-struck listeners hear the stools creaking in the kitchen, or the dead leaves outside rustling under the ghostly footsteps. In the Vosges Mountains on All Souls' Eve the solemn sound of the church bells invites good Christians to pray for the repose of the dead. While the bells are ringing, it is customary in some families to uncover the beds and open the windows, doubtless in order to let the poor souls enter and rest. No one that evening would dare to remain deaf to the appeal of the bells. The prayers are prolonged to a late hour of the night. When the last *De profundis* has been uttered, the head of the family gently covers up the beds, sprinkles them with holy water, and shuts the windows. In some villages fire is kept up on the hearth and a basket of nuts is placed beside it for the use of the ghosts. Again, in some parts of Saintonge and Aunis a Candlemas candle used to be lit before the domestic crucifix on All Souls' Day at the very hour when the last member of the family departed this life; and some people, just as in Tonquin, refrained from sweeping the house that day lest they should thereby disturb the ghostly visitors.

In Bruges, Dinant, and other towns of Belgium holy candles burn all night in the houses on the Eve of All Souls, and the bells toll till midnight, or even till morning. People, too, often set lighted candles on the graves. At Scherpenheuvel the houses are illuminated, and the people walk in procession carrying lighted candles in their hands. A very common custom in

Belgium is to eat “soul-cakes” or “soul-bread” on the eve or the day of All Souls. The eating of them is believed to benefit the dead in some way. Perhaps originally, as among the Esquimaux of Alaska to this day, the ghosts were thought to enter into the bodies of their relatives and so to share the victuals which the survivors consumed. Similarly at festivals in honour of the dead in Northern India it is customary to feed Brahmans, and the food which these holy men partake of is believed to pass to the deceased and to refresh their languid spirits. The same idea of eating and drinking by proxy may perhaps partly explain many other funeral feasts. Be that as it may, at Dixmude and elsewhere in Belgium they say that you deliver a soul from Purgatory for every cake you eat. At Antwerp they give a local colour to the soul-cakes by baking them with plenty of saffron, the deep yellow tinge being suggestive of the flames of Purgatory. People in Antwerp at the same season are careful not to slam doors or windows for fear of hurting the ghosts.

In Lechrain, a district of Southern Bavaria which extends along the valley of the Lech from its source to near the point where the river flows into the Danube, the two festivals of All Saints and All Souls, on the first and second of November, have significantly fused in popular usage into a single festival of the dead. In fact, the people pay little or no heed to the saints and give all their thoughts to the souls of their departed kinsfolk. The Feast of All Souls begins immediately after vespers on All Saints' Day. Even on the eve of All Saints' Day, that is, on the thirty-first of October, which we call Hallowe'en, the graveyard is cleaned and every grave adorned. The decoration consists in weeding the mounds, sprinkling a layer of charcoal on the bare earth, and marking out patterns on it in red service-berries. The marigold, too, is still in bloom at that season in cottage gardens, and garlands of its orange blooms, mingled with other late flowers left by the departing summer, are twined about the grey mossgrown tombstones. The basin of holy water is filled with fresh water and a branch of box-wood put into it; for box-wood in the popular mind is associated with death and the dead. On the eve of All Souls' Day the people begin to visit the graves and to offer the soul-cakes to the hungry souls. Next morning, before eight o'clock, commence the vigil, the requiem, and the solemn visitation of the graves. On that day every household offers a plate of meal, oats, and spelt on a side-altar in the church; while in the middle of the sacred edifice a bier is set, covered with a pall, and surrounded by lighted tapers and vessels of holy water. The tapers burnt on that day and indeed generally in services for the departed are red. In the evening people go, whenever they can do so, to their native village, where their dear ones lie in the churchyard; and there at the graves they pray for the poor souls, and leave an offering of soul-cakes also on a side-altar in the church. The soul-cakes are baked of dough in the shape of a coil of hair and are made of all sizes up to three feet long. They form a perquisite of the sexton.

The custom of baking soul-cakes, sometimes called simply “souls,” on All Souls' Day is widespread in Southern Germany and Austria; everywhere, we may assume, the cakes were originally intended for the benefit of the hungry dead, though they are often eaten by the living. In the Upper Palatinate people throw food into the fire on All Souls' Day for the poor souls, set lights on the table for them, and pray on bended knees for their repose. On the graves, too, lights are kindled, vessels of holy water placed, and food deposited for the refreshment of the souls. All over the Upper Palatinate on All Souls' Day it is also customary to bake special cakes of fine bread and distribute them to the poor, who eat them perhaps as the deputies of the dead.

The Germans of Bohemia observe All Souls' Day with much solemnity. Each family celebrates the memory of its dead. On the eve of the day it is customary to eat cakes and to drink cold milk for the purpose of cooling the poor souls who are roasting in purgatory; from which it appears that spirits feel the soothing effect of victuals consumed vicariously by their

friends on earth. The ringing of the church bells to prayer on that evening is believed to be the signal at which the ghosts, released from the infernal gaol, come trooping to the old familiar fire-side, there to rest from their pangs for a single night. So in many places people fill a lamp with butter, light it, and set it on the hearth, that with the butter the poor ghosts may anoint the burns they have received from the sulphureous and tormenting flames of purgatory. Next morning the chime of the church bells, ringing to early mass, is the knell that bids the souls return to their place of pain; but such as have completed their penance take flight to heaven. So on the eve of All Saints' Day each family gathers in the parlour or the kitchen, speaks softly of those they have lost, recalls what they said and did in life, and prays for the repose of their souls. While the prayer is being said, the children kindle little wax lights which have been specially bought for the purpose that day. Next morning the families go to church, where mass is celebrated for the dead; then they wend their way to the churchyard, where they deck the graves of their kinsfolk with flowers and wreaths and set little lights upon them. This custom of illumining the graves and decking them with flowers on the Eve or Day of All Souls is common all over Bohemia; it is observed in Prague as well as in the country, by Czechs as well as by Germans. In some Czech villages four-cornered cakes of a special sort, baked of white wheaten meal with milk, are eaten on All Souls' Day or given to beggars that they may pray for the dead. Among the Germans of Western Bohemia poor children go from house to house on All Souls' Day, begging for soul-cakes, and when they receive them they pray God to bless all poor souls. In the southern districts every farmer used to grind a great quantity of corn against the day and to bake it into five or six hundred little black soul-cakes which he gave away to the poor who came begging for them.

All Souls' Day is celebrated with similar rites by the Germans of Moravia. "The festival of the farewell to summer," says a German writer on this subject, "was held by our heathen forefathers in the beginning of November, and with the memory of the departed summer they united the memory of the departed souls, and this last has survived in the Feast of All Souls, which is everywhere observed with great piety. On the evening of All Souls the relations of the departed assemble in the churchyards and adorn the graves of their dear ones with flowers and lights, while the children kindle little wax tapers, which have been bought for them, to light the 'poor souls.' According to the popular belief, the dead go in procession to the church about midnight, and any stout-hearted young man can there see all the living men who will die within the year."

In the Tyrol the beliefs and customs are similar. There, too, "soul-lights," that is, lamps filled with lard or butter are lighted and placed on the hearth on All Souls' Eve in order that poor souls, escaped from the fires of purgatory, may smear the melted grease on their burns and so alleviate their pangs. Some people also leave milk and dough-nuts for them on the table all night. The graves also are illuminated with wax candles and decked with such a profusion of flowers that you might think it was springtime. In the Italian Tyrol it is customary to give bread or money to the poor on All Souls' Day; in the Val di Ledro children threaten to dirty the doors of houses if they do not get the usual dole. Some rich people treat the poor to bean-soup on that day. Others put pitchers full of water in the kitchen on All Souls' night that the poor souls may slake their thirst. In Baden it is still customary to deck the graves with flowers and lights on All Saints' Day and All Souls' Day. The lights are sometimes kindled in hollow turnips, on the sides of which inscriptions are carved and shine out in the darkness. If any child steals a turnip-lantern or anything else from a grave, the indignant ghost who has been robbed appears to the thief the same night and reclaims his stolen property. A relic of the old custom of feeding the dead survives in the practice of giving soul-cakes to godchildren.

The Letts used to entertain and feed the souls of the dead for four weeks from Michaelmas (September 29) to the day of St. Simon and St. Jude (October 28). They called the season *Wellalaick* or *Semlicka*, and regarded it as so holy that while it lasted they would not willingly thresh the corn, alleging that grain threshed at that time would be useless for sowing, since the souls of the dead would not allow it to sprout. But we may suspect that the original motive of the abstinence was a fear lest the blows of the flails should fall upon the poor ghosts swarming in the air. At this season the people were wont to prepare food of all sorts for the spirits and set it on the floor of a room, which had been well heated and swept for the purpose. Late in the evening the master of the house went into the room, tended the fire, and called upon his dead kinsfolk by their names to come and eat and drink. If he saw the ghosts, he would die within the year; but if he did not see them he would outlive it. When he thought the souls had eaten and drunk enough, he took the staff which served as a poker and laying it on the threshold cut it in two with an axe. At the same time he bade the spirits go their way, charging them to keep to the roads and paths and not to tread upon the rye. If the crops turned out ill next year, the people laid the failure at the door of the ghosts, who fancied themselves scurvily treated and had taken their revenge by trampling down the corn. The Samagitians annually invited the dead to come from their graves and enjoy a bath and a feast. For their entertainment they prepared a special hut, in which they set out food and drink, together with a seat and a napkin for every soul who had been invited. They left the souls to revel by themselves for three days in the hut; then they deposited the remains of the banquet on the graves and bade the ghosts farewell. The good things, however, were usually consumed by charcoal burners in the forest. This feast of the dead fell early in November. The Esthonians prepare a meal for their dead on All Souls' Day, the second of November, and invite them by their names to come and partake of it. The ghosts arrive in the early morning at the first cock-crow, and depart at the second, being ceremoniously lighted out of the house by the head of the family, who waves a white cloth after them and bids them come again next year.

In some parts of the Russian Government of Olonets the inhabitants of a village sometimes celebrate a joint festival in honour of all their dead. Having chosen a house for the purpose, they spread three tables, one outside the front door, one in the passage, and one in the room which is heated by a stove. Then they go out to meet their unseen guests and usher them into the house with these words, "Ye are tired, our own ones; take something to eat." The ghosts accordingly refresh themselves at each table in succession. Then the master of the house bids them warm themselves at the stove, remarking that they must have grown cold in the damp earth. After that the living guests sit down to eat at the tables. Towards the end of the meal the host opens the window and lets the ghosts gently out of it by means of the shroud in which they were lowered into the grave. As they slide down it from the warm room into the outer air, the people tell them, "Now it is time for you to go home, and your feet must be tired; the way is not a little one for you to travel. Here it is softer for you. Now, in God's name, farewell!"

Among the Votiaks of Russia every family sacrifices to its dead once a year in the week before Palm Sunday. The sacrifice is offered in the house about midnight. Flesh, bread, or cakes and beer are set on the table, and on the floor beside the table stands a trough of bark with a lighted wax candle stuck on the rim. The master of the house, having covered his head with his hat, takes a piece of meat in his hand and says, "Ye spirits of the long departed, guard and preserve us well. Make none of us cripples. Send no plagues upon us. Cause the corn, the wine, and the food to prosper with us." The Votiaks of the Governments of Wjatka and Kasan celebrate two memorial festivals of the dead every year, one in autumn and the other in spring. On a certain day koumiss is distilled, beer brewed, and potato scones baked in

every house. All the members of a clan, who trace their descent through women from one mythical ancestress, assemble in a single house, generally in one which lies at the boundary of the clan land. Here an old man moulds wax candles; and when the requisite number is made he sticks them on the shelf of the stove, and begins to mention the dead relations of the master of the house by name. For each of them he crumbles a piece of bread, gives each of them a piece of pancake, pours koumiss and beer, and puts a spoonful of soup into a trough made for the purpose. All persons present whose parents are dead follow his example. The dogs are then allowed to eat out of the trough. If they eat quietly, it is a sign that the dead live at peace; if they do not eat quietly, it argues the contrary. Then the company sit down to table and partake of the meal. Next morning both the dead and the living refresh themselves with a drink, and a fowl is boiled. The proceedings are the same as on the evening before. But now they treat the souls for the last time as a preparation for their journey, saying: "Eat, drink, and go home to your companions. Live at peace, be gracious to us, keep our children, guard our corn, our beasts and birds." Then the people banquet and indulge in all sorts of improprieties. The women refrain from feasting until the dead have taken their departure; but when the souls are gone, there is no longer any motive for abstinence, the koumiss circulates freely among the women, and they grow wanton. Yet at this, as at every other festival, the men and women eat in different parts of the room.

On All Saints' Day, the first of November, shops and streets in the Abruzzi are filled with candles, which people buy in order to kindle them in the evening on the graves of their relations. For all the dead come to visit their homes that night, the Eve of All Souls, and they need lights to show them the way. For their use, too, lights are kept burning in the houses all night. Before people go to sleep they place on the table a lighted lamp or candle and a frugal meal of bread and water. The dead issue from their graves and stalk in procession through every street of the village. You can see them if you stand at a cross-road with your chin resting on a forked stick. First pass the souls of the good, and then the souls of the murdered and the damned. Once, they say, a man was thus peeping at the ghastly procession. The good souls told him he had better go home. He did not, and when he saw the tail of the procession he died of fright.

In our own country the old belief in the annual return of the dead long lingered in the custom of baking "soul-cakes" and eating them or distributing them to the poor on All Souls' Day. Peasant girls used to go from farmhouse to farmhouse on that day, singing,

*"Soul, soul, for a soul cake,
Pray you, good mistress, a soul cake."*

In Shropshire down to the seventeenth century it was customary on All Souls' Day to set on the table a high heap of soul-cakes, and most visitors to the house took one of them. The antiquary John Aubrey, who records the custom, mentions also the appropriate verses:

*"A soul-cake, a soul-cake,
Have mercy on all Christen soules for a soule-cake."*

Indeed the custom of soul-cakes survived in Shropshire down to the latter part of the nineteenth century and may not be extinct even now. "With us, All Saints' Day is known as 'Souling Day,' and up to the present time in many places, poor children, and sometimes men, go out 'souling': which means that they go round to the houses of all the more well-to-do people within reach, reciting a ditty peculiar to the day, and looking for a dole of cakes, broken victuals, ale, apples, or money. The two latter are now the usual rewards, but there are few old North Salopians who cannot remember when 'soul-cakes' were made at all the farms and 'bettermost' houses in readiness for the day, and were given to all who came for them.

We are told of liberal housewives who would provide as many as a clothes-basket full." The same custom of going out "a-souling" on All Saints' Day or All Souls' Day used to be observed in the neighbouring counties of Staffordshire, Cheshire, Lancashire, Herefordshire, and Monmouthshire. In Herefordshire the soul-cakes were made of oatmeal, and he or she who received one of them was bound to say to the giver:

"*God have your saul,
Beens and all.*"

Thus the practice of "souling" appears to have prevailed especially in the English counties which border on Wales. In many parts of Wales itself down to the first half of the nineteenth century poor peasants used to go about begging for bread on All Souls' Day. The bread bestowed on them was called *bara ran* or dole-bread. "This custom was a survival of the Middle Ages, when the poor begged bread for the souls of their departed relatives and friends." However, the custom was not confined to the west of England, for at Whitby in Yorkshire down to the early part of the nineteenth century it was usual to make "soul mass loaves" on or about All Souls' Day. They were small round loaves, sold by bakers at a farthing apiece, chiefly for presents to children. In former times people used to keep one or two of them for good luck. In Aberdeenshire, also, "on All Souls' Day, baked cakes of a particular sort are given away to those who may chance to visit the house, where they are made. The cakes are called 'dirge-loaf.'" Even in the remote island of St. Kilda it was customary on All Saints' Day to bake a large cake in the form of a triangle, furrowed round; the cake must be all eaten that night.

The same mode of celebrating All Souls' Day has been transported by Catholicism to the New World and imparted to the aborigines of that continent. Thus in Carchi, a province of Ecuador, the Indians prepare foods of various sorts against All Souls' Day, and when the day has come they take some of the provisions to the church and there deposit them on tables set out for the purpose. These good things are the perquisite of the priest, who celebrates mass for the dead. After the service the Indians repair to the cemetery, where with burning candles and pots of holy water they prostrate themselves before the tombs of their relations, while the priest or the sacristan recites prayers for the souls of the departed. In the evening the Indians return to their houses. A table with four lights on it is spread with food and drink, especially with such things as the dead loved in their life. The door is left open all night, no doubt to let the spirits of the dead enter, and the family sits up, keeping the invisible guests company through the long hours of darkness. From seven o'clock and onwards troops of children traverse the village and its neighbourhood. They go from house to house ringing a bell and crying, "We are angels, we descend from the sky, we ask for bread." The people go to their doors and beg the children to recite a *Pater Noster* or an *Ave Maria* for the dead whom they name. When the prayer has been duly said, they give the children a little of the food from the table. All night long this goes on, band succeeding band of children. At five o'clock in the morning the family consumes the remainder of the food of the souls. Here the children going from door to door during the night of All Souls appear to personate the souls of the dead who are also abroad at that time; hence to give bread to the children is the same thing as to give bread to the poor hungry souls. Probably the same explanation applies to the giving of soul-cakes to children and the poor on All Souls' Day in Europe.

A comparison of these European customs with the similar heathen rites can leave no room for doubt that the nominally Christian feast of All Souls is nothing but an old pagan festival of the dead which the Church, unable or unwilling to suppress, resolved from motives of policy to connive at. But whence did it borrow the practice of solemnizing the festival on that particular day, the second of November? In order to answer this question we should observe,

first, that celebrations of this sort are often held at the beginning of a New Year, and, second, that the peoples of North-Western Europe, the Celts and the Teutons, appear to have dated the beginning of their year from the beginning of winter, the Celts reckoning it from the first of November and the Teutons from the first of October. The difference of reckoning may be due to a difference of climate, the home of the Teutons in Central and Northern Europe being a region where winter sets in earlier than on the more temperate and humid coasts of the Atlantic, the home of the Celts. These considerations suggest that the festival of All Souls on the second of November originated with the Celts, and spread from them to the rest of the European peoples, who, while they preserved their old feasts of the dead practically unchanged, may have transferred them to the second of November. This conjecture is supported by what we know of the ecclesiastical institution, or rather recognition, of the festival. For that recognition was first accorded at the end of the tenth century in France, a Celtic country, from which the Church festival gradually spread over Europe. It was Odilo, abbot of the great Benedictine monastery of Clugny, who initiated the change in 998 a.d. by ordering that in all the monasteries over which he ruled, a solemn mass should be celebrated on the second of November for all the dead who sleep in Christ. The example thus set was followed by other religious houses, and the bishops, one after another, introduced the new celebration into their dioceses. Thus the festival of All Souls gradually established itself throughout Christendom, though in fact the Church has never formally sanctioned it by a general edict nor attached much weight to its observance. Indeed, when objections were raised to the festival at the Reformation, the ecclesiastical authorities seemed ready to abandon it. These facts are explained very simply by the theory that an old Celtic commemoration of the dead lingered in France down to the end of the tenth century, and was then, as a measure of policy and a concession to ineradicable paganism, at last incorporated in the Catholic ritual. The consciousness of the heathen origin of the practice would naturally prevent the supreme authorities from insisting strongly on its observance. They appear rightly to have regarded it as an outpost which they could surrender to the forces of rationalism without endangering the citadel of the faith.

Perhaps we may go a step further and explain in like manner the origin of the feast of All Saints on the first of November. For the analogy of similar customs elsewhere would lead us to suppose that the old Celtic festival of the dead was held on the Celtic New Year's Day, that is, on the first, not the second, of November. May not then the institution of the feast of All Saints on that day have been the first attempt of the Church to give a colour of Christianity to the ancient heathen rite by substituting the saints for the souls of the dead as the true object of worship? The facts of history seem to countenance this hypothesis. For the feast of All Saints was instituted in France and Germany by order of the Emperor Lewis the Pious in 835 a.d., that is, about a hundred and sixty years before the introduction of the feast of All Souls. The innovation was made by the advice of the pope, Gregory IV., whose motive may well have been that of suppressing an old pagan custom which was still notoriously practised in France and Germany. The idea, however, was not a novel one, for the testimony of Bede proves that in Britain, another Celtic country, the feast of All Saints on the first of November was already celebrated in the eighth century. We may conjecture that this attempt to divert the devotion of the faithful from the souls of the dead to the saints proved a failure, and that finally the Church reluctantly decided to sanction the popular superstition by frankly admitting a feast of All Souls into the calendar. But it could not assign the new, or rather the old, festival to the old day, the first of November, since that was already occupied by the feast of All Saints. Accordingly it placed the mass for the dead on the next day, the second of November. On this theory the feasts of All Saints and of All Souls mark two successive efforts of the Catholic Church to eradicate an old heathen festival of the dead. Both efforts failed. "In all Catholic countries the day of All Souls has preserved the serious character of a festival of the dead

which no worldly gaieties are allowed to disturb. It is then the sacred duty of the survivors to visit the graves of their loved ones in the churchyard, to deck them with flowers and lights, and to utter a devout prayer—a pious custom with which in cities like Paris and Vienna even the gay and frivolous comply for the sake of appearance, if not to satisfy an impulse of the heart.”

§ 3. The Festival in the Month of Athyr.

The foregoing evidence lends some support to the conjecture—for it is only a conjecture—that the great festival of Osiris at Sais, with its accompanying illumination of the houses, was a night of All Souls, when the ghosts of the dead swarmed in the streets and revisited their old homes, which were lit up to welcome them back again. Herodotus, who briefly describes the festival, omits to mention its date, but we can determine it with some probability from other sources. Thus Plutarch tells us that Osiris was murdered on the seventeenth of the month Athyr, and that the Egyptians accordingly observed mournful rites for four days from the seventeenth of Athyr. Now in the Alexandrian calendar, which Plutarch used, these four days corresponded to the thirteenth, fourteenth, fifteenth, and sixteenth of November, and this date answers exactly to the other indications given by Plutarch, who says that at the time of the festival the Nile was sinking, the north winds dying away, the nights lengthening, and the leaves falling from the trees. During these four days a gilt cow swathed in a black pall was exhibited as an image of Isis. This, no doubt, was the image mentioned by Herodotus in his account of the festival. On the nineteenth day of the month the people went down to the sea, the priests carrying a shrine which contained a golden casket. Into this casket they poured fresh water, and thereupon the spectators raised a shout that Osiris was found. After that they took some vegetable mould, moistened it with water, mixed it with precious spices and incense, and moulded the paste into a small moon-shaped image, which was then robed and ornamented. Thus it appears that the purpose of the ceremonies described by Plutarch was to represent dramatically, first, the search for the dead body of Osiris, and, second, its joyful discovery, followed by the resurrection of the dead god who came to life again in the new image of vegetable mould and spices. Lactantius tells us how on these occasions the priests, with their shaven bodies, beat their breasts and lamented, imitating the sorrowful search of Isis for her lost son Osiris, and how afterwards their sorrow was turned to joy when the jackal-headed god Anubis, or rather a mummer in his stead, produced a small boy, the living representative of the god who was lost and was found. Thus Lactantius regarded Osiris as the son instead of the husband of Isis, and he makes no mention of the image of vegetable mould. It is probable that the boy who figured in the sacred drama played the part, not of Osiris, but of his son Horus; but as the death and resurrection of the god were celebrated in many cities of Egypt, it is also possible that in some places the part of the god come to life was played by a living actor instead of by an image. Another Christian writer describes how the Egyptians, with shorn heads, annually lamented over a buried idol of Osiris, smiting their breasts, slashing their shoulders, ripping open their old wounds, until, after several days of mourning, they professed to find the mangled remains of the god, at which they rejoiced. However the details of the ceremony may have varied in different places, the pretence of finding the god's body, and probably of restoring it to life, was a great event in the festal year of the Egyptians. The shouts of joy which greeted it are described or alluded to by many ancient writers.

§ 4. The Festival in the Month of Khoiak.

The funeral rites of Osiris, as they were observed at his great festival in the sixteen provinces of Egypt, are described in a long inscription of the Ptolemaic period, which is engraved on the walls of the god's temple at Denderah, the Tentyra of the Greeks, a town of Upper Egypt situated on the western bank of the Nile about forty miles north of Thebes. Unfortunately,

while the information thus furnished is remarkably full and minute on many points, the arrangement adopted in the inscription is so confused and the expression often so obscure that a clear and consistent account of the ceremonies as a whole can hardly be extracted from it. Moreover, we learn from the document that the ceremonies varied somewhat in the several cities, the ritual of Abydos, for example, differing from that of Busiris. Without attempting to trace all the particularities of local usage I shall briefly indicate what seem to have been the leading features of the festival, so far as these can be ascertained with tolerable certainty.

The rites lasted eighteen days, from the twelfth to the thirtieth of the month Khoiak, and set forth the nature of Osiris in his triple aspect as dead, dismembered, and finally reconstituted by the union of his scattered limbs. In the first of these aspects he was called Chent-Ament (Khenti-Amenti), in the second Osiris-Sep, and in the third Sokari (Seker). Small images of the god were moulded of sand or vegetable earth and corn, to which incense was sometimes added; his face was painted yellow and his cheek-bones green. These images were cast in a mould of pure gold, which represented the god in the form of a mummy, with the white crown of Egypt on his head. The festival opened on the twelfth day of Khoiak with a ceremony of ploughing and sowing. Two black cows were yoked to the plough, which was made of tamarisk wood, while the share was of black copper. A boy scattered the seed. One end of the field was sown with barley, the other with spelt, and the middle with flax. During the operation the chief celebrant recited the ritual chapter of "the sowing of the fields." At Busiris on the twentieth of Khoiak sand and barley were put in the god's "garden," which appears to have been a sort of large flower-pot. This was done in the presence of the cow-goddess Shenty, represented seemingly by the image of a cow made of gilt sycamore wood with a headless human image in its inside. "Then fresh inundation water was poured out of a golden vase over both the goddess and the 'garden' and the barley was allowed to grow as the emblem of the resurrection of the god after his burial in the earth, 'for the growth of the garden is the growth of the divine substance.'" On the twenty-second of Khoiak, at the eighth hour, the images of Osiris, attended by thirty-four images of deities, performed a mysterious voyage in thirty-four tiny boats made of papyrus, which were illuminated by three hundred and sixty-five lights. On the twenty-fourth of Khoiak, after sunset, the effigy of Osiris in a coffin of mulberry wood was laid in the grave, and at the ninth hour of the night the effigy which had been made and deposited the year before was removed and placed upon boughs of sycamore. Lastly, on the thirtieth day of Khoiak they repaired to the holy sepulchre, a subterranean chamber over which appears to have grown a clump of Persea-trees. Entering the vault by the western door, they laid the coffined effigy of the dead god reverently on a bed of sand in the chamber. So they left him to his rest, and departed from the sepulchre by the eastern door. Thus ended the ceremonies in the month of Khoiak.

§ 5. The Resurrection of Osiris.

In the foregoing account of the festival, drawn from the great inscription of Denderah, the burial of Osiris figures prominently, while his resurrection is implied rather than expressed. This defect of the document, however, is amply compensated by a remarkable series of bas-reliefs which accompany and illustrate the inscription. These exhibit in a series of scenes the dead god lying swathed as a mummy on his bier, then gradually raising himself up higher and higher, until at last he has entirely quitted the bier and is seen erect between the guardian wings of the faithful Isis, who stands behind him, while a male figure holds up before his eyes the *crux ansata*, the Egyptian symbol of life. The resurrection of the god could hardly be portrayed more graphically. Even more instructive, however, is another representation of the same event in a chamber dedicated to Osiris in the great temple of Isis at Philae. Here we see the dead body of Osiris with stalks of corn springing from it, while a priest waters the stalks from a pitcher which he holds in his hand. The accompanying inscription sets forth that "this

is the form of him whom one may not name, Osiris of the mysteries, who springs from the returning waters.” Taken together, the picture and the words seem to leave no doubt that Osiris was here conceived and represented as a personification of the corn which springs from the fields after they have been fertilized by the inundation. This, according to the inscription, was the kernel of the mysteries, the innermost secret revealed to the initiated. So in the rites of Demeter at Eleusis a reaped ear of corn was exhibited to the worshippers as the central mystery of their religion. We can now fully understand why at the great festival of sowing in the month of Khoiak the priests used to bury effigies of Osiris made of earth and corn. When these effigies were taken up again at the end of a year or of a shorter interval, the corn would be found to have sprouted from the body of Osiris, and this sprouting of the grain would be hailed as an omen, or rather as the cause, of the growth of the crops. The corn-god produced the corn from himself: he gave his own body to feed the people: he died that they might live.

And from the death and resurrection of their great god the Egyptians drew not only their support and sustenance in this life, but also their hope of a life eternal beyond the grave. This hope is indicated in the clearest manner by the very remarkable effigies of Osiris which have come to light in Egyptian cemeteries. Thus in the Valley of the Kings at Thebes there was found the tomb of a royal fan-bearer who lived about 1500 b.c. Among the rich contents of the tomb there was a bier on which rested a mattress of reeds covered with three layers of linen. On the upper side of the linen was painted a life-size figure of Osiris; and the interior of the figure, which was waterproof, contained a mixture of vegetable mould, barley, and a sticky fluid. The barley had sprouted and sent out shoots two or three inches long. Again, in the cemetery at Cynopolis “were numerous burials of Osiris figures. These were made of grain wrapped up in cloth and roughly shaped like an Osiris, and placed inside a bricked-up recess at the side of the tomb, sometimes in small pottery coffins, sometimes in wooden coffins in the form of a hawk-mummy, sometimes without any coffins at all.” These corn-stuffed figures were bandaged like mummies with patches of gilding here and there, as if in imitation of the golden mould in which the similar figures of Osiris were cast at the festival of sowing. Again, effigies of Osiris, with faces of green wax and their interior full of grain, were found buried near the necropolis of Thebes. Finally, we are told by Professor Erman that between the legs of mummies “there sometimes lies a figure of Osiris made of slime; it is filled with grains of corn, the sprouting of which is intended to signify the resurrection of the god.” We cannot doubt that, just as the burial of corn-stuffed images of Osiris in the earth at the festival of sowing was designed to quicken the seed, so the burial of similar images in the grave was meant to quicken the dead, in other words, to ensure their spiritual immortality.

§ 6. Readjustment of Egyptian Festivals.

The festival of Osiris which Plutarch assigns to the month of Athyr would seem to be identical in substance with the one which the inscription of Denderah assigns to the following month, namely, to Khoiak. Apparently the essence of both festivals was a dramatic representation of the death and resurrection of the god; in both of them Isis was figured by a gilt cow, and Osiris by an image moulded of moist vegetable earth. But if the festivals were the same, why were they held in different months? It is easy to suggest that different towns in Egypt celebrated the festival at different dates. But when we remember that according to the great inscription of Denderah, the authority of which is indisputable, the festival fell in the month of Khoiak in every province of Egypt, we shall be reluctant to suppose that at some one place, or even at a few places, it was exceptionally held in the preceding month of Athyr, and that the usually well-informed Plutarch described the exception as if it had been the rule, of which on this supposition he must have been wholly ignorant. More probably the discrepancy is to be explained by the great change which came over the Egyptian calendar

between the date of the inscription and the lifetime of Plutarch. For when the inscription was drawn up in the Ptolemaic age the festivals were dated by the old vague or movable year, and therefore rotated gradually through the whole circle of the seasons; whereas at the time when Plutarch wrote, about the end of the first century, they were seemingly dated by the fixed Alexandrian year, and accordingly had ceased to rotate.

But even if we grant that in Plutarch's day the festivals had become stationary, still this would not explain why the old festival of Khoiak had been transferred to Athyr. In order to understand that transference it seems necessary to suppose that when the Egyptians gave to their months fixed places in the solar year by accepting the Alexandrian system of intercalation, they at the same time transferred the festivals from what may be called their artificial to their natural dates. Under the old system a summer festival was sometimes held in winter and a winter festival in summer; a harvest celebration sometimes fell at the season of sowing, and a sowing celebration at the season of harvest. People might reconcile themselves to such anomalies so long as they knew that they were only temporary, and that in the course of time the festivals would necessarily return to their proper seasons. But it must have been otherwise when they adopted a fixed instead of a movable year, and so arrested the rotation of the festivals for ever. For they could not but be aware that every festival would thenceforth continue to occupy for all time that particular place in the solar year which it chanced to occupy in the year 30 b.c., when the calendar became fixed. If in that particular year it happened, as it might have happened, that the summer festivals were held in winter and the winter festivals in summer, they would always be so held in future; the absurdity and anomaly would never again be rectified as it had been before. This consideration, which could not have escaped intelligent men, must have suggested the advisability of transferring the festivals from the dates at which they chanced to be celebrated in 30 b.c. to the dates at which they ought properly to be celebrated in the course of nature.

Now what in the year 30 b.c. was the actual amount of discrepancy between the accidental and the natural dates of the festivals? It was a little more than a month. In that year Thoth, the first month of the Egyptian calendar, happened to begin on the twenty-ninth of August, whereas according to theory it should have begun with the heliacal rising of Sirius on the twentieth of July, that is, forty days or, roughly speaking, a month earlier. From this it follows that in the year 30 b.c. all the Egyptian festivals fell about a month later than their natural dates, and they must have continued to fall a month late for ever if they were allowed to retain those places in the calendar which they chanced to occupy in that particular year. In these circumstances it would be a natural and sensible thing to restore the festivals to their proper places in the solar year by celebrating them one calendar month earlier than before. If this measure were adopted the festivals which had hitherto been held, for example, in the third month Athyr would henceforth be held in the second month Phaophi; the festivals which had hitherto fallen in the fourth month Khoiak would thenceforth fall in the third month Athyr; and so on. Thus the festal calendar would be reduced to harmony with the seasons instead of being in more or less flagrant discord with them, as it had generally been before, and must always have been afterwards if the change which I have indicated had not been introduced. It is only to credit the native astronomers and the Roman rulers of Egypt with common sense to suppose that they actually adopted the measure. On that supposition we can perfectly understand why the festival of sowing, which had formerly belonged to the month of Khoiak, was transferred to Athyr. For in the Alexandrian calendar Khoiak corresponds very nearly to December, and Athyr to November. But in Egypt the month of November, not the month of December, is the season of sowing. There was therefore every reason why the great sowing festival of the corn-god Osiris should be held in Athyr and not Khoiak, in November and not in December. In like manner we may suppose that all the Egyptian

festivals were restored to their true places in the solar year, and that when Plutarch dates a festival both by its calendar month and by its relation to the cycle of the seasons, he is perfectly right in doing so, and we may accept his evidence with confidence instead of having to accuse him of ignorantly confounding the movable Egyptian with the fixed Alexandrian year. Accusations of ignorance levelled at the best writers of antiquity are apt to recoil on those who make them.

V. The Nature of Osiris

§ 1. Osiris a Corn-God.

The foregoing survey of the myth and ritual of Osiris may suffice to prove that in one of his aspects the god was a personification of the corn, which may be said to die and come to life again every year. Through all the pomp and glamour with which in later times the priests had invested his worship, the conception of him as the corn-god comes clearly out in the festival of his death and resurrection, which was celebrated in the month of Khoiak and at a later period in the month of Athyr. That festival appears to have been essentially a festival of sowing, which properly fell at the time when the husbandman actually committed the seed to the earth. On that occasion an effigy of the corn-god, moulded of earth and corn, was buried with funeral rites in the ground in order that, dying there, he might come to life again with the new crops. The ceremony was, in fact, a charm to ensure the growth of the corn by sympathetic magic, and we may conjecture that as such it was practised in a simple form by every Egyptian farmer on his fields long before it was adopted and transfigured by the priests in the stately ritual of the temple. In the modern, but doubtless ancient, Arab custom of burying "the Old Man," namely, a sheaf of wheat, in the harvest-field and praying that he may return from the dead, we see the germ out of which the worship of the corn-god Osiris was probably developed. Earth. What more appropriate parentage could be invented for the corn which springs from the ground that has been fertilized by the water of heaven? It is true that the land of Egypt owed its fertility directly to the Nile and not to showers; but the inhabitants must have known or guessed that the great river in its turn was fed by the rains which fell in the far interior. Again, the legend that Osiris was the first to teach men the use of corn would be most naturally told of the corn-god himself. Further, the story that his mangled remains were scattered up and down the land and buried in different places may be a mythical way of expressing either the sowing or the winnowing of the grain. The latter interpretation is supported by the tale that Isis placed the severed limbs of Osiris on a corn-sieve. Or more probably the legend may be a reminiscence of a custom of slaying a human victim, perhaps a representative of the corn-spirit, and distributing his flesh or scattering his ashes over the fields to fertilize them. In modern Europe the figure of Death is sometimes torn in pieces, and the fragments are then buried in the ground to make the crops grow well, and in other parts of the world human victims are treated in the same way. With regard to the ancient Egyptians we have it on the authority of Manetho that they used to burn red-haired men and scatter their ashes with winnowing fans, and it is highly significant that this barbarous sacrifice was offered by the kings at the grave of Osiris. We may conjecture that the victims represented Osiris himself, who was annually slain, dismembered, and buried in their persons that he might quicken the seed in the earth.

Possibly in prehistoric times the kings themselves played the part of the god and were slain and dismembered in that character. Set as well as Osiris is said to have been torn in pieces after a reign of eighteen days, which was commemorated by an annual festival of the same length. According to one story Romulus, the first king of Rome, was cut in pieces by the senators, who buried the fragments of him in the ground; and the traditional day of his death, the seventh of July, was celebrated with certain curious rites, which were apparently connected with the artificial fertilization of the fig. Again, Greek legend told how Pentheus, king of Thebes, and Lycurgus, king of the Thracian Edonians, opposed the vine-god Dionysus, and how the impious monarchs were rent in pieces, the one by the frenzied Bacchanals, the other by horses. These Greek traditions may well be distorted reminiscences

of a custom of sacrificing human beings, and especially divine kings, in the character of Dionysus, a god who resembled Osiris in many points and was said like him to have been torn limb from limb. We are told that in Chios men were rent in pieces as a sacrifice to Dionysus; and since they died the same death as their god, it is reasonable to suppose that they personated him. The story that the Thracian Orpheus was similarly torn limb from limb by the Bacchanals seems to indicate that he too perished in the character of the god whose death he died. It is significant that the Thracian Lycurgus, king of the Edonians, is said to have been put to death in order that the ground, which had ceased to be fruitful, might regain its fertility. In some Thracian villages at Carnival time a custom is still annually observed, which may well be a mitigation of an ancient practice of putting a man, perhaps a king, to death in the character of Dionysus for the sake of the crops. A man disguised in goatskins and fawnskins, the livery of Dionysus, is shot at and falls down as dead. A pretence is made of flaying his body and of mourning over him, but afterwards he comes to life again. Further, a plough is dragged about the village and seed is scattered, while prayers are said that the wheat, rye, and barley may be plentiful. One town (Viza), where these customs are observed, was the capital of the old Thracian kings. In another town (Kosti, near the Black Sea) the principal masker is called the king. He wears goatskins or sheepskins, and is attended by a boy who dispenses wine to the people. The king himself carries seed, which he casts on the ground before the church, after being invited to throw it on two bands of married and unmarried men respectively. Finally, he is stripped of the skins and thrown into the river.

Further, we read of a Norwegian king, Halfdan the Black, whose body was cut up and buried in different parts of his kingdom for the sake of ensuring the fruitfulness of the earth. He is said to have been drowned at the age of forty through the breaking of the ice in spring. What followed his death is thus related by the old Norse historian Snorri Sturluson: "He had been the most prosperous (literally, blessed with abundance) of all kings. So greatly did men value him that when the news came that he was dead and his body removed to Hringariki and intended for burial there, the chief men from Raumariki and Westfold and Heithmörk came and all requested that they might take his body with them and bury it in their various provinces; they thought that it would bring abundance to those who obtained it. Eventually it was settled that the body was distributed in four places. The head was laid in a barrow at Steinn in Hringariki, and each party took away their own share and buried it. All these barrows are called Halfdan's barrows." It should be remembered that this Halfdan belonged to the family of the Ynglings, who traced their descent from Frey, the great Scandinavian god of fertility. Frey himself is said to have reigned as king of Sweden at Upsala. The years of his reign were plenteous, and the people laid the plenty to his account. So when he died, they would not burn him, as it had been customary to do with the dead before his time; but they resolved to preserve his body, believing that, so long as it remained in Sweden, the land would have abundance and peace. Therefore they reared a great mound, and put him in it, and sacrificed to him for plenty and peace ever afterwards. And for three years after his death they poured the tribute to him into the mound, as if he were alive; the gold they poured in by one window, the silver by a second, and the copper by a third.

The natives of Kiwai, an island lying off the mouth of the Fly River in British New Guinea, tell of a certain magician named Seger, who had sago for his totem. When his son died, the death was set down to the magic of an enemy, and the bereaved father was so angry that by his spells he caused the whole crop of sago in the country to fail; only in his own garden the sago grew as luxuriantly as ever. When many had died of famine, the people went to him and begged him to remove the spells which he had cast on the sago palms, so that they might eat food and live. The magician, touched with remorse and pity, went round planting a sago shoot in every garden, and the shoots flourished, sago was plentiful once more, and the

famine came to an end. When Segera was old and ill, he told the people that he would soon die, but that, nevertheless, he would cause their gardens to thrive. Accordingly, he instructed them that when he was dead they should cut him up and place pieces of his flesh in their gardens, but his head was to be buried in his own garden. Of him it is said that he outlived the ordinary age, and that no man knew his father, but that he made the sago good and no one was hungry any more. Old men who were alive a few years ago affirmed that they had known Segera in their youth, and the general opinion of the Kiwai people seems to be that Segera died not more than two generations ago.

Taken all together, these legends point to a widespread practice of dismembering the body of a king or magician and burying the pieces in different parts of the country in order to ensure the fertility of the ground and probably also the fecundity of man and beast. Whether regarded as the descendant of a god, as himself divine, or simply as a mighty enchanter, the king was believed to radiate magical virtue for the good of his subjects, quickening the seed in the earth and in the womb. This radiation of reproductive energy did not cease with his life; hence the people deemed it essential to preserve his body as a pledge of the continued prosperity of the country. It would be natural to imagine that the spot where the dead king was buried would enjoy a more than ordinary share of his blessed influence, and accordingly disputes would almost inevitably arise between different districts for the exclusive possession of so powerful a talisman. These disputes could be settled and local jealousies appeased by dividing the precious body between the rival claimants, in order that all should benefit in equal measure by its life-giving properties. This was certainly done in Norway with the body of Halfdan the Black, the descendant of the harvest-god Frey; it appears to have been done with the body of Segera, the sago-magician of Kiwai; and we may conjecture that in prehistoric times it was done with the bodies of Egyptian kings, who personated Osiris, the god of fertility in general and of the corn in particular. At least such a practice would account for the legend of the mangling of the god's body and the distribution of the pieces throughout Egypt.

In this connexion the story that the genital member of Osiris was missing when Isis pieced together his mutilated body, may not be without significance. When a Zulu medicine-man wishes to make the crops grow well, he will take the body of a man who has died in full vigour and cut minute portions of tissue from the foot, the leg, the arm, the face, and the nail of a single finger in order to compound a fertilizing medicine out of them. But the most important part of the medicine consists of the dead man's generative organs, which are removed entire. All these pieces of the corpse are fried with herbs on a slow fire, then ground to powder, and sown over the fields. We have seen that similarly the Egyptians scattered the ashes of human victims by means of winnowing-fans; and if my explanation of the practice is correct, it may well have been that they, like the Zulus, attributed a special power of reproduction to the genital organs, and therefore carefully excised them from the body of the victim in order to impart their virtue to the fields. I have conjectured that a similar use was made of the severed portions of the priests of Attis.

To an ancient Egyptian, with his firm belief in a personal immortality dependent on the integrity of the body, the prospect of mutilation after death must have been very repugnant; and we may suppose that the kings offered a strenuous resistance to the custom and finally succeeded in abolishing it. They may have represented to the people that they would attain their object better by keeping the royal corpse intact than by frittering it away in small pieces. Their subjects apparently acquiesced in the argument, or at all events in the conclusion; yet the mountains of masonry beneath which the old Egyptian kings lay buried may have been intended to guard them from the superstitious devotion of their friends quite as much as from the hostile designs of their enemies, since both alike must have been under a strong

temptation to violate the sanctity of the grave in order to possess themselves of bodies which were believed to be endowed with magical virtue of the most tremendous potency. In antiquity the safety of the state was often believed to depend on the possession of a talisman, which sometimes consisted of the bones of a king or hero. Hence the graves of such persons were sometimes kept secret. The violation of royal tombs by a conqueror was not a mere insult: it was a deadly blow struck at the prosperity of the kingdom. Hence Ashurbanipal carried off to Assyria the bones of the kings of Elam, believing that thus he gave their shades no repose and deprived them of food and drink. The Moabites burned the bones of the king of Edom into lime. Lysimachus is said to have opened the graves of the kings of Epirus and scattered the bones of the dead.

With savage and barbarous tribes in like manner it is not unusual to violate the sanctity of the tomb either for the purpose of wreaking vengeance on the dead or more commonly perhaps for the sake of gaining possession of the bones and converting them to magical uses. Hence the Mpongwe kings of the Gaboon region in West Africa are buried secretly lest their heads should fall into the hands of men of another tribe, who would make a powerful fetish out of the brains. Again, in Togoland, West Africa, the kings of the Ho tribe are buried with great secrecy in the forest, and a false grave is made ostentatiously in the king's house. None but his personal retainers and a single daughter know where the king's real grave is. The intention of this secret burial is to prevent enemies from digging up the corpse and cutting off the head. "The heads of important chiefs in the Calabar districts are usually cut off from the body on burial and kept secretly for fear the head, and thereby the spirit, of the dead chief, should be stolen from the town. If it were stolen it would be not only a great advantage to its new possessor, but a great danger to the chief's old town, because he would know all the peculiar ju-ju relating to it. For each town has a peculiar one, kept exceedingly secret, in addition to the general ju-jus, and this secret one would then be in the hands of the new owners of the spirit." The graves of Basuto chiefs are kept secret lest certain more or less imaginary witches and wizards called *Baloi*, who haunt tombs, should get possession of the bones and work evil magic with them. In the Thonga tribe of South Africa, when a chief dies, he is buried secretly by night in a sacred wood, and few people know the place of the grave. With some clans of the tribe it is customary to level the mound over the grave so that no sign whatever remains to show where the body has been buried. This is said to be done lest enemies should exhume the corpse and cut off the ears, the diaphragm, and other parts in order to make powerful war-charms out of them. By many tribes in Fiji "the burial-place of their chief is kept a profound secret, lest those whom he injured during his lifetime should revenge themselves by digging up and insulting or even eating his body. In some places the dead chief is buried in his own house, and armed warriors of his mother's kin keep watch night and day over his grave. After a time his bones are taken up and carried by night to some far-away inaccessible cave in the mountains, whose position is known only to a few trustworthy men. Ladders are constructed to enable them to reach the cave, and are taken down when the bones have been deposited there. Many frightful stories are told in connection with this custom, and it is certain that not even decomposition itself avails to baulk the last revenge of cannibals if they can find the grave. The very bones of the dead chief are not secure from the revenge of those whose friends he killed during his lifetime, or whom he otherwise so exasperated by the tyrannous exercise of his power as to fill their hearts with a deadly hate. In one instance within my own knowledge, when the hiding-place was discovered, the bones were taken away, scraped, and stewed down into a horrible hell-broth." When a Melanesian dies who enjoyed a reputation for magical powers in his lifetime, his friends will sometimes hold a sham burial and keep the real grave secret for fear that men might come and dig up the skull and bones to make charms with them.

Beliefs and practices of this sort are by no means confined to agricultural peoples. Among the Koniags of Alaska “in ancient times the pursuit of the whale was accompanied by numerous superstitious observances kept a secret by the hunters. Lieutenant Davidof states that the whalers preserved the bodies of brave or distinguished men in secluded caves, and before proceeding upon a whale-hunt would carry these dead bodies into a stream and then drink of the water thus tainted. One famous whaler of Kadiak who desired to flatter Baranof, the first chief manager of the Russian colonies, said to him, ‘When you die I shall try to steal your body,’ intending thus to express his great respect for Baranof. On the occasion of the death of a whaler his fellows would cut the body into pieces, each man taking one of them for the purpose of rubbing his spear-heads therewith. These pieces were dried or otherwise preserved, and were frequently taken into the canoes as talismans.”

To return to the human victims whose ashes the Egyptians scattered with winnowing-fans, the red hair of these unfortunates was probably significant. If I am right, the custom of sacrificing such persons was not a mere way of wreaking a national spite on fair-haired foreigners, whom the black-haired Egyptians of old, like the black-haired Chinese of modern times, may have regarded as red-haired devils. For in Egypt the oxen which were sacrificed had also to be red; a single black or white hair found on the beast would have disqualified it for the sacrifice. If, as I conjecture, these human sacrifices were intended to promote the growth of the crops—and the winnowing of their ashes seems to support this view—red-haired victims were perhaps selected as best fitted to personate the spirit of the ruddy grain. For when a god is represented by a living person, it is natural that the human representative should be chosen on the ground of his supposed resemblance to the divine original. Hence the ancient Mexicans, conceiving the maize as a personal being who went through the whole course of life between seed-time and harvest, sacrificed new-born babes when the maize was sown, older children when it had sprouted, and so on till it was fully ripe, when they sacrificed old men. A name for Osiris was the “crop” or “harvest”; and the ancients sometimes explained him as a personification of the corn.

§ 2. Osiris a Tree-Spirit.

But Osiris was more than a spirit of the corn; he was also a tree-spirit, and this may perhaps have been his primitive character, since the worship of trees is naturally older in the history of religion than the worship of the cereals. However that may have been, to an agricultural people like the Egyptians, who depended almost wholly on their crops, the corn-god was naturally a far more important personage than the tree-god, and attracted a larger share of their devotion. The character of Osiris as a tree-spirit was represented very graphically in a ceremony described by Firmicus Maternus. A pine-tree having been cut down, the centre was hollowed out, and with the wood thus excavated an image of Osiris was made, which was then buried like a corpse in the hollow of the tree. It is hard to imagine how the conception of a tree as tenanted by a personal being could be more plainly expressed. The image of Osiris thus made was kept for a year and then burned, exactly as was done with the image of Attis which was attached to the pine-tree. The ceremony of cutting the tree, as described by Firmicus Maternus, appears to be alluded to by Plutarch. It was probably the ritual counterpart of the mythical discovery of the body of Osiris enclosed in the *erica*-tree.

Now we know from the monuments that at Busiris, Memphis, and elsewhere the great festival of Osiris closed on the thirtieth of Khoiak with the setting up of a remarkable pillar known as the *tatu*, *tat*, *tet*, *dad*, or *ded*. This was a column with four or five cross-bars, like superposed capitals, at the top. The whole roughly resembled a telegraph-post with the cross-pieces which support the wires. Sometimes on the monuments a human form is given to the pillar by carving a grotesque face on it, robing the lower part, crowning the top with the symbols of

Osiris, and adding two arms which hold two other characteristic emblems of the god, the crook and the scourge or flail. On a Theban tomb the king himself, assisted by his relations and a priest, is represented hauling at the ropes by which the pillar is being raised, while the queen looks on and her sixteen daughters accompany the ceremony with the music of rattles and sistrums. Again, in the hall of the Osirian mysteries at Abydos the King Sety I. and the goddess Isis are depicted raising the column between them. In Egyptian theology the pillar was interpreted as the backbone of Osiris, and whatever its meaning may have been, it was one of the holiest symbols of the national religion. It might very well be a conventional way of representing a tree stripped of its leaves; and if Osiris was a tree-spirit, the bare trunk and branches might naturally be described as his backbone. The setting up of the column would thus, as several modern scholars believe, shadow forth the resurrection of the god, and the importance of the occasion would explain and justify the prominent part which the king appears to have taken in the ceremony. It is to be noted that in the myth of Osiris the *erica*-tree which shot up and enclosed his dead body, was cut down by a king and turned by him into a pillar of his house. We can hardly doubt, therefore, that this incident of the legend was supposed to be dramatically set forth in the erection of the *ded* column by the king. Like the similar custom of cutting a pine-tree and fastening an image to it in the rites of Attis, the ceremony may have belonged to that class of customs of which the bringing in of the May-pole is among the most familiar. The association of the king and queen of Egypt with the *ded* pillar reminds us of the association of a King and Queen of May with the May-pole. The resemblance may be more than superficial.

In the hall of Osiris at Denderah the coffin containing the hawk-headed mummy of the god is clearly depicted as enclosed within a tree, apparently a conifer, the trunk and branches of which are seen above and below the coffin. The scene thus corresponds closely both to the myth and to the ceremony described by Firmicus Maternus. In another scene at Denderah a tree of the same sort is represented growing between the dead and the reviving Osiris, as if on purpose to indicate that the tree was the symbol of the divine resurrection. A pine-cone often appears on the monuments as an offering presented to Osiris, and a manuscript of the Louvre speaks of the cedar as sprung from him. The sycamore and the tamarisk were also his trees. In inscriptions he is spoken of as residing in them; and in tombs his mother Nut is often portrayed standing in the midst of a sycamore-tree and pouring a libation for the benefit of the dead. In one of the Pyramid Texts we read, "Hail to thee, Sycamore, which encloseth the god"; and in certain temples the statue of Osiris used to be placed for seven days upon branches of sycamores. The explanation appended in the sacred texts declares that the placing of the image on the tree was intended to recall the seven months passed by Osiris in the womb of his mother Nut, the goddess of the sycamore. The rite recalls the story that Adonis was born after ten months' gestation from a myrrh-tree. Further, in a sepulchre at How (Diospolis Parva) a tamarisk is depicted overshadowing the tomb of Osiris, while a bird is perched among the branches with the significant legend "the soul of Osiris," showing that the spirit of the dead god was believed to haunt his sacred tree. Again, in the series of sculptures which illustrate the mystic history of Osiris in the great temple of Isis at Philae, a tamarisk is figured with two men pouring water on it. The accompanying inscription leaves no doubt, says Brugsch, that the verdure of the earth was believed to be connected with the verdure of the tree, and that the sculpture refers to the grave of Osiris at Philae, of which Plutarch tells us that it was overshadowed by a *methide* plant, taller than any olive-tree. This sculpture, it may be observed, occurs in the same chamber in which the god is represented as a corpse with ears of corn springing from him. In inscriptions he is referred to as "the one in the tree," "the solitary one in the acacia," and so forth. On the monuments he sometimes appears as a mummy covered with a tree or with plants; and trees are represented growing from his grave.

It accords with the character of Osiris as a tree-spirit that his worshippers were forbidden to injure fruit-trees, and with his character as a god of vegetation in general that they were not allowed to stop up wells of water, which are so important for the irrigation of hot southern lands. According to one legend, he taught men to train the vine to poles, to prune its superfluous foliage, and to extract the juice of the grape. In the papyrus of Nebseni, written about 1550 b.c., Osiris is depicted sitting in a shrine, from the roof of which hang clusters of grapes; and in the papyrus of the royal scribe Nekht we see the god enthroned in front of a pool, from the banks of which a luxuriant vine, with many bunches of grapes, grows towards the green face of the seated deity. The ivy was sacred to him, and was called his plant because it is always green.

§ 3. Osiris a God of Fertility.

As a god of vegetation Osiris was naturally conceived as a god of creative energy in general, since men at a certain stage of evolution fail to distinguish between the reproductive powers of animals and of plants. Hence a striking feature in his worship was the coarse but expressive symbolism by which this aspect of his nature was presented to the eye not merely of the initiated but of the multitude. At his festival women used to go about the villages singing songs in his praise and carrying obscene images of him which they set in motion by means of strings. The custom was probably a charm to ensure the growth of the crops. A similar image of him, decked with all the fruits of the earth, is said to have stood in a temple before a figure of Isis, and in the chambers dedicated to him at Philae the dead god is portrayed lying on his bier in an attitude which indicates in the plainest way that even in death his generative virtue was not extinct but only suspended, ready to prove a source of life and fertility to the world when the opportunity should offer. Hymns addressed to Osiris contain allusions to this important side of his nature. In one of them it is said that the world waxes green in triumph through him; and another declares, "Thou art the father and mother of mankind, they live on thy breath, they subsist on the flesh of thy body." We may conjecture that in this paternal aspect he was supposed, like other gods of fertility, to bless men and women with offspring, and that the processions at his festival were intended to promote this object as well as to quicken the seed in the ground. It would be to misjudge ancient religion to denounce as lewd and profligate the emblems and the ceremonies which the Egyptians employed for the purpose of giving effect to this conception of the divine power. The ends which they proposed to themselves in these rites were natural and laudable; only the means they adopted to compass them were mistaken. A similar fallacy induced the Greeks to adopt a like symbolism in their Dionysiac festivals, and the superficial but striking resemblance thus produced between the two religions has perhaps more than anything else misled inquirers, both ancient and modern, into identifying worships which, though certainly akin in nature, are perfectly distinct and independent in origin.

§ 4. Osiris a God of the Dead.

We have seen that in one of his aspects Osiris was the ruler and judge of the dead. To a people like the Egyptians, who not only believed in a life beyond the grave but actually spent much of their time, labour, and money in preparing for it, this office of the god must have appeared hardly, if at all, less important than his function of making the earth to bring forth its fruits in due season. We may assume that in the faith of his worshippers the two provinces of the god were intimately connected. In laying their dead in the grave they committed them to his keeping who could raise them from the dust to life eternal, even as he caused the seed to spring from the ground. Of that faith the corn-stuffed effigies of Osiris found in Egyptian tombs furnish an eloquent and unequivocal testimony. They were at once an emblem and an instrument of resurrection. Thus from the sprouting of the grain the ancient Egyptians drew

an augury of human immortality. They are not the only people who have built the same far-reaching hopes on the same slender foundation. "Thou fool, that which thou sowest, thou sowest not that body that shall be, but bare grain, it may chance of wheat, or of some other grain: but God giveth it a body as it hath pleased him, and to every seed his own body. So also is the resurrection of the dead. It is sown in corruption; it is raised in incorruption: it is sown in weakness; it is raised in power: it is sown a natural body; it is raised a spiritual body."

A god who thus fed his people with his own broken body in this life, and who held out to them a promise of a blissful eternity in a better world hereafter, naturally reigned supreme in their affections. We need not wonder, therefore, that in Egypt the worship of the other gods was overshadowed by that of Osiris, and that while they were revered each in his own district, he and his divine partner Isis were adored in all.

