1. *The Roman foot*—There are five different ways of determining the length of the Roman foot. These are, 1. From ancient measures still in existence; 2. From measurements of known distances along roads; 3. From measurements of buildings; 4. From the contents of certain measures of capacity; and, 5. From measurements of a degree on the earth's surface.

1. It might appear, at first thoughts, that ancient measures in actual existence would at once give the required information. But these measures are found to differ among themselves. They are of two kinds, foot-measures cut upon gravestones, and brass or iron measures, intended, in all probability, to be used as measures. From the nature of the case, the latter would probably be more exact than the former, and, in fact, the measures on the gravestones are rudely cut, and their subdivisions are of unequal length, so that they have no pretensions to mathematical accuracy; but, on the other hand, it would be absurd to suppose that they would have been made very far wrong. We may safely conclude that they would have about as much accuracy as a measure hastily cut on stone by a mason from the foot-rule used by him in working. Such measures are preserved in the Capitol at Rome. They are of brass, with Roman and Capponian feet. They have been repeatedly measured, but, unfortunately, the different measurements gave different results. The brass and iron foot-rules, of which several exist, do not precisely agree in length. There was anecdotally a standard foot-measure kept in *v* Capitol, called the *peces monetaria*, which was probably lost at the burning of the Capitol under Vitellius or Titus.

2. The itinerary measurements are of two kinds, according as they are obtained by measuring the distance from one place to another, or the dis-
tance from one milestone to another on a Roman road. Both methods have the advantage of the diminution of error which always results from determining a lesser magnitude from a greater, but both are subject to uncertainty from turnings in the road, and from the improbability of the mile-stones having been laid down with minute accuracy; and two other serious objections are, that it is not impossible that the figures formed in the process of diminishing the length of the road shall be subject to the difficulty of determining the point where the measurement began and ended, and the changes which may have taken place in the direction of the road. Both methods, however, have been tried; the former by Riccioli, who measured the distance from Nimes to Narbonne, and by Riccioli and Grimaldi, who measured that between Modena and Bologna, and the latter by Cassini, between Aix and Aries.

3. The measurement of buildings is rather a verification of the value of the foot as obtained from other sources than an independent evidence. It very seldom happens that we know the number of ancient feet contained in the building measured. We have one such example in the Pantheon, which was called Hecatompedon (hundred-footed) from the width of its floor; but even in this case there is always a doubt whether the whole building was in fact measured by the length of the Greek foot, to what precise part of the front this measurement applies. Again, there is the obelisk in the Piazza del Popolo at Rome, and the Flaminian obelisk, the heights of which are given by Pliny. But the actual heights of these obelisks, as compared with Pliny, would give greater value, while the diameter of the circle, on which, in some cases, the whole construction of the obelisk is supposed to be based, would give a less value.

The building is measured, and the length thus obtained is divided by the supposed value of the ancient foot (as derived from other evidence); and if a remainder be left, this value of the foot is corrected so that there may be no remainder. It is assumed in this process that no fractions of feet were allowed in the dimensions of the building, and also that the measurements were made with the most minute exactness, both of which assumptions are not very probable. In fact, these measurements have given different values for the foot. "Modern architects," says Mr. Hussey, "do not allow that such calculations could be depended on in modern buildings, for determining the true length of the measures by which they were planned. Nor are the dimensions of the parts of buildings of the Middle Ages in our own country, as Gothic churches and cathedrals, found to agree exactly, so as to give whole numbers of the standard measure." On the other hand, these measurements, like those on roads, have the advantage of involving, in all probability, very small errors, and of the diminution of the error by division.

4. Villalpando and Einschmidt have attempted to deduce the length of the Roman foot from the solid content of the congius of Vespasian. (Vid. Congius.) Since the congius was the eighth of the amphora, and the content of the amphora was a cubic foot (vid. Amphora), the process is to multiply the content of the congius by 8, and extract the cube root of the product. But there is a doubt about the content of the congius itself (vid. Labra); then it is hardly to be supposed that the content of the con-

5. Some French geographers, and especially M. Gosselin, have supposed that the ancient astronomers were acquainted with the dimensions of a great circle of the earth, and that they found their whole system of measures from the revolutions of such a circle. The results of M. Gosselin's calculations agree well with those derived from other sources. But we need better evidence than this agreement to convince us that both the Greeks and Romans, at a very early period, formed a system of measures on such scientific principles; and it is incredible that, if such a system had really existed, there should be no allusion to it in any of the ancient geographers. The average values of the Roman foot, obtained from these various sources, in terms of the English foot are the following: 1. From ancient measures = 9718
2. From itinerary measurements = 97082
3. From measurements of buildings = 96594
4. From the congius = 9632
5. From Popolo = 9724
of which the first three are the most to be depended on; and of those three the average is 9708, or 11-6496 inches, or 11.1496 inches, which we may take as the probable value of the Roman foot.

Cagnazzi, whose researches are said by Niebuhr to have placed the true value of the Roman foot beyond a doubt, gives it a greater length than the above, namely, 12.135 Paris inches; but this calculation is objected to by Böckh, as being derived by a process not perfectly true from the value of the pound, and as being confirmed only by one existing measure, and also as being at variance with the value of the Greek foot, obtained from independent sources. Böckh's own calculation which agrees with that of Warm, gives a value very little less than the above, namely, 12.1-15. Paris inches = 9704.69 inches. The Romans applied the uncial division (vid. As) to the foot, which thus contained 12 unciae, whence our inches; and many of the words used to express certain numbers of unciae are applied to the parts of the foot. It was also divided into 105 digiti (fingers). The Roman foot was used especially by architects and land-surveyors, and is found on all the foot-measures that have come down to us. Palmae (the thumb), which is used in modern Latin for an inch, is not found in the ancient writers, but Pliny uses the adjective policaris (of a thumb's breadth or thickness). Palma (a hand-breadth) was the fourth part of the foot, containing 4 digiti or 3 unciae. There have been several of 12 digiti or 9 unciae.

The following measures were longer than the foot. Palmipes, that is palmae et pes, 14 feet, or 15 inches; cubitus, 14 feet, is seldom used in Latin except as a translation of the Greek πυγμ. (Vid. Cibmis.) Uima (the arm) is used by later writers as equivalent to cubitus; but it was properly the translation of the Greek σχοινη; Pliny uses it for the whole length of the outstretched arms from finger to finger. From the analogy of the as we have also ascendia for 2 feet, and pes sestertius for 24 feet. Passus (a pace), 5 feet, Mille passus, 5000 feet, or a mile. (Vid. Milliarium.) Gradus, = 1 passus. Leuga or Leuca was a Greek measure =

which would give a rather smaller ratio than that of 34 : 25 for the ratio of the Roman to the Greek foot. It is on the authority of this passage that Büch gives the value above mentioned for the Roman foot. If, according to the supposition already noticed, a slight diminution took place in the Roman foot, this would account for the difference. But perhaps we ought not to consider this solitary passage of sufficient weight to influence the calculation.

The Greeks used different standards at different places and at different times. The foot which generally prevailed over Greece was that by which the stadium at Olympia was measured (vid. Stadium), which was the one we have been speaking of, and which was therefore the same as that used at Athens in her best days. Hyginus mentions this foot as being used in Cyrene under the name of Polemios.

The following table represents the parts and multiples of the Greek foot:

The square foot (pes quadratus) is called by Frontinus constratus, and by Boethius constratus. Frontinus applies the term quadratus to the cubic foot. The principal square measure was the jurgerum of 240 feet by 120. (Vid. JUGERON.)

Some have concluded, from the measurements of buildings, that the foot was slightly reduced about the time of Domitian, which Wurm accounts for by supposing that the pes montanus, after being destroyed in the fire under Titus, was restored by Domitian in a careless manner. Both the fact and the explanation, however, appear to be very doubtful.

II. The Greek foot.—We have no ancient measures by which to determine the length of the Greek foot, but we have the general testimony of ancient writers that it was longer than the Roman, and that the former measured itself by the foot of 25 : 24. The Greek stadium, which contained 600 Greek feet, is said by Roman writers to contain 625 Roman feet; and also a Roman mile, or 5000 feet, was reckoned equal to 8 Greek stadia, or 4800 feet; both of these calculations give the above ratio of 25 : 24.

If, therefore, the Roman foot was 9709 square inches, the Greek foot was equal to 101125 feet, or 1235 inches.

This value is confirmed by the measurement of the Parthenon. "Stuart,"4 says Mr. Hussey, "measured the upper step of the basement of the Parthenon, which is the platform on which the pillars stand, and is exactly that part of the building where, we should expect that the measure would have been taken if the name He catolphedon was really given to it on account of the dimensions. He found the width of the front to be 101 feet 1 7 inch-,

length, the side of 227 feet 7 0 inches; and since these two quantities are very nearly in the ratio of 100 to 225, he inferred that the two sides really contained these two numbers of feet. From this he calculated the value of the foot, from the front 123 17 inches, from the side 12 13 inches: of which the greatest exceeds the value given above by only 003 of an inch." Other measurements of the Parthenon and of other buildings at Athens tend to the same result.

Strabo, however,4 quotes from Polybius a calculation which makes the Greek and Roman foot equal, but it is perfectly clear that there is a mistake in this statement. Plutarch again4 says expressly that the mile is a little less than 8 stadia.

1. 1. (De Condit. Agr. p. 510.)—2. (De Mena. p. 368.)
time, namely, the tenth century. The *Pis Drusus*, or foot of Drusus, contained 131 Roman inches = 13-1058 English inches. It was used beyond the boundaries of Italy for measuring land, and was the standard among the Tungri in Lower Germany.

1. *PERSULUS.* (Vid. JUNA, p. 536.)

2. Trunchoons, said to have been first used in battle by the Africans in fighting against the Egyptians.

PESOSILLOS. (Vid. LutrHenCULL.)

3. Poles used to carry burdens in the manner represented in the woodcut, p. 57, or so as to combine the strength of two or more individuals. The carriers who used these poles were called *phalangii*, and also *heraclii* and *exagerii*. The Stereos kept 215 pairs, they worked in parties of six, four, or two persons. The poles were marked at equal distances, and the straps which passed over the shoulders of the workmen were so fixed at the divisions, that each man sustained an equal share of the burden.

4. Rollers placed under ships to move them on dry land, so as to draw them upon shore or into the water. Some were four-wheeled, and others had a long column, and a stone column. Rollers were employed in the same manner to move military engines; and we need not hesitate to conclude that columns of marble and other enormous stones, designed for building were transported from the quarry by the same process.

It must be observed that the Greeks were left entirely without a cart or four-wheeled vehicle. Their chariots ranged in long succession, and moving parallel to one another, it might be expected that the term *phalax* would be used by them metaphorically. We, accordingly, not only find it applied to denote the bones of the hand and foot, which are placed beside one another like so many rollers, but in the IIiad the lines of soldiers ranged in close order, and following one another, are often called by the same expressive appellation, and hence arose the subsequent established use of the term in reference to the Greek army. (Vid. ARMY, GREEK.)

PHALANGON (φαλάγγων), "a class of venomous spiders," says Adams, "several species of which are described by Nicerand. These Sprengel attempts to determine, but his conclusions are not very certain. He does not refer any of them to the genus *Phalangium.*" Stockhouse concludes that the *phalaxian* of Theophrastus includes the *Araaeus uncinaria* and the *A. Tarantula;* the former, however, is an American species, and, consequently, inadmissible.

PHALANTHICA. (Vid. HVARA, p. 489.)

PHALEA (φαλαία), the whale. (Vid. BALENA.)

"II. An insect referable to the genus *Filana*, or Moths. "De Pauw," says Adams, "makes the *phalax* of Philo to be the *phalaxia*. It appears, however, with more propriety, to be referable to the *phalagias*.

PHALANA or PALANGA (φαλάγγα), any long cylindrical piece of wood, but especially

1. Trunks or branches of trees, or portions of them, cut as articles of merchandise. The Athenians presented to the King of Persia *δεικνυόμενα* *φαλάγγας θέσιν,* "200 pieces of ebony." 1

PHALANGA (φαλαγγα), a boss, disc, or crescent of metal, in many instances of gorgons, and beautifully wrought, so as to be highly prized. 2 Orchards of this description, being used in pairs, are scarcely ever mentioned except in the plural number. The names for them are evidently formed from the term *phalax*, which is explained under *Galea*, p. 406. 3 Besides the metallic ornaments of the helmet, similar decorations were sometimes, though very rarely, worn by warriors of other parts of their dress or armour, probably upon the breast. 4 The negro slaves who were kept by opulent Romans wore them suspended round their necks. 5 According to the *Tiara of the King of Persia* was thus adorned. 6 But we

most commonly read of phaleras as ornaments attached to the harness of horses, 1 especially about the head (φαρητρα μαλακος), and often worn as pendants (pennesitas), so as to produce a terrific effect when shaken by the rapid motions of the horse (turbantur phaleras). These ornaments were often bestowed upon horsemen by the Roman generals in the same manner as the Armilla, the Torques the hasta pura (vid. Hasta, p. 490), and the crown of gold (vid. Corona), in order to make a public and permanent acknowledgment of bravery and merit. 2

PHARETRA (φαρητρα, αρ. Ηρόδ. φαρητρος), a Quiver. A quiver, full of arrows, was the usual accompaniment of the bow. (Vid. Arcus.) It was, consequently, part of the attire of every nation addicted to archery. Virgil applies to it the epithets Creusa, Lucia, Therisa, 3 Ovid mentions the pharetra of Geta, 4 and Herodotus represents it as part of the ordinary armour of the Persians. 5 Females also assumed the quiver, together with the bow, as in the case of the Amazons, 6 and of those Spartan, Tyrian, and Thracian virgins who were fond of hunting, and wore boots (vid. Coturnus, Phero) and other appropriate articles of dress. 7 On the same principle, the quiver is an attribute of certain divinities, as, of Apollo, 8 Diana, 9 Hercules, 10 and Cupid. 11 The quiver, like the bow-case (vid. Corvex), was principally made of hide or leather, 12 and was adorned with gold 13 (aurata), painting, 14 and braiding (στυλαρθος). 15 It had a lid (φυκωμα), 16 and was suspended from the right shoulder by a belt (vid. Balteus), passing over the breast and behind the back. 17 Its most common position was on the left hip, in the usual place of the sword (vid. Gladius), and consequently, as Pindar says, "under the elbow" 18 or "under the arm" (υπωλειον). 19 It was worn thus by the Scythians 20 and by the Egyptians, 21 and is so represented in the annexed figure of the Amazon Dinomache, copied from a Greek vase. 22 The left-hand figure in the same woodcut is from one of the Εγινα marbles. But it is the statue of an Astarte (captive, or perhaps the virgin, fractured in the original) is suspended equally low, but with the opening towards his right elbow, so that it would be necessary for him, in taking the arrows, to pass his hand behind his body instead of before it. To this fashion was opposed the Cretan method of carrying the quiver, which is exemplified in the woodcut, p. 945, and is uniformly seen in the ancient temples of Diana. 23 The necessity that the quiver should be so hung that the arrows might be taken from it with ease and rapidity, and this end would be obtained in any one of the three positions described. The warrior made the arrows rattle in his quiver as a method of inspiring fear. 24

PHARMACEUTICA (Φαρμακευτικα), sometimes called Φαρμακια, 25 is defined by Galen 26 to be that part of the science of medicine which cures diseases by means of drugs, δια φαρμακων, 27 and formed, according to Celsus, 28 one of the three divisions of the whole science, or, more properly, 29 of that called Therapeutica. (Vid. Therapeutica.)

With respect to the actual nature of the medicines used by the ancients, it is in most cases useless to inquire; 30 depending as it does upon a large mass of records, change of language, and ambiguity of description, have rendered great part of the learned researches on the subject unsatisfactory; and, indeed, we are in doubt with regard to many of the medicines employed even by Hippocrates and Galen. It is, however, clearly shown by the earliest records, that the ancients were aware of the sedative powers of many powerful remedies; thus Melampus of Argos, one of the most ancient Greek physicians with whom we are acquainted, is said to have cured Iphicles, one of the Argonauts, of sterility by administering the rust (or nesiquoside) of iron in wine for ten days; 31 and the same physician used the black helioboe as a purge on the daughters of King Peneus afflicted with melancholy. Opium, or a preparation of the poppy, was certainly known in the earliest ages; it was probably opium that Helen mixed with wine, and gave to the guests of Menelaus, under the expressive name of νησαθενε, 32 to drive away their cares, and increase their hilarity; and this conjecture (says Dr. Paris, in his "History of the Opium") receives further support from the fact that the νησαθενθ of Homer was obtained from the Egyptian Thebes, and the tincture of opium (or laudanum) has been called "Thebaic tincture." Gororrus, however, in his "Definitiones Medicae," 33 thinks that the herb alluded to was the "Enula Campana," 34 or Elecampane, which is also called "Helenium," with a traditional reference (as is supposed) to Helen's name. There is reason to believe that the pagan priesthood were under the influence of some powerful narcotic during the display of their oracular powers. Dr. Darwin thinks it might be the Laurocerasus, but the effects produced (says Dr. Paris) would seem to resemble rather those of opium, or perhaps stramonium, than the opium (or hydromiace). The sedative powers of the Lacuna nativa, or lettuce, were known also in the earliest times: among the fables of antiquity, we read that, after the death of Adonis, Venus throw herself on a bed of lettuces to kill her grief and express her desires; and we are told that Galen, in the decline of life, suffered much from morbid vigi-
Many of the ancient physicians have written on the subject of drugs; the following list contains titles of those that are refer-

PHASEIUS.

1. PHASELUS or PHASELUS (φάσελος), a Lighthouse. The most celebrated lighthouse of antiquity was that situated at the entrance to the port of Alexandria. It was built by Sostratus of Cnidus, on an island which bore the same name, by command of one of the Ptolemies, and at an expense of 800 talents. It was square, constructed of white stone, and with admirable art; exceedingly lofty, and in all respects of great dimensions. It contained many stories (πολύθροφα), which diminished in width from below upward. The upper stories had windows looking seaward, and torches or fires were kept burning in them by night, in order to guide vessels into the harbour.

Pliny mentions the lighthouses of Ostia and Ravenna, and says that there were similar towers at many other places. They are represented on the medals of Apamea and other maritime cities. The name of Pharos was given to them in allusion to that at Alexandria, which was the model for their construction. The piers of Brundisium, for example, was, like that of Alexandria, an island with a lighthouse upon it. Stenoton mentions another pharos at Capreae.

The annexed woodcut shows two pharoi remaining in Britain. The first is within the precincts of Dover Castle. It is about 40 feet high, octagonal externally, tapering from below upward, and built with narrow, course of brick stone and much wider courses of stone in alternate portions. The space within the tower is square, the sides of the octagon without and of the square within being equal, viz., each 15 Roman feet. The door is seen at the bottom. A similar pharos formerly existed at Boulogne, and is supposed to have been built by Caligula, as the tower here introduced is on the summit of the point on the coast of Flintshire.

PHA'ROS (φάρος). (Vid. PALLION.)

PHASE'LUS (φάσελος) was a vessel rather long and narrow, apparently so called from its resemblance to the shape of a phaselus or kidney bean. It was chiefly used by the Egyptians, and was of various sizes, from a mere boat to a vessel adapted for long voyages. Octavia sent ten triremes of this kind, which she had obtained from Antony, to assist her brother Octavius; and Appian describes them as a kind of medium between the ships of war and the common transport or merchant vessels. The phaselus was built for speed (phaselus ursile—navium celerrimum), to which more attention seems to have been paid than to its strength. At the present time, the epithet fragilis is given to it by Horace. The vessels were also sometimes made of clay (fictilibus phaselis), to which the epithet of Horace may perhaps also refer.

PHASELUS or PHASELUS (φάσελος, φασελός), the Phaselus vulgaris, or common Kidney Bean.

PHAS'ANON (φασανόν). "Sprengel," says Adams, hesitates between the Iris gazellina and the Gladiolus communis, or common Sword Grass; Stackhouse between the latter and the Iris Xiphium. These doubts, however, are of older date.17

PHASIA'NOS (φασίανος or φασιανικός δυός), the Pheasant, or Phasianus Colchicus, L. According to the Greek legend, the Pheasant took its name, in that language, from the river Phasis in Colchis. It was a game bird, and might occasionally be caught in country before the expedition of the Argonauts. These adventurers, it is said, on ascending the Phasis, beheld the birds in question spread along the banks of the river, and, bringing some of them back to their native country, bestowed upon it, says Montezial, a gift more precious than the golden fleece. At the present time, under the same authority, the pheasants of Ciechis or Mingrelia are the finest and largest in the known world.3

PHAS'OLUM. (Vid. PHASELUS.)

PHASIS (φάσις) was one of the various methods by which public offenders at Athens might be prosecuted; but the word is often used to denote any other quality, such as Pollux says, κατά τον χάρην λιγότερον πόλις αι μετάφεσις των θαυμάσθηκεν μετωπώ. (Vid. Aristoph. Ec. 300, and Acharn. 283, 866, where the word φασις is used in the same sense as φαίνει.) The word συκοφάντης is derived from the practice of laying information against those who exported figs. (Vid. SYCOPHANTES.)

Though it is certain that the φάσις or distinctions which accompany this way of criminal prosecution, 10 we are not informed in what its peculiarities consisted. According to Polllux, it might be brought against those who committed offences against the mine laws, or the customs, or any other part of the revenue; against any persons who brought false accusations against others for such offences; and against guardians who injured their wards. The charge, as in the γραφας, was made in writing (ἐν γραφαιμεία), with the name of the prosecutor and the proposed penalty (τίμία) affixed, and also the names of the καλλιτεχνής. The same author says, εραφοντι δε προς τον φορτων. Here we must either understand the word ἀρχοντα to be used in a more general sense, as denoting any magistrate to whom a jurisdiction belonged, or, with Schillemberg, 13 For it is clear that the archon was not the only person before whom a φάσις might be preferred. In cases where corn had been carried to a foreign port, or money lent on a ship which did not bring a return cargo to Athens, and probably in all cases of offence

against the export and import laws, the information was laid before the ἐπιμελητὰς τοῦ ἱμωρίου. Where public money had been embezzled or illegally appropriated, for which a φάσας was maintainable, the σύνδεσμος were in court, and mutual redress was hoped for. The same went to the state which was one of a purely public nature, that is, where the offence immediately affecte d the state; but where it was of a mixed nature, as where a private person was injured, and the state only indirectly, in such case compensation was awarded to the private person. This was the case in prosecutions against fraudulent guardians. On the same ground, wherever the prosecutor had an interest in the case beyond that which he might feel as the vindicator of public justice, as where he, or some third person on whose behalf he interposed, was the party directly injured, and might reap advantage from the result, he was liable to the καταφύλακτος, and also to the παράπτωσις, just as he would be in a private action. Probably this liability attached upon informations for carrying corn to a foreign port, as the informer there got half the penalty if successful. Where the φάσας was of a purely public nature, the prosecutor would be subject only to the payment of the παράπτωσις, and to the thousand drachmas if he failed to obtain a fifth part of the voto, according to the common practice in criminal causes. Whether, in those of a mixed nature, he was liable to these payments, as well as to the παράπτωσις and καταφύλακτος, is a question which has been much discussed, but cannot be settled. We have no speech left us by the orators on the subject of a φάσας, but only mention of a lost speech of Lysias πρὸς τὴν φάσαν τοῦ ἡρακλείου οἰκίου.5

*PHASSA (φάσα), the Ring-dove or Cuscuta, namely, the Columba palumbus. L. Sonini says the males of the species are distinguished by the French φάσα, and le pigeon sambois, to the French.6

*PELLUS (φῖλλος), the Quercus ruber, or Cork-tree.7

PHERNE (φέρνη). (Vid. Dos, Greek.)

PHIALA. (Vid. Patrea.)

*PHILLOREA (φιλλορέα), the Phillorea latifolia, or Broad-leaved true Phillorea. Sibthorpe found it growing abundantly in Cappadocia, the ancient Cretan 8.

*PHILYRA (φιλήρα), the Tilia Europaea, the Lime or Linden tree. Of the inner bark were formed strings for graniers, mats, &c.9

*PHILEOS (φίλεος), a species of Reed. Sprengel makes it the Arundo amplafoodis ; Stockhouse, the Arundo calamagrostis.10

PHILOMOS (φιλόμος) or PHILOMOS (φιλόμος). "Fond of poetry and description," remarks Adams of the φιλόμος and φιλάμος by Dioscorides and Galen, it is difficult to determine their several genera and species. Matthiolius, Dodonaeus, and Sprengel are agreed that the φιλόμος ἀγρίος is the Philmos fruticosus, or Broad-leaved Sage-tree. The female λεπίνος φιλόμος is the Verbascum undulatum, Lam., according to Sibthorp, and the male λεπίνος φιλόμος, the Verbascum Thapsus, or Great Mullein, according to the same; but Sprengel appears to show satisfactorily that the female is the Thapsus, and the male the undulatum. The Verbascum nigricans, or Black Mullein, is well known. The first two species of the φιλόμος are referred by Sprengel to the Philmos Samia, L., and the Philmos lunariafolia, Sibthorp. Clusius named the narrow-leaved Jerusalem Sage, Philmos lychnites, Sprengel.

*PHLOX (φλόξ), a plant which Sprengel calls the Agrostemma coronarium.11 Schneider mentions that Anguillara held it to be the "flore del veluto" of the Italians. All the plants included in the genus Phlox of modern botanists are natives of the New World.12

*PHOCA (φόκα), the Seal, or Phoca vitulina, called by Pliny "Vitulus marinus," or Sea Cat. It was ranked among the κύνη by Homer.13

*PHOCENA (φόκενα), the Delphinus Pinnatus, L., or Porpoise. Julius Scaliger, Belon, Gesner, and Rondel concurred in referring the Tursio of Pliny to the Porpoise. Pliny and other writers of antiquity confound the φόκα, or Seal, with the φιλακτινή, or Porpoise.14

*PHÈNICOPTÈRUS (φενικόπτερος), the Flamingo, or Phoenicopterus ruber, L. The Greek name denotes that the bird was of the Phoenix, and especially suitable to individuals of two years old, whose wings alone are of a fine carnation, while the neck and body are still invested with white plumage. The ancients held the flesh of the Flamingo in high estimation, and the tongue was especially regarded as an exquisite morsel; but such of the moderns as have tasted it declare it to be oily, and of an unpleasant marshy flavour.15

*PHÈNICUS (φινικός), a species of Bird, the Sylvia Punicus, Lath., or Redstart. "The Redstart so nearly resembles the Redbreast in general appearance, that it is not to be wondered at that Aristotle took it for a Redbreast in its summer plumage."16

PHÈNIX (φίνιξ). I. a fabulous Egyptian bird. II. The Phœnix dactylifera, Date-tree, or greater Palm. "Theophrastus describes six species or kinds of palms; his χαμάρδης is the same as the χαμάρδης φίνικης of Dioscorides, namely, the Chamaerea humilis, L. The Thebais Palm of Dioscorides are named Cruscera Thebasæa by De Lisle; but, according to Sprengel, they were mere varieties of the common Palm. The ancients were well aware of the distinction of species which exists in this tribe of trees. The φίνικη phia of Dioscorides is undoubtedly the Lodoicer perenne, Perennial Darnel, or Rye Grass.17

PHΟΝΟΣ (φόνος), Homicide, was either ἀκόστος or ἀκοστός, a distinction which corresponds in some measure, but not exactly, with our murder and manslaughter; for the φόνος ἀκοστός might fall within the description of justifiable homicide, while φόνος ἀκοστός might be excusable homicide. According 1.

mg to the different circumstances under which the homicide was committed, the tribunal to which the case was referred, and the modes of proceeding at Athens, varied. All cases of murder (with one exception, to be hereafter noticed) were tried by the court of Areopagus; other cases of homicide were tried by the judges of Draco to be tried by the ἕφεται. All φώναι dikai belonged to the jurisdiction of the ἅρμον. The latter, if the murder was the sole judge in cases of unintentional homicide; for such an act was considered, in a religious point of view, as being a pollution of the city; and it became his duty, as guardian of religion, to take care that the pollution (γέγος) was duly expiated. Draco, however, established the ἕφεται, first, as a court of appeal from the ἅρμον; and so, after they began to perform the office of ἔφεται, they became the presiding magistrate. 1 In discussing this subject, we have to consider the various courts established at Athens for the trial of homicide, the different species of crime therein respectively prosecuted, the manner of proceeding against the criminal, and the nature of the punishments to which he was liable. All these points are treated of in the ætacris of the Πραγματευσόμενα, and in the ἔφεται of this work. 2 To the court ἐπί ἐπισκοπής belonged the cases of accidental homicide, manslaughter, murder by proxy (διώκομαι), and murder or manslaughter (κατακτήτωρ). Such a case as that mentioned by Demonesthenes, 3 of an unlawful blow followed by death, would be manslaughter. It seems, also, that this court had a concurrent jurisdiction with the Areopagus in charges of murder, which was carried into effect. The law perhaps allowed the prosecutor to waive the heavier charge, and proceed against the defendant as an accessory, because of the supposed origin of this court, as Harpocration 4 says. The court ἐπί ἐπισκοπής was referred cases where the party confessed the deed, but justified it: ‘υπ’ τίνος δολομεῦ μὲν κτίτου, εὐνόμως δὲ φύς δειράνειν. Demosthenes calls it ἁγίατον καὶ φιλικότατον. 5

As to the origin of this court, see Mathias, 152. In the τό ἐπί Πραγματευτικος, the objects of prosecution were inanimat things, as wood, stone, or iron, which had caused the death of a man by falling on him. 6 Draco enacted that the cause of death should be cast out of the boundaries of the land (υπέρπετισθαναι), in which ceremony the ἄρμων βασιλεύει was assisted by the φιλαπειστῆς. 7 This was a relic of very rude times, and may be not inaptly compared with our custom of giving a funeral. Mathias thinks there was an ulterior object in the investigation, viz., that by the production of the instrument by which death was inflicted, a clue might be found to the discovery of the real murderer, if any. The court ἐπί φρατεῖοι was reserved for a peculiar one, where a man, after going into exile for an unintentional homicide, and before he had appeared the relatives of the deceased, was charged with having committed murder. He was brought in a bın ' in the harbour called ἐπί φρατεῖοι. vü: were pleaded his cause on board ship, whilst judges remained on land. If he was convicted, he suffered the penalty of the punishment of murder; if acquitted, he suffered the remainder of his fornication. The object of this peculiar proceeding was to avoid pollution (for the crime of the first act had not yet been expiated), and, at the same time, to bring the second offence to trial. 1

To one or other of these courts all φώναι dikai were sent for trial, and it was the business of the ἄρμων βασιλεύει to decide which. The task of prosecution devolved upon the nearest relatives of the deceased, and in case of a slave, upon the master. To neglect to prosecute, without good cause, was deemed an offence against religion; that is, in any relative not farther removed than a first cousin's son (ανεφίδειον). Within that degree the law enjoined the relatives to prosecute, under penalty of a fine (κατακτήτωρ), which might, however (without incurring any censure), forbear to prosecute, where the murdered man had forgiven the murderer before he died; 2 or, in cases of involuntary homicide, where the offender gave the satisfaction which the law required, unless the deceased had given a special injunction to avenge him. 3 The first step taken by the prosecutor was, to give notice of the cause of action to the parties, or to all public places and sacrifices. This was called πρὸς ἔργος, and was given at the funeral of the deceased. 4 After this he gave a public notice in the market place, warning the accused to appear and answer to the charge: here he was said προεσπείται or προ ανεφίδειον; 5 The next thing was to prefer the charge before the archon. The word ἀνεφίδειον, the term ἐπισκοπήσθαι or ἐπισκοπήσθαι was peculiarly applied. 6 The charge was delivered in writing: the prosecutor was said ἀναπαράσεον δικράνοις. 7 The thing was not to be used as a censer, but as a weapon, the object which was intended was to bring the offender to an appropriate punishment. The evidence and other matters to be prepared were in the usual way. Three months were allowed for this preliminary inquiry, and there were three special hearings, one in each month, called διαδικαιοσύνη, or (according to Bekker's reading) διαδικαιοσύνη. 8 After which, in the fourth month, the archon εργάζεται ἐπὶ ἔργον. 9 The defendant was allowed to put in a παραγράφος if he contended that the charge ought to be tried in one of the minor courts. 10

All the φώναι dikai were held, in the open air, in order that the judges might not be under the same roof with one suspected of impurity, nor the prosecutor with his adversary. 11 The king archon, presided with his crown taken off. 12 The parties were bound by the most solemn oaths; the one swearing that the charge was true, that he bore

such a relationship to the deceased, and that he would, in conducting his case, confine himself to the question at issue; the other declaring the charge to be false.\(^1\) The witnesses on both sides were worn in like manner,\(^2\) and slaves were allowed to appear as witnesses.\(^3\) Either party was at liberty to make two speeches, the prosecutor beginning, as may be seen from the τεραπόνες. But the pleader was obliged to confine himself to the point at issue.\(^4\) Advocates (προφήται) were not admitted to speak for the parties anecdotally, but in later times they were.\(^5\) Two days were occupied in the trial. After the first day, the defendant, if fearful of the result, was at liberty to fly the country, except in the case of parricide. Such flight could not be prevented by the adversary, but the proper remedy was to find itself. On the third day the judges proceeded to give their votes, for which two boxes or urns were provided (φθορίας ή άρματος), one of brass, the other of wood; the former for the condemning ballots, the latter for those of acquittal. An equal number of votes was an acquittal; a point first established (according to the old tradition) upon the trial of Orestes.

As the defence might consist either in a simple denial of the imputation to kill, or in a justification of the act, it is necessary to inquire what circumstances amounted to a legal justification or excuse. We learn from Demosthenes\(^6\) that it was excusable to kill another unintentionally in a gymnastic combat, or to kill a friend in battle or ambuscade, mistaking him for an enemy; that it was justifiable to slay an adulterer if caught in ύπαθερμωμάτων, or to kill in the same way with a sister or daughter, or even with a concubine, if her children would be free. (As to an adulterer, see Lysias.) \(^7\) It was lawful to kill a robber at the time when he made his attack (εὐθύς ἁμαρτωλόν), but not after.\(^8\) By a special decree of the people, made after the expulsion of the Thirty Tyrants, it was lawful to kill any man who attempted to establish or to restore a tyrant, or to put down the democracy, or committed treason against the state.\(^9\) A physician was excused who caused the death of a patient by mistake or professional ignorance.\(^10\) This distinction, however, must be observed. Justifiable homicide left the perpetrator entirely free from pollution (καταφανές). That which, though unintentional, was not perfectly free from blame, required to be explained. See the remarks of Antiphon in the Τέραπον, b. 123.

It remains to speak of the punishment. The courts were not invested with a discretionary power in awarding punishment; the law determined this according to the nature of the crime.\(^11\) Wild murder was punished with death.\(^12\) It was the duty of the thermothete to see that the sentence was executed, and of the Eleven to execute it.\(^13\) We have seen that the criminal might avoid it by flying before the sentence was passed. Malicious wounds were punished with banishment and confiscation of goods.\(^14\) So were attempts to murder (βασανίζοντας). But where the design was followed by the death of him whose life was plotted against, and the crime was treated as a murder, it might be punished with death, at least if it was tried in the Areopagus; for it is doubtful whether the minor courts (except that άργοστάτος had the power of inflicting capital punishment.\(^1\) If the criminal who was banished, or who avoided his sentence by voluntary exile, returned to the country, an ἀνάδεικσις might forthwith be laid against him, and but for the operation of the provision before the theomatethes, or even slain on the spot.\(^2\) The proceeding by ἄραγγες (arrest) might perhaps be taken against a murderer in the first instance, if the murder was attended with robbery, in which case the prosecutor was liable to the penalty of a thousand drachmas if he failed to get a fifth of the votes.\(^3\) But no murderer, even after conviction, could lawfully be killed, or even arrested, in a foreign country, if the try or appeal was made by the offended party. In the practice it was a principle of international law, that the exile had a safe asylum in a foreign land. If an Athenian was killed by a foreigner abroad, the only method by which his relatives could obtain redress was to seize natives of the country (not more than three), and keep them until the murderer was given up for judgment.\(^4\) Those who were convicted of unintentional homicide, not purposely or maliciously, were permitted to leave the country for a year. They were obliged to go out (εξεξυγυμνάσατο) by a certain time, and by a certain route (τακτῆς δόξος), and to expiate their offence by certain rites. Their term of absence was called ἀνακτονησία. It was their duty, also, to appease (αἰδέσθαι) the relatives of the deceased, or, if he had none within a certain degree, the members of his clan, either by presents or by humble entreaty and submission. If the convict could pre- vail on them, he might even return before the year had expired. The word αἰδέσθαι is used not only of the criminal humbling himself to the relatives, but also of their forgiving him.\(^5\) The property of such a criminal was not forfeited, and it was unlawful to do any injury to him, either on his leaving the country or during his absence.

Such was the constitution of the courts and the state of the law as established by Solon, and mostly, indeed, by Draco; for Solon retained most of Dra'co's ψυχικοὶ νόμοι.\(^6\) But it appears that the jurisdiction of the ἱσθαί in later times, if not soon after the legislation of Solon, was greatly abridged, and that most of the ψυχικοὶ δίκαι were tried by a council.\(^7\) It is not possible that the ordinary method of trial, to which they were accustomed in other causes, criminal as well as civil, to the more aristocratical constitution of the court of ἱσθαί. Their jurisdiction in the courts άργοστάτος, and ἄραγγες, was, no doubt, still retained; and there seem to have been other peculiar cases reserved for their cognizance.\(^8\) Whether the powers of the Areopagus, as a criminal court, were curtailed by the proceedings of Pericles and Ephialtes, or only their administrative and censorial authority as a council, is a question which has been much discussed. The strong language of Demosthenes\(^9\) inclines one to the latter opinion. See also Dinarchus,\(^10\) from which it appears there was no appeal from the decision of that court.\(^11\)
PHYLOBASILEIS.

No extraordinary punishment was imposed by the Athenian legislator on parricide. Suicide was not considered a crime in point of law, though it seems to have been deemed an offence against religion; for, by the custom of the country, the hand of the suicide was buried apart from his body.  

₁ΦΟΝΩΤΑΙ ΑΙΘ. (vid. Phonos.)  

ΦΟΡΑΣ ΑΦΑΝΟΤΣΣ, ΜΕΘΕΡΜΙΝΕΣ ΔΙΚΗ (φοράς ἀφανοῦς, μεθέρμινης δικῆς) is enumerated by Πολύτορας as among the Athenian decrees. He has given a satisfactory explanation of the meaning. Κύμη (vid. note to Dindorf's edition) explains it thus: "Actio in servis operario, qui non praebat datab domino φοράς ἀφανοῦς, pensionem, mercedes de operis quae erat ἡμισε, i.e. non incurrebat in oculos, ut facultates et opes manifesta. Ετρατ ἐφορηθη δικαίως, in case the owner would be absurd to the owner until he got an account from the other party. As to the practice of lending slaves, vid. Demosth., c. Απηκ., 619, 389. Meier 2 suspects that the true reading might be φοράς, θήφα, θήρωσ, search; in which case the owner would be one for unlawfully searching a person's house, either secretly (ἀφανοῦς), or openly in the daytime (μεθέρμινης). The first conjecture, at least, is highly improbably, as there was a δίκη κλημός.

ΠΟΡΒΕΙΑ (φορβεία.) (vid. Lyra.)  

ΠΟΗΜΙΝΧ (φοιμίνχ), the Valeriana officinalis or great wild-mint. ³PHOΞΝΙΟΣ (φοξνίος), the Cyprisus Phoxinus, L., or the Minnow. Gesner, however, questions this opinion. ⁴PHRACTIA (φρακτία). (vid. Civitas, Grecia.) ⁵ΦΡΓΙΟΥ (φργίου) (vid. Pallium, p. 718.) ⁶ΦΡΙΓΙΥΣ ΛΑΠΙΟΣ (φριγιύς λίπος), the Phrygian mace. To the latter (according to Adam) other authorities, would appear to have been a pumice, with an admixture of alum and other ingredients.

⁷ΦΡΗΝΟΣ (φρήνος), a species of Toad, the Rubea of the Latins. "Commentators are greatly puzzled," remarks Adams, "to determine what it is. A. After comparing the ancient accounts of it with the account of the Bufo vulgaris given in the Encyclopaedia Methodica, I was forcibly struck with their coincidence, and it affords me pleasure to find that Schneider also identifies the Phrymus or Rubea with the Bufo vulgaris. Agricola confirms the ancient statements of its being venomous, but few modern naturalists agree with him. The common Louse. Aristotle notices the lice which form on fishes. Donnegan, in speaking of these, calls them "a kind of small shellfish, that fixes upon and derives its food from the bodies of other fishes, familiar examples of which may be noticed in the common prawn (on the corset of which a protuberance may often be observed, the parasite being covered by a coating of the shell), as also in the mussel." ²Ι. The fruit of a species of Pine, the Pinus Pinaster. Consult the remarks of Ritter, in his Vorhalle Europ. Volksgesch., p. 154, in relation to the φυλαρχία of antiquity.

ΘΟΡΑΣ ΤΩΝ ΑΙΕΟΤΕΡΕΣΙΑΝ (θορά των ἀειότερων) was one of the offenses which might be criminally prosecuted at Athens. The word φοράς may signify an absentee, one who does not pay his rent; but the expression φοράς e. c. comprehends, if it is not limited to, a crime too common among the Greeks, as appears from a law cited by Ἀκσίνης. ⁸On this subject, vid. Phalgoeus, and Schömann, Ant. Jur. Pub. Gr., p. 338, 339.

⁹ΦΥΓΙΟΣ (φυγιός). (vid. Fuga.) ¹₀ΦΥΓΕΣ (φυγες). (vid. Banishment, Grec.) ¹¹ΦΥΛΑΡΧΙ (φυλαρχί), generally the prefects of the tribes in any state, as at Epidamus, where the government was formerly vested in the φυλαρχος, but afterward in a senate. ⁴At Athens, the officers so called were (after the age of Cleisthenes) ten in number, one for each of the tribes, and were specially charged with the command and superintendence of the cavalry. There can be but little doubt that each of the phylarchs commanded the cavalry of his own tribe, and that they were themselves, collectively and individually, under the control of the two hippocasts, just as the taxiarchoi were subject to them. ⁵PHYLITIS (φυλητίς). "It appears probable," remarks Adams, "that the φυλητός alluded to by Dioscorides and Theophrastus was the Μενεκρισία annua. The φυλής of Galen and of Paulus Aegineta is not the same; it is an annual species of the meladorhaphis. Apicius uniformly calls the Malabathrum, or Cassia leaf, by the name of Folium."

PHYSOBASILEIS (φυλασσαλείς). The origin and duties of the Athenian magistrates so called are involved in much obscurity, and the little knowledge we possess of this subject is derived almost entirely from the grammarians. In the earliest times they were four in number, representing each one of the four tribes, and probably elected (but not for life) from and by them. ¹²They were nominated from the Eupatriae, and during the continuous royalty of Athens these "kings of the tribes" were the constant assessors of the sovereign, and rendered their advice to the magistrates and consuls. ¹³From an expression in one of the laws of

PhysoLogia

though, was (Hist. Pollux, the
rites took place in the presence of the
the son of the king, or "tie sacrificia,"
as they had formerly done the
king. Though they were originally connected with the four ancient tribes, still they were not abolished by Cleisthenes when he increased the number of tribes and otherwise altered the constitution of Athens, probably because their duties were mainly of a religious character. They appear to have existed even before his time, and were always regarded in unimportant or merely formal matters. They presided, we are told, over the court of the Ephesiate, held at the Prytaneum, in the mock trials over instruments of homicide (αι των δφησεων δκια), and it was part of their duty to remove these instruments beyond the limits of their country (κατα δια
σεν ανάφυγον απορροιαα). We may reasonably conclude that this jurisdiction was a relic of more important offices as that of the Ephesiate, from which, and with their connexion with the Prytaneum, it has been conjectured that they were identical with the old Prytaneans. Plutarch speaks of them both as βασιλες and πραυτες. In a ψηφισμα, quoted by Andocide,1 the title of βασιλες seems to be applied to them.

Physiologia (ψυχολογια), one of the five divisions into which, according to some of the ancient writers, the whole science of medicine was divided. (Vid. Medicina.) It treats, as its name implies (ψυχα περιεχεται, or λεγον, a discourse), of the nature and functions of the human body, which agrees with the definitions found among Galen's works;11 and as a knowledge of the parts of the human body (or anatomy) is a necessary step to a knowledge of its functions, it will be included here under that head.

The first beginnings of anatomical knowledge would arise from the inspection of the victims offered in sacrifice, and from the dressing of wounds and other bodily injuries; the progress, however, that was thus made would naturally be very slow and imperfect, and it was soon found that anatomy could only be learned by a careful inspection of the internal parts of the animal frame, or, in other words, by systematic dissection.

The Pythagorean philosopher, Alcmaeon, is said by Chalcedius12 to have been the first person who dissected animals (about B.C. 540); this was an important step, and with this anatomist remained content for more than two hundred years. Alcmaeon appears to have made considerable advances on the knowledge of his predecessors, and most of his discoveries are that of the Eustachian body, or of cartilage loading from the anterior and inner part of the tympanum to the faucæ; and his mistake in saying

1. (Plut. in Vit. c. 19)—2. (Niebuhr, R., l., p. 204, Engli-

2. (Pollux, Onom., viii., 111)—3. (Wachsmuth, I.,

3. (Pollux, Onom., viii., 120)—4. (Solen, c. 10)—7.

that goats breathe through the ear (which is oppo-
sected by Aristotle) may be easily explained by supposing that in the animal that he dissects the membrana tympani had been accidentally destroyed. Pliny notices this opinion of Alcmeon (though with-
out correcting it), but attributes it to Archelaus.3

Empedocles of Agrigentum (in the fifth century B.C.) was the first who noticed the cochea of the ear (συνάλληδος χώρος), which he thought was the immediate organ of hearing and also gave the name (ενευρωτής) to the innermost of the membranes surrounding the ear. His contemporary, Anaxagoras was perhaps the first person who tried to explain the difference of the sexes by the place occupied by the fetus in the uterus; the male, said he, is on the right side, the female on the left; and this opinion (though with-
out the least foundation in fact) one is surprised to find received and repeated by Hippocrates, 4 Aris-
totle (who, however, adds that this is not certain, as sometimes the contrary takes place), and Galen. The anodote of the way in which Anaxagoras, by his knowledge of comparative anatomy, queted a tumult occasioned at Athens by the sight of a goat with only one horn, may be seen in Plutarch.6

Democritus of Abdera (B.C. 460—357) was partic-
ularly celebrated for his knowledge of anatomy, and has given the name (ενευρωτής) to the innermost of the membranes surrounding the ear. The way of living when visited by Hippocrates, the earth round where he was sitting is noticed as being covered with the carcases of animals that he had dissected; however, none of his opinions require to be particularly specified here.

The next great physiologist of antiquity, and the first whose writings have still a name is Hippocrates (B.C. 460—357); though, in fact, it is not certain that any of the anatomical works that go under his name were really written by him.13

It would be impossible here to give anything like a complete analysis of the physiology of Hippocrates (and the same apology applies also to the other writers hereafter to be mentioned, particularly Aristotle and Galen); the reader must content himself to find here a very brief account of some few facts and opinions, and be referred for further particulars to the different histories of medicine. Hippocrates called both arteries and veins indiscriminately by the name of οξης, the word ωρομα in his writings being used to designate the trachea. (Vid. Αναβαλα.) His knowledge of the bones appears to have been very great, and that in particular of the skull, brain, or viscera. Tendons and nerves he called τονα or νευρα, without knowing that the latter convey sensation, and arise from the brain; motion, he thought, was caused by all the tendinous white cords throughout the body without distinction. His theory of generation is (as may be inferred from the specimen alluded to above) very fanciful and imperfect; and his ignorance of human anatomy appears in his
discourse of the uterus,13 the existence of which in woman was for a long time taken for granted, on account of their being found in the inferior animals. He says that the Scythians were so impotent from being bled behind the ears,14 a theory which may be explained and illustrated by the supposed course of the spermatic vessels.15

PHYSIOLOGIA

Upon the whole, though the anatomical and physiological knowledge of Hippocrates has been highly extolled by those who overrate the ancient physicians as much as others ignorantly depreciate them, this must be allowed to be one of the most imperfect and unsatisfactory parts of his writings. Plato has inserted a good deal of physiological matter in his "Laws," and the parts of the body, of Xenophon's "Memorabilia," may be considered as the earliest specimens of what would be now called "Natural Theology." One of the most celebrated of Plato's anatomical opinions was, that part of the fluids that are drunk enters the trachea, an assertion which for a long time occasioned great disputation, as appears from the words of Aristotle. The word ῥυσσόν in his writings means a ligament; both arteries and veins are called ἄφλος, and the word ἀρτηρία is applied to the trachea. He says the heart is the origin of the veins and the fountain of the blood. It may be added, that Cicero's fragment "De Universitate" is a translation of part of this dialogue; that Galen wrote a work "De ipsis Medicina," which is cited in Plin. Nat. Hist., and which a Latin translation still exists, and that there is also a Latin translation and commentary by Chalcidius. Vid. J. K. Lichtenstädter, "Plato's Lehren auf dem Gebiete der Naturforschung und der Heilkunde. Nach den Quellen bearbeitet," Leipzig, 1836, 8vo. Aristotle's knowledge of human anatomy was much inferior to that of his predecessors: whether he acquired it by the dissection of animals only, is now impossible to decide. Aristotle is the first author who gives the name ἀρδηρία to the principal artery in the human body; however, he calls it ἄφλος, and never seems to suppose the veins and arteries to be distinct and different from each other. They are, according to the same author, ligaments, means, means the trachea. He says the brain is entirely supplied with blood; that the trachea receives neither fluid nor solid, but only air: that man's brain is larger than that of any other animal: that the heart contains three ventricles, though in another place he seems to say that there are only two; and that there are on each side eight ribs. Praxagoras, who was the preceptor of Herophilus, contributed much to the science of Physiology: but the honour of discovering that the arteries and veins are distinct, and of being the first who applied the word ἀρτηρία to the bloodvessels which now bear the same name, is attributed to Herophilus. He is celebrated in Opusc. Acad. Med. et Philosc., tom. ii., p. 128, sq. Inferior to Hippocrates in medical skill, enjoying far less posthumous influence and renown, but much more above him as anatomists, were Herophilus and Erasistratus, who were contemporaries, and lived in the second century B.C. The former is said expressly by Galen to have dissected human bodies; while the numerous passages, both in Galen's works and in those of other anatomists, recommending the dissection of apes, bears, goats, and other animals, would seem indirectly to prove that human bodies were seldom or never used for that purpose. Herophilus and Erasistratus are said also to have dissected criminals alive; but whether this was really the case, or whether the story arose from their having been among the first who dissected human bodies, it is not easy to determine. The anatomical phraseology of Galen is so closely connected with the nerves to be the organs of sensation, though, like Aristotle, Herophilus continued to call them canals, πόροι. However, he so far agreed with the ancient opinion on the subject as to say that some of the nerves arise from bones and connect the articulations, thus confounding the nerves with arteries. They were, however, a point of common to which the sinuses of the dura mater converge, which is still called, after him, the torcular Herophili. He was also the author of the name calamus scriptorius, which is still applied to the angular indentation in the posterior part of the medulla oblongata. That part of the intestines which is called the duodecim (docecadecem) dermoqνας, the proximate one, to which they refer respecting Herophilus, see a memoir by K. P. H. Marx, entitled "Herophilus; ein Beitrag zur Gesch. der Chirurgie," Karlsruhe, 1838. Erasistratus was not less celebrated as an anatomist than Herophilus, though his name is connected with fewer discoveries. The tricuspid valves (tricuspidae) were named after him, in order to distinguish between the right auricle and ventricle, received his name from 9. The bile and the spleen he considered altogether useless. The trachea derives its name from him, as he was the first person who added the word ἀρτηρία, which had hitherto signified the windpipe, the epithelium, the duct, the trachea. He also translated Pliny's celebrated passage, to correct the opinion of Plato mentioned above.

Endermus, a contemporary of Herophilus, is mentioned together with him by Galen, as having discovered the pancreas, though he does not give it any name.

Celsus (who is supposed to have lived in the first century after Christ), in his work "De Medicina," defends the necessity of the study of anatomy, and seems to recommend the dissection of human bodies. He has inserted some anatomical matter in different parts of his work, but his language is not always technically correct, as the trachea he calls arteria, though in other places that word means an artery. Celsus also mistakes in many cases, sometimes means the abdominale, sometimes means a tendon, and sometimes even a muscle. There is no anatomical discovery attached to his name.

Marinus, in the second century after Christ, is called by Galen one of the restorers of anatomy, which appears to have been neglected. He describes particularly the mesenteric glands, fixe the number of the pairs of the cerebral nerves as seven, and first noticed the palatine nerves, which are

The twenty-fourth and twenty-fifth books of the Συναγωγα τα ἑτατεία, "Collecta Medicinalia," of Orbaisius, contain a system of Anatomy compiled from Rufus Ephesius, Galen, and Soranus; there is in them (as far as the writer is aware) nothing new, but in another place he mentions having himself dissected apes.

About the same time (the end of the fourth century after Christ) lived Nemesis, the author of a work Peri Ὀσομαίας τῶν Ἀνθρώπων, De Natura Hominis. This is a very interesting little treatise, but it has enjoyed more celebrity than perhaps it deserves, on account of two curious passages; in one of which he is supposed by some of the most zealous admirers of the ancients to have discovered the circulation of the blood, and in the other the use of the bile. He plainly distinguishes the nerves from the tendons, saying that the former possess the sensibility, but not the latter.

The next work we come to is by Theophylus Protopsatharians, who is generally supposed to have lived in the seventh century, but who probably belongs to a later period. It is entitled Περὶ τῶν Ἀνθρώπων Κατακεκεῖς, "De Corporis Humani Fabrica," and is in five books. It is, for the most part, taken word for word from Galen, "De Usu Partium Corporis Human," and Hippocrates, "De Genitura," and "De Natura Fueri," from whom, however, he sometimes differs. The work of Melitius (a monk who lived probably in the eighth or ninth century), Περὶ τῶν Ἐνοχῶν Κατακεκεῖς, "De Hominis Fabrica," does not require any particular notice; nor that by Constantinus Afer (who lived in the eleventh century), "De Membris Principaliis Corporis Humanus." Beside these works, which may be considered as more especially anatomical and physiological, several of the early Christian fathers have left treatises on Natural Theology, pointing out the "wisdom, and power, and goodness of God," as displayed in the structure of the human frame. Such are St. Ambrose, De nos et arca (c. 6—9); Id., Hexameron (vii., 9); St. Basil, Peri τῆς τῶν Ἀνθρώπων Κατακεκείσ, "De Structura Hominis Orations Tres" (which, however, is probably not genuine); St. Gregory of Nyssa, De verbis "Faciaces Hominem," &c., Orations Duces: Id., Peri τῆς τῶν Ἀνθρώπον Κατακεκείσ, "De Hominis Opificio" (written as a supplement to his brother St. Basil's unfinished work, entitled Σβαμερων, Hexameron); Theodot, Peri προνοιας, "De Providentia," Orat. i., iv.; and Laclantius, "De Opificio Dei." Some of these works are well worth reading for their scientific correctness as well as their piety; but some parts, it must be confessed, are very strange and fanciful. However, they add nothing to the amount of anatomical knowledge already in the world, as probably every statement in their writings that is not erroneous (and many of those that are) may be found in the works of Galen. The same may be said of the Arabian writers, of whom several (e.g., Alzaharavius, Avicenna, Haly Abbas, Razes, &c,) have prefixed to their medical works a physiological introduction, which it would be out of place to notice here more particularly.

PICA. (Vid. CITTA.)

PICEA. (Vid. PINUS.)

PICUS, the Woodpecker, a bird sacred to Mars, and from the Archetypal Littere to which he was drawn by the nations of Italy. A bird of this species guarded a colony of the Sabines, sent out in consequence of a vow of a sacred spring (Ver Sacrum), and also
PIGNUS.

Pignus, a pledge or security for a debt or demand, is derived, says Gaius, from pignus, "quia quae pignori dantur." This is one of the causes of the failure of the Roman jurists when they attempted etymological explanation of words. (Vid. Origem.) The element of pignus (pig) is contained in the word pa(a)n(y) and its cognate forms.

A thing is said to be pledged to a man when it is made a security to him for some debt or demand. It might be a thing personal or incorporeal, a word or thing given to him to which it is made a security, and hypotheca when it is made a security without being put in his possession. The law relating to pignus and hypotheca was in all essentials the same. The object of the pledge is that the pledgee shall, in case of necessity, sell the pledge and satisfy the debt or demand. A pledge may be given for any obligation, whether money borrowed (mutua pecunia), done, in a case of buying and selling, letting and hiring; whether the obligation is conditional or unconditional; for part of a sum of money as well as for the whole. Anything could be the object of pledge which could be an object of sale; it might be a thing corporeal or incorporeal, a single thing or a university of things. If a single thing was pledged, the thing with all its increase was the security, as in the case of a piece of land which was increased by alluvio. If a shop (taberna) was pledged, all the goods in it were pledged; and if some of them were sold and others brought in, the thing which was sold and the thing which was added to the shop and all that it contained at the time of the pledgee's death. If all a man's property was pledged, the pledge comprehended also his future property, unless such property was clearly excepted.

The act of pledging required no particular form, in which respect it resembled contracts made by consent. Nothing more was requisite to establish the validity of a pledge than proof of the agreement of the parties to it. It was called contractus pignoratitius when it was a case of pignus, and pactum hypothecae when it was a case of hypotheca: in the former case, tradition was necessary. A man might demand the pledge out of the presence of the pignoror. The intention of a man to pledge could in any case be deduced either from his words or from any acts which admitted of no other interpretation than an intention to pledge.

A man could only pledge a thing when he was the owner and had full power of disposing of it; but a part owner of a thing could pledge his share.

A pledge could not move property if the other consented to the pledge at the time or afterward, but in either case this must properly be considered the pledge of the owner for the debt of another. If a man pledged a thing which was not his, and afterward became the owner of it, the pledge was valid.

A thing on which a pledge was security depended on the agreement: it might be for principal and interest, or for either; or it might comprehend principal and interest, and all costs and expenses which the pledgee might be put to on account of the thing pledged. For instance, a creditor would be entitled to his necessary expenses concerning a slave or an estate which had been pignorated.

Pignus might be created by a judicial sentence, as, for instance, by the decree of the praeator giving to a creditor power to take possession of his debtor's property (missio creditoris in bona debitoris), either a single thing, or all his property, as the case might be. But the possession or command of the magistratus did not effect a pledge, unless the person actually took possession of the thing. The following are instances: the missio damni infecti causa (vid. Damnun infectum): legatorum servandorum causa, which had for its object the securing of a legacy which had been left subject to conditions or die: missio ventris in possessionem, when the property remained with the owner's heir. This case was resolved upon by the praetor, and a judgment against him (ex causa judicii).

There was also among the Romans a tacita hypotheca, which existed not by consent of the parties, but by rule of law (ipso jure), as a consequence of certain acts or agreements, which were not acts or agreements pertaining to pignorating (in quibus hypothecae) (in pignus ad hypothecam facienda, etc.).

The following are instances of special hypothecae: The lessor of a praedium urbanum had an hypotheca in respect of its claims on the property of the subject, and on the property of its agents or officers: the husband on the property of him who promised a dow; and legates and fideicommissarii in respect of their legates. Fideicommissorum, on that portion of the heir's legacies of him who had to pay the legacies or fideicommissa. There were other cases of general hypothecae.

The following are instances of special hypothecae: The lessor of a praedium rusticum had an hypotheca in respect of its claims arising out of the court, or all general property with which the lessee brought upon the premises for constant use (invencta et ilata). The lessor of a praedium rusticum had an hypotheca on the fruits of the farm as soon as they were collected. A person who lent money to repair a house had an hypotheca on the house and the ground on which it stood, provided the money had been spent on it. Papili and minor's had an hypotheca on things which were bought with their money.

The person who had given a pledge was still the owner of the thing that was pledged. He could therefore use the thing and enjoy its fruits. But the agreement might be that the creditor should have the use of the thing without the possession of it; then, which kind of contract was called antichresis, or mutual use; and if there was no agreement as to use, the creditor could not use the thing. The pledgee could also sell the thing pledged, unless there were some agreement to the contrary, but such sale did not affect the right of the pledgee. If the pledgee sold a movable thing that was pignorated, with the consent of the creditor, he was guilty of furtum. If the pledgee, at the time of a pignus being given, was not the owner of the thing, but had the possession of it, he could still acquire the property of the thing by usucapion.

(Vid. Possessio.)

The creditor could keep possession of a pignorated thing till his demand was fully satisfied, and he

775
could maintain his right to the possession against any other person who obtained possession of the thing. He could also pledge the thing that was pledged to him. He had also the right, in case his demand was not satisfied at the time agreed on, to sell the thing, and to satisfy his demand out of the proceeds (jus distraxendi sive vendendi pignor).

Gains illustrates the maxim that he who was not the owner of a thing could in some cases sell it, but he properly refers the act of sale to the will of the debtor, as expressed in the agreement of pledging; and thus, in legal effect, it is the debtor who sells by means of his agent, the creditor. An agreement to pledge was founded in case the demand was not paid at the time agreed on, was originally very common, but it was declared by Constantine to be illegal. (Vid. Commissoria Lex.)

In case of a sale, the creditor, according to the later law, must give the debtor notice of his intention to sell, and after such notice he must wait two years before he could legally make a sale. If anything remained over after satisfying the creditor, or, it was his duty to give it to the debtor; and if the price was insufficient to satisfy the creditor's demand, his debtor was still his debtor for the remainder. If no purchaser at a reasonable price could be found, the creditor might become the purchaser, but still the debtor had a right to redeem the thing within two years on condition of fully satisfying the creditor.

If there were several creditors to whom a thing was pledged which was insufficient to satisfy them all, his whose pledge was prior in time had a preference over the rest (potor est in pignor qui prae creditibus pecuniam et acception hypothecam). There were some exceptions to this rule; for instance, when a subsequent pledge had lent his money to save the pledged thing from destruction, he had a preference over a prior pledgee. This rule has been adopted in the English law as to money lent on ships and secured by bottomry bonds.

Certain hypothecae, both tacite and founded on contract, had a preference or priority (privilegium) over all other claims. The fuscus had a preference in respect of its claims; the wife in respect of her dower; for, as the English law stood, only the wife had a redemption of a building; a pupillus with whose money a thing had been bought. Of these hypothecae which were founded on contract, the following were privileged: the hypothec of those who had lent money for the purchase of an immovable thing, or for a shop, or for the building, maintaining, or improving of a house, &c., and had contracted for an hypotheca on the thing; there was also the hypotheca which the seller of an immovable thing reserved by contract until he was paid the purchase-money. Of these claims, the fuscus came first; then the wife in respect of her dower; and then the other privileged creditors, according to their priority in point of time.

In the case of unprivileged creditors, the general rule, as already observed, was, that priority in time gave priority of right. But an hypotheca which could be proved by a writing executed in a certain public form (instrumentum publice confectum), or which was proved by the signatures of three reputable persons (instrumentum quasi publice confectum), had a priority over all those which could not so be proved. If several hypothecae of the same kind were of the same date, he who was in possession of the thing had a priority.

The creditor who had for any reason the priority over the rest, was entitled to be satisfied to the full amount of his claim out of the proceeds of the thing pledged. A subsequent creditor could obtain the rights of a prior creditor in several ways. If he furnished the debtor with money to pay off the debt, on the condition of standing in his place, and the term of the mortgage being the life of the prior creditor, the subsequent creditor stepped into the place of the prior creditor. Also, if he purchased the thing on the condition that the purchase-money should go to satisfy a prior creditor, he thereby stepped into his place. A subsequent creditor could also, without the consent either of a prior creditor or of the debtor, pay off a prior creditor, and stand in his place to the amount of the money paid. This arrangement, however, did not affect the rights of an intermedicate pledgee.

The creditor had an actio hypothecaria in respect of the pledge against every person who was in possession of it; and had not a better right than himself. This right of action existed independently in the case of pignus and hypotheca. A lessor had this action for the recovery of the possession of a chattel mortgaged, when the rent was not paid according to agreement. A creditor who had a pignus had also a right to the interdictum retinenda et recuperanda possessionis, if he was disturbed in his possession.

The pledgee was bound to restore a pignus on payment of the debt for which it had been given, and up to that time he was bound to take proper care of the thing pledged. The pledgee might sue in an actio pignoraria by the pledgor for the restoration of the thing, and for any damage that it had sustained through his neglect. The remedy of the pledgee against the pledgor for his proper care and charges in respect of the pledge, and for any dolus or culpa on the part of the pledgor relating thereto, was by an actio pignoratitria contraria.

The law of pledges at Rome was principally founded on the Edict. Originally the only mode of giving security was by a transfer of the quiritarian ownership of the thing by mancipatio or in share cession if it was a res mancipi, on the condition of its being reconveyed when the debt was paid (sub leges mancipationis or sub fiducia). (Vid. Fiducia.)

But in this case the pledgor had no security against the pledgeree, and the pledgor was not entitled to a thing merely given to the creditor with the condition that he might sell it in case his demand was not satisfied. But, so long as the creditor could not protect his possession by legal means, this was a very insufficient security. Ultimately the pretor gave a creditor a right of action (actio in rem), under the name Servian actio, for the recovery of the property of a columna when it was his security for his rent (pro mercedibus fundi); and this right of action was extended, under the name of quasi Serviana or hypothecaria, generally to creditors who had things pignorated or hypothecated to them. As to the interdictum Salvianum, see Interdictum.

The Roman law of pledge was gradually developed, and it would be rather difficult to show in a satisfactory way the various stages of its growth. Some of the rules of law as to pledges mentioned in this article belong to a later period.

The Roman law of pledge has many points of resemblance to the English law, but more is comprehended under the Roman law of pledge than the English law of pledge, including in that term mortgage. Many of the things comprehended in the Roman law of pledge belong to the English law of lien, and to other divisions of English law which are not included under pledge or mortgage.

There is an English treatise, entitled "The Law of 1. (Dig. 20, tit. 4, a. 16) — 2. (Inst., introd. t. 6, s. 7) — 3. (Dig. 90, tit. 1, s. 5, c. 60 — Cod. 7, tit. 14, 15, 16, c. 9.)
PILA.

of Pidges or Pawns, as it was in use among the Romans, &c., by John Ayiffe, London, 1732,1 which appears to contain all that can be said, but the author's method of treating the subject is not perspicuous.

PILA (σφαίρα), a Ball. The game at ball (σφαίρας-
tροχός) was one of the most favourite gymnastic exercises of the Greeks. The Romans imitated them to the full on the exercise, as well as to the games of Cassius, and some of the orations of Cicero; but the romans seem to have been of three kinds: the pilai in its narrower sense, a small ball; the follis, a great ball filled with air (vid. Follis); and the pagana, of which we know scarcely anything; as it is only mentioned in two passages by Martial, but from the latter of which we may conclude that it was smaller than the follis and larger than the pilai.

The game at ball was played at in various ways. Pila was used in a general sense for any kind of ball; but the balls among the Romans seem to have been of three kinds: the pilai in its narrower sense, a small ball; the follis, a great ball filled with air (vid. Follis); and the pagana, of which we know scarcely anything; as it is only mentioned in two passages by Martial.

Among the Romans, the game at ball was also played at in various ways. Pila was used in a general sense for any kind of ball; but the balls among the Romans seem to have been of three kinds: the pilai in its narrower sense, a small ball; the follis, a great ball filled with air (vid. Follis); and the pagana, of which we know scarcely anything; as it is only mentioned in two passages by Martial. But the most favourite game at ball seems to have been the trigon, or pila trigonialis, which was played at by three persons, who stood in the form of a triangle, in τριγώνοι. We have no particulars respecting it, but we are told that skillful players prided themselves upon catching and throwing the ball with their left hand.

The ancient physical writers give instruction in the game at ball, as well as other kinds of exercise, to their patients; Antyllus gives some interesting information on this subject.

The persons playing with the pila or small ball in the annexed woodcut are taken from a painting in the baths of Titus, but it is difficult to say what particular kind of game they are playing at. Three of the players have two balls each.6

PILA. (Vid. Mortarium.)

PILA'NI. (Vid. Army, Roman, p. 103.)

PILETUM, a splendid four-wheeled carriage, furnished with soft cushions, which conveyed the Roman matrons in sacred processions, and in going to the Carneval and other games. Among the Romans, the game at ball was also played at in various ways. Pila was used in a general sense for any kind of ball; but the balls among the Romans seem to have been of three kinds: the pilai in its narrower sense, a small ball; the follis, a great ball filled with air (vid. Follis); and the pagana, of which we know scarcely anything; as it is only mentioned in two passages by Martial. But the most favourite game at ball seems to have been the trigon, or pila trigonialis, which was played at by three persons, who stood in the form of a triangle, in τριγώνοι. PILAUS or PILEUM; pila virorum sunt,13

PILUS.

to cause it to rebound, when he struck it down again with the palm of his hand, and so went on doing many times: the number of times was counted.1 We learn from Plato,2 that in one game of ball, played at by boys, though we do not know what kind it was, the boy who was conquered was called αττικός, and the one who conquered was named king (σαιες).3

Among the Romans, the game at ball was also played at in various ways. Pila was used in a general sense for any kind of ball; but the balls among the Romans seem to have been of three kinds: the pilai in its narrower sense, a small ball; the follis, a great ball filled with air (vid. Follis); and the pagana, of which we know scarcely anything; as it is only mentioned in two passages by Martial. PILAUS or PILEUM; pila virorum sunt,13

PIELEUS or PILE'OLUM (πίλεος, dim. πίλον, second dimin. πιλόδον; πιλημα, πιλήτων), any piece of felt; more especially, a sou’lcap of felt, a hat.

There seems no reason to doubt that fetting (πιλήτης) is a more ancient invention than weaving (νικήλη), nor that both of these arts came into Europe from Asia.

From the Greeks, who were acquainted with this article as early as the age of Homer2 and Hesiod,4 the use of felt passed, together with its name, to the Romans. Among tills the employment of it was always far less extended than among the Greeks. Nevertheless, Pliny, in one sentence, "Lana et per se concta vested faciunt," gives a very exact account of the process of fetting. A Latin sepulchral inscription5 mentions a "manufacturer of woollen felt" (lanarius constructus), the same time indicating that he was not a native of Italy (Larissaeus).

The principal use of felt among the Greeks and Romans was to make coverings of the head for the male sex, and the most common kind was a simple sculpia. It was often more elevated, though still round at the top. In this shape it appears on coins, especially on those of Sparta, or such as exhibit the symbols of the Didaskoloi; and it is thus represented, with that addition on its summit which distinguished the Roman flames and Salii, in three figures of the woodcut to the article Apex. But the apex, according to Dionysius of Halicarnassus, was sometimes conical; and conical or pointed caps were certainly very common. One use of this form probably was to discharge the rain and wet, as when they were worn by fishermen7 and by mariners. In the case of agricultural labourers,4 the advantages of this particular shape are less obvious, and, accordingly, the bonnet worn by the ploughman in the woodcut, page 225, is very different from that of the reaper at page 429. A remarkable specimen of the pointed cap is that worn by the Dioscuri at page 530. Private persons also among the Romans, and still more frequently among the Greeks, availed themselves of the comforts of the felt cap on a journey, in sickness, or in case of unusual exposure.9 On returning home

from a party, a person sometimes carried his cap and slippers under his arm.1

In the Greek and Roman mythology, caps were symbolically assigned in reference to the customs above related. The painter Nicomachus first represented Ulysses in a cap, no doubt to indicate his seafaring life.2 The preceding woodcut shows him clothed in the Epomis, and in the act of offering wine to the Cyclopi.3 He here wears the round cap, but more commonly both he and the boatman Charon (see woodcut, p. 486) have it pointed. Vulcan (see woodcut, p. 610) and Dædalus wear the caps of common artificers.

A cap of very frequent occurrence in the works of ancient art is that now generally known by the name of the Phrygian cap. The Mystia pialeus, mentioned by Aristophanes,4 must have been one of this kind. For we find it continually introduced as the characteristic symbol of Asiatic life in paintings and sculptures of Priam (see woodcut, p. 750) and Mithras (woodcut, p. 518), and, in short, in all the representations, not only of Trojans and Phrygians, but of Amazons (woodcut, p. 768), and of all the inhabitants of Asia Minor, and even of those of the west of Asia Minor, which we have seen in the works of the sculptors of the time of Charon, of the northern Greeks, and of the Dacians (see woodcut, p. 768).

The form of those worn by sailors is frequently mentioned in ancient writers, and was certainly held to be of great use by mariners, and they were very greatly respected by the Athenians, who at the time of the capture of the Sarmatians in the group at page 171. Strabo observes that caps of felt were necessary in Media on account of the cold.4 He calls the Persian cap πιλημα πυργυτων, i. e., "felt shaped like a tower."

Another singular variety of the Asiatic pialeus was that of the Lycians, which was surrounded with feathers,4 and must have resembled the head-dresses of some of the North American Indians.

Among the Romans the cap of felt was the em blem of liberty. When a slave obtained his free dom, he had his head shaved, and wore instead of his hair an undyed pialeus (πιλεος λεκνον). This change of attire took place in the Temple of Pessia, which was the goddess of freedmen.15 The figure of Liberty on some of the coins of Antoninus Pius, struck A.D. 145, holds this cap in the right hand.

In contradistinction to the various forms of the felt cap now described, we have to consider others more nearly corresponding with the hats worn by Europeans in modern times. The Greek word πε ταμος, dim. πετασιον, derived from petaiomuo, "to expand," and adopted by the Latins in the form petas, dim. petasculus, well expressed the Asiatic"i" shape of these hats. What was taken from their height was added to their width. Those already described had no brim: the petasus of every variety had a brim, which was either exactly or nearly circular, and which varied greatly in its

---

width. In some cases it is a circular disk without any crown at all, and often there is only a depression or slight concavity in this disk fitted to the top of the head. Of this a beautiful example is presented in a recumbent statue of Endymion, habituated as a hunter, and sleeping on his scarf. It is to be added that this statue belongs to the Townley Collection in the British Museum, and shows the mode of wearing the petasus tied under the chin.

In other instances it is tied behind the neck instead of being tied before it. (See the next woodcut.) Very frequently we observe a boss on the top of the petasus, in the situation in which it appears in the woodcuts, pages 52, 227, 336e, in these woodcuts, and in that here introduced, the brim of the petasus is surmounted by a crown. Frequently the crown is in the form of a sculpac; we also find it surrounded by a very narrow brim. The Greek petasus, in its most common form, agreed with the cheapest hats of undyed felt now made in England. On the heads of rustics and artificers in our streets and lanes, we often see the exact counterpart of these which we most admire in the works of ancient art. The petasus is still also commonly worn by agricultural labourers in Greece and Asia Minor. In ancient times it was preferred to the sculpac as a protection from the sun, and on this account Caligula permitted the Roman senators to wear it at the races. It was used by shepherds, hunters, and travellers. The annexed woodcut is from a fictile vase belonging to Mr. Hope, and it represents a Greek soldier in his hat and blanket. (Vid. Pallium.) The ordinary dress of the Athenian ephebus, well exhibited in the Panathenac frieze of the Parthenon, now preserved in the British Museum, was the hat and scarf. (Vid. Calamve.) Among imaginary beings, the same costume was commonly attributed to Mercury, and sometimes to the Dioscuri.

Ancient authors mention three varieties of the petasus, the Thessalian, Arcadian, and the Laconian; but they do not say in what the difference consisted. In like manner, it is by no means clear in what respects the Cal verbs differed from the petasus, although they are distinctly opposed to one another by a writer in Athenaeus. Moreover, in the later Greek authors we find σταυρός used to denote a hat of other materials besides felt.

On the use of felt in covering the feet, see Udo. Felt was likewise used for the lining of helmets. (Vid. Galea.) Being generally thicker than common cloth, it presented a more effectual obstacle to missile weapons. Hence, when the soldiers under Julius Caesar were much annoyed by Pompey’s archers, they made shirts or other coverings of felt, and put them on for their defence. Thucydides refers to the use of similar means to protect the Athenian soldiers against the missiles of the besieging cities, felt was used, together with hides and sackcloth, to cover the wooden towers and military engines.

PILCREPUS. (Vid. Pila.)

Pinus, most probably, according to Adams, the Call of the Oak, or Cynips micrantha Galia dirius, of the British Edinburgh, same story.

PILON. (Vid. Hasta, p. 480.)

PINACOTHÈQUE (πίναξ; θήκη), a Picture-galle ry. Marcellus, after the capture of Syracus, first displayed the works of Greek painters and sculptors to his countrymen, whose taste for the fine arts was gradually matured by the conquests of L. Scipio, Flamininus, and L. Paullus, and grew into a passion for art. Hence a school of art was erected by the Emperor Vespasian at Rome. Objects of this description were at first employed exclusively for the decoration of temples and places of public resort, but private collections were soon formed; and, towards the close of the Republic, we find that in the houses of the more opulent a room was devoted to the reception of the paintings and statues. It was the practice of Augustus, Vitruvius includes the picture-thea among the ordinary apartments of a complete nasci on, and gives directions that it should be of ample size and facing the north, in order that the light might be equable and not too strong.

PINNA (πίνας), a species of bivalve shellfish, of a size and shape with our pearl muscle. It is referable to the genus Pinnia, L. The ancient stories respecting the Pinnia, and its companion the small crab, are purely imaginary. (Vid. Pinnophylax.)

PINNOFYLLAX (πιννοφύλαξ οί πιννοστήρ). A minute species of Crab, the Cancer Pinnoferes, L., found in the shell of the Pinnia, and supposed by the ancients to belong to the class of marine crustaceans. Hence its Greek name of πιννοφύλαξ, from πίνας and φύλαξ, "a guard," and its other Greek appellation of πιννοστήρ, from πίνας and τήρω, "to preserve" or "to keep." The ancients believed that the Pinnophylax kept guard by the mouth of the Pinnia as it lay open, and, when any small fish came near, it slightly bit into the inner parts of the Pin nia, remaining within at the same time; the Pinnia thereupon immediately closed its mouth, and banqueted along with the Pinnophylax upon the captive. Cuvier regards the whole story as fabulous. Pennant calls the Pinnophylax the Pea-crab, Cancer pinnae.

PINUS (πίνους), the Pine-tree. "The species of Pines are so indistinctly marked in the ancient works that they cannot now be recognised. Sprengel, after changing his mind several times on the subject, comes at last to the conclusion that the
PISTOR.

Bread was often baked in moulds called *örtoplos* and the loaves thus baked were termed *ortopicos*.

In one of the bakehouses discovered at Pompeii, several loaves have been found apparently baked in moulds, which may therefore be regarded as *ortoplos*, they are represented below. They are flat, and about eight inches in diameter.

Bread was not generally made at home at Athens, but was sold in the market-place chiefly by women called *ortoplēdai*. These women seem to have been what the fish-women of London are at present; they excelled in abuse, whence Aristophanes says, καλαδρείαν ἄρσεν ἀρτοπλῆδαι. 

PISTORIUM. (Vid. *MONTARIUM.*)

PISTORIUS. (Vid. *SIMIUM.*)

PITYOCAMPE (πιτυοκάμπη), the Catherpillar of the pine-tree. "Sprengel remarks that there are several species of caterpillars which infest pines, such as the *Liparis monachia*, *Lasiocampa pinii*, &c. They are treated of as being deadly poisons by Dioscorides and the other writers on Toxicology."

ΠΥΣ (πυσ), the *Pinus pinea*, or Stone Pine. "S-Stanhope says, "An complains of the difficulty of distinguishing the *πυσ* from the *πυσ* of Theophrastus. Both Sprengel and Stockhouse think they see traces of the Larch, or *Pinus larix*, in the *πυσ* of *Theophrastus*; but I agree with Schneider that there are no certain grounds for this opinion. Sprengel sets down the *πυσ* of Dioscorides as being the *Pinus pinea*, or Stone Pine." According to Coray, the *πυσ* is in common in modern Greek *νάρα*, from the fruit κοκκώδια, i.e. the fruit of the pine, called *στροβύλος*. "The kernels of the Stone Pine are brought to table in Turkey. According to Russell, they are very common in the kitchens of Aleppo. The seeds of the Stone Pine are still collected with great industry in Elia, and form an object of exportation to Zante and Cephalonia, as well as other places. Both the *πυσ* and *πυσ* are much used for ship-building. Their timber is said to be much harder and tougher than that of our northern firs, and, consequently, more lasting."

PLAGIUM. (Vid. *CURATOR.*)

PLAGIA. (Vid. *AV OV.*

PLAGIUM. This offence was the subject of a Fabian lex, which is mentioned by Cicero, and is assigned to the consilium of Quintus Fadius and M. Claudius Marcellus, B.C. 183. The chief provisions of the lex are collected from the Digest. If a free man concealed, kept confined, or knowingly, with bulus malus, purchased an ingenius or libertus against his will, or participated in any such acts; or if he persuaded another man's male or female slave to run away from a master or mistress, or without the consent or knowledge of the master...
or mistres concealed, kept confined, or purchased knowingly, with dolus malus, such male or female slave, or participated in any such acts, he was liable to the penalties of the lex paelina; but this fell into disuse, and persons who offended against the lex were punished according to the nature of their offence, and were generally condemned to the mines. A senatus consultum ad legem Fabi,um did not allow a master to give or sell a runaway slave, which was technically called "fugitivus,” but the provision did not apply to a slave who was merely absent, nor to the case of a runaway slave when the master had commissioned any one to go after him and sell him: it was the object of the provision to encourage the recovery of runaway slaves. The name of the senatus consultum by which the lex Fabia was amended does not appear. The word paelina is said to come from the Greek παλινας, oblique, indirect, dolosus. He who committed paelina was paelinar, a word which Martialis applies to a person who falsely gave himself out as the author of a book; and in this sense the word has come into common use in our language.1

1. P.l A.T.A NUS (πλατάνος), the Plane-tree. "There are cucullae of the lex Platinus," that is, the authority of the lex was pecunia; but this fell into disuse, and persons who offended against the lex were punished according to the nature of their offence, and were generally condemned to the mines. A senatus consultum ad legem Fabianum did not allow a master to give or sell a runaway slave, which was technically called "fugitivus,” but the provision did not apply to a slave who was merely absent, nor to the case of a runaway slave when the master had commissioned any one to go after him and sell him: it was the object of the provision to encourage the recovery of runaway slaves. The name of the senatus consultum by which the lex Fabia was amended does not appear. The word paelinar is said to come from the Greek παλινας, oblique, indirect, dolosus. He who committed paelinar was paelinaris, a word which Martialis applies to a person who falsely gave himself out as the author of a book; and in this sense the word has come into common use in our language.1

The commonest kind of cart-wheel was that called tympanum, "the drum," from its resemblance to the musical instrument of the same name. It was an essential part of every Roman cart, and they never ventured to take a long circuit in turning. They advanced slowly.2 They also made a loud creaking which was heard to a great distance (stridens plaustrum, gementia). Their rude construction made them liable to be overturned with their load of stone, timber, manure, or skins of wine,8 whence the Emperor Claudius had them changed for more solidly-wheeled wagons from entering the city of Rome.4 The wagoner was sometimes required to aid the team with his shoulder. Accidents of this kind gave origin to the proverb "Plaustrum perecuti," meaning, “I have had a misfortune.”2 Carts of this description, having solid wheels without spokes, are still used in Greece5 and in some parts of Asia.

PLEBES or PLEBS, PLEBII. This word contains the same root as impr-pleo, com-pleo, &c., and is, therefore, etymologically connected with πληθος, a term which was applied to the plebeians by the more correct Greek writers on Roman history, while others wrongly called them διομοι or de omologo.

The plebeians were the body of commons or the commonalty of Rome, and thus constituted one of the two great elements of which the Roman nation consisted, and which has given to the earlier periods of Roman history its peculiar character and interest. Before the time of Niebuhr, the most inconstant notions were entertained by the jurists regard to the plebeians and their relations to the patricians; and it is one of his peculiar merits to have pointed out the real position which they occupied in the history of Rome.

The ancients themselves do not agree respecting the time when the plebeians began to form a part of the body politic. Some represent them as having formed a part of the Romans as early as the time of Romulus, and seem to consider them as the low multitude of outcasts who flocked to Rome at the time when Romulus opened the asylum.8 If there is any truth at all in these accounts of the plebeians, we can only conceive them to have been the original inhabitants of the districts occupied by the new settlers (Romani, who, after their territory was conquered, were kept in that state of submission in which conquered nations were so frequently held in early times. There are also some other statements referring to such an early existence of the plebeians; for the clients, in the time of Livy, were said to have been formed from the Διομοι, but it is not clear in what manner the position of a client was in many respects undoubtedly fa: more favourable than that of a plebeian, and it is not improbable that some of the plebeians may for this reason have entered into the relation of clientela to some patricians, and have given up the rights which they had as free plebeians; and occurrences of this kind may have given

Plebeian rise to the story mentioned by the writers just referred to. Whatever may be thought of the existence of plebeians at Rome in the earliest times, their number, at all events, cannot have been very great. The time when they first appear as a distinct class of Roman citizens, in contradistinction to the patricians, is in the reign of Tullus Hostilius. Alba, the head of the Latin confederacy, was in his reign taken by the Romans and razed to the ground. The most distinguished of its inhabitants were transplanted to Rome and received among the patricians; but the great bulk of Alban citizens, who were likewise transferred to Rome, received settlements on the Caelian Hill, and were kept in a state of submission to the populus Romanus, or the patricians. This new population of Rome, which in number is said to have been equal to the old inhabitants of the city, or the patricians, were the plebeians. They were Latins, and, consequently, of the same blood as the Ramnes, the noblest of the three patrician tribes. After the conquest of Alba, Rome, in the reign of Ancus Marcius, acquired possession of a considerable extent of country, containing a number of dependant Latin towns, as Medullia, Fidenae, Pollitiorum, Telleneae, and Ficana. Great numbers of the inhabitants of these towns were again transplanted to Rome, and incorporated with the plebeians already settled there, and the Aventine Hill and the Palaestra were assigned to them as a habitation. Some portions of the land which these new citizens had possessed were given back to them by the Romans, so that they remained free land-owners as much as the conquerors themselves, and thus were distinct from the clients.

The order of plebeians, or the commonalty, which had been thus formed, and which far exceeded the population on the Palatine, was partly settled, and partly in the districts above mentioned, and partly on their former estates in the country subject to Rome, in towns, villages, or scattered farms. The plebeians were citizens, but not optimo jure; they were perfectly free from the patricians, and were neither contained in the three tribes, nor in the curia, nor in the patrician gentes. They were, consequently, excluded from the office of the augurs, the haruspex, and the priestly offices of the state. Dionysius is greatly mistaken in stating that all the new citizens were distributed among the patrician curies, and under this error he labours throughout his history, for he conceives the patricians and plebeians as having been united in the comitia curiata. That the plebeians were not contained in the curies is evident from the following facts: Dionysius himself calls the curies a patrician assembly; Livy speaks of a lex curiata, which was made without any co-operation on the part of the plebeians, and those who confirm the election of kings or magistrates and confer the imperium, are in some passages called patricians, and in others curies, which shows that they were not synonymous. That the plebeians did not belong to the patrician curie is expressly stated by Livy. The only point of contact between the two estates was the army; for, after the inhabitants of Alba had been transplanted to Rome, Tullus Hostilius doubled the number of legions of the Roman army. Livy also states that Tullus Hostilius formed ten new turmae of equites; but whether these new turmae consisted of Albas, as Livy says, or whether they were taken from the three old tribes, as Götzling thinks, is only matter of speculation. The plebeians were thus obliged to fight and shed their blood in the defence and support of their new fellow-citizens, without being allowed to exercise any of their rights or privileges, without even the right of intermarriage (connubium). In all judicial matters they were entirely at the mercy of the patricians, and had no right of appeal against any unjust sentence, though they were not, like the clients, bound to have a patron. They continued to have their own sacra which they had before the conquest, but they were regulated by the patrician pontiffs.

Lastly, they were free landlords, and had their own gentes. That a plebian, when married to a plebian woman, had the patri potestas over his children, and that, if he belonged to a plebian gens, he shared in the jur and sacra gentilicia of that gens, are points which appear to be self-evident.

The population of the Roman state thus consisted of two opposite elements: a ruling class or aristocracy, and the commonalty, which, though of the same stock as the noblest among the rulers, and exceeding them in numbers, yet enjoyed none of the rights which might enable them to take a part in the management of public affairs, religious or civil. Their citizenship resembled the relation of aliens to a state, in which they are merely tolerated on condition of performing certain services, and they are, in fact, sometimes called pergini. Whosoever was a Roman citizen was organized by its division into curies, decuriae, and gentes, the commonalty had no such organization, except its division into gentes; its relations to the patricians were in no way defined, and it consequently had no means of protecting itself against any arbitrary proceedings of the rulers. That such a state of things could not last, is a truth which was as evident to the ancient Romans as it is to every historian who blunders by his own self-sufficiency and love of dominion.

Tarquinii Priscus was the first who conceived the idea of placing the plebeians on a footing of equality with the old burghers, by dividing them into tribes, which he intended to call after his own name and those of his friends. But this noble plan was frustrated by the opposition of the patricians, who were afraid of the consequences of assigning the office of a representative to the patricians. All that Tarquinii could do was to effect the admission of the noblest plebeian families into the three old tribes, who were distinguished from the old patrician families by the names of Ramnes, Tities, and Luceres secundus, and their gentes are sometimes distinguished by the epithet minor, as they entered into the same relation in which the Luceres had been to the first two tribes before the time of Tarquinii. This measure, although an advantage to the most distinguished plebeian families, did not benefit the plebeians as an order; for the new patricians must have become alienated from the commonalty, while the plebeians, as a body, were considerably strengthened by the addition of the new families. It was reserved to his successor, Servius Tullius, to give to the commonalty a regular internal organization, and to determine their relations to the patricians. The intention of this king was not to upset the old constitution, but only to enlarge it, so as to render it capable of receiving within itself the new elements of the state. He first divided the city into four, and then the subject country into nine provinces, and was inhabited by plebeians, into twenty-six regions or local tribes, and in these regions he assigned lots of land to those plebeians who...
were yet without landed property. Niebuhr1 thinks that these allotments consisted of seven jugera each, an opinion which is controverted by Göttling.2 As the new tribunes were elected, the other ten tribes were not served that the Aventine and the Capitol were not contained in them; the former forming a part of the country tribes, and the latter being, as it were, the city of the gods.3 The twenty-six country tribes are not mentioned by Livy in his account of the Servian constitution, and where he first speaks of the whole number of the tribes he only mentions the twenty-one instead of thirty. Niebuhr4 is undoubtedly right in reconciling this number with the thirty tribes of Servius, by the supposition that in the war with Porsenna Rome lost one third of her territory, i.e., ten tribes, so that there were only twenty left. As, therefore, after the immigration of the Claudii and their clients, a new tribe was formed,4 Livy is right in only mentioning twenty-one tribes. These thirty Servian tribes did not, at least originally, contain any patricians; and even after the Claudii had come to Rome, it is not necessary to suppose that the gens Claudia, which was raised to the rank of patrician, was contained in the new tribe, but the new tribe probably consisted of the whole number of the Servian oracles, as this may be understood from the Anio.5 (Compare Tribus.) Some of the clients of the patricians, however, were probably contained in the Servian tribes.6 Each tribe had its prefect, called tribunus. (Vid. Tribunus.) The tribes had also their own sacred, festivals, and meetings (comitia tributa), which were convened by their tribunes.

Thus the citizen of the tribes, with tribunes at their heads, had no more than an internal organization of the plebeians, analogous to the division of the patricians into thirty curie, without conferring upon them the right to interfere in any way in the management of public affairs, or in the elections, which were left entirely to the senate and the curia. In this right altogether, the well-substantiated hypothesis of an other regulation of Servius Tullius, which was made wholly independent of the thirty tribes. For this purpose he instituted a censors, and divided the whole body of Roman citizens, plebeians as well as patricians, into five classes, according to the amount of their property. Taxation and the military service were arranged according to these classes in such a manner that the benefits and duties fell upon the wealthier classes. The whole body of citizens thus divided was formed into a great national assembly called comitiatus maximus or comitia centuriata. (Vid. Comitia, p. 593, &c.) In this assembly the plebeians now met the patricians apparently on a footing of equality, but the votes were distributed in such a way that it was always in the power of the wealthiest classes, to which the patricians naturally belonged, to decide a question before it was put to the vote of the poorer classes. A great number of such noble plebeian families as, after the subjugation of the Latin towns, had not been admitted into the curies by Tarquinii, were constituted into a separate centuria, to which a number of equites, with twelve suffragia in the comitia centuriata. (Vid. Equestres, p. 414, &c.) Lastly, Servius Tullius is said to have regulated the commerce between the two orders by about fifty laws6 (Νόμους τοῖς μετὰ συναλλαγμάσιν καὶ τοὺς περὶ τῶν ἀδυκμάτων). In this constitution the plebeians, as such, did not obtain admission to the senate, nor to the highest magistracy, nor to any of the priestly offices. To all these offices the patricians alone alone

themselves entitled by divine right. The plebeians also continued to be excluded from occupying any portion of the public land, which as yet was only possessed by the patricians and was given to them to keep their cattle upon the common pasture, for which they had to pay to the state a certain sum. It is true that by the acquisition of wealth plebeians might become members of the first property class, and that thus their votes in the comitia might become of the same weight as that of the patricians; but the possibility of acquiring such wealth was diminished by their being excluded from the use of the ager publicus. Niebuhr1 infers from the nature of the Servian constitution that it must have granted to the plebeians greater advantages than those mentioned by our historians: he conceives that it gave to them the right of appeal to their own assembly, and to pass sentence upon such as grossly subjugated their clients. An constitution placed them on the same footing in regard to the patricians as it was afterward permanently effected by the laws of C. Licinius and L. Sexius. There is no doubt that such might and should have been the case, but the arguments which he brings forward in support of his hypothesis are by no means convincing, as they are pointed out by Göttling.4 All that we know for certain is, that Servius gave to the body of the plebeians an internal organization by the establishment of the thirty plebeian tribes, and that in the comitia centuriata it placed them, at least apparently, on a footing of equality with the populus. Whether this intention was realized to any extent the done more if it had been in his power, is a different question. But facts like those stated above were sufficient, at a later period, when the benefits actually conferred upon the plebeians were taken away from them, to make the grateful commonalty look upon that king as its great patron, and even regard him as having granted all rights which subsequently they acquired after many years of hard struggle. Thus what he actually had done was exaggerated to what he possibly might have done or would have wished to do. In this light we have to regard the story that he intended, to lay down his royal dignity, and to establish the government by his own consuls, one of whom was to have been a plebeian.

During the reign of the last king, the plebeians not only lost all they had gained by the legislation of his predecessor, but the tyrant also compelled them to work like slaves in his great architectural works, such as the cloaca and the circus.

On the establishment of the Republic, the comitia centuriata, and perhaps the whole constitution such as it had been before the reign of the last Tarquinius, were restored, so that the patricians alone continued to be eligible to all the public offices.4 That the comitia centuriata were restored immediately after the banishment of the Tarquins, may be inferred from the words of Livy,5 who says that the people, who had been granted all rights which Tullius, for these words probably refer to the comitia centuriata, in which, according to the regulations of King Servius, the elections were to be held. There was still no connubium between the two orders, and the populus was still, in every respect, distinct from the plebs. Considering the fact that the patrician power which had formerly been concentrated in the king, and that these powers were now given to a number of patrician officers, we must admit that the plebeians, at the commencement of the Republic, were worse off than if the kingly rule had contin-

affected the institutions introduced by Servius. They, however, soon gained some advantages. This was the case, in the first instance, of the plebeians. During the reign of the last king were filled up with the most distinguished among the plebeian equites (patres conscripti) (vid. senator). But that the plebeians might have no share in the censorial power with which the consuls had been invested, the military tribunes did not obtain that power, and a new curule dignity, the censorship, was established, with which patricians alone were to be invested. (vid. Censor.) Shortly after the taking of Rome by the Gauls, we find the plebeians again in a state little better than that in which they had been before their first secession to the Mons Sacer. In B.C. 421, however, they were admitted to the questorship, which opened to them the way into the senate, where henceforth their number continued to increase. (vid. questor, senator.) In B.C. 387, the tribunes L. Licinius Stolo and L. Sextius placed themselves at the head of the commons, and resumed the contest against the patricians. After a fierce struggle, which lasted for several years, they at length carried a rogation, according to which decennaries were to be appointed for keeping the Sibylline books instead of duumvirs, of whom half were to be plebeians. The next great step was the restoration of the consulship, on condition that the patricians were to be the only ones by whom a rogation of Licinius, which was only intended to afford momentary relief to the poor plebeians, regulated the rate of interest. From this time forward the plebeians also appear in the possession of the right to appoint consuls of the Ager Publicus. In B.C. 366, L. Sextius Lateranus was the first plebeian consul. The patricians, however, who always clung to the privilege of being the only ones to be able to muster a sufficient force to render a consul unpopular, after they were deposed and sanctioned by law, the patricians exerted every means to obstruct the operation of the law. Such fraudulent attempts led, in B.C. 286, to the last secession of the plebeians, after which, however, the dictator Q. Hortensius successfully and permanently reconciled the two orders, secured to the plebeians all the rights they had acquired until then, and procured the plebeian tribunes and the power of leges binding upon the whole nation.

In a political point of view, the distinction between patricians and plebeians now ceased, and Rome, internally strengthened and united, entered upon the happiest period of her history. How completely the old distinction was now forgotten, is evident from the fact that immense favorable to the plebeians. The government of Rome had thus gradually changed from an oppressive oligarchy into a moderate democracy, in which each party had its proper influence, and the power of checking the other, if it should venture to assume more than it could legally claim. It was this constitution, the work of many generations.

that excited the admiration of the great statesman Polybius.

We stated above that the plebeians, during their struggle with the patricians, did not seek power for the mere gratification of their ambition, but as a necessary means to protect themselves from oppression.

The abuse which they, or, rather, their tribunes, made of their power, belongs to a much later time, and no traces of it appear until more than half a century after the Hortensian law; and even then this power was only abused by individuals, and not on behalf of the real plebeians, but of a degenerating democratical party, which is unfavourable to the connection which the plebeians had with the patricians, and thus has become identified with them. Those who knew the immense influence which religion and its public ministers had upon the whole management of the state, would not wonder that the plebeians, in their contest with the aristocracy, exerted themselves as much to gain access to the pri estly offices as to the tribunates, for, as the latter, in reality, would have been of little avail without the former. The office of curio maximus, which the plebeians sought and obtained nearly a century after the Ognulian law, seems, indeed, to afford ground for supposing that in this instance the plebeians sought a distinction merely for the purpose of extending their privileges; but Aristotle, in his construction of the history of ancient Rome, says that the office of curio maximus was at that time of greater political importance than is generally believed. It is also well known, that such priestly offices as had little or no connexion with the management of public affairs, such as that of the rex aurocrum, the flamines, Salli, and others, were never coveted by the plebeians, and continued to be held by the patricians down to the latest times.

After the passing of the Hortensian law, the political distinction between patricians and plebeians ceased, and, with a few unimportant exceptions, both orders were placed on a footing of perfect equality. Henceforth the name populus is sometimes applied to the plebeian alone, and sometimes to the whole body of Roman citizens, as assembled in the comitia centuraria or tributa. The term plebs or plebucula, on the other hand, was applied, in a loose manner of speaking, to the multitude or populace, in opposition to the nobles or the senatorial party.

Cesar, who was born a plebeian could only be raised to the rank of a patrician by a lex curiata, as was sometimes done during the kingly period and in the early times of the Republic. Cesar was the first who ventured in his own name to raise plebeians to the rank of patricians, and his example was followed by the emperors. (Vid. Patrict.)