VI. Isis

The original meaning of the goddess Isis is still more difficult to determine than that of her brother and husband Osiris. Her attributes and epithets were so numerous that in the hieroglyphics she is called "the many-named," "the thousand-named," and in Greek inscriptions "the myriad-named." The late eminent Dutch scholar C. P. Tiele confessed candidly that "it is now impossible to tell precisely to what natural phenomena the character of Isis at first referred." Yet he adds, "Originally she was a goddess of fecundity." Similarly Dr. Budge writes that "Isis was the great and beneficent goddess and mother, whose influence and love pervaded all heaven and earth and the abode of the dead, and she was the personification of the great feminine, creative power which conceived, and brought forth every living creature and thing, from the gods in heaven to man on the earth, and to the insect on the ground; what she brought forth she protected, and cared for, and fed, and nourished, and she employed her life in using her power graciously and successfully, not only in creating new beings but in restoring those that were dead. She was, besides these things, the highest type of a faithful and loving wife and mother, and it was in this capacity that the Egyptians honoured and worshipped her most."

Thus in her character of a goddess of fecundity Isis answered to the great mother goddesses of Asia, though she differed from them in the chastity and fidelity of her conjugal life; for while they were unmarried and dissolute, she had a husband and was a true wife to him as well as an affectionate mother to their son. Hence her beautiful Madonna-like figure reflects a more refined state of society and of morals than the coarse, sensual, cruel figures of Astarte, Anaitis, Cybele, and the rest of that crew. A clear trace, indeed, of an ethical standard very different from our own lingers in her double relation of sister and wife to Osiris; but in most other respects she is rather late than primitive, the full-blown flower rather than the seed of a long religious development. The attributes ascribed to her were too various to be all her own. They were graces borrowed from many lesser deities, sweets rifled from a thousand humbler plants to feed the honey of her superb efflorescence. Yet in her complex nature it is perhaps still possible to detect the original nucleus round which by a slow process of accretion the other elements gathered. For if her brother and husband Osiris was in one of his aspects the corn-god, as we have seen reason to believe, she must surely have been the corn-goddess. There are at least some grounds for thinking so. For if we may trust Diodorus Siculus, whose authority appears to have been the Egyptian historian Manetho, the discovery of wheat and barley was attributed to Isis, and at her festivals stalks of these grains were carried in procession to commemorate the boon she had conferred on men. A further detail is added by Augustine. He says that Isis made the discovery of barley at the moment when she was sacrificing to the common ancestors of her husband and herself, all of whom had been kings, and that she showed the newly discovered ears of barley to Osiris and his councillor Thoth or Mercury, as Roman writers called him. That is why, adds Augustine, they identify Isis with Ceres. Further, at harvest-time, when the Egyptian reapers had cut the first stalks, they laid them down and beat their breasts, wailing and calling upon Isis. The custom has been already explained as a lament for the corn-spirit slain under the sickle. Amongst the epithets by which Isis is designated in the inscriptions are "Creatress of green things," "Green goddess, whose green colour is like unto the greenness of the earth," "Lady of Bread," "Lady of Beer," "Lady of Abundance." According to Brugsch she is "not only the creatress of the fresh verdure of vegetation which covers the earth, but is actually the green corn-field itself, which is personified as a goddess." This is confirmed by her epithet *Sochit* or *Sochet*, meaning "a corn-field," a sense which the word still retains in Coptic. The Greeks conceived of Isis as a

corn-goddess, for they identified her with Demeter. In a Greek epigram she is described as “she who has given birth to the fruits of the earth,” and “the mother of the ears of corn”; and in a hymn composed in her honour she speaks of herself as “queen of the wheat-field,” and is described as “charged with the care of the fruitful furrow's wheat-rich path.” Accordingly, Greek or Roman artists often represented her with ears of corn on her head or in her hand.

Such, we may suppose, was Isis in the olden time, a rustic Corn-Mother adored with uncouth rites by Egyptian swains. But the homely features of the clownish goddess could hardly be traced in the refined, the saintly form which, spiritualized by ages of religious evolution, she presented to her worshippers of after days as the true wife, the tender mother, the beneficent queen of nature, encircled with the nimbus of moral purity, of immemorial and mysterious sanctity. Thus chastened and transfigured she won many hearts far beyond the boundaries of her native land. In that welter of religions which accompanied the decline of national life in antiquity her worship was one of the most popular at Rome and throughout the empire. Some of the Roman emperors themselves were openly addicted to it. And however the religion of Isis may, like any other, have been often worn as a cloak by men and women of loose life, her rites appear on the whole to have been honourably distinguished by a dignity and composure, a solemnity and decorum well fitted to soothe the troubled mind, to ease the burdened heart. They appealed therefore to gentle spirits, and above all to women, whom the bloody and licentious rites of other Oriental goddesses only shocked and repelled. We need not wonder, then, that in a period of decadence, when traditional faiths were shaken, when systems clashed, when men's minds were disquieted, when the fabric of empire itself, once deemed eternal, began to show ominous rents and fissures, the serene figure of Isis with her spiritual calm, her gracious promise of immortality, should have appeared to many like a star in a stormy sky, and should have roused in their breasts a rapture of devotion not unlike that which was paid in the Middle Ages to the Virgin Mary. Indeed her stately ritual, with its shaven and tonsured priests, its matins and vespers, its tinkling music, its baptism and aspersions of holy water, its solemn processions, its jewelled images of the Mother of God, presented many points of similarity to the pomps and ceremonies of Catholicism. The resemblance need not be purely accidental. Ancient Egypt may have contributed its share to the gorgeous symbolism of the Catholic Church as well as to the pale abstractions of her theology. Certainly in art the figure of Isis suckling the infant Horus is so like that of the Madonna and child that it has sometimes received the adoration of ignorant Christians. And to Isis in her later character of patroness of mariners the Virgin Mary perhaps owes her beautiful epithet of *Stella Maris*, “Star of the Sea,” under which she is adored by tempest-tossed sailors. The attributes of a marine deity may have been bestowed on Isis by the seafaring Greeks of Alexandria. They are quite foreign to her original character and to the habits of the Egyptians, who had no love of the sea. On this hypothesis Sirius, the bright star of Isis, which on July mornings rises from the glassy waves of the eastern Mediterranean, a harbinger of halcyon weather to mariners, was the true *Stella Maris*, “the Star of the Sea.”

VII. Osiris and the Sun

Osiris has been sometimes interpreted as the sun-god; and in modern times this view has been held by so many distinguished writers that it deserves a brief examination. If we inquire on what evidence Osiris has been identified with the sun or the sun-god, it will be found on analysis to be minute in quantity and dubious, where it is not absolutely worthless, in quality. The diligent Jablonski, the first modern scholar to collect and sift the testimony of classical writers on Egyptian religion, says that it can be shown in many ways that Osiris is the sun, and that he could produce a cloud of witnesses to prove it, but that it is needless to do so, since no learned man is ignorant of the fact. Of the writers whom he condescends to quote, the only two who expressly identify Osiris with the sun are Diodorus and Macrobius. The passage in Diodorus runs thus: "It is said that the aboriginal inhabitants of Egypt, looking up to the sky, and smitten with awe and wonder at the nature of the universe, supposed that there were two gods, eternal and primaeval, the sun and the moon, of whom they named the sun Osiris and the moon Isis." Even if Diodorus's authority for this statement is Manetho, as there is some ground for believing, little or no weight can be attached to it. For it is plainly a philosophical, and therefore a late, explanation of the first beginnings of Egyptian religion, reminding us of Kant's familiar saying about the starry heavens and the moral law rather than of the rude traditions of a primitive people. Jablonski's second authority, Macrobius, is no better, but rather worse. For Macrobius was the father of that large family of mythologists who resolve all or most gods into the sun. According to him Mercury was the sun, Mars was the sun, Janus was the sun, Saturn was the sun, so was Jupiter, also Nemesis, likewise Pan, and so on through a great part of the pantheon. It was natural, therefore, that he should identify Osiris with the sun, but his reasons for doing so are exceedingly slight. He refers to the ceremonies of alternate lamentation and joy as if they reflected the vicissitudes of the great luminary in his course through the sky. Further, he argues that Osiris must be the sun because an eye was one of his symbols. It is true that an eye was a symbol of Osiris, and it is also true that the sun was often called "the eye of Horus"; yet the coincidence hardly suffices to establish the identity of the two deities. The opinion that Osiris was the sun is also mentioned, but not accepted, by Plutarch, and it is referred to by Firmicus Maternus.

Amongst modern scholars, Lepsius, in identifying Osiris with the sun, appears to rely mainly on the passage of Diodorus already quoted. But the monuments, he adds, also show "that down to a late time Osiris was sometimes conceived as *Ra*. In this quality he is named *Osiris-Ra* even in the 'Book of the Dead,' and Isis is often called 'the royal consort of Ra.'" That *Ra* was both the physical sun and the sun-god is undisputed; but with every deference for the authority of so great a scholar as Lepsius, we may doubt whether the identification of Osiris with *Ra* can be accepted as proof that Osiris was originally the sun. For the religion of ancient Egypt may be described as a confederacy of local cults which, while maintaining against each other a certain measure of jealous and even hostile independence, were yet constantly subjected to the fusing and amalgamating influence of political centralization and philosophic thought. The history of the religion appears to have largely consisted of a struggle between these opposite forces or tendencies. On the one side there was the conservative tendency to preserve the local cults with all their distinctive features, fresh, sharp, and crisp as they had been handed down from an immemorial past. On the other side there was the progressive tendency, favoured by the gradual fusion of the people under a powerful central government, first to dull the edge of these provincial distinctions, and finally to break them down completely and merge them in a single national religion. The conservative party probably mustered in its ranks the great bulk of the people, their prejudices and affections being

warmly enlisted in favour of the local deity, with whose temple and rites they had been familiar from childhood; and the popular dislike of change, based on the endearing effect of old association, must have been strongly reinforced by the less disinterested opposition of the local clergy, whose material interests would necessarily suffer with any decay of their shrines. On the other hand the kings, whose power and glory rose with the political and ecclesiastical consolidation of the realm, were the natural champions of religious unity; and their efforts would be seconded by the refined and thoughtful minority, who could hardly fail to be shocked by the many barbarous and revolting elements in the local rites. As usually happens in such cases, the process of religious unification appears to have been largely effected by discovering points of similarity, real or imaginary, between the provincial deities, which were thereupon declared to be only different names or manifestations of the same god.

Of the deities who thus acted as centres of attraction, absorbing in themselves a multitude of minor divinities, by far the most important was the sun-god Ra. There appear to have been few gods in Egypt who were not at one time or other identified with him. Ammon of Thebes, Horus of the East, Horus of Edfu, Chnum of Elephantine, Tum of Heliopolis, all were regarded as one god, the sun. Even the water-god Sobk, in spite of his crocodile shape, did not escape the same fate. Indeed one king, Amenophis IV., undertook to sweep away all the old gods at a stroke and replace them by a single god, the "great living disc of the sun." In the hymns composed in his honour, this deity is referred to as "the living disc of the sun, besides whom there is none other." He is said to have made "the far heaven" and "men, beasts, and birds; he strengtheneth the eyes with his beams, and when he showeth himself, all flowers live and grow, the meadows flourish at his upgoing and are drunken at his sight, all cattle skip on their feet, and the birds that are in the marsh flutter for joy." It is he "who bringeth the years, createth the months, maketh the days, calculateth the hours, the lord of time, by whom men reckon." In his zeal for the unity of god, the king commanded to erase the names of all other gods from the monuments, and to destroy their images. His rage was particularly directed against the god Ammon, whose name and likeness were effaced wherever they were found; even the sanctity of the tomb was violated in order to destroy the memorials of the hated deity. In some of the halls of the great temples at Carnac, Luxor, and other places, all the names of the gods, with a few chance exceptions, were scratched out. The monarch even changed his own name, Amenophis, because it was compounded of Ammon, and took instead the name of Chu-en-aten, "gleam of the sun's disc." Thebes itself, the ancient capital of his glorious ancestors, full of the monuments of their piety and idolatry, was no longer a fit home for the puritan king. He deserted it, and built for himself a new capital in Middle Egypt at the place now known as Tell-el-Amarna. Here in a few years a city of palaces and gardens rose like an exhalation at his command, and here the king, his dearly loved wife and children, and his complaisant courtiers led a merry life. The grave and sombre ritual of Thebes was discarded. The sun-god was worshipped with songs and hymns, with the music of harps and flutes, with offerings of cakes and fruits and flowers. Blood seldom stained his kindly altars. The king himself celebrated the offices of religion. He preached with unction, and we may be sure that his courtiers listened with at least an outward semblance of devotion. From the too-faithful portraits of himself which he has bequeathed to us we can still picture to ourselves the heretic king in the pulpit, with his tall, lanky figure, his bandy legs, his pot-belly, his long, lean, haggard face aglow with the fever of religious fanaticism. Yet "the doctrine," as he loved to call it, which he proclaimed to his hearers was apparently no stern message of renunciation in this world, of terrors in the world to come. The thoughts of death, of judgment, and of a life beyond the grave, which weighed like a nightmare on the minds of the Egyptians, seem to have been banished for a time. Even the name of Osiris, the awful judge of the dead, is not once mentioned in the graves at Tell-el-Amarna. All this lasted only during the life of the reformer. His death was followed by a violent reaction. The old

gods were reinstated in their rank and privileges: their names and images were restored, and new temples were built. But all the shrines and palaces reared by the late king were thrown down: even the sculptures that referred to him and to his god in rock-tombs and on the sides of hills were erased or filled up with stucco: his name appears on no later monument, and was carefully omitted from all official lists. The new capital was abandoned, never to be inhabited again. Its plan can still be traced in the sands of the desert.

This attempt of King Amenophis IV. is only an extreme example of a tendency which appears to have affected the religion of Egypt as far back as we can trace it. Therefore, to come back to our point, in attempting to discover the original character of any Egyptian god, no weight can be given to the identification of him with other gods, least of all with the sun-god Ra. Far from helping to follow up the trail, these identifications only cross and confuse it. The best evidence for the original character of the Egyptian gods is to be found in their ritual and myths, so far as these are known, and in the manner in which they are portrayed on the monuments. It is mainly on evidence drawn from these sources that I rest my interpretation of Osiris.

The ground upon which some modern writers seem chiefly to rely for the identification of Osiris with the sun is that the story of his death fits better with the solar phenomena than with any other in nature. It may readily be admitted that the daily appearance and disappearance of the sun might very naturally be expressed by a myth of his death and resurrection; and writers who regard Osiris as the sun are careful to indicate that it is the diurnal, and not the annual, course of the sun to which they understand the myth to apply. Thus Renouf, who identified Osiris with the sun, admitted that the Egyptian sun could not with any show of reason be described as dead in winter. But if his daily death was the theme of the legend, why was it celebrated by an annual ceremony? This fact alone seems fatal to the interpretation of the myth as descriptive of sunset and sunrise. Again, though the sun may be said to die daily, in what sense can he be said to be torn in pieces?

In the course of our inquiry it has, I trust, been made clear that there is another natural phenomenon to which the conception of death and resurrection is as applicable as to sunset and sunrise, and which, as a matter of fact, has been so conceived and represented in folk-custom. That phenomenon is the annual growth and decay of vegetation. A strong reason for interpreting the death of Osiris as the decay of vegetation rather than as the sunset is to be found in the general, though not unanimous, voice of antiquity, which classed together the worship and myths of Osiris, Adonis, Attis, Dionysus, and Demeter, as religions of essentially the same type. The consensus of ancient opinion on this subject seems too great to be rejected as a mere fancy. So closely did the rites of Osiris resemble those of Adonis at Byblus that some of the people of Byblus themselves maintained that it was Osiris and not Adonis whose death was mourned by them. Such a view could certainly not have been held if the rituals of the two gods had not been so alike as to be almost indistinguishable. Herodotus found the similarity between the rites of Osiris and Dionysus so great, that he thought it impossible the latter could have arisen independently; they must, he supposed, have been recently borrowed, with slight alterations, by the Greeks from the Egyptians. Again, Plutarch, a very keen student of comparative religion, insists upon the detailed resemblance of the rites of Osiris to those of Dionysus. We cannot reject the evidence of such intelligent and trustworthy witnesses on plain matters of fact which fell under their own cognizance. Their explanations of the worships it is indeed possible to reject, for the meaning of religious cults is often open to question; but resemblances of ritual are matters of observation. Therefore, those who explain Osiris as the sun are driven to the alternative of either dismissing as mistaken the testimony of antiquity to the similarity of the rites of Osiris, Adonis, Attis, Dionysus, and Demeter, or of interpreting all these rites as sun-worship. No modern scholar

has fairly faced and accepted either side of this alternative. To accept the former would be to affirm that we know the rites of these deities better than the men who practised, or at least who witnessed them. To accept the latter would involve a wrenching, clipping, mangling, and distorting of myth and ritual from which even Macrobius shrank. On the other hand, the view that the essence of all these rites was the mimic death and revival of vegetation, explains them separately and collectively in an easy and natural way, and harmonizes with the general testimony borne by the ancients to their substantial similarity.

VIII. Osiris and the Moon

Before we conclude this study of Osiris it will be worth while to consider an ancient view of his nature, which deserves more attention than it has received in modern times. We are told by Plutarch that among the philosophers who saw in the gods of Egypt personifications of natural objects and forces, there were some who interpreted Osiris as the moon and his enemy Typhon as the sun, "because the moon, with her humid and generative light, is favourable to the propagation of animals and the growth of plants; while the sun with his fierce fire scorches and burns up all growing things, renders the greater part of the earth uninhabitable by reason of his blaze, and often overpowers the moon herself." Whatever may be thought of the physical qualities here attributed to the moon, the arguments adduced by the ancients to prove the identity of Osiris with that luminary carry with them a weight which has at least not been lightened by the results of modern research. An examination of them and of other evidence pointing in the same direction will, perhaps, help to set the original character of the Egyptian deity in a clearer light.

1. Osiris was said to have lived or reigned twenty-eight years. This might fairly be taken as a mythical expression for a lunar month.
2. His body was reported to have been rent into fourteen pieces. This might be interpreted of the waning moon, which appears to lose a portion of itself on each of the fourteen days that make up the second half of a lunar month. It is expressly said that his enemy Typhon found the body of Osiris at the full moon; thus the dismemberment of the god would begin with the waning of the moon. To primitive man it seems manifest that the waning moon is actually dwindling, and he naturally enough explains its diminution by supposing that the planet is being rent or broken in pieces or eaten away. The Klamath Indians of Oregon speak of the moon as "the one broken to pieces" with reference to its changing aspect; they never apply such a term to the sun, whose apparent change of bulk at different seasons of the year is far too insignificant to attract the attention of the savage, or at least to be described by him in such forcible language. The Dacotas believe that when the moon is full, a great many little mice begin to nibble at one side of it and do not cease till they have eaten it all up, after which a new moon is born and grows to maturity, only to share the fate of its countless predecessors. A similar belief is held by the Huzuls of the Carpathians, except that they ascribe the destruction of the old moon to wolves instead of to mice.
3. At the new moon of the month Phamenoth, which was the beginning of spring, the Egyptians celebrated what they called "the entry of Osiris into the moon."
4. At the ceremony called "the burial of Osiris" the Egyptians made a crescent-shaped chest "because the moon, when it approaches the sun, assumes the form of a crescent and vanishes."
5. The bull Apis, held to be an image of the soul of Osiris, was born of a cow which was believed to have been impregnated, not in the vulgar way by a bull, but by a divine influence emanating from the moon.
6. Once a year, at the full moon, pigs were sacrificed simultaneously to the moon and Osiris.
7. In a hymn supposed to be addressed by Isis to Osiris, it is said that Thoth—
*"Placeth thy soul in the bark Ma-at,
 In that name which is thine, of God Moon."*

And again:—

*“Thou who comest to us as a child each month,
We do not cease to contemplate thee.
Thine emanation heightens the brilliancy
Of the stars of Orion in the firmament.”*

Here then Osiris is identified with the moon in set terms. If in the same hymn he is said to “illuminate us like Ra” (the sun), that is obviously no reason for identifying him with the sun, but quite the contrary. For though the moon may reasonably be compared to the sun, neither the sun nor anything else can reasonably be compared to itself.

8. In art Osiris is sometimes represented as a human-headed mummy grasping in his hands his characteristic emblems and wearing on his head, instead of the usual crown, a full moon within a crescent.

Now if in one of his aspects Osiris was originally a deity of vegetation, we can easily enough understand why in a later and more philosophic age he should come to be thus identified or confounded with the moon. For as soon as he begins to meditate upon the causes of things, the early philosopher is led by certain obvious, though fallacious, appearances to regard the moon as the ultimate cause of the growth of plants. In the first place he associates its apparent growth and decay with the growth and decay of sublunary things, and imagines that in virtue of a secret sympathy the celestial phenomena really produce those terrestrial changes which in point of fact they merely resemble. Thus Pliny says that the moon may fairly be considered the planet of breath, “because it saturates the earth and by its approach fills bodies, while by its departure it empties them. Hence it is,” he goes on, “that shell-fish increase with the increase of the moon and that bloodless creatures especially feel breath at that time; even the blood of men grows and diminishes with the light of the moon, and leaves and herbage also feel the same influence, since the lunar energy penetrates all things.” “There is no doubt,” writes Macrobius, “that the moon is the author and framer of mortal bodies, so much so that some things expand or shrink as it waxes or wanes.” Again, Aulus Gellius puts in the mouth of a friend the remark that “the same things which grow with the waxing, do dwindle with the waning moon,” and he quotes from a commentary of Plutarch's on Hesiod a statement that the onion is the only vegetable which violates this great law of nature by sprouting in the wane and withering in the increase of the moon. Scottish Highlanders allege that in the increase of the moon everything has a tendency to grow or stick together; and they call the second moon of autumn “the ripening moon” (*Gealach an abachaidh*), because they imagine that crops ripen as much by its light as by day.

From this supposed influence of the moon on the life of plants and animals, men in ancient and modern times have deduced a whole code of rules for the guidance of the husbandman, the shepherd, and others in the conduct of their affairs. Thus an ancient writer on agriculture lays it down as a maxim, that whatever is to be sown should be sown while the moon is waxing, and that whatever is to be cut or gathered should be cut or gathered while it is waning. A modern treatise on superstition describes how the superstitious man regulates all his conduct by the moon: “Whatever he would have to grow, he sets about it when she is in her increase; but for what he would have made less he chooses her wane.” In Germany the phases of the moon are observed by superstitious people at all the more or even less important actions of life, such as tilling the fields, building or changing houses, marriages, hair-cutting, bleeding, cupping, and so forth. The particular rules vary in different places, but the principle generally followed is that whatever is done to increase anything should be done while the moon is waxing; whatever is done to diminish anything should be done while the moon is waning. For example, sowing, planting, and grafting should be done in the first half

of the moon, but the felling of timber and mowing should be done in the second half. In various parts of Europe it is believed that plants, nails, hair, and corns, cut while the moon is on the increase, will grow again fast, but that if cut while it is on the decrease they will grow slowly or waste away. Hence persons who wish their hair to grow thick and long should cut it in the first half of the moon. On the same principle sheep are shorn when the moon is waxing, because it is supposed that the wool will then be longest and most enduring. Some negroes of the Gaboon think that taro and other vegetables never thrive if they are planted after full moon, but that they grow fast and strong if they are planted in the first quarter. The Highlanders of Scotland used to expect better crops of grain by sowing their seed in the moon's increase. On the other hand they thought that garden vegetables, such as onions and kail, run to seed if they are sown in the increase, but that they grow to pot-herbs if they are sown in the wane. So Thomas Tusser advised the peasant to sow peas and beans in the wane of the moon "that they with the planet may rest and arise." The Zulus welcome the first appearance of the new moon with beating of drums and other demonstrations of joy; but next day they abstain from all labour, "thinking that if anything is sown on those days they can never reap the benefit thereof." But in this matter of sowing and planting a refined distinction is sometimes drawn by French, German, and Esthonian peasants; plants which bear fruit above ground are sown by them when the moon is waxing, but plants which are cultivated for the sake of their roots, such as potatoes and turnips, are sown when the moon is waning. The reason for this distinction seems to be a vague idea that the waxing moon is coming up and the waning moon going down, and that accordingly fruits which grow upwards should be sown in the former period, and fruits which grow downwards in the latter. Before beginning to plant their cacao the Pipiles of Central America exposed the finest seeds for four nights to the moonlight, but whether they did so at the waxing or waning of the moon is not said. Even pots, it would seem, are not exempt from this great law of nature. In Uganda "potters waited for the new moon to appear before baking their pots; when it was some days old, they prepared their fires and baked the vessels. No potter would bake pots when the moon was past the full, for he believed that they would be a failure, and would be sure to crack or break in the burning, if he did so, and that his labour accordingly would go for nothing."

Again, the waning of the moon has been commonly recommended both in ancient and modern times as the proper time for felling trees, apparently because it was thought fit and natural that the operation of cutting down should be performed on earth at the time when the lunar orb was, so to say, being cut down in the sky. In France before the Revolution the forestry laws enjoined that trees should only be felled after the moon had passed the full; and in French bills announcing the sale of timber you may still read a notice that the wood was cut in the waning of the moon. So among the Shans of Burma, when a house is to be built, it is a rule that "a lucky day should be chosen to commence the cutting of the bamboos. The day must not only be a fortunate one for the builder, but it must also be in the second half of the month, when the moon is waning. Shans believe that if bamboos are cut during the first half of the month, when the moon is waxing, they do not last well, as boring insects attack them and they will soon become rotten. This belief is prevalent all over the East." A like belief obtains in various parts of Mexico. No Mexican will cut timber while the moon is increasing; they say it must be cut while the moon is waning or the wood will certainly rot. In Colombia, South America, people think that corn should only be sown and timber felled when the moon is on the wane. They say that the waxing moon draws the sap up through the trunk and branches, whereas the sap flows down and leaves the wood dry during the wane of the moon. But sometimes the opposite rule is adopted, and equally forcible arguments are urged in its defence. Thus, when the Wabondei of Eastern Africa are about to build a house, they take care to cut the posts for it when the moon is on the increase; for they say that posts cut when the moon is wasting away would soon rot, whereas posts cut while the moon is

waxing are very durable. The same rule is observed for the same reason in some parts of Germany.

But the partisans of the ordinarily received opinion have sometimes supported it by another reason, which introduces us to the second of those fallacious appearances by which men have been led to regard the moon as the cause of growth in plants. From observing rightly that dew falls most thickly on cloudless nights, they inferred wrongly that it was caused by the moon, a theory which the poet Alcman expressed in mythical form by saying that dew was a daughter of Zeus and the moon. Hence the ancients concluded that the moon is the great source of moisture, as the sun is the great source of heat. And as the humid power of the moon was assumed to be greater when the planet was waxing than when it was waning, they thought that timber cut during the increase of the luminary would be saturated with moisture, whereas timber cut in the wane would be comparatively dry. Hence we are told that in antiquity carpenters would reject timber felled when the moon was growing or full, because they believed that such timber teemed with sap; and in the Vosges at the present day people allege that wood cut at the new moon does not dry. We have seen that the same reason is assigned for the same practice in Colombia. In the Hebrides peasants give the same reason for cutting their peats when the moon is on the wane; "for they observe that if they are cut in the increase, they continue still moist and never burn clear, nor are they without smoke, but the contrary is daily observed of peats cut in the decrease."

Thus misled by a double fallacy primitive philosophy comes to view the moon as the great cause of vegetable growth, first, because the planet seems itself to grow, and second, because it is supposed to be the source of dew and moisture. It is no wonder, therefore, that agricultural peoples should adore the planet which they believe to influence so profoundly the crops on which they depend for subsistence. Accordingly we find that in the hotter regions of America, where maize is cultivated and manioc is the staple food, the moon was recognized as the principal object of worship, and plantations of manioc were assigned to it as a return for the service it rendered in the production of the crops. The worship of the moon in preference to the sun was general among the Caribs, and, perhaps, also among most of the other Indian tribes who cultivated maize in the tropical forests to the east of the Andes; and the same thing has been observed, under the same physical conditions, among the aborigines of the hottest region of Peru, the northern valleys of Yuncapata. Here the Indians of Pacasmayu and the neighbouring valleys revered the moon as their principal divinity. The "house of the moon" at Pacasmayu was the chief temple of the district; and the same sacrifices of maize-flour, of wine, and of children which were offered by the mountaineers of the Andes to the Sun-god, were offered by the lowlanders to the Moon-god in order that he might cause their crops to thrive. In ancient Babylonia, where the population was essentially agricultural, the moon-god took precedence of the sun-god and was indeed reckoned his father.

Hence it would be no matter for surprise if, after worshipping the crops which furnished them with the means of subsistence, the ancient Egyptians should in later times have identified the spirit of the corn with the moon, which a false philosophy had taught them to regard as the ultimate cause of the growth of vegetation. In this way we can understand why in their most recent forms the myth and ritual of Osiris, the old god of trees and corn, should bear many traces of efforts made to bring them into a superficial conformity with the new doctrine of his lunar affinity.

IX. The Doctrine of Lunar Sympathy

In the preceding chapter some evidence was adduced of the sympathetic influence which the waxing or waning moon is popularly supposed to exert on growth, especially on the growth of vegetation. But the doctrine of lunar sympathy does not stop there; it is applied also to the affairs of man, and various customs and rules have been deduced from it which aim at the amelioration and even the indefinite extension of human life. To illustrate this application of the popular theory at length would be out of place here, but a few cases may be mentioned by way of specimen.

The natural fact on which all the customs in question seem to rest is the apparent monthly increase and decrease of the moon. From this observation men have inferred that all things simultaneously wax or wane in sympathy with it. Thus the Mentras or Mantras of the Malay Peninsula have a tradition that in the beginning men did not die but grew thin with the waning of the moon, and waxed fat as she neared the full. Of the Scottish Highlanders we are told that "the moon in her increase, full growth, and in her wane are with them the emblems of a rising, flourishing, and declining fortune. At the last period of her revolution they carefully avoid to engage in any business of importance; but the first and middle they seize with avidity, presaging the most auspicious issue to their undertakings." Similarly in some parts of Germany it is commonly believed that whatever is undertaken when the moon is on the increase succeeds well, and that the full moon brings everything to perfection; whereas business undertaken in the wane of the moon is doomed to failure. This German belief has come down, as we might have anticipated, from barbaric times; for Tacitus tells us that the Germans considered the new or the full moon the most auspicious time for business; and Caesar informs us that the Germans despaired of victory if they joined battle before the new moon. The Spartans seem to have been of the same opinion, for it was a rule with them never to march out to war except when the moon was full. The rule prevented them from sending troops in time to fight the Persians at Marathon, and but for Athenian valour this paltry superstition might have turned the scale of battle and decided the destiny of Greece, if not of Europe, for centuries. The Athenians themselves paid dear for a similar scruple: an eclipse of the moon cost them the loss of a gallant fleet and army before Syracuse, and practically sealed the fate of Athens, for she never recovered from the blow. So heavy is the sacrifice which superstition demands of its votaries. In this respect the Greeks were on a level with the negroes of the Sudan, among whom, if a march has been decided upon during the last quarter of the moon, the departure is always deferred until the first day of the new moon. No chief would dare to undertake an expedition and lead out his warriors before the appearance of the crescent. Merchants and private persons observe the same rule on their journeys. In like manner the Mandingoes of Senegambia pay great attention to the changes of the moon, and think it very unlucky to begin a journey or any other work of consequence in the last quarter.

It is especially the appearance of the new moon, with its promise of growth and increase, which is greeted with ceremonies intended to renew and invigorate, by means of sympathetic magic, the life of man. Observers, ignorant of savage superstition, have commonly misinterpreted such customs as worship or adoration paid to the moon. In point of fact the ceremonies of new moon are probably in many cases rather magical than religious. The Indians of the Ucayali River in Peru hail the appearance of the new moon with great joy. They make long speeches to her, accompanied with vehement gesticulations, imploring her protection and begging that she will be so good as to invigorate their bodies. On the day when the new moon first appeared, it was a custom with the Indians of San Juan Capistrano, in

California, to call together all the young men for the purpose of its celebration. “*Correr la luna!*” shouted one of the old men, “Come, my boys, the moon! the moon!” Immediately the young men began to run about in a disorderly fashion as if they were distracted, while the old men danced in a circle, saying, “As the moon dieth, and cometh to life again, so we also having to die will again live.” An old traveller tells us that at the appearance of every new moon the negroes of the Congo clapped their hands and cried out, sometimes falling on their knees, “So may I renew my life as thou art renewed.” But if the sky happened to be clouded, they did nothing, alleging that the planet had lost its virtue. A somewhat similar custom prevails among the Ovambo of South-Western Africa. On the first moonlight night of the new moon, young and old, their bodies smeared with white earth, perhaps in imitation of the planet's silvery light, dance to the moon and address to it wishes which they feel sure will be granted. We may conjecture that among these wishes is a prayer for a renewal of life. When a Masai sees the new moon he throws a twig or stone at it with his left hand, and says, “Give me long life,” or “Give me strength”; and when a pregnant woman sees the new moon she milks some milk into a small gourd, which she covers with green grass. Then she pours the milk away in the direction of the moon and says, “Moon, give me my child safely.” Among the Wagogo of German East Africa, at sight of the new moon some people break a stick in pieces, spit on the pieces, and throw them towards the moon, saying, “Let all illness go to the west, where the sun sets.” Among the Boloki of the Upper Congo there is much shouting and gesticulation on the appearance of a new moon. Those who have enjoyed good health pray that it may be continued, and those who have been sick ascribe their illness to the coming of the luminary and beg her to take away bad health and give them good health instead. The Esthonians think that all the misfortunes which might befall a man in the course of a month may be forestalled and shifted to the moon, if a man will only say to the new moon, “Good morrow, new moon. I must grow young, you must grow old. My eyes must grow bright, yours must grow dark. I must grow light as a bird, you must grow heavy as iron.” On the fifteenth day of the moon, that is, at the time when the luminary has begun to wane, the Coreans take round pieces of paper, either red or white, which represent the moon, and having fixed them perpendicularly on split sticks they place them on the tops of the houses. Then persons who have been forewarned by fortune-tellers of impending evil pray to the moon to remove it from them.

In India people attempt to absorb the vital influence of the moon by drinking water in which the luminary is reflected. Thus the Mohammedans of Oude fill a silver basin with water and hold it so that the orb of the full moon is mirrored in it. The person to be benefited must look steadfastly at the moon in the basin, then shut his eyes and drink the water at one gulp. Doctors recommend the draught as a remedy for nervous disorders and palpitation of the heart. Somewhat similar customs prevail among the Hindoos of Northern India. At the full moon of the month of Kuar (September-October) people lay out food on the house-tops, and when it has absorbed the rays of the moon they distribute it among their relations, who are supposed to lengthen their life by eating of the food which has thus been saturated with moonshine. Patients are often made to look at the moon reflected in melted butter, oil, or milk as a cure for leprosy and the like diseases.

Naturally enough the genial influence of moonshine is often supposed to be particularly beneficial to children; for will not the waxing moon help them to wax in strength and stature? Hence in the island of Kiriwina, one of the Trobriands Group to the east of New Guinea, a mother always lifts up or presents her child to the first full moon after its birth in order that it may grow fast and talk soon. So among the Baganda of Central Africa it was customary for each mother to take her child out at the first new moon after its birth, and to point out the moon to the infant; this was thought to make the child grow healthy and strong. Among the

Thonga of South Africa the presentation of the baby to the moon does not take place until the mother has resumed her monthly periods, which usually happens in the third month after the birth. When the new moon appears, the mother takes a torch or a burning brand from the fire and goes to the ash-heap behind the hut. She is followed by the grandmother carrying the child. At the ash-heap the mother throws the burning stick towards the moon, while the grandmother tosses the baby into the air, saying, "This is your moon!" The child squalls and rolls over on the ash-heap. Then the mother snatches up the infant and nurses it; so they go home.

The Guarayos Indians, who inhabit the gloomy tropical forests of Eastern Bolivia, lift up their children in the air at new moon in order that they may grow. Among the Apinagos Indians, on the Tocantins River in Brazil, the French traveller Castelnau witnessed a remarkable dance by moonlight. The Indians danced in two long ranks which faced each other, the women on one side, the men on the other. Between the two ranks of dancers blazed a great fire. The men were painted in brilliant colours, and for the most part wore white or red skull-caps made of maize-flour and resin. Their dancing was very monotonous and consisted of a jerky movement of the body, while the dancer advanced first one leg and then the other. This dance they accompanied with a melancholy song, striking the ground with their weapons. Opposite them the women, naked and unpainted, stood in a single rank, their bodies bent slightly forward, their knees pressed together, their arms swinging in measured time, now forward, now backward, so as to join hands. A remarkable figure in the dance was a personage painted scarlet all over, who held in his hand a rattle composed of a gourd full of pebbles. From time to time he leaped across the great fire which burned between the men and the women. Then he would run rapidly in front of the women, stopping now and then before one or other and performing a series of strange gambols, while he shook his rattle violently. Sometimes he would sink with one knee to the ground, and then suddenly throw himself backward. Altogether the agility and endurance which he displayed were remarkable. This dance lasted for hours. When a woman was tired out she withdrew, and her place was taken by another; but the same men danced the monotonous dance all night. Towards midnight the moon attained the zenith and flooded the scene with her bright rays. A change now took place in the dance. A long line of men and women advanced to the fire between the ranks of the dancers. Each of them held one end of a hammock in which lay a new-born infant, whose squalls could be heard. These babes were now to be presented by their parents to the moon. On reaching the end of the line each couple swung the hammock, accompanying the movement by a chant, which all the Indians sang in chorus. The song seemed to consist of three words, repeated over and over again. Soon a shrill voice was heard, and a hideous old hag, like a skeleton, appeared with her arms raised above her head. She went round and round the assembly several times, then disappeared in silence. While she was present, the scarlet dancer with the rattle bounded about more furiously than ever, stopping only for a moment while he passed in front of the line of women. His body was contracted and bent towards them, and described an undulatory movement like that of a worm writhing. He shook his rattle violently, as if he would fain kindle in the women the fire which burned in himself. Then rising abruptly he would resume his wild career. During this time the loud voice of an orator was heard from the village repeating a curious name without cessation. Then the speaker approached slowly, carrying on his back some gorgeous bunches of brilliant feathers and under his arm a stone axe. Behind him walked a young woman bearing an infant in a loose girdle at her waist; the child was wrapped in a mat, which protected it against the chill night air. The couple paced slowly for a minute or two, and then vanished without speaking a word. At the same moment the curious name which the orator had shouted was taken up by the whole assembly and repeated by them again and again. This scene in its turn lasted a long time, but ceased suddenly with the setting of the moon. The French traveller who witnessed it

fell asleep, and when he awoke all was calm once more: there was nothing to recall the infernal dances of the night.

In explanation of these dances Castelnau merely observes that the Apinagos, like many other South American Indians, pay a superstitious respect to the moon. We may suppose that the ceremonious presentation of the infants to the moon was intended to ensure their life and growth. The names solemnly chanted by the whole assembly were probably those which the parents publicly bestowed on their children. As to the scarlet dancer who leaped across the fire, we may conjecture that he personated the moon, and that his strange antics in front of the women were designed to impart to them the fertilizing virtue of the luminary, and perhaps to facilitate their delivery.

Among the Baganda of Central Africa there is general rejoicing when the new moon appears, and no work is done for seven days. When the crescent is first visible at evening, mothers take out their babies and hold them at arms' length, saying, "I want my child to keep in health till the moon wanes." At the same time a ceremony is performed which may be intended to ensure the king's life and health throughout the ensuing month. It is a custom with the Baganda to preserve the king's navel-string with great care during his life. The precious object is called the "Twin" of the king, as if it were his double; and the ghost of the royal afterbirth is believed to be attached to it. Enclosed in a pot, which is wrapt in bark cloths, the navel-string is kept in a temple specially built for it near the king's enclosure, and a great minister of state acts as its guardian and priest. Every new moon, at evening, he carries it in state, wrapped in bark cloths, to the king, who takes it into his hands, examines it, and returns it to the minister. The keeper of the navel-string then goes back with it to the house and sets it in the doorway, where it remains all night. Next morning it is taken from its wrappings and again placed in the doorway until the evening, when it is once more swathed in bark cloths and restored to its usual place. Apparently the navel-string is conceived as a vital portion, a sort of external soul, of the king; and the attentions bestowed on it at the new moon may be supposed to refresh and invigorate it, thereby refreshing and invigorating the king's life.

The Armenians appear to think that the moon exercises a baleful influence on little children. To avert that influence a mother will show the moon to her child and say, "Thine uncle, thine uncle." For the same purpose the father and mother will mount to the roof of the house at new moon on a Wednesday or Friday. The father then puts the child on a shovel and gives it to the mother, saying, "If it is thine, take it to thee. But if it is mine, rear it and give it to me back." The mother then takes the child and the shovel, and returns them to the father in like manner. A similar opinion as to the noxious influence of moonshine on children was apparently held by the ancient Greeks; for Greek nurses took great care never to show their infants to the moon. Some Brazilian Indians in like manner guard babies against the moon, believing that it would make them ill. Immediately after delivery mothers will hide themselves and their infants in the thickest parts of the forest in order that the moonlight may not fall on them. It would be easy to understand why the waning moon should be deemed injurious to children; they might be supposed to peak and pine with its dwindling light. Thus in Angus it is thought that if a child be weaned during the waning of the moon, it will decay all the time that the moon continues to wane. But it is less easy to see why the same deleterious influence on children should be ascribed to moonlight in general.

There are many other ways in which people have sought to turn lunar sympathy to practical account. Clearly the increase of the moon is the time to increase your goods, and the decrease of the moon is the time to diminish your ills. Acting on this imaginary law of nature many persons in Europe show their money to the new moon or turn it in their pockets at that season, in the belief that the money will grow with the growth of the planet; sometimes, by

way of additional precaution, they spit on the coin at the same time. "Both Christians and Moslems in Syria turn their silver money in their pockets at the new moon for luck; and two persons meeting under the new moon will each take out a silver coin and embrace, saying, 'May you begin and end; and may it be a good month to us.'" Conversely the waning of the moon is the most natural time to get rid of bodily ailments. In Brittany they think that warts vary with the phases of the moon, growing as it waxes and vanishing away as it wanes. Accordingly, they say in Germany that if you would rid yourself of warts you should treat them when the moon is on the decrease. And a German cure for toothache, earache, headache, and so forth, is to look towards the waning moon and say, "As the moon decreases, so may my pains decrease also." However, some Germans reverse the rule. They say, for example, that if you are afflicted with a wen, you should face the waxing moon, lay your finger on the wen, and say thrice, "What I see waxes; what I touch, let it vanish away." After each of these two sentences you should cross yourself thrice. Then go home without speaking to any one, and repeat three paternosters behind the kitchen door. The Huzuls of the Carpathians recommend a somewhat similar, and no doubt equally efficacious, cure for waterbrash. They say that at new moon the patient should run thrice round the house and then say to the moon, "Moon, moon, where wast thou?" "Behind the mountain." "What hast thou eaten there?" "Horse flesh." "Why hast thou brought me nothing?" "Because I forgot." "May the waterbrash forget to burn me!" Thus a curative virtue appears to be attributed by some people to the waning and by others to the waxing moon. There is perhaps just as much, or as little, to be said for the one attribution as for the other.

X. The King As Osiris

In the foregoing discussion we found reason to believe that the Semitic Adonis and the Phrygian Attis were at one time personated in the flesh by kings, princes, or priests who played the part of the god for a time and then either died a violent death in the divine character or had to redeem their life in one way or another, whether by performing a make-believe sacrifice at some expense of pain and danger to themselves, or by delegating the duty to a substitute. Further, we conjectured that in Egypt the part of Osiris may have been played by the king himself. It remains to adduce some positive evidence of this personation.

A great festival called the Sed was celebrated by the Egyptians with much solemnity at intervals of thirty years. Various portions of the ritual are represented on the ancient monuments of Hieraconpolis and Abydos and in the oldest decorated temple of Egypt known to us, that of Usirniri at Busiris, which dates from the fifth dynasty. It appears that the ceremonies were as old as the Egyptian civilization, and that they continued to be observed till the end of the Roman period. The reason for holding them at intervals of thirty years is uncertain, but we can hardly doubt that the period was determined by astronomical considerations. According to one view, it was based on the observation of Saturn's period of revolution round the sun, which is, roughly speaking, thirty years, or, more exactly, twenty-nine years and one hundred and seventy-four days. According to another view, the thirty years' period had reference to Sirius, the star of Isis. We have seen that on account of the vague character of the old Egyptian year the heliacal rising of Sirius shifted its place gradually through every month of the calendar. In one hundred and twenty years the star thus passed through one whole month of thirty days. To speak more precisely, it rose on the first of the month during the first four years of the period: it rose on the second of the month in the second four years, on the third of the month in the third four years; and so on successively, till in the last four years of the hundred and twenty years it rose on the last day of the month. As the Egyptians watched the annual summer rising of the star with attention and associated it with the most popular of their goddesses, it would be natural that its passage from one month to another, at intervals of one hundred and twenty years, should be the occasion of a great festival, and that the long period of one hundred and twenty years should be divided into four minor periods of thirty years respectively, each celebrated by a minor festival. If this theory of the Sed festivals is correct, we should expect to find that every fourth celebration was distinguished from the rest by a higher degree of solemnity, since it marked the completion of a twelfth part of the star's journey through the twelve months. Now it appears that in point of fact every fourth Sed festival was marked off from its fellows by the adjective *tep* or "chief," and that these "chief" celebrations fell as a rule in the years when Sirius rose on the first of the month. These facts confirm the view that the Sed festival was closely connected with the star Sirius, and through it with Isis.

However, we are here concerned rather with the meaning and the rites of the festival than with the reasons for holding it once every thirty years. The intention of the festival seems to have been to procure for the king a new lease of life, a renovation of his divine energies, a rejuvenescence. In the inscriptions of Abydos we read, after an account of the rites, the following address to the king: "Thou dost recommence thy renewal, thou art granted to flourish again like the infant god Moon, thou dost grow young again, and that from season to season, like Nun at the beginning of time, thou art born again in renewing the Sed festivals. All life comes to thy nostril, and thou art king of the whole earth for ever." In short, on these occasions it appears to have been supposed that the king was in a manner born again.

But how was the new birth effected? Apparently the essence of the rites consisted in identifying the king with Osiris; for just as Osiris had died and risen again from the dead, so the king might be thought to die and to live again with the god whom he personated. The ceremony would thus be for the king a death as well as a rebirth. Accordingly in pictures of the Sed festival on the monuments we see the king posing as the dead Osiris. He sits in a shrine like a god, holding in his hands the crook and flail of Osiris: he is wrapped in tight bandages like the mummified Osiris; indeed, there is nothing but his name to prove that he is not Osiris himself. This enthronement of the king in the attitude of the dead god seems to have been the principal event of the festival. Further, the queen and the king's daughters figured prominently in the ceremonies. A discharge of arrows formed part of the rites; and in some sculptures at Carnac the queen is portrayed shooting arrows towards the four quarters of the world, while the king does the same with rings. The oldest illustration of the festival is on the mace of Narmer, which is believed to date from 5500 b.c. Here we see the king seated as Osiris in a shrine at the top of nine steps. Beside the shrine stand fan-bearers, and in front of it is a figure in a palanquin, which, according to an inscription in another representation of the scene, appears to be the royal child. An enclosure of curtains hung on poles surrounds the dancing-ground, where three men are performing a sacred dance. A procession of standards is depicted beside the enclosure; it is headed by the standard of the jackal-god Up-uat, the "opener of ways" for the dead. Similarly on a seal of King Zer, or rather Khent, one of the early kings of the first dynasty, the monarch appears as Osiris with the standard of the jackal-god before him. In front of him, too, is the ostrich feather on which "the dead king was supposed to ascend into heaven. Here, then, the king, identified with Osiris, king of the dead, has before him the jackal-god, who leads the dead, and the ostrich feather, which symbolizes his reception into the sky." There are even grounds for thinking that in order to complete the mimic death of the king at the Sed festival an effigy of him, clad in the costume of Osiris, was solemnly buried in a cenotaph.

According to Professor Flinders Petrie, "the conclusion may be drawn thus. In the savage age of prehistoric times, the Egyptians, like many other African and Indian peoples, killed their priest-king at stated intervals, in order that the ruler should, with unimpaired life and health, be enabled to maintain the kingdom in its highest condition. The royal daughters were present in order that they might be married to his successor. The jackal-god went before him, to open the way to the unseen world; and the ostrich feather received and bore away the king's soul in the breeze that blew it out of sight. This was the celebration of the 'end,' the *sed* feast. The king thus became the dead king, patron of all those who had died in his reign, who were his subjects here and hereafter. He was thus one with Osiris, the king of the dead. This fierce custom became changed, as in other lands, by appointing a deputy king to die in his stead; which idea survived in the Coptic Abu Nerūs, with his tall crown of Upper Egypt, false beard, and sceptre. After the death of the deputy, the real king renewed his life and reign. Henceforward this became the greatest of the royal festivals, the apotheosis of the king during his life, after which he became Osiris upon earth and the patron of the dead in the underworld."

A similar theory of the Sed festival is maintained by another eminent Egyptologist, M. Alexandre Moret. He says: "In most of the temples of Egypt, of all periods, pictures set forth for us the principal scenes of a solemn festival called 'festival of the tail,' the Sed festival. It consisted essentially in a representation of the ritual death of the king followed by his rebirth. In this case the king is identified with Osiris, the god who in historical times is the hero of the sacred drama of humanity, he who guides us through the three stages of life, death, and rebirth in the other world. Hence, clad in the funeral costume of Osiris, with the tight-fitting garment clinging to him like a shroud, Pharaoh is conducted to the tomb; and from it he

returns rejuvenated and reborn like Osiris emerging from the dead. How was this fiction carried out? how was this miracle performed? By the sacrifice of human or animal victims. On behalf of the king a priest lay down in the skin of the animal victim: he assumed the posture characteristic of an embryo in its mother's womb: when he came forth from the skin he was deemed to be reborn; and Pharaoh, for whom this rite was celebrated, was himself reborn, or to adopt the Egyptian expression, 'he renewed his births.' And in testimony of the due performance of the rites the king girt his loins with the tail, a compendious representative of the skin of the sacrificed beast, whence the name of 'the festival of the tail.'

"How are we to explain the rule that at a certain point of his reign every Pharaoh must undergo this ritual death followed by fictitious rebirth? Is it simply a renewal of the initiation into the Osirian mysteries? or does the festival present some more special features? The ill-defined part played by the royal children in these rites seems to me to indicate that the Sed festival represents other episodes which refer to the transmission of the regal office. At the dawn of civilization in Egypt the people were perhaps familiar with the alternative either of putting their king to death in his full vigour in order that his power should be transmitted intact to his successor, or of attempting to rejuvenate him and to 'renew his life.' The latter measure was an invention of the Pharaohs. How could it be carried out more effectively than by identifying themselves with Osiris, by applying to themselves the process of resurrection, the funeral rites by which Isis, according to the priests, had magically saved her husband from death? Perhaps the fictitious death of the king may be regarded as a mitigation of the primitive murder of the divine king, a transition from a barbarous reality to symbolism."

Whether this interpretation of the Sed festival be accepted in all its details or not, one thing seems quite certain: on these solemn occasions the god Osiris was personated by the king of Egypt himself. That is the point with which we are here chiefly concerned.

XI. The Origin of Osiris

Thus far we have discussed the character of Osiris as he is presented to us in the art and literature of Egypt and in the testimonies of Greek writers; and we have found that judged by these indications he was in the main a god of vegetation and of the dead. But we have still to ask, how did the conception of such a composite deity originate? Did it arise simply through observation of the great annual fluctuations of the seasons and a desire to explain them? Was it a result of brooding over the mystery of external nature? Was it the attempt of a rude philosophy to lift the veil and explore the hidden springs that set the vast machine in motion? That man at a very early stage of his long history meditated on these things and evolved certain crude theories which partially satisfied his craving after knowledge is certain; from such meditations of Babylonian and Phrygian sages appear to have sprung the pathetic figures of Adonis and Attis; and from such meditations of Egyptian sages may have sprung the tragic figure of Osiris.

Yet a broad distinction seems to sever the myth and worship of Osiris from the kindred myths and worships of Adonis and Attis. For while Adonis and Attis were minor divinities in the religion of Western Asia, completely overshadowed by the greater deities of their respective pantheons, the solemn figure of Osiris towered in solitary grandeur over all the welter of Egyptian gods, like a pyramid of his native land lit up by the last rays of the setting sun when all below it is in shadow. And whereas legend generally represented Adonis and Attis as simple swains, mere herdsmen or hunters whom the fatal love of a goddess had elevated above their homely sphere into a brief and melancholy pre-eminence, Osiris uniformly appears in tradition as a great and beneficent king. In life, he ruled over his people, beloved and revered for the benefits he conferred on them and on the world; in death he reigned in their hearts and memories as lord of the dead, the awful judge at whose bar every man must one day stand to give an account of the deeds done in the body and to receive the final award. In the faith of the Egyptians the cruel death and blessed resurrection of Osiris occupied the same place as the death and resurrection of Christ hold in the faith of Christians. As Osiris died and rose again from the dead, so they hoped through him and in his dear name to wake triumphant from the sleep of death to a blissful eternity. That was their sheet-anchor in life's stormy sea; that was the hope which supported and consoled millions of Egyptian men and women for a period of time far longer than that during which Christianity has now existed on earth. In the long history of religion no two divine figures resemble each other more closely in the fervour of personal devotion which they have kindled and in the high hopes which they have inspired than Osiris and Christ. The sad figure of Buddha indeed has been as deeply loved and revered by countless millions; but he had no glad tidings of immortality for men, nothing but the promise of a final release from the burden of mortality.

And if Osiris and Christ have been the centres of the like enthusiastic devotion, may not the secret of their influence have been similar? If Christ lived the life and died the death of a man on earth, may not Osiris have done so likewise? The immense and enduring popularity of his worship speaks in favour of the supposition; for all the other great religious or semi-religious systems which have won for themselves a permanent place in the affections of mankind, have been founded by individual great men, who by their personal life and example exerted a power of attraction such as no cold abstractions, no pale products of the collective wisdom or folly could ever exert on the minds and hearts of humanity. Thus it was with Buddhism, with Confucianism, with Christianity, and with Mohammedanism; and thus it may well have been with the religion of Osiris. Certainly we shall do less violence to the evidence if we

accept the unanimous tradition of ancient Egypt on this point than if we resolve the figure of Osiris into a myth pure and simple. And when we consider that from the earliest to the latest times Egyptian kings were worshipped as gods both in life and in death, there appears to be nothing extravagant or improbable in the view that one of them by his personal qualities excited a larger measure of devotion than usual during his life and was remembered with fonder affection and deeper reverence after his death; till in time his beloved memory, dimmed, transfigured, and encircled with a halo of glory by the mists of time, grew into the dominant religion of his people. At least this theory is reasonable enough to deserve a serious consideration. If we accept it, we may suppose that the mythical elements, which legend undoubtedly ascribed to Osiris, were later accretions which gathered about his memory like ivy about a ruin. There is no improbability in such a supposition; on the contrary, all analogy is in its favour, for nothing is more certain than that myths grow like weeds round the great historical figures of the past.

In recent years the historical reality of Osiris as a king who once lived and reigned in Egypt has been maintained by more than one learned scholar; and without venturing to pronounce a decided opinion on so obscure and difficult a question, I think it worth while, following the example of Dr. Wallis Budge, to indicate certain modern African analogies which tend to confirm the view that beneath the mythical wrappings of Osiris there lay the mummy of a dead man. At all events the analogies which I shall cite suffice to prove that the custom of worshipping dead kings has not been confined to Egypt, but has been apparently widespread throughout Africa, though the evidence now at our disposal only enables us to detect the observance of the custom at a few points of the great continent. But even if the resemblance in this respect between ancient Egypt and modern Africa should be regarded as established, it would not justify us in inferring an ethnical affinity between the fair or ruddy Egyptians and the black aboriginal races who occupy almost the whole of Africa except a comparatively narrow fringe on the northern sea-board. Scholars are still divided on the question of the original home and racial relationship of the ancient Egyptians. It has been held on the one hand that they belong to an indigenous white race which has been always in possession of the Mediterranean coasts of Africa; and on the other hand it has been supposed that they are akin to the Semites in blood as well as in language, and that they entered Africa from the East, whether by gradual infiltration or on a sudden wave of conquest like the Arabs in the decline of the Roman empire. On either view a great gulf divided them from the swarthy natives of the Sudan, with whom they were always in contact on their southern border; and though a certain admixture may have taken place through marriage between the two races, it seems unsafe to assume that the religious and political resemblances which can be traced between them are based on any closer relationship than the general similarity in structure and functions of the human mind.

In a former part of this work we saw that the Shilluks, a pastoral and partially agricultural people of the White Nile, worship the spirits of their dead kings. The graves of the deceased monarchs form indeed the national or tribal temples; and as each king is interred at the village where he was born and where his afterbirth is buried, these grave-shrines are scattered over the country. Each of them usually comprises a small group of round huts, resembling the common houses of the people, the whole being enclosed by a fence; one of the huts is built over the grave, the others are occupied by the guardians of the shrine, who at first are generally the widows or old men-servants of the deceased king. When these women or retainers die, they are succeeded in office by their descendants, for the tombs are maintained in perpetuity, so that the number of temples and of gods is always on the increase. Cattle are dedicated to these royal shrines and animals sacrificed at them. For example, when the millet crop threatens to fail or a murrain breaks out among the beasts, one of the dead kings will

appear to somebody in a dream and demand a sacrifice. The dream is reported to the king, and he immediately orders a bullock and a cow to be sent to the grave of the dead king who appeared in a vision of the night to the sleeper. This is done; the bullock is killed and the cow added to the sacred herd of the shrine. It is customary, also, though not necessary, at harvest to offer some of the new millet at the temple-tombs of the kings; and sick people send animals to be sacrificed there on their behalf. Special regard is paid to trees that grow near the graves of the kings; and the spirits of the departed monarchs are believed to appear from time to time in the form of certain animals. One of them, for example, always takes the shape of a certain insect, which seems to be the larva of the *Mantidae*. When a Shilluk finds one of these insects, he will take it up in his hands and deposit it reverentially at the shrine. Other kings manifest themselves as a certain species of white birds; others assume the form of giraffes. When one of these long-legged and long-necked creatures comes stalking up fearlessly to a village where there is a king's grave, the people know that the king's soul is in the animal, and the attendants at the royal tomb testify their joy at the appearance of their master by sacrificing a sheep or even a bullock.