It frequently occurs in the history of Rome that one and the same gens contained plebeian as well as patrician families. In the gens Cornelia, for instance, we find the plebeian families of the Balbi, Manniulae, Merules, &c., along with the patrician Sceipiones, Sulles, Leutulii, &c. The occurrence of this phenomenon may be accounted for in different ways. It may have been that one branch of a plebeian family means to protect itself by appealing to the surviving plebeians. It may also have happened that two families had the same nomen gentilicium without being actual members of the same gens. Again, a patrician family might go over to the plebeians; and, as such a family continued to bear the name of its patrician gens, this gens apparently contained a plebeian family. At the time when a conubium existed between the two orders, a manage between a patrician and a plebeian had the consequence, that the same nomen gentilicium belonged to persons of the two orders. When a perigrinus obtained the civitas through the influence of a patrician, or when a slave was emancipated by his patrician master, they generally adopted the nomen gentilicium of their benefactor, and thus appear to belong to the same gens with him.

Plebiscitum, a name properly applied to a law passed at the comitia tributa on the rotation of a tribune, a law to which the plebeians could appeal, had authority to convene, not the universus populus, but only a part, could hold a concilium, but not comitia; and as the tribunes could not summon the patricii, nor refer any matter to them, what was voted upon the proposal of the tribunes was not a lex, but a seuitum. But in course of time plebiscita were treated as proper so called, and, accordingly, they are sometimes included in the term leges. (Vid. L. xx., p. 579.)

Originally a plebiscitum required confirmation. The progress of change as to this matter appears from the following passages. A lex Valeria, passed in the comitia centuraria B.C. 449, enacted that the populus should be bound (teneatur) by that law. A lex Hortensia, B.C. 286, to the effect that plebiscita should be binding on the rest of the populus, as Galus expresses it; or, "sit e jure, quod plebes statuisset, omnes Quirites teneretur," according to Laelius Felix, as quoted by Gellius; and this latter is also the expression of Pliny.

The lex Hortensia is always referred to as the lex which put plebiscita, as to their binding force, exactly on the same footing as leges.

If we might judge of the effect of the two preceding leges by the terms in which they are expressed, as above quoted, they were the same as the Hortensian lex. From the terms in which Livy speaks of the lex Valeria, it is clear that in that passage populus and patres are the same, and that the plebiscita should be binding on the rest of the state besides the plebs. Consistently with this, we read of the rejection of an agrarian plebiscitum shortly after the passing of which was only prevented by the senate prevailing on part of the tribunes to put their veto on the measure. No allusion is made to any power of the senate to prevent the carrying of such a measure; but the want of such power may be supposed, in order that the narrative may be intelligible. In the case of the law Canuleia, it is said that the patres were at last prevailed upon to give their consent to the rogatio on the conumium of the patres and the plebs being proposed. In this case the consent of the patres was considered necessary; but as the plebiscita were only supposed, as they may supposed, to persons of the two orders, when a plebeian, their rights, it is not inconsistent to say the lex Valeria made the plebiscita binding on the populus, and yet a plebiscitum could not alter the privileges of the populus. A plebiscitum might apertain to a matter which indifferently concerned all, and such a plebiscitum would, consistently with Livy's expression, be a lex. It is, however, stated

1. (Liv., xxvii., 6, 6.)—2. (Stauden and Augusten, p. 55.)

by several modern writers that the effect of the Valeria lex was to put plebs on the footing of leges centuriae, when they had been first approved by the senate, or were subsequently approved by the senate and confirmed by the curia, that the Lap- burius' opinion, that the effect of the lex Pubilia was to render a senatus consultum a sufficient con-
firmation of a plebiscitum, and to make the confirm-
ation of the curiae unnecessary; and that the effect of the lex Hortensia was to render unnecessary even the confirmation of the senate, and to give to the tributa comitia complete legislative force. Thus, by the lex Pubilia, the senate succeeded to the place of the curiae, and the tribus to that of the old burgh-
ers.1 According to this view, the lex Pubilia was not a mere repetition of the lex Valeria, as it would seem to be from the terms of Livy. Numerous passages of Livy are cited by modern writers in confirmation of their views as to the first two of these legs, but, on the whole, it is not easy to come to any certain conclusions for them. It would be an improbable hypothesis to suppose that all of early Roman legislation should be exceedingly confused, and that they are so is apparent enough. It would also be an improbable hypothesis to sup-
pose that much of early Roman legislation was ir-
regularly conducted, of which fact, also, there is evidence. It further appears to be clear enough, that without further information we must remain ignorant of the exact character of the laws here before mentioned, which preceded the lex Hor-
tensia. It cannot be a matter of doubt that the objects which a plebiscitum might embrace must have been as important to determine as the forns which should give it validity; and that these objects which could be comprised in a plebiscitum were more limited in number and extent before the passing of the lex Hortensia than after, is easily shown.
The principal plebsita are mentioned under the
article Lex.

PLECTRUM. (Vid. Lyra, p. 605.)

PLEMO/CHAOI (πλημοχαοί). (Vid. Eleusina, p. 390.)

PLETHRON (φλέθρον). (Vid. Pas, p. 763.)

PLETHOS (πλέθος). (Vid. Later.)

*PLOC/IMOS (πλόκιμος), a sort of Reed. Ac-
cording to Sprengel, the Arundo ampolodios.2

PLUMA/RII, a class of persons mentioned by Vi-
truvius,3 Varro,4 and in inscriptions. It cannot be
deemed with certainty what their exact occupation was; their name would lead us to suppose that it had something to do with feathers (plumae). Sal-
masius5 supposes that they were persons who wove in garments golden or purple figures made like fe-
athers. The word, however, probably signifies all those who work in feathers, as lanarius those who work in wool, and argentarius those who work in silver. Sen-
eca6 speaks of dresses made of feathers of birds.7

*PLUMBA/GO (μολυβάγος), a term which was sometimes applied to Plumbago or Graphite, and sometimes to the stone Molus, which is also called Plumbago,8 says Agricola, "the Greeks term molibdána. It appears to be an oxeyde of lead." Sprengel says it is found in the mountains of Aus-
tria, consisting of oxeye of lead with molybdic acid, alumina, and carbonate of lime. It alludes, as Adams supposes, to the molybdate of lead, or the Plumb.

of the black and the white, the latter of which the Greeks called καιοστορος. The former of these, namely, the Plumbum nigrum, was, according to Adams, the chief, as one lessoned several of the native varieties of it. The καιοστορος, or Plumbum album, was the "Pyramidal Tin Ore" of Jameson, or oxeye of tin. (Vid. Stem. Num.)

PLUNITYR (from πλωμεν, to wash), was a festi
val celebrated at Athens every year on the 35th of Thargelion, in honour of Athena, surnamed Agla-
rous, whose temple stood on the Acropolis. The day of this festival was at Athens among the Καιο-
στόρει, or δεις νεφατί; for the temple of the goddess was surrounded by a rope, to preclude all communi-
ation with it; her statue was stripped of its gu-
ments and ornaments for the purpose of cleaning them, and was in the mean while covered over to conceal it from the sight of man. The persons who performed this service were called πρασιγγυ-
δαι. The city was therefore, so to speak, without its protecting divinity, and any under-
taking commenced on it was believed to be neces-
sarily unsuccessful. A procession was also held on the day of the Plyntheria, in which a quantity of dried figs, called ἱγγορα, were carried about.9

Other particulars are not known.

PLUTEUS was applied in military affairs to two different objects: 1. A kind of shed, made of bur-
dles covered with raw hides, which could be moved forward by small wheels attached to it, and under which the besiegers of a town made their ap-
proaches.8 2. Boards or planks placed on the val-
um of a camp, on movable towers or other military engines, as a kind of roof or covering for the pro-
tection of the soldiers.

The word pluteus was also applied to any board, laid on the ground as a sheet of protection or enclosure, as, for instance, to the board at the head of a bed.

PNEUMATICI (Πνευματικοί), a medical sect, founded at Rome by Athenaeus of Cilicia in the time of Nero and Vespassian, about A.D. 69.11 This was at the time when the Methodici enjoyed their great-
est reputation, from whom the Pneumatici differed
principally in that, instead of the mixture of primit-
vity and superstition, they admitted the doctrine of immaterial nature, to which they gave the name of πνεύμα, spirit. This principle was the cause of health or disease, and from this word they derived their name. It is from Galen alone that we learn the doctrines of the founder of the Pneumatici, for of his numerous writings only a few fragments re-
main preserved by Orhisius. The theory of Plato had already laid the foundations of the doctrine of this ethereal substance, of which Aristotle was the first who gave a clear idea, in describing the ways by which the πνεύμα is introduced into the body and the sanguineous system. The Stoics developed it still more, and applied it to the explanation of the functions of the body; and Erasistratus and his suc-
cessors had made the πνεύμα act a great part in the constitution of health or disease. This doctrine, therefore, of the Pneumatici could not be regarded as new. Galen, who gives the above his-
tory of it, asserts12 that the Stoics followed the steps of Aristotle with respect to Physiology. The found-
ination, however, of the sect of the Methodici appears to have done away with much of the consideration

21.—Adams, Appendix, v. μολυβάγος.—2. (Plut., Alcib., 34—
Hipp., Gorg., 7, 11.—Herod., Hist., 3, 179.)—3. (Hippocr., Ver-
tem., iv., 15—Liv., xxvii., 17—9.)—4. (Festus, s. v.—Cass., Gall
s., 25, 41, 72.—10. (Strutt, Con., 26.)—11. (Galen, De Difl. Pul
Natu., iv., 6, p. 92, tom. ii.)
which the theory of the *πνεῦμα* had formerly enjoyed. Those physicians who would not follow the sect of the Methodici chose that which revived the *πνεῦμα*, in order to oppose to the former sect a firmly-established principle, and agreed in that, as upon various other points, with the Stoics. They thought especially that it was indispensable to the perfection of mankind; for in many cases they disputed simply about names, and Galen tells us that the Pneumatici would rather have betrayed their country than abjured their opinions. Like the greater part of the Stoics of his time, Athenæus had adopted all the doctrines of the Peripatetics. What undeniably proves it is, that, besides the doctrine of the *πνεῦμα*, the Pneumatici believed in very much more, at least, than the Methodici were in the habit of doing. He recognised in the four known elements the positive qualities (ποιότητις) of the animal body; but he often regarded them as real substances, and gave to the whole of them the name of *Nature of Man*. Although the followers of this doctrine, attributed, in general, the greater part of what was natural to the *πνεῦμα*, they paid at the same time great attention to the mixture of the elements. The union of heat and moisture is the most suitable for the preservation of health. Heat and dryness give rise to acute diseases, cold and moisture produce phlegmatic affections, cold and dryness give rise to melancholy. Everything brings to pass changes in the body; and these are the lines of death.

It cannot be denied, says Sprengel, that the Pneumatici rendered great services to pathology, and discovered several new diseases. It is only to be regretted that they carried their subtleties too far. Thus, for instance, they established many more kinds of fever than there really exist in nature. But Homer, Hesiod, and the Greek writers in general, apply it to all sort of heresies.

**POEICILIS (ποικιλή),** the name of a bird mentioned by Aristotle. The scholiast on Theophrastus makes it the same as the *dactylis*, or Siskin.

**POEICILUS (ποικίλος),** the name of a fish mentioned by Opper, and which Peneaus suggests may be the *Stellaria cantica*.

**POEUM (Greek *πογιον*).** The Roman sense of this word is explained by Ulpius at the same time that he explains fras and multa. Fras is generally an offence, noxa; and poena is the punishment of an offence, noxe vindicata. Poena is a general name for any punishment of any offence; multa is the penalty of a particular offence, which is now (in Ulpius's time) pecuniary. Ulpius explains it at the same time, because by the law of the Twelve Tables the multa was pecuniaria, or a certain number of oxen and sheep. It explains that poena may affect a person's caput and exstirpation, that is, poena may be loss of citizenship and infamy. A multa was imposed according to circumstances, and its amount was determined by the pleasure of him who imposed it. A poena was only inflicted when it was imposed by some lex or some other legal authority (quo alicujus). When no poena was imposed, then...
POLYPUIS.

A mulia or penalty might be inflicted. Every person who had jurisdiction (this seems to be the right reading instead of judicato) could impose a mulia, and these were magistrates and provincials in particular. A para might be inflicted by any one who was intrusted with the judicial preservation of the offence to punish. The legal distinction between para and mulia is not always observed by the Roman writers.

POLEMAR/CHUS (polymerchus). An account of the functions of the Athenian magistrate of this name is given under ARCH. Athens, however, was not the only state of Greece which had officers so called. We read of them at Sparta and in various cities of Beotia. As their name denotes, their duty was to protect and preserve the peace and military affairs, being intrusted either with the command of armies abroad, or the superintendence of the war department at home: sometimes with both. The polemarchs of Sparta appear to have ranked next to the king when on actual service abroad, and were generally of the royal kindred or house (ενική). They commanded single armed forces, so that they were apparently to have been ships in number, and sometimes whole armies. They also formed part of the king's council in war, and of the royal escort called δυσμεσία, and were supported or represented by the officers called συμφώνεοι.

The polemarchs of Sparta had also the superintendence of the public tables: a circumstance which admits of explanation from the fact that Lycurgus is said to have instituted the ίσον πένετρα for the purposes of war, and, therefore, as military, so, too. Lacedemonians would eat and fight in the same company. But, in addition to their military functions and the duties connected therewith, the polemarchs of Sparta had a civil as well as a certain extent of judicial power, in which respect they resembled the ἄρχοντα πολεμαρχοι of Athens. In Beotia, also, there were magistrates of this name. At Thebes, for instance, there appears to have been two, perhaps elected annually, and, from what happened when Phebidas, the Lacedemonian commander, seized the Cadmeia or citadel of Thebes (B.C. 392), we may infer that in times of peace they were invested with the chief executive power of the state and the command of the city, having its military force under their orders. They are not, however, associated with the Betcarchi. At Thespiae, also, there were officers of this name, and likewise in Κυμα, and Arcadia. At Συμνα, in the latter country, the gates of the city were intrusted to the special care of the polemarchs: they had to keep guard by them in the daytime, and to close them at night, and the keys were always kept in their custody.

POLEMÔNIUM (polyemonion), a species of plant; most probably, as Adams thinks, the Polemonium caroleum. The same name makes the proper name to be Greek Valerian.

POLETAI (polytai), a board of ten officers or magistrates (for they are called ἄρχοντα) by Haplogora, whose duty it was to grant leases of the public lands and mines, and also to let the revenues arising from the customs, taxes, confiscations, and forfeitures. Of such letting the word polev is (not χωρίς) generally used, and also the correlative words οἰκεῖος and προεδρου. Their official place of business was called poleithron. One was chosen from each tribe. A chairman presided at their meetings (ἐπιτρόπιον). In the letting of the

Revenue they were assisted by the managers of the territorial fund (τοις θεωρικοῖς), and they acted under the authority of the senate of Five Hundred, who exercised a general control over the financial department of the administration. Resident aliens, who did not pay their residence tax (πολιτικόν), were under the same penalty as Roman citizens, and, on committed default, were sold in a room called πολειτηρίων ἤθεληξιόν. Other persons who had forfeited their freedom to the state were also sold by the πολειτής, as foreigners who had been convicted of usurping the rights of citizenship.

POLTON (polton), a plant, which has been generally considered to be the Teucrium Polium, a species of Germander. We are informed by Sprengel that it is confined to Paeada, and, "agree in preferring the Teucrium Creticum. Schneider is, with out- standing, disposed to agree with Columna in referring it to the Santolina chamysappariss, or Cypress-leaved Lavender Cotton. This last we are rather disposed to hold as one of the species of ἀβροφόρον described by Dioscorides."

POLITEIA, POLITITES (politeia, politeiao). (Vid. CIVITAS, POLITEIA.)

POLIculara. (Vid. Poli.)

POLICITATIIO. (Vid. Obligationes, p. 765.)

POLINACTORES. (Vid. Funus, p. 459.)

POLAS (poly.). (Vid. Heeologium.)

POLYCARPOeum (polykarpov). a plant, the Pyrgorum Persiciaria.

POLYGONALON (poligynalos), tis γένους ομαλαωτικ, or Butterwort. Such, at least, is the opinion at Trasag, which is followed by Sprengel.

POLYGRANON (polygrynon), a plant. The ἄρχοντα πολιγρανον of Dioscorides is generally acknowledged to be the Pyrgorum angustatum, or Krott Grass. The π. tile is referred by Sprengel to the Pyrgorum maritimum. It is deserving of remark, however, that nearly all the other authors refer to it, as for example, Matthiolus, Dodonaeus, and Bauhin, make the latter to have been the Hippus vulgaris, of Mare's Tail. The poligrynon is the Sanguinaria of Pliny.

POLYMITHA. (Vid. Tula.)

POLYPUS (polypous or polipous), the Polypus. Several species of the Polypus are described by Aristotle, most of which are to be referred to the genus Hydra of Linnaeus. The H. viridis is its most remarkable species. The ancient writers use the general term polypus in speaking of these animals, but modern naturalists employ the appellation aequi, as specifying their principal characteristic, a particular class, and the name polypus is now exclusively assigned to a tribe of the radiceata. Aristotle, Pliny, and, in fact, all the ancient writers, affirm that this animal issues from the water, and that it sometimes visits the land; avoiding, however, all the smooth places. Ælian and Athenæus add that it also crawls on trees! It appears that the octopus make their principal habitation in the sea, as Aristotle observed long ago. They also feed on conchylia mollusca; and Pliny concerning them the trick, which has also been attributed to apes, of placing a little stone between the two valves of oysters, of
which they are extremely fond, so as to prevent them from closing, and that then they extract the flesh. But how could an octopus take up a little stone and place it so adroitly, even supposing that the semi-hatus of his visor, continually filled by his peculiar chitinous of the edges of its mantle, would permit it? It has been asserted, absurdly enough, that the octopus, when pushed by hunger, will gnaw its own arms, which possess the singular property of shooting forth again. But Aristotle and Pliny more justly attribute the fact of octopi being often found which have some fewer appendages than usual, to the circumstance of easy birth through the gills. We are ignoring respecting the full size to which the octopus may attain. We find in the reci- tals of certain travellers, and even of some naturalists, that a species exists to which the name of Kraken has been given, which arrives at an immeasurable bulk, so as to resemble an island when it approaches the surface of the water, and to over- set the largest vessels. Under sufficient pressure, it comes entangled in their cordage. But we may be assured, without any fear of deceiving ourselves, that this is but an exaggeration of what has been said by the ancients, especially Pliny, concerning an octopus, which, according to Trebus, had a head .

The size of a barrel containing fifteen amphorae, and exhaled through the gills, so that its head, when the head was presented to Lucullus, were thirty feet in length, knotted like clubs, and so thick that a man could sorely embrace them round: the suckers resembled basins, and the teeth were in proportion. All that was preserved of the body weighed seven hundred pounds. There are other stories still more extraordinary: we read of an octopus of over forty feet in length, which Pliny adds, is the largest in the world. It was observed at Casterna, in Batica, in Spain, and was accustomed to come forth from the sea into the depths for salted fish, &c., and to devour those provisions. The pertinacity of its robberies at length roused the indignation of the keepers; they built very lofty palisades, but all in vain; this persevering polypus succeeded in getting over them by taking advantage of a neighbouring tree, so that it could not be taken but by the sagacity of the dogs, which, having marked it one night as it was returning to the sea, intimated the affair to the keepers, who were struck with terror and astonishment at the novelty of this tremendous spec- tacle. In truth, the animal was of an immeasurable bulk, and the whistle which it gave during its subterraneous passage through the brine, and it exhaled a most intolerable odour. Nevertheless, after a desperate combat with the dogs, which Pliny depicts with all the vigour of his poetical style, and by the efforts of men armed with tridents, it was at last killed, and the head was brought to Lucullus. Aelian also tells us that, in the course of time, these animals arrive at such an extraordinary bulk, so as to equal in size the largest cetacea. On this subject he favours us with a story pretty nearly similar to that of Trebus, of a polypus which, having devastated the magazines of the Iberian merchants, was besieged by a great number of persons, and cut in pieces with hatchets, just in the same style that woodmen cut down the thick branches of trees. Aristotle, indeed, tells us there are polypi whose arms are as much as five cubits in length, which would make above seven feet. But this is a long way behind the narrations of Tre- bus and Aelian, and falls still shorter of the won- ders of the Northern romances concerning their krakens. The ancients tell us that the octopi are the enemies of the lobsters, which dread them, while they are themselves pursued by the morone, which devour their arms. They likewise inform us that their bite is stronger than that of the sepia, but not so venomous. Aelian adds, that it is said by fisher- men that the octopi are attracted to the land by the fruit of the olive-tree. 1

*POMAT'TIAS (ποματτιας), a species of excellent Snail, mentioned by Dioscorides. It is the Heli pomatia.*

POMCE/RIUM. This word is compounded of post and marium (muros), in the same manner as pomeridiem of post and meridie, and thus signifies a line running by the walls of a town (gone or post muros). But the walls of a town here spoken of are not its actual walls or fortifications, but symbolical walls, and the course of the pomerium itself was the right of the town, and thence from that certain intervals. The custom of making a pomerium was common to the Latins and Etruscans; and this method of computing it was in use in the earliest times, when a town was to be founded, was as fol- lows: A bullock and a heifer were yoked to a plough, and a furrow was drawn around the place which was to be occupied by a new town in such an extent, usually made by such men as lived by their victories over foreign nations increased the boundaries of the Empire, 2 and neither could a pomerium be formed nor altered without the augurs previously consulting the will of the gods by augury, whence the jux pomarii of the augurs. 3 The formula of the prayer which the augurs performed on occasions of the like kind is this: "Here, my lord, there, my master, by the people who attended, is preserved in Festus. 9

The original pomerium of Romulus ran, according to Gallus, 10 around the foot of the Palatine, but the one which Tacitus 11 describes as the pomerium of Romulus comprised a much wider space, and was, as Niebuhr thinks, 12 an enlargement of the original compass, taking in a suburb or borough. Niebuhr also believes that pomerium properly de- notes a suburb taken into the city. The Roman pomerium, according to Tacitus, ran from the Forum Boarium (the arch of Septimius Severus) through the valley of the Circus so as to include the ara maxima Heroulias; then along the foot of the Palatine to the ara Consis, and thence from the Septizonium to the curiae veteres (a little below the baths of Trajan), along the top of the Vela to the Sacellum Larium, and lastly by the Via Sacra to the Forum. From the eastern side of the Forum to

the Velabrum. There was a swamp, so that Tacitus
do not mention the line of the pomerium here.
Servius Tullius again extended the pomerium,1
but the Aventine was not included, either because
the anopiae here taken by Romulus had been unfa-
vorable, or which more probable, because there
stood on this hill the temple of Diana, the common
sanctuary of the Latins and Romans.2 The Aven-
tine did not become included within the pomerium
until the time of the Emperor Claudius.3 Dionys-
ianus4 states that, down to his time, nobody had ex-
tended the pomerium since the time of King Ser-
vius, although we know from authentic sources that
at least Augustus enlarged the pomerium,5 and
that the pontiff Hardouin, the chief of Sulla and J.
Cæsar,6 the last who extended the pomerium of Rome
was the Emperor Antoninus, after he had enlarged the walls
of the city.7

**POMPA (πομπα)**, a solemn procession, as on
the occasion of a funeral, triumph, &c.8 It is, how-
ever, more particularly applied to the grand proce-
sion with which the games of the circus commenced
(August. Caesar.). (Vid. Circus, p. 556.)

**POMPEIÆ LEGES** (Vid. Lex, p. 584, 585.)

*POMP'HEXY (πομπαττιζ).* "Pompholyx," says
Charras,9 "is a white, light powder, that sticks
upon the tops of furnaces where they melt and re-
fine copper, like flour of meal, and sometimes little
poules or blisters. They call it Nt or Nithid.10 Tutia
comes from Mithra, the same name as the pompholyx, but
the weight of it causes it to stick about the lower part of the
furnaces. The Greeks call Tutia by the name of *Spadun.*"
Hardouin, as Adams remarks, gives it the French
name of "La fleur de la Calomme." Blancard gives
it the English name of "The White Tuttie," but it is
generally called "Brown Ashes" or "White Ashes"

*POMPH'OLYX (πομφολυξ).* A species of fish, sup-
posed to be the Coryphaena Pomphila. It is of a rare
kind, and, according to Rondelet, is sometimes sold
for Spanish mackerel. Athenæus calls it the lepros
imagin. Oppian makes it the καλαλυχα.11

**FONS.** (Vid. Branda.)

**PONTIFEX.** The origin of this word is ex-
plained in various ways. Q. Scaevola, who was
himself pontifex maximus, derived it from poosae
and fasce, and Varro from poos, because the pont-
iffs, he says, had built the Pons Sublicium, and af-
terward frequently restored it, that it might be pos-
sible to perform sacrifices on each side of the Ti-
ber.12 This statement is, however, contradicted by the
tradition which ascribes the building of the Pons
Sublicium to Ancus Marcus,13 at a time when the
pontiffs had long existed and borne this name.
Götting14 thinks that pontifex is only another form
for pomfex, which would characterize the pontiffs
only as the managers and conductors of public pro-
cessions and solemnities. But it seems far more
probable that the word is formed from poos and
fasce (in the signification of the Greek μετέχει, to
perform sacrifices), and that, consequently, it signi-
fies the priests who offered sacrifices upon the
bridge. The ancient sacrifice to which the name
thus alludes is that of the Argeans on the sacred
or Sublician bridge, which is described by Dionys-

1. (Liv., i., 44—Dionys., iv., 13—2. (Gell., i., c.—Varro, De Léx, p. 29.)
2. (Gell, 1., 9.)—Anni.
4. (Compare Arbeg.) Greek writers sometimes
translate the word, and call the pontiffs ψευφοραυίτοι.
5. The Roman pontiffs formed the most illustrious
among the great colleges of priests. Their institu-
tion, like that of all important matters of religion,
was ascribed to Numa.2 The number of pontiffs
appointed by this king was four,3 and at their head
was the pontifex maximus, who is generally not
included when the number of pontiffs is mentioned.
Cicero,4 however, includes the pontifex maximus
when he says that Numa appointed five pontiffs.
Nieuwhuys5 supposes, with great probability, that
the original number of four pontiffs (not including
the pontifex maximus) had reference to the two ear-
est tribes of the Romans, the Rames and Titites,
so that each tribe was represented by two pontiffs.
In the year B.C. 300, the Ogulnian law raised the
number of pontiffs to eight, or, including the pontif-
exus maximus, to nine, and four of them were to
be plebeians.4 The pontifex maximus, however,
to continue to be a patrician down to the year B.C. 254,
when Tib. Corinæus was the first plebeian who
was invested with this dignity.7 This number of
pontiffs remained for a long time unaltered, until,
in 81 B.C., the dictator Sulla increased it to fifteen,10
and J. Cæsar to sixteen.16 In both these changes
the pontifex maximus is included in the number.
During the Empire the number varied, though, on
the whole, fifteen appears to have been the regular
number.

The mode of appointing the pontiffs was also dif-
erent at different times. It appears that after their
institution by Numa, the college had the right of
co-optation, that is, if a member of the college died
(for all the pontiffs held their office for life), the
members met and elected a successor, who, after
his election, was inaugurated by the augurs.18 This
pontiff was co-opted. The pontifex maximus, for the
year 212 B.C. Livy12 speaks of the election of a
pontifex maximus in the comitia (probably the com-
tia tributa) as the ordinary mode of appointing this
high-priest. But, in relating the events of the
year 181 B.C., he again states that the appointment
of the chief pontiff took place by the co-optation of
the college.17 How these anomalies arose (unless
the pontifices maximiss should be understood to
carve a path for themselves, as far as we know, the first
temptation to deprive the college of its right of co-optation, and to
transfer the power of election to the people, was
not made until the year B.C. 145, by the tribune C. Lici-
nus Crassus; but it was frustrated by the prae-
tor C. Labilius.18 In 104 B.C. the attempt was
successfully repeated by the tribune Cn. Dominicus
Ahenobarbus; and a law (lex Decem Epist., B.C. 67—
lex Cornelia de Sacerdotiis (81 B.C.), which restored
to the great priestly colleges their full right of co-

topta.17 In the year 63 B.C. the law of Sulla
was abolished, and the Dominian law was restored,
but not in its full extent; for it was now determined
that, in case of a vacancy, the college itself should
1. (Gel., i., 33—2. (Dionys., i., 20.—Dionys., ii., 73.)—3. (Liv., x., 6.)
5. (Compare it., p. 47.)—6. (Cic., De Rep., 91—De
15. (Cic., De Leg. Agr., i., 7.—Epist. ad Brut., i., 5.—Valer. Mexic., 7.)
nominate two candidates, and the people elect one of them. This mode of proceeding is expressly mentioned in regard to the appointment of augurs, and was consequently the same in that of the pontiffs. 1 Julius Caesar did not alter this modified lex Domitia, but M. Antoninus M. L. restituted the right of co-optatio to the colleges. 2

The college of pontiffs had the supreme superintendence of all matters of religion, and of things and persons connected with public as well as private worship. A general outline of their rights and functions is given by Livy 3 and Dionysius. 4 This power is said to have been given to them by Numa; and it is said also that their books contained the ritual ordinances, together with the obligation to give information to any one who might consult them on matters of religion. They had to guard against any irregularity in the observance of religious rites that might arise from a neglect of the ancient customs, or from the introduction of foreign rites. They had not only to determine in what manner the heavenly gods should be worshipped, but also the proper form of burials, and how the souls of the departed (mammes) were to be appeased; in like manner, what signs either in lightning or other phenomena were to be received and attended to. They had the judicial decision in all matters of religion, whether private persons, magistrates, or the state, were involved. If the existing laws or customs were found defective or insufficient, they made new laws and regulations (decreta pontificum), in which they always followed their own judgment as to what was consistent with the existing customs and usages. 5 They watched over the conduct of all persons who had anything to do with public worship; and it was a duty of the pontifices, it is said, to see that all things connected with the observance of the sacred rites were properly carried out.

The pontiffs themselves were not subject to any court of law or punishment, and were not responsible either to the senate or to the people. The details of these duties and functions were contained in books called libri pontificii or pontificales, commentarii sacrorum or sacrorum pontificum, 6 which they were said to have received from Numa, and which were sanctioned by Ancus Marcus. This king is said to have made public worship the subject of his laws; and to have provided for the observance of the sacred public rites and ceremonies; and when, at the commencement of the Republic, the wooden tables on which these public regulations were written had fallen into decay, they were restored by the pontifex maximus C. Papirius. 7 One part of these libri pontificales was called indigntamenta, and contained the names of the gods, as well as the manner in which these names were to be used in public worship. 8 A second part must have contained the formulas of the jus pontificum. 9 The original laws and regulations contained in these books were in the course of time increased and more accurately defined by the decrees of the pontiffs, who, perhaps, name commentarii. Another tradition contends that Numa communicated to the pontiffs their duties and rights merely by word of mouth, and that he had buried the books in a stone chest on the Janiculum. 10 These books

were found in 181 B.C., and one half of them contained ritual regulations and the jus pontificum, and the other half philosophical inquiries on these same subjects, and were written in the Greek language. The books were brought to the prae tor urb ans Q. Petilius, and the senate ordered the latter half to be burned, while the former was carefully preserved. Respecting the nature of these books, the author of this story, see Hartung, De Relig. d. Röm., i., p. 214, &c. Concerning the annales maximi which were kept by the pontifex maximus, and to which Livy 1 applies the name commentarii pontificum, see ANNALES.

As to the rights and duties of the pontiffs, it must first be borne in mind that they were not priests of any particular divinity, but a college which stood above all other priests, and superintended the whole external worship of the gods. 2 One of their principal duties was the regulation of the sacra, both publica and privata, and to watch that they were observed at the proper times for which purpose the pontiffs had the whole regulation of the calendar: vid. CALENDAR, p. 195, &c. and in their proper form. In the management of the sacra publica they were in later times assisted in certain performances by the triumviri epulones (vid. Epulones), and had in their keeping the funds from which the expenses of the sacra publica were defrayed.

The pontiffs convoked the assembly of the curies (comitia calata or curiata) in cases where priests were to be appointed, and flamines or rex sacrorum were to be inaugurated; also when wills were to be received, and when a detestatio sacrorum and adoption by auguro took place. 3 (Vid. ANEPRO.)

The age and presence of the pontiffs, together with that of the augurs and flamines, were taken into account in the comitia curiata, also, in cases when other matters were transacted, as Niebuhri thinks, 5 does not appear to be quite certain. The curious circumstance that on one occasion the pontifex maximus was commanded by the senate to preside at the election of tribunes of the people, is explained by Niebuhri.

As regards the jurisdiction of the pontiffs, magistrates and priests, as well as private individuals were bound to submit to their sentence, provided it had the sanction of three members of the college. 4 In most cases the sentence of the pontiffs only inflicted a fine upon the offenders, 5 but the persons convicted might be subjected to such severity as the pontifex might release him from the fine. In regard to the vestal virgins and the persons who committed incest with them, the pontiffs had criminal jurisdiction, and might pronounce the sentence of death. 6 A man who had violated a vestal virgin was, according to an ancient law, scourged to death by the pontiffs, and the punishment might be inflicted by the pontifex himself, by the decemvirs, by the pontifex maximus, or by the vestal virgins. In later times we find that, even in the case of the pontiffs having passed sentence upon vestal virgins, a tribune interfered, and induced the people to appoint a questor for the purpose of making a fresh inquiry into the case; and it sometimes happened that after

PONTIFEX.

I'OPULIFUGIA.

this new trial the sentence of the pontiffs was modified or annulled. Such cases, however, seem to have been mere irregularities, founded upon an abuse of power. As pontificate was the term commonly applied to early times to the pontiffs, as a portion of the patricians, were in the possession of the civil as well as religious law, until the former was made public by C. Flavius. (Vid. Cic., 17.) The regulations which served as a guide to the pontiffs in their judicial proceedings formed a large collection of laws, which was called the jus pontificium, and formed part of the libri pontificii. The Epist., 39.

The sacra regia, or the episcopal guide, was given, as Cic., 17.) The episcopal guide, was given, as

If we were to suppose that the pontiffs were no longer a dignity, but a title, then the most natural conclusion of title pontificum maximus, or of the pontifex maximus, is that they stand in the same relation to the other pontiffs as the patres minorum gentium to the patres majorum gentium; and that subsequently, when the meaning of the name was forgotten, it was applied to the secretaries of the great college of pontiffs. In another passage Niebuhr suggests that the Luceres were never represented in the college of pontiffs; and this opinion is contradicted by all the statements of ancient writers who mention the pontifices minores. Livy, in speaking of the secretaries of the college of pontiffs, adds, "quos nunc minores pontifices appellant," from which it is evident that the name pontifices minores was of later introduction, and that it was given to persons who originally had no claims to it, that is, to men of no family or influence. The only natural solution of the question seems to be this. At the time when the real pontiffs began to neglect their duties, and to leave the principal business to be done by their secretaries, it became customary to designate these scribes by the name of pontifices minores. Macrob., 1 in speaking of minor pontiffs previous to the time of Cn. Flavius, makes an anachronism, as he transfers a name customary in his own days to a time when it could not possibly exist. The number of these secretaries is uncertain: Cicero mentions the names of three minor pontiffs. The name cannot have been used long before the end of the Republic, when even chief pontiffs began to show a disregard for their sacred duties, as in the case of P. Licinius Crassus and Julius Caesar. Another proof of their falling into disuse is that comparison with former days, is, about the same time the good and luxurious living of the pontiffs became proverbial at Rome.

PONTIFICUM JUS. (Vid. Jus, p. 660.) PONTIFICIALES LUDI. (Vid. Ludus Pontificalis.)

POPTOCA. Ponto, a Pontoon, was a vessel used for transport of troops across rivers. We are told that it was a kind of Gallic vessel, but we have no further particulars respecting it. 13

POPA. (Vid. Sacrificium.)

POPINIA. (Vid. Cappona, p. 226.)

POPULARIA. (Vid. Amphiteatrum, p. 53.)

POPPULUS. (Vid. Patriarch.)

POPOPULIFUGIA or POPIIFUGIA, the day of the people's flight, was celebrated on the nones of July, according to an ancient tradition preserved by

PORTA.

Varro, in commemoration of the flight of the people, when the inhabitants of Ficula, Ficene, and other places round about, appeared in arms against Rome shortly after the departure of the Gauls, and procured supplies necessary that the Romans might field before them. Macrobius, however, says that the populifugia was celebrated in commemoration of the flight of the people before the Tuscan, while Dionysius refers its origin to the flight of the people on the death of Romulus. Niebuhr seems disposed to accept the tradition preserved by Varro, because sufficient was made of it and its truth, and Macrobius and Dionysius render the story uncertain.

PORIST Al (πορισταί) were magistrate stations at Athens, Pp p. heavily brambled the extraordinary supplies (Πορισταί είναι ἄρχη τῆς Αθηναίας, είς πόρους έλεγεν). Antiphon classes them with the poetæ and practores; and Demosthenes joins τῶν χρημάτων ταύτα καὶ πορίσταί, from which it would appear that they were public officers in his time, although the words do not necessarily prove this. 4

*POROS (πόρος). "Theophrastus," says Adams, "describes a species of marble under this name. He says it resembles the Parian in hardness and colour, and the Τόρπυς (τόρπος) in lightness. The Törvis would seem to have been the Ptolemeion of uncoloured stone, since it was the easiest form to build upon. The portico was a two-storied building, which is generally ascribed to the chisel-workers, who form in the joints of persons who have long laboured under the gout."

PORPE (πόρπη). (Vid. FIBULA.)

PORTA (πόρπη, dim. πορπός), the gate of a city, citadel, or other open space enclosed by a wall, in contradistinction to ιτας, which was the door of a house or an any house or covered edifice. The terms porta and πορπή are often found in the plural, even when applied to a single gate, because it consisted of two leaves.

The gates of a city were, of course, various in their number and position. The ancient walls of Pompeii, Sessaunam, and Aosta still exist, and close a square: the centre of each of the four walls was a gate. If, instead of being situated on a plain, a city was built on the summit of a precipitous hill, there was a gate on the sloping declivity which afforded the easiest access. If, in consequence of the unevenness of the ground, the form of the walls was irregular, the number and position of the gates varied accordingly to the circumstances. Thus Megara had 5 gates; 11 Thebes, in Boeotia, had 7; Athens had 8; 2 Rome, or perhaps even more. The janams of the gate were mounted, 1 by a lintel, which was long and wide in proportion to the width of the gate. The lintel of the centre gate leading into the Athenian acropolis is 17 feet long, 2. But especially at Pompeii, Praetia, Sessaunam, Volterra, Aosta, Bezançon, and Tiviere. 3 At Arpinum, one of the gates is now remaining in place, while another is constructed with the stones projecting one beyond another, after the manner represented in the woodcut at p. 85.

At Como, Verona, and other ancient cities, it was found convenient to construct two passages close together, the one designed for carriages entering, and the other for carriages leaving the city. The same provision is observed in the magnificent ruin of a gate at Tiviere. (See the following woodcut, showing a view of it, together with its plan.) In other instances we find only one gate for carriages, but a smaller one on each side of it (ποριστάρι) for foot-passengers. (See the plan of the gate of Pompeii, p. 224.) Each of the fine gates which remain at Autun has not only two carriage-ways, but, exterior to them, two sideways for pedestrians. 3 When there were no side ways, one of the valves of the large gate sometimes contained a wicket (πορτολά, πορτλα: μύωπηλ) large enough to admit a single person. The porter opened it when any one wished to go in or out by night.

The contrivance for fastening gates were in general the same as those used for doors (vid. Jan. 4), but larger in proportion. The wooden bar placed across them in the inside (μοιχλός) was kept in its position by the following method. A hole, passing through it perpendicularly (βαλανόδοκας), admitted a cylindrical piece of iron, called βαλανος, which also entered a hole in the gate, so that, until it was taken out, the bar could not be removed either to the one side or the other. 4 Another piece of iron, fitted to the βαλανος, and called βαλανώρα, was used to extract it. 5 When the besiegers, for want of this key, the βαλανώρα, were unable to remove the bar, they cut it through with a hatchet, 6 or set it on fire.

The gateway had commonly a chamber, either on one side or on both, which served as the residence of the porter or guard. It was attached to the gate, its situation is shown in the following plan. (See woodcut.) But the gateway was also, in many cases, surmounted by a tower, adapted either for defence (πορτας τερρες ιποσιτάς), or for conducting the general business of government. In the gates of Como and Verona this edifice is three stories high. At Tiviere it was four stories high (vid. Jan. 4), although the four stories remain standing in one of them only, as may be observed in the annexed woodcut. The length of this building is 115 feet; its depth, 47 in the middle, 61' in the flanks; its greatest height, 92. All the four stories are ornamented in every direction with rows of Tuscan columns. The gateways are each 14 feet wide. The entrance of

PORTICUS.

Each appears to have been guarded, as at Pompeii (see p. 234), first by a porticu1, and then by gates of wood and iron. The barbican, between the double portico and the pair of gates, was no doubt open to the sky, as in the gates of Pompeii. This edifice was probably erected by Constantine. Its rows of ornamental windows, and the general style of its architecture, afford sufficient indications, that, although very strong, it was not intended solely nor principally for the purposes of defence, but to be applied in time of peace to the various objects of civil government. To these latter purposes the gatehouse (παλάτιον) was commonly devoted, more especially in Eastern countries. Hence Polybius calls a building at Alexandria τον χαρακτηριστικόν πυ- λώνα τῶν βασιλέων, i.e., "the gatehouse of the palace, used for the transaction of public business." In the Old Testament the references to this custom are very frequent. By metonymy, the gates meant those who administered justice at the gates, and wielded the powers of government.

Statutes of the gods were often placed near the gate, or even within it in the barbican, so as to be ready to receive the adoration of those who entered the city. The probable position of the statue was the point S in the above plan. The gate was sometimes much ornamented. Sculptured elephants, for example, were placed upon the Porta Aurea at Constantinople.

PORTICUS (στόα), a walk covered with a roof, which is supported by columns at least on one side. A porticus was either attached to temples and other public buildings, or it was built independent of any other edifice. Such shaded walks and places of resort are almost indispensable in the southern countries of Europe, where people live much in the open air, as a protection from the heat of the sun and from rain. This was the case in ancient times to a much greater extent than at present. The porticoes attached to the temples were either constructed only in front of them, or went round the whole building, as is the case in the so-called Temple of Theseus at Athens. They were originally intended as places for those persons to assemble and converse in who visited the temple for various purposes. As such temple-porticoes, however, they found too small or not suited for the various purposes of private and public life, most Grecian towns had independent porticoes, some of which were very extensive; and as the Greeks, in all the countries of Europe, wherever people lived in the open air, the public places were found not only to have a more utility, these public walks were not only built in the most magnificent style, but were adorned with pictures and statues by the best masters. Of this kind were the peccile and στόα βασιλείος at Athens, and the στόα Περακή at Sparta. The Skias at Sparta, where the popular assemblies were held, seems to have been a building of the same kind. In Egypt, such στοας were placed, that those who were tired might sit down. They were frequented not only by idle loungers, but also by philosophers, rhetoricians, and other persons fond of intellectual conversation. The Stoic school of philosophy derived its name from the circumstance that the founder of it used to converse with his disciples in a στοά. The Romans took the example of these eastern countries, and as luxuries among them were carried in everything to a greater extent than in Greece, wealthy Romans had their private porticoes, sometimes in the city itself, and sometimes in their country-seats. In the public

This quid (Bockh, deten. 39, a.p. Suet., A related pay festi-
mary rate of the value of taxable articles, and as this was the customary rate in Greece, it is probable that this was the average sum raised in all the other provinces. In the times of the emperors, the ordinary rate of the portorium appears to have been the fortieth part (quadragesima) of the value of imported goods. At a late period, the exorbitant sum of the right (portorium) to enable the ordinary import duty; but it is uncertain whether this is the duty for all articles of commerce, or merely for certain things.

The portorium was, like all other vettigalia, farmed out by the tax collectors to publicans, who collected it through the portorites. (Vid. Vettigal.

PORTUNNA'LIA or PORTUN'A'LIA, a festival celebrated in honour of Portunus or Portus, the god of harbours. It was celebrated on the 17th day before the calends of September. 

FOSCA, vinegar mixed with water, was the common drink of the lower orders among the Romans, as for soldiers when on service. Slaves, and others. 

POSEIDONIA (Poseidonion), a festival held every year in Eginia in honour of Poseidon. It seems to have been celebrated by all the inhabitants of the island, as Athenaeus14 calls it a panegyric, and mentions that, during one celebration, Phryne, the celebrated hetaira, walked naked into the sea in the presence of the assembled Greeks. The festival is also mentioned by Theodoretus15 but no particulars are known.}

POSESSIO

POSSESSIO. Paulus observes, "Possessio ap pollata est, ut et Liboc ait, a pedibus" (ed. Flor., "Sedi-
bus"), "quasi postiri: quia naturaliter terentur ab eo qui inventi. The absurdity of the etymology and of the reason is equal. The elements of possessio are either pour pot-is and sedes, or the first part of the word is related to apud and the cognate Greek form of nort. (potis).

Possessio, in its primary sense, is the condition or power by virtue of which a man has such a mastery over a corporeal thing as to deal with it at his pleasure and to exclude other persons from med

inous he happiness to the possessor, or of the things possessed. It is a kind of real power, and it lies at the bottom of all legal consequences deriving from the word possessio. This possession is no legal state or condition, but it may be the source of rights, and it then becomes possessio in a juridical or legal sense. Still, even in this sense, it is not in any way to be confounded with property (propri

ta): A man may have the juridical possession of a thing, but he may be the proprietor of a thing without having the juridical possession of it, and, consequently, without having the detention of it. Ownership is the legal capacity to operate on a thing according to a man's pleasure, and to exclude everybody else from doing so. Possession, in the sense of deten

tion, is a kind of opinion, or the exercise of such a power as the owner has a right to exercise.

Detention becomes juridical possession and the foundation of certain rights when the possessor has the intention (animus) to deal with the thing as his own. If he deal with it as the property of another, as exercising over it the rights of another, he is not in such a juridical sense, but he is said "aleno nomine possidere." This is the case with the commodatarius and with whom he holds a deposit.

When the detention is made a juridical possessio by virtue of the animus, it lays the foundation of a right to the interdict, and by virtue of usucapio it becomes ownership. The right to the interdict is simply founded on a juridical possession, in whatever way it may have originated, except that it must not have originated illegally with respect to the person against whom the interdict is claimed. (Vid. INTERDICTUM.) Simply by virtue of being possessor, the possessor has a better right than any other person who is not possessor. Usucapio requires certain local possession of the thing, to the origin it must have been bona fide and founded on a justa causa, that is, there must be nothing illegal in the origin of the possessio. (Vid. USUCAPIO.)

The right which is founded on a juridical possessio is a jus possessiorum, or right of possession, that is, a right arising from a juridical possession. The expression jus possessio is used by the Rom.

ian jurists. The right to possess, called by modern jurists jus possessendi, belongs to the theory of ownership.

All juridical possession, then, that is, possessio in the Roman law as a source of rights, has reference only to usucapio and interdicts; and all the rules of law which treat possession as a thing of a juridical nature, have no other object than to det

temine the possibility of usucapio and of the interdicts. In answer to the question to which class of rights possessio belongs, Savigny observes, So far as concerns usucapio, one cannot suppose the thing to be the subject of a question. No one thinks of asking to what class of rights a justa causa belongs, without which tradition cannot give owner.

1. (Dig. 41, tit. 5, a. 1.)—2. (Dig. 41, tit. 2, a. 2.)—3. (Dig. 41, tit. 3, a. 18, 20, 34, 41, 45, tit. 17, a. 1, 2.)—5. (Savigny, Das Recht des Besitzes, p. 26, 65.)
shipment. It is not right, but 'it is a part of the whole transaction by which ownership is acquired. So is it with possession in respect to usucapion.

The right to possessorial interdicts belongs to the law of obligationes ex maleficiis. "The right to possessorial interdicts, then, belongs to the law of obligations, and therein possession is only so far considered as containing the condition without which the interdicts cannot be supposed possible. The jus possessioni, consequently—that is, the right which mere possession gives—consists simply in the claim which the possessor has to the interdict as soon as the possession is disturbed in a definite form. Independent of this disturbance, bare possession gives no rights, neither a jus obligationis, as is self-evident, nor yet a right to the thing, for no dealing with a thing is to be considered as a legal act simply because the person so dealing has 'the possession of the thing.'"

The term possession occurs in the Roman jurists in various senses. There is possession generally, and possession civilis, and possession naturalis.

Possessio denoted originally bare detention. But this detention under certain conditions becomes a legal state, inasmuch as it leads to ownership through usucapion. Accordingly, the word possessio, which required no qualification so long as there was no other notion attached to possessio, requires such qualification when it is used to denote a legal state. This detention, then, when it has the conditions necessary to usucapion, is called possessio civilis; and all other possession, as opposed to civilis, is naturalis. But detention may also be the foundation of interdicts, which notion of possession is always expressed by possessio simply, and this is the meaning of possessio when used alone and in a that sense that is opposite to a legal state. This detention, then, when it has the conditions necessary to usucapion, is called possessio civilis; and all other possession, as opposed to civilis, is naturalis. But detention may also be the foundation of interdicts, which notion of possession is always expressed by possessio simply, and this is the meaning of possessio when used alone and in a that sense that is opposite to a legal state.

In the case of a thing being pignorated, the person who pledges it has still the possession as usucapion, but in the pledge alone has the possessio ad interdicta. It is not a possession in the true sense, but the foundation of the pledge's title by usucapiion; but by a special fiction he is considered to have such possession, and so the case is a special exception to the general rule, "sine possessione usucapionem contigere non potest." Possessio justa is every possessio that is not illegal in its origin, whatever such possessio be mere detention or jurisdiction possessio. The word justa is here used, not in that acceptance in which it has reference to jus civilis, and is equivalent to civilis or legitima, but in another sense, which is more indefinite, and means "rightful" generally, that is, not wrongful. The creditor who is in possession of a pledge has a justa possessio, but not a civilis possessio: he has, however, a juristial possessio, that is, possessio, and, consequently, a right to the interdicts. The missio in possessioni is the foundation of a justa possessio, but, as a general rule, not of a juristial possessio. Possessio injusta is the logical opposite of justa, and in the case of possessio injusta there are three special vital possessions, that is, when the possession has originated vi, clam, or precario (Hane tu mhi vel vi, vel clam, vel precario fec tradas).

With respect to the cause possessioni, there was a legal maxim: "Possession istis non causas, pos- sessio ista munere potest." This rule is explained by Savigny by means of Gaius, as having reference to the old usucapiion pro herede, and the meaning of it was, that if a person had once begun to possess for any particular cause, he could not at his pleasure change such possessio into a possessio pro herede.

A possessor bona fidei is he who believes that no person has a better right to possess than himself. A possessor malus fidei is he who knows that he has no right to possess the thing.

Besides these various meanings of possessio, possessio, possessidere, at the bottom of all which lies the notion of possession, there are some other meanings. "To have ownership" is sometimes expressed by possessidere; the thing which is the object of a person's ownership is sometimes possessio; and the owner is possessor. This use of the word occurs frequently in the Code and Pandect, and also in Cicero, Quintilian, Horace, and other writers. But it is remarked by Savigny that these meanings of possessidere, possessio, &c. are always to refer to land as their object.

Possessio also denotes the relation of a defendant to a plaintiff. For instance, when ownership is claimed, the demand must be against a person in possession; but this does not mean that such person must have a juristial possession. In a vindicatio, accordingly, the plaintiff is called petitor, and the defendant is named possessio, because, in fact, he has the possession of that which the plaintiff claims. The procedure by the vindicatio was also adapted to the case of an hereditatis, and here also the term possessio was applied to the defendant. In many cases the possessor was really such, and one object of the hereditatis petitor was to recover single things which the defendant possessed pro herede or pro possessore. But the term possessio was not limited to such cases, for the defendant is called possessio when the petitor is not about a matter of possession. He is called juris possessio, because he refuses to do something which the heres claims of him, or be cause he asserts his right to a portion of the hereditatis.

The juridical notion of possession implies a thing which can be the object of ownership: it also implies that the possessor can be no other than a legal person.

The notion of possession is such that only one person at a time can possess the whole of a thing (plures eandem rem in solidum possidere non possunt). When several persons possess a thing in common, so that their possession is mutually limited, each, in fact, possesses only a definite part of the thing, but does not possess the other parts; and, though the division into parts is only ideal, this does not affect the legal consideration of the matter. Persons may also possess the same thing in different senses, as in the case of the debtor and his credit or who has received from him a pignus.

Though things incorporeal are not strictly ob

1. (Tertul., Eunuch., ii. 3—Dig. 43, cit. 17, e. 1. 2—2 17, 52, d.c.),—Savigny, (p. 56).—4 (Savigny, p. 64).
POSSESSIO.

jects of possession, yet there is a juris quasi posses-
sion of them, as, for instance, in the case of ser-
vitutes (easements). The exercise of a right of
this kind is analogous to the possession of a corpo-
real thing: in other words, as real possession con-
sists in the dominium of the possessor over the
thing possessed, which is fashioned from analogy to
the other, consists in the exercise of a jus in re, or of
one of the component parts of ownership. In the
case of possession, it is the thing (corpus) which is
possessed, and not the property: by analogy, then,
we should not say that the servitus or the jus in re
is possessed, but that the owner of the corporeal
thing there is nothing to which the notion of posses-
ion can be attached, while in the case of ownership
there is the thing to which we apply the notion of
possession, we are compelled to resort to the ex-
pression, juris quasi possessio, by which nothing
more is meant than the exercise of a jus in re,
which exercise has the same relation to the jus in re
that proper possession has to ownership.

In order to the acquisition of juristic possessio,
apprehension and animus are necessary. The
apprehension of a corporeal thing is such a dealing
with it as empowers the person who intends to ac-
quire the possession to operate on the thing to the
exclusion of all other persons. But actual corpo-
oreal contact with the thing is not necessary to any
prehension: it is enough if there is some act on
the part of the person who intends to acquire pos-
session, which gives him the physical capacity
to operate on the thing at his pleasure. Thus,
in the case of a piece of ground, he who enters upon part
is considered to have entered upon the whole. A
man may acquire possession of what is contained
in a thing by delivery of the key which gives him
access to the contents, in the presence of (apud)
the thing. The case mentioned in the Digest is
that of the key of a granary being delivered in
right of the granary (apud horrea). The delivery
of the key is not a symbolical delivery, as some
have supposed, but it is the delivery of the means
of getting at the thing.

The animus consists in the will to treat as one's
own the thing that is the object of our apprehen-
ion. All persons, therefore, who are legally incompetent
to will, are incompetent to acquire a juristic pos-
session. Children and lunatics are examples of such.
When a child has attained the age of discretion, he
may acquire the possession by the animus alone,
for the other condition has been already complied
with.

In order that juristic possession may be ac-
quired, there must always be the animus on the part
of him who intends to acquire the possession; but
the act of apprehension (corpus) may be effected by
another as his representative, if (that other does the
necessary acts, and with the intention of acquiring
he possession for the other, and not for himself.

There must be a certain relation between the per-
son for whom possession is thus acquired and the
person who acquires it for him, either of legal power
(potestas) or of agency: the former is the case of a
slave or filiusfamilias who obeys a command, and
the latter is the case of an agent who follows in-
suctions (mandatum). A person who is the rep-
resentative of another, and has the possession of a
thing, may by the animus alone cease to have the
possessio, and transfer it to that other, retaining
only the bare detention.

The possession of the right of possession, is,
however, a thing that can be transferred without the
transfer of ownership. In this case of derive-
tive possessio, the apprehensor is the same as in
the case of acquiring a juristic possessio; but the
animus with which the thing is apprehended cannot
be the "animus domini," but merely the "animus
possidentis," that is, the will to acquire the jus pos-
sessio of the thing possessed. The animus of the
right of possession is more. The detention of a thing may be transferred without the ownership, but the transfer of the detention is not always accompanied by a transfer of the jus possessiones. There are three classes into
which all acts may be distributed which are accom-
panied with a transfer of detention: 1. those which
are made by the possessor himself; 2. those which are
sometimes. The first class comprehends such
cases as those when the detention of a thing is
transferred to an agent (procurator), and the case of
a commodatum. (Vid. Commodatum.) The sec-
ond class comprehends the case of the emphyteu-
ta, which is a possessio, but only a derivative one,
as the emphyteuta has not the animus domini; it
also comprehends the case of the creditor who re-
cieves the detention of a pignus by a contractus
pignoris, but it does not comprehend the case of a
pignus preteriorum, pignus in causa judicati captum,
or a pactum hypothecae. In the case of a con-
tractus pignoris, when the thing was delivered to
the creditor, the possession of the same is not inter-
dicts, but not possessio civilis, that is, the right
of usuacapio. The debtor had no possessio at all,
but, by virtue of an exception to a general rule, he
continued the usuacapio that had been commenced.
(Vid. Pignora.) The third class comprehends de-
positum and precatium.

The possessio consists in the right to the
protection of the interdict (vid. Interdictum), and
this protection is also extended to juras in re.
The relation of the juris quasi possessio to possess-
io has been already explained. The objects of this
juris quasi possessio are personal servitutes, re-
servitutes, and juras in re which do not belong to
the class of servitutes, of which superficies is the
only proper instance. In all the cases of juris quasi
possessio, the acquisition and the continuance of the
right of possession depend on the corpus, the animus,
and the animus is to be viewed exactly in the
same way as in the case of possession of a cor-
poral thing. The exercise of personal servitutes
are subject to a duty, not a command. If the posses-
sion of the thing is acquired by possession, the
possessor of them is consequently acquired in the
same way as the possession of a corporeal thing.
As to the juris quasi possessio of real servitutes,
there are two cases: either he who has a right to
the servitus must do some act, which, if he had not
the right, he might be forbidden to do (servitus qui
in faciendo consistit), or the owner of property has
no right to do some particular thing, which, if the
right did not exist, he might do (servitus qui in non
facentio consistit). As to the first class, which
may be called positive servitutes, the acquisition
of the juris quasi possessio consists merely in doing
some act which is the object of the right, and the
doing of this act must be done for the purpose of
exercising the right. This rule applies to the jus
itineris, actus, vis, and others, which are independ-
ent of the possession of any other property. Such
an act as the jus tigni immittendi, or the driving a
beam into the wall of one's neighbour's house, is a
right connected with the possession of another
piece of property, and the possession consists in the
exercise of it. As to the second class, which may be
called negative servitutes, the juris quasi possessio is acquired in consequence of

1. (Savigny, p. 166.)—2. (Dig. 15, tit. 1, s. 74.)—3. (Compare Lord Hardwicke's remarks on this matter, Ward v. Turner, 2
Ves.)—4. (Poinsett, S. R., v. tit. 5, s. 1.)
the person whose right is thereby limited attempting to do some act contrary to the right of the person who claims the servitus, and meeting with opposition to such act, and acquiescing in the opposition. Thus, juristic possession may also be founded on a legal title, that is, on any juristic act which can give such right.

Every possession continues so long as the corpus and the animus continue. If both cease, or either of them ceases, the possession is gone. As to the corpus, the possession is lost when, in consequence of any event, the possessor cannot operate on the thing at his pleasure, as before. In the case of movable things, the possession is lost when another person has got hold of them, either by force or secretly: in the case of immovable things, it is lost when a man has turned another out of the possession; but if, in the absence of the possessor, another occupies his land without his knowledge, he does not lose the possession till he attempts to exercise ownership over the land, and is prevented by the person then in possession of it, or, through fear, does not attempt to recover his possession. The possession thus acquired by the new possessor is a violent possession. If the former possessor knows the fact, and acquires as by doing nothing, he loses the possession by the animus alone. In the case of possession being lost by the animus alone, it may be effected either expressly or tacitly; the only thing necessary is that there should be no attempt to give up the possession. The possession is lost corpore et animo when the possessor gives up a thing to another to possess as his own. In the case of a juris quasi possession, as well as in that of possession proper, the continuance of the possession depends on the corpus and animus together. There can be no juris quasi possession without the animus possidendi; and if there be merely the animus possidendi, the juris quasi possession must cease.

Possessio can be lost by a person who represents the possessor. Such person may himself acquire the possession by exercising the animus possidendi when it is accompanied with a sufficient corporeal act: in the case of movable things, this is furtum; in the case of immovable things, it is violent dispossession. The possession can be lost through a wrong representation in all cases in which it would have been lost by the possessor if there had been no representation.

In many of the systematic expositions of Roman law, the theory of possessio is treated as introductory to the theory of ownership (dominium). The view which has been here given of it is also not universally acquiesced in. For instance, Gans, in his chapter on Possession, begins with the two following sections:

§ 103. Darstellung der verschiedenen hersenden Meinungen über den Besitz.—Der Besitz ist kein blosses factum, und erststeht nicht als recht, durch den umgang der wahrts.

§ 104. Der Besitz als des eigenthums nach der rete des biis besonderen wils. — Anfangseder, praemissive eigenthum.

Savigny's view, on the contrary, is briefly this: "Possession is a fact (factum), so far as a mere fact (unjurisdictional) relation (detention) is the foundation of it. But possession is also a right, so far as rights are connected with the bare existence of the relation of fact. Consequently, possession is held at law and equity." Also: "The only right arising from bare possession is a right to the interdicts" and "the right to the interdicts is founded on the fact of the exercise of ownership being obstructed wrongfully, as, for instance, by force."

It is shown in the article Agrariae Leges that the origin of the Roman doctrine of possession may probably be traced to the genius of the aeg publicus. Possessio, possessor, and possidere are the proper technical terms used by the Roman writers to express the possession and the enjoyment of the public lands. These terms did not express ownership (ex jure Quiritium): they had, in fact, no more relation to ownership than the possessio of which this article treats. Still, the notion of this kind of use and enjoyment was such, that one may easily conceive how the term possessio became applicable to various cases in which there was no Quiritarian ownership, but something that had an analogy to it. Thus, in the case of damnum infectum, with reference to the second missio in possessionem (ex secundo decreto), the praetor says "possidere habeas," which is equivalent to giving bonitarien ownership with the power of usucaption. A usufructus which could only be maintained by the jus praetorianum, was a possessio usufructus as opposed to dominium usufructus. The expressions hereditatis or honorum possessio do not mean the actual possession of the things, but the peculiar character of the prætoria hereditas: for this bonorum possessio has the same relation to the hereditas than that bonitarian has to Quiritarian ownership. (Fid. 1527. jurisprudence. De domino.)

Hence, in all these instances to the possessio of the aeg publicus, which consists in this, that in both cases an actual exclusive enjoyment of a particular person to a particular thing is recognised. This will also explain how property in provincial ground came to be called possessio: such property was not Quiritarian ownership, but it was a right to the exclusive enjoyment of the land; a right which was possessed by the possessio sufficiently expressed. Thus the name possessio was transferred from the right to its object, and aeg and possessio were thus opposed. Aeg was a piece of land which was the object of Quiritarian ownership, and possessio a piece of land which was either accidentally an object only of bonitarian ownership, as a fundus italicus of which the possessor could not remove; or it could not be the object of Quiritarian ownership, such as provincial land and the old aeg publicus.

Other matters relating to possessio appear to be explained by this view of its historical origin. The interdictum recuperandae possessio relationes only to land, a circumstance which is consistent with the hypothesis of the origin of possessio. The nature of the precisaro, also, is explained, when we know that it expressed originally the relation between the patronus and the clients who occupied the possessio of the patronus as a tenant at will, and could be ejected by the interdictum de precesario if he did not quit on notice. Farther, we may thus explain the apparent inconsistency in the case of a lessee of aeg vegaillis, who, though he had only a juris praetorianus, could not hold it. The aeg vegaillis was in fact fashioned according to the analogy of the old aeg publicus, and it was a simple process to transfer to it that notion of possessio which had existed in the case of the aeg publicus. (Fid. Emphyteusis.)

This article, read in connexion with the article on Agrariae Leges and the Licianian Rogations (v. Romanuors Luctuales) will give the reader an outline of the law of possession both in relation to the aeg publicus and privatus.

The preceding view of possession a from Savigny, Das Recht des Besitzes, fifth ed., 1527. There is
an analysis of this excellent work by Warnecköng, "Analyse du treal de la possession par M. de Sai-
igny, Liége, 1824," and a summary view of Sai-
igny's Theory is given by Mackeldey, Lehrbuch, &c., ii., 17.

POSSèSSIO BONORUM. (Vid. BONORUM POSS-
SSIONIS.)

POSSÈSSIO CLANDESTINA. (Vid. INTER-
diction, p. 544.)

POSTICUM. (Vid. JANUCC, p. 524.)

POSTILNYM, JUS POSTILMINII. "There
are no Pompeiius, but two kinds of postilminii,
for a man may either return himself or recover some-
ing." Postilminium is farther defined by Paulus9 to be the "right of recovering a lost thing
from an extraneous and of its being restored to
its former status, which right has been established be-
tween us (the Romans) and free people and kings by usage and enactments (moribus ac legisbus); for
what to an enemy, as it were, as it was has gone, if
we recover it, we are said to recover postilminion; and
this usage has been introduced by natural equity, in
order that he who was wrongfully detained by
strangers should recover his former rights on re-
turning into his own territories (in fines suos)."

Again, Paulus says, "a man seems to have returned
postilminion when he has restored something to
his own (ubi fines nostras exces-
sit). But if a man has come into a state in alliance
(socia) or friendship with Rome, or has come to a
king in alliance or friendship with Rome, he appears
to have forthwith returned by postilminium, be-
cause he then has not restored the same thing to
the name of the Roman state." These extracts are
made for the purpose of clearing up the etymology
of this word, as to which there was a difference of
opinion.6 The explanation of Scaevola, as given by
 Cicero, has reference to the etymology of the word, 
post et limen: "what has been lost by us and has
been restored by us, when it has been within our
own limes, and then has afterward (post) re-
turned to the same limen, seems to have returned by
postilminium." According to this explanation,
the lumen was the boundary or limit within which
the thing was under the authority of Rome and an
object of the Roman law. A recent writer7 sug-
gests that the "lumen" is not a fixed line, but
analogous to pomerium. There is a fanciful
explanation of the matter by Plutarch8 in his answer to
the question, Why are those who have been falsely
reported to have died in a foreign land, not received
into the house through the door in case of their re-
turn, but let down through an opening in the roof?
If a Roman citizen, during war, came into the pos-
session of an enemy, he sustained a dunningum capti-
tis maxima, and all his civil rights were in abey-
ance. Being captured by the enemy, he became a
slave; but his rights over his children, if he had
any, were not destroyed, but were said to be in
abeyance (pedere) by virtue of the jus postilminii:
when he returned, his children were again in his
possession and if he died in captivity, they became
his. Whether their condition as sui juris dated from
the time of the capture or of the death, was a disputed matter;9 but Ulpian, who wrote after
Gaius, declares that in such case he must be con-
sidered to have died when he was made captive;
and this is certainly the true deduction from the
premises. In the case of a filius or nepos being
made captive, the parental power was suspended (in
summeo). If the son returned, he obtained his civil
rights, and the father resumed his parental
powers, which is the case mentioned in the Di-
gest.1 As to a wife, the matter was different: the
husband did not recover his wife juris postilminii,
but the marriage was renewed by consent. This
rule of law involves the doctrine, that if a husband
was captured by the enemy, his marriage, if any
then existed, was dissolved. If a Roman was
ransomed, the person by whom the ransom was paid
was in the nature of a pledge to the ransomer, and
the jus postilminii had no effect till he had paid the
ransom money.

Sometimes, by an act of the state, a man was giv-

en up bound to an enemy, and if the enemy would
not receive him, it was a question whether he had
the jus postilminii. This was the case with Sp.
Cicero. This was the case with Sp.

Cicero uses the word postilminium in a different
sense; for he applies it to a man who had, by his
own act, ceased to be a citizen of a state, and
therefore resumed his original civic rights by postilminium.

It appears that the jus postilminii was founded on the
fiction of the captive having never been absent from
home—a fiction which was of easy applica-
tion; for as the captive, during his absence, could
not do any legal act, the interval of captivity was a
period of legal non-activity, which was terminated by
his showing himself again.

The Romans acknowledged capture in war as the
source of ownership in other nations, as they claimed
it in their own case. Accordingly, things taken by

the enemy lost their Roman owners; but when they
were recovered, they reverted to their original ow-
eers. This was the case with the Samnites, who;
with C. Hostilius Mancinus, who was given up to the
Nunantines; but the better opinion was that they
had no jus postilminii:2 and Mancinus was re-

covered to his civic rights by a lea.3

Cicero4 uses the word postilminium in a different
sense; for he applies it to a man who had, by his
own act, ceased to be a citizen of a state, and
thereby resumed his original civic rights by postilminium.

and down by Laboe. Paulus also, in his remark on
Laboe's rule of law, merely mentions an exception
to the rule, which was of a peculiar kind. If, then,
anything taken in war was booty (præda), to what
did the jus postlimini Dates to? It applied, at least,
to all that was restored by treaty or was included in
the terms of surrender, and slaves, no doubt, were
a very important part of all such things as were
captured or lost in time of war; and they were
things that could be easily identified and restored
to their owners. It also applied to a slave who
escaped from the enemy and returned to his mas-
ter. The maxim, quæ res hostilis opud nos sunt,
amputationem fiant, has no reference to capture
from the enemy, as it sometimes seems to be sup-
posed. It may be objected, that the explanation of one
difficulty that has been already suggested raises
another. According to this explanation, if a man
in time of war recaptured his own slave, it should
be præda, and he would not at once recover the
ownership, as above supposed. The answer should
be, that it may he so, and that this matter of postliminium,
particularly as regards things, waits for a careful in-
vestigation. As a general rule, all movable
belonging to an enemy which were captured by a Ro-
man army were præda, apparently not the property
of the individual soldier who happened to lay his
hands on them, but the property of the state, or, at
least, of the person who had possession of them.
Whether it was necessary to ascertain whether all movables so taken were præda, ex-
cept res postliminii, or whether all things so taken
were præda, res postliminii included. In the
former case, the res postliminii would be the property
of the owner when he could prove them to have been
his: in the latter, when a thing had become præda, it had lost its capacity (if we may so speak) of
being a res postliminii: to decide this question, it
was necessary to make a fundamental one. The difficulty partly
arises from the expression of Laboe above quoted,
Si quid, &c., where the Florentine reading has been
followed. But Bynkershoek3 amends the reading into Si quid, &c., the propriety of which may be
doubted.
If a man made a will before he was taken cap-
tive, and afterward returned, the will was good jour
postliminii. If he died in captivity, the will would
be good by the lex Cornelia. The law of postlimini-
um applied to time of peace as well as war, when
the circumstances were such that the person or the thing
could become the property of another nation,4
as, for instance, of a nation that had neither an
amicia, hospitium, nor a foedus with Rome; for
such might be the relation of a nation to Rome, and
yet it might not be hosts. A nation was not hosts,
in the later acceptance of that term, till the Ro-
mans had declared war against it, or the nation had
declared war against Rome. Robbers and pirates
were not hosts, and a person who was captured by
them did not become a slave, and therefore had no
need of the jus postliminii.

POTESTAS. (Vid. PATRIA POTESTAS.)

*POTAMOGEL'TON (ptámagéitón), the Potam-
ogelon natans, or Floating Pondweed.

*PETROMIGNON (ptéromigión), a species of plant.

Pena and Lobelius held it to be the Poterium spino-
sum, L., but Sprengel is inclined to think, with Mat-
thiolius and Cllusius, that it is the Astragalus Potem-
rion, Pall, being a species of Tragacantum, accord-
ing to Linnaeus.5

POTESTAS. (Vid. PATRIA POTESTAS.)

*POTHUS (póthó), "a species of plant, which
Sprengel, in the first edition of his R. H. S., sets
down for the Lychnis Chalcedonica, and in the sec-
tion for the Amaryllis lutea, but upon a doubtful
reading according to Schneider. Baurin, however,
is pretty decided in favour of the Lychnis Chal-
edonica.6

PRACTORES (píáktòres), subordinate officers
(μέσιοι υπήρχος, says Pollux8) who collected the
fines and penalties (épíbalos and týmima) imposed
by magistrates and courts of justice, and payable
to the state. The magistrate who imposed the fine,
or the γερμηνευτής, gave notice thereof in writing
to the práktòres. He was then said to
gráfein to ἥμισυ τοις πράκτοροις, and the debtor's
name was pencilled on the praetoria. If the fine or
any part thereof was to go to a temple, the like noti-
cation was sent to the tòmu of the god or goddess
whom the temple belonged.7 The name of the
debtor, with the sum which he was condemned to
pay, was entered by the práktòres in a tablet in the
Acropolis. Hence the debtor was said to be
γραφεμενον τῷ δήμῳ, or ἐν τῇ ἀκρόπολε. It
was the business of the práktòres to demand pay-
ment of this sum, and, if they received it, to pay it
over to the ἀποδεκτα, and also to erase the name
of the debtor in the register (ἐξαλείπειν οὐκ ἀπαλ-
eίπειν). Such erasure usually took place in the
presence of some members of the senate. An ἐνδείκ
lay against any man who made or ceased to be
made a fraudulent entry or erasure of a debt. The
Romans have collected no information as to the
methods of enforcement after the expiration of the ninth πρατορία from the registering of the debt
(or, in case of a penalty imposed on a γερμηνευτικ, after the expiration of eleven days), if it still remained unpaid, it
was doubled, and an entry made accordingly.8 There-
upon immediate measures might be taken for seiz-
ure and confiscation of the debtor's goods; but here
the práktòres had no further duty to perform, ex-
cept, perhaps, to give information of the default to
the senate.9

PLECTANTIO. (Vid. AMPHITHEATRUM, p. 53.)

*PRECOCCIA (πρακκικία), called bérbíkóka in the
Geoponica, the same as the μῆλα Ἀρεσκέα, be-
ing a variety of the Apricot, or Prunus Armeniaca.10

PRÆCONES, Crières, were employed for various
purposes, and naturally advertised the place, the
time, and conditions of sale: they seem also to have acted the part of the mod-
ern auctioneer, so far as calling out the biddings
and amusing the company, though the property
was knocked down by the magistrate auctioned. (Vid.
Auctors.) 2. In all public assemblies they ordered
silence.3 In the comitia they called the centuri-
as one by one to give their votes, pronounced the

laws that were to be passed. 4. In trials, they
summoned the accused and the accused, the plain-
tiff and defendant.5 In the public games, they
invited the people to attend, and proclaimed the
victors. 6. In solemn funerals they invited the
people to attend by a certain fum, &c., the att.
funerals were called funera incendia. 7. When
things were lost, they cried them and searched for

4. 800.)
there is neither this nor any similar regulation in
the Code of Justinian, there is a passage which
apparently recognises that persons might become
coloni by such agreement.1

The coloni were not slaves, though their condi-
tion, in certain respects, was assimilated to that of
slaves, a circumstance which will explain their be-
ing called servi terre, and sometimes being con-
trasted with liberii. They had, however, connubium,
which alone is a characteristic that distinguishes
them clearly from slaves.2 But, like slaves, they
were liable to corporeal punishment, and they had
no right of action against their master, whose rela-
tion to them was not conceived of as that of a free
master both to the servus terrenus and to the
servus Rusticus.3

The colonus was attached to the soil, and he could
not be permanently separated from it by his own
act, or by that of his patronus, or by the consent of
the two. The patronus could sell the estate with
the colonus, but neither of them without the other.4
He could, however, transfer superabundant coloni
to another of his own estates. When an estate
held in common was divided, married persons and
relatives were not to be separated. The ground
of there being no legal power of separating the
coloni and the estate was the opinion that such an
arrangement was favourable to agriculture, and
there were also financial reasons for this rule of law,
as will presently appear. The only case in which the
property of coloni could be transferred against the
will of its becoming a soldier, which must be consid-
ered to be done with the patron's consent, as the
burden of recruiting the army was imposed on him,
in this instance the state dispensed with a general
rule for reasons of public convenience.

The colonus paid a certain yearly rent for the land
on which he lived: the amount was fixed by cus-
tion, and could not be raised, but, as the land-owner
might attempt to raise it, the colonus had in such
case for his protection a right of action against him,
which was an exception to the general rule above
stated.5 There were, however, cases in which the
rent was a money payment, either by agreement or
by custom.6

A farther analogy between the condition of servi
and coloni appears from the fact of the property
of coloni being called their peculium. It is, however,
distinctly stated that they could hold property;7 and
the expressions which declare that they could have
nothing "propria," seem merely to declare that it
was subject to a prior right, and that they were not
to alienate it, at least without the consent of their
patroni. It appears that a colonus could make a
will, and that, if he made none, his property went
to his next of kin: for if a bishop, presbyter, deacon,
&c., died intestate and without kin, his property
went to the church or convent to which he belonged,
except such as he had as a colonus, which went
to his patronus, who, with respect to the ownership
of the land, is called dominus possessions.8 Some
classes of coloni had a power of alienating their
property.9

The land-tax due in respect of the land occupied
by the colonus was paid by the dominus; but the
colonus were liable to the payment of the poll-tax,
contingent in certain respects, on the person of the
colonus, who recovered it from the colonus. The lia-
bility of the colonus to a poll-tax explains why this
class of persons was so important to the state, and
why their condition could not be changed without
the consent of the state. It was only when the colonus
had lived as a free man for thirty years that

(Cod. Theod., v., tit. 11.)—4. (Cod. xii., tit. 47, s. 2, 7.)—5
(Cod. xii., tit. 47, s. 5.)—6. (Cod. Theod., v., tit. 11.)—7. (Cod.
xii., tit. 49, s. 8.)—8. (Cod. Theod., v., tit. 2.)—9. (Cod. xii.,
tit. 47, s. 23.)
he could maintain his freedom by a prescription, but Justinian abolished this prescription, and thus empowered the dominus to assert his right after any unjust treatment. With respect to their liability to the poll-tax, the coloni were called tributarii, censiti or censiti absconditi, adscripti, adscriptitio conditionis, and censibus adscripti. This term adscriptio appears to have no reference to their being attached to the land, but it refers to their liability to the poll-tax as being rated in the tax-books; and, accordingly, we find that the Greek term for adscriptitio is ἐνδοφάγος.

As the coloni were not servi, and as the class of Latini and peregrini hardly existed in the later ages of the Empire, we must consider the coloni to have had the civitas, such as it then was; and it is a consequence of this that they had connubium generally. A constitution of Justinian, however, declared the marriage of a colonus who belonged to another person and a free woman to be void. The constitution does not seem to mean anything else than that in this case the emperor took away the connubium, whether for the reasons stated by Savigny, or for other reasons, is immaterial. This special exception, however, proves the general rule as to connubium.

The origin of these coloni seems absolutely uncertain. They appear to be referred to in one passage of the Codicis Justiniani, but it is not certain that they had a term which certainly was sometimes applied to the whole class of coloni. The passage just referred to states that, if a man bequeaths as a legacy the inquilini without the praeda to which they adhere (vina praeda quibus adhaerent), it is a void legacy. Savigny conceives that this passage may be explained without considering it to refer to the coloni of whom we are speaking; but the explanation that he suggests seems a very forced one, and the same remark applies to his explanation of another passage in the Digest. The condition of the old clients seems to bear some relation to that of the coloni, but all historical traces of one class growing out of the other are entirely wanting; and, indeed, all evidence of the real origin of the coloni seems to fail altogether.

Savigny observes that he does not perceive any historical connexion between the villani (villanai) of modern Europe and the coloni, though there is a strong resemblance between their respective conditions. There were, however, many important distinctions; for instance, the villane services due to the lord had nothing corresponding to them in the case of the coloni, so far as we know. Littlenton’s Tenures, section 179, &c., and Bracton, may be consulted as to the incidents of villeinage.

This view of the condition of the coloni is from Savigny’s Essay on the subject, which is translated in the Philological Museum, vol. ii.

PRECEPTUS. (Vid. Army, Roman, p. 102.)

PRECEPTUS ÄRAVI. (Vid. Äraëriam.)

The provisions, especially of the corn-market, was not a regular magistrate under the Republic, but was only appointed in cases of extraordinary scarcity, when he seems to have regulated the prices at which corn was to be sold. The superintendence of the corn-market throughout the whole Republic was at a later period intrusted to Pompey for a period of five years; and, in accordance with this example, Augustus took the same superintendence upon himself and commanded that two persons, who had been pretors five years before, should be appointed every year for the distribution of the corn (cursum frumenti populo revendicandum). Subsequently Augustus assigned this duty to two persons in consultation; but the praefectus annonae, under the title of Preceptus Annonae, who must be distinguished from the above-mentioned officers. This office was a permanent one, and appears to have been only held by one person at a time; he had jurisdiction over all matters appertaining to the corn-market, and, like the Praefectus Vigilum, was chosen from the equites and was not reckoned among the ordinary magistrates. The praefectus annonae continued to exist till the latest times of the Empire: respecting his duties in later times, see Walter, Gesch. des Röm. Rechts, p. 373, 374.

PRECEPTUS AQUARIUM. (Vid. Aquar. Duc tis, p. 75.)

PRECEPTUS CASTORIUM, praefect of the camp, is first mentioned in the reign of Augustus. There was one to each legion. We learn from Vegetius that it was his duty to attend to all matters connected with the making of a camp, such as the vaultum, fossa, &c., and also to the internal economy of it.

PRECEPTUS CLASSISI, the commander of a fleet. This title was frequently given in the times of the Republic to the commander of a fleet; but Augustus appointed two permanent officers with this title. This officer was stationed at the sea-port of Brundisium, and lived on the Hadriatic, and the other at Mecumum on the Tuscan Sea, each having the command of a fleet.

PRECEPTUS TABLUM. (Vid. Fabri.)

PRECEPTUS JURI DICUNDO. (Vid. Col oni a, p. 282.)

PRECEPTUS PRÆTORIO was the commander of the troops who guarded the emperor’s person. The Praefectus Pretorio was established by Augustus, and was at first only military, and had comparatively small power attached to it; but under Tiberius, who made Sejanus commander of the praetorian troops, it became of much greater importance, till at length the power of these praefects became only second to that of the emperors. The relation of the praefectus pretorio to the emperor is compared to that of the magister equitum to the dictator under the Republic. From the reign of Severus to that of Diocletian, the praefects, like the viziers of the East, had the superintendence of all departments of the state, the palace, the army, the finances, and the law; they also had a court in which they decided cases. The office of praefectus of the pretorio was not confined to military officers; it was filled by Ulpian and Papian, and other distinguished jurists.

Originally there were two praefects; afterward sometimes one and sometimes two; from the time of Commodus, sometimes three, and even four. They were, as a regular rule, chosen only from the equestrian order; but, from the time of Alexander Severus, the dignity of senator was always joined with their office.

Under Constantine the praefects were deprived of all military command, and changed into governors of provinces. He appointed four such praefects: one who commonly attended on the imperial court had the command of Thrace, the whole of the East, and Egypt; the second had the command of Illyricum, Macedonia, and Greece, and usually resi
PÆFECTUS URB.

aged first at Sirmium, afterward at Thessalonica; the third, of Italy and Africa; the fourth, who resided at Trèves, of Gaul, Spain, and Britain. These prefects were the proper representatives of the emperor, and their power extended over all departments of the state; the army alone was not subject to their jurisdiction.

PÆFECTUS URB. V'GILUM, the commander of the city guards. To protect the state against fires at night, robbery, housebreaking, &c., Augustus formed seven courts of watch-soldiers (ngilae), originally consisting of freedmen, but afterward of others, one for each of the two regions into which the city of Rome was divided; these courts were presided over by a tribune, and the whole were under a prefect, Vigilus, who had jurisdiction in all ordinary cases of incendiaries, thieves, &c.; but, if anything extraordinary occurred, it was his duty to report it to the prefect urbis. This prefect was chosen from the equites, and was not reckoned among the ordinary magistrates for life. When the republic, the prefect urbis was placed under the regius of Theodosius and Arcadius, at which time he had to refer all capital crimes to the prefect of the city.

PÆFECTUS URB. prefect or warden of the city, was originally called custos urbis. The name prefectus urbis does not seem to have been used till after the time of the Caesars. The dignity of custos urbis and the office of praefectus urbis in the ancient Roman senate, was conferred by the king, as he had to appoint one of the decem primi as princes urbis. The functions of the custos urbis, however, were not exercised except in the absence of the king from Rome, and then he acted as the representative of the king: he convoked the senate, held the comitia, and, in case of necessity, appointed on emergency magistrates; he could, by such measures as he thought proper; in short, he had the imperium in the city. Romulus is said to have conferred this dignity upon Denter Romulius, Tullus Hostilius upon Numa Martinus, and Tarquinius Superbus upon Sp. Laetius. During the Kings period, the office of warden of the city was probably for life.

Under the republic, the office and its name of custos urbis remained unaltered; but in 487 B.C. it was elevated into a magistracy, to be bestowed by election. The custos urbis was in all probability elected by the curiae, instead of whom Dionysius mentions the senate. Persons of consular rank were alone eligible; and, down to the time of the Emperor Vespasian, the office was always occupied by men of high birth. The office had been at an earlier period conferred on the consuls; and the office of the custos urbis was conferred in cases of public necessity by the magistrates. When the office of praefect urbus was instituted, the wardenship of the city was swallowed up in it; but, as the Romans were at all times averse to dropping altogether any of their old institutions, a praefect urbus, though a mere shadow of the former office, was henceforth appointed every year, only as a superintendence of the administration of the city for the purpose of celebrating the Latine.

This prefectus had neither the power of convoking the senatus nor the right of speaking in it, as in most cases he was a person below the senatorial

1. (Symm., xii. 32.)
PRÆPOSSTUS.

They were the medium through which the emperors received the petitions and presents from their capital. At the election of a pope, the prefect of Rome had the care of all the external regulations. PRÆFECTURA. (Vid. Colonia, p. 292, 293.) PRÆFECTURÆ. (Vid. Breviarii, c. 1.) PRÆFURTNIUM. (Vid. Bathis, p. 151.) PRÆJUDICIJUM. This word, as appears from its etymology, has a certain relation to judicium, to which it is opposed by Cicero, de quo non praejudicium, sed plane jam judicium factum. The commentator, who goes under the name of Asconius, observes on this passage, that a prejudicium is something which, when established, becomes an exception, or precedent; the decision of a cause to follow; but this leaves us in doubt whether he means something established in the same cause by way of preliminary inquiry, or something established in a different, but a like cause, which would be what we call a precedent. Quintilian states that it is used both in the sense of a precedent, in which case it is rather exemplum than praefectum (res ex paribus causis judicatae), and also in the sense of a preliminary inquiry. The former is the sense to follow; but the latter belongs to the matter in dispute (judicium ad ipsum causam pertinentium), whence also comes the name prejudicium. This latter sense is in conformity with the meaning of prejudiciales actions or prejudicia, in which there is an intent only, and nothing else. (Vid. Accio.) These, accordingly, were called prejudiciales actions, which had for their object the determination of a precedent, in which case there was nothing but a sense and a duty to be remembered. If a judge should have declared that the child must be maintained by the reputed father, there must still be the prejudicium to ascertain whether the reputed father is the true father. If it was doubtful whether the mother was his wife, there must be a prejudicium on this matter before the prejudicium de parte agnoscento. These prejudicial actions, then, were, as it appears, only preparatory to the final judgment; and they were either civil or praetorius. It was a civil action when the question was as to libertas; the rest seem to have been praetorius actions. Quintilian makes a third class of prejudicia, cum de cadem causa pronuntiatus est, Sec. Sometimes prejudicium means inconvenience, damage, injury, which sense appears to arise from the notion of a thing being prejudged, or decided without being fairly heard; and this sense of the word seems to be very nearly the same in which it occurs in our law in the phrase "without prejudice to other matters in the cause." PRÆLEUSIIO. PRÆNOEMEN. (Vid. NOMEN, ROMAN.) PRÆPOSTITUS, which means a person placed over, was given as a title in the latter times of the Roman Empire, to the judges of the praetores; of these, the most important was the praepositus sacri velabili, or chief chamberlain in the emperor's palace. Under him was the primicerius, together with the cubicularius and the corpor of silentarii, commanded by three decuriones, who preserved silence in the interior of the palace. 1. (Synonym sch., Epist., x., 36, 29, 33.—Cod. xii., tit. 43.—9.) (Synonymsch., Epist., x., 71, 83.)—3. (Divinat., iv.)—4. (Inst. Ort., v., 1, &c.)—5. (Guisas, iv., 44.)—6. (Guisas, ii., 123.)—6. PRÆSCRIPTIO.

PRÆROGATIVÆ CENTURIA. (Vid. Comitia, p. 237.)

PRES. If we might trust a definition by Asconius, 1. he was called vas who gave security for an other in a causa causalis; and he who gave security for another in a causa civilis praecipue. But this authority cannot be trusted, and the usage of the words vas and pres was certainly not always conformable to this definition. According to Varro, 2. any person was vas who promised vidimnion for another, that is, gave security for another in any legal proceeding. Festus says that vas is a spinner in a res capitalis. If vas is genus, of which vas is its special sense, and pres are species, these definitions are not extended, but they are narrower in their sense, marks, that manceps signifies him who buys or hires any public property (qui a populo emitt conductio), and that he is also called pres because he is bound to make good his contract (pretatque quod promit) as well as he who is his pres. According to this, pres is a surity for one who buys of the state, and so called because of his liability (pretatere). But the etymology at least is doubtful, and, we are in the midst of these definitions, false. The passage of Festus explains a passage in the Life of Atticus, 3. in which it is said that he never bought anything at public auction (ad hastam publicam), and never was either manceps or pres. A case is mentioned by Gellius in which a person was committed to prison who could not obtain praejudicia. The goods of a pres were called praejudicia, and in Cicero and Livy pres are used as praedas. The phrase praedas vendere means to sell, not the praejudicia properly so called, but the things which are given as a security.

Praedatores are supposed by Brissiunus to be the same as praedas, at least so far as these were sureties to the state. But praedator is defined by Gaius 5. to be one who buys from the people, and from the context it is clear that it is one who buys a praejudicium, which is further defined to be a thing pledged to the populus (res obligata populo). The praedator, then, is he who buys a praejudicium, that is, a thing given to the populus as a security by a third person, whose right relating to such matters was called jus praedatorium.

PRÆSCRIPTIO, or, rather, TEMPORIS PRÆSCRIPTIO signifies the exceptio or answer which a defendant has to the demand of a plaintiff, founded on the circumstance of the lapse of time. The word then, has properly no reference to the plaintiff's loss of right, but to the defendant's acquisition of a right which he would have obtained if the plaintiff had prosecuted his suit. This right of a defendant did not exist in the old Roman law. When the preatores gave new actions by their edict, they attached to them the condition that those actions must be brought within a year (intra annum judicium dabo), that is, a year from the time when the right of action accrued. These actions, then, were exceptions from the old rule, that all actions were prescriptio. This rule became extended by the longi tempore praescriptio, which established that in actions about ownership, or jura in re, ten, or in some cases twenty years, would give a prescriptio, when the possessor could show that he had complied with the main conditions of usucaption, without having acquired ownership by usucaption, for if he had, he had...
PRESCRIPTIO.

PRÆTOR.

No need of any exceptio. This rule was farther extended by Constantine, and a period of 30 or 40 years, for i. seems that the time was not quite settled. It might be considered sufficient for a prescriptio, though the defendant had the praescriptio, if it occurred within the conditions of usucaption. A general constitution was made by Theodosius, A.D. 424, which, with some variations, appears in both the Codes; and it enacted that, as in the case of the actions already mentioned, there should be no hereditatis petitio after 30 years, and that, after the same term, the action finium regundorum was excepted, and also the action of a creditor for his pignus or hypotheca against the debtor, but not against others. Prae- diciales actions as to status are not enumerated among those against which there was a prescriptio, but they seem to be included in the general words of the law. Justinian, by a constitution of the year 530, established the general rule of 30 years on all actions, with the exception of the actio hypothecar, for which he required 40 years. His constitution enumerates the following actions to which the prescriptio of 30 years would apply: Familiae her- riceuvae, Communi dividendo, Finium regundorum, Pro Socio, Parts et Vi Bonusor Regundorum; and it adds, in the same year, that in the actiones perpetuae, namely longiora esse trinjuit annis, &c., sed ex quo ab initio competit, cit semel vata est, &c., post memo- ratum tempus finiri. It thus appears that all ac- tions were originally perpetue, then some were made subject to prescriptio, and, finally, all were made so. In consequence of this change, the term perpetua, originally applied to what were not subject to prescriptio, was used to signify an actio in which 30 years were necessary to give a prescriptio, as opposed to actions in which the right to a prescriptio accrued in a shorter term. The conditions necessary to establish a prescrip- tio were, 1. Actio data, for there must be a right of action, and that a prescriptio may have an origi- nal, and the date of its origin must be fixed by the date of the right of action. 2. There must be a continuous neglect on the part of the person enti- ded to bring the action, in order that the time of the prescriptio may be reckoned uninterrupted. 3. Bona fides was not a necessary ingredient in a prescriptio, but it was the neglect of the plaintiff which laid the foundation of the term- prentio. But the longi temporis prescriptio was made like to usucapion as to its conditions, of which bona fides was one. Justinian required a bona fides in the case of a thirty-year prescriptio; but this was no new rule, except so far as the pos- sessor claimed the benefit of usucapion; and as the longi temporis prescriptio, as an independent rule of law, disappeared from the legislation of Justinian, the bona fides, as a condition of prescriptio, went with it. 4. The lapse of time, which was 30 years; but this there were many exceptions. The sources on the subject of prescriptio are to be found in Brinkman's Institutiones Juris Roman, and in the Commentaries of Palsgrave and Gaisser, and § 481, on the distinction being ultimately abol- ished between prescriptio and usucapio.—Savigny, System des heutigen Röm. Rechts, vol. v., from whom this outline is taken. Vide also USUCAPIO.

Prescriptio had a special sense in Roman pleadings, which Gaius has explained as existing in his time. These prescriptiones were pro actio, and not pro reo; and an example will explain the term. It often happens that an obligatio is such that a man is bound to another to do certain acts at cer-
of the consuls might appropriately be called praetorium. 1 Praetor was also a title of office among the Latins.

In the Pr, that praetor specially so called was appointed in the year B.C. 366, and he was chosen only from the patricians, who had this new office created as a kind of indemnification to themselves for being compelled to share the consulsiphip with the plebeians. 2 No plebeian praetor was appointed till the year B.C. 337. The praetor was called collega consulis, and was elected with the same auspices at the comitia centuriata.

The praetorship was originally a kind of third consulsiphip, and the chief functions of the praetor (ius in urbe dare, juris reddere) were a portion of the functions of the consuls, who, according to the passage of Cicero above referred to, were also called jurides a judicante. The praetor sometimes commanded the armies of the state; and while the consuls were absent with the armies, he exercised their functions within the city. He was a magistratus curulis, and he had the imperium, and, consequently, was one of the magistratus maiores: but he owed respect and obedience to the consuls. 3 His insignia of office were six lictors, whence he is called by Polibius ἡγεμόνων ὡς στρατηγὸς ἥξαπλεύς, and sometimes simply ἥξαπλεύς. At a later period, the praetor had only two lictors in Rome. 4 The praetorship was at first given to a consul of the preceding year, and called the Lex, in the 21st year, 246 B.C. 5

In the year B.C. 246 another praetor was appointed, whose business was to administer justice in matters in dispute between peregrini, or peregrini and Roman citizens; and, accordingly, he was called praetor peregrinorum. 6 The other praetor was then called praetor urbanus "quia ius inter eum dicitur," and sometimes simply praetor urbanus and praetor urbicus. The latter was to determine whether functions they should respectively exercise. If either of them was at the head of the army, the other performed all the duties of both within the city. Sometimes the military imperium of a praetor was prolonged for a second year. When the territorles of the state were extended beyond the limits of Italy, the praetors were soon increased. Thus, two praetors were created B.C. 227, for the administration of Sicily and Sardinia, and two more were added when the two Spanish provinces were formed, B.C. 197. When there were six praetors, two stayed in the city, and the other four went abroad. The senate determined their provinces, which were distributed among them by lot. 7 After the discharge of his judicial functions in the city, a praetor often had the administration of a province, with the title of prov. praetor. Sulla increased the number of praetors to eight, which Julius Caesar raised successively to ten, twelve, fourteen, and sixteen. Augustus, after several changes, fixed the number at twelve. Under Tiberius there were sixteen. Two praetors were appointed by Claudius for matters relating to foreign affairs. The praetors were also to be the business in the distribution of the land had become commercial, but this reduced the number to one, and Nerva added a praetor for the decision of matters between the fastus and individuals. "Thus," says Pompeius, speaking of his own time, "eighteen praetors administer justice (ius ducunt) in the state." 8

M. Aurelius, according to Capitoilinus, 9 appointed a praetor for matters relating to tutela, which must have taken place after the Claudian edict. (Pandects.) The main duties of the praetors were judicial, and it appears that it was found necessary from time to time to increase their number; and to assign to them special departments of the administration of justice.

The praetor urbanus was specially named praetor, and he was the first in rank. His duties confined him to Rome, as is implied by the name, and he could only leave the city for ten days at a time. It was part of his duty to supervise the ludi Apollinares. He was also the chief magistrate for the administration of justice, and to the edicta of the successive praetors the Roman law owes a great degree its development and improvement. Both the praetor urbanus and the praetor peregrinorum had the jus edicendi, 10 and their functions in this respect do not appear to have been limited on the establishment of the imperial power, though it must have been gradually restricted as the practice of imperial constitutions and rescripts became common. (Vid. Edictum.)

The chief judicial functions of the praetor in civil matters consisted in giving a judex. (Vid. Juxex.) It was only in the case of interdicts that he decided in a summary way. (Vid. Infirnptctum.) Proceedings before the praetor were technically said to be in iure.

The praetors also presided at trials of criminal matters. These were the quœstiones perpetue, or the trials for repertundæ, ambitus, majestas, and pænulæ, which, when there were six praetors, were divided among them, or, if there were only two, assigned by lot. These questions those of falsum, de sacrârie et vcnâcias, and de parricidio, and for this purpose he added two, or, according to some accounts, four praetors for the accounts of Pomponius and of other writers do not agree on this point. 11 On these occasions the praetor presided, but a body of judges determined by a majority of votes the condemnation or acquittal of the accused. (Vid. Jusex.)

The praetor, when he administered justice, sat on a sella curulis in a tribunal, which was that part of the court which was appropriated to the praetor and his assessors and friends, and is opposed to the subscilla, or part occupied by the judges, and others who were present. 12 But the praetor could do many other acts out of court, or, as it was expressed, e plano or ex aqua loco: for instance, he could, in certain cases, give validity to the act of manumission when he was out of doors, as on his road to the bath or to the theatre. 13

The praetors existed with varying numbers to a late period in the Empire, and they had still jurisdiction. 14

The functions of the praetors, as before observed, were chiefly judicial, and this article should be completed by a reference to Edictum, Imperium, Judex, Jurisdiction, Magistratus, Provincia. To the authorities referred to under Edictum may be added, "Die Prasidentsche Edeute der Romer," etc., von D. Eduard Schrader, Weimar, 1813. 15

PRÆTORIA A CIVIO. (Vid. Praet.)

PRÆTORIA COHORS. (Vid. Praetor.)

PRÆTORIAE/NI, sc. miliites, or Praetoriae Cohorses, a body of troops instituted by Augustus to protect his person and his power; and called by that name in imitation of the praetoria cohors, or select troop, which attended the person of the praetor or general of the Roman army. 16 This cohort is said to have been first formed by Sejius Africanus out of the praetorian guard, but it was exempted from all other duties except guarding his person, and to whom he gave sixfold pay: 17 but even in the early

---

PRIMICIERIUS.

The commanders of the praetorians were called PRÆFECTUS PRÆTORIO, whose duties, powers, &c., are described in a separate article.