But of all the dead kings none is revered so deeply or occupies so large a place in the minds of the people as Nyakang, the traditional founder of the dynasty and the ancestor of all the kings who have reigned after him to the present day. Of these kings the Shilluks have preserved the memory and the genealogy; twenty-six seem to have sat on the throne since Nyakang, but the period of time covered by their reigns is much shorter than it would have been under conditions such as now prevail in Europe; for down to the time when their country came under British rule it was the regular custom of the Shilluks to put their kings to death as soon as they showed serious symptoms of bodily or mental decay. The custom was based on "the conviction that the king must not be allowed to become ill or senile, lest with his diminishing vigour the cattle should sicken and fail to bear their increase, the crops should rot in the fields, and man, stricken with disease, should die in ever-increasing numbers." It is said that Nyakang, like Romulus, disappeared in a great storm, which scattered all the people about him; in their absence the king took a cloth, tied it tightly round his neck, and strangled himself. According to one account, that is the death which all his successors on the throne have died; but while tradition appears to be unanimous as to the custom of regicide, it varies as to the precise mode in which the kings were relieved of their office and of life. But still the people are convinced that Nyakang did not really die but only vanished mysteriously away like the wind. When a missionary asked the Shilluks as to the manner of Nyakang's death, they were filled with amazement at his ignorance and stoutly maintained that he never died, for were he to die all the Shilluks would die also. The graves of this deified king are shown in various parts of the country.

From time to time the spirit of Nyakang manifests itself to his people in the form of an animal. Any creature of regal port or surpassing beauty may serve as his temporary incarnation. Such among wild animals are lions, crocodiles, little yellow snakes that crawl about men's houses, the finest sorts of antelopes, flamingoes with their rose-pink and scarlet plumage, and butterflies of all sorts with their brilliant and varied hues. An unusually fine head of cattle is also recognized as the abode of the great king's soul; for example he once appeared in the shape of a white bull, whereupon the living king commanded special sacrifices to be offered in honour of his deified predecessor. When a bird in which the royal spirit is known to be lodged lights on a tree, that tree becomes sacred to Nyakang; beads and cloths are hung on its boughs, sacrifices and prayers are offered below it. Once when the Turks unknowingly felled such a tree, fear and horror fell on the Shilluks who beheld the sacrilege. They filled the air with lamentations and killed an ox to appease their insulted ancestor. Particular regard is also paid to trees that grow near the graves of Nyakang, though

they are not regularly worshipped. In one place two gigantic baobab trees are pointed out as marking the spot where Nyakang once stood, and sacrifices are now offered under their spreading shade.

There seems to be no doubt that in spite of the mythical elements which have gathered round his memory, Nyakang was a real man, who led the Shilluks to their present home on the Nile either from the west or from the south; for on this point tradition varies. "The first and most important ancestor, who is everywhere revered, is Nyakang, the first Shilluk king. He always receives the honourable titles of Father (*uò*), Ancestor (*qua*), King (*red*) or Kings (*ror*), Ancestors, and Great Man Above (*čal duong mal*) to distinguish him from the other great men on earth. Nyakang, as we know, was an historical personage; he led the Shilluks to the land which they now occupy; he helped them to victory, made them great and warlike, regulated marriage and law, distributed the country among them, divided it into districts, and in order to increase the dependence of the people on him and to show them his power, became their greatest benefactor by giving himself out as the bestower of rain." Yet Nyakang is now universally revered by the people as a demi-god; indeed for all practical purposes his worship quite eclipses that of the supreme god Juok, the creator, who, having ordered the world, committed it to the care of ancestral spirits and demons, and now, dwelling aloft, concerns himself no further with human affairs. Hence men pay little heed to their creator and seldom take his name into their lips except in a few conventional forms of salutation at meeting and parting like our "Good-bye." Far otherwise is it with Nyakang. He "is the ancestor of the Shilluk nation and the founder of the Shilluk dynasty. He is worshipped, sacrifices and prayers are offered to him; he may be said to be lifted to the rank of a demi-god, though they never forget that he has been a real man. He is expressly designated as 'little' in comparison with God." Yet "in the political, religious and personal life Nyakang takes a far more important place than Juok. Nyakang is the national hero, of whom each Shilluk feels proud, who is praised in innumerable popular songs and sayings; he is not only a superior being, but also a man. He is the sublime model for every true Shilluk; everything they value most in their national and private life has its origin in him: their kingdom and their fighting as well as cattle-breeding and farming. While Nyakang is their good father, who only does them good, Juok is the great, uncontrollable power, which is to be propitiated, in order to avoid his inflictions of evil." Indeed "the whole working religion of the Shilluk is a cult of Nyakang, the semi-divine ancestor of their kings, in each of whom his spirit is immanent." The transmission of the divine or semi-divine spirit of Nyakang to the reigning monarch appears to take place at the king's installation and to be effected by means of a rude wooden effigy of Nyakang, in which the spirit of that deified man is perhaps supposed to be immanent. But however the spiritual transmission may be carried out, "the fundamental idea of the cult of the Shilluk divine kings is the immanence in each of the spirit of Nyakang." Thus the Shilluk kings are encircled with a certain halo of divinity because they are thought to be animated by the divine spirit of their ancestor, the founder of the dynasty.

The universal belief of the Shilluks in the former humanity of Nyakang is strongly confirmed by the exact parallelism which prevails between his worship and that of the dead kings his successors. Like them he is worshipped at his tomb; but unlike them he has not one tomb only, but ten scattered over the country. Each of these tombs is called "the grave of Nyakang," though the people well know that nobody is buried there. Like the grave-shrines of the other kings, those of Nyakang consist of a small group of circular huts of the ordinary pattern enclosed by a fence. Only children under puberty and the few old people whose duty it is to take care of the shrines may enter these sacred enclosures. The rites performed at them resemble those observed at the shrines of the kings. Two great ceremonies are annually performed at the shrines of Nyakang: one is observed before the beginning of the rainy

season in order to ensure a due supply of rain; the other is a thanksgiving at harvest, when porridge made from the new grain is poured out on the threshold of Nyakang's hut and smeared on the outer walls of the building. Even before the millet is reaped the people cut some of the ripening ears and thrust them into the thatch of the sacred hut. Thus it would seem that the Shilluks believe themselves to be dependent on the favour of Nyakang for the rain and the crops. "As the giver of rain, Nyakang is the first and greatest benefactor of the people. In that country rain is everything, without rain there is nothing. The Shilluk does not trouble his head about artificial irrigation, he waits for the rain. If the rain falls, then the millet grows, the cows thrive, man has food and can dance and marry; for that is the ideal of the Shilluks." Sick people also bring or send sheep as an offering to the nearest shrine of Nyakang in order that they may be healed of their sickness. The attendants of the sanctuary slaughter the animal, consume its flesh, and give the sufferer the benefit of their prayers.

The example of Nyakang seems to show that under favourable circumstances the worship of a dead king may develop into the dominant religion of a people. There is, therefore, no intrinsic improbability in the view that in ancient Egypt the religion of Osiris originated in that way. Certainly some curious resemblances can be traced between the dead Nyakang and the dead Osiris. Both died violent and mysterious deaths: the graves of both were pointed out in many parts of the country: both were deemed the great sources of fertility for the whole land: and both were associated with certain sacred trees and animals, particularly with bulls. And just as Egyptian kings identified themselves both in life and in death with their deified predecessor Osiris, so Shilluk kings are still believed to be animated by the spirit of their deified predecessor Nyakang and to share his divinity.

Another African people who regularly worship, or rather used to worship, the spirits of their dead kings are the Baganda. Their country Uganda lies at the very source of the Nile, where the great river issues from Lake Victoria Nyanza. Among them the ghosts of dead kings were placed on an equality with the gods and received the same honour and worship; they foretold events which concerned the State, and they advised the living king, warning him when war was likely to break out. The king consulted them periodically, visiting first one and then another of the temples in which the mortal remains of his predecessors were preserved with religious care. But the temple (*malolo*) of a king contained only his lower jawbone and his navel-string (*mulongo*); his body was buried elsewhere. For curiously enough the Baganda believed that the part of the body to which the ghost of a dead man adheres above all others is the lower jawbone; wherever that portion of his person may be carried, the ghost, in the opinion of these people, will follow it, even to the ends of the earth, and will be perfectly content to remain with it so long as the jawbone is honoured. Hence the jawbones of all the kings of Uganda from the earliest times to the present day have been preserved with the utmost care, each of them being deposited, along with the stump of the monarch's navel-string, in a temple specially dedicated to the worship of the king's ghost; for it is believed that the ghosts of the deceased monarchs would quarrel if they shared the same temple, the question of precedence being one which it would be very difficult for them to adjust to their mutual satisfaction. All the temples of the dead kings stand in the district called Busiro, which means the place of the graves, because the tombs as well as the temples of the departed potentates are situated within its boundaries. The supervision of the temples and of the estates attached to them was a duty incumbent on the *Mugema* or earl of Busiro, one of the few hereditary chiefs in the country. His principal office was that of Prime Minister (*Katikiro*) to the dead kings.

When a king dies, his body is sent to Busiro and there embalmed. Then it is laid to rest in a large round house, which has been built for its reception on the top of a hill. This is the king's tomb. It is a conical structure supported by a central post, with a thatched roof reaching down

to the ground. Round the hut a high strong fence of reeds is erected, and an outer fence encircles the whole at some distance lower down the hill. Here the body is placed on a bedstead; the sepulchral chamber is filled with bark cloths till it can hold no more, the mainpost is cut down, and the door of the tomb closed, so that no one can enter it again. When that was done, the wives of the late king used to be brought, with their arms pinioned, and placed at intervals round the outer wall of the tomb, where they were clubbed to death. Hundreds of men were also killed in the space between the two fences, that their ghosts might wait on the ghost of the dead king in the other world. None of their bodies were buried; they were left to rot where they fell. Then the gates in the fences were closed; and three chiefs with their men guarded the dead bodies from the wild beasts and the vultures. But the hut in which the king's body reposed was never repaired; it was allowed to moulder and fall into decay.

Five months later the jawbone of the royal corpse was removed in order to be fashioned into an effigy or representative of the dead king. For this purpose three chiefs entered the tomb, not through the door, but by cutting a hole through the wall, and having severed the head from the body they brought it out, carefully filling up the hole in the wall behind them, replacing the thatch, and securing the gates in the fence. When the jawbone had been removed by a chief of the Civet clan, the skull was sent back to Busiro and buried with honour near the mouldering tomb. In contrast to the neglect of the tomb where the royal body lay, the place where the skull was buried was kept in good repair and guarded by some of the old princesses and widows. As for the jawbone, it was put in an ant-hill and left there till the ants had eaten away all the flesh. Then, after it had been washed in beer and milk, it was decorated with cowry-shells and placed in a wooden vessel; this vessel was next wrapt in bark cloths till it assumed a conical shape, about two and a half feet high by a foot and a half broad at the base. This conical packet, decorated on the outside with beads, was treated as an image of the deceased king or rather as if it were the king himself in life, for it was called simply "The King." Beside it was placed the stump of the king's navel-string, similarly wrapt in bark cloths and decorated, though not made up into a conical shape. The reason for preserving both the jawbone and the navel-string was that the ghost of the king was supposed to attach itself to his jawbone, and the ghost of his double to his navel-string. For in the belief of the Baganda every person has a double, namely, the afterbirth or placenta, which is born immediately after him and is regarded by the people as a second child. Now that double has a ghost of its own, which adheres to the navel-string; and if the person is to remain healthy, it is essential that the ghost of his double should be carefully preserved. Hence every Baganda man and woman keeps his or her navel-string wrapt up in bark cloth as a treasure of great price on which his health and prosperity are dependent; the precious little bundle is called his Twin (*mulongo*), because it contains the ghost of his double, the afterbirth. If that is deemed necessary for everybody, much more is it deemed essential for the welfare of the king; hence during his life the stump of his navel-string is kept, as we saw, by one of the principal ministers of state and is inspected by the king himself every month. And when his majesty has departed this life, the unity of his spirit imperatively demands that his own ghost and the ghost of his double should be kept together in the same place; that is why the jawbone and the navel-string of every dead king are carefully preserved in the same temple, because the two ghosts adhere respectively to these two parts of his person, and it would be unreasonable and indeed cruel to divide them.

The two ghosts having been thus safely lodged in the two precious parcels, the next thing was to install them in the temple, where they were to enter on their career of beneficent activity. A site having been chosen, the whole country supplied the labour necessary for building the temple; and ministers were appointed to wait upon the dead king. The officers of state who

had held important posts during his life retained their titles and continued to discharge their duties towards their old master in death. Accordingly houses were built for them near the temple. The dowager queen also took up her residence at the entrance to the temple enclosure, and became its principal guardian. Many also of the king's widows of lower rank were drafted off to live inside the enclosure and keep watch over it. When the queen or any of these widows died, her place was supplied by another princess or a woman of the same clan; for the temple was maintained in perpetuity. However, when the reigning king died, the temple of his predecessor lost much of its importance, though it was still kept up in a less magnificent style; indeed no temple of a dead king was allowed to disappear altogether. Of all the attendants at the temple the most important probably was the prophet or medium (*mandwa*), whose business it was from time to time to be inspired by the ghost of the deceased monarch and to give oracles in his name. To this holy office he dedicated himself by drinking a draught of beer and a draught of milk out of the dead king's skull.

The temple consecrated to the worship of a king regularly stood on a hill. The site was generally chosen by the king in his life, but sometimes his choice was set aside by his successor, who gave orders to build the temple in another place. The structure was a large conical or bee-hive-shaped hut of the ordinary pattern, divided internally into two chambers, an outer and an inner. Any person might enter the outer chamber, but the inner was sacred and no profane person might set foot in it; for there the holy relics of the dead king, his jawbone and his navel-string, were kept for safety in a cell dug in the floor, and there, in close attendance on them, the king's ghost was believed to dwell. In front of the partition which screened this Holy of Holies from the gaze of the multitude there stood a throne, covered with lion and leopard skins and fenced off from the rest of the sacred edifice by a glittering rail of brass spears, shields, and knives. A forest of poles, supporting the roof, formed a series of aisles in perfect line, and at the end of the central nave appeared, like the altar of a Christian church, the throne in all its glory. When the king's ghost held a reception, the holy relics, the jawbone and the navel-string, each in its decorated wrappings, were brought forth and set on the throne; and every person who entered the temple bowed to the ground and greeted the jawbone in an awestruck voice, for he regarded it as the king in person. Solemn music played during the reception, the drums rolling and the women chanting, while they clapped their hands to the rhythm of the songs. Sometimes the dead king spoke to the congregation by the voice of his prophet. That was a great event. When the oracle was about to be given to the expectant throng, the prophet stepped up to the throne, and addressing the spirit informed him of the business in hand. Then he smoked one or two pipes, and the fumes bringing on the prophetic fit, he began to rave and to speak in the very voice and with the characteristic turns of speech of the departed monarch, for the king's spirit was now in him. This message from the world beyond the grave was naturally received with rapt attention. Gradually the fit of inspiration passed: the voice of the prophet resumed its natural tones: the spirit had departed from him and returned to its abode in the inner room. Such a solemn audience used to be announced beforehand by the beating of the drums in the early morning, and the worshippers brought with them to the temple offerings of food for the dead king, as if he were still alive.

But the greatest day of all was when the reigning king visited the temple of his father. This he did as a rule only once during his reign. Nor did the people approve of the visits being repeated, for each visit was the signal for the death of many. Yet, attracted by a painful curiosity, crowds assembled, followed the monarch to the temple, and thronged to see the great ceremony of the meeting between the king and the ghost of his royal father. The sacred relics were displayed: an old man explained them to the monarch and placed them in his hands: the prophet, inspired by the dead king's spirit, revealed to the living king his destiny.

The interview over, the king was carried back to his house. It was on the return journey that he always gave, suddenly and without warning, the signal of death. Obedient to his orders the guards rushed upon the crowd, captured hundreds of spectators, pinioned them, marched them back to the temple, and slaughtered them within the precincts, that their ghosts might wait on the ghost of the dead king. But though the king rarely visited his father's ghost at the temple, he had a private chapel for the ghost within the vast enclosure of the royal residence; and here he often paid his devotions to the august spirit, of whom he stood greatly in awe. He took his wives with him to sing the departed monarch's praise, and he constantly made offerings at the shrine. Thither, too, would come the prophet to suck words of wisdom from the venerable ghost and to impart them to the king, who thus walked in the counsel of his glorified father.

In Kiziba, a district of Central Africa on the western side of Lake Victoria Nyanza, the souls of dead kings become ruling spirits; temples are built in their honour and priests appointed to serve them. The people are composed of two different races, the Bairu, who are aboriginals, and the Bahima, who are immigrants from the north. The royal family belongs to the Bahima stock. In his lifetime the king's person is sacred; and all his actions, property, and so forth are described by special terms appropriated to that purpose. The people are divided into totemic clans: the totems (*muziro*) are mostly animals or parts of animals: no man may kill or eat his totem animal, nor marry a woman who has the same totem as himself. The royal family seems to have serpents for their totem; after death the king's soul lives in a serpent, while his body is buried in the hut where he died. The people revere a supreme god named Rugaba, who is believed to have created man and cattle; but they know little about him, and though they occasionally pray to him, particularly in the case of a difficult birth, he has no priests and receives no sacrifices. The business of the priests is to act as intermediaries, not between God and man, but between men and the spirits. The spirits are believed to have been formerly kings of the world. The highest of them is a certain Wamara, who rules over the souls of the dead, and who would seem to have been a great king in his life. Temples are built for him; they are like the houses of men, but only half as large. A perpetual holy fire is kept up in each temple, and the priest passes the night in it. He receives white sheep or goats as victims, and generally acts also as a diviner or physician. When a man is very ill, he thinks that Wamara, the lord of the spirits of the dead, is summoning him to the far country; so he sends a sacrifice to Wamara's priest, who prays to the spirit to let the sick man live yet a while. This great spirit of an ancient king, who now rules over the dead, resembles the Egyptian Osiris.

The Bantu tribes who inhabit the great tableland of Northern Rhodesia revere a supreme being whom they call Leza, but their ideas about him are hazy. Thunder, lightning, earthquakes, rain, and other natural phenomena are grouped together under his name as manifestations of his power. Among the more progressive tribes, such as the Awemba and the Wabisa, the great god is thought to take some interest in human affairs; and though they do not pray to him, they nevertheless invoke him by his names of praise, which set forth his attributes as the protector and judge of mankind. It is he, too, who receives the souls of the departed. "Yet, as far as the dominant Wemba tribe is concerned, the cult of Leza is outside their ordinary religion. There is no direct access to him by prayer or by sacrifices, which are made to Mulenga and the other great tribal and ancestral spirits instead. For upon such animism is founded the whole fabric of Wemba religion." The ancestral spirits whom the Awemba and all other tribes of this region worship may be divided into two main classes. First come the spirits of departed chiefs, who are publicly worshipped by the whole tribe; and second come the spirits of near relations who are worshipped privately by each head of a family. "Among the Awemba there is no special shrine for these purely family spirits, who are worshipped inside the hut, and to whom family sacrifice of a sheep, a goat, or a fowl is

made, the spirit receiving the blood spilt on the ground, while all the members of the family partake of the flesh together. For a religious Wemba man the cult of the spirit of his nearest relations (of his grandparents, or of his deceased father, mother, elder brother, or maternal uncle) is considered quite sufficient. Out of these spirit relatives a man will worship one whom he considers as his special familiar, for various reasons. For instance, the diviner may have told him that his last illness was caused because he had not respected the spirit of his uncle; accordingly he will be careful in future to adopt his uncle as his tutelary spirit. As a mark of such respect he may devote a cow or a goat to one of the spirits of his ancestors. Holding the fowl, for instance, in his hands, he will dedicate it, asking the spirit to come and abide in it, upon which the fowl is let go, and is afterwards called by the name of the spirit. If the necessities, however, of the larder demand that it should be killed, another animal is taken, and the spirit is asked to accept it as a substitute! Before beginning any special task, such as hoeing a new garden, or going on a journey, Wemba men invoke their tutelary spirits to be with them and to assist their efforts, in short ejaculatory prayers usually couched in a set formula. Among many of the tribes in the North Luangwa district longer formal prayers are still made to all the deceased ancestors of the clan at the time of harvest, asking them to protect the crops and to drive away illnesses and evil spirits from the family, which honours them with libations of beer and offerings of the first-fruits.”

Thus among these tribes, who all belong to the great Bantu family, the public worship which a whole tribe pays to the souls of its dead chiefs is probably nothing but an extension of the private worship which every family pays privately to the souls of its dead members. And just as the members of his family whom a man worships privately are not mythical beings conjured up by imagination out of a distant past, but were once real men like himself whom he knew in life, it may be his father, or uncle, or elder brother, so we may be sure that in like manner the dead chiefs revered by the whole tribe are not creations of the mythical fancy, but were once real men of flesh and blood, who ruled over the tribe, and whose memory has been more or less faithfully preserved by tradition. In this respect the tribes of Northern Rhodesia are typical of all the tribes of that great Bantu family which occupies nearly the whole southern half of Africa, from the great equatorial lakes to the Cape of Good Hope. The main practical religion of all these numerous and widespread peoples appears to be the worship of their ancestors.

To adduce in full the evidence which points to this conclusion would lead us too far from our present subject; it must suffice to cite a few typical statements of competent authorities which refer to different tribes of the Bantu stock. Speaking with special reference to the tribes of South-Eastern Africa, the Rev. James Macdonald tells us that “the religion of the Bantu, which they not only profess but really regulate their conduct by, is based on the belief that the spirits of their ancestors interfere constantly in their affairs. Every man worships his own ancestors and offers sacrifices to avert their wrath. The clan worships the spirits of the ancestors of its chiefs, and the tribe worships the spirits of the ancestors of the paramount chief.” “The religion of the Bantu was based upon the supposition of the existence of spirits that could interfere with the affairs of this world. These spirits were those of their ancestors and their deceased chiefs, the greatest of whom had control over lightning. When the spirits became offended or hungry they sent a plague or disaster until sacrifices were offered and their wrath or hunger was appeased. The head of a family of commoners on such an occasion killed an animal, and all ate of the meat, as the hungry ghost was supposed to be satisfied with the smell.” For example, in the year 1891 the son of a chief of the Pandomisi tribe was arrested for an assault and sent for trial before a colonial court. It chanced to be a season of intense heat and severe drought, and the Pandomisi tribe attributed these calamities to the wrath of a dead chief named Gwanya, very famous in his lifetime, whose body, fastened to a

log, had been buried under a heap of stones in a deep pool of the Lina river. This redoubtable chieftain was the seventh ancestor in the direct line of the man who had committed the assault; and he warmly resented the indignity which the whites had done to a noble scion of his house by consigning him to durance vile. To appease the natural indignation of the ghost, the tribesmen killed cattle on the banks of the pool which contained his grave, and threw the flesh into the water along with new dishes full of beer. The prisoner, however, was convicted of the assault and sentenced by the ruthless magistrate, who was no respecter of ghosts, to pay a fine. But the tribe clubbed together and paid the fine for him; and a few days later rain fell in plenty. The mollified ghost had opened the celestial sluices.

Another writer, describing the religion of the South African Bantus, tells us that “the ancestral spirits love the very things they loved before they passed through the flesh; they cherish the same desires and have the same antipathies. The living cannot add to the number of the wives of ancestral spirits; but they can kill cattle in their honour and keep their praise and memory alive on earth. Above all things, they can give them beef and beer. And if the living do not give them sufficient of these things the spirits are supposed to give the people a bad time: they send drought, and sickness, and famine, until people kill cattle in their honour. When men are alive they love to be praised and flattered, fed and attended to; after death they want the very same things, for death does not change personality.... In time of drought, or sickness, or great trouble, there would be great searchings of heart as to which ancestor had been neglected, for the trouble would be supposed to be caused by the neglected ancestor. Most of the people would get the subject on their nerves (at least, as far as a Kafir could get anything on the leather strings which do duty for nerves), and some one would be sure to have a vivid dream in which an ancestor would complain that the people had not praised him half enough of late. So an ox would be killed, either by the head-man of the kraal or by a diviner. Then the man would say over the ox as it was being killed, ‘Cry out, ox of So-and-So; listen to us, So-and-So; this is your ox; we praise you by all your laud-giving names, and tell of all your deeds; do not be angry with us any more; do you not see that this is your ox? Do not accuse us of neglecting you; when, forsooth, have we ceased to praise you and offer you meat and beer? Take note, then, that here is another ox we are offering to you.’ When the ox is dead some of the meat is mixed with herbs and medicines and placed in a hut with a bowlful of blood. This meat is placed in the part of the hut where the man loved to sit while he was alive, and some one is told off to guard the sacrifice. The meat is left for a night, or longer, and the spirits are supposed to come and enjoy the smell, or drink the serum which oozes from the meat, and to inhale the smell of the beer. The priest or diviner will then sprinkle the people and the huts with medicine made from the contents of the stomach of the ox. He places a little on a sherd; when this is dry he burns it and calls on the spirits to smell the incense. After the meat has been left for a certain time it is taken out and cooked, and eaten by the men near the cattle kraal in public.... If the trouble does not vanish after this ceremony the people get angry and say to the spirits, ‘When have we ceased to kill cattle for you, and when have we ever refused to praise you by your praise-names? Why, then, do you treat us so shabbily? If you do not behave better we shall utterly forget your names, and then what will you do when there is no one to praise you? You will have to go and live on grasshoppers. If you do not mend your ways we shall forget you. What use is it that we kill oxen for you and praise you? You do not give us rain or crops, or cause our cattle to bear well; you show no gratitude in return for all we do for you. We shall utterly disown you. We shall tell the people that, as for us, we have no ancestral spirits, and this will be to your shame. We are disgusted with you.’ ” Thus the sweet savour of beef and beer does not suffice to content Caffre ghosts; they share the love of praise and flattery with many gods of higher rank.

Among the Basutos, an important Bantu people of South Africa, “each family is supposed to be under the direct influence and protection of its ancestors; but the tribe, taken as a whole, acknowledges for its national gods the ancestors of the reigning sovereign. Thus, the Basutos address their prayers to Monaheng and Motlumi, from whom their chiefs are descended. The Baharutsis and the Barolongs invoke Tobege and his wife Mampa. Mampa makes known the will of her husband, announcing each of her revelations by these words, ‘*O re! O re!*’ ‘He has said! he has said!’ They make a distinction between the ancient and modern divinities. The latter are considered inferior in power, but more accessible; hence this formula, which is often used: ‘New gods! entreat the ancient gods for us!’ In all countries spirits are more the objects of fear than of love. A deep feeling of terror generally accompanies the idea that the dead dispose of the lot of the living. The ancients spoke much of incensed shades. If they sacrificed to the manes, it was generally in order to appease them. These ideas perfectly correspond to those of the Basutos. They conjure rather than pray; although they seek to gain favours, they think more of averting chastisement. Their predominating idea as to their ancestors is, that they are continually endeavouring to draw them to themselves. Every disease is attributed to them; thus medicine among these people is almost entirely a religious affair. The first thing is to discover, by means of the *litaola* (divining bones), under the influence of what *molimo* the patient is supposed to be. Is it an ancestor on the father's side or the mother's? According as fate decides, the paternal or maternal uncle will offer the purifying sacrifice, but rarely the father or brother. This sacrifice alone can render efficacious the medicines prescribed by the *ngaka* (doctor)... As soon as a person is dead he takes his place among the family gods. His remains are deposited in the cattle-pen. An ox is immolated over his grave: this is the first oblation made to the new divinity, and at the same time an act of intercession in his favour, serving to ensure his happy reception in the subterranean regions. All those present aid in sprinkling the grave, and repeat the following prayer: ‘Repose in peace with the gods; give us tranquil nights.’”

Similarly among the Thonga, another Bantu tribe of South Africa, “any man, who has departed this earthly life, becomes a *shikwembu*, a god”; “when an old decrepit man or woman dies, he at once becomes a god: he has entered the domain of infinity.” In this tribe “the spirits of the ancestors are the main objects of religious worship. They form the principal category of spirits.” “On the one hand, the ancestor-gods are truly gods, endowed with the attributes of divinity; whilst, on the other, they seem to be nothing but mere human beings, exactly on the same level as their worshippers.” There are two great classes of these ancestor-gods, to wit, “those of the family, and those of the country, the latter being those of the reigning family. They do not differ as regards their nature. In national calamities those of the country are invoked, whilst, for purely family matters, those of the family are called upon. Moreover, each family has two sets of gods, those on the father's side and those on the mother's, those of *kweru* and those of *bakokwana*. They are equal in dignity. Both can be invoked, and the divinatory bones are always asked to which the offering must be made. It seems, however, as if the gods on the mother's side were more tender-hearted and more popular than those on the father's. The reason for this is, perhaps, that relations are easier with the family of the mother than with that of the father. It is also just possible that it is a relic of the matriarchal period, when the ancestors of the mother only were known, and consequently invoked. At any rate, the part played by *batukulu* [uterine] nephews in the offerings shows that they are the true representatives of the gods, not of those of their father, but of their mother.” Among the Thonga “the belief in the continuation of life after death is universal, being at the base of the ancestrolatry, which is the religion of the tribe.” “How real is the ancestrolatry, the religion of the Thonga, of, in fact, all the South African Bantus! How frequent and manifold are its manifestations! This is the first, and the most perceptible set of their religious intuitions, and any European, who has stayed in their villages, learnt their

language, and tried to understand their customs, has had the opportunity of familiarizing himself with this religion.”

Among the Basutos and Bechuanas, who also belong to the great Bantu family, the sacrificial ritual is not highly developed. “Only in great misfortunes which affect the whole people or the royal family, a black ox is slaughtered; for in such cases they always think that the angry spirits of the departed are the cause of all the suffering. ‘*Re amogioa ki badimo,*’ say the people, ‘the spirits are robbing us.’ The ox is led to the chiefs grave; there they pray, ‘Lord, we are come to call upon thee, we who are thy children; make not our hearts troubled; take not, Lord, that which is ours.’ The old chief is honoured and praised in songs, he is invoked by all his praise-names, the ox is killed and its flesh eaten, but the blood and the contents of the stomach are poured on the grave, and there the bones of the sacrificed animal are also deposited.”

The Zulus, another great Bantu tribe of South Africa, believe in the existence of a being whom they call Unkulunkulu, which means “the Old-Old-one, the most ancient man.” They say that “it is he who was the first man; he broke off in the beginning. We do not know his wife; and the ancients do not tell us that he had a wife.” This Old-Old-one or Great-Great-one “is represented as having made all things—men, cattle, water, fire, the mountains, and whatever else is seen. He is also said to have appointed their names. Creation was effected by splitting a reed, when the first man and other things issued from the cleft.” Further, the Zulus and other Caffre tribes of Natal “believe that, when a person dies, his *i-hloze* or *isi-tute* survives. These words are translated ‘spirit,’ and there seems no objection to the rendering. They refer to something manifestly distinguished from the body, and the nature of which the prophets endeavour to explain by saying that it is identical with the shadow. The residence of the *ama-hloze*, or spirits, seems to be beneath; the practice of breaking a man’s assagais, before they are buried with him, shows that he is believed to return to earth through the grave; while it appears to be generally thought that, if the earth were removed from the grave, the ghost would return and frighten his descendants. When spirits have entered the future state, they are believed to possess great power; prosperity is ascribed to their favour, and misfortune to their anger; they are elevated in fact to the rank of deities, and (except where the Great-Great is worshipped concurrently with them) they are the only objects of a Kafir’s adoration. Their attention (or providence) is limited to their own relatives—a father caring for the family, and a chief for the tribe, which they respectively left behind them. They are believed to occupy the same relative position as they did in the body, the departed spirit of a chief being sometimes invoked to compel a man’s ancestors to bless him.”

“To these shades of the dead, especially to the ghosts of their great men, as Jama, Senzangakona, and Chaka, their former kings, they look for help, and offer sacrifices; that is, slaughter cattle to them, and offer a sort of prayer, in time of danger and distress.... When they are sick, they slaughter cattle to the shades, and say, ‘Father, look on me, that this disease may cease from me. Let me have health on the earth, and live a long time.’ They carry the meat into the house, and shut it up there, saying, ‘Let the paternal shades eat, so shall they know that the offering was made for them, and grant us great wealth, so that both we and our children may prosper.’ In the cattle-fold they talk a long time, praising the ghosts; they take the contents of the stomach, and strew it upon all the fold. Again they take it, and strew it within the houses, saying, ‘Hail, friend! Thou of such a place, grant us a blessing, beholding what we have done. You see this distress; may you remove it, since we have given you our animal. We know not what more you want, whether you still require anything more or not.’ They say, ‘May you grant us grain, that it may be abundant, that we may eat, of course, and not be in need of anything, since now we have given you what you want.’ They say, ‘Yes, for a long time have you preserved me in all my going. Behold, you see, I have just

come to have a kraal. This kraal was built by yourself, father; and now why do you consent to diminish your own kraal? Build on us as you have begun, let it be large, that your offspring, still here above, may increase, increasing in knowledge of you, whence cometh great power.' Sometimes they make beer for the ghosts, and leave a little in the pot, saying, 'It will be eaten by the ghosts that they may grant an abundant harvest again, that we may not have a famine.' If one is on the point of being injured by anything, he says, 'I was preserved by our divinity, which was still watching over me.' Perhaps he slaughters a goat in honour of the same, and puts the gall on his head; and when the goat cries out for pain of being killed, he says, 'Yes, then, there is your animal, let it cry, that ye may hear, ye our gods who have preserved me; I myself am desirous of living on thus a long time here on the earth; why then do you call me to account, since I think I am all right in respect to you? And while I live, I put my trust in you, our paternal and maternal gods.' "

"Black people," say the Zulus, "do not worship all Amatongo indifferently, that is, all the dead of their tribe. Speaking generally, the head of each house is worshipped by the children of that house; for they do not know the ancients who are dead, nor their laud-giving names, nor their names. But their father whom they knew is the head by whom they begin and end in their prayer, for they know him best, and his love for his children; they remember his kindness to them whilst he was living; they compare his treatment of them whilst he was living, support themselves by it, and say, 'He will still treat us in the same way now he is dead. We do not know why he should regard others besides us; he will regard us only.' So it is then although they worship the many Amatongo of their tribe, making a great fence around them for their protection; yet their father is far before all others when they worship the Amatongo. Their father is a great treasure to them even when he is dead. And those of his children who are already grown up know him thoroughly, his gentleness, and his bravery. And if there is illness in the village, the eldest son lauds him with the laud-giving names which he gained when fighting with the enemy, and at the same time lauds all the other Amatongo; the son reproves the father, saying, 'We for our parts may just die. Who are you looking after? Let us die all of us, that we may see into whose house you will enter. You will eat grasshoppers; you will no longer be invited to go anywhere, if you destroy your own village.' After that, because they have worshipped him, they take courage saying, 'He has heard; he will come and treat our diseases, and they will cease.' Such then is the faith which children have in the Itongo [ancestral spirit] which is their father. And if there is a chief wife of a village, who has given birth to children, and if her husband is not dead, her Itongo is much revered by her husband and all the children. And that chief wife becomes an Itongo which takes great care of the village. But it is the father especially that is the head of the village." Thus among the Zulus it is the spirits of those who have just died, especially the spirits of fathers and mothers, who are most revered and worshipped. The spirits of the more remote dead are forgotten.

When the missionaries inquired into the religious ideas of the Herero, a Bantu tribe of German South-West Africa, they heard much of a certain Mukuru, whom at first they took to be the great god of heaven and earth. Accordingly they adopted Mukuru as the native name for the Christian God, and set out on their mission to preach the glad tidings of Mukuru and his divine Son to the poor benighted heathen. But their first experiences were disconcerting. Again and again when they arrived in a village and announced their intention to the chief, they were brought up very short by that great man, who told them with an air of astonishment that he himself was Mukuru. For example, Messrs. Büttner and Irle paid a visit to an old chief named Tjenda and remonstrated with him on the impropriety of which he had been guilty in giving a baptized girl in marriage to a native gentleman whose domestic arrangements were framed on the polygamous patriarchal pattern. "Mukuru will punish you for that," said Mr.

Büttner. "What?" roared the chief. "Who's Mukuru? Why, I am Mukuru in my own tribe," and he bundled the two missionaries out of the village. A repetition of these painful incidents at last impressed on the minds of the missionaries the conviction that Mukuru was not God at all but merely the head of a family, an ancestor, whether alive or dead. They ascertained at the same time that the Herero recognize a good god who dwells in heaven and bears the name of Ndjambi Karunga. But they do not worship him nor bring him offerings, because he is so kind that he hurts nobody, and therefore they need not fear him. "Rather they share the opinion of the other Bantu tribes that Ndjambi, the good Creator, has withdrawn to heaven and left the government on earth to the demons." "It is true that the Herero are acquainted with punishment for what is bad. But that punishment they ascribe to Mukuru or their ancestors. It is their ancestors (*Ovakuru*) whom they must fear; it is they who are angry and can bring danger and misfortune on a man. So it is intelligible that the whole of their worship turns, not on Ndjambi Karunga, but on their ancestors. It is in order to win and keep their favour, to avert their displeasure and wrath, in short to propitiate them, that the Herero bring their many offerings; they do so not out of gratitude, but out of fear, not out of love, but out of terror. Their religion is a worship of ancestors with here and there touches of fetishism." "Thus among the Herero, as among all Bantu tribes, there exists a religious dualism: they know the highest, the true God, but they worship their ancestors." And among the worshipful ancestors "the old dead chiefs of every tribe take the first place. The son of a great dead chief and the whole tribe worship that old father as their god. But the remote ancestors of that chief they do not worship, indeed they hardly know them by name and can no longer point to their graves." Thus with the Herero, as with the Zulus, it is the recent and well-remembered dead who are chiefly or exclusively worshipped; as the souls of the departed recede further and further into the past their memory perishes, and the nimbus of supernatural glory which encircled it for a time fades gradually away.

The religion of the Ovambo, another Bantu tribe of German South-West Africa, is similar. They also recognize a great being named Kalunga, who created the world and man, but they neither fear nor worship him. A far greater part is played in the religion of the Ovambo by their belief in spirits, and amongst the worshipful spirits a conspicuous place is assigned to the souls of the dead. Every man leaves behind him at death a spirit, which continues to exist on earth and can influence the living; for example, it may enter into their bodies and thereby cause all sorts of sickness. However, the souls of ordinary dead men can exert their influence only on members of their own families; the souls of dead chiefs, on the other hand, have power over the rain, which they can either give or withhold. To these powerful spirits a portion of the new corn is offered at harvest as a thank-offering for their forbearance in not visiting the people with sickness, and above all for their bounty in sending down the fertilizing showers on the crops. The souls of dead magicians are particularly dreaded; and to prevent the multiplication of these dangerous spirits it is customary to dismember their bodies, severing the arms and legs from the trunk and cutting the tongue out of the mouth. If these precautions are taken immediately after death, the soul of the dead man cannot become a dangerous ghost; the mutilation of his body has practically disarmed his spirit.

The Wahehe, a Bantu tribe of German East Africa, believe in a great invisible spirit named Nguruhi, who created the world and rules both human destiny and the elements. He it is who makes the rain to fall, the sun to shine, the wind to blow, the thunder to roll, and the crops to grow. "This god is accordingly conceived as all-powerful, yet with the limitation that he only exercises a general power of direction over the world, especially human fate, while the *masoka*, the spirits of the dead, wield a permanent and very considerable influence on the course of particular events. Nguruhi is lord also of all the spirits of the dead (*masoka*), but his relation to them has not been further thought out. With this Supreme Being the people hold

no intercourse by means of prayer, sacrifice, or in any other way. He stands remote from the religious life of the Wahehe and really serves only as an explanation of all those things and events which are otherwise inexplicable. All religious intercourse, all worship centres alone on the spirits of the dead. Hence if we speak of a religion of the Wahehe, it must be described as a pure worship of ancestors." The human soul quits the body at death and at once becomes an ancestral spirit (*m'soka*), invisible and endowed with complete liberty of motion. Even the youngest children have souls which rank among the ancestral spirits at death. Hence the great multitude of the dead comprises spirits of all ages, from the infant one day old to the grey-haired patriarch. They are good or bad according as they were good or bad in life, and their social position also is unchanged. He who was powerful in life is powerful also in death; he who was a nobody among men is a nobody also among the spirits. Hence the ghost of a great man can do more for the living than the ghost of a common man; and the ghost of a man can do more than the ghost of a woman. Yet even the meanest ghost has power over the greatest living man, who can only defend himself by appealing for help to stronger ancestral spirits. Thus while the Supreme Being exercises a general superintendence over affairs, the real administration is in the hands of the ancestral spirits. While he, for example, regulates the weather as a whole, it is the ghosts who cause each particular shower to fall or the sun to break out in glory from the clouds. If he sends plagues on the whole people or stays the ravages of disease, it is the ghosts who make each individual sick or sound. These powerful spirits exert themselves especially to help their descendants, though they do not hesitate to plague their own kith and kin if they think themselves neglected. They flit freely through the air and perch on trees, mountains, and so forth, but they lodge by preference at their graves, and you are always sure of finding them there, if you wish to consult them. That is why in the country of the Wahehe the only places of sacrifice are the graves; temples and altars are unknown. However, it is only the bodies of considerable persons that are buried; the corpses of common folk are simply thrown away in the bush; so that the number of graves and consequently of sacrificial places is strictly limited. The spirits of the dead appear to the living most commonly in dreams to give them information or warning, but oftener to chide and torment them. So the sleeper wakes in a fright and consults a diviner, who directs him what he must do in order to appease the angry ghost. Following the directions of his spiritual adviser the man sacrifices an ox, or it may be only a sheep or a fowl, at the tomb of one of his ancestors, prays to the ghost, and having scattered a few morsels of the victim's flesh on the grave, and spat a mouthful of beer upon it, retires with his family to feast on the remainder of the carcass. Such sacrifices to the dead are offered on occasion of sickness, the lack of male heirs, a threatened war, an intended journey, in short, before any important undertaking of which the issue is doubtful; and, they are accompanied by prayers for health, victory, good harvests, and so forth.

Once more, the Bahima, a Bantu people of Ankole, in Central Africa, believe in a supreme god Lugaba, who dwells in the sky and created man and beast; but "this supreme being is not worshipped nor are offerings made to him; he has no sacred place. Although they talk freely about him, and acknowledge him to be their great benefactor, they accept all his gifts as a matter of course, and make him no offering in return.... One must not, therefore, conclude that the Bahima are an irreligious people; like most of the Bantu tribes their religion consists chiefly in dealing with ghosts of departed relatives, and in standing well with them; from the king to the humblest peasant the ghosts call for daily consideration and constant offerings, whilst the deities are only sought in case of great trials or national calamities."

To return, now, to the worship of dead chiefs or kings among the Bantu tribes of Northern Rhodesia. The spirits of dead chiefs had priestesses to wait upon them, who were called the "wives of the departed." These were elderly women who led a celibate life and swept the

huts dedicated to the ghosts of the chiefs. The aid of these dead potentates was invoked in time of war and in seasons of drought, and special offerings were brought to their shrines at harvest. Among the Awemba, who form the aristocracy of the country, when a diviner announced that a drought was caused by the spirits of dead chiefs or kings buried at Mwaruli, a bull would be sent to be sacrificed to the souls of the deceased rulers; or if the drought was severe, a human victim would be despatched, and the high priest would keep him caged in a stoutly woven fish-basket, until the preparations for the sacrifice were complete. Among the Yombe no one might eat of the first-fruits of the crops until the living chief had sacrificed a bull before the tomb of his grandfather, and had deposited pots of fresh beer and porridge, made from the first-fruits, in front of the shrine. The ground about the tomb was then carefully weeded, and the blood of the sacrificial victim sprinkled on the freshly turned up soil and on the rafters of the little hut. After thanking the ghost of his grandfather for the harvest, and begging him to partake of the first-fruits, the chief and his train withdrew to feast on the carcase and the fresh porridge and beer at the village. When the head chief or king of the Awemba had resolved to make war on a distant enemy, he and the older men of the tribe would pray daily for victory to the spirits of the dead kings, his predecessors. The day before the army was to set forth, the great war-drum boomed out and the warriors flocked together from the outlying districts under their respective captains. In the dusk of the evening the king and the elderly women, who passed for the wives of the dead kings and tended their shrines at the capital, went and prayed at these shrines that the souls of the departed monarchs would keep the war-path free from foes and lead the king in a straight course to the enemy's stockade. These solemn prayers the king led in person, and the women beat their bare breasts as they joined in the earnest appeal. Next morning the whole army was marshalled in front of the ghost-huts of the dead kings: the living king danced a war-dance before his ancestors, while his chief wife sprinkled him with holy flour; and all prostrated themselves in supplication before the shrines.

Among these tribes of Northern Rhodesia the spirits of dead chiefs or kings sometimes take possession of the bodies of live men or women and prophesy through their mouths. When the spirit of a dead chief comes over a man, he begins to roar like a lion, whereupon the women gather together and beat the drums, shouting that the chief has come to visit the village. The man thus temporarily inspired will prophesy of future wars or impending attacks by lions. While the inspiration lasts, he may eat nothing cooked by fire, but only unfermented dough. However, the spirit of a departed chief takes possession of women oftener than of men. "These women assert that they are possessed by the soul of some dead chief, and when they feel the divine afflatus, whiten their faces to attract attention, and anoint themselves with flour, which has a religious and sanctifying potency. One of their number beats a drum, and the others dance, singing at the same time a weird song, with curious intervals. Finally, when they have arrived at the requisite pitch of religious exaltation, the possessed woman falls to the ground, and bursts forth into a low and almost inarticulate chant, which has a most uncanny effect. All are silent at once, and the *bashing'anga* (medicine-men) gather round to interpret the voice of the spirit." Sometimes the spirits of departed chiefs are reincarnated in animals, which are then revered as the abodes of the dead rulers. Thus the paramount chief of the Amambwe is incarnated after death in the form of a young lion, while Bisa and Wiwa chiefs come back in the shape of pythons. In one of the rest-houses near Fife a tame python waxed fat on the offerings of fowls and sour beer which the Winamwanga presented to it in the fond belief that it housed the spirit of one of their dead chiefs. One day unfortunately for himself the reptile deity ventured to dispute the possession of the rest-house with a German cattle-dealer who was passing by; a discharge of shot settled the dispute in favour of the cattle-dealer, and the worshippers of the deity beheld him no more.

Another Bantu people who worship the spirits of their dead kings are the Barotse or Marotse of the Upper Zambesi. The Barotse believe in a supreme god, the creator of all things, whom they call Niambe. He lives in the sun, and by his marriage with the moon begat the world, the animals, and last of all men. But the cunning and ferocity of his creature man terrified the beneficent creator, so that he fled from earth and escaped up the thread of a spider's web to heaven. There he still retains a certain power to interfere in human affairs, and that is why men sometimes pray and sacrifice to him. For example, the worshipper salutes the rising sun and offers him a vessel of water, no doubt to quench the thirst of the deity on his hot journey across the sky. Again, when a long drought has prevailed, a black ox is sacrificed to Niambe "as a symbol of the clouds big with the longed-for rain." And before they sow the fields, the women pile the seeds and their digging hoes in a heap, and pray to the god that he would render their labour fruitful.

Yet while they acknowledge the divine supremacy of Niambe, the Barotse address their prayers most frequently to the inferior deities, the *ditino*, who are the deified kings of the country. The tombs of the departed monarchs may be seen near the villages which they inhabited in life. Each tomb stands in a grove of beautiful trees and is encircled by a tall palisade of pointed stakes, covered with fine mats, like the palisade which surrounds the royal residence of a living king. Such an enclosure is sacred; the people are forbidden to enter it lest they should disturb the ghost of him who sleeps below. But the inhabitants of the nearest village are charged with the duty of keeping the tomb and the enclosure in good order, repairing the palisade, and replacing the mats when they are worn out. Once a month, at the new moon, the women sweep not only the grave and the enclosure but the whole village. The guardian of the tomb is at the same time a priest; he acts as intermediary between the god and the people who come to pray to the deity. He bears the title of Ngomboti; he alone has the right to enter the sacred enclosure; the profane multitude must stand at a respectful distance. Even the king himself, when he comes to consult one of his ancestors, is forbidden to set foot on the holy ground. In presence of the god, or, as they call him, the Master of the Tomb, the monarch must bear himself like a slave in the presence of his lord. He kneels down near the entrance, claps his hands, and gives the royal salute; and from within the enclosure the priest solemnly returns the salute, just as the king himself, when he holds his court, returns the salute of his subjects. Then the suppliant, whether king or commoner, makes his petition to the deity and deposits his offering; for no man may pray to the god with empty hands. Inside the enclosure, close to the entrance, is a hole which is supposed to serve as a channel of communication with the spirit of the deified king. In it the offerings are placed. Often they consist of milk which is poured into the hole; and the faster it drains away, the more favourably inclined is the god thought to be to the petitioner. More solid offerings, such as flesh, clothes, and glass beads, become the property of the priest after they have been allowed to lie for a decent time beside the sacred aperture of the tomb. The spirits of dead kings are thus consulted on matters of public concern as well as by private individuals touching their own affairs. If a war is to be waged, if a plague is raging among the people or a murrain among the cattle, if the land is parched with drought, in short, if any danger threatens or any calamity has afflicted the country, recourse is had to these local gods, dwelling each in his shady grove, not far from the abodes of the living. They are near, but the great god in heaven is far away. What wonder, therefore, that their help is often sought while he is neglected? They are national heroes as well as gods; their history is remembered; men tell of the doughty deeds they did in their lifetime; why should they not be able to succour their votaries now that they have put on immortality? All over the country these temple-tombs may be seen. They serve as historical monuments to recall to the people the names of their former kings and the annals of their country. One of the most popular of the royal shrines is near Senanga at the southern end of the great plain of the Barotse. Voyagers who go down the Zambesi do

not fail to pay their devotions at the shrine, that the god of the place may make their voyage to prosper and may guard the frail canoe from shipwreck in the rush and roar of the rapids; and when they return in safety they repair again to the sacred spot to deposit a thank-offering for the protection of the deity.

The foregoing examples suffice to prove that the worship of dead chiefs and kings has been an important, perhaps we may even say, the most important element in the religion of many African tribes. Regarded from the native point of view nothing could be more natural. The king rules over his people in life; and since all these tribes entertain a firm and unquestioning belief not only in the existence but in the power of the spirits of the dead, they necessarily conclude that of all the departed spirits none can be so potent for good or evil, none therefore need to be propitiated so earnestly by prayer and sacrifice, as the souls of dead kings. Thus while every family worships privately the spirits of its own ancestors, the whole tribe worships publicly the spirits of its departed monarchs, paying to each of these invisible potentates, whose reality they never dream of doubting, a homage of precisely the same sort as that which they render to his living successor on the throne. Such a religion of the dead is by no means incompatible with the recognition of higher spiritual powers who may have an origin quite independent of the worship of ancestors. We have seen in point of fact that many tribes, whose practical religion is concentrated chiefly on their dead, nevertheless acknowledge the existence of a supreme god, the creator of man and of all things, whom they do not regard as a glorified ghost. The Baganda, the most progressive and advanced of all the Bantu tribes, had a whole pantheon of gods whom they sharply distinguished from the worshipful spirits of their forefathers.

Yet in spite of this distinction we may suspect that in many cases the seeming line of division between gods and worshipful ghosts is deceptive; and that the magic touch of time, which distorts and magnifies the past, especially among peoples who see it only through the haze of oral tradition, has glorified and transfigured many a dead man into a deity. This at all events seems to have been the history of some of the Baganda gods. On this subject our best authority says that "the principal gods appear to have been at one time human beings, noted for their skill and bravery, who were afterwards deified by the people and invested with supernatural powers." "Mukasa held the highest rank among the gods of Uganda. He was a benign god; he never asked for the life of any human being, but animals were sacrificed to him at the yearly festivals, and also at other times when the king, or a leading chief, wished to consult him. He had nothing to do with war, but sought to heal the bodies and minds of men. He was the god of plenty; he gave the people an increase of food, cattle, and children. From the legends still current it seems to be almost certain that he was a human being who, because of his benevolence, came to be regarded as a god.... The legends about Mukasa are of great interest; they show how the human element has been lost in the divine, how the natural has been effaced by the supernatural, until, in the minds of the common people, only the supernatural remains."

If we cannot prove that the great god Mukasa himself was once a man, we have very tangible evidence that his brother the war-god Kibuka was so. For like the dead kings of Uganda, Kibuka was worshipped in a great conical hut resembling the huts which living people inhabit: like them, his spirit was supposed to enter from time to time into the body of his priest and to give oracles through him; and like them he was represented in his temple by his personal relics, his jawbone and his navel-string, which were rescued from the ruins of his temple and now rest in the Ethnological Museum at Cambridge. In face of this complete parallelism between the god and the kings whose personal existence is not open to question, it seems difficult to doubt that Kibuka was once like them a real man, and that he spoke with

the jawbone and made bodily use of the other corporeal organs which were preserved in his temple.

These analogies lend some support to the theory that in ancient Egypt, where the kings were worshipped by their people both in life and death, Osiris may have been originally nothing but one of these deified monarchs whose worship gradually eclipsed that of all the rest and ended by rivalling or even surpassing that of the great sun-god himself. We have seen that at Abydos, one of the principal centres of his worship, the tomb of Osiris was identified with the tomb of King Khent, one of the earliest monarchs of the first Egyptian dynasty, and that in this tomb were found a woman's richly jewelled arm and a human skull lacking the lower jawbone, which may well be the head of the king himself and the arm of his queen. The carved monument of Osiris which was found in the sepulchral chamber appears indeed to be a work of late Egyptian art, but it may have replaced an earlier sarcophagus. Certainly we may reasonably suppose that the identification of the tomb of Osiris with the tomb of King Khent was very ancient; for though the priests may have renewed the sculptured effigy of the dead god, they would hardly dare to shift the site of the Holy Sepulchre. Now the sepulchre is distant about a mile and a half from the temple in which Osiris was worshipped as a god. There is thus a curious coincidence, if there is nothing more, between the worship of Osiris and the worship of the dead kings of Uganda. As a dead king of Uganda was worshipped in a temple, while his headless body reposed at some distance in a royal tomb, and his head, without the lower jawbone, was buried by itself near the grave, so Osiris was worshipped in a temple not far from the royal tomb which tradition identified with his grave. Perhaps after all tradition was right. It is possible, though it would be very rash to affirm, that Osiris was no other than the historical King Khent of the first dynasty; that the skull found in the tomb is the skull of Osiris himself; and that while it reposed in the grave the missing jawbone was preserved, like the jawbone of a dead king of Uganda, as a holy and perhaps oracular relic in the neighbouring temple. If that were so, we should be almost driven to conclude that the bejewelled woman's arm found in the tomb of Osiris is the arm of Isis.

In support of the conclusion that the myth and religion of Osiris grew up round the revered memory of a dead man we may quote the words in which the historian of European morals describes the necessity under which the popular imagination labours of embodying its cherished ideals in living persons. He is referring to the dawn of the age of chivalry, when in the morning twilight the heroic figure of Charlemagne rose like a bright star above the political horizon, to be thenceforth encircled by a halo of romance like the nimbus that shone round the head of Osiris. "In order that the tendencies I have described should acquire their full force, it was necessary that they should be represented or illustrated in some great personage, who, by the splendour and the beauty of his career, could fascinate the imaginations of men. It is much easier to govern great masses of men through their imagination than through their reason. Moral principles rarely act powerfully upon the world, except by way of example or ideals. When the course of events has been to glorify the ascetic or monarchical or military spirit, a great saint, or sovereign, or soldier will arise, who will concentrate in one dazzling focus the blind tendencies of his time, kindle the enthusiasm and fascinate the imagination of the people. But for the prevailing tendency, the great man would not have arisen, or would not have exercised his great influence. But for the great man, whose career appealed vividly to the imagination, the prevailing tendency would never have acquired its full intensity."

Whether the parallel thus suggested between Charlemagne, the mediaeval ideal of a Christian knight, and Osiris, the ancient Egyptian ideal of a just and beneficent monarch, holds good or not, it is now impossible to determine. For while Charlemagne stands near enough to allow us clearly to discern his historical reality, Osiris is so remote that we can no longer discriminate

with any certitude between the elements of history and fable which appear to have blended in his traditional character. I am content to indicate bare possibilities: dogmatism on such points would be in the highest degree rash and unbecoming. Whether Osiris and Isis were from first to last purely imaginary beings, the ideal creations of a primitive philosophy, or whether they were originally a real man and woman about whom after death the myth-making fancy wove its gossamer rainbow-tinted web, is a question to which I am not bold enough to give a decided answer.

XII. Mother-Kin And Mother Goddesses

§ 1. Dying Gods and Mourning Goddesses.

We have now concluded our inquiry into the nature and worship of the three Oriental deities Adonis, Attis, and Osiris. The substantial similarity of their mythical character justifies us in treating of them together. All three apparently embodied the powers of fertility in general and of vegetation in particular. All three were believed to have died and risen again from the dead; and the divine death and resurrection of all three were dramatically represented at annual festivals, which their worshippers celebrated with alternate transports of sorrow and joy, of weeping and exultation. The natural phenomena thus mythically conceived and mythically represented were the great changes of the seasons, especially the most striking and impressive of all, the decay and revival of vegetation; and the intention of the sacred dramas was to refresh and strengthen, by sympathetic magic, the failing energies of nature, in order that the trees should bear fruit, that the corn should ripen, that men and animals should reproduce their kinds.

But the three gods did not stand by themselves. The mythical personification of nature, of which all three were in at least one aspect the products, required that each of them should be coupled with a goddess, and in each case it appears that originally the goddess was a more powerful and important personage than the god. At all events it is always the god rather than the goddess who comes to a sad end, and whose death is annually mourned. Thus, whereas Osiris was slain by Typhon, his divine spouse Isis survived and brought him to life again. This feature of the myth seems to indicate that in the beginning Isis was, what Astarte and Cybele always continued to be, the stronger divinity of the pair. Now the superiority thus assigned to the goddess over the god is most naturally explained as the result of a social system in which maternity counted for more than paternity, descent being traced and property handed down through women rather than through men. At all events this explanation cannot be deemed intrinsically improbable if we can show that the supposed cause has produced the very same effect among existing peoples, about whose institutions we possess accurate information. This I will now endeavour to do.

§ 2. Influence of Mother-Kin on Religion.

The social system which traces descent and transmits property through the mother alone may be called mother-kin, while the converse system which traces descent and transmits property through the father alone may be called father-kin. A good example of the influence which mother-kin may exert on religion is furnished by the Khasis of Assam, whose customs and beliefs have lately been carefully recorded by a British officer specially charged with the study of the native races of the province. Like the ancient Egyptians and the Semites of Syria and Mesopotamia, the Khasis live in settled villages and maintain themselves chiefly by the cultivation of the ground; yet "their social organization presents one of the most perfect examples still surviving of matriarchal institutions, carried out with a logic and thoroughness which, to those accustomed to regard the status and authority of the father as the foundation of society, are exceedingly remarkable. Not only is the mother the head and source, and only bond of union, of the family: in the most primitive part of the hills, the Synteng country, she is the only owner of real property, and through her alone is inheritance transmitted. The father has no kinship with his children, who belong to their mother's clan; what he earns goes to his own matriarchal stock, and at his death his bones are deposited in the cromlech of his mother's kin. In Jowai he neither lives nor eats in his wife's house, but visits it only after dark. In the veneration of ancestors, which is the foundation of the tribal piety, the primal

ancestress (*Ka lāwbei*) and her brother are the only persons regarded. The flat memorial stones set up to perpetuate the memory of the dead are called after the woman who represents the clan (*māw kynthēi*), and the standing stones ranged behind them are dedicated to the male kinsmen on the mother's side. In harmony with this scheme of ancestor worship, the other spirits to whom propitiation is offered are mainly female, though here male personages also figure. The powers of sickness and death are all female, and these are those most frequently worshipped. The two protectors of the household are goddesses, though with them is also revered the first father of the clan, *U Thāwlang*. Priestesses assist at all sacrifices, and the male officiants are only their deputies; in one important state, Khyrim, the High Priestess and actual head of the State is a woman, who combines in her person sacerdotal and regal functions." Thus amongst the Khasis of the present day the superiority of the goddess to the god, and especially of the revered ancestress to the revered ancestor, is based directly on the social system which traces descent and transmits property through women only. It is not unreasonable therefore to suppose that in Western Asia the superiority of the Mother Goddess to the Father God originated in the same archaic system of mother-kin.

Another instance of the same cause producing the same effect may be drawn from the institutions of the Pelew Islanders, which have been described by an accurate observer long resident in the islands. These people, who form a branch of the Micronesian stock, are divided into a series of exogamous families or clans with descent in the female line, so that, as usually happens under such a system, a man's heirs are not his own children but the children of his sister or of his maternal aunt. Every family or clan traces its descent from a woman, the common mother of the whole kin, and accordingly the members of the clan worship a goddess, not a god. These families or clans, with female descent and a worship of goddesses rather than of gods, are grouped together in villages, each village comprising about a score of clans and forming with its lands a petty independent state. Every such village-state has its special deity or deities, generally a god and a goddess. But these political deities of the villages are said to be directly derived from the domestic deities of the families or clans, from which it seems to follow that among these people gods are historically later than goddesses and have been developed out of them. The late origin of the gods as compared with the goddesses is further indicated by the nature of their names.

This preference for goddesses over gods in the clans of the Pelew Islanders has been explained, no doubt rightly, by the high importance of women in the social system of the people. For the existence of the clan depends entirely on the life of the women, not at all upon the life of the men. If the women survive, it is no matter though every man of the clan should perish; for the women will, as usual, marry men of another clan, and their offspring will inherit their mother's clan, thereby prolonging its existence. Whereas if the women of the clan all die out, the clan necessarily becomes extinct, even though every man of it should survive; for the men must, as usual, marry women of another clan, and their offspring will inherit their mothers' clan, not the clan of their fathers, which accordingly, with the death of the fathers, is wiped out from the community. Hence in these islands women bear the titles of *Adhalál a pelú*, "Mothers of the Land," and *Adhalál a blay*, "Mothers of the Clan," and they are said to enjoy complete equality with the men in every respect. Indeed, in one passage our principal authority speaks of "the predominance of feminine influence in the social condition of the people," and asserts without qualification that the women are politically and socially superior to the men. The eldest women of the clan exercise, he tells us, the most decisive influence on the conduct of its affairs, and the headman does nothing without full consultation with them, a consultation which in the great houses extends to affairs of state and foreign politics. Nay, these elder women are even esteemed and treated as equal to the deities in their lifetime.

But the high position which women thus take in Pelew society is not a result of mother-kin only. It has an industrial as well as a kinship basis. For the Pelew Islanders subsist mainly on the produce of their taro fields, and the cultivation of this, their staple food, is the business of the women alone. "This cardinal branch of Pelew agriculture, which is of paramount importance for the subsistence of the people, is left entirely in the hands of the women. This fact may have contributed materially to the predominance of female influence in the social condition of the people. The women do not merely bestow life on the people, they also do that which is most essential for the preservation of life, and therefore they are called *Adhalál a pelú*, the 'Mothers of the Land,' and are politically and socially superior to men. Only their offspring enjoy the privilege of membership of the state (the children of the men are, strictly speaking, strangers destitute of rights), and the oldest women of the families are esteemed and treated as equal to deities even in their lifetime, and they exercise a decisive influence on the conduct of affairs of state. No chief would venture to come to a decision without first consulting with the *Adhalál a blay*, the 'Mothers of the Family.' From this point of view it is impossible to regard the assignment of the taro cultivation to women as a consequence of their subordinate position in society: the women themselves do not so regard it. The richest woman of the village looks with pride on her taro patch, and although she has female followers enough to allow her merely to superintend the work without taking part in it, she nevertheless prefers to lay aside her fine apron and to betake herself to the deep mire, clad in a small apron that hardly hides her nakedness, with a little mat on her back to protect her from the burning heat of the sun, and with a shade of banana leaves for her eyes. There, dripping with sweat in the burning sun and coated with mud to the hips and over the elbows, she toils to set the younger women a good example. Moreover, as in every other occupation, the *kaliths*, the gods, must also be invoked, and who could be better fitted for the discharge of so important a duty than the Mother of the House?" It seems clear that in any agricultural people who, like the Pelew Islanders, retain mother-kin and depute the labours of husbandry to women, the conception of a great Mother Goddess, the divine source of all fertility, might easily originate. Perhaps the same social and industrial conditions may have combined to develop the great Mother Goddesses of Western Asia and Egypt.

But in the Pelew Islands women have yet another road to power. For some of them are reputed to be the wives of gods, and act as their oracular mouthpieces. Such prophetesses are called *Amlaheys*, and no surprise is felt when one of them is brought to bed. Her child passes for the offspring of the god, her divine husband, and goes about with his hair hanging loose in token of his superhuman parentage. It is thought that no mortal man would dare to intrigue with one of these human wives of a god, since the jealous deity would surely visit the rash culprit with deadly sickness and a lingering decline. But in these islands men as well as women are often possessed by a deity and speak in his name. Under his inspiration they mimic, often with great histrionic skill, the particular appearance and manner which are believed to be characteristic of the indwelling divinity. These inspired men (*Korongs*) usually enjoy great consideration and exert a powerful influence over the whole community. They always acquire wealth in the exercise of their profession. When they are not themselves chiefs, they are treated as chiefs or even preferred to them. In not a few places the deity whom they personate is also the political head of the land; and in that case his inspired priest, however humble his origin, ranks as a spiritual king and rules over all the chiefs. Indeed we are told that, with the physical and intellectual decay of the race, the power of the priests is more and more in the ascendant and threatens, if unchecked, to develop before long into an absolute theocracy which will swallow up every other form of government.

Thus the present, or at least the recent, state of society and religion in the Pelew Islands presents some interesting parallels to the social and religious condition of Western Asia and

Egypt in early days, if the conclusions reached in this work are correct. In both regions we see a society based on mother-kin developing a religion in which goddesses of the clan originally occupied the foremost place, though in later times, as the clans coalesced into states, the old goddesses have been rivalled and to some extent supplanted by the new male gods of the enlarged pantheon. But in the religion of the Pelew Islanders, as in that of the Khasis and the ancient Egyptians, the balance of power has never wholly shifted from the female to the male line, because society has never passed from mother-kin to father-kin. And in the Pelew Islands as in the ancient East we see the tide of political power running strongly in the direction of theocracy, the people resigning the conduct of affairs into the hands of men who claimed to rule them in the name of the gods. In the Pelew Islands such men might have developed into divine kings like those of Babylon and Egypt, if the natural course of evolution had not been cut short by the intervention of Europe.

The evidence of the Khasis and the Pelew Islanders, two peoples very remote and very different from each other, suffices to prove that the influence which mother-kin may exert on religion is real and deep. But in order to dissipate misapprehensions, which appear to be rife on this subject, it may be well to remind or inform the reader that the ancient and widespread custom of tracing descent and inheriting property through the mother alone does not by any means imply that the government of the tribes which observe the custom is in the hands of women; in short, it should always be borne in mind that mother-kin does not mean mother-rule. On the contrary, the practice of mother-kin prevails most extensively amongst the lowest savages, with whom woman, instead of being the ruler of man, is always his drudge and often little better than his slave. Indeed, so far is the system from implying any social superiority of women that it probably took its rise from what we should regard as their deepest degradation, to wit, from a state of society in which the relations of the sexes were so loose and vague that children could not be fathered on any particular man.

When we pass from the purely savage state to that higher plane of culture in which the accumulation of property, and especially of landed property, has become a powerful instrument of social and political influence, we naturally find that wherever the ancient preference for the female line of descent has been retained, it tends to increase the importance and enhance the dignity of woman; and her aggrandizement is most marked in princely families, where she either herself holds royal authority as well as private property, or at least transmits them both to her consort or her children. But this social advance of women has never been carried so far as to place men as a whole in a position of political subordination to them. Even where the system of mother-kin in regard to descent and property has prevailed most fully, the actual government has generally, if not invariably, remained in the hands of men. Exceptions have no doubt occurred; women have occasionally arisen who by sheer force of character have swayed for a time the destinies of their people. But such exceptions are rare and their effects transitory; they do not affect the truth of the general rule that human society has been governed in the past and, human nature remaining the same, is likely to be governed in the future, mainly by masculine force and masculine intelligence.

To this rule the Khasis, with their elaborate system of mother-kin, form no exception. For among them, while landed property is both transmitted through women and held by women alone, political power is transmitted indeed through women, but is held by men; in other words, the Khasi tribes are, with a single exception, governed by kings, not by queens. And even in the one tribe, which is nominally ruled by women, the real power is delegated by the reigning queen or High Priestess to her son, her nephew, or a more distant male relation. In all the other tribes the kingship may be held by a woman only on the failure of all male heirs in the female line. So far is mother-kin from implying mother-rule. A Khasi king inherits power in right of his mother, but he exercises it in his own. Similarly the Pelew Islanders, in

spite of their system of mother-kin, are governed by chiefs, not by chieftainesses. It is true that there are chieftainesses, and that they indirectly exercise much influence; but their direct authority is limited to the affairs of women, especially to the administration of the women's clubs or associations, which answer to the clubs or associations of the men. And to take another example, the Melanesians, like the Khasis and the Pelew Islanders, have the system of mother-kin, being similarly divided into exogamous clans with descent in the female line; "but it must be understood that the mother is in no way the head of the family. The house of the family is the father's, the garden is his, the rule and government are his."

We may safely assume that the practice has been the same among all the many peoples who have retained the ancient system of mother-kin under a monarchical constitution. In Africa, for example, the chieftainship or kingship often descends in the female line, but it is men, not women, who inherit it. The theory of a gynaeocracy is in truth a dream of visionaries and pedants. And equally chimerical is the idea that the predominance of goddesses under a system of mother-kin like that of the Khasis is a creation of the female mind. If women ever created gods, they would be more likely to give them masculine than feminine features. In point of fact the great religious ideals which have permanently impressed themselves on the world seem always to have been a product of the male imagination. Men make gods and women worship them. The combination of ancestor-worship with mother-kin furnishes a simple and sufficient explanation of the superiority of goddesses over gods in a state of society where these conditions prevail. Men naturally assign the first place in their devotions to the ancestress from whom they trace their descent. We need not resort to a fantastic hypothesis of the preponderance of the feminine fancy in order to account for the facts.

The theory that under a system of mother-kin the women rule the men and set up goddesses for them to worship is indeed so improbable in itself, and so contrary to experience, that it scarcely deserves the serious attention which it appears to have received. But when we have brushed aside these cobwebs, as we must do, we are still left face to face with the solid fact of the wide prevalence of mother-kin, that is, of a social system which traces descent and transmits property through women and not through men. That a social system so widely spread and so deeply rooted should have affected the religion of the peoples who practise it, may reasonably be inferred, especially when we remember that in primitive communities the social relations of the gods commonly reflect the social relations of their worshippers. How the system of mother-kin may mould religious ideas and customs, creating goddesses and assigning at least a nominal superiority to priestesses over priests, is shown with perfect lucidity by the example of the Khasis, and hardly less clearly by the example of the Pelew Islanders. It cannot therefore be rash to hold that what the system has certainly done for these peoples, it may well have done for many more. But unfortunately through lack of documentary evidence we are seldom able to trace its influence so clearly.

§ 3. Mother-Kin and Mother Goddesses in the Ancient East.

While the combination of mother-kin in society with a preference for goddesses in religion is to be found as a matter of fact among the Khasis and Pelew Islanders of to-day, the former prevalence of mother-kin in the lands where the great goddesses Astarte and Cybele were worshipped is a matter of inference only. In later times father-kin had certainly displaced mother-kin among the Semitic worshippers of Astarte, and probably the same change had taken place among the Phrygian worshippers of Cybele. Yet the older custom lingered in Lycia down to the historical period; and we may conjecture that in former times it was widely spread through Asia Minor. The secluded situation and rugged mountains of Lycia favoured the survival of a native language and of native institutions long after these had disappeared from the wide plains and fertile valleys which lay on the highroads of war and commerce.

Lycia was to Asia Minor what the highlands of Wales and of Scotland have been to Britain, the last entrenchments where the old race stood at bay. And even among the Semites of antiquity, though father-kin finally prevailed in matters of descent and property, traces of an older system of mother-kin, with its looser sexual relations, appear to have long survived in the sphere of religion. At all events one of the most learned and acute of Semitic scholars adduced what he regarded as evidence sufficient to prove "that in old Arabian religion gods and goddesses often occurred in pairs, the goddess being the greater, so that the god cannot be her Baal, that the goddess is often a mother without being a wife, and the god her son, and that the progress of things was towards changing goddesses into gods or lowering them beneath the male deity."

In Egypt the archaic system of mother-kin, with its preference for women over men in matters of property and inheritance, lasted down to Roman times, and it was traditionally based on the example of Isis, who had avenged her husband's murder and had continued to reign after his decease, conferring benefits on mankind. "For these reasons," says Diodorus Siculus, "it was appointed that the queen should enjoy greater power and honour than the king, and that among private people the wife should rule over her husband, in the marriage contract the husband agreeing to obey his wife in all things." A corollary of the superior position thus conceded to women in Egypt was that the obligation of maintaining parents in their old age rested on the daughters, not on the sons, of the family.

The same legal superiority of women over men accounts for the most remarkable feature in the social system of the ancient Egyptians, to wit, the marriage of full brothers with full sisters. That marriage, which to us seems strange and unnatural, was by no means a whim of the reigning Ptolemies; on the contrary, these Macedonian conquerors appear, with characteristic prudence, to have borrowed the custom from their Egyptian predecessors for the express purpose of conciliating native prejudice. In the eyes of the Egyptians "marriage between brother and sister was the best of marriages, and it acquired an ineffable degree of sanctity when the brother and sister who contracted it were themselves born of a brother and sister, who had in their turn also sprung from a union of the same sort." Nor did the principle apply only to gods and kings. The common people acted on it in their daily life. They regarded marriages between brothers and sisters as the most natural and reasonable of all. The evidence of legal documents, including marriage contracts, tends to prove that such unions were the rule, not the exception, in ancient Egypt, and that they continued to form the majority of marriages long after the Romans had obtained a firm footing in the country. As we cannot suppose that Roman influence was used to promote a custom which must have been abhorrent to Roman instincts, we may safely assume that the proportion of brother and sister marriages in Egypt had been still greater in the days when the country was free.

It would doubtless be a mistake to treat these marriages as a relic of savagery, as a survival of a tribal communism which knew no bar to the intercourse of the sexes. For such a theory would not explain why union with a sister was not only allowed, but preferred to all others. The true motive of that preference was most probably the wish of brothers to obtain for their own use the family property, which belonged of right to their sisters, and which otherwise they would have seen in the enjoyment of strangers, the husbands of their sisters. This is the system which in Ceylon is known as *beena* marriage. Under it the daughter, not the son, is the heir. She stays at home, and her husband comes and lives with her in the house; but her brother goes away and dwells in his wife's home, inheriting nothing from his parents. Such a system could not fail in time to prove irksome. Men would be loth to quit the old home, resign the ancestral property to a stranger, and go out to seek their fortune empty-handed in the world. The remedy was obvious. A man had nothing to do but to marry his sister himself instead of handing her over to another. Having done so he stayed at home and enjoyed the

family estate in virtue of his marriage with the heiress. This simple and perfectly effective expedient for keeping the property in the family most probably explains the custom of brother and sister marriage in Egypt.

Thus the union of Osiris with his sister Isis was not a freak of the story-teller's fancy: it reflected a social custom which was itself based on practical considerations of the most solid kind. When we reflect that this practice of mother-kin as opposed to father-kin survived down to the latest times of antiquity, not in an obscure and barbarous tribe, but in a nation whose immemorial civilization was its glory and the wonder of the world, we may without being extravagant suppose that a similar practice formerly prevailed in Syria and Phrygia, and that it accounts for the superiority of the goddess over the god in the divine partnerships of Adonis and Astarte, of Attis and Cybele. But the ancient system both of society and of religion had undergone far more change in these countries than in Egypt, where to the last the main outlines of the old structure could be traced in the national institutions to which the Egyptians clung with a passionate, a fanatical devotion. Mother-kin, the divinity of kings and queens, a sense of the original connexion of the gods with nature—these things outlived the Persian, the Macedonian, the Roman conquest, and only perished under the more powerful solvent of Christianity. But the old order did not vanish at once with the official establishment of the new religion. In the age of Constantine the Greeks of Egypt still attributed the rise of the Nile to Serapis, the later form of Osiris, alleging that the inundation could not take place if the standard cubit, which was used to measure it, were not deposited according to custom in the temple of the god. The emperor ordered the cubit to be transferred to a church; and next year, to the general surprise, the river rose just as usual. Even at a later time Athanasius himself had to confess with sorrow and indignation that under his own eyes the Egyptians still annually mourned the death of Osiris. The end came with the destruction of the great Serapeum at Alexandria, the last stronghold of the heathen in Egypt. It perished in a furious and bloody sedition, in which Christians and pagans seem to have vied with each other in mutual atrocities. After its fall the temples were levelled with the ground or converted into churches, and the images of the old gods went to the melting-pot to be converted into base uses for the rabble of Alexandria.

The singular tenacity with which the Egyptian people maintained their traditional beliefs and customs for thousands of years sprang no doubt from the stubborn conservatism of the national character. Yet that conservatism was itself in great measure an effect of geographical and climatic conditions and of the ways of life which they favoured. Surrounded on every side by deserts or almost harbourless seas, the Egyptians occupied a position of great natural strength which for long ages together protected them from invasion and allowed their native habits to set and harden, undisturbed by the subversive influence of foreign conquest. The wonderful regularity of nature in Egypt also conduced to a corresponding stability in the minds of the people. Year in, year out, the immutable succession of the seasons brought with it the same unvarying round of agricultural toil. What the fathers had done, the sons did in the same manner at the same season, and so it went on from generation to generation. This monotonous routine is common indeed to all purely agricultural communities, and everywhere tends to beget in the husbandman a settled phlegmatic habit of mind very different from the mobility, the alertness, the pliability of character which the hazards and uncertainties of commerce and the sea foster in the merchant and the sailor. The saturnine temperament of the farmer is as naturally averse to change as the more mercurial spirit of the trader and the seaman is predisposed to it. But the stereotyping of ideas and of customs was carried further in Egypt than in most lands devoted to husbandry by reason of the greater uniformity of the Egyptian seasons and the more complete isolation of the country.

The general effect of these causes was to create a type of national character which presented many points of resemblance to that of the Chinese. In both we see the same inflexible strength of will, the same astonishing industry, the same strange blend of humanity and savagery, the same obstinate adherence to tradition, the same pride of race and of ancient civilization, the same contempt for foreigners as for upstarts and barbarians, the same patient outward submission to an alien rule combined with an unshakeable inward devotion to native ideals. It was this conservative temper of the people, bred in great measure of the physical nature of their land, which, so to say, embalmed the memory of Osiris long after the corresponding figures of Adonis and Attis had suffered decay. For while Egypt enjoyed profound repose, the tides of war and conquest, of traffic and commerce, had for centuries rolled over Western Asia, the native home of Adonis and Attis; and if the shock of nationalities in this great meeting-ground of East and West was favourable to the rise of new faiths and new moralities, it was in the same measure unfavourable to the preservation of the old.

Notes

I. Moloch The King.

I cannot leave the evidence for the sacred character of Jewish kings without mentioning a suggestion which was made to me by my friend and teacher the Rev. Professor R. H. Kennett. He thinks that Moloch, to whom first-born children were burnt by their parents in the valley of Hinnom, outside the walls of Jerusalem, may have been originally the human king regarded as an incarnate deity. Certainly the name of Moloch, or rather Molech (for so it is always written in the Massoretic text), is merely a slightly disguised form of *melech*, the ordinary Hebrew word for "king," the scribes having apparently given the dreadful word the vowels of bosheth, "shameful thing." But it seems clear that in historical times the Jews who offered these sacrifices identified Molech, not with the human king, but with Jehovah, though the prophets protested against the custom as an outrage on the divine majesty.

If, however, these sacrifices were originally offered to or in behalf of the human king, it is possible that they were intended to prolong his life and strengthen his hands for the performance of those magical functions which he was expected to discharge for the good of his people. The old kings of Sweden answered with their heads for the fertility of the ground, and we read that one of them, Aun or On by name, sacrificed nine of his sons to Odin at Upsala in order that his own life might be spared. After the sacrifice of his second son he received from the god an oracle that he should live as long as he gave him one of his sons every tenth year. When he had thus sacrificed seven sons, the ruthless father still lived, but was so feeble that he could no longer walk and had to be carried in a chair. Then he offered up his eighth son and lived ten years more, bedridden. After that he sacrificed his ninth son, and lived ten years more, drinking out of a horn like a weaned child. He now wished to sacrifice his last remaining son to Odin, but the Swedes would not let him, so he died and was buried in a mound at Upsala. In this Swedish tradition the king's children seem to have been looked upon as substitutes offered to the god in place of their father, and apparently this was also the current explanation of the slaughter of the first-born in the later times of Israel. On that view the sacrifices were vicarious, and therefore purely religious, being intended to propitiate a stern and exacting deity. Similarly we read that when Amestris, wife of Xerxes, was grown old, she sacrificed on her behalf twice seven noble children to the earth god by burying them alive. If the story is true—and it rests on the authority of Herodotus, a nearly contemporary witness—we may surmise that the aged queen acted thus with an eye to the future rather than to the past; she hoped that the grim god of the nether-world would accept the young victims in her stead, and let her live for many years. The same idea of vicarious suffering comes out in a tradition told of a certain Hova king of Madagascar, who bore the sonorous name of Andriamasinavalona. When he had grown sickly and feeble, the oracle was consulted as to the best way of restoring him to health. "The following result was the consequence of the directions of the oracle. A speech was first delivered to the people, offering great honours and rewards to the family of any individual who would freely offer himself to be sacrificed, in order to the king's recovery. The people shuddered at the idea, and ran away in different directions. One man, however, presented himself for the purpose, and his offer was accepted. The sacrificer girded up his loins, sharpened his knife, and bound the victim. After which, he was laid down with his head towards the east, upon a mat spread for the purpose, according to the custom with animals on such occasions, when the priest appeared, to proceed with all solemnity in slaughtering the victim by cutting his throat. A quantity of red liquid, however, which had been prepared from a native dye, was spilled in

the ceremony; and, to the amazement of those who looked on, blood seemed to be flowing all around. The man, as might be supposed, was unhurt; but the king rewarded him and his descendants with the perpetual privilege of exemption from capital punishment for any violation of the laws. The descendants of the man to this day form a particular class, called *Tay maty manota*, which may be translated, 'Not dead, though transgressing.' Instances frequently occur, of individuals of this class appropriating bullocks, rice, and other things belonging to the sovereign, as if they were their own, and escaping merely with a reprimand, while a common person would have to suffer death, or be reduced to slavery."

Sometimes, however, the practices intended to prolong the king's life seem to rest on a theory of nutrition rather than of substitution; in other words, the life of the victims, instead of being offered vicariously to a god, is apparently supposed to pass directly into the body of the sacrificer, thus refreshing his failing strength and prolonging his existence. So regarded, the custom is magical rather than religious in character, since the desired effect is thought to follow directly without the intervention of a deity. At all events, it can be shown that sacrifices of this sort have been offered to prolong the life of kings in other parts of the world. Thus in regard to some of the negroes who inhabit the delta of the Niger we read that: "A custom which formerly was practised by the Ibani, and is still prevalent among all the interior tribes, consists in prolonging the life of a king or ancestral representative by the daily, or possibly weekly, sacrifice of a chicken and egg. Every morning, as soon as the patriarch has risen from his bed, the sacrificial articles are procured either by his mother, head wife, or eldest daughter, and given to the priest, who receives them on the open space in front of the house. When this has been reported to the patriarch, he comes outside and, sitting down, joins in the ceremony. Taking the chicken in his hand, the priest first of all touches the patriarch's face with it, and afterwards passes it over the whole of his body. He then cuts its throat and allows the blood to drop on the ground. Mixing the blood and the earth into a paste, he rubs it on the old man's forehead and breast, and this is not to be washed off under any circumstances until the evening. The chicken and the egg, also a piece of white cloth, are now tied on to a stick, which, if a stream is in the near vicinity, is planted in the ground at the water-side. During the carriage of these articles to the place in question, all the wives and many members of the household accompany the priest, invoking the deity as they go to prolong their father's life. This is done in the firm conviction that through the sacrifice of each chicken his life will be accordingly prolonged."

The ceremony thus described is, like so many other rites, a combination of magic and religion; for whereas the prayers to the god are religious, the passing of the victim over the king's body and the smearing of him with its blood are magical, being plainly intended to convey to him directly, without the mediation of any deity, the life of the fowl. In the following instances the practices for prolonging the king's life seem to be purely magical. Among the Zulus, at one of the annual feasts of first-fruits, a bull is killed by a particular regiment. In slaughtering the beast they may not use spears or sticks, but must break its neck or choke it with their bare hands. "It is then burned, and the strength of the bull is supposed to enter into the king, thereby prolonging his life." Again, in an early Portuguese historian we read of a Caffre king of East Africa that "it is related of this Monomotapa that he has a house where he commands bodies of men who have died at the hands of the law to be hung up, and where thus hanging all the humidity of their bodies falls into vases placed underneath, and when all has dropped from them and they shrink and dry up he commands them to be taken down and buried, and with the fat and moisture in the vases they say he makes ointments with which he anoints himself in order to enjoy long life—which is his belief—and also to be proof against receiving harm from sorcerers."

The Baganda of Central Africa used to kill men on various occasions for the purpose of prolonging the king's life; in all cases it would seem to be thought that the life of the murdered man was in some mysterious fashion transferred to the king, so that the monarch received thereby a fresh accession of vital energy. For example, whenever a particular royal drum had a new skin put on it, not only was a cow killed to furnish the skin and its blood run into the drum, but a man was beheaded and the spouting blood from the severed neck was allowed to gush into the drum, "so that, when the drum was beaten, it was supposed to add fresh life and vigour to the king from the life of the slain man." Again, at the coronation of a new king, a royal chamberlain was chosen to take charge of the king's inner court and to guard his wives. From the royal presence the chamberlain was conducted, along with eight captives, to one of the human shambles; there he was blindfolded while seven of the men were clubbed to death, only the dull thud and crashing sound telling him of what was taking place. But when the seven had been thus despatched, the bandages were removed from the chamberlain's eyes and he witnessed the death of the eighth. As each man was killed, his belly was ripped open and his bowels pulled out and hung round the chamberlain's neck. These deaths were said to add to the King's vigour and to make the chamberlain strong and faithful. Nor were these the only human sacrifices offered at a king's coronation for the purpose of strengthening the new monarch. When the king had reigned two or three months, he was expected to hunt first a leopard and then a bushbuck. On the night after the hunt of the bushbuck, one of the ministers of State caught a man and brought him before the king in the dark; the king speared him slightly, then the man was strangled and the body thrown into a papyrus swamp, that it might never be found again. Another ceremony performed about this time to confirm the king in his kingdom was to catch a man, bind him, and bring him before the king, who wounded him slightly with a spear. Then the man was put to death. These men were killed to invigorate the king.

When a king of Uganda had reigned some time, apparently several years, a ceremony was performed for the sake of prolonging his life. For this purpose the king paid a visit—a fatal visit—to a chief of the Lung-fish clan, who bore the title of Nankere and resided in the district of Busiro, where the tombs and temples of the kings were situated. When the time for the ceremony had been appointed, the chief chose one of his own sons, who was to die that the king might live. If the chief had no son, a near relation was compelled to serve as a substitute. The hapless youth was fed and clothed and treated in all respects like a prince, and taken to live in a particular house near the place where the king was to lodge for the ceremony. When the destined victim had been feasted and guarded for a month, the king set out on his progress from the capital. On the way he stopped at the temple of the great god Mukasa; there he changed his garments, leaving behind him in the temple those which he had been wearing. Also he left behind him all his anklets, and did not put on any fresh ones, for he was shortly to receive new anklets of a remarkable kind. When the king arrived at his destination, the chief met him, and the two exchanged a gourd of beer. At this interview the king's mother was present to see her son for the last time; for from that moment the two were never allowed to look upon each other again. The chief addressed the king's mother informing her of this final separation; then turning to the king he said, "You are now of age; go and live longer than your forefathers." Then the chief's son was introduced. The chief took him by the hand and presented him to the king, who passed him on to the body-guard; they led him outside and killed him by beating him with their clenched fists. The muscles from the back of the body of the murdered youth were removed and made into two anklets for the king, and a strip of skin cut from the corpse was made into a whip, which was kept in the royal enclosure for special feasts. The dead body was thrown on waste land and guarded against wild beasts, but not buried.

When that ceremony was over, the king departed to go to another chief in Busiro; but on the way thither he stopped at a place called Baka and sat down under a great tree to play a game of spinning fruit-stones. It is a children's game, but it was no child's play to the man who ran to fetch the fruit-stones for the king to play with; for he was caught and speared to death on the spot for the purpose of prolonging the king's life. After the game had been played the king with his train passed on and lodged with a certain princess till the anklets made from the muscles of the chief's murdered son were ready for him to wear; it was the princess who had to superintend the making of these royal ornaments.

When all these ceremonies were over, the king made a great feast. At this feast a priest went about carrying under his mantle the whip that had been made from the skin of the murdered young man. As he passed through the crowd of merry-makers, he would flick a man here and there with the whip, and it was believed that the man on whom the lash lighted would be childless and might die, unless he made an offering of either nine or ninety cowrie shells to the priest who had struck him. Naturally he hastened to procure the shells and take them to the striker, who, on receiving them, struck the man on the shoulder with his hand, thus restoring to him the generative powers of which the blow of the whip had deprived him. At the end of the feast the drummers removed all the drums but one, which they left as if they had forgotten it. Somebody in the crowd would notice the apparent oversight and run after the drummers with the drum, saying, "You have left one behind." The thanks he received was that he was caught and killed and the bones of his upper arm made into drumsticks for that particular drum. The drum was never afterwards brought out during the whole of the king's reign, but was kept covered up till the time came to bring it out on the corresponding feast of his successor. Yet from time to time the priest, who had flicked the revellers with the whip of human skin, would dress himself up in a mantle of cow-hide from neck to foot, and concealing the drumstick of human bones under his robe would go into the king's presence, and suddenly whipping out the bones from his bosom would brandish them in the king's face. Then he would as suddenly hide them again, but only to repeat the manoeuvre. After that he retired and restored the bones to their usual place. They were decorated with cowrie shells and little bells, which jingled as he shook them at the king.

The precise meaning of these latter ceremonies is obscure; but we may suppose that just as the human blood poured into a drum was thought to pass into the king's veins in the booming notes of the drum, so the clicking of the human bones and the jingling of their bells were supposed to infuse into the royal person the vigour of the murdered man. The purpose of flicking commoners with the whip made of human skin is even more obscure; but we may conjecture that the life or virility of every man struck with the whip was supposed to be transmitted in some way to the king, who thus recruited his vital, and especially his reproductive, energies at this solemn feast. If I am right in my interpretation, all these Baganda modes of strengthening the king and prolonging his life belonged to the nutritive rather than to the vicarious type of sacrifice, from which it will follow that they were magical rather than religious in character.

The same thing may perhaps be said of the wholesale massacres which used to be perpetrated when a king of Uganda was ill. At these times the priests informed the royal patient that persons marked by a certain physical peculiarity, such as a cast of the eye, a particular gait, or a distinctive colouring, must be put to death. Accordingly the king sent out his catchpoles, who waylaid such persons in the roads and dragged them to the royal enclosure, where they were kept until the tale of victims prescribed by the priest was complete. Before they were led away to one of the eight places of execution, which were regularly appointed for this purpose in different parts of the kingdom, the victims had to drink medicated beer with the king out of a special pot, in order that he might have power over their ghosts, lest they should

afterwards come back to torment him. They were killed, sometimes by being speared to death, sometimes by being hacked to pieces, sometimes by being burned alive. Contrary to the usual custom of the Baganda, the bodies, or what remained of the bodies, of these unfortunates were always left unburied on the place of execution. In what way precisely the sick king was supposed to benefit by these massacres of his subjects does not appear, but we may surmise that somehow the victims were believed to give their lives for him or to him.

Thus it is possible that in Israel also the sacrifices of children to Moloch were in like manner intended to prolong the life of the human king (*melech*) either by serving as substitutes for him or by recruiting his failing energies with their vigorous young life. But it is equally possible, and perhaps more probable, that the sacrifice of the first-born children was only a particular application of the ancient law which devoted to the deity the first-born of every womb, whether of cattle or of human beings.

II. The Widowed Flamen.

§ 1. The Pollution of Death.

A different explanation of the rule which obliged the Flamen Dialis to resign the priesthood on the death of his wife has been suggested by my friend Dr. L. R. Farnell. He supposes that such a bereavement would render the Flamen ceremonially impure, and therefore unfit to hold office. It is true that the ceremonial pollution caused by death commonly disqualifies a man for the discharge of sacred functions, but as a rule the disqualification is only temporary and can be removed by seclusion and the observance of purificatory rites, the length of the seclusion and the nature of the purification varying with the degree of relationship in which the living stand to the dead. Thus, for example, if one of the sacred eunuchs at Hierapolis-Bambyce saw the dead body of a stranger, he was unclean for that day and might not enter the sanctuary of the goddess; but next day after purifying himself he was free to enter. But if the corpse happened to be that of a relation he was unclean for thirty days and had to shave his head before he might set foot within the holy precinct. Again, in the Greek island of Ceos persons who had offered the annual sacrifices to their departed friends were unclean for two days afterwards and might not enter a sanctuary; they had to purify themselves with water. Similarly no one might go into the shrine of Men Tyrannus for ten days after being in contact with the dead. Once more, at Stratonicea in Caria a chorus of thirty noble boys, clad in white and holding branches in their hands, used to sing a hymn daily in honour of Zeus and Hecate; but if one of them were sick or had suffered a domestic bereavement, he was for the time being excused, not permanently excluded, from the performance of his sacred duties. On the analogy of these and similar cases we should expect to find the widowed Flamen temporarily debarred from the exercise of his office, not permanently relieved of it.

However, in support of Dr. Farnell's view I would cite an Indian parallel which was pointed out to me by Dr. W. H. R. Rivers. Among the Todas of the Neilgherry Hills in Southern India the priestly dairyman (*palol*) is a sacred personage, and his life, like that of the Flamen Dialis, is hedged in by many taboos. Now when a death occurs in his clan, the dairyman may not attend any of the funeral ceremonies unless he gives up office, but he may be re-elected after the second funeral ceremonies have been completed. In the interval his place must be taken by a man of another clan. Some eighteen or nineteen years ago a man named Karkievan resigned the office of dairyman when his wife died, but two years later he was re-elected and has held office ever since. There have meantime been many deaths in his clan, but he has not attended a funeral, and has not therefore had to resign his post again. Apparently in old times a more stringent rule prevailed, and the dairyman was obliged to vacate office whenever a death occurred in his clan. For, according to tradition, the clan of Keadrol was divided into its two existing divisions for the express purpose of ensuring that there might still be men to

undertake the office of dairyman when a death occurred in the clan, the men of the one division taking office whenever there was a death in the other.

At first sight this case may seem exactly parallel to the case of the Flamen Dialis and the Flaminica on Dr. Farnell's theory; for here there can be no doubt whatever that it is the pollution of death which disqualifies the sacred dairyman from holding office, since, if he only avoids that pollution by not attending the funeral, he is allowed at the present day to retain his post. On this analogy we might suppose that it was not so much the death of his wife as the attendance at her funeral which compelled the Flamen Dialis to resign, especially as we know that he was expressly forbidden to touch a dead body or to enter the place where corpses were burned.

But a closer inspection of the facts proves that the analogy breaks down at some important points. For though the Flamen Dialis was forbidden to touch a dead body or to enter a place where corpses were burned, he was permitted to attend a funeral; so that there could hardly be any objection to his attending the funeral of his wife. This permission clearly tells against the view that it was the mere pollution of death which obliged him to resign office when his wife died. Further, and this is a point of fundamental difference between the two cases, whereas the Flamen Dialis was bound to be married, and married too by a rite of special solemnity, there is no such obligation on the sacred dairyman of the Todas; indeed, if he is married, he is bound to live apart from his wife during his term of office. Surely the obligation laid on the Flamen Dialis to be married of itself implies that with the death of his wife he necessarily ceased to hold office: there is no need to search for another reason in the pollution of death which, as I have just shown, does not seem to square with the permission granted to the Flamen to attend a funeral. That this is indeed the true explanation of the rule in question is strongly suggested by the further and apparently parallel rule which forbade the Flamen to divorce his wife; nothing but death might part them. Now the rule which enjoined that a Flamen must be married, and the rule which forbade him to divorce his wife, have obviously nothing to do with the pollution of death, yet they can hardly be separated from the other rule that with the death of his wife he vacated office. All three rules are explained in the most natural way on the hypothesis which I have adopted, namely, that this married priest and priestess had to perform in common certain rites which the husband could not perform without his wife. The same obvious solution of the problem was suggested long ago by Plutarch, who, after asking why the Flamen Dialis had to lay down office on the death of his wife, says, amongst other things, that "perhaps it is because she performs sacred rites along with him (for many of the rites may not be performed without the presence of a married woman), and to marry another wife immediately on the death of the first would hardly be possible or decent." This simple explanation of the rule seems quite sufficient, and it would clearly hold good whether I am right or wrong in further supposing that the human husband and wife in this case represented a divine husband and wife, a god and goddess, to wit Jupiter and Juno, or rather Dianus (Janus) and Diana; and that supposition in its turn might still hold good even if I were wrong in further conjecturing that of this divine pair the goddess (Juno or rather Diana) was originally the more important partner.

However it is to be explained, the Roman rule which forbade the Flamen Dialis to be a widower has its parallel among the Kotas, a tribe who, like the Todas, inhabit the Neilgherry Hills of Southern India. For the higher Kota priests are not allowed to be widowers; if a priest's wife dies while he is in office, his appointment lapses. At the same time priests "should avoid pollution, and may not attend a Toda or Badaga funeral, or approach the seclusion hut set apart for Kota women." Jewish priests were specially permitted to contract the pollution of death for near relations, among whom father, mother, son, daughter, and unmarried sister are particularly enumerated; but they were forbidden to contract the

pollution for strangers. However, among the relations for whom a priest might thus defile himself a wife is not mentioned.

§ 2. The Marriage of the Roman Gods.

The theory that the Flamen Dialis and his wife personated a divine couple, whether Jupiter and Juno or Dianus (Janus) and Diana, supposes a married relation between the god and goddess, and so far it would certainly be untenable if Dr. Farnell were right in assuming, on the authority of Mr. W. Warde Fowler, that the Roman gods were celibate. On that subject, however, Varro, the most learned of Roman antiquaries, was of a contrary opinion. He not only spoke particularly of Juno as the wife of Jupiter, but he also affirmed generally, in the most unambiguous language, that the old Roman gods were married, and in saying so he referred not to the religion of his own day, which had been modified by Greek influence, but to the religion of the ancient Romans, his ancestors. Seneca ridiculed the marriage of the Roman gods, citing as examples the marriages of Mars and Bellona, of Vulcan and Venus, of Neptune and Salacia, and adding sarcastically that some of the goddesses were spinsters or widows, such as Populonia, Fulgora, and Rumina, whose faded charms or unamiable character had failed to attract a suitor.

Again, the learned Servius, whose commentary on Virgil is a gold mine of Roman religious lore, informs us that the pontiffs celebrated the marriage of the infernal deity Orcus with very great solemnity; and for this statement he would seem to have had the authority of the pontifical books themselves, for he refers to them in the same connexion only a few lines before. As it is in the highest degree unlikely that the pontiffs would solemnize any foreign rites, we may safely assume that the marriage of Orcus was not borrowed from Greek mythology, but was a genuine old Roman ceremony, and this is all the more probable because Servius, our authority for the custom, has recorded some curious and obviously ancient taboos which were observed at the marriage and in the ritual of Ceres, the goddess who seems to have been joined in wedlock to Orcus. One of these taboos forbade the use of wine, the other forbade persons to name their father or daughter.

Further, the learned Roman antiquary Aulus Gellius quotes from "the books of the priests of the Roman people" (the highest possible authority on the subject) and from "many ancient speeches" a list of old Roman deities, in which there seem to be at least five pairs of males and females. More than that he proves conclusively by quotations from Plautus, the annalist Cn. Gellius, and Licinius Imbrex that these old writers certainly regarded one at least of the pairs (Mars and Nerio) as husband and wife; and we have good ancient evidence for viewing in the same light three others of the pairs. Thus the old annalist and antiquarian L. Cincius Alimentus, who fought against Hannibal and was captured by him, affirmed in his work on the Roman calendar that Maia was the wife of Vulcan; and as there was a Flamen of Vulcan, who sacrificed to Maia on May Day, it is reasonable to suppose that he was assisted in the ceremony by a Flaminica, his wife, just as on my hypothesis the Flamen Dialis was assisted by his wife the Flaminica. Another old Roman historian, L. Calpurnius Piso, who wrote in the second century b.c., said that the name of Vulcan's wife was not Maia but Majestas. In saying so he may have intended to correct what he believed to be a mistake of his predecessor L. Cincius. Again, that Salacia was the wife of Neptune is perhaps implied by Varro, and is positively affirmed by Seneca, Augustine, and Servius. Again, Ennius appears to have regarded Hora as the wife of Quirinus, for in the first book of his Annals he declared his devotion to that divine pair. In fact, of the five pairs of male and female deities cited by Aulus Gellius from the priestly books and ancient speeches the only one as to which we have not independent evidence that it consisted of a husband and wife is Saturn and Lua; and in regard to Lua we know that she was spoken of as a mother, which renders it not improbable that she

was also a wife. However, according to some very respectable authorities the wife of Saturn was not Lua, but Ops, so that we have two independent lines of proof that Saturn was supposed to be married.

Lastly, the epithets “father” and “mother” which the Romans bestowed on many of their deities are most naturally understood to imply paternity and maternity; and if the implication is admitted, the inference appears to be inevitable that these divine beings were supposed to exercise sexual functions, whether in lawful marriage or in unlawful concubinage. As to Jupiter in particular his paternity is positively attested by Latin inscriptions, one of them very old, which describe Fortuna Primigenia, the great goddess of Praeneste, as his daughter. Again, the rustic deity Faunus, one of the oldest and most popular gods of Italy, was represented by tradition in the character of a husband and a father; one of the epithets applied to him expressed in a coarse way his generative powers. Fauna or the Good Goddess (*Bona Dea*), another of the oldest native Italian deities, was variously called his wife or his daughter, and he is said to have assumed the form of a snake in order to cohabit with her. Again, the most famous of all Roman myths represented the founder of Rome himself, Romulus and his twin brother Remus, as begotten by the god Mars on a Vestal Virgin; and every Roman who accepted the tradition thereby acknowledged the fatherhood of the god in the physical, not in a figurative, sense of the word. If the story of the birth of Romulus and Remus should be dismissed as a late product of the mythical fancy working under Greek influence, the same objection can hardly be urged against the story of the birth of another Roman king, Servius Tullius, who is said to have been a son of the fire-god and a slave woman; his mother conceived him beside the royal hearth, where she was impregnated by a flame that shot out from the fire in the shape of the male organ of generation. It would scarcely be possible to express the physical fatherhood of the fire-god in more unambiguous terms. Now a precisely similar story was told of the birth of Romulus himself; and we may suspect that this was an older form of the story than the legend which fathered the twins on Mars. Similarly, Caeculus, the founder of Praeneste, passed for a son of the fire-god Vulcan. It was said that his mother was impregnated by a spark which leaped from the fire and struck her as she sat by the hearth. In later life, when Caeculus boasted of his divine parentage to a crowd, and they refused to believe him, he prayed to his father to give the unbelievers a sign, and straightway a lambent flame surrounded the whole multitude. The proof was conclusive, and henceforth Caeculus passed for a true son of the fire-god. Such tales of kings or heroes begotten by the fire-god on mortal women appear to be genuine old Italian myths, which may well go back far beyond the foundation of Rome to the common fountain of Aryan mythology; for the marriage customs observed by various branches of the Aryan family point clearly to a belief in the power of fire to impregnate women.

On the whole, if we follow the authority of the ancients themselves, we seem bound to conclude that the Roman gods, like those of many other early peoples, were believed to be married and to beget children. It is true that, compared with the full-blooded gods of Greece, the deities of Rome appear to us shadowy creatures, pale abstractions garbed in little that can vie with the gorgeous pall of myth and story which Grecian fancy threw around its divine creations. Yet the few specimens of Roman mythology which have survived the wreck of antiquity justify us in believing that they are but fragments of far more copious traditions which have perished. At all events the comparative aridity and barrenness of the Roman religious imagination is no reason for setting aside the positive testimony of learned Roman writers as to a point of fundamental importance in their own religion about which they could hardly be mistaken. It should never be forgotten that on this subject the ancients had access to many sources of information which are no longer open to us, and for a modern scholar to reject their evidence in favour of a personal impression derived from a necessarily imperfect

knowledge of the facts seems scarcely consistent with sound principles of history and criticism.

§ 3. Children of Living Parents in Ritual.

But Dr. Farnell adduces another argument in support of his view that it was the pollution of death which obliged the widowed Flamen Dialis to resign the priesthood. He points to what he considers the analogy of the rule of Greek ritual which required that certain sacred offices should be discharged only by a boy whose parents were both alive. This rule he would explain in like manner by supposing that the death of one or both of his parents would render a boy ceremonially impure and therefore unfit to perform religious functions. Dr. Farnell might have apparently strengthened his case by observing that the Flamen Dialis and the Flaminica Dialis were themselves assisted in their office, the one by a boy, the other by a girl, both of whose parents must be alive. At first sight this fits in perfectly with his theory: the Flamen, the Flaminica, and their youthful ministers were all rendered incapable of performing their sacred duties by the taint or corruption of death.

But a closer scrutiny of the argument reveals a flaw. It proves too much. For observe that in these Greek and Roman offices held by boys and girls the disqualification caused by the death of a parent is necessarily lifelong, since the bereavement is irreparable. Accordingly, if Dr. Farnell's theory is right, the ceremonial pollution which is the cause of the disqualification must also be lifelong; in other words, every orphan is ceremoniously unclean for life and thereby excluded for ever from the discharge of sacred duties. So sweeping a rule would at a stroke exclude a large, if not the larger, part of the population of any country from the offices of religion, and lay them permanently under all those burdensome restrictions which the pollution of death entails among many nations; for obviously a large, if not the larger, part of the population of any country at any time has lost one or both of its parents by death. No people, so far as I know, has ever carried the theory of the ceremonial pollution of death to this extremity in practice. And even if it were supposed that the taint wore off or evaporated with time from common folk so as to let them go about their common duties in everyday life, would it not still cleave to priests? If it incapacitated the Flamen's minister, would it not incapacitate the Flamen himself? In other words, would not the Flamen Dialis be obliged to vacate office on the death of his father or mother? There is no hint in ancient writers that he had to do so. And while it is generally unsafe to argue from the silence of our authorities, I think that we may do so in this case without being rash; for Plutarch not only mentions but discusses the rule which obliged the Flamen Dialis to resign office on the death of his wife, and if he had known of a parallel rule which compelled him to retire on the death of a parent, he would surely have mentioned it. But if the ceremonial pollution which would certainly be caused by the death of a parent did not compel the Flamen Dialis to vacate office, we may safely conclude that neither did the similar pollution caused by the death of his wife. Thus the argument adduced by Dr. Farnell in favour of his view proves on analysis to tell strongly against it.

But if the rule which excluded orphans from certain sacred offices cannot with any probability be explained on the theory of their ceremonial pollution, it may be worth while to inquire whether another and better explanation of the rule cannot be found. For that purpose I shall collect all the cases of it known to me. The collection is doubtless far from complete: I only offer it as a starting-point for research.

At the time of the vintage, which in Greece falls in October, Athenian boys chosen from every tribe assembled at the sanctuary of Dionysus, the god of the vine. There, branches of vines laden with ripe grapes were given to them, and holding them in their hands they raced to the sanctuary of Athena Sciras. The winner received and drained a cup containing a

mixture of olive-oil, wine, honey, cheese, and barley-groats. It was necessary that both the parents of each of these boy-runners should be alive. At the same festival, and perhaps on the same day, an Athenian boy, whose parents must both be alive, carried in procession a branch of olive wreathed with white and purple wool and decked with fruits of many kinds, while a chorus sang that the branch bore figs, fat loaves, honey, oil, and wine. Thus they went in procession to a temple of Apollo, at the door of which the boy deposited the holy bough. The ceremony is said to have been instituted by the Athenians in obedience to an oracle for the purpose of supplicating the help of the god in a season of dearth. Similar boughs similarly laden with fruits and loaves were hung up on the doors of every Athenian house and allowed to remain there a year, at the end of which they were replaced by fresh ones. While the branch was being fastened to the door, a boy whose parents were both alive recited the same verses about the branch bearing figs, fat loaves, honey, oil, and wine. This custom also is said to have been instituted for the sake of putting an end to a dearth. The people of Magnesia on the Maeander vowed a bull every year to Zeus, the Saviour of the City, in the month of Cronion, at the beginning of sowing, and after maintaining the animal at the public expense throughout the winter they sacrificed it, apparently at harvest-time, in the following summer. Nine boys and nine girls, whose fathers and mothers were all living, took part in the religious services of the consecration and the sacrifice of the bull. At the consecration public prayers were offered for the safety of the city and the land, for the safety of the citizens and their wives and children, for the safety of all that dwelt in the city and the land, for peace and wealth and abundance of corn and all other fruits, and for the cattle. A herald led the prayers, and the priest and priestess, the boys and girls, the high officers and magistrates, all joined in these solemn petitions for the welfare of their country. Among the Karo-Bataks of Central Sumatra the threshing of the rice is the occasion of various ceremonies, and in these a prominent part is played by a girl, whose father and mother must be both alive. Her special duty is to take care of the sheaf of rice in which the soul of the rice is believed to reside. This sheaf usually consists of the first rice cut and bound in the field; it is treated exactly like a person.

The rites thus far described, in which boys and girls of living parents took part, were clearly ceremonies intended specially to ensure the fertility of the soil. This is indicated not merely by the nature of the rites and of the prayers or verses which accompanied them, but also by the seasons at which they were observed; for these were the vintage, the harvest-home, and the beginning of sowing. We may therefore compare a custom practised by the Roman Brethren of the Ploughed Fields (*Fratres Arvales*), a college of priests whose business it was to perform the rites deemed necessary for the growth of the corn. As a badge of office they wore wreaths of corn-ears, and paid their devotions to an antique goddess of fertility, the Dea Dia. Her home was in a grove of ancient evergreen oaks and laurels out in the Campagna, five miles from Rome. Hither every year in the month of May, when the fields were ripe or ripening to the sickle, reaped ears of the new corn were brought and hallowed by the Brethren with quaint rites, that a blessing might rest on the coming harvest. The first or preliminary consecration of the ears, however, took place, not in the grove, but in the house of the Master of the Brethren at Rome. Here the Brethren were waited upon by four free-born boys, the children of living fathers and mothers. While the Brethren reclined on couches, the boys were allowed to sit on chairs and partake of the feast, and when it was over they carried the rest of the now hallowed corn and laid it on the altar.

In these and all other rites intended to ensure the fertility of the ground, of cattle, or of human beings, the employment of children of living parents seems to be intelligible on the principle of sympathetic magic; for such children might be deemed fuller of life than orphans, either because they "flourished on both sides," as the Greeks put it, or because the very survival of

their parents might be taken as a proof that the stock of which the children came was vigorous and therefore able to impart of its superabundant energy to others.

But the rites in which the children of living parents are required to officiate do not always aim at promoting the growth of the crops. At Olympia the olive-branches which formed the victors' crowns had to be cut from a sacred tree with a golden sickle by a lad whose father and mother must be both alive. The tree was a wild olive growing within the holy precinct, at the west end of the temple of Zeus. It bore the name of the Olive of the Fair Crown, and near it was an altar to the Nymphs of the Fair Crowns. At Delphi every eighth year a sacred drama or miracle-play was acted which drew crowds of spectators from all parts of Greece. It set forth the slaying of the Dragon by Apollo. The principal part was sustained by a lad, the son of living parents, who seems to have personated the god himself. In an open space the likeness of a lordly palace, erected for the occasion, represented the Dragon's den. It was attacked and burned by the lad, aided by women who carried blazing torches. When the Dragon had received his deadly wound, the lad, still acting the part of the god, fled far away to be purged of the guilt of blood in the beautiful Vale of Tempe, where the Peneus flows in a deep wooded gorge between the snowy peaks of Olympus and Ossa, its smooth and silent tide shadowed by overhanging trees and tall white cliffs. In places these great crags rise abruptly from the stream and approach each other so near that only a narrow strip of sky is visible overhead; but where they recede a little, the meadows at their foot are verdant with evergreen shrubs, among which Apollo's own laurel may still be seen. In antiquity the god himself, stained with the Dragon's blood, is said to have come, a haggard footsore wayfarer, to this wild secluded glen and there plucked branches from one of the laurels that grew in its green thickets beside the rippling river. Some of them he used to twine a wreath for his brows, one of them he carried in his hand, doubtless in order that, guarded by the sacred plant, he might escape the hobgoblins which dogged his steps. So the boy, his human representative, did the same, and brought back to Delphi wreaths of laurel from the same tree to be awarded to the victors in the Pythian games. Hence the whole festival of the Slaying of the Dragon at Delphi went by the name of the Festival of Crowning. From this it appears that at Delphi as well as at Olympia the boughs which were used to crown the victors had to be cut from a sacred tree by a boy whose parents must be both alive.

At Thebes a festival called the Laurel-bearing was held once in every eight years, when branches of laurel were carried in procession to the temple of Apollo. The principal part in the procession was taken by a boy who held a laurel bough and bore the title of the Laurel-bearer: he seems to have personated the god himself. His hair hung down on his shoulders, and he wore a golden crown, a bright-coloured robe, and shoes of a special shape: both his parents must be alive. We may suppose that the golden crown which he wore was fashioned in the shape of laurel leaves and replaced a wreath of real laurel. Thus the boy with the laurel wreath on his head and the laurel bough in his hand would resemble the traditional equipment of Apollo when he purified himself for the slaughter of the dragon. We may conjecture that at Thebes the Laurel-bearer originally personated not Apollo but the local hero Cadmus, who slew the dragon and had like Apollo to purify himself for the slaughter. The conjecture is confirmed by vase-paintings which represent Cadmus crowned with laurel preparing to attack the dragon or actually in combat with the monster, while goddesses bend over him holding out wreaths of laurel as the meed of victory. On this hypothesis the octennial Delphic Festival of Crowning and the octennial Theban Festival of Laurel-bearing were closely akin: in both the prominent part played by the laurel was purificatory or expiatory. Thus at Olympia, Delphi, and Thebes a boy whose parents were both alive was entrusted with the duty of cutting or wearing a sacred wreath at a great festival which recurred at intervals of several years.