PRÆTORIUM was the name given to the general's tent in the camp, and was so called because the name of the chief Roman magistrate was originally prætor, and not consul. (Vid. CASTRÉ, p. 220.) The officers who attended on the general in the prætorium, and formed his council of war, were called by the same name.1 The word was also used in several other significions, which were derived from the original one. Thus the residence of a governor of a province was called the prætorium,2 and the same name was also given to any large house or palace.3 The camp of the praetorian troops at Rome, and frequently the praetorian troops themselves, were called by this name. (Vid. PRÆTORIUM.)

PRAÆDÌUM. (Vid. CÆNA, p. 274.)

*PRÆSTÆTES LAPIS (προστιγμὸς λίθος), "the Praise of Jameson and Præsum of Kirwan. It is a sub-species of quartz, and, as Cleveland remarks, usually of a leek or dark olive colour. It is a gem, as Sir J. Hill says, of the lower class, and is known by our jewellers by the name of root of emerald, the name of which the χρυσομοσχημός is a gem of greater value."4

PRÆSÌUM (πράσιον), a name applied to more than one species of the Marsûbum, L., or Horrehound.5

*PRÁSOCRÍS (πρασκορίς), a species of larva or caterpillar noticed by Aristotele, Theophrastus, and Athenæus. Stackhouse refers it to the Cimic Præsius, or Lady-cow.6

*PRASÒN (πράσιον), the Leek, or Allium portuwm, L. (Vid. ALIUM.)

PRECARIUM. (Vid. Interdictum, p. 544.)

PRELUM or PRÆLUM is a part of a press used by the ancients in making wine, olive oil, and paper; but the press itself was called a presser, and the prelum was that part which was either scraped or knocked down upon the things to be pressed, in order to squeeze out the last juices.7 Sometimes, however, prelum and torcular are used as convertible terms, a part being named instead of the whole. As regards the pressing of the grapes, the prelum is a skin which is torn from the grapes by means of a rudder or wooden board with the feet; but as this process did not press out all the juice of the grapes, they were afterward, with their stalks and peels (scopi et foliic) put under the prelum.8 Cato9 advised his countrymen always to make the prelum of the wood of black maple (carpæus astra). After all the juice was pressed out of the grapes, they were collected in casks, water was poured upon them, and after standing a night they were pressed again. The liquor thus obtained was called lora; it was preserved in casks, and was used as a drink for workmen during the winter.10 Respecting the use of the prelum in making olive-oil and in the manufacture of paper, see Plin., H. N., xv., 1; xii., 25.—Col. 72.—Praetoriana. (Vid. Inspect. p. 167.)

PRÆSTÈR (προστήρ). (Vid. DISPAR.)

PRIMICIERIUS, a name given to various officers and dignitaries under the Later Roman Empire, is explained by Suidas1 to be the person who holds the first rank in anything. The etymology of the word is doubtful: it is supposed that a person was times at the Republic the Roman general seems to have been attended by a select troop.1 In the time of the civil wars the number of the praetorian cohors was increased, and the establishment of them as a separate force was owing to the policy of Augustus. They originally consisted of nine or ten cohorts, each consisting of a thousand men, horse and foot. They were chosen only from Italy, chiefly from Etruria and Umbria, or ancient Latium, and the old colonies,2 but afterward from Macedonia, Syria, and the rest of Asia. Augustus, in accordance with his general policy of avoiding the appearance of despotism, stationed only three of these cohorts in the capital, and dispersed the remainder in the adjacent towns of Italy. Tiberius, however, under pretence of introducing a stricter discipline among them, assembled them all at Rome in a permanent camp, which was strongly fortified.3 Their number was increased by Vitellius to sixteen cohorts, or 16,000 men.4

The praetorians were distinguished by double pay and special privileges. Their term of service was originally fixed by Augustus at twelve years,5 but was afterward increased to sixteen years; and when they had served their time, each soldier received an indemnity of one thousand sesterces, which it was supposed they had to have had the same rank as the centurions in the regular legions, since we are told by Dio6 that they had the privilege of carrying a vites (βατός) like the centurions. The praetorians, however, soon became the most powerful body in the state, and, like the janizaries at Constantinople, frequently deposed and restored emperors according to their pleasure. Even the most powerful of the emperors were obliged to court their favour; and they always obtained a liberal donation upon the accession of each emperor. After the death of Pertinax (A.D. 193) they even offered the empire for sale, which was purchased by Didius Julianus;7 but upon the accession of Severus in the same year they were disbanded, on account of the part they had taken in the death of Pertinax, and banished from the city.8 The emperors, however, could not dispense with guards, and accordingly the praetorians were restored on a new model by Severus, and increased to four times their ancient number. Afterward they were distributed to brilliant places in Italy, Gaul, Africa, Baetica, Umbria, or Spain, as formerly, the best soldiers were now drafted from all the legions on the frontier, so that the praetorian cohorts now formed the bravest troops of the Empire.9 Dioeclesiian reduced their numbers and abolished their privileges;10 they were still allowed to remain at Rome, but had no longer the guard of the emperor's person, as he never resided in the capital. Their numbers were again increased by Maxentius, but after his defeat by Constantine, A.D. 312, they were entirely suppressed by the latter, their fortified camp destroyed, and those who had not perished in the battle between Constantine and Maxentius were dispersed among the legions. The new body of praetorians established by Constantine did not require such a body of troops, and, accordingly, they were never revived. The emperor's body-guards now only consisted of the domestic, horse and foot under two comites, and of the protectores.11

1. (Liv., vii., 50.)—2. (Appian, Bell. Civ., iii., 67.—Id. ib., v., 3.)
10. (Cod. Thod., vii., 28.)
11. (Cod. Theod., vi., 24.)
caused primicerius because his name stood first in the wax (cera), that is, the tablet made of wax, which contained a list of persons of any rank.

The word primicerius does not seem to have been always applied to the person who was at the head of any department of the state or army, but also to the first in second in command or authority, as, for instance, the primicerius sacri cubicularii, who was under the praepositus sacri cubiculi. (Vid. Præpositus.) Various primicerii are mentioned, as the primicerii domesticonum and protectorum, fabricae, menorum, notariorum, &c.

PRIMPILARIS. (Vid. Centenio.) PRIMPILIUS. (Vid. Centenio.) PRINCEPS JUVENTUTIS. (Vid. Equites, p. 417.)

PRINCEPS SENATUS. (Vid. Senatus.) PRINCIPIES. (Vid. Army, Roman, p. 103.) PRINCIPIA, PRINCIPALIS VIA. (Vid. Cartha.)

"PRINOS (πρίος), "the Quercus cocifera or Quercus ilex" (which would appear to be varieties of the same species). "The κόκκος, Vetus, or Scarlet-grain, is produced on this tree by a certain class of persons." (Vid. Pterylus.) "PRISTIS (πρίσις), the Squalus Pristis, L., or Pristis antiquorum, L., the Sawfish, a large fish of the Shark tribe."

PRIVILEGIIUM. (Vid. Lex, p. 581.) PROAGONITÆS GRAFÆ (προαγωγείας γράφω), a prosecution against those persons who performed the degrading office of pimps or procurers (προαγωγείς A. u. t.). The heaviest punishment (τά μέγιστα επίτιμα) was inflicted on such a person (καὶ τις εἰλεθηρὸν παῖδα ή γυναῖκα προαγωγείν) According to Plutarch, a penalty of twenty drachms was imposed for the same offence. To reconcile this statement with that of Aeschines, we may suppose with Platter that the law mentioned by Plutarch's applied only to prostitutes. An example of a man put to death for taking an Olybphan girl to a brothel (ιπταμένες εν οἰκήμασι) occurs in Dinarchus. A prosecution of a man by Hyperiës ἵπτο προαγωγία is mentioned by Pollux. A charge (probably false) was brought against Apsasia of getting freeborn women into her house for the use of Pericles. In connexion with this subject, see the γραφεὶς ΚΑΤ' ΠΡΗΣΙΩΝ, and ΦΟΟΡΑΣ ΤΩΝ ΕΛΕΥΘΕΡΩΝ.

PROBÓLE (προβολÎ), an accusation of a criminal nature, preferred before the people of Athens in assembly, with a view to obtain their sanction for bringing the charge before a judicial tribunal. It may be compared in this one respect (viz., that it was a preliminary step to a more formal trial) with our application for a criminal information, though in regard to the object and mode of proceeding there is not much resemblance. The probol was reserved for those cases where the public had sustained an injury, or where, from the station, power, or influence of the defunct, the prosecutor might deem it hazardous to proceed in the ordinary way without being authorized by a vote of the sovereign assembly. In this point it differed from the ἀκαταγγελία, that in the latter the people were called upon either to pronounce final judgment, or to direct some peculiar method of trial; whereas in the probol, after the judgment of the assembly, the parties proceeded to trial in the usual manner. The court before whom they appeared, however influenced they might be by the prejudicium of the people, were under no legal compulsion to abide by their decision; and, on the other hand, it is not improbable that, if the people refused to give judgment in favour of the complainant, he might still proceed against his adversary by a γραφή or a private action, according to the nature of the case.

The cases to which the probol (προβόλα) was applied were complaints against magistrates for official misconduct or oppression; against those public in formers and mischief-makers who were called συνομιλητζ; against those who outraged public decency at the religious festivals; and against all such as, by evil practices, exhibited disaffection to the state. With regard to magistrates, Schumann thinks that the probol could only be brought against them at those ἕκτερον θύελλαν which were held at the first κυριακα καιζανία in every Prytaneion, when the people inquired into the conduct of magistrates, with a view to continue them in office or depose them, according to their deserts. An example of magistrates being so deposed occurs in Demosthenes, c. Theor., 1350. The people (says Schumann) could not, therefore, as in pontifical cases, except on the complaint (προβολά) of some individual; the deposed magistrate was afterward brought to trial, if the accuser thought proper to prosecute the matter further. There appears, however, to be no authority for limiting the probol against magistrates to these particular occasions; and other writers have not agreed with Schumann upon this point. An example of a probol against a sanctuary is that which the people, discovering too late their error in putting to death the generals who gained the battle of ARGinas, directed to be brought against their accusers. Another occurs in Lysias, where the words οὐληθήρον ὄπαντες καὶ οὐ δῆμων καὶ οὐ δικαστήρι αὐτοκράτωρ διώκεται, describe the course of proceeding in this method of prosecution.

Those who worked the public mines clandestinely, and those who were guilty of peculation or embezzelement of the public money, were liable to a probol. A case of embezzelement is referred to by Demosthenes, c. Mid., 584.

But the probol which has become most celebrated, during the speech of Aeschines against Miltiades, is that which was brought for the misconduct at public festivals. We learn from the laws cited in that speech, that the probolai were enjoined against any persons who, at the Dionsian, Thargelian, or Eleusinian festival (and the same enactment was probably extended to other festivals), had been guilty of such an offence as would fall within the description of υδηδίαις δεξαμενοι. A riot or disturbance during the ceremony, an assault, or other gross insult or outrage, committed upon any of the performers or spectators of the games, whether citizen or foreigner, and even upon a slave, much more upon a magistrate or officer engaged in superintending the performance; an attempt to imprison by legal process, and even a levying of execution upon the goods of a debtor during the continuance of the festival, was held to be a profanation of its sanctity, and subject to the offender to the penalties of these statutes. For any such offence complaint was to be made to the Prytanes (i.e., the proedri, who were to bring forward the charge at an assembly to be held soon after the festival in the theatre.
PROBOULEMA.

of Baeotus. The defendant was to be produced before the assembly. Both parties were heard, and then the people proceeded to vote by show of hands. Those who voted in favour of the prosecution were said to have cast their votes in favour of a "proboleia," a council, against Midian. The complainant was said to have declared his wish, πολέμισον τον ἀλλοντα, and the people, if they condemned him, προκαταργοῦσιν.¹

Some difficulty has arisen in explaining the following words in the law above referred to: τὰς ποδολῆς περαιτέρων οὐκ ἐν μὴ κτετεινάν ὠνίν. Platner² and Schömann³ suppose that by these words the senate was to order the people those complaints for which satisfaction has not been made by the offender to the prosecutor, and, to show that a compromise would be legal, Platner refers to Demosthenes, c. Mid., 563, 563; to which we may add the circumstance that Demosthenes is said to have compromised his charges against Midian for a sum of money. Meier explains thus: that the prayers (or, rather, the prooedi) were to bring before the people all the ποδολῆς, except those of a trifling character, for which they were themselves empowered to impose a fine. (as to the power of fines, see Att. Proc., 34.) If we suppose the complaint to take the name of ποδολῆς upon its being presented to the prooedi, the ποδολῆς was probably a sum of money assessed to the people those complaints for which satisfaction has not been made by the offender to the prosecutor, and the ποδολῆς may signify to pay the fine imposed by the magistrates before whom the charge was brought; and ποδολῆς is not used improperly for πεπόλεμο, any more than δίκαιον is for τίμημα in the other case. Perhaps there was more force in another objection urged by Platner, viz., that (according to this interpretation) the not bringing the case before the assembly is made to depend on the non-payment, and not (as might have been expected) on the imposition of the fine.

The people having given their sentence for the prosecution, the case was to be brought into the court of helia. In certain cases of a serious nature, the defendant might be required to give bail for his appearance or (in default thereof) go to prison.⁴ The persons on whom devolved the ἱερομνήμονας were, according to Polux,⁵ the thermotheke. Meier⁶ thinks this would depend on the ποδολῆς being a sum of money payable upon the conclusion of a festival, the cognizance would belong to such of the three superiors archons as had the superintendence thereof. This would (no doubt) follow from the ordinary principles of Athenian jurisprudence; but it may be conceived that the extraordinary nature of the complaint by ποδολῆς might take it out of the common course of practice.⁷ The defendants had to pronounce their verdict on the guilt of the party, and to assess the penalty, which might be death, or only a pecuniary fine, according to their discretion. The trial (it seems) was attended with no risk to the prosecutor, who was considered to proceed under the authority of the people therefore.

PROBOULEMA. (Vid. Boul, p. 168, 169.)

PROBOULOI (πρόβολοι), a name applicable to any persons who are appointed to consult or take measures for the benefit of the people. Thus the delegates who were sent by the twelve Ionian cities to attend the Athenian council, and deliberate on the affairs of the confederacy, were called πρόβολοι. The word is often applied to those who in the Greek states went to attend the congress at the Isthmus, on the occasion of the second Persian invasion; and also the envys whom the Greeks agreed to send annually to Plato.⁸ The word is also used, like νομοθέτης, to denote an oligarchical body, in whom the government of a state was vested, who at least exercised a controlling power over the senate and popular assemblies. Such were the sixty senators of Cnidus; and a similar body appears to have existed at Megara, where, although democracy prevailed at an earlier period, the government became oligarchical before the beginning of the Peloponnesian war. A body of men called πρόβολοι or προδεῖκται, were visible during the siege of Pelopon, was to act as a committee of public safety. Thucydides⁹ calls them ἀρχήν ποινα ὀνοματίων, ópýyn perί τῶν παράντων ὡς ἀν καὶ ρόδος προδεῖκτοι. They were ten in number.¹⁰ Whether their appointment arose out of any concerted plan for overturning the constitution, is doubtful. They have been conceived by some as anxious to defend their country and prosecuting the war appear to have been prudent and vigorous. Their authority did not last much longer than a year; for a year and a half afterward Pisander and his colleagues established the council of Four Hundred, by which the democracy was overthrown.¹¹ The first step which Pisander undertook, was to procure the election of a body of men called ἑπιγραφεῖσις ὀτικόκρατοι, who were to draw up a plan, to be submitted to the people, for remodelling the constitution. Thucydides says they were ten in number. Harpocrates¹² relates Androtion and Philochorus as having stated that thirty were chosen, and adds, O ὁ θερμώντας τῶν ἑπιγραφῆσιμον τῶν πρόβολον. This and the language of Suidas¹³ have led Schänn to conjecture that the πρόβολοι were elected as ἑπιγραφεῖσις, and twenty more persons associated with them, making in all the thirty mentioned by Androtion and Philochorus.¹⁴ Others have thought that the ἑπιγραφῆσις of Thucydides have been confused with the thirty tyrants, who were first chosen of the twelve patrois νόμος ἱερομνήμονας ἄνω σειρεῖς.¹⁵ These Athenian πρόβολοι are alluded to by Aristophanes in the Lysistrata,¹⁶ which was act upon the year after the Sicilian defeat, and by Lysias, c. Eristalh, 126, ed. Stephan. PROBOLIA (πρόβολις) (Vid. Boul, p. 169)

PROCLEYSIS (πρόκλεσις) (Vid. Dialetais, p. 353, 354.)

PROCONSUL is an officer who acts in the place of a consul without holding the office of consul itself, though the proconsul was generally one who had held the office of consul, so that the proconsulship was a continuation, though a modified one, of the consulship. The first time that we meet with a consul whose imperium was prolonged after the year of his consulship, is at the commencement of the second Samnite war, at the end of the consular year 327 B.C., when it was thought advisable to prolong the imperium (imperium peragon) of Q. Fabius.¹⁷ The power of a proconsul has been followed by the loss of most of the advantages that had been gained in his campaign.¹⁸ The power of proconsul was conferred by a senatus consultum and plebsconsultum, and was nearly equal to that of a regular consul, for he had the imperium and ju

---

Prodigies

(See Cic., De Div. 42—43.)

The term prodigies was first used by the Greeks to denote the appearance of certain natural phenomena believed to be signs of impending misfortune, and happened under such circumstances as to announce that the calamity was impending over the whole community or nation. The word is derived from a verb meaning "to be NULL, void, to have no effect, to be a failure, to be a sacrifice." The word "prodigium" is synonymous with ostentum, monstrum, portentum. "Quia enim ostendunt, portendunt, monstrant, prodicunt; ostentia, portenta, monstra, prodigia dictant." It should be observed, however, that "prodigium" must be derived from ago, and not from deo, as Cicero would have it.

Since prodigies were viewed as direct manifestations of the wrath of heaven, and warnings of coming vengeance, it was believed that this wrath might be appeased, and, consequently, this vengeance averted, by prayers and sacrifices duly offered to the offended gods. This being a matter which deeply concerned the public welfare, the necessary rites were in ancient times regularly performed, under the direction of the pontifices, by the consuls before they left the city, the solemnities being called "proculsia prodigiorum." unlocking these.

Although, from the very nature of the occurrences, it was impossible to anticipate and provide for every contingency, we have reason to know that rules for expiation, applicable to a great variety of cases, were laid down in the Osteria, the Liberi Rituales, and other sacred books of the Etrurians, with the contents of which the Roman priests were well acquainted. The conduct of the priest in the presence of a visible or unprecedented nature, it was usual to seek counsel from some renowned Tuscan seer, from the Sibylline books, or even from the Delphic oracle. The phenomenon was usually frequent, and served as a warning to the public, and a sign of divine disfavor. The phenomenon was usually a warning to the public, and a sign of divine disfavor. The phenomenon was usually a warning to the public, and a sign of divine disfavor.
which, no doubts might be mitigated by decree of the public, as in the case of Miltiades and many other traitors. 1

2. The goods of traitors who suffered death were confiscated, and their houses razed to the ground; nor were they permitted to be buried in the country, but had their bodies cast out in some place on the confines of Attica and Megara. 2 Therefore it was that the bones of The-mistocles, who had been condemned for treason, were brought over and buried secretly by his friends. 3 The posterity of a traitor became átvos, and those of a tyrant were liable to share his fate. 4 Traitors might be proceeded against even after their death, as we have seen done even in modern times. Thus the Athenians resolved to prosecute Phrynichus, who had been most active in setting up the oligarchy of the Four Hundred (του νεκρών κραίμαν προσδοσία), and also to subject his defenders to the punishment of traitors in case of a conviction. This was done. Judgment of treason was passed against Phrynichus. His bones were dug up, and cast out of Attica; his decapation, and those of murderers honoured with the freedom of the city. 5

ΠΡΟΔΟΣΙΑΣ ΓΡΑΜΜΩ (προδοσία γραφή). (Vid. ΠΡΟΔΟΣΙΑ.)

PROEDRIS. (Vid. Boule, p. 168, 170.)

ΠΡΟΕΔΡΟΣΤΑ, ΣΟΙ λαί (προεδροφαί λαί) were sacrifices (cf. according to other writers, the sacrifices offered by the Athenians for the purpose of obtaining a plentiful harvest. According to Suidas, the Athenians performed this sacrifice in Ol. 5, on behalf of all the Greeks; but from all the other accounts it would appear that the Athenians did so at all times, and that the instance mentioned by Proxenos, that of Suidas, who said that the sacrifice was offered by the Athenians for all the Greeks. They are said to have been instituted on the command of some oracle, at a time when all the world was suffering from scarcity or from the plague. 6

ΠΡΟΕΙΣ ΦΗΩΡΑ (προεισφώρα). (Vid. Eiphrop., p. 392.)

ΠΡΟΕΠΙΦΩΡΑΣ ΔΙΚΗ (προεπιφώρας δίκη), an action brought by a member of a symmoria, to recover a rate paid on account of another. The symmoria being so arranged that three hundred of the richest men were selected to form a superior board, responsible to the state in the first instance for the collection of a property tax, the people passed a law prescribing that the members of this board should be reimbursed from the whole tax in advance. These then were entitled to be reimbursed by the remaining nine hundred of the symmoria, and each of them probably had a certain number assigned to him by the strategi for that purpose, against whom he might bring actions for contribution according to their respective assessments. To recover money so advanced was called προεπιφωρας κυριακη. 7 This cause, like others relating to the property tax and the trierarchy, belonged to the jurisdiction of the strategi.

3. (Demosth., 39, 453.)

PROTRIGIA.

PROTRIGIA (προτριγία), a festival celebrated at Athens in honour of Prometheus. The time at which it was solemnized is not known, but it was one of the five Attic festivals which were held with a torch-race in the Ceramicus (compare LAMPADEPHORIA), for which the gymnasiarch had to supply the youths from the gymnasia. Prometheus was said to have instituted this torch-race, whence he was called the torch-bearer. The torch-race of the Prometheus commenced at the so-called altar of Prometheus in the Academia, or in the Ceramicus, and thence the youths with their torches raced to the city.

PROQUESTOR. (Vid. QUESTOR.)

PRORA. (Vid. SHIPS.)

PROSE'NIUM. (Vid. THEATRE.)

PROSCRIPTIO. (Vid. DICE, p. 268.)

PROSCRIPTIO. This word signifies to exhibit a thing for sale by means of a bill or advertisement: in this sense it occurs in a great many passages. But in the time of Sulla it assumed a very different meaning, for he applied it to a measure of his own invention, namely, to the sale of the property of those who were put to death at his command, and who were themselves called proscript. This measure was adopted on the year 82 B.C. by Sulla, after his return from Preneste, declared before the assembly of the people that he would improve their condition, and punish severely all those who had supported the party of Marius. The people appear tacitly to have conceded to him all the power which he wanted for the execution of his design, for the lex Cornelia de Proscriptione or Proscriptio was sanctioned afterward, when he was made dictator. This law, which was proposed by the interrex L. Valerius Flaccus at the command of Sulla, is sometimes called lex Cornelia and sometimes lex Valeria. Cicero pretended not to know whether he should call it a lex Cornelia or Valeria.

Sulla drew up a list of the persons whom he wished to enslave, and this list was exhibited in the Forum to public inspection. Every person contained in it was an outlaw, who might be killed by any one who met him with impunity, even by his slaves and his nearest relatives. All his property was taken and publicly sold. It may naturally be supposed that such property was sold at a very low price, and was in most cases purchased by the friends and favourites of Sulla; in some instances, only part of the price was paid at which it had been purchased. The property of those who had fallen in the ranks of his enemies was sold in the same manner. Those who killed a proscribed person, or gave notice of his place of concealment, received two talents as a reward; and whoever concealed or gave shelter to a proscribed, was punished with death. But this was not all; the proscription was regarded as a corruption, and, consequently, the sons and grandsons of proscribed persons were forever excluded from all public offices.

After this example of a proscription had once been set, it was readily adopted by those in power during the civil commotions of subsequent years. This was the case during the triumvirate of Antonius, Cassar, and Lepidus (43 B.C.). Their proscription was not less formidable than that of Sulla, for 2000 equites and 900 senators are said to have been proscribed. For the subsequent annals of Sulla, see De Mortibus, p. 308.

PROSECTIO ACTIO. (Vid. Actio, p. 127.)

PROSTIMEMA (προστιμήμα). (Vid. TIMMA.)

PROST'ATES (προστάτης). (Vid. LIBERTUS, GREEK: ΜΕΤΟΙΚΟΙ.)

PROZ'ATHS TOY AXHM'OU (προστάτης τού άχμου), a leader of the people, denoted at Athens and in other democratic states a person who by his eloquence placed himself at the head of the people, and whose opinion had the greatest sway among them; such was Pericles. It appears, however, that προστάτης τού άχμου was also the title of a public officer in some Doric states.

PROTHESIS (προθέσεις). (Vid. FEATUS, p. 486.)

PROTHESIES (προθέσεις). The term limited for bringing actions and prosecutions at Athens. In all systems of jurisprudence some limitation of this kind has been prescribed, for the sake of quelling possession, and affording security against vexatious litigation. The Athenian expression προθέσεις νόμος corresponds to our statute of limitations. The time for commenceing actions to recover debts or compensation for injuries appears to have been limited to five years at Athens. This καλόντων διά τίνα κακόν ἥγηση εἶναι επισταμένα

[omitted]... Inheritance clauses stood on a peculiar footing.

When a house had been adjudged to a party, he was still liable to an action at the suit of a new claimant for the whole period of his life, and his heir for five years afterward. This arose from the anxiety of the Athenians to transmit inheritances in the regular line of succession. (Vid. HEBREWS, GREEK.)

The liability of bail continued only for a year (χρονόν επί τέτων ἕξις) and, of course, no proceeding could be taken against them after the expiration of the year. It is doubtful whether any period was prescribed for bringing criminal prosecutions, at least for offences of the more serious kind, though, of course, there would be an indisposition in the jury to convict if a long time had elapsed since the offence was committed. Certain cases, however, must be excepted. The youth could only be brought within a year after the propounding of the law, and the ξάδωμα against magistrates were limited to a certain period, according to Polux.

Amnesties or pardons, granted by special decrees of the people, scarcely belong to this subject. The term προθέσθαι is applied also to the time which was allowed to a defendant for paying damages, after the expiration of which, if he had not paid them, he was called ἐπεραιμένος, ἐπερημένος, or ἐκπρόθεσθαι. PROTHYRA (πρόθυρα). (Vid. HOUSE, GREEK, p. 514.)

PROTRIGIA (Προτρίγια), a festival celebrated in honour of Dionysus, named Protriges, and of Poseidon. The origin and mode of celebration of

this festival at Tyre are described by Achilles Tau-

r'ius.

PROVINCI.A. The original meaning of this word seems to be “a duty” or “matter intrusted to a person,” as we see in various passages; though some writers, apparently not correctly, consider this sense of “provincia” to be derived from that ordinary acceptance of it which will presently be mentioned. The etymology appears to be uncertain; but, if the usual orthography be correct, it is difficult to assign any other meaning to the word than to “push forward,” to “drive before one,” and in this sense provincia is the commission which a Roman general or praetor is to “drive before him.” But this sense of the word, if it was the original one, became changed in the course of time, or perhaps it received additions to its meaning. Thus, for instance, in the age of Cicero, provincia denoted a part of the Roman dominion beyond Italy which had a regular organization and was under Roman administration. This is soon seen to require the appellation of the separate territory in a certain relation of subordination to Rome. It is clear, however, from Livy, that the word was also used, before the establishment of any provincial governments, to denote a district or enemy's country which was assigned to a general as the field of his operations; a circumstance which confirms the correctness of the primary meaning of the × word.

The Roman state, in its complete development, consisted of two parts with a distinct organization, Italy and the provinciae. There were no provinciae in this sense of the word till the Romans had extended their conquests beyond Italy; and Sicily was the first country that was made a Roman province, as it was the first that the Roman province of Gallia Ulterior in the time of Cesar was sometimes designated simply by the term provincia, a name which has been perpetuated in the modern Provence.

A conquered country received its provincial organization either from the Roman commander, whose seat was “praetorium” to be derived from the seat, or the government was organized by the commander and a body of commissioners appointed by the senate out of their own number. The mode of dealing with a conquered country was not uniform. When constituted a provincia, it did not become to all purposes an integral part of the Roman state; it retained its national existence and privileges. The sovereignty of Sicily was completed by P. Rupilius, with the aid of ten legates, and his constitution is sometimes referred to under the name of leges Rupillic. (Vid. Lex, p. 585.) The island was formed into two districts, with Syracuse for the chief town of the eastern, and Lilybaeum of the western district: the whole island was administered by a governor annually sent from Rome. He was assisted by two questores, and was accompanied by a train of praecones, scribae, haruspices, and other persons, who formed his coheors. The questores received from the Roman aarium the necessary sums for the administration of the island, and they also collected the taxes, except those which were formed by the census. He also presided at the quaestiones de pago, and the other with the governor or praetor at Syracuse. The governor could dismiss the questores from the province if they did not conform to his orders, and could appoint legati to do their duties. The whole island was not treated exactly in the same way. Seventeen conquered towns forfeited their land, which was re-

stored on condition of the payment of the decemvir and the curios. But this restoration must not be understood as meaning that the ownership of the land was restored, for the Roman state became the owner of the land, and the occupiers had at most a possession. These taxes or dues were let to Panormus and Segesta, were libera et immunas, a country with a free constitution, and appeared to the state whether they were free from the burdens to which the federate civitates, as such, were subject by virtue of their fideus with Rome. Before the Roman conquest of Sicily, the island had been subject to a payment of the tenth of wine, oil, and other products, the collecting of which had been determined with great precision by a law or regulation of time. Before the Roman conquest of Sicily, the island had been subject to a payment of the tenth of wine, oil, and other products, the collecting of which had been determined with great precision by a law or regulation of time.
standing this, there remained some important distinctions between Sicily and Italy, as hereafter explained. The chief authority for this account of the provincial organization of Sicily is the Verrine orations of Cicero.

Hispania was formed into two provinces, Ulterior or Tarraconensis, and Ulterior or Baetica. Hispania Ulterior was divided into seven conventus: Carthaginensis, Tarraconensis, Caesarugustanus, Clieniius, Asturum, Lucennis, and Bracarum. The diversity of the condition of the several parts of the province appears from the enumeration of coloniae, oppida civium Romanorum, Latini vetere, and oppida stipendiaria. Hispania Baetica was divided into four jurisdictovs: Gadirianus, Cordovenus, Astigitanus, Hispalensis. The oppida consisted of coloniae, municipia, Latii antiqui donata, which appear to be equivalent to Latini veteres, libera, fæderati, stipendiaria. The provincia of Lusitania was divided into three conventus: Emeritensis, Paeconsis, and Scalobitanus. The classes of oppida enumerated are coloniae, municipia civium Romanorum, oppida Latii antiqui or veteres, stipendiaria. This example will give some idea of the Roman mode of administering a province for judicial purposes. All Hispania received the Latinitas from Vespasian. The province paid a fixed velticial or land-tax in addition to the tributum which was collected by prefects, and in addition to taxes levied for a certain purpose. The praetor had originally the right to purchase a twentieth part at what price he pleased.

This organization was not confined to the Western provinces. In Asia, for instance, there was a Smyrneus conventus which was frequented by a great part of Æolia; the term conventus was applied both to the territorial division made for the administration of the affairs of Æolia and to the chief city or place in quen conveniebant. Ephesus gave name to another conventus. As the conventus was mainly formed for judicial purposes, the term jurisdiction is sometimes used as an equivalent. Thus Pliny speaks of the Sardiana jurisdiction, which is the same as Sardianus conventus. The object of this division is farther elucidated by such phrases as eum disceptant form, and a Tarracense disceptant populi xilii. Strabo remarks that the boundaries of Phrygia, Lydia, Caria, and Mysia were confused, and that the Romans had added to the confusion by not attending to the subsisting national divisions, but making the administrative divisions different (râg disceptant), in which they are the fora (âyagô, M.S.) and the administration of justice. The word âyagô probably represents conventus (as to the reading, see Casaubon's note). The conventus, it appears, were sometimes held (conventus acta) in the winter; but in Caesar's case this might be a matter of convenience. Cicero proposed to do the same in his province.

The expression forum ager is equivalent to eum disceptant. The conventus were attended by the Romans who were resident in the province, among whom were the publicani, and generally by all persons who had any business to settle there. The judges for the decision of suits were chosen from the persons who attended the conventus. Other acts were also done there which were not matters of litigation, but which required certain Romans to be present. The administration by persons under thirty years of age, certain forms were required by the lex Ælia Sentia, and in the provinces it was effectuated on the last day of the conventus; from which it appears that conventus means also the time during which business was transacted at the place in quen conveniebant.

The magistratus upon entering on his duties, published an edict, which was often framed upon the Edictum Urbanum. Cicero, when procurator of Sicily, says that on some matters he framed an edict of his own, and that as to others he referred to the Edicta Urbana. Though the Romans did not formally introduce their law into the provinces, and so much of it as applied to land and the status of persons was inapplicable to provincial land and provincial persons, great changes were gradually introduced by the edicital power, both as to the forms of procedure and all other matters to which the Roman law was applicable, and also by special enactments.

There was one great distinction between Italy and the provinces as to the nature of property in land. Provincial land could not be an object of Quiritarian ownership, and it was accordingly appropriately called possessio. The ownership of provincial land was either in the populace or the Caesar; at least this was the doctrine in the time of Galus. Provincial land could be transferred without the forms required in the case of Italian land, but it was subject to the payment of a land-tax (velticial). Sometimes the jus Italicum was given to certain lands in the provinces, and on others this right was transferred to Italian land for all legal purposes. With the jus Italicum such towns received a free constitution, like that of the towns of Italy, with magistrates, as decemviri, quinquevallia (censors), and ediles, and also a jurisdictio. It was a ground of complaint against Piso that he exercised jurisdictio in a libera civitas. Towns possessing the jus Italicum and Latitium, and other countries associated to Italian land for all legal purposes. With the jus Italicum such towns received a free constitution, like that of the towns of Italy, with magistrates, as decemviri, quinquevallia (censors), and ediles, and also a jurisdictio. It was a ground of complaint against Piso that he exercised jurisdictio in a libera civitas. Towns possessing the jus Italicum and Latitium, and other countries associated to Italian land for all legal purposes. It was not easy to state what was the precise condition of the coloniae Romanae and Latine, which were established in the provinces, and without a governor, the provincial organization having entirely disappeared. In the year B.C. 49, when Caesar crossed the Rubicon on his march towards Rome, it was a province of which he was procurator, a circumstance which gives a distinct meaning to this event. Cicero still calls it Provincia Gallia at the epoch of the battle of Mutina. In the year B.C. 43, the constitution of the Provincia Gallia, was murdered, and from that time we hear of no more procuratorships of this province; and it is a reasonable conjecture that those who then had all the political power were unwilling to allow any person to have the command of an army in a district so near to Rome. The name Italia was, however, applied to this part of Italy before it became an integral portion of the peninsula in the Lex Ælia Sentia; if the name Italicus was to be a provincia. On the determination of the provincial form of government in Gallia Cisalpina, it was necessary to give to this part

of Italy a new organization suited to the change of circumstances, particularly as regarded the admin-
istration of justice, which was effected by the lex
Rubria de Gal·lia Cisalpina. The proconsul of Gal-
·lia Cisalpina had the imperium, but, on his func-
tions ceasing, the jurisdiction was placed in the hands of
the local magistrates who had not the imperium.
These magistrates could give a judex: in some ca-
ses their jurisdiction was unlimited; in others it did
not extend to cases above a certain amount of mon-
ney; they could remit a novi operis nuntiato, require
a cautio in case of damnum infectum and, if it was
not given, they could grant an action in the suit of
the victim. These magistrates were, however, not
able to engage in the battle of Acctium, as enumerated by Siginoni, are, Sicilia, Sardinia
e et Corsica, Hispania Citerior et Ulterior, Gallia Citeri-
or, Gallia Narbonensis et Comata, Ilyricum, Macedonien,
Achaia, Asia, Cilicia, Syria, Bithynia et Pontus, Cyprus, Africa, Cyrene et Creta, Nu-
midia, Mauritania. Those of a subsequent date,
which were either new or incorporated from a subse-
quent division, are, according to Siginoni, Rhetia, Nori-
cum, Pannonia, Messia, Dacia, Britannia, Mauritai-
nia Cæsariensis and Tingitana, Ägyptus, Cappa-
docia, Galatia, Rhodus, Lycia, Commagene, Judaea,
Arabia, Mesopotamia, Armenia, Assyria. The accu-
reacty of this enumeration is not warranted. It will ap-
pear that it does not contain Lusitania, which was
divided into two provinces: the division of Ulteri-
or, the other being Bætica: Lusitania may, how-
ever, not have had a separate governor. Original-
ly the whole of Spain, so far as it was organized,
was divided into the two provinces Citerior and Ul-
terior; the division of Ulterior into Bætica and Lu-
sitania belongs to a later period. Under Augustus,
Gal·lia Cisalpina (on which at a later time provinces
Cæsariensis, Celtica or Lugdunensis, Belgica, and Aquitania.
The Provincia Cæsarii's Commentaries, from
which term the modern name Provence is derived,
appears to have corresponded to the subsequent
province Narbonensis. He had also the province
Gal·lia Cisalpina or Citerior, which, as already ex-
plained, was subdivider incorporated with Italy
as an integral part of it. Cicero speaks of the
two Gallæ as then united in one imperium under
C. Julius Caesar, and he farther distinguishes them
by the names of Citerior and Ulterior.2 The same
expressions are used by Caesar in his Commenta-
ries.
Strabo4 gives the division into provinces (περι-
παραγωγαὶ) as constituted by Augustus. The provinces
of the populus (δήμος) were two consular provinces
(περιπαραγωγαὶ) and ten praetorian provinces (περι-
παραγωγαὶ). The rest of the eparchies, he says, belong to the
Caesar. Lusitania is not enumerated among the eparchies of the populus, and if it was a distinct eparchy, it must have belonged to the Caesar ac-
cording to the principle of the divisions of the prov-
inces, as stated by Strabo. The list of provinces in the
"Demonstratio Provinciarum"5 mentions the province of Asturia et Gallaco Lusitania. Dion
Cassius6 states the division of the provinces by
Augustus as follows: the provinces of Africa, Nu-
midia, Asia, Helias (Achaia) with Epirus, Dalmatia,
Maecenas, and the designated praefectus was in the hands of
Bithynia with the adjacent Pontus, Sardinia, and Bæ-
tica, belonged to the senate and the people (δήμος and pœvovia); Tarraconensis, Lusitania, all Gal-
·lia, Calis-Syria, Phcenicia, Cilicia, Cyprus, and Ägyptu-
s, belonged to Augustus. He afterward took Dalmatia from the senate, and gave to them Cyprus and Gal·lia Narbonensis, and other changes were made subsequently.

At first praetors were appointed as governors ut
provinces;7 or afterward they were appointed to the
government of provinces upon the expiration of
their year of office at Rome, and with the title of
praetores. In the later times of the Republic, the
consuls also, after the expiration of their year of
office, received the government of a province, with
the title of proconsules: such provinces were called
consules. Cicero was proconsul of Cilicia B.C.
55, and his col league in the consulship, C. Antoni-
us, obtained the proconsulship of Macedonia imme-
diately on the expiration of his consular office. The
provinces were generally distributed by lot, but the
distribution was sometimes determined by lot, but not among the persons entitled to. By a Sempri-
nelia lex the proconsular provinces were annually de-
termined before the election of the consuls, the ob-
ject of which was to prevent all disputes. A sena-
tus consultum of the year 55 B.C. provided that no
consul or praetor should have a province till the
expiration of five years from the time of his consul-
ship or pretorship. A province was generally held
for a year, but the time was often prolonged.
When a new governor arrived in his province, his prede-
cessor was required to leave it within thirty days.
The governor of a province had originally to ac-
count to Rome (ad urbem) for his administration from his own books and those of his quaestors; but
Augustus, who 即 the first time he entered Italy, were
bound to deposit two copies of his accounts (ratio-
nes) in the two chief cities of his province, and to
forward one (totidem verbis) to the Åerrarium.1
If the governor misconducted himself in the adminis-
tration of the province, the provincials applied to
the Roman senate, and to the powerful Romans
who had power to set him down in his province, and
peregrinus was the usual grounds of complaint by
the provincials; and if a governor had betrayed the
interests of the state, he was also liable to the
penalties attached to majestas. Questions were
established for inquiries into these offences; yet
it was not always an easy matter to bring a guilty
Aeator to the punishment that he deserved.
With the establishment of the imperial power un-
der Augustus, a considerable change was made in
the administration of the provinces. Augustus took
the charge of these provinces where a large military
force was required; the rest were left to the care
of the senate and the Roman people.2 Accordingly,
Caesar was required to account for the provincial
office to those who were "propraetores Macedoni,
and those which were "propraetores Arnæ." In this
division, with some modifications, continued to the
third century. The senatorial provinces were dis-
tributed among consules and those who had filled
the office of praetor, two provinces being given to
the consuls and the rest to the praetori; these
governors were called proconsules or praefecti,
which latter is the usual term employed by the old
jurists for a provincial governor. The praetors had
the jurisdiction of the praetor urbans and the praetor
peregrinus, and their quaestors had the same jurisdic-
tion that the curule ediles had at Rome.4 The
imperial provinces were governed by legati Caesaris
and legati, who had the same oath and the same
jurisdiction in the Caesar himself, and the legati being his de-
legates and representatives. The legati were selected from those who had been consuls or praetors, or from
the senators. They held their office and their pow-
er at the pleasure of the emperor, and he delegated to
them both military command and jurisdiction, just
as a proconsul in the republican period delegated
these powers to the legati. These legati and these legati had also
legati under them. No quaestors were sent to the

PROVINCIA.

provinces of the Caesar, and for this reason, observes Gaius, "this edit (hoc edictum) is not published in those provinces, by which he appears, from the context, to mean the edit of the curule ediles. In place of the quattuor, there were procuratores Caesaris, who were either consoles or proconsuls of the Caesar. Egypt was governed by an eques, with the title of prefectus. The procuratores looked after the taxes, paid the troops, and generally were in trusted with the interests of the fiscus. Judea, which was a part of the province of Syria, was governed by a procurator who had the powers of a legatus. It appears that there were also procuratores Caesaris in the senatorial provinces, who collected certain dues that were levied in what was the province of what due to the aerarium. The regular taxes, as in the Republican period, were the poll-tax and land-tax. The taxation was founded on a census of persons and property, which was established by Augustus. The portoria and other dues were levied by the publicani, as in the republican period.

The governors of the senatorial provinces and the legati of the Caesar received their instructions from him, and, in all cases not thus provided for, they had to apply to the Caesar for special directions. The rescripta of the emperors to the provincial governors are numerous. Justice was administered in the provinces according to the laws of the provinces, and such Roman laws as were specially enacted for them, and according to imperial constitutions, senatorial laws, and edicta of the governors. In some instances the provisions of Roman laws were extended to the provinces.1

The organization of the Italian towns under the Empire has been already explained in the article Colonia, and the same observations apply, in general, to the senatus of provincial towns which have been made with respect to the functions of the senates of Italian towns. Even in the provinces, the names senate and senator occur in the sense, respectively, of curia and decuriones. But there was a great distinction between the magistratus of provincial and those of Italian towns. The functions of these personages in the provincial towns were generally munera (burdens), and not honores. (Vid. Honores.) Such honores have reference to rights, real or personal, and probably to others also; but they had nothing corresponding to the duumviri juric dicundo of the Italian towns, that is, no functionary "qui jus dicebat." The only exception were such towns as had received the jus Italicum, the effect of which, as elsewhere explained, appears to have been, in brief, to give to a certain city and district the same character that it would have had if it had been a part of the Italian soil, but only so far as affected the whole district; it did not affect the status of individuals. Freedom from the land-tax, and a free constitution in Italian form, with duumviri J. D., quinquinnales, aediles, and juridici, were essential ingredients of this jus Italicum. Sicily received the civitas from the death of Julius Caesar, and from the occurrence of the mention of duumviri in the inscriptions of a Sicilian town, Savigny draws the probable inference that the Sicilian towns received the jus Italicum also; at least, if in any case we can show that any provincial city had duumviri, we may conclude that such city had the jus Italicum, and, consequently, magistratus with juridicius. The regular juridicius in all the provinces was vested in the governor, who exercised it personally and by his legati; with reference to his circuits in the provincia, the governor, in the later ages of the Empire, was called judex ordinarius, and sometimes simply judex. The towns which had the jus Italicum were, as already observed, ed, not under his immediate jurisdicatio, though a right of appeal to the governor from the judgment of the duumviri must be considered as always existing. The provincial towns had the management of their own revenue; and some of the principal towns could coin money. It does not appear that the religion of the provincial was ever interfered with, nor had it been put under any restraint in the republican period.

The constitution of Caracalla, which gave the civitas to all the provinces and towns of the Empire, merely affected the personal status of the people. The land remained provincial land when the jus Italicum had not been communicated to it, and the same道理 had not received the jus Italicum, and were immediately under the jurisdicatio of the governors. This constitution, however, must have made considerable changes in the condition of the provincials; for, when they all became Roman citizens, the Roman incidents of marriage, such as the patri potestas, and the Roman law of succession in case of intestacy, would seem to be inseparable consequences of this change, at least so far as the want of the jus Italicum did not render it inapplicable.

The constitution of the provincial towns was materially affected by the establishment of defensores, whose complete title is "Defensores Civitatis Plebis Loctis." Until about the time of Constantine, so far as the Pandect shows, defensor was the title of persons who were merely employed in certain municipalities. In the year A.D. 365, the defensores appear as regularly established functionaries. They were elected by the decuriones and all the city; but, unlike the magistratus, they could not be elected out of the body of decuriones. The office was originally for five years, but after the time of Justinian only for two years. The principal business of the defensor was to protect his town against the oppression of the governor.2 He had a limited jurisdiction in civil matters, which Justinian extended from matters of the amount of 60 solidi to matters of the amount of 300 solidi. There was an appeal from him to the governor.3 He could not impose a multa, but he could appoint a tutor. In criminal matters, he had only jurisdiction in some of the less important cases.

The towns both in the Italic and provincial towns, seems to have been generally one hundred; and this was the number in Capua.4 But the number was not in all places the same. Besides the actual members, the album decurionum comprised others who were merely honorary members. The album of the town of Canusium, of the year A.D. 233, which has been preserved, consists of 148 members, of whom 90 were patricii, Roman senatores, and 2 were patruini, Roman equites; the remainder were 7 quinquennalia, a term which is easily explained by referring to the meaning of the term quinquennalia (vid. Colonia, p. 283), 4 allociti inter quinquennales, 23 duumvirales, 19 edilicii, 21 pedani, 34 pretestt. The distinction between pedani and pretestt Saviugi professes himself unable to explain. In many towns, the first persons in the list of actual senators were distinguished from the rest, and generally the first ten, as decremprimi, of which there is an example in Livy; and in the case of America, and of Centuripe in Sicily.

It has been previously shown, that at the time when the Roman republic had attained its complete development, Italy and the provinciae were the two great separable parts of the Empire; and one great boundary which was that, in this

Italia the towns had magistratus withjurisdiction; but in the provinces, except in places which had received the jus Italicum, the governor alone had jurisdiction. But with the growth and development of the imperial power, the civil power was pushed into the administration of all parts of the Empire, and ultimately Italy itself was under a provincial form of government. (Vid. COLONIA.) As above shown, the relation of the governor to the provinces was not the same when a city had magistrates and when it had not; and, consequently, it was in this respect extremely the case with imporTant coloniae.

The constitution of Constantine was based on a complete separation of the civil and military power, which were essentially united in the old system of provincial government: Justinian, however, ultimately reunited the civil and military power in the same person. The governor, who had civil power, was called rector, judex, judex ordinarius; and of these governors there were three classes, consultares, correctores, praesides, among whom the only distinction was in the extent and rank of their government. In the writings of the older jurists, which are excerpted in the Pandect, the præses is a general name for a provincial governor. The military power was given to duces, who were under the general direction of a provincial magister militum. Some of these duces were called comites, which was originally a title of rank given to various functionaries, and among them to the duces: and when the title of comes was regularly given to certain duces, who had important commands, the same dux was dropped, and comes became a title. This was more particularly the case with important bodies on the frontier. The comes was mentioned in imperial constitutions before the dux, whence we infer his higher rank.

It remains to add a few remarks on the exercise of the jurisdiction, so far as they have not been anticipated in speaking of the functionaries themselves. In Italy, and in the towns which had the privileges of Italian towns, all matters, as a general rule, came before the magistratus in the first instance; but in certain excepted matters, and in cases where the amount in question was above a certain sum (the precise amount of which is not known), the matter came before the governor of the province in the first instance, and then before the emperor. Until the middle of the fourth century A.D., all matters in the provincial towns which had not magistrates came before the governor in the first instance; but about this time the defender acquired a power like that of the magistrates of the privileged towns, though more limited. The old form of proceeding in civil matters has been explained elsewhere (vid. Joux): the magistrates empowered the judge to make a condemnation; and this institution was the ordo judiciorum privatum. That which the magistrates did without the aid of a judex was extra ordinem. (Vid. INTRUDUX.) The same institution prevailed in these towns which had a magistratus, for it was of the essence of a magistratus of one of the classes to perform the functions of a governor; and as the governors, it gradually became common for the magistratus to decide various cases without the aid of a judex, and these are the extraordinary cognitions spoken of in the Digest. In the reign of Dioscorus, the ordo judiciorum, as a general rule, was abolished in the provinces, and the pedanei judices (hoe est gubernatio humanae disciplet) were only appointed by the præses when he was very much occupied with business, or for some trifling matters (vid. Joux, PROVINCIA.

PROVINCIA.

PRUNUS, the Plum, called in Greek κοκυλία.

(Vid. CoCCYMELA.) It is the fruit of the Prunus domestica, L.

*PRUNUS (κοκυλία), the Plum-tree, or Pru- nus domestica, L. (Vis. CoCCYMELA.) Theophras- tus and Dioscorides designate the Plum-tree by the name of κοκυλία. It is also called by Theophras- tus προξενία. Galen styles it προξενία. The compound term κοκυλία, however (meaning the tree that bears for fruit little balls or pilules), is the most classical form of expression. The term προξενία, whence comes the Latin pruna, seems to be a bar- barian word Greecised. The Plum-tree is originally from the mountains in the vicinity of Damascans.2

PRYTHEMION (Πρυτανείον). The Prytaneion of the ancient Greek states and cities were to the communities living around them, the common houses of which the Prytaneion is the measure represented, what private houses were to the families which occupied them. Just as the house of each family was its home, so was the Prytaneion of every state or city the common home of its members or inhabitants, and was consequently called the ιύτων πόλεως, the ‘focus’ or ‘penetrata urban.’1 This correspond- ence between the Prytaneion, or home of the city, and the private house, or a man’s family, was at Athens very remarkable. A perpetual fire, or πυρίτον, was kept continually burning on the public altar of the city in the Prytaneion, just as in private houses a fire was kept up on the domestic altar in the inner court of the house.4

The same custom was observed at the Prytaneion of the Eleusins, where a fire was kept burning night and day.5 Moreover, the city of Athens exercised in its Prytaneion the duties of hospitality, both to its own citizens and strangers. Thus foreign ambas- sassadors were entertained here, as well as Athenian envoys on their return home from a successful or well-conducted mission.6 Here, too, were en- tertained from day to day? the successive prytanes, or presidents of the senate, together with those citizen- es of whom the whole or some part of the annual mag- nificent public ceremonial, that is, those who were connected with the Prytaneion, were also entertained.7 For the Prytaneion was held in high esteem by the Athenians and became almost a sort of state church, which also they held in great veneration and honor.8

Another illustration of the uses to which the Prytaneion were dedicated is found in the case of the daughters of Aristides, who, on the death of their father, were considered as the adopted children of the state, and married from (κοκυλία) that common home of the city, just as they would have been from their father’s home had he lived. Moreover from the ever-burn- ing fire of the Prytaneion, or home of a mother state, was carried the sacred fire which was to be kept burning in the Prytaneia of her colonies; and if it happened that this was ever extinguished, the flame was rekindled from the Prytaneion of the pa- rence city.8 Lastly, a Prytaneion was also a distin- guishing mark of an independent state, and is men- tioned as such by Thucydides,9 who informs us that before the time of Theseus every city or state (πό- λις) of Attica possessed a Prytaneion. The Athenians, as we are told, called their Prytaneion λόγον (from λόγος, populus), or the “town-hall,” and exclusion

The Prytaneion of Athens lay under the Acro- polis, on its northern side (near the θυσίας), and was, as its name denotes, originally the place of assembly of the πρυτανεία; in the earliest times it probably stood on the Acropolis. Officers called πρυτανεῖς were intrusted with the chief magistracy in sev- eral states of Greece, as Corcyra, Corinth, Miletus,10 and the title is sometimes synonymous with βασιλεύς, or princes, having apparently the same root as πρυτανεία and προτάστος. At Athens they were in early times called Prytaneis, but later Prytaneions. The Prytaneion was the court of the Prytaneion, or the πυρίτον, which, it is said11 to have been presided over by the ψηφιδία- είς, who, perhaps, were the same as the πρυτανεῖς.11

In later ages, however, and after the establish- ment of the courts of the helma, the court of the Prytaneion had lost what is supposed to have been its original importance, and was made one of the courts of the epheta, who held there a species of mock trial over the instruments by which any individual had lost his life, as well as over persons who had committed murder, and were not forthcoming or detected.

The tablets or άρκονεια, εἰκονεία kūρῆς, on which Solon’s laws were written,12 were also deposited in the Prytaneion; they were at first kept on the Acropolis, probably in the old Prytaneion, but after- wards were transferred to the Prytaneion itself, and were supposed to be open to public inspection.13 Ephi- ates is said to have been the author of this measure,14 but their removal may have been merely the conse- quence of the erection of a new Prytaneion on the lower site in the time of Pericles.15

PRYTHEMION. (Vis. Prytheomion, Boule, p. 168.)

*PSAR (ψαρ), the Starling, or Sturnus vulgaris. Starlings are gregarious, and hence mention is made by Homer of “a cloud of starlings.”16

*PSEN (ψηφί), the insect on the fig-tree which performs the work of caprification. It is the Cynipta Phoeae of modern naturalists.17

PSEPHISMOS (ψῆφισμα). (Vid. Boule, p. 169; Nomostate, p. 664.)

PSEPHOS (ψῆφος). The Athenian diets, in giving their verdict, voted by ballot. For this pur-
pose they used either seashells, *χορίνα,1* or beans (since the *δῆμος* is called *κοινοτρίχος* by Aristophanes2), or balls of metal (*σπόνδυλος*), or stone (*ψυχρός*). These last were the most common; hence *ψυχρίζω* and its various derivatives are used so often to signify *determining*, etc. The balls were either of the same kind (*σείσια*), whole (*κυάς*), the former for condemnation, the latter for acquittal,3 or they were black and white, for the same purposes respectively, as the following lines show.4

"...Mos erat antiqvis nivei aristique lapillus, / His damnare reus, illis absolvire culpa."5

There might be three methods of voting. First, the secret method, called κρόβδον *ψυχρίζων*, where each dicast had two balls given him (say a black and a white); two boxes (*κάποιος, καθίκου, or υφεροί*) were prepared, one box, called the judgment-box (*κύάς*), into which the dicast put the ball by which he gave his vote, and the other of wood, called *δαίμον*, into which he put the other ball, and the only object of which was to enable him to conceal his vote. Each box had a neck or funnel (*κυώσις, i.e., *ἐπίθεμα μίας ψυχράς κέιρας*), into which a man could put his hand, but only one ball could pass through it. In this part of the game, there might be only one box, in which the dicast put one of the two balls he pleaded, and returned the other to the officer of the court. Thirdly, there might be two boxes, one for condemnation, the other for acquittal, and only one ball.6 This first method was most commonly practised at Athens. Where, however, there were severe penalties before the court, as in inheritance causes, to one of whom an estate or other thing was to be adjudged, it was customary to have as many balloting-boxes as there were parties, or, at least, parties in distinct interests; and the dicast put the white or whole ball into the box of the person in whose favour he decided. (Vid. Her. 205. 39.)

The same system of balloting was employed when the dictasts voted on the question of damages. Hence the verdict on the question, guilty or not guilty, or for the plaintiff or defendant (to distinguish it from the other), is called πράγμα ψυχρός.7 A curious custom was in vogue in the time of Aristophanes. Each dicast had a waxen tablet, on which, if the heavier penalty was awarded, as in inheritance causes, to one of whom an estate or other thing was to be adjudged, it was customary to have as many balloting-boxes as there were parties, or, at least, parties in distinct interests; and the dicast put the white or whole ball into the box of the person in whose favour he decided. (Vid. Her. 205. 39.)

When two or more persons were before the court, in such a case, he who offered the better alternative, was to have the advantage of his adversary. (As to this point, see Meier, Att. Proc. 181.) The tablet is called by Aristophanes πίνακας τιμήτων. In the expression τιμή τον μακρον, we understand γραμματίον τιμήτων.

In the popular assemblies, the common method of voting was by show of hands. (Vid. Cheliotontia.) There were some occasions, however, when the ballot was employed, as when it was deemed important that the voting should be secret, or that the numbers should be accurately counted. Thus, to pass a law of naturalization of a foreigner, or for the release of a state debtor, the voting was done by a show of hands. The voting was also done by a show of hands under cases, in which case, a different allusion. The presiding magistrate or officer, who called on the people to give their votes, was said ἄπεφεσεν, ψυχρόν ἢ δαίμονα, though the last expression is also used in the sense of voting in favour of a person. *Ψυχρίζω*, to vote, to resolve, ἀντοψγρίζω, to acquit, and other derivations from ψυχρός, are often used metaphorically, where the word ψυχρός, though used in a more positive sense than 柴Ye, is, at such times, a mere metaphor, Χιρωνοενεν, however, is not used, like ψυχρίζων, with the accusative of the thing voted. As to this, see Schömann, De Com., 123.

*PSEHTTA* (ψηφτή), a species of fish, mentioned by Aristotle, Ἐλίαν, Ὀππίαν, and others. According to Adams, it would seem to have been the *Pleuronectes platessa*, or *Platessa bosc*.

The ψηφτή of Athenæus, on the other hand, is referred by Artedi and the writer on Ichthyology in the Encyclopedic Methodique, to the *Pleuronectes Plataessa*, or Plaice. The name is often written ψιττά.*

*ΥΣΥΛΩΡΤΙΟΣ ΟΙΟΛΙΤΗ ΣΟΙΩ (ψυχωρογραφος ψαράς)* is a law of the Athenians that the natural debtor at Athens was entered in a register by the praecones, whose duty it was to collect the debts, and erase the name of the party when he had paid it. The entry was usually made upon a return by some magistrate, to whom the incurring of the debt became officially known; as, for instance, on a return by which the natural person had become a lessee of public lands or farmer of taxes, as in the case of the latter of Cnidian, or on such terms. In case the authorities neglected to make the proper return, any individual might, on his own responsibility, give information to the registering officers of the existence of the debt; and thereupon the officers, if they thought proper, might make an entry accordingly, though it would probably be that the party would make the entry himself, if possible. If they made a false entry, either wilfully, or upon the suggestion of another person, the aggrieved party might institute a prosecution against them, or against the person upon whose suggestion it was made. Such prosecution was called γραφή ψυχωρογραφίας. It would lie, also, where a man was registered a debtor who was really due from him. And the reader must understand the like remedy to be open to one who was falsely recorded as a debtor by the ραγίς τον ἔχων. Whether this form of proceeding could be adopted against magistrates for making a false return, or whether the remo-
The defendant was convicted, the name of the complainant was struck off the register, and that of the defendant was entered in his stead, as debtor for the same amount. The officer blundered was similar to this, only it lay in those cases where a man who had been a state debtor had paid all that was due, but his name was not erased, or, having been erased, was re-entered. We may presume that fraudulent or malicious motives were necessary to be proved on such a charge; but it is reasonable, also, to suppose, that in any case of gross negligence, fraud or malice might (as matter of course) be presumed by the dicasts.

1. *EUGYNEIS MARAGIDES (ψευδοψευδογογος), the Bastard Emerald. “By bastard gerns,” says Adams, “the ancients meant crystals, tinged of the colours of the precious stones by the admixture of metallic particles.”

2. *PSYKTOBONIUM (ψευδοδομανιον), a plant, which Dodoneus, Matthiolus, and Bauhin held to be the Barbaroas, or Winter Cress; but Sprengel follows Lobelius in referring it to the Pimpinella tenuis.

3. *PSUEDICTAMNIIUM (ψευδοεικανιαν), a plant, which Stackhouse sets down for the Origanum Egyptians; but Sprengel adopts the opinion of Dodoneus, who makes it the Matthiwm Pseudo Digitamnii.

4. *EUXODAKHTEIS TARAHX (ψευδοκαθητης ψαρος), a prosecution against one who had appeared as a witness (κλητος or κλητωρ) to prove that a defendant had been duly summoned, and thereby enabled the plaintiff to get a judgment by default. To prevent fraud, the Athenian law directed that the names of the witnesses who attended the summons should be signed or sealed, or of plaint or indictment (εκλεκται), so that the defendant, if he never had been summoned, and judgment had nevertheless been given against him by default, might know against whom to proceed. The false witness (κλητος) was liable to be criminally prosecuted, and punished at the discretion of the court. Even death might be inflicted in a case of gross hypocrisy. A person three times convicted of the offence was, in the case of other false testimony, ειρου jure disfranchised; and even for the first offence the jury might, if they pleased, by a πρωτημοριος, inflict the penalty of disfranchisement upon him. Here we may observe this distinction, that the proceeding against the false witness to a summons was of a criminal nature, while the witness in the case (μουταρη) was liable only to a civil action. The cause might be that the former offence was more likely to do mischief. The magistrate before whom the defendant neglected to appear, when, by the evidence of the witness, it was shown that he had been duly summoned, had no discretion but to pronounce judgment against him; whereas to the dicasts, to whom the witness gave false evidence, it was at their discretion how and when to bring his verdict according to the truth. If the fraud was owing to a conspiracy between the plaintiff and the witness, it is probable that an action at the suit of the defendant would lie against the former, to recover compensation; for, though the conviction of the witness would lead to a reversal of the judgment, still he (the defendant) might have suffered damage in the mean time, which the setting aside of the judgment would not repair. Such action (it has been conjectured) might be a δεικτον φωνασιος or, perhaps, παρακατηγος. If the name of the witness had been fraudulently used by the plaintiff, and the witness had thereby been brought into trouble, we may conclude, by analogy to the case of other witnesses, that he had a δεικτον βιδος against the plaintiff.

5. The γραιφοδοκληται came before the thessalothete, and the question at the trial simply was, whether the defendant in the former cause had been summoned or not.

6. The Parrot. “If it be true,” remarks Adams, “as stated by Dodoneus, that the Parrot is a native of the extremities of Syria, the Greeks may have been acquainted with it before the invasion of India by Alexander. It is first mentioned by Aristotle, unless Ctesias have a prior claim, who speaks of the βασσας, the species of parrot with which the ancients are said to have been acquainted. The head and neck of the parrot described by Ctesias is adorned with the green parrot with a red collar, namely, the Psittacus Alexandri of modern naturalists.”

7. “The ancients,” says Pidgeon, “were acquainted with several kinds of Parrot among which the most celebrated was that sent from India to Alexander in the course of his expedition into that country. When he was about to depart for home, he had written on a group of Psittacids known to the ancients, and has treated this subject with his accustomed elegance of style, metaphysica, discrimination, and classical research, tells us that the ancient writers are unanimous in informing us that the parrots known to their times came exclusively from India. In that country these birds were ever held in the highest estimation. We are informed by Elias that they were the favourite inmates of the palaces of princes, and were looked up to as objects of sacred reverence by the religious feelings of the people. From this quarter they were introduced into Europe at the time of the Macedonian conquest, and the specific name of Alexandrii, applied by modern science to the type of the group, in honour of the first European discoverer, serves to perpetuate the name of a warrior, who, by some, valued the conquests that extended the boundaries of his empire chiefly as they served to extend the boundaries of science. It was not until the time of Nero that the parrots of Africa became known to the Romans. Some of these birds were among the discoveries made in the course of an expedition sent out by that prince. They came apparently from the interior of Africa, and it is probable that, as the country became more known, numbers of the same race were imported from it into Rome, and formed the chief part of those victims of the parrot tribe which in after times are said to have supplied the inordinate luxury and wantonness of Heliogabalus.”

8. *PSYTHEROS (ψυτραος), dim. ψυτραωδος, a Wine-caster.

9. Respecting the general use of ice and...
are preserved in Plutarch. The procession went to a temple of Apollo, and the olive-branch was planted at its entrance. According to others, every Athenian planted, on the day of the Pyanepsia, such an olive-branch before his own house, where it was left standing till the next celebration of the festival, when it was exchanged for a fresh one.

**PUBLICANI. (Vid. CURATOR, IMPER. IMPENS.).

**PUBLICANI, farmers of the public revenues of the Roman state (sestertii). Their name is derived from publicum, which signifies all that belongs to the state, and is sometimes used by Roman writers as synonymous with vectigal. The revenues which formed them were the national income, consisting chiefly of tolls, tithes, harbour-dues, the salt-tax, or the tax which was paid for the use of the public pasture-lands, and the duties paid for the use of mines and saltworks (salinae), were let out, or, as the Romans expressed it, were sold by the censors in Rome itself to the highest bidder. This sale generally took place in the month of Quintilis, and was made for the three years in advance. The lots which were let were fixed by the censors in the so-called lagen censorship.

The people or the senate, however, sometimes modified the terms fixed by the censors in order to raise the credit of the publicani, and in some cases even the tribunes of the people interfered in this branch of the administration. The titles of publicani were hereditary, and we have the exception of those of wine, oil, and garden produce, were not sold at Rome, but in the districts of Sicily itself, according to a practice established by Hicor. The persons who undertook the farming of the public revenue of course belonged to the wealthiest Romans. Their wealth and consequent influence may sometimes have been considerable, as is shown by the fact that during the Punic war, after the battle of Carthage, when the Carthage was entirely exhausted, the publicani advanced large sums of money to the state on condition of repayment after the end of the war. But what class of Romans the publicani were at this time is not stated; scarcely half a century later, however, we find that they were principally men of the equestrian order, and down to the end of the Republic, as well as during the early part of the Empire, the farming of the public revenues was almost exclusively in the hands of the equites, whereas the words equitani and publicani are sometimes used as synonymous.

The publicani had to give security to the state for the sums which they bought, or for more branches of the revenue in a province; but since they knew that the property of even the wealthiest individual must have been inadequate, a number of equites generally united together and formed a company (socii, societas, or corpus), which was recognised by the state, and by which they were enabled to carry on their undertakings upon a large scale. Such companies employed in a partnership system, the Romans enjoying shares which each partner of such a company took in the business were called partners, and if they were small, particular. The responsible person in each such company, and the one who contracted with the state, was called mancipes (vid. MANCIPES); but
there was also a magistrate to manage the business of each society, who resided at Rome, and kept an extensive correspondence with the agents in the provinces. He seems to have held his office only for one year; his representative in the provinces was called sub magistro, who had to travel about and superintend the actual business of collecting the revenues. The ἀρχιτελῶν in St Luke is probably such a sub magistro. The magister at Rome had also to keep the accounts which were sent in to him (tabula accepti et expenst). The credit of these companies of publicani and the flourishing state of their finances were of the utmost importance to the state, and, in fact, its very foundation; and of this the Romans were well aware, and Cicero therefore calls them the "στοματίου ειρήνας et firmamentum rei publicae." It has been already mentioned that the publicani, in case of need, acted as a kind of public bank, and advanced large sums of money to the state, which therefore thought them worthy of its especial protection. But they abused their power at an early period, in the provinces as well as at Rome itself; and Livy says "ubi publicani est, ibi aut jus publicum vanum, aut libertas socius nulla." Nobody but a Roman citizen was allowed to become a member of a company of publicani; freedmen and slaves were excluded. No Roman magistrate, however, or governor of a province, was allowed to take any share whatever in a company of publicani, a regulation which was chiefly intended as a protection against the oppression of the provincials. During the later period of the Empire various changes were introduced in the farming of the public revenues. Although it was, on the whole, a rule that no person should be compelled to take any share in a company of publicani, yet such cases sometimes occurred. From the time of Constantine, however, the publicani remained in office for periods of longer than for three years. Several parts of the revenue which had before been let to publicani, were now raised by especial officers appointed by the emperors.

All the persons hitherto mentioned as members of these companies, whether they held any office in such a company or not, and merely contributed their share in the raising of the public revenues, or not themselves take any part in the actual levying or collecting of the taxes in the provinces. This part of the business was performed by an inferior class of men, who were said operas publicanias dare, or esse in operis societatis. They were engaged by the publicani, and consisted of freemen as well as slaves, Romans as well as provincials. This body of men is called familia publicanorum, and comprehended, according to the pretor's edict, all persons who assisted the publicani in collecting the vectival. Various laws were enacted in the course of time, which were partly intended to support the servants of the publicani in the performance of their duty, and partly to prevent them from acts of oppression.

The separate branches of the public revenue in the provinces (decuma, portio, scriptura, and the revenues from the mines and saltworks) were mostly leased to separate companies of publicani, whence they were distinguished by names derived from that particular branch which they had taken in farm; e. g., decumani, pecurari or scripturari, salini or mancipies salinarum, &c. (Compare De cive, Portiorum, Salinarum, Scripturarum.) On some occasions, on the other hand, one company was employed to farm two or more branches at once; thus we have instance of a societas farming the portorium and the scriptura at the same time. The commentator, who goes by the name of Asconius, asserts that the portorites were publicani who farmed the portorium; but from all the passages where they are mentioned in ancient writers, it is beyond all doubt that the portorites were not publicani properly so called, but only those servants engaged in examining the goods imported or exported, and levying the custom-duites upon them. They belonged to the same class as the publicani of the New Testament. Respecting the impudent way in which these inferior officers sometimes behaved towards travellers and merchants, see Plaut., Menenck., 1, 2, 5, &c.—Cic. ad Quint. Fr., 1, 1.—Plut. De Curiosis, p. 58, c. 6.

PUBLICIANA IN REM ACTIO was given to him who obtained possession of a thing ex justa causa, and had lost the possession before he had acquired the ownership by usucaption. This was a pretorian action, so called from a pretor Publicius and the fiction by which the possessor was enabled to sue was that he had obtained the ownership by usucaption. This action was an incident to every kind of possession. Accrue, possession was not Julius (the thirty years' excepted). In the old Roman law this action resembled the vindicatio, and in the newer Roman law it was still more closely assimilated to it, and consequently, in this actio, mere possession was not the only thing considered, but the matter was likened to the case where ownership and possession were acquired at the same time by occupatio or tradition. Accordingly, possession or the possessor's acts in full usufruct of usucaption may be viewed in two ways, viewed with respect to the ownership of which it is the foundation, it is a subject of jurisprudence as bare possession; viewed with reference to the Publician actio, which is incident to it, it is viewed as ownership. The owner of a thing might also avail himself of this action if he had any difficulty in proving his right.

This action was introduced for the protection of those who had a civilis possession, but that only, and, consequently, could not recover a thing by the rei vindicatio, an action which a man could only have when he had the Quiritanian ownership of a thing. According to the definition, a man could have this actio, 63, 30, 29; a thing which he had in bonis, and for a thing of which he had a civilis possession without having it in bonis; and his action was good even against the Quiritanian owner; for if such owner pleaded his ownership, the plaintiff might reply that the thing had been sold and delivered, and therefore was his in bonis. The Publician actio of the plaintiff, who had a civilis possession without having the thing in bonis, was not good against the owner, who had the right of a civilis possession in fact, without having it in bonis; and his action was good against another who had a civilis possession, for that possession was as good as his own. His action was good against a possessor who had not a civilis possession. In this action the plaintiff had to prove that he possessed civiliter before the time when he lost the possession. (Vid. Possessor.)

The object of the actio was the recovery of the thing and all that belonged to it. In the legislation of Justinian, the distinction between res inani
and nec manicpi was abolished, and ownership could in all cases be transferred by gift. The Publiciana actio, therefore, became useless for any other purpose than a case of house feudis posessio, and this seems to explain why the words "non a domino" appear in the edict as cited in the Digest, while they do not appear in Gaius. 2

The Publiciana actio applied also to servitutes, the right to which had not been transferred by mancipatio or in jure cessio, but which had been enjoyed with the consent of the owner of the land. As the legislation of Justinian rendered the old forms of trial that in the case of servitutes the Publiciana actio could then only apply to a case of possession.

PUBLICUM. (Vid. Publicani.)

PUBLICUM, PRIVATUM JUS. (Vid. Jus, p. 561.)

PUBLICUS AGER. (Vid. Agrariae Leges.)

PUBLILLAE LEX. In the consilium of L. Pinnarius and P. Furius, B.C. 472, the tribune Pubилиus Volesius proposed in the comitia to transfer the right of the tribes that the tribunes should in future be appointed in the comitia of the tribes (ut plebis magistrius tribunis comitis servent) instead of by the centuries, as had formerly been the case, since the clients of the patricians were so numerous in the centuries that the plebeians could not elect whom they wished. This motion was opposed by the boxers with whom the patricians who prevented the tribes from coming to any resolution respecting it throughout this year; but in the following year, B.C. 471, Pubилиus was re-elected tribune, and together with him C. Lactorinus, a man of still greater resolution than Pubилиus. Fresh measures were added to the former proposition: the ediles were to choose the tribunes by lot, and the decemvirs, as the publicans, and the tribes were to be competent to deliberate and determine on all matters affecting the whole nation, and not such only as might concern the plebs. 3 This proposition was still more violently resisted by the patricians than the one of the previous year; and, although the consul Appius used force, the tribes could not be prevented from passing the proposal they laid before the senate to receive the assent of that body; and, through the advice of the other consul, T. Quinctius, it received the sanction of the senate, and afterward of the curiae, and thus obtained the force of a law. Some said that the number of tribunes was now for the first time raised to five, having been only two previously.

PUBLILLAE LEGES, proposed by the dictator Q. Pubилиus Philo, B.C. 339. Niebuhr 4 thinks that the main object of these laws was to abolish the power of the patrician assembly of the curiae, and that they were carried with the approbation of the senate, which was opposed to the narrow-mindedness of the great body of the patricians. Great opposition was made, however, to have been expected; and, accordingly, the consuls Ti. Æmilius named his own colleague, Q. Pubилиus Philo, dictator, in order that the reforms might be carried with the authority of the highest magistracy in the state.

According to Livy, there were three Publiciana acts. The first is said to have enacted that plebeians should be allowed to plebisce (when thoseiores tenentes), which is to the same purport as lex Hortensia of B.C. 286. (Vid. Plebiscei.)

Niebuhr, however, thinks that the object of this law was to render the approval of the senate a sufficient confirmation of a plebisceum, and to make the confirmation of the curiae unnecessary. The second

1. (1, tit. 3, 1.—8., liv., 20, 1.—3., Dig. 6, tit. 2.—1.—1., 20, 1.—3., Dig. 6, tit. 2.—1.—1., 20, 1.—3.)—Savigny, Das Recht der Besitzungen.—4., Liv., 56.)
2. (Diurn., ix, 43.—Zonara, vii, 17, 6.—Liv., ii, 58.—Niebuhr, Hist. of Rome, ii, p. 211, &c.)—7. (Kossache Grosso, vii, p. 167.—173, 5.—viii, 1, 12.)

1. (Compare Arnold, Hist. of Rome, ii, p. 154, &c.)—2. (Paus., v, 8, 4.—Theocritus, xxiv, 113.—Apololod., iii, 6, 4.—Paus., v, 8, 3, 3.—Nem., viii, 69.—Hom., ii, xxiv, 69.—Vil. Ant., 3, 2, 2, &c., &c.)
2. (Paus., v, 8, 3, 3.—7. (Paus., vi, 4, 5, 6, 9.—Hom., ii, xxiv, 500.—Verg., Æn. v, 421.—Plut., Quo. 7.—Ohi Chrysost., Melanes, 8, ort. 29, 29, 22.)
3. (C. Chrysost., Serm., vii, 1.—Plut., Sympos., i, 5.—Compare Paus., vi, 12, 3, 3.)

And the law enacted: "ut legem qua comitibus centuriarum ferreterentur ante initionem patris auctoritatem.

By patres Livy here means the curiae; and, accordingly, this law made the confirmation of the curiae a mere formality in reference to all laws submitted to the comitia centuriata, since every law proposed by the senate to the centuries was to be considered to have the sanction of the curiae also. The third law enacted that one of the two censores should necessarily be a plebeian. Niebuhr supposes that there was also a fourth, which applied the Lictorian law to the praetorship as well as to the centuries, and provided that new censors should be elected each alternate year the praetor should be a plebeian.

PUGILATUS (παλιντα, πυγμη, πυγμαχον, πυγμασον.) Boxing. The fist (pugmus, πυγμαθος) being the simplest and most natural weapon, it may be taken for granted that boxing was one of the earliest athletic games among the Greeks. Hence gods and several of the earliest heroes are described either as victors in boxing or as heroes who received for boxing the Olympic games in Ol. 32, and for boys in Ol. 37. Contests in boxing for boys are also mentioned in the Nemean and Isthmian.

In the earliest times boxers (pugiles, πυγμαται) fought naked, with the exception of a στενα round their loins; but this was not used when boxing with the Greeks. The earliest cases, therefore, where boxing and racing had been carried on here by persons entirely naked ever since Ol. 15. Respecting the leathan thongs with which pugilists surrounded their fists, see Cestus, where its various forms are illustrated by woodcuts.

The boxing of the ancients appears to have resembled the practice of modern times. Some particulars, however, are distinguishable to be mentioned. A peculiar method, which required great skill, was not to attack the antagonist, but to remain on the defensive, and thus to wear out the opponent, until he was obliged to acknowledge himself to be conquered. It was considered a sign of the greatest skill in a boxer to conquer without receiving any wounds, or to have the Howard points in the direction of the wounds inflicted, and at the same time not to expose one's self to any danger (πληγη αι διαιτητι). A pugilist used his right arm chiefly for fighting, and the left as a protection for his head, for all regular blows were directed against the upper parts of the body, and the wounds inflicted upon the head were often severe and fatal. In some ancient representations of boxers, the blood is seen streaming from their noses, and their teeth were frequently knocked out. The ears especially were exposed to great danger, and with regular pugilists they were generally much mutilated and broken. Hence, in works of art, the ears of the pankrationists always appear beaten flat, and, although swollen in appearance, are yet smaller than ears usually are. In order to protect the ears from severe blows, little covers, called
The game of boxing was, like all the other gymnastic and athletic games, regulated by certain rules. Thus pugilists were not allowed to take hold of one another, or to use their feet for the purpose of making one another fall, as was the case in the pancratium. Cases of death, either during the fight itself or soon after, appear to have occurred rather frequently; but if a fighter wilfully killed his antagonist, he was severely punished. If both the combatants were tired without wishing to give up the fight, they might pause a while to recover their strength, and in some cases they are described as resting on their knees. If the fight lasted too long, recourse was had to a plan called 

\[ \text{PUPILLA'IES} \] 1

that is, both parties agreed not to move, but to stand still and receive the blows without using any means of defence except a certain position of the hands. The contest did not end until one of the combatants was compelled by fatigue, wounds, or despair, to draw himself up, and to throw off his

PYTHIAN GAMES (paia), one of the four great national festivals of the Greeks. It was cele-
PYTHIAN GAMES.

Once the Pythian games were held at Athens, on the oracle of Demeter at Eleusis (Ol. 132, 39), because the Delphoi were in possession of the passes around Delphi.

The Pythian games were, according to most legends, instituted by Apollo himself; other traditions referred them to ancient heroes, such as Amphictyon, Adrastus, Diomedes, and others. They were originally, perhaps, nothing more than a religious panegyris, occasioned by the oracle of Delphi, and the sacrifice of a ram; and it is said that a musical contest, which consisted in singing a hymn to the honour of the Pythian god with the accompaniment of the cithara. Some of the poets, however, and mythographers represent even the gods and the early heroes as engaged in gymnastic and equestrian contests at the Pythian games. But such statements, numerous as they are, can prove nothing; they are anachronisms in which later writers were fond of indulging. The description of the Pythian games in which Sophocles, in the Electra, makes Orestes take part, belongs to this class.

The Pythian games must, on account of the celebrity of the Delphic oracle, have become a national festival for all the Greeks at a very early period; and when Solon fixed pecuniary rewards for those Athenian poets who had first introduced equestrian and gymnastic contests, the Pythion was undoubtedly included in the number, though it is not expressly mentioned.

Whether gymnastic contests had been performed at the Pythian games previous to Ol. 47 is uncertain. Böckh supposes that these two kinds of games had been connected at the Pythia from early times, but that afterward the gymnastic contests were neglected; but, however this may be, it is certain that about Ol. 47 they did not exist at Delphi. Down to Ol. 48 the Delphians themselves had been the agonothetes at the Pythian games, but in the third year of this Olympiad, when, after the Cisian war, the Amphictyons took the management of the games, they naturally became the agonothetes.

Some of the ancients date the institution of the Pythian games from this time, and others say that henceforth they were called Pythian games. Owing to their being under the management of the Amphictyons, they are sometimes called Ἀμφικτυωνικὰ ἄθλα. From Ol. 48, 3, the Pythia were occasionally used as an era, and the Pythion was given over the first Pythiad. Pausanias expressly states that in this year the original musical contest in Κιθάροδια was extended by the addition of ἀθλιδία, i.e., singing with the accompaniment of the flute, and by that of flute-playing alone. Strabo, in speaking of these innovations, does not mention the θησαυροὶ, but states that the contests of cithara-players (κιθαριστά) was added, while Pausanias assigns the introduction of this contest to the eighth Pythiad.

One of the musical contests at the Pythian games, in which only flute and cithara-players took part, was the so-called νόμος Πάθησις, which, at least in subsequent times, consisted of five parts, viz., ιωύωνας, δύνασμα, καταλειπτόμενον ιμαντός καὶ θαλάσσαι. The whole of these νόμος was a musical description of the flight of Argus, accompanied by the dragon, and of his victory over the monster. A somewhat different account of the parts of this νόμος is given by the scholiast on Pindar, and by Pollux.

Besides these innovations in the musical contests which were made in the first Pythiad, the games were then customary at Olympia were either revived at Delphi, or introduced for the first time. The chariot-race with four horses was not introduced till the second Pythiad. Some games, on the other hand, were adopted, which had not yet been practised at Olympia, viz., the ἄλκυστος and the βάλλοντος for boys. In the first Pythiad the victors received χρυσάρια as pecuniary rewards; but the highest prize was established as the reward for the victors. The scholiast on Pindar reckons the first Pythiad from this introduction of the chariot, and their system has been followed by most modern chronologers, though Pausanias expressly assigns this institution to the second Pythiad. The ἄλκυστος, which was introduced in the first Pythiad, was omitted at the second and every after, as only elegies and ὕπαιθροι had been sung to the flute, which were thought too melancholy for this solemnity. The ἔρθριπτος, or chariot-race with four horses, however, was added in the same Pythiad. In the eighth Pythiad (Ol. 55, 3), the contest in playing the cithara without singing was introduced; in Pythiad 28, the foot-race in arms was added; in Pythiad 48, the chariot-race with two horses in arms (πύθαιδες) was performed for the first time; in Pythiad 59, the chariot-race with four foals was introduced. In Pythiad 61, the pancratium for boys; in Pythiad 63, the horserace with foals; and in Pythiad 69, the chariot-race with two foals, were introduced.

Various musical contests were also added in the course of time, and contests in tragedy, as well as in other kinds of poetry and in recitations of historical compositions, are expressly mentioned.

Works of art, as paintings and sculptures, were exhibited to the assembled Greeks, and prizes were awarded to those who had produced the finest works. The musical and artistic contests were at all times the most prominent features of the Pythian games, and in this respect they even excelled the Olympic games.

Previous to Ol. 48, the Pythian games had been an εὐανετρητις, that is, they had been celebrated at the end of every eighth year; but in Ol. 48, 3, they became, like the Olympia, a πενταετρητις, i.e., they were held at the end of every fourth year; and a Pythiad, therefore, ever since the time that it was established, consisted of four years, commencing with the third year of every Olympiad.

Others have, in opposition to direct statements, inferred from Thucydides that the Pythian games were held towards the end of the second year of every Olympiad. Respecting this controversy, see Kruise, i. c., p. 59, &c. As for the season of the Pythian games, they were, in all probability, held in the month of Νοέμβριος, which was supposed to be the same as the Attic Munychion. Böckh, however, has shown that the games took place in the month of Bucalidas, which followed after the month of Bysia, and that this month must be considered as the same as the Attic Munychion. The games lasted for several days, as is expressly mentioned by Thucydides.

When ancient writers speak of the day of the Pythian agon, they are probably thinking of the musical agon alone, which was the most important part of the games, and probably took place on the 7th of

writers, and are only known from coins or inscriptions, we shall only give a list of the places where they were held: Ancyra in Galatia, Aphrodisias in Caria, Antioch in Carthia in the island of Cos, Carthage, Chrysa in Phrygia, Delos, Emisa in Syria, Hierapolis in Phrygia, Magnesia, Megara, Mileitus, Naples in Italy, Nicaea in Bithynia, Nicomedia, Pergamus in Mysia, Perge in Pamphylia, Perinthus on the Propontis, Philippopolis in Thrace, Side in Pamphylia, Sicyon, Tabia in Caria, Thessalonic in Macedonia, in Thrace, Thyatira, and Trellas in Lydia, Tripolis on the Maeander, in Caria.

PYXIS, dim. PYXIDULA (πυξίς, dim. πυξίδου), a Jewel-box. Quintilian produces this term as an example of catachresis, because it properly denoted that which was made of box (πυξίς), but was applied to things of similar form and use made of any other material. In fact, the casks in which the ladies of ancient times kept their jewels and other ornaments, were made of gold, silver, ivory, mother-of-pearl, tortoise-shell, &c. They were also much enriched with sculpture. A silver coffers, 2 feet long, 1 ½ wide, and 1 deep, most elaborately adorned with figures in bas-relief, is described by Büttiger. The annexed woodcut (from

Ant. d'Ercolano, vol. ii., tab. 7) represents a plain jewel-box, out of which a dove is extracting a riband or fillet. Nero deposited his beard in a valuable pyxis when he shaved for the first time. (Vid. Barr. p. 138.)

The same term is applied to boxes used to contain drugs or poison, and to metallic rings employed in machinery. *PYXUS (πυξίς), the Boxwood-tree. (Vid Buxus.)

Q.

QUADRAGESIMA, the fortieth part of the imported goods, was the ordinary rate of the portorius. Avienus says that the quadragesima was abolished by Nero, and had not been imposed again (monet abolitio quadragesima); but it appears most probable that this quadragesima abolished by Nero was not the portorium, but the tax imposed by Caigula of the fortieth part of the value of all property respecting which there was any lawsuit. That the latter is the more probable opinion appears from the fact that we never read of any tax upon lawsuits after the time of Nero, while the former one is mentioned to the latest times of the Empire. Considerable difficulty, however, has arisen in consequence of some of the coins of Galba having Quadragesima Remissa upon them, which is supposed by some writers to contradict the passage of Tacitus, and by others to prove that Galba abolished the quadragesima of the portorium. The words, however, do not necessarily imply this: it was common, in seasons of scarcity and want, or as an act of special favour, for the emperors to remit certain taxes for a certain period, and it is

that the coins of Galba were struck in commemoration of such a remission, and not of an abolition of the tax. (See Burmann, De Vectig., p. 64, &c., who quotes the opinions of Spanheim, De Prsent. et Usur., vol. ii., p. 548.)

QUADRANS. (Vid. As, p. 111.)
QUADRANTAL. (Vid. Cursus.)
QUADRIGA. (Vid. Bravl., Currus.)
QUADRIGATUS. (Vid. Bigatus.)
QUADRUPES. (Vid. Pauperies.)

QUADRUPLATORES, public informers or accusers, were so called, either because they received a fourth part of the criminal's property, or because those who were convicted were condemned to pay fourfold (quadrisple dammari), as in cases of violation of the laws respecting gambling, usury, &c. We know that on some occasions the accuser received a fourth part of the property of the accused; but the other explanation of the word may also be correct, because usurers who violated the law were subjected to a penalty of four times the amount of the loan. When the general right of accusation was given, the abuse of which led to the springing up of the quadruplatores, in uncertain; but originally all fines went into the common treasury, and while that was the case, the accusations, no doubt, were brought on behalf of the state. Even under the Republic, an accusation of a public officer, who had merited it by his crimes, was considered a service to the state. But the right of quadruplatores seems to have been given by way of contempt to mercenary or false accusers. Seneca calls those who sought great returns for small favours Quadruplatores benefictorum suorum.

QUADRUPLIGATIO. (Vid. Accrò, p. 19.)

QUATIONES, QUATIONES PERPETUE. (Vid. Juris, p. 552; Paxtor, p. 806.)

Quaestiones per Petrum, i. p. 117. De Beatius given to two distinct classes of Roman officers. It is derived from quarto, and Varro gives a definition which assigns the principal functions of both classes of officers: "Quaestores a quadringento, qui conquerunt publicas pecunias et malecenas." The one class, therefore, had to do with the collecting and keeping of the public revenues, and the others were a kind of quaestor or paymasters, who, from the name of quaestores classicorum, the latter of quaestores parricidi.

The quaestores parricidi were, as we have said, public accusers, two in number, who conducted the accusation of persons guilty of murder or any other capital offence, and carried the sentence into execution. Respecting their confusion with the duumviri perduelliones, see Perduelliones Duumvirii. All moderns agree that these public accusers existed at Rome during the period of the kings, though it is impossible to ascertain by which king they were instituted, as some mention them in the reign of Romulus, and others in that of Numa. When Ulpian takes it for certain that they occurred in the time of Tullus Hostilius, he appears to confound them, like other writers, with the duumviri perduelliones, who in this reign acted as judges in the case of Horatius, who had slain his sister. During the kingly period there occurs no instance in which it could be said with any certainty that the quaestores parricidi took a part. As thus everything is so uncertain, and as the late writers are guilty of such manifest confusions, we can say no more than that such public accusers existed, and infer, from the analogy of later times, that they were appointed by the populus on the presentation of the king. In the early period of the Republic the quaestores parricidi appear to have been subject to the same conditions, which, like others, was held only for one year. They were appointed by the populus or the curies on the presentation of the consuls. When these quaestores discovered that a capital offence had been committed, they had to bring the charge before the comitia for trial. They convoked the comitia through the person of a trumpeter, who proclaimed the day of meeting from the Capitol, at the gates of the city, and at the house of the accused.

When the sentence had been pronounced by the people, the quaestores parricidi executed it; thus they threw Sparianus Cassius from the Tarpeian rock.

They were mentioned in the laws of the Twelve Tables, and after the time of the decemvirs they still continued to be appointed, though probably no longer by the curies, but either in the comitia centuriata or tribuna, which they therefore tributaria or tribunatu, which they therefore must also have had the right to assemble in cases of emergency. This appears to be implied in the statement of Tacitus, that in the year 447 B.C. they were created by the people without any presentation of the consuls. From the year 366 B.C. they are no longer mentioned in Roman history, as their functions were gradually transferred to the praetors. When the lictors were appointed, they were partly to the ediles and tribunes. (Vid. Ecles., Tribuna.)

The quaestores parricidi have not only been confounded with the duumviri perduelliones, but also with the quaestores classicorum, and this probably owing to the fact that they ceased to be appointed at such an early period, and that the two kinds of quaestores are seldom distinguished in ancient writers, and the names are sometimes exchanged.

The quaestores classicorum were officers intrusted with the care of the public money. Their distinguishing epithet classicorum is not mentioned by any ancient writer except Lydus, who, however, gives an absurd interpretation of it. Niebuhr refers it to their having been elected by the centuries ever since the time of Valerius Publicola, who is said to have himself instituted the quaestores, because, as he states, they were at first only in number, and, of course, taken only from the patricians. As the senate had the supreme administration of the finances, the quaestores were in some measure only its agents or paymasters, for they could not dispose of any part of the public money without being directed by the senate. Their duties consequently consisted in making the necessary payments from the arsarium, and receiving the public revenues. Of both they had to keep correct accounts in their tabula publica. Demands which any one might have on the arsarium, and outstanding debts, were likewise registered by them. Fines to be paid to the public treasury were registered and exacted by them. Another branch of their duties, which, however, was likewise connected with the quaestores classicorum, was the proper accommodations for foreign ambassadors, or such persons as were connected with the Republic by ties of public hospitality. Lastly, they were charged with the care of the burials and monuments of distinguished men, the expenses for which had been

decree by the senate to be defrayed by the treasury. In the erarium, and, consequently, under the superintendence of the questors, were kept the books in which the senatus consults were registered, while the original documents were kept in the keeping of the ediles, until Augustus transferred the care of them also to the questors.

In the year B.C. 421 the number of questors was doubled, and the tribunes tried to effect, by an amendment of the law, that a part (probably two) of the questors should be plebeians. This attempt was not successful, and the Senate, possibly to effect a compromise, that the election should not be restricted to either order. After this law was carried, eleven years passed without any plebeian being elected to the office of questor, until, in B.C. 409, three of the four questors were plebeians. A person who had held the office of questor had undoubtedly, as in later times, the right to take his seat in the Senate, the number of questors was again doubled, and they were worthy by the next successors. And this was probably the reason why the plebeians so determinately opposed the admission of plebeians to this office.

(Vid. Senatus.) Henceforth the consuls, whenever they took the field against an enemy, were accompanied by one questor each, who at first had only to advance and count the enemy, and then to count the money which was either divided among the legion, or was transferred to the erarium. Subsequently, however, we find that these questors also kept the funds of the army, which they had received from the treasury at Rome, and gave the soldiers their pay; they were, in fact, the paymasters in the army. This office of the quaestor at Rome, continued to discharge the same duties as before, and were distinguished from those who accompanied the consuls by the epithet urbanī. In the year B.C. 265, after the Romans had made themselves masters of Italy, and, when, in consequence, the administration of the treasury and the raising of the revenues became more laborious and important, the number of questors was again doubled to eight; and it is probable that henceforth their number continued to be increased in proportion as the Empire became extended. One of the eight questors was appointed by lot to the quaesturam Ostiensis, a most laborious and important post, as he had to provide Rome with corn when the province of that name was invaded by an army. These two quaestors, who usually resided at Ostia, where the other quaestors were distributed in Italy, to raise those parts of the revenue which were not farmed by the publicani, and to control the latter, were accompanied by their two quaestores; and the whole number of the quaestors at Rome was not mentioned, though it was probably of great importance, as the quaestors at Rome served as their treasury at Rome. Some quaestors were assigned to the quaestores after their election, who accompanied the army and were not included in the number of quaestors at Rome. The relation existing between a praetor or praetorius and his quaestor was, according to an ancient custom, regarded as resembling that between a father and his son. When a quaestor died in his province, the praetor had the right to appoint a quaestor in his stead; and when the praetor was absent, the quaestor supplied his place, and was then regarded as a quaestor in the province.

In the provinces, the quaestors had the same jurisdiction as the eurule adules at Rome. If a quaestor was appointed by lot to the quaesturam Ostiensis, which was the most laborious and important post, as he had to provide Rome with corn when the province of that name was invaded by an army.

"QUERCUS (qvh.), the Oak, or "Quercus (Linn. gen. 1447) specie omnis." On reading attentively, says Fée, "the different passages of Virgil where mention is made of the oak, it is easy to perceive that the poet refers to several species, the determination of which would not be an easy task. The kind of oak, however, which figures most commonly in his verses as the symbol of strength, and which, moreover, from its majestic beauty, was conse-

**QUINQUAGESIMA.**

The date referred to is a day of sacrifice by the God Quinquatrus; Quinquatrus, a Roman god who was celebrated on March 19th (a. d. XIX., Kal. Apr.), and was so

called, according to Varr0, because it was the fifth day after the ides, in the same way as the Tuscanians called a festival on the sixth day after the ides as Sessatur, and one on the seventh Septimatus. Gel-
lus4 and Festus5 also give the same etymology, and add the latter states that the Faliscans too called a festi-

Both Varro and Festus state that the quinquatrus was celebrated for only one day, but Ovid6 says that it was celebrated for five days, and was for this reason called by this name: that on the first day no blood was shed, but that on the last four there were contests of gladiators. It would appear, moreover, from the above-mentioned authorities, that the fifth day was sometimes, even by the Faliscans, cele-

The ancient calendars, too, assign only one day to the festival.

Ovid7 says that this festival was celebrated in commemoration of the birthday of Minerva; but, according to Festus, it was consecrated to Minerva be-

Because her temple on the Aventine was consecrated on that day. On the fifth day of the festival, ac-

According to ancient legends, the fruit of the oak served as nourishment for the early race of mankind. If this account be true, it must have been on the acorns of the Quercus ilex that the primitive race of mamkink supported themselves. They are still used as an article of food in certain countries in the south of Europe, and taste, when roasted, like chestnuts. In the year 1812, during the Peninsular War, the French troops cantoned in the environs of Salamanca, where immense forests of the Quercus ballota exist, lived for several days on the fruit of these trees.

The species of oak described by Theophrastus may be thus arranged: 1. the quercus fraxinifolia, 2. certain species of Quercus, 3. Quercus pedunculata (uncertain), 4. Quercus fraxinifolia, 5. Quercus ilex. The quercus ilex and Quercus pedunculata are both oak and Quercus ilex.

We are also told by Tacitus6 that Nero abolished the quinquagenaria; this must have been a different tax from the above-mentioned one, and may have been similar to the quinquagenaria mentioned by Ciceron7 and was called the quinquagenaria.

A duty of two per cent. was levied at Athens upon exports and imports. (Vid. Pentecoste.)

QUINQUATRUS or QUINQUATRIA, a festival sacred to Minerva, which was celebrated on the 19th of March (a. d. XIX., Kal. Apr.), and was so

MENASARI); the same number of commissioners was sometimes appointed to superintend the formation of a colony, though three (tribuni) was a more common number. (Vid. COLONIA, p. 269.)

We find, however, that the regulations for superintending the repairs of the walls and of the towers of the city, as well as for various other purposes.

Besides the extraordinary commissioners of this name, there were also permanent officers, called quinqueviri, who were responsible for the safety of the city after sunset, as it was inconvenient for the regular magistrates to attend to this duty after dark. (Cf. D.C.) They were often appointed after the war with Pyrrhus. 2

QUINTANA. (Vid. CAstra.)

QUINTITILIS. (Vid. Calendar, Roman.)

QUIRINALIA, a festival sacred to Quirinus, which was celebrated on the 17th of February (a. d. XIII, Cal. Mart.), on which day Romulus (Quirinius) was consulted. This festival was also called Stultorum feria, respecting the meaning of which, see FORNACIA.

QUIRINALIS FLAMEN. (Vid. Flamen.)

QUIRITIUM. (Vid. Citia, Roman; Jus, p. 561.)

QUO DUSSU, ACTIO. (Vid. Jusso, Quod.)

QUORUM BONORUM, INTERDICTUM. The object of this interdict is to give to the pretorian heres the possession of anything belonging to the hereditas which another possessors pro herede or pro possessoro. The name of this interdict is derived from the introductory words, and it runs as follows: "Actio. Quod dem vissera pro herede aut pro possessore posses, possideres si nihil usucapion est: quod uidem dolo malo facies, ut desineres possidere: id illi restituit." The plaintiff is entitled to this interdict when he has obtained the honorous possessio, and when any one of the four following conditions apply to the defendant.

1. Quod dem vissera pro herede aut pro possessore posses.
2. Aut pro possessore possides.
3. Possideres si nihil usucapion est.
4. Quod uidem dolo malo facies, ut desineres possidere.

The first two conditions are well understood, and apply, also, to the case of the hereditatis petitio. When the pretorian heres, according to law, had succeeded to the possessio of the deceased heredes, the petitio of the heir was interrupted by the first claim, the heres had no title to the interdict, as appears from its terms, for such a possessio was not included in No. 1 or 2. Hadrian, 4 by a senatus consultum, changed the law so far as to protect the heres against the complete usucapion of an improbus possessor, and to restore the right of the claimant. The words of Gaius are general, but within the range of the senatus consultum of Hadrian it could not apply to the usucapion of the bonorum possessors nor to that of the bonorum possessors.

According to the old law, any possessors, without respect to his title, could, by usucapion pro herede, obtain the ownership of a thing belonging to the hereditas; and, of course, the bonorum possessors were exposed to this danger as much as the heres. If the usucapion of the possessor was interrupted, the pretorian heres also succeeded to the possession of the heir, and the rei vindicatio; but, in fact, the "quod uidem," the reading "quodque," has been proposed, which seems to be required; for No. 4 has no reference to No. 3, but is itself a new condition. The words of No. 3 have caused some difficulty, which may be explained as follows.

In establishing the honorous possessio, the pretorian heres intended to give to many persons, such as emancipated children and cognati, the same rights that the heres had; and his object was to accomplish this effectually. The Roman heres was the representative of the person who had died and left an hereditas, and by virtue of this representative or juridical fiction of the person of the dead having a continued existence in the person of the heir, he exercised this right in respect to his property, and to all his rights and obligations. In the matter of rights and obligations the pretorian heres succeeded to the same situation as the heres, by allowing him to sue in respect of the claims that the deceased had, and allowing any person to sue him in respect of claims against the deceased, in an actio utilis or fictitia. In respect to the property, according to the old law any person might take possession of a thing belonging to the hereditas, and acquire the ownership of it in a certain time by usucapion. 1 The persons in whose favor the pretorian heres could do this as well as any other person; but if they found any other person in possession, and were not belonging to the hereditas, they could neither claim it by the vindicatio, for they were not owners, nor by the hereditatis petitio, for they were not heredes. To meet this difficulty, the interdict quorum bonorum was introduced, the object of which was to aid the bonorum possessors in getting the possession of real property, and to bring into the title of Marcus Aurelius, and commencing the usucapion. If he lost the possession before the usucapion was complete, he could, in most cases, recover it by the possessorial interdicts properly so called, or by other legal means. This, according to Saligny, is the origin of the bonorum possessors.

In course of time, usufruct ownership (in bonis) was fully established, and co-existent with Quiritarian ownership, this new kind of ownership was attributed to the bonorum possessors after he had acquired the bonorum possessio, and thus all that belonged to the deceased ex jure Quiritum became his in bonis, and finally, by usucapion, ex jure Quiritum, though in the mean time he had most probably changed his legal ownership to a senatus consultum.

Ultimately the bonorum possessio came to be considered as a species of hereditas, and the like forms of procedure to those in the case of the real hereditas were applied to the case of the bonorum possessio: thus arose the possessoria hereditatis petitio, which is mentioned by Gaius, and cannot, therefore, be of later origin than the time of Marcus Aurelius. Thus the new form of procedure, which would have rendered the interdict quorum bonorum unnecessary if it had been introduced sooner, co-existed with the interdict, and a person might avail himself of either mode of proceeding, as he found best. 2 In the legislation of Justinian we find both forms of procedure mentioned, though that of the interdict had altogether fallen into disuse. 3

According to the old law, any possessors, without respect to his title, could, by usucapion pro herede, obtain the ownership of a thing belonging to the hereditas; and, of course, the bonorum possessors were exposed to this danger as much as the heres. If the usucapion of the possessors was interrupted, the pretorian heres also succeeded to the possession of the heir, and the rei vindicatio; but, in fact, the "quod uidem," the reading "quodque," has been proposed, which seems to be required; for No. 4 has no reference to No. 3, but is itself a new condition. The words of No. 3 have caused some difficulty, which may be explained as follows.

1. Gaius, i., 58. 2. (Gaius, iii., 31.)—3 (Inst. iv., tit. 15.)—4. (Gaius, ii., 57.)

1. Gaius, ii., 58. —2. (Gaius, iii., 31.) —3 (Inst. iv., tit. 15.) —4. (Gaius, ii., 57.)
ALCEI GA ACTIO.

REDHIBTORIA ACTIO.

since that usuaption forms no part of it; yet the words have been retained in the compilation of Justinian, and many others belonging to an earlier age, though in their new place they are entirely devoid of meaning.

R.

•RAI, a species of fish, the Skate. (Vid. BATS.)

RAMNES, RANMENSES. (Vid. PATRICH.)

•RANA, the Frog (Vid. BATRACHUS.)

•RANOCULUS, a plant. (Vid. BATRACHION.)

RAPHANUS. (Vid. RAPHAIUS.)

RAPINA. (Vid. BONA KAPTA, FORTUM.)

RASTER or RASTRUM, dim. RASTELLUS, RALLUS, RALLUM (stortipis), a spud (vid. KATRI

NOS) a rake, a hoe.

Agreedly to its derivation from rado, to scrape, "raster" denoted a hoe which in its operation and in its simplest form resembled the scrapers used by our scavengers in cleansing the streets. By the division of its blades into tines or prongs, it assumed more of the form of our garden-rakes, and it was distinguished by the epithets bidens and quadridens, according to the number of the divisions.

The raster bidens was by far the most common species, and hence we frequently find it mentioned under the simple name bidens. This term corresponds to the Greek dicalian, for which quadri was substituted in the Attic dialect. Bidens was used to turn up the soil, and thus to perform, on a small scale, the part of a plough. But it was much more commonly used in the work called occatio and Balokotia, i.e., the breaking down of the clods after ploughing. (Vid. MALLEUS.) Hence it was heavy.

The prongs of the bidens held by the rustie in the woodent at p. 715 are curved, which agrees with the description of the same implement in Catullus.

Vine-dressers continually used the bidens in hacking and breaking the lumps of earth, stirring it, and collecting it about the roots of the vines. In stony land it was adapted for digging trenches, while the spade was better suited to the purpose when the soil was full of the roots of bushes and other plants. (Vid. PALA.) Wooden rakes were sometimes used.

RATIO NIBUS DISTRAHENDIS ACTIO. (Vid. TUTELA.)

RECEPTA; DE RECEPTO, ACTIO. The praetor declared that he would allow an action against nautes, canopos, and stabularis, in respect of any property for the security of which they had undertakings, and on the name of the action, if they did not restore it. The meaning of the term nautes has been explained (vid. EXEQUITORIA ACTIO): the meaning of caupo follows from the description of the business of a caupo. "A nauta, caupo, and stabularis are paid, not for the care which they take of a thing, but the naute is paid for carrying passengers, the caupo for permitting travellers to remain in his house, and the stabularis for allowing beasts of burden to stay in his stable and yet they are bound for the security of the thing also custodia nomine tenetur." The latter two actions are similar to such actions as arise among us against innkeepers and livery-stable-keepers, on whose premises loss or injury has been sustained with respect to the property of persons who they have

legal implication undertaken the care of. At first sight there seems no reason for these praetoria actions, as the person who has sustained loss might either have an actio locuta and conducti in cases where payment had been agreed on, or an actio de positi where no payment had been agreed on; but Pomponius suggests that the reason was this: in a matter of locatum and conductum, the receiver was only answerable for loss in case he was guilty of culpa; and in a matter of depositum, in case he was guilty of malus; but the receiver was liable to these praetoria actions if the thing was lost or injured even without any culpa on his part, and he was only excused in case of damnum fatale, such as shipwreck, piracy, and so forth.

These praetoria actions in fact were either "rei persecutoriae" for the recovery of the thing, or "pamelae" for damages. The former action might be maintained against the heres of the nauta, caupo, or stabularis. The executor of a ship was answerable for any loss or damage caused to property, which he had received in the legal sense of this term, by any person in his employment. The actio against him was in dupium. The liability on the part of capones and stabularia was the same: a caupo, for instance, was answerable for loss or damage to the goods of any traveller who lodged in his house, and by those who were dwelling in the caupo, but not if caused by other travellers. The actio for damages could not be maintained against the heres.

When parties who had a matter to litigate had agreed to refer it to an arbitrator, which reference was called compromissum, and a person had accepted the office of arbitrator (arbitrium receptetur), the praetor would compel him to pronounce a sentence, unless he had some legal excuse. The praetor could compel a person of any rank, as a consular, for instance, to pronounce a sentence after taking upon him the office of arbitrator; but he could not compel a person who held a magistrature or post, as a consul or praetor, for he had no imperium over them. The parties were bound to submit to the award of the arbitrator; and if either party refused to abide by it, the other had against him a poena petito, if a poena was agreed on in the compromissum; and if there was no poena in the compromissum, he had an incerti actio.

RECISSIO ACTIO. (Vid. INTERCESSIO, p. 542.)

RECEPHERATORES. (Vid. Actio, p. 18; Io

nex, p. 550.)

REDEMPTOR. The general name for a contract or who undertook the building and repairing of public works, private houses, &c., and, in fact, of any kind of work. The farmers of the public taxes were also called Redemptores.

REDHIBITORIA ACTIO was an actio which a buyer had against a seller for rescinding the bargain of sale on account of a defect in the thing purchased, which the buyer was not bound with, and which, according to the edict of the eur. ediles, he ought to have been acquainted with. "Redhibere," says Ulpian, "is so to act that the seller shall have back what he had; and because this is done by restoration, for that reason it is called 'redhibito,' which is as much as to say 'redhibe.'" The object of the redhibito was to rescind the bargain, and to put both parties in the same condition as if the sale had never taken place.

The time allowed for prosecuting the actio redhibitoria was "sex mensas utiles," which were reckon-

REDIMIC'ULUM (ka'derip), a fillet attached to the Calan'tica, Diadem, mitra, or other headdress at the occult, and passed over the shoulders so as to hang on each side over the breast. 1 Redimel- la, 13 in the statues of Venus they were imitated in gold. 4

REG. LEX. A lex regia during the keyng period of Roman history might have a twofold meaning. In the first place, it was a law which had been passed by the comitia under the presidency of the king, and was thus distinguished from a lex regia, which passed at a council not under the presidency of the tribunes celerum. In later times, all laws, the origin of which was attributed to the time of the kings, were called leges regiae, though by no means follows that they were all passed under the presidency of the kings, and much less, as some modern scholars have supposed, that they were enacted by the kings without the consent of the Senate. Some of these laws were preserved and followed at a very late period of Roman history. Livy 2 tells us, that after the city was burned by the Gauls, the leges regiae still extant were collected. 3 That they were followed at a much later period is clear from Livy. 4 Fragments of such laws are preserved in Festus, 5 Filo-

REGIFU'RIUM. The extent of lex curiata during the keyng period was undoubtedly the same as that of the lex curiata de imperio. (Vid. IMPERIUM.) This is, indeed, not mentioned by any ancient writer, but must be inferred from the lex regia which we meet with under the Empire, for the name could scarcely have been invented then; it must have come down from early times, when its meaning was similar, though not by far as extensive as under the Empire the curies continued to hold their meetings, though they were only a shadow of former times; and after the election of a new emperor, they conferred upon him the imperium in the ancient form by a lex curiata de imperio, which was now usually called lex regia. The imperium, however, did not consist in the exercise of the powers of a leges regiae, of course, but of an imperator, was of a very different nature from that which in former times it had conferred upon the kings. It now embraced all the rights and powers which formerly the populus Romanus had possessed, so that the emperor became what formerly the populus had been, that is, sovereign. Hence he could do what he chose in his capacity of imperator, which had formerly been done by the populus Romanus, and, at least, only with its sanction. 8 A fragment of such a lex regia, confering the imperium upon Vespasian, engraved upon a brazen tablet, is still extant in the Lateran at Rome. It is generally called, though wrongly, Senatus consultum de Vespasiani Imperio. It is copied in Ernesti, Excurs. ii. on Tacitus, vol. i., p. 604, &c., ed. Beckler. 9

10 REGIFU'RIUM or FUGA/LIA, the king v. flight, a festival which was held by the Romans every year on the 24th of February, and, according to Vergiuss 1 and Ovid, 2 in commemoration of the flight of King Tarquinius Superbus from Rome. The day is marked in the fasti as nefastus. In some ancient calendarii the 24th of May is likewise called Regifugium, and in others it is described as Q. C. P. that "quando rex comito fugit," or "quando rex comito fugit," Several ancient as well as modern writers have denied that either of these days had anything to do with the flight of King Tarquinius, 5 are of opinion that these two days derived their name from the symbolical flight of the rex saecorum from the comitium; for this was generally not allowed to appear in the comitium, which was not the transaction of political matters, in which he could not take part. But on certain days in the year, and certainly on the two days mentioned above, he had to go to the comitium for the purpose of offering certain sacrifices, and immediately after he had performed his functions there he hasty fled from Rome; and this symbolical flight was called Regifugium. 8

REGULA (ka'vov), the ruler used by scribes for drawing right lines with pen and ink; 9 also the rule used by carpenters, masons, and other artificers, either for drawing straight lines or making plane surfaces. That it was marked with equal spaces in our division of time into hours, is manifest from the representations of it among the ancient or ma- neta faburum tignatum, 10 in the woodcuts at pages 252, 664. The substance with which the lines were made was raddle or red ochre (μυρτος). (Vid. L. INE.)

The scale-beam is sometimes called ka'vov instead of GE'NIA. These two rows were sometimes fixed crossoways, in the form of the letter X, as a support for a piece of machinery. 6

REPETU'NDA or PECUNIA REPETU'NDA. Repetenda pecunia was the term used to designate such sums of money as the secli of the Roman state or individuals claimed to recover from magistrates, eminent persons, or others. It sometimes happened that they had improperly taken or received in the province or the urbs Roma, either in the discharge of their ju- risdiiction, or in their capacity of judges, or in respect of any other public function. Sometimes the word repetenda was used to express the illegal act for which compensation was sought, as in the phrase "repetendarum inanimari, damari," and pecunia meant the money due. Originally inquiry was made into this offence extra ordinem ex senatus consulto, as appears from the case of P. Furius Philus and M. Matienus, who were accused of this offence by the Hispani. 7 The first lex on the subject was the Calpurnia, which was proposed and carried by the tribunos plebis L. Calpurnius Piso (327 B.C.), who distinguished himself as an historical writer. By this lex a praetor was appointed for trying persons charged with this crime. 10 This lex only applied to provincial

magistratus, because in the year B.C. 141, according to Cicero, the lie offence in a magistratus urbans was the subject of a questio extra ordinem. It seems that the penalties of the lex Calpurnia were merely pecuniary, and, at least, did not comprise exsiliium for L. Lentulus, who was censor B.C. 147, had been convicted on a charge of repetundae in the previous year. The pecuniary penalty was asscertained by the litis estatim, or taking an account of the money which the convicted party had ill-gained.

Various cases De Repetundis were passed after the lex Calpurnia, and the penalties were continually made heavier. The lex Junia was passed probably about B.C. 126, on the proposal of M. Junius Pennis, tribunus plebis. It is probable that this was the lex under which C. Cato, proconsul of Macedo-nia, was living in exile at Terraco, for at least exsiliium was not a penalty imposed by the Calpur-nia lex, but was added by some later lex. This lex Junia and the lex Calpurnia are mentioned in the lex Servilia.

The lex Servilia Glaucia was proposed and carried by C. Servilius Glaucia, praetor, in the sixth consulship of Marius, B.C. 100. This lex applied to any magistrate who had improperly taken or received money from any private person; but a magistratus could not be accused during the term of office. The lex enacted that the praetor peregrinus should annually appoint 450 judges for the trial of this offence: the judges were not to be senators. The penalties of the lex were pecuniary and exssiliium; the law allowed a compensandio. Before the lex Servilia, the pecuniary penalty was simply restitution of what had been wrongfully taken; this lex seems to have raised the penalty to double the amount of what had been wrongfully taken, and subsequently it was made quadruple. Exsiliium was only the punishment in case a man did not abide his trial, but withdrew from Rome. Under this lex were tried M. Aquiliius, P. Rutilius, M. Securus, and Q. Metellus Numidicus. The lex gave the civitas to any person on whose complaint a person was convicted of repetundae. When Siganus was professor at Padua, he found in the library of Cardinal Benso two fragments of a Roman law on bronze, which, for reasons apparently sufficient, he considers to be fragments of this lex Servilia. The inscription, which is greatly mutilated, is given in the work of Siganus Dejusticiis, and has also been published by P. Gellée, 1856, but the writer has not seen the work of Klenze.

The lex Acilia, which seems to be of uncertain date, was proposed and carried by M. Acilius Glabrlio, a tribunus plebis, which enacted that there should be neither ampliatio nor compensandio. It is conjectured that this is the lex Caecilia mentioned by Valerius Maximus, in which passage, if the conjecture is correct, we should read Acilia for Caecilia. It has been doubted whether the Acilia or Servilia was first enacted, but it appears that the Acilia took away the compensandio which the Servilia allowed.

The lex Cornelia was passed in the dictatorial power of Sulla, and continued in force to the time of C. Julius Caesar. It extended the penalties of repetundae to consuls, it seems, as compensation for the provinciae, and to judges who received bribes, to those who whose hands the money came, and to those who did not give into the aerarium their proconsular accounts (proconsularis rationes). The praetor who presided over this questio chose the judges by lot from the senators, whence it appears that the Servilia lex was enacted by this lex, at least so far as related to the constitution of the court. This lex also allowed ampliatio and compensandio. The penalties were pecuniary (litis estatim) and the aquis ignis interdictio. Under this lex were tried L. Dolabella, Cn. Piso, C. Verres, C. Macer, M. For-teius, and Lucius Flaccus, the last two of whom were defended by Cicero. In the Vereine orations, Cicero speaks of the consequences of the compen-sandio and the hearing of the case which the lex Cornelia allowed, and refers to the practice under the lex Acilia, according to which the case for the prosecution, the defence, and the evidence were only heard once, and so the matter was decided. The last lex De Repetundis was the lex Julia, passed in the first consulship of C. Julius Caesar, B.C. 54. This lex consisted of numerous heads (capita), which have been collected by Sigonius. This lex repealed the penalty of exsiliium, but, in addition to the litis estatim, it enacted that persons convicted under this lex should lose their rank and be disqualified from being witnesses, judges, or senators. This is the lex which was commented on by the jurists, whose expousitions are preserved in the Digest and in the Code. This lex adopted some provisions that existed in previous leges, as for instance, that by which the money that had been improperly retained could be recovered from those into whose hands it could be traced. The lex had been passed when Cicero made his oration against Piso, B.C. 54. A. Gabinius was convicted under this lex. Many of its provisions may be collected from the oration of Cicero against Piso. Cicero boasts in his preface to his work on ludi sacri that there was no cost caused to the people by himself, his legati, quaestor, nor any one else; he did not even demand from the people what the lex (Julia) allowed him. Under the Empire, the offence was punishable with exile.

In Clinton's Fasti Hellenici, the lex Calpurnia is incorrectly stated to be the first law at Rome against bribery at elections. Brinay is Ambrus (Sigonius, De Justiciis, i., c. 27, to which subsequent writers have added very little.)

RESTITUTIO IN INTEGRUM, in the sense in which the term will here be used, signifies the re-sinding of a contract or transaction, so as to place the parties to it in the same position with respect to each other as if it had never been made. The restitution here spoken of is founded on the Edict. If the contract or transaction is such as not to be valid according to the jus civile, this restitution is not needed, and it only applies to cases of contracts and transactions which are not in their nature or form invalid. In order to entitle a person to the restitution, he must have sustained some injury caused by the inadmissibility of the contract or transaction, and not through any fault of his own, except in the case of one who is minor or malum animi, who was protected by the restitution against the consequences of his own carelessness. The injury, also, must be one for which the injured person has no other remedy.

824
RESTITUTIO IN INTEGRUM.

The restitution may either be effected on the complaint of the injured party, which would generally be made after the completion of the transaction, or when he is sued by the other party in respect of the transaction, and defends himself by an exceptio. The complaint, as a general rule, must be made within four years of the time of the injury being discovered, and the party being capable of bringing his action: in the case of minors, the four years were reckoned from the time of their attaining their majority. In the case of an exceptio there was no limitation of time. According to the old law, the complaint must be made within one year.

The application for a restitution could only be made to one who had jurisdiction, either original or delega-
ted, which flowed from the possession of the imper-
rium; and it might, according to the circumstances, be decreed by the magistratus extra ordinem, or the matter might be referred to a judex. When a resti-
tutio was decreed, each party restored to the other what he had received from him, with all its acces-
sories and fruits, except so far as the fruits on one side might be set off against the interest of money to be returned on the other side. All proper costs and expenses incurred in respect of the thing to be restored were allowed. If the object of the restitutio was a right, the injured party was restored to his right; or if he had incurred a duty, he was released from the duty.

The grounds for a restitution might be maintained by the person injured, by his heredes, cessionarii, and aurei; but, as a general rule, it could only be maintained against the person with whom the contract had been made, and not against a third person who was in possession of the thing which was sought to be recovered, except when the actio for restitution was adrogated, or in the actio scripta, or the injured party had an actio in rem, or when the right, which he had lost, was a right in rem.

The grounds of restitution were either those expressed in the Edict, or any good and sufficient cause: *item si qua alia mihi justa causa esse vide-
bitur: r. integram restitutum, quod ejus per leges ple-
bat. ejus quae comitatus consulata, edicta, decreta principum licet.*

The ground of the restitution was, that the party who had just cause of complaint had not bona fide consented to the contract or transaction by which he was injured. The following are the chief cases in which a restitution might be decreed:

1. When a man had acted under the influence of force, or reasonable fear caused by the acts of the other party, he had an actio quod mutus causa for restitution against the party who was the wrong-doer, and also against an innocent person who was in possession of that which had thus illegally been got from him, and also against the heredes of the wrong-doer if they were enriched by the property and had not sustained any injury of their own in the transaction, he could defend himself by an exceptio quod mutus causa. The actio quod mutus was given by the prae
tor L. Octavius, a contemporary of Cicero. 3

2. The case of dolus. When a man was fraudulently induced to become a party to a transaction which was legal in all of the party being fraudulently induced, his acti
da dolce male against the guilty person and his heredes, so far as they were made richer by the fraud, for the restoration of the thing of which he had been defrauded, and, if that was not possible, for compensation. Against a third party who was in bona fide possession of the thing, he had no ac-
tion, if he was sued in respect of the transaction, he could defend himself by the exceptio coli mah (Vid. Culpa). 4

The case of minores xxx, annorum. A minor could by himself do no legal act for which the as
sent of a tutor or curator was required, and, there
fore, if he did such act by himself, no restitution was necessary. If the tutor had given his auctoritas, or the curator or his agent, the transaction was legally binding, but yet the minor had not restitution if he had sustained injury by the transaction. Gaius gives an example when he says that, if too large an amount was inserted in the condemnatio of the forum, the matter is set right by the prae
tor, or, in other words, *"causa in integram restituturium;"* but if too little was inserted in the formula, the prae
tor could not make any alteration; *"for,"* he adds, "the prae
tor more readily relieves a defendant than a plaintiff; but we except the case of minores xxx.

There were, however, cases in which minores could obtain he was entitled to a restitution, either a minor, with fraudulent design, gave himself credit to be a major; when he confirmed the transaction after becoming of age; and in other cases. The benefit of this restitution belonged to the heredes of the mi
nor, and generally, also, to suriates. The demand could only be made, as a general rule, against the person with whom the minor had the transaction and his heredes. The minor had forever or when attaining his majority in which he could sue. The older law allowed only one year. If the time had not elapsed when he died, his heredes had the benefit of the remaining time, which was reckoned from the time adeundi hereditatem; and if the heredes was a minor, from the time of his attaining his majority. (Vid. leges xxv.

The case of absentia: which comprehends not merely absence in the ordinary sense of the word, but absence owing to madness or imprisonment, and the like causes. 5 If a man had sustained injury by his own absentia, he was generally entitled to resti
tutio if the absentia was unavoidable: if it was not unavoidable, he could not recover, unless he could have no redress from his procurator, or was not blamable for not having appointed one. If a man found that he might sustain damage on ac
count of the absence of his adversary, he might avoid that by entering a protestation in due form.

The case of error, mistake, comprehends such errors as were mistakes adropagisci; and in such case, a man could always have restitution when another was enriched by his loss. The errors cause probatio somewhat resembles this case.

The case of capitia diminutio through adrogatio or in manum conventio, which was legally followed by the extinction of all the obligations of the per
son adrogated or in manum. The prae
tor restored to the one, the other, what he had received, either in good faith or not, as the case might be with the possessor, which had thus alienated, the prae
tor gave an actio in factum against the alienor to the full value of the thing. If a man assigned a claim or right with the view of injuring his adversary by giving him a harder claimant to deal with, the adversary could meet the assignee, when he sued, with an exceptio judicii mutandae causa.

1. (Cod. 1., tit. 53, s. 7.)—2. (Dig. 4, tit. 6, s. 1.)—3. (Com-

R 851
The case of alienation in fraudem creditorum facta. 1 When a man was insolvent (non solvendo), and alienated his property for the purpose of injuring his creditor, the praetor's edict gave the creditor a remedy. If, for instance, a debt was paid post bona possesso, it was absolutely void, for the effect of the bonorum possesso in the case of insolvenzy was to put all the creditors on the same footing. If any alienation was made before the bonorum possesso, it was valid in some cases. A debtor might reject anything which was for his advantage, for the praetor's edict related only to the diminishment of his property, and not to its increase. If the act was such as to diminish his property (fraudationis causa), the creditors, as a general rule, were entitled to have the act undone. A creditor who exacted his just debt was entitled to retain it. The act by which the creditors destroyed the effect of an illegal alienation was called pauliana, which was brought by the curator bonorum in the name of the creditors, for the restoration of the thing which had been improperly aliened, and all its fruits. The creditors were also entitled to an interdictum fraudatorum in order to get possession of the thing that had been improperly aliened. 2

In the imperial times, restitutio was also applied to the remission of a punishment, which could only be done by the imperial grace. 3

RESTITUT'RIA ACTIO. (Vid. Inessiceps, p. 542.)

RETTA'RII. (Vid. Gladiatores, p. 476.)

RETTICULUM. (Vid. Calantia.)

RETTIS, and RETE, dim. RETICULUM (bikrinos), a Net. Nets were made most commonly of flax from Egypt, Calicia, the vicinity of the Cinyrs in North Africa, and some other places. Occasionally a material of which nets were keneces called lina (Liva) on account of the material of which they consisted. 4 The meshes (macule, 7 δισκος, dim. δισκοτε 4) were great or small, according to the purposes intended, and these purposes were very various. But by far the most important application of network was to the three kindred arts of fishing, hunting, and fishing; and besides the general terms used in reference to all these employments, there are special terms to be explained under each of these heads. 5

I. In fishing, the use of nets was comparatively limited; 6 nevertheless, thrushes were caught in them; 7 and doves or pigeons, with their limbs tied up or fastened to the ground, or with their eyes covered or put out, were confined in a net, in order that the net in not, in order that the net could not escape. 8 The ancient Egyptians, as we learn from the paintings in their tombs, caught birds in clap nets. 9

II. In hunting, it was usual to extend nets in a curved line of considerable length, so as to form in part a space into which the beasts of chase, such as hare, the boar, the deer, the lion, and the bear were driven, even through the opening left on one side. 10 This is the case of hunting-nets by which feathers dyed scarlet and of other bright colours were tied, so as to flare and flutter in the chase. The hunters then sallied forth with their dogs, disabled the animals from their coverts, and by shouts and barking drove them first within the formido, as the apparatus of string and feathers was called, and then, as they were scared with this appearance within the circuit of the nets. Splendid descriptions of this scene are given in some of the following passages, all of which allude to the spectaculous closure of network. 11 The accompanying woodcuts are taken from two bas-reliefs in the collection of ancient marbles at Ince-Blundell in Lancashire. In the uppermost figure, three servants with staves carry on their shoulders a large net, which is intend ed to be set up as already described. 12 The foremost servant holds by a leash a dog, which is eaged to pursue the game. In the middle figure the net is set up. At each end of it stands a watchman holding a staff. 13 Being intended to take such large quadrupeds as boars and deer (which are seen within it), the meshes are very wide (rete vasta). The net is supported by three stakes (σταλίκες, apnea, vari). To dispose the nets in this manner was called retia poner, or retia tendere. Comparing with the stature of the attendants, we perceive the net to be between five and six feet high. The upper border of the net consists of a strong rope, which was called σαμβον. 14 The figures in the following woodcut represent two men carrying the net home after the chase; the stakes for supporting it, two of which they hold in their hands, are torned at the top, as is expressed by the terms for them [already quoted], ancomes and vari.

Besides the nets used to enclose woods and coverts, or other large tracts of country, two additional kinds are mentioned by those authors who treat on hunting. All the three are mentioned together by Xenophon (διστρυς, δισθαν, δικεν, ii.), and by Ne meion. 15

The two additional kinds were placed at intervals in the same circuit with the large hunting-net or haye. The road-net (plaga, δικεν) was much less than the others, and was placed across "roads and narrow openings between bushes. The purse or tunnel net (κοσσις, δαμε) was made with a bag (κοράφωσ), intended to receive the animal when closed towards the extremity of the enclosure. Within this bag, if we may so call it, were placed branches of trees, to keep it expanded, and to decoy

---

the animals by making it invisible. The words ἄγων καὶ σαστὶs are used metonymically to denote some certain method of destruction, and are more particularly applied, as well as ἀμφίβλητον, which will be explained immediately, to the large-bawl in which Cybele herself enveloped her husband in order to murder him.¹

III. Fishing-nets (αἰσθετικά ἄχτακτα) were of six different kinds, which are enumerated by Oppian² as follows:

Τῶν τε μὲν ἀμφίβλητων, τὰ δὲ γράφων καλύτερα, Ἡγαγγήμα Δ', ὡν' ὑποχαι περίπεται, ἢδε σαστὶν, ἧν αἳλλα δὲ κηλευκόν καλύτερα.

Of these, by far the most common were the ἀμφίβλητον, or casting-net (fuscunda, jactulum, reticulum), and the σαστὶ, i.e., the drag-net or sean (tragum),² tragula, nescula, Concla. Of these two the only kinds mentioned by Virgil³ and by Ovid.⁴ Of the καλύτερα we find nowhere any further mention. We are also ignorant of the exact form and use of the γράφων, although its comparative utility may be inferred from the mention of it in connection with the sean and casting-net by Artemidorus⁵ and Plutarch (πηγὶ εἴδουσί). The γράφων was a landing-net, made with a hoop (κύκλος) fastened to a pole, and perhaps provided also with the means of closing the circular aperture at the top.⁶ The metaphorical use of the term ἀμφίβλητον has been already mentioned. That it denoted a casting-net may be concluded both from its etymology and from the fact that it was mentioned by various authors.⁷ More especially the casting-net, being always pear-shaped or conical, was suited to the use mentioned under the article CONEPRÆM. Its Latin names are found in the passages of Virgil's Georgics, and of the Vulgate Bible above referred to, in Plautus,⁸ and in Isidorus Hisp.⁹ It was probably derived from the Latin (which is also mentioned by various authors.¹¹ More especially the casting-net, being always pear-shaped or conical, was suited to the use mentioned under the article CONEPRÆM. Its Latin names are found in the passages of Virgil's Georgics, and of the Vulgate Bible above referred to, in Plautus,¹² and in Isidorus Hisp.¹³ Isid. Hist. Orig. xix. 5. — The use of nets (φίλαθλος, corices substræ)¹² to support the top, and of leads (φυλακηλία) at the bottom, is frequently mentioned by ancient writers.¹⁴ and is clearly exhibited in some of the paintings in Egyptian tombs. Leads, and pieces of wood serving as floats instead of corks, still remain on a sean which is preserved in the fine collection of Egyptian antiques at Berl.

REV. (Fid. Actol: Obligationes, p. 675.)

rex sacrif. rex sacrificulus

rex sacrif. rex sacrificulus

or REX SACRIF. For the civil and military powers of the king were transferred to two priests or consuls, upon the establishment of the kingdom of Rome. The Romans, however, were not invested with that part of the royal dignity by virtue of which he had been the high-priest of his nation, and had conducted several of the sacra rebus, but this priestly part of his office was trans-ferred to a priest called rex sacrifcus or rex publicanus.¹ The first sacro saern was designated, at the time of the consuls, the first pontifex, pontiffs, and inaugurated by the augurs. He was always elected and inaugurated in the comitia curiata, under the presidency of the pontiffs; ² and, as long as a rex sacrifcus was appointed at Rome, he was always a patrician, for as he had no influence upon the management of political affairs, the ple- beians never coveted this dignity.³ But, for the same reason, the patricians, top, appear at last to have at- tributed little importance to the office, whence it sometimes occurs that for one, or even for two suse- cessive years, no rex sacrifcus was appointed, and during the civil wars in the last period of the Repub- lic, the office appears to have fallen altogether into disuse. Augustus, however, seems to have revived it, for he never mentions it during the Em-}
ent the latter from appearing as prosecutor against him on the subject of the embassy to Philip.  

RHETRA (ῥέτρα). (Vid. Nomos.)

RHINE (ρήνη), the Squillus squatina, called in English the Monk or Angel Fish. Rondelet states that the monkfish will sometimes weigh 160 lbs. Pennant remarks that this fish connects the genera of the Ray and Shark.
RINGS.

early as the time of Solon, to wear rings with precious stones on which the figures were engraved, may justly be doubted; and it is much more probable that at that time the figures were cut in the metal of the ring itself, a custom which was never abandoned altogether. Rings without precious stones were called ἀρετοί, the name of the genus being ψῆφος or σφραγῖς. In later times rings were worn more as ornaments than as articles for use, and persons now were no longer satisfied with one, but wore two, three, or even more rings; and instances are recorded of those who regularly loaded their hands with rings. Greek women likewise used rings, and those above mentioned were frequently worn by women also appear to have been less costly than those of men, for some are mentioned which were made of amber, ivory, &c. Rings were mostly worn on the fourth finger (παρισμάτωσα). The Lacedaemonians are said to have used iron rings at all times. With the exception, perhaps, of Sparta, the law does not appear to have been confined to a particular order or class of citizens.

The custom of wearing rings was believed to have been introduced at Rome by the Sabines, who were said to be of Greek parentage. Ancient rings with precious stones (γεμματοι ἀνυσίδ) of great beauty. Florus states that it was introduced from Etruria in the reign of Tarquinius Priscus, and Pliny derives it from Greece. The fact that among the statues of the Roman kings it: the Capitol, two, Numa and Servius Tullius, were depicted in rings, and there was an argument for their early use, as later artists would naturally represent the rings with such signs as were customary for the highest magistrates in later times. But, at whatever time rings may have become customary at Rome, thus much is certain, that at first they were always of iron; that they were destined for the same purpose as in Greece, namely, to be used as seals; and that every free Roman had a right to use such a ring. This iron ring was used down to the last period of the Republic by such men as served the simplicity of the good old times. Marius wore an iron ring in his triumph over Jugurtha, and several noble families continued it as the ancient custom, and never wore golden ones.

When senators, in the early times of the Republic, were sent as ambassadors to a foreign state, they wore, during the time of their mission, golden rings, which they received from the state, and which were, perhaps, adorned with some symbolic representation of the Republic, and might serve as a state seal. But later they died out. As an ambassador used his ring as a public; in private they used their iron ones. In the course of time it became customary for all the senators, chief magistrates, and at last for the equites also, to wear a golden seal-ring. This right of wearing a golden ring, which was subsequently called the jus annulii auri, or the jus annulum, remained for several centuries in a perfect exclusion of senators, magistrates, and equites, while all other persons continued to use iron ones. Magistrates and governors of provinces seem to have had the right of conferring upon

RINGS.

paintings. Martial speaks of it under the name of Ricinum. *

*RHYTROS (ρητρός), a plant, which many of the commentators on Theophrastus, &c., and Spence and Stockhouse among the rest, conclude to have been the Echinos, L. But, "as Schneider remarks, it is better, with Baulin, to admit our ignorance of it, than indulge in unfounded conjectures." (Orig., xiii. p. 180.)

RICINUM, RECINUM, or RECINUS, an article of dress. The name was, according to Festus, applied to any dress consisting of a square piece of cloth. It occurs in a fragment of the "Twelve Tables," and the ancient commentators, according to Festus, explained the word there as a toga for women (if the headings Lat. rings be right) of a kind of virilem togam), with a purple stripe in front. That it was an article of female dress, and more especially a small and short kind of pallium, is stated by Nonius, on the authority of Varro. It was worn in grief and mourning, and in such a manner that one half of it was thrown back, whence the ancient grammarians derive the word from refere, although it is manifestly a derivative from rice, which was a covering of the head used by females. The grammarians appear themselves to have had no clear idea of the ricinium; but, after careful examination of the passages above referred to, it appears to have been a kind of mantle, with a sort of cowl attached to it, in order to cover the head. It was also worn by mimes upon the stage; and the mavourtio, mavorpe, or mavors of later times, was thought to be only another name for what had formerly been called ricinium.

RINGS (δακτυλία, annuli). Every freeman in Greece appears to have used a ring; and, at least in the earlier times, not as an ornament, but as an article of use, as the ring always served as a seal. How ancient the custom of wearing rings among the Greeks was cannot be ascertained, though it is certain, as even Pliny observes, that in Homer the poems there are no traces of it. In works of fiction, however, and those legends in which the customs of later ages are mixed up with those of the earliest times, we find the most ancient heroes described as wearing rings. But it is highly probable that the custom of wearing rings was introduced into Greece from Asia, where it appears to have been almost universal. In the time of Solon, seal-rings (sphragides), as well as the practice of counterfeiting them, appears to have been rather common, for Diogenes Laërtius speaks of a law of Solon which forbade the artists to keep the form of a seal (sphragis) which he had sold. (Pliny, H. N., xxiii. 4.—19. (Fris., i., 17, 6); xix. 40.)

RINGS.

inferior officers, or such persons as had distinguished themselves, the privilege of wearing a golden ring. Verres thus presented his secretary with a golden ring in the assembly at Syracuse. 3. During the Empire, the right of granting the annulus aureus belonged to the emperor himself. In 100 B.C. there were not very scrupulous in conferring this privilege. Augustus gave it to Mona, a freedman, and to Antoninus Musa, a physician. 4. In A.D. 22 the Emperor Tiberius ordained that the golden ring should only be worn by those ingenui whose fathers and grandfathers had had a property of 400,000 sesterces, and not by any freedman or slave. 5. But this restriction was of little avail, and the ambition for the annulus aureus became so great that it had been before. 6. The emperors Severus and Aurelian conferred the right of wearing golden rings upon all Roman soldiers; 7 and Justinian at length allowed all the citizens of the Empire, whether ingenui or libertini, to wear such rings.

The status of a person who had received the juss annuli appears to have differed at different times. During the Republic and the early part of the Empire, it seems to have been a person of ingenuus (if he was a libertinus), and to have raised him to the rank of eques, provided he had the requisite equestrian census, and it was probably never granted to any one who did not possess this census. Those who lost their property, or were found guilty of criminal offences, lost the juss annuli. 8. This privilege was conferred, for example, upon Hadrian, who was expected from the equestrian, the privilege was bestowed upon a great many freedmen, and such persons as did not possess the equestrian census, who therefore, for this reason alone, could not become equites; nay, the juss annuli, at this late period, did not even raise a freedman to the station of ingenuus: he only became, as it were, a half ingenuus (quasi ingenuus), that is, he held a public office, and might at any future time be raised to the rank of eques. The lex Visellia 9 punished those freedmen who sued for a public office without having the juss annuli aurei. In many cases a libertus might, through the juss annuli, become an eques if he had the requisite census, and the princes allowed it; but the annulus itself no longer included this honour. This difference of status between libertus, who was to be clear also, from the fact that women received the juss annuli, 10 and that Alexander Severus, though he allowed all his soldiers to wear the golden ring, yet did not admit any freedmen among the equites. 11 The condition of a libertinus who had received the juss annuli was in the main as follows: Hadrian had laid down the general maxim that he should be regarded as an ingenuus sado sua jure patris. 12 The patrons had also to give his consent to his freedman accepting the juss annuli, and Commodus took the annulus away from those who had received it without this consent. 13 Hence a libertinus with the annulus might be tortured if, e. g., his patron died an unnatural death, as, in case of such a libertinus dying, his patron might succeed to his property. The freedmen hated this; during his lifetime, only an imago libertatis; he was a quas ingenuus, but had not the status of an ingenuus, 14 and he died quasi libertus. In the reign of Justinian these distinctions were done away with. Isidorus 15 is probably alin-

ding to the period preceding the reign of Justinian when he says that freemen wore golden, freedmen silver, and slaves iron rings.

The practical purposes for which rings, or, rather, the figures engraved upon them, were used at all times, were the same as those for which we use our seals. Residues, however, persons, where they left their houses, used to seal up such parts as contained stores or valuable things, in order to secure them from thieves, especially slaves. 1 The ring of a Roman emperor was a kind of state-seal, and the emperor sometimes allowed the use of it to such persons as he wished to be regarded as his representatives. The keeping of the imperial rings was an office of state, it was called annulius. 2 The signs engraved upon rings were very various, as we may judge from the specimens still extant: they were portraits of ancestors or friends, subjects connected with the mythology or the worship of the gods; and in many cases a person had engraved upon his seal symbolic allusions to the real or mythical history of his family. 3 Sulla took a ring with a gem, on which Jugurtha was represented, 4 and Augustus at first sealed with a sphinx, afterward with a portrait of Alexander the Great, and at last with his own portrait, which was subsequently done by several emperors. 5 The principal value of a ring consisted in the gem framed in it, or, rather, in the workmanship of the engraver. The stones most commonly used were rubies, sapphires, emeralds, and diamonds, on account of their various colours, of which the artists made the most skilful use. In the art of engraving figures upon gems, the ancients, in point of beauty and execution, far surpass everything in this department that modern times can boast of. The ring itself (σαφήνα), in which the gem was framed, was, likewise, in many cases, of admirable workmanship. The part of the ring which contained the gem was called pala. (Vid. Pala.) In Greece we find that some persons fond of show used to wear hollow rings, the inside of which was filled up with a less valuable substance. 6 With the increasing love of luxury and show, the Romans, as well as the Greeks, covered their fingers with rings. Some persons also wore rings of precious stones, and others used different rings for summer and winter. 7 Much superstition appears to have been connected with rings in ancient as well as in modern times; but this seems to have been the case in the East and in Greece more than at Rome. Some persons made it a lucrative trade to sell rings which were believed to possess some powers, and to preserve those who wore them from external dangers. Such persons are Eudamias in Aristophanes, 8 and Phratetus in Antiphanes. 9 These rings were for the most part worn by the lower classes, and then not of costly material, as may be inferred from the price (one drachma) in the two instances referred to. There are several celebrated rings with magic powers mentioned by the ancients writers, as that of Gygges, which he found in a grave, 10 that of Chalcis, 11 and the iron rings of Euricuc.
ROSTRA.

ROBIGA'LIA, a public festival in honour of the god Robigus, to preserve the fields from mildew, is said to have been instituted by Numa, and was celebrated a. d. VII., Kal. Mat. (April 25th). 1 The sacrifices offered on this occasion consisted of the entrails of a dog and a sheep, accompanied with frankincense and wine: a prayer was presented by a flamen in the grove of the ancient deity, whom Ovid and Columella make a goddess. 2 A god Robigus or a goddess Robigo is a mere invention from the name of this festival, for the Romans paid no divine honours to evil deities. 3

Vere Curt., an epitaph applied to the Oak:—(Vid. Qurvkm.)

ROGATI0. (Vid. Lex. p. 590.)

ROGATI0NES LICINiLi. 4 In the year B.C. 375, C. Licinius Stolo and L. Sextius, being elected two of the tribuni plebis, promulgated various rogations, the object of which was to weaken the power of the patricians and for the benefit of the plebe. One rogatio was to have the words of on of the tribuni plebis was encumbered; 5 and it provided that all the money which had been paid as interest should be deducted from the principal sum, and the remainder should be paid in three years by equal payments.

The second related to the ager publicus, and enacted that no person should occupy (possessaret) more than 600 jugera. The words and act carried on that no more tribuni triumvirum should be elected, but that consuls should be elected, and one of them should be a plebeian. The patricians prevented these rogations from being carried by inducing the other tribes to oppose their intercession. C. Licinius Stolo and L. Sextius retaliated in the same way, and also had an interdict made against the remaining tribe. They were re-elected tribuni plebis, and they persevered for five years in preventing the election of any curule magistratus.

In the year 368, the two tribes were still elected, for the eighth time, and they felt their power increasing with the diminution of the opposition of the patricians. The first rogatio had given them a hold on one of the tribuni militum, M. Fabius, the father-in-law of C. Licinius Stolo. After violent agitation, a new rogatio was promulgated to the effect that, instead of duumviri sacris faciundis, decemviri should be elected, and that half of them should be plebeians. In the year B.C. 366, when Licinius and Sextius had been re-elected, the latter of them was murdered, and in this law the word was passed as to the decemviri, and five plebeians and five patricians were elected, a measure which prepared the way for the plebeians participating in the honours of the consuls. The rogations of Licinius were finally carried, and in the year B.C. 365 L. Sextius was elected consul, being the first plebeian who attained that dignity. The patricians were compensated for their loss of the exclusive right to the consulship by the creation of the office of curule aedile and of praefectus.

The law as to the settlement between debtor and creditor was, if Livy is correct, to be literally understood, an invasion of the established rights of property. Niebuhr's explanation of this law is contained in his third volume, p. 309, and is generally received.

Besides the limitation fixed by the second lex to the number of jiggers which an individual might possess in the public land, it declared that no individual should have above 100 large and 500 smaller animals on the public pastures. Licinius was the first who fell under the penalties of his own law.

The statement is that "he, together with his son, possessed a thousand jugera of the ager (publicus) and, by emancipating his son, had acted in fraud of the law." 6 From this story it appears that the plebeians could now possess the public land, a right which they may have acquired by the law of Licinius; but there is no evidence on this matter. The story is told also by Columella, 7 Pliny, 8 and Valerius Maximus. 9 The last writer, not understanding what he was recording, says that, in order to conceal his violation of the law, Licinius emancipated part of the land to his son. The facts, as stated by Livy, are not put in the clearest light. But it is certain that Licinius was entitled to possess 500 jugera as the father, and if he bona fide possessed that quantity of the ager publicus, there was no fraud on the law. From the expression of Pliny (substituta fili persona), the fraud appears to have consisted in the emancipation of his son being effected solely that he might in his own name possess the land, while his father had the actual enjoyment. But the details of this lex are too imperfectly known to enable us to give more than a probable solution of the matter. As the object of the lex was to diminish the possessiones of the patricians, it may be assumed that the surplus land thus acquired was distributed (assignatam) among the plebeians, who on otherwise would have gained nothing by their increased number. A distribution of land is stated to have been part of the lex of Licinius by Varro 10 and Columella. 11

According to Livy, 12 the rogatio de decemviris sacrum in was carried first B.C. 366. The three other rogations were included in one lex, which was a lex Satura. 13

B.C. 364. These passages referred to, the reader may see Niebuhr, vol. iii., p. 1–36, for his view of the Licianian rogations; and Götting, Geschichte der Röm. Staatsverfassung, p. 354, and the note on the corrupt passage of Varro (De Re Rust., i., 2).

ROGATORES. (Vid. Diihrortes.)

ROGOS. (Vid. Fonos, p. 460.)

ROMPIEA. (Vid. Hiera, p. 489.)

ROBATII, a class of light-armed Roman soldiers. According to Niebuhr, 14 robari must originally have been the name for slingers, who were taken from the fifth class of the Servian census. The grammarians, probably with justice, derive the word from ros and vorare, as their attacks upon the enemy with their slings and stones were regarded as a devouring of the enemy. According to this etymology, robari would be slingers or solitary drops of rain precede a heavy shower. The literal translation of robari, therefore, would be drippers or sprinklers. 15 In later times, and even as early as the time of Plautus, the name was applied to the light-armed hastati. 16 and as this latter name supplanted that of robari, who, according to the later constitution of the army, no longer existed in it in their original capacity, the robari are not mentioned in later times. (Compare Army, Roman, p. 104.)

*ROSA, the Rose. (Vid. Rhodon.)

*ROSMARiNUS. (Vid. Liranoi.)

ROSTRA, or The Beaks, was the name applied to the large (suggestus) barks which were the most famous of the galleys of Rome. This stage was originally called templum, 17 because it was consecrated by the augurs, but obtained its name of rostra at the conclusion of the great Latin war, when it was adorned with the beaks (rostra) of the ships of the Auliques. 18 The Greeks also mutilated galleys in a similar manner. 19

5. (Liv., viii., 34.)

10. (Livy, viii., 34.)
the same way for the purpose of trophies: this was called by them ἀσπορήματα. (Vid. Acroterium.)

The rostra lay between the comitium or place of meeting for the curies, and the Forum or place of meeting for the tribies, so that the speaker might turn either to the one or the other; but, down to the time of Calus Graccuses, even the tribies, in speaking, used to front the comitium; he first turned his back to it, and spoke with his face towards the Forum.¹ The form of the rostra has been well described by Niebuhr and Bunsen;² the latter supposes "that it was a circular building, raised on arches, with a stand or platform on the top bordered by a parapet, the access to it being by two flights of steps, one on each side. It fronted towards the comitium, and the rostra were fixed to the front of it, just under the arches. Its form has been, in all the main points, preserved in the ambones, or circular pulpits of the most ancient churches, which also had two flights of steps leading up to them, one on the east side, by which the preacher ascended, and another on the west side for his descent. Specimens of these old churches are still to be seen at Rome in the churches of St. Clement and S. Lorenzo fuori le mura." The speaker was thus enabled to walk to and fro while addressing his audience.

The suggestion or rostra was transferred by Julius Caesar to a corner of the Forum, but the spot where the ancient rostra had stood still continued to be called Rostra Vetera, while the other was called Rostra Novae. Rostra Novae, as the rostra contained statues of illustrious men;³ the new rostra contained equestrian statues of Sulla, Pompey, J. Caesar, and Augustus.⁴ Niebuhr discovered the new rostra in the long wall that runs in an angle towards the three columns, which have for a very long time borne the name of Jupiter Stator, but which belong to the Curia Julia. The substance of the new rostra consists of bricks and casting-work, but it was, of course, cased with marble: the old rostra Niebuhr supposed were constructed entirely of peperino.

The following cut contains representations of the rostra from Roman coins, but they give little idea of their form: the one on the left hand is from a denarius of the Lollia gens, and is supposed to represent the old rostra, and the one on the right is from a denarius of the Sulpicia gens, and supposed to represent the new rostra.⁶

ROSTRATA COLUMNAR. (Vid. Columna, p. 290.)

ROSTUM. (Vid. Ships.)

ROTA. (Vid. Corona, p. 331.)

RUDATA. (Vid. Pyneus.)

RUBRIA LEX. (Vid. Lex., p. 585.)

*RUDENS (καλεῖς, dim. καλεσένθε), any rope used to move or fix the mast or sail of a vessel, more especially: 1. The ropes used to elevate or depress the mast, and to keep it firm and steady when elevated, were called rudentes, in Greek προτόροτοι. These ropes extended from the higher part of the mast towards the prow in one direction, and to the stern in the other. 2. The sail was also called rudentes. Those used to raise or lower the yard. (Vid. Artenna.)⁷ According to the ancient scholia, these ropes are the κάλαμοι mentioned in Od., v., 260. III Those fastened to the bottom of the sail at its two corners, and therefore called rodes;¹ Before setting sail, these ropes, which our seamen call the sheaths, would lie in a coil or bundle. In order, therefore, to depart, the first thing was to unroll or untie them (excutere), the next to adjust them according to the direction of the wind and the aim of the voyage. With a view to fill the sail and make it expose the largest surface, they were let out, which was called inmittere or laxare. ² "Lazate rudentes" among the Romans was equivalent to "Ease the sheaths." with us. IV. Those used in towing (πλοῦς ἀπὸ καλέο), as when the oars became useless in consequence of the size of the ship. ³

In a more extended sense, the terms rudens and rudentes were applied to ropes of any description.⁴ In the comedy of Plautus it is applied to the rope with which a fisherman drags his net.

RUDERATIO. (Vid. House, Roman, p. 519.)

RUDIA RIL. (Vid. Gladiatores, p. 478.)

RUDIS. (Vid. Gladiatores, p. 476.)

RUDUC (Vid. House, Roman, p. 476.)

The plane, which is delineated among jointers' tools (Instrument. Fabr. Vignar.), in the woodcut at p. 664, showing the stock with two holes for the hands, and the iron (ἰεύρη) very long, but inclined as in our planes, seems to be of that narrow kind which is adapted to make grooves, rebates, or beads (κλεφτος). The square hole in the right side of the stock seems intended for the passage of the shaving (ῥονσκίον). It is certain that the shavings of firwood, produces by such a plane as that here exhibited, would precisely answer to Pliny's description of them, likening them to curbs of human hair and to the tendrils of the vine.⁵ The Latin and Greek names for this instrument gave origin to the corresponding transitive verbs runcino and runcanum, meaning to plane.⁶ Pliny speaks of "runcina, a cutting instrument referring to the operation of those beasts and birds which use their snout or beak to plough up the ground.

RUFILE LEGES. (Vid. Lex., p. 585.)

RUTILIANA ACTIO was a pretorian acio introduced by the praetor Publius Rutilius, by virtue of which the bonorum emporium could sue in the name of the person whose goods he had bought, and claim the condemnation to be made in his own favour and in his own name.¹

RUTRUM, dim. RUTELLOM, a kind of hoe, which had the handle fixed perpendicularly into the middle of the blade, thus differing from the Rata. It was used before sowing to level the ground, by breaking down every clods which adhered too long together. ¹This operation is described by Virgil in the following terms, which also assign the derivation of the name: "Cumulatoque virilis pingues arco..."
SACREDOS.

The same implement was used in mixing lime or clay with water and straw to make plaster for walls.

The word *rutabulum* ought to be considered as another form of *rurum*. It denoted a hoe or rake of the same construction, which was used by the baker in stirring the hot ashes of his oven. A wooden rutabulum was employed to mix the contents of the vats in which wine was made.

S.

"SACCHARUM (σάκχαρον), Sugar. 'The ancient Sugar, called also 'the Honey of Reeds' and '1', was made by boiling certain reeds, more especially on the bamboo cane (*Bambusa arundinacea*). It would appear that Moses Cherrennessis, in the fifth century, is the first author who distinctly mentions our sugar, that is, the sugar procured by boiling from the sugarcane. The first mention of the bamboo cane is made by Herodotus, and then by Ctesias. 1

The word sugar is a diminutive that signifies a small place consecrated to a god, containing an altar, and sometimes, also, a statue of the god to whom it was dedicated. 2 Festus 3 completes the definition by stating that a sacellum never had a roof. It was, therefore, a sacred enclosure, surrounded by a fence or wall to separate it from the profane world. 4 The form of a sacellum was sometimes square and sometimes round. The ancient sacellum of Janus, which was said to have been built by Remus, was of a square form, contained a statue of the god, and had two gates. 5 Many Romans had private sacella on their own estates; but the city conceded to certain persons the honor of having a sacella, such as that of Caecus, 6 of Hercules in the Forum Boarium; 7 of the Lares; 8 of Naenia, 9 of Pudicitia, 10 and others.

SACERDOS, SACERDOTTUM. Cicero 11 distinguishes two kinds of sacerdotes; those who had the superintendence of the forms of worship (carmine) and of the sacra, and those who interpreted signs, being either by living persons or by persons.

Another division is that into priests who were not devoted to the service of any particular deity, such as the pontiffs, augurs, fetiales, and those who were connected with the worship of a particular divinity, such as the flamines. The priests of the ancient world did not consist of men alone, for in Greece, as well as at Rome, certain deities were only attended by priestesses. At Rome the wives of particular priests were regarded as priestesses, and had to perform certain sacred functions, as the regina sacrum and the flaminia. (Vid. Flamen, Äx Sacram.) In other cases maids were appointed priestesses, as the vestal virgins, or boys, with the augural functions, to which their fathers and mothers should be alive (patri et matrim). As all the different kinds of priests are treated of separately in this work, it is only necessary here to make some general remarks.

In comparison with the civil magistrates, all priests at Rome were regarded as honories privati, 12 though all of them, as priests, were sacerdotes publici, in as far as their office (sacerdotium) was connected with any worship recognised by the state. The appellation of sacerdos publicus was, however, given principally to the chief pontif and the flamen dialis, 13 who were, at the same time, the only priests who were members of the senate by virtue of their office. All priestly offices or sacerdotia were held for life. None required any civil magistrate to be capable of their person as long as they lived; hence the augurs and fraters arvalis retained their character even when sent to exile, or when they were taken prisoners. 14 It also occurs that one and the same person held two or three priestly offices at a time. Thus we find the three dignities of pontifex maximus, augur, and decemvir sacrum united in one person, and certain persons being incapable of the same gens were not allowed to be members of the same college of priests. This regulation, however, was in later times often violated or evaded by adoptions. 15 Bodily defects prevented, at Rome as among all ancient nations, a person unfit for holding any priestly office.

An interesting historical note is that the original patricians, but from the year B.C. 367 the plebeians also began to take part in the sacerdotia (vid. plebs, p. 794); and those priestly offices which, down to the latest times, remained in the hands of the patricians alone, such as that of the rex sacrum, the flamines, aediles, and others, had no influence upon the affairs of the state.

A few words are necessary concerning the ancient unamniously state that at first they were appointed by the kings, 16 but after the sacerdotia were once instituted, each college of priests—for nearly all priests constituted certain corporations called collegia—had the right of filling up the occurring vacancies by co-optatio. (Vid. Pontifex, page 790.) Other priests, on the contrary, such as the vestal virgins and the flamines, were appointed by the people (capituli pontifex) by the pontifex maximus, a rule which appears to have been observed down to the latest times; others, again, such as the duumvir sacrum, were elected by the people or by the euri, the euri, et cetera. But, in whatever manner they were appointed, all priests, after their appointment, required to be inaugurated by the pontiffs and the augurs, and to perform the latter alone. 17 Those priests who formed colleges had originally, as we have already observed, the right of co-optatio; but in the course of time they were deprived of this right, or, at least, the co-optatio was reduced to a mere form, by several leges, called leges De Sacerdotis, such as the lex Do- rica, 18 which prohibited all priests from marrying, and which is in the article Pontifex, page 790, &c.; and what is there said in regard to the appointment of pontiffs, applies equally to all the other colleges. The leges annales, which fixed the age at which persons became eligible to the different magistracies, had no reference to priestly offices; and on the whole, it may be said that the rubricas was regarded as the time after which a person might be appointed to a sacerdotium 19

ed and regulated by the pontiffs. We shall then speak of the sacra publica.

SACRA PUBLICA. Among the sacra publica the Romans reckoned not only those which were performed on behalf of the whole Roman people, but also those performed on behalf of the great subdivisions of the Roman community. For example, Festus expresses, "pro montantis, pagis, curia, sacellis." The sacra pro montibus et pagis are undoubtedly the sacra montanalia and paganalia, which, although not sacra of the whole Roman people, were yet publica. The sacella in the expression of Festus, sacra pro sacellis, appear only to indicate the places where some sacra publica were performed.

When we come to consider the case, it is that they were performed at the expense of certain public funds, which had to provide the money for victims, libations, incense, and for the building and maintenance of those places where they were performed. The funds set apart for the sacra publica were in the keeping of the pontiffs, and the sacrae sunt

Such an obligation was in later times evaded in various ways.

And the sacra privata were reckoned also the sacra municipalia, that is, such sacra as a community or town had been accustomed to perform before it had received the Roman franchise. After this event, the Roman pontiffs took care that they were continued in the same manner as before.1 (Compare Sacristium.)

SACRISTIUM. (Vid. Vindicale.)

Sacrificium was, according to the definition of Ulpian,2 any place in which sacred things were deposited and kept; whether this place was a part of a temple or of a private house. A sacrarium, therefore, was that part of a house in which the images of the penates were kept. Respecting the sacrarium of the lares, see Lararium. Public sacraria at Rome were: one attached to the Temple of the Capitoline Jupiter, in which the tense, or chariots for public processions, were kept;4 the place of the salii, in which the ancellia and the liramus of Romulus were kept,3 and others. In the time of the emperors, the name sacrarium was sometimes applied to a place in which a statue of an emperor was erected.5 Livy6 uses it as a name for a sacred retired place.

SACRATAE LEGES. (Vid. Lex, p. 585.)

SACRIFICIUM (liptó;). Sacrifices or offerings formed the chief part of the worship of the ancients. They were partly signs of gratitude, partly a means of propitiating the gods, and partly, also, intended to induce the deity to bestow some favour upon the sacrificer, or at least to make him prosper. If this was the sacrifice was offered. Sacrifices in a wider sense would also embrace the Donaria; in a narrower sense, sacrificia were things offered to the gods, which merely afforded momentary gratification, which were burned upon their altars, or were believed to be consumed by the gods. We shall divide all sacrifices into two classes: those attached to the Temple of the bloody sacrifices, and, where it is necessary, consider Greek and Roman sacrifices separately.

Bloody sacrifices.—As regards sacrifices in the earliest times, the ancients themselves sometimes imagined that unholy sacrifices, chiefly offerings of fruit, had been customary long before bloody sacrifices were made. The act of sacrifice, indeed, was denied, that sacrifices of fruit, cakes, libations, and the like, existed in very early times; but bloody sacrifices, and, more than this, human sacrifices, are very frequently mentioned in early story; in fact, the mythology of Greece is full of instances of human sacrifices being offered, and of their pleasing the gods. Wachsmuth7 has given a list of the most celebrated instances. It may be said that none of them has come down to us with any degree of historical evidence; but surely the spirit which gave origin to those legends is sufficient to prove that human sacrifices had nothing repulsive to the ancients, and must have existed to some extent. In the historical times of Greece, we find various occasions upon which human sacrifices were made. In several parts of Greece, which can only be accounted for by supposing that they were introduced as substitutes for human sacrifices. In other cases, where civilization had shown less of its softening influences, human sacrifices remained customary throughout the historical periods of Greece, and down to the time of the emperors. Thus, in the worship of Apollo at Arcadia, where human sacrifices were said to have been offered by Lycurgus,4 they appear to have continued till the time of the Roman emperors. In Leneas a person was every year, at the festival of Apollo, thrown from a rock into the sea;2 and Themistocles, before the battle of Salamis, is said to have sacrificed three Persians to Dionysus. Respecting an annual sacrifice of human beings at the festival of the gods of Phrygia, the exceptions, however, human sacrifices had ceased in the historical ages of Greece. Owing to the influences of civilization, in many cases animals were substituted for human beings, in others a few drops of human blood were thought sufficient to propitiate the gods.4 The custom of sacrificing human life to the gods are undoubtedly from the belief, which, under different forms, has manifested itself at all times and in all nations, that the nobler the sacrifice, and the dearer to its possessor, the more pleasing it would be to the gods. Hence the frequent instances in Grecian story of persons sacrificing their own children, or of persons devoting themselves to the gods of the lower world. In later times, however, persons were in many cases sacrificed with the general criminals who had been condemned to death, or such as had been taken prisoners in war.

That the Romans also believed human sacrifices to be pleasing to the gods might be inferred from the story of Curtius, and from the self-sacrifice of the Decii. The symbolic sacrifice of human figures made of wax, which the Roman emperors (Aurelian) also shows that in the early history of Italy human sacrifices were not uncommon. For another proof of this practice, see the article Varr Sacrum. One awful instance also is known, which belongs to the latest period of the Roman Republic. When the soldiers of J. Caesar attempted an insurrection at Rome in the year 49, two of them were sacrificed to Mars in the Campus Martius by the pontifes and the flamens Martialis, and their heads were stuck up at the regia.

A second kind of bloody sacrifices were those of animals of various kinds, according to the nature and character of the divinity. The sacrifices of animals were the most common among the Greeks and Romans, and were made partly in Latin hostia or victimæ. In the early times it appears to have been the general custom to burn the whole victim (skókasté) upon the altars of the gods, and the same was in some cases, also, observed in later times,7 and more especially in sacrifices to the gods of the lower world, and such as were offered to avenge some crime that had been committed.8 But, as early as the time of Homer, it was the most general practice to burn only the legs (yaojí, yapi, μήπα) enclosed in fat, and certain parts of the intestines, while the remaining parts of the victim were consumed by men at a festive meal. The gods delighted chiefly in the smoke arising from the burning of the feet and hands. From this avarice and crime, the more pleasing was the sacrifice. Hence it was not uncommon to offer a sacrifice of one hundred bulls (keatogra) at once, though, it must not be supposed that a hecatomb always signifies a sacrifice of a hundred bulls, for the name was used in a general way to designate any great sacrifice. Such great sacrifices were not less pleasing to men than to the gods, for in regard to the former they were, in reality, a donation of meat. Hence, at Athens, the

partially for such sacrifices rose to the highest degree.1

Sparta, on the other hand, was less extravagant in sacrifices; and while in other Greek states it was necessary that a victim should be healthy, beautiful, and uninjured, the Spartans were not very scrupulous in this respect. The animals which were sacrificed were mostly of the domestic kind, as bulls, cows, sheep, rams, lambs, goats, pigs, dogs, and horses; but fishes are also mentioned as pleasing to certain gods. Each god had his favourite animal, and like them best of all was the sacred pig.2 It may be considered as a general rule, that those animals which were sacred to a god were not sacrificed to him, though horses were sacrificed to Poseidon notwithstanding this usage.3 The head of the victim, before it was killed, was in most cases strewed with roasted barley-meal (σάλλησις or σιλησία) mixed with salt (moda salis). The Athenians used for this purpose only barley grown in the Persian plain.4 The persons who offered the sacrifice wore generally garlands round their heads, and sometimes, also, carried them in their hands, and before they touched anything belonging to the sacrifice they washed their hands in water. The victim itself was likewise adorned with garlands, and its horns were sometimes gilt. Before the animal was killed, a bunch of hair was cut from its forehead and offered as a present to the heavens; and in later ages, the high-priests of their people, killed the victim; in later times this was done by the priests themselves. When the sacrifice was to be offered to the Olympic gods, the head of the animal was drawn heavenly (see the woodcut in p. 19); when to the gods of the lower world, to heroes, or to the dead, it was drawn downward. When the victim was to be used as an offering, to a god or to a hero, both the blood and incense were thrown upon it,6 and prayers and music accompanied the solemnity.

The most common animal sacrifices at Rome were the suovetaurilia or solstitialia, consisting of a pig, a sheep, and an ox. They were performed in all cases of a lustration, and the victims were carried around the thing to be lustrated, whether it was a city, a people, or a piece of land. (Vid. Lus- tratio.) The Greek ἱερά, which likewise consisted of an ox, a sheep, and a pig, was the same sacrifice as the Roman suovetaurilia.9 The customs observed before and during the sacrifice of an animal were, on the whole, the same as those observed in Greece.10 But the victim was in most cases not killed by the priests who conducted the sacrifice, but by a person called popintus, who struck the animal with a hammer before the knife was used.11 The better parts of the intestines (exta) were strewed with barley-meal, wine, and incense, and were burned upon the altar. Those parts of the animal which were burned were called *prosecta, prosicis, or ablegmina. When a sacrifice was offered to gods of rivers or of the sea, these parts were not burned, but thrown into the water.12 The word ἱερά is by no means the name which the ancients made of sacrifices to learn the will of the gods, vid. Haruspex and Divinatio.

Unbloody sacrifices.—Among these we may first mention the libations (libationes, ἱεβοται or σφόνδας). We have seen above that bloody sacrifices were usually accompanied by libations, as wine was poured upon them. Libations always accompanied a sacrifice which was offered in concluding a treaty with a foreign nation; and that here they formed a prominent part of the solemnity, is clear from the fact that this was a special libation called σπάνιον. But libations were also made independent of any other sacrifice, as in solemn prayers,1 and on many other occasions of public and private life, as before drinking at meals, and the like. Libations usually consisted of unmixed wine (εὐποτοδερα, maru), but sometimes also of milk, honey, and other fluids, either pure or diluted with water.4 Incense was likewise an offering, and sometimes a libation of bloody sacrifices, but it was also burned as an offering for itself. Real incense appears to have been used only in later times;1 but in the early times, and afterward various kinds of fragrant wood, such as cedar, figne, and myrtle-wood, were burned upon the altars of the gods.13

A third class of unbloody sacrifices consisted of the libationes stibatrices. The Romans mostly offered to the gods as primates or tithes of the harvest, and a sign of gratitude.1 They were sometimes offered in their natural state, sometimes, also, adorned or prepared in various ways. Of this kind were the εἰραστια, an olive-branch wound around with wool, and hung with various kinds of fruits; the χιτηρια, or pots filled with cooked beans (vid. Φανερια); the κέρπον or κέρφα, or dishes with fruit; the θυρης, or Acer, which was served to the gods. A list of those offerings cannot be found in the accounts of the various festivals. Cakes (πέλαναι, πήματα, τόπανα, ibidum) were peculiar to the worship of certain deities, as that of Apollo. They were either simple cakes of flour, sometimes also of wax, or they were made in the shape of some animal, and were then offered as symbolical sacrifices in the place of real animals, or because they could not easily be procured, or were too expensive for the sacrificer.8 This appearance, instead of reality, in sacrifices was also manifest on other occasions, for we find that sheep were sacrificed instead of stages, and were then called stages; and in the Temple of Isis at Alexandria the priests used water of the river Tiber instead of Nile water, and called the former water of the Nile.9

SACRIFICIUM is the crime of stealing things consecrated to the gods, or things deposited in a consecrated place.1 A lex Julia, referred to in the Digest,10 appears to have placed the crime of sacrilege on an equality with peculium. (Vid. Pecori- lurus.) Several of the imperial constitutions made death the punishment of a sacrilegus, which consisted, according to circumstances, either in being thrown to the beasts, or being burned, or having their heads cut off. Paulus says, in general, that a sacrilegus was punished with death; but he distinguishes between such persons as robbed the sacra publica and such as robbed the sacra privata, and he is of opinion that the latter, though more than common thieves, yet deserve less punishment than the former. In a wider sense, sacrilege was used by the jurists for actions forbidden by religion or of anything which should be treated with religious reverence.11 Hence a law in the Codex12 states that any person is guilty of sacrilege who neglects or violates the sanctity of the divine law. Another law13 decreed that even a doubt as to whether a person appointed by an emperor to some office was worthy of this office, was to be regarded as a crime equal to sacrilege.
other Homeric epithet, viz., "three-tongued" (τριτυλός), is illustrated by the forms of the arrow-heads, all of bronze, which are represented in the annexed woodcut. That which lies horizontally

was found at Persepolis, and is drawn of the size of the original. The two smallest, one of which shows a rivet-hole at the side for fastening it to the shaft, are from the plain of Marathon. The fourth specimen was also found in Attica. The use of barbed (aduncus, hemate) and poisoned arrows (venenata sagittae) is always represented by the Greek and Roman authors as the characteristic of barbarous nations. It is attributed to the Sauromates and Getes, to the Servii and Scythians, and to the Arabs and Moors. When Úlysses wishes to have recourse to this insidious practice, he is obliged to travel north to the country of the Thresprotians; and the classical authors who mention it do so in terms of condemnation. Some of the northern nations, who could not obtain iron, barbed their arrow-heads with bone. The poi son applied to tips of the arrows having been called toxicon (τοξικόν), on account of its connexion with the use of the bow, the signification or this term was afterward extended to poisons in general.

The excellence of the shaft consisted in being long, and at the same time straight, and, if it were of light wood, in being well polished. But it often consisted of a smooth cane or reed (Arundo donax or Phragmites, Linn.), and on this account the whole arrow was called either arundo in the one case, or calamus in the other. In the Egyptian tombs reed-arrows have been found, varying from 34 to 22 inches in length. They show the slit (χλιφός) cut in the reed for fixing it upon the string.

The feathers are shown on ancient monuments of all kinds, and are indicated by the terms penae, penata sagittae, and πτερωτές ἀείνων. The arrows of Hercules are said to have been feared from the wings of a black eagle.

Besides the use of arrows in the ordinary way, they were sometimes employed to carry fire. Octavius attempted to set Antony's ships on fire by sending ἀργυρούς σφόνδυλος from the bows of his archers. A headress of small arrows is said to have been used.
beaten by the Indians,1 the Nabians and Egyptians, and other Oriental nations.2

In the Greek and Roman armies, the sagittarius, more anciently called argyrites, i.e., archers or bowmen,3 formed an important part of the light-armed infantry.4 They belonged, for the most part, to the allies, and were principally Cretans.5 (Vid. Arcus, Curtius, Phæretta, Tormentum.)

SALGMINA were the same as the Verbenas, namely, herbs torn up by their roots from within the city, called the Capitoline, which were always carried by the fetiales or ambassadors when they went to a foreign people to demand restitution for wrongs committed against the Romans, or to make a treaty. (Vid. Fetiales.) They served to mark the sacred character of the ambassadors, and answered the same purpose as the Greek epikria.6 Pliny7 also says that sagmina were used in rematris publicis. This custom, or the custom of Tyburn setting out to make a treaty or declare war. He connects it with the words sanctus and sanctire, and it is not at all impossible that it may contain the same root, which appears in a simpler form in sacr- or sac-men, sa(-n)c: Marcus, however, makes a ridiculous mistake when he derives sanctis from sagmina.

Müller8 thinks that aumenium is the same word as sagmen, although used respecting another thing by the Ancientus3.

SAGMINA was the cloak worn by the Roman soldiers and inferior officers, in contradiction to the paludamentum of the general and superior officers. (Vid. Paludamentum.) It is used in opposition to the toga or garb of peace, and we accordingly find that, when there was a war in Italy, all citizens put on the sagum, even in the city, with the exception of those of consular rank (saga sumere, ad sagam ven, in sagis esse:9) hence, in the Italic war, the sagum was worn for two years.10

The sagum was open in the front, and usually fastened across the shoulders by a clasp, though not always:11 it resembled in form the paludamentum (see woodcuts, p. 721), as we see from the specimen of a pair of Tyburn setting out to make a treaty or declare war. He connects it with the words sanctus and sanctire, and it is not at all impossible that it may contain the same root, which appears in a simpler form in sacr- or sac-men, sa(-n)c: Marcus, however, makes a ridiculous mistake when he derives sanctis from sagmina.

Müller8 thinks that aumenium is the same word as sagmen, although used respecting another thing by the Ancientus3.

The cloak worn by the northern nations of Europe is also called sagum: see woodcut, p. 171, where three Sarmatians are represented with sagus, and compare Pallium, p. 719. The German sagum is mentioned by Tacitus:12 that worn by the Gauls seems to have been a species of plaid (meris-color sagulum).13

The outer garment worn by slaves and poor persons is also sometimes called sagum.14

SALAMANDRA (σαλαμάνδρα), the Salamander, or Lacerta Salamandra, a batrachian reptile of the second family of the serpents, and constituting the type of a distinct genus. "To have some idea of its figure," says Buffon, "we may suppose the tail of a lizard applied to the body of a frog." For a full and accurate account, however, of this reptile and its peculiar structure, the reader is referred to Grifith's Cuvier. The popular belief that the salamander is proof against the action of fire, or to which Aristotle is guilty of giving some countenance) is now entirely exploded. According to Sprengel, the only foundation for this belief is the fact that the reptile emits a cold, viscid secretion from its body, which might be capable of extinguishing a small coal. Dioscorides states decidedly that it is not true that the salamander can live in fire. "The salamander," says Griffith, "takes and abides in the humid earth, in the trenched woods of high mountains, in ditches and shady places, under stones and the roots of trees, in hedges, by the banks of streams, in subterraneous caverns, and ruined buildings. Though generally feared, it is by no means dangerous. The milky fluid which exudes from its skin, and which it sometimes shoots to the distance of several inches, though nauseous, is in reality a secretory vapor, which, in the case of a fire, is fatal only to very small animals. This humour, however, was doubtless the cause of a general prescription of the salamander. According to Pliny, by infecting with its poison all the vegetables of a vast extent of territory, this reptile could produce death to entire nations! Other animals seem to have an instinctive horror of it. Its bite, however, is perfectly harmless, though Mathioli has declared that it is capable of being poisonous; with that of the viper—an atrocious absurdity.15

SALAMINIA (Σαλαμίνια). The Athenians, from very early times, kept for public purposes two sacred or state vessels, the one of which was called Πόροι αξός, and the other Σαλαμίνια; the crow of the one bore the name of παραλία or παράλος, and that of the other Σαλαμίνιοι.16 In the former of these articles Plutarch erroneously regards the two names as belonging to one and the same ship.2 The Salaminia was also called Δηλία or Θησορις, because it was used to convey the θερυμα to Delos, on which occasion the ship was adorned with garlands by the priest of Apollo.4 Both these vessels were quick-sailing triremes, and were used for a variety of public purposes; they were used to carry ambassadors, or those who had charge of public business, &c., from Athens, carried treasures from subject countries to Athens, fetched state criminals from foreign parts to Athens, and the like.5 In battles they were frequently used as the ships in which the admirals sailed. These vessels and their crews were always kept in readiness to act, in case of any necessity arising; and the crew, although they could not, for the greater part of the year, be in actual service, received their regular pay of four oboli per day all the year round. This is expressly stated only of the Paralos,4 but may be safely said of the Salaminia also. The statement of the scholar on Aristophanes,7 that the Salaminia was only used to convey criminals to Athens, and the Paralos for theories, is incorrect, at least if applied to the earlier times. When Athens had a garrison at Megara, in winter, the vessels of war and transports or ships of war were employed for purposes for which before either the Salaminia or the Paralos had been used, it is natural to suppose that these two vessels were chiefly...

employed in matters connected with religion, as
heroes, and in extraordinary cases, such as when a
state was at war. The Sacred Ships was to be solemnly
vowed to and named by the citizenry, who would have
seem to point to a very early period of the history
of Attica, when there was no navigation except be-
tween Attica and Salamis, for which the Salaminia
was used, and around the coast of Attica, for which
purpose the Panolos was destined. In later times
the names were retained, although the destination
of the ships was primarily to give the purposes of
religion, whence they are frequently called the
sacred ships.

SALAMONICUM (άλς Αμονιτάκος), a Fos-
sil Salt, procured from the district of Africa
adjoining the Temple of Jupiter Ammon. It was
total different from the Sal Ammoniac of the
moderns, which is Hydrochlor Amoniac. (Vid. Am-
moniac.) It has been thought, says Dr. Moore,
that the ancients knew Sal Ammoniac under the
name of Nitrum; and, although Beckmann main-
tains the opposite opinion, the grounds on which he
rests his argument do not bear him out. He ob-
serves that 'there are two properties with which
the ancients might have accidentally become ac-
quainted, and which might have been suffi-
sient to make known or define to us this salt
(sal ammoniac). In the first place, by an acci-
dental mixture of quicklime, the strong smell or un-
pleasant vapour diffused by the volatile alkali sepa-
rated from the acid might have been observed.'
Now what Beckmann seems willing to admit as a
crib of the alkali, is mentioned by Pliny of
nitrum, which he says, 'gives forth a powerful odor' (calcis asperum red-
dit odorem vehementiorem). Beckmann appears
to 'yubit what he says, 'several writers have assert-
ed, that sal ammoniac comes also from the East
Indies.' But it certainly is brought thence at this
lay, and may have been manufactured there, and
have been transported to Europe, and to our
also; for we find that unchangeable country pro-
ducing the same things then as now, indigo, In-
dian ink, fine steel, sugar, silks, &c. The manu-
facture of sal ammoniac in Egypt also may, for
aught we know, have been more ancient than is
thought. We are not justified in concluding that
this manufacture was so old a thing that we
never discover no mention in their works. One of
the chief reasons for supposing the ancients to have
been ignorant of our sal ammoniac and nitre is,
that we know of very few uses to which they
might have been applied. But, though they may
have had little inducement to manufacture them,
even had they possessed the art, yet they could
hardly have failed to observe in a native state,
since both these salts are found occurring thus in
Southern Italy and elsewhere.'

SALAriUM, a Salary. The ancients derive the
word from sal, i. c., salt, &c; the most necessary
thing to support human life being thus mentioned
as a representative for all others. Salarium there-
fore comprehended also what was given out of
which the Roman officers were supplied, as well as
their pay in money. In the time of the Republic the
name salarium does not appear to have been used;
it was Augustus who, in order to place the governors
of provinces and other military officers in a
greater state of dependance, gave salaries to them or
certain sums of money, to which afterward various
supplements in kind were added. Before the time of
Augustus, the provincial magistrates had been pro-
vided in their provinces with everything they would
through the medium of redemptores (προσωποφόροι),
who undertook, for a certain sum paid by the state,
to provide the governors with all that was neces-
sary to them. During the Empire we find instances
of the salarium being paid to a person who had ob-
tained a province, but was nevertheless not allowed
to govern it. In this case the salarium was a com-
penation for the honour and advantages which he
might have derived from the actual government of
his province, and was not to be reckoned to him as
an actual advantage, as it was in the case of the
ancients, where it was an actual discharge from
his duty. In the time of the republic, when the
same was paid, it would appear to be a more
lasting advantage to the person who received it,
and, in the case of a governor, as a matter of course
he could be expected to do it. On this occasion,
and when persons did not fulfil their duties, they
were punished by deducting from their salaries.
Alexander Se-
verus instituted fixed salaries for rhetoricians, gram-
marians, physicians, haruspices, mathematicians,
mechanicians, and architects; but to how much these
salaries amounted we are not informed. Re-
spected and new, certain classes of priests re-
ceived, vid. Sacerdos.

SALII were priests of Mars Gradivus, and are
said to have been instituted by Numia. They
were twelve in number, chosen from the patricians even
in the latest times, and formed an ecclesiastical cor-
poration (licta juvenata patricia). They had the
charge of twelve aulae (vid. Acula), which were
kept in the Temple of Mars on the Palatine Hill
whence these priests were sometimes called Salii
Palatini, to distinguish them from the other salii
mentioned below. The distinguishing dress of the
salii was an embroidered tunic bound with a brazer
belt, the trabea, and the apex, also worn by the flan-
ciers. Each carried with him a sword by his side,
and in his right hand a spear or staff.

The festival of Mars was celebrated by the salii
on the 1st of March and for several successive
days, on which occasion they were accustomed
to go through the city in their official dress, carrying
the aula in their left hands or suspended from their
shoulders, and at the same time singing and
dancing, which Ovid appears to have been
able to derive their name.
The songs or hymns
which they sang on this occasion (salaria carmina)were
called asaetna, assamenta, or examenta, of which
the etymology is uncertain. Gottlieb thinks
they were so called because they were sung without any
musical accompaniment, asa etre; but this etymi-
ology is opposed to the express statement of Dionys-
ius. Some idea of the subject of these songs may
be obtained from a passage in Virgil, and a small
fragment of them is preserved by Varro in later
times they were scarcely understood, even by the
priests themselves. The praises of Manuvius
Veturius formed the principal subject of these
songs, though Marcus Manuvus Veturius was the
ancient whose name is most generally
said to be the armor of which that eleven
ancilia like the one that was sent from heaven (vid.
Annu-In), but some modern writers suppose it to be

merely another name of Mars. Besides, however, the praises of Mamurius, the verses which the saltcellar contained, and the festival, in which the praises of all the celestial deities were celebrated, with the exception of Venus. 1 The verses in honour of each god were called by the respective names of each, as Januli, Junonii, Minervii. 2 Divine honour was paid to some of the emperors by inserting their names in the songs of the salt. This honour was first bestowed upon Augustus, 3 and afterward upon Germanicus; 4 and when Venus died, his name was inserted in the song of the salt by command of M. Antonius. 5 

At the conclusion of the festival, the salt were accustomed to partake of a splendid entertainment in the Temple of Mars, which was proverbial for its excellence. 6 The members of the college were elected by co-optation. We read of the dignities of praefect, vates, and magister in the college. 7

Tullius Hostilius established another collegium of salti in fulfilment of a vow which he made in a war with the Sabines. These salti were also twelve in number, chosen from the patricians, and appear to have been dedicated to the service of Quirinus. They were called the Salti Collini, Agonales or Agonenses. Nicobius supposed that the oldest and most ancient college, the one chosen originally from the oldest tribe, the Rames, and the one instituted by Tullius Hostilius, or the Quirinalian, from the Titii alone: a third college for the Luceres was never established. 10

SALINAE (άλας, ἀλοπηγόν), a Saltwork. 11 Although the ancients were well acquainted with rock salt (Δέξα ἀπόθαρσις, i. e., fossil salt 12), and although they obtained salt likewise from certain in- and lakes, 13 and from natural springs or brine pits, 14 nd found no small quantity on certain shores, where t was concealed by the heat of the sun without human labour (Δέξα αὐθαίρετος), yet they obtained by far the greatest quantity by the management of works constructed on the seashore, where it was naturally adapted for the purpose by being so low and flat as to be easily overflown by the sea (maritima area salinarum), or even to be a brackish marsh (ἀλοπηγόν) or a marine pool (ἄμφιβαλλατρίς). In order to aid the natural evaporation, shallow rectangular ponds (multifida lacus) were dug, divided from one another by earthen walls. The seawater was admitted through canals, which were opened for the purpose, and closed again by sluices. (Vid. Cato- nina.) From these, the water being more impregnated with salt as it flowed from one pond to another. 15 When reduced to brine (cocore humo), it was called by the Greeks άλας, by the Latins salagus or salisago, and by the Spaniards maria. 16

In this state it was used by the Egyptians to pickle fish, 17 and by the Romans to preserve olives, cheese, and other vegetables. From maria, which seems to be a corruption of αὔμας, "to be impregnated," it seems to have been red in it called salsa mariatica. 18 As the brine which was left in the ponds crystallized, a man instructed with the care of them, and therefore called salinator (ἀλοπηγοῦς), raked out the salt, so that it lay in heaps (tumulii) upon the ground to drain. 19

In Attica, in Britain, 20 and elsewhere, several places, where the salt was established in them, obtained the name of Άλας or Salina. 21

Throughout the Roman Empire, the saltworks, having been first established by the early kings of Rome, were commonly public property, and were let by the government to the highest bidder. The publicans who farmed them, and often maintained upon them a great number of servants, 22 were called saltuarii. 23 (Vid. Marcius.) Malefactors of both sexes were employed in them, as they were in the mines. 24

SALI'NUM, dim. SALILLUM, a Saltcellar. Among the poor, a shell served for a saltcellar, 25 but all who were raised above poverty had one of silver, which descended from father to son, 26 and was accompanied by a silver plate, which was used, together with the saltcellar, in the domestic sacrifices. (Vid. Pastor.) These two articles of silver were alone compatible with the simplicity of Roman manners in the early times of the Republic. 27

The saltcellar was no doubt placed in the middle of the table, to which it communicated a sacred character, the meal partaking of the nature of a sacrifice. 28 (Vid. Focus, Mensa.) These circumstances, to gether with the religious reverence paid to salt, and saltcellars, so prevalent a custom of it to wit and survivy, explain the metaphor by which the soul of a man is called his saltcellar. 29

"SALPE (σαλπη), the Stockfish, or Sparus Salpa, in French, la Saumpe; in Italian, Sarpa. 30

SALPNX (σαλπη), a bird whose note resem- bled the sound of a trumpet (σαλπη, "a trumpet"). Hesychius and Philitus identify it with the προςαζον, or golden-crested wren, "the notes of which," says Adams, "are certainly piping, but cannot well be compared to the sound of a trumpet." 31

II. A kind of shellfish, called also στρόμος.

SALTATIO (σάλτος, σάλτος), Dancing. The dancing of the Greeks, as well as of the Romans, had very little in common with the exercise which goes by that name in modern times. It may be divided into two kinds, gymnastic and mimetic; that is, it was intended either to represent bodily activity, or to express by gestures, movements, and attitudes, certain ideas or feelings, and also single events or a series of events, as in the modern ballet. All these movements, however, were accompanied by music; but the terms σάλτος and saltatio were used in so much wider a sense that our word "dance" is, so to speak, a part of them. The movements of whose feet excite his admiration. 32 Skilful dancers were at all times highly prized by the Greeks; we read of some who were presented with golden crowns, and had statues erected to their honour, and their memory celebrated in inscriptions. 33

The lively imagination and mimetic powers of the Greeks found abundant subjects for various kinds of dances, and, accordingly, the names of no less than 200 different dances have come down to us. 1 It would be inconsistent with the nature of this work to give a description of all these dances; only the most important can be mentioned, and such as will give some idea of the dancing of the ancients.

Dancing was originally closely connected with religion: Plato 2 thought that all dancing should be based on religion, as it was, he says, among the Egyptians. 3 In Egypt, as in Greece, there was a dance called Choros, 4 so the chorus in the oldest times consisted of the whole population of a city, who met in a public place to offer up thanksgiving to the god of their country by singing hymns and performing dances. These dances, which, like all others, were accompanied by music, were therefore of a strictly religious nature; and in all the public festivals, which were so numerous and so intoxicating, a dance was never very prominent. We find, from the earliest times, that the worshippers of Apollo were connected with a religious dance called Hysorchem. All the religious dances, with the exception of the Bacchic and the Corybantian, were very simple, and consisted of gentle movements of the body, with various turns and wriggles around the altar; such a dance was the γυραφος, which Theseus is said to have performed at Delos on his return from Crete. 5 The Dionysiac or Bacchic and the Corybantian were of a very different nature. In the former, the life and adventures of the god were represented by mimetic dancing (vid. Dionysia): the dance called Bacchika by Lucian was a satyric dance; a character prevailed in Ionia and Pontus; the most illustrious men in the state danced in it, representing Titans, Corybants, satyrs, and husbandmen, and the spectators were so delighted with the exhibition that they remained sitting the whole day to witness it, forgetful of everything else. The Corybantian was of a very wild character: it was chiefly danced in Phrygia and in Crete; 6 the dancers were chiefly preoccupied with their shields, and displayed the most extravagant fury; it was accompanied chiefly by the flute. 7 The following woodcut, from the Museo Pio-Clementino, is supposed to represent a Corybantian dance. Respecting the dances in the theatre, vid. chorus.

Dancing was applied to gymnastic purposes and to training for war, especially in the Doric states, and was believed to have contributed very much to the success of the Dorians in war, as it enabled them to perform their evolutions simultaneously and in order. Hence the poet Socrates 8 says,

ος δε χορευσε κυλιται θεος τιμαιον, άριστον εν πολεμή.

There were various dances in early times which served as a preparation for war; hence Homer 9 calls the hoplitic προδόκει, a war-dance having been called πρόθεσις by the Cretans. 10 Of such dances, the most celebrated was that of the Pyrrhae (ὑπρήρχον); 11 of which the πρόδοκες was probably only another name. This Pyrrhae takes the representative of all war dances. The invention of this dance is placed in the mythical age, and is usually assigned to one Pyrrhus; but most of the accounts agree in assigning it a Cretan or Spartan origin, though others refer it to Pyrrhus or Neoptolemus, the son of Achilles, apparently misled by the name, for it was undoubtedly of Doric origin. 12 It was danced to the sound of the flute, and its time was very quick and light, as is shown by the name of the Pyrrhic foot (πρήρχον), which must be connected with this dance: and from the same source came also the Proeumnetic (πρόεμνον), or challenging foot. The Pyrrhic dance was performed in different ways at various times and in various countries, for it was by no means confined to the Doric states. Plato 4 describes it as representing, by rapid movements of the body, the way in which missiles and blows from weapons were avoided, and also the mode in which the enemy was attacked. In the non-Doric states it was probably not practised as a training for war, but only as a mimetic dance: thus we read of its being danced by women to entertain a company. 9 It was also performed at Athens at the greater and lesser Panathenaea by Epehi, who were called Pyrrhichists (Πυρρήχιστοι), and were trained at the expense of the state. 10 This dance was in the fragmentary parts of Theseus and Macedon, dances are performed at the present day by men armed with muskets and swords. 11 The following woodcut, taken from Sir W. Hamilton's vases, 12 represents three Pyrrhichists, two of whom, with sword and shield, are engaged in the dance, while the third is standing with a sword. Above them is a female balancing herself on the head of one, and apparently in the act of performing a somerset; she, no doubt, is taking part in the dance, and performing a very artistic kind of κυδιο-τύρας or tumbling, for the Greek performances of this kind surpass anything we can imagine in modern times. Her danger is increased by the person below, who holds a bow pointing towards her. A female spectator, sitting, looks on astonished at the exhibition.

The Pyrrhic dance was introduced in the public games at Rome by Julius Caesar, when it was danced by the children of the leading men in Asia and Bithynia. 13 It seems to have been much liked by the Romans; it was exhibited both by Caligula and Nero, 14 and also frequently by Hadrian. 15 Athenaeus 16 says that the Pyrrhic dance was still practised in his time (the third century A.D.) at Sparta,

851
where it was danced by boys from the age of fifteen, but that in other places it had become a species of Dionysiac dance, in which the history of Dionysus was represented, and where the dancers, instead of armed with thyrsus and torches.

Another important gymnastic dance was performed at the festival of γυναικορατσία at Sparta, in commemoration of the battle of Thyreia, where the chief object, according to Müller, was to represent gymnastic exercises and dancing in intimate union: respecting the dance at this festival, see Gymnopaedia.

There were other dances besides the Pyrrhic in which the performers had arms, but these seem to have been entirely mimetic, and not practised with any view to training for war. Such was the Karpala, peculiar to the Eolianians and Magnesians, which was performed by two armed men in the following manner: one lays down his arms, sows the ground, and ploughs with a yoke of oxen, frequently looking around as if afraid; then comes a robber, whom as soon as the other sees, he snatches up his arms, and fights with him for the oxen. All these movements are rhythmical, accompanied by a flute. At last the robber binds the man and drives away the oxen, but sometimes the husbandman conquers. Similar dances by persons with arms are mentioned by Xenophon on the same occasion. These dances were frequently performed at banquets for the entertainment of the guests, where also the κυβάριας were often introduced, who in the course of their dance would together, on the heads of a flute player, or, after a short interval, go again upon their feet. See Curiestres, where the remarks which are made respecting the κυβαρίας are well illustrated by the following woodcut from the Remarkes of the Muscic Borbonico, vol. vii., tav. 58. We learn from Tacitus that the German youths also used to dance among swords and spears pointed at them.

Other kinds of dances were frequently performed at entertainments, in Rome as well as in Greece, by courtesans, many of which were of a very indecent and lascivious nature. The dancers seem to have frequently represented Bacchanales: many such dancers occur in the paintings found at Herculaneum and Pompeii, in a variety of graceful attitudes.

Among the most important was the θυρσος, which was danced at Sparta by youths and maidens together; the youth danced first some movements suited to his age, and of a military nature; the maiden followed in measured steps and with feminine gestures. Lucian says that it was similar to the dance performed at the Gymnopaedia. Another common dance at Sparta was the Diadeste, which is described in a separate article.

1. (Dor., iv. 6, § 5.)—2. (Xen. Alcib. vi., 7, 8.—Athén., i., p. 155, f. 10, a.—Maxim. Tyr., Dion., xvii., 4—3. (Athén., Rap., p. 155, b.)—4. (Gem., 24.)—5. (Mann. Sat., ii. 10.—Piat., Stich., v., 9, 11.)—6. (Vid. Musee Borb., vol. viii., tav. 54.—70 vol. ix., tav. 17; vol. x., tav. 6, 94.)—7. (De Salt., 12.)—8. (Compare Müller, Dor., iv. 6, § 5.)

In many of the Greek states, the art of dancing was carried to great perfection by females, who were frequently engaged to add to the pleasure and enjoyment of men at their symposia. These dances always belonged to the hekateia. Xenophon describes a mimetic dance which was represented at a symposium where Socrates was present. It was performed by a maiden and a youth belonging to a Syracusan, who is called the ὁμηροτοῖοςκολος, and represented the loves of Dionysus and Ariadne.

Respecting the dancers on the tight-ropes, see Fe

SAMBUCA (σαμβύκη or σαμβύκη), a Harp.

The preceding Latin and Greek names are with good reason represented by Bochart, Vossius, and other critics to be the same with the Hebrew שבטה (sabcan), which occurs in Daniel. The performances of sambucistria (σαμβοκιστρίας) were only known to the early Romans as luxuries brought over from Asia. The Athenians considered them as an exotic refinement; and the Rhodian women who played on the harp at the marriage-feast of

1. (Symp., ix., 7,—2. (ad Virg., Ec., v., 73.)—3. (vii., 2.)—4. (Fest., s. v., 5.—Quint., Inst. Orat., i., 11, § 18.—Maurocr. ii., 30.—Por Mure., b.—7. (Mensius, Orchestria.—Barezeit, De la Deac des Anciens.)—8. (Memmius, Sotion, Colum., Pref., i.—Max., x., 17.)—9. (Quint. Inst. Orat., i., 11, § 18.—Phil. de sa Dictionary, ed. Mauke.)
SANDARACHA.

Caranus in Macedonia, clothed in very thin tunics, were introduced with a view to give to the entertainment the highest degree of splendour. Some Greek authors expressly attributed the invention of this instrument to the Syrians or Phoenicians. The opinion of those who ascribed it to the lyre post Pindar can only be hypothecized, and that this invention was improved considerably higher than the invention of the performer, whereas the harp was sometimes considerably higher than the stature of the performer, and was placed on the ground. The harp of the Parthians and Troglydetae had only four strings. Those which are painted on the walls of Egyptian tombs (see Denon, Wilkinson, &c.) have from four to thirty-five. One of them, taken from Bruce’s Travels, is here introduced. From the allusions to this instrument in Vitruvius, we find that the longest string was called the “proslambanomenos,” the next “hypste,” the shortest but one “paranete,” and the shortest, which had, consequently, the highest tone, was called “neta.” (Vid. Music, p. 648.) Under the Roman emperors the harp appears to have come into more general use, and was played by men (σαμβοκιστατ) as well as women.

Samanca was also the name of a military engine, used to scale the walls and towers of besieged cities. It was called by this name on account of its general resemblance to the form of the harp. Accordingly, we may conceive an idea of its construction by turning to the woodcut, and supposing a mast or upright pole to be elevated in the place of the longest strings, and to have at its summit an apparatus of pulleys, from which ropes proceed in the direction of the top of the harp. We must suppose a strong ladder, 4 feet wide, and guarded at the sides with palisades, to occupy the place of the sounding-board, and be capable of being lowered or raised at pleasure by means of the ropes and pulleys. At the siege of Syracuse Marcellus had engines of this description fixed upon vessels, which the rowers moved up to the walls so that the soldiers might enter the city by ascending the ladders.

When an inland city was beleaguered, the sambuca was mounted upon wheels.

SAMA TERRA (Σαμια γη). “The Samian Earth,” says Sir John Hill, “was a dense, ponderous, unctuous clay, of a sub-astringent taste, and either white or sub-burnished. It was dug in the island of Samos, whence it was shipped, and was found in any other place that we know of.” It consisted principally of alumine, according to Adams. The σαμια was merely a dense variety of it. “The Samian earth,” observes Dr. Moore, “was obtained from a vein of considerable extent, but only two feet in height between the rocks which surrounded it. The samian stone stood erect while digging it, but was obliged to lie upon his back or side. This vein contained four different qualities of earth, which became better in proportion as it was obtained from nearer the centre of the vein. The outer and inferior kind, called aster (σαμια), was chiefly or solely employed for cleansing and painting garments.”

SAMBUCUS (Σαμβοκιστατ). According to Gessner and De Laet, the Samian Stone belonged to the same class of substances as the Samian earth, from which it differed only in hardness.

SAMIANITES (Vid. Gladiatores, p. 477.)

SAMSYCHON (σαμσωφρυνος), a species of plant, the Origanum marianum, or Marjoram. It was called σαμσωφρυνος, Samycnas, and Sambucus in other places, such as Cyzicus, &c.