Why a boy of living parents should be chosen for such an office is not at first sight clear; the reason might be more obvious if we understood the ideas in which the custom of wearing wreaths and crowns had its origin. Probably in many cases wreaths and crowns were amulets before they were ornaments; in other words, their first intention may have been not so much to adorn the head as to protect it from harm by surrounding it with a plant, a metal, or any other thing which was supposed to possess the magical virtue of banning baleful influences. Thus the Arabs of Moab will put a circlet of copper on the head of a man who is suffering from headache, for they believe that this will banish the pain; and if the pain is in an arm or a leg, they will treat the ailing limb in like manner. They think that red beads hung before the eyes of children who are afflicted with ophthalmia will rid them of the malady, and that a red ribbon tied to the foot will prevent it from stumbling on a stony path. Again, the Melanesians of the Gazelle Peninsula in New Britain often deck their dusky bodies with flowers, leaves, and scented herbs not only at festivals but on other occasions which to the European might seem inappropriate for such gay ornaments. But in truth the bright blossoms and verdant foliage are not intended to decorate the wearer but to endow him with certain magical virtues, which are supposed to inhere in the flowers and leaves. Thus one man may be seen strutting about with a wreath of greenery which passes round his neck and droops over his shoulders, back, and breast. He is not a mere dandy, but a lover who hopes that the wreath will work as a charm on a woman's heart. Again, another may be observed with a bunch of the red dracaena leaves knotted round his neck and the long stalk hanging down his back. He is a soldier, and these leaves are supposed to make him invulnerable. But if the lover should fail to win the affections of his swarthy mistress, if the warrior should be wounded in battle, it never occurs to either of them to question the magical virtue of the charm; they ascribe the failure either to the more potent charm of another magician or to some oversight on their own part. On the theory that wreaths and garlands serve as amulets to protect the wearer against the powers of evil we can understand not only why in antiquity sacred persons such as priests and kings wore crowns, but also why dead bodies, sacrificial victims, and in certain circumstances even inanimate objects such as the implements of sacrifice, the doors of houses, and so forth, were decorated or rather guarded by wreaths. Further, on this hypothesis we may perhaps perceive why children of living parents were specially chosen to cut or wear sacred wreaths. Since such children were apparently supposed to be endowed with a more than common share of vital energy, they might be deemed peculiarly fitted to make or wear amulets which were designed to protect the wearer from injury and death: the current of life which circulated in their own veins overflowed, as it were, and reinforced the magic virtue of the wreath. For the same reason such children would naturally be chosen to personate gods, as they seemingly were at Delphi and Thebes.

At Ephesus, if we may trust the evidence of the Greek romance-writer, Heliodorus, a boy and girl of living parents used to hold for a year the priesthood of Apollo and Artemis respectively. When their period of office was nearly expired, they led a sacred embassy to Delos, the birthplace of the divine brother and sister, where they superintended the musical and athletic contests and laid down the priesthood. At Rome no girl might be chosen a Vestal Virgin unless both her father and mother were living; yet there is no evidence or probability that a Vestal vacated office on the death of a parent; indeed she generally held office for life. This alone may suffice to prove that the custom of entrusting certain sacred duties to children of living parents was not based on any notion that orphans as such were ceremonially unclean. Again, the dancing priests of Mars, the Salii, must be sons of living parents; but as in the case of the Vestals this condition probably only applied at the date of their election, for they seem like the Vestals to have held office for life. At all events we read of a lively old gentleman who still skipped and capered about as a dancing priest with an agility which threw the efforts of his younger colleagues into the shade. Again, at the public

games in Rome boys of living parents had to escort the images of the gods in their sacred cars, and it was a dire omen if one of them relaxed his hold on the holy cart or let a strap slip from his fingers. And when the stout Roman heart was shaken by the appalling news that somebody had been struck by lightning, that the sky had somewhere been suddenly overcast, or that a she-mule had been safely delivered of a colt, boys and girls whose fathers and mothers were still alive used to be sought out and employed to help in expiating the terrific prodigy. Again, when the Capitol had been sacked and burned by the disorderly troops of Vitellius, solemn preparations were made to rebuild it. The whole area was enclosed by a cordon of fillets and wreaths. Then soldiers chosen for their auspicious names entered within the barriers holding branches of lucky trees in their hands; and afterwards the Vestal Virgins, aided by boys and girls of living parents, washed the foundations with water drawn from springs and rivers. In this ceremony the choice of such children seems to be based on the same idea as the choice of such water; for as running water is deemed to be especially alive, so the vital current might be thought to flow without interruption in the children of living parents but to stagnate in orphans. Hence the children of living parents rather than orphans would naturally be chosen to pour the living water over the foundations, and so to lend something of their own vitality or endurance to a building that was designed to last for ever.

On the same principle we can easily understand why the children of living parents should be especially chosen to perform certain offices at marriage. The motive of such a choice may be a wish to ensure by sympathetic magic the life of the newly wedded pair and of their offspring. Thus at Roman marriages the bride was escorted to her new home by three boys whose parents were all living. Two of the boys held her, and the third carried a torch of buckthorn or hawthorn in front of her, probably for the purpose of averting the powers of evil; for buckthorn or hawthorn was credited with this magical virtue. At marriages in ancient Athens a boy whose parents were both living used to wear a wreath of thorns and acorns and to carry about a winnowing-fan full of loaves, crying, "I have escaped the bad, I have found the better." In modern Greece on the Sunday before a marriage the bridegroom sends to the bride the wedding cake by the hands of a boy, both of whose parents must be living. The messenger takes great care not to stumble or to injure the cake, for to do either would be a very bad omen. He may not enter the bride's house till she has taken the cake from him. For this purpose he lays it down on the threshold of the door, and then both of them, the boy and the bride, rush at it and try to seize the greater part of the cake. And when cattle are being slaughtered for the marriage festivities, the first beast killed for the bride's house must be killed by a youth whose parents are both alive. Further, a son of living parents must solemnly fetch the water with which the bridegroom's head is ceremonially washed by women before marriage. And on the day after the marriage bride and bridegroom go in procession to the well or spring from which they are henceforth to fetch their water. The bride greets the spring, drinks of the water from the hollow of her hand, and throws money and food into it. Then follows a dance, accompanied by a song, round about the spring. Lastly, a lad whose parents are both living draws water from the spring in a special vessel and carries it to the house of the bridal pair without speaking a word: this "unspoken water," as it is called, is regarded as peculiarly holy and wholesome. When the young couple return from the spring, they fill their mouths with the "unspoken water" and try to spirt it on each other inside the door of the house. In Albania, when women are baking cakes for a wedding, the first to put hand to the dough must be a maiden whose parents are both alive and who has brothers, the more the better; for only such a girl is deemed lucky. And when the bride has dismounted from her horse at the bridegroom's door, a small boy whose parents are both alive (for only such a boy is thought to bring luck) is passed thrice backwards and forwards under the horse's belly, as if he would girdle the beast. Among the South Slavs of Bulgaria a little child whose

father and mother are both alive helps to bake the two bridal cakes, pouring water and salt on the meal and stirring the mixture with a spurtle of a special shape; then a girl lifts the child in her arms, and the little one touches the roof-beam thrice with the spurtle, saying, "Boys and girls." And when the bride's hair is to be dressed for the wedding day, the work of combing and plaiting it must be begun by a child of living parents. Among the Eesa and Gadabursi, two Somali tribes, on the morning after a marriage "the bride's female relations bring presents of milk, and are accompanied by a young male child whose parents are living. The child drinks some of the milk before any one else tastes it; and after him the bridegroom, if his parents are living; but if one or both of his parents are dead, and those of the bride living, she drinks after the child. By doing this they believe that if the newly-married woman bears a child the father will be alive at the time." A slightly different application of the same principle appears in the old Hindoo rule that when a bride reached the house of her husband, she should be made to descend from the chariot by women of good character whose husbands and sons were living, and that afterwards these women should seat the bride on a bull's hide, while her husband recited the verse, "Here ye cows, bring forth calves." Here the ceremony of seating the young wife on a bull's hide seems plainly intended to make her fruitful through the generative virtue of the bull; while the attendance of women, whose husbands and sons are living, is no doubt a device for ensuring, by sympathetic magic, the life both of the bride's husband and of her future offspring.

In the Somali custom just described the part played by the child of living parents is unambiguous and helps to throw light on the obscurer cases which precede. Such a child is clearly supposed to impart the virtue of longevity to the milk of which it partakes, and so to transmit it to the newly married pair who afterwards drink of the milk. Similarly, we may suppose that in all marriage rites at least, if not in religious rites generally, the employment of children of living parents is intended to diffuse by sympathy the blessings of life and longevity among all who participate in the ceremonies. This intention seems to underlie the use which the Malagasy make of the children of living parents in ritual. Thus, when a child is a week old, it is dressed up in the finest clothes that can be got, and is then carried out of the house by some person whose parents are both still living; afterwards it is brought back to the mother. In the act of being carried out and in, the infant must be twice carefully lifted over the fire, which is placed near the door. If the child is a boy, the axe, knife, and spear of the family, together with any building tools that may be in the house, are taken out of it at the same time. "The implements are perhaps used chiefly as emblems of the occupations in which it is expected the infant will engage when it arrives at maturer years; and the whole may be regarded as expressing the hopes cherished of his activity, wealth, and enjoyments." On such an occasion the service of a person whose parents are both alive seems naturally calculated to promote the longevity of the infant. For a like reason, probably, the holy water used at the Malagasy ceremony of circumcision is drawn from a pool by a person whose parents are both still living. The same idea may explain a funeral custom observed by the Sihanaka of Madagascar. After a burial the family of the deceased, with their near relatives and dependents, meet in the house from which the corpse was lately removed "to drink rum and to undergo a purifying and preserving baptism called *fàfy rànom-bóahàngy*. Leaves of the lemon or lime tree, and the stalks of two kinds of grass, are gathered and placed in a vessel with water. A person, both of whose parents are living, is chosen to perform the rite, and this 'holy water' is then sprinkled upon the walls of the house and upon all assembled within them, and finally around the house outside." Here a person whose parents are both living appears to be credited with a more than common share of life and longevity; from which it naturally follows that he is better fitted than any one else to perform a ceremony intended to avert the danger of death from the household.

The notion that a child of living parents is endowed with a higher degree of vitality than an orphan probably explains all the cases of the employment of such a child in ritual, whether the particular rite is designed to ensure the fertility of the ground or the fruitfulness of women, or to avert the danger of death and other calamities. Yet it might be a mistake to suppose that this notion is always clearly apprehended by the persons who practise the customs. In their minds the definite conception of superabundant and overflowing vitality may easily dissolve into a vague idea that the child of living parents is luckier than other folk. No more than this seems to be at the bottom of the Masai rule that when the warriors wish to select a chief, they must choose "a man whose parents are still living, who owns cattle and has never killed anybody, whose parents are not blind, and who himself has not a discoloured eye." And nothing more is needed to explain the ancient Greek custom which assigned the duty of drawing lots from an urn to a boy under puberty whose father and mother were both in life. At Athens it would appear that registers of these boys were kept, perhaps in order that the lads might discharge, as occasion arose, those offices of religion which required the service of such auspicious youths. The atrocious tyrant Heliogabalus, one of the worst monsters who ever disgraced the human form, caused search to be made throughout Italy for noble and handsome boys whose parents were both alive, and he sacrificed them to his barbarous gods, torturing them first and grabbing among their entrails afterwards for omens. He seems to have thought that such victims would be peculiarly acceptable to the Syrian deities whom he worshipped; so he encouraged the torturers and butchers at their work, and thanked the gods for enabling him to ferret out "their friends."

III. A Charm To Protect a Town.

The tradition that a Lydian king tried to make the citadel of Sardes impregnable by carrying round it a lion may perhaps be illustrated by a South African custom. When the Bechuanas are about to found a new town, they observe an elaborate ritual. They choose a bull from the herd, sew up its eyelids with sinew, and then allow the blinded animal to wander at will for four days. On the fifth day they track it down and sacrifice it at sunset on the spot where it happens to be standing. The carcase is then roasted whole and divided among the people. Ritual requires that every particle of the flesh should be consumed on the spot. When the sacrificial meal is over, the medicine-men take the hide and mark it with appropriate medicines, the composition of which is a professional secret. Then with one long spiral cut they convert the whole hide into a single thong. Having done so they cut up the thong into lengths of about two feet and despatch messengers in all directions to peg down one of those strips in each of the paths leading to the new town. "After this," it is said, "if a foreigner approaches the new town to destroy it with his charms, he will find that the town has prepared itself for his coming." Thus it would seem that the pastoral Bechuanas attempt to place a new town under the protection of one of their sacred cattle by distributing pieces of its hide at all points where an enemy could approach it, just as the Lydian king thought to place the citadel of his capital under the protection of the lion-god by carrying the animal round the boundaries.

Further, the Bechuana custom may throw light on a widespread legend which relates how a wily settler in a new country bought from the natives as much land as could be covered with a hide, and how he then proceeded to cut the hide into thongs and to claim as much land as could be enclosed by the thongs. It was thus, according to the Hottentots, that the first European settlers obtained a footing in South Africa. But the most familiar example of such stories is the tradition that Dido procured the site of Carthage in this fashion, and that the place hence received the name of Byrsa or "hide." Similar tales occur in the legendary history of Saxons and Danes, and they meet us in India, Siberia, Burma, Cambodia, Java, and Bali. The wide diffusion of such stories confirms the conjecture of Jacob Grimm that in them

we have a reminiscence of a mode of land measurement which was once actually in use, and of which the designation is still retained in the English *hide*. The Bechuana custom suggests that the mode of measuring by a hide may have originated in a practice of encompassing a piece of land with thongs cut from the hide of a sacrificial victim in order to place the ground under the guardianship of the sacred animal.

But why do the Bechuanas sew up the eyelids of the bull which is to be used for this purpose? The answer appears to be given by the ceremonies which the same people observe when they are going out to war. On that occasion a woman rushes up to the army with her eyes shut and shakes a winnowing-fan, while she cries out, "The army is not seen! The army is not seen!" And a medicine-man at the same time sprinkles medicine over the spears, crying out in like manner, "The army is not seen! The army is not seen!" After that they seize a bull, sew up its eyelids with a hair of its tail, and drive it for some distance along the road which the army is to take. When it has preceded the army a little way, the bull is sacrificed, roasted whole, and eaten by the warriors. All the flesh must be consumed on the spot. Such parts as cannot be eaten are burnt with fire. Only the contents of the stomach are carefully preserved as a charm which is to lead the warriors to victory. Chosen men carry the precious guts in front of the army, and it is deemed most important that no one should precede them. When they stop, the army stops, and it will not resume the march till it sees that the men with the bull's guts have gone forward. The meaning of these ceremonies is explained by the cries of the woman and the priest, "The army is not seen! The army is not seen!" Clearly it is desirable that the army should not be perceived by the enemies until it is upon them. Accordingly on the principles of homoeopathic magic the Bechuanas apparently imagine that they can make themselves invisible by eating of the flesh of a blind bull, blindness and invisibility being to their simple minds the same thing. For the same reason the bowels of the blind ox are carried in front of the army to hide its advance from hostile eyes. In like manner the custom of sacrificing and eating a blind ox on the place where a new town is to be built may be intended to render the town invisible to enemies. At all events the Bawenda, a South African people who belong to the same Bantu stock as the Bechuanas, take great pains to conceal their kraals from passers-by. The kraals are built in the forest or bush, and the long winding footpaths which lead to them are often kept open only by the support of a single pole here and there. Indeed the paths are so low and narrow that it is very difficult to bring a horse into such a village. In time of war the poles are removed and the thorny creepers fall down, forming a natural screen or bulwark which the enemy can neither penetrate nor destroy by fire. The kraals are also surrounded by walls of undressed stones with a filling of soil; and to hide them still better from the view of the enemy the tops of the walls are sown with Indian corn or planted with tobacco. Hence travellers passing through the country seldom come across a Bawenda kraal. To see where the Bawenda dwell you must climb to the tops of mountains and look down on the roofs of their round huts peeping out of the surrounding green like clusters of mushrooms in the woods. The object which the Bawenda attain by these perfectly rational means, the Bechuanas seek to compass by the sacrifice and consumption of a blind bull.

This explanation of the use of a blinded ox in sacrifice is confirmed by the reasons alleged by a Caffre for the observance of a somewhat similar custom in purificatory ceremonies after a battle. On these occasions the Bechuanas and other Caffre tribes of South Africa kill a black ox and cut out the tip of its tongue, an eye, a piece of the ham-string, and a piece of the principal sinew of the shoulder. These parts are fried with certain herbs and rubbed into the joints of the warriors. By cutting out the tongue of the ox they think to prevent the enemy from wagging his tongue against them; by severing the sinews of the ox they hope to cause

the enemy's sinews to fail him in the battle; and by removing the eye of the ox they imagine that they prevent the enemy from casting a covetous eye on their cattle.

IV. Some Customs Of The Pelew Islanders.

We have seen that the state of society and religion among the Pelew Islanders in modern times presents several points of similarity to the condition of the peoples about the Eastern Mediterranean in antiquity. Here I propose briefly to call attention to certain other customs of the Pelew Islanders which may serve to illustrate some of the institutions discussed in this volume.

§ 1. Priests dressed as Women.

In the Pelew Islands it often happens that a goddess chooses a man, not a woman, for her minister and inspired mouthpiece. When that is so, the favoured man is thenceforth regarded and treated as a woman. He wears female attire, he carries a piece of gold on his neck, he labours like a woman in the taro fields, and he plays his new part so well that he earns the hearty contempt of his fellows. The pretended change of sex under the inspiration of a female spirit perhaps explains a custom widely spread among savages, in accordance with which some men dress as women and act as women through life. These unsexed creatures often, perhaps generally, profess the arts of sorcery and healing, they communicate with spirits, and are regarded sometimes with awe and sometimes with contempt, as beings of a higher or lower order than common folk. Often they are dedicated and trained to their vocation from childhood. Effeminate sorcerers or priests of this sort are found among the Sea Dyaks of Borneo, the Bugis of South Celebes, the Patagonians of South America, and the Aleutians and many Indian tribes of North America. In the island of Rambree, off the coast of Aracan, a set of vagabond "conjurers," who dressed and lived as women, used to dance round a tall pole, invoking the aid of their favourite idol on the occasion of any calamity. Male members of the Vallabha sect in India often seek to win the favour of the god Krishna, whom they specially revere, by wearing their hair long and assimilating themselves to women; even their spiritual chiefs, the so-called Maharajas, sometimes simulate the appearance of women when they lead the worship of their followers. In Madagascar we hear of effeminate men who wore female attire and acted as women, thinking thereby to do God service. In the kingdom of Congo there was a sacrificial priest who commonly dressed as a woman and gloried in the title of the Grandmother. The post of Grandmother must have been much coveted, for the incumbent might not be put to death, whatever crimes or rascalities he committed; and to do him justice he appears commonly to have taken full advantage of this benefit of clergy. When he died, his fortunate successor dissected the body of the deceased Grandmother, extracting his heart and other vital organs, and amputating his fingers and toes, which he kept as priceless relics, and sold as sovereign remedies for all the ills that flesh is heir to.

We may conjecture that in many of these cases the call to this strange form of the religious life came in the shape of a dream or vision, in which the dreamer or visionary imagined himself to be a woman or to be possessed by a female spirit; for with many savage races the disordered fancies of sleep or ecstasy are accepted as oracular admonitions which it would be perilous to disregard. At all events we are told that a dream or a revelation of some sort was the reason which in North America these men-women commonly alleged for the life they led; it had been thus brought home to them, they said, that their medicine or their salvation lay in living as women, and when once they had got this notion into their head nothing could drive it out again. Many an Indian father attempted by persuasion, by bribes, by violence, to deter his son from obeying the mysterious call, but all to no purpose. Among the Sauks, an Indian tribe of North America, these effeminate beings were always despised, but sometimes they were pitied "as labouring under an unfortunate destiny which they cannot avoid, being

supposed to be impelled to this course by a vision from the female spirit that resides in the moon." Similarly the Omahas, another Indian tribe of North America, "believe that the unfortunate beings, called *Min-qu-ga*, are mysterious or sacred because they have been affected by the Moon Being. When a young Omaha fasted for the first time on reaching puberty, it was thought that the Moon Being appeared to him, holding in one hand a bow and arrows and in the other a pack strap, such as the Indian women use. When the youth tried to grasp the bow and arrows the Moon Being crossed his hands very quickly, and if the youth was not very careful he seized the pack strap instead of the bow and arrows, thereby fixing his lot in after life. In such a case he could not help acting the woman, speaking, dressing, and working just as Indian women used to do." Among the Ibans or Sea Dyaks of Borneo the highest class of sorcerers or medicine-men (*manangs*) are those who are believed to have been transformed into women. Such a man is therefore called a "changed medicine-man" (*manang bali*) on account of his supposed change of sex. The call to transform himself into a woman is said to come as a supernatural command thrice repeated in dreams; to disregard the command would mean death. Accordingly he makes a feast, sacrifices a pig or two to avert evil consequences from the tribe, and then assumes the garb of a woman. Thenceforth he is treated as a woman and occupies himself in feminine pursuits. His chief aim is to copy female manners and habits as accurately as possible. He is employed for the same purposes as an ordinary medicine-man and his methods are similar, but he is paid much higher fees and is often called in when others have been unable to effect a cure. Similarly among the Chukchees of North-Eastern Asia there are shamans or medicine-men who assimilate themselves as far as possible to women, and who are believed to be called to this vocation by spirits in a dream. The call usually comes at the critical age of early youth when the shamanistic inspiration, as it is called, first manifests itself. But the call is much dreaded by the youthful adepts, and some of them prefer death to obedience. There are, however, various stages or degrees of transformation. In the first stage the man apes a woman only in the manner of braiding and arranging the hair of his head. In the second he dons female attire; in the third stage he adopts as far as possible the life and characteristics of the female sex. A young man who is undergoing this final transformation abandons all masculine occupations and manners. He throws away the rifle and the lance, the lasso of the reindeer herdsman, and the harpoon of the seal-hunter, and betakes himself to the needle and the skin-scraper instead. He learns the use of them quickly, because the spirits are helping him all the time. Even his pronunciation changes from the male to the female mode. At the same time his body alters, if not in outward appearance, at least in its faculties and forces. He loses masculine strength, fleetness of foot, endurance in wrestling, and falls into the debility and helplessness of a woman. Even his mental character undergoes a change. His old brute courage and fighting spirit are gone; he grows shy and bashful before strangers, fond of small talk and of dandling little children. In short he becomes a woman with the appearance of a man, and as a woman he is often taken to wife by another man, with whom he leads a regular married life. Extraordinary powers are attributed to such transformed shamans. They are supposed to enjoy the special protection of spirits who play the part of supernatural husbands to them. Hence they are much dreaded even by their colleagues in the profession who remain mere men; hence, too, they excel in all branches of magic, including ventriloquism. Among the Teso of Central Africa medicine-men often dress as women and wear feminine ornaments, such as heavy chains of beads and shells round their heads and necks.

And just as a man inspired by a goddess may adopt female attire, so conversely a woman inspired by a god may adopt male costume. In Uganda the great god Mukasa, the deity of the Victoria Nyanza Lake and of abundance, imparted his oracles through a woman, who in ordinary life dressed like the rest of her sex in a bark cloth wrapped round the body and fastened with a girdle, so as to leave the arms and shoulders bare; but when she prophesied

under the inspiration of the god, she wore two bark cloths knotted in masculine style over her shoulders and crossing each other on her breast and back. When once the god had chosen her, she retained office for life; she might not marry or converse with any man except one particular priest, who was always present when she was possessed by the deity.

Perhaps this assumed change of sex under the inspiration of a goddess may give the key to the legends of the effeminate Sardanapalus and the effeminate Hercules, as well as to the practice of the effeminate priests of Cybele and the Syrian goddess. In all such cases the pretended transformation of a man into a woman would be intelligible if we supposed that the womanish priest or king thought himself animated by a female spirit, whose sex, accordingly, he felt bound to imitate. Certainly the eunuch priests of Cybele seem to have bereft themselves of their manhood under the supposed inspiration of the Great Goddess. The priest of Hercules at Antimachia, in Cos, who dressed as a woman when he offered sacrifice, is said to have done so in imitation of Hercules who disguised himself as a woman to escape the pursuit of his enemies. So the Lydian Hercules wore female attire when he served for three years as the purchased slave of the imperious Omphale, Queen of Lydia. If we suppose that Queen Omphale, like Queen Semiramis, was nothing but the great Asiatic goddess, or one of her Avatars, it becomes probable that the story of the womanish Hercules of Lydia preserves a reminiscence of a line or college of effeminate priests who, like the eunuch priests of the Syrian goddess, dressed as women in imitation of their goddess and were supposed to be inspired by her. The probability is increased by the practice of the priests of Hercules at Antimachia, in Cos, who, as we have just seen, actually wore female attire when they were engaged in their sacred duties. Similarly at the vernal mysteries of Hercules in Rome the men were draped in the garments of women; and in some of the rites and processions of Dionysus also men wore female attire. In legend and art there are clear traces of an effeminate Dionysus, who perhaps figured in a strange ceremony for the artificial fertilization of the fig. Among the Nahanarvals, an ancient German tribe, a priest garbed as a woman presided over a sacred grove. These and similar practices need not necessarily have any connexion with the social system of mother-kin. Wherever a goddess is revered and the theory of inspiration is held, a man may be thought to be possessed by a female spirit, whether society be organized on mother-kin or on father-kin. Still the chances of such a transformation of sex will be greater under mother-kin than under father-kin if, as we have found reason to believe, a system of mother-kin is more favourable to the development and multiplication of goddesses than of gods. It is therefore, perhaps, no mere accident that we meet with these effeminate priests in regions like the Pelew Islands and Western Asia, where the system of mother-kin either actually prevails or has at least left traces of it behind in tradition and custom. Such traces, for example, are to be found in Lydia and Cos, in both of which the effeminate Hercules had his home.

But the religious or superstitious interchange of dress between men and women is an obscure and complex problem, and it is unlikely that any single solution would apply to all the cases. Probably the custom has been practised from many different motives. For example, the practice of dressing boys as girls has certainly been sometimes adopted to avert the Evil Eye; and it is possible that the custom of changing garments at marriage, the bridegroom disguising himself as a woman, or the bride disguising herself as a man, may have been resorted to for the same purpose. Thus in Cos, where the priest of Hercules wore female attire, the bridegroom was in like manner dressed as a woman when he received his bride. Spartan brides had their hair shaved, and were clad in men's clothes and booted on their wedding night. Argive brides wore false beards when they slept with their husbands for the first time. In Southern Celebes a bridegroom at a certain point of the long and elaborate marriage ceremonies puts on the garments which his bride has just put off. Among the Jews

of Egypt in the Middle Ages the bride led the wedding dance with a helmet on her head and a sword in her hand, while the bridegroom adorned himself as a woman and put on female attire. At a Brahman marriage in Southern India “the bride is dressed up as a boy, and another girl is dressed up to represent the bride. They are taken in procession through the street, and, on returning, the pseudo-bridegroom is made to speak to the real bridegroom in somewhat insolent tones, and some mock play is indulged in. The real bridegroom is addressed as if he was the syce (groom) or gumasta (clerk) of the pseudo-bridegroom, and is sometimes treated as a thief, and judgment passed on him by the latter.” Among the Bharias of the Central Provinces of India “the bridegroom puts on women's ornaments and carries with him an iron nut-cutter or dagger to keep off evil spirits.” Similarly among the Khangars, a low Hindustani caste of the same region, “the bridegroom is dressed in a yellow gown and overcloth, with trousers of red chintz, red shoes, and a marriage crown of date-palm leaves. He has the silver ornaments usually worn by women on his neck, as the *khang-wāri* or silver ring and the *hamel* or necklace of rupees. In order to avert the evil eye he carries a dagger or nut-cracker, and a smudge of lampblack is made on his forehead to disfigure him and thus avert the evil eye, which, it is thought, would otherwise be too probably attracted by his exquisitely beautiful appearance in his wedding garments.” These examples render it highly probable that, like the dagger or nut-cracker which he holds in his hand, the woman's ornaments which he wears are intended to protect the bridegroom against demons or the evil eye at this critical moment of his life, the protection apparently consisting in a disguise which enables him to elude the unwelcome attentions of malignant beings.

A similar explanation probably accounts for the similar exchange of costume between other persons than the bride and bridegroom at marriage. For example, after a Bharia wedding, “the girl's mother gets the dress of the boy's father and puts it on, together with a false beard and moustaches, and dances holding a wooden ladle in one hand and a packet of ashes in the other. Every time she approaches the bridegroom's father on her rounds she spills some of the ashes over him and occasionally gives him a crack on the head with her ladle, these actions being accompanied by bursts of laughter from the party and frenzied playing by the musicians. When the party reach the bridegroom's house on their return, his mother and the other women come out, and burn a little mustard and human hair in a lamp, the unpleasant smell emitted by these articles being considered potent to drive away evil spirits.” Again, after a Khangar wedding the father of the bridegroom, dressed in women's clothes, dances with the mother of the bride, while the two throw turmeric mixed with water on each other. Similarly after a wedding of the Bharbhunjas, another Hindustani caste of the Central Provinces, the bridegroom's father dances before the family in women's clothes which have been supplied by the bride's father. Such disguises and dances may be intended either to protect the disguised dancer himself against the evil eye or perhaps rather to guard the principal personages of the ceremony, the bride and bridegroom, by diverting the attention of demons from them to the guiser. However, when at marriage the bride alone assumes the costume and appearance of the other sex, the motive for the disguise may perhaps be a notion that on the principle of homoeopathic magic she thereby ensures the birth of a male heir. Similarly in Sweden there is a popular superstition that “on the night preceding her nuptials the bride should have a baby-boy to sleep with her, in which case her first-born will be a son”; and among the Kabyles, when a bride dismounts from her mule at her husband's house, a young lad leaps into the saddle before she touches the ground, in order that her first child may be a boy.

Be that as it may, there is no doubt that the assumption of woman's dress is sometimes intended to disguise a man for the purpose of deceiving a demon. Thus among the Boloki or Bangala on the Upper Congo a man was long afflicted with an internal malady. When all

other remedies had failed, a witch-doctor informed the sufferer that the cause of his trouble was an evil spirit, and that the best thing he could do was to go far away where the devil could not get at him, and to remain there till he had recovered his health. The patient followed the prescription. At dead of night he left his house, taking only two of his wives with him and telling no one of his destination, lest the demon should hear it and follow him. So he went far away from his town, donned a woman's dress, and speaking in a woman's voice he pretended to be other than he was, in order that the devil should not be able to find him at his new address. Strange to say, these sage measures failed to effect a cure, and wearying of exile he at last returned home, where he continued to dress and speak as a woman. Again, the Kuki-Lushai of Assam believe that if a man kills an enemy or a wild beast, the ghost of the dead man or animal will haunt him and drive him mad. The only way of averting this catastrophe is to dress up as a woman and pretend to be one. For example, a man who had shot a tiger and was in fear of being haunted by the animal's ghost, dressed himself up in a woman's petticoat and cloth, wore ivory earrings, and wound a mottled cloth round his head like a turban. Then smoking a woman's pipe, carrying a little basket, and spinning a cotton spindle, he paraded the village followed by a crowd roaring and shrieking with laughter, while he preserved the gravity of a judge, for a single smile would have been fatal. To guard against the possibility of unseasonable mirth, he carried a porcupine in his arms, and if ever, tickled beyond the pitch of endurance, he burst into a guffaw, the crowd said, "It was the porcupine that laughed." All this was done to mortify the pride of the tiger's ghost by leading him to believe that he had been shot by a woman.

The same dread of attracting the attention of dangerous spirits at critical times perhaps explains the custom observed by some East African tribes of wearing the costume of the opposite sex at circumcision. Thus, when Masai boys have been circumcised they dress as women, wearing earrings in their ears and long garments that reach to the ground. They also whiten their swarthy faces with chalk. This costume they retain till their wounds are healed, whereupon they are shaved and assume the skins and ornaments of warriors. Among the Nandi, a tribe of British East Africa, before boys are circumcised they receive a visit from young girls, who give them some of their own garments and ornaments. These the boys put on and wear till the operation of circumcision is over, when they exchange the girls' clothes for the garments of women, which, together with necklaces, are provided for them by their mothers; and these women's garments the newly circumcised lads must continue to wear for months afterwards. Girls are also circumcised among the Nandi, and before they submit to the operation they attire themselves in men's garments and carry clubs in their hands.

If such interchange of costume between men and women is intended to disguise the wearers against demons, we may compare the practice of the Lycian men, who regularly wore women's dress in mourning; for this might be intended to conceal them from the ghost, just as perhaps for a similar reason some peoples of antiquity used to descend into pits and remain there for several days, shunning the light of the sun, whenever a death had taken place in the family. A similar desire to deceive spirits may perhaps explain a device to which the Loeboes, a primitive tribe of Sumatra, resort when they wish to obtain male or female offspring. If parents have several sons and desire that the next child shall be a girl, they dress the boys as girls, cut their hair after the girlish fashion, and hang necklaces round their necks. On the contrary, when they have many daughters and wish to have a son, they dress the girls up as boys.

On the whole we conclude that the custom of men dressing as women and of women dressing as men has been practised from a variety of superstitious motives, among which the principal would seem to be the wish to please certain powerful spirits or to deceive others.

§ 2. Prostitution of Unmarried Girls.

Like many peoples of Western Asia in antiquity, the Pelew Islanders systematically prostitute their unmarried girls for hire. Hence, just as in Lydia and Cyprus of old, the damsels are a source of income to their family, and women wait impatiently for the time when their young daughters will be able to help the household by their earnings. Indeed the mother regularly anticipates the time by depriving the girl of her virginity with her own hands. Hence the theory that the prostitution of unmarried girls is a device to destroy their virginity without risk to their husbands is just as inapplicable to the Pelew Islanders as we have seen it to be to the peoples of Western Asia in antiquity. When a Pelew girl has thus been prepared for her vocation by her mother, she sells her favours to all the men of her village who can pay for them and who do not belong to her own exogamous clan; but she never grants her favours to the same man twice. Accordingly in every village of the Pelew Islands it may be taken as certain that the men and women know each other carnally, except that members of the same clan are debarred from each other by the rule of exogamy. Thus a well-marked form of sexual communism, limited only by the exogamous prohibitions which attach to the clans, prevails among these people. Nor is this communism restricted to the inhabitants of the same village, for the girls of each village are regularly sent away to serve as prostitutes (*armengols*) in another village. There they live with the men of one of the many clubs or associations (*kaldebekels*) in the clubhouse (*blay*), attending to the house, consorting freely with the men, and receiving pay for their services. A girl leading this life in the clubhouse of another village is well treated by the men: a wrong done to her is a wrong done to the whole club; and in her own village her value is increased, not diminished, by the time she thus spends as a prostitute in a neighbouring community. After her period of service is over she may marry either in the village where she has served or in her own. Sometimes many or all of the young women of a village go together to act as prostitutes (*armengols*) in a neighbouring village, and for this they are well paid by the community which receives them. The money so earned is divided among the chiefs of the village to which the damsels belong. Such a joint expedition of the unmarried girls of a village is called a *blolobol*. But the young women never act as *armengols* in any clubhouse of their own village.

Thus, while the Pelew custom of prostituting the unmarried girls to all the men of their own village, but not of their own clan, is a form of sexual communism practised within a local group, the custom of prostituting them to men of other villages is a form of sexual communism practised between members of different local groups; it is a kind of group-marriage. These customs of the Pelew Islanders therefore support by analogy the hypothesis that among the ancient peoples of Western Asia also the systematic prostitution of unmarried women may have been derived from an earlier period of sexual communism.

Somewhat similar custom observed in Yap, one of the Caroline Islands.

A somewhat similar custom prevails in Yap, one of the western group of the Caroline Islands, situated to the north of the Pelew group. In each of the men's clubhouses "are kept three or four unmarried girls or *Mespil*, whose business it is to minister to the pleasures of the men of the particular clan or brotherhood to which the building belongs. As with the Kroomen on the Gold Coast, each man, married or single, takes his turn by rotation in the rites through which each girl must pass before she is deemed ripe for marriage. The natives say it is an ordeal or preliminary trial to fit them for the cares and burden of maternity. She is rarely a girl of the same village, and, of course, must be sprung from a different sept. Whenever she wishes to become a *Langin* or respectable married woman, she may, and is thought none the less of for her frailties as a *Mespil*.... But I believe this self-immolation before marriage is confined to the daughters of the inferior chiefs and commons. The supply of *Mespil* is generally kept up

by the purchase of slave girls from the neighbouring districts.” According to another account a *mespil* “must always be stolen, by force or cunning, from a district at some distance from that wherein her captors reside. After she has been fairly, or unfairly, captured and installed in her new home, she loses no shade of respect among her own people; on the contrary, have not her beauty and her worth received the highest proof of her exalted perfection, in the devotion, not of one, but of a whole community of lovers?” However, though the girl is nominally stolen from another district, the matter is almost always arranged privately with the local chief, who consents to wink hard at the theft in consideration of a good round sum of shell money and stone money, which serves “to salve the wounds of a disrupted family and dispel all thoughts of a bloody retaliation. Nevertheless, the whole proceeding is still carried out with the greatest possible secrecy and stealth.”

§ 3. Custom of slaying Chiefs.

In the Pelew Islands when the chief of a clan has reigned too long or has made himself unpopular, the heir has a formal right to put him to death, though for reasons which will appear this right is only exercised in some of the principal clans. The practice of regicide, if that word may be extended to the assassination of chiefs, is in these islands a national institution regulated by exact rules, and every high chief must lay his account with it. Indeed so well recognized is the custom that when the heir-apparent, who under the system of mother-kin must be a brother, a nephew, or a cousin on the mother's side, proves himself precocious and energetic, the people say, “The cousin is a grown man. The chief's *tobolbel* is nigh at hand.”

In such cases the plot of death is commonly so well hushed up that it seldom miscarries. The first care of the conspirators is to discover where the doomed man keeps his money. For this purpose an old woman will sleep for some nights in the house and make inquiries quietly, till like a sleuth-hound she has nosed the hoard. Then the conspirators come, and the candidate for the chieftainship despatches his predecessor either with his own hand or by the hand of a young cousin. Having done the deed he takes possession of the official residence, and applies to the widow of the deceased the form of persuasion technically known as *meleket*. This consists of putting a noose round her neck, and drawing it tighter and tighter till she consents to give up her late husband's money. After that the murderer and his friends have nothing further to do for the present, but to remain quietly in the house and allow events to take their usual course.

Meantime the chiefs assemble in the council-house, and the loud droning notes of the triton-shell, which answers the purpose of a tocsin, summon the whole population to arms. The warriors muster, and surrounding the house where the conspirators are ensconced they shower spears and stones at it, as if to inflict condign punishment on the assassins. But this is a mere blind, a sham, a legal fiction, intended perhaps to throw dust in the eyes of the ghost and make him think that his death is being avenged. In point of fact the warriors take good care to direct their missiles at the roof or walls of the house, for if they threw them at the windows they might perhaps hurt the murderer. After this formality has been satisfactorily performed, the regicide steps out of the house and engages in the genial task of paying the death duties to the various chiefs assembled. When he has observed this indispensable ceremony, the law is satisfied: all constitutional forms have been carried out: the assassin is now the legitimate successor of his victim and reigns in his stead without any further trouble.

But if he has omitted to massacre his predecessor and has allowed him to die a natural death, he suffers for his negligence by being compelled to observe a long series of complicated and irksome formalities before he can make good his succession in the eyes of the law. For in that case the title of chief has to be formally withdrawn from the dead man and conferred on his

successor by a curious ceremony, which includes the presentation of a coco-nut and a taro plant to the new chief. Moreover, at first he may not enter the chief's house, but has to be shut up in a tiny hut for thirty or forty days during all the time of mourning, and even when that is over he may not come out till he has received and paid for a human head brought him by the people of a friendly state. After that he still may not go to the sea-shore until more formalities have been fully observed. These comprise a very costly fishing expedition, which is conducted by the inhabitants of another district and lasts for weeks. At the end of it a net full of fish is brought to the chief's house, and the people of the neighbouring communities are summoned by the blast of trumpets. As soon as the stranger fishermen have been publicly paid for their services, a relative of the new chief steps across the net and solemnly splits a coco-nut in two with an old-fashioned knife made of a *Tridacna* shell, while at the same time he bans all the evils that might befall his kinsman. Then, without looking at the nut, he throws the pieces on the ground, and if they fall so that the two halves lie with the opening upwards, it is an omen that the chief will live long. The pieces of the nut are then tied together and taken to the house of another chief, the friend of the new ruler, and there they are kept in token that the ceremony has been duly performed. Thereupon the fish are divided among the people, the strangers receiving half. This completes the legal ceremonies of accession, and the new chief may now go about freely. But these tedious formalities and others which I pass over are dispensed with when the new chief has proved his title by slaying his predecessor. In that case the procedure is much simplified, but on the other hand the death duties are so very heavy that only rich men can afford to indulge in the luxury of regicide. Hence in the Pelew Islands of to-day, or at least of yesterday, the old-fashioned mode of succession by slaughter is now restricted to a few families of the bluest blood and the longest purses.

If this account of the existing or recent usage of the Pelew Islanders sheds little light on the motives for putting chiefs to death, it well illustrates the business-like precision with which such a custom may be carried out, and the public indifference, if not approval, with which it may be regarded as an ordinary incident of constitutional government. So far, therefore, the Pelew custom bears out the view that a systematic practice of regicide, however strange and revolting it may seem to us, is perfectly compatible with a state of society in which human conduct and human life are estimated by a standard very different from ours. If we would understand the early history of institutions, we must learn to detach ourselves from the prepossessions of our own time and country, and to place ourselves as far as possible at the standpoint of men in distant lands and distant ages.

Part V. Spirits of the Corn and of the Wild

(Originally published in Volumes VII and VIII)

Preface

In the last part of this work we examined the figure of the Dying and Reviving God as it appears in the Oriental religions of classical antiquity. With the present instalment of *The Golden Bough* we pursue the same theme in other religions and among other races. Passing from the East to Europe we begin with the religion of ancient Greece, which embodies the now familiar conception in two typical examples, the vine-god Dionysus and the corn-goddess Persephone, with her mother and duplicate Demeter. Both of these Greek divinities are personifications of cultivated plants, and a consideration of them naturally leads us on to investigate similar personifications elsewhere. Now of all the plants which men have artificially reared for the sake of food the cereals are on the whole the most important; therefore it is natural that the religion of primitive agricultural communities should be deeply coloured by the principal occupation of their lives, the care of the corn. Hence the frequency with which the figures of the Corn-mother and Corn-maiden, answering to the Demeter and Persephone of ancient Greece, meet us in other parts of the world, and not least of all on the harvest-fields of modern Europe. But edible roots as well as cereals have been cultivated by many races, especially in the tropical regions, as a subsidiary or even as a principal means of subsistence; and accordingly they too enter largely into the religious ideas of the peoples who live by them. Yet in the case of the roots, such as yams, taro, and potatoes, the conception of the Dying and Reviving God appears to figure less prominently than in the case of the cereals, perhaps for the simple reason that while the growth and decay of the one sort of fruit go on above ground for all to see, the similar processes of the other are hidden under ground and therefore strike the popular imagination less forcibly.

Having surveyed the variations of our main theme among the agricultural races of mankind, we prosecute the enquiry among savages who remain more or less completely in the hunting, fishing, and pastoral stages of society. The same motive which leads the primitive husbandman to adore the corn or the roots, induces the primitive hunter, fowler, fisher, or herdsman to adore the beasts, birds, or fishes which furnish him with the means of subsistence. To him the conception of the death of these worshipful beings is naturally presented with singular force and distinctness; since it is no figurative or allegorical death, no poetical embroidery thrown over the skeleton, but the real death, the naked skeleton, that constantly thrusts itself importunately on his attention. And strange as it may seem to us civilised men, the notion of the immortality and even of the resurrection of the lower animals appears to be almost as familiar to the savage and to be accepted by him with nearly as unwavering a faith as the obvious fact of their death and destruction. For the most part he assumes as a matter of course that the souls of dead animals survive their decease; hence much of the thought of the savage hunter is devoted to the problem of how he can best appease the naturally incensed ghosts of his victims so as to prevent them from doing him a mischief. This refusal of the savage to recognise in death a final cessation of the vital process, this unquestioning faith in the unbroken continuity of all life, is a fact that has not yet received the attention which it seems to merit from enquirers into the constitution of the human mind as well as into the history of religion. In the following pages I have collected examples of this curious faith; I must leave it to others to appraise them.

Thus on the whole we are concerned in these volumes with the reverence or worship paid by men to the natural resources from which they draw their nutriment, both vegetable and animal. That they should invest these resources with an atmosphere of wonder and awe, often indeed with a halo of divinity, is no matter for surprise. The circle of human knowledge,

illuminated by the pale cold light of reason, is so infinitesimally small, the dark regions of human ignorance which lie beyond that luminous ring are so immeasurably vast, that imagination is fain to step up to the border line and send the warm, richly coloured beams of her fairy lantern streaming out into the darkness; and so, peering into the gloom, she is apt to mistake the shadowy reflections of her own figure for real beings moving in the abyss. In short, few men are sensible of the sharp line that divides the known from the unknown; to most men it is a hazy borderland where perception and conception melt indissolubly into one. Hence to the savage the ghosts of dead animals and men, with which his imagination peoples the void, are hardly less real than the solid shapes which the living animals and men present to his senses; and his thoughts and activities are nearly as much absorbed by the one as by the other. Of him it may be said with perhaps even greater truth than of his civilised brother, "What shadows we are, and what shadows we pursue!"

But having said so much in this book of the misty glory which the human imagination sheds round the hard material realities of the food supply, I am unwilling to leave my readers under the impression, natural but erroneous, that man has created most of his gods out of his belly. That is not so, at least that is not my reading of the history of religion. Among the visible, tangible, perceptible elements by which he is surrounded—and it is only of these that I presume to speak—there are others than the merely nutritious which have exerted a powerful influence in touching his imagination and stimulating his energies, and so have contributed to build up the complex fabric of religion. To the preservation of the species the reproductive faculties are no less essential than the nutritive; and with them we enter on a very different sphere of thought and feeling, to wit, the relation of the sexes to each other, with all the depths of tenderness and all the intricate problems which that mysterious relation involves. The study of the various forms, some gross and palpable, some subtle and elusive, in which the sexual instinct has moulded the religious consciousness of our race, is one of the most interesting, as it is one of the most difficult and delicate tasks, which await the future historian of religion.

But the influence which the sexes exert on each other, intimate and profound as it has been and must always be, is far indeed from exhausting the forces of attraction by which mankind are bound together in society. The need of mutual protection, the economic advantages of co-operation, the contagion of example, the communication of knowledge, the great ideas that radiate from great minds, like shafts of light from high towers,—these and many other things combine to draw men into communities, to drill them into regiments, and to set them marching on the road of progress with a concentrated force to which the loose skirmishers of mere anarchy and individualism can never hope to oppose a permanent resistance. Hence when we consider how intimately humanity depends on society for many of the boons which it prizes most highly, we shall probably admit that of all the forces open to our observation which have shaped human destiny the influence of man on man is by far the greatest. If that is so, it seems to follow that among the beings, real or imaginary, which the religious imagination has clothed with the attributes of divinity, human spirits are likely to play a more important part than the spirits of plants, animals, or inanimate objects. I believe that a careful examination of the evidence, which has still to be undertaken, will confirm this conclusion; and that if we could strictly interrogate the phantoms which the human mind has conjured up out of the depths of its bottomless ignorance and enshrined as deities in the dim light of temples, we should find that the majority of them have been nothing but the ghosts of dead men. However, to say this is necessarily to anticipate the result of future research; and if in saying it I have ventured to make a prediction, which like all predictions is liable to be falsified by the event, I have done so only from a fear lest, without some such warning, the

numerous facts recorded in these volumes might lend themselves to an exaggerated estimate of their own importance and hence to a misinterpretation and distortion of history.

J. G. Frazer.

Cambridge, *4th May 1912*.

I. Dionysus

In the preceding part of this work we saw that in antiquity the civilised nations of western Asia and Egypt pictured to themselves the changes of the seasons, and particularly the annual growth and decay of vegetation, as episodes in the life of gods, whose mournful death and happy resurrection they celebrated with dramatic rites of alternate lamentation and rejoicing. But if the celebration was in form dramatic, it was in substance magical; that is to say, it was intended, on the principles of sympathetic magic, to ensure the vernal regeneration of plants and the multiplication of animals, which had seemed to be menaced by the inroads of winter. In the ancient world, however, such ideas and such rites were by no means confined to the Oriental peoples of Babylon and Syria, of Phrygia and Egypt; they were not a product peculiar to the religious mysticism of the dreamy East, but were shared by the races of livelier fancy and more mercurial temperament who inhabited the shores and islands of the Aegean. We need not, with some enquirers in ancient and modern times, suppose that these Western peoples borrowed from the older civilisation of the Orient the conception of the Dying and Reviving God, together with the solemn ritual, in which that conception was dramatically set forth before the eyes of the worshippers. More probably the resemblance which may be traced in this respect between the religions of the East and the West is no more than what we commonly, though incorrectly, call a fortuitous coincidence, the effect of similar causes acting alike on the similar constitution of the human mind in different countries and under different skies. The Greek had no need to journey into far countries to learn the vicissitudes of the seasons, to mark the fleeting beauty of the damask rose, the transient glory of the golden corn, the passing splendour of the purple grapes. Year by year in his own beautiful land he beheld, with natural regret, the bright pomp of summer fading into the gloom and stagnation of winter, and year by year he hailed with natural delight the outburst of fresh life in spring. Accustomed to personify the forces of nature, to tinge her cold abstractions with the warm hues of imagination, to clothe her naked realities with the gorgeous drapery of a mythic fancy, he fashioned for himself a train of gods and goddesses, of spirits and elves, out of the shifting panorama of the seasons, and followed the annual fluctuations of their fortunes with alternate emotions of cheerfulness and dejection, of gladness and sorrow, which found their natural expression in alternate rites of rejoicing and lamentation, of revelry and mourning. A consideration of some of the Greek divinities who thus died and rose again from the dead may furnish us with a series of companion pictures to set side by side with the sad figures of Adonis, Attis, and Osiris. We begin with Dionysus.

The god Dionysus or Bacchus is best known to us as a personification of the vine and of the exhilaration produced by the juice of the grape. His ecstatic worship, characterised by wild dances, thrilling music, and tipsy excess, appears to have originated among the rude tribes of Thrace, who were notoriously addicted to drunkenness. Its mystic doctrines and extravagant rites were essentially foreign to the clear intelligence and sober temperament of the Greek race. Yet appealing as it did to that love of mystery and that proneness to revert to savagery which seem to be innate in most men, the religion spread like wildfire through Greece until the god whom Homer hardly deigned to notice had become the most popular figure of the pantheon. The resemblance which his story and his ceremonies present to those of Osiris have led some enquirers both in ancient and modern times to hold that Dionysus was merely a disguised Osiris, imported directly from Egypt into Greece. But the great preponderance of evidence points to his Thracian origin, and the similarity of the two worships is sufficiently explained by the similarity of the ideas and customs on which they were founded.

While the vine with its clusters was the most characteristic manifestation of Dionysus, he was also a god of trees in general. Thus we are told that almost all the Greeks sacrificed to "Dionysus of the tree." In Boeotia one of his titles was "Dionysus in the tree." His image was often merely an upright post, without arms, but draped in a mantle, with a bearded mask to represent the head, and with leafy boughs projecting from the head or body to shew the nature of the deity. On a vase his rude effigy is depicted appearing out of a low tree or bush. At Magnesia on the Maeander an image of Dionysus is said to have been found in a plane-tree, which had been broken by the wind. He was the patron of cultivated trees; prayers were offered to him that he would make the trees grow; and he was especially honoured by husbandmen, chiefly fruit-growers, who set up an image of him, in the shape of a natural tree-stump, in their orchards. He was said to have discovered all tree-fruits, amongst which apples and figs are particularly mentioned; and he was referred to as "well-fruited," "he of the green fruit," and "making the fruit to grow." One of his titles was "teeming" or "bursting" (as of sap or blossoms); and there was a Flowery Dionysus in Attica and at Patrae in Achaia. The Athenians sacrificed to him for the prosperity of the fruits of the land. Amongst the trees particularly sacred to him, in addition to the vine, was the pine-tree. The Delphic oracle commanded the Corinthians to worship a particular pine-tree "equally with the god," so they made two images of Dionysus out of it, with red faces and gilt bodies. In art a wand, tipped with a pine-cone, is commonly carried by the god or his worshippers. Again, the ivy and the fig-tree were especially associated with him. In the Attic township of Acharnae there was a Dionysus Ivy; at Lacedaemon there was a Fig Dionysus; and in Naxos, where figs were called *meilicha*, there was a Dionysus Meilichios, the face of whose image was made of fig-wood.

Further, there are indications, few but significant, that Dionysus was conceived as a deity of agriculture and the corn. He is spoken of as himself doing the work of a husbandman: he is reported to have been the first to yoke oxen to the plough, which before had been dragged by hand alone; and some people found in this tradition the clue to the bovine shape in which, as we shall see, the god was often supposed to present himself to his worshippers. Thus guiding the ploughshare and scattering the seed as he went, Dionysus is said to have eased the labour of the husbandman. Further, we are told that in the land of the Bisaltae, a Thracian tribe, there was a great and fair sanctuary of Dionysus, where at his festival a bright light shone forth at night as a token of an abundant harvest vouchsafed by the deity; but if the crops were to fail that year, the mystic light was not seen, darkness brooded over the sanctuary as at other times. Moreover, among the emblems of Dionysus was the winnowing-fan, that is the large open shovel-shaped basket, which down to modern times has been used by farmers to separate the grain from the chaff by tossing the corn in the air. This simple agricultural instrument figured in the mystic rites of Dionysus; indeed the god is traditionally said to have been placed at birth in a winnowing-fan as in a cradle: in art he is represented as an infant so cradled; and from these traditions and representations he derived the epithet of *Liknites*, that is, "He of the Winnowing-fan."

At first sight this symbolism might be explained very simply and naturally by supposing that the divine infant cradled in the winnowing-fan was identified with the corn which it is the function of the instrument to winnow and sift. Yet against this identification it may be urged with reason that the use of a winnowing-fan as a cradle was not peculiar to Dionysus; it was a regular practice with the ancient Greeks to place their infants in winnowing-fans as an omen of wealth and fertility for the future life of the children. Customs of the same sort have been observed, apparently for similar reasons, by other peoples in other lands. For example, in Java it is or used to be customary to place every child at birth in a bamboo basket like the sieve or winnowing-basket which Javanese farmers use for separating the rice from the

chaff. It is the midwife who places the child in the basket, and as she does so she suddenly knocks with the palms of both hands on the basket in order that the child may not be timid and fearful. Then she addresses the child thus: "Cry not, for Njai-among and Kaki-among" (two spirits) "are watching over you." Next she addresses these two spirits, saying, "Bring not your grandchild to the road, lest he be trampled by a horse; bring him not to the bank of the river, lest he fall into the river." The object of the ceremony is said to be that these two spirits should always and everywhere guard the child. On the first anniversary of a child's birthday the Chinese of Foo-Chow set the little one in a large bamboo sieve, such as farmers employ in winnowing grain, and in the sieve they place along with the child a variety of articles, such as fruits, gold or silver ornaments, a set of money-scales, books, a pencil, pen, ink, paper, and so on, and they draw omens of the child's future career from the object which it first handles and plays with. Thus, if the infant first grasps the money-scale, he will be wealthy; if he seizes on a book, he will be learned, and so forth. In the Bilaspore district of India it is customary for well-to-do people to place a newborn infant in a winnowing-fan filled with rice and afterwards to give the grain to the nurse in attendance. In Upper Egypt a newly-born babe is immediately laid upon a corn-sieve and corn is scattered around it; moreover, on the seventh day after birth the infant is carried on a sieve through the whole house, while the midwife scatters wheat, barley, pease and salt. The intention of these ceremonies is said to be to avert evil spirits from the child, and a like motive is assigned by other peoples for the practice of placing newborn infants in a winnowing-basket or corn-sieve. For example, in the Punjaub, when several children of a family have died in succession, a new baby will sometimes be put at birth into an old winnowing-basket (*chhaj*) along with the sweepings of the house, and so dragged out into the yard; such a child may, like Dionysus, in after life be known by the name of Winnowing-basket (*Chhajju*) or Dragged (*Ghasitâ*). The object of treating the child in this way seems to be to save its life by deceiving the spirits, who are supposed to have carried off its elder brothers and sisters; these malevolent beings are on the look-out for the new baby, but they will never think of raking for it in the dust-bin, that being the last place where they would expect to find the hope of the family. The same may perhaps be the intention of a ceremony observed by the Gaolis of the Deccan. As soon as a child is born, it is bathed and then placed on a sieve for a few minutes. On the fifth day the sieve, with a lime and *pan* leaves on it, is removed outside the house and then, after the worship of Chetti has been performed, the sieve is thrown away on the road. Again, the same notion of rescuing the child from dangerous spirits comes out very clearly in a similar custom observed by the natives of Laos, a province of Siam. These people "believe that an infant is the child, not of its parents, but of the spirits, and in this belief they go through the following formalities. As soon as an infant is born it is bathed and dressed, laid upon a rice-sieve, and placed—by the grandmother if present, if not, by the next near female relative—at the head of the stairs or of the ladder leading to the house. The person performing this duty calls out in a loud tone to the spirits to come and take the child away to-day, or for ever after to let it alone; at the same moment she stamps violently on the floor to frighten the child, or give it a jerk, and make it cry. If it does not cry this is regarded as an evil omen. If, on the other hand, it follows the ordinary laws of nature and begins to exercise its vocal organs, it is supposed to have a happy and prosperous life before it. Sometimes the spirits do come and take the infant away, *i.e.* it dies before it is twenty-four hours old, but, to prevent such a calamity, strings are tied round its wrists on the first night after its birth, and if it sickens or is feeble the spirit-doctors are called in to prescribe certain offerings to be made to keep away the very spirits who, only a few hours previously, were ceremoniously called upon to come and carry the child off. On the day after its birth the child is regarded as being the property no longer of the spirits, who could have taken it if they had wanted it, but of the parents, who forthwith sell it to some relation for a nominal sum—an

eighth or a quarter of a rupee perhaps. This again is a further guarantee against molestation by the spirits, who apparently are regarded as honest folk that would not stoop to take what has been bought and paid for.”

A like intention of averting evil in some shape from a child is assigned in other cases of the same custom. Thus in Travancore, “if an infant is observed to distort its limbs as if in pain, it is supposed to be under the pressure of some one who has stooped over it, to relieve which the mother places it with a nut-cracker on a winnowing fan and shakes it three or four times.” Again, among the Tanala people of Madagascar almost all children born in the unlucky month of Faosa are buried alive in the forest. But if the parents resolve to let the child live, they must call in the aid of a diviner, who performs a ceremony for averting the threatened ill-luck. The child is placed in a winnowing-fan along with certain herbs. Further, the diviner takes herbs of the same sort, a worn-out spade, and an axe, fastens them to the father's spear, and sets the spear up in the ground. Then the child is bathed in water which has been medicated with some of the same herbs. Finally the diviner says: “The worn-out spade to the grandchild; may it (the child) not despoil its father, may it not despoil its mother, may it not despoil the children; let it be good.” This ceremony, we are told, “puts an end to the child's evil days, and the father gets the spear to put away all evil. The child then joins its father and mother; its evil days are averted, and the water and the other things are buried, for they account them evil.” Similarly the ancient Greeks used to bury, or throw into the sea, or deposit at cross-roads, the things that had been used in ceremonies of purification, no doubt because the things were supposed to be tainted by the evil which had been transferred to them in the rites. Another example of the use of a winnowing-fan in what may be called a purificatory ceremony is furnished by the practice of the Chinese of Foo-Chow. A lad who is suffering from small-pox is made to squat in a large winnowing sieve. On his head is placed a piece of red cloth, and on the cloth are laid some parched beans, which are then allowed to roll off. As the name for beans, pronounced in the local dialect, is identical with the common name for small-pox, and as moreover the scars left by the pustules are thought to resemble beans, it appears to be imagined that just as the beans roll off the boy's head, so will the pustules vanish from his body without leaving a trace behind. Thus the cure depends on the principle of homoeopathic magic. Perhaps on the same principle a winnowing-fan is employed in the ceremony from a notion that it will help to waft or fan away the disease like chaff from the grain. We may compare a purificatory ceremony observed by the Karens of Burma at the naming of a new-born child. Amongst these people “children are supposed to come into the world defiled, and unless that defilement is removed, they will be unfortunate, and unsuccessful in their undertakings. An Elder takes a thin splint of bamboo, and, tying a noose at one end, he fans it down the child's arm, saying:

*‘Fan away ill luck, fan away ill success:
Fan away inability, fan away unskilfulness:
Fan away slow growth, fan away difficulty of growth:
Fan away stuntedness, fan away puniness:
Fan away drowsiness, fan away stupidity:
Fan away debasedness, fan away wretchedness:
Fan away the whole completely.’*

“The Elder now changes his motion and fans up the child's arm, saying:

*‘Fan on power, fan on influence:
Fan on the paddy bin, fan on the paddy barn:
Fan on followers, fan on dependants:
Fan on good things, fan on appropriate things.’ ”*

Thus in some of the foregoing instances the employment of the winnowing-fan may have been suggested by the proper use of the implement as a means of separating the corn from the chaff, the same operation being extended by analogy to rid men of evils of various sorts which would otherwise adhere to them like husks to the grain. It was in this way that the ancients explained the use of the winnowing-fan in the mysteries. But one motive, and perhaps the original one, for setting a newborn child in a winnowing-fan and surrounding it with corn was probably the wish to communicate to the infant, on the principle of sympathetic magic, the fertility and especially the power of growth possessed by the grain. This was in substance the explanation which W. Mannhardt gave of the custom. He rightly insisted on the analogy which many peoples, and in particular the ancient Greeks, have traced between the sowing of seed and the begetting of children, and he confirmed his view of the function of the winnowing-fan in these ceremonies by aptly comparing a German custom of sowing barley or flax seed over weakly and stunted children in the belief that this will make them grow with the growth of the barley or the flax. An Esthonian mode of accomplishing the same object is to set the child in the middle of a plot of ground where a sower is sowing hemp and to leave the little one there till the sowing is finished; after that they imagine that the child will shoot up in stature like the hemp which has just been sown.

With the foregoing evidence before us of a widespread custom of placing newborn children in winnowing-fans we clearly cannot argue that Dionysus must necessarily have been a god of the corn because Greek tradition and Greek art represent him as an infant cradled in a winnowing-fan. The argument would prove too much, for it would apply equally to all the infants that have been so cradled in all parts of the world. We cannot even press the argument drawn from the surname "He of the Winnowing-fan" which was borne by Dionysus, since we have seen that similar names are borne for similar reasons in India by persons who have no claim whatever to be regarded as deities of the corn. Yet when all necessary deductions have been made on this score, the association of Dionysus with the winnowing-fan appears to be too intimate to be explained away as a mere reminiscence of a practice to which every Greek baby, whether human or divine, had to submit. That practice would hardly account either for the use of the winnowing-fan in the mysteries or for the appearance of the implement, filled with fruitage of various kinds, on the monuments which set forth the ritual of Dionysus. This last emblem points plainly to a conception of the god as a personification of the fruits of the earth in general; and as if to emphasise the idea of fecundity conveyed by such a symbol there sometimes appears among the fruits in the winnowing-fan an effigy of the male organ of generation. The prominent place which that effigy occupied in the worship of Dionysus hints broadly, if it does not strictly prove, that to the Greek mind the god stood for the powers of fertility in general, animal as well as vegetable. In the thought of the ancients no sharp line of distinction divided the fertility of animals from the fertility of plants; rather the two ideas met and blended in a nebulous haze. We need not wonder, therefore, that the same coarse but expressive emblem figured conspicuously in the ritual of Father Liber, the Italian counterpart of Dionysus, who in return for the homage paid to the symbol of his creative energy was believed to foster the growth of the crops and to guard the fields against the powers of evil.

Like the other gods of vegetation whom we considered in the last volume, Dionysus was believed to have died a violent death, but to have been brought to life again; and his sufferings, death, and resurrection were enacted in his sacred rites. His tragic story is thus told by the poet Nonnus. Zeus in the form of a serpent visited Persephone, and she bore him Zagreus, that is, Dionysus, a horned infant. Scarcely was he born, when the babe mounted the throne of his father Zeus and mimicked the great god by brandishing the lightning in his tiny hand. But he did not occupy the throne long; for the treacherous Titans, their faces whitened

with chalk, attacked him with knives while he was looking at himself in a mirror. For a time he evaded their assaults by turning himself into various shapes, assuming the likeness successively of Zeus and Cronus, of a young man, of a lion, a horse, and a serpent. Finally, in the form of a bull, he was cut to pieces by the murderous knives of his enemies. His Cretan myth, as related by Firmicus Maternus, ran thus. He was said to have been the bastard son of Jupiter, a Cretan king. Going abroad, Jupiter transferred the throne and sceptre to the youthful Dionysus, but, knowing that his wife Juno cherished a jealous dislike of the child, he entrusted Dionysus to the care of guards upon whose fidelity he believed he could rely. Juno, however, bribed the guards, and amusing the child with rattles and a cunningly-wrought looking-glass lured him into an ambush, where her satellites, the Titans, rushed upon him, cut him limb from limb, boiled his body with various herbs, and ate it. But his sister Minerva, who had shared in the deed, kept his heart and gave it to Jupiter on his return, revealing to him the whole history of the crime. In his rage, Jupiter put the Titans to death by torture, and, to soothe his grief for the loss of his son, made an image in which he enclosed the child's heart, and then built a temple in his honour. In this version a Euhemeristic turn has been given to the myth by representing Jupiter and Juno (Zeus and Hera) as a king and queen of Crete. The guards referred to are the mythical Curetes who danced a war-dance round the infant Dionysus, as they are said to have done round the infant Zeus. Very noteworthy is the legend, recorded both by Nonnus and Firmicus, that in his infancy Dionysus occupied for a short time the throne of his father Zeus. So Proclus tells us that "Dionysus was the last king of the gods appointed by Zeus. For his father set him on the kingly throne, and placed in his hand the sceptre, and made him king of all the gods of the world." Such traditions point to a custom of temporarily investing the king's son with the royal dignity as a preliminary to sacrificing him instead of his father. Pomegranates were supposed to have sprung from the blood of Dionysus, as anemones from the blood of Adonis and violets from the blood of Attis: hence women refrained from eating seeds of pomegranates at the festival of the Thesmophoria. According to some, the severed limbs of Dionysus were pieced together, at the command of Zeus, by Apollo, who buried them on Parnassus. The grave of Dionysus was shewn in the Delphic temple beside a golden statue of Apollo. However, according to another account, the grave of Dionysus was at Thebes, where he is said to have been torn in pieces. Thus far the resurrection of the slain god is not mentioned, but in other versions of the myth it is variously related. According to one version, which represented Dionysus as a son of Zeus and Demeter, his mother pieced together his mangled limbs and made him young again. In others it is simply said that shortly after his burial he rose from the dead and ascended up to heaven; or that Zeus raised him up as he lay mortally wounded; or that Zeus swallowed the heart of Dionysus and then begat him afresh by Semele, who in the common legend figures as mother of Dionysus. Or, again, the heart was pounded up and given in a portion to Semele, who thereby conceived him.

Turning from the myth to the ritual, we find that the Cretans celebrated a biennial festival at which the passion of Dionysus was represented in every detail. All that he had done or suffered in his last moments was enacted before the eyes of his worshippers, who tore a live bull to pieces with their teeth and roamed the woods with frantic shouts. In front of them was carried a casket supposed to contain the sacred heart of Dionysus, and to the wild music of flutes and cymbals they mimicked the rattles by which the infant god had been lured to his doom. Where the resurrection formed part of the myth, it also was acted at the rites, and it even appears that a general doctrine of resurrection, or at least of immortality, was inculcated on the worshippers; for Plutarch, writing to console his wife on the death of their infant daughter, comforts her with the thought of the immortality of the soul as taught by tradition and revealed in the mysteries of Dionysus. A different form of the myth of the death and resurrection of Dionysus is that he descended into Hades to bring up his mother Semele from

the dead. The local Argive tradition was that he went down through the Alcyonian lake; and his return from the lower world, in other words his resurrection, was annually celebrated on the spot by the Argives, who summoned him from the water by trumpet blasts, while they threw a lamb into the lake as an offering to the warder of the dead. Whether this was a spring festival does not appear, but the Lydians certainly celebrated the advent of Dionysus in spring; the god was supposed to bring the season with him. Deities of vegetation, who are supposed to pass a certain portion of each year under ground, naturally come to be regarded as gods of the lower world or of the dead. Both Dionysus and Osiris were so conceived.

A feature in the mythical character of Dionysus, which at first sight appears inconsistent with his nature as a deity of vegetation, is that he was often conceived and represented in animal shape, especially in the form, or at least with the horns, of a bull. Thus he is spoken of as "cow-born," "bull," "bull-shaped," "bull-faced," "bull-browed," "bull-horned," "horn-bearing," "two-horned," "horned." He was believed to appear, at least occasionally, as a bull. His images were often, as at Cyzicus, made in bull shape, or with bull horns; and he was painted with horns. Types of the horned Dionysus are found amongst the surviving monuments of antiquity. On one statuette he appears clad in a bull's hide, the head, horns, and hoofs hanging down behind. Again, he is represented as a child with clusters of grapes round his brow, and a calf's head, with sprouting horns, attached to the back of his head. On a red-figured vase the god is portrayed as a calf-headed child seated on a woman's lap. The people of Cynaetha in north-western Arcadia held a festival of Dionysus in winter, when men, who had greased their bodies with oil for the occasion, used to pick out a bull from the herd and carry it to the sanctuary of the god. Dionysus was supposed to inspire their choice of the particular bull, which probably represented the deity himself; for at his festivals he was believed to appear in bull form. The women of Elis hailed him as a bull, and prayed him to come with his bull's foot. They sang, "Come hither, Dionysus, to thy holy temple by the sea; come with the Graces to thy temple, rushing with thy bull's foot, O goodly bull, O goodly bull!" The Bacchanals of Thrace wore horns in imitation of their god. According to the myth, it was in the shape of a bull that he was torn to pieces by the Titans; and the Cretans, when they acted the sufferings and death of Dionysus, tore a live bull to pieces with their teeth. Indeed, the rending and devouring of live bulls and calves appear to have been a regular feature of the Dionysiac rites. When we consider the practice of portraying the god as a bull or with some of the features of the animal, the belief that he appeared in bull form to his worshippers at the sacred rites, and the legend that in bull form he had been torn in pieces, we cannot doubt that in rending and devouring a live bull at his festival the worshippers of Dionysus believed themselves to be killing the god, eating his flesh, and drinking his blood.

Another animal whose form Dionysus assumed was the goat. One of his names was "Kid." At Athens and at Hermion he was worshipped under the title of "the one of the Black Goatskin," and a legend ran that on a certain occasion he had appeared clad in the skin from which he took the title. In the wine-growing district of Phlius, where in autumn the plain is still thickly mantled with the red and golden foliage of the fading vines, there stood of old a bronze image of a goat, which the husbandmen plastered with gold-leaf as a means of protecting their vines against blight. The image probably represented the vine-god himself. To save him from the wrath of Hera, his father Zeus changed the youthful Dionysus into a kid; and when the gods fled to Egypt to escape the fury of Typhon, Dionysus was turned into a goat. Hence when his worshippers rent in pieces a live goat and devoured it raw, they must have believed that they were eating the body and blood of the god.

The custom of tearing in pieces the bodies of animals and of men and then devouring them raw has been practised as a religious rite by savages in modern times. We need not therefore

dismiss as a fable the testimony of antiquity to the observance of similar rites among the frenzied worshippers of Bacchus. An English missionary to the Coast Indians of British Columbia has thus described a scene like the cannibal orgies of the Bacchanals. After mentioning that an old chief had ordered a female slave to be dragged to the beach, murdered, and thrown into the water, he proceeds as follows: "I did not see the murder, but, immediately after, I saw crowds of people running out of those houses near to where the corpse was thrown, and forming themselves into groups at a good distance away. This I learnt was from fear of what was to follow. Presently two bands of furious wretches appeared, each headed by a man in a state of nudity. They gave vent to the most unearthly sounds, and the two naked men made themselves look as unearthly as possible, proceeding in a creeping kind of stoop, and stepping like two proud horses, at the same time shooting forward each arm alternately, which they held out at full length for a little time in the most defiant manner. Besides this, the continual jerking their heads back, causing their long black hair to twist about, added much to their savage appearance. For some time they pretended to be seeking the body, and the instant they came where it lay they commenced screaming and rushing round it like so many angry wolves. Finally they seized it, dragged it out of the water, and laid it on the beach, where I was told the naked men would commence tearing it to pieces with their teeth. The two bands of men immediately surrounded them, and so hid their horrid work. In a few minutes the crowd broke into two, when each of the naked cannibals appeared with half of the body in his hands. Separating a few yards, they commenced, amid horrid yells, their still more horrid feast. The sight was too terrible to behold. I left the gallery with a depressed heart. I may mention that the two bands of savages just alluded to belong to that class which the whites term 'medicine-men.'" The same writer informs us that at the winter ceremonials of these Indians "the cannibal, on such occasions, is generally supplied with two, three, or four human bodies, which he tears to pieces before his audience. Several persons, either from bravado or as a charm, present their arms for him to bite. I have seen several whom he has bitten, and I hear two have died from the effects." And when corpses were not forthcoming, these cannibals apparently seized and devoured living people. Mr. Duncan has seen hundreds of the Tsimshian Indians sitting in their canoes which they had just pushed off from the shore in order to escape being torn to pieces by a party of prowling cannibals. Others of these Indians contented themselves with tearing dogs to pieces, while their attendants kept up a growling noise, or a whoop, "which was seconded by a screeching noise made from an instrument which they believe to be the abode of a spirit."

Mr. Duncan's account of these savage rites has been fully borne out by later observation. Among the Kwakiutl Indians the Cannibals (*Hamatsas*) are the highest in rank of the Secret Societies. They devour corpses, bite pieces out of living people, and formerly ate slaves who had been killed for the purpose. But when their fury has subsided, they are obliged to pay compensation to the persons whom they have bitten and to the owners of slaves whom they have killed. The indemnity consists sometimes of blankets, sometimes of canoes. In the latter case the tariff is fixed: one bite, one canoe. For some time after eating human flesh the cannibal has to observe a great many rules, which regulate his eating and drinking, his going out and his coming in, his clothing and his intercourse with his wife. Similar customs prevail among other tribes of the same coast, such as the Bella Coola, the Tsimshian, the Niska, and the Nootka. In the Nootka tribe members of the Panther Society tear dogs to pieces and devour them. They wear masks armed with canine teeth. So among the Haida Indians of the Queen Charlotte Islands there is one religion of cannibalism and another of dog-eating. The cannibals in a state of frenzy, real or pretended, bite flesh out of the extended arms of their fellow villagers. When they issue forth with cries of *Hop-pop* to observe this solemn rite, all who are of a different religious persuasion make haste to get out of their way; but men of the cannibal creed and of stout hearts will resolutely hold out their arms to be bitten. The sect of

dog-eaters cut or tear dogs to pieces and devour some of the flesh; but they have to pay for the dogs which they consume in their religious enthusiasm. In the performance of these savage rites the frenzied actors are believed to be inspired by a Cannibal Spirit and a Dog-eating Spirit respectively. Again, in Morocco there is an order of saints known as Isowa or Aisawa, followers of Mohammed ben Isa or Aisa of Mequinez, whose tomb is at Fez. Every year on their founder's birthday they assemble at his shrine or elsewhere and holding each other's hands dance a frantic dance round a fire. "While the mad dance is still proceeding, a sudden rush is made from the sanctuary, and the dancers, like men delirious, speed away to a place where live goats are tethered in readiness. At sight of these animals the fury of the savage and excited crowd reaches its height. In a few minutes the wretched animals are cut, or rather torn to pieces, and an orgy takes place over the raw and quivering flesh. When they seem satiated, the Emkaddim, who is generally on horseback, and carries a long stick, forms a sort of procession, preceded by wild music, if such discordant sounds will bear the name. Words can do no justice to the frightful scene which now ensues. The naked savages—for on these occasions a scanty piece of cotton is all their clothing—with their long black hair, ordinarily worn in plaits, tossed about by the rapid to-and-fro movements of the head, with faces and hands reeking with blood, and uttering loud cries resembling the bleating of goats, again enter the town. The place is now at their mercy, and the people avoid them as much as possible by shutting themselves up in their houses. A Christian or a Jew would run great risk of losing his life if either were found in the street. Goats are pushed out from the doors, and these the fanatics tear immediately to pieces with their hands, and then dispute over the morsels of bleeding flesh, as though they were ravenous wolves instead of men. Snakes also are thrown to them as tests of their divine frenzy, and these share the fate of the goats. Sometimes a luckless dog, straying as dogs will stray in a tumult, is seized on. Then the laymen, should any be at hand, will try to prevent the desecration of pious mouths. But the fanatics sometimes prevail, and the unclean animal, abhorred by the mussulman, is torn in pieces and devoured, or pretended to be devoured, with indiscriminating rage."

The custom of killing a god in animal form, which we shall examine more in detail further on, belongs to a very early stage of human culture, and is apt in later times to be misunderstood. The advance of thought tends to strip the old animal and plant gods of their bestial and vegetable husk, and to leave their human attributes (which are always the kernel of the conception) as the final and sole residuum. In other words, animal and plant gods tend to become purely anthropomorphic. When they have become wholly or nearly so, the animals and plants which were at first the deities themselves, still retain a vague and ill-understood connexion with the anthropomorphic gods who have been developed out of them. The origin of the relationship between the deity and the animal or plant having been forgotten, various stories are invented to explain it. These explanations may follow one of two lines according as they are based on the habitual or on the exceptional treatment of the sacred animal or plant. The sacred animal was habitually spared, and only exceptionally slain; and accordingly the myth might be devised to explain either why it was spared or why it was killed. Devised for the former purpose, the myth would tell of some service rendered to the deity by the animal; devised for the latter purpose, the myth would tell of some injury inflicted by the animal on the god. The reason given for sacrificing goats to Dionysus exemplifies a myth of the latter sort. They were sacrificed to him, it was said, because they injured the vine. Now the goat, as we have seen, was originally an embodiment of the god himself. But when the god had divested himself of his animal character and had become essentially anthropomorphic, the killing of the goat in his worship came to be regarded no longer as a slaying of the deity himself, but as a sacrifice offered to him; and since some reason had to be assigned why the goat in particular should be sacrificed, it was alleged that this was a punishment inflicted on the goat for injuring the vine, the object of the god's especial care. Thus we have the strange

spectacle of a god sacrificed to himself on the ground that he is his own enemy. And as the deity is supposed to partake of the victim offered to him, it follows that, when the victim is the god's old self, the god eats of his own flesh. Hence the goat-god Dionysus is represented as eating raw goat's blood; and the bull-god Dionysus is called "eater of bulls." On the analogy of these instances we may conjecture that wherever a deity is described as the eater of a particular animal, the animal in question was originally nothing but the deity himself. Later on we shall find that some savages propitiate dead bears and whales by offering them portions of their own bodies.

All this, however, does not explain why a deity of vegetation should appear in animal form. But the consideration of that point had better be deferred till we have discussed the character and attributes of Demeter. Meantime it remains to mention that in some places, instead of an animal, a human being was torn in pieces at the rites of Dionysus. This was the practice in Chios and Tenedos; and at Potniae in Boeotia the tradition ran that it had been formerly the custom to sacrifice to the goat-smiting Dionysus a child, for whom a goat was afterwards substituted. At Orchomenus, as we have seen, the human victim was taken from the women of an old royal family. As the slain bull or goat represented the slain god, so, we may suppose, the human victim also represented him.

The legends of the deaths of Pentheus and Lycurgus, two kings who are said to have been torn to pieces, the one by Bacchanals, the other by horses, for their opposition to the rites of Dionysus, may be, as I have already suggested, distorted reminiscences of a custom of sacrificing divine kings in the character of Dionysus and of dispersing the fragments of their broken bodies over the fields for the purpose of fertilising them. In regard to Lycurgus, king of the Thracian tribe of the Edonians, it is expressly said that his subjects at the bidding of an oracle caused him to be rent in pieces by horses for the purpose of restoring the fertility of the ground after a period of barrenness and dearth. There is no improbability in the tradition. We have seen that in Africa and other parts of the world kings or chiefs have often been put to death by their people for similar reasons. Further, it is significant that King Lycurgus is said to have slain his own son Dryas with an axe in a fit of madness, mistaking him for a vine-branch. Have we not in this tradition a reminiscence of a custom of sacrificing the king's son in place of the father? Similarly Athamas, a King of Thessaly or Boeotia, is said to have been doomed by an oracle to be sacrificed at the altar in order to remove the curse of barrenness which afflicted his country; however, he contrived to evade the sentence and in a fit of madness killed his own son Learchus, mistaking him for a wild beast. That this legend was not a mere myth is made probable by a custom observed at Alus down to historical times: the eldest male scion of the royal house was regularly sacrificed in due form to Laphystian Zeus if he ever set foot within the town-hall. The close resemblance between the legends of King Athamas and King Lycurgus furnishes a ground for believing both legends to be based on a real custom of sacrificing either the king himself or one of his sons for the good of the country; and the story that the king's son Dryas perished because his frenzied father mistook him for a vine-branch fits in well with the theory that the victim in these sacrifices represented the vine-god Dionysus. It is probably no mere coincidence that Dionysus himself is said to have been torn in pieces at Thebes, the very place where according to legend the same fate befell king Pentheus at the hands of the frenzied votaries of the vine-god.

The theory that in prehistoric times Greek and Thracian kings or their sons may have been dismembered in the character of the vine-god or the corn-god for the purpose of fertilising the earth or quickening the vines has received of late years some confirmation from the discovery that down to the present time in Thrace, the original home of Dionysus, a drama is still annually performed which reproduces with remarkable fidelity some of the most striking traits in the Dionysiac myth and ritual. In a former part of this work I have already called

attention to this interesting survival of paganism among a Christian peasantry; but it seems desirable and appropriate in this place to draw out somewhat more fully the parallelism between the modern drama and the ancient worship.

The drama, which may reasonably be regarded as a direct descendant of the Dionysiac rites, is annually performed at the Carnival in all the Christian villages which cluster round Viza, the ancient Bizya, a town of Thrace situated about midway between Adrianople and Constantinople. In antiquity the city was the capital of the Thracian tribe of the Asti; the kings had their palace there, probably in the acropolis, of which some fine walls are still standing. Inscriptions preserved in the modern town record the names of some of these old kings. The date of the celebration is Cheese Monday, as it is locally called, which is the Monday of the last week of Carnival. At Viza itself the mummary has been shorn of some of its ancient features, but these have been kept up at the villages and have been particularly observed and recorded at the village of St. George (Haghios Gheorgios). It is to the drama as acted at that village that the following description specially applies. The principal parts in the drama are taken by two men disguised in goatskins. Each of them wears a headdress made of a complete goatskin, which is stuffed so as to rise a foot or more like a shako over his head, while the skin falls over the face, forming a mask with holes cut for the eyes and mouth. Their shoulders are thickly padded with hay to protect them from the blows which used to be rained very liberally on their backs. Fawnskins on their shoulders and goatskins on their legs are or used to be part of their equipment, and another indispensable part of it is a number of sheep-bells tied round their waists. One of the two skin-clad actors carries a bow and the other a wooden effigy of the male organ of generation. Both these actors must be married men. According to Mr. Vizyenos, they are chosen for periods of four years. Two unmarried boys dressed as girls and sometimes called brides also take part in the play; and a man disguised as an old woman in rags carries a mock baby in a basket; the brat is supposed to be a seven-months' child born out of wedlock and begotten by an unknown father. The basket in which the hopeful infant is paraded bears the ancient name of the winnowing-fan (*likni*, contracted from *liknon*) and the babe itself receives the very title "He of the Winnowing-fan" (*Liknites*) which in antiquity was applied to Dionysus. Two other actors, clad in rags with blackened faces and armed with stout saplings, play the parts of a gypsy-man and his wife; others personate policemen armed with swords and whips; and the troupe is completed by a man who discourses music on a bagpipe.

Such are the masqueraders. The morning of the day on which they perform their little drama is spent by them going from door to door collecting bread, eggs, or money. At every door the two skin-clad maskers knock, the boys disguised as girls dance, and the gypsy man and wife enact an obscene pantomime on the straw-heap before the house. When every house in the village has been thus visited, the troop takes up position on the open space before the village church, where the whole population has already mustered to witness the performance. After a dance hand in hand, in which all the actors take part, the two skin-clad maskers withdraw and leave the field to the gypsies, who now pretend to forge a ploughshare, the man making believe to hammer the share and his wife to work the bellows. At this point the old woman's baby is supposed to grow up at a great pace, to develop a huge appetite for meat and drink, and to clamour for a wife. One of the skin-clad men now pursues one of the two pretended brides, and a mock marriage is celebrated between the couple. After these nuptials have been performed with a parody of a real wedding, the mock bridegroom is shot by his comrade with the bow and falls down on his face like dead. His slayer thereupon feigns to skin him with a knife; but the dead man's wife laments over her deceased husband with loud cries, throwing herself across his prostrate body. In this lamentation the slayer himself and all the other actors join in: a Christian funeral service is burlesqued; and the pretended corpse is lifted up as if to

be carried to the grave. At this point, however, the dead man disconcerts the preparations for his burial by suddenly coming to life again and getting up. So ends the drama of death and resurrection.

The next act opens with a repetition of the pretence of forging a ploughshare, but this time the gypsy man hammers on a real share. When the implement is supposed to have been fashioned, a real plough is brought forward, the mockery appears to cease, the two boys dressed as girls are yoked to the plough and drag it twice round the village square contrary to the way of the sun. One of the two skin-clad men walks at the tail of the plough, the other guides it in front, and a third man follows in the rear scattering seed from a basket. After the two rounds have been completed, the gypsy and his wife are yoked to the plough, and drag it a third time round the square, the two skin-clad men still playing the part of ploughmen. At Viza the plough is drawn by the skin-clad men themselves. While the plough is going its rounds, followed by the sower sowing the seed, the people pray aloud, saying, "May wheat be ten piastres the bushel! Rye five piastres the bushel! Amen, O God, that the poor may eat! Yea, O God, that poor folk be filled!" This ends the performance. The evening is spent in feasting on the proceeds of the house-to-house visitation which took place in the morning.

A kindred festival is observed on the same day of the Carnival at Kosti, a place in the extreme north of Thrace, near the Black Sea. There a man dressed in sheepskins or goatskins, with a mask on his face, bells round his neck, and a broom in his hand, goes round the village collecting food and presents. He is addressed as a king and escorted with music. With him go boys dressed as girls, and another boy, not so disguised, who carries wine in a wooden bottle and gives of it to every householder to drink in a cup, receiving a gift in return. The king then mounts a two-wheeled cart and is drawn to the church. He carries seed in his hand, and at the church two bands of men, one of married men and the other of unmarried men, try each in turn to induce the king to throw the seed on them. Finally he casts it on the ground in front of the church. The ceremony ends with stripping the king of his clothes and flinging him into the river, after which he resumes his usual dress.

In these ceremonies, still annually held at and near an old capital of Thracian kings, the points of similarity to the ritual of the ancient Thracian deity Dionysus are sufficiently obvious. The goatskins in which the principal actors are disguised remind us of the identification of Dionysus with a goat: the infant, cradled in a winnowing-fan and taking its name from the implement, answers exactly to the traditions and the monuments which represent the infant Dionysus as similarly cradled and similarly named: the pretence that the baby is a seven-months' child born out of wedlock and begotten by an unknown father tallies precisely with the legend that Dionysus was born prematurely in the seventh month as the offspring of an intrigue between a mortal woman and a mysterious divine father: the same coarse symbol of reproductive energy which characterised the ancient ritual of Dionysus figures conspicuously in the modern drama: the annual mock marriage of the goatskin-clad mummer with the pretended bride may be compared with the annual pretence of marrying Dionysus to the Queen of Athens: and the simulated slaughter and resurrection of the same goatskin-clad actor may be compared with the traditional slaughter and resurrection of the god himself. Further, the ceremony of ploughing, in which after his resurrection the goatskin-clad mummer takes a prominent part, fits in well not only with the legend that Dionysus was the first to yoke oxen to the plough, but also with the symbolism of the winnowing-fan in his worship; while the prayers for plentiful crops which accompany the ploughing accord with the omens of an abundant harvest which were drawn of old from the mystic light seen to illumine by night one of his ancient sanctuaries in Thrace. Lastly, in the ceremony as observed at Kosti the giving of wine by the king's attendant is an act worthy of the wine-god: the throwing of seed by the king can only be interpreted, like the ploughing, as a charm to

promote the fertility of the ground; and the royal title borne by the principal masker harmonises well with the theory that the part of the god of the corn and the wine was of old sustained by the Thracian kings who reigned at Bisya.

If we ask, To what ancient festival of Dionysus does the modern celebration of the Carnival in Thrace most nearly correspond? the answer can be hardly doubtful. The Thracian drama of the mock marriage of the goatskin-clad mummer, his mimic death and resurrection, and his subsequent ploughing, corresponds both in date and in character most nearly to the Athenian festival of the Anthesteria, which was celebrated at Athens during three days in early spring, towards the end of February or the beginning of March. Thus the date of the Anthesteria could not fall far from, and it might sometimes actually coincide with, the last week of the Carnival, the date of the Thracian celebration. While the details of the festival of the Anthesteria are obscure, its general character is well known. It was a festival both of wine-drinking and of the dead, whose souls were supposed to revisit the city and to go about the streets, just as in modern Europe and in many other parts of the world the ghosts of the departed are still believed to return to their old homes on one day of the year and to be entertained by their relatives at a solemn Feast of All Souls. But the Dionysiac nature of the festival was revealed not merely by the opening of the wine-vats and the wassailing which went on throughout the city among freemen and slaves alike; on the second day of the festival the marriage of Dionysus with the Queen of Athens was celebrated with great solemnity at the Bucolium or Ox-stall. It has been suggested with much probability that at this sacred marriage in the Ox-stall the god was represented wholly or partly in bovine shape, whether by an image or by an actor dressed in the hide and wearing the horns of a bull; for, as we have seen, Dionysus was often supposed to assume the form of a bull and to present himself in that guise to his worshippers. If this conjecture should prove to be correct—though a demonstration of it can hardly be expected—the sacred marriage of the Queen to the Bull-god at Athens would be parallel to the sacred marriage of the Queen to the Bull-god at Cnossus, according to the interpretation which I have suggested of the myth of Pasiphae and the Minotaur; only whereas the bull-god at Cnossus, if I am right, stood for the Sun, the bull-god at Athens stood for the powers of vegetation, especially the corn and the vines. It would not be surprising that among a cattle-breeding people in early days the bull, regarded as a type of strength and reproductive energy, should be employed to symbolise and represent more than one of the great powers of nature. If Dionysus did indeed figure as a bull at his marriage, it is not improbable that on that occasion his representative, whether a real bull or a man dressed in a bull's hide, took part in a ceremony of ploughing; for we have seen that the invention of yoking oxen to the plough was ascribed to Dionysus, and we know that the Athenians performed a sacred ceremony of ploughing, which went by the name of the Ox-yoked Ploughing and took place in a field or other open piece of ground at the foot of the Acropolis. It is a reasonable conjecture that the field of the Ox-yoked Ploughing may have adjoined the building called the Ox-stall in which the marriage of Dionysus with the Queen was solemnised; for that building is known to have been near the Prytaneum or Town-Hall on the northern slope of the Acropolis.

Thus on the whole the ancient festival of the Anthesteria, so far as its features are preserved by tradition or can be restored by the use of reasonable conjecture, presents several important analogies to the modern Thracian Carnival in respect of wine-drinking, a mock marriage of disguised actors, and a ceremony of ploughing. The resemblance between the ancient and the modern ritual would be still closer if some eminent modern scholars, who wrote before the discovery of the Thracian Carnival, and whose judgment was therefore not biased by its analogy to the Athenian festival, are right in holding that another important feature of the Anthesteria was the dramatic death and resurrection of Dionysus. They point out that at the

marriage of Dionysus fourteen Sacred Women officiated at fourteen altars; that the number of the Titans, who tore Dionysus in pieces, was fourteen, namely seven male and seven female; and that Osiris, a god who in some respects corresponded closely to Dionysus, is said to have been rent by Typhon into fourteen fragments. Hence they conjecture that at Athens the body of Dionysus was dramatically broken into fourteen fragments, one for each of the fourteen altars, and that it was afterwards dramatically pieced together and restored to life by the fourteen Sacred Women, just as the broken body of Osiris was pieced together by a company of gods and goddesses and restored to life by his sister Isis. The conjecture is ingenious and plausible, but with our existing sources of information it must remain a conjecture and nothing more. Could it be established, it would forge another strong link in the chain of evidence which binds the modern Thracian Carnival to the ancient Athenian Anthesteria; for in that case the drama of the divine death and resurrection would have to be added to the other features which these two festivals of spring possess in common, and we should have to confess that Greece had what we may call its Good Friday and its Easter Sunday long before the events took place in Judaea which diffused these two annual commemorations of the Dying and Reviving God over a great part of the civilised world. From so simple a beginning may flow consequences so far-reaching and impressive; for in the light of the rude Thracian ceremony we may surmise that the high tragedy of the death and resurrection of Dionysus originated in a rustic mummers' play acted by ploughmen for the purpose of fertilising the brown earth which they turned up with the gleaming share in sunshiny days of spring, as they followed the slow-paced oxen down the long furrows in the fallow field. Later on we shall see that a play of the same sort is still acted, or was acted down to recent years, by English yokels on Plough Monday.

But before we pass from the tragic myth and ritual of Dionysus to the sweeter story and milder worship of Demeter and Persephone, the true Greek deities of the corn, it is fair to admit that the legends of human sacrifice, which have left so dark a stain on the memory of the old Thracian god, may have been nothing more than mere misinterpretations of a sacrificial ritual in which an animal victim was treated as a human being. For example, at Tenedos the new-born calf sacrificed to Dionysus was shod in buskins, and the mother cow was tended like a woman in child-bed. At Rome a she-goat was sacrificed to Vedijovis as if it were a human victim. Yet on the other hand it is equally possible, and perhaps more probable, that these curious rites were themselves mitigations of an older and ruder custom of sacrificing human beings, and that the later pretence of treating the sacrificial victims as if they were human beings was merely part of a pious and merciful fraud, which palmed off on the deity less precious victims than living men and women. This interpretation is supported by the undoubted cases in which animals have been substituted for human victims. On the whole we may conclude that neither the polished manners of a later age, nor the glamour which Greek poetry and art threw over the figure of Dionysus, sufficed to conceal or erase the deep lines of savagery and cruelty imprinted on the features of this barbarous deity.

II. Demeter And Persephone

Dionysus was not the only Greek deity whose tragic story and ritual appear to reflect the decay and revival of vegetation. In another form and with a different application the old tale reappears in the myth of Demeter and Persephone. Substantially their myth is identical with the Syrian one of Aphrodite (Astarte) and Adonis, the Phrygian one of Cybele and Attis, and the Egyptian one of Isis and Osiris. In the Greek fable, as in its Asiatic and Egyptian counterparts, a goddess mourns the loss of a loved one, who personifies the vegetation, more especially the corn, which dies in winter to revive in spring; only whereas the Oriental imagination figured the loved and lost one as a dead lover or a dead husband lamented by his leman or his wife, Greek fancy embodied the same idea in the tenderer and purer form of a dead daughter bewailed by her sorrowing mother.

The oldest literary document which narrates the myth of Demeter and Persephone is the beautiful Homeric *Hymn to Demeter*, which critics assign to the seventh century before our era. The object of the poem is to explain the origin of the Eleusinian mysteries, and the complete silence of the poet as to Athens and the Athenians, who in after ages took a conspicuous part in the festival, renders it probable that the hymn was composed in the far off time when Eleusis was still a petty independent state, and before the stately procession of the Mysteries had begun to defile, in bright September days, over the low chain of barren rocky hills which divides the flat Eleusinian cornland from the more spacious olive-clad expanse of the Athenian plain. Be that as it may, the hymn reveals to us the conception which the writer entertained of the character and functions of the two goddesses: their natural shapes stand out sharply enough under the thin veil of poetical imagery. The youthful Persephone, so runs the tale, was gathering roses and lilies, crocuses and violets, hyacinths and narcissuses in a lush meadow, when the earth gaped and Pluto, lord of the Dead, issuing from the abyss carried her off on his golden car to be his bride and queen in the gloomy subterranean world. Her sorrowing mother Demeter, with her yellow tresses veiled in a dark mourning mantle, sought her over land and sea, and learning from the Sun her daughter's fate she withdrew in high dudgeon from the gods and took up her abode at Eleusis, where she presented herself to the king's daughters in the guise of an old woman, sitting sadly under the shadow of an olive tree beside the Maiden's Well, to which the damsels had come to draw water in bronze pitchers for their father's house. In her wrath at her bereavement the goddess suffered not the seed to grow in the earth but kept it hidden under ground, and she vowed that never would she set foot on Olympus and never would she let the corn sprout till her lost daughter should be restored to her. Vainly the oxen dragged the ploughs to and fro in the fields; vainly the sower dropped the barley seed in the brown furrows; nothing came up from the parched and crumbling soil. Even the Rarian plain near Eleusis, which was wont to wave with yellow harvests, lay bare and fallow. Mankind would have perished of hunger and the gods would have been robbed of the sacrifices which were their due, if Zeus in alarm had not commanded Pluto to disgorge his prey, to restore his bride Persephone to her mother Demeter. The grim lord of the Dead smiled and obeyed, but before he sent back his queen to the upper air on a golden car, he gave her the seed of a pomegranate to eat, which ensured that she would return to him. But Zeus stipulated that henceforth Persephone should spend two thirds of every year with her mother and the gods in the upper world and one third of the year with her husband in the nether world, from which she was to return year by year when the earth was gay with spring flowers. Gladly the daughter then returned to the sunshine, gladly her mother received her and fell upon her neck; and in her joy at recovering the lost one Demeter made the corn to sprout from the clods of the ploughed fields and all the broad earth to be heavy with leaves

and blossoms. And straightway she went and shewed this happy sight to the princes of Eleusis, to Triptolemus, Eumolpus, Diocles, and to the king Celeus himself, and moreover she revealed to them her sacred rites and mysteries. Blessed, says the poet, is the mortal man who has seen these things, but he who has had no share of them in life will never be happy in death when he has descended into the darkness of the grave. So the two goddesses departed to dwell in bliss with the gods on Olympus; and the bard ends the hymn with a pious prayer to Demeter and Persephone that they would be pleased to grant him a livelihood in return for his song.

It has been generally recognised, and indeed it seems scarcely open to doubt, that the main theme which the poet set before himself in composing this hymn was to describe the traditional foundation of the Eleusinian mysteries by the goddess Demeter. The whole poem leads up to the transformation scene in which the bare leafless expanse of the Eleusinian plain is suddenly turned, at the will of the goddess, into a vast sheet of ruddy corn; the beneficent deity takes the princes of Eleusis, shews them what she has done, teaches them her mystic rites, and vanishes with her daughter to heaven. The revelation of the mysteries is the triumphal close of the piece. This conclusion is confirmed by a more minute examination of the poem, which proves that the poet has given, not merely a general account of the foundation of the mysteries, but also in more or less veiled language mythical explanations of the origin of particular rites which we have good reason to believe formed essential features of the festival. Amongst the rites as to which the poet thus drops significant hints are the preliminary fast of the candidates for initiation, the torchlight procession, the all-night vigil, the sitting of the candidates, veiled and in silence, on stools covered with sheepskins, the use of scurrilous language, the breaking of ribald jests, and the solemn communion with the divinity by participation in a draught of barley-water from a holy chalice.

But there is yet another and a deeper secret of the mysteries which the author of the poem appears to have divulged under cover of his narrative. He tells us how, as soon as she had transformed the barren brown expanse of the Eleusinian plain into a field of golden grain, she gladdened the eyes of Triptolemus and the other Eleusinian princes by shewing them the growing or standing corn. When we compare this part of the story with the statement of a Christian writer of the second century, Hippolytus, that the very heart of the mysteries consisted in shewing to the initiated a reaped ear of corn, we can hardly doubt that the poet of the hymn was well acquainted with this solemn rite, and that he deliberately intended to explain its origin in precisely the same way as he explained other rites of the mysteries, namely by representing Demeter as having set the example of performing the ceremony in her own person. Thus myth and ritual mutually explain and confirm each other. The poet of the seventh century before our era gives us the myth—he could not without sacrilege have revealed the ritual: the Christian father reveals the ritual, and his revelation accords perfectly with the veiled hint of the old poet. On the whole, then, we may, with many modern scholars, confidently accept the statement of the learned Christian father Clement of Alexandria, that the myth of Demeter and Persephone was acted as a sacred drama in the mysteries of Eleusis.

But if the myth was acted as a part, perhaps as the principal part, of the most famous and solemn religious rites of ancient Greece, we have still to enquire, What was, after all, stripped of later accretions, the original kernel of the myth which appears to later ages surrounded and transfigured by an aureole of awe and mystery, lit up by some of the most brilliant rays of Grecian literature and art? If we follow the indications given by our oldest literary authority on the subject, the author of the Homeric hymn to Demeter, the riddle is not hard to read; the figures of the two goddesses, the mother and the daughter, resolve themselves into personifications of the corn. At least this appears to be fairly certain for the daughter Persephone. The goddess who spends three or, according to another version of the myth, six

months of every year with the dead under ground and the remainder of the year with the living above ground; in whose absence the barley seed is hidden in the earth and the fields lie bare and fallow; on whose return in spring to the upper world the corn shoots up from the clods and the earth is heavy with leaves and blossoms—this goddess can surely be nothing else than a mythical embodiment of the vegetation, and particularly of the corn, which is buried under the soil for some months of every winter and comes to life again, as from the grave, in the sprouting cornstalks and the opening flowers and foliage of every spring. No other reasonable and probable explanation of Persephone seems possible. And if the daughter goddess was a personification of the young corn of the present year, may not the mother goddess be a personification of the old corn of last year, which has given birth to the new crops? The only alternative to this view of Demeter would seem to be to suppose that she is a personification of the earth, from whose broad bosom the corn and all other plants spring up, and of which accordingly they may appropriately enough be regarded as the daughters. This view of the original nature of Demeter has indeed been taken by some writers, both ancient and modern, and it is one which can be reasonably maintained. But it appears to have been rejected by the author of the Homeric hymn to Demeter, for he not only distinguishes Demeter from the personified Earth but places the two in the sharpest opposition to each other. He tells us that it was Earth who, in accordance with the will of Zeus and to please Pluto, lured Persephone to her doom by causing the narcissuses to grow which tempted the young goddess to stray far beyond the reach of help in the lush meadow. Thus Demeter of the hymn, far from being identical with the Earth-goddess, must have regarded that divinity as her worst enemy, since it was to her insidious wiles that she owed the loss of her daughter. But if the Demeter of the hymn cannot have been a personification of the earth, the only alternative apparently is to conclude that she was a personification of the corn.

With this conclusion all the indications of the hymn-writer seem to harmonise. He certainly represents Demeter as the goddess by whose power and at whose pleasure the corn either grows or remains hidden in the ground; and to what deity can such powers be so fittingly ascribed as to the goddess of the corn? He calls Demeter yellow and tells how her yellow tresses flowed down on her shoulders; could any colour be more appropriate with which to paint the divinity of the yellow grain? The same identification of Demeter with the ripe, the yellow corn is made even more clearly by a still older poet, Homer himself, or at all events the author of the fifth book of the *Iliad*. There we read: “And even as the wind carries the chaff about the sacred threshing-floors, when men are winnowing, what time yellow Demeter sifts the corn from the chaff on the hurrying blast, so that the heaps of chaff grow white below, so were the Achaeans whitened above by the cloud of dust which the hoofs of the horses spurned to the brazen heaven.” Here the yellow Demeter who sifts the grain from the chaff at the threshing-floor can hardly be any other than the goddess of the yellow corn; she cannot be the Earth-goddess, for what has the Earth-goddess to do with the grain and the chaff blown about a threshing-floor? With this interpretation it agrees that elsewhere Homer speaks of men eating “Demeter's corn”; and still more definitely Hesiod speaks of “the annual store of food, which the earth bears, Demeter's corn,” thus distinguishing the goddess of the corn from the earth which bears it. Still more clearly does a later Greek poet personify the corn as Demeter when, in allusion to the time of the corn-reaping, he says that then “the sturdy swains cleave Demeter limb from limb.” And just as the ripe or yellow corn was personified as the Yellow Demeter, so the unripe or green corn was personified as the Green Demeter. In that character the goddess had sanctuaries at Athens and other places; sacrifices were appropriately offered to Green Demeter in spring when the earth was growing green with the fresh vegetation, and the victims included sows big with young, which no doubt were intended not merely to symbolise but magically to promote the abundance of the crops.

In Greek the various kinds of corn were called by the general name of "Demeter's fruits," just as in Latin they were called the "fruits or gifts of Ceres," an expression which survives in the English word cereals. Tradition ran that before Demeter's time men neither cultivated corn nor tilled the ground, but roamed the mountains and woods in search of the wild fruits which the earth produced spontaneously from her womb for their subsistence. The tradition clearly implies not only that Demeter was the goddess of the corn, but that she was different from and younger than the goddess of the Earth, since it is expressly affirmed that before Demeter's time the earth existed and supplied mankind with nourishment in the shape of wild herbs, grasses, flowers and fruits.

In ancient art Demeter and Persephone are characterised as goddesses of the corn by the crowns of corn which they wear on their heads and by the stalks of corn which they hold in their hands. Theocritus describes a smiling image of Demeter standing by a heap of yellow grain on a threshing-floor and grasping sheaves of barley and poppies in both her hands. Indeed corn and poppies singly or together were a frequent symbol of the goddess, as we learn not only from the testimony of ancient writers but from many existing monuments of classical art. The naturalness of the symbol can be doubted by no one who has seen—and who has not seen?—a field of yellow corn bespangled thick with scarlet poppies; and we need not resort to the shifts of an ancient mythologist, who explained the symbolism of the poppy in Demeter's hand by comparing the globular shape of the poppy to the roundness of our globe, the unevenness of its edges to hills and valleys, and the hollow interior of the scarlet flower to the caves and dens of the earth. If only students would study the little black and white books of men less and the great rainbow-tinted book of nature more; if they would more frequently exchange the heavy air and the dim light of libraries for the freshness and the sunshine of the open sky; if they would oftener unbend their minds by rural walks between fields of waving corn, beside rivers rippling by under grey willows, or down green lanes, where the hedges are white with the hawthorn bloom or red with wild roses, they might sometimes learn more about primitive religion than can be gathered from many dusty volumes, in which wire-drawn theories are set forth with all the tedious parade of learning.

Nowhere, perhaps, in the monuments of Greek art is the character of Persephone as a personification of the young corn sprouting in spring portrayed more gracefully and more truly than on a coin of Lampsacus of the fourth century before our era. On it we see the goddess in the very act of rising from the earth. "Her face is upraised; in her hand are three ears of corn, and others together with grapes are springing behind her shoulder. Complete is here the identification of the goddess and her attribute: she is embowered amid the ears of growing corn, and like it half buried in the ground. She does not make the corn and vine grow, but she *is* the corn and vine growing, and returning again to the face of the earth after lying hidden in its depths. Certainly the artist who designed this beautiful figure thoroughly understood Hellenic religion."

As the goddess who first bestowed corn on mankind and taught them to sow and cultivate it, Demeter was naturally invoked and propitiated by farmers before they undertook the various operations of the agricultural year. In autumn, when he heard the sonorous trumpeting of the cranes, as they winged their way southward in vast flocks high overhead, the Greek husbandman knew that the rains were near and that the time of ploughing was at hand; but before he put his hand to the plough he prayed to Underground Zeus and to Holy Demeter for a heavy crop of Demeter's sacred corn. Then he guided the ox-drawn plough down the field, turning up the brown earth with the share, while a swain followed close behind with a hoe, who covered up the seed as fast as it fell to protect it from the voracious birds that fluttered and twittered at the plough-tail. But while the ordinary Greek farmer took the signal for ploughing from the clangour of the cranes, Hesiod and other writers who aimed

at greater exactness laid it down as a rule that the ploughing should begin with the autumnal setting of the Pleiades in the morning, which in Hesiod's time fell on the twenty-sixth of October. The month in which the Pleiades set in the morning was generally recognised by the Greeks as the month of sowing; it corresponded apparently in part to our October, in part to our November. The Athenians called it Pyanepsion; the Boeotians named it significantly Damatrius, that is, Demeter's month, and they celebrated a feast of mourning because, says Plutarch, who as a Boeotian speaks with authority on such a matter, Demeter was then in mourning for the descent of Persephone. Is it possible to express more clearly the true original nature of Persephone as the corn-seed which has just been buried in the earth? The obvious, the almost inevitable conclusion did not escape Plutarch. He tells us that the mournful rites which were held at the time of the autumn sowing nominally commemorated the actions of deities, but that the real sadness was for the fruits of the earth, some of which at that season dropped of themselves and vanished from the trees, while others in the shape of seed were committed with anxious thoughts to the ground by men, who scraped the earth and then huddled it up over the seed, just as if they were burying and mourning for the dead. Surely this interpretation of the custom and of the myth of Persephone is not only beautiful but true.

And just as the Greek husbandman prayed to the Corn Goddess when he committed the seed, with anxious forebodings, to the furrows, so after he had reaped the harvest and brought back the yellow sheaves with rejoicing to the threshing-floor, he paid the bountiful goddess her dues in the form of a thank-offering of golden grain. Theocritus has painted for us in glowing colours a picture of a rustic harvest-home, as it fell on a bright autumn day some two thousand years ago in the little Greek island of Cos. The poet tells us how he went with two friends from the city to attend a festival given by farmers, who were offering first-fruits to Demeter from the store of barley with which she had filled their barns. The day was warm, indeed so hot that the very lizards, which love to bask and run about in the sun, were slumbering in the crevices of the stone-walls, and not a lark soared carolling into the blue vault of heaven. Yet despite the great heat there were everywhere signs of autumn. "All things," says the poet, "smelt of summer, but smelt of autumn too." Indeed the day was really autumnal; for a goat-herd who met the friends on their way to the rural merry-making, asked them whether they were bound for the treading of the grapes in the wine-presses. And when they had reached their destination and reclined at ease in the dappled shade of over-arching poplars and elms, with the babble of a neighbouring fountain, the buzz of the cicadas, the hum of bees, and the cooing of doves in their ears, the ripe apples and pears rolled in the grass at their feet and the branches of the wild-plum trees were bowed down to the earth with the weight of their purple fruit. So couched on soft beds of fragrant lentisk they passed the sultry hours singing ditties alternately, while a rustic image of Demeter, to whom the honours of the day were paid, stood smiling beside a heap of yellow grain on the threshing-floor, with corn-stalks and poppies in her hands.

In this description the time of year when the harvest-home was celebrated is clearly marked. Apart from the mention of the ripe apples, pears, and plums, the reference to the treading of the grapes is decisive. The Greeks gather and press the grapes in the first half of October, and accordingly it is to this date that the harvest-festival described by Theocritus must be assigned. At the present day in Greece the maize-harvest immediately precedes the vintage, the grain being reaped and garnered at the end of September. Travelling in rural districts of Argolis and Arcadia at that time of the year you pass from time to time piles of the orange-coloured cobs laid up ready to be shelled, or again heaps of the yellow grain beside the pods. But maize was unknown to the ancient Greeks, who, like their modern descendants, reaped their wheat and barley crops much earlier in the summer, usually from the end of April till

June. However, we may conclude that the day immortalised by Theocritus was one of those autumn days of great heat and effulgent beauty which in Greece may occur at any time up to the very verge of winter. I remember such a day at Panopeus on the borders of Phocis and Boeotia. It was the first of November, yet the sun shone in cloudless splendour and the heat was so great, that when I had examined the magnificent remains of ancient Greek fortification-walls which crown the summit of the hill, it was delicious to repose on a grassy slope in the shade of some fine holly-oaks and to inhale the sweet scent of the wild thyme, which perfumed all the air. But it was summer's farewell. Next morning the weather had completely changed. A grey November sky lowered sadly overhead, and grey mists hung like winding-sheets on the lower slopes of the barren mountains which shut in the fatal plain of Chaeronea.

Thus we may infer that in the rural districts of ancient Greece farmers offered their first-fruits of the barley harvest to Demeter in autumn about the time when the grapes were being trodden in the wine-presses and the ripe apples and pears littered the ground in the orchards. At first sight the lateness of the festival in the year is surprising; for in the lowlands of Greece at the present day barley is reaped at the end of April and wheat in May, and in antiquity the time of harvest would seem not to have been very different, for Hesiod bids the husbandman put the sickle to the corn at the morning rising of the Pleiades, which in his time took place on the eleventh of May. But if the harvest was reaped in spring or early summer, why defer the offerings of corn to the Corn Goddess until the middle of autumn? The reason for the delay is not, so far as I am aware, explained by any ancient author, and accordingly it must remain for us a matter of conjecture. I surmise that the reason may have been a calculation on the part of the practical farmer that the best time to propitiate the Corn Goddess was not after harvest, when he had got all that was to be got out of her, but immediately before ploughing and sowing, when he had everything to hope from her good-will and everything to fear from her displeasure. When he had reaped his corn, and the sheaves had been safely garnered in his barns, he might, so to say, snap his fingers at the Corn Goddess. What could she do for him on the bare stubble-field which lay scorched and baking under the fierce rays of the sun all the long rainless summer through? But matters wore a very different aspect when, with the shortening and cooling of the days, he began to scan the sky for clouds and to listen for the cries of the cranes as they flew southward, heralding by their trumpet-like notes the approach of the autumnal rains. Then he knew that the time had come to break up the ground that it might receive the seed and be fertilised by the refreshing water of heaven; then he bethought him of the Corn Goddess once more and brought forth from the grange a share of the harvested corn with which to woo her favour and induce her to quicken the grain which he was about to commit to the earth. On this theory the Greek offering of first-fruits was prompted not so much by gratitude for past favours as by a shrewd eye to favours to come, and perhaps this interpretation of the custom does no serious injustice to the cool phlegmatic temper of the bucolic mind, which is more apt to be moved by considerations of profit than by sentiment. At all events the reasons suggested for delaying the harvest-festival accord perfectly with the natural conditions and seasons of farming in Greece. For in that country the summer is practically rainless, and during the long months of heat and drought the cultivation of the two ancient cereals, barley and wheat, is at a standstill. The first rains of autumn fall about the middle of October, and that was the Greek farmer's great time for ploughing and sowing. Hence we should expect him to make his offering of first-fruits to the Corn Goddess shortly before he ploughed and sowed, and this expectation is entirely confirmed by the date which we have inferred for the offering from the evidence of Theocritus. Thus the sacrifice of barley to Demeter in the autumn would seem to have been not so much a thank-offering as a bribe judiciously administered to her at the very moment of all the year when her services were most urgently wanted.

When with the progress of civilisation a number of petty agricultural communities have merged into a single state dependent for its subsistence mainly on the cultivation of the ground, it commonly happens that, though every farmer continues to perform for himself the simple old rites designed to ensure the blessing of the gods on his crops, the government undertakes to celebrate similar, though more stately and elaborate, rites on behalf of the whole people, lest the neglect of public worship should draw down on the country the wrath of the offended deities. Hence it comes about that, for all their pomp and splendour, the national festivals of such states are often merely magnified and embellished copies of homely rites and uncouth observances carried out by rustics in the open fields, in barns, and on threshing-floors. In ancient Egypt the religion of Isis and Osiris furnishes examples of solemnities which have been thus raised from the humble rank of rural festivities to the dignity of national celebrations; and in ancient Greece a like development may be traced in the religion of Demeter. If the Greek ploughman prayed to Demeter and Underground Zeus for a good crop before he put his hand to the plough in autumn, the authorities of the Athenian state celebrated about the same time and for the same purpose a public festival in honour of Demeter at Eleusis. It was called the Proerosia, which signifies "Before the Ploughing"; and as the festival was dedicated to her, Demeter herself bore the name of Proerosia. Tradition ran that once on a time the whole world was desolated by a famine, and that to remedy the evil the Pythian oracle bade the Athenians offer the sacrifice of the Proerosia on behalf of all men. They did so, and the famine ceased accordingly. Hence to testify their gratitude for the deliverance people sent the first-fruits of their harvest from all quarters to Athens.