SANDALIUM (σανδαλιον or σανδαλον), a kind of shoe worn only by women. In the Homeric age, however, it was not confined to either sex, and consisted of a wooden sole fastened to the foot with thongs. In later times, the sandalium must be distinguished from the sandalia, which was a simple sole bound under the foot, whereas the sandalium, also called βλαστια or βλαστιον, was a sole with a piece of leather covering the toes, so that it formed the transition from the ὑπόδυμα to real shoes. The piece of leather over the toes was called ξυγό or ξυγυν. The οὐξια σαμβος in Strabo are, however, not sandalia without the ξυγυν, but, as Becker justly remarks, sandalia which did not belong to one another, or did not form a pair, and one of which was larger or higher than the other. The ξυγυν was frequently adorned with costly embroidery and gold, and appears to have been one of the most luxurious articles of female dress. This small cover of the toes, however, was not sufficient to fasten the sandalium to the foot, wherefore those sandalia beautifully adorned, were attached to it. Although sandalia, as we have stated, were in Greece, and subsequently at Rome also, worn by women only, yet there are traces that, at least in the East, they were also worn by men.

The Roman ladies, to whom this ornament of the foot was introduced from Greece, wore sandalia which appear to have been less beautiful and costly than those worn by the Greeks and the Oriental nations.

SANDAPILA. (Vid. Fundus, p. 458.)

SANDARACHA (σανδαραχα), a red pigment, called now Realgar, or red sulphuret of arsenic. According to the analysis of Thenard, it consists of

853
SARD. SATRA.

75 parts of arsenic and 25 of sulphur. It was freely used by the ancient physicians as a caustic and stimulant. "An adulterate kind of sandaracha," says Dr. Moore, was made, according to Pliny, of calcined white lead; that is, the red lead he had just before described under the name of usa was substituted for realgar. But Vitruvius prefers to the native sandaracha this substitute, which he designates by no other name, simply saying that cerasus by the heat of a furnace converted into sandaracha. Strabo speaks of a mine of sandaracha at Pompeipolis, in Paphlagonia, in which, because of the dangerous exhalations from the mineral, none others were employed but slaves who had been sold on account of crimo. 1

SANDIX (σανίς), a red or scarlet paint, formed of the mixture of sandaracha with rubies in equal proportions. Servius, in his commentary on Virgil, erroneously takes it for an herb yielding a dye; and La Cerva, falling into a similar mistake, says that sandia is both an herb and a colour. 2

SANT'ALON (σαντάλων), the Sandal-tree and its wood. Arrian is supposed to refer to this kind of wood under the name of σανολίνα ξόλα, where probably we ought to read σαντάλων or σαντάλινα, or else σαντάλα. 3

SAPPHI'RUS (σάφηρος), the Sapphire. "The sapphire of the ancients," says Dr. Moore, "described by Theophrastus as sprinkled with gold (χρύση) and black (πράσινος) spots; as the sapphires (scintillat), is agreed by all to have been our lapis-lazuli. The name is Hebrew, and occurs repeatedly in the Old Testament, applied to the same substance. What the ancients took for gold was the iron pyrites often disseminated in this mineral, and forming a feature in its external character upon which, under their mistake, they were inclined to place the highest value. The idea of a precious stone raised the name of this and other minerals beside lapis-lazuli were included under the name sapphire. Pliny speaks of purple sapphires, of which the best, he says, are the Median. 4

SARCO-PHAGUS. (Vid. Feves, p. 460.)

SAR'CU'LUM, a servicus (σκαλις, σκαλιστήρων), a Hoe, chiefly used in weeding gardens, cornfields, and vineyards. The name, as seems to be settled, is borrowed from the Hebrew, and may mean to cover the seed when sown, 5 and in mountainous countries is sown instead of a plough. 6 Directions for using it to clear the surface of the ground (σκαλείν, σκαλεένων) are given by Palladius. 7

SARDA or SAR'DUS (σαρδος), the Carmelian. Pliny says it was found first at Sardes, intending probably by this to signify the origin of the berry. Others, however, derive the term from the island of Sardinia, where, according to Kircher, very good ones are obtained. Ephippianus says it received its name from some resemblance which it bore to the fish called sardine (σαρδίς τεταραχμένης). The "carmelian," says Sir John Hill, "is one of the semiprecious gems, and has its name Carnelianus, Cornelius, a man of Carthage, or, as some authors suppose, from the colour, which resembles flesh (sera, carminis) with more or less of the blood in it." The best carnelians had been obtained from near Babylon, in working certain stone quarries, where it was found enveloped in the rock; but that locality, Pliny says, had failed. It was, however, a common gem, and occurred in many other places. "The carnelian," says Adams, "consists mostly of silex; but, according to Brückmann, the ancients used the name in a generic sense, comprehendinger under it all the finer species of horntones or agates. The red were called carnelians, the white onyxes; and those compounded of both, carondoixes." 8

SARD'ON'YX (σαρδόνυξ), the Sardonyx, a precious stone. This variety, according to Cleaveland, differs from the carnelian (vid. SARD.) in its colour only, which is reddish yellow, or nearly orange, sometimes with a tinge of brown. "The sardonyx," says Dr. Moore, "mentioned by Pliny next after opal, as holding the next rank, was evidently the same stone with that now so called. But under the same denomination seem to have been comprehended other varieties of chalcedony, and especially that species of carnelian which Werner calls Sardonyx, whose colours are in alternate bands of red and white, and, when the stone is cut in certain directions, resemble the flesh seen through the finger nail. The first Roman who sealed with a sardonyx was the elder Scipio Africanus, from whose name the stone is derived. Under this sort of gem was much used for that purpose, it being almost the only one which left a fair impression, and brought away with it no portion of the wax. This gem was most approved when it exhibited distinct colours and bands well defined. The localities mentioned by Pliny are India, Arabia, and Armenia. 9

SARRA'CUM, a kind of common cart or wagon, which was used by the country-people of Italy for conveying the produce of their fields, trees, and the like from one place to another. 10 Its name, as well as the fact that it was used by several barbarous nations, show that it was introduced from them into Italy. 11 That persons also sometimes rode in such a sarracum, is mentioned by Seneca. 12 Quinctilian, 13 who even regards the word sarracum as low and vulgar. Capitolinus 14 states that, during a plague, the mortality at Rome was so great, that it was found necessary to carry the dead bodies out of the city upon the common sarracum. Several of the barbarous nations with which the Romans came in contact used these wagons also in war, and they formed part of the Roman armament, and were employed, 15 and the Scythis used them in their wanderings, and spent almost their whole lives upon them, with their wives and children, whence Ammianus compares such a caravan of sarracum, with all that was conveyed upon them, to a wandering city. The Romans appear to have used the word sarracum as synonymous with planstrum, and Junian 16 goes even so far as to apply it to the combination of stars which was generally called planstrum. 17 SART'AGO (σαρτάγον) was a sort of pan, which was used in the Roman kitchens for a variety of purposes, such as roasting, melting fat or butter, cooking, &c. 18 Frequently, also, dishes consisting of a variety of ingredients seemed to have been prepared in such a sartago, as Persius 19 speaks of a sartago logeni, that is, a mixture of proper and improper expressions. Some commentators on this passage, and perhaps with more justice, understand the sartago logendi as a mode of speaking in which blushing sounds are employed, similar to the noise produced when meat isfried in a pan.

SATISDATTO. (Vid. Actio, p. 19.)

SAT'IURA, or, in the softened form, SATIRA, is the name of a species of poetry, which we call satira.
SATURNA.

ne. In the history of Roman literature we have to distinguish two different kinds of satires, viz., the early saturna and the later saturna, which received its perfect development from the poet C. Lucilius (148–103 B.C.). Both species of poetry, however, are altogether peculiar to the Romans. The literal meaning of saturna, the root of which is sat, comes nearest to what the French call poët-pourri, or to the Latin farrege, a mixture of all sorts of things. The name was accordingly applied by the Romans in many ways, but always to things consisting of various parts or ingredients, e. g., lanx saturna, an offering of diverse kinds of foods to Saturn; lex per saturmam laeta, a law which contained several distinct regulations at once. It would appear from the etymology of the word, that the earliest Roman saturna, of which we otherwise scarcely know anything, must have treated in one work on a variety of subjects just as they occurred to the writer, and perhaps, as was the case with the satirist Varro, half in prose and half in verse, or in verses of different metre. Another feature of the earliest saturna, as we learn from the celebrated passage in Livy, is that it was scenic, that is, an improvisatory and irregular kind of dramatic performance, of the same class as the versus Fascenmini. (Vid. Fascenninia.) We are also informed by Livy, that the first public Saturnalia were celebrated at Rome, the people, on account of their fondness for such extempore jokes and railing, still continued to keep up their former amusements, and it is not improbable that the exoxia of later times were the old saturna merely under another name. (Vid. Exodia.) The satires mentioned are ascribed to the first writers of satires, but we are entirely unable to judge whether their works were dramatic like the saturna of old, or whether they resembled the satires of Lucilius and Horace. At any rate, however, neither Ennius nor Pacuvius can have made any great improvement in this species of poetry, as Quintilian does not mention either of them, and does not mention C. Lucilius as the first great writer of satires. It is Lucilius who is universally regarded by the ancients as the inventor of the new kind of satyr, which resembled, on the whole, that species of poetry which is in modern times designated by the same name, and which was no longer scenic or dramatic. The character of this new saturna was afterward so far improved by the satirists of the succeeding age, that it was thenceforward called Lucilius. These new satires were written in hexameters, which metre was subsequently adopted by all the other satirists, as Horace, Persius, and Juvenal, who followed the path opened by Lucilius. Their character was essentially ethical or practical, and as the stage at Rome was not so free as at Athens, the satires of the former had a similar object to that of the ancient comedy at the latter. The poets, in their satires, attacked not only the follies and vices of mankind in general, but also of such living and distinguished individuals as had any influence upon their contemporaries. Such a species of poetry must necessarily be subject to great modifications, arising partly from the character of the time in which the poet lives and from the personal character and temperament of the poet himself; and it is from these circumstances that we have to explain the differences between the satires of Lucilius, Horace, Persius, and Juvenal.

After Lucilius had already, by his own example, established the artistic principles of satires, Tarentine Varro, in his youth, wrote a kind of satires which were neither like the old saturna nor like the

SATURNALIA.

1. (Gell, ii. 15–16; 2—Macrob. Sat. xiv. 18, Mart. i. 66.—Suet. Iul. 74.) 2. (Gell, ii. 15; 3—Plin. iv. 1; 4—Suet. Oct. 73.—Mart. v. 19; 5—Seneca, Ep. 13.) 3. (Plin. v. 10.—Scur. 14, 15.—Ep. 18.) 4. (Liv. xxv. 1; 5.—Ov. Am. xii. 13.—Arr. Di. Epictet. 1, 2.) 5. (Lucian, Sat. 4.)
return to Greece, as the authors of the Saturnalia. Records approaching more nearly to history referred the erection of temples and altars, and the first celebration of the festival, to epochs comparatively recent, to the reign of Tattius, or of Tullus Hostilius, or of Tarquinii Superbus, to the consuls of A. Sempronius and M. Minutius, B.C. 497, or to that of T. Lartius in the preceding year. These conflicting statements may be easily reconciled by supposing that the appointed ceremonies were in these rude ages neglected from time to time, or corrupted, and again at different periods revived, purified, expanded, and performed with fresh splendour and greater regularity.

During the Republic, although the whole month of December was considered as dedicated to Saturn, only one day, the xiv. Kal. Jan., was set apart for the sacred rites of the divinity: when the month was lengthened by the addition of two days upon the adoption of the Julian Calendar, the Saturnalia fell on the xvi. Kal. Jan., which gave rise to confusion and mistakes among the more ignorant portion of the people. To obviate this inconvenience, and allay all religious scruples, Augustus enacted that three whole days, the 17th, 18th, and 19th of December, should in all time coming be hallowed, thus embracing both the old and new style. A fourth day was added, we know not when or by whom, and a fifth, with 1. Kal. Aug. to the 5th of the Kal. Caligula, is the arrangement which, after it had fallen into disuse for some years, was restored and confirmed by Claudius.

But although, strictly speaking, one day only, during the Republic, was consecrated to religious observances, the festivities were spread over a much longer space. Thus, while Livy speaks of the first day of the Saturnalia (xvi. kal. Dec., 15.), Ov. narrates the second and third (secunda Saturnalius; Saturnalius tertius); and it would seem that the merry-making lasted during seven days, for Novius, the writer of Atellaneæ, employed the expression septem Saturnalia, a phrase copied in later times by Memmius; and even Martial speaks of Septem Saturni dies, although in many other passages he confined the Saturnalia to the obser-

vance of the xiv. of December with the edicts of Caligula and Claudius. In reality, under the Empire, three different festivals were celebrated during the period of seven days. First came the Saturnalia proper, commencing on xvi. Kal. Dec., followed by the Opalia, anciently coincident with the Saturnalia, on xiv. Kal. Jan.; these two together lasted for five days, and the sixth and seventh were occupied with the Sigillaria, so called from little earthenware figures (sigilla, oscilla) exposed for sale at this season, and given as toys to children.

**SATYRION (σατύριον), a plant, having the property of exciting salacity, whence the name. The σατύριον τριφύλλου of Dioscorides and Galen has given rise to many conjectures, as Adams remarks, "to lineaments very difficult to determine." The σατύριον κροκόνδυλον has been commonly held for the Erythromyron Dens Canis, or Dog's-tooth; Sprengel, however, is not quite satisfied about it.**  

**II. A four-footed amphibious animal. (Vid. En-**

**SYNDRUS.**  

**SATYRUS. (Vid. SIMIA.)**

**SAURUS and SAURA (σαῦρος, σαῦρα). These terms are applied to several species of the genus Lacerta; to the Salamander, the Steleio, and the Gecko. The σαῦρος χρυσός noticed by Zelil must have been the Lacerta viridis, L. It is a very large species. Virgil mentions it in the following lines:**

"I nunc viridis stiam occultant spineta laceris.

"**I. A species of fish, about which great uncertainty prevails. Some have referred it," says Adams, "to Salmo, or to Sardina; others to the Tarantola. Schweighauser mentions that the*
SCYPHORUS.

*SCYPHORUS (σκυψόρος), another name for the preceding, used by Athenaeus.

1. *SCEPTRUM is a Latinized form of the Greek *σκηπτρόν, denoted simple staff or walking-stick. (Vid. Bacchus.) The corresponding Latin term is scipio, sprouting from the same root and having the same signification, but of less frequent occurrence.

As the staff was not merely to support the steps of the aged and infirm, but as a weapon of defence and assault, the privilege of habitually carrying it becomes emblematic of station and authority. The straight staves with which the four of the first sitting figures in the woodcut at p. 61, while a third holds the curved staff, or Lerus, indicate, no less than their attitude and position, that they are exercising judicial functions. In ancient authors the sceptre is represented as belonging more especially to kings, princes, and leaders of tribes; but it is also borne by judges, by heralds, and by priests and seers. It was more especially characteristic of Asiatic manners, so that, among the Persians, whole classes of those who held high rank and were invested with authority, including eunuchs, were distinguished as the sceptre-bearing classes (*οί σκηπτροφόροι*). The sceptre descended from father to son; and committed to any one in order to express the transfer of authority. Those who bore the sceptre swore by it, solemnly taking it in the right hand and raising it towards heaven.

The original wooden staff, in consequence of its application to the uses now described, received a variety of ornaments or emblems. It early became a truncheon, pierced with golden "eunuch" and supported; it was enriched with gems, and made of precious metals or of ivory. The annexed woodcut, taken from one of Sir Wm. Hamilton's fittle vases, and representing Ancus followed by Ascanius, and carrying off his father Anchises, who holds the sceptre in his right hand, shows its form as worn by kings. The ivory sceptre (*ευρέμου σκιπίον*) of the kings of Rome, which descended to the consuls, was surmounted by an eagle. (Vid. Insigne.) Jupiter and Juno, as sovereigns of the gods, were represented with a sceptre.

SEMPERONAN.

*SCYPHORUS (σκυψόρος). (Vid. Hypercly-}

**SCIRIUS.** The Pistacia lentiscus, or the lentisk which produces mastich.  
**CHISNOS** (σκίνος), a species of Pistacia, or the lentisk which produces mastich.  
**CHISNOS LAPS** (σκίντος λάπος). "The Schistus lapsis," says Dr. Moore, "by burning which, we find from Dioscorides and Pliny, that hematiche warm sometimes counterfeited, was probably an ochre stone of a slaty structure, whence its name (σκίντς, 'split', 'cleaven'). The best was of a somewhat saffron colour, friable, fissile, and resembling in structure and in the cohesion of its layers the fossil salt called ammonite."

**SCHENICICLUS** (σχενικίλικος), a species of bird, which Schneider says has been referred to the Em- berton Schenakenis, or Reed Spearro. This Adams considers as rare and ref. suggests the Motacilla aurivittata, or Reed Wren.

**SCHENUS** (σχένος), an Egyptian and Persian measure, the length of which is stated by Herodotus at 60 stadia, or 2 parasangs; by Eratosthenes at 40 stadia, and by others at 32. Strabo and Pliny both state that the schenus varied in different parts of Egypt and Persia. The schenus was used especially for measuring land.

**SCHENUS** (σχένος), a term applied to several species of Rush. "According to Sprengel, the δηνοχόιος is the Juncus acutus, and the δηνοχόιος the Schenus marginis, in which opinion he is supported by Stackhouse. Stephens gives nearly the same account of the Scham. Sibthorp makes the σχένος λεια of Dioscorides to be the S. Holoschamis, L. It is considered as the most important of this tribe. Moses Charris says of it, 'The Schanath is Greek, and signifies the flower of a reed, which is the best part of that plant.' Dr. Hill also says of "The Schanath, or Juncus odoratus of the shops, is a dried stalk of a plant brought to us from Arabia, sometimes bare and naked, sometimes with the leaves and flowers cut off, or with more or less remains of them." Sprengel gives a very interesting description of this reed (which he calls Andropogon Schanathus) from a specimen which he got from India."

**SCHOLIA.** (Vid. Bathy, p. 148.)

**SCIADEION** (σκιαδέεων). (Vid. UMBRALCUM.)

**SCIADEPHORA** (σκιάδεφορα). (Vid. HYDRAD- PHORA.)

**SCIA'NA** (σκιανα), a species of fish, the Sciana corvina, L. It is also called skenos and skindilos. According to Belon, it is about four cubits long, and sometimes weighs 60 lbs. Rondelet says it is so like the Corvina that the one is often sold for the other in Rome.

**SCILLA** (σκίλλα), a bulbous-rooted plant, the Sea Onion or Squill. "The σκίλλα" of Dioscorides is without doubt," says Adams, "the Scilla maritima, or Squill. The σκίλλα Ἐπιμελεία of Theophrastus was most probably the Scilla Italica, as Stockhouse suggests. The Scilla maritima, according to Sibthorp, abounds in the island of Zante. It is an object of commerce, and is exported to Holland and England. A sequin for 1000 roots is paid for collecting them. It is called ἄσκαλα at Constantinople, where it is sold with honey for the asthmatic, or applied in cataplasms to the joints affected with rheumatic pains."

**SCIOTHETICUM.** (Vid. Herololium, p. 509.)

**SCIPIO**. (Vid. Sceptrum.)

**SCIURUS** (σκίουρο), the Squirrel, or Sciurus

---

---

**SCIRPUS** (σκίρπος), the Squirrel Grass, of which Nicander, Eilian, says:

**SCIRPUS vulgaris.** The Greek name is derived from the circumstance of the tail serving, as it were, to shade the body (σκίς and αύρα).
and other ancient authors describe several species. Sprengel remarks that Nicandrus's division of scorpions had been adopted by modern naturalists. "The scorpion," says Wilkinson, "was among the Romans an emblem of the goddess Selk, though we should rather expect it to have been chosen as a type of the Evil Being. "Elian mentions scorpions of Coptos, which, though inflicting a deadly sting, and dreaded by the people, so far respected the goddess Isis, who was particularly worshipped in that city, that women, in order to express their grief before the image of Isis, which had become the symbol, without receiving any injury from them."

"All the fables," says Griffith, "which superstition and ignorance have brought forth, during a series of ages, respecting this animal, are exhibited at length in the Natural History of Pliny. The ancients, however, did observe that it coupled, and was viviparous; that its sting was pierced, so as to give passage to the poison, and that this poison was white. They further remarked that the females carried their young, but they supposed that there was but one to each mother; that this had escaped by stratagem from the general slaughter which she had made of her posterity, and that it finally avenged its brethren by devouring the author of its life. Accurate observers had already observed the poison of any of its own family; but, at all events, the voracity of these animals was fully recognised. It is probable that the winged scorpions, which excited astonishment from this size, as well as those which Megasthenes informs us were to be found in India, are orthoptera of the genus Phasma, or spectrum or heimiptron of that of Nepos of Linnaeus. Pliny informs us that these animals are sometimes found naturalized in Italy by the scorpions of Africa, but that their attempts proved wholly unsuccessful. He distinguishes nine species, on the authority of Apollodorus. Nicander, who reckons one less, gives some particular details on the subject, but is guided by views purely medical."

"III. A species of fish, the Scorpia porcus, L., called in Italian Scorfanelli; in modern Greek, οξορίδη, according to Belon and Coryn."

"IV. A species of thirsty plant, which Anguillara, Sprengel, and Schneider agree in regarding as the Sparrium Scorpius. "Stackhouse, however, finds objections to this opinion."

"V. A species of the genus Apis (from apomoides), a species of plant, which Donnatus and Sprengel agree in referring to the Scorpiumus sulcatus, L., or Scorpioniades, Tourenfort."

SCRIE. - The scribes at Rome were public notaries or clerks in the pay of the state. They were chiefly employed in making up the public accounts, copying out laws, and recording the process of the different functionaries of the state. The phrase "scribus facere" was used to denote their occupation. Being very numerous, they were divided into companies or classes (decuria), and were assigned by lot to different magistrates, whence they were named questoril, addilici, or pronturil, from the officers of state to whom they were attached. We also read of a "questor of the decuriae," a member of a of a inferior order. The appointment to the office of a "scriba" seems to have been either made on the nomination of a magistrate, or purchased. Thus Livy tells us that a scriba was appointed by a questor; and we meet with the phrase "decuriam emere," to "purchase a company," i.e., to buy a clerk's place. Horace, for instance, bought for himself a "patent place as clerk in the treasury" (scribium quatuorium comparavit). In Cicero's time, the person who might become a scriba or public clerk by purchase, and, consequently, as freedmen and their sons were eligible, and constituted a great portion of the public clerks at Rome, the office was not highly esteemed, though frequently held by ignoble or freeborn citizens. Cicero, however, informs us that the scribe formed a re- spected class of society. The house of Scaurus even seems to have assigned a reason for calling them such, as if he were conscious that he was combating a popular prejudice. Very few instances are recorded of the scribe being raised to the higher dignities of the state. Cic. Flavus, the scribe of Appius Claudius, was raised to the office of curule aedile in gratitude for his making public the various forms of actions, according to the number and the actual cost of the property of the patricians (vid. Acro, p. 17), but the returning officer refused to acquiesce in his election till he had given up his books (tabulas posuit) and left his profession. The private secretaries of individuals were called librarii, and sometimes scribes ab epistolis. In ancient times, as Festus informs us, scribes were employed for public records."

SCRIBO'NIA LEX. (Vid. Lex. p. 585.)

SCRI'NVM. (Vid. CAPSA.)

SCRIPLUM. (Vid. Scripulum.)

SCRIPTA DU'ODEMIC. (Vid. Latruncula.)

SCRIPTO'RA was that part of the revenue of the Roman Republic which was derived from letting out those portions of the public pastures which it could not be taken into cultivation as pasture-land. The name for such parts of the aegus publicus was pascua publica, saltus, or silva. They were let by the census to the publicani, like all othervectigalia; and the persons who let their cattle graze on such public pastures had to pay a certain tax or duty to the publicani, which, of course, was considered as the exclusive occupation of the cattle which they kept upon them. To how much this duty amounted is nowhere stated, but the revenue which the state derived from it appears to have been very considerable. The publican had to keep the lists of the persons who sent their cattle upon the public pastures, together with the number and quality of their cattle, and, from this information (scribueri) the duty itself was called scripture, the public pasture-land aeger scripturarius, and the publican, or their agents who raised the tax, scripturarius. Cattle not registered by the publican were called pecudes inscriptae, and those who sent such cattle upon the public pastures were punished according to the lex Corporia, and the cattle were taken by the publican and forfeited.11 The lex Triodia12 did away with the scripture in Italy, where the public pastures were very numerous and extensive, especially in Apulia,13 and the lands themselves were now sold or distributed. In the provinces, where the public pastures were also let out in the same manner, the practice continued until the time of the Empire, but afterwards the latum is no longer mentioned. SCUR'PULUM, or, more properly, Scription (pompea), the smallest denomination of weight among the Romans. It was the 24th part of a "scriptio."
of the Uncia, or of the Libra, and therefore is 18.66 grains English, which is about the average weight of the sculpurial aurei still in existence. (Vid. Jeurzam.)

As a square measure, it was the smallest division of the jurerum, which contained 298 scrupula. (Vid. Jeurzam.) Pliny 1 uses the word to denote small divisions of a degree. It seems, in fact, to be applicable to any measure.

Though the scrupulum was the smallest weight in common use, we find divisions of it sometimes mentioned, as the obolus = ½ of a scrupum, the semi-obolus = ¼ of an obolus, and the situlae = ¾ of an obolus, which is thus shown to have been originally the weight of a certain number of seeds. 2

"Semiobioli duplium est obola, quem ponderes duplo Gramma vacant, scriptum nosi dizero prioris. Semina sec axi sitiurae latitancia curvis Attribuunt scruplo, lentinose grana ha octo, Aut totidem speltas numerant, tristesse lupinos Bis duo." 3

SCULPTURA (γλυφ) properly means the art of engraving figures upon metal, stone, wood, and similar materials, but is sometimes improperly applied by modern writers to the statuary art, which is known as sculptura figurata. (Vid. Sculptura.) There are two different forms of the word, both in Greek and Latin, viz., sculpum, sculptura, and sculpum sculpura (in Greek γλυφω and γλυφό.) The general opinion is, that both sculpum and sculpum, with their derivatives, signify the same thing, only different in degree of perfection, so that sculptura would signify a coarse or rude, sculptura an elaborate and perfect engraving. This opinion is probably based upon the following passages: Horat., Sat., ii., 3, 22.—Ovid. Met., x., 248.—Vitriv., i., 6. 3 Others, again, believe that sculpum (γλυφ) signifies to cut figures into the material (intaglio), and sculpum (γλυφω) to produce raised figures, as in coins. It is but very doubtful whether the ancients themselves made or observed such a distinction.

It may be expedient, however, in accordance with this distinction, to divide sculptura into two departments: 1. The art of cutting figures into the material (intaglio), which was chiefly applied to producing seals and matrices for the mints; and, 2. The art of producing raised figures (cameos), which accord for the most part as ornaments.

The first branch of these two branches was much more extensively practised among the ancients than in modern times, which arose chiefly from the general custom of every free man wearing a seal-ring. (Vid. Rings.) The first engravers of metal or stone, which served as seals, were simple and rude, signifies without any meaning, sometimes merely consisting of a round or square hole. 4 In the second stage of the art, the commonest or ornament forms, as in the worship of the gods, were introduced, until at last, about the age of Phidias and Praxiteles, this, like the other branches of the fine arts, had completed its free and unrestrained career of development, and was carried to such a degree of perfection, that, in the beauty of design as well as of execution, the works of the ancients remain univalved down to the present day. But for the names of the artists who excelled in this art have come down to us. Some intaglio, as well as cameos, have a name engraved upon them, but it is in all cases more probable that such are the names of the owners rather than those of the artists. The first artist who is mentioned as an engraver of stones is Theodor, the son of Telecles, the Samian, who engraved the stone in the ring of Polygertes. 5 The most celebrated among them was Pyrgoteles, who engraved the seal-rings for Alexander the Great. 6 The art continued for a long time after Pyrgoteles in a very high state of perfection, and it appears to have been applied about this period to ornamental works; for several of the successors of Alexander and other wealthy persons adopted the custom, which was and is still very prevalent in the East, of adorning their gold and silver vessels, vessels, cedrals, and the like, with precious stones, on which raised figures (cameos) were worked. 7 Among the same class of ornamental works we may reckon such precious and mosaic ornaments as those which there was in many cases a whole series of raised figures of the most exquisite workmanship. 8 Respecting the various precious and other stones which the ancient artists used in these works, see Müller. 9

As regards the technical part of the art of working in precious stones, we only know the following particulars. The art was first polished by the goldsmith, and received either a plane or convex surface; the latter was especially preferred, when the stone was intended to serve as a seal. The sculptor himself used iron or steel instruments moistened with oil, and sometimes also a diamond framed in iron. These metal instruments were either sharp and pointed, or round. 10 The stones which were destined to be framed in rings, as well as those which were to be inlaid in gold or silver vessels, then passed from the hands of the sculptor into those of the goldsmith (appiarius, compositor).

Numerous specimens of intaglio and cameos are still preserved in the various museums of Europe, and are described in numerous works. For the liberal treatment of the subject see Müller. 11

SKYRIA ΔΙΚΗ (σκυρία δίκη) is thus explained by Pellox: Σκυρία δίκην ὄνομαζον οἱ κυμοδοδόπαλοι τὴν τραγείαν οἱ γλυφοντες ἐκ τοιοῦτον τις Σκυρίων ἢ ἐις Δίκην ὀνομαζομεν. By τραγεία δίκη is meant one beset with difficulties, in which the plaintiff had to encounter every sort of trickery and evasion on the part of the defendant. On the appointed day the plaintiff and defendant were required to be present in court, and if either of them did not answer in the least attempt to justify himself, he was pronounced against him, unless he had some good excuse to offer, such as illness or inevitable absence abroad. Cause was shown by some friend on his behalf, supported by an affidavit called ὑπομονα, in answer to which the opponent was allowed to put in a counter-affidavit (ἀντιὑπομονα), and the court decided whether the excuse was valid. It seems to have become a practice with persons who wished to put off or shirk a trial, to pretend that they had gone to some island in the Εὔκαρε, either on business or on the public service; and the isles of Scyros (one of the Cyclades), Lemnos, and Imbros were particularly selected for that purpose. Sliamners of this kind were therefore called Σκυρίαυς Δίκαιοι and Imbriaus Δίκαιοι.

SCYTÄLAE (σκύταλαι) (Vid. Demost.), the Roman shield worn by the heavy-armed infantry, instead of being round like the Greek CIPPUS, was adapted to the form of the human body by being made either oval or circularly, the shape of a door (σκύτα), which it also resembled in being made of wood or wickerwork, and from which, 1

SCYTALE

consequently its Greek name was derived. Two of its forms are shown in the woodcut at page 496. That which is here exhibited is also of fre-

quent occurrence, and is given on the same authority; in this case the shield is curved, so as in part to encircle the body. The terms clipeus and scutum are often confused; but that they properly denoted different kinds of shields is manifest from the passages of Livy and other authors which are quoted in p. 102, 269. In like manner, Plutarch distinguishes the Roman 

\[ \text{θήρας} \] from the Greek δίστοις in his Life of Titus, transcribing a statement of ' \text{Polybius}', i.e., in St. Paul uses the term \text{θυρας} rather than \text{δίστοις or σκοτ}, because he is describing the equipment of a Roman soldier. ( \text{Vid. Arm., p. 95.}) These Roman shields are called \text{scuta longaonz θυράς κοινής}. Polybius states their dimensions were 4 feet by 2. The shield was held on the left arm by means of a handle, and covered the left shoulder.

\*SCYL'TUM (σκύλλος), a species of Shark, probably the \text{Squalus catenula}, or \text{Bounce.} 

SCY'TALE (σκύταλα), I. is the name applied to a secret mode of writing, by which the Spartan ephors communicated with their kings and generals when abroad. When a king or general left Sparta, the ephors gave to him a staff of a definite length and thickness, and retained for themselves another of precisely the same size. When they had any communication to make to him, they cut the material upon which they intended to write into the shape of a narrow ribbon, wound it round their staff, and then wrote upon it the message which they had to send to him. When the strip of writing material was taken from the staff, nothing but single letters appeared, and in this state the strip was sent to the general, who, after having wound it around his staff, was able to read the communication. This rude and imperfect mode of sending a secret message must have come down from early times, although no instance of it is recorded previous to the time of Pausanias. In later times, the Spartans used the scytale sometimes also as a medium through which they sent their commands to subject and allied towns.

\*II. (σκύταλα), the Blue-bellied Snake. “From Nicander’s description of the scytale,” says Adams, it is clear that it nearly resembled the amphibiae. In the Latin translations, they are denominated \text{iscusculum}. Avicenna says it resembles the amphibia both in form and in the effects of its sting. Hence Sprengel refers the scytale to the

\[ \text{Anguis eriox}, \text{a serpent which differs in length only from the Anguis fragilis, or Blindworm.} \]

\text{SECTIO.} “Those are called sectores who buy property publicly.” Property was said to be sold publicly (\text{publice }) when a man’s property was sold by the state in consequence of a condamnation, and for the purpose of repayment to the state of such sums of money as the condemned person had improperly appropriated, or in consequence of a proscriptio. Such a sale of all a man’s property was a sectio; and sometimes the things sold were called sectio. The sale was effected by the praetor giving to the quasemors the bonorum possessio in reference to which the phrase “ \text{bona publice possideri}” is used. The property was sold sub haste, and the sale transferred Quiritarian ownership, to which Gaius probably alludes in a mutilated passage. The sector was entitled to the interdictum sectorium for the purpose of obtaining possession of the property; but he took the property with all its liabilities. An hereditas that had fallen to the fiscus was sold in this way, and the sector acquired the hereditatis pettio.

SECTOR. ( \text{Vid. Sectio.})

SECTORIUM INTERDICTUM. ( \text{Vid. Interdictum})

SECURIS, \*SECURICULA (σκύταλα, πτελές) an Axe or Hatchet. The axe was either made with a single edge, or with a blade or head on each side of the haft, the latter kind being denominated \text{bipenis (πτελές διστόμως, ου μιστήμως)}. As the axe was not only an instrument of constant use in the hands of the carpenter and the husbandman, but was, moreover, one of the earliest weapons of attack, a portion of the Roman fasces, and a part of the apparatus when animals were slain in sacrifice, we find it continually recurring under a great variety of forms upon coins, gems and bas-reliefs. In the woodcut to the article \text{Secrux}, the young Ascanius holds a battle-axe in his hand. Also real axe-heads, both of stone and metal, are to be seen in many collections of antiquities. Besides being made of bronze and iron, more rarely of silver, axe-heads have from the earliest times and among all nations been made of stone. They are often found in sepulchral tumuli, and are arranged in our museums together with chisels, both of stone and metal, of bronze, under the name of \text{cells.} ( \text{Vid. Dolabr.})

The prevalent use of the axe on the field of battle was generally characteristic of the Asiatic nations, whose troops are therefore called \text{securigera catena.} As usual, we find the Asiatic custom propagating itself over the north of Europe. The bifurcans and the spear were the chief weapons of the Franks.

In preparing for a conflict, the metallic axe was sharpened with a whetstone (\text{subligur in cote secu}.)

SECU'TO-RES. ( \text{Vid. Gladiatores, p. 477.})

SEISACH'THEIA. (σέσαχθεία), a disbanding ordinance, was the first and preliminary step to the legislation of Solon. The real nature of this measure was a subject of doubt even among the ancients themselves; for, while some state that Solon thereby cancelled all debts, others describe it as a mere reduction of the rate of interest. But from the various accounts in Plutarch and the grammarians, it

861
seems to be clear that the σειάγχεα consisted of four distinct measures. The first of these was the reduction of the rate of interest; and if this was, as it appears, retrospective, it would naturally, in many cases, wipe off a considerable part of the debt. The second part of the measure consisted in lowering the taille and courage, that Solomon made 73 old drachmas to be worth 100 new ones; so that the debtor, in paying off his debt, gained ather more than one fourth. Böckh supposes that it was Solomon's intention to lower the standard of the coinage only by one fourth, that is, to make 75 old drachmas equal to 100 new ones, but that the new coin proved to be lighter than he had expected. The third part consisted in the release of the engaged lands from their encumbrances, and the restoration of them to their owners as full property. How this was effected is not clear. Lastly, Solomon abolished the law which gave to the creditor a right to the person of his insolvent debtor, and he restored to their full liberty those who had been enslaved for debt.

This great measure, when carried into effect, gave general satisfaction, for it conferred the greatest benefits upon the poor without depriving the rich of too much, and the Athenians expressed their thankfulness by a public sacrifice, which they called ξειάσχεσα, and by appointing Solomon to legislate for them with unlimited power.4  

SELÉNION (σέληνον).  "I agree with Sprengel," says Adams, "in thinking this the Apum Petroscílianus.  It is said, from the house being doubtful.  Ludovicius Nomius correctly remarks that it ought not to be confounded with the Petroscíliam of the ancients, or Macedonian Parsley. 13 SELLA. The general term for a seat or chair of any description. The varieties most deserving of notice are: 1. SELLA CURULIS, the chair of state. CURULIS is derived from the ancient writers from CURRUS; but it more probably contains the same root as CURIA, which is also found in Quirites, CURATES, the Greek κηροικος, κηροαιος, &c. (vid. Comtii, p. 295.) The sella curulis is said to have been used at Rome from a very remote period as an emblem of kingly power (hence "curul regia sella adornavit"), having been imported, along with various other insignia of royalty, from Etruria, according to one account to Tullus Hostilius; according to another by the elder Tarquinius; while Silius names Vetulonia the city from which it was immediately derived. 12 Under the Republic, the right of sitting upon this chair belonged to the consuls, praetors, curules ediles, and censors; 11 to the flamen dialis  (vid. Flamen); to the dictator, and to those whom he deputed to act under himself, as the magister equitum, since he might be said to comprehend all magistracies within himself. 12 After the downfall of the constitution, it was assigned to the emperors also, or to their statues in their absence; 13 to the augural, 14 and perhaps to the praefectus urbi. 15 It was displayed upon all great public occasions, especially in the circus and theatre, sometimes even after the death of the person to whom it belonged, a mark of special honour bestowed on Marcellus, Germanicus, and Pertinax; 4 and it was the seat of the praetor when he administered justice. 2 In the provinces it was assumed by inferior magistrates when they exercised proconsular or procurator authority, as we infer from its appearing along with fasces on a coin of the Genia Regia, struck at Nicaea, in Bithynia, and bearing the same AVIIOC ×FVITPOC TAMIC.  We find it occasionally exhibited on the medals of foreign monarchs likewise, on those of Ariobarzanes II. of Cappadocia, for it was the practice of the Romans to present a curule chair, an ivory sceptre, a toga praetexta, and such like ornaments, as tokens of respect and confidence to those rulers whose friendship they desired to cultivate. 3 The selle curulis appears from the first to have been ornamented with ivory, and this is commonly indicated by such expressions as curule clar; Numida sculptile dentis orae; and elaphinivos δίφορος; at a later period it was overlaid with gold, and consequently we find διόροφον ἐπιχρόσυνος, θρόνοι καταχράσεως, τὸν διόροφν τὸν κερκρωμένων, recurring constantly in Dion Cassius, who frequently, however employs the simple form δίφορον ἐμφατος. 4 In shape it long remained extremely plain, closely resembling a common folding (plectate) camp-stool with crook-ed legs. These last gave rise to the name ἀγκόλη-ποσ διφορος, found in Plutarch; 5 they strongly remind us of elephant's teeth, which they may have been intended to imitate, and the Emperor Aurelian proposed to construct one in which each foot was to consist of an enormous tusk entire. 6 This form of the selle curulis, as it is commonly represented upon the denarii of the Roman families, is given in p. 431. In the following cut are represented two pairs of bronze legs belonging to a selle curulis preserved in the Museum at Naples, 7 and a selle curulis copied from the Vatican collection.

II. BISELLIUM. The word is found in no classical author except Varro, according to whom it means a seat large enough to contain two persons. We learn from various inscriptions that the right of using a seat of this kind upon public occasions was granted as a mark of honour to distinguished persons by the magistrates and people in provincial towns. There are examples of this in an inscription found at Pisa, which called forth the long, learned, rambling dissertation of Chimelli, and in two others found at Pompeii. 9 In another inscription we have BISELLIIS HONOR, 11 in another, 10 containing the roll of an incorporation of carpenters, one of the office-bearers is styled COLLEG. I. BISEL.

LEARIUS. 12

SEMEIOTICA.

I.

Two bronze bisellia were discovered at Pompeii, and thus all uncertainty with regard to the form of the seat has been removed. One of these is engraved above.  

III. Sella Gestatoria of Fertoria, a sedan used both in town and country by men as well as by women (muliebris sella). It is expressly distinguished from the Lascaria, a portable bed or sofa, in which the person carried lay in a recumbent position, while the sella was a portable chair in which the occupant sat upright; but they are sometimes confounded, as by Martial. It differed from the cathedra also, but in what the difference consisted it is not easy to determine. (Vid. Cathedra.)

The sella was sometimes entirely open, as we infer from the account given by Tacitus of the death of Galba; but more frequently shut in. Dion Cassius pretends that Claudius first employed the covered sella, but in this he is contradicted by Suetonius and by himself. It appears, however, not to have been introduced until long after the Lactea was common, since we scarcely, if ever, find any allusion to it until the period of the Empire. The sella were made sometimes of plain leather, and sometimes ornamented with bone, ivory, silver, or gold, according to the rank or fortune of the proprietor. They were furnished with a pillow to support the head and neck (cervical); when made roomy, the epitaph faex was applied, when smaller than the patient's head, the therapeutical effect was so easy that one might study without inconvenience, while, at the same time, it afforded healthful exercise.

IV. Sella of different kinds are mentioned incidentally in ancient writers, accompanied by epithets which serve to point out generally the purposes for which they were intended. Thus we read of sella balneares, sella tomosia, sella obstetricia, sella familiaris v. pertuse, and many others. Both Varro and Festus have preserved the word seliquastrum. The former classes it along with sedes, sedile, solium, sella; the latter calls it "sedilia antiqui generis," and Arnobius includes them among common articles of furniture. No hint, however, is given by any of these authorities which could lead us to conjecture the shape, nor is there any additional light thrown upon the question by Hyginus, who tells us, when describing the constellations, that Cassiopeia is seated "in siliquastro."

Of chairs in ordinary use for domestic purposes, a great variety are found, displaying great taste, has been discovered in excavations, or are seen represented in ancient frescoes. The first cut annexed represents a bronze one from the Museum at Naples; the second, two chairs, of which the one on the right hand is in the Vatican, and the other is taken from a painting at Pompeii. A chair of a very beautiful form is given in the Mus. Borh.

V.

SELENA EQUESTRES. (Vid. EPHIPPION.)

SEMATA. (Vid. FUNUS, p. 457.)

SEMEIOTICA (το Σημειωτικόν), one of the five parts into which, according to some authors, the ancients divided the whole science of medicine. (Vid. MEDICINA.) The more ancient name for this branch of medicine was Diagnostica (το διαγνωστικόν), but in Galen's time the more common name appears to have been Semeiotica. Its particular province was the studying the symptoms of diseases, so as to be able to form a correct judgment as to their precise nature, and also to foretell with tolerable accuracy their probable termination. It was divided into three parts, comprehending, I. the knowledge of the past accidents and history of the disease; II. the inspection and study of the patient's actual condition; and, III. the prognosis of the event of his illness. As perhaps this branch of medicinest depends less on the state of science, and more on observation and natural acuteness than any other, this is the part in which the ancients laboured under the fewest disadvantages, and approved most nearly to ourselves. They seem also to have paid particular attention to the study of it, and their writings on this subject are still well worth consulting. The manuscript of Galen is now in the Vatican, and Alexander Trallianus; and the author of the treatise De Arte, in the Hippocratic collection, seems to think the knowing the nature of a disease almost the same as curing it. There are so many anecdotes of the skill and acuteness of the ancients in diagnosis and prognosis, that it is difficult to select the most striking. That of Erasistratus is well known, who discovered that the secret disease of which Antiochus, the son of Seleucus Nicator, was dying, was in fact nothing but his love for his stepmother Stratonea.
Many instances are recorded of Galen's extraordinary penetration, insomuch that he ventured to say that, by the assistance of the Deity, he had never been wrong in his prognostics. Asclepiades is said to have gained a great reputation by discovering that a man who was supposed to be dead, and was on the point of being buried, was in fact alive, and several similar instances are upon record. It must not, however, be supposed, that the natural acuteness of the ancients enabled them, in this branch of medicine, to overcome the force of vulgar prejudices, which so distinctly appear in other parts of their writings; e. g. Avian, on some subjects (as, for example, everything connected with generation) their prognostics was formed on the most ridiculous and superstitious grounds.

In the Hippocratic collection, the following works are found on this subject, of which, however, only the first is considered as undoubtedly genuine:—1. Προσφωνικών, Προσφωνίων; 2. Καίσακ Προσφωνίων, Προσφωνίων Coae, supposed to be more ancient than Hippocrates; 3. Προθέσεως, Προθέσεων, in two books, of which the former is probably anterior to Hippocrates, the second cannot be older than Aristotle and Praxagoras; 4. Περὶ Χυμῶν, De Humoribus; 5. Περὶ Κρίσεων, De J udicat ioni bus; 6. Περὶ Κρίσεων, De Diesibus J udicatiori s. Aratores has left four valuable books Περὶ Αἰτίων και Αἰτίων ἱστορίων, Περὶ Αἰτίων καὶ Αἰτίων ἱστορίων, Περὶ Αἰτίων καὶ Αἰτίων ἱστορίων, Περὶ Αἰτίων καὶ Αἰτίων ἱστορίων, of which the first two were valued and the last two were supposed by Vitruvius to belong to Hippocrates, and to be among the oldest works of the ancients that remain upon this subject.

SEMENTIVE FERLE. (Vid. Ferti, p. 436.)

SEMIS, SEMISSIS (Vid. As, p. 110.)

SEMPRONIE LEGES, the name of various laws proposed by Tiberius and Caius Sempronius Gracchus.

AGRAWI. In B.C. 133 the tribune Tiberius Gracchus proposed the Agrarian law of Licinius (vid. Roationes Liciniae): he proposed that no one should possess more than 500 jugera of the public land (ne quis ex publico agro plus quam quingentâ jugera possetderci); and that the surplus land should be divided among the poor citizens, who were not to have the power of alienating it: he also proposed, as a compensation to the possessors deprived of the land on which they had frequently made improvements, that the former possessors should have the full ownership of 500 jugera, and each of their sons, if they had any, half that quantity; finally, that three commissioners (triumviri) should be appointed every year to carry the law into effect. This law naturally met with the greatest opposition, but was eventually passed in the year in which it was proposed, 133 B.C., by Tiberius, C. Gracchus, and Appius Claudius were the three commissioners appointed under it. It was, however, never carried fully into effect, in consequence of the murder of Tiberius Gracchus. The other measures contemplated by Tiberius Gracchus do not require to be mentioned here, as they were never brought for- ward. In consequence of the difficulties which were experienced in carrying his father's agrarian law into effect, it was again brought forward by C. Gracchus B.C. 123.

DE CAPITÉ CIVIUM ROMANORUM, proposed by C. Gracchus B.C. 123, enacted that the people only should decide respecting the captas or civil condition of a citizen (ne de capitâ civium Romanor um in jusse nostro judicaturum). This law continued in force till the latest times of the Republic.

Fumventaria, proposed by C. Gracchus B.C. 123, enacted that corn should be sold by the state at 4th of an as for each modius (ut semisie et tricite, frumentum plebis daratur): Livy says semissi et trientia, that is 6 oz. and 4 oz. =10 oz., because there was no coin to represent the dextans (Vid. As, p. 110.) Respecting this law, see also Appian, Bell. Civ., i. 21—Plut., C. Gracchus, 5. —Vell. Pat., ii. 6.—Cic., Tus., iii. 20.—Pro Sex., 48.—Schoel, Bob. Pro Sex., p. 300, 303, ed. Orelli.

JUDICIALIZ. (Vid. J uex, p. 553.)

Militium, proposed by C. Gracchus B.C. 123, enacted that the soldiers should receive their clothing gratis, and that no one should be enrolled as a soldier under the age of seventeen. Previously a fixed sum was deducted from the pay for all clothes and arms issued to the soldiers.

Quinis a Trib. Consultatoribus, proposed by C. Gracchus B.C. 123, published the consuls were conspired to obtain the condemnation of a person in a judicium publicum. One of the provisions of the lex Cornelia de Sisariss was to the same effect.

De Provinciis Consularibus, proposed by C. Gracchus B.C. 123, enacted that the senate should fix each year, before the comitia for electing the regents, the number of two consulars which were to be allotted to the two new consulae.

There was also a Sempronian law concerning the province of Asia, which probably did not form part of the lex De Provinciis Consularibus, which enacted that the taxes of this province should be let out to farm by the censors at Rome. This law was afterward repealed by J. Caesar.

SEMIUCIAS, SEMILUCES.

SEMUNCII RIIUM FUNUS (Vid. Interest of Money, p. 547.)

Sena'Tus. In all the republics of antiquity, the government was divided between a senate and a popular assembly; and in cases where a king stood at the head of affairs, as at Sparta and in early Rome, the king had little more than the executive office. A senate in the early times was always regarded as an assembly of elders, which is, in fact, the meaning of the Roman senatus as of the Spartan sepoiowia, and its members were elected from among the nobles of the nation. The number of senators in the ancient republics always bore a distinct relation to the number of tribes of which the nation was composed. (Vid. Booth, Jeromii, p. 479.) Hence, in the earliest times, when Rome consisted of only one tribe, its senate consisted of one hundred members (senatores or patres; compare Pa ratici); and when the Sabine tribe, or the Titii, became united with the Latin tribe, or the Rames, the number of senators was increased to two hundred. This number was again augmented by one
hundred when the third tribe, or the Luceres, became incorporated with the Roman state. Dionysius and Livy place the last event in the reign of Tarquin Priscus. Cicero, on the other hand, tells us that Tarquinius doubled the number of senators, according to which we are obliged to suppose that before Tarquinus the senate consisted only of 150 members. This difference, however, may be accounted for by the supposition, that at the time of Tarquinius Friscus a number of seats had become vacant, which he filled up at the same time that he added 100 Luceres to the senate, or else that Cicero regarded the Luceres, in opposition to the two other tribes, as a second or a new half of the nation, and thus incorrectly considered their senators likewise as the second or new half of that body. The new senators added by Tarquinus Friscus were distinguished from those belonging to the two old er tribes by the appellation patres minorum gentium, as previously those who represented the Titii had been distinguished by the same name from those who represented the Rames. Servius Tullius did not make any change in the composition of the senate; but under Tarquinus Superbus the number of senators must have been very much diminished, as this tyrant put many to death, and sent others into exile. This account, however, appears to be greatly exaggerated, and it is a probable supposition of Niebuhr, that several vacancies in the senate arose from many of the senators accompanying the tyrant into his exile. The vacancies which thus arose were filled up immediately after the establishment of the Republic, by L. Junius Brutus, as some writers state, or, according to Dionysius, by Brutus and Valerius Publicola, and, according to Plutarch and Festus, by Valerius Publicola alone. All, however, agree that the persons who on this occasion made senators were distinguished from the rest of the senate by the title of Censors. Dionysius states that the noblest of the plebeians were first raised to the rank of patricians, and that then the new senators were taken from among them. But this appears to be inconsistent with the name by which they were designated. Had they been made patricians, they would have been made senators, and the persons who have suggested that the senators are said to have been distinguished from the old ones by the name of conscripti, is the very mode of addressing the whole senate, and always was patres conscripti, that is, patres et conscripti. There is a statement that the number of these new senators was 164, but this, Niebuhr has justly remarked, is a fabrication, perhaps of Valerius of Antium, which is contradicted by all subsequent history.

Henceforth the number of 300 senators appears to have remained unaltered for several centuries. C. Sempronius Gracchus was the first who attempted to make a change, but in what this consisted is not certain. In the edition of Livy it is expressly stated that he added 600 equites to the number of 300 senators, which would have made a senate of 900 members, and would have given a great preponderance to the equites. This appears to be an absurdity. Plutarch states that Gracchus added to the senate 300 equites, whom he was selected to select from the tribes, and that he raised the number of the judicia from 600 to 600. This account seems to be founded upon a confusion of the lex Judiciae of C. Gracchus with the later one of Livius Drusus, and all the other writers who mention the lex Judiciae of C. Gracchus do not allude to any change in the constitution of the Senate made by him. It is even said by Livy that Gracchus made such a change in the constitution of the Senate that he transferred the judicia from the senate to the equites, which remained in their possession till the tribuneship of Livius Drusus. The latter proposed that, as the senate consisted of 300, an equal number of equites should be elected (opus vivum) into the senate, and that in future the judicia should be taken from the members of the Senate. On the death of Livius Drusus, however, this law was abolished by the senate itself, on whose behalf it had been proposed, and the senate now again consisted of 300 members. During the civil war between Marius and Sulla, many vacancies must have occurred in the senate. Sulla, in his dictatorship, not only filled up these vacancies, but increased the number of senators. All we know of this increase with certainty, is, that he caused about 300 of the most distinguished equites to be elected into the senate; but the real increase which he made to the number of senators is not mentioned anywhere. It appears, however, henceforth to have consisted of between five and six thousand. The members of the Senate, and the number of these members, who were contemptuously called by the people Or. cini senatora, reduced its number to 600, and ordained that a list of the senators should always be exhibited to public inspection. During the first centuries of the Empire, this number appears, on the whole, to have remained the same; but, as everything relative to the institution of the Senate has been left unrecorded, we can scarcely expect to find a regular and fixed number of them. During the latter period of the Empire their number was again very much diminished.

With respect to the eligibility of persons for the senate, as well as to the manner in which they were elected, there were several periods of Roman history. It was formerly a common opinion, founded upon Livy and Festus, which has in modern times found new supporters in Huscite and Rubino, that in the early period of Roman history the kings appointed the members of the senate at their own discretion. It has, however, been shown by Niebuhr and others, with uncontroversible arguments, that the Populus of Rome was the real sovereign; that all the powers which the kings possessed were delegated to them by the Populus; and that the senate was an assembly formed on the principle of representation: it represented the Populus, and its members were elected by the Populus. Niebuhr is, therefore, in stating that the senators were elected by the Populus, but the manner in which he describes the election is erroneous, for he believes that the three tribes were already united when the senate consisted of only one hundred members, and that the senators were elected by the curies. Niebuhr thinks that each genus was represented in the Senate in the next period, Götting, on the other hand, believes, with somewhat more
probability, that each decurio (the δικαιος of Dionysius), which contained either a part of one or parts of several smaller gentes, had to appoint one old man by whom it was represented in the senate, and a younger one (ευνας) as his assistant. This supposition removes the difficulty respecting the decurio which has been pointed out by Walter; for the decurio was the commander of a division of the army, and, as such, could not well have been of the age of a senator. As each decurio or gens appointed one senator, each curus was represented by ten, each tribe by one hundred, and the whole populus by three hundred senators, all of whom held their dignity for life. The plebeians, as such, were not represented in the senate, for the instances in which plebeians are mentioned as being made senators, as in the reign of Tarquinius Priscus, and after the abolition of the kingly power, cannot be regarded in any other light than mere momentary measures, which the government was obliged to adopt for several reasons, and without any intention to appoint representatives of the plebeia. The numbers of such plebeian senators, at any rate, must have been much smaller than they are stated by our authorities, for there is no instance of any plebeian senator on record until the year 439 B.C., when Spurius Maelius is mentioned as senator.

The senate itself appears to have had some influence upon the election of new members, inasmuch as it may be inferred from the decree of Censorinus. The whole senate was divided into decuriae, each of which corresponded to a curia. When the senate consisted of only one hundred members, there were, accordingly, only ten decuriae of senators; and ten senators, one being taken from each decurio, formed the decem primi who represented the ten tribes. When, subsequently, the representatives of the two curiae were added into the senate, the Ramnes, with their decem primi, remained for a time their superiority over the two other tribes, and gave their votes first. The first among the decem primi was the princeps senatus, who was appointed by the king, and was, at the same time, custos urbis. (Vid. Prefectus Uribi.) Respecting the age at which a person might be elected into the senate, it is no more than is indicated by the name senator itself, that is, that they were persons of advanced age.

It can scarcely be imagined that, immediately after the establishment of the Republic, the election of senators should at once have passed from the decuriae or gentes into the hands of the magistrates, and that ten senators were elected annually from each tribe. We must therefore suppose that, at least for a time, the senators were appointed by the gentes, decuriae, or perhaps by the curiae. Afterward, however, the right to appoint senators belonged to the curules, consular tribunes, and subsequently to the censors. This fact has been alleged in support of the opinion that formerly the kings had the same privilege, especially as it is stated that the republic was selected from the remaining nine men to the senatorial dignity (conjugantissimos sibi quique patriaeorum legabant); but this statement is, as Niebuhr justly remarks, founded upon a total ignorance of the nature of the Roman senate. It should not be forgotten that the power of electing senators possessed by the republican magistrates was by no means an arbitrary power, for the senators were always taken from among those who were equites, or whom the people, and previously

INVESTED WITH A MAGISTRACY, SO THAT IT WAS

INVESTED WITH A MAGISTRACY, SO THAT IT WAS

INVESTED WITH A MAGISTRACY, SO THAT IT WAS

INVESTED WITH A MAGISTRACY, SO THAT IT WAS
to the last century of the Republic the senatorial dignity was only regarded as one conferred by the people. But, notwithstanding this apparently popular character of the senate, it was never a popular or democratic assembly, for now its members belonged to the nobles, who were as aristocratic as the patricians. (Vid. Nov. Homers.) The office of princeps senatus, which had become independent of the censorship, was now given by the censors, and at first always to the eldest among the ex-censors, but afterward to any other senator whom they thought most worthy, and, unless there was any charge to be made against him, he was re-elected at the next lustrum. This distinction, however, great as it was, afforded neither power nor advantages, and did not even confer the privilege of precedence among the senators. The passage from Cicero that Caesar was the first who instituted a senatorial census, but the passage of Cicero is still more inconclusive than that of Livy, and we may safely take it for granted that during the whole of the republican period no such census existed, although senators naturally always belonged to the wealthiest class, and consequently the first and last of a census for senators belongs altogether to the time of the Empire. Augustus first fixed it at 400,000 sestertes, afterward increased it to double this sum, and at last even to 1,200,000 sestertes. Those senators whose property did not amount to this sum, received grants from the emperor to make it up, so that they might continue to enjoy the necessary provision customary to remove from the senate those who had lost their property through their own prodigality and vice, if they did not quit of their own accord. Augustus also, after having cleared the senate of unworthy members, introduced a new and reanimating element into it, by admitting men from the municipia, the colonies, and even from the provinces, and thus, while the inhabitants were enrolled in this manner, the province was said to receive the jus senatus. Provinciae who were made senators, of course, went to reside at Rome, and, with the exception of such as belonged to Sicily or to Gallia Narbonensis, they were not allowed to visit their native countries without a special permission of the emperor. In order to make Rome or Italy their new home, the provincial candidates for the senate were subsequently always expected to acquire landed property in Italy. On the whole, however, the equites remained during the first centuries of the Empire the senatorium senatus, which they had also in the latter period of the Republic.

As regards the age at which a person might become a senator, we have no express statement for the time of the Republic, although it appears to have been fixed by some custom or law, as the etas senatoria is frequently mentioned, especially during the latter period of the Republic. But we may by induction discover the probable age. We know that, according to the laws amounting to the tribune Villius, the age fixed for the questorship was thirty-oh-I. Now as it might happen that a quaesitor was made a senator immediately after the expiration of his office, we may presume that the earliest age at which a man could become a senator was thirty-two. Augustus at last fixed the senatorial age at twenty-five, which appears to have remained unaltered throughout the time of the Empire.

Now a senator was allowed to carry on any mercantile business. About the commencement of the second Punic war, some senators appear to have violated this law or custom, and, in order to prevent its recurrence, a law was passed, with the vehement opposition of the senate, that none of its members should be permitted to possess a ship of more than 300 amphorae in tonnage, as this was thought to imply the produce of their estates abroad. It is clear, however, from Cicero, that this law was frequently violated.

Regular meetings of the senate (senatus legitiwm) took place during the Republic, and probably during the kingly period also, on the calends, nones, and the ides of every month. Extraordinary meetings (senatus convoca) were held by the emperor, with the exception of those which were atri, and those on which comitia were held. The right of convoking the senate during the kingly period belonged to the king, or to his viceroy, the customs urbs. (Vid. Prefectus Ursi.) This right was during the Republic transferred to the curule magistrates, and at last to the tribunes also. Under the Empire, the consuls, praetors, and tribunes continued to enjoy the same privilege, although the emperors had the same. If a senator did not appear on a day of meeting, he was liable to a fine, for which a pledge was taken (pignoris capitis) until it was paid. Under the Empire, the penalty for not appearing with the appointed comitia was still greater. Towards the end of the Republic it was decreed that, during the whole month of February, the senate should give audience to foreign ambassadors on all days on which the senate could lawfully meet, and that no other matters should be discussed until these affairs were settled. The place where the meetings of the senate were held (curia, senaculum) were always inaugurated by the augurs. (Vid. Templwm.) The most ancient place was the Curia Hostilia, in which alone, originally, a senatus consultum could be made. Afterward, however, several temples were used for this purpose, such as the Temple of Concordia, a building near the Temple of Belnap (Vid. Laus), the temple of Castor and Pollux, and one near the Porta Capena. Under the emperors the senate also met in other places: under Cesar, the Curia Julia, a building of immense splendour, was commenced; but subsequent meetings of the senate were not seldom held in the house of a consul.

But in the earliest times, the king or the customs urbs, after consulting the pleasure of the gods by auspices, had convened the senate (senatum editum, convocatum), he opened the session with the words "Quod bonum, faustum, felix fortunatunque sit populo Romano Quiritibus," and then laid before the assembly (referre, relatio) what he had to propose. The president then called upon the members to discuss the matter, and when the discussion was over,
The subjects laid before the senate partly belonged to the internal affairs of the state, partly to legislation, and partly to the finance; and no measure could be brought before the populace without having previously been discussed and prepared by the senate. The senate was thus the medium through which all affairs of the whole government had to pass: it considered and discussed whatever measures the king thought proper to introduce, and laid, on the other hand, a perfect control over the assembly of the populace, which could only accept or reject what the senate brought before it. When a king died, the royal dignity, until a successor was elected, was transferred to the decem primi, each of whom, in rotation, held this dignity for five days. The candidate for the royal power was first decided upon by the interreges, who then proposed him to the people, and if not acceptable to the assembly, with the election, the interex of the day, at the command of the senate, proposed the candidate to the comitia, and took their votes respecting him. The will of the gods was then consulted by the augurs, and when the gods too sanctioned the election, a second meeting of the populace was held, in which the augurs announced the sanction of the gods. Hereupon the king was invested with the powers belonging to his office.

Under the Republic, the right of convoking the senate was at first only possessed by the dictators, praetors, or consuls, interreges, and the praefectus urbi, who also, like the kings of former times, laid before the senate the subjects for deliberation. The power of the senate was at first the same as under the kings, if not greater: it had the general care of the public welfare, the superintendence of all matters of religion, the management of all affairs with foreign nations; it commanded the levies of troops, regulated the taxes and duties, and had, in short, the supreme control of all the revenue and expenditure. The order in which the senators spoke and voted was determined by their rank and age, and was regulated by certain distinctions of rank, and in the collegium of the hundred senators, the distinction of rank, however, appears to have ceased after the decemvirate, and even under the decemvirate we have instances of the senators speaking without any regular order. It is also probable that after the decemvirate vacancies in the senate were generally filled with ex-magistrates, which had now become more practicable, as the number of these offices was considerably reduced, and the number of the people likewise obtained access to the deliberations of the senate, but they had no seats in it yet, but sat before the opened doors of the curia. The senate had at first had the right to propose to the comitia the candidates for magistracies, but this right was now lost: the comitia centuriata had become quite free in regard to elections, and what the comitia centuriata chose became, in the comitia comitum, the law of the comitia. The curiae only still possessed the right to sanction the election; but in the year B.C. 299 they were compelled to sanction any election of magistrates which the comitia might make, before it took place; and this soon after became law by a law of the comitia centuriata. Then, at last, the comitia centuriata, in the same year, re-assembled for this special purpose of power, the senate stepped into their place, and henceforth in elections, and soon after, also, in matters of legislation, the senate had previously to sanction whatever the comitia might decide. After the lex Hortensia, a decree of the comitia tributa became law even without the sanction of the senate. The original state of things had thus gradually become reversed, and the senate had lost very important branches of its power, which had all been gained by the comitia tributa. (Vid. Tarr. Pluris.) In its relation to the comitia centuriata, however, the ancient rules were still in force, as laws, declarations of war, conclusions of peace, treaties, &c., were brought before them, and decided by them on the proposal of the senate.

The powers of the senate, after both orders were placed upon a perfect equality, may be thus briefly summed up. The senate continued to have the supreme superintendence in all matters of religion; it determined upon the manner in which a war was to be conducted, what legions were to be placed at the disposal of a commander, and whether new ones were to be levied; it decreed what provisions and supplies were to be levied for the public service (Provincia), and whose imperium was to be prolonged. The commissioners who were generally sent out to settle the administration of a newly-conquered country were always appointed by the senate. All embassies for the conclusion of peace or treaties with foreign states were sent out by the senate, and such ambassadors were generally senators themselves, and ten in number. The senate alone carried on the negotiations with foreign ambassadors, and received the complaints of subject or allied nations, who always regarded the senate as their common protector. By virtue of this office of protector, it also settled all disputes which might arise among the municipia and colonies of Italy, and punished all heavy crimes committed in Italy which might endanger the public peace and security. Even in Rome itself, the judges, to whom the praetor referred important cases, both public and private, were taken from among the senators, and in extraordinary cases the senate appointed special commissions to investigate them; but such a commission, if the case in question was a capital offence committed by a citizen, required the sanction of the people, and the senate. In time of danger, the senate might confer unlimited power upon the magistrates by the formula vident consules, ne quid respublica det, hanc capit, which was equivalent to a declaration of martial law within the city. This general care for the internal and external welfare of the Republic included, as before, the right to dispose over the finances requisite for these ends, and to order the public resources. The superintendence of the Republic were under the direct administration of the senate, and the censors and quaestors were only its ministers or agents. (Vid. Cons, Ques.) All the expenses necessary for the maintenance of the armies required the sanction of the senate before anything could be done, and it might even prevent the triumph of a return.

How many members were required to be present in order to constitute a full assembly is uncertain, though it appears that there existed some regulations on this point, and there is one instance on record in which at least one hundred senators were required to be present. The presiding magistrate opened the business, and as the senators sat in the following order, princes, praetors, consuls, censorii, praetorii, edilicii, tribunici, questorii, it is natural to suppose that they were asked their opinion and voted in the same manner (\textit{suus loco sententiam decree}). Towards the end of the Republic, the order in which the question was put to the senators appears to have depended upon the discretion of the presiding consul, who called upon each member by pronouncing his name (\textit{nominatum}); but he usually began with the princes senatori, or, if consuls designate were present, with them. The consuls generally observed all the year round the same order in which he had commenced on the first of January. A senator, when called upon, might either give his vote, or, as a general rule, even introduce subjects not directly connected with the point at issue. It depended upon the presiding consul which of the opinions he would put to the vote, and which he would pass over. Those men who were not yet real senators, but had only a seat in the senate on account of the office they held, and who were not allowed to take the presiding right that was stepped over to the party they wished to join, and they were now called \textit{senatores pedarii}. When a senator consultum was passed, the consuls ordered it to be written down by a clerk in the presence of some senators, especially those of whom he had been most interested in it or most active in bringing it about (\textit{vid. senatorius consultum}). A senator was not allowed to be held before sunrise, or to be prolonged after sunset. On extraordinary emergencies, however, this regulation was set aside.

During the latter part of the Republic the senate was degraded in various ways by Sulla, Caesar, and others, and on many occasions it was only an instrument of the hands of the men who exercised the military command prepared for the despotic government of the emperors, when it was altogether the creature and obedient instrument of the princeps. The emperor himself was generally also princeps senatori, and had the power of convoking both ordinary and extraordinary meetings, although the consuls, praetors, and tribunes continued to have the same right. The ordinary meetings, according to a regulation of Augustus, were held twice in every month. A full assembly required the presence of at least 400 members, but Augustus himself afterward modified this rule according to the difference and importance of the subjects which might be brought under discussion. At a later period an emperor is said to have been attended by a durum assembly as a consul, or the emperor himself, if he was invested with the consularship. At extraordinary meetings, he who convoked the senate was the presiding and ex officio president. However, even when he did not preside, had, by virtue of his office of tribune, the right to introduce any subject for discussion, and to make the senate decide upon it. At a later period this right was expressly and in proper form conferred upon the emperor, under the name of \textit{jus relationis}; and, accordingly, those who had the right to introduce three or more subjects, the \textit{jus legis}, called \textit{jus tertiae, quarta, quintae, &c., relationis}. The emperor introduced his proposals to the senate by writing (\textit{oratio, libellus, epistola principis}), which was read in the senate by one of his questioners. (\textit{vid. orationes principis}). The praetors, that they might not be inferior to the tribunes, likewise received the \textit{jus relationis}. The mode of conducting business in an ordinary assembly and the order in which the senators were called upon to vote, remained, on the whole, the same as under the Republic; but when magistrates were to be elected, the senate, as in former times the comitia, gave their votes in secret with little tablets. The transactions of the senate were, from time to time, the subject of the \textit{quae sunt a rebus quaestionis}, for the purpose, under the superintendence of a senator. In cases which required secrecy (\textit{senatus consultum tactum}), the senators themselves appointed by the Roman emperor concentrated in his own person all the powers which had formerly been possessed by the Senate, and were in many cases deprived of them without limitation or responsibility, it is clear that the emperor, in its administrative powers, was dependent upon the emperor, who might avail himself of its counsels or not, just as he pleased. In the reign of Tiberius, the election of magistrates was transferred from the people to the senate, which, however, was not the case in all? and it was only in the hands of some of those candidates who were recommended to it by the emperor. This regulation remained, with a short interruption in the reign of Caligula, down to the third century, when we find that the princes alone exercised the right of appointing magistrates. At the demise of an emperor, the senate had the right of exercising this power in the line of his issue, and if one had been nominated by the emperor himself; or, if there had been in very rare cases an opportunity to exercise this right, as it was usurped by the soldiers. The auriarium, at first, still continued nominally to be under the control of the senate, but the emperors gradually took it under their own exclusive management, and the senate retained nothing but the administration of the funds of the city (\textit{a urbs publica}), which were distinct both from the auriarium and from the fiscus, and the right of giving its opinion upon cases connected with the fiscal law. Its right of coming money was limited by Augustus to copper coins, and ceased altogether in the reign of Gallicanus. Augustus ordained that no accusations should be brought before the Senate, and instead of them he raised the senate to the highest court of justice, upon which he conferred the right of taking cognizance of capital offences committed before the Senate.
by senators, 1 of crimes against the state and the person of the emperors, 2 and of crimes committed by the provincial magistrates in the administration of their provinces. The senate might also receive appeals from other courts, 3 whereas, at least from the time of Hadrian, there was no appeal from a sentence of the senate. 4 The princes sometimes referred cases which were not contained in the above categories, or which he might have decided himself, to the senate, or requested its co-operation. 5 Respecting the provinces of the senate, see Provincia.

When Constantine was made the second capital of the Empire, Constantine instituted also a second senate, much more powerful than the old one, and referred all the privileges of the senate of Rome. 5 Both these senates were still sometimes consulted by the emperors in an oratio upon matters of legislation. 6 The senate of Constantine retained its share in legislation down to the ninth century. 7 Each senate also continued to be a high court of justice, to which the emperor referred important criminal cases. 8 Capital offences committed by senators, however, no longer came under their jurisdiction, but either under that of the governors of provinces, or of the prefects of the two cities. 9 Civil cases of senators likewise belonged to the forum of the prefect of the urbs. 10 The senatorial dignity was now obtained by descent, 11 and by having held certain offices at the court, or it was granted as an especial favor by the emperor on the proposal of the senate. 12 To be made a senator was indeed one of the greatest honors that could be conferred, and was more valued than in the times of the Republic; but its burdens were very heavy, for not only had the senators to give public games, 13 to make rich presents to the emperors, 14 and, in times of need, execute some of the functions of the state, but in the time of the foundation, they had to pay a peculiar tax upon their landed property, which was called follis or gleba. 15 A senator who had no landed property was taxed at two follis. 16 It was, therefore, only the wealthiest persons of the Empire, no matter what part of it they belonged, that could aspire to the dignity of senator. A list of them, together with an enumeration of the property which they were required to pay to the emperor every three months by the prefect of the city, 17 Down to the time of Justinian the consuls were the presidents of the senate, but from this time the prefecture urbis always presided. 18 It now remains to mention some of the distinctions and privileges enjoyed by Roman senators:

1. The tunica with a broad purple stripe (latae oclae) in front, which was woven in it, and not, as is commonly believed, sewed upon it. 2. A kind of short boot, with the letter C on the front of the foot. 3 This C is generally supposed to mean centum, and to refer to the original number of 100 (centum) sen-

ators. 3 The right of sitting in the orchestra it the theatres and amphitheatres. This distinction was first procured for the senators by Scipio Africanus Major, 193 B.C. 1 The same honor was granted to the senators in the reign of Claudius at the games held there. 2 On the emperor's wedding day in the year a sacrifice was offered to Jupiter in the Capitol, and on this occasion the senators alone had a feast in the Capitol; the right was called the jus publice opulantis. 3 5. The jus libere legationis. (Vid. Legatus, p. 576.)

SENATUS CONSULTUM. In his enumeration of the parts of the jus civile, Cicero includes senatus consultum, 4 from which it appears that in his time senators were not consulted by the emperors except upon the more important legal questions, and that the laws, and numerous leges, properly so called, were enacted in the reign of Augustus, and leges properly so called were made even after his time. It was under Augustus, however, that the senatus consultum began to take the place of leges properly so called, a change which is also indicated by the fact that until his time the senatus consulta were not designated by the names of the consuls, or by any other person's name, so far as we have evidence. But from that time we find the senatus consulta designated either by the name of the consuls, as Apri nianum, Silanianum, or from the name of the Caesar, as Claudianum, Neronianum; or they are designated as made "auctoré," or "ex auctoritate Hadri anii," 5, 6, or "ad oracionem Hadriani." 5, 6 The name of the senatus consultum涑cundum Claudianum is an exception, as will afterward appear.

Senatus consultum were enacted in the republican period, and some of them were laws in the proper sense of the term, though some modern writers have denied this position. But the opinion of those who deny the legislative power of the senate during the Empire is, that the attempts of the emperors to extend this power has sometimes been made to support it by a passage of Tacitus ("when primeval camps consulted ad patres translatam sunt"), which only refers to the elections. It is difficult, however, to determine how far the legislative power of the senate extended. A recent writer 7 observes that "the senatus consultum was an important source of law for matters religious, political, or military"; and that the maintenance of religion, the suspension or repeal of laws in the case of urgent public necessity, the rights of the emperor, and the publican, the treatment of the Italians and the provincials. 8 The following are instances of senatus consultum under the Republic: a senatus consultum "ne quis in urbe sequeletur," the senatus consultum De Bacchanalibus, after more particularly mentioned a senatus consultum Libertinorum Tribun; 5 a senatus consultum De Cumibus at the Megalenei lud; 5 a senatus consultum "ne homo inmoleretur;" 9 a senatus consultum De Provinciis Questoribus; a senatus consultum made Tullio Cicero referent to the effect, "ut legationem liberorum tempus annum aequat;" various senatus consulta De Collegiis Dissolution; an old senatus consultum De senatus consultum ne libet et Africanius (bestia) in Italia adoveth," which was so far repealed by a plebiscitum proposed by Cr. Aufidius, tribunus plebis, that the importation for the purpose of the Cicernae was made legal; 17 an old senatus consultum by which "quas aequitas (servorum) in caput domini prohibebatur;" 18 a rule of law which Cicero 2 refers to mores as its foundation. From these instances of senatus consultum made

1. (Dion Cass., lib. 31, c. 6.—Sueton, Calig., 2.—Tact., Annal., xii., 44.—J. Capitol., M. Anton., 10.—2. (Dion. Cass., lib. 17, 17, 22; lib. 10, 32; Sueton, Oct., 56.—Tact., Annal., xii., 44.)

870
in the republican period, we may collect, in a general way, the kind of matters to which this form of legislation applied. The constitution of the senate was such as to gradually bring within the sphere of its legislation all matters that pertained to religion, police, administration, provincial matters, and all foreign relations. And it seems that the power of the senate had so far increased at the time of the accession of Augustus, that it must change to make it the only legislating body. Pomponius, though his historical evidence must be received with caution, states the matter in a way which is generally consistent with what we otherwise know of the progress of senatorial legislation: "As the plebs found it difficult to assemble, &c., it was a matter of necessity that the administration of the state came to the senate; thus the senate began to act, and whatever the senate had determined (constitutisset) was observed (observabatur), and the law so made is called senatus consultum."

The senatus consultum was so named because the consul (qui retulit) was said "senatus consultum aquae non id" (Cic., Ep. 1.1). Marcus L. F. S. Postumius L. F. Cos. Senatus Consultum (Postvmivs) was the name of the legislature of the Senate (Bancaeiabnus). In the senatus consultum De Philosophia et Rhetoribus, the prætor "consultulis." In the enacting part of a lex the populus was said "iubertos," and in a plebiscitum, "seire;" in a senatus consultum the senate was said "censers;" De Bacchaniabus, &c., ut excedemum censere (S. C. De Bacch.). In the senatus consultum of the time of Augustus for the proper reading of the passage which follows "censere" is sometimes "placere huic ordint." In Tacitus the verb "censere" is also applied to the person who made the motion for a senatus consultum. Sometimes the term "arbitrari" is used; and Gauck, writing under the Antonines, applies to the senate the terms which originally denoted the legislative power of the people: "Senatus juliet quae constituat: idque legi suum optinet, quamvis fuerit quasam." The mode in which the legislation of the senate was conducted in the imperial period is explained in the article Operationes Principis.

Certain forms were observed in drawing up a senatus consultum of Augustus; that is no example in Cicero: "S. C. Auctoritates" (for this is the right reading), "Pridie Kal. Octob. in Ede Apollinis, scribendo adfuertit L. Domitius Cr. Filius Athenobarbus, &c. Quod M. Marcellus Consul V. F. (verba fectis) de prov. Cons. D. E. R. I. C. (de ea re iuxta consulvunt Ut, &c.). The preamble of the senatus consultum De Bacchaniabus is similar, but the names of the consuls come at the beginning, and the word is "consulvunt," the date and place are also given; and the names of those who scribendo adfuertit (SC. ARF. in the inscription). The names of the persons who were witnesses to the drawing up of the senatus consultum were called the "auctoritates," and these auctoritates were cited as evidence of the power of the senate; "Senatus juliet quae constituat: idque legi suum optinet, quamvis fuerit quasam." (1.

1. (Dig. 1, tit. 2, s. 2.)—2. (Gell. iv. 6.)—2. (De Aquae. Roms., ii.)—2. (Aem. iv. 20.)—5. (Dig. 16, tit. 1, s. 2.)—4. (Id. B. xxvii, 6.)—8. (Cic. De Gr. l., 2.)—9. (Cic. Ep. ad Div. v., 2.)

There can be no doubt that certain persons were required to be present "scribendo," but others might assist if they chose, and a person in this way might testify his regard for another on behalf of whom, or with reference to whom, the S. C. was made ("Cato autem et scribendo adfuirt, &c."). Besides the phrase "scribendo adfixis," there are "case ad scribendum" and "ponti ad scribendum" (as to which, see the curious passage in Cicero). When a S. C. was made, it was said it must be made "in sententiam ejus." If the S. C. was carried, it was written on tablets and placed in the ararium: the S. C. De Bacchanalibus provides that it shall be cut on a bronze tablet, but this was for the purpose of its being put up in a public place where it could be read (exa faciendum gnoseret potissit).

A measure which was proposed as a senatus consultum might be stopped by the intercessio of the tribunes, and provision was sometimes made for further proceeding in such case: "si quis hujus senatus consultu intercesseret senatus placiur auctoritatem peracribi (præscribi) et de ea re ad senatum populumque referret." This explains one meaning of senatus consultum, which was that a law or resolution which has been proposed and not carried, and of which a record was kept with the "auctoritates eorum qui scribendo adfuertur." In one passage Cicero calls a S. C. which had failed, owing to an intercessio, an auctoritas. One meaning of auctoritas, in fact, is a S. C. proposed, but not yet carried; and this agreement of Cicero with Tacitus FRONTvmus 24. The first book of Frontinus, De Aquae.ctibus: the senatus consultum about the Aphrodisienses; the oration of Claudius; the various senatus consultums preserved in the Digest, which are mentioned in a subsequent part of this article. See also the senatus consultum printed in Sigitus, De Antiq. Jure Provinciarum, i., 21.)

The senatus consultum contains perhaps all of which they are distinguished by the name of a consul or other distinctive name. Numen.

meous senatus consulta under the Empire are re-
ferr ed to in the Latin writers, for which we find no
distinctive name, though it is probable that all of
them had a title like the leges, but many of them,
being of little importance, were not much referred
to or cited, and thus their names were forgotten.
Tacitus, for instance, often speaks of S. C. without
giving their names, and in some cases we are able
to affix the titles from other authorities. Many of
the imperial senatus consulta were merely amend-
mentary of laws, but they were laws in the proper
sense of the word.

Some of the senatus consulta of the republican
period were laws, as already observed, but others
were only determinations of the senate, which be-
came leges by being carried in the comitia. Such
S. C. were really only auctoritates. One instance
of this kind occurred on the occasion of the trial of
Clodius for violating the mysteries of the Bona Dea.
A roagio on the subject of the trial was proposed
to the comitia ex senatus consulta,1 which is also
spoken of as the auctoritas of the senate, and as
"quod ab senatu constitu tum" (the word of Gaius,
1, 4).

Apro nianum, probably enacted in the time of Ha-
drian, empowered all civitates which were within
the Roman empire to take a fideicommissa hereditis.
This, and this only, is stated in Chronicon without
the name; but it appears, from comparing Ulpian
with the Digest,2 to be the senatus consultum Apro-
nianum. A senatus consultum also allowed civi-
tates or municipia, which were legally considered
as universitates, to be appointed heredes by their li-
berti or libertae. Ulpian speaks of this senatus con-
sumtum in the passage referred to, immediately
before he speaks of the senatus consultum in which
we know to be the Apronianum, and it appears
probable that the two senatus consulta were the
same, for their objects were similar, and they are
mentioned together without any indication of their
being different. This last-mentioned provision is
also mentioned in the Digest3 as being contained in
a senatus consultum which was post or to the Tre-
bellianum, but the name is not given in the Digest.
Under this provision a municipium could obtain the
honorum possessio. Barchius4 assigns the senatus
consultum to the reign of Trajan; but it appears to
belong to the time of Hadrian, and to be the same
senatus consultum which allowed civitates to take a
legacy.5

Articulianum gave the presses of a province
administration in the case of fideicommissa libertas,
even when the heres did not belong to the province.
The heres could be compelled to give the libertas
which was the subject of the fideicommissum. (Vid.
Manumissio, p. 616.)

De Bacchanalibus. This senatus consultum, which is
sometimes called Marcianum, was passed in
the year B.C. 186. The terms of it are stated
generally in Dio

(Ulp., Frag., tit. 54. 7.)— 7. (Digest. 49, tit. 5, s. 44, s. 8.— 8. (xxxi.
18. 9. (De Diva Religiosi Peregrinae apud Veteres Romanos,
Op., i, 412.)

672

S E N A T U S C O N S U L T U M.

Ca ntilum

1. (Ulp., Frag., tit. xvi.)— 2. (i, 85.)— 3. (i, 84.)
consultum only reduced the cohabiting woman to a servile state when she cohabited with a man’s slave “involo et denuntiante domun autem” if she informed him, knowing him to be a slave, without the knowledge of the master, there could be no denun-
tiatio; and this case, it appears, was not affected by the senatus consultum, for Gaius observes, as above stated,1 that the lex idai still effect, and the offspring of such cohabitation was a slave. The fact of this clause of the lex consulturn used again after the enacting of the senatus consultum, appears to be an instance of the strict interpretation which the Roman jurists applied to positive enactments; for the senatus consultum of Hadrian, as stated by Gaius, only applied to the case of a contract be-
tween the master’s slave and the woman, and this is one instance did not comprehend the case of cohabitation when there was no compact. Besides this, if a free woman cohabited with a man’s slave either without the knowledge of the master or with his knowledge, but without the “denuntiatio,” it seems that this was considered as if the woman simply indulged in promiscuous intercourse (ulglo conceptu, and the mother being free, the child also would have been free. The senatus consultum, however, to restrain such intercourse by working on the pa-
rental affections of the mother, and the senatus cons-
ultum by a direct penalty on herself. There was a “juris inelegantiae” in a free woman giving birth to a slave, but this was not regarded by Hadrian, who was struck by the inelegance of a woman by cohabing with minor did not comprehend a case of cohabitation while there was no compact. 

This senatus consultum was passed A.D. 52, and is mentioned by Tacitus, but the terms in which he expresses himself do not contain the true meaning of the senatus consultum, and in one respect, “same consulturn,” the senatus consultum and the lex consulturn do differ materially from the text of Gaius, unless the reading “libertis” should be “libera.” It appears, however, from a passage in Paulus,2 that a woman, in some cases which are not mentioned by him, was reduced to the condition of a liberta by the senatus consultum; a circumstance which confirms the statements of Suetonius. The senatus consultum, as imperfectly as he has stated the senatus consultum. 

Suetonius3 attributes the senatus consultum to the reign of Vespasian, and expresses its effect in terms still more general and incorrect than those of Tacitus. Such instances show how little we can rely on the Roman historians for exact information as legislation.

It appears from Paulus that the provisions of this senatus consultum are stated very imperfectly even by Gaius, and that they applied to a great number of cases of cohabitation between free women, whether ingenues or libertines, and slaves.

This senatus consultum was entirely repealed by a senatus consultum of Justinian. Some writers refer the words “et leges” to the senatus consultum of Claudius, and they must, consequently, refer the words “et auctores legis” also to this senatus consultum; but the word “lex” in neither case appears to refer to the senatus consultum, but to the lex Aelia Sentea. 

There were several other senatus consultas Claudi-
um, of which there is a short notice in Jo. August. iii. 32. Tacitus, who speaks of the senatus consultas Claudium, says they were the reading of the Digest referred to. 

Lobianum, passed in the reign of Tiberius, in the consulship of T. Statilius Taurus and L. Scribonius Libo, A.D. 16, contained various provisions, one of which was to the effect that if a man wrote a will for another, everything which he wrote in his own favour was void: accordingly, he could not make himself a tutor to his infant or legateus.

This senatus consultum contained other provisions, and it appears to have been an extension of the lex Cornelia de Falsis.7 (Vid. Falsum.)

Macedonius, enacted A.D. 46, provided that any loan of money to a filiusfamilias could not be recovered, even after the death of the father. The, its provisions are imperfectly stated, but a notorious usurer, as appears from the terms of the senatus consultum, which is preserved. Theophili8 states incorrectly that the senatus consultum took its name from a filiusfamilias. The provision of the senatus consultum is cited by Tacitus,9 but in such terms as might lead to ambiguity in the inter-
eductio, etiam Gaius, Huicius, devolutae, nisi per accidit, senatus consultum to the time of Vespasian, but he states its provisions in less ambiguous terms than Tacitus.

Memmius. This name is sometimes given to the senatus consultum passed in the time of Nero, the terms of which are preserved by Tacitus:10 “Ne similitude collin in usum partibus publicus judicandi, neque ne suscipamis quidem hereditas interleges.” The object of this senatus consultum was to prevent the evasion of the lex Julia et Papia Poppaea. (Vid. Jul. et P. P. Leg. L.) It is sometimes referred to the consulship of C. Memmius Regulus and Virginius Rufus, A.D. 63, but it appears to belong to the preceding year.11

Neronianum, is passed in the reign of Claudius, the provisions of which are stated in the article Legatum.12

Neronianum, also called Pisonianum, from being enacted in the consulship of Nero and L. Calpurni-
unus Piso, A.D. 57. It contained various provisions: 13 “Ut si quae est servis interfecisset eum, it quoque, qui testamentum manumissit sub hodie testo manuisserat, inter servos concilium pendentur.”

The ancient se-
tend, which is thus expressed by Papinius.1 2 Sed a major modus institutionis quam fraudis fuerit quod at Palaeidam attinet, de superfuo quarta retributur.3

The history of legislation on the subject of tacita fideicomissa is not altogether free from some doubt.

PLAUTIANUM. (Vid. PLANCIOANUM.)

RUBRIANUM, enacted in the time of Trajan, in the consilium of Rubrius Gallus and Q. Celsus His po, A.D. 101, related to fideicommissa libertas. Its terms are given in the Digest. 4 5 Si hi a quibus iberi trem prastari opopet evocasti a prato adesse noluisse, 5 Sis causa cognta prator proumississet liber tantum his dehur, eodem jure statim servari ac di retdersi esset. Compare Plin., Ep., iv., 9, ad Ursum, with the passage in the Digest.

SABRINIANUM, of uncertain date, but apparently after the time of Antoninus Pius. It related to the rights of one or three brothers who had been adopted to a portion of the hereditas contra tabulam testamento.5

SILANIANUM, passed in the time of Augustus, in the consilium of P. Cornelius Dolabella and C. Junius Silanus, A.D. 10, contained various enactments. It gave freedom to a slave who discovered the murderer of his master. If a master was murd ered, all the slaves who were under the roof at the time, if the murder was committed under a roof, or who were with him in any place at the time of the murder, were put to the torture, and, if they had not discovered the murderer, were put to death. Tacitus refers to this provision of the senator consultum, and he uses the phrase "utere ex more." Lipsius (note on this passage) refers to Cicero.6 Servi impuberis were excepted from this provision of the senator consultum.7 The heres who took possession of the hereditas of a murdered person before the proper inquiry was made, forfeited the hereditas, which fell to the fideicommissarius. If this were the same whether, being heres ex testamento, he opened the will (tabula testamento) before the inquiry was made, or whether, being heres intesta to, he took possession of the hereditas (adit hereditatem) or obtained the honorum possessio; he was also subjected to a heavy pecuniary penalty. A senator consultum, passed in the time of Antoninus Pius (A.D. 12-11), enacted that the penalty for opening the will of a murdered person could not be inflicted after five years, except it was a case of purricide, to which this temporis scriptio did not apply.8

TERTULLIANUM is stated in the Institutes of Justinian9 as having been enacted in the time of Hadri an, in the consilium of Tertullian and Sacerdos, but some critics, on standing this, would refer it to the time of Antoninus Pius. This senator consultum empowered a mother, whether ingenua or liberta, to take the legitima hereditas of an intestate son; the inherit, if she was or had been the mother of three children; the liberta, if she was or had been the mother of four children. They could also take, though they neither were nor had been mothers, if they had obtained the jus liberorum by imperial favour. Several persons, however, took precedence of the mother: the sister heredes of the son, those who were called to the bonorum possessio as such heredes, the father, and the frater consanguineus. If there was a soror consanguineus, she shared with her mother. The senator consultum Orphitianum gave the children a claim to the hereditas of the mother.9

R., iii., tit. 4.—Dig. 48, tit. 5, cod., s. 17.)—8. (Cod. ad Div. iv., 19.)—12. (Dig. 54, tit. 9, s. 11.)—7. (Paulus S. R., iv., tit. 9.—Dig. 30, tit. 17.)
SEPTIMIUM.

SERCUM.

**TREBELLIANUM.** Enacted, in the time of NERO, in the consulship of L. Ameius Scenec and Trebello Maximus, A.D. 62, related to fideicommissa hereditates. 1 (Vid. Fideicommissum.)

**TREBELLIANUM.** Enacted, in the time of Nero, in the consulship of Cesonius Paetus and Petronius Turpil lanus, A.D. 61, was against praeractic or the col luvent desisting from prosecuting a criminal charge. The composition of this statute consulted, and the terms in it with Tacitus 2 "Qua vetera ora ram emptisset, vendidisset, perinde panes teneretur. As publico judicio calumniis condemnetur." The definition of a praeractic is given in the Digest. 3 Vellelianum rendered void all intercessions by women, whether they were on behalf of males or females. This senatus consultum was enacted in the consulship of M. Silanus and Senatus, as appears from the preamble of the senatus consultum, 4 and it appears most probably to have been passed in the reign of Claudius, from the words of Uplin in his comment upon it. In the article Intercessio, where this senatus consultum is mentioned, A.D. 10 seems to be a misprint for A.D. 19. The name of Velleius Tactor does not occur in the Fasti of Tacitus, though he may be a consul suffectus. The name of M. Silanus occurs as consul in the reign of Claudius, and the colleague of Valerius Asiaticus, A.D. 46. 5 (Vid. Intercessio.) In the year A.D. 19, according to the Fasti, a M. Silanus was also consul; his colleague, according to the Fasti, was L. Norbanus Balbus, and this agrees with Tacitus. 6

**VETRASIANUM.** Assigned to the reign of Vespasi an, but the time is very uncertain. It related to fideicommissa libertas. 7

**VOLUSIANUM.** Enacted, in the reign of Nero, in the consulship of Q. Volusius Saturninus and P. Cornelius Scipio, A.D. 56. It contained a provision against women, molliter et ulterius salus a male commoditatis pro salute, but the object of this law seems rather obscure: it is referred to without the name being given in the Digest. 8 Tacitus 9 mentions a senatus consultum in this consulship which limited the power of the soldiers: "Quantum curvales, quantum nibilis pignoris sapertur, vel panes irraportent." A senatus consultum held in the second year of the reign of Augustus 10 enacted that persons should be liable to the penalties of the lex Julii de vi Privata, who joined in the suit of another person with the bargain that they should share whatever was acquired by the condemnation. 11

**SENIOR ES.** (Vid. Comit. p. 296.)

**SEPTIMVIRI EPULOSES.** (Vid. Eepolones.)

**SEPTIMO N'TUM, a Roman festival which was held in the month of December. It lasted only for one day (dies Septimontium, dies Septimontialis). According to Festus, 11 the festival was the same as the Agonalia; but Scaliger, in his note on this pas sage, has shown from Varro 12 and from Tertullian 13 that the Agonalia and the Septimontium have been held as festivals of the last days of December, whereas the Agonalia took place on the tenth of this month. The day of the Septimontium was a dies feriatus for the Montani, or the inhabitants of the seven ancient hills, or, rather, districts of Rome, who offered on this day sacrifices to the gods in their respective districts. Those sacra (sacra pro montibus) 14 were like the Pagnalia, not sacra publica, but privata. 15

875
The production of raw silk (serica) in Europe was first attempted under Justinian, A.D. 530. The eggs of the silkworm were conveyed to Byzantium in the hollow stem of a plant from "Serindia," which was probably Khotan in Little Bokhara, by some monks, who had learned the method of hatching and caring them. The worms were fed with the leaf of the black or common mulberry (magnus*). The cultivation both of this species and of the white mulberry, the breeding of silkworms, and the manufacture of their produce, having been long confined to Greece, were at length, in the twelfth century, transported into Sicily, and thence extended over the south of Europe.\(^1\) The progress of this important branch of industry was, however, greatly impeded even in Greece, both by sumptuary laws restricting the use of silk except in the church service, or in the dress and ornaments of the court, and also by fines and prohibitions against private silksmills, and by other attempts to regulate the price both of the raw and manufactured article. It was at one time determined that the business should be carried on solely by the imperial treasurer. Peter Barsamian held the office, and conducted himself in the most oppressive manner, so that the trade was ruined both in Byzantium and at Tyre and Berytus, while Justinian, the Empress Theodora, and their treasurer, amassed great wealth by the monopoly.\(^2\) The silks woven in Europe previously to the thirteenth century were in general plain in their pattern. Many of those produced by the industry and taste of the Seres, i.e., the silk manufacturers of the interior of Asia, were so elaborate that the slave appears to have been ignorant of the manner in which they had been made, and the style of ornament they bore was not uncommon, since those goods (serica) were procurable in the vicius Tusus at Rome.\(^3\) Silk thread was also imported and used for various purposes.\(^4\) Although Commodus in some degree replenished the palace with valuable and curious effects, including those of silk,\(^5\) this article soon afterward again became very rare, so that few writers of the third century make mention of it. When finely manufactured, its value was increased by the introduction of beating the drapery with a hammer between the planks (tenues tabulis) or rollers (trabes). A similar representation of the use of the frame-saw is given in a painting found at Herculanum, the operators being winged genii, as in this woodcut;\(^6\) but in a bas-relief published by Micali,\(^7\) two sawyers wear tunics girt round the waist like that of the shipbuilder in the woodcut on p. 112. The woodcut here introduced also shows the blade of the saw detached from its frame, with a ring at each end for fixing it in the frame, and ex- hibited on a finemal monument published by Gruter. On each side of the last-mentioned figure is represented a hand-saw adapted to be used by a single person. That on the left is from the same finemal monument as the blade of the frame-saw: that on the right is the figure of an ancient Egyptian saw preserved in the British Museum. These saws (serrae manuacturae) were used to divide the smaller objects. Some of them, called lepip, had a particular shape, by which they were adapted for amputating the branches of trees.\(^8\)

St. Jerome\(^9\) seems clearly to allude to the circular saw, which was probably used, as at present, in cutting veneers (laminae prataemus).\(^10\) We have also intimations of the use of the centre-bit, and we find that even in the time of Ciceron\(^11\) it was employed by the bees.

Pliny\(^12\) mentions the use of the saw in the ancient Belgium for cutting white building stone: some of the oolitic and cretaceous rocks are still treated in the same manner, both in that part of the Continent and in the south of England. In this case Pliny must be understood to speak of a proper or toothed saw. The saw without teeth was then used, just as it is now, by the workers in marble, and the place of teeth was supplied, according to the hardness of the stone, either by emery, or by various kinds of sand of inferior hardness.\(^13\) In this manner the ancient artificers were able to cut slabs of the hardest rocks, which, consequently, were adapted to receive the highest polish, such as granite, por-

---

SERVITIÜES.

The saw is an instrument of high antiquity, its invention being attributed either to Dedalus or to his nephew Perdix (vid. CIRCINUS), also called Talos, who, having found the jaw of a serpent, and divided a piece of wood with it, was led to imitate the teeth in iron. In a bas-relief published by Winckelmann, Dedalus is represented holding a saw approaching very closely in form to the Egyptian saw above delineated. SERVITUTES, used only in the plural (σεστίμα, σεσαφά- μοι), a Feast or Garland.

The art of weaving wreaths (vid. CORONA), garlands, and festoons, employed a distinct class of persons (σερβίτους και κορώνες, στέφανωτακοι or στεφάνωτακοι), who endeavoured to combine all the most beautiful variety of leaves, flowers, and of fruits, so as to blend their forms, colours, and scents in the most agreeable manner. The annexed woodcut, taken from a sarcophagus at Rome, shows a feaston adapted to be suspended by means of the fillets at both ends. Its extremities are skilfully excised in acanthus-leaves: its body consists apparently of laurel or bay, together with a profusion of fruits, such as apples, pears, pomegranates, bunches of grapes, and fir-cones. At Athens there was a market, called στεφανοπηλακοι, for the manufacture and sale of this class of productions, the work being principally performed by women and girls.

When a priest was preparing a sacrifice, he often appeared with a festoon intended to be placed on the door of the temple (festa fronte, specius servis13) on the front of the altar1 (vid. ARA, p. 77, 78), or upon the head of the victim. Thus, in the Iliad, Chryses, besides the gilded sceptre which denoted his office and authority (vid. SCEPTERUM), carries a garland in honour of Apollo, which was probably wound about the sceptre.1 The act here described is seen in the annexed woodcut, which is taken from a bas-relief in the collection of antiques at Ince-Blundell, and represents a priestess carrying in her two hands a festoon to suspend upon the circular temple which is seen in the distance. As the festoons remained on the temples long after their festivals, and were used in processions, they came gradually into use as votive offerings. The Temple of Juno at Argos was destroyed in consequence of their being set on fire. The garlands on funereal monuments hung there for a year, and were then renewed.2 The funeral pile was also decorated in a similar manner, but with an appropriate choice of plants and flowers.4

Festoons were placed upon the doorposts of private houses in token of joy and affection (vid. JANU, p. 527), more especially on occasion of a wedding. They were hung about a palace in compliment to the wealthy possessor (insertato corona atria), and on occasions of general rejoicing; the streets of a city were sometimes enlivened with these elegant and tasteful decorations.

The smaller garlands or crowns, which were worn by persons on the head or round the neck, are sometimes called sert2. The fashion of wearing such garlands suspended from the neck was adopted by the early Christians.14

SERVILIA LEX. (Vid. Lex, p. 586.)

SERVITUS. (Vid. SERVUS, ROMAN.)

SERVITUTES are considered by the Roman law as parts of ownership, which are opposed to ownership as the totality of all those rights which are included in the term ownership. The owner of a thing can use it in all ways consistent with it, and he can prevent others from using it in a way inconsistent with his full enjoyment of it as owner. If the owner's power over the thing is limited either way, that is, if his enjoyment of it is subject to the condition of not doing certain acts in order that some other person may have the benefit of such forbearance, or to the condition of allowing others to do certain acts, which limit the enjoyment of the thing as it is owned, is called "servitium," to be subject to a "servitus." When a thing was sold as "optima maxima," this term was understood to mean that it was waranted free from servitutes. Servitutes are also expressed by the terms "jura" and "jura in re;" and these terms are opposed to dominium or complete ownership. Those who exercise servitutes over a servitus, therefore, not the animus dominii, not even in the case of usufructus, for the usufructuarius is never recognised as owner in the Roman law. The technical word for ownership, when the usufructus is deduced from it, is proprietas.

A man can only have a right to a servitus in another person's property: the notion of the servitus has no direct relation to his own property. A servitus can only be in a corporeal thing. Viewed with respect to the owner of the thing, a servitus is either consistent in his being restrained from doing certain acts to his property, or which otherwise he might do (servitus qua in non faciendo consistit; servitus negatv), or it consists in his being bound to allow some other person to do something to the property, which such person might otherwise be prevented from doing (servitus qua in patiendo con-
SERTUDES.

Servitus. A servitus never consists in the owner of the servient property being obliged to do any act to his property, though he may be obliged to do acts which are necessary towards the enjoyment of the servitus.

There were two classes of servitudes. Either they had for their subject a definite person, who could exercise the right, in which case they were called personal, personarum; or they had for their subject another piece of property, or a house, or land, and the person who exercised the servitus exercised it in respect of his right to the house or land which was its subject. Servitudes of the latter kind were called praeludis servitute servorum or rerum, or jurid praeiudicum; and therefore, in respect of their special kinds, juris aquarum, etc.

The exercise of personal servitudes, of which usuas and usufructus were the principal, was always connected with the natural possession of the thing, and, consequently, the quasi possessio of such servitudes had a close resemblance to possessio. (Vid. Possessio.) Servitudes of this class consisted solely in "padiendo." Precludial servitudes consisted both in "padiendo" and "in non faciendo." Those which consisted in "padiendo" were either acts which a person might do, by virtue of his right, upon the property of another, as the jus iterici, &c., or they were acts which he could do to or upon the property of another, by virtue of possessing another piece of property. Praedial servitude, or the right of living in another person's house, resembled the usufructus or usus adiunum. But it was not lost, as usufructus and usus were, by captis dominio or neglect to exercise the right. Also, it consisted in the right to inhabit some definite part of a house only, and not the whole; the habitation could be sold or let. If it was a donation inter vivos, it could be set aside by the donor.

Oper seervorum et animalium consisted in a man having a right to the use and services of another person's slave or beast, so long as the slave or beast lived. The servitus continued after the death of the person entitled to it, and was not lost by a capit dominio, nor by neglect to exercise it. This is called by Gaius the "Ususfructus hominum et servorum animalium." Precludial servitudes imply the existence of two pieces of land (pradia), one of which owes a servitus to the other (servitutem debit, pradum, fundum serviens), and the servitus is said to be due (deberi) from the one to the other. The name of precludium dominium, which is now often used to designate the praedium to which the servitus is due, is modern. It is of the same root of clas servitute servorum, or an advantage to the land to which it belongs: it must be something that in some way increases its value. It must also be a thing that is permanently to the advantage of the dominant servitus. The servitus is considered as belonging to the dominant servitus in such a sense that it cannot be alienated without the servitus, nor pledged, nor let.

Precludial servitudes were either praeludium urbana or rural. But the word servitus has a double meaning, according as we view it as a right or a duty. The servitus of a praedium rusticum or urbanum in, in the former sense, the servitus which belongs to a particular praedium as a right: in the latter sense, it is the servitus which some particular praedium owes as a duty. When the two praedias are contumeliously united in their mutual relations of right and duty, the word servitus expresses the whole relation. Servitudes urbanae appear to be those which are for the advantage of an edifice as such, and rusticae those which are for the advantage of a piece of ground as such, and mainly for the benefit of agriculture.

The following are the principal servitudes urbanae: 1. Oneria forenda, or the right which a man has to build on his own edifice. The owner of the servent property was consequently bound to keep it in repair, so that it should be adequate to discharge its duty. 2. Tigni inmittendi, or the right of planting a beam in or upon a neighbour's wall. 3. Proriciendi, or the right of adding something to a man's edifice, though it shall project into the open space which is above his neighbour's grounds. 4. Stillicidi, or the right of collecting water from a neighbour's premises. The technical meaning of stillicidium is rain in drops; when collected in a flowing body, it is flumen. 5. Leitores servitus, or the right of allowing a neighbour's man to build his house higher than its present elevation, or the duty of the owner of a piece of land not to raise his edifice above a certain height, in order that the owner of some other house might have the advantage of such forbearance. If a man was released from this duty by his neighbour, he obtained a new right, which is the jus alius tolendi. In like manner, a man who was released from the servitus stillicidi, was said to have the servitus stillicidi non recipiendi. This was not strictly accurate language; for if a servitus is defined to be some limitation of the usual rights of ownership, a recovery of these rights, or a release from the duties which is implied by the possession of these rights by another, merely gives the possession of their use for the time being, and not an entire renunciation of the servitus. Still, such was the language of the Roman jurists; and, accordingly, we find enumerated among the urbane servitudes "stillicidium ancertendi in tectum vel aream vicini aut non avertzendi." 7. Servitus ne luminibus, and ne prospectu officiari, or the duty which a man owes to his neighbour's land not to obstruct his light or his prospect, and servitus luminum or prospectus, or the duty of a man to allow his neighbour to make openings into his premises, as in a common wall, for instance, to get light or a prospect. It was a servitus the object of which was to procure light, whereas the ne officiari was to prevent the de stroying of light. But there are different opinions as to the meaning of servitus luminum. 8. Servitus stercolinii, or the right of placing dung against a neighbour's wall, &c. 9. Servitus fontis inmittendi, or the right of sending one's smoke through a neighbour's chimney.

The following are the principal servitudes rusticae: 1. Servitus iterieris, or the right of a footpath through another man's ground, or to ride through on horseback, or in a sella or lectica, for a man in such cases was said to ride, and not aequa, Viewed with reference to the other, the servitus rusticus in this right, this servitus was properly called jus emundi. 1.(Dig. 8, tit. 5, s. 6.) 2. (Varr. De Ling. Lat., v. 27, ed Müller.—Cic. De Orat., i. 28.) 3. (Dig. 5, tit. 2, s. 2.—4. (Vid. Gaius, i. 31.—Cic. De Orat., i. 39.) 5. (Dig. 5, tit. 2, s. 4, 60.—Gaius, iv. 9.)
SERVITUTES.

2. Actus or agenti, or the right of driving a beast or carriage through another man's land. 3. Vide, or the right ouendi et agenti et ambulantii. Vix of course included the other two servitutes, and it was distinguished from them by its width, which was defined by the Twelve Tables. 1

The width of an iter or actus might be a matter of evidence, and if it was not determined, it was settled by an arbitrator. If the width of an iter was not determined, its width was taken to be the legal width (lactudo legitima). In the work of Frontinus, De Colonis, the phrase "iter populo debetur" or "non debetur" frequently occurs. When "iter debetur" occurs, the width of the iter is given in feet. It seems that, in the assignment of the lands in these instances, the lands were made into a continuous width. If a servitute was formed, the servitute was servitus passendi, or the right of a man in respect of the ground to which his cattle are attached, to pasture them on another's ground. 5. Servitutes aquaeductus, or the ducendi aquam per fundum alienum. There were also other servitutes, as aquae haustus, pecoris ad aquam appulas, calcis coequandus, and aranea fodienda. If a publicus locus or a via publica was so wide as to cross a public road, it could only be crossed by permit. The intervention of a sacer et religioso locus was an obstacle to imposing an itineris servitutis, for no servitut could be due to any person on ground which was sacer or religioso.

A servitut negativa could be acquired by mere contract; and it seems the better opinion that a servitut affirmative could be acquired, and that tradition, at least in the later periods, was not necessary in order to establish the jus servitut. But tradition was necessary in order to give a right to the publican in rem actio. A servitut could be established by the decision of a judex in the judicium familiar cereisdende, communi dividendo, and in a case where the judex adjudicated the proprietats to one and the usufructus to another. 6 Servitute could also be acquired by the prescriptio longi temporis. 7 In a servitut and a servitute of clerico 8 seems to allude to the possibility of acquiring a right to a servitut by use, as to which a lex Scironiae made a change. (Vid. Lex Scironiae.)

Quasi servitutes were sometimes simply founded on positive enactments, which limited the owner of a property in its enjoyment; and others were considered servitutes legatus. 9

A servitut might be released (remittit) to the owner of the fundus servitutis; or it might be surrendered by allowing the owner of the fundus servitutis to do certain acts upon which it was inconsistent with the continuance of the servitut. 10

If the funds and the servient land came to belong to one owner, the servitutes were extinguished; there was a confusio. If the separate owners of two separate estates jointly acquired an estate which was servient to the two separate estates, the servitutes were not extinguished; but they were extinguished if the joint owners of a dominant estate jointly acquired the servient estate. 11 The servitute was also extinguished when the usufructuaries acquired the proprietas of the thing. A servitut was extinguished by the extinction of the object; but if the servient object was restored, the servitute was also restored. 12 A servitute was extinguished by the extinction of the servitute. In the case of a servitut, with the destruction of the dominant subject; but they were revived with its revival. A servitute might be extinguished by not using it. According to the old law, usufructus and usus were lost, and to another's servitut possessor was restored. The servitute was a movable; and in one year in the case of things movable. In Justimian's legislation, usufructus and usus were only lost by not exercising the right when there had been a usucapio libertatis on the part of the owner of the thing, or the ownership had been acquired by usucapi. 2

Servitute might be the subjects of actions in rem. An actio confessoria or vindicatio servitutis had for its object the establishing the right to a servitute, and it could only be brought by the owner of the dominant land when it was due to land. The object of the action was the establishment of the right, damages, and security against future disturbance of the right. Another's servitutes were disturbance in the exercise of the right of his ownership. The plaintiff had, of course, to prove his ownership, and the defendant to prove his title to the servitute.

In the case of personal servitutes, the interdicts were just the same as in the case of proper possession; the interdict which was applied in the case of proper possession was here applied as a utile in terrore.

In the case of prudial servitutes, we must first consider the positive. In the first class, the acquisition of the jus quasi possesso is effected by an act which is done simply as an exercise of the right, independent of any other right. The interference with the exercise of the right was prevented by interdict, for example, as to a servitute for the repair of water passages; 13 in the case of the jus aquae haurientiae.

The second class of positive servitutes consists in the exercise of the servitute in connection with

the possession of another piece of property. The
interdicts applicable to this case are explained un-
der the next class, that of negative servitudes.

In the case of negative servitudes, there are only
two modes in which the juris quasi possessio can be
acquired: 1, when no property is protected by the
interdict; 2, by any legal act which is capable of transferring the jus servitutis. The possession is lost when the owner of the ser-
vient property does an act which is contrary to the right. The possession of the servitudes of the sec-
ond and third class is protected by the interdict uti possessor. There was a special interdict about sewers
(De Circis).

It has been stated that quasi servitutes were
sometimes founded on positive enactments. These
were not servitudes properly so called, for they were
limitations of the exercise of ownership made for
the public benefit. The only cases of the limitation
of the exercise of ownership by positive enactment
which are mentioned in the Pandect, are reducible
to three principal classes. The first class compre-
ends the limitation of ownership on religious
grounds. To this class belongs finis, or a space of
five feet in width between adjoining estates, which
it was not permitted to cultivate. This intermed-
siate space was sacred, and it was used by the own-
ners for religious purposes. To fortify this class also belongs the rule, that if a man had
buried a dead body on the land of another without his
consent, he could not, as a general rule, be compel-
led to remove the body, but he was bound to make
recompense. The second class comprehends rules
relating to police. According to the Twelve Ta-
bles, owners of buildings in the city were required
to leave a space of two feet and a half vacant al-
round any edifice that he erected: this was called
legitimum spatium, legitimus modus. Consequently,
between two adjoining houses there must be a va-
ant space of five feet. This law was, no doubt,
frequently neglected; for, after the fire in Nero's reign,
it was forbidden to build houses with a common
wall, because they were likely to overhang each other.
Legitimum spatium was again required to be observed;
and it is referred to in a rescript of Antoninus and Verus.
This class also comprehends rules as to the height
and form of buildings. Augustus fixed the height
at seventy feet; Nero also, after the great fire, made
some regulations with the view of limiting the height
of houses. Trajan fixed the greatest height at sixty
feet. These regulations were general, and had no
reference to the convenience of persons who pos-
sessed adjoining houses: they had, therefore, no
relation at all to the servitutes altius tollendii and non
tollendii, as some writers suppose. The rule of the
Twelve Tables, which forbade the removing a "tig-
num furtum vel vinum janctum," had for its object the preventing of accidents. Another rule
declares that public aqueducts should be permitted
to be taken from their lands for these public purpo-
ses, but should receive a proper compensation. The
Twelve Tables forbade the burning or interring of a
dead body in the city; and this rule was enforced
by a lex Duilia. In the time of Antoninus Pius, this
rule prevailed both in Rome and other cities.

The third class of limitations had for its object
the propriety of agriculture. It comprised the rules
relating to Aqua Flavia, and to the tignum janctum
in the case of a vineyard; and it gave a man permission to go on his neighbour's premises
to gather the fruits which had fallen thereon from
his trees, with this limitation, that he could only go
every third day. The Twelve Tables enacted that
if a neighbour's tree hung over into another person's
land, that person might enter under the height of
fifteen feet from the ground (quindecim pedes altius eam
subductor). The rule was a limitation of owner-
ship, but not a limitation of the ownership of the
tree-owner: it was a limitation of the ownership of
the land-owner; for it allowed his neighbour's
tree to overhang his ground, provided there were
no branches less than fifteen feet from the ground.

With these exceptions, some of which were of great
antiquity, ownership in Roman law must be
considered as unlimited. These limitations, also,
had no reference to the convenience of individuals
who had adjoining houses or lands. With respect
to neighbours, the law allowed them to regulate
their mutual interests as they pleased; and, accord-
ingly, a man could agree to allow a neighbour to
derive a certain benefit from his land, which his
proximity rendered desirable to him, or he could
agree to abstain from certain acts on his land for
the benefit of his neighbour's land. The law gave
force to these agreements under the name of serv-
itudes, and assimilated the benefits of them to the
right of ownership by attaching to them a right of
action like that which an owner enjoyed.

This view of the limitation of ownership among
the Romans, which is the correct one, is a valuable
essay by Dirksen.

This imperfect sketch may be completed by ref-
ference to the following works, and the authorities
cited in them: Mackeldy, Lehrbuch, f.e.—Müh-
lenbruch, Doctrina Pandectarum, p. 268, &c.—Sa-
vigny, Das Recht des Besitzes, Juris Quasi Possacai,
and succeeding works. The whole subject is de-
volved through simple Vertrag und Stipulation von
Illner, Rhein. Mus. für Jurisprudenz, Erster Jahrgang.—
"Von dem Verhältniss des Eigenthums zu den Servi-

SERVUS (Greek). The Greek δοῦλος, like the
Latin servus, corresponds to the usual meaning of
our word slave. Slavery existed almost through
the whole of history in Greece. In Athens, the com-
plete household is that which consists of
slaves and freemen (οἰκία δὲ τέλειος ἐκ δοῦλων καὶ
ἐλευθέρων), and he defines a slave to be a living
working-tool and possession (ὁ δοῦλος ἄρθρον ἀργά
νυς: ὁ δοῦλος κτήμα τι ἔργον). None of the Greek
philosophers ever seem to have objected to
slavery as a thing morally wrong: Plato, in his
perfect state, only desires that no Greeks should be
made slaves by Greeks, and Aristotle defends
the justice of the institution on the ground of a diver-
sity of race, and divides mankind into the free (ἐλε-
υθέροις), and those who are slaves by nature (οἱ ψάες
dοῦλοι): under the latter description he appears to
have regarded all barbarians in the Greek sense of
the word, and therefore considers their slavery jus-
tifiably.

In the most ancient times there are said to have
been no slaves in Greece; but we find them in the
Homeric poems, though by no means so generally
as in later times. They are usually prisoners taken
in war (δομάλωτοι), who serve their conquerors;
but we also read as well of the purchase and sale of
slaves. They were, however, at that time mostly
confined to the houses of the wealthy.

There were two kinds of slavery among the
Greeks. One species arose when the inhabitants

Ann. p. 459.)—4. (Dig. 6, tit. 8, n. 16.)—4. (Suet. Octavi, 65.)
5. (Dig. 47, tit. 2.)
at a country were subdued by an invading tribe, and reduced to the condition of serfs or bondsmen: they lived upon and cultivated the land which their masters had appropriated to themselves, and paid them a certain rent. They also attended their masters in war. They could not be sold out of the country or separated from their families, and could acquire no property. In the time of Philip V., Lysimachus the Heletis of Sparta ('rid. Helotes), the Penestes of Thessaly (vid. Pa- nista), the Bithynians at Byzantium, the Caligiri at Syracuse, the Mariandyi at Heraclæa in Pontus, the Aphiactæ in Crete. (Vid. Cosm. p. 316.)

The other species of slavery consisted of domestic slaves acquired by purchase (αγρυψωρος or χρωινω- ρος). A slave might be the property of masters, and could be disposed of like any other goods and chattels: these were the δυννοι properly so called, and were the kind of slaves that existed at Athens and Corinth. In commercial cities slaves were very numerous, as they performed the work of the artisans and manufacturers of modern towns. In poorer republics, which had little or no capital, and could not provide themselves with property, these slaves would be few: thus in Phocis and Locris there are said to have been originally no domestic slaves. The majority of slaves were purchased; few, comparatively, were born in the family of the master, partly because the number of female slaves was very small in comparison with the male, and partly because the male slave was so much cheaper to obtain as it was considered cheaper to purchase than to rear slaves. A slave born in the house of a master was called αϋκάρης, in contradistinction to one purchased, who was called ολεργή. If both the father and mother were slaves, the offspring was called μοιδαλοφόρος: if the parents were ολεργαδες, the offspring was called ολεργός.

It was a recognised rule of Greek national law, "that the persons of those who were taken prisoners in war became the property of the conqueror," but it was the practice for the Greeks to give liberty to those of their own nation on payment of a ransom. Consequently, almost all slaves in Greece, with the exception of the serfs above mentioned, were barbarians. It appears to follow, from a passage in Thucydides, that the Chians were the first who carried on the slave-trade, where the slaves were more numerous than in any other place except Sparta, that is, in comparison with the free inhabitants.

In the early ages of Greece, a great number of slaves were obtained by piracy, who kidnapped persons on the coast; but the number of slaves that were brought from the Greek colonies in Asia Minor, who had abundant opportunities of obtaining them from their own neighbourhood and the interior of Asia. A considerable number of slaves also came from Thrace, where he parents frequently sold their children.

At Athens, as well as in other states, there was a regular slave-market, called the κλόμα 11 because the slaves stood round in a circle. They were also sometimes sold by auction, and appear then to have been placed on a stone called the παρείπα κλός: 11 the same was also the practice in Rome, whence the phrase homo de lapide entum. (Vid. Anc.) The slave-market at Athens seems to have been held on certain fixed days, usually the last day of the month (the Ἐν καὶ νόι or νου- ωτισα). 12 The price of slaves also naturally differed according to their age, strength, and acquire-

2. "Some slaves," says Xenophon, 1 are well worth two minas, others hardly half a mina; some sell for five minas, and others even for ten; and Nicias, the son of Niceraton, is said to have given no less than a talent for an overseer in the mines. 13 Böckh 4 has collected many particulars respecting the price of slaves; he calculated the value of the commonest slave from 125 to 150 drachmas. The knowledge of any art had a great influence upon the value of a slave. Of the thirty-two or thirty-three sword-cutters who belonged to the father of Demosthenes, some were worth five, some six, and the lowest more than three minas; and his three couch-makers, together, were valued at a talent. Considerable sums were paid for contraceptors and female players on the cithara; twenty and thirty minas were common for such. 14 Neera was sold for thirty minas. 6

The number of slaves was very great in Athens. According to the census made when Demetrius Phalereus was archon (B.C. 309), there are said to have been 21,000 free citizens, 10,000 metics, and 400,000 slaves, 6 which makes the slave population is so immensely large in proportion to the free, that some writers have rejected the account altogether, and others have supposed a corruption in the numbers, and that for 400,000 we ought to read 40,000. 5 Böckh 4 and Clinton, 15 however, remark, with some justice, that in computing the number of slaves the establishment must we compound a good part of their political and military strength, and hence the census of only males of full age was taken; while, in enumerating slaves, which were property, it would be necessary to compute all the individuals who composed that property. Böckh takes the proportion of free inhabitants to slaves as nearly one to four. 4 There was a slave-market in many places as regular as that in one: but, whatever may be thought of these calculations, the main fact, that the slave population in Attica was much larger than the free, is incontrovertible: during the occupation of Decëa by the Lacedemonians, more than 20,000 Athenian slaves escaped to this place. 11 In Corinth and Égina their number was equally large: according to Timæus, Corinth had 460,000, and according to Aristotle, Égina had 470,000 slaves; 16 but these large numbers, especially in relation to Égina, must be understood only of the early times, before Athens had obtained possession of the commerce of Greece.

At Athens even the poorest citizen had a slave for the care of his household, and in every moderate establishment many were employed as possible occupations, as bakers, cooks, tailors, &c. The number possessed by one person was never so great as at Rome during the later times of the Republic and under the Empire, but it was still very considerable. Plato 10 expressly remarks, that some persons had fifty slaves, and even more. This was also the case of the Athenian statesman, who possessed: 14 Lyssias and Polemarchus had 120, 16 Philemonides had 300, Hippomimus 600, and Nicias 1000 slaves in the mines alone. 11 It must be borne in mind, when we read of one person possessing so large a number of slaves, that they were employed in various workshops, mines, or manufactories: the number mentioned is that to which he was attached to his own private wants or those of his household was probably never very large. And this constitutes one 

881
great distinction between Greek and Roman slaves, that the labour of the former was regarded as the means by which an owner might obtain profit for the outlay of his capital in the purchase of the slaves, while the latter were chiefly employed in ministering to the wants of their master and his family, and in gratifying his luxury and vanity. Thus Athenaeus remarks that many of the Romans possessed 10,000 or 20,000 slaves, and even more; but not, he adds, for the sake of bringing in a revenue, as the wealthy Nicias.

Slaves either worked on their masters' account or for their own [in the latter case they could sell their masters a certain sum a day], or they were let out by their master on hire, either for the mines or any other kind of labour, or as hired servants for wages (ἀποφάσα). The rowers on board the ships were usually slaves; it is remarked as an unusual circumstance, that the seamen of Paralos were free-men. These slaves belonged either to the state or to private persons, who let them out to the state on payment of a certain sum. It appears that a considerable number of persons kept large gangs of slaves merely for the purpose of letting out, and found this a profitable mode of investing their capital. Great numbers were required for the mines, and in most cases the mine lessees would be obliged to hire some, as they would not have sufficient capital to engage them in this manner by themselves. We learn from a fragment of Hyperides preserved by Suidas, that there were at one time as many as 150,000 slaves who worked in the mines and were employed in country labour. Generally none but inferior slaves were confined in these mines: they worked in chains, and numbers died from the effects of the unhealthy atmosphere. We cannot calculate the numbers engaged in this occupation, but the overspends three times.

Nicias paid an obolus a day for each mining slave which he hired. The rate of profit upon the purchase-money of the slaves was naturally high, as their value was destroyed by age, and those who lied had to be replaced by fresh purchases. The proprietor was also exposed to the great danger of running away, when it became necessary to manumit them, as he could not be sure that they would not sell their liberty at a profit (σπαρακτικα). Antigone of Rhodes was the first that established an assurance of slaves. For a yearly contribution of eight drachmas for each slave that was in the army, he undertook to make good the value of the slave at the time of his running away.

Slaves that worked in the fields were under an overseer (ἐπιτραπέζων), to whom the whole management was intrusted, which required the master resided in the city; the household slaves were under a steward (ταυκοτ), the female slaves under a stewardess (ταυκια). The Athenian slaves did not, like the Helots of Sparta and the Penetae of Thessaly, serve in the armies; the battles of Marathon and Arginusae, when the Athenians armed their slaves, were exceptions to the general rule.

The rights of possession with regard to slaves differed in no respect from any other property; they could be given or taken as pledges. The condition, however, of Greek slaves was, upon the whole, better than that of Roman ones, with the exception, perhaps, of Sparta, where, according to Plutarch, it is the best place in the world to be a freeman, and the worst to be a slave (τοι Ακαδαίοι και τον ελεύθερον μισεις ελθειν εναι, και τον δολου μισης δολου). At Athens especially, the slaves seem to have been allowed a degree of liberty and indulgence which was never granted to them at Rome. On the reception of a new slave into a house at Athens, it was the custom to scatter sweetmeats (καταφυσμα), as was done in the case of a newly-married pair.

The life and person of a slave were also protected by the law: a person who struck or maltreated a slave was liable to an action (δικαιο γραφη); a slave, too, could not be put to death without legal sentence. He could even take shelter from the cruelty of his master in the Temple of Theseus, and there claim the privilege of being sold by him (πων αι αιτιτεβαι). The person of a slave, however, was not considered so sacred as that of a freeman: his offences were punished with corporeal chastisement, which was the last mode of punishment inflicted on a freeman. He was not believed upon oath, and if he had false testimony in his favour, his case was always taken with torture. (Vid. B.Cav.)

Notwithstanding the generally mild treatment of slaves in Greece, their insurrection was not unfeigned; but these insurrections in Attica were usually confined to the mining slaves, who were treated with more severity than the others. On one occasion they murdered their guards, took possession of the mines, and from this point ravaged the country for a considerable time.

Slaves were sometimes manumitted at Athens, though not so frequently as at Rome; but it seems doubtful whether a master was ever obliged to liberate a slave against his will for a certain sum of money, as some writers have concluded from a passage of Plautus. Those who were manumitted (ελευθεροι) did not become citizens, as they might at Rome, but passed into the condition of metics. They were obliged to honour their former master as their patron (ποιτοτης), and to fulfil certain duties towards him, the neglect of which rendered them liable to the δια εποδοσησια, by which they might again be sold into slavery. (Vid. Liv.).

Repealing the public slaves at Athens, see Demosthenes. It appears that there was a tax upon slaves at Athens, which Bockh supposes was three oboli a year for each slave.

932
SERVUS (Roman), SERVITUS. "Servitus est constituto iuris genus quae quidem dominio alieno contra naturam subiicit." Gaius also considers the potestas of a master over a slave as "jurus gentium." The Romans viewed liberty as the natural state, and slavery as a status or condition which was contrary to the natural state. The mutual relation of slave and master among the Romans was expressed by the terms servus and dominus, and the power and interest which the dominus had over his slave, and in the slave was expressed by dominium. The term dominium or ownership, with reference to a slave, pointed to the slave merely as a thing or object of ownership, and a slave, as one of the res mancipii, was classed with other objects of ownership.

The word potestas was also applied to the master and to his slave, as the same word was used to express the father's power over his children. The boundaries between the patria and dominica potestas were originally very narrow, which were altogether wanting to the condition of the slave. The master had no potestas over the slave if he had already a "nudum jus Quiritium in servo." It was necessary that the slave be his in bonis at least.

According to the strict principles of the Roman law, it was a consequence of the relation of master and slave that the master could treat the slave as he pleased; he could sell him, punish him, and put him to death. Positive morality, however, and the social intercourse that must always subsist between a master and the slaves who are immediately about him, ameliorated the condition of slavery. Still we read of acts of great cruelty committed by masters in the later republican and earlier imperial periods, and the lex Petronia was enacted in order to protect the slave. (Vid. Lex Petronia, p. 584.) The proper term of the slave's death, which Gaius considers to be a part of the jus gentium, was limited by a constitution of Antoninus, which enacted that, if a man put his slave to death without sufficient reason (sine causa), he was liable to the same penalty as if he had killed another man's slave.

The constitution applied to Roman citizens, and to all persons who were subject to the Roman jurisdictio. The same constitution also prohibited the cruel treatment of slaves by their masters, by enacting that if the cruelty of the master was intolerable, he might be compelled to sell the slave, and the slave was empowered to make his complaint to the proper authority. A constitution of Claudius enacted that, if a man should sell his slave, and the same who were infernum, they should be sold free, and the constitution also declared that, if they were put to death, the act should be murder. It was also enacted, that in sales of division of property, slaves, as husband and wife, parents and children, brothers and sisters, should not be separated. A master could not contract a marriage. His cohabitation with the term servus and dominium, and 40 legal relation between him and his children was recognised. Still nearness of blood was considered an impediment to marriage after manumission: thus, a manumitted slave could not marry his manumitted sister.

A slave could have no property. He was not capable of acquiring property, but his acquisitio belonged to his master, which Gaius considers to be a rule of the jus gentium. A slave could acquire for his master by mancipatio, traditio, stipulatio, or in any other way. In this capacity of the slave to take, though he could not keep, his condition was assimilated to that of filiusfamilias, and he was regarded as a person. If one party gave a servus to a master, the master acquired a nudum jus Quiritium in a slave, and he was another's in bonis, his acquisitions belonged to the person whose he was in bonis. If a man possessed another man's slave or a free person, he only acquired through the slave in two cases: he was entitled to all that the slave acquired out of or by means of the property of the master or free person; and he was entitled to all that the slave acquired by his own labour (ex operis suis); the law was the same with respect to a slave of whom a master had the usufructus only. All other acquisitions of such slaves or free persons belonged to their owner or to themselves, according as they were slaves or free men.

A master could also acquire possessio through his slave, and thus have a commencement of usufruct, but the owner must have the possession of the slave; he might not acquire it through him, and, consequently, a man could not acquire possession by means of a pignorated slave. (Vid. Pignorie.) A bone fide possessor, that is, one who believed the slave to be his own, could acquire possession through him in such cases as he could acquire property; consequently, a pledgee could not acquire possession through his pignorated slave, though he had the possession of him bona fide, for this, bona fides was not that which is meant in the phrase bone fide possessor. The usufructus of a master acquired possession through the slave in the same cases in which the bonae fide possessor acquired it.

Slaves were not only employed in the usual domestic offices and in the labours of the field, but also as factors or agents for their masters in the management of business (vid. Institutiones Superiores, &c.), and as mechanics, artisans, and in every branch of industry. It may easily be conceived that, under these circumstances, especially as they could not acquire property, and, in a great measure, there must have arisen a practice of appropriating a slave to consider part of his gains as his own: this was his peculium, a term also applicable to such acquisitions of a filiusfamilias as his father allowed him to consider as his own. (Vid. Patria Potestas.) According to strict law, the peculium was the property of the master, but, according to usage, it was considered to be the property of the slave. Sometimes it was agreed between master and slave that the slave should purchase his freedom with his peculium when it amounted to a certain sum. If a slave was manumitted by the owner in his lifetime, the peculium was considered to be given together with libertas, unless it was expressly retained. Transferences of property and debts after the death of the debtors have been regarded as place between the master and slave with respect to the peculium, though no right of action arose on either side out of such dealings, conformably to a general principle of Roman law. If, after the slave's manumission, the master paid him a debt which had arisen in the manner above mentioned, he could not recover it. In case of the claim of creditors on the slave's peculium, the debt of the slave to the master was first taken into the account, and deducted from the peculium. So far was the law modified, that in the case of the naturales obli...
A naturalis obligation might also result from the dealings of a slave with other persons than his master; but the master was not at all affected by such dealings. If a slave of his own accord bought or sold the slaves of another, he was regarded as acting for himself, and dealings of the slave when the slave was employed as his agent or instrument, in which case the master might be liable to an actio Exercitoria or Institoria. There was, of course, an actio against the master when the slave acted by his orders. (Vid. Josse, Quom, &c.) If a slave or filiusfamiliae traded with his peculium with the knowledge of the dominus or father, the peculium and all that was produced by it was divisible, the creditors and master or father in due proportions (pro rata portione); and if any of the creditors complained of getting less than his share, he had a tributoria actio against the master or father, to whom the law gave the power of distribution among the creditors. The master was not liable for anything beyond the amount of the peculium, and his own property was exempt from a claim on the slave. Sometimes a slave would have another slave under him, who had a peculium with respect to the first slave, just as the slave had a peculium with respect to his master. On this practice was founded the distinction between servi ordinarii and vicarii. These subordinate pecula were, however, legally considered as included in the principal peculium. In the case of a slave loaned to a creditor, the master was not liable to that creditor, unless it required that any action in respect of the peculium must be brought within a year. If a slave or filiusfamiliae had carried on dealings without the knowledge and consent of his master or father, there might be an action against the master or father in respect of such dealings, so far as it could be proved that he had derived advantage from them. This was called the actio de rem verso, and it was, in fact, the same actio as that de peculo. That was said in rem patris dominique versum which turned out for his advantage. For instance, if a slave borrowed ten sestertii and paid them to the master's creditors, the master was bound to pay the loan, and the lender had an actio against him de rem verso. If the slave paid any part of this debt, the master was not liable to the lender for the amount so applied, and if the slave had wasted the other part, the master was bound to make that good to the amount of the slave's peculium; but still with this provision, that the amount of the slave's peculium could only be ascertained by first deducting from it what he owed to the master. The case was the same with the peculium as a whole, and a slave. Thus, as Gaius observes, the actio de peculo and de rem verso was one actio, but contained two condemnations.

It is a consequence of the relation of slave and master, that the master acquired no rights against the slave in consequence of his delicts. Other persons might obtain rights against a slave in consequence of his delict but their right could not be prosecuted by action until the slave was manumitted. They had, however, a right of action against the slave's master for damages, and if the master would not pay the damages, he must give up the slave. (Vid. Noxa.) The slave was protected against injury from other persons. If the slave was killed, the master might either prosecute the killer for a capital offence, or sue for damages under the lex Aquilina. (Vid. AQUILINA LEX, INFRA.) The master had also a praetoria actio in duplum against those who corrupted his slave (servus, serva) and led him into bad practices; the in duplum was to twice the amount of the estimated damage. He had also an action against a person who committed the same wrong and, with his female slave. A runaway slave (fugitivus) could not lawfully be received or harboured; to conceal him was forturn. The master was entitled to pursue him wherever he pleased, and it was the duty of all authorities to give him aid in recovering the slave. It was the object of various laws to check the running away of slaves in every way, and, accordingly, a runaway slave could not legally be an object of sale. A case of the rule of law was established, that, though a woman at the time of the birth might be a slave, still her child was free, if the mother had been free at any time reckoning backward from the time of the birth to the time of the conception. There were various cases of children of the offspring of a free parent and a slave, as to which positive law provided whether the children should be free or slaves (Vid. SENATUS CONSULTUM CLAUDIANUM).

A person became a slave by capture in war, also jure gentium. Captives in war were sold as belonging to the errarium, or distributed among the soldiers by lot. In reference to the practice of selling prisoners with a crown on their heads, we find the expression sub corona venire, vendere. A free person might become a slave in various ways. If a master purchased a runaway slave at a public sale, that was the case with incensio (vid. Capvur), and those who evaded military service. In certain cases, a man became a slave if he allowed himself to be sold as a slave in order to defraud the purchaser; and a free woman who cohabited with a slave might be reduced to the same condition. (Vid. SENATUS CONSULTUM CLAUDIANUM.) Under the Empire, the rule was established that persons condemned to death, to the mines, and to fight with wild beasts, lost their freedom, and their property was confiscated, whence, concludes Gaius, it appears that they lose the testamenti facio. But this was not the earlier law. A person so condemned, though he lost his freedom, had no master, and, consequently, the hereditates and legacies which were left to him were simply void, for such a person was only a servus servorum servorum. A man never lost his freedom by usucapion. According to the old law, a man was a slave by birth, and was capable of holding a personal estate as a servus servorum servorum. Addicebatur to the

person whose property he had stolen; but it was doubted whether the effect of the addictio was to make him a servus, or to put him in the condition of an adjudicatus. 1

By a constitutio or senatus consultum of Claudius, 2 a freedman who misconducted himself towards his patron was reduced to his former state of slavery, and finally deprived of all the rights he had enjoyed in the time of Nero. 3 (Vid. Patronus, Libertus.)

The state of slavery was terminated by Manu- missio. It was also terminated by various positive enactments, either by way of reward to the slave, or punishment to the master. The Senatus Consul- tum Silanum is an example of the former; and a power of capital punishment was given to slaves who discovered the perpetrators of certain crimes. 4

Liberty might also be acquired by the prescriptio temporis. After the establishment of Christianity, it might be acquired, subject to certain limitations, by becoming a monk or a spiritual person, 5 but if the person left his monastery for a secular life, or rambled about in the towns or the country, he might be reduced to his former servile condition.

There were slaves that belonged to the state, and were called servi publici: they had the testamenti factio to the amount of one half of their property, 6 from which circumstance it appears that they were viewed in a light somewhat different from the slaves of private families.

The preceding account treats of the legal condi- tion of slaves in their relation to their masters. It remains to give an account of the history of slavery among the Romans, of the sale and value of slaves, of the different classes into which they were divided, and of the general condition of the class.

Slavery existed at Rome in the earliest times of which we have any record, but they do not appear to have been numerous under the kings and in the earliest ages of the Republic. The different trades and the mechanical arts were chiefly carried on by the clients of the patricians, and the small farms in the country were cultivated, for the most part, by the labor of the proprietor and of his own family.

But, as the territories of the Roman state were extended, the patricians obtained possession of large estates out of the ager publicus, since it was the practice of the Romans to deprive a conquered people of part of their land. These estates probably required a larger number of hands for their cultivation than could readily be obtained among the free population; and since the freemen were constantly liable to be called away from their work to serve in the armies, the lands began to be cultivated almost entirely by slave labor. 7 Through war and commerce slaves could easily be obtained, and at a cheap rate, and their number soon became so great that the proprietor of a large estate was thrown almost entirely out of employment. This state of things was one of the chief arguments used by Li- cinius and the Gracchi for limiting the quantity of public land which a person might possess; 8 and we know that there was a provision in the Licinian constitution that a certain number of freemen should be employed on every estate. 9 This regulation, however, was probably of little avail: the lands still continued to be almost entirely cultivated by slaves, although, in the latest times of the Republic, we find that Julius Cæsar attempted to remedy this state of things to some extent, by enacting that, of those persons who attended to cattle, a third

should always be freemen. 10

In Sicily, which supplied Rome with so great a quantity of corn, the number of agricultural slaves was immense: the oppressions to which they were exposed drove them twice to open rebellion, and their numbers enabled them to defy for a time the Roman power. The first of these servile wars began in B.C. 194, and the last, the Bocchus war, took place in B.C. 102, and lasted almost four years.

Long, however, after it had become the custom to employ large gangs of slaves in the cultivation of the land, the number of those who served as personal attendants still continued to be small. Persons in good circumstances seem usually to have been free, or to have been considered as such by the law, and were generally called by the name of his master, with the word por (that is, puer) affixed to it, as Caipor, Lucipor, Mucipor, Pulipor, Quintipor, &c.; and hence Quintilian 9 says, long before whose time luxury had augmented the number of personal attend- ants, that such names no longer existed. Cato, when he went to Spain as consul, only took three slaves with him. 14

But during the latter times of the Republic, and under the Empire, the number of domestic slaves greatly increased, and in every family of importance there were separate slaves to attend to all the necessities of domestic life. It was considered a reproach to a man not to keep a considerable number of slaves. Thus Cicero, in describing the house of Piso, says: 15

"Idem cognos, idem alienus: pistor domi nul- las." 16 The first question asked respecting a per- son's fortune was " Quos paesit servos?" Horace 17 seems to speak of ten slaves as the lowest num- ber which a person in tolerable circumstances ought to possess. The dictator Tullius for being attended by no more than five, who were going from his Tiburtine villa to Rome. 18

The immense number of prisoners taken in constant war with the Romans, and the increase of wealth and luxury, augmented the number of slaves to a prodigious extent. The statement of Athenaeus, 19 that very many Romans possessed 10,000 and 20,000 slaves, and even more, is probably an ex- aggeration; but a freedman under Augustus, who had lost much property in the civil wars, left at his death as many as 4116. 20 Two hundred was no uncommon number for one person to keep, 21 and Augustus permitted even a person that was exiled to take with him upon his return 10,000 slaves. The mechanical arts, which were formerly in the hands of the clients, were now entirely exercised by slaves; 22 a natural growth of things, for where slaves perform certain duties or practise certain arts, such duties or arts will be thought degrading to a free man. It must not be forgotten that the games of the amphitheatrum were secured an immense number of slaves trained for this purpose. 23 (Vid. Gladiatres.) Like the slaves in Sicily, the gladiators in Italy rose in B.C. 73 against their op- pressors, and, under the able generalship of Sparta- cus, defeated a Roman consular army, and were not subdued till B.C. 71, when 60,000 of them are said to have fallen in battle. 24

Under the Empire, various enactments, mention- ed above (p. 883), were made to restrain the cruelty of masters towards their slaves; but the spread of Christianity tended most to ameliorate the condi- tion of slaves, though the possession of them was for a long time by no means condemned as contra- ry to Christian justice. The Christian writers,

---

The trade of slave-dealers (mangones) was con-

tered disreputable, and expressly distinguished 

from that of merchants (mangones non mercatores 

sed venaliciarum appellantus)1; but it was very 

lucrative, and great fortunes were frequently real-

ized from it. The slave-dealer Tharsius, who lived 

in the time of Augustus, was a well-known charac-

ter, and his slave-dealer in his time, of the name of 

Gargilusian.

Slaves were usually sold by auction at Rome. 

They were placed either on a raised stone (hence 
de lapide emus)2 or a raised platform (eatego3), 

so that every one might see and handle them, even 

if they did not wish to purchase them. Purchasers 

usually took care to have them stripped naked,4 

for slaves with the feet whitened with chalk,5 

and those that could not stand on their hind 

feet,6 which we know was a sign of slavery 

among many Eastern nations. The slave-trade, 

like all other markets, was under the jurisdiction 

of the authorities, who made many regulations by edicts 

respecting the sale of slaves. The character of the 

slave was set forth in a scroll (titulus) hanging 

around his neck, which was a warranty to the 

purchaser;7 the vendor was bound to announce 

fairly all his defects,8 and if he gave a false account, 

had to take him back within six months from 

the time of his sale,9 or the purchaser, if the latter 

had lost through obtaining an inferior 

kind of slave to what had been warranted.10 The 

vendor might, however, use general terms of 

com- 

mendation without being bound to make them 

good.11 The chief points which the vendor had to 

warrant were the health of the slave, especially 

freedom from epilepsy, and that he had not a 
tendency to thievish, running away, or committing 

suicide.12 The nature of a slave was considered 

important, and had to be set forth by the vendor. 

Slaves sold without any warranty were at the 

time of sale a pilius) upon their head.13 Slaves 

newly imported were generally preferred for 

common work: those who had served long were 

considered artful (veteratores); and the perfectness 

and impudence of those born in their master's house 

(serva: see above, p. 894) were proverbial (verna 

proaca).14

The value of slaves depended, of course, upon 

their qualifications; but under the Empire, the 

increase of luxury and the corruption of morals led 

purchasers to pay immense sums for beautiful 

slaves, or such as ministered to the caprice or 

whim of the purchaser. Eunuchs always fetched 

high prices, and Martians of beautiful 

Erotop., lib. i.)—14. (Harby, iii.)—15. (Mart. in Xen., xxv., 1, 555.)—16. (Ovid, Am., i., 8, 64.)—17. (Juv., i., 104.)

Erotop., lib. i.)—14. (Harby, iii.)—15. (Mart. in Xen., xxv., 1, 555.)—16. (Ovid, Am., i., 8, 64.)—17. (Juv., i., 104.)
Slaves were divided into many various classes: the first division was into public or private. The former belonged to the state and public bodies, and their condition was preferable to that of the common slaves. They were less liable to be sold, and under less control than ordinary slaves: they also possessed the privilege of the testamenti factio to the amount of one half of their property (see above, p. 880), which shows that they were regarded in a different light from all other slaves.

Private slaves were employed to take care of their owner's buildings and to attend upon magistrates and priests. They were not used as waiters and seaters had great numbers of public slaves at their command, as had also the triumviri nocturni, who employed them to extinguish fires by night. They were also employed as lectors, jailers, executioners, watermen, &c.

A slave belonging to one person was called familia, but two persons were considered sufficient to constitute a familia. Private slaves were divided into urban (familia urbana) and rustic (familia rustica); but the name of urban was given to those slaves who served in the villa or country residence as well as in the town house, so that the word "urban" and "rustic" rather characterized the nature of their occupation than the place where they served (urbana familia et rustica non loco, sed genere distinguuntur). The familia urbana could therefore accompany their master to his villa without being called rustic on account of their remaining in the country. When there was a large number of slaves in one house, they were frequently divided into decursii; but, in small families, or in the country, they were arranged in certain classes, which held a higher or a lower rank according to the nature of their occupation. These classes are: Ordinarii, Vulgares, Mediatorii, and Quales-Quales but it is doubtful whether the Lateris, or literary slaves, were included in any of these classes. Those that were slaves of the private owners were called privati. Ordinarii seem to have been those slaves who had the superintendence of certain parts of the housekeeping. They were always chosen from those who had the confidence of their master, and they generally had certain slaves under them. To this class the astores, procuratores, and dispensatores belonged. Astores or familiares [suits] were the family urban, but in the former are almost the same as the vitelli. They were stewards or bailiffs. To the same class also belong the slaves who had the charge of the different stores, and who correspond to our housekeepers and butlers: they are called callarii, promi, conti, procuratores peni, &c. (Liv. xli.

Vulgares included the great body of slaves in a house who had to attend to any particular duty in the house, and to minister to the domestic wants of their master. As there were distinct slaves or a distinct slave for almost every department of household economy, as bakers (pastoreto), cooks (coq), confectioners (dulciari), picklers (salmentari), &c., it is unnecessary to mention these more particularly. This class also included the porters (ostiarii), the bedchamber slaves (vid. Cubicularii), the litter-bearers (lectarii) (vid. Lectica), and all personal attendants of any kind.

Mediatorii. (Vid. Mediatorii.)

Quales-Quales are only mentioned in the Digest, and represent the most inferior class of slaves, but in what respects they differed from the mediatorii is doubtful: Becker2 imagines they may have been a kind of slaves, quasquali condiione viventes, which, however, does not give us any idea of their duties or occupations.

Litterati, literary slaves, were used for various purposes by their masters, either as readers (amanuenses) or as librarii, or personal attendants of any kind. Complete lists of all the duties performed by slaves are given in the works of Pignorius, Pompa, and Blair, referred to at the close of this article.

The treatment of slaves, of course, varied greatly according to the disposition of their masters, but it seems to have been on the whole, to have been treated with greater severity and cruelty than among the Athenians. Originally the master could use the slave as he pleased: under the Republic the law does not seem to have protected the person or life of the slave at all, but the cruelty of masters was to some extent restrained under the Empire, as has been pointed out. The employment of the slave in the treatment of slaves, however, was probably little affected by legislative enactments. In early times, when the number of small was small, they were treated with more indulgence, and more like members of the family; they joined their masters in offering up prayers and thanksgivings to the gods, and partook of the same food, and were allowed to become freedmen, though not at the same table with them, but upon benches (subsellia) placed at the foot of the lectus. But with the increase of numbers and of luxury among masters, the ancient simplicity of manners was changed: a certain quantity of food was allowed them (dimicium or domensium), which was granted to them either monthly (mensis) or daily (diurnum). Their chief food was the corn called far, of which either four or five modii were granted them a month, or one Roman pound (libra) a day. They also obtained an allowance of salt and oil: Cato3 allowed his slaves a sextarius of oil a month, and a modius of salt a year. They also got a small portion of wine, and of pepper, which was not allowed to the Saturnalia and Compitalia, and sometimes fruit, but seldom vegetables. Butcher's meat seems to have been hardly ever given.

Under the Republic they were not allowed to serve in the army, though after the battle of Canae, when the state was in such imminent danger, 8000 of them were admitted to the rank of soldiers.14 They were frequently beaten with sticks or scourged with the whip (of which an account is given under FLAVIUS); but these were such every-day punishments that many slaves ceased almost to care for them. Thus Chrysalsius says,15

"The offences of slaves were punished with severity, and frequently the utmost barbarity. One of the mildest punishments was the removal from the familia urbana to the rustica, where they were obliged to work in chains or fetters. They were frequently beaten with sticks or scourged with the whip (of which an account is given under FLAVIUS); but these were such every-day punishments that many slaves ceased almost to care for them."

---

"Si u1i sunt virga ruri, at mih2 torgum est domi."

Runaway slaves (fugitives) and thieves (fures) were branded on the forehead with a mark (stigma), whence they are said to be notati or inscripti. Slaves were also punished by being hung up by their hands with weights suspended to their feet, or by being sent to work in the Ergastulum or Pisonarium. (Vid. Ergastulum, Mol.) The carrying of the furca was a very common mode of punishment. (Vid. Furca.) The toilet of the Roman ladies was a dreadful ordeal to the female slaves, who were often barbarously punished by their mistresses for the slightest mistake in the arrangement of the hair or a part of the dress.

In the case of female slaves as many hours in the day as they pleased, but they usually allowed them holydays on the public festivals. At the festival of Saturn in particular, special indugences were granted to all slaves, of which an account is given under Saturnalia. There was no distinctive dress for slaves. It was once proposed in the senate to give slaves a distinctive costume, but it was rejected, since it was considered dangerous to show them their number. Male slaves were not allowed to wear the toga or bucca, nor females the stola, but otherwise they were dressed nearly in the same way as poor people, in clothes of a dark colour (pullata) and slippers (crepada) (vestas servitis).

The rites of burial, however, were not denied to slaves; for, as the Romans regarded slavery as an inexcusable evil, they desired to deny it an end to the distinction between slaves and free men. Slaves were sometimes even buried with their masters, and we find funeral inscriptions addressed to the Divi Manes of slaves (Dis Manibus). It seems to have been considered a duty for a master to bury his slave, since we find that a person who buried the soul of another had a right of action for the expenses of the funerals.

In 1726 the burial vaults of the slaves belonging to Augustus and Livia were discovered near the Via Appia, where numerous inscriptions were found, which have been illustrated by Bianchini and Gori, and give us considerable information respecting the different classes of slaves and their various occupations. Other sepulchra of the same time have also been discovered in the neighbourhood of Rome.

"SES (σεσ), "a term generally supposed to signify the Tinea of the Latins, i.e., the Book-worm, but used by Aristotle in a more extended sense. That said to be formed in wax would appear to be the Phalana cereana; that formed in wood (called by him άκαβ) is the Tenea fumata, or White Ant; that formed among clothes is probably the Phalana sarceliata. Others, says Schneider, hold them to be the Tinea vestinella, T. pelinella, and T. mellonella. It is to be borne in mind that the Tinea form a division of the genus Phalana."  

"SESSAMUM (σέσσαμον), the Sesamum Orientale, or Eastern Oily-grain."

SESTERTIUS (Sesterzio), a plant, of which Dioscorides describes three species, the Sesi Massiliensis, S. Athlogicum, and S. Piloniheicicum. "The seseli of Galen is the first of these. The seseli of Theophrastus is the same as the τορδύλαν, namely, the Tordylium officinale, or Hartwort. The attraction between the seseli and tordylium is pointed out by Dioscorides and Pliny. According to Stephen Alston, and others, the popular name of the Sesi Massiliensis is 'Hard Meadow Saxifrage,' but its scientific name is Sesel tortuosum. This species is the S. Gallicus of Apicius. It is also called Sui by Celsus. Dr. Milligan, however, confines it with the S. Atticum, a sort of red ochre, which was never used for medicinal purposes. Sprenger follows Anguillara in referring the S. Athlogicum to the Bupleurum fruticosum, and Matthiolus in holding that the Pelpomenniscium is the Equisetum Ppolonensiacum.

SESTERTIUS, a Roman coin, which properly belonged to the silver coinage, in which it was one fourth of the denarius, and therefore equal to 24 asses. Hence the name, which is an abbreviation of semis tertius (sc. nummus), the Roman mode of expressing 24. The word nummus is often expressed with sestertius, and often it stands alone, meaning sestertius.

Hence the symbol H. S or I I S, which is used to designate the sestertius. It stands either for L S (Libra Libra et Semie), or for I I S, the two I's merely forming the numeral two (sc. asaes or libra), and the whole being in either case equivalent to decpndius et semes.

When the as was reduced to half an ounce, and the number of asses in the denarius was made sixteen instead of ten (Vig. As, Denarius), the sestertius was still made one sixtieth of the denarius, and therefore contained no longer 24, but 4 asses. The old reckoning of 10 asses to the denarius was kept, however, in paying the troops. After this change the sestertius was coined in brass as well as in silver; the metal used for it was that called aurichaleum, which was much finer than the common æ, of which the asses were made.

The sum of 1000 sestertii was called sestertium. This was also denoted by the symbol H. S, the obvious explanation of which is "I I S (½) millin," but Gronovius understands it as 2æ pounds of silver (sestertium pondus argenti), which he considers to have been worth originally 1000 sestertii, and therefore to have represented this value ever after. The sestertius was always a sum of money, never a coinage. Sometimes 1000 denarii in the payment of large sums was the denarius.

According to the value we have assigned to the Denarius up to the time of Augustus, we have

£. d. farth.

the sestertius = 9 2 5
the sestertium= 7 1 1
after the reign of Augustus:

the sestertius = 9 0 3 5
the sestertium= 7 1 6 3

The sestertius was the denomination of money almost always used in reckoning considerable amounts. There are a very few examples of the use of the denarius for this purpose. The mode of reckoning was as follows:

"S - nummus = nummus."

Sums below 1000 sestertii were expressed by the numeral adjectives joined with either of these forms.

The sum of 1000 sestertii = mille sestertiorum = M m. (for sestertiorum) = N nummii = M nummus (for nummorum) = M m. (for m. nummorum) = M m. sestertiorum nummum = nummus. These forms are used with the numeral adjectives below 1000; sometimes mille is used instead of sestertiorum; sometimes both words are omitted; sometimes nummus or sestertiorum is added. For example, 600,000 sestertii =

2. (Pliny, H. N., xxxiv., 9.)—3. (Varro, L. L., i., 11.)
SESTERTIUM.

For some of a thousand sesteria (s. e., a million sesteri) and upward, the numeral adverbs in iex (decies, undecies, vicies, &c.) are used, with which the words centena millia (a hundred thousand) must be understood. With these adverbs the construction is the same as for sestertius, and the number is joined in the case required by the construction. Thus, decies sesteriium—decies centena millia sesteriium—ten times a thousand thousand sesteriium==1,000,000,000 sesteriium—1,000,000,000 sesteriium. When an amount is described by more than one of these adverbs in iex, they must be added together if the larger numeral stands first, but multiplied when the smaller is first; care, however, being taken not to reckon the centena millia which is understood more than once in the whole amount. Thus Suetonius1 has millies et quingenies for 150,000 sesteria, i.e., 100,000 x 1 + 50,000 x 1 + 10,000 x 1. Sestertia and immediately after quaterdecies millies for 1,400,000 sesteria, i.e., 14 x 100,000. A variety was allowed in these forms: thus Cicero uses decies et octingenta millie for 1800 sesteria, i.e., 1,000,000 + 800,000 sesteria, and quaterdecies for 1400 sesteria, i.e., 14 x 100,000 sesteria.

When the numbers are written in cipher, it is often difficult to know whether sestertii or sestertia are meant. A distinction is sometimes made by a line placed over the numeral when sestertia are intended, or, in other words, when the numeral is an adverb in iex. Thus

HS. M. C.==1100 sestertii; but ES. M. C==HS millies centes
==110,000 sestertia==110,000,000 sesteriium.

Wurm (p. 24) gives the following rule: When the numbers are divided into three classes by points, the right-hand division indicates units, the second thousands, the third hundreds of thousands. Thus, 177,932=100,000 + 19,000 + 72,000 = 1,092,000 sesteriium. But these distinctions are by no means strictly observed in the manuscripts.

Like other parts and multiples of the as, the sestertius is applied to other kinds of magnitude, e. g., pes sesteriium for 21/2 feet. (Vid. Pes.)

Sestercia is sometimes used as an English word. If so, it ought to be used only as the translation of sestertius, never of sestertium.

SEVIR. (Vid. Equites, p. 418.)
SEX SUFFRAGIA. (Vid. Equites, p. 416.)
SEXTANS. (Vid. As, p. 111.)
SEXTARIUS, a Roman dry and liquid measure, which may be considered one of the principal measures in the Roman system, and the connecting point between that of the Greeks, for it was equal to the στρομον of the latter. It was one sixth of the congius, and hence its name. It was divided, in the same manner as the As, into parts named unia, sextans, quadrans, triens, quinuex, sexsemis, &c. The unia, or twelfth part of the sextarius, was the Ligula; its sextans was therefore two cyathus, its quadrans three, its triens four, its quinquex five, &c.3

The following table exhibits the principal Roman liquid measures, with their contents in the English imperial measure. The dry measures, which are nearly the same, have been given under Monius.

SEXTULIA, the sixth part of the uncia, was the smallest denomination of money in use among the Romans.1 It was also applied to the uncia, to other kinds of magnitude. (Vid. Uncia.)

SHIPS (ναος, πλατον, ναυς, ναυιγια). The beginning of the art of ship-building and of navigation among the Greeks must be referred to a time much anterior to the ages of which we have any record. Even in the earliest mythical stories long voyages are mentioned, which are evidently not altogether poetical fabrications, and we have every reason to suppose that at this early age ships were used which were far superior to a simple canoe, and of a much more complicated structure. The time, therefore, when boats consisted of one hollow tree (Μονοξύλω), or when ships were merely rafts (ραχαλοι), is a period of very little dimensions,1 which the Greeks called ναυιγια, a word which Homer3 is understood. It was the art of making these boats, together with their navies, that brought the name of which not the slightest record has reached us, although such rude and simple boats or rafts continued occasionally to be used down to the latest times, and appear to have been very common among several of the barbarous nations with which the Romans were in contact.2 Passing over the story of the ship Argo and the expedition of the Argonauts, we shall proceed to consider the ships as described in the Homeric poems.

The numerous fleets with which the Greeks sailed to the coast of Asia Minor must, on the whole, be regarded as sufficient evidence of the extent to which navigation was carried on in ancient times; however much of the detail in the Homeric description may have arisen from the poet's own imagination. In the Homeric catalogue it is stated that each of the fifty Boeotian ships carried 120 warriors,4 and a ship which carried so many cannot have been of small dimensions. What Homer here states of the Boeotian vessels applies more or less to the ships of other Greeks. These boats were provided with a mast (ιστρια), which was fastened by two ropes (πρόθρονοι) to the two ends of the ship, so that, when the rope connecting it with the prow broke, the mast would fall towards the stern, where it might kill the helmsman.4 The mast could be erected or taken down as necessary, however, only one sail, which was used in favourable wind; and the principal means of propelling the vessel lay in the oars, who sat upon benches (αληθόκες). The oars were fastened to the side of the ship with leather thongs (περιπλονοι), in which they were turned as a key in its hole. The ships in Homer are mostly called black (μελανοι), probably because they were painted or covered with a black substance, such as pitch, to protect the wood against the influence of the water and the air; sometimes other colours, such as μαργα, minimum (a red colour), were used to adorn the sides of the

SHIPS.

SHIPS near the prow, whence Homer occasionally calls ships μητρόπαροι, i. e., red-checked; 1 they were also painted occasionally with a purple colour (φουκιοπαρότι). When the Greeks had landed on the coast of Troy, the ships were drawn on land, and fastened at the poop with a rope to large stones, which served as anchors. 2 (Vid. Ancora.) The Greeks then surrounded the fleet with a fortification to secure it against the attacks of the enemy. This custom of drawing the ships upon the shore, when they were not used, was followed in later times also, as every one will remember from the accounts in Caesar's Commentaries. There is a celebrated but difficult passage in the Odyssey, 3 in which the building of a boat is described, although not with the minuteness which an actual shipbuilder might wish for. Odysseus first cuts down with his axe twenty trees, and prepares the wood for his purpose by cutting it smooth and giving it the proper shape. He then bores the holes for nails and hooks, and fits the planks together, and fastens them with nails. He rounds the bottom of the ship like that of a broad transport vessel, and raises the bow of the ship above the surface of the bottom. The bottom is said, as Homer says, to be flat. He afterward covers the whole of the outside with planks, which are laid across the ribs from the keel upward to the bulwark; next the mast is made, and the sailyard attached to it, and lastly the rudder. When the ship is thus far completed, he raises the bulwark still higher by wickercwork, which goes all around the ship's prow against the waves. This raised bulwark of wickercwork and the like was used in later times also. 4 For ballast, Odysseus throws into the ship δάνειον, which, according to the scholiast, consisted of wood, stones, and sand. Calypto then brings him materials to make a sail of, and he fastens the νέσοι or ropes, which run from the top of the mast to the two ends of the yard, and the κοήν, with which the sail is drawn up or let down. The νέσος mentioned in this passage were undoubtedly, as in ἱκέτης, the ropes attached to the lower corners of the square sail. 5 The ship of which the building is thus described was a small boat, a σκελία, as Homer calls it; but it had, like all the Homeric ships, a round or flat bottom. Greater ships must have been fitted with a more complicated structure. Shipbuilders are praised as artists. 6 In the article Κεραυν. in P. L., p. 234, a representation of two boats is given, which appear to bear great resemblance to the one of which the building is described in the Odyssey. 7

It is a general opinion that in the Homeric age sailors did not venture out into the open sea, but that such was really one is clear from the fact that Homer makes Odysseus say that he had lost sight of land, and saw nothing but the sky and water, 8 although, on the whole, it may be admitted that, even down to the later historical times, the navigation of the ancients was confined to coasting along the shore. Homer never mentions engagements at sea. The Greeks most renowned in the heroic ages as sailors were the Cretans, whose king Minos is said to have possessed a large fleet, and also the Phocaeans. 9 After the times of the Trojan war, navigation, and with it the art of ship-building, must have become greatly improved, on account of the establishment of the numerous colonies on foreign coasts, and the increased commercial intercourse with

The following woodcut contains a beautiful fragment of a bireme, with a complete deck. 3 Another specimen of a small bireme is given in p. 58

The first Greek people who acquired a navy of importance were the Corinthians, Samians, and Phocaeans. About the time of Cyrus and Cambyses, the Corinthian triremes were generally adopted by the Sicilian tyrants and by the Corinthians, who soon acquired the most powerful navies among the Greeks. In other parts of Greece, and even at Athens and in Eëgina, the most common vessels about this time were long ships with only one rank of rowers. Athens, although the foundation of its maritime power had been laid by Solon (vid. Naukratis), did not obtain a fleet of any importance until the time of Themistocles, who persuaded them to build 200 triremes for the purpose of carrying on

(Thucyd., i. 13.—Plin. H. N., vii. 57.)—2. (Herod., ii. 163.)

3. (Wicksteed, Mann, &c., ed., p. 297.)
SHIPS.

the war against Egia. But even then ships were not provided with complete decks (στεγοσκορπία) covering the whole of the vessel. A single deck appears to have been an invention of later times; Pliny ascribes it to the Thasians, and before this event the ships had only small decks at the poop and the prow. At the same time that The-mistocles induced the Athenians to build a fleet of 200 sails, he also carried a decree that every year twenty new triremes should be built from the produce of the mines of Laurium. After the time of Themistocles as many as twenty triremes must have been built every year, both in times of war and of peace, as the average number of triremes which was always ready was from three to four hundred. Such an annual addition was the more necessary, as the vessels were of a light structure and did not last long. The whole superintendence of the building of new triremes was in the hands of the senate of the Five Hundred, but the actual business was intrusted to a committee called the τριαπόστολοι, one of whom acted as their treasurer, and had in his keeping the money set apart for the purpose. In the summer of 406 B.C. two triremes of the τριαπόστολοι ran away with the money, which amounted to two talents and a half. During the time after Alexander the Great, the Attic navy appears to have become considerably diminished, as in 307 B.C. Det-metius Policrates prostituted the Athenians timber for 100 new triremes. After this time the Rhodians became the most important maritime power in Greece. The navy of Sparta was never of great importance.

Navigation remained, for the most part, what it had been before: the Greeks seldom ventured out into the open sea, and it was generally considered necessary to remain in sight of the coast, or of some station which served as a guide at daylight; in the night, the position, the rising and setting of the different stars, also answered the same purpose. In winter navigation generally ceased altogether. In cases where it would have been necessary to coast around a considerable extent of country, which was connected with the main land by a narrow neck, the Athenians would sometimes of necessity sail from land to one sea to the other by machines called ἄλκοι. This was done most frequently across the Isthmus of Corinth.

Now, as regards the various kinds of ships used by the Greeks, we might divide them with Pliny, according to the number of ranks of oarsmen employed in them. Besides the triremes, quinqueremes, &c., we have the enormous ship with forty ranks of oars, built by Poltemea Philopator. But all these appear to have been constructed on the same principle, and it is more convenient to divide them into ships of war and ships of burden (φορτικά, φορτιγιά, βάλλεις, πλοιά, πτεροί, ναυκτια) (see note 2). Ships of the latter kind were not calculated for quick movement or rapid sailing, but to carry the greatest possible quantity of goods. Hence their structure was bulky, their bottom round, and, although they were not without rows, yet the chief means by which they were propelled were their sails.

The most common ships of war, after they had one consisting of real men-of-war, which were quick-sailing vessels (τριαξίοιοι), and the other of transports with which the (τριαξίοιοι) or for horses (πτεργόιοι, πτεργυροί). Ships of this class were more heavy and awkward, and were therefore not used in battle except in cases of necessity. The ordinary size of a war-galley may be inferred from the fact that the average number of men engaged in it, including the crew and marines, was two hundred, to whom, on some occasions, as much as thirty epibates were added. (Vid. Erat.

The rapidity with which these war-galleys sailed may be gathered from various statements in ancient writers, and appears to have been very great, that even we cannot help looking upon it without astonishment when we find that the quickness of an ancient near seems equalled that of a modern steamboat. Among the war-ships of the Athenians their sacred state-vessels were always included (vid Salamnim), but smaller vessels, such as the πεντικύρωτοι or τριακυρωτοι, are never included when the sum of men-of-war is mentioned, and their use for military purposes appears gradually to have ceased.

Vessels with more than three ranks of rowers were not constructed in Greece till about the year 400 B.C., when Dionysius I., tyrant of Syracuse, who bestowed great care upon his navy, built the first quadriremes (τετρατρόποι) with which he had probably become acquainted through the Carthagi-nians. The invention of these vessels is ascribed to them. Up to this time of the Athenians their sacred state-vessels were always included (vid Salamnimos). The invention of these vessels is ascribed to them. At the time of Alexander the Great, the use of vessels with four, five, and more ranks of rowers became very general, and it is well known from Polybius that the first Punic war was chiefly carried on with such vessels. Ships with twelve, thirty, or even forty ranks of rowers, &c., were built by Alexander and the Ptolemies, appear to have been mere curiosities, and did not come into common use. The Athenians at first did not adopt vessels larger than triremes, probably because they thought that with rapidity and skill they could do more mischief with vessels of small size. But from the year B.C. 336 they continued to use nothing but triremes; but in 330 B.C. the Republic had already a number of quadriremes, which was afterward increased. The first quinqueremes at Athens are mentioned in a document belonging to the year B.C. 325. Herodotus, according to the common reading, calls the triera, which in Olympiad 72 the 429 Greeks took from the Athenians, a πτερος; but the reading in this passage is corrupt, and πτερος should be written instead of πτερος. After the year 330 the Athenians appear to have gradually ceased building triremes, and to have constructed quadriremes instead.

Every vessel at Athens, as in modern times, had a name given to it, which was generally of the feminine gender, whence Aristophanes calls the triremes παθηναί, and one vessel, the name of which

SHIPS.

was Nausphante, he calls the daughter of Nauso.1 The Romans sometimes gave to their ships masculine names. The Greek names were either taken from ancient heroines, such as Nausicaa, or they were abstract words, such as Ἑκλώος, Θεραξία, Πρόνους, Σκύλωνα, Ἡγουμήν, &c. In many cases the name of the builder also was added.

We now proceed to describe some of the parts of ancient vessels.

1. The prow (πρῶπος or μέτωπον, proa) was generally ornamented on both sides with figures, which were either painted upon the sides or laid in. It seems to have been very common to represent an eye on each side of the prow.2 Upon the prow or fore-deck there was always some emblem (πρᾶγμα, insigne, figura) by which the ship was distinguished from others. (Vid. Insigne.) Just below the prow, and projecting a little above the keel, was the rostrum (ηδόλος, ἱδόλον) or beak, which consisted of a beam, to which were attached sharp and pointed irons, or the head of a ram, and the like. This ἡδόλος was used for the purpose of attacking another vessel, and of breaking its sides. It is said to have been invented by the Tyrrhenian Pisces.3 These beaks were at first always above the water, and visible; afterward they were attached lower, so that they were invisible, and thus became still more dangerous to other ships.4 The annexed woodcuts, taken from Montfaucon,5 represent three different beaks of ships.

Connected with the ηδόλος was the προρμβολίς, which, according to Pollux,6 must have been a wooden part of the vessel in the prow above the beak, and was probably the same as the καταφλέκσα, intended to ward off the attack of the ηδόλος of a hostile ship. The command in the prow of a vessel was exercised by an officer called πρωρεύς, who seems to have been next in rank to the steersman, and to have had the care of the gear, and the command over the rowers.7

2. The stern (πήρωπον, pippia) was generally above the other parts of the deck, and in the helmsman had his elevated seat. It is seen in the representations of ancient vessels to be rounder than the prow, though its extremity is likewise sharp. The stern, was, like the prow, adorned in various ways, but especially with the image of the tutelary deity of the vessel (tutela). In some representations a kind of roof is formed over the head of the steersman (see woodcut, p. 58), and the upper part of the stern has the elegant form of a swan’s neck. (Vid. Cbk.

3. The τράγεις is the bulwark of the vessel, or, rather, the uppermost edge of it.1 In small boats, the pegs (πκαλλαί, sculm) between which the oars move, and to which they are fastened by a thong (τροπτωρ), were upon the τράγεις.2 In all other vessels the oars passed through holes in the sides of the vessel (φθαλαμοί, τρίγατα, or τριπτώματα).3

4. The middle part of the deck in most ships of war appears to have been raised above the bulwark, or, at least, to a level with its upper edge, and thus enabled the soldiers to occupy a position from which they could see far around, and hurl their darts against the enemy. Such an elevated deck appears in the annexed woodcut, representing a monerus. In this instance the flag is standing upon the hind-deck.4

5. One of the most interesting as well as important parts in the arrangement of the hirdemes, triremes, &c., is the position of the ranks of rowers, from which the ships themselves derive their names. Various opinions have been entertained by those who have written upon this subject, as the information which ancient writers give upon it is extremely scanty. Thus much is certain, that the different ranks of rowers, who sat along the sides of a vessel, were placed one above the other. This seems at first sight very improbable, as the common ships in later times must have had five ordinates of rowers on each side; and since even the lowest of them must have been somewhat raised above the surface of the water, the highest oardo must have been at a considerable height above it, and, consequently, required very long oars; the apparent improbability is still more increased when we heat of vessels with thirty or forty ordinates of rowers above one another. But that such must have been the arrangement is proved by the following facts: First, on works of art, in which more than one oordo of rowers is represented, they appear above one another, as in the fragment of a bireme given above, and in several others figured by Montfaucon. Secondly, the scholiast on Aristophanes5 states that the lowest rank of rowers having the shortest oars, and, consequently, the easiest work, received the smallest pay, while the highest ordo had the longest oars, and, consequently, had the heaviest work, and received

SHIPS.

The highest pay. Thirdly, in the monstrous στήριγματός of Polemaeus Philatopar, the description of which by Callixenus 1 is as authentic as it well can be, the height of the ship from the surface of the water to the top of the prow (δέκασταλόν) was 48 cubits, and from the water to the top of the stern (στῆλας) 58 cubits. This height afforded sufficient room for the crew as well as the machinery of war which were conveyed in it, and confined us- selves to a brief description of things belonging to a ship as such. All such utensils are divided into wooden and hanging gear (σκεύη βάλλων καὶ σκεύη κυνήγιος). Xenophon 2 adds to these the σκεύη πλοίας, or the various kinds of work, but these are more comprehended among the μηχανα. 

I. Σκεύη βάλλων.

1. Ουρά (τύπα, τεμπ). — The collective term for oars is ράβδος, which properly signified nothing but the blade or flat part of the oar; 3 but was afterward used as a collective expression for all the oars, with the exception of the rudder. 4 The oars varied in size accordingly as they were used by a lower or higher order of rowers; and from the name of the oar by which they were used, they also received the names of κυνηγίος, ραβδίτος, τέμπος, ζυγίτης, and ραβδινής. Böckh 5 has calculated that each trireme, on an average, had 170 oars. In a quinquereme during the First Punic war, the average number of rowers was 300; 6 in later times we even find as many as 400. 7 The great vessel of Polemaeus Philatopar had 4000 rowers; 8 and the handle of each oar (τεμπόδιον) was partly made of lead, that the shorter part in the vessel might balance in weight the outer part, and thus render the long oars manageable. The lower part of the holes through which the oars passed appeared to have been covered with leather (αἰσκωμα), which also extended a little way outside the hole. 9 The ράβδος also contained the κυνήγιος which, must, consequently, be a peculiar kind of oar. They must have derived their name, like other oars, from the class of rowers by whom they were used. Böckh supposes that they were oars which were not regularly used, but only in case of need, and then by the epibates. Their length in a trireme is stated at from 9 to 9½ cubits, but in what part of the vessel they were used is unknown. Respecting oars in general, see the Ap. pendix in Arnold's Thucydides. 10

2. The rudder. (Vid. Gubernaculum.)

3. Λαδή. (ἀκανθίδες, scale.) Each trireme had two wooden ladders, and the same seems to have been the case in the τριακτόραρον. 11

4. Poles or punt poles (κορώνι, contact.) Three of these belonged to every trireme, which were of different lengths, and were accordingly distinguished as κορώνι μέγα, κορώνι μένι, and κορώνι μικρός. Triacontores had probably always four punt poles (Vid. Coxtus). 12

5. Helm, rams, or supports for the masts. They seem to have been a kind of props placed at the foot of the mast. The mast of a trireme, as long as such props were used, was supported by two. In later times they do not occur any longer in triremes, and must have been supplanted by something else. The triacontores, on the other hand, retained their παραστήρια. 13

6. The mast and yards. (Vid. Malus and Antonia.)

II. Σκεύη μηχαν. 14

1. Τυπώμα πα.— This part of an ancient vessel was formerly quite misunderstood, as it was believed to be the boards or planks covering the outside of a ship, and running along it in the direction from poop to prow. But Schneider 15 has proved that the word means cordage or tackling, and this opinion, which is supported by many ancient authors, is consequently affirmed by the documents published by Böckh, where it is reckoned among the σκεύη κυνήγιος. The τυπώματα were thick and broad ropes, which ran in a horizontal direction around the ship from the stern to the prow, and were intended to keep the whole fabric together. They ran round the vessel in several circles, and at certain distances from one another. The Latin name for τυπώμα is tormentum. 16 The length of these torments varied accordingly as they ran around the higher or lower part of the ship, the latter being naturally shorter than the former. Their number varied according to the size of the ship. The tessaracontores of Polemaeus Philadephus had twelve τυπώματα, each 600 cubits long. 17 Such τυπώματα were always ready in the Attic arsenal, and in the ancient vessel when it was taken into use. Sometimes, also, they were taken on board when a vessel sailed, and not put on till it was thought necessary. 18 The act of putting them on was called υπόθωμοναι, or διατείνοναι, or ὁλο. A trireme required four τυπώματα, and sometimes this number was even increased, especially when the vessel had to sail to the stormy part of the sea. 19

2. Τετρον (ερεμό), sail. Most ancient ships had only one sail, which was attached with the yard to the great mast. In a trireme, too, one sail might be sufficient, but the triarch might nevertheless add a second. As each of the two masts of a trireme had two sails, it further follows that each mast might have two sails, one of which was placed lower than the other; and this fact was such that the mainmast were probably called ἱστα μεγάλα, and those of the foremost ἱστα μικρά. 20 The former were used on ordinary occasions, but the latter probably only in cases when it was necessary to sail with extraordinary speed. The sails of the Attic

SHIPS.

war-galleys, and of most ancient ships in general, were of a square form, as is seen in numerous representations on works of art. Whether triangular sails were ever used by the Greeks, as has been frequently supposed, is very doubtful. The Romans, however, that they must have had two distinct classes of ropes, as the topeia are always mentioned after the sails, and the σχοινα before the anchors. The σχοινα (fuses) are the strong ropes to which the anchors were attached, and by which a ship was fastened to the land; while the topeia were a lighter kind of ropes, and made with greater care, which were attached to the masts, yards, and sails. Each rope of this kind was made for a distinct purpose and place (τόνος, whence the name τοπεία). The following kinds are most worthy of notice: α) καλώδια or κιάλα. What they were is not quite clear, though Böckh thinks it probable that they belonged to the standing tackle, i.e., that they were the ropes by which the mast was fastened to both sides of the ship, so that the πρόνοια in the Homeric ships were only an especial kind of καλώδια, or the καλώδια then consisted of two, and sometimes four, which, uniting at the top of the mast, and there passing through a ring, descended on the other side, where it formed the ἐπίτονος, by means of which the sail was drawn up or let down. Compare the woodcut at p. 63, which shows a vessel with two ceruchi, and the woodcut at p. 534, which shows one with four ceruchi. c) ἀγκώνα, Latin ampulla, was the rope fastened from the middle of a yard to the top of the mast, and was intended to facilitate the drawing up and letting down of the sail. The ἀγκώνα διπλή of quadriremes undoubtedly consisted of two ropes. Whether triremes also had them double is uncertain. d) Πόδες (pedes) were in later times, as in the poems of Homer, the ropes attached to the two lower corners of a square sail. These πόδες ran from the ends of the sail to the sides of the vessel towards the stern, where they were fastened with rings attached to the outer side of the bulwark. Another rope is called πρόσων, proper, which was probably nothing else than the lower and thinner end of the πόδες, which was fastened to the ring. e) Τειχερα were the two ropes attached to the two ends of the sailyard, and thence came down to a part of the ship near the stern. Their object was to move the yard in a horizontal direction. In Latin they are called opisara, which is, perhaps, only a corruption of kypora. The last among the τοπεία is the χαλόνδιο, or bridge, the nature of which is quite unknown.

4. Παραθύρωμα. The ancients, as early as the time of Homer, had various preparations raised above the edge of a vessel, which were made of skins and wickerwork, and which were intended as a protection against high waves, and also to serve as a kind of breastwork, behind which the men might be safe against the darts of the enemy. These elevations of the bulwark are called παράθυρα, as in the documents in Böckh they are either called τρίγυια, made of hair, or λευκα, white. They were probably fixed upon the edge on both sides of the vessel, and were taken off when not wanted. Each galley appears to have had several παράθυρα, made of hair and two white ones, these four being regularly mentioned as belonging to one ship. The Καρδινία and χαλόνδια. The former of these occurs in quadriremes as well as in triremes, the latter only in triremes. Their object and nature are very obscure, but they appear to have been a lighter kind of παραθύρα.

5. Σχοινα are the stronger and heavier kinds of ropes. There were two kinds of these, viz., the σχοινα ἀγκώνα, to which the anchor was attached, and σχοινα ἐπίτονος or ἐπίτονος (vestinaria), by which the ship was fastened to the shore or drifted upon the shore. Four ropes of each of these two kinds is the highest number that is mentioned as belonging to one ship. The thick ropes were made of several thinner ones.

The Romans, in the earlier periods of their history, never conceived the idea of increasing their power by the formation of a fleet. The time when the Romans possessed a practicable and a large armed fleet was during the second Samnite war, in the year B.C. 811. Livy, where he mentions this event, says: duumviri navales classis or nandae treficiendae causa were then for the first time appointed by the people. This expression seems to suggest that a fleet had been in existence before, and that the duumvir navale had been pre- sented and bestowed by the other powers. (Vid. Dr. Sieveking.) Niebuhr2 thinks that the expression of Livy only means that at this time the Romans resolved to build their first fleet. The idea of founding a navy was probably connected with the establishment of a colony in the Pontian islands, as the Romans at this time must have felt that they ought not to be defenceless at sea. The ships which the Romans possessed were necessarily only the small kind. These were then very common among the Greeks of Italy, and most of them were perhaps furnished by the Italian towns subject to Rome. This fleet, however insignificant it may have been, continued to be kept up until the time when Rome became a real maritime power. This was the time of the first Punic war. That their naval power then was of no importance, is clear from Polybius, who speaks as if the Romans had been totally unacquainted with the sea up to that time. In the year B.C. 280, when the Romans saw that without a navy they could not carry on the war against Carthage with any advantage, the senate ordained that a fleet should be built. Triremes would now have been of no avail against the high-bulwarked vessels (quinqueremes) of the Carthaginians. But the Romans would have been unable to build others, had not, fortunately, a Carthaginian quinquereme been wrecked on the coast of Bruttium, and fallen into their hands. This wreck the Romans took as their model, and after it built 120, or, according to others, 130 ships. According to Polybius, one hundred of them were πεντερείας, and the remaining twenty τριμείσις, or, as Niebuhr proposes to read, 1.

3. (Orig., iv., 7.)
This large fleet was completed within sixty days after the trees had been cut down. The ships, built of green timber in this hurried way, were very clumsily made, and not likely to last for any time; and the Romans themselves, for want of practice in naval affairs, proved very unsuccessful in their first maritime undertaking, for seventeen ships were taken by the Carthaginians off Messana. C. Duilius, who perceived the disadvantage with which his countrymen had to struggle at sea, devised a plan which enabled them to change a seafight, as it were, into a fight on land. The machine by which this was effected was afterward called curvus, and is described by Polybios. (Vid. Coron. For. 27.)

For a more detailed account of the ships and navigation of the ancients, see Scheffer, De Militia Nave, Upsala, 1654.—Berghaus, Geschichte der Schiffsfahrte der vormachten Völk der Altherums. —Benedict, Gesch. der Schiffahrt und des Handels der Alten.—Howell, On the War-galleys of the Ancients.—A. Jal, Archéologie Nauté, Paris, 1840; and for the Attic navy especially, Beckh's Urkunden über das Seewesen des Attischen Staates, Berlin, 1840.

These books are said to have been obtained in the reign of Tarquinius Priscus, or, according to other accounts, in that of Tarquinius Superbus, when a sibyl (Σβελέκα), or prophetic woman, presented herself before the king, and a great variety of destructive engines of war were invented to purchase them, she went and burned three, and then returned and demanded the same price for the remaining six as she had done for the nine. The king again refused to purchase them, whereupon she burned three more, and demanded the same sum for the remaining three as she had done at first for the nine: the king's council, however, became excited, so that he purchased the books, and then the sibyl vanished. (Respecting the different sibyls mentioned by ancient writers, see Divinatio, p. 369.)

These books were probably written in Greece, as the later ones undoubtedly were, and, if so, consequently came from a Greek source, though it is difficult from what quarter. Niebuhr supposes them to be the work of certain officers from Cuma in Campania. They were kept in a stone chest under ground in the Temple of Jupiter Capitolinus, under the custody of certain officers, at first only two in number, but afterward increased successively to ten and fifteen, of whom an account is given under De exvivis, p. 348.

The public were not allowed to inspect the books, and they were only consulted by the officers who had the charge of them at the special command of the senate (ad libros iret). They were consulted in the case of prodigies and calamities, but it is difficult to ascertain whether they contained predictions, or merely directions as to what was to be done for conciliating or appeasing the gods, in consequence of the mystery which enveloped them from the time that one of their keepers was put to death for divulging their secrets. Niebuhr remarks, from the instances in Livy, that the original books were not consulted, as the Greek oracles were, for the purpose of getting light concerning future events, but to learn what worship was required by the gods when they had manifested their wrath by some calamities. But, if we may judge from his statements, we find that the instruction they give is in the nature of a spirit; prescribing what honour was to be paid to the deities already recognised, or what new ones were to be imported from abroad. They were probably written on palm-leaves, and it is not unlikely that the leaves of the Cumean sibyl described by Virgil were designed as an allusion to the form of the books. For this reason they were called tabulata. Niebuhr supposes that they were referred to in the same way as Eastern nations refer to the Koran and to Hafiz: they did not search for a passage and apply it, but probably only shuffled the palm-leaves and then drew one.

When the Temple of Jupiter Capitolinus was burned by the Gauls, C. Cato, the sibylline books perished in the fire; and in order to restore them, ambassadors were sent to various towns in Italy, Greece, and Asia Minor to make fresh collections, which, on the rebuilding of the temple, were deposited in the same place that the former had occupied. But as a great many prophetic books, many of them prepared by the state, were destroyed in the first circulation at Rome, Augustus commanded that all such books should be delivered up to the praetor urbanus by a certain day and burned, and that, in future, none should be kept by any private person. More than 2000 prophetic books were thus delivered up and burned, and those which were considered genuine, and were in the custody of the state, were put in two gift cases at the base of the statue of Apollo, in the temple of that god on the Palatine, and were intrusted, as before, to the quindecemviri. The writing of those belonging to the state had faded by time, and Augustus commanded the priests to write them over again. A fresh examination of the sibylline books was again made by Tiberius, and many rejected. They were considered spurious. A few years afterward, also in the reign of Tiberius, it was proposed to add a new volume of sibylline oracles to the received collection.

The Christian writers frequently appeal to the sibylline verses as containing prophecies of the Messiah and his kingdom, and most critical historians and commentators have thought that the sibylline books were also used in the Church, and were with others read by the ancient Christians. A complete collection of sibylline oracles was published by Galenus, Amst., 1659: fragments of them have also been published by Mai, Milon, 1817, and Struve, Regiomont. 1818.

The sibylline books were also called Futa Sibylina* and Libri Pascales. Those that were collected after the burning of the temple on the Capitol were considered spurious. Along with the sibylline books, the books of the two prophetic brothers, 1. (Cic., De Div. i., 32.—Liv., xiii., 57.—Dionys., 1. c.—Val. Max., i., 12.)—3. (Serv. ad Virg., Ens., i., 444; vii., 74.)—4. (Dion., 1. c.)—5. (Suet., Oct., 35.—Tacit., Ann., vii., 10.)—6. (Fl., i., 17.—Plin., N. H., xxxii., 1.)—7. (Compare Ces. De Bell. Gall., iii., 14.—Dion Cass., xxxii., 49.—Veget., 1. c.—Mil., de Milone, 20.)—8. (Flav., i., 1.—Varro, Lactant., l. 6.—Gell., l., 10.—Plin., N. H., xiii., 37.)—9. (Hist. of Rome, i., p. 506.)—10. (Gotting., Gescht. der Roum. Staaten, p. 212.)

the Marci, the Etruscan prophecies of the nymph Bygote, and those of Albina or Albunea of Tibar. Those of the Marci, which had not been placed there at the time of the battle of Cannae, were written in Latin: a few remain of them have come down to us in Livy and Macrobius.

SICA, dim. SICULA, whence the English sickle, and SICILICULA. A curved Dagger, adapted by its form to be concealed under the clothes, and therefore carried by robbers and murderers. (Vid. ADINACEs, p. 14.) Sica may be translated a cimeter, to distinguish it from Pugio, which denoted a dagger of the common kind. Sicarius, though properly meaning one who murdered with the sica, was applied to murderers in general. Hence the forms de sicarius and inter sicarius were used in the criminal courts in reference to murder. Thus judicium inter sicarius, "a trial for murder," and defendere inter sicarios, "to defend against a charge of murder." (Vid. JUDEX, p. 552.)

SICARIUS. (Vid. SICA, CORNELIA LEX DE SICARI.) SICYS (civix or cives), the Cucumber. The civix ápocras, which produces the medicinal Elaterium, was formerly called Cucumis agrustis, but has now got the name of Monordica elaterium. It may be proper to remark in this place, that Hippocrates uses the term Elatërion rather loosely, as to all applicable purgatives. See kolokíthos, where the interchange of names between it and civix is pointed out.

SIDE (civdis), according to Sprengel, the white Water Lily, or Nymphea alba. This, however, Adames regards as very uncertain.

SIDERITES (sidérites Atlóis), Magnetic Iron Ore. (Vid. ADAMAS, towards the end of that article.)

SICILIA, (Vid. SATURNILLA, p. 856.)

SIGILLA'TA. (Vid. LEMMIA TERRA.)

SIGMA. (Vid. MENSA, p. 633.)

SIGNA MILITARIA. (sigmata, sigmata), military caps or standards. The most ancient standard employed by the Romans is said to have been a handful of straw fixed to the top of a spear or pole. Hence the company of soldiers belonging to it was called Manipulus. The bundle of hay or fern was soon succeeded by the figures of animals, of which Pliny enumerates five, viz., the eagle, the wolf, the minotaur, the horse, and the boar. These appear to have corresponded to the five divisions of the Roman army as shown on page 614. The eagle (aquila) was carried by the aquilifer in the midst of the hastati, and we may suppose the wolf to have been carried among the principes, and so on. In the second consularship of Marius, B.C. 104, the four quadrupeds were entirely laid aside as standards, the eagle being alone retained. It was made of silver or bronze, and with expanded wings, but was probably of a small size, since a standard-bearer (signifer) under Julius Cesar is said, in circumstances of danger, to have wrecked the eagle from its staff, and concealed it in the folds of his girdle.

The bronze horse just represented belonged to a Roman standard, and is delineated but a little less than the original; it is preserved in the collection at Goodrich Court.

Under the later emperors the eagle was carried, as it had been for many centuries, with the legion, a legion being on that account sometimes called aquila, and, at the same time, each cohort had for its own ensign the serpent or dragon (draco, drókus), which was woven on a square piece of cloth (textilis angustis), elevated on a gilt staff, to which a cross-bar was adapted for the purpose, and carried by the decuriones. Another figure used in the standards was a ball (pila), supposed to have been emblematic of the dominion of Rome over the world; and for the same reason, a bronze figure of Victory was sometimes fixed at the top of the staff, as we see it sculptured, together with small statues of Mars, on the Column of Trajan and the Arch of Constantine. (See the next woodcut.) Under the eagle or other emblem was often placed a head of the reigning emperor, which was to the army the object of idolatrous adoration. The name of the emperor, or of him who was acknowledged as emperor, was sometimes in-
SILEX.

When Constantine had embraced Christianity, a figure or emblem of Christ, woven in gold upon purple cloth, was substituted for the aedile of the emperor. This richly-ornamented staff and was called labarum. Since the movements of a body of troops, and of every portion of it, were regulated by the standards, all the evolutions, acts, and incidents of the Roman army were expressed by phrases derived from this circumstance. Thus signa infere meant to advance, referre to retreat, and concentrare to face about; referre, or castris velare, to march out of the camp; ad signa concurre to reassemble. Notwithstanding some obscurity in the use of terms, it appears that, while the standard of the legion was properly called aquila, those of the cohorts were, in a special sense of the term, called signa, their bearers being signiferi, and that of the manipuli, or smaller divisions of the cohort, were denominated vexilla, their bearers being vexillarii. Also those who fought in the first ranks of the legion, before the standards of the legion and cohorts, were called

anteguarnis. 1 A peculiar application of the term vexillarii and subeguarnis is explained in page 103.

In military stratagems it was sometimes necessary to conceal the standards. 2 Although the Romans commonly considered it a point of honour to preserve their standards, yet, in some cases of extreme danger, the leader himself threw them among the Parthian ranks, in order to divert their attention or to animate his own soldiers. 3 A wounded or dying standard-bearer delivered it, if possible, into the hands of his general, from whom he had received it (signis acceptis). In time of peace the standards were kept in the Aemarium, under the care of the Curatores.

While the information respecting the standards of any other nation besides the Romans, the banners of the Parthians appear to have had a similar form to that of the Romans, but were more richly decorated with gold and silk. (Vid. Sertorium.) A golden eagle with expanded wings was the royal standard of Persia. 4 The military ensigns of the Egyptians were very various. Their sacred animal, which was maltreated in them, was also represented in the same manner. At Thebes we observe such objects as a king's name, a sacred boat, or some other emblem, applied to the same purpose. 5 The Jewish army was probably marshalled by the aid of banners; 6 but not so the Greek, although the latter had a standard, the elevation of which served as a signal for joining battle. The Greek ensign (pompon) was sometimes used for this purpose. 7

SIGNINUM OPUS. (Vid. House, Roman, p. 519.)

* SIL, a term applied by the Romans to Yellow Ochre, the Exo of the Greeks. It appears to have been the principal yellow pigment of the ancient world. It signifies the three varieties of the Ash, which was the best; the Marmoussin, which may have been what we call Stone Ochre; and the Sycium, of a dull colour, named from the island of Syros; as may have been the red paint also, called by the same name. Sil was found in many places, Vitruvius observes, but the Attic, which used to be the best, was no longer to be obtained; because the veins of it, which occurred in the silver mines of Attica, were no longer now explored. It is described by Dioscorides as light, smooth, free from stone, friable, and of a full bright yellow. 8

SILENTIARII. (Vid. P. P. E. P.)

*SILEX, a tree about which great uncertainty prevails. The Roman writers call it Silvicia, and apply it very devoutly respecting it. Fée makes it the same with the thuya of the Greeks, and refers it to the Salix vitellina, L., though without condemning the opinion of Auguillara and Spengler, who declare for the Salix caprea. Pliny merely says that it delights in watery places.

*SILEX. * The Silex," says Dr. Moore, "of which certain kinds are specified by Pliny as fit to be used in building, may in some cases have been such as we also term siliceous; but the more probable opinion is, that the name silex was somewhat indiscriminately applied to the more compact and harder stones. The Viridis silex, which so remarkably resisted fire, which was never abland, may perhaps have been the underpinning stone of the contrary need be drawn from Pliny's calling it silex, for he presently after speaks of lime made

SIMIA.  

**SILICERNIUM.** (Vid. Funus, p. 462.)

*Silicium (silicium)*, a kind of *Laserrium* or *Arsafatius*, forming one of the chief natural productions of the world. One of the Roman emperors, however, was so fond of this vegetable that he caused a large quantity of it to be brought from the East, and used it as a substitute for wax, rendering their flesh also tender, and was a useful apertif for man. From its juice, too, when kneaded with clay, a powerful antiseptic was obtained.

The silphium formed a great article of trade, and at Rome the composition just mentioned sold for its weight in silver. It is for this reason that the silphium appeared always on the medals of Cyrene. Its culture was neglected, however, when the Romans became masters of the country, and pasturage was more attended to. Captain Beechy, in the course of his travels through this region, noticed a plant about three feet in length, very much resembling the hemlock or wild carrot. He was told that it was usually fatal to the cattle which ate of it, and that its juice was so acrid as to fester the flesh, if the joculators should drink it. He supposed it to be the silphium. Della Cella describes, apparently, the same production as an unbeligerous plant, with compound, indented leaves, fleshy, delicate, and shining, without any involucrum; the fruit being somewhat flattened, surmounted by three ribs, and furnished all round with a membrane as glossy as silk. Captain Smith succeeded in bringing over a specimen of this plant to England, and one to Devonshire. M. Pacho says that the Arabs call it *Derias*, and he proposes to class the plant as a species of *Laserrium*, under the name of *Laserrium derias*. It seems to resemble the *Laserrium furcalaceum* of Linnaeus. 4

**SILURUS (silurus),** the name of a numerous genus of fishes, the species *Glans* belonging to which inhabits the fresh waters of Europe, Asia, and Africa. It is the Scheid of the Gormans, and the Sheat-fish of the English, and is the largest of the fresh-water fishes of Europe, growing sometimes to the weight of 150 lbs. and upward. "The silurus of Ansonius," says Adams, "has been referred by some to the sturgeon; this opinion, however, is untenable. It is a venomous fish, and is found in the Elbe, the Vistula, the Rhine, and the Danube. It is therefore natural to inquire why that mention of it would have been made among the fishes of the Moselle, which forms the subject of Ansonius's poem, the Moselle being a branch of the Rhine." 5

**SILVANI ET CARBONIS LEX.** (Vid. Lex Papilia Plautia, p. 564.)

*Simia* (sapeca), the Ape. Buffon, treating of monkeys, says its recent discoveries were only acquainted with one, the *Pithecos* of the Greeks; the *Simia* of the Latins is of this kind, and the real monkey, upon which Aristotle, Pliny, and Galen have instituted all their physical comparisons, and founded all their relations of the monkey to mankind: but this *Pithecos*, this monkey of the ancients, so generally resembling man in external form, and still more so in its internal organization, nevertheless differs from it in an essential point, the size of the human species being generally above five feet, while that of the *pithesos* is seldom more than a fourth of that height. 6 So far Buffon. "I am inclined to think, however," remarks Adams, "that the species of baboon called *Papia mammon* or Mandri, answers best to the ancient accounts of the *pithesos*. It is proper to mention, however, that Dr. Trail holds that Aristotle's description of the *pithesos* applies best to the young Barbary ape, or *Simia Inimus*. The *kibos* was a species of monkey having a long tail. The *kynokelados* would appear to have been the species of monkey now called Magot, which is described by Tournefort. Buffon refers the *kalyldios* to the green ape; but, according to Dr. Trail, it may rather be set down as the *Simia sabacao* of Senegal. The *kypetitheos* was a monkey with a tail, as its name implies. Hardouin refers it, with little probability, to the Marmot. The *chryospetheos* of Aristotle cannot be determined satisfactorily. Pennant supposes the *Simia senev* & c. representative of the ancient *saudos*, but Dr. T.'s supposition is rendered more probable by his finding out that there can be no doubt, as Adams thinks, that it owes its colour to an admixture of iron. 7

**Sion (sion),** a plant of which Speusippus (cited by Adams) says that it grows in water, having a head like the Marsh Parsley. Sprengel inclines, with Fucisius, to make it the *Veronica anagallis* but mentions that others took it for the *Saim lathynes*. Adams suggests *Silurus albus*, and Adams supposes it to be the *Saim modiforium*, or procumbent Water Parsnip. 8

**SIPARIUM, a piece of tapestry stretched on a frame, which rose before the stage of the theatre, and consequently answered the purpose of the drop-scene with us, although, contrary to our practice, it was depressed when the play began, so as to go below the level of the stage (aula premantur), and was raised again when the play ended (aula premantur). From the last-cited passage we learn that human figures were represented upon it, whose feet appeared to rest upon the stage when this screen was drawn up. From a passage of Virgil 9 we further learn that the figures were sometimes those of Britons woven in the canvass, and raising their arms in the attitude of lifting up a piece of tapestry. For the stage it was made in the same manner as *Atlantes*, Perse, and *Caryatides*.