But the exact date at which the Proerosia or Festival before Ploughing took place is somewhat uncertain, and enquirers are divided in opinion as to whether it fell before or after the Great Mysteries, which began on the fifteenth or sixteenth of Boedromion, a month corresponding roughly to our September. Another name for the festival was Proarcturia, that is, "Before Arcturus," which points to a date either before the middle of September, when Arcturus is a morning star, or before the end of October, when Arcturus is an evening star. In favour of the earlier date it may be said, first, that the morning phase of Arcturus was well known and much observed, because it marked the middle of autumn, whereas little use was made of the evening phase of Arcturus for the purpose of dating; and, second, that in an official Athenian inscription the Festival before Ploughing (*Proerosia*) is mentioned immediately before the Great Mysteries. On the other hand, in favour of the later date, it may be said that as the autumnal rains in Greece set in about the middle of October, the latter part of that month would be a more suitable time for a ceremony at the opening of ploughing than the middle of September, when the soil is still parched with the summer drought; and, second, that this date is confirmed by a Greek inscription of the fourth or third century b.c., found at Eleusis, in which the Festival before Ploughing is apparently mentioned in the month of Pyanepsion immediately before the festival of the Pyanepsia, which was held on the seventh day of that month. It is difficult to decide between these conflicting arguments, but on the whole I incline, not without hesitation, to agree with some eminent modern authorities in placing the Festival before Ploughing in Pyanepsion (October) after the Mysteries, rather than in Boedromion (September) before the Mysteries. However, we must bear in mind that as the Attic months, like the Greek months generally, were lunar, their position in the solar year necessarily varied from year to year, and though these variations were periodically corrected by intercalation, nevertheless the beginning of each Attic month sometimes diverged by several weeks from the beginning of the corresponding month to which we equate it. From this it follows that the Great Mysteries, which were always dated by the calendar month, must have annually shifted their place somewhat in the solar year; whereas the Festival before Ploughing, if it was indeed dated either by the morning or by the evening phase of Arcturus,

must have occupied a fixed place in the solar year. Hence it appears to be not impossible that the Great Mysteries, oscillating to and fro with the inconstant moon, may sometimes have fallen before and sometimes after the Festival before Ploughing, which apparently always remained true to the constant star. At least this possibility, which seems to have been overlooked by previous enquirers, deserves to be taken into account. It is a corollary from the shifting dates of the lunar months that the official Greek calendar, in spite of its appearance of exactness, really furnished the ancient farmer with little trustworthy guidance as to the proper seasons for conducting the various operations of agriculture; and he was well advised in trusting to various natural timekeepers, such as the rising and setting of the constellations, the arrival and departure of the migratory birds, the flowering of certain plants, the ripening of fruits, and the setting in of the rains, rather than to the fallacious indications of the public calendar. It is by natural timekeepers, and not by calendar months, that Hesiod determines the seasons of the farmer's year in the poem which is the oldest existing treatise on husbandry.

Just as the ploughman's prayer to Demeter, before he drove the share through the clods of the field, was taken up and reverberated, so to say, with a great volume of sound in the public prayers which the Athenian state annually offered to the goddess before the ploughing on behalf of the whole world, so the simple first-fruits of barley, presented to the rustic Demeter under the dappled shade of rustling poplars and elms on the threshing-floor in Cos, were repeated year by year on a grander scale in the first-fruits of the barley and wheat harvest, which were presented to the Corn Mother and the Corn Maiden at Eleusis, not merely by every husbandman in Attica, but by all the allies and subjects of Athens far and near, and even by many free Greek communities beyond the sea. The reason why year by year these offerings of grain poured from far countries into the public granaries at Eleusis, was the widespread belief that the gift of corn had been first bestowed by Demeter on the Athenians and afterwards disseminated by them among all mankind through the agency of Triptolemus, who travelled over the world in his dragon-drawn car teaching all peoples to plough the earth and to sow the seed. In the fifth century before our era the legend was celebrated by Sophocles in a play called *Triptolemus*, in which he represented Demeter instructing the hero to carry the seed of the fruits which she had bestowed on men to all the coasts of Southern Italy, from which we may infer that the cities of Magna Graecia were among the number of those that sent the thank-offering of barley and wheat every year to Athens. Again, in the fourth century before our era Xenophon represents Callias, the braggart Eleusinian Torchbearer, addressing the Lacedaemonians in a set speech, in which he declared that "Our ancestor Triptolemus is said to have bestowed the seed of Demeter's corn on the Peloponese before any other land. How then," he asked with pathetic earnestness, "can it be right that you should come to ravage the corn of the men from whom you received the seed?" Again, writing in the fourth century before our era Isocrates relates with a swell of patriotic pride how, in her search for her lost daughter Persephone, the goddess Demeter came to Attica and gave to the ancestors of the Athenians the two greatest of all gifts, the gift of the corn and the gift of the mysteries, of which the one reclaimed men from the life of beasts and the other held out hopes to them of a blissful eternity beyond the grave. The antiquity of the tradition, the orator proceeds to say, was no reason for rejecting it, but quite the contrary it furnished a strong argument in its favour, for what many affirmed and all had heard might be accepted as trustworthy. "And moreover," he adds, "we are not driven to rest our case merely on the venerable age of the tradition; we can appeal to stronger evidence in its support. For most of the cities send us every year the first-fruits of the corn as a memorial of that ancient benefit, and when any of them have failed to do so the Pythian priestess has commanded them to send the due portions of the fruits and to act towards our city according to ancestral custom. Can anything be supported by stronger evidence than by the oracle of god, the assent of many Greeks, and the harmony of ancient legend with the deeds of to-day?"

This testimony of Isocrates to the antiquity both of the legend and of the custom might perhaps have been set aside, or at least disparaged, as the empty bombast of a wordy rhetorician, if it had not happened by good chance to be amply confirmed by an official decree of the Athenian people passed in the century before Isocrates wrote. The decree was found inscribed on a stone at Eleusis and is dated by scholars in the latter half of the fifth century before our era, sometime between 446 and 420 b.c. It deals with the first-fruits of barley and wheat which were offered to the Two Goddesses, that is, to Demeter and Persephone, not only by the Athenians and their allies but by the Greeks in general. It prescribes the exact amount of barley and wheat which was to be offered by the Athenians and their allies, and it directs the highest officials at Eleusis, namely the Hierophant and the Torchbearer, to exhort the other Greeks at the mysteries to offer likewise of the first-fruits of the corn. The authority alleged in the decree for requiring or inviting offerings of first-fruits alike from Athenians and from foreigners is ancestral custom and the bidding of the Delphic oracle. The Senate is further enjoined to send commissioners, so far as it could be done, to all Greek cities whatsoever, exhorting, though not commanding, them to send the first-fruits in compliance with ancestral custom and the bidding of the Delphic oracle, and the state officials are directed to receive the offerings from such states in the same manner as the offerings of the Athenians and their allies. Instructions are also given for the building of three subterranean granaries at Eleusis, where the contributions of grain from Attica were to be stored. The best of the corn was to be offered in sacrifice as the Eumolpids might direct: oxen were to be bought and sacrificed, with gilt horns, not only to the two Goddesses but also to the God (Pluto), Triptolemus, Eubulus, and Athena; and the remainder of the grain was to be sold and with the produce votive offerings were to be dedicated with inscriptions setting forth that they had been dedicated from the offerings of first-fruits, and recording the names of all the Greeks who sent the offerings to Eleusis. The decree ends with a prayer that all who comply with these injunctions or exhortations and render their dues to the city of Athens and to the Two Goddesses, may enjoy prosperity together with good and abundant crops. Writing in the second century of our era, under the Roman empire, the rhetorician Aristides records the custom which the Greeks observed of sending year by year the first-fruits of the harvest to Athens in gratitude for the corn, but he speaks of the practice as a thing of the past.

We may suspect that the tribute of corn ceased to flow from far countries to Athens, when, with her falling fortunes and decaying empire, her proud galleys had ceased to carry the terror of the Athenian arms into distant seas. But if the homage was no longer paid in the substantial shape of cargoes of grain, it continued down to the latest days of paganism to be paid in the cheaper form of gratitude for that inestimable benefit, which the Athenians claimed to have received from the Corn Goddess and to have liberally communicated to the rest of mankind. Even the Sicilians, who, inhabiting a fertile corn-growing island, worshipped Demeter and Persephone above all the gods and claimed to have been the first to receive the gift of the corn from the Corn Goddess, nevertheless freely acknowledged that the Athenians had spread, though they had not originated, the useful discovery among the nations. Thus the patriotic Sicilian historian Diodorus, while giving the precedence to his fellow-countrymen, strives to be just to the Athenian pretensions in the following passage. "Mythologists," says he, "relate that Demeter, unable to find her daughter, lit torches at the craters of Etna and roamed over many parts of the world. Those people who received her best she rewarded by giving them in return the fruit of the wheat; and because the Athenians welcomed her most kindly of all, she bestowed the fruit of the wheat on them next after the Sicilians. Wherefore that people honoured the goddess more than any other folk by magnificent sacrifices and the mysteries at Eleusis, which for their extreme antiquity and sanctity have become famous among all men. From the Athenians many others received the boon of the corn and shared the seed with their neighbours, till they filled the whole inhabited

earth with it. But as the people of Sicily, on account of the intimate relation in which they stood to Demeter and the Maiden, were the first to participate in the newly discovered corn, they appointed sacrifices and popular festivities in honour of each of the two goddesses, naming the celebrations after them and signifying the nature of the boons they had received by the dates of the festivals. For they celebrated the bringing home of the Maiden at the time when the corn was ripe, performing the sacrifice and holding the festivity with all the solemnity and zeal that might be reasonably expected of men who desired to testify their gratitude for so signal a gift bestowed on them before all the rest of mankind. But the sacrifice to Demeter they assigned to the time when the sowing of the corn begins; and for ten days they hold a popular festivity which bears the name of the goddess, and is remarkable as well for the magnificence of its pomp as for the costumes then worn in imitation of the olden time. During these days it is customary for people to rail at each other in foul language, because when Demeter was mourning for the rape of the Maiden she laughed at a ribald jest." Thus despite his natural prepossession in favour of his native land, Diodorus bears testimony both to the special blessing bestowed on the Athenians by the Corn Goddess, and to the generosity with which they had imparted the blessing to others, until it gradually spread to the ends of the earth. Again, Cicero, addressing a Roman audience, enumerates among the benefits which Athens was believed to have conferred on the world, the gift of the corn and its origin in Attic soil; and the cursory manner in which he alludes to it seems to prove that the tradition was familiar to his hearers. Four centuries later the rhetorician Himerius speaks of Demeter's gift of the corn and the mysteries to the Athenians as the source of the first and greatest service rendered by their city to mankind; so ancient, widespread, and persistent was the legend which ascribed the origin of the corn to the goddess Demeter and associated it with the institution of the Eleusinian mysteries. No wonder that the Delphic oracle called Athens "the Metropolis of the Corn."

From the passage of Diodorus which I have quoted we learn that the Sicilians celebrated the festival of Demeter at the beginning of sowing, and the festival of Persephone at harvest. This proves that they associated, if they did not identify, the Mother Goddess with the seed-corn and the Daughter Goddess with the ripe ears. Could any association or identification be more easy and obvious to people who personified the processes of nature under the form of anthropomorphic deities? As the seed brings forth the ripe ear, so the Corn Mother Demeter gave birth to the Corn Daughter Persephone. It is true that difficulties arise when we attempt to analyse this seemingly simple conception. How, for example, are we to divide exactly the two persons of the divinity? At what precise moment does the seed cease to be the Corn Mother and begins to burgeon out into the Corn Daughter? And how far can we identify the material substance of the barley and wheat with the divine bodies of the Two Goddesses? Questions of this sort probably gave little concern to the sturdy swains who ploughed, sowed, and reaped the fat fields of Sicily. We cannot imagine that their night's rest was disturbed by uneasy meditations on these knotty problems. It would hardly be strange if the muzzy mind of the Sicilian bumpkin, who looked with blind devotion to the Two Goddesses for his daily bread, totally failed to distinguish Demeter from the seed and Persephone from the ripe sheaves, and if he accepted implicitly the doctrine of the real presence of the divinities in the corn without discriminating too curiously between the material and the spiritual properties of the barley or the wheat. And if he had been closely questioned by a rigid logician as to the exact distinction to be drawn between the two persons of the godhead who together represented for him the annual vicissitudes of the cereals, Hodge might have scratched his head and confessed that it puzzled him to say where precisely the one goddess ended and the other began, or why the seed buried in the ground should figure at one time as the dead daughter Persephone descending into the nether world, and at another as the living Mother

Demeter about to give birth to next year's crop. Theological subtleties like these have posed longer heads than are commonly to be found on bucolic shoulders.

The time of year at which the first-fruits were offered to Demeter and Persephone at Eleusis is not explicitly mentioned by ancient authorities, and accordingly no inference can be drawn from the date of the offering as to its religious significance. It is true that at the Eleusinian mysteries the Hierophant and Torchbearer publicly exhorted the Greeks in general, as distinguished from the Athenians and their allies, to offer the first-fruits in accordance with ancestral custom and the bidding of the Delphic oracle. But there is nothing to shew that the offerings were made immediately after the exhortation. Nor does any ancient authority support the view of a modern scholar that the offering of the first-fruits, or a portion of them, took place at the Festival before Ploughing (*Proerosia*), though that festival would no doubt be an eminently appropriate occasion for propitiating with such offerings the goddess on whose bounty the next year's crop was believed to depend.

On the other hand, we are positively told that the first-fruits were carried to Eleusis to be used at the Festival of the Threshing-floor (*Haloo*). But the statement, cursorily reported by writers of no very high authority, cannot be implicitly relied upon; and even if it could, we should hardly be justified in inferring from it that all the first-fruits of the corn were offered to Demeter and Persephone at this festival. Be that as it may, the Festival of the Threshing-floor was intimately connected with the worship both of Demeter and of Dionysus, and accordingly it deserves our attention. It is said to have been sacred to both these deities; and while the name seems to connect it rather with the Corn Goddess than with the Wine God, we are yet informed that it was held by the Athenians on the occasion of the pruning of the vines and the tasting of the stored-up wine. The festival is frequently mentioned in Eleusinian inscriptions, from some of which we gather that it included sacrifices to the two goddesses and a so-called Ancestral Contest, as to the nature of which we have no information. We may suppose that the festival or some part of it was celebrated on the Sacred Threshing-floor of Triptolemus at Eleusis; for as Triptolemus was the hero who is said to have diffused the knowledge of the corn all over the world, nothing could be more natural than that the Festival of the Threshing-floor should be held on the sacred threshing-floor which bore his name. As for Demeter, we have already seen how intimate was her association with the threshing-floor and the operation of threshing; according to Homer, she is the yellow goddess who parts the yellow grain from the white chaff at the threshing, and in Cos her image with the corn-stalks and the poppies in her hands stood on the threshing-floor. The festival lasted one day, and no victims might be sacrificed at it; but special use was made, as we have seen, of the first-fruits of the corn. With regard to the dating of the festival we are informed that it fell in the month Poseideon, which corresponds roughly to our December, and as the date rests on the high authority of the ancient Athenian antiquary Philochorus, and is, moreover, indirectly confirmed by inscriptional evidence, we are bound to accept it. But it is certainly surprising to find a Festival of the Threshing-floor held so late in the year, long after the threshing, which in Greece usually takes place not later than midsummer, though on high ground in Crete it is sometimes prolonged till near the end of August. We seem bound to conclude that the Festival of the Threshing-floor was quite distinct from the actual threshing of the corn. It is said to have included certain mystic rites performed by women alone, who feasted and quaffed wine, while they broke filthy jests on each other and exhibited cakes baked in the form of the male and female organs of generation. If the latter particulars are correctly reported we may suppose that these indecencies, like certain obscenities which seem to have formed part of the Great Mysteries at Eleusis, were no mere wanton outbursts of licentious passion, but were deliberately practised as rites calculated to promote the fertility of the ground by means of homoeopathic or imitative magic. A like association of what we might

call indecency with rites intended to promote the growth of the crops meets us in the Thesmophoria, a festival of Demeter celebrated by women alone, at which the character of the goddess as a source of fertility comes out clearly in the custom of mixing the remains of the sacrificial pigs with the seed-corn in order to obtain a plentiful crop. We shall return to this festival later on.

Other festivals held at Eleusis in honour of Demeter and Persephone were known as the Green Festival and the Festival of the Cornstalks. Of the manner of their celebration we know nothing except that they comprised sacrifices, which were offered to Demeter and Persephone. But their names suffice to connect the two festivals with the green and the standing corn. We have seen that Demeter herself bore the title of Green, and that sacrifices were offered to her under that title which plainly aimed at promoting fertility. Among the many epithets applied to Demeter which mark her relation to the corn may further be mentioned "Wheat-lover," "She of the Corn," "Sheaf-bearer," "She of the Threshing-floor," "She of the Winnowing-fan," "Nurse of the Corn-ears," "Crowned with Ears of Corn," "She of the Seed," "She of the Green Fruits," "Heavy with Summer Fruits," "Fruit-bearer," "She of the Great Loaf," and "She of the Great Barley Loaf." Of these epithets it may be remarked that though all of them are quite appropriate to a Corn Goddess, some of them would scarcely be applicable to an Earth Goddess and therefore they add weight to the other arguments which turn the scale in favour of the corn as the fundamental attribute of Demeter.

How deeply implanted in the mind of the ancient Greeks was this faith in Demeter as goddess of the corn may be judged by the circumstance that the faith actually persisted among their Christian descendants at her old sanctuary of Eleusis down to the beginning of the nineteenth century. For when the English traveller Dodwell revisited Eleusis, the inhabitants lamented to him the loss of a colossal image of Demeter, which was carried off by Clarke in 1802 and presented to the University of Cambridge, where it still remains. "In my first journey to Greece," says Dodwell, "this protecting deity was in its full glory, situated in the centre of a threshing-floor, amongst the ruins of her temple. The villagers were impressed with a persuasion that their rich harvests were the effect of her bounty, and since her removal, their abundance, as they assured me, has disappeared." Thus we see the Corn Goddess Demeter standing on the threshing-floor of Eleusis and dispensing corn to her worshippers in the nineteenth century of the Christian era, precisely as her image stood and dispensed corn to her worshippers on the threshing-floor of Cos in the days of Theocritus. And just as the people of Eleusis last century attributed the diminution of their harvests to the loss of the image of Demeter, so in antiquity the Sicilians, a corn-growing people devoted to the worship of the two Corn Goddesses, lamented that the crops of many towns had perished because the unscrupulous Roman governor Verres had impiously carried off the image of Demeter from her famous temple at Henna. Could we ask for a clearer proof that Demeter was indeed the goddess of the corn than this belief, held by the Greeks down to modern times, that the corn-crops depended on her presence and bounty and perished when her image was removed?

In a former part of this work I followed an eminent French scholar in concluding, from various indications, that part of the religious drama performed in the mysteries of Eleusis may have been a marriage between the sky-god Zeus and the corn-goddess Demeter, represented by the hierophant and the priestess of the goddess respectively. The conclusion is arrived at by combining a number of passages, all more or less vague and indefinite, of late Christian writers; hence it must remain to some extent uncertain and cannot at the best lay claim to more than a fair degree of probability. It may be, as Professor W. Ridgeway holds, that this dramatic marriage of the god and goddess was an innovation foisted into the Eleusinian Mysteries in that great welter of religions which followed the meeting of the East

and the West in the later ages of antiquity. If a marriage of Zeus and Demeter did indeed form an important feature of the Mysteries in the fifth century before our era, it is certainly remarkable, as Professor Ridgeway has justly pointed out, that no mention of Zeus occurs in the public decree of that century which regulates the offerings of first-fruits and the sacrifices to be made to the gods and goddesses of Eleusis. At the same time we must bear in mind that, if the evidence for the ritual marriage of Zeus and Demeter is late and doubtful, the evidence for the myth is ancient and indubitable. The story was known to Homer, for in the list of beauties to whom he makes Zeus, in a burst of candour, confess that he had lost his too susceptible heart, there occurs the name of "the fair-haired Queen Demeter"; and in another passage the poet represents the jealous god smiting with a thunderbolt the favoured lover with whom the goddess had forgotten her dignity among the furrows of a fallow field. Moreover, according to one tradition, Dionysus himself was the offspring of the intrigue between Zeus and Demeter. Thus there is no intrinsic improbability in the view that one or other of these unedifying incidents in the backstairs chronicle of Olympus should have formed part of the sacred peep-show in the Eleusinian Mysteries. But it seems just possible that the marriage to which the Christian writers allude with malicious joy may after all have been of a more regular and orthodox pattern. We are positively told that the rape of Persephone was acted at the Mysteries; may that scene not have been followed by another representing the solemnisation of her nuptials with her ravisher and husband Pluto? It is to be remembered that Pluto was sometimes known as a god of fertility under the title of Subterranean Zeus. It was to him under that title as well as to Demeter, that the Greek ploughman prayed at the beginning of the ploughing; and the people of Myconus used to sacrifice to Subterranean Zeus and Subterranean Earth for the prosperity of the crops on the twelfth day of the month Lenaeon. Thus it may be that the Zeus whose marriage was dramatically represented at the Mysteries was not the sky-god Zeus, but his brother Zeus of the Underworld, and that the writers who refer to the ceremony have confused the two brothers. This view, if it could be established, would dispose of the difficulty raised by the absence of the name of Zeus in the decree which prescribes the offerings to be made to the gods of Eleusis; for although in that decree Pluto is not mentioned under the name of Subterranean Zeus, he is clearly referred to, as the editors of the inscription have seen, under the vague title of "the God," while his consort Persephone is similarly referred to under the title of "the Goddess," and it is ordained that perfect victims shall be sacrificed to both of them. However, if we thus dispose of one difficulty, it must be confessed that in doing so we raise another. For if the bridegroom in the Sacred Marriage at Eleusis was not the sky-god Zeus, but the earth-god Pluto, we seem driven to suppose that, contrary to the opinion of the reverend Christian scandal-mongers, the bride was his lawful wife Persephone and not his sister and mother-in-law Demeter. In short, on the hypothesis which I have suggested we are compelled to conclude that the ancient busybodies who lifted the veil from the mystic marriage were mistaken as to the person both of the divine bridegroom and of the divine bride. In regard to the bridegroom I have conjectured that they may have confused the two brothers, Zeus of the Upper World and Zeus of the Lower World. In regard to the bride, can any reason be suggested for confounding the persons of the mother and daughter? On the view here taken of the nature of Demeter and Persephone nothing could be easier than to confuse them with each other, for both of them were mythical embodiments of the corn, the mother Demeter standing for the old corn of last year and the daughter Persephone standing for the new corn of this year. In point of fact Greek artists, both of the archaic and of later periods, frequently represent the Mother and Daughter side by side in forms which resemble each other so closely that eminent modern experts have sometimes differed from each other on the question, which is Demeter and which is Persephone; indeed in some cases it might be quite impossible to distinguish the two if it were not for the inscriptions attached to the figures. The ancient sculptors, vase-painters,

and engravers must have had some good reason for portraying the two goddesses in types which are almost indistinguishable from each other; and what better reason could they have had than the knowledge that the two persons of the godhead were one in substance, that they stood merely for two different aspects of the same simple natural phenomenon, the growth of the corn? Thus it is easy to understand why Demeter and Persephone may have been confused in ritual as well as in art, why in particular the part of the divine bride in a Sacred Marriage may sometimes have been assigned to the Mother and sometimes to the Daughter. But all this, I fully admit, is a mere speculation, and I only put it forward as such. We possess far too little information as to a Sacred Marriage in the Eleusinian Mysteries to be justified in speaking with confidence on so obscure a subject.

One thing, however, which we may say with a fair degree of probability is that, if such a marriage did take place at Eleusis, no date in the agricultural year could well have been more appropriate for it than the date at which the Mysteries actually fell, namely about the middle of September. The long Greek summer is practically rainless and in the fervent heat and unbroken drought all nature languishes. The river-beds are dry, the fields parched. The farmer awaits impatiently the setting-in of the autumnal rains, which begin in October and mark the great season for ploughing and sowing. What time could be fitter for celebrating the union of the Corn Goddess with her husband the Earth God or perhaps rather with her paramour the Sky God, who will soon descend in fertilising showers to quicken the seed in the furrows? Such embraces of the divine powers or their human representatives might well be deemed, on the principles of homoeopathic or imitative magic, indispensable to the growth of the crops. At least similar ideas have been entertained and similar customs have been practised by many peoples; and in the legend of Demeter's love-adventure among the furrows of the thrice-ploughed fallow we seem to catch a glimpse of rude rites of the same sort performed in the fields at sowing-time by Greek ploughmen for the sake of ensuring the growth of the seed which they were about to commit to the bosom of the naked earth. In this connexion a statement of ancient writers as to the rites of Eleusis receives fresh significance. We are told that at these rites the worshippers looked up to the sky and cried "Rain!" and then looked down at the earth and cried "Conceive!" Nothing could be more appropriate at a marriage of the Sky God and the Earth or Corn Goddess than such invocations to the heaven to pour down rain and to the earth or the corn to conceive seed under the fertilising shower; in Greece no time could well be more suitable for the utterance of such prayers than just at the date when the Great Mysteries of Eleusis were celebrated, at the end of the long drought of summer and before the first rains of autumn.

Different both from the Great Mysteries and the offerings of first-fruits at Eleusis were the games which were celebrated there on a great scale once in every four years and on a less scale once in every two years. That the games were distinct from the Mysteries is proved by their periods, which were quadriennial and biennial respectively, whereas the Mysteries were celebrated annually. Moreover, in Greek epigraphy, our most authentic evidence in such matters, the games and the Mysteries are clearly distinguished from each other by being mentioned separately in the same inscription. But like the Mysteries the games seem to have been very ancient; for the Parian Chronicler, who wrote in the year 264 b.c., assigns the foundation of the Eleusinian games to the reign of Pandion, the son of Cecrops. However, he represents them as of later origin than the Eleusinian Mysteries, which according to him were instituted by Eumolpus in the reign of Erechtheus, after Demeter had planted corn in Attica and Triptolemus had sown seed in the Rarian plain at Eleusis. This testimony to the superior antiquity of the Mysteries is in harmony with our most ancient authority on the rites of Eleusis, the author of the *Hymn to Demeter*, who describes the origin of the Eleusinian Mysteries, but makes no reference or allusion to the Eleusinian Games. However, the great

age of the games is again vouched for at a much later date by the rhetorician Aristides, who even declares that they were the oldest of all Greek games. With regard to the nature and meaning of the games our information is extremely scanty, but an old scholiast on Pindar tells us that they were celebrated in honour of Demeter and Persephone as a thank-offering at the conclusion of the corn-harvest. His testimony is confirmed by that of the rhetorician Aristides, who mentions the institution of the Eleusinian games in immediate connexion with the offerings of the first-fruits of the corn, which many Greek states sent to Athens; and from an inscription dated about the close of the third century before our era we learn that at the Great Eleusinian Games sacrifices were offered to Demeter and Persephone. Further, we gather from an official Athenian inscription of 329 b.c. that both the Great and the Lesser Games included athletic and musical contests, a horse-race, and a competition which bore the name of the Ancestral or Hereditary Contest, and which accordingly may well have formed the original kernel of the games. Unfortunately nothing is known about this Ancestral Contest. We might be tempted to identify it with the Ancestral Contest included in the Eleusinian Festival of the Threshing-floor, which was probably held on the Sacred Threshing-floor of Triptolemus at Eleusis. If the identification could be proved, we should have another confirmation of the tradition which connects the games with Demeter and the corn; for according to the prevalent tradition it was to Triptolemus that Demeter first revealed the secret of the corn, and it was he whom she sent out as an itinerant missionary to impart the beneficent discovery of the cereals to all mankind and to teach them to sow the seed. On monuments of art, especially in vase-paintings, he is constantly represented along with Demeter in this capacity, holding corn-stalks in his hand and sitting in his car, which is sometimes winged and sometimes drawn by dragons, and from which he is said to have sowed the seed down on the whole world as he sped through the air. At Eleusis victims bought with the first-fruits of the wheat and barley were sacrificed to him as well as to Demeter and Persephone. In short, if we may judge from the combined testimony of Greek literature and art, Triptolemus was the corn-hero first and foremost. Even beyond the limits of the Greek world, all men, we are told, founded sanctuaries and erected altars in his honour because he had bestowed on them the gift of the corn. His very name has been plausibly explained both in ancient and modern times as "Thrice-ploughed" with reference to the Greek custom of ploughing the land thrice a year, and the derivation is said to be on philological principles free from objection. In fact it would seem as if Triptolemus, like Demeter and Persephone themselves, were a purely mythical being, an embodiment of the conception of the first sower. At all events in the local Eleusinian legend, according to an eminent scholar, who has paid special attention to Attic genealogy, "Triptolemus does not, like his comrade Eumolpus or other founders of Eleusinian priestly families, continue his kind, but without leaving offspring who might perpetuate his priestly office, he is removed from the scene of his beneficent activity. As he appeared, so he vanishes again from the legend, after he has fulfilled his divine mission."

However, there is no sufficient ground for identifying the Ancestral Contest of the Eleusinian games with the Ancestral Contest of the Threshing-festival at Eleusis, and accordingly the connexion of the games with the corn-harvest and with the corn-hero Triptolemus must so far remain uncertain. But a clear trace of such a connexion may be seen in the custom of rewarding the victors in the Eleusinian games with measures of barley; in the official Athenian inscription of 329 b.c., which contains the accounts of the superintendents of Eleusis and the Treasurers of the Two Goddesses, the amounts of corn handed over by these officers to the priests and priestesses for the purposes of the games is exactly specified. This of itself is sufficient to prove that the Eleusinian games were closely connected with the worship of Demeter and Persephone. The grain thus distributed in prizes was probably reaped on the Rarian plain near Eleusis, where according to the legend Triptolemus sowed the first

corn. Certainly we know that the barley grown on that plain was used in sacrifices and for the baking of the sacrificial cakes, from which we may reasonably infer that the prizes of barley, to which no doubt a certain sanctity attached in the popular mind, were brought from the same holy fields. So sacred was the Rarian plain that no dead body was allowed to defile it. When such a pollution accidentally took place, it was expiated by the sacrifice of a pig, the usual victim employed in Greek purificatory rites.

Thus, so far as the scanty evidence at our disposal permits us to judge, the Eleusinian games, like the Eleusinian Mysteries, would seem to have been primarily concerned with Demeter and Persephone as goddesses of the corn. At least that is expressly affirmed by the old scholiast on Pindar and it is borne out by the practice of rewarding the victors with measures of barley. Perhaps the Ancestral Contest, which may well have formed the original nucleus of the games, was a contest between the reapers on the sacred Rarian plain to see who should finish his allotted task before his fellows. For success in such a contest no prize could be more appropriate than a measure of the sacred barley which the victorious reaper had just cut on the barley-field. In the sequel we shall see that similar contests between reapers have been common on the harvest fields of modern Europe, and it will appear that such competitions are not purely athletic; their aim is not simply to demonstrate the superior strength, activity, and skill of the victors; it is to secure for the particular farm the possession of the blooming young Corn-maiden of the present year, conceived as the embodiment of the vigorous grain, and to pass on to laggard neighbours the aged Corn-mother of the past year, conceived as an embodiment of the effete and outworn energies of the corn. May it not have been so at Eleusis? may not the reapers have vied with each other for possession of the young corn-spirit Persephone and for avoidance of the old corn-spirit Demeter? may not the prize of barley, which rewarded the victor in the Ancestral Contest, have been supposed to house in the ripe ears no less a personage than the Corn-maiden Persephone herself? And if there is any truth in these conjectures (for conjectures they are and nothing more), we may hazard a guess as to the other Ancestral Contest which took place at the Eleusinian Festival of the Threshing-floor. Perhaps it in like manner was originally a competition between threshers on the sacred threshing-floor of Triptolemus to determine who should finish threshing his allotted quantity of corn before the rest. Such competitions have also been common, as we shall see presently, on the threshing-floors of modern Europe, and their motive again has not been simple emulation between sturdy swains for the reward of strength and dexterity; it has been a dread of being burdened with the aged and outworn spirit of the corn conceived as present in the bundle of corn-stalks which receives the last stroke at threshing. We know that effigies of Demeter with corn and poppies in her hands stood on Greek threshing-floors. Perhaps at the conclusion of the threshing these effigies, as representatives of the old Corn-spirit, were passed on to neighbours who had not yet finished threshing the corn. At least the supposition is in harmony with modern customs observed on the threshing-floor.

It is possible that the Eleusinian games were no more than a popular merrymaking celebrated at the close of the harvest. This view of their character might be supported by modern analogies; for in some parts of Germany it has been customary for the harvesters, when their work is done, to engage in athletic competitions of various kinds, which have at first sight no very obvious connexion with the business of harvesting. For example, at Besbau near Luckau great cakes were baked at the harvest-festival, and the labourers, both men and women, ran races for them. He or she who reached them first received not only a cake, but a handkerchief or the like as a prize. Again, at Bergkirchen, when the harvest was over, a garland was hung up and the harvesters rode at it on horseback and tried to bring it down with a stab or a blow as they galloped past. He who succeeded in bringing it down was proclaimed King. Again, in the villages near Fürstenwald at harvest the young men used to fetch a fir-tree from the wood,

peel the trunk, and set it up like a mast in the middle of the village. A handkerchief and other prizes were fastened to the top of the pole and the men clambered up for them. Among the peasantry of Silesia, we are told, the harvest-home broadened out into a popular festival, in which athletic sports figured prominently. Thus, for example, at Järischau, in the Strehlitz district, a scythe, a rake, a flail, and a hay-fork or pitchfork were fastened to the top of a smooth pole and awarded as prizes, in order of merit, to the men who displayed most agility in climbing the pole. Younger men amused themselves with running in sacks, high jumps, and so forth. At Prauss, near Nimptsch, the girls ran a race in a field for aprons as prizes. In the central parts of Silesia a favourite amusement at harvest was a race between girls for a garland of leaves or flowers. Yet it seems probable that all such sports at harvest were in origin not mere pastimes, but that they were serious attempts to secure in one way or another the help and blessing of the corn-spirit. Thus in some parts of Prussia, at the close of the rye-harvest, a few sheaves used to be left standing in the field after all the rest of the rye had been carted home. These sheaves were then made up into the shape of a man and dressed out in masculine costume, and all the young women were obliged to run a race, of which the corn-man was the goal. She who won the race led off the dancing in the evening. Here the aim of the foot-race among the young women is clearly to secure the corn-spirit embodied in the last sheaf left standing on the field; for, as we shall see later on, the last sheaf is commonly supposed to harbour the corn-spirit and is treated accordingly like a man or a woman.

If the Ancestral Contest at the Eleusinian games was, as I have conjectured, a contest between the reapers on the sacred barley-field, we should have to suppose that the games were celebrated at barley-harvest, which in the lowlands of Greece falls in May or even at the end of April. This theory is in harmony with the evidence of the scholiast on Pindar, who tells us that the Eleusinian games were celebrated after the corn-harvest. No other ancient authority, so far as I am aware, mentions at what time of the year these games were held. Modern authorities, arguing from certain slight and to some extent conjectural data, have variously assigned them to Metageitnion (August) and to Boedromion (September), and those who assign them to Boedromion (September) are divided in opinion as to whether they preceded or followed the Mysteries. However, the evidence is far too slender and uncertain to allow of any conclusions being based on it.

But there is a serious difficulty in the way of connecting the Eleusinian games with the goddesses of the corn. How is the quadriennial or the biennial period of the games to be reconciled with the annual growth of the crops? Year by year the barley and the wheat are sown and reaped; how then could the games, held only every fourth or every second year, have been regarded as thank-offerings for the annual harvest? On this view of their nature, which is the one taken by the old scholiast on Pindar, though the harvest was received at the hands of the Corn Goddess punctually every year, men thanked her for her bounty only every second year or even only every fourth year. What were her feelings likely to be in the blank years when she got no thanks and no games? She might naturally resent such negligence and ingratitude and punish them by forbidding the seed to sprout, just as she did at Eleusis when she mourned the loss of her daughter. In short, men could hardly expect to reap crops in years in which they offered nothing to the Corn Goddess. That would indeed appear to be the view generally taken by the ancient Greeks; for we have seen that year by year they presented the first-fruits of the barley and the wheat to Demeter, not merely in the solemn state ritual of Eleusis, but also in rustic festivals held by farmers on their threshing-floors. The pious Greek husbandman would no doubt have been shocked and horrified at a proposal to pay the Corn Goddess her dues only every second or fourth year. "No offerings, no crops," he would say to himself, and would anticipate nothing but dearth and famine in any year when he failed to satisfy the just and lawful demands of the divinity on whose good pleasure he believed the

growth of the corn to be directly dependent. Accordingly we may regard it as highly probable that from the very beginning of settled and regular agriculture in Greece men annually propitiated the deities of the corn with a ritual of some sort, and rendered them their dues in the shape of offerings of the ripe barley and wheat. Now we know that the Mysteries of Eleusis were celebrated every year, and accordingly, if I am right in interpreting them as essentially a dramatic representation of the annual vicissitudes of the corn performed for the purpose of quickening the seed, it becomes probable that in some form or another they were annually held at Eleusis long before the practice arose of celebrating games there every fourth or every second year. In short, the Eleusinian mysteries were in all probability far older than the Eleusinian games. How old they were we cannot even guess. But when we consider that the cultivation of barley and wheat, the two cereals specially associated with Demeter, appears to have been practised in prehistoric Europe from the Stone Age onwards, we shall be disposed to admit that the annual performance of religious or magical rites at Eleusis for the purpose of ensuring good crops, whether by propitiating the Corn Goddess with offerings of first-fruits or by dramatically representing the sowing and the growth of the corn in mythical form, probably dates from an extremely remote antiquity.

But in order to clear our ideas on this subject it is desirable to ascertain, if possible, the reason for holding the Eleusinian games at intervals of two or four years. The reason for holding a harvest festival and thanksgiving every year is obvious enough; but why hold games only every second or every fourth year? The reason for such limitations is by no means obvious on the face of them, especially if the growth of the crops is deemed dependent on the celebration. In order to find an answer to this question it may be well at the outset to confine our attention to the Great Eleusinian Games, which were celebrated only every fourth year. That these were the principal games appears not only from their name, but from the testimony of Aristotle, or at least of the author of *The Constitution of Athens*, who notices only the quadriennial or, as in accordance with Greek idiom he calls it, the penteteric celebration of the games. Now the custom of holding games at intervals of four years was very common in Greece; to take only a few conspicuous examples the Olympic games at Olympia, the Pythian games at Delphi, the Panathenaic games at Athens, and the Eleutherian games at Plataea were all celebrated at quadriennial or, as the Greeks called them, penteteric periods; and at a later time when Augustus instituted, or rather renewed on a more splendid scale, the games at Actium to commemorate his great victory, he followed a well-established Greek precedent by ordaining that they should be quadriennial. Still later the emperor Hadrian instituted quadriennial games at Mantinea in honour of his dead favourite Antinous. But in regard to the two greatest of all the Greek games, the Olympian and the Pythian, I have shewn reasons for thinking that they were originally celebrated at intervals of eight instead of four years; certainly this is attested for the Pythian games, and the mode of calculating the Olympiads by alternate periods of fifty and forty-nine lunar months, which added together make up eight solar years, seems to prove that the Olympic cycle of four years was really based on a cycle of eight years, from which it is natural to infer that in the beginning the Olympic, like the Pythian, games may have been octennial instead of quadriennial. Now we know from the testimony of the ancients themselves that the Greeks instituted the eight-years' cycle for the purpose of harmonising solar and lunar time. They regulated their calendar primarily by observation of the moon rather than of the sun; their months were lunar, and their ordinary year consisted of twelve lunar months. But the solar year of three hundred and sixty-five and a quarter days exceeds the lunar year of twelve lunar months or three hundred and fifty-four days by eleven and a quarter days, so that in eight solar years the excess amounts to ninety days or roughly three lunar months. Accordingly the Greeks equated eight solar years to eight lunar years of twelve months each by intercalating three lunar months of thirty days each in the octennial cycle; they intercalated one lunar month in the third year of the cycle, a second

lunar month in the fifth year, and a third lunar month in the eighth year. In this way they, so to say, made the sun and moon keep time together by reckoning ninety-nine lunar months as equivalent to eight solar years; so that if, for example, the full moon coincided with the summer solstice in one year, it coincided with it again after the revolution of the eight years' cycle, but not before. The equation was indeed not quite exact, and in order to render it so the Greeks afterwards found themselves obliged, first, to intercalate three days every sixteen years, and, next, to omit one intercalary month in every period of one hundred and sixty years. But these corrections were doubtless refinements of a later age; they may have been due to the astronomer Eudoxus of Cnidus, or to Cleostratus of Tenedos, who were variously, but incorrectly, supposed to have instituted the octennial cycle. There are strong grounds for holding that in its simplest form the octennial cycle of ninety-nine lunar months dates from an extremely remote antiquity in Greece; that it was in fact, as a well-informed Greek writer tell us, the first systematic attempt to bring solar and the lunar time into harmony. Indeed, if the Olympiads were calculated, as they appear to have been, on the eight years' cycle, this of itself suffices to place the origin of the cycle not later than 776 b.c., the year with which the reckoning by Olympiads begins. And when we bear in mind the very remote period from which, judged by the wonderful remains of Mycenae, Tiryns, Cnossus and other cities, civilisation in Greek lands appears to date, it seems reasonable to suppose that the octennial cycle, based as it was on very simple observations, for which nothing but good eyes and almost no astronomical knowledge was necessary, may have been handed down among the inhabitants of these countries from ages that preceded by many centuries, possibly by thousands of years, the great period of Greek literature and art. The supposition is confirmed by the traces which the octennial cycle has left of itself in certain ancient Greek customs and superstitions, particularly by the evidence which points to the conclusion that at two of the oldest seats of monarchy in Greece, namely Cnossus and Sparta, the king's tenure of office was formerly limited to eight years.

We are informed, and may readily believe, that the motive which led the Greeks to adopt the eight years' cycle was religious rather than practical or scientific: their aim was not so much to ensure the punctual despatch of business or to solve an abstract problem in astronomy, as to ascertain the exact days on which they ought to sacrifice to the gods. For the Greeks regularly employed lunar months in their reckonings, and accordingly if they had dated their religious festivals simply by the number of the month and the day of the month, the excess of eleven and a quarter days of the solar over the lunar year would have had the effect of causing the festivals gradually to revolve throughout the whole circle of the seasons, so that in time ceremonies which properly belonged to winter would come to be held in summer, and on the contrary ceremonies which were only appropriate to summer would come to be held in winter. To avoid this anomaly, and to ensure that festivals dated by lunar months should fall at fixed or nearly fixed points in the solar year, the Greeks adopted the octennial cycle by the simple expedient of intercalating three lunar months in every period of eight years. In doing so they acted, as one of their writers justly pointed out, on a principle precisely the reverse of that followed by the ancient Egyptians, who deliberately regulated their religious festivals by a purely lunar calendar for the purpose of allowing them gradually to revolve throughout the whole circle of the seasons.

Thus at an early stage of culture the regulation of the calendar is largely an affair of religion: it is a means of maintaining the established relations between gods and men on a satisfactory footing; and in public opinion the great evil of a disordered calendar is not so much that it disturbs and disarranges the ordinary course of business and the various transactions of civil life, as that it endangers the welfare or even the existence both of individuals and of the community by interrupting their normal intercourse with those divine powers on whose

favour men believe themselves to be absolutely dependent. Hence in states which take this view of the deep religious import of the calendar its superintendence is naturally entrusted to priests rather than to astronomers, because the science of astronomy is regarded merely as ancillary to the deeper mysteries of theology. For example, at Rome the method of determining the months and regulating the festivals was a secret which the pontiffs for ages jealously guarded from the profane vulgar; and in consequence of their ignorance and incapacity the calendar fell into confusion and the festivals were celebrated out of their natural seasons, until the greatest of all the Roman pontiffs, Julius Caesar, remedied the confusion and placed the calendar of the civilised world on the firm foundation on which, with little change, it stands to this day.

On the whole, then, it appears probable that the octennial cycle, based on considerations of religion and on elementary observations of the two great luminaries, dated from a very remote period among the ancient Greeks; if they did not bring it with them when they migrated southwards from the oakwoods and beechwoods of Central Europe, they may well have taken it over from their civilised predecessors of different blood and different language whom they found leading a settled agricultural life on the lands about the Aegean Sea. Now we have seen reasons to hold that the two most famous of the great Greek games, the Pythian and the Olympian, were both based on the ancient cycle of eight years, and that the quadriennial period at which they were regularly celebrated in historical times was arrived at by a subdivision of the older octennial cycle. It is hardly rash, therefore, to conjecture that the quadriennial period in general, regarded as the normal period for the celebration of great games and festivals, was originally founded on elementary religious and astronomical considerations of the same kind, that is, on a somewhat crude attempt to harmonise the discrepancies of solar and lunar time and thereby to ensure the continued favour of the gods. It is, indeed, certain or probable that some of these quadriennial festivals were celebrated in honour of the dead; but there seems to be nothing in the beliefs or customs of the ancient Greeks concerning the dead which would suggest a quadriennial period as an appropriate one for propitiating the ghosts of the departed. At first sight it is different with the octennial period; for according to Pindar, the souls of the dead who had been purged of their guilt by an abode of eight years in the nether world were born again on earth in the ninth year as glorious kings, athletes, and sages. Now if this belief in the reincarnation of the dead after eight years were primitive, it might certainly furnish an excellent reason for honouring the ghosts of great men at their graves every eight years in order to facilitate their rebirth into the world. Yet the period of eight years thus rigidly applied to the life of disembodied spirits appears too arbitrary and conventional to be really primitive, and we may suspect that in this application it was nothing but an inference drawn from the old octennial cycle, which had been instituted for the purpose of reconciling solar and lunar time. If that was so, it will follow that the quadriennial period of funeral games was, like the similar period of other religious festivals, obtained through the bisection of the octennial cycle, and hence that it was ultimately derived from astronomical considerations rather than from any beliefs touching a quadriennial revolution in the state of the dead. Yet in historical times it may well have happened that these considerations were forgotten, and that games and festivals were instituted at quadriennial intervals, for example at Plataea in honour of the slain, at Actium to commemorate the great victory, and at Mantinea in honour of Antinous, without any conscious reference to the sun and moon, and merely because that period had from time immemorial been regarded as the proper and normal one for the celebration of certain solemn religious rites.

If we enquire why the Greeks so often bisected the old octennial period into two quadriennial periods for purposes of religion, the answer can only be conjectural, for no positive

information appears to be given us on the subject by ancient writers. Perhaps they thought that eight years was too long a time to elapse between the solemn services, and that it was desirable to propitiate the deities at shorter intervals. But it is possible that political as well as religious motives may have operated to produce the change. We have seen reason to think that at two of the oldest seats of monarchy in Greece, namely Cnossus and Sparta, kings formerly held office for periods of eight years only, after which their sovereignty either terminated or had to be formally renewed. Now with the gradual growth of that democratic sentiment, which ultimately dominated Greek political life, men would become more and more jealous of the kingly power and would seek to restrict it within narrower limits, and one of the most obvious means of doing so was to shorten the king's tenure of office. We know that this was done at Athens, where the dynasty of the Medontids was reduced from the rank of monarchs for life to that of magistrates holding office for ten years only. It is possible that elsewhere the king's reign was cut down from eight years to four years; and if I am right in my explanation of the origin of the Olympic games this political revolution actually took place at Olympia, where the victors in the chariot-race would seem at first to have personated the Sun-god and perhaps held office in the capacity of divine kings during the intervals between successive celebrations of the games. If at Olympia and elsewhere the games were of old primarily contests in which the king had personally to take part for the purpose of attesting his bodily vigour and therefore his capacity for office, the repetition of the test at intervals of four instead of eight years might be regarded as furnishing a better guarantee of the maintenance of the king's efficiency and thereby of the general welfare, which in primitive society is often supposed to be sympathetically bound up with the health and strength of the king.

But while many of the great Greek games were celebrated at intervals of four years, others, such as the Nemean and the Isthmian, were celebrated at intervals of two years only; and just as the quadriennial period seems to have been arrived at through a bisection of the octennial period, so we may surmise that the biennial period was produced by a bisection of the quadriennial period. This was the view which the admirable modern chronologer L. Ideler took of the origin of the quadriennial and biennial festivals respectively, and it appears far more probable than the contrary opinion of the ancient chronologer Censorinus, that the quadriennial period was reached by doubling the biennial, and the octennial period by doubling the quadriennial. The theory of Censorinus was that the Greeks started with a biennial cycle of twelve and thirteen lunar months alternately in successive years for the purpose of harmonising solar and lunar time. But as the cycle so produced exceeds the true solar time by seven and a half days, the discrepancy which it leaves between the two great celestial clocks, the sun and moon, was too glaring to escape the observation even of simple farmers, who would soon have been painfully sensible that the times were out of joint, if they had attempted to regulate the various operations of the agricultural year by reference to so very inaccurate an almanac. It is unlikely, therefore, that the Greeks ever made much use of a biennial cycle of this sort.

Now to apply these conclusions to the Eleusinian games, which furnished the starting-point for the preceding discussion. Whatever the origin and meaning of these games may have been, we may surmise that the quadriennial and biennial periods at which they were held were originally derived from astronomical considerations, and that they had nothing to do directly either with the agricultural cycle, which is annual, nor with the worship of the dead, which can scarcely be said to have any cycle at all, unless indeed it be an annual one. In other words, neither the needs of husbandry nor the superstitions relating to ghosts furnish any natural explanation of the quadriennial and biennial periods of the Eleusinian games, and to discover such an explanation we are obliged to fall back on astronomy or, to be more exact,

on that blend of astronomy with religion which appears to be mainly responsible for such Greek festivals as exceed a year in their period. To admit this is not to decide the question whether the Eleusinian games were agricultural or funereal in character; but it is implicitly to acknowledge that the games were of later origin than the annual ceremonies, including the Great Mysteries, which were designed to propitiate the deities of the corn for the very simple and practical purpose of ensuring good crops within the year. For it cannot but be that men observed and laid their account with the annual changes of the seasons, especially as manifested by the growth and maturity of the crops, long before they attempted to reconcile the discrepancies of solar and lunar time by a series of observations extending over several years.

On the whole, then, if, ignoring theories, we adhere to the evidence of the ancients themselves in regard to the rites of Eleusis, including under that general term the Great Mysteries, the games, the Festival before Ploughing (*proerosia*), the Festival of the Threshing-floor, the Green Festival, the Festival of the Cornstalks, and the offerings of first-fruits, we shall probably incline to agree with the most learned of ancient antiquaries, the Roman Varro, who, to quote Augustine's report of his opinion, "interpreted the whole of the Eleusinian mysteries as relating to the corn which Ceres (Demeter) had discovered, and to Proserpine (Persephone), whom Pluto had carried off from her. And Proserpine herself, he said, signifies the fecundity of the seeds, the failure of which at a certain time had caused the earth to mourn for barrenness, and therefore had given rise to the opinion that the daughter of Ceres, that is, fecundity itself, had been ravished by Pluto and detained in the nether world; and when the dearth had been publicly mourned and fecundity had returned once more, there was gladness at the return of Proserpine and solemn rites were instituted accordingly. After that he says," continues Augustine, reporting Varro, "that many things were taught in her mysteries which had no reference but to the discovery of the corn."

Thus far I have for the most part assumed an identity of nature between Demeter and Persephone, the divine mother and daughter personifying the corn in its double aspect of the seed-corn of last year and the ripe ears of this, and I pointed out that this view of the substantial unity of mother and daughter is borne out by their portraits in Greek art, which are often so alike as to be indistinguishable. Such a close resemblance between the artistic types of Demeter and Persephone militates decidedly against the view that the two goddesses are mythical embodiments of two things so different and so easily distinguishable from each other as the earth and the vegetation which springs from it. Had Greek artists accepted that view of Demeter and Persephone, they could surely have devised types of them which would have brought out the deep distinction between the goddesses. That they were capable of doing so is proved by the simple fact that they regularly represented the Earth Goddess by a type which differed widely both from that of Demeter and from that of Persephone. Not only so, but they sometimes set the two types of the Earth Goddess and the Corn Goddess (Demeter) side by side as if on purpose to demonstrate their difference. Thus at Patrae there was a sanctuary of Demeter, in which she and Persephone were portrayed standing, while Earth was represented by a seated image; and on a vase-painting the Earth Goddess is seen appropriately emerging from the ground with a horn of plenty and an infant in her uplifted arms, while Demeter and Persephone, scarcely distinguishable from each other, stand at full height behind her, looking down at her half-buried figure, and Triptolemus in his wheeled car sits directly above her. In this instructive picture, accordingly, we see grouped together the principal personages in the myth of the corn: the Earth Goddess, the two Goddesses of the old and the new corn, and the hero who is said to have been sent forth by the Corn Goddess to sow the seed broadcast over the earth. Such representations seem to prove that the artists clearly distinguished Demeter from the Earth Goddess. And if Demeter did not personify the

earth, can there be any reasonable doubt that, like her daughter, she personified the corn which was so commonly called by her name from the time of Homer downwards? The essential identity of mother and daughter is suggested, not only by the close resemblance of their artistic types, but also by the official title of “the Two Goddesses” which was regularly applied to them in the great sanctuary at Eleusis without any specification of their individual attributes and titles, as if their separate individualities had almost merged in a single divine substance.

Surveying the evidence as a whole, we may say that from the myth of Demeter and Persephone, from their ritual, from their representations in art, from the titles which they bore, from the offerings of first-fruits which were presented to them, and from the names applied to the cereals, we are fairly entitled to conclude that in the mind of the ordinary Greek the two goddesses were essentially personifications of the corn, and that in this germ the whole efflorescence of their religion finds implicitly its explanation. But to maintain this is not to deny that in the long course of religious evolution high moral and spiritual conceptions were grafted on this simple original stock and blossomed out into fairer flowers than the bloom of the barley and the wheat. Above all, the thought of the seed buried in the earth in order to spring up to new and higher life readily suggested a comparison with human destiny, and strengthened the hope that for man too the grave may be but the beginning of a better and happier existence in some brighter world unknown. This simple and natural reflection seems perfectly sufficient to explain the association of the Corn Goddess at Eleusis with the mystery of death and the hope of a blissful immortality. For that the ancients regarded initiation in the Eleusinian mysteries as a key to unlock the gates of Paradise appears to be proved by the allusions which well-informed writers among them drop to the happiness in store for the initiated hereafter. No doubt it is easy for us to discern the flimsiness of the logical foundation on which such high hopes were built. But drowning men clutch at straws, and we need not wonder that the Greeks, like ourselves, with death before them and a great love of life in their hearts, should not have stopped to weigh with too nice a hand the arguments that told for and against the prospect of human immortality. The reasoning that satisfied Saint Paul and has brought comfort to untold thousands of sorrowing Christians, standing by the deathbed or the open grave of their loved ones, was good enough to pass muster with ancient pagans, when they too bowed their heads under the burden of grief, and, with the taper of life burning low in the socket, looked forward into the darkness of the unknown. Therefore we do no indignity to the myth of Demeter and Persephone—one of the few myths in which the sunshine and clarity of the Greek genius are crossed by the shadow and mystery of death—when we trace its origin to some of the most familiar, yet eternally affecting aspects of nature, to the melancholy gloom and decay of autumn and to the freshness, the brightness, and the verdure of spring.

III. Magical Significance of Games in Primitive Agriculture

In the preceding chapter we saw that among the rites of Eleusis were comprised certain athletic sports, such as foot-races, horse-races, leaping, wrestling, and boxing, the victors in which were rewarded with measures of barley distributed among them by the priests. These sports the ancients themselves associated with the worship of Demeter and Persephone, the goddesses of the corn, and strange as such an association may seem to us, it is not without its analogy among the harvest customs of modern European peasantry. But to discover clear cases of games practised for the express purpose of promoting the growth of the crops, we must turn to more primitive agricultural communities than the Athenians of classical antiquity or the peoples of modern Europe. Such communities may be found at the present day among the savage tribes of Borneo and New Guinea, who subsist mainly by tilling the ground. Among them we take the Kayans or Bahaus of central Borneo as typical. They are essentially an agricultural people, and devote themselves mainly to the cultivation of rice, which furnishes their staple food; all other products of the ground are of subordinate importance. Hence agriculture, we are told, dominates the whole life of these tribes: their year is the year of the cultivation of the rice, and they divide it into various periods which are determined by the conditions necessary for the tilling of the fields and the manipulation of the rice. "In tribes whose thoughts are so much engrossed by agriculture it is no wonder that they associate with it their ideas of the powers which rule them for good or evil. The spirit-world stands in close connexion with the agriculture of the Bahaus; without the consent of the spirits no work in the fields may be undertaken. Moreover, all the great popular festivals coincide with the different periods of the cultivation of the rice. As the people are in an unusual state of affluence after harvest, all family festivals which require a large outlay are for practical reasons deferred till the New Year festival at the end of harvest. The two mighty spirits Amei Awi and his wife Buring Une, who, according to the belief of the Kayans, live in a world under ground, dominate the whole of the tillage and determine the issue of the harvest in great measure by the behaviour of the owner of the land, not so much by his moral conduct, as by the offerings he has made to the spirits and the attention he has paid to their warnings. An important part in agriculture falls to the chief: at the festivals he has, in the name of the whole tribe, to see to it that the prescribed conjurations are carried out by the priestesses. All religious ceremonies required for the cultivation of the ground take place in a small rice-field specially set apart for that purpose, called *luma lali*: here the chief's family ushers in every fresh operation in the cultivation of the rice, such as sowing, hoeing, and reaping: the solemn actions there performed have a symbolical significance."

Not only the chief's family among the Kayans has such a consecrated field; every family possesses one of its own. These little fields are never cultivated for the sake of their produce: they serve only as the scene of religious ceremonies and of those symbolical operations of agriculture which are afterwards performed in earnest on the real rice-fields. For example, at the festival before sowing a priestess sows some rice on the consecrated field of the chief's family and then calls on a number of young men and girls to complete the work; the young men then dig holes in the ground with digging-sticks, and the girls come behind them and plant the rice-seed in the holes. Afterwards the priestesses lay offerings of food, wrapt in banana-leaves, here and there on the holy field, while they croon prayers to the spirits in soft tones, which are half drowned in the clashing music of the gongs. On another day women gather all kinds of edible leaves in their gardens and fields, boil them in water, and then

sprinkle the water on the consecrated rice-field. But on that and other days of the festival the people attend also to their own wants, banqueting on a favourite species of rice and other dainties. The ceremonies connected with sowing last several weeks, and during this time certain taboos have to be observed by the people. Thus on the first day of the festival the whole population, except the very old and the very young, must refrain from bathing; after that there follows a period of rest for eight nights, during which the people may neither work nor hold intercourse with their neighbours. On the tenth day the prohibition to bathe is again enforced; and during the eight following days the great rice-field of the village, where the real crops are raised, is sowed. The reason for excluding strangers from the village at these times is a religious one. It is a fear lest the presence of strangers might frighten the spirits or put them in a bad humour, and so defeat the object of the ceremony; for, while the religious ceremonies which accompany the cultivation of the rice differ somewhat from each other in different tribes, the ideas at the bottom of them, we are told, are everywhere the same: the aim always is to appease and propitiate the souls of the rice and the other spirits by sacrifices of all sorts.