In a more general sense, *siparium* denoted any piece of cloth or canvass stretched upon a frame. 10

**SIRIO (Sirius, PROCYON (Procyon).**, the Greek names of the bright stars in the constellations of the Great and Little Dog (*Canis Major* and *Minor*). These are Orion's dogs, according to some, and those of minor persons, according to others: the whole of their mythic ex planations form a strong proof that these constellations are not Greek in their origin. In a passage of Hesiod, he has been supposed to speak of the sun under the name of Sirius; and Hiercylus de cites the word to mean both the sun and the dog star. The Egyptians called the dog-star *Sostis*, and from its heliacal rising had warning that the overflow of the Nile was about to commence. Now the overflow of the Nile follows the summer solstice; whereas, by the precession of the equinoxes, the heliacal rising of Sirius is now about the tenth of August. The greatest heats of sum-

---

mer generally follow the summer solstice, and in ancient times it was observed that the unhealthy and oppressive period coincided with the heliacal rising of the dog-star. We say the dog-star, without specifying whether it was Sirius or Procyon; it is uncertain which it was, and may have been both, for the heliacal risings do not differ by many days. The star itself was in Latin canicula, which should seem to apply to the lesser dog, and Horace says, *Jam Procyon furtr, c.&c.* Pliny supports the same meaning of canicula and perhaps hyginus; also the names of the Alphabonic Tables, and Bede and Kepler among the moderns; while Germanicus and Julius Firmicus, with Apian, Margini, Argoli, Stephens, and Petavius among the moderns, contend for Sirius, which is the more common opinion. All antiquity ascribed an evil influence to the star; and though Gemma among the ancients, and Petavius among the moderns, thought that the effects were to be attributed to the sun alone, they had hardly any followers until the fall of judicial astrology. Even at this day, when the heats of the latter part of summer are excessive, we are gravely told that we are in the dog-days, the real classical dog-days being the twenty-two days preceding and the twenty-two days following the heliacal rising of whichever star it was, whether Sirius or Procyon.*

*SITUS. (sitores). "Sprengel, who had formerly held this to be the Stium Sistrum, in his last work declares himself a convert to the opinion of that of Fuchsius, which made it to be the Pastinaca sativa, or Garden Parnass."

SISTRUM (sistrorum), a mystical instrument of music, used by the ancient Egyptians in their ceremonies, and especially in the worship of Isis. It was held in the right hand (see woodcut), and shake, from which circumstance it derived its name (στρατ-, to shake). The most common form is seen in the right-hand figure of the annexed woodcut, which represents an ancient sistrum formerly belonging to the library of St. Genovefa at Paris. Plutarch describes the shaking of the four bars within the circular apsis represented the agitation of the four elements within the compass of the world, by which all things are continually destroyed and reproduced, and that the dog sculptured upon the apsis was an emblem of the moon. Apuleius describes the sistrum as a bronze rattle (areum crepitaculum), consisting of a narrow plate curved like a sword-belt (balteus), through which passed a few rods that rendered a loud, shrill sound. He says

that these instruments were sometimes made of silver, or even of gold. He also seems to intimate that the term *sistrum* (σιστρον, together with *sistrus* or *sistrum*), which would make a rude sort of music.

The introduction of the worship of Isis into Italy, shortly before the commencement of the Christian era, made the Romans familiar with this in its form. The *lingeri calci, sistrataque turba*, are expressly depicted in two paintings found at Portici, and containing the two figures of a priest of Isis, and a woman kneeling at her altar, which are introduced into the preceding woodcut. The use of the sistrum in Egypt as a military instrument to collect the troops, is probably a fiction.

*Sistrum, which, in fact, like Scepter, a Greek word with a Latin termination, the proper Latin term for it being crepitaculum, is sometimes used for*

*SISYMBRIUM (σισυμβρίον), a plant. From the description," says Adams, "which Dioscorides gives of his first species, there can be no doubt that it was a species of mint, probably the Mentha sylvestris, as Anguillara contends. The other species is unquestionably the Nasturtium officinale, or Watercress.*

*SISYRNCTION (σισυρνκτίον). Sprengel, and Stockhouse make this plant to be the Iris Sisyrichnum, in which opinion they are supported by Cordus, Bauhin, and many of the earlier authorities. Schneider's objection appears to me too fine a point."

SITELLUS. (vid. Situla.)

SITONAI (σίτωναι). (vid. Stato.)

SITOPHYLACES (σιτοφύλακες), a board of officers, chosen by lot, at Athens. They were at first three, afterward increased to fifteen, of whom ten were for the city, five for the Piraeus. Their business was partly to watch the arrival of the corn-ships, take account of the quantity imported, and see that the import laws were observed; partly to watch the sales of corn in the market, and take care that the prices were fair and reasonable, and none but legal weights and measures used by the factors; in which respect their duties were much the same as those of the agoranomi and metronomi with regard to other saleable articles. They are mentioned by some of the most modem writers in the books of the stiophylacies (την παρα τοις σιτοφύλακες ἀπογραφή) to prove the quantity of corn imported from Pontus, which (he says) was equal to all that came from elsewhere, owing to the liberality of Leucon, king of the Bosporus, who allowed corn to be exported from Theodosia to Athens free of charge. These books were probably kept by the five who acted for the Piraeus, whose especial business it would be to inspect the car goes that were unladen.*

SITOS (σίτος). The soil of Attica, though favourably producible of figs, olives, and grapes, was not so favourable for corn; and the population being very considerable in the flourishing period of Athens, it is probable that wheat was imported for corn for subsistence. According to the calculation of Böckh, which does not materially differ from that of other writers, there were 135,000 free men and 365,000 slaves residing in Attica. The country, which contained an area of 64,000 stadia, produced annually about two millions of bushels of corn; chiefly barley. The measures were as follows: 1 bushel, 3 gallons, and 5-75 pints, or 48 Attic σῖτος.···"
SITOS.

A χοίρος was considered a fair daily allowance of meal (θηρίους τρόφον) for a slave. The consumption of the whole population was three million minae, and one third, therefore, was imported. It came from the countries bordering on the Euxine Sea (Pontus, as it was called by the Greeks, and more especially from the Cimmerian Bosporus and the opposite coast of Thrace, Chersonese, Libya, Cyprus, Rhodes, Sicily, and Euboea. The necessities of the Athenians made them exceedingly anxious to secure a plentiful supply, and every precaution was taken for that purpose by the government as well as by the legislator. Sunnium was fortified, in order that the corn vessels (στάτοις θηρίους) might come safely round the promontory. Ships of war were often taken by the enemy to carry the cargo (παραπήμνων του στίγμα) beyond the reach of an enemy. When Pollia, the Lacedaemonian admiral, was stationed with his fleet off Aegina, the Athenians embarked in haste, under the command of Chabrias, and offered him battle, in order that the corn-ships, which had arrived as far as Cerestus in Euboea, might get into the Piraeus. One of the principal objects of Philip in his attack on Athens was to prevent the city, by might command the entrance to the Euxine, and so have it in his power to distress the Athenians in the corn-trade. Hence the great exertions made by Demosthenes to relieve the Byzantines, of the success of which he justly boasts. The measures taken by the legislature to obtain supplies of corn may appear harsh, and their policy is at least doubtful. They strongly evince the anxiety of the people on this subject. Exportation was entirely prohibited, nor was any Athenian or resident alien allowed to carry corn to any other place than Athens (στατοι γι' άλλης Αθηνας). Whoever did so was punishable with death. Of the corn brought into the Athenian port, two thirds were to be brought into the city and sold there. No one might lend money on a ship that did not sail with an express condition to bring a return cargo, part of it corn, to Athens. If any merchant, capitalist, or other person, advanced money, or entered into any agreement in contravention of these laws, not only was he liable to the penalty, but the agreement itself was null and void, nor could he recover any sum of money, or bring any action in respect of any frauds. Violation of these regulations was to be laid before the ἐπιμελητή τοῦ κυριοῦ. Strict regulations were made with respect to the sale of corn in the market. Conspiracies among the corn-dealers (αγορακός) to buy up the corn (συναγώνισαται), or raise the price (συμφόρους τοὺς τιμάοις), were punished with death. They were not allowed to make a profit of more than one obol in the mina, and it was unlawful to buy more than fifty obols at a time. It is not certain what the size of a φόρμος was: Böckh supposes it to be about as much as a medium mina. These laws remind us of our own statutes against engaging in roasting and regrating; but they appear to have been easily evaded by the corn-dealers. The sale of corn was placed under the supervision of a special board of officers called the ἐπιμελητής, and it was unlawful to sell all other marketable commodities was superintended by the agonomeni. It was their business to see that meal and bread were of the proper quality, and sold at the legal weight and price. They were bound to detect the frauds of the factor and the butcher, and (if we may believe Lysias) they sometimes suffered death for their want of vigilance. The mode of proceeding against them was by eisag γεία before the senate.

Notwithstanding these careful provisions, several cities (αστοί) frequently occurred at Athens, either for sustenance, or for the sale of large quantities of corn, and selling it at a low price. Public granaries were kept in the Odeum, Pompeum, Long Porch, and naval storehouse near the sea. Στοά was appointed to get in the supply and manage the sale. Demosthenes was appointed on one occasion to that office. Perce inquired what ημερακια received the corn, and sold it out, and distributed it in certain quantities. Public-spirited individuals would sometimes import grain at their own expense, and sell it at a moderate price, or distribute it gratuitously. We read of the Athenian state receiving presents of corn from kings and princes. Thus Leucos, king of the Bosporus, sent a large present, for which he had been solvent. The Athenian laws for the safety of the granaries (αἰτιακία) conferred on him by a decree of the people. Ptolemaicus, an Egyptian prince, sent a present in Olymp. 83, 4, Demetrius in Olymp. 118, 2, Spartius, king of Bosporus, a few years after. In later times, that made by the Roman Atticus is well known. On the whole of this subject the reader is referred to Böckh, where also he will find the various objections (λαβρία) to these laws, and another, copiously explained. As to the duty payable on the importation of corn, see Παμπλαστοτελεια. Στίγμα is strictly where flour, ἀλβερτας barley flour, μπαλιεια barley, ιππαριον barley bread, μέθον barley bread. Σιτος, however, is often applied to all kinds of corn, and even, in a larger sense, to provisions in general. "Vid. ΣΙΤΟΤΙ ΔΙΚΗ."

SITOU DIKE.

960.
cover the principal, σίτου, for the interest. The interest was called σῖτος (alimony or maintenance), because it was the income from which the woman had to be maintained, αἱ δειλίταιραι προ- ρατ, διδομένη πρόσωπος ἐλεον ταῖς γυναιξί. The word σῖτος is often used generally for provisions, just as we use the word bread. So in the law, which required the son of an ἵππησιος to maintain his mother when he came of age and took possession of his estate, the son was to give his mother σῖτος μετετέλεσα τῷ μητρί. The allowance for rations given to soldiers was called αἰτερίων. The δίκη σῖτου was tried before the archon in the Odeum, the same building in which the corn granaries were kept, which makes it improbable that in earlier times the defendant was called upon to pay the damages, though it is possible that the payment of the marriage portion was proved. 4

4 SITTA (άιτα). According to Gesner, who follows the authority of Turner, this is the bird called Nuthatch, namely, the Sitta Europa. 5

5 SITULA, dim. SITTELLA (όπια), was probably a bucket or pail for drawing and carrying water, though it was more usually applied to the vessel from which lots were drawn: sitella, however, was more commonly used in this signification. 6 It appears that the vessel was filled with water (as among the Greeks, whence the word ὀπια), and that the lots (sortes) were made of wood; and as, though increasing in size below, it had a narrow neck above, it was doubtless used as a water-jug at the same time, when it was shaken (shaken the form hunc tecum afferto cum aqua et sortes). The vessel used for drawing lots was also called urna or σίτου as well as situla or sitella. 7

6 It is important to understand the true meaning of sitella, since almost all modern writers have supposed that it was an instrument used in games (as in the lottery), into which those who voted in the comitia and courts of justice cast their tabellae; but Wunder 8 has proved that the opinion of Manutius 9 is correct, who maintained that the sitella was the urn from which the names of the tribes or centuries were drawn out by lot, so that each person, in completing the lot, took that which was cast into the cista (see supra). The form of the cista is preserved on a coin of the Cinnan gens, figured by Spanheim, 10 where a man is represented in the act of placing a tabella, marked with the letter A (i. e., ἀσέβοι) in the cista. This cista, which is represented in the annexed cut, is exactly the form of the vessel which appears in the pictures, it being the practice to use the cista as a vessel in which the tabellae were cast. The form of the cista is said to have been introduced by L. Aemilius Paullus, who is supposed to have taken the form of the cista from a tree, whose name was κακια (κακίας). The confusion of the two forms of the cista, as well as the varieties of shape which have been given to it, is very remarkable.

7 SMILAX (μῦλα), Bindweed. (Vid. Milax.)

8 SMILAGE (μύλα), Vine. (Vid. Milana.)

9 SMIRIS (μύρις) or SMYRIS (μύρις), the Em-}
For the reasons mentioned under the articles Baxa and Cremis, the socius was born by comic actors, and was in this respect opposed to the Comœnus. The annexed woodcut is taken from an ancient painting of a buffoon (Mirus), who is dancing in loose yellow slippers (luteum soccæm). This was one of their most common colours. (Vid. Solėa.)

SOCIETAS. Societas is classed in dissolution (Catu. Mart., Ant. dissol.)

When several persons unite for a common purpose, which is legal, and contribute the necessary means, such a union is societas, and the persons are socii. The contract of societas might either be made in words, or by the acts of the parties, or by the consent of the parties signed through third persons. A societas might be formed either for the sake of gain to arise from the dealings and labour of the socii (quiisutes), or not. Societas for the purpose of questus corresponds to the English partnership. A societas might be formed which would comprise all the property of the socii (societas omnium bonorum); in which case, as soon as the societas was formed, all the property of all the socii immediately became common (res communis continuo communicat). But the societas might be limited to a part of the property of the socii or to a single thing, as the buying and selling of slaves, or to carry on trade in a particular thing in a particular place. The communism of property in a societas might also be limited to the use of the things.

Each socius was bound to contribute towards the objects of the societas according to the terms of the contract. But it was not necessary that all the socii should contribute money; one might supply money, and another might supply labour (opera), and the profit might be divisible between them, for the labour of one might be as valuable as the money of the other. In the case of Roscius the actor, Fannius had a slave Panurgus, who, by agreement between Roscius and Fannius, was made their joint property (communites). Roscius paid nothing for his one half of the man, but he undertook to instruct him in his art. Apparently they became partners in the man in equal shares, for Cicero complains of the terms of the societas on the part of Roscius, whose instruction was worth much more than the price of the slave before he was taught his art. The agreement between the socii might also be, that one socius should sustain no loss and should have a share of the gain, provided his labour was so valuable as to render it equitable for him to become a partner on such terms. If the shares of the socii were not fixed by agreement, they were considered to be equal. One partner might have two or more shares, and another might have only one, if the contributions to the societas were in money or in labour were in these proportions. If the agreement was merely as to the division of profit, it followed that the socii must bear the losses in the same proportion. Each socius was answerable to the others for his conduct in the management of the business; he was bound to use diligence, and was answerable for any loss through culpa. The action which one socius had an in respect of the contract of partnership was an actio directa, and called pro socii (arbitrum pro sociis). The action might be brought for any breach of the agreement of partnership, for an account, and for a dissolution. A partner might transfer his interest to another person, but this transfer did not make that other person a partner, for consent of all parties was essential to a societas; in fact, such a transfer was a dissolution of the partnership, and the person to whom the transfer was made might have his action de communi dividendo.

Each socius had a right of action in proportion to his interest against any person with whom any of the socii had contracted, if the socii had некоторых him to make the contract, or had approved of the contract, or if it was an action arising from a delict. Thus, in the case of Roscius and Fannius, they had severally sued a third person in respect of their several claims as partners, and yet Fannius still claimed the half of what Roscius had recovered in respect of his share in the partnership. In all other cases the person who made the contract could alone sue. All the socii could be sued if they had all joined in the contract with a third person, and each in proportion to his share.

If one socius contracted on behalf of all, being commissioned to do so, all were liable to the full amount. If a socius borrowed money, the other socii were in no case bound by his contract, unless the money had been brought into the common stock. In fact, the dealings of one partner did not bind the other partners, except in such cases as they would be bound independent of the existence of the societas. Condemnatio in an actio pro socio was sometimes attended with infamia.

A societas could be ended at the pleasure of any one of the socii: any member of the body could give notice of dissolution when he pleased (rewa societatis), and therefore the societas was dissolved (solvitur). But in the case of a societas omnium bonorum, if one socius had been appointed heres, he could not, by giving notice of dissolution, deprive his copartners of their share of the hereditas. The death of a partner dissolved the societas, and a capitis diminutio was said to have the same effect. If the property of any one of the socii was in another publice (bonorum publico) or private, the societas was dissolved. It was also dissolved when the purpose for which it was formed was accomplished, or the things in which there was a societas had ceased to exist.

If, on the dissolution of a partnership, there was no profit, but a loss to sustain, the loss was borne, as already stated, by the socii in proportion to their shares. If one man contributed money and another labour, and there was a loss borne? If the money and the labour were considered equivalent, it would seem to follow that, until the partnership property were exhausted by the payment of the debts, there should be no pecuniary contribution by the person who supplied

902
SOCII.

The labour of this principle is a consequence of what Gaull states, that the capital of one and the labour of another might be considered equal, and the gain might be divided; and if there was a loss, the loss must be divided in the same proportion. Socii.

After the dissolution of the Latin league, when the name Latini, or nomen Latinum, was artificially applied to the subject races of Italy, by whom were real inhabitants of the old Latin towns, and the majority of whom had been Latins by the will and the law of Rome, there necessarily arose a difference between these Latins and the Soei, and the expression Socii nomen Latinum is one of the old asyndeta, instead of Socii et nomen Latinum.

The Roman allies, again, must be distinguished from foreign allies. Of the latter we shall speak hereafter. The Italian allies consisted, for the most part, of such nations as had either been conquered by the Romans, or had come under their dominion by other circumstances. When such nations formed an alliance with Rome, they generally retained their own laws; or if at first they were not of the sameclass and privileges as the other allies, they received them back again. The condition of the Italian allies varied, and mainly depended upon the manner in which they had come under the Roman dominion; but, in reality, they were always dependant upon Rome. Niebuhr* considered that there were two main conditions of the Socii, analogous or equal to those of the provincials, that is, that they were either federati or liberi (immunes). The former were such as had formed an alliance with Rome, which was sworn to by both parties; the latter were those people to whom the senate had restored their autonomy after they were conquered, such as the Hernican towns. But the condition of each of these classes must again have been modified according to circumstances. The cases in which Rome had an equal alliance with nations or towns of Italy became gradually fewer in number; alliances of this kind existed for a long time with Tibur, Praeneste, Naples, and others, but these places were nevertheless, in reality, as dependent upon Rome as the other allies. There was a division of the wealth of the Roman army to such people, such as the Camerets and the Heracleans, that maintained the rights of their equal alliance with Rome down to a very late time.* With these few exceptions, most of the Italians were either Socii (in the later sense) or Latini. During the latter period of the Republic they had the connubium with Rome, but not the suffrage of the Latins. It sometimes happened, as in the case of the Macedonian Onesimus, that a foreign individual was honoured by the senate by being registered among the Italian Socii (in sociorum formulam reforvere), and in this case the senate provided him with a house and lands in some part of Italy.4

Although the allies had their own laws, the Senate sometimes, when it was expedient, made laws for the general welfare, might command them to submit to any ordinance it might issue, as in the case of the senatus consultum De Bacchanalibus. Many regulations, also, which were part of the Roman law, especially as related to usury, sureties, wills, and innumerable other things,1 were introduced among the Socii, and nominally received by them voluntarily.2 The Romans thus gradually united the Italians with themselves, by introducing their own laws into their constitutions. Notwithstanding all this, the Romans did not grant to them the same civic rights, the Socii ultimately demanded them, arms in their hands.

Among the duties which the Italian Socii had to perform towards Rome, the following are the principal ones: they had to send subsidies in troops, money, corn, ships, and other things, whenever the Roman state was threatened.3 The number of troops required for completing or increasing the Roman armies was decreed every year by the senate, and the consuls fixed the amount which each allied nation had to send, in proportion to its population capable of bearing arms, of which each nation was obliged to draw up accurate lists, called formulae. The consul also appointed the place and time at which the troops of the Socii, each part under its own leader, had to meet him and his legions.4 The infantry of the allies in a consular army was usually equal in numbers to that of the Romans; the cavalry was generally three times the number of the Socii;5 but these numerical proportions were not always observed.6 The consuls appointed the paymasters of the allies, to whom they paid for the maintenance of their power answered to that of the twelve military tribunes in the consular legions.7 These prefects, who were probably taken from the allies themselves, and not from the Romans, selected a third of the cavalry, and a fifth of the infantry of the Socii, who formed a select detachment for extraordinary cases, and who were called the coloni. The remaining body of the Socii was then divided into two parts, called the right and left wings.8 The infantry of the wings was, as usual, divided into cohorts, and the cavalry into turmas. In some cases, also, legions were formed of the Socii.9 Pay and clothing were given to the allied troops by the states or towns to which they belonged, and which appointed quaestors or paymasters for this purpose;10 but Rome furnished them with provisions at the expense of the Republic: the infantry received the same as the Roman infantry, but the cavalry only received two thirds of what was given to the Roman cavalry.11 In the distribution of the spoil and of conquered territory among the allies, the Romans treated the Socii as belonging to the Romans.12 The Socii were also sometimes sent out as colonists with the Romans.13 They were never allowed to take up arms of their own accord, and disputes among them were settled by the senate. Notwithstanding all this, the Socii fell gradually under the arbitrary rule of the senate and the magistrates of Rome; and after the year B.C. 179, it even became customary for magistrates, when they travelled through Italy, to demand of the authorities of allied towns to pay homage to them, to provide them with a residence, and to furnish them with beasts of burden when they continued their journey.14 Gellius1 mentions a number of other vexations which the Roman magistrates inflicted upon the Socii, who could not venture to seek any redress against them. The only way for the allies to obtain any protection against such arbitrary proceedings, was to enter into a kind of clientela with

some influential and powerful Roman, as the Samnites were in the clientela of Fabricius Luscinus, and which was at one time regarded as the chief protector of the Socii, not only recognised such a relation of clientela between Socii and a Roman citizen, but even referred to such patronage cases for decision which otherwise it might have decided itself. 2 Socii who revolted against Rome were frequently punished with the loss of their freedom, or of the honour of serving in the Roman armies. Such punishments, however, varied according to circumstances.

After the civitas had been granted to all the Italians by the lex Julia De Civitate, the relation of the Italian Socii to Rome ceased. But Rome had long before this event applied the name Socii to foreign nations also which were allied with Rome, though the meaning of the word in this case differed from that of the Socii Italic. Livy distinguishes two principal kinds of alliances with foreign nations: 1. Fadius aquum, such as might be concluded either after a war in which neither party had gained a decisive victory, or with a nation which with Rome had never been at war; 2. a fadius iniquum, when a foreign nation conquered by the Romans was obliged to enter the alliance on any terms proposed by the conquerors. In the first case the people themselves were commonly subject to Rome, and obliged to comply with anything that Rome might demand. But all foreign Socii, whether they had an equal or an unequal alliance, were obliged to send subsidies in troops when Rome demanded them: these troops, however, did not, like those of the Italian Socii, serve in the line, but were employed as light-armed soldiers, and were called miles auxiliares, auxiliaris, or sometimes auxilia externa. 3 Towards the end of the Republic, all the Roman allies, whether they were nations or kings, sank down to the condition of mere subjects or vassals of Rome, whose freedom and independence consisted in nothing but a name. 4 (Compare FABRiAZi DE CIViTAteS.)

Soci. PRO, ACTIO. (Vid. Societas.)

Socius. (Vid. Societas.)

Sodales Augustales. (Vid. Augusta-les.)

Sodalirium. (Vid. Amentus.)

SodaMium. (Vid. Horologium, p. 509; House, Roman, p. 518.)

Solea was the simplest kind of sandal (vid. Solea), consisting of a sole with little more to fasten it to the foot than a strap across the instep. It was sometimes made of wood, 5 and worn by rustics (xaololobla), resembling probably the wooden sandals which now form part of the dress of the Capuchins. The solea, as worn by the upper classes, was adapted chiefly for wearing in the house, so that when a man went out to dinner he walked in shoes (vid. Calceus), taking with him his slipper (vid. Socceae) or socle, which he put on when he entered the house. Before reclining at table, these were taken away by a servant 6 (see woodcut, p. 276); consequently, when dinner was over, it was necessary to call for them. 7 But, according to the state of the roads or of the weather, the shoes or boots were again put on in order to return home, the soles being carried, as before, under the arm. 8 When circumstances were favourable, this change of the shoes for slippers or soles was not considered necessary, the latter being worn in the streets. 9

Solea lignea, soles or shoes of wood, were put on, under the authority of the Roman law, either for the purpose of torture, or perhaps merely to indicate the condition of a criminal, or to prevent his escape. 10 In domestic life, the sandal, commonly worn by females, was often used to chastise a husband, and to bring him into subjection 11 (soles obijugabre rubra.)

Iron shoes (soles ferrae) were put on the feet of mules; 8 but instead of this, Nero had his mules shod with silver, 9 and his empress Poppea hers with gold. 10

*SOI.1EA, II. (DoByg) oto or -eta, the Fleuronets Socius, I., or Solae. 12 (The Lingula of Festus and Varro is supposed to have been the Solea. By a play on the word, it is called sitella in the curious parody of Matron preserved by Athenaeus.)

*SOlEN (sai) or, the name of a testaceous fish mentioned by Aristotle, Galen, Xenocrates, and Pliny, and called also aitlo, bux, and dounas. According to Rondonet, they are called Cape longe by the Italians, Couteuru by the French, and Pirats by the English. Belon, however, gives them the name of Flatae, and Gesner of Baghia. It is difficult to determine where this point to. But is there any reason to doubt that the solea of the Greeks belonged to the genus Solen of modern naturalists? 11

*SORBUS, the fruit of the Sorb or Service-tree (Vid. Ova.)

*SOREX. (Vid. Mus.)

SORO (sor). (Vid. Fossa, p. 456.)

SORTES, Lots. It was a frequent practice among the Italian nations to endeavour to ascertain a knowledge of future events by drawing lots (sortes): in many of the ancient Italian temples the will of the gods was consulted in this way, as at Preneste, Core, &c. (Vid. Quercus, p. 699.) Respecting the meaning of Sors, see Cicero. 12

These sorts or lots were usually little tablets or counters of wood or other materials, and were commonly thrown into a stella or urn filled with water, as is explained under SRETTA. The lots were sometimes thrown as dice. 13 The name of sorts was in fact given to anything used to determine chances, 14 and was also applied to any verbal response of an oracle. 15 Various things were written upon the lots according to circumstances, as, for instance, the names of the persons using them, &c.: it seems to have been a favourite practice in later times to write the verses of illustrious poets upon little tablets, and to draw them out of the urn like other lots, the verses which a person thus obtained being supposed to be applicable to him: hence we read of sortes Virgiliana, &c. 16 It was also the practice to consult the poets in the same way as the Moham medans do the Koran and Hafiz, and many Christians the Bible, namely, by opening the book at random, and applying the first passage that struck the lot, and to draw them out of the urn like other lots, the verses which a person thus obtained being supposed to be applicable to him: hence we read of sortes Virgiliana, &c. This practice was very common among the early

904

1. (Mart. xii, 88.)—2. (Cic. Invent., ii, 50; ad Herenn., i, 13.—Pliny, viii, 6.)—3. (Tac., Ann., xxv, 18.)—4. (Porphyr., ii, 37.—Plut. Truc., ii, 4, 12.)—5. (Livy, iv, 13.—Plaut. Truc., ii, 4, 12; Mont., Hist., i, 37.—Hor, Sat. ii, 7, 77.—12. (Hor, Ep., v, 13, 15.)
Christians, who substituted the Bible and the Psalter for the Homer and Vergil; many councils repeatedly condemned these, and theworks of such were called "speculative". The sibylline books were probably also consulted in this way. (Vide Savinlius Lib.)

Those who foretold future events by lots were called "sorcerers".

The "sorites convivialiae" were tablets sealed up, which were sold at entertainments, and, upon being consulted, enabled the purchaser to things of very unequal value: they were, therefore, a kind of lottery.

"SPARGANTON (σπαργάνον)." It is "clearly," says Adams, "one or other of the well-known "burrs;" the Sparganium ramosum according to Matthiuss, or the simplex according to Sprengel.

"SPARTUS (σπαρτός), a shrub, a species of broom, out of the young branches and bark of which ropes and nets were made, and the seeds of which were used medicinally; the Spartium junceum or species." (Linn.)

SPARUS. (Vide Hasta, p. 489.)

SPECULARIA. (Vide House, Roman, p. 521.)

SPECULATURIS LAPIS. (Vide House, Roman, p. 521.)

SPECULATORES or EXPLORATORIS were scouts or spies sent before an army to reconnoitre the ground and observe the movements of the enemy. Festus makes a distinction between these two words, which is not sustained by the usage of the ancient writers. As these speculatores were naturally active men, they were frequently employed by the emperors to convey letters, news, &c.

Under the emperors there was a body of troops called speculatores, who formed part of the praetorian cohorts, and had the especial care of the emperor's person. They appear to have been so called from their duty of watching over the emperor's safety.

"SPECULUM (σπαρτόπτρον, ἐσπαρτόρ, ἀποσπρότρον), a Mirror, a Looking-glass. The use of mirrors is of very high antiquity; and they are not mentioned by Homer, even when he describes in so circumstantial a manner the toilet of Juno. In the historical times of Greece there were three sorts of mirrors, the one in which the image was really known in Greece long before, since every substance capable of receiving a fine polish would answer the purpose of a mirror. Thus basins were employed instead of mirrors; and also cups, the inside of which was sometimes so disposed that the image of the person who drank from them was seen multiplied.

The looking-glasses of the ancients were usually made of metal, at first of a composition of tin and copper, but afterward more frequently of silver. Pliny says that silver mirrors were first made by Praxiteles in the time of Pompey the Great, but they are mentioned as early as that of Phaestus.

Under the Empire the use of silver mirrors was so common that Theophrastus, when he began to write his"history of plants", says: they are constantly mentioned in the Digest when silver plate is spoken of. At first they were made of the pure silver, but metal of an inferior quality was afterward employed.

Looking-glasses were generally small, and such as could be carried in the hand. Most of those which are preserved in our museums are of this kind; they usually have a handle, and are of round or oval shape. Their general form is shown in the preceding woodcut. Instead of their being fixed so as to be hung against the wall, or to stand upon the table or floor, they were generally held by female slaves before their mistresses when dressing, which office was also performed sometimes by the lover, when admitted to the toilet of his mistress.

Looking-glasses, however, were also made of the length of a person’s body (specula tois paria corporibus), of which kind the mirror of Demosthenes must have been. They were fastened to the walls sometimes (speculum cubicum), which expression, however, Lessing considers as contrary to the Latin idiom, and therefore regards the whole passage as a forgery. That there were, however, rooms ornamented in this way, is probable from Claudian’s description of the chamber of Venus, which was covered over with mirrors, so that the entire space of the room was from floor to ceiling, representing her own image. We frequently find the mirror mentioned in connexion with Venus, but Minerva was supposed to make no use of it.

PHARISTERICUM. (Vid. Barts, p. 153; Gymnium, p. 483.)

*SPACHELOS (σφάκηλος), the Sabina hortensis, or common Sage. (Sage.)

*SPHENDAMNOS (σφένδαμνος), a species of Maple. Sprengel hesitates between the Aser Pseudo-platanus and the Creticum; Stockhouse between the former and the A. campestris. The γενετικόν and γενετικόν are varieties or synonyms of it.

*SPOINOTET (σποινοτέτ). (Vid. Funda.)

*SPIH (σφίς), a term applied to the Vespa vulgaris, or common Wasp, but sometimes misapplied to the Vespa crabro, or Hornet.

SPLAGAS (σφλαγάς). (Vid. Ringe, p. 839.)

*SPHYRENA (σφύρενα), a species of fish somewhat larger than the pike, and found only in the Mediterranean. It is the Esox Sphyraena, L., or Sphyraena, Lacepede. In Italian, Luzzo marino; in French, Splet. The κόρη of Atheneus is the same as the σφλαγάς. Oponew mentions two species, the former of which is the only one described. Rondel calls the other Sphyraena para; in French, Hautin.

*SPIKELATION (σφίκελατον). (Vid. Bronxe, p. 77.)

SPIVULUM. (Vid. Barta, p. 489.)

*SPIAVA (σπίαβα), the Thorn. (Vid. Acantha.)

SPLINTER or SPINTHER. (Vid. Armilla, p. 96.)

*SPIRA, dim. SPIRILA; the base of a column. This member did not exist in the Doric order of Greek architecture (Vid. Columna), but was always present in the Ionic and Corinthian, as well as in the Attic (Vid. Atticorders), which may be regarded as a variety of the Ionic. The term occurs frequently in Vitruvius and in Pliny. They adopted it from the writings of Greek architects, whose works have perished. It is, in fact, the Greek term στίγμα, which was applied to this member of a column, probably on account of its resemblance to a coil of rope. In ancient Greek inscriptions, στίγμα denotes the base both of Ionic and Corinthian pillars, being applied to those of the temples of Minerva Polias at Athens, and of Jupiter at Labranda.

In the Tuscan and the Roman Doric the base consisted of a single torus, sometimes surmounted by an astragal. In the Ionic and Attic it commonly consisted of two tori (torus superior and torus inferior) divided by a scotia (γραφήλος), and in the Corinthian of two tori divided by two scotae. The upper torus was often fluted (παλαιωτός), and surmounted by an astragal (Vid. Astrapalas), as in the left-hand figure of the annexed woodcut, which shows the form of the base in the Ionic or Attic temple of Panops on the Iliissus. The right-hand figure in the same woodcut shows the corresponding part in the Temple of Minerva Polias at Athens. In this the upper torus is wrought with a plaited ornament, perhaps designed to represent a rope or cable. In these two temples the spira rests, not upon a plinth (πλινθος, πλιθωθος), but on a podium. In Ionic buildings of a later date it rests on a square plinth, corresponding in its dimensions with the ARA.

SPITHAME (σπίθαμα). (Vid. Psa., p. 762.)

*SPIZA (σπίζα), a species of bird, "generally held to be the Chaffinch, to which Rennie has given the scientific name of Fringilla Spiza, instead of the misnomer given it by Linnaeus, namely, Fringilla cæledo." I cannot help thinking it doubtful, however, whether the σπίζα of Aristotle be the chaffinch, seeing he compares the missel-thrush to the σπίζα, and it is well known that the former is much larger than the chaffinch.

*SPODIAS (σποδίας). According to Sprengel, the Prumus institia, or Bullace-tree.

SPOLIA. Four words are commonly employed to denote booty taken in war, Prada, Manubia, Estiva, Spolia. Of these, prada bears the most comprehensive meaning, being used for plunder of every description. (Vid. Puegarturism.) Manubia and Estiva lead to a reconsideration of the spoil which fell to the share of the commander-in-chief; the

the proceeds of which were frequently applied to the erection of some public building. 1 Aulus Gellius, 2 indeed, endeavours to prove that we must understand by manubia the money which the questor realized from the sale of those objects which constituted praeda; but the following passage, adduced by himself in a garbled form (for he omits the words printed in roman), when quoted faithfully, is sufficient to confute his views: "Aurum, argentum, ex praeda, ex manubia, ex coronario, ad quosqueyque per- seni." 3  

The term Euxusu indicates anything stripped from the person of a foe, while Spolia, properly speaking, ought to be confined to armour and weapons, although both words are applied loosely to trophies, such as chariots, standards, beaks of ships, and the like, which might be preserved and displayed. 4  

In the heroic ages, no victory was considered complete unless the conquerors could succeed in stripping the bodies of the slain, the spoils thus obtained being viewed (like scalps among the North American Indians) as the only unquestionable evidence of successful valor and to be found Holian, that the spoils, which were carried forward to be turned in single combat, the manner in which the body and arms of the vanquished were to be disposed of formed the subject of a regular compact between the parties. 5  

Among the Romans, spoils taken in battle were considered the most honourable of all distinctions; to have twice stripped an enemy, in ancient times, entitled the seeker to posthumous honours, and during the second Punic war, Fabius, when filling up the numerous vacancies in the senate, caused by the slaughter at Cannae and by other disastrous defeats, after having selected such as had borne some of the greatest offices of state, named those next "qui spolia ex hosse fasse domi haberent, et in atriis cuiusdam domus --- argenti mum --- et aquarum --- vocari --- " On the battle-field after an engagement, or found in a captured town, were employed to decorate the temples of the gods, triumphal arches, porticoes, and other places of public resort, and sometimes, in the hour of extreme need, served to arm the people; 6 but those which were gained by individual prowess were considered the unadorned property of the victor, and when the latter was engaged in the most conspicuous part of his dwelling, 7 being hung up in the atrium, suspended from the door-posts, or arranged in the vestibulum, with appropriate inscriptions. 8 They were regarded as peculiarly sacred, so that, even if the house was sold, the new possessor was not permitted to remove them. 9 A remarkable instance of this is found in Cicero (Phil. i. 13). 10  

Opima, a term applied to those only which the commander-in-chief of a Roman army stripped in a field of battle from the leader of the foe. 11 Festus 6 gives the same definition as Liivy, but adds, "M. Varro ait opima spolia esse [estiam] si manciparis miles detraserit dammodo duas hostium," a statement, if correctly quoted, directly at variance with the opinion generally received and accepted by Plutarch, when M. Cæsar, in the fifth consulship of Octavianus (B.C. 29), slew Dolo, king of the Bastarnæ, he was not considered to have gained spolia opima, because acting under the auspices of another; 12 and Plutarch 13 expressly asserts that Roman history up to his own time afforded but three examples. The first were said to have been won by Romulus from Acer, king of the Acarnæ, the second by Scipio Africanus over Hannibal at the Third Ebro, the third by M. Claudius Marcellus from Viridomarus (or Bruthamoros, as he is called by Plutarch), king of the Bastarnæ. In all these cases, in accordance with the original institution, the spolia were dedicated to Jupiter Feretrius. The honours of spolia opima were accorded to Titus Quinctius Flamininus, the first consulship (B.C. 44, the year of his death), but it was not even pretended that he had any legitimate claim to this distinction. 14 (The question with regard to the true definition of spolia opima is discussed with great learning by Perizonius.) 4  

SPOHIA. (Vid. Luctus, p. 573.)  

SPONDYULUS. (Vid. Oyster, p. 672.)  

SPONDYULUS (spëndi'luh) (spou'di-lu'z), "an insect noticed by Aristotle and Theophrastus, and about which there has been much diversity of opinion. Some suppose it the Gryllotalpa; some the larva of the Scarabæus melolontha; and others a species of Buita. Stockhouse offers another conjecture, that it is the Julus, L. 15  

SPONGIA. (Vid. Painting, p. 704.)  

II. SPONGIA (spou'gi-a), Sponge, or Spongia officinalis. "The animal nature of the sponge is lastly and properly Julius Cæsar. Among his three, the μάυρος, the πένθος, and the Αἴξιλ- λεος, it is difficult to specify exactly the last two; but the first may be confidently pronounced to be the Spongia officinalis." Dr. Vincent derives the term "sponge," through the Greek, from the Arabic suffunge (s'unge, s'plunge, spunge).  

SPONGIA. (Vid. Marriage, Roman, p. 62.)  

SPONA, SPONUS. (Vid. Marriage, Roman, p. 62.)  

SPONSA, SPONSA (Vid. Marriage, Roman, p. 625.)  

SPONSOR. (Vid. Intercession, p. 541.)  

SPORTULA. (Vid. Marriage, Roman, p. 629.)  

SPORTULA. In the days of Roman freedom, clients were in the habit of testifying respect for their patron by thronging his atrium at an early hour, and escorting him to places of public resort. 16 Under Augustus, his being accorded acceptance upon their courtesies, some of the number were usually invited to partake of the evening meal. After the extinction of liberty, the presence of such guests, who had now lost all political importance, was soon regarded as an irksome restraint, while, at the same time, many of the noble and wealthy were unwilling to sacrifice the temporary enjoyment of their company. Hence the practice was introduced, under the Empire, of bestowing on each client, when he presented himself for his morning visit, a certain portion of food as a substitute and compensation.
STADIUM.

or the occasional invitation to a regular supper (cena recta); and this dole, being carried off in a little basket provided for the purpose, received the name of sportula. Hence, also, it is termed by Greek writers on Roman affairs δείπνον δωροσυμπόσιον, which however was never confused with the δείπνον δωροσυμπόσιον of earlier antiquity, which was a sort of picnic.¹ For the sake of convenience, it soon became common to give an equivalent in money, the sum established by general usage being a hundred quadrans.² Martial, indeed, often speaks of this as a shabby pitance (centum miselis quadrantes²), which, however, he did not scorn himself to accept, but, at the same time, does not fail to anecdotally commended by himself a largess to a greater amount on his birthday.³ The donation in money, however, did not entirely supersede the sportula given in kind; for we find in Juvenal a lively description of a great man's vestibule crowded with dependants, each attended by a slave bearing a portable kitchen to receive the viands, and keep them hot while they were being prepared.⁴ If the sketches of the satirist are not inadequate to the purpose, we may conclude that in his time great numbers of the lower orders derived their whole sustenance, and the funds for ordinary expenditure, exclusively from this source, while even the highborn did not scruple to increase their incomes by taking advantage of the ostentatious profusion of the rich and vain.⁵ A regular roll was kept at each mansion of the persons, male and female, who were allowed to receive the allowance; the names were called over in order, the individuals were required to appear in person, and the almoner was ever on his guard to frustrate the roguery of false pretenders,⁶ whence the proverb quoted by Tertullian, "sportulam furunculas capitt." The morning, as we have seen above,⁷ was the usual period for these distributions, but they were sometimes made in the afternoon.⁸

Nero, imitating the custom of private persons, ordained that a sportula should be substituted for the public banquets (publica cena) given to the people on certain high solemnities; but this unpopular regulation was repealed by Domitian.⁹

When the Emperor Claudius, on one occasion, resolved unexpectedly to entertain the populace with sportulae, he found himself to be in a short time only, he styled the exhibition a sportula in the age of the younger Pliny, the word was commonly employed to signify a gratuity, gift, or emolument of any description.¹²

(Compare a dissertation on the sportula by Buttmann, in the Kritiscke Bibliothek for 1821.—Vid. also Becker, Gallus, i, p. 147.)

STABULARIUS. (Vid. Recepta Actio.)

*STACTE (стактê). (Vid. Skvrena.)

STADIUM (δο θαδιος ρ δοθαδιος). 1. A Greek measure of length, and the chief one used for literary itineraries. It was adopted by the Romans, also, chiefly for nautical and astronomical measurements. It was equal to 600 Greek or 625 Roman feet, or to 125 Roman paces; and the Roman mile contained 8 stadia. Hence the stadium contained 600 feet 9 inches English. (Vid. Paps.) This standard prevailed throughout Greece under the name of the Olympic stadium, so called because it was the exact length of the stadium or footrace-course at Olympia, measured between the pillars at the two extremities of the course. The first use of the

measure seems to be contemporaneous with the institution of the stadium at Olympia, when the Olympic games were revived by Iphitus (B. C. 894 or 829). This distance doubled formed the stade, the περικυκλοσ was 4 stadia, and the διαμεταπετριξ is differently stated at 6, 7, 8, 9, 10, 11 to 12, 13, 14, 15, 16, 17; thus the σταδιον δοριον, 24, is to be understood at 36, 42, 48, 54, 60, 66, 72, 78, 84, 90.

It has been supposed by some authors that there were other stadia in use in Greece besides the Olympic. ¹ The most ancient writers neither either say or hint at such a thing; but when we compare the distances between places, as stated by them in stadia, with the real distances, they are found almost invariably too great if estimated by the Olympic stadium, never too small. Hence the conclusion has been drawn by some writers that the Olympic stadia must have been made smaller. The latter part of this statement is untenable a shade smaller than the Olympic. Major Rennell, who analyzes several of these statements, gives 505 feet for the value of the Olympic stade.¹ It is, however, scarcely credible, that these authors, some of whom expressly inform us that the stade contained 600 feet, should reckon distances by another stade without giving any intimation of the fact, especially as they usually warn their readers to be on the watch for such discrepancies. The ancients reckoned the stade to be one of the standing distances. The real cause of the excess in the itinerary distances of the Greeks is explained by Ukert in a way which seems decisive of the question.¹ The most ancient mode of reckoning distances among the Greeks, as among most other nations, was by the number of days required to perform the journey. When the stadium was brought into use, the ancients reckoned the distances of sea journeys, but transferred into stadia by reckoning a certain number of stadia to a day's journey.⁴ It is evident that nearly all the distances given by the ancient Greek writers were computed, not measured. The uncertainties attending this mode of computation are obvious; and it is equally obvious that, as a general rule, the results would be above the truth. At sea the calculation was made according to the number of stadia which could be sailed over in a day by a good ship, in good order, and with a fair wind. Any failure in these conditions (and some such there must always have been) would increase the number of days' sail, and therefore the calculated distance when reduced to stadia. SIMilarly by land a day's journey was reckoned equal to the number of stadia which a good traveller (diplomas) could perform in a day, which, for obvious reasons, would generally exceed the space passed over under ordinary circumstances. Even the Greeks themselves are not agreed as to the number of stadia in a day's journey. Herodotus gives 700 stadia for the voyage of a sailing ship by day, 600 by night. Most commonly 1000 stadia were reckoned as a 24 hours' voyage, but under unfavourable circumstances scarcely 500 were performed.⁶ Allowance must also be made for the windings of the coast, the difficulties of the navigation, the currents of the sea, the skilfulness of the seamen, and other circumstances.

A day's journey by land was reckoned at 200 or 180 stadia,² or for an army 150 stadia.³ And here also-delays would often occur. The ancients themselves differ widely in their accounts of distances, not only as compared with the true distances, but with one another, a fact which the theory of a separate itinerary stade cannot account for, but which is a natural result of their mode of reckoning, as explained above.

The following testimonies are advanced in support

1092

---
STADIUM.

sort of the view of different stadia. Consensus, who lived in the time of Alexander Severus, after speaking of the astronomical measurements of Eratosthenes and Pythagoras, says that by the stadium used in them we must understand "the stadium which is called Italic, of 625 feet, for there are others besides this, of different lengths, as the Olympic, which consists of 600 feet, and the Pythian, of 1000 feet. This passage is evidently a complication of blunders. The "Italic stadium," unknown elsewhere, is manifestly the same as the Olympic, but reckoned in Roman feet, of which it contained 625. The "Olympic, of 600 feet," is the same in Greek feet. The value given for the Pythian stadium is clearly wrong, for the Olympic racecourse was the longest in Greece (as appears from the passage of Geras, quoted below); and, besides, Censorinus obviously confounds the racecourses named stadium with the measurement of the same name; for it is not disputed that the former were of different lengths, though the latter never varied.

Aulus Gellius' quotes from Plutarch to the effect that Hercules measured out the stadium at Olympia with a cord of 600 feet, and that when afterward other stadia were established in Greece containing the same number of feet, these were shorter than the Olympic in the proportion by which the foot of Hercules exceeded that of other men. But whatever there is of fact in this story obviously refers to the courses themselves, not the measurements of the earth. But surely it is far more reasonable to take these different values as a proof (among others) that the ancients did not know the real length of a great circle, than, first assuming that they had such knowledge, to explain them as referring to different standards.

On the whole, therefore, there seems no reason to believe that the stadium existed before the third century of the Christian era.

From this period, however, we do find varieties of the stade, the chief of which are those of 7 and 7½ to the Roman mile. The following table of supposed varieties of the stadium is from Hussey's Ancient Weights, &c.:

This has been stated above that the Olympic footrace-course was called a stadium, and the same name was used throughout Greece wherever games were celebrated. It was originally intended for the footrace, but the other contests which were added to the games from time to time (vid. Οlympικακαλα) were also exhibited in the stadium, except the horse races, for which a place was set apart, of a similar form with the stadium, but larger: this was called the hippodrome (ἱπποδρόμος).

The stadium was an oblong area terminated at one end by a straight line, at the other by a semi-circle having the breadth of the stadium as its base. Round this area were ranges of seats ramp above one another in steps.

It was constructed in three different ways, according to the nature of the ground. The simplest form was that in which a place could be found which had by nature the required shape, as at Laodicea. Most commonly, however, a position was chosen on the side of a hill, and then the stadium was formed on one side by a natural slope, on the other by a mound of earth (γης χώμα), as at Olympia, Thebes, and Epidaurus. Sometimes, however, the stadium was on level ground, and mounds of earth were cast up round it to form seats, and covered with stone or marble. We have two celebrated examples of this construction in the Pythian stadium at Delphi and the stadium of Athens, which was originally constructed of Parian marble, and afterward covered with Pentelic marble by Herodes Atticus, who adorned in the same manner the stadium at Athens, which had been originally constructed on the banks of the Illisus by the orator, Lycurgus. The marble covering, which was supposed to take a century to complete, has now disappeared, but the area is still left, with some remains of the masonry.

The stadium sometimes formed a part of the buildings of the gymnasion (vid. Gymnasium), at other times it was placed in its neighbourhood, and often, as at Athens, stood entirely by itself. That at Olympia was called "the stadium of Zeus," and at Delphi "the stadium of Apollo." The names of the stadia are different.

The site of the stadium varied both in length and breadth. The general length was, as above stated, the geographical stadium of 600 Greek feet. This was not, however, the total length, but only the distance between the pillars at the two ends, and it was exclusive of the semicircular end of the area.

The accounts left by ancient writers of the arrangements of the parts of the stadium are scanty but, from a comparison of them with existing remains of stadia, we may collect the following particulars.

At one end a straight wall shut in the area, and here were the entrances, the starting-place for the runners, and (at Olympia) an altar of Endymion. The area was filled with seats, and at the starting-place, the goal, was the end of a circle, and at the distance of a stadium from the starting-place, was the goal, which was the termination of the simple footrace. In the Pythian, these were called στάδιον: the race itself is called στάδιον and ὄμιλος. In the δίανυσις and δίαμετρος, the race was turned round this and came back to the starting-place. The term στάδιον is applied to these different names. The term ὀμιλια is explained as the line along which the racers were placed before starting, ἄναζη, which means the lash of a whip, is supposed to have been a cord which was stretched in front of the racers to restrain their imitation and to let them know when the race was given to start; the name κατάστροφος was applied to the goal because the runners in the δίανυσις and δίαμετρος turned round it to complete their course. These terms are often applied indiscriminately to the starting-place and the goal, probably because the starting-place was also the end of all races except the simple στάδιον. The starting-place and goal were each marked by a square pillar (στῆλαι, κύκλως κυκλεύειν), and half way between these was a third. On the first was inscribed the word ἀρίστενε, on the second σταΐά, and on the third κυκλών. The διάμετρος turned round both the extreme pillars till

it F metals Beckmann, e different 167. 290.)—

JAep, the the the seats so marble, Greece, the myne stadium surrounded and were stadium. This was called their they probably had supported the Ephesian and Mesessian stadia, in the latter of which it is surrounded by 16 rows of seats. The area of the stadium was surrounded by the seats for spectators, which were separated from it by a low wall or podium.

Opposite to the goal on one side of the stadium were the seats of the hellanodice, for whom there was a secret entrance into the stadium (κρήνη ἐπιδρος), and on the other side was an altar of white marble, on which the priestesses of Demeter Chaynue sat to view the games. The area was generally adorned with altars and statues.

Such was the general form and arrangement of the Greek stadium. After the Roman conquest of Greece, the form of the stadium was often modified so as to resemble the amphitheatre, by making both its ends semicircular, and by surrounding it with seats supported by vaulted masonry, as in the Roman amphitheatre. The Ephesian stadium still has such seats wove a portion of it. A restoration of this stadium is given in the following woodcut, copied from Kause.

A a the boundary wall at the aphi, 77 feet deep. B C the sides, and D the semicircular end, of the same depth as A; F F the area, including the σεβεματικα; b b pieces of masonry jutting out into the area; e e the entrances; from o to P is the length of an Olympic stadium; from q—z the range of amphitheatral seats mentioned above. (Vid OLYMPIC GAMES.)

STATER (στατήρ), the name which signifies a standard (in this case both of weight and more particularly of money), was the name of the principal gold coin of Greece, which was also called chryseus (χρυσος). The general subject of Greek gold money

1. (Krause, Die Gymnastik und Agonistik der Hallen, p. 131, s. 14.—Müller's Arch. der Kunst, s. 290.)—2. (Dioecor., v. 96—Pliny, xxv. 47.—ead., Orig., xxii. 91.—Numbers, xxxii. 22.—Heeren's Hist. Researches, vol. iii, p. 167.—Adams, Ap pend. s. v.—Moore's Antiq. Lex., 1 44, 45.)
has been discussed under *Aurum*, where it is stated that the Greeks obtained their principal supply of gold from Asia. To the same quarter we must look for the origin of that gold at Syracuse. For this city, which came to us from Persia, has been already treated of. (Vid. *Dacierus*.) The stater is said to have been first coined in Lydia by Croesus. To this country, indeed, one tradition ascribes the origin both of gold and silver money: but, be this as it may, the stater of Croesus was the first gold coinage with which the Greeks were acquainted. Böckh *assures* that these stater were undoubtedly formed of the pale gold or electrum which was washed down from Μολος by the Pactolus, and which Sphocles speaks of as Sardian electrum. *Electrum, according to Pliny,* was gold containing a mixture of ⅙ part of silver. There is in the Hunterian collection (plate 66, fig. 1) a very ancient coin of this pale gold, of an oval, ball-like shape, impressed with the figure of a man kneeling, holding a fish in his left hand, and in his right a knife hanging down, which Pinkerton takes for a coin of Croesus, but respecting which nothing more can be said with safety that it is a very ancient specimen of Asiatic money. Its weight is 243½ English grains, or about that of the Attic tetradrachm, which was twice the weight of the stater. This, therefore, would be a double stater. At all events, in the absence of certain specimens of the Lydian stater, and of any express statement of its value, we may suppose, from the very silence of the Greek writers, that it did not differ materially from the stater which was afterward current in Greece, and which was equal in weight to two drachmas, and in value to twenty.*

**Macedonian Stater.**

The following were the principal Greek staters:

1. The Attic stater, which has been spoken of under *Aurum*. The weight of the coin issued of this city are 132-3, 132-7, 133-2, and 133-75 grains, the average of which is 132-5875 grains, which only falls short of the weight of the Attic dirachm by a little more than half a grain. (Vid. *Drachma*). The gold of the Attic coin is remarkably pure.

2. The stater of Cyzicus was common in Greece, especially at Athens. We learn from Demosthenes* that in a particular period (a little after B.C. 325) this stater passed on the Bosporus for 28 Attic drachmas, which, by a comparison with the then value of the drachm (vid. *Doric*), would give for its weight about 180 grains. Several Cyzicene staters exist, but none of them come up to this weight. Hence we may conclude that the price of gold at Cyzicus was not much below that at Athens. The coin is very high. Some of the existing coins give 160 grains, and others not more than 120, for the weight of the Cyzicene stater, so that the element of this coinage seems to have been a piece of 40 grains. Its value, calculated from the number of drachmas it passed for, would be 1½. 2s. 9d.

3. The stater of Lampascus is mentioned in an inscription of 396. B.C. 434. Several gold coins of Lampascus are extant: they may be known by

---

The impression of a shecah upon them. There are two in the British Museum, of the weight of about 129 grains, which is just that of the daricus. The weight of the Lampascus stater being unequal; and both Lampascus and Cyzicus appear to have had gold coins which were multiples of different standards.

4. The stater of Phoecea is mentioned by Thucydides* and Demosthenes* as in circulation in their times. Sestini gives several of these, the largest of which, stamped with a, weighs 255-42 Attic drachmas. Some of them are gold and silver, and others gold and copper. There was also at Athens a Phocean coin called *ktyr,* which may have been either the sixth of the stater or (Mr. Hussey conjectures) of the mina. Heuscy, mentions the *ktyr, tpyr,* and *tyrpyr* as coins of gold, or silver, or copper. There was a gold coin of (what state we are not told) *hipyon,* which was worth eight silver obols.

5. The stater of Macedonia was coined by Philip II, and Alexander the Great; the standard of the Attic dirachm, and of very fine gold. Under these princes it came into general circulation in Greece and throughout the Macedonian empire. The extant specimens of this coinage are very numerous.

Mr. Hussey gives the following report of an *aros* which was made for him of a stater of Alexander:

Gold, 11 oz. 9 dwt. 6 grs.
Silver, 18 "
Alloy, 0

The silver is an accidental admixture, or, if lacinia to be present, was not allowed for, so that our coin may be reckoned at 138½ grains of fine gold. Our sovereign, after deducting the alloy, contains 113½ grains of fine gold. Therefore the Macedonian stater is equal to ⅛ of the English sovereign, or Ⅵ. 3s. 6d. 0½28. 622. farthing. The average is, however, a little below this stater, but not more than is due to wear. The stater of Philip was very recently current in Greece at the value of about 25 shillings. This standard was preserved, or very nearly so, under the later Macedonian kings, and was adopted by other states, as Ephesus, Eolzia, Acananria, and Syracuse.

Besides the staters noticed above, most of the cities of Ilia had gold coins, but their value is very doubtful. There are specimens in existence which show the coins of Molossia, of Argos, of Patras, of Samos, of Sparta, of Thasos, the Greek cities of Sicily, and Cyrene, had gold money at an early period.

Pollux mentions a Corinthian stater as used in Sicily, which he calls *dekadrachm* and makes equal to ten *Aeginetan* obols. The explanation of this statement is very difficult. There is the disputed question whether the Corinthian money followed the Attic or the *Aeginetan* standard,
STATUARIES.

In calculating the value of the statue in our money, the ratio of gold to silver must not be overlooked. Thus the statue of Alexander, which we have valued according to the present worth of gold, at 11. 3s. 6d., passed for twenty drachmae, which, according to the present value of silver, were worth only 3d. But the former is the true worth of the statue, the difference arising from the greater value of silver in ancient times than now. (Vid. Arsentium.)

Besides the statue itself, there were, as appears from the above remarks, double statues, and the halves (ἡμιαρχοντες, ἡμιστατήρες), quarters, thirds, sixths, and twelfths of the statue. The coins of the last four denominations are, however, much less common than the double statues.

The term sta'toire in later times, was applied to the silver tetradrachm, but whether it was so used in the flourishing times of Athens is doubtful. (Vid. Drachma.)

It was also used in reference to weight, apparently like the Hebrew shekel and the Latin pondus, in a general sense. The Min'a, 3 and the Sicilian Litra2 are also of this class.

STATI DIES. (Vid. Dres. p. 362.)

STATIO'NES. (Vid. Castr. p. 222.)

STATIO'NES FISICI. The Piscus was divided into various departments, called stationes, according to the different revenues belonging to it. Thus we read of a statio XX. hereditatium;² a statio hereditatium,² a statio anumone.*

STATIO'NES MUNICIPIO'RUM. Mentioned by Pliny,² are supposed by Niebuhr³ to be places by the side of the comitia allotted to municipalities, that they might hear the debates, like privileged seats in the hall of a parliamentary assembly. The Graecostasis mentioned by Cicero,³ and Varro² was a similar place, as Niebuhr remarks, on the right of the comitia, allotted to the Greeks from the allied states for the same purpose.

STATOR, a public servant, who attended on the Roman magistrates in the provinces. The stationes seem to have derived their name from standing by the side of the magistrate, and thus being at hand to execute all his commands: they appear to have been chiefly employed in carrying letters and messages.⁴ Alexander Severus forbade the use of stationes in the provinces, and commanded that their duties should be performed by the soldiers.⁵

STATU LIBER. (Vid. Manumissio, p. 616.)

STATUARY (staturia aris) is, in its proper sense, the art of making statues or busts, whether they consist of stone or metal, and includes the art of making the various kinds of reliefs (alto, baso, and mezzo relievo). The ancients, accustomed to trace all their arts and sciences to a single person, who was generally believed to have been led to his discovery by some accidental circumstance, relate several stories to account for the origin and discovery of the arts of painting and statuary.⁶ But arts such as these cannot, like those which are the necessary result of particular-local circumstances, or are in their origin of a capricious nature, be assigned to any particular nation or to any particular individual: these being supposed to have been led to this, and taken their origin alike everywhere in the inanimate faculty of man. It is, therefore, idle to talk when modern writers gravely repeat the stories about the invention of sculpture or painting, or assign the invention of either of them to the Egyptians or any other nation. These arts, in their infant state, existed among the Greeks from time immemorial; and if there are any resemblances between the earliest, the most barbarous, and the most civilized nations, we have still no right to infer that the Greek statuary was derived from the Egyptians; and we might as well assert that the Greeks learned their arts from the Gauls or from the Siamese, for the works of these nations, too, resemble those of early Greece. An art in its primitive state manifests itself nearly in the same manner in all parts of the world. But what is of real interest is to know the causes through which they have arrived at a more or less correct appr'iate term, sculpture, became so pre-eminently the art of the Greeks, that down to this day no other nation has produced artists that can compete with them, and that all look upon the Greeks as the great masters and models for all ages. Winckelmann has pointed out three great causes, viz., their innate genius, their religion, and their social and political institutions; 2 to us that three points are accurately explained, we certainly feel that these singularly co-operated in making the Greek artists what they were. There is another point connected with the origin of Grecian sculpture which appears to have led some modern writers to form erroneous opinions. The peculiar form of the Herma (vid. Herculeus) has given rise to the belief that in the earliest statues the head only (bust) was represented, and that the remaining part of the body was expressed by a simple pillar or block. This view is contrary to nature as well as to history; for neither a nation nor a child (which in this case may be fairly taken as a representative of a nation in its infancy), when they begin to exercise their imitative faculty, will rest satisfied with forming the mere head of a human being, but endeavor to produce the whole as well as we can. We may add, that no other nation presents such a phenomenon in the earliest history of its arts. The Herma, therefore, cannot have arisen from an incapability of forming a whole human figure. They appear rather to point to the time when the Greeks began to represent their gods in a human form. To give to a god the entire form of a man would have been irreverent, whereas the head only flows out of the body, and is sufficient to represent him as a distinct individual being, and endowed with spiritual and thinking powers. The process of humanizing the gods must have been preceded by the custom of representing them in unnatural forms, or such as were partly human and partly animal. ⁶ The earliest images of the gods were pure images (not the gods themselves), and intended to express art and those or ideas: now, as the natural figure of man is only expressive of itself, the significant parts of two or more beings were put together to express the idea which men had formed of their gods. Such monstrous figures were retained as representations of some gods down to the latest times. As instances of this, we may mention Glaucus with the tail of a fish, the Areian Paus with garments and the head and mane of a horse. Homer's silence on such compound representations of the gods is no proof that they did not exist in early times.

Before proceeding to consider statuary in its several stages of development, it is necessary to make a few preliminary remarks respecting the materials used by the Greeks in this art. On the whole, it may be said that there is no material applicable to statuary which was not used by the Greeks. As

---

912
The history of ancient art, and of statuary in particular, may be divided into five periods.

1. **First Period**, from the earliest times till about 800 B.C., or 580 B.C.

The real history of the arts is preceded by a period of a purely mythical character, which tradition has peopled with divine artists and most extraordinary productions. Three kinds of artists, however, may be distinguished in this mythical period: the first consists of gods and demons, such as Athena, Hephaestus, the Phrygian or Dardanian Dactyls, and the Cabiri. The second consists of inventors of arts and sciences, distinguished from others by the mysterious possession of superior skill in the practice of the arts, such as the Telchines and the Lycian Cyclopes. The third consists of individuals who are, indeed, described as human beings, but yet are nothing more than personifications of particular branches of art, or the representatives of families of artists.

1. (Hesiod, Theog., 571, etc.—Stob., Strom., i.)—2. (H. N., iv., 49, 3.)—3. (Paus. x. 38, 6; Lyc. D, i. 3.)—4. (Paus. ix. 47, 1; 50, 1; vii. 22, 3.)—5. (Paus. xx. 29, 4.)

2. **Second Period**.

The earliest representations of the gods, however, were by no means regarded as the gods themselves, or even as images of them, but only as symbols of their presence; and as the imagination of a pious primitive age does not require much from the representation of a deity, the simplest symbols were sometimes sufficient to produce this effect. Hence we find that in many places the presence of a god was indicated by the simplest and most shapeless symbols, such as unhewn blocks of stone (λίθος ἀποφευγός), and by simple pillars or pieces of wood. (Vid. Dôcana and Æmidâ.) Many such symbolic rep-
resentations of gods were held in the greatest esteem, even in the historical ages, as sacred inheritances of former times, and remained the conventional representations of the gods, notwithstanding the progress which the arts had made. The general name for a representation of a god not consisting of sculpture was, however, not always the case. Temples are mentioned in several places, and temples presuppose the existence of representations of the gods.

A statue of Athena is mentioned at Ilion, upon whose knees the queen places a magnificent peplos. The statue thus appears to have been in a sitting position, like the statues of Athena among the Lydians.

The sculptor of Apollo must be inferred from Iliad, i., 58, for the στῆγα ἠδονίς can only mean the wreath or diadem with which his statue itself used to be adored. This statue must, moreover, have been represented carrying a bow, for attributes like ἄργυρος ἄρχος could have had no meaning unless they referred to something existing and well-known. Other proofs of representations of the Iliads and Homeric poems are found in Iliad, ii., 478, &c.; iii., 396, &c. These statues were undoubtedly all ἑλεία, and, as we must infer from the expressions of Homer, were far more perfect than they are said to have been previously to the time of Dädalus. A work still extant, which certainly as old as the time of Homer, if not much older, is the relief above the ancient gate of Myconos, representing two lions standing on their hind legs, with a sort of pillar between them. These facts justify us in supposing that, at the time of Homer, the Greeks, but more especially the Ionians of Asia Minor, had made great progress in sculpture. The Ionians appear to have been far in advance of the Greeks of the mother-country. The cause of this must probably be sought in the influence which some of the nations of Western Asia, not only the Lydians, Lycians, and Phoenicians, had upon the Ionian colonists, for those nations excelled the Greeks in various branches of the arts is abundantly attested by numerous passages in the Homeric poems. We must not, however, attribute too much to this foreign influence, for there were many other causes at work besides, by which the Greek colonies, not only of Asia, but of Sicily and Italy also, were enabled to be in advance of the mother-country. The ancient coins of the Italian Greeks, too, are much more beautiful, and show more individuality than those of Greece proper: we also find that Leareuch of Rhgium, about 720 B.C., came to Sparta, and formed there the earliest bronze statue of Zeus, which consisted of several pieces nailed together. It was also ancient that Tyche was being shortly after this time that the statues of Sparta made a bronze statue of Athena. Another great work in bronze belonging to this period is the colossal statue of Zeus, which was dedicated at Olympia by Cypselus or Periander of Corinth, and for which the wealthier Corinthians were obliged to sacrifice a considerable part of their property. About 590 B.C., Myron of Sicyon dedicated two δίδυμα of bronze at Olympia, which were still there in the 3. 8. the days of Pausanias. The time which elapsed between the composition of the Homeric poems and the beginning of the fifth century at Athens must be supposed to have been a discovery; for nearly all the inventions upon the application of which the development of the arts is dependant are assigned to this period, which, may, at the same time, be regarded as the first historical period in the history of art. Glauceus of Chios or Samos is said to have invented the art of soldering metal (συγκλινον διαλημματος). The two artists most celebrated for their discoveries were the two sons of Polycrates of Samos, the time of Polykrates. The most important of them was the art of casting figures of metal. This art appears to have been peculiar to the Greeks; at least we do not find that it was ever made use of by any other ancient nation. It is a singular circumstance, that the very two artists to whom this invention is ascribed are said to have made it at the same time in Egypt: that story was told of the two brothers executing a έμπορον of the Pythian Apollo in such a manner, that while Telecles made the one half of the statue at Delos, the other half was made by Theodorus at Ephesus, and that, when the two halves were put together, they tallied as accurately as if the whole had been the work of one artist, has been thought to support the Egyptian story, that the art had been introduced into Greece in the exercise of their art by what they had learned in Egypt. But, in the first place, the whole story has a very fabulous appearance; and even admitting that the artists, as the Egyptians asserted, had actually been in their country, nobody will on this ground maintain that they learned their art there: the utmost they could have learned might have been some mechanical processes, the art itself must be vindicated for the Greeks. In the second place, Telecles and Theodorus are called by Didus sons of Rhoeus; and Pausanias himself, who was unable to discover a bronze work of Theodorus, saw at Ephesus a bronze statue which was the work of Rhoeus. Hence we have reason to suppose that Telecles and Theodorus learned, at any rate, the art of soldering metal from their father, and not in a foreign country. Respecting the various accounts of these two artists, and the time at which they lived, see Pliny, Herodotus, and Pausanias. Pliny says that Pastelo called the art of modeling clay the mother of the art of casting figures in metal (στιατορία), and this passage has been explained as if Pastelo meant to say that in Samos the former of these arts had given rise to the latter. But this is manifestly wrong; for, from the words which follow in the text of Pliny, it is clear that the meaning is, that he never executed any work in metal, marble, &c., "without previously making a model in clay. Statues of gods in marble clay, though in general more used for domestic and private than for public worship, continued to be given as gifts. Many specimens of small dimensions and of very rude workmanship have been discovered in Attic graves. Ornaments and reliefs on houses, porticoes, and temples, were likewise very commonly made of clay, especially at Corinth and in the Ceramicas. Representations of the gods in marble are not mentioned in Homer, although they may have existed in his time as well as statues of wood, which are

II. Second Period, from Ol. 50 to Ol. 75. (590-580 B.C.)

This period, although comprising no more than one century, developed all the elements which combined to make Grecian art what it became during the third and most flourishing period of its history. Greece now came into close contact with the nations of the East and with Egypt; commerce flourished at Corinth, Ægina, Samos, Miletus, Phocaea, and other places; gold became more abundant in Greece, and the multitude of young men who sprang up in several parts of Greece surrounded themselves with splendour and magnificence, and acted as the patrons of art to palliate their own usurpation. But all these were only external influences, and could not have produced a nation of artists like the Greeks. Epic poetry had gradually created in the minds of the people more defined ideas of the gods, which, along with the belief that they had been the founders of the ancient public, began to make men look beyond what was conventional and traditionary. The athletic and orcheatic arts attained about Ol. 50 a high degree of perfection, and the circumstance that about the same time the gymnastic and athletic contests at the great public festivals began to be performed naked, directed the attention of the public to these artists, and rendered them familiar with the beautiful forms of the human body. But the imitation of nature was at first of a very hard and severe character, and the influence of conventional forms still acted in many cases as an obstacle.

The number of artists who flourished during this period is truly astonishing. It has been said that the close connexion of other and ancient as well as of art shrinks from it in disgust. The drapery is likewise stiff, and the folds are very symmetrical, and worked with little regard to nature. As the arts, during this period, were chiefly employed in the service of religion, they could, notwithstanding the many mechanical discoveries of the time, make but slow progress towards the production of works of sublimity or beauty; for in the representations of the gods for public worship, adornment of temples and customs, were retained, and repeated without the artist being allowed, even if he was able to do it, to depart from these forms, or to introduce any material change. Art, therefore, could not make any great progress until it was applied to purposes in which the artist's genius was not restrained by religious custom, and not bound to conventional forms. Religion, although the murmuring mother of the arts in infancy, became a tedious restraint when they grew up to manhood. But, as soon as other spheres of action were opened, religion, in her turn, could not escape from the influence of the advancement of the arts, and the old conventional forms in many places gave way to works of real merit and genius. This great and important change took place about and after Ol. 50.
great school of sculptors in marble, in which Bupas and Anthermus were the most distinguished, about Olympia 60. Their works were scattered over various parts of Greece, and their value may be inferred from the fact that Augustus adorned with them the pediment of the Temple of Apollo on the Palatine. These works must be supposed originally to have belonged to a Greek temple of the same god, and must certainly have been of superior beauty to the works discovered in the island of Eginia, otherwise Augustus would not have chosen them as ornaments for the Palatine temple. Sicyon also possessed a celebrated school of sculptors in marble, and about Ol. 50 Dipenus and Scyllis, who had come from Crete, were at the head of it, and executed several marble statues of gods. In Aetolia, whether they withdrew for a time, and at Argos, there likewise existed works in marble by these artists. Disciples of them, such as Dorycleidas, Medon, and Theocles, were engaged at Sparta and in other places. Respecting Magna Graecia and Sicily we know few particulars, though it appears that the arts here went on improving, and continued to be in advance of the mother-country. The most celebrated artists in southern Italy were Dames of Croton and Pythagoras of Rhegium.

In Attica, from early times, to be the seat of a distinguished school of artists. Here Canachus and Aristocles flourished about Ol. 70 as sculptors in metal, though the former was also celebrated in the art of carving in wood and in teoretic. Pliny calls Sicyon *divi officinarum omnium metallorum patria.* Canachus, whose works Cicero*** calls more rigid and hard than was consistent with true art, was the most distinguished among the Sicyan artists, and his skill found employment in other parts of Italy also. His most celebrated work was a colossal bronze statue of Apollo Phileius in the Didymaean, the description of which may give us an idea of the character of temple-statues at this period. The whole figure was stiff, very muscular, and without any elegance. In his right hand, which was stretched out, the god held a fawn, and in the left, which was somewhat lower, a bow. The features of the countenance were hard, and worked in the old hieratic style: the hair was divided, and hung down like wire, with little curls at the end. In *Eginia* the arts appear likewise to have continued to flourish as before, and the most celebrated among its artists was Callimachus. The latter, who was the most distinguished among the Sicyan artists, and his skill found employment in other parts of Italy also. those who had gained the victory thrice were allowed to have iconic statues erected, yet they were destined to preserve the memory of the particular physical powers and the bodily development of the athletes, or even to show the peculiar skill or the peculiar stratagems by which an athlete had excelled and overcome his adversary, and thus afforded to the artists numerous opportunities of representing figures in a variety of attitudes and actions. 1 Statues erected in public, or dedicated in temples in honour of others and ages now forgotten, are men- tioned during this period, but they appear generally to have been portraits (elávées, statuæ iconicae). The earliest statues of this kind we know of are those of Cleobis and Biton of Argos, which were dedicated in the Temple of Delphi about O1. 50. 2 The first iconic statues of Harmodius and Aristogiton were made by Antenor in 509 B.C., and in 477 B.C. new statues of Selinuntine Greeks, which were destroyed by Critias. It is allowed on all hands that nothing contributed more to the advancement of statuary than the contests at the public games, as they not only rendered the artists familiar with the greatest variety of attitudes, and with the most beautifully developed forms of the bodies of the athletes, but also afforded them numerous opportunities to represent those attitudes which were later seen and admired. The widest field for study and exercise was thus opened to the artists.

We have seen that, at a very early period of Gre- cian art, attempts were made to adorn the outside of temples and other public buildings, but it was not till the period we are now entering that it became customary to adorn the pediments, friezes, &c., of temples with reliefs or groups of statues of marble. We still possess two great works of this kind, which are sufficient to show their general character during this period. 1. The Selinuntine Marbles, or the metopes of two temples on the acropolis of Seleucia in Sicily, which were discovered in 1823 by W. Harris and Sam. Angell, and are at present in the Museum of Palermo. Those belonging to the western temple appear to have been made at the beginning of this period, as they show a very great resemblance to the works in the hieratic style. The figures of the other or middle tem- ple show indeed a considerable advancement of the art, but the works of the same person, which may have possibly been executed a short time before O1. 75. 3 The Eginatian Marbles were dis- covered in 1812, in the island of Ægina, and are now at Munich in the collection of the King of Bavaria. They consisted of eleven statues, which adorned two pediments of a temple of Athena, and represent the gods leading Æneas against Troy, and contain manifest allusions to the war of the Greeks with the Persians. Many small holes in the marble render it probable that originally sev- ral parts of these statues, perhaps the armour, were of bronze, and fixed to them with nails. The general character of these Éginatian statues is a mixture of the archaic style and an anxious imitation of nature; the hair is wavy, and traces of paint are visible on all parts of the statues with the ex- ception of those representing the flesh. 4

Besides these, a great number of works in bronze and marble of this period are still extant; they are partly roun figures or statues, and partly reliefs. Some of the best specimens in marble relief, which seem to form the transition from this to the third period, are preserved in the British Museum. 1 It is not always easy to say whether a work made in the archaic style is really as old as the third period, as this style was never entirely abandoned, and was retained in temple-statues even under the Roman emperors.

III. Third Period, from O1. 75 to O1. 111. (480—336 B.C.)

During this period Athens was the centre of the fine arts in Greece. The Persian wars awakened in the hearts of the people the feeling and the con- viction of their own power, and the Greeks, who had at first only warded off the attacks of the barbarians, now felt strong enough to act on the offen- sive. Thus Athens in 472 B.C. to the supremacy in the wars against Persia. Athens had now acquired a powerful navy, and the tributes of the allies, which amounted at different times from 460 to 1200 tal- ents, and which, from 462 B.C., were deposited in the treasury at Athens, raised the city to a height and power, the character of which belied. Only a small portion of those treasures were spent upon war; the rest was applied at first to the fortifi- cation of the city, and afterward to the building of temples, porticoes, theaters, gymnasium, &c. Among them we need only mention the Theseum, the Par- thenon, the Propylaæ, the stone theatre, the Pæcile, and the Odeum. After the wars with Persia, Athens became a great and wealthy city, which meant exhausted or broken down, but refreshed and strengthened, like nature after a heavy storm.

Statuary during this period went hand in hand with the other arts and with literature; it became emancipated from its ancient fetters, from the stiffness and conventional forms of former times. The free and natural style of the fifth century showed its influence in all departments of literature and art, and among the latter statuary reached its culminating point in the sublime and mighty works of Phidias. The democratical spirit did not, how- ever, lead to any kind of extravagance in the arts: no vehement passions or actions were represented; rather, the mind of the artist sought the sublime and the beautiful in the grandest and most simple things; a new gen- eration now stepped into the path of the heroic race which had partaken in or witnessed the mem- orable events of the Persian war. Sensuality and an indulgence of the passions became the prominent features in the character of the Athenian people; and the prevailing desire after pleasures and strong excitements could not fail to produce an injurious influence on the art of that time. These were the same works which were produced after the year 380 B.C., there was no longer that calm and sublime majesty which characterized the works of Phidias and his more immediate followers, but the figures were more pathetic, and calculated to have a greater effect upon the senses of the beholders. The different stages of the artist's period are more easily perceived by the most striking analogy with the three plagues of tragedy, as they lie before us in the works of the three great dramatists, Æschylus, Sophocles, and Euripides.

Argos was, next to Athens, the most distinguished seat of the arts during this period, and the works of the Athenian and Argive artists spread over all Greece, and became the models for other Greek artists.

1. (Vid. Combe, Marbleis of the Brit. Museum, ii., pl 6 and 7; Specimens of Anc. Sculpture, pl. 11.)
STATUARY.

The development of statuary at Athens and Argos had been prepared by Calamis of Athens and Pythagoras of Rhegium, the former of whom, although not quite free from the hardness of the earlier style, yet produced a great variety of works, among which are mentioned representations of gods in a sublime style, graceful statues of women, and spirited horses, in which he was unrivaled.\(^1\) Pythagoras was distinguished for the perfection with which he expressed the muscles, veins, and hair in his athletic statues, for the beautiful proportions and the powerful expression of these statues, which, as Pliny says, made the beholders feel the pains which the individuals represented were suffering.\(^2\) Some of the statues of this artist have been described by Quatremère.\(^3\) The career of Phidias the Athenian begins about Ol. 82. The genius of this artist was so great and so generally recognized, that all the great works which were executed in the age of Pericles were placed under his direction, and thus the whole host of artists who were at that time assembled at Athens were engaged in working out his designs and ideas.\(^4\) He himself was chiefly engaged in executing the colossal works in ivory and gold, the expenses of which were supplied by the Greek states with the greatest liberality, and other works in bronze and marble. The first among these works is the statue of Pallas Parthenos (made about Ol. 83, 3), of ivory and gold. The statue was twenty-six cubits in height, and represented the goddess in her chariot with her two maidens, in a most powerful expression of a most majestic and victorious being. A description of the statue is given by Pausanias.\(^5\)

It was frequently imitated in antiquity in marble statues and upon coins, and from these imitations, and the descriptions we possess of it, Quatremère de Quincy\(^6\) has made a very unsuccessful attempt at restoring the original statue. The robe which Pallas wore and her four horses, through which its thickness was not much above a line,\(^7\) was not taken off and used for other purposes in the time of Demetrius Poliorcetes. The style of this was, like that of all the works of Phidias, extremely simple, yet grand and sublime; the helmet, shield, and the pedestal were beautifully adorned with scenes belonging to the story of Attica. A second work on which the artist was still more admired, was the statue of the Olympic Zeus (made in Ol. 86), who was represented sitting upon a φόνον.\(^8\)

The statue was, like that of Pallas, made of ivory and gold, and, without the pedestal, forty feet high. The great richness with which the throne, sceptre, and the pedestal of this simple but majestic representation of the father of the gods were adorned, the profound wisdom in the proportions of the colossal work, and the sublime idea which the artist had formed and here imbedded of the majesty of Zeus, made this statue one of the wonders of the ancient world. The idea of Zeus is said to have been suggested to Phidias by the celebrated verses of Homer, and the impression which the god in this work made upon the beholder was that of a god ruling in omnipotence, and yet generally inclined to listen to the prayers of man, and to grant his wishes.\(^9\)

The statue of the Olympic Zeus existed till A.D. 475, when it was destroyed in a fire at Constantinople, whether it had been transported by the Emperor Theodosius I. The most colossal statue of Phidias was his Athena Promachos, of bronze, which was fifty feet high without taking the pedes-

tal into account.\(^1\) It stood on the Acropolis, between the Parthenon and the Propylaea, rising above each of these buildings, so that it was seen at a distance by the sailors when they approached the coast of Athens. This work, however, was not completed when he died, and it was finished nearly a generation later by Myr.\(^8\) Phidias was greatest in the representation of the gods, and especially in portraying the character of Athena, which he represented with various modifications, sometimes as a warlike goddess, and sometimes as the mild and graceful protectress of the arts.\(^5\)

We do not read of many disciples of Phidias, but the students among them were Agoracritus of Samos and Alcaneus of Athens. Both, though the latter with greater independence, applied their skill, like their master, to statues of the gods; both were especially renowned for the great beauty, softness, and calm majesty with which they represented goddesses, in the composition of which they rivalled each other. Some of the statues of Alcaneus were very highly valued in antiquity, especially his Hecate, Athena, Aphrodite in the gardens, Hephaestus, and also the groups in the pediment of the temple at Olympia. The most celebrated statue of Agoracritus was the Nemesis of Rhannus, which had originally been intended as an Aphrodite to compete with that of Alcaneus, but was afterward, by the addition of proper attributes, consecrated.

We still possess a series of sculptured works in marble which were made by the school of Phidias, and some of them undoubtedly by the great master himself. These works are:

1. Some parts of the eighteen sculptured metopes, together with the frieze of the small sides of the cella of the Temple of Theseus. Ten of the metopes represent mythological subjects, while the other eight others of Theseus. The figures in the frieze are manifestly gods, but their meaning is uncertain. All the figures are full of life and activity, and worked in the sublime style of the school of Phidias. Some antiquarians value them even higher than the sculptures of the Parthenon. Casts of these figures are in the British Museum.\(^4\)

2. A fragment of the metopes of the Parthenon, which are all adorned with reliefs in marble, a great part of the frieze of the cella, some colossal figures, and a number of fragments of the two pediments of this temple. The greater part of these works are now in the British Museum, where they are collected under the name of the Elgin Marbles. They have been described and commented upon so often, that they require no further mention here. The best work, so far as the explanation of these sculptures is concerned, is Bröndsted’s Reisen, vol. ii.

3. The marble reliefs of the Temple of Nike Apteros belong, indeed, to a later age than that of Phidias, but they are manifestly made in the spirit of his school. They represent, with great liveliness and correctness of ideas, Greeks with Persians, and of Greeks among themselves. These also are at present in the British Museum.

All these sculptures breathe, on the whole, the same sublime spirit, though it would seem that some, especially some figures of the metopes of the Parthenon, were executed by artists who had not emancipated themselves entirely from the influence of an earlier age. With this exception and some other slight defects, which are probably the conse-

---

of the parts of the body, that it was looked upon by the ancient artists as a canon of rules on this point. 3

Polycleitus is said to have written a work on the same subject, in which it was declared that his doctrine was intended to give a practical specimen of the rules he had laid down in his treatise. He gained a victory over Phidias in the representation of an Amazon, which must, consequently, have been a figure in the greatest luxuriance of female beauty combined with a manly character. 2

Polycleitus was also distinguished as a portrait-statues, among which that of Agathokles of Pericles, and as, far as the impression upon the senses was concerned, his works were most pleasing; but animi sensus non expressit," says Pliny. 4 The crown upon which in bronze was celebrated in all antiquity. 9

Pliny mentions a considerable number of his works, among which a dog, a discobolus, pentathl, and pancratista were most celebrated; the last of them were especially distinguished for their eurythmy, and the animation displayed in their movements, as well as for the perfection of their attitudes. Among his statues of gods we find only representations of a fessment group representing Heracles, Zeus, and Athena, which he made for the Samians. 4 In his execution of the hair, he adhered, according to Pliny, to the ancient style.

The deviation from the sublime ideality of the Attic school of Phidias was still more manifest in the works of Callimachus and Demetrius. The former executed his statues with the utmost possible accuracy and attention to the minutest details, but was careless in the conception as well as in the execution of the whole, which destroyed the value of his works, whence he was designated by the nickname of 

character of the age. There was a time when this school of statuary was considered superior even to that of Phidias, and it is indeed true that its productions are distinguished by exquisite beauty and graceful form, whereby these female statues in particular have been unrivalled; but the effect they produced upon the minds of the beholders was by no means of the same pure and elevating nature as that of the works of their predecessors. Pliny mentions a number of works of Scopas, some of which he himself saw at Rome. Among them were Aphrodite, Pothos, Phaethon, Apollo, a sitting Deme- ter, Poseidon, Thetis, Achilles, the Nereids riding on dolphins, and a number of other marine deities. When Scopas was a child, and the son of a herdsman who made stuffed models of the infant children, in which the time of Pliny stood in a Temple of Apollo at Rome, was the work of Scopas or Praxiteles, was a matter of doubt among the ancients themselves. This group was discovered in 1583, near the Porta S. Giovanni at Rome, and the greater number of its fragments is at present in the museum of Florence, but some figures are in other museums. Munich possesses the finest head of all the Niobids. It has been the subject of much discussion whether the group discovered in 1583 is the original work of Scopas or Praxiteles, or only a copy; but, although the latter is by far the more probable opinion, these remains are the most beautiful relics of ancient art; the mother Niobe herself, especially, is unrivalled. The works of Praxiteles were more nearly admired for their character than for their style. The transition in all departments of the arts, from the ancient simplicity to the representation of subjects exciting sensual desires and appetites, was exceedingly slow and gradual; and thus, although in the works of Praxiteles youthful and female beauty appears naked, and clothed with all the charms that art can bestow, and although many of his portraits are engraved on his own head, his figures are not those peculiar to the worship of Dionysus, yet we cannot say that they displayed any kind of sensuality. His most celebrated works were: 1. Figures of Dionysus, Satyrs, and Mänadens. 2. Statues of Eros for various parts of Greece. 3. Statues of Aphrodite. The most celebrated among these were the Aphrodite of Cos (εικάς δικτήρες), and, above all, the Aphrodite found at Argos (Ἀφροδίτη τῆς Αργοῦς), which stood in the church built expressly for the purpose, and open on all sides. This statue was of such extraordinary beauty, that, as Pliny states, many persons sailed to Cnidus merely for the purpose of seeing it. Some critics have asserted that the Venus known under the name of the Medicane is the Cnidian Venus of Praxiteles, or a copy of it, but Visconti has clearly proved that this is impossible. There is much more sensuality in the Medicane Venus than we have any reason to suppose existed in that of Cnidus. Praxiteles had also great reputation for his statues of the most beautiful heathen, and it is said that he took the most charming among them as models for his representations of Aphrodite. There was also a statue of Praxiteles representing Apollo, adorned Sacrocalum, or the river Lissur, which had great reputation in antiquity. Cephisosodorus and Timarchus were sons of Praxiteles. There were several works of the former at Rome in the time of Pliny: he made his art subservient to passions and sensual desires. Pliny mentions among his works a celebrated Symposium at Pergamos, which is the first instance of this kind that we hear of in Grecian art. A similar spirit pervaded the works of Leochares (a Galanides carried by an eagle up to Zeus), of Polykles, who was the first that made the voluptuous statues of Hermaphroditus, and of Silanion, who made a dying Jocaste. Leochares also made a nude and portrait-statues in ivory and gold, of members of the royal family of Macedonia, and of other persons. Such portrait-statues about this time began to give much occupation to the artists. About the year 350 B.C., several of the greatest artists of the age, such as Scopas, Leochares, Timotheus, and Ibyraxis, were engaged in Caria in making the magnificent mausoleum of Mausolus, a general description of which is given by Strabo. Most of the above-mentioned artists, however widely their works differed from those of the school of Phidias, may yet be regarded as having only continued and developed its characteristics in a certain direction; but towards the end of this period Euphranor and Lysippus of Sikyon carried out the principles of the Argive school of Polykleitos. Their principal object was to represent the highest possible degree of physical beauty, and of athletic and heroic power. Lysippus was the greater of the two: he was one of the most fruitful artists that have ever lived, for he is said to have made no less than 1500 figures. Among the heroes Hercules appears to have been a favourite subject of Lysippus, for he made several statues of him, representing him in various states, and on his figure his heroes to serve as types for subsequent artists. We still possess some representations of Hercules which are considered to be imitations of his works. The most celebrated among his portrait-statues were those of Alexander the Great. The chief characteristic of Lysippus and his school is a close imitation of nature, which even contrived to represent the details of the human figure in the most natural manner; its tendency is entirely realistic. The ideal statues of former times disappear more and more, and make way for mere portraits. Lysippus, it is true, made statues of gods, but they did not properly belong to his sphere; he merely executed them because he had received orders which he could not well refuse. His greatest care was bestowed upon the execution of the limbs, so that the proportions of the parts of the human body were made to correspond with the correct proportions of the parts of the human face, the effect of making portrait-statues slender and tall above the common standard. In short, all the features which characterize the next period appear in the school of Lysippus.

IV. Fourth Period, from Ol. 111 to Ol. 158. (336—146 BC.)

Within a few generations Grecian art had passed through the various stages of development, and each of them had produced such an abundance of masterpieces, that it was difficult for a new generation of artists to produce new and original works. Hence the periods which followed could not do so much more than imitate, and their productions were better or worse in proportion as they were founded upon the study of earlier works or not. But even this period of eclecticism has nevertheless produced statues and groups worthy of the highest admiration, and which can be placed by the side of the best works of antiquity. The very slow decay of the arts, in comparison with the rapid decline of literature, is indeed a strange phenomenon.

During the first fifty years of this period, the schools of Praxiteles and that of Silion continued
to flourish, especially in works of bronze; but after this time bronze statues were seldom made until the art was carried on with new vigour at Athens about the end of the period. The school of Lysippus gave rise to that of Rhodes, where his disciple Chares formed the most celebrated among the hundred colossal statues of the sun. It was seventy cubits high, and partly of metal. It stood near the harbour, and was thrown down by an earthquake about 225 B.C. 1 Antiquarians assign to this part of the fourth period several very beautiful works still extant, as the magnificent group of Laocoön and his sons, which was discovered in 1506 near the baths of Titus, and is at present at Rome. This is, next to Nibei, the most beautiful among the extant works of ancient art; it was, according to Pliny, the work of three Rhodian artists: Agesander, Polydorus, and Athenodorus. 2 The celebrated Parnesan bull is likewise the work of two Rhodian artists, Apollonius and Tauriscus. 3

In the various kingdoms which arose out of the conquests of Alexander, the arts were more or less cultivated, and not only were the great masterworks of former times copied to adorn the new capitals, but new schools of artists sprung up in several of them. Alexander, Pergamus, and Seleucia rivalled each other in art no less than in literature; the works of these schools were composed which represented the victories of Attalus and Eumenes over the Gauls. 4 It is believed by some 5 that the so-called dying gladiator at Rome is a statue of a Gaul, which originally belonged to one of these groups. Ephesus also had a flourishing school of art, which appears to have followed the style of Lysippus, and excelled, like that of Pergamus, in the representation of battle scenes. The Borghese fighter in the Louvre is supposed to be the work of an Ephesian Agasias, and to have originally formed a part of such a battle scene. In Syria, too, art flourished at Antiochia until the time of Antonius IV, before whose reign a number of statues had already been carried away by the kingdoms which this

such numbers of statues, the workmanship natural ly became worse in proportion as the honour sank in public estimation. During this time it became customary to combine with the statues of kings and generals symbolical representations of towns, which are called roves. In Magna Graecia a t r gradually fell into decay after the wars with the Romans; and the example of Capua, from which all the statues were carried to Rome, affords us an instance of the robberies and plunder which were committed by the Romans in other towns of Italy. But even after the Roman conquests, the cultivation of sculpture in Italy continued to be handed down to us, as we must infer from the numerous works found at Pompeii, some of which possess a higher degree of perfection and beauty than might have been expected in works of so late a date. In Sicily the activity of the artists appears to have ceased after the Roman conquest, for the numerous works with which Syracuse was adorned, and with which we are made acquainted by Cicero, 6 mostly belong to an earlier period.

Shortly before the taking of Corinth by Mummian, statues in bronze and marble were revived at Athens; and, although the artists were far inferior to those of former times, yet they still produced works of great excellence, as they showed their independence and power by the skill displayed in their successors; the subject of their works and imitation. 7 Among those who contributed most to this revival of statuary were Cleomenes (who made the Medicean Venus, an imitation of that of Cnides, but inferior in point of taste and delicacy), his son Cleomenes (by whom there is a statue in the Louvre, which shows an exquisite pre-Roman beauty, but little life), Glycon, Apollonius, and other sculptors. About the close of this period, and for more than a century afterward, the Romans, in the conquest of the countries where the arts had flourished, made it a regular practice to carry away the works of art; and, as they were unable to appreciate their value and merit, they acted, in many cases, no better than rude barbarians, regarding the most precious relics of art in no other light than that of chairs and tables, which might be made again at pleasure, and at any time. At first these robberies were carried on with some moderation, as by Marcellus at Syracuse and by Fabius Maximus at Tarentum, and only with a view to adorn their triumphal chariots; but at a later period, when victors, like Philip, Antiochus, the Ætolians, the Gauls in Asia, Perseus, Pseudo-Philip, and, above all, the taking of Corinth, and subsequently the victories over Mithradates and Cleopatra, filled the Roman temples and porticoes with the greatest variety of works of art. After the taking of Corinth, the Roman generals and governors of provinces began to show a kind of avariciousness in works of art, which was probably more owing to the fashion prevailing among the Roman grandees than to any real taste or love for the fine arts: they now robbed whatever they could to adorn their own residences. Sometimes either their avarice or necessity induced them to melt down the most precious works with which they found out a new temple, and to sell the plunder of temples, and the carrying away of the sacred statues from the public sanctuaries, which had at first been prevented to some extent by the penalties, became afterward a common practice. The manner in which Verres acted in Sicily is but one of many instances of the extent to which these robberies were carried on. The emperors, especially Augustus and Nero, were the offenders. They carried off thousands of statues, and the immense number of statues which,

6 A
notwithstanding all this, remained at Rhodes, Delphi, Athens, and Olympia, is truly astonishing.  

Before we proceed to describe the state of statuary during the last stage, in which Rome was the centre of the ancient world, it will be necessary to give an outline of the history of statuary among the Etruscans and Romans down to the year 146 B.C.

The Etruscans were, on the whole, an industrious and enterprising people. Different hypotheses have been proposed to account for the cultivation of the arts, in which this nation excelled all others in central and northern Italy, as well as for the peculiar style in some of their productions. Some writers think that it was owing to colonies from Lydia, which were established at Cæren and Tarquinii; others, that the Etruscans themselves were a Pelasgian tribe. With the works of Grecian art they must have become acquainted at an early time, through their intercourse with the Greeks of southern Italy; and their influence upon the art of the Etruscans is evident in numerous cases. The East, also, appears to have exercised some influence upon the Etruscans, as many works of art found in Etruria contain precisely the same representations as those which we find in Asia, especially among the Babylonians. However this may have been effectuated, we know for certain that the whole range of the fine arts was cultivated by the Etruscans at an early period, as the clay (terra sigillata) which supported the place of wood, diaeta, which was used in Grecian art, and bronze appears to have acquired a high degree of perfection. In 267 B.C., no less than 3000 bronze statues are said to have existed at Volscini, and numerous works of Etruscan art are still extant, which show great vigour and life, though they do not possess a very high degree of beauty. Among these we may name the Chimaera (at Florence); the Capitoline She-wolf, which was dedicated in B.C. 296; the Minerva of Arezzo (now at Florence), and others. Some of their statues are worked in a Greek style; others are of a character peculiar to themselves, and entirely different from works of Grecian art, being stiff and ugly; others, again, are exaggerated and forced in their manner of treatment, and the awkwardness with which we meet with in the representations of Asiatic nations. Etruscan utensils of bronze, such as candelabra, paterae, cups, thrones, &c., embellished with various ornaments and figures, were very highly valued in antiquity, and even at Athens at a time when the arts were still flourishing there. Their works in stone, especially the alto and basso relievo, which are found in considerable numbers on chests containing the ashes of the dead, are, with few exceptions, of very inferior merit.

The Romans, previously to the time of the first Tarquin, are said to have had no images of the gods, and for a long time afterward their statues of gods in clay or wood were made by Etruscan artists. During the early part of the Republic, the works executed were of inferior merit. The statues were flat and unmeaning; and, though the technique was perfect and useful, and not of an ornamental character, and statuary was, in consequence, little cultivated. But in the course of time, the senate and the people, as well as foreign states, which were indebted to some Roman, began to erect bronze statues to distinguished persons in the Forum and other places. The earliest works of this kind which we can consider as really historical will be the statues of Attis treated by Mnesicles outside the Porta Trigemina, and of Pythagoras and Alcibiades, which stood in the corners of the comitium then the year B.C. 314 down to the dictatorship of Sulla. The last two statues were undoubtedly of Greek workmanship. The earliest metal statue of a deity was, according to Pline, a Ceres which was made of the confiscated property of Spurius Cassius, about 485 B.C. Two other metal statues of gods were the Capitoline Hercules, 306 B.C., and the colossal statue of the Capitoline Jupiter, which, according to Livy, was made about 490 B.C. The number of statues of men in the Forum appears soon to have become very great, and many persons seem to have had them erected there without any right; hence, in 161 B.C., the censors P. Cornelius Scipio and M. Popilius removed from the Forum all statues of magistrates which had not been erected with the sanction of the senate or the people. A statue of Cornelia, the mother of the Gracchi, stood in the porch of Metellus. The artists by whom these and other statues were executed were undoubtedly Greeks and Etruscans.