However, during this obligatory period of seclusion and rest the Kayans employ themselves in various pursuits, which, though at first sight they might seem to serve no other purpose than that of recreation, have really in the minds of the people a much deeper significance. For example, at this time the men often play at spinning tops. The tops are smooth, flat pieces of wood weighing several pounds. Each man tries to spin his own top so that it knocks down those of his neighbours and continues itself to revolve triumphantly. New tops are commonly carved for the festival. The older men sometimes use heavy tops of iron-wood. Again, every evening the young men assemble in the open space before the chief's house and engage in contests of strength and agility, while the women watch them from the long gallery or verandah of the house. Another popular pastime during the festival of sowing is a masquerade. It takes place on the evening of the tenth day, the day on which, for the second time, the people are forbidden to bathe. The scene of the performance is again the open space in front of the chief's house. As the day draws towards evening, the villagers begin to assemble in the gallery or verandah of the house in order to secure good places for viewing the masquerade. All the maskers at these ceremonies represent evil spirits. The men wear ugly wooden masks on their faces, and their bodies are swathed in masses of slit banana leaves so as to imitate the hideous faces and hairy bodies of the demons. The young women wear on their heads cylindrical baskets, which conceal their real features, while they exhibit to the spectators grotesque human faces formed by stitches on pieces of white cotton, which are fastened to the baskets. On the occasion when Dr. Nieuwenhuis witnessed the ceremony, the first to appear on the scene were some men wearing wooden masks and helmets and so thickly wrapt in banana leaves that they looked like moving masses of green foliage. They danced silently, keeping time to the beat of the gongs. They were followed by other figures, some of whom executed war-dances; but the weight of their leafy envelope was such that they soon grew tired, and though they leaped high, they uttered none of the wild war-whoops which usually accompany these martial exercises. When darkness fell, the dances ceased and were replaced by a little drama representing a boar brought to bay by a pack of hounds. The part of the boar was played by an actor wearing a wooden boar's head mask, who ran about on all fours and grunted in a life-like manner, while the hounds, acted by young men, snarled, yelped, and made dashes at him. The play was watched with lively interest and peals of laughter by the spectators. Later in the evening eight disguised girls danced, one behind the other, with slow steps and waving arms, to the glimmering light of torches and the strains of a sort of jew's harp.

The rites which accompany the sowing of the fields are no sooner over than those which usher in the hoeing begin. Like the sowing ceremonies, they are inaugurated by a priestess, who hoes the sacred field round about a sacrificial stage and then calls upon other people to complete the work. After that the holy field is again sprinkled with a decoction of herbs.

But the crowning point of the Kayan year is the New Year festival. The harvest has then been fully housed: abundance reigns in every family, and for eight days the people, dressed out in all their finery, give themselves up to mirth and jollity. The festival was witnessed by the Dutch explorer Dr. Nieuwenhuis. To lure the good spirits from the spirit land baskets filled with precious objects were set out before the windows, and the priestesses made long speeches, in which they invited these beneficent beings to come to the chief's house and to stay there during the whole of the ceremonies. Two days afterwards one of the priestesses harangued the spirits for three-quarters of an hour, telling them who the Kayans were, from whom the chief's family was descended, what the tribe was doing, and what were its wishes, not forgetting to implore the vengeance of the spirits on the Batang-Lupars, the hereditary foes of the Kayans. The harangue was couched in rhyming verse and delivered in sing-song tones. Five days later eight priestesses ascended a sacrificial stage, on which food was daily set forth for the spirits. There they joined hands and crooned another long address to the spirits, marking the time with their hands. Then a basket containing offerings of food was handed up to them, and one of the priestesses opened it and invited the spirits to enter the basket. When they were supposed to have done so, the lid was shut down on them, and the basket with the spirits in it was conveyed into the chief's house. As the priestesses in the performance of the sacred ceremonies might not touch the ground, planks were cut from a fruit-tree and laid on the ground for them to step on. But the great feature of the New Year festival is the sacrifice of pigs, of which the spiritual essence is appropriately offered to the spirits, while their material substance is consumed by the worshippers. In carrying out this highly satisfactory arrangement, while the live pigs lay tethered in a row on the ground, the priestesses danced solemnly round a sacrificial stage, each of them arrayed in a war-mantle of panther-skin and wearing a war-cap on her head, and on either side two priests armed with swords executed war dances for the purpose of scaring away evil spirits. By their gesticulations the priestesses indicated to the powers above that the pigs were intended for their benefit. One of them, a fat but dignified lady, dancing composedly, seemed by her courteous gestures to invite the souls of the pigs to ascend up to heaven; but others, not content with this too ideal offering, rushed at the pigs, seized the smallest of them by the hind legs, and exerting all their strength danced with the squealing porker to and from the sacrificial stage. In the evening, before darkness fell, the animals were slaughtered and their livers examined for omens: if the under side of the liver was pale, the omen was good; but if it was dark, the omen was evil. On the last day of the festival one of the chief priestesses, in martial array, danced round the sacrificial stage, making passes with her old sword as if she would heave the whole structure heavenward; while others stabbed with spears at the foul fiends that might be hovering in the air, intent on disturbing the sacred ministers at their holy work.

“Thus,” says Dr. Nieuwenhuis, reviewing the agricultural rites which he witnessed among the Kayans on the Mendalam river, “every fresh operation on the rice-field was ushered in by religious and culinary ceremonies, during which the community had always to observe taboos for several nights and to play certain definite games. As we saw, spinning-top games and masquerades were played during the sowing festival: at the first bringing in of the rice the people pelted each other with clay pellets discharged from small pea-shooters, but in former times sham fights took place with wooden swords; while during the New Year festival the men contend with each other in wrestling, high leaps, long leaps, and running. The women

also fight each other with great glee, using bamboo vessels full of water for their principal weapons.”

What is the meaning of the sports and pastimes which custom prescribes to the Kayans on these occasions? Are they mere diversions meant to while away the tedium of the holidays? or have they a serious, perhaps a religious or magical significance? To this question it will be well to let Dr. Nieuwenhuis give his answer. “The Kayans on the Mendalam river,” he says, “enjoy tolerably regular harvests, and their agricultural festivals accordingly take place every year; whereas the Kayans on the Mahakam river, on account of the frequent failure of the harvests, can celebrate a New Year's festival only once in every two or three years. Yet although these festivities are celebrated more regularly on the Mendalam river, they are followed on the Mahakam river with livelier interest, and the meaning of all ceremonies and games can also be traced much better there. On the Mendalam river I came to the false conclusion that the popular games which take place at the festivals are undertaken quite arbitrarily at the seasons of sowing and harvest; but on the Mahakam river, on the contrary, I observed that even the masquerade at the sowing festival is invested with as deep a significance as any of the ceremonies performed by the priestesses.”

“The influence of religious worship, which dominates the whole life of the Dyak tribes, manifests itself also in their games. This holds good chiefly of pastimes in which all adults take part together, mostly on definite occasions; it is less applicable to more individual pastimes which are not restricted to any special season. Pastimes of the former sort are very rarely indulged in at ordinary times, and properly speaking they attain their full significance only on the occasion of the agricultural festivals which bear a strictly religious stamp. Even then the recreations are not left to choice, but definite games belong to definite festivals; thus at the sowing festivals other amusements are in vogue than at the little harvest festival or the great harvest festival at the beginning of the reaping, and at the New Year festival.... Is this connexion between festivals and games merely an accidental one, or is it based on a real affinity? The latter seems to me the more probable view, for in the case of one of the most important games played by men I was able to prove directly a religious significance; and although I failed to do so in the case of the others, I conjecture, nevertheless, that a religious idea lies at the bottom of all other games which are connected with definite festivals.”

If the reader should entertain any doubt on the subject, and should suspect that in arriving at this conclusion the Dutch traveller gave the reins to his fancy rather than followed the real opinion of the people, these doubts and suspicions will probably be dispelled by comparing the similar games which another primitive agricultural people avowedly play for the purpose of ensuring good crops. The people in question are the Kai of German New Guinea, who inhabit the rugged, densely wooded mountains inland from Finsch Harbour. They subsist mainly on the produce of the taro and yams which they cultivate in their fields, though the more inland people also make much use of sweet potatoes. All their crops are root crops. No patch of ground is cultivated for more than a year at a time. As soon as it has yielded a crop, it is deserted for another and is quickly overgrown with rank weeds, bamboos, and bushes. In six or eight years, when the undergrowth has died out under the shadow of the taller trees which have shot up, the land may again be cleared and brought under cultivation. Thus the area of cultivation shifts from year to year; and the villages are not much more permanent; for in the damp tropical climate the wooden houses soon rot and fall into ruins, and when this happens the site of the village is changed. To procure good crops of the taro and yams, on which they depend for their subsistence, the Kai resort to many superstitious practices. For example, in order to make the yams strike deep roots, they touch the shoots with the bone of a wild animal that has been killed in the recesses of a cave, imagining that just as the creature penetrated deep into the earth, so the shoots that have been touched with its bone will

descend deep into the ground. And in order that the taro may bear large and heavy fruit, they place the shoots, before planting them, on a large and heavy block of stone, believing that the stone will communicate its valuable properties of size and weight to the future fruit. Moreover, great use is made of spells and incantations to promote the growth of the crops, and all persons who utter such magical formulas for this purpose have to abstain from eating certain foods until the plants have sprouted and give promise of a good crop. For example, they may not eat young bamboo shoots, which are a favourite article of diet with the people. The reason is that the young shoots are covered with fine prickles, which cause itching and irritation of the skin; from which the Kai infer that if an enchanter of field fruits were to eat bamboo shoots, the contagion of their prickles would be conveyed through him to the fruits and would manifest itself in a pungent disagreeable flavour. For a similar reason no charmer of the crops who knows his business would dream of eating crabs, because he is well aware that if he were to do so the leaves and stalks of the plants would be dashed in pieces by a pelting rain, just like the long thin brittle legs of a dead crab. Again, were such an enchanter to eat any of the edible kinds of locusts, it seems obvious to the Kai that locusts would devour the crops over which the imprudent wizard had recited his spells. Above all, people who are concerned in planting fields must on no account eat pork; because pigs, whether wild or tame, are the most deadly enemies of the crops, which they grub up and destroy; from which it follows, as surely as the night does the day, that if you eat pork while you are at work on the farm, your fields will be devastated by inroads of pigs.

However, these precautions are not the only measures which the Kai people adopt for the benefit of the yams and the taro. "In the opinion of the natives various games are important for a proper growth of the field-fruits; hence these games may only be played in the time after the work on the fields has been done. Thus to swing on a long Spanish reed fastened to a branch of a tree is thought to have a good effect on the newly planted yams. Therefore swinging is practised by old and young, by men and women. No one who has an interest in the growth of his crop in the field leaves the swing idle. As they swing to and fro they sing swing-songs. These songs often contain only the names of the kinds of yams that have been planted, together with the joyous harvest-cry repeated with variations, 'I have found a fine fruit!' In leaping from the swing, they cry '*Kakulili!*' By calling out the name of the yams they think to draw their shoots upwards out of the ground. A small bow with a string, on which a wooden flag adorned with a feather is made to slide down (the Kai call the instrument *tawatawa*), may only be used when the yams are beginning to wind up about their props. The tender shoots are then touched with the bow, while a song is sung which is afterwards often repeated in the village. It runs thus: '*Mama gelo, gelowaineja, gelowaineja; kiki tambai, kiki tambai.*' The meaning of the words is unknown. The intention is to cause a strong upward growth of the plants. In order that the foliage of the yams may sprout luxuriantly and grow green and spread, the Kai people play cat's cradle. Each of the intricate figures has a definite meaning and a name to match: for example 'the flock of pigeons' (*Hulua*), 'the Star,' 'the Flying Fox,' 'the Sago-palm Fan,' 'the Araucaria,' 'the Lizard and the Dog,' 'the Pig,' 'the Sentinel-box in the Fields,' 'the Rat's Nest,' 'the Wasp's Nest in the Bamboo-thicket,' 'the Kangaroo,' 'the Spider's Web,' 'the Little Children,' 'the Canoe,' 'Rain and Sunshine,' 'the Pig's Pitfall,' 'the Fish-spawn,' 'the Two Cousins, Kewâ and Imbiâwâ, carrying their dead Mother to the Grave,' etc. By spinning large native acorns or a sort of wild fig they think that they foster the growth of the newly-planted taro; the plants will 'turn about and broaden.' The game must therefore only be played at the time when the taro is planted. The same holds good of spearing at the stalks of taro leaves with the ribs of sago leaves used as miniature spears. This is done when the taro leaves have unfolded themselves, but when the plants have not yet set any tubers. A single leaf is cut from a number of stems, and these leaves are brought into the village. The game is played by two

partners, who sit down opposite to each other at a distance of three or four paces. A number of taro stalks lie beside each. He who has speared all his adversary's stalks first is victor; then they change stalks and the game begins again. By piercing the leaves they think that they incite the plants to set tubers. Almost more remarkable than the limitation of these games to the time when work on the fields is going forward is the custom of the Kai people which only permits the tales of the olden time or popular legends to be told at the time when the newly planted fruits are budding and sprouting." At the end of every such tale the Kai story-teller mentions the names of the various kinds of yams and adds, "Shoots (for the new planting) and fruits (to eat) in abundance!" "From their concluding words we see that the Kai legends are only told for a quite definite purpose, namely, to promote the welfare of the yams planted in the field. By reviving the memory of the ancient beings, to whom the origin of the field-fruits is referred, they imagine that they influence the growth of the fruits for good. When the planting is over, and especially when the young plants begin to sprout, the telling of legends comes to an end. In the villages it is always only a few old men who as good story-tellers can hold the attention of their hearers."

Thus with these New Guinea people the playing of certain games and the recital of certain legends are alike magical in their intention; they are charms practised to ensure good crops. Both sets of charms appear to be based on the principles of sympathetic magic. In playing the games the players perform acts which are supposed to mimic or at all events to stimulate the corresponding processes in the plants: by swinging high in the air they make the plants grow high; by playing cat's cradle they cause the leaves of the yams to spread and the stalks to intertwine, even as the players spread their hands and twine the string about their fingers; by spinning fruits they make the taro plants to turn and broaden; and by spearing the taro leaves they induce the plants to set tubers. In telling the legends the story-tellers mention the names of the powerful beings who first created the fruits of the earth, and the mere mention of their names avails, on the principle of the magical equivalence of names and persons or things, to reproduce the effect. The recitation of tales as a charm to promote the growth of the crops is not peculiar to the Kai. It is practised also by the Bakaua, another tribe of German New Guinea, who inhabit the coast of Huon Gulf, not far from the Kai. These people tell stories in the evening at the time when the yams and taro are ripe, and the stories always end with a prayer to the ancestral spirits, invoked under various more or less figurative designations, such as "a man" or "a cricket," that they would be pleased to cause countless shoots to sprout, the great tubers to swell, the sugar-cane to thrive, and the bananas to hang in long clusters. "From this we see," says the missionary who reports the custom, "that the object of telling the stories is to prove to the ancestors, whose spirits are believed to be present at the recitation of the tales which they either invented or inherited, that people always remember them; for which reason they ought to be favourable to their descendants, and above all to bestow their blessings on the shoots which are ready to be planted or on the plants already in the ground." As the story-teller utters the prayer, he looks towards the house in which the young shoots ready for planting or the ripe fruits are deposited.

Similarly, the Yabim, a neighbouring tribe of German New Guinea, at the entrance to Huon Gulf, tell tales for the purpose of obtaining a plentiful harvest of yams, taro, sugar-cane, and bananas. They subsist chiefly by the fruits of the earth which they cultivate, and among which taro, yams, and sugar-cane supply them with their staple food. In their agricultural labours they believe themselves to be largely dependent on the spirits of their dead, the *balum*, as they call them. Before they plant the first taro in a newly cleared field they invoke the souls of the dead to make the plants grow and prosper; and to propitiate these powerful spirits they bring valuable objects, such as boar's tusks and dog's teeth, into the field, in order that the ghosts may deck themselves with the souls of these ornaments, while at

the same time they minister to the grosser appetites of the disembodied spirits by offering them a savoury mess of taro porridge. Later in the season they whirl bull-roarers in the fields and call out the names of the dead, believing that this makes the crops to thrive.

But besides the prayers which they address to the spirits of the dead for the sake of procuring an abundant harvest, the Yabim utter spells for the same purpose, and these spells sometimes take the form, not of a command, but of a narrative. Here, for instance, is one of their spells: "Once upon a time a man laboured in his field and complained that he had no taro shoots. Then came two doves flying from Poum. They had devoured much taro, and they perched on a tree in the field, and during the night they vomited all the taro up. Thus the man got so many taro shoots that he was even able to sell some of them to other people." Or, again, if the taro will not bud, the Yabim will have recourse to the following spell: "A muraena lay at ebb-tide on the shore. It seemed to be at its last gasp. Then the tide flowed on, and the muraena came to life again and plunged into the deep water." This spell is pronounced over twigs of a certain tree (*kalelong*), while the enchanter smites the ground with them. After that the taro is sure to bud. Apparently the mere recitation of such simple tales is thought to produce the same effect as a direct appeal, whether in the shape of a prayer or a command, addressed to the spirits. Such incantations may be called narrative spells to distinguish them from the more familiar imperative spells, in which the enchanter expresses his wishes in the form of direct commands. Much use seems to be made of such narrative spells among the natives of this part of German New Guinea. For example, among the Bukaua, who attribute practically boundless powers to sorcerers in every department of life and nature, the spells by which these wizards attempt to work their will assume one of two forms: either they are requests made to the ancestors, or they are short narratives, addressed to nobody in particular, which the sorcerer mutters while he is performing his magical rites. It is true, that here the distinction is drawn between narratives and requests rather than between narratives and commands; but the difference of a request from a command, though great in theory, may be very slight in practice; so that prayer and spell, in the ordinary sense of the words, may melt into each other almost imperceptibly. Even the priest or the enchanter who utters the one may be hardly conscious of the hairbreadth that divides it from the other. In regard to narrative spells, it seems probable that they have been used much more extensively among mankind than the evidence at our disposal permits us positively to affirm; in particular we may conjecture that many ancient narratives, which we have been accustomed to treat as mere myths, used to be regularly recited in magical rites as spells for the purpose of actually producing events like those which they describe.

The use of the bull-roarer to quicken the fruits of the earth is not peculiar to the Yabim. On the other side of New Guinea the instrument is employed for the same purpose by the natives of Kiwai, an island at the mouth of the Fly River. They think that by whirling bull-roarers they produce good crops of yams, sweet potatoes, and bananas; and in accordance with this belief they call the implement "the mother of yams." Similarly in Mabuag, an island in Torres Straits, the bull-roarer is looked upon as an instrument that can be used to promote the growth of garden produce, such as yams and sweet potatoes; certain spirits were supposed to march round the gardens at night swinging bull-roarers for this purpose. Indeed a fertilising or prolific virtue appears to be attributed to the instrument by savages who are totally ignorant of agriculture. Thus among the Dieri of central Australia, when a young man had undergone the painful initiatory ceremony of having a number of gashes cut in his back, he used to be given a bull-roarer, whereupon it was believed that he became inspired by the spirits of the men of old, and that by whirling it, when he went in search of game before his wounds were healed, he had power to cause a good harvest of lizards, snakes, and other reptiles. On the other hand, the Dieri thought that if a woman were to see a bull-roarer that

had been used at the initiatory ceremonies and to learn its secret, the tribe would ever afterwards be destitute of snakes, lizards, and other such food. It may very well be that a similar power to fertilise or multiply edible plants and animals has been ascribed to the bull-roarer by many other peoples who employ the implement in their mysteries.

Further, it is to be observed that just as the Kai of New Guinea swing to and fro on reeds suspended from the branches of trees in order to promote the growth of the crops, in like manner Lettish peasants in Russia devote their leisure to swinging in spring and early summer for the express purpose of making the flax grow as high as they swing in the air. And we may suspect that wherever swinging is practised as a ceremony at certain times of the year, particularly in spring and at harvest, the pastime is not so much a mere popular recreation as a magical rite designed to promote the growth of the crops.

With these examples before us we need not hesitate to believe that Dr. Nieuwenhuis is right when he attributes a deep religious or magical significance to the games which the Kayans or Bahaus of central Borneo play at their various agricultural festivals.

It remains to point out how far the religious or magical practices of these primitive agricultural peoples of Borneo and New Guinea appear to illustrate by analogy the original nature of the rites of Eleusis. So far as we can recompose, from the broken fragments of tradition, a picture of the religious and political condition of the Eleusinian people in the olden time, it appears to tally fairly well with the picture which Dr. Nieuwenhuis has drawn for us of the Kayans or Bahaus at the present day in the forests of central Borneo. Here as there we see a petty agricultural community ruled by hereditary chiefs who, while they unite religious to civil authority, being bound to preside over the numerous ceremonies performed for the good of the crops, nevertheless lead simple patriarchal lives and are so little raised in outward dignity above their fellows that their daughters do not deem it beneath them to fetch water for the household from the village well. Here as there we see a people whose whole religion is dominated and coloured by the main occupation of their lives; who believe that the growth of the crops, on which they depend for their subsistence, is at the mercy of two powerful spirits, a divine husband and his wife, dwelling in a subterranean world; and who accordingly offer sacrifices and perform ceremonies in order to ensure the favour of these mighty beings and so to obtain abundant harvests. If we knew more about the Rarian plain at Eleusis, we might discover that it was the scene of many religious ceremonies like those which are performed on the little consecrated rice-fields (the *luma lali*) of the Kayans, where the various operations of the agricultural year are performed in miniature by members of the chief's family before the corresponding operations may be performed on a larger scale by common folk on their fields. Certainly we know that the Rarian plain witnessed one such ceremony in the year. It was a solemn ceremony of ploughing, one of the three Sacred Ploughings which took place annually in various parts of Attica. Probably the rite formed part of the *Proerosia* or Festival before Ploughing, which was intended to ensure a plentiful crop. Further, it appears that the priests who guided the sacred slow-paced oxen as they dragged the plough down the furrows of the Rarian Plain, were drawn from the old priestly family of Bouzygai or "Ox-yokers," whose eponymous ancestor is said to have been the first man to yoke oxen and to plough the fields. As they performed this time-honoured ceremony, the priests uttered many quaint curses against all churls who should refuse to lend fire or water to neighbours, or to shew the way to wanderers, or who should leave a corpse unburied. If we had a complete list of the execrations fulminated by the holy ploughmen on these occasions, we might find that some of them were levelled at the impious wretches who failed to keep all the rules of the Sabbath, as we may call those periods of enforced rest and seclusion which the Kayans of Borneo and other primitive agricultural peoples observe for the good of the crops.

Further, when we see that many primitive peoples practise what we call games but what they regard in all seriousness as solemn rites for the good of the crops, we may be the more inclined to accept the view of the ancients, who associated the Eleusinian games directly with the worship of Demeter and Persephone, the Corn Goddesses. One of the contests at the Eleusinian games was in leaping, and we know that even in modern Europe to this day leaping or dancing high is practised as a charm to make the crops grow tall. Again, the bull-roarer was swung so as to produce a humming sound at the Greek mysteries; and when we find the same simple instrument whirled by savages in New Guinea for the sake of ensuring good crops, we may reasonably conjecture that it was whirled with a like intention by the rude forefathers of the Greeks among the cornfields of Eleusis. If that were so—though the conjecture is hardly susceptible of demonstration—it would go some way to confirm the theory that the Eleusinian mysteries were in their origin nothing more than simple rustic ceremonies designed to make the farmer's fields to wave with yellow corn. And in the practice of the Kayans, whose worship of the rice offers many analogies to the Eleusinian worship of the corn, may we not detect a hint of the origin of that rule of secrecy which always characterised the Eleusinian mysteries? May it not have been that, just as the Kayans exclude strangers from their villages while they are engaged in the celebration of religious rites, lest the presence of these intruders should frighten or annoy the shy and touchy spirits who are invoked at these times, so the old Eleusinians may have debarred foreigners from participation in their most solemn ceremonies, lest the coy goddesses of the corn should take fright or offence at the sight of strange faces and so refuse to bestow on men their annual blessing? The admission of foreigners to the privilege of initiation in the mysteries was probably a late innovation introduced at a time when the fame of their sanctity had spread far and wide, and when the old magical meaning of the ritual had long been obscured, if not forgotten.

Lastly, it may be suggested that in the masked dances and dramatic performances, which form a conspicuous and popular feature of the Sowing Festival among the Kayans, we have the savage counterpart of that drama of divine death and resurrection which appears to have figured so prominently in the mysteries of Eleusis. If my interpretation of that solemn drama is correct, it represented in mythical guise the various stages in the growth of the corn for the purpose of magically fostering the natural processes which it simulated. In like manner among the Kauga and Kobeua Indians of North-western Brazil, who subsist chiefly by the cultivation of manioc, dances or rather pantomimes are performed by masked men, who represent spirits or demons of fertility, and by imitating the act of procreation are believed to stimulate the growth of plants as well as to quicken the wombs of women and to promote the multiplication of animals. Coarse and grotesque as these dramatic performances may seem to us, they convey no suggestion of indecency to the minds either of the actors or of the spectators, who regard them in all seriousness as rites destined to confer the blessing of fruitfulness on the inhabitants of the village, on their plantations, and on the whole realm of nature. However, we possess so little exact information as to the rites of Eleusis that all attempts to elucidate them by the ritual of savages must necessarily be conjectural. Yet the candid reader may be willing to grant that conjectures supported by analogies like the foregoing do not exceed the limits of a reasonable hypothesis.

IV. Woman's Part in Primitive Agriculture

If Demeter was indeed a personification of the corn, it is natural to ask, why did the Greeks personify the corn as a goddess rather than a god? why did they ascribe the origin of agriculture to a female rather than to a male power? They conceived the spirit of the vine as masculine; why did they conceive the spirit of the barley and wheat as feminine? To this it has been answered that the personification of the corn as feminine, or at all events the ascription of the discovery of agriculture to a goddess, was suggested by the prominent part which women take in primitive agriculture. The theory illustrates a recent tendency of mythologists to explain many myths as reflections of primitive society rather than as personifications of nature. For that reason, apart from its intrinsic interest, the theory deserves to be briefly considered.

Before the invention of the plough, which can hardly be worked without resort to the labour of men, it was and still is customary in many parts of the world to break up the soil for cultivation with hoes, and among not a few savage peoples to this day the task of hoeing the ground and sowing the seed devolves mainly or entirely upon the women, while the men take little or no part in cultivation beyond clearing the land by felling the forest trees and burning the fallen timber and brushwood which encumber the soil. Thus, for example, among the Zulus, "when a piece of land has been selected for cultivation, the task of clearing it belongs to the men. If the ground be much encumbered, this becomes a laborious undertaking, for their axe is very small, and when a large tree has to be encountered, they can only lop the branches; fire is employed when it is needful to remove the trunk. The reader will therefore not be surprised that the people usually avoid bush-land, though they seem to be aware of its superior fertility. As a general rule the men take no further share in the labour of cultivation; and, as the site chosen is seldom much encumbered and frequently bears nothing but grass, their part of the work is very slight. The women are the real labourers; for (except in some particular cases) the entire business of digging, planting, and weeding devolves on them; and, if we regard the assagai and shield as symbolical of the man, the hoe may be looked upon as emblematic of the woman.... With this rude and heavy instrument the woman digs, plants, and weeds her garden. Digging and sowing are generally one operation, which is thus performed; the seed is first scattered on the ground, when the soil is dug or picked up with the hoe, to the depth of three or four inches, the larger roots and tufts of grass being gathered out, but all the rest left in or on the ground." A special term of contempt is applied to any Zulu man, who, deprived of the services of his wife and family, is compelled by hard necessity to handle the hoe himself. Similarly among the Baronga of Delagoa Bay, "when the rains begin to fall, sometimes as early as September but generally later, they hasten to sow. With her hoe in her hands, the mistress of the field walks with little steps; every time she lifts a clod of earth well broken up, and in the hole thus made she plants three or four grains of maize and covers them up. If she has not finished clearing all the patch of the bush which she contemplated, she proceeds to turn up again the fields she tilled last year. The crop will be less abundant than in virgin soil, but they plant three or four years successively in the same field before it is exhausted. As for enriching the soil with manure, they never think of it." Among the Barotsé, who cultivate millet, maize, and peas to a small extent and in a rudimentary fashion, women alone are occupied with the field-work, and their only implement is a spade or hoe. Of the Matabelé we are told that "most of the hard work is performed by the women; the whole of the cultivation is done by them. They plough with short spades of native manufacture; they sow the fields, and they clear them of weeds." Among the Awemba, to the west of Lake Tanganyika, the bulk of the work in the

plantations falls on the women; in particular the men refuse to hoe the ground. They have a saying, "Is not each male child born for the axe and each female child for the hoe?"

The natives of the Tanganyika plateau "cultivate the banana, and have a curious custom connected with it. No man is permitted to sow; but when the hole is prepared a little girl is carried to the spot on a man's shoulders. She first throws into the hole a sherd of broken pottery, and then scatters the seed over it." The reason of the latter practice has been explained by more recent observers of these natives. "Young children, it may here be noted, are often employed to administer drugs, remedies, even the Poison Ordeal, and to sow the first seeds. Such acts, the natives say, must be performed by chaste and innocent hands, lest a contaminated touch should destroy the potency of the medicine or of the seedlings planted. It used to be a very common sight upon the islands of Lake Bangweolo to watch how a Bisa woman would solve the problem of her own moral unfitness by carrying her baby-girl to the banana-plot, and inserting seedlings in the tiny hands for dropping into the holes already prepared." Similarly among the people of the Lower Congo "women must remain chaste while planting pumpkin and calabash seeds, they are not allowed to touch any pig-meat, and they must wash their hands before touching the seeds. If a woman does not observe all these rules, she must not plant the seeds, or the crop will be bad; she may make the holes, and her baby girl, or another who has obeyed the restrictions, can drop in the seeds and cover them over." We can now perhaps understand why Attic matrons had to observe strict chastity when they celebrated the festival of the Thesmophoria. In Attica that festival was held in honour of Demeter in the month of Pyanepsion, corresponding to October, the season of the autumn sowing; and the rites included certain ceremonies which bore directly on the quickening of the seed. We may conjecture that the rule of chastity imposed on matrons at this festival was a relic of a time when they too, like many savage women down to the present time, discharged the important duty of sowing the seed and were bound for that reason to observe strict continence, lest any impurity on their part should defile the seed and prevent it from bearing fruit.

Of the Caffres of South Africa in general we read that "agriculture is mainly the work of the women, for in olden days the men were occupied in hunting and fighting. The women do but scratch the land with hoes, sometimes using long-handled instruments, as in Zululand, and sometimes short-handled ones, as above the Zambesi. When the ground is thus prepared, the women scatter the seed, throwing it over the soil quite at random. They know the time to sow by the position of the constellations, chiefly by that of the Pleiades. They date their new year from the time they can see this constellation just before sunrise." In Basutoland, where the women also till the fields, though the lands of chiefs are dug and sowed by men, an attempt is made to determine the time of sowing by observation of the moon, but the people generally find themselves out in their reckoning, and after much dispute are forced to fall back upon the state of the weather and of vegetation as better evidence of the season of sowing. Intelligent chiefs rectify the calendar at the summer solstice, which they call the summer-house of the sun.

Among the Nandi of British East Africa "the rough work of clearing the bush for plantations is performed by the men, after which nearly all work in connexion with them is done by the women. The men, however, assist in sowing the seed, and in harvesting some of the crops. As a rule trees are not felled, but the bark is stripped off for about four feet from the ground and the trees are then left to die. The planting is mostly, if not entirely, done during the first half of the *Kiptamo* moon (February), which is the first month of the year, and when the *Iwat-kut* moon rises (March) all seed should be in the ground. The chief medicine man is consulted before the planting operations begin, but the Nandi know by the arrival in the fields of the guinea-fowl, whose song is supposed to be, *O-kol, o-kol; mi-i tokoch* (Plant, plant; there is

luck in it), that the planting season is at hand. When the first seed is sown, salt is mixed with it, and the sower sings mournfully: *Ak o-siek-u o-chok-chi* (And grow quickly), as he sows. After fresh ground has been cleared, eleusine grain is planted. This crop is generally repeated the second year, after which millet is sown, and finally sweet potatoes or some other product. Most fields are allowed to lie fallow every fourth or fifth year. The Nandi manure their plantations with turf ashes.... The eleusine crops are harvested by both men and women. All other crops are reaped by the women only, who are at times assisted by the children. The corn is pounded and winnowed by the women and girls." Among the Suk and En-jemusi of British East Africa it is the women who cultivate the fields and milk the cows. Among the Wadowe of German East Africa the men clear the forest and break up the hard ground, but the women sow and reap the crops. So among the Wanyamwezi, who are an essentially agricultural people, to the south of Lake Victoria Nyanza, the men cut down the bush and hoe the hard ground, but leave the rest of the labour of weeding, sowing, and reaping to the women. The Baganda of Central Africa subsist chiefly on bananas, and among them "the garden and its cultivation have always been the woman's department. Princesses and peasant women alike looked upon cultivation as their special work; the garden with its produce was essentially the wife's domain, and she would under no circumstances allow her husband to do any digging or sowing in it. No woman would remain with a man who did not give her a garden and a hoe to dig it with; if these were denied her, she would seek an early opportunity to escape from her husband and return to her relations to complain of her treatment, and to obtain justice or a divorce. When a man married he sought a plot of land for his wife in order that she might settle to work and provide food for the household.... In initial clearing of the land it was customary for the husband to take part; he cut down the tall grass and shrubs, and so left the ground ready for his wife to begin her digging. The grass and the trees she heaped up and burned, reserving only so much as she needed for firewood. A hoe was the only implement used in cultivation; the blade was heart-shaped with a prong at the base, by which it was fastened to the handle. The hoe-handle was never more than two feet long, so that a woman had to stoop when using it." In Kiziba, a district immediately to the south of Uganda, the tilling of the soil is exclusively the work of the women. They turn up the soil with hoes, make holes in the ground with digging-sticks or their fingers, and drop a few seeds into each hole. Among the Niam-Niam of Central Africa "the men most studiously devote themselves to their hunting, and leave the culture of the soil to be carried on exclusively by the women"; and among the Monbuttoo of the same region in like manner, "whilst the women attend to the tillage of the soil and the gathering of the harvest, the men, unless they are absent either for war or hunting, spend the entire day in idleness." As to the Bangala of the Upper Congo we read that "large farms were made around the towns. The men did the clearing of the bush, felling the trees, and cutting down the undergrowth; the women worked with them, heaping up the grass and brushwood ready for burning, and helping generally. As a rule the women did the hoeing, planting, and weeding, but the men did not so despise this work as never to do it." In this tribe "the food belonged to the woman who cultivated the farm, and while she supplied her husband with the vegetable food, he had to supply the fish and meat and share them with his wife or wives." Amongst the Tofoke, a tribe of the Congo State on the equator, all the field labour, except the clearing away of the forest, is performed by the women. They dig the soil with a hoe and plant maize and manioc. A field is used only once. So with the Ba-Mbala, a Bantu tribe between the rivers Inzia and Kwilu, the men clear the ground for cultivation, but all the rest of the work of tillage falls to the women, whose only tool is an iron hoe. Fresh ground is cleared for cultivation every year. The Mpongwe of the Gaboon, in West Africa, cultivate manioc (cassava), maize, yams, plantains, sweet potatoes, and ground nuts. When new clearings have to be made in the forest, the men cut down and burn the trees, and the women put in the crop. The only tool they use is a dibble,

with which they turn up a sod, put in a seed, and cover it over. Among the Ashira of the same region the cultivation of the soil is in the hands of the women.

A similar division of labour between men and women prevails among many primitive agricultural tribes of Indians in South America. "In the interior of the villages," says an eminent authority on aboriginal South America, "the man often absents himself to hunt or to go into the heart of the forest in search of the honey of the wild bees, and he always goes alone. He fells the trees in the places where he wishes to make a field for cultivation, he fashions his weapons, he digs out his canoe, while the woman rears the children, makes the garments, busies herself with the interior, cultivates the field, gathers the fruits, collects the roots, and prepares the food. Such is, generally at least, the respective condition of the two sexes among almost all the Americans. The Peruvians alone had already, in their semi-civilised state, partially modified these customs; for among them the man shared the toils of the other sex or took on himself the most laborious tasks." Thus, to take examples, among the Caribs of the West Indies the men used to fell the trees and leave the fallen trunks to cumber the ground, burning off only the smaller boughs. Then the women came and planted manioc, potatoes, yams, and bananas wherever they found room among the tree-trunks. In digging the ground to receive the seed or the shoots they did not use hoes but simply pointed sticks. The men, we are told, would rather have died of hunger than undertake such agricultural labours. Again, the staple vegetable food of the Indians of British Guiana is cassava bread, made from the roots of the manioc or cassava plant, which the Indians cultivate in clearings of the forest. The men fell the trees, cut down the undergrowth, and in dry weather set fire to the fallen lumber, thus creating open patches in the forest which are covered with white ashes. When the rains set in, the women repair to these clearings, heavily laden with baskets full of cassava sticks to be used as cuttings. These they insert at irregular intervals in the soil, and so the field is formed. While the cassava is growing, the women do just as much weeding as is necessary to prevent the cultivated plants from being choked by the rank growth of the tropical vegetation, and in doing so they plant bananas, pumpkin seeds, yams, sweet potatoes, sugar-cane, red and yellow peppers, and so forth, wherever there is room for them. At last in the ninth or tenth month, when the seeds appearing on the straggling branches of the cassava plants announce that the roots are ripe, the women cut down the plants and dig up the roots, not all at once, but as they are required. These roots they afterwards peel, scrape, and bake into cassava bread.

In like manner the cassava or manioc plant is cultivated generally among all the Indian tribes of tropical South America, wherever the plant will grow; and the cultivation of it is altogether in the hands of the women, who insert the sticks in the ground after the fashion already described. For example, among the tribes of the Uaupes River, in the upper valley of the Amazon, who are an agricultural people with settled abodes, "the men cut down the trees and brushwood, which, after they have lain some months to dry, are burnt; and the mandioca is then planted by the women, together with little patches of cane, sweet potatoes, and various fruits. The women also dig up the mandioca, and prepare from it the bread which is their main subsistence.... The bread is made fresh every day, as when it gets cold and dry it is far less palatable. The women thus have plenty to do, for every other day at least they have to go to the field, often a mile or two distant, to fetch the root, and every day to grate, prepare, and bake the bread; as it forms by far the greater part of their food, and they often pass days without eating anything else, especially when the men are engaged in clearing the forest." Among the Tupinambas, a tribe of Brazilian Indians, the wives "had something more than their due share of labour, but they were not treated with brutality, and their condition was on the whole happy. They set and dug the mandioc; they sowed and gathered the maize. An odd superstition prevailed, that if a sort of earth-almond, which the Portuguese

call *amendoens*, was planted by the men, it would not grow.” Similar accounts appear to apply to the Brazilian Indians in general: the men occupy themselves with hunting, war, and the manufacture of their weapons, while the women plant and reap the crops, and search for fruits in the forest; above all they cultivate the manioc, scraping the soil clear of weeds with pointed sticks and inserting the shoots in the earth. Similarly among the Indians of Peru, who cultivate maize in clearings of the forest, the cultivation of the fields is left to the women, while the men hunt with bows and arrows and blowguns in the woods, often remaining away from home for weeks or even months together.

A similar distribution of labour between the sexes prevails among some savage tribes in other parts of the world. Thus among the Lhoosai of south-eastern India the men employ themselves chiefly in hunting or in making forays on their weaker neighbours, but they clear the ground and help to carry home the harvest. However, the main burden of the bodily labour by which life is supported falls on the women; they fetch water, hew wood, cultivate the ground, and help to reap the crops. Among the Miris of Assam almost the whole of the field work is done by the women. They cultivate a patch of ground for two successive years, then suffer it to lie fallow for four or five. But they are deterred by superstitious fear from breaking new ground so long as the fallow suffices for their needs; they dread to offend the spirits of the woods by needlessly felling the trees. They raise crops of rice, maize, millet, yams, and sweet potatoes. But they seldom possess any implement adapted solely for tillage; they have never taken to the plough nor even to a hoe. They use their long straight swords to clear, cut, and dig with. Among the Korwas, a savage hill tribe of Bengal, the men hunt with bows and arrows, while the women till the fields, dig for wild roots, or cull wild vegetables. Their principal crop is pulse (*Cajanus Indicus*). Among the Papuans of Ayambori, near Doreh in Dutch New Guinea, it is the men who lay out the fields by felling and burning the trees and brushwood in the forest, and it is they who enclose the fields with fences, but it is the women who sow and reap them and carry home the produce in sacks on their backs. They cultivate rice, millet, and bananas. So among the natives of Kaimani Bay in Dutch New Guinea the men occupy themselves only with fishing and hunting, while all the field work falls on the women. In the Gazelle Peninsula of New Britain, when the natives have decided to convert a piece of grass-land into a plantation, the men cut down the long grass, burn it, dig up the soil with sharp-pointed sticks, and enclose the land with a fence of saplings. Then the women plant the banana shoots, weed the ground, and in the intervals between the bananas insert slips of yams, sweet potatoes, sugar-cane, or ginger. When the produce is ripe, they carry it to the village. Thus the bulk of the labour of cultivation devolves on the women.

Among some peoples of the Indian Archipelago, after the land has been cleared for cultivation by the men, the work of planting and sowing is divided between men and women, the men digging holes in the ground with pointed sticks, and the women following them, putting the seeds or shoots into the holes, and then huddling the earth over them; for savages seldom sow broadcast, they laboriously dig holes and insert the seed in them. This division of agricultural labour between the sexes is adopted by various tribes of Celebes, Ceram, Borneo, Nias, and New Guinea. Sometimes the custom of entrusting the sowing of the seed to women appears to be influenced by superstitious as well as economic considerations. Thus among the Indians of the Orinoco, who with an infinitude of pains cleared the jungle for cultivation by cutting down the forest trees with their stone axes, burning the fallen lumber, and breaking up the ground with wooden instruments hardened in the fire, the task of sowing the maize and planting the roots was performed by the women alone; and when the Spanish missionaries expostulated with the men for not helping their wives in this toilsome duty, they received for answer that as women knew how to conceive seed and bear children, so the seeds and roots planted by them bore fruit far more abundantly than if they had been planted by male hands.

Even among savages who have not yet learned to cultivate any plants the task of collecting the edible seeds and digging up the edible roots of wild plants appears to devolve mainly on women, while the men contribute their share to the common food supply by hunting and fishing, for which their superior strength, agility, and courage especially qualify them. For example, among the Indians of California, who were entirely ignorant of agriculture, the general division of labour between the sexes in the search for food was that the men killed the game and caught the salmon, while the women dug the roots and brought in most of the vegetable food, though the men helped them to gather acorns, nuts, and berries. Among the Indians of San Juan Capistrano in California, while the men passed their time in fowling, fishing, dancing, and lounging, “the women were obliged to gather seeds in the fields, prepare them for cooking, and to perform all the meanest offices, as well as the most laborious. It was painful in the extreme, to behold them, with their infants hanging upon their shoulders, groping about in search of herbs or seeds, and exposed as they frequently were to the inclemency of the weather.” Yet these rude savages possessed a calendar containing directions as to the seasons for collecting the different seeds and produce of the earth. The calendar consisted of lunar months corrected by observation of the solstices, “for at the conclusion of the moon in December, that is, at the conjunction, they calculated the return of the sun from the tropic of Capricorn; and another year commenced, the Indian saying ‘the sun has arrived at his home.’ ... They observed with greater attention and celebrated with more pomp, the sun's arrival at the tropic of Capricorn than they did his reaching the tropic of Cancer, for the reason, that, as they were situated ten degrees from the latter, they were pleased at the sun's approach towards them; for it returned to ripen their fruits and seeds, to give warmth to the atmosphere, and enliven again the fields with beauty and increase.” However, the knowledge of the calendar was limited to the *puplem* or general council of the tribe, who sent criers to make proclamation when the time had come to go forth and gather the seeds and other produce of the earth. In their calculations they were assisted by a *pul* or astrologer, who observed the aspect of the moon. When we consider that these rude Californian savages, destitute alike of agriculture and of the other arts of civilised life, yet succeeded in forming for themselves a calendar based on observation both of the moon and of the sun, we need not hesitate to ascribe to the immeasurably more advanced Greeks at the dawn of history the knowledge of a somewhat more elaborate calendar founded on a cycle of eight solar years.

Among the equally rude aborigines of Australia, to whom agriculture in every form was totally unknown, the division of labour between the sexes in regard to the collection of food appears to have been similar. While the men hunted game, the labour of gathering and preparing the vegetable food fell chiefly to the women. Thus with regard to the Encounter Bay tribe of South Australia we are told that while the men busied themselves, according to the season, either with fishing or with hunting emus, opossums, kangaroos, and so forth, the women and children searched for roots and plants. Again, among the natives of Western Australia “it is generally considered the province of women to dig roots, and for this purpose they carry a long, pointed stick, which is held in the right hand, and driven firmly into the ground, where it is shaken, so as to loosen the earth, which is scooped up and thrown out with the fingers of the left hand, and in this manner they dig with great rapidity. But the labour, in proportion to the amount obtained, is great. To get a yam about half an inch in circumference and a foot in length, they have to dig a hole above a foot square and two feet in depth; a considerable portion of the time of the women and children is, therefore, passed in this employment. If the men are absent upon any expedition, the females are left in charge of one who is old or sick; and in traversing the bush you often stumble on a large party of them, scattered about in the forest, digging roots and collecting the different species of fungus.” In fertile districts, where the yams which the aborigines use as food grow abundantly, the

ground may sometimes be seen riddled with holes made by the women in their search for these edible roots. Thus to quote Sir George Grey: "We now crossed the dry bed of a stream, and from that emerged upon a tract of light fertile soil, quite overrun with *warran* [yam] plants, the root of which is a favourite article of food with the natives. This was the first time we had yet seen this plant on our journey, and now for three and a half consecutive miles we traversed a fertile piece of land, literally perforated with the holes the natives had made to dig this root; indeed we could with difficulty walk across it on that account, whilst this tract extended east and west as far as we could see." Again, in the valley of the Lower Murray River a kind of yam (*Microseris Forsteri*) grew plentifully and was easily found in the spring and early summer, when the roots were dug up out of the earth by the women and children. The root is small and of a sweetish taste and grows throughout the greater part of Australia outside the tropics; on the alpine pastures of the high Australian mountains it attains to a much larger size and furnishes a not unpalatable food. But the women gather edible herbs and seeds as well as roots; and at evening they may be seen trooping in to the camp, each with a great bundle of sow-thistles, dandelions, or trefoil on her head, or carrying wooden vessels filled with seeds, which they afterwards grind up between stones and knead into a paste with water or bake into cakes. Among the aborigines of central Victoria, while the men hunted, the women dug up edible roots and gathered succulent vegetables, such as the young tops of the *munya*, the sow-thistle, and several kinds of fig-marigold. The implement which they used to dig up roots with was a pole seven or eight feet long, hardened in the fire and pointed at the end, which also served them as a weapon both of defence and of offence. Among the tribes of Central Australia the principal vegetable food is the seed of a species of *Claytonia*, called by white men *munyeru*, which the women gather in large quantities and winnow by pouring the little black seeds from one vessel to another so as to let the wind blow the loose husks away.

In these customs observed by savages who are totally ignorant of agriculture we may perhaps detect some of the steps by which mankind have advanced from the enjoyment of the wild fruits of the earth to the systematic cultivation of plants. For an effect of digging up the earth in the search for roots has probably been in many cases to enrich and fertilise the soil and so to increase the crop of roots or herbs; and such an increase would naturally attract the natives in larger numbers and enable them to subsist for longer periods on the spot without being compelled by the speedy exhaustion of the crop to shift their quarters and wander away in search of fresh supplies. Moreover, the winnowing of the seeds on ground which had thus been turned up by the digging-sticks of the women would naturally contribute to the same result. For though savages at the level of the Californian Indians and the aborigines of Australia have no idea of using seeds for any purpose but that of immediate consumption, and it has never occurred to them to incur a temporary loss for the sake of a future gain by sowing them in the ground, yet it is almost certain that in the process of winnowing the seeds as a preparation for eating them many of the grains must have escaped and, being wafted by the wind, have fallen on the upturned soil and borne fruit. Thus by the operations of turning up the ground and winnowing the seed, though neither operation aimed at anything beyond satisfying the immediate pangs of hunger, savage man or rather savage woman was unconsciously preparing for the whole community a future and more abundant store of food, which would enable them to multiply and to abandon the old migratory and wasteful manner of life for a more settled and economic mode of existence. So curiously sometimes does man, aiming his shafts at a near but petty mark, hit a greater and more distant target.

On the whole, then, it appears highly probable that as a consequence of a certain natural division of labour between the sexes women have contributed more than men towards the

greatest advance in economic history, namely, the transition from a nomadic to a settled life, from a natural to an artificial basis of subsistence.

Among the Aryan peoples of Europe the old practice of hoeing the ground as a preparation for sowing appears to have been generally replaced at a very remote period by the far more effective process of ploughing; and as the labour of ploughing practically necessitates the employment of masculine strength, it is hardly to be expected that in Europe many traces should remain of the important part formerly played by women in primitive agriculture. However, we are told that among the Iberians of Spain and the Athamanes of Epirus the women tilled the ground, and that among the ancient Germans the care of the fields was left to the women and old men. But these indications of an age when the cultivation of the ground was committed mainly to feminine hands are few and slight; and if the Greek conception of Demeter as a goddess of corn and agriculture really dates from such an age and was directly suggested by such a division of labour between the sexes, it seems clear that its origin must be sought at a period far back in the history of the Aryan race, perhaps long before the segregation of the Greeks from the common stock and their formation into a separate people. It may be so, but to me I confess that this derivation of the conception appears somewhat far-fetched and improbable; and I prefer to suppose that the idea of the corn as feminine was suggested to the Greek mind, not by the position of women in remote prehistoric ages, but by a direct observation of nature, the teeming head of corn appearing to the primitive fancy to resemble the teeming womb of a woman, and the ripe ear on the stalk being likened to a child borne in the arms or on the back of its mother. At least we know that similar sights suggest similar ideas to some of the agricultural negroes of West Africa. Thus the Hos of Togoland, who plant maize in February and reap it in July, say that the maize is an image of a mother; when the cobs are forming, the mother is binding the infant on her back, but in July she sinks her head and dies and the child is taken away from her, to be afterwards multiplied at the next sowing. When the rude aborigines of Western Australia observe that a seed-bearing plant has flowered, they call it the Mother of So-and-so, naming the particular kind of plant, and they will not allow it to be dug up. Apparently they think that respect and regard are due to the plant as to a mother and her child. Such simple and natural comparisons, which may occur to men in any age and country, suffice to explain the Greek personification of the corn as mother and daughter, and we need not cast about for more recondite theories. Be that as it may, the conception of the corn as a woman and a mother was certainly not peculiar to the ancient Greeks, but has been shared by them with many other races, as will appear abundantly from the instances which I shall cite in the following chapter.

V. The Corn-Mother and the Corn-Maiden in Northern Europe

It has been argued by W. Mannhardt that the first part of Demeter's name is derived from an alleged Cretan word *deai*, "barley," and that accordingly Demeter means neither more nor less than "Barley-mother" or "Corn-mother"; for the root of the word seems to have been applied to different kinds of grain by different branches of the Aryans. As Crete appears to have been one of the most ancient seats of the worship of Demeter, it would not be surprising if her name were of Cretan origin. But the etymology is open to serious objections, and it is safer therefore to lay no stress on it. Be that as it may, we have found independent reasons for identifying Demeter as the Corn-mother, and of the two species of corn associated with her in Greek religion, namely barley and wheat, the barley has perhaps the better claim to be her original element; for not only would it seem to have been the staple food of the Greeks in the Homeric age, but there are grounds for believing that it is one of the oldest, if not the very oldest, cereal cultivated by the Aryan race. Certainly the use of barley in the religious ritual of the ancient Hindoos as well as of the ancient Greeks furnishes a strong argument in favour of the great antiquity of its cultivation, which is known to have been practised by the lake-dwellers of the Stone Age in Europe.

Analogies to the Corn-mother or Barley-mother of ancient Greece have been collected in great abundance by W. Mannhardt from the folk-lore of modern Europe. The following may serve as specimens.

In Germany the corn is very commonly personified under the name of the Corn-mother. Thus in spring, when the corn waves in the wind, the peasants say, "There comes the Corn-mother," or "The Corn-mother is running over the field," or "The Corn-mother is going through the corn." When children wish to go into the fields to pull the blue corn-flowers or the red poppies, they are told not to do so, because the Corn-mother is sitting in the corn and will catch them. Or again she is called, according to the crop, the Rye-mother or the Pea-mother, and children are warned against straying in the rye or among the peas by threats of the Rye-mother or the Pea-mother. In Norway also the Pea-mother is said to sit among the peas. Similar expressions are current among the Slavs. The Poles and Czechs warn children against the Corn-mother who sits in the corn. Or they call her the old Corn-woman, and say that she sits in the corn and strangles the children who tread it down. The Lithuanians say, "The Old Rye-woman sits in the corn." Again the Corn-mother is believed to make the crop grow. Thus in the neighbourhood of Magdeburg it is sometimes said, "It will be a good year for flax; the Flax-mother has been seen." At Dinkelsbühl, in Bavaria, down to the latter part of the nineteenth century, people believed that when the crops on a particular farm compared unfavourably with those of the neighbourhood, the reason was that the Corn-mother had punished the farmer for his sins. In a village of Styria it is said that the Corn-mother, in the shape of a female puppet made out of the last sheaf of corn and dressed in white, may be seen at midnight in the corn-fields, which she fertilises by passing through them; but if she is angry with a farmer, she withers up all his corn.

Further, the Corn-mother plays an important part in harvest customs. She is believed to be present in the handful of corn which is left standing last on the field; and with the cutting of this last handful she is caught, or driven away, or killed. In the first of these cases, the last sheaf is carried joyfully home and honoured as a divine being. It is placed in the barn, and at threshing the corn-spirit appears again. In the Hanoverian district of Hadeln the reapers stand

round the last sheaf and beat it with sticks in order to drive the Corn-mother out of it. They call to each other, "There she is! hit her! Take care she doesn't catch you!" The beating goes on till the grain is completely threshed out; then the Corn-mother is believed to be driven away. In the neighbourhood of Danzig the person who cuts the last ears of corn makes them into a doll, which is called the Corn-mother or the Old Woman and is brought home on the last waggon. In some parts of Holstein the last sheaf is dressed in woman's clothes and called the Corn-mother. It is carried home on the last waggon, and then thoroughly drenched with water. The drenching with water is doubtless a rain-charm. In the district of Bruck in Styria the last sheaf, called the Corn-mother, is made up into the shape of a woman by the oldest married woman in the village, of an age from fifty to fifty-five years. The finest ears are plucked out of it and made into a wreath, which, twined with flowers, is carried on her head by the prettiest girl of the village to the farmer or squire, while the Corn-mother is laid down in the barn to keep off the mice. In other villages of the same district the Corn-mother, at the close of harvest, is carried by two lads at the top of a pole. They march behind the girl who wears the wreath to the squire's house, and while he receives the wreath and hangs it up in the hall, the Corn-mother is placed on the top of a pile of wood, where she is the centre of the harvest supper and dance. Afterwards she is hung up in the barn and remains there till the threshing is over. The man who gives the last stroke at threshing is called the son of the Corn-mother; he is tied up in the Corn-mother, beaten, and carried through the village. The wreath is dedicated in church on the following Sunday; and on Easter Eve the grain is rubbed out of it by a seven-years-old girl and scattered amongst the young corn. At Christmas the straw of the wreath is placed in the manger to make the cattle thrive. Here the fertilising power of the Corn-mother is plainly brought out by scattering the seed taken from her body (for the wreath is made out of the Corn-mother) among the new corn; and her influence over animal life is indicated by placing the straw in the manger. At Westerhüsen, in Saxony, the last corn cut is made in the shape of a woman decked with ribbons and cloth. It is fastened to a pole and brought home on the last waggon. One of the people in the waggon keeps waving the pole, so that the figure moves as if alive. It is placed on the threshing-floor, and stays there till the threshing is done. Amongst the Slavs also the last sheaf is known as the Rye-mother, the Wheat-mother, the Oats-mother, the Barley-mother, and so on, according to the crop. In the district of Tarnow, Galicia, the wreath made out of the last stalks is called the Wheat-mother, Rye-mother, or Pea-mother. It is placed on a girl's head and kept till spring, when some of the grain is mixed with the seed-corn. Here again the fertilising power of the Corn-mother is indicated. In France, also, in the neighbourhood of Auxerre, the last sheaf goes by the name of the Mother of the Wheat, Mother of the Barley, Mother of the Rye, or Mother of the Oats. They leave it standing in the field till the last waggon is about to wend homewards. Then they make a puppet out of it, dress it with clothes belonging to the farmer, and adorn it with a crown and a blue or white scarf. A branch of a tree is stuck in the breast of the puppet, which is now called the Ceres. At the dance in the evening the Ceres is set in the middle of the floor, and the reaper who reaped fastest dances round it with the prettiest girl for his partner. After the dance a pyre is made. All the girls, each wearing a wreath, strip the puppet, pull it to pieces, and place it on the pyre, along with the flowers with which it was adorned. Then the girl who was the first to finish reaping sets fire to the pile, and all pray that Ceres may give a fruitful year. Here, as Mannhardt observes, the old custom has remained intact, though the name Ceres is a bit of schoolmaster's learning. In Upper Brittany the last sheaf is always made into human shape; but if the farmer is a married man, it is made double and consists of a little corn-puppet placed inside of a large one. This is called the Mother-sheaf. It is delivered to the farmer's wife, who unties it and gives drink-money in return.

Sometimes the last sheaf is called, not the Corn-mother, but the Harvest-mother or the Great Mother. In the province of Osnabrück, Hanover, it is called the Harvest-mother; it is made up

in female form, and then the reapers dance about with it. In some parts of Westphalia the last sheaf at the rye-harvest is made especially heavy by fastening stones in it. They bring it home on the last waggon and call it the Great Mother, though they do not fashion it into any special shape. In the district of Erfurt a very heavy sheaf, not necessarily the last, is called the Great Mother, and is carried on the last waggon to the barn, where all hands lift it down amid a fire of jokes.