V. Fifth Period, from Ql. 158 (B.C. 146) to the fall of the Western Empire.

During this period Rome was the capital of nearly the whole of the ancient world, not through its intellectual superiority, but by its military and political power. But it nevertheless became the centre of an art and literature, as the artists resorted thither from all parts of the Empire for the purpose of seeking employment in the houses of the great. The mass of the people, however, had as little taste for, and were as little concerned about the arts as ever. In addition to this, there was still a strong party of the Romans who, either from an affected or an honest contempt for the Greeks, entertained the vain hope of being, at once, the first and the last in literature and art. These circumstances account for the fact that a man like Cicero thought it necessary to conceal and disguise his love and knowledge of the fine arts. It was, therefore, only the most distinguished and intellectual Romans that really loved and cherished the arts. This was both a fortunate and an unfortunate circumstance: had it not been so, art would have persisted at once; now it continued in some degree to be cultivated, but it experienced the same fate, which it has met with at all times, when it has continued its existence without the sympathies of the people, and merely under the patronage of the great. Notwithstanding these unfavourable circumstances, there were a number of distinguished artists at Rome during the latter period of the Republic, who had really imbibed the spirit of the ancient Greeks, and produced works of great beauty and merit. We need only mention such names as Pasi-telea of southern Italy, who was a Roman citizen, and made an ivory statue of Jupiter for the Temple of Metellus; Arcesilaus, of whom Pline mentions several highly valued works, and whose models were prized more than the statues of others; De- 

1. (Vid. Weikel, Uber die Wegfuehrung der Alten Kunst durch die Antiken Mutter, Arch. Mitt. 185, &c., 2. (Pline, H. N., xxiv, 16, 18.—Compare Vitr., iii, 2, 3.—(Dionysus, i, 79.—Liv, x, 23, 4. 2. (Pline, H. N., xxxv, 12.) — 2. (Id., xxxiv, 9.) — 3. (Liv, iv, 44, 4. (Id., ix, 40; x, 25.—Pline, H. N., xxxv, 15.— (Id., id, xxxiv, 16.— (Horat. ad Puteae, 283.—Petru, 86.— (Pline, H. N., xxxiv, 4, 9, 16.— (Senec. Epist. 83.— (H N, xxv, 2.)
groups. Pliny mentions such Craterus, Pythodorus, Polydeuces, Hermolaoi, a second Pythodorus, Artemon, and Aphrodissius of Tralles. In the time of Nero, who did much for the arts, we meet with Zenoecorus, a founder of metal statues, who was commissioned by the emperor to execute a colossal statue of 110 feet high, representing Nero as the Sun. The work was not completely executed, as the art of using the metal had fallen into oblivion. In A.D. 75 the statue was consecrated as a Sol, and was afterward changed into a statue of Commodus by altering the head. The principal sculptors worked at that time under the patronage of the Egyptians. 1. Reliefs on public monuments, such as those adorning the triumphal arch of Titus, which represented the apotheosis of the emperor, and his triumph over Judæa. The invention and grouping of the figures are good and tasteful, but the execution is careless. The same may be said of the reliefs of the Temple of Minerva in the Forum of Domitian, in which the drapery in particular is very bad. 2. Statues and busts of the emperors. These may again be divided into classes, and are easiest distinguished by the costumes in which they are represented. They are (a) faithful portraits in the costume of ordinary life (toga), or in the attire of warriors (warriors thora- cate), generally in an attitude as if they were advancing or retiring. (b) Allegorical representations of Augustus in the palace Grimaldi. To this class also belong the equestrian statues, and the statues upon triumphal cars with from two to six horses, and sometimes even with elephants, which were frequently made for emperors out of mere vanity, and without there having been any real triumph to occasion such a work. (c) Statues in a partaking of the individual in an exalted, heroic, or deified character. Among those were reckoned the so-called Achillian statues, which were first made in the time of Augustus; they were naked, and bore a basta in one hand; and, secondly, statues in a sitting position, with the upper part of the body naked, and a pallium covering the loins. These statues, as representing an emperor as Jupiter, but sometimes also as an Apollo. This method of representing an emperor as a god was at first practised with much good taste. The statues of the ladies of the imperial families are likewise either simple and faithful portraits, or they are idealized as goddesses: specimens of each kind are still extant. (d) Sculptures in the round, the more beautiful, of combining allegorical representations of towns and provinces with the monuments erected in honour of the sovereigns, was sometimes followed by the Romans also, and some of them were made by very distinguished artists. In the reign of Trajan, the column of Trajan, with sculptures representing the victory of this emperor over the Dacians, and other similar works, were executed. We also possess a beautiful colossal statue of Nerva in the Vatican, and in the Louvre there is a beautiful statue thoracata of Trajan, and several fine busts of the same emperor. Down to the reign of Hadrian, statuary had become more and more confined to the representation of subjects of a common nature, such as the life and reign of emperors, the victories at Rome, and other similar works, were executed, but the records of victories in the reliefs on the public monuments, and the various kinds of statues of the emperors and the members of their families. But in the reign of Ha- drian the arts seemed to begin a new era. He himself was undoubtedly a real lover and connoisseur of art, and he encouraged it not only at Rome, but in Greece and Asia Minor. The great villa of Trajan below Tivoli, the ruins of which cover an extent of ten Roman miles in circumference, was richer in works of art than any other place in Italy. Here more works of art have been dug out of the ground than anywhere else within the same compass. Hadrian was fond of the ancient forms in art as well as in language, and many works in the archaic style still extant may have been executed at this time. Some statues made at this time combine Egyptian stiffness with Greek elegance, and a frequent appearance is Greek heads with bodies such as that of Isis, are half Greek and half Egyptian. But by the side of this strange school there existed another, in which the pure Greek style was cultivated, and which has produced works worthy of the highest admiration. Foremost among these stand the statues and busts of Antinous, for whom the artists entertained a passionate partiality, and who was represented in innumerable works of art. The colossal bust of Antinous in the Louvre is reckoned one of the finest works of ancient art, and is placed by some critics on an equality with the best works that Greece has produced. The two cen- tauries of black marble on the Capitol probably belong to the reign of Hadrian; one of them is executed with great spirit, and represents the object of his religious mania, Eros riding on his back; the other looks more like an intoxicated satyr. There are also some very good works in red marble which are referred to this period, as it is not known to have been used before the age of Hadrian. As the arts had received such encouragement and brought such results in the reign of Hadrian, the effects remained visible for some time during the reign of the Antonines. Antoninus Pius built the great villa at Lanuvium, of which ruins are still extant, and where many excellent works of art have been discovered. But sophistry and pedantic learn- ing now began to regard the arts with the same contempt as the ignorance of the Romans had formerly done. The frieze of a temple, which the senate caused to be erected to Antoninus Pius and Faustina, is adorned with griffins and vessels of very exquisite workmanship; but the busts and statues of the emperors show in many parts an affected elegance, while the features of the counte- nance are tasteless and trivial copies of nature. In the time of Marcus Aurelius, the equestrian statue of Marcus Aurelius of gilt bronze, which stands on the Capitol, and the column of M. Aurelius, with reliefs representing scenes of his war against the Marcomanni. The busts which we possess of M. Aurelius, Faustina, and Lucius Verus, are executed with very great care, especially as regards the hair. The number of the extant busts of the Antonines amounts to above one hun- dred; and the rate at which busts of emperors were sometimes multiplied, may be inferred from the fact that the senate sometimes ordained that the bust of an emperor should be in the house of every citizen. After the time of the Antonines, the symptoms of decline in the arts became more and more visible. The most numerous works continued to be busts and statues of the emperors, but the best among them are not free from affectation and mannerism. The hair, especially in the representations of male figures, becomes gradually utterly tasteless; and instead of the natural hair, the artists made it a point to show that it was a large peruk, which in some cases might be put on and taken off at pleasure. (Vid. Galerius.) In the time of Caracalla many statues were made, especially of Alexander the Great. Alexander Severus was a great admirer of...
tatoes, not from a genuine love of art, but because
deighted in the representations of great and good
men. The reliefs on the triumphal arch of Sep-
timius Severus, representing his victories over the
Parthians, Arabs, and the Adiabænians, have some-
ty any artistic merits. During this time of decay the
custom arose of adorning the sarcophagi with
figures in high relief, representing scenes from the
legend of Demeter, Dionysus, and from the be-
trope ages of Greece; sometimes, also, the fable of
Eros and Psyche: all these contained allusions to
the immortality of the soul. Art, however, now
decayed with great rapidity; busts and statues were
more seldom made than before, and are awk-
ward and poor; the hair is frequently indicated by
nothing else but holes bored in the stone. The
reliefs on the sarcophagi gradually became monoton-
ous, lifeless, and evidently executed without spirit.
The reliefs on the arch of Constantine, which are
not taken from that of Trajan, are perfectly rude and
worthless, and those on the column of Theodosius
were not better.
At this time the art, in the proper sense of the
word, ceased to exist; statues of victors in the
public games continued to be erected down to the
fourth, and statues of the emperors (at Constanti-
ople) down to the eighth century; but at Rome,
as at Constantine, those who were honoured in
this way were more concerned about their rank and
dress being properly represented in their statues,
than about any perfection of the plastic art.
Artistry became mere manual labour, and required
nothing but mechanical skill. At Constantinople,
however, where statues had been collected from Rome,
Greece, and Asia Minor, the events of history al-
lowed the plastic arts to die away more gradually
than in Italy.
Art, even excluding, it remains to say a few words
in the destruction of ancient works of art. During
the latter part of the reign of Constantine, many sta-
tues of the gods were destroyed and melted down,
and not long after his time a systematic destruction
began, which under Theodosius spread over all parts
of the Empire. This spirit of destruction, however,
was not directed against works of art in general and
as such, but only against the pagan idols. The
opinion then prevailing, which is, that the losses we
have sustained in works of an-
cient art are mainly attributable to the introduction
of Christianity, is too sweeping and general.
Of the same character is another opinion, according
to which the final decay of ancient art was a conse-
quence of the spiritual nature of the new religion.
The coincidence of the general introduction of Chris-
tianity with the decay of the art is merely acci-
dental. That the early Christians did not despise
the arts as such, is clear from several facts. We
know that they erected statues to their martyrs, of
which we have a specimen in that of St. Hippolitus
in the Vatican library; and it is expressly stated that
Christians devoted themselves to the exercise of the
arts. The numerous works, lastly, which have been
found in the Christian churches of Rome, might alone
be a sufficient proof that the early Christians were not hostile towards the rep-
resentation of the heroes of their religion in works of
art. The hostility, such as it appears in the wris-
tings of Augustin, cannot therefore have been gen-
eral: and, in fact, Christianity during the Middle
Ages became as much the mother of the arts of modern
Europe as the religion of Greece was the mother of
ancient art. Another very general and
yet incorrect notion is, that the Northern barbarians,
after the conquest of Rome, intentionally destroyed
works of art. This opinion is not supported by any
of the contemporary historians, nor is it at all prob-
able. The barbarians were only anxious to carry
with them the most precious treasures in order to
enrich themselves; a statue must have been an ob-
ject of indifference to them. What perishable, par-
ticularly naturally by the circumstances and calamities
of the times: in times of need, bronze statues were
melted down, and the material used for other pur-
poses; marble statues were frequently broken to
pieces and used for building materials. If we con-
sider the history of Rome during the first centuries
after the conquest of Italy by the Germans, we have
every reason to wonder that so many specimens of
ancient art have come down to our times.

STELA.] (στιλή). One of the most curious speci-
mens of architecture, a festival with contests, cele-
brated by the Argives in honour of Zeus, surnamed
Sthenius, who had an altar, consisting of a large
rock, in the neighbourhood of Hermione. Plutarch
states that the πάλη or wrestling, which formed a
part of the contests at this festival, was accompa-
nied by a flute; and he also mentions a tradition,
according to which the festival had originally been
held in honour of Danaus, and that it was afterward
consecrated to Zeus Sthenius.

STIBIDAUM. (Vid. Menra, p. 633.)

STIBIUM or STENIA, a Sulphur of Antimony,
used from the earliest times, and still employed at
the present day in the East for tinging black
the hair and eyebrows, the eyelashes and edges of the
lids; this last application being with a view to in-
crease the apparent size of the eye. "Pliny's de-
scription of stibium," says Dr. Moore, "does not
suit, in all respects, the common sulphur of anti-
mony; but this mineral may have been found then
and more frequently associated, as it now sometimes is
with this oxide, or with the alkaliferous sul-
phur, to enable the Lepidus, Pliny, or his imita-
tor, to represent it as 'candida nitensque' might be with propriety
applied." Hardouin correctly states, according to
Adams, that the ancient works were probably un-
accounted for pure antimony, which is a factitious
substance, or, at least, is rarely found as a native
ore. It is called retipisnwm by Hippocrates, from
its being made into pastes of a soluble form. On
the ancient antimony, consult Pliny's Natural His-
tory.

STILLICDIUM. (Vid. Serivitos, p. 878.)

STILUS or STYLiUS is in all probability the same
word with the Greek στυλος, and conveys the gen-
eral idea of an object taping like an architectural
column. It signifies,

1. An iron instrument, resembling a pencil in
size and shape, used for writing upon waxed
tables. At one end it was sharpened to a point
for scratching the characters upon the wax, while
the other end, being flat and circular, served to render
the surface of the tables smooth again, and so to
obliturate what had been written. Thus everti
stilum means to erase, and hence to correct, as in
the well-known Latin phrase, \\n
2. A sharp stake or spile placed in pitfalls before

924
**STIPENDIUM.**

It was intended to embarrass the progress of an attacking enemy. It was to be paid to the same purpose as the contrivances called *cippi, lilia, and stimuli* by Cassar. 2

3. A bronze needle or rod for picking worms off fruit-trees 3 also a wooden probe employed in gardening operations.

It bears, also, the meaning of the stem of a tree or vegetable, 4 which is, perhaps, the primary significance of *στρογγυλος.*

*STIMMI*, the Greek name for what the Romans called *Stibium.* (Vid. *Stimnum.*)

**STIPENDIAРИI.** The stipendiaria urbes of the Roman province were so denominated, as being subjects of the state whose pay was not Lev. monopoly, but *"stipendium,"* in contradistinction to the vectigalae, who paid a certain portion, as a tenth or twentieth of the produce of their lands, their cattle, or customs. The word *"stipendium"* was used to signify the tribute paid, as it was originally imposed for, and afterward appropriated to, the purpose of furnishing the Roman army with horses, which were of the most material importance as auxiliary forces.

The condition of the urbes stipendiariae was not easy, but the distinction between the two terms was not always observed. 7 The word *stipendiarius* is also applied to a person who receives a fixed salary or pay, as a *"stipendiaria miles,"* a phrase which is sometimes used to denote a veteran who has received pay for many years, or served in many campaigns. 8 Some MSS. have stipendious in the passage last quoted, which is, perhaps, a better reading. 9

**STIPENDIUM,** a pension or pay, from *stipem* and *pendo,* because, before silver was coined at Rome, the receipt of money was paid by weight and not by tale. According to Livy, the practice of giving pay to the Roman soldiers (ut *stipendium miles de publico accipere*) was not introduced till B.C. 405, on the occasion of the taking of Tarracina or Anxur. He represents the change as the spontaneous and unsolicited act of the senate; but from another passage 10 we learn, that in the year 421 B.C. the tribunes had proposed that the occupiers of the public land should pay their *vectigal* regularly, and that it should be devoted to the payment of the troops. The concession was probably accelerated by the prospect of the last war with Veii, and made with a view of conciliating the plebs, who, without such some favour, would in their then humour have refused to vote for the army law and proposals, and the funds for the payment to have been raised by a *tributum* or general tax; but, as Arnold observes, 11 'The vectigal or tithe due from the occupiers of the public land was to provide pay for the soldiers; and if this were not sufficient, it was to be made good by a tax or tribute levied upon the whole people. This tithe, however, was probably paid very irregularly, and hence the pay of soldiers would, in point of fact, be provided chiefly out of the tributum.' 12 A few years after this session (33 C. 403), during the hostilities against Veii, a certain amount of pay was assigned (cessus numerus eris est assisa natura) to the knights also, or *Equites,* p. 416. Livy, however, seems to be here speaking of the citizens who possessed an equestrian fortune, but had no horse (equus publicus) assigned to them by the state; for it had always been customary for the knights of the 18th centuries to raise this sum from the common treasury in the shape of an allowance for the purchase of a horse, and a yearly pension of 2000 *asses* for its keep. (Vid. *Æs Eques†rium, Æs Hordarium.)* Hence Niebuhr 13 doubts the accuracy of the account which is given by Livy, 14 and observes that 'the Veientine war cannot have been discussed at a council, and the idea of giving pay to the troops was first established: the errarii must undoubtedly have always continued to pay pensions (capite) to the infantry, in the same way as single women and minors did to the kings: and the change consisted in this, that every legionary now became entitled to pay, whereas the number of pensioners had previously been limited by that of the cavalry and horses provided for them. The deficiency was supplied out of the *aerarium* from the produce of the vectigal, and when this failed, by a tribute levied even from those plebeians who were themselves bound to serve.' Consequently, the tribunes murmured that the tribute was only imposed for the sake of ruining the plebs. 14 In support of this opinion, Niebuhr advances the argument that at least it make very probable that the *paterna legislation* of Servius Tullius provided for the pay of the infantry in the manner mentioned; but even admitting this, the practice might have been discontinued, so as to justify the statement made on this subject by Livy. We have no place to repeat or discuss those who differ from him, and therefore simply refer to them in vol. i., p. 374, and vol. ii., p. 441, of his History. According to Polybius, 15 the daily pay of a legionary amounted, in his time, to two oboli, which, as he makes a drachma equivalent to a denarius, and a denarius, in paying the soldiers, was then estimated at ten *asses,* and not at six, as fate has since supposed. In an ancient transaction, he gives 33d *asses* a day, or 100 a month. Now the yearly pension of the knights (2000 *asses*), observes Niebuhr, gives, if we take the old year of 10 months, 200 *asses* a month; just double the pay of the foot-soldiers. In later times the knights received triple pay (triplex *stipendium merebantur*). This allowance was first established by the military tribune Cn. Cornelius Cossus (400 B.C.), and, according to Niebuhr, was then designed as a compensation to those who served with their own horses: it did not become the general custom till some time afterward. Polybius 16 thus speaks of the stipendium of his day, which he calls ἐνδείξεως, as St. Luke 17 also does.

The foot-soldier receives as pay two oboli a day; the horse-soldier, 13d a day of the concession (13 C. 403), and a drachma or denarius. The foot-soldiers also receive in corn every month an allowance (δεμενὸν) of 6s of an Attic medimnus, or about 2 bushels of wheat; the horsemen 7 medimni of barley and 2 of wheat. The infantry of the allies receive the same allowance (αὐτομενὸν ἐδόθη) as the Roman; but instead of 13d a day of the concession of wheat and 5 of barley. But there is this difference, that their pay is received as a gratuity; the Roman

2. (Livy, v., 7, 2.—i., 474, and ii., p. 441.)—3. (iv., 59.)—4. (Livy, iv., 60.)—5. (I.e., v., 37, 7. (Pliny, l.e., 8.—vi. 37.)—6. (iii, 16.)
STREBEO.

solders, or the contrary, have deduced from their pay the money value of whatever they receive, in corn, armour, or clothes. There was, indeed, a law received by Caius Licinius, which provided that, besides their pay, the soldiers should receive from the treasury an allowance for clothes; but from Tacitus' this law seems either to have been repealed or to have fallen into disuse. The two oboli of Polybius, which we make equal to 3d asses, are reckoned by Plautus in round numbers at 3 asses. Thus says he, "Iati qui trium nummorum causa subvenit sub falsas." This amount was doubled for the legionaries by Julius Caesar before the civil war. He also gave them corn whenever he had the means, without any restrictions (sine nodo nessuraque). Under Augustus it appears to have been raised to 10 asses a day (three times the original sum), or 300 a month, or 1200 in four months. Now, as the original amount of their pay had been tripled, the soldiers could not complain if the denarius was reckoned at 10 asses in payments made to themselves as well as other persons; and, taking this value, the 1200 assed amount to exactly 3 aurei, or 3 x 400 asses. This sum, then, was considered as a unit, and called stipendium, being paid three times a year. Hence Suetonius says of Domitian, "Addidit et quattuor stipendium, ternos aureos," a fact which Zonaras otherwise expresses by stating that, instead of 75 drachmas (i.e. denarii), Domitian gave the soldiers 100, i.e. he made an addition of 25 denarii or 1 aureus to their pay. The expression of Suetonius supposes that 3 aurei were paid every quarter instead of every four months, after the addition made by Domitian; that of Zonaras implies that 4 aurei instead of 3 were paid, as before, every three months, the annual amount being the same either way, and the quarterly payments for 3 months instead of being called a stipendium. Niebuhr's statement on this subject is only partially correct, or else obscure: at any rate, if the soldiers received 10 asses a day, they must have received more than 1200 a year.

The praetorian cohorts received twice as much as the legionaries. The pay of the tribunes is not known; but it was considered very great, and probably was not less than 45 aurei per annum after the time of Domitian. We must not omit to mention that, if his pay was withheld, the Roman soldier was allowed, by an old unwritten custom, to distress the goods (per pignorium capionem) of the officer whose duty it was to supply it. The eques was allowed the same privilege against the person who was bound to furnish him with the es equestre for the maintenance of his horse, and the es hordeaem for its keep.

From an expression which Livy puts into the mouth of a patrician orator, it might be supposed that the soldiers always received a full year's pay, independent of the length of their service. This, however, seems so unreasonable, that we cannot but agree with Niebuhr in supposing that the historian of Livy added the pay of his own time, when a full year had long been the stipulated term of a soldier's pay as well as of his service.

STIFULATIO, STIFULATOR.

STIVIA. (Vid. Araetum, p. 79.)

STILENGES (stilix). (Vid. Loeben, p. 599.)

STOA (stol). (Vid. Porticus.)

STOCHEION (stomion). (Vid. Horologion.)

STREBEO (croton). According to Hardouin, a species of Scabiosa; but this opinion is rejected by

Sprengel, who rather too confidently refers it to the Petunium spinosum, L. Stackhouse holds it to be the Streblta centaurea."

STREBEO, and aureus. (Hor., ii. 26-28.)—Splenches (odorata), a species of Lavandier, probably, as Sprengel maintains, the Lavandula Stachas.

STOLA was a female dress worn over the tunic, it came as low as the ankles or feet (ad talos stola demissa), and was fastened round the body by a girdle, leaving above the breast broad folds (ragosorem stola frontem). The tunic did not reach much below the knee, but the essential distinction between the tunic and stola seems to have been, that the latter always had an Iavatra or馒头 sewed to the bottom, and reaching to the instep. Over the stola the pallia or pallium was worn (vid. Pallium), as we see in the cut annexed.

The stola seems to have been usually fastened over the shoulder by a Fimbula or clasp, and usually had sleeves, but not always.

The stola was the characteristic dress of the Roman matrons, as the toga was of the Roman men. Hence the meretrices were not allowed to wear it, but only a dark-coloured toga; and, accordingly, Horace speaks of the matrona in contradistinction to the togata. For the same reason, women who had been divorced from their husbands on account of adultery were not allowed to wear the stola, but only the toga, to which Martial alludes.

STOMONIA. (Vid. ADAMAS.)

STRAGULUM. (Vid. TAPERS.)

STRATEGOS (statergon). The office and title of statergon, or general, seem to have been more especially peculiar to the democratic states of ancient Greece: we read of them, for instance, at Athens, Tarentum, Syracuse, Argos, and Thurii; and when the tyrants of the Ionian cities in Asia Minor were deposed by Aristagoras, he established statergon in their room, to act as chief magistrates.

The strategi at Athens were instituted after the remodelling of the constitution by Clisthenes, to discharge the duties which had in former times been performed either by the king or the archon polemarchus. They were ten in number, one for each of the ten tribes, and chosen by the suffrages (euphraxia) of the people. Before entering on their duties, they were required to submit to a disnfia, or examination of their character; and no one was eligible to the office unless he had legitimate children, and was possessed of landed property in Attica.

They were, as their name denotes, intrusted

with the command on military expeditions, with the superintendence of all warlike preparations, and with the regulation of all matters in any way connected with the war department of the state. They levied and enlisted the soldiers (carditional), either personally or with the assistance of the taxbearers. They were intrusted with the collection and management of the ἐσφορά, or property-taxes raised for the purposes of war; and also presided over, or officiated as eicεγυγείς in, the courts of justice in which any disputes connected with this subject or the trierarchy were decided. They also nominated from among their own number persons to serve as trierarchs, and took cognizance of the cases of ἀντιδοσία arising out of the trierarchy and property-taxes (ἴπτανα τῶν ἀντιδοσιών). They also presided at courts-martial, and at the trials in cases of accusation for non-performance of military and naval duties. (Vid. ἈΣΤΡΑΣΙΑΙ and ἈΝΑΤΜΑΙΟΤΙΟΝ ΓΡΑΦΑΙ.) They likewise had the power of convening extraordinary assemblies of the people in cases of emergency (vid. ΕΚΚΛΗΣΙΑ, p. 384), and from the instance of Pericles, it would almost seem that in critical times they had the power of preventing an assembly being held. But their most important trust was the command in war, and it depended upon circumstances to how many of the number of the trierarchs a Spartan general was present, and the chief command came to each of them in turn. The archon polemarchus also was there associated with them, and, according to the ancient custom, his vote in a council of war was equal to that of any of the generals. In the expedition against Samos, also, all the ten generals were engaged, 2 the poet Sophocles being one of the numbers, who, both from his philosophy and from the nature of the war, would be neither convenient nor useful to send out the whole number on the same undertaking, and, during the course of a protracted war, it would be necessary for some of them to be left at home in charge of the war department there. Accordingly, in the best times of Athens, three only were, for the most part, sent out; and as the (πρῶτον ἀριστεῖον) was considered as the commander-in-chief, but his colleagues had an equal voice in a council of war. Sometimes a strategus, as Pericles, was invested with extraordinary powers: in like manner, the three generals engaged in the Sicilian expedition, Nicias, Alcibiades, and Lamachus, were made ἀστρασίαιοι, or supreme and independent in all matters, with power to act against the wishes of the Delphic oracle. 3 So strong was the reverence felt for his command at Platea. But even in ordinary cases the Athenian generals were not fettered in the conduct of a campaign by any council of war or other controlling authority, as the Spartan kings sometimes were; still they were responsible for it, and in the time of Demosthenes  4 exposed, at the termination of their command, to capital incriminations at the caprice of the people, or from the malevolence of personal enmity. Even Pericles himself  5 was fined by the people for imported mismanagement, but really because the Athenians were disappointed in their expectations. In the times of Chabrias and Phoenix, however, the greater part of the generals regularly remained at the head of their command, to capital incriminations did enjoy them, leaving their wars to be conducted by mercenaries and their colleagues. 6 Some of them, too, were not commanders of all the 1. (Lyk., c. Aleth., 140; Pro Milta., 114.)—2. (Wolf ed. Loys., p. 100. 3. (Demosth. c. Lecr., 90/46. —4. (Demosth. c. Bccl., 907. —5. Xen., De Rep. Aten., 3.3.)—6. (o. Phaon., 180.)—7. (Thucyd., v., 22.)—8. (Herod., vi., 100.)—9. (Thucyd., ii., 116.)—10. (Miller, Literature of Ancient Greece, p. 225.)—11. (c. Milt., 58; c. Aristoph., 676.)—12. (Thucyd., ii., 65.)—13. (Wachsmuth, 11. i. p. 416.—Demosth., Phil., 1, 47, 18.)

1. The strategi at Athens were perhaps the most important officers of the Republic, especially during the latter part of the war. They were appointed by the assembly of the most distinguished citizens, Miltiades, Themistocles, Pericles, Phocion, &c. But the generals of the early times differed in many respects from the contemporaries of Demosthenes. Formerly the general and the statesman were united in one person; the leader in the field was the leader in the assembly, and thus acquired a double influence, accompanied with a double responsibility. But in later times, the general and the privileged orator on statesmen were generally perfectly distinct, and the latter, as will always be the case in free states, had far by the greater. Influence. The last of the Athenian generals who was considered to unite the two characters was Phocion, who was general no less than statesman. Phocion was indeed the head of the two parties into which the state was then divided had each their orator and general, the former acting as a recognised leader;  2 and a general, when absent on foreign expeditions, was liable to be malignated or misrepresented to the people by an unfriendly and influential demagogue. Hence we cannot wonder that although the age of Demosthenes were neither so patriotic nor so distinguished as those of former times, more especially when we call to mind that they were often the commandants of mercenary troops, and not of citizens, whose presence might have checked or animated them. Moreover, they suffered in moral character by the contamination of the mercenary leaders with whom they were associated with a double responsibility. But in the latter war, the hired soldiers with pay, habituated them to the practice of levying excises from the allies; the sums thus levied were not strictly accounted for, and what should have been applied to the service of the state was frequently spent by men like Chares upon their own pleasures, or in the purchase of political power. As a consequence, the responsibility of the two characters was, that the responsibility of the general and of the orator or minister was lessened, and it was in most cases easy for a general to purchase an apparently disinterested advocacy of his conduct. There was this farther abuse connected with the system, that, according to the custom,  3 military command was so much coveted, that the election of generals was often determined by the most profligate bribery.

2. The most eminent generals of the time of Demosthenes were Chabrias, Chabrias, Chabrias, and Dorothis. Chabrias and Phocion were inferior to them both in loyalty and skill, but the former and the mercenary Chabrias were frequently employed by the former. Chabrias and Phocion were the last of the best endowed trierarchs. The chief maistrae at Athens was called στρατηγὸς, or the duke: Constantine bestowed on him the title of μέγας στρατηγός, or the grand duke.  4 The military chieftains of the Eotolian and Achaean leagues were also called στρατηγοί. The Achaean στρατηγοί had the power of convening a
STRENA.

STRYCHNUS.

general assembly of the league on extrem. nary occasions. 1

*STRYCHTIUS (στρυχνίτης), a species of plant, probably a kind of water-lentil. "The στρυχτίτης ποτάμων was most probably, according to Spengel, the Pistia Stratiotes. Woodville, locating the common Varrenro Millefolium, says of it, "This plant appears to be the στρυχτίτης χιλιάδος of the Greek writers." It is pretty generally looked upon as being the Achillea millefolium. It got the name of Achillea from its being supposed the herb used by Achilles in dressing wounds. 2

STRAVORES. 1. Imperial equerries subject to the tribunal stabulorum. Their proper duty, as the name implies, was to saddle the horses; they also led them from the stable, and assisted the emperor to mount. Hence they were termed in Greek ανάβολος. From the addition of miles to their title, it appears that they were considered as part of the military establishment. 3 Consuls and prehors had their straures, as we learn from inscriptions, 4 and perhaps adiles also. 5

2. Officers sent into the provinces to select horses for the stud of the prince or for the general service of the state. 6 These, in all probability, belonged to the same body with those mentioned above; the title strauores a publicis ratiionibus, by which they are usually distinguished in works upon Roman antiquities, rests upon no authority except the letters STR. A. P. R. in an inscription, 7 the interpretation of which, however, does not appear to be correct. 8

3. Jaizers under the orders of the commentariensis, or chief inspector of prisons. 9 To these Ulpin refers, 9 nemo procurumstrauores suos habere poetest, sed eorum vice milites ministerio in provinciis funguntur, although the passage is quoted in most dictionaries as bearing upon the straures of the stable. 10

4. In the later Latin writers, and especially in the annals of Martial, who meniori monili atque sapii in militibus and which ἀναβολοί denote a chosen body of soldiers sent in advance of an army to explore the country, to determine the proper line of march, to select the spots best fitted for encamping, and to make all the arrangements necessary for the safety and comfort of the troops when they halted, their duties being in some respects analogous to those of the classical metatores, and tribunus stabuli. 11

5. We find in an inscription the words D i o n e u s A r P. S T R A V O R, which is generally understood to commemorate the labours of some individual in paying the Appian Way, and mention is made of straures of this description, in another inscription found at Mayence.

STRENA, a present given on a festive day and for the sake of good omens, 12 whence a good omen is called by Plautus bon a strena. 13 It was, however, chiefly applied to a ten-year's gift, to a present made on the calends of January. In accordance with a sentanus consultation, new-year's gifts had to be presented to Augustus in the Capitol, even when he was absent. 14 The person who received such presents was accustomed to make others in return (strenae a pecunia comet), but Tiberius, who did not like the custom on account of the trouble it gave him, and also of the expense in making presents in return,

turn, frequently left Rome at the beginning of January, that he might be out of the way, 1 and also strictly forbade any such presents to be offered him after the first of January, as he used to be annoyed by them during the whole of the month. 15 The custom, so far as the emperor himself concerned, thus seems to have fallen almost entirely into disuse during the reign of Tiberius. It was revived again by Caligula, 2 but abolished by Claudius; 3 it must, however, have been restored afterward, as we find it mentioned as late as the reigns of Theodosius and Arcadius. 4

STRIGIL. (Vid. Bathy, p. 146; Loutrof, p. 598.)

*STRIX, the Soreese Owl. (Vid. Glaxes.)

*STROMBUS (στρόμβος), a shellfish, called in French Trompe, in English Trumpet; namely, the Cochlea Strombus, L. 5

STROPHΟΣ (στροφός), the Sopanoria officinalis, or Soapwort. "Lucian mentions," says Adams, "that the impostor Alexander used it to procure a discharge of saliva from his mouth." 6

*STROUATHOS (στροβύθος). A term used by Paulus Εγινοτα in the same genera sense that aspetho is used by Greek writers. 7

ΣΤΡΟΥΘΟΣ, μέγαλος, Λείβων, or Αράβις, called also στροβύθος, τλῆς, the Ostrich, or Strombo-camelus, L. It is described by Xenophon, Aristotle, Αelian, Dioscorus, and others. Oppian calls it λείβων στροφόν βοτών ἀγκαλιδόνερον, and again, μείτα στροβύθο κόιμαν. "The length of its legs and of its neck," says Griffith, speaking of the ostrich, "and certain habits peculiar to it, have caused it to be compared to the camel. Eldemmi, in his History of Animals, informs us, that the volgar belief of Arabia is, that the ostrich is the production of a camel and a bird. From such approximations are derived the names which the ostrich has received in various countries. The Persian name of swumorg literally signifies camel-bird; and it is the same with the strothio-camelus of the Latins. We cannot, however, say with Aristotle, that the ostrich is of an equivocal nature, partly bird, partly quadruped; but still we may aver that, in the chain of being, it evidently constitutes a link between the birds and the mammalia. Though decreed, from its bulk, to remain upon the earth, and deprived of that faculty which is the eminent characteristic of its class, it has received in compensation a force and rapidity in the race far surpassing that of all other existing animals.

STRUCTOR. (Vid. Celsa, p. 275.)

*STRYCHNUS or -UM (στρυχγος or -οι), the herb Nightshade. "I cannot pretend," says Adams, "to unravel all the confusion which invests the subject of the ancient strychni. Both Celsus and Pliny

STYRAX.

SUCCESSIO.

state that, the \textit{Styrachs} of the Greeks was called \textit{Solanum} by the Romans. The Latin writer of the Middle Ages term it \textit{Saneilla}. Apuleius describes four species: the first called \textit{Hortula}; the second called \textit{Cacatum}; the third called \textit{Hypnotice sommifera}, &c.; the fourth, \textit{Furiatis}. Sprengel, in his annotations on Dioscorides, arranges the \textit{styrachs} as follows: 1st. The \textit{styrachs} \textit{argiace} is the \textit{Solanum migram} (common Nightshade), or \textit{S. miniatum}, 2d. The \textit{styrachs} \textit{ulicae} is the \textit{Physalis Allklockeni}, common Winter-cherry. 3d. The \textit{styrachs} \textit{maucicas} is the \textit{Solanum Solumecum}, or Black-spined Nightshade. Theophrastus describes the first, third, and fourth species. Stockhouse supposes the last to be the \textit{Aitro belladonna}, which, by-the-way, is generally supposed to be the plant which Buchanan calls \textit{Solanum sommiferum}, and describes very graphically. Woodville thinks this species (the fourth) to be the same. \textit{Aitro belladonna} or \textit{Solanum dulcamara}. Stockhouse agrees with Sprengel regarding the first and third species. On the \textit{styrachs} of the ancients, see in particular Schueler (\textit{Text. Vetem., c. 18}), whose account of them agrees in the main with that given above.

\textsc{Stylorum prevented.} (\textit{Vid. Formicariae.})

\textsc{Styaxis.} (\textit{Vid. Stythus.})

\textsc{Styptide.} (\textit{Styptia.}) From the circumstance alone of the localities in which Dioscorides says the \textit{styrachs} was found, namely, Melos, Lipari, Sardinia, &c., we can have no difficulty in deciding it to have been the \textit{Ochthoalum Alum.} in the family \textit{Althoes Alum.} Ascertained by Apuleius, and confirmed by Werner. The ancients, however, have described several varieties, which have exercised the ingenuity of the commentators to determine what they were. Alston calls the \textit{styrachs} \textit{xicotis}, \textit{alumine scissile vel plumosum.} He says, the true plumose or feathered gum is a salt, in colour and grain somewhat resembling that of the \textit{Aitro belladonna}, or \textit{Solanum dulcamara}, but differently labouring. Dr. Hill describes the \textit{plumosum} gum as consisting of efflorescences which hang from the rocks in certain islands of the Archipelago, where the earth is full of alum. These specimens were called \textit{rio xit is} by the Greeks, as if composed of hairs. He alludes, I presume, to the \textit{Haar Salts} (Hair Salt) of Werner, formerly supposed a variety of alum, but consisting, according to Klapp, of chlorides of Magnesia and iron. Dr. Kidd states that the capillary or plumose gum consists of very delicate fibres like down. The \textit{opho}, or liquid gum, according to Dr. Hill, was what drops through the fissures of stones: when this assumed a round form, it was called \textit{strogylych}, round. Dr. Milligan finds fault with Drs. Jameson and Thompson for holding that the ancient alum consisted principally of the sulphate of iron: they were right, however, in regard to the \textit{alumine scissile}, or hair alum, which, as we have stated, Klapproth found to contain sulphate of iron. This variety was therefore considerably different from the common \textit{Styrax} of the Greeks.

\textsc{Styrax} (\textit{ Stromphauli}), a tree producing a resinous gum. The gum is produced in Greece to \textit{stromphauli}, and the tree which produces it \textit{b} or \textit{d} \textit{stromphauli}. The gum is known in the dispensatories by the denominations of \textit{Styra} or \textit{Storax}. It has a fragrant odour, and an agreeable, slightly pungent, and aromatic taste; it is stimulant, and in some degree expectorant. The styrax of commerce is chiefly obtained from Asiatic Turkey. The \textit{styrachs} \textit{kalamis}, mentioned by Paulus Agineas, is the \textit{Styrax calamita}, so called because anciently packed up in reeds for safety of carriage. The \textit{styrax-tree} is still called in the East \textit{storax} or \textit{styrachs}.

\textsc{Subtesten.} (\textit{Vid. Tell.})

\textsc{Styliola.} (\textit{Vid. Tullia.})

\textsc{Successio.} This word is used to denote a right which remains unchanged as such, but is changed with reference to its subject. The change is of such a nature, that the right, when viewed as attached to a new person, is founded on a preceding right, is derived from it, and depends upon it. The right given by the law for the benefit of the original owner remains attached to the person who previously had it. Thus, in the case of the transfer of ownership by tradition, the new ownership begins when the old ownership ceases, and it only arises in case the former possessor of the thing had the ownership; that is, prior ownership is a necessary condition of subsequent ownership. This kind of change in ownership is called succession. It follows from the definition of that name that succession is not included in it. The success of a hered is included; for though there might be a considerable interval between the death and the actio hereditatis, when the hereditas was once taken possession of, the actio of aditus had, by a legitimate application of the rules of succession, obtained the right to the possession. Thus whereas we generally view persons who possess rights as the permanent substance and the rights as accidents, in the case of succession the right is the permanent substance, which persists in a series of persons.

The notion of succession applies mainly, though

1. (Dioscor., i., 79.—Paulus Agineas, viii., c. 11.—Adams, Appen., s. v.—Eryth. Am., s. v.)—2. (Dioscor., v., 193.—Plin., H. N., xxv., 55.—Usinger, ed Milligan, p. 126.—\textit{A'kane Appen., s. v.})

6 B
not exclusively, to property. With respect to the law that relates to familia, it applies so far as the parts of the familia partake of the nature of property, such as the power of a master over his slave, and the case of patronatus and mancipii causa. Thus the patrimia potestas and the condition of a wife in many may be objects of succession. It applies also to the case of adoption.

Successio is divided into singular succession and universal succession. These terms conveniently express the notion, but they were not Roman terms. The Roman terms were as follows: in universum jus, in eam duntaxat rem succedere; pur universi- tatem, in rem succedere; in omne jus mortui, in singulis partibus, as ususfructus. 4 In universa bona, in rei tantum dominium succedere. It is singular succession when a single thing, as an object of ownership, is transferred, or several things together, when they are transferred as individual things, and not as having relation to one another in consequence of this accidental common mode of transfer.

The object of universal succession is property as an ideal whole (universitas) without any reference to its component parts. Yet the notion of succession applies as well to a fraction of this ideal whole as to the unit which this ideal whole is conceived to be; for the whole property being viewed as a unit, it may be conceived to be divided into fractions, or to refer to any reference to the several things which are included in the ideal whole. It was also consistent with this species of succession that many particular rights should be incapable of being transferred: thus, in the case of an hereditas, the usufructus of the deceased did not pass to the heres, and in the case of arodrage neither the usufructus nor the debts of the adrogated person, according to the old law.

The object of universal succession is a universitas such as, and it is by means of the words universitas and universum that the Romans denote this kind of succession; but it would be erroneous to infer from this use of the term that succession applies to all universitates. Its proper application is to property, and the true character of universal succession is that of passing from one person to another of all the credits and debts that belong or are attached to the property. This happens in the case of an hereditas, and in the case of adrogation as to most matters. The debts would be transferred by adrogation if this were not accompanied with a capitius dimittitum. Credits and debts could not be transferred by singular succession.

The cases of universal succession were limited, and the notion could not be applied and made effectual at the pleasure of individuals. The most important cases of universal succession were the property of a deceased person; as hereditas, bonorum possessesio, fideicommisaria hereditas, and others of the like kind. The property of a living person might be transferred in this way, in the case of adrogation, communication, patrimonium, and the like. In many other cases, though the object is to transfer a whole property, it is, in fact, effected by the transfer of the several things: the following are instances of this kind of transfer, the gift of a whole property, or its being made a dos, or being brought into a societas, or the sale of an hereditas by a heres.

The notion of a universal succession among the Romans appears to have been derived from the notion of the hereditas, to which it was necessary to attach the credits and debts of the deceased and the sacra. Other instances of universal succession, such as the bonorum possessio, grew out of the notion of the hereditas; and it was found convenient to extend it to other cases, such as adrogation. But, as already observed, the extension of the notion was not left to the pleasure of individuals, and, accordingly, this doctrine was, to use a Roman phrase, juris publici.

The words successio, successor, succedere, by themselves, have a general meaning, and comprise both kinds of succession. Sometimes these words, by themselves, signify universal succession, as appears from the context, and by such expressions as heredes ceterique successores. In other cases the kind of succession is indicated by appropriate words, as alecto, servus, &c., and mundus, &c., in universum jus succedere, &c., in the case of universal succession; and in rem, in rei dominium, in singularum rerum dominium succedere, &c., in the case of singular succession.

In the phrase "per universitatem succedere," the notion of universal succession is not directly expressed; for the phrase has immediate reference to the acquisition of a single thing, and it is only by means of the word universitas that we express the notion that the acquisition of the individual thing is effected by means of the acquisition of the whole.

SUCCESSOR. (Vid. Successio.)

SUCCESSORUM. (Vid. Suciolaculum.)

SUCCESSIVUM. (Vid. Sub successionem.)

SYCAM'INDS (Sycamorus). (Vid. Sycamorum.)

SYCE (Sycus), the fig-tree, properly called Ficus Carica. "The wild fig-tree is called ἵππος by Homer. The οὐδέποτε, called also καρπωλία, is the Ficus religiosa according to Stackhouse, but according to Schneider the Ceratonia siliqua, L., or the Syca morum Phalerum. In the Attic language, the amelanchier according to Sprengel, the Lonicera Pyrenaica according to Stackhouse. The οὐδέποτε is the Ficus Indica, or Banyan, according to Sprengel, the Rhisophora mangle, or Mangrove, according to Stackhouse. The Banyan, or Indian fig-tree, is noticed by Theophrastus, Pliny, Strabo, Diódorus Siculus, Quintus Curtius, Arrian, and Athenaeus."

SYCOM'OROS or ON (Sycamora), the Sycamore-tree, or Ficus Sycomorus. (Vid. Sycamorus.)

SYCOPHANTES (Sycophantes). At an early period in Attic history, a law was made prohibiting the exportation of figs. Whether it was made in a time of dearth, or through the foolish policy of preserving to the natives the most valuable of their productions, is not a question that can be determined.

The law continued in force long after the cause of its enactment, or the general belief of its utility had ceased to exist, and Attic fig-growers exported their fruit in spite of prohibitions and penalties. To inform against a man for so doing was considered harsh and vexatious, and all people are apt to think that obsolete statutes may be infringed with impunity. Hence the term sycophant, which originally signified to lay an information against another

1. (Dig. 21, tit. 3, s. 2.)—2 (Gaius, ii, 97.—Dig. 43, tit. 3, s. 1.)—3 (Dig. 29, tit. 2, s. 7.)—4 (Dig. 39, tit. 2, s. 54.)—5 (Gaius, ii, 98.)—6 (Livy, vi, 51.)—7 (Theophyl. Th. 2, iii, 2.)—8 (Dig. 82.)—9 (Thucyd. i, 105.)—10 (Hist. 11, 14.)—11 (Athen. 3, 40.)—12 (Athen. 4, 4.)—13 (Athen. 5, 41.)—14 (Athen. 6, 41.)—15 (Athen. 7, 41.)—16 (Athen. 8, 41.)
for suffrage, came to be applied to all ill-natured, malicious, groundless, and vexatious accusations. It is defined by Suidas ψευδός τινος καταγγελῆς. As to a different origin of the word, see Bickh. 2

Συκοφάντης, in the time of Aristophanes and Demosthenes, designated a person of a peculiar class, not capable of being described by any single word in our language, but well understood and appreciated by an Athenian. He had not much in common with our sycophant, but was a happy compound of the common ratter, reportor, pettifoger, busybody, rogue, busy fool, or drudge. All that law permitted any citizen (τοῦ βουλῆματος) to give information against public offenders, and prosecute them in courts of justice. It was the policy of the legislator to encourage the detection of crime, and a reward (such as half the penalty) was frequently given to the successful accuser. Such a power, with such a temptation, was likely to be abused, unless checked by the force of public opinion or the vigilance of judicial tribunals. Unfortunately, the character of the Athenian democracy and the temper of the judges furnished additional incentives to the informer. Eminent statesmen, orators, generals, magistrates, and all persons of wealth and influence, were regarded with jealousy by the people. The custom of the times: to report such persons accused to the judges, and fines and confiscations enriched the public treasury. The prosecutor, therefore, in public causes, as well as the plaintiff in civil, was looked on with a more favourable eye than the defendant, and the chances of success made the employment a lucrative one. It was not always necessary to go to trial, or even to commence legal proceedings. The timid defendant was glad to compromise the case, and the conscious delinquent to avert the threat of a prosecution by paying a sum of money to his opponent. Thriving informers found it not very difficult to procure witnesses, and the profits were divided between them. According to Theophrastus, 3 Aristophanes was full of δυσανακροτοβόλων καὶ λαυκαντοβόλων καὶ ψευδοφαντῶν καὶ ψευδοκτόνων. The character of the sycophant will be best understood by the examples and descriptions found in the Attic writers. Aristophanes directs the keenest edge of his satire against them. 4 Demosthenes says: ποιησαν τὸν συ-

κοφανταὶ καὶ βέσακαι καὶ φλαγίακι. 5 Συκοφαντίτιτρα τρίταν καὶ τρίταν αὐτοὶ, τρίταν καταστέφωντες μόνον τὰ πεπραγμένα ἐξ ἀνοχῆς ἀκροβατικῆς πρακ-

tύς. 6 That the increase of litigation and perjury was in some measure owing to the establishment of clubs and political associations, and the violence of party spirit, may be gathered from various passages of the Attic writers.

The Athenian law did indeed provide a remedy against this mischievous class of men. There was a γραφή συκοφαντίτας tried before the theomotheta. Any person who brought a false charge against another, or extorted money by threat of legal proceedings, or corrupted false witnesses, or engaged in a conspiracy to ruin the character of an innocent man, was liable to this γραφή. He might also be proceeded against on the ground of ἱπταμένα ἀθέσμητα ἀλήθεια, or εἰσαγγέλεια. 7 (See articles Pharis, &c.) The trial was an ἔγγον γυμνός. The heaviest punishment might be inflicted, together with ἀτύχημα and confiscation of property. Besides this, if any

man brought a criminal charge against another, and neglected to prosecute it (ἐπετείκειν), he was liable to a penalty of 1000 drachmas, and lost the privilege or being a similar proceeding in future, which was considered to be a species of αἰτία. The same consequence followed if he failed to obtain a fifth part of the votes at the trial. The ἐποβέλλα in civil action was a penalty of the same kind, and having the same object, viz., to prevent the abuse of legal process, and check frivolous and unjust actions. Such were the remedies provided by law, but they were considered to be a species in practice; and the words of Aristophanes were not more severe than true: "there is no charm against the bite of a συκοφάντας." 8

ΣΥΚΟΦΑΝΤΗΣ ΤΩ ΤΡΑΘ. (Vid. Stephomar.) SUFFRAGIUM. SUFFRATIIO. (Vid. Bathis, p. 149.)

SYENITES LAPIS (Συενίτης λίθος), a species of stone quarried near Syen, in Upper Egypt, whence its name. "Of this," says Dr. More, "were formed those celebrated obelisks described by Pliny, and which are still gazed at with wonder either in Egypt or at Rome. This stone is classed by Winkelnkomm with granite, of which, he says, Egypt furnished two varieties, one red and whithis, of which are formed these obelisks and many statues which are white and black, peculiar, as he thinks, to Egypt." 9

SUFFRAGIUM SEX. (Vid. Equites, p. 416.)

SUFFRAGIUM, a vote. At Athens, the voting in the popular assemblies and the courts of justice was either by show of hands or by ballot, as is explained under Χρηστοκομίσις and Πζεψις. It is now commonly supposed that the Athenians always polled in the comitia by word of mouth, till the passing of the Leges Tabellariae about the middle of the second century before Christ (v. i. Tabellariarum Leges), when the ballot by means of tabellae was introduced. (Vid. Tabella.) Wunder, 1 however, has shown that the popular assemblies voted by ballot, as well as by word of mouth, before the passing of the Leges Tabellariae, but that, instead of using tabellae, they employed stones or pebbles (the Greek ψῆφος), and that each voter received two stones, one white and the other black, the former to be used in the approval, and the latter in the condemnation of a measure. The voting by word of mouth seems to have been only partial, and the use of pebbles to have been confined to the enactment and repeal of laws. That the latter mode of voting was adopted in early times is proved by many passages of Dionysius, and especially by x. 41: ὡς ὁ δήμος ἀπέτυχε τῆς ψήφου, οἱ νοτιότατοί των πολιτῶν—τὰ ἀγγέλγα τῶν ψήφων τοσούτοι ὑπέφραγεν; and xi. 65: ἐκάλουσαν κατάκομμα τῷ ἀπὸ τῆς πόλεως θρωμάτως, καὶ ἐπέτει

λυπῶνται τῶν ψήφων. It is also confirmed by the common expressions used with respect to voting, as suffragium ferre, mittere in suffragia, inare, or ire in suffragia, which lead us to suppose that the suffragium probably signified some thing which was put by the hand from one place into another, in the same manner as a coin would be cast over by mouth, or carried by hand. If such a word as "suffragium" was used, it is scarcely possible that such an expression as "suffragium ferre" would have been used when they had nothing to carry; but, on the contrary, some such word as dicere would have been employed, more especially as it is certain that in the most ancient times those who voted by word of mouth did not go up one by one to the officer who received the votes, but re-

1 (Steph. Theopr., 872, 3.—2 (Staath. der Ath., i., 45, 3.)—3 (ap. Athen., vi., 324, 4.—4 (See particularly Acharn., 318, 16.)—5 (Dem., 416, 9.—6 (Steph. Ephor., 157, ed. SYLLOGEIS.

SYMBOLAIOn.

mained in their places, and were asked for t. ir votes by the τεγατέρες, who thenee derived τις
name. Besides which, the word συφραγίαν can
scarcely signify the same as sententia or κεν. The
eymology is uncertain, for the opinions of those
who have treated it all in their respective ways do not
observe nulle. Wunder thinks that it may possibly
be allied with συφραγά, and signifies originally an
ankle-bone or kneecap-bone. On the passing of the
Leges Ῥάμβλαιρι, the voting stones or pebbles went
out of use. For farther particulars with re-
spect to the voting in the comitia, see Comitia, p.
265, Dikaiotikes, Sufula, Tabella, Tabellarie
Legati. These who had the ius suffragi, or the right of
voting in the comitia, as well as the capacity of en-
joying magistracies, were citizens optimo jure. (Vid.
Civitas, Roman, p. 261.)

SUGGESTUS means in general any elevated
place made of materials heaped up (sub and gero), and
is specially applied : 1. To the stage or pulpit
from which the orators addressed the people in the
comitia. (Vid. Rostra.) 2. To the elevation from
which a general addressed the soldiers.3 3. To the
elevated seat from which the emperor behold the
public games, also called cubiculum. (Vid. Cur-
ulum.)

SUGGRANDIUM. (Vid. Funus, p. 460.)

SULAI (σουλία). When a Greek state, or any of
its members, had received an injury or insult from
some other state or some of its members, and the
former was unwilling or not in a condition to de-
declare open war, it was not usual to give a com-
misssion or grant public authority to individuals to
make reprisals. This was called σουλία or σουλία,
δεδομένα. Polybius4 calls άτρυφοι or δέδομεν καταγο-
ραίη, those who were allowed to make reprisals.
Lacedaemonians thought the Athenians had broken the treaty with them by
making incursions from Pybus, they issued a pro-
clamation that any of their subjects might commit
depredations on the Athenians (ἀλιθεύον τοις Ἀθε-
ναίοις). Demosthenes5 declares that the deput
 captains of triremes so misbehaved themselves in
foreign countries, plundering everybody they came
near, that they were unable to give an answer to the
Athenian questions.6 He says, that those who
were liable to breaches of contract, were liable to
be seized (ex delicto, or the άπωθησις συναλλαγμάτων),
and that it was common practice to use this
right in cases of breach of contract, and to make
other claims on the persons thus seized.

SYLLOGEIS (συλλογεῖς), usually called Συλλο-
γεῖς τοῦ ἱσθίου, or the collectors of the people, were
special commissioners at Athens, who made out a
list of the property of the oligarchs previously to its
confiscation.7 They formed an ἐργα,8 and seem to
have been introduced after the domination of the

Thirty Tyrants. It appears from an inscription
that the συλλογεῖς had to attend to the sacred rites
connected with the worship of Athena and the
Olympian Zeus, whence Boeck conjectures that they
collected or summoned the citizens to certain
sacred meetings.9 He observes, however, that it is
probable from this circumstance they derived their
name; the property of the oligarchs, of which they
are said to have made out a list for the purpose of
confiscation, may have been applied to these public
banquets, since confiscated property was not un-
commonly divided among the citizens.10

SULPHUR. (Vid. Theion.)

SYLOGISMEIS. (Vid. Lex, p. 586.)

SYMBOLAIOn, SYNALLAGMA, SYNTHESE (συνα-
λλαγμα, συναλλαγή, συνθεσία), are all words used
to signify a contract, but are distinguishable from
one another. Συμβολαίον is used of contracts
and bargains between private persons, and peculiar-
ly of loans of money. Thus συμβολὲν ἐς ἀνδρῶν
δοῦν ἐστὶν to lend upon the security of a slave.2 Συν-
αλλαγμα signifies any matter negotiated or transacted
between two or more persons, whether a contract
or anything else.3 Συνθεσία is used of more solemn
and important contracts, not only of those made
between private individuals, but also of treaties and
conventions between kings and states.4

As to the necessity or advantage of having written
agreements between individuals, see ΣΥΜΒΛΗΡΗ.
National compacts, on account of their great im-
portance, and the possibility of otherwise pre-
serving evidence of them, were most always com-
mited to writing, and commonly inscribed on pillars
or tablets of some durable material.5 Upon a breach,
or on the expiration of the treaty, the pillars were
taken down.6

For breaches of contract actions were maintain-
able at Athens, called συμβολαιωματικά (συναλλα-
γματικά) par
 actions. Such actions, it is apprehended,
applied only to expressions contracts, not to obliga-
ex delicto, or the συναλλαγμάτων of Aristotle.
Thus, if I had promised to pay a sum of money by a
certain day, and failed to perform that promise,
an action for breach of contract would have lain at
Athens. But if my eov had broken my neighbour's
fence, my obligation to repair the damage would have
given rise, not to an action for breach of con-
tract, but a contract for breach of it. Οn the other hand, a
δίκη βιαστίας would lie against a person who had
committed a breach of contract; for he was regarded
as a wrongdoer, and liable to pay compensation to
the party injured. Therefore Dionysodoros, who
failed to perform the conditions of a ναυτική συγ-
γραφή, had a δίκη βιαστίας brought against him by
the persons who lent him money on his ship.7 The
Athenian law frequently gave an option between
various forms of action. It is not, however, im-
probable that the δίκη συναλλαγμάτων par
 was only one species of the δίκη βιαστίας, and the name
one of a technical kind. Wherever a debt had be-
come due to a man by reason of some previous
contract, we may suppose that he had the option
between an action of debt (χρεος) and one for
breach of contract. The same notice of action will
not apply to the δίκη παρακαταβοσθ., ἐργονωμ., and others of a similar kind. The main point of difference
might be this: that in a general action for

SYMPHONY.

reach of contract, the plaintiff went for unliquidated damages, which the court had to assess; whereas, upon a claim to recover a debt or sum certain, or a specific thing, it was more to do than to determine whether the plaintiff was entitled to it or not; the áγων was áμίςεξ. All such actions were tried before the θεαματική.

"Ορολογία appears to be a word of less technical nature than συνθήκη, though (as we might expect in words of this sort) they are often used indifferently; but in the case of των κοινών κάλλων, of which they seem to be the most proper expressions, the two terms are practically synonymous, and in the same manner as διάκειμεν, the testamentary dispositions, is put for διάκειμεν, the will. Συμβόλων also signifies a compact or agreement, but had become (in Attic parlance) obsolete in this sense, except in the expression δίκαια από συμβόλων. (Vid. Συμβόλων, &c.)

SYMBOLOGIA PARA ΑΓΕΩΣΕΙΣ ΚΩΝ. (Vid. Συμβόλων.)

SYMBOLOGIA, AΠΟΙ, ΔΙΚΑΙ (συμβόλων, ἀπό, δικαίως). The ancient Greek states had no well-defined international law for the protection of their respective members. In the earlier times troops of robbers used to roam about from one country to another, and commit aggressions upon individuals, who in their private capacity retaliated by force on their own hands. Even when the state took upon itself to resent the injury done to its members, a violent remedy was resorted to, such as the giving authority to take σόλα or βόσια, a sort of national distress. As the Greeks advanced in civilization, and a closer intercourse sprang up among them, disputes between the natives of different countries were settled (whenever it was possible) by friendly negotiation. It soon began to be evident that it would be much better if, instead of any interference on the part of the state, such disputes could be decided by legal process, either in the one country or the other. Among every people, however, the laws were so framed and the judicial administration so administered as to favor, to a certain extent, the foreigner; and, therefore, it would be disadvantageous, and often dangerous, to sue a man, or be sued by him, in his own country. The most friendly relation might subsist between two states, such as συμμαχία or επιστομία, and yet the natives of each be exposed to this disadvantage in their mutual intercourse. In such cases, whenever it was possible, it was necessary to have a special agreement, declaring the conditions upon which justice was to be reciprocally administered. International contracts of this kind were called συμβόλων, defined by Suidas thus: συμβόλων ὡς ἄν ἄλλαζις ας πόλεις ἄρμαται τάττεις τον χώραν, ὡς τῶν δόλων καὶ λαμβάνεις τὰ δίκαια; and the names of the parties were called δίκαια από συμβόλων. The more constant and more important the intercourse between any two nations, the more necessary would it be for them to establish a good system of international jurisprudence. Commercial people would stand in need of it the most. Aristotle mentions the Tuscan and Carthaginians as having entered into such agreements, and that such commerce had been preserved to us, and we know but little about the terms that were usually prescribed. The basis of them seems to have been the principle that actus sequitur forum rei; but this, as well as other conditions, must have varied according to circumstances. Liberty of person and protection of property would no doubt be recognized, and the cases of capture or of debt collected within the confines of the state would be the duty of the τρόμος to see that these rights were respected. A common provision was, that the party who lost his cause might appeal to the tribunal of the other country, or to that of some third state mutually agreed upon. This was perhaps suggested by the practice which had grown up in the East, in which disputes were referred to the arbitration of some individual or third state.

When the Athenians made any such treaty, they required it to be approved of and finally ratified by a jury of the heliaia, under the direction of the thesmothetai. Hence Pollux2 says of these magistrates, τὰ σύμβολα τὰ πρὸς τὰς πόλεις κυρώσεις. The other contracting state was therefore compelled to send an envoy to Athens, with power to conclude the treaty (if he thought fit) as it was drawn up and settled by the thesmothetai and jurors. Most of the people with whom the Athenians had to deal were either subject or inferior to them, and were content to acquiesce in the above regulation. Philip, however, would not submit to it, and demanded that the terms of the treaty, after its final ratification in Macedonia, this demand is made the subject of a complaint by Dmoathenus.3

The name of δίκαια από συμβόλων was given also to the causes which the allies of the Athenians sent to be tried at Athens.4 This fact has been called in question by Böckh, but there is not much reason for doubting it. It is true that the expression is not strictly applicable to causes, not between an Athenian and a foreigner, but between two foreigners; and it may be allowed that the object of the Athenians in bringing such causes to Athens was, not to give the allies a better or speedier means of obtaining justice, but to secure certain advantages to them in the imperial city.5 It is, however, not improbable that the arrangement called σύμβολον for the very purpose of softening the harshness of the measure, by giving an honourable name to that which, in reality, was a mark of servitude. For the same reason, the confederate states were called συμμαχοί, allies, while in point of fact they were rather ἔτη κοινοί, or subjects. These treaties were tried in the summer months, when the voyage to Athens was more convenient, and (like all other δίκαια από συμβόλων) belonged to the jurisdiction of the thesmothetai. We have but one example of such a cause preserved to us, viz., the speech of Antipolis on the death of Herodes, where both the prosecutor and the defendant are natives of Mytilene. As to the σύμβολον given to the jurors, see Diac-3

SYMBOLOI (σύμβολοι). (Vid. Parerei.)

SYMMPHONY (συμμπρων). (Vid. Eisphora. p. 392; Trycheria.)

"SYMPHONY (σύμφωνον), a plant having healing properties." Wall. Pl. 189. 1.

This name is derived from its great efficacy in healing wounds, causing, as it were, the lips of the wound to grow together rapidly: hence the language of Pliny. "Vulnurus sanandis tanta prastantia est, ut earnes quoque, dum coquuntur, congruentia addita tande et gracem nomen impuore." The first species of Dioscorides was the σύμφωνον πτεροτόν, which, according to Sprengel, is the Coris Manselense. Pliny

2. (V. 88. — 4. (De Isiam., 75. — 5. (Pollux, Com., viii., 63.)
3. (De Rép. Ath., i, 10, 17. — Papot, s. v. Συμβολον. — Thebes, Thebes.)
5. 933
SYDNCOS.

This species was called *Alum* by the Romans. The second species of Dioscorides, which Apuleius says was called *Consolida* by the Romans, was in all probability the *Symphyton officinale*, or Comfort.1 *SYMPHONON* (συμφωνίαν). (Vid. *Symposium*)

SYNTAQLERE LEGES, the name of various laws passed to prevent inordinate expense (sumptuaria) in banquets, dress, &c. In the states of antiquity it was considered the duty of government to put a check upon extravagance in the private expenses of persons, and among the Romans in particular we find traces of this in the laws attributed to the kings and in the Twelve Tables. The censors, to whom was intrusted the *disciplina* or *cura morum*, punished by the *nota censoria* all persons guilty of what was considered luxury.3 In the Roman Republic they were annually repeated. The following is a list of the most important of them, arranged in chronological order.

**Oppia**, proposed by the tribune C. Oppius in the consulship of Q. Fabius and T. Sempronius, in the middle of the second Punic war, B.C. 215, enacted that no woman should have above half an ounce of gold in her third year a dress of different colours, nor ride in a carriage in the city or in any town, or within a mile of it, unless on account of public sacrifices. This law was repealed twenty years afterward,4 when we frequently find the lex *Orchia* mentioned as the first lex *Sumtuaria*. *Tacitus*5 speaks of *Oppiae leges*.

*Orchia*, proposed by the tribune C. Orchias in the second year after the censorship of Cato, B.C. 181, limited the number of guests to be present at entertainments.6 It appears that M. Cato was at first opposed to this law, but afterward supported it.7

*Fannia*, proposed by the consul C. Fannius B.C. 161, limited the sums which were to be spent on entertainments, and enacted that not more than 100 asses should be spent on certain festivals named in the law. This is called *Centenarius* by *Lullius*; that on ten other days in each month not more than 30 asses, and that on all other days not more than 10 asses should be expended: also, that no other fowl but one hen should be served up, and that not fattened for the purpose.8

*Didia*, passed B.C. 149, extended the lex *Fannia* to the whole of Italy, and enacted that not only those who gave entertainments which exceeded in expense what the law had prescribed, but also all who were present at such entertainments, should be liable to the penalties of the law. We are not, however, told in what these consisted.9

*Licina* agreed in its chief provisions with the lex *Fannia*, and was brought forward, we are told, that there might be the authority of a new law upon the subject, in the interest of the lex *Fannia* was beginning to be neglected. It allowed 200 asses to be spent on entertainments upon marriage days, and on other days the same as the lex *Fannia*: also, that on ordinary days there should not be served up more than three pounds of fresh and one pound of salt meat.10 *Gellius*11 states that this law was brought forward by P. Licinius Crassus, but we do not know at what time, probably, however, in his praetorship, B.C. 103.

*Cornelia*, a law of the dictator Sulla, B.C. 81, was enacted on account of the neglect of the Fannian and Licinian laws. Like these, it regulated the expenses of entertainments. Extravagance in dress and luxury was being forbidden. In the Twelve Tables,2 was also restated by a law of Sulla.3 It was probably the same law which determined how much might be spent upon monuments.4

*Emilia*, proposed by the consul *Emiliius Lapiti* B.C. 78, did not limit the expenses of entertainments, but the kind and quantity of food that was to be used.5 *Pliny*4 and *Aurelius Victor*7 ascribe this law to the consulship of M. *Emiliius Serratus* (235). It is not impossible that there may have been two *Emilian* laws on the subject.

*Antia*, of uncertain date, proposed by Antius Resto, besides limiting the expenses of entertainments, enacted that no actual magistrate, or magistrate elect, should dine abroad anywhere except at the houses of certain persons. This law, however, was little observed; and we are told that Antius styled himself *Antius the Emperor*, forward, that he might not see his own law violated.

*Julia*, proposed by the dictator C. Julius Caesar, enforced the former sumptuary laws respecting entertainments, which had fallen into disuse.8 *Julius Caesar* adopted strong measures to carry this law into execution, but it was violated when he was absent from Rome.9 He stationed officers in the provinces honored by the law, and sometimes sent liers and soldiers to banquets to take everything which was not allowed by the law.10 *Cicero* seems to refer to this law in two of his epistles.11

*Julia*, a lex of Augustus, allowed 200 *stereces* to be expended upon festivals on dies profesti, 500 upon those on the calendae, ides, nones, and some of his other festival days, and 1000 upon marriage feasts. There was also an edict of Augustus or Tiberius, by which as much as from 300 to 3000 *stereces* were allowed to be expend upon entertainments, the increase being made with the hope of securing thereby the observance of the law.12 *Tiberius* attempted to check extravagance in banquets,13 and a servatus consultum was passed in his name, which forbade gold vessels to be employed except for sacred purposes, and also prohibited the use of silk garments to men.14 This sumptuary law, however, was but little observed.15 Some regulations on the subject were also made by *Nero*,16 and by succeeding emperors, but they appear to have been of little or no avail in checking the increasing love of luxury in dress and furniture.

SYNTAQLLAGMA (συνταλλαγμα). (Vid. *Symposium*.)

**ΣΥΓΝΗΠΑΤΟΣ ΕΚΚΑΣΙΑ** (σύγχροτος εκκασία). (Vid. *Ecclesia*, p. 383.)

SYNDIOS (συνδιος), an advocate, is frequently used as synonymous with the word *synagoras*, to denote any one who pleads the cause of another, whether in a court of justice or elsewhere. *Cicero*, also, is used indifferently with *synagogos* or *synagogeszoevthelos*.17 Thus the five public advocates,

SYNEXTEREO

who were appointed to defend the ancient laws be-

before the court of heliasts when an amendment or a

new law was proposed, and called both σύνδες and συνώροι. As to them, see Νομοθετεῖς, and also Schömann, De Comit., 255; Ant. Jurr. Publ. Gr., 228. The name of συνδέων seems to have been peculiarly applied to those orators who were sent by the state to plead the cause of their countrymen before a foreign tribunal.

Aschines, for example, was appointed to plead be-

fore the Persian court ofecessation after the proposal of

the Delian temple; but a certain discovery having been

made not very creditable to his patriotism, the court of

Aresipagus took upon themselves to remove

him, and appoint Hyperides in his stead.1 These

extraordinary advocates are not to be confounded

with the Pythagoreans, or ordinary Amphiheutopic

deputies.2 There were other σύνδες, who acted rather

as magistrates or judges than as advocates, though

they probably derived their name from the circum-

stance of their being appointed to protect the in-

terests of the state. These were extraordinary

functionaries, created from time to time to exercise

a jurisdiction in disputes concerning confiscated

property; as when, for instance, an information

was laid against a man for having in his possession the

property of a heliast, he was made liable to be seized

in execution on behalf of the state; or when the goods of

a convict having been confiscated, a claim was made by a mortgagee, or other creditor having a lien thereupon, to have his debt satisfied out of the proceeds. Such a claim was called ενεργέων, and to prosecute it ενερ-

γεσκεπτεῖ; or, to put it more generally, the reader is referred to the speeches of Lyseias, De Publ. Pecun., De Nic. Frat. Pecun., De Aristoph. Pecun., and more espe-

cially p. 149, 151, 154, ed. Steph. The first ap-

pointment of these judicial συνδεῖον took place after

the expulsion of the thirty tyrants; and one of their

duties appears to have been to receive informations from

the φύλαρχοι against those persons who had served

in the cavalry during the interregnum, and who, by a special decree of the people, were ordered to restore to the treasury all the pay which they had received for that service.4 (Vid. Synergors.)

SYNEXTEREO (συνδεῖον), a name given to

the members of any council or any body of men who

sat together to consult or deliberate. The congress of

Greeks at Salamis called together to confer and re-

flect on the general assembly of the Greeks, τοιουτων τῶν Ἐλλήνων συνδέων, at Corin-

th, Thermopylae, or elsewhere.5 When the new alli-

ance of the Athenians was formed, after B.C. 377,

upon fair and more equitable principles than the for-

mer, the several states who were included therein

were expressly declared to be independent, and a congress was held at Athens, to which each of the

allied states sent representatives. The congress was called συνδέων, and the deputies συνώροι, and the sums furnished by the allies συναξάτες, in order to avoid the old and hateful name of φόρος, or trib-

ute.6 Many allusions to this new league are made

by the orators, especially Isocrates, who strongly

urged his countrymen to adhere to the principle on

which the union was founded, and to effect the at-

tempt to re-establish their old supremacy.7 Per-

haps the συνώροι mentioned in the oath of the Δα-

καστί are the Athenian members of this congress.

For further information on the subject of this con-

feracy, see Schömann, Ant. Jurr. Publ. Gr., 434. —

Bezold, Staats. der Athen., 1, 449.—Thirlwall, Hist. of Greece, 1, 423. 424.

The name of συνδέων was given at Athens to

any magisterial or official body, as to the court of

Areopagus,1 or to the place where they transacted

business, their board or council-room.2

SYNEGORICON (συνηγορία). (Vid. Synegor-

ros.)

SYNEGOROS (συνηγοροῦσα) may be translated an

advocate or counsel, though such translation will

convey to the English reader a more comprehensive

meaning than the Greek word strictly bears.

According to the ancient practice of the Athenian

law, parties to an action were obliged to conduct

their own causes without assistance; but, on the

increase of litigation, the sciences of law and rhet-

oric began to unfold themselves, and men who had

paid no attention to these were unable to compete

with more experienced opponents. To consult a

friend before bringing an action, or about the best

means of preparing a defence, were obvious expen-

dients. It was but another step to have a speech

prepared by such friend out of court, to be delivered

by the party himself when the cause was brought

to trial. A class of persons thus sprang up, some-

times employed by clients, sometimes for hire, who

endeavoured money for writing speeches and giving legal ad-

vice to those who consulted them. Of this class

Antiphon was the first who acquired any celebrity.

Lysea, Isaeus, and Isocrates obtained considerable

incomes by speech-writing. Demosthenes followed

the same profession for some time, until his engage-

ments in public business compelled him to relinquish it.4

These persons were called, μαν σύνωροι, but λογο-

γραφόν, a name applied to Demosthenes reproach-

fully by his rival, who accuses him also of betraying

his clients by showing the speeches which he had

written to the adversary.5 Still, whatever assist-

ance the party might have received out of court, the

law which compelled him to appear in person at

the trial remained in force; although the prohibi-

tion to speak by counsel was so far relaxed, that if

the party was labouring under illness, or through

any physical or mental debility was unable to con-

duct his own cause without manifest disadvantage,

he might (by permission of the court) procure a re-

late or friend to speak for him. Thus, when Mu-

dipnus had been wounded, and was being

a gangrene in his hip was unable to plead his own

cause, he was brought on a litter into court, and his

brother Tisagoras addressed the people on his be-

half. So, when Isocrates was ill, his son Aphares

spoke for him in the cause about the αὐτὸδοσ. 

And in the speech of Demosthenes against Leocra-

ases, we see that the son conducts his father's cause.

As a general rule, the party was expected to defend

the court himself; for the judges liked to form an

opinion of him from his voice, look, and demeanour;

and, therefore, if a man distrusted his own ability,

he would open the case himself by a short speech,

and then ask permission for his friend to come for-

ward.6 This was seldom refused; and in the time

of the orators, there is no period established in

which all and rich public occasions were not fre-

quently made by the advocate. The defences

by Demosthenes of Cleophon against Pseudo-

chines, and of Phanus against Aphobus, may be cited as ex-

amples. In both of these it will be seen that Demos-

thenes was as much interested as the defending

himself; and it is farther to be observed, that
the advocate was looked upon with more favour on the whole account; for as no fees were allowed to be taken, a speaker was regarded with suspicion who had no apparent motive for undertaking the cause of another person. Hence we find in most of the συνήγγοροι λόγοι that the speaker avows what his motives are; as, for instance, that he is connected by blood or friendship with the one party, or at enmity with the other, or that he has a stake in the matter at issue between them. In the cause against Leochares above cited, it is evident that the son had an equal interest with his father in preserving the inheritance, and therefore he would be considered in the light of a party. The law which prohibited the advocate from taking fees under peril of a γραφή before the themosothétes, made no provision (and perhaps it was impossible to make an effective provision) against an influence of a more pernicious kind, viz., that of political illustration, which induced men to support the members of their club or party without the least regard for the right or justice of the case. Hence the frequent allusions by the orators to the εργαστήρια συμφαγόντων, μοχθο- δών ανδρότρων συνεστόκτων, παρακεκάσας λόγων, μαρ- τύρων, συναγωγών, all which expressions have reference to that system of confiscation at Athens by which individuals endeavoured to influence and control the temper of the court (see ed. of Ctesippus). That friends were often requested to plead, not on account of any incapacity in the party, but in order that by their presence they might exert an influence on the bench, is evident from an attentive perusal of the orators. In some cases this might be a perfectly legitimate course, as where a defendant, charged with some serious crime, called a man of high reputation to speak in his behalf and himself thereby that he believed the charge groundless. With such view Læchines, on his trial for misconduct in the embassy, prayed the aid of Eubulus and Phocion, the latter of whom he had previously called as a witness. On criminal trials, the practice with respect to advocates was much the same as in civil actions, only that it seems to have been more common to have several speakers on the part of the prosecution; and in causes of importance, wherein the state was materially interested, more especially in those which were brought before the court upon a ιδιαγεγέλεια, it was usual to appoint public advocates (called συνήγγοροι, σύνθλοι, κατ' αντικτόροι) to manage the prosecution. Thus Petronides, a noble citizen, not only defied the prosecution, but insist in the impeachment of Cimon. Public prosecutors were chosen by the people to bring trial Demosthenes, Aristotigion, and others, charged with having received bribes from Harpalus. In ordinary cases, however, the accuser or prosecutor (κατ' αντικτόρος) was a distinct person from the συνήγγορος, who acted only as auxiliary, and might be indirectly that the συνήγγορος performed the most important part at the trial, as Anytus and Lycon are said to have done on the trial of Socrates, wherein Melitus was prosecutor; or it might be that he performed a subordinate part, making only a short speech in support of the prosecution, like those of Lysias against Epirates, Ephocles, and Philocrates, which are called ἐπίθητοι. But, however this might be, it is evident that the συνήγγορος was neither entitled to a share of the reward (if any) given by the law to a successful accuser, nor liable, on the other hand, to the penalty of a thousand drachmas, or the ἄγαν εἰσο- ράεως upon a failure to gain a fifth part of the vote. Here we must distinctly mark how an advocate and a joint prosecutor. The latter stood precisely in the same situation as his colleague, just as a co-plaintiff in a civil action. The names of both would appear in the bill (ἐγκήμη), both would attend the ὄνκης, and would, in short, have the same rights and liabilities; the elder of the two only having priority in certain matters of form, such as the πρωτολογία. In the proceedings against the law of Lepidus there were two prosecutors, Aphepion and Ctesippus, the son of Chabrias; each addressed the court, Aphepion first, as being the elder; each had his advocate, the one Phormia, the other Demosthenes, who tells us in the exordium that he had undertaken to speak partly from a conviction of the impolicy of the law, and partly to oblige the son of Chabrias, who would have been deprived of certain privileges inherited from his father if the law had taken effect. There seems to have been no law which limited the advocates of persons who might appear as advocates, either in public or private causes. There was, however, this practical limitation, that as the time allowed for speaking to either party was measured by the clepsydra, if either chose to employ a friend to speak for him, he subtracted so much from the legal time as he thought sufficient for that of his friend, and the whole time allowed was precisely the same, whatever the number of persons who spoke on one side. Both parties were usually allowed to make two speeches, the plaintiff beginning, the defendant following, then the plaintiff replying, and, lastly, the defendant again. These are often called λόγοι προτέρους καὶ δευτέρους respectively, and they are not to be confounded with the συνήγγος or διηγομένος, which might, and usually did, immediately follow the speech of the party in whose favour they were made, though as a matter of arrangement it might be convenient sometimes to reserve the speech of the advocate for the reply, in which case the συνήγγος λόγος and the δευτέρος λόγος would be the same. With respect to the custom of producing friends to speak in mitigation of damages or punishment, see ΤΙΜΕΑ. As to the public advocates appointed to defend the old laws before the court of hellasists, see ΣΥΝΟΔΟΣ, ΝΟΜΟΘΕΤΗΣ.

The fee of a drachm (τὸ συνήγγορον) mentioned by Aristophanes was probably the sum paid to the public advocate whenever he was employed as such. The phrase δικαστήριοι, early by Schémann that Petti was wrong in supposing that the orators or statesmen who spoke in the assembly are called συνήγγοροι. They are always distinguished by the title of βητορὸς or δημιογόρος, or, if they possessed much influence with the people, δημιογό- γοι: and it is not to be supposed that they constituted a distinct class of persons, inasmuch as any other person of talent might be admitted to the assembly when he pleased; though, as it was found in practice that the possession of the βητεία was confined to a few persons who were best fitted for it by their talent and experience, such persons acquired the title of βητορὸς, &c. There appears, however, to have been (at least at one period) a regular appointment of συνήγγοροι, ten in number, with whom the office was confined, as follows, anywhere, to a βητορὸς, or orator. For what purpose such ten συνήγγοροι were appointed, is a matter about which we have no certain information. Some think they were officers connected with the board of scrutators.

SYNCRAPHE.

who audited magistrates' accounts. * Aristotle says the authorities to whom magistrates rendered their accounts were called in some of the Greek states ειςθνων, in others λογοτατι, in others συγγραφι συμφωνοι or επετεια. * and the author of the Lexicon Rhetorici, published by Bekker, * says that the syntagm were ῥητορικοι κληρικοι οι θεοθοντοι της λογοτατι προς της ειςθνως. * But what sort of assistance did they render? * Is it not probable that they performed the duty which their name imports, viz., that of prosecuting such magistrates as, in the opinion of the logiaste, had rendered an unsatisfactory account? Any indignant and aggrieved party might charge against a magistrate when the time for rendering his account had arrived; but the prosecution by a συγγραφος would be an επο τυχοει proceeding, such as the logiaste were bound to institute if they saw any reason to suspect the accounting party of malversation or misconduct. If this conjecture be well founded, it is not unreasonable to suppose that these ten ειςθνως were not only annual, but annual, or that the public advocates who were employed to conduct state prosecutions of a different kind. They might be appointed annually, either by lot or by election (according to Harpocrates). Their duties would be only occasional, and they would receive a drachm as their fee whenever they were employed. Böckh's conjecture, that they received a drachma a day for every day that they sat, is not supported by any previous writer. The reader will find the authorities on this subject referred to in Schömann and Böckh. 

SYNGE NEIA (συγγενεια). (Vid. Heres, Grec. p. 494.)

SYNGRAPE (συγγραφη) signifies a written contract, whereas συνθήκη and συμβολαιοι do not necessarily import that the contract is in writing. Συγγραφη, is, strictly speaking, a verbal agreement. Póilax puts the word συνθήκη ἐγγραφος, ἡμολογία ἐγγραφος. 

At Athens important contracts were usually reduced to writing, such as leases (μισθωται), loans of money, and all executorial agreements where certain conditions were to be fulfilled in future. The rate of interest, with other conditions, and also the penalties for breach of contract (ποιημα τα εκ της συγγραφης), were particularly mentioned. The names of the witnesses and the sureties (if any) were specified. The whole was contained in a little tablet of wax or wood (δίκαιον ου γραμματειον, sometimes double, διδυμος), which was sealed, and deposited in the temple of Minerva at the time of the letting of the houses. Any example of a contract on a bottomly loan (ταυτηκ συγγραφη) will be found in Demostenes, where the terms are carefully drawn up, and there is a declaration at the end, κυριευτων δε περι τοιτον ἀλλο μην ειναι της συγγραφης, * which agreement shall be valid, anything to the contrary notwithstanding. The public advocates stood as the object of a written contract—a release (ἀφεσης), a settlement of disputes (δικαιος), the giving up of a slave to be examined or tortured, or any other accepted challenge (πρόκλησις); in short, any matter wherein the contracting parties thought it safer to have documentary evidence of the terms. Εκδοτης υπεραντακτικα συγγραφης is to give an order for the making of a copy of the writing. The assumptions, of a certain fashion, at a certain price, &c., as specified in the agreement. * No particular form of words was necessary to make the instrument valid in point of law, the sole object being to furnish good evidence of the parties' intention. The agreement itself was valid without any writing, and would form the ground of an action against the party who broke it, if it could be sufficiently proved. Hence it was the practice to have witnesses to a parcel agreement. The law declared κυριευται ειναι τοις προς ἄλλους ἡμολογιας, δι' αν ἔννοιαν αμετρητων ποιοτισματιν. * It seems that for the maintenance of an ἡμιτεχνηδον δικαιον it was necessary to have a written contract.

Bankers were persons of extensive credit, and had peculiar confidence reposed in them. They were often chosen as the depositaries of agreements and other contracts. Money was put into their hands without any acknowledgment, and often without witnesses. They entered these, and also the loans made by themselves to others, in their books making memorandia (πανευμνηματα) of any important particulars. Such entries were regarded as strong evidence in courts of justice. Sureties were usually required by them on making loans. * Συγγραφη denotes an instrument signed by both or all the contracting parties. Χαριγραφη is a mere acknowledgment by one party. Συγγραφησαυει ου συνθήκη is to draw up the contract, σημανωσαυει to seal it, ἀνεναι to cancel, ἀνελθαυει to take it up from the person with whom it was deposited, for the purpose of cancelling, when it was no longer of any use. Συγγραφησαυει, to break the seal, to cancel, the writing itself. Such terms could be used as to alter the terms of the instrument, or erase or destroy some material part, or even the whole thereof (μεταγράφων η διαφθείρων). (Vid. Συμβολαιον.)

SYNECIA (συνοικία) differs from οικία in this, that the latter is a dwelling-house for a single family, the former a building for lodging houses, ino,as, the Romans would say. The distinction is thus expressed by Ερισκήνης. * ὑπὸν μὲν γὰρ πολλά μεθοδευόμενα μῖας ἐπαρχείας διελευκάτω εἴξονα, συνοικία τὰ καλότερα, ὅπως δὲ ἐν υἱοκλήτις οἰκίας. There was a great deal of speculation in the building and letting of houses at Athens. The lodging houses were let mostly to foreigners who came to Athens on business, and especially to the μέτοικος, whom the law did not allow to acquire real property, and who therefore could not purchase houses of their own. * Ασ, they, with their families, formed a population of about 45,000, the number of συνοικίαι must have been considerable. Parthen, the banker, had a lodging-house valued at 100 minas. Herodotus (Hist., Χαλκιδερος, 4) tells us, that Athenians were encouraged to invest their money in houses, and that leave should be granted to the most respectable to build and become house proprietors (οἰκοδομημέναις ἐγκατστήσονταί). Τις ἰστηκεῖται ἐτοιμωτα under no such disability; for Lyssias and his brother Polemarchus, who belonged to that class, were the owners of the house. The houses must have varied according to the size, the build, the situation, and other circumstances. Those in the city were more valuable than those in the Piraeus or the country, οἰκία τοπίου παραβι. Two counting-houses are mentioned by Isea* as yielding a return of rather more than 8 per cent. interest on the purchase-money. But this probably was much below the average profit, and the houses near the market, where it was most profitable for the letting of houses, when merchants and other visitors flocked to Athens. The rent was commonly paid by the month. Lodging-houses were frequently taken on speculation by persons called

SUPERFICIES, SUPERFICiA/RiUS. "Those are aedetes superficiarum which are built on hired ground, and the property of which, both by the jus civilis and naturalis, belongs to him to whom the ground (solum) also belongs." Every building, then, was regarded a part of the ground on which it stood; and the owner's right and possession of the building were inseparable from the ownership and possession of the ground. The superficies resembles a servitus, and is classed among the iura in re. According to the definition, the superficiarius had not the thing even in bonis; and as the animus dominii could not exist in the case of superficies, he consequently could not be possessed. He had, however, the right of the owner or possessor. The superficiarius had the right to the enjoyment of the superficies: he could alienate the superficies, and pledge it for the term of his enjoyment; he could dispose of it by testament; and it could be the object of succession ab intestato; he could also make it subject to a servitus; and he could prosecute his right by a utilis in rem actio. As he had a juris quasi possession, he was protected against alienation by a special interdict, which is given in the Digest, and in its effect resembles the interdictum uti possidetis. The explanation of the passage relating to this interdict is given by Savigny. If he was ejected, he could have the interdictum de vi, as in the case of proper possession; and if he had granted the use of the superficies to another precario, who refused to restore it, he had the interdictum de precario.

A man could obtain the use of a superficies by agreement with the owner of the land for permission to erect a building on it; and he might also, by agreement, have the use of an existing superficies. He was bound to discharge all the duties which he owed in respect of the superficies, and to make the proper payment in respect of it (solarium), if any payment had been agreed on.

The rule of law that the superficies belonged to the owner of the soil was expressed thus: Superficies solo cedit. If, then, a man built on another man's land, the house became the property of the owner of the land. But if the owner of the land claimed the house, and would not pay the expenses incurred by building it, the builder of the house must meet the claimant with a plea of dolus malus (exceptio dolis mati), that is, to say, if he was a bona fide possessor, and had a just title by law, he had, of course, no answer to the owner's claim.

SUPERNUMERARII. (Vid. ACCESSII.)

SUPP/iPARUM. (Vid. Athen, p. 894.)

SUPPLiCIATION was a solemn thanksgiving to supplication to the gods decreed by the senate, whose temples were opened, and the statues of the gods frequently placed in public upon couches (pul menara), to which the people offered up their thanksgivings and prayers (ad emuna pulinaria supplicium decreta cet). {Vid. LECTiSTERNIUM. A supplication was decreed for two different reasons: I. As a thanksgiving when a great victory had been gained: it was usually decreed as soon as official intelligence of the victory had been received by a letter from the general in command. The number of days during which it was last to be proportioned to the importance of the victory. Sometimes it was decreed for only one day, but more commonly for three or five days. A supplication of ten days was first decreed in honour of Pompey at the conclusion of the war with Mithradates, and one of fifteen days after the victory over the Delge by Caesar, an honour which Caesar himself says had never been granted to any one before. Subsequently a supplication of twenty days was decreed after the victory over Vercingetorix. For this reason the senate seems to have frequently increased the number of days out of mere compliment to the general. We thus find mention of thanksgivings for forty days, fifty days, and even sixty. A supplication was usually regarded as a prelude to a triumph, but it was not always followed by one, as Caesar reminds Cicero, whose honour a supplication had been decreed. This honor was conferred upon Cicero on account of his suppression of the conspiracy of Catiline, which had never been decreed to any one before in a civil capacity (togatius), as he frequently takes occasion to mention. II. A Supplicatio, a solemn supplication and h.s. militation, was also decreed in times of public danger and distress, and on account of prodigies in avert distress and save the state.}

SUPERDUS. (Vid. OBhIATIONES, p. 673.)

*SUS. (Vid. HvS)

SUPPENSU'RA. (Vid. Bath, p. 144.)

SYMP0SiUM (συμπόσιον, comissatio, consuvinium), a drinking-party. The συμπόσιον, or the πότος, must be distinguished from the δείπνo; for though drinking almost always followed a dinner-party, yet the former was an entertainment and an entertainment of a very different kind. The latter was also, after the dinner had been finished, the libations made, and the swan sung, they turned to drinking (τρύψεωσαν προς τον πότον).

Symposia seem to have been very frequent at Athens. Their enjoyment was heightened by agreeable conversation, by the introduction of music and dancing, and by games and amusements of various kinds: sometimes, too, philosophical subjects were
discussed at them. The Symposium of Plato and Xenophon give us a lively idea of such entertainments at Athens. The name itself shows that the enjoyment of drinking was the main object of the symposia: wine from the juice of the grape (οἶνος δὲμέλινον) was the only drink partaken of by the Greeks, with the exception of water. For palm wine and beer (vid. Cæsarea), though known to many of the Greeks from intercourse with foreign nations, were never introduced among them; and the extraordinary cheapness of wine at Athens (vid. Vins) enabled persons even in moderate circumstances to give drinking-parties to their friends. Even in the most exalted times of Athens, when poetry was considered one of the greatest sources of pleasure, and hence Musaeus and his son supposed that the just passed their time in Hades in a state of perpetual intoxication, as a reward of their virtue (γνήσιον καλλιτόν άρετος μαινόν μεθήνον ἄνων) it would appear from the Symposium of Plato that even the Athenians frequently concluded their most naturally designed rambles in a drink occasion, and it was to guard against this that such parties were forbidden at Sparta and in Crete.

The wine was almost invariably mixed with water, and to drink it unmixed (ἄλκαλον) was considered a characteristic of barbarians. Zaleucus is said to have enacted a law among the Locrians, by which all those who entered into a meal without water or wine without the command of his physician, was to be put to death; and the Greeks in general considered unmixed wine as excessively prejudicial to physical and mental health. The Spartans attributed the insanity of Cleomenes to his indulging in this practice, which he learned from the Scythis. So universal was the custom that the Athenian law, which required that the word οἰνος is always applied to such a mixture; and whenever wine is spoken of in connection with drinking, we are always to understand wine mixed with water, unless it is expressly added (τὸ κράμα, κατοι έδάσον μετέχον πλέονον, ὤν, καλλιεργέν). The proportion in which the wine and water were mixed was very different; but generally there was a much greater quantity of water than of wine. It appears from Plutarch, Athenæus, and Eustathius, that the most common proportions were 3:1, or 2:1, or 3:2. Hence it is evident that the former was the most common practice in the symposia: wine was sometimes handed to the guests in a cup, and as such sprinkled; and in the latter case it received the name of τρίφμα, and is frequently mentioned by the writers of the New Comedy. Other ingredients were also occasionally added. The mixture was made in a large vessel called the κρατήρ (vid. Crater), from which it was conveyed to the cups of οἰνογρύς or κάησα. (vid. Cantius.) The cups usually employed were the κύκλα, φαλήρι, καρφίσιον, and κάησα, of which an account is given in separate articles. The Rhyton, or drinking-horn was also very commonly used. We find several vases on vases representing drinking scenes.

The guests at a symposium reclined on couches, and were crowned with garnets of flowers, as is explained under Despoina. A master of the revels (δρόμος τῆς πότων, συμπόσιαρχος ή βασιλεύς) was usually chosen to conduct the symposium (μακάριος γενικός, συμπόσιαρχος), whose commands the whole company had to obey, and who regulated the whole or derivative entertainment, the amusements, &c. The same practice prevailed among the Romans, and their symposiarch was called the magister or res convivia, or the arbiter bidenti. The Athenians, as a natural consequence, with their growing of astragalii or talli; but we find in Plato, Alcibiades constituting himself symposiarch. The proportion in which the wine and water were mixed was fixed by him, and also how much each of the company was to drink. The servants (οἰνογρύοι and οἰνοτρόποι), usually young slaves, who had to mix the wine and present it to the company, and also under his orders; but if there was no symposiarch, the company called for the wine just as they pleased.

Before the drinking commenced, it was agreed upon in what way they should drink, for it was not usually left to the option of each of the company to drink as much or as little as he pleased, but generally the wine was fixed by the host, as it might order. At Athens they usually began drinking out of small cups (μετέρα ποτήρα), but as the entertainment went on, larger ones were introduced. In the Symposium of Plato, Alcibiades and Socrates each empty an immense cup, containing eight cotylēs, or nearly four English pints; and the most frequent vintage of wine was called vaseprinos (ἀπεντετροτερον ἀποκαταλιθεῖται, and early did it especially to the one who handed the same cup. This seems to have been the custom which Cicero alludes to when he speaks of "drinking after the Greek fashion" (Graeco more bibere; Graci in convivio solent nominare, cui poculum tradituri sunt). Music and dancing were usually introduced, as already observed, as parts of the festivity, and we find few representations of such scenes in ancient vases without the presence of female players on the flute and the cithara. Plato, indeed, distinctly objects to their presence, and maintains that it is only men incapable of amusing themselves by rational conversation that have recourse to such means of enjoyment, but this says nothing against the general practice; and Xenophon, in his Symposium, represents Socrates mightily pleased with the mimetic dancing and other feats performed on that occasion. The female dancers, and the players on the flute and the cithara, were frequently introduced at the symposia of young men for another purpose, and were oftentimes actual Sтратον (vid. Ηαταισκον, p. 508), as we see clearly represented on many ancient vases. Respecting the different kinds of dances performed at symposia, see Saltatia.

Respecting the games and amusements by which the symposia were enlivened, it is unnecessary to say much here, as most of them are described in separate articles in this work. Enigmas or riddles (ἀἰσθήματα or γρίφοι) were among the most usual and favourite modes of diversion. Each of the company proposed one in turn to his right-hand neighbour: if he solved it, he was rewarded with a crown, a garland, a cake, or something of a similar kind, and sometimes with a kiss; if he failed, he had to drink a cup of unmixed wine, or of wine mixed with salt-water, at one draught. 1 The cotabos was also another favourite game at symposia, and was played at in various ways. (Vid. Cotta- nos.)

The other games at symposia which require mention are the ἀστραγάλιοι and καβδεία, explained under Ταλι and Τασσερέα, the περτεία, spoken of under Ἀλθρένευς, and the χαλικίματις. The latter consisted in turning round a piece of money placed upright on its edges, and causing it suddenly to stop while moving by placing a finger on its top. In representations of symposia are very common on ancient vases. Two guests usually reclined on each couch (κάλυθος), as is explained on p. 344, and illustrated by the following cut from one of Sir W. Hamilton's vases, where the couch on the right hand contains two persons, and that on the left is represented with only one, which does not appear to have been the usual practice. The guests wear garlands of flowers, and the two who are reclining on the same couch hold a phiala each in the right hand. Sometimes there were four or five persons on one couch, as in the woodcut on p. 326.

A drinking-party among the Romans was sometimes called comissatio, but the word comissatio more nearly corresponds to the Greek συντέχνον. (Vid. Comissatio.) The Romans, however, usually drank during their dinner (cana), which they frequently prolonged during many hours in the later times of the Republic and under the Empire. Their customs connected with drinking differed little from those of the Greeks, and have been incidentally noticed above. The preceding account has been mainly composed from Becker's Charikles 9 and Gallus, 4 where the subject is treated at length. SYNTHESIS, a garment frequently worn at dinner, and sometimes also on other occasions. As it was inconvenient to wear the toga at table on account of its many folds, it was customary to have dresses especially appropriated to this purpose, called vates catantoria or catantoria, &c. (Vid. Sylhias.) The synthesis is commonly explained to be a loose kind of robe like the pallium, but Becker 9 supposes, from a comparison of a passage of Dion Cassius 6 with one of Suetonius, describing the dress of Nero, that it must have been a kind of tunic, an indumentum rather than an amictus. (Vid. Amictus.) That it was, however, an easy and comfortable kind of dress, as we should say, seems to be evident from its use at table above mentioned, and also from being worn by all classes at the Saturnalia, a season of universal relaxation and enjoyment. 3 More than this respecting its form we cannot say: it was usually dyed with some colour, 4 and was not white like the toga.

The word synthesis is also applied to a set of wearing apparel or a complete wardrobe. 3 This use of the word agrees better with its etymology (synthesis, συνθέσις) than the one mentioned above.

SYRINX (συρίγξ), the Pan's Pipe, or Pandean Pipe, was the appropriate musical instrument of the Arcadian and other Greek shepherd, and was regarded by them as the invention of Pan, their tutelary god. 10 who was sometimes heard playing upon it (συρετόν), as they imagined, on Mount Menalos. 7 It was, of course, attributed to Faunus, who was the same with Pan. 9 When the Roman poets had occasion to mention it, they called it fas-ta. 6 It was also variously denominated according to the materials of which it was constructed, whether of cane (τεμένους), (τοξεύς, δοξακις), 11 reed (calamus, 12 καλάμος), or hemlock (cicuta 13). In general, seven hollow stems of these plants were fitted together by means of wax, having been previously cut to the proper length, and adjusted so as to form an octave: 14 but sometimes nine were admitted, giving an equal number of notes. 15 Another name for the construction of this instrument, which, however, was rarely practised, was to arrange the pipes in a curve so as to fit the form of the lip, instead of arranging them in a plane. 17 A syrinx of eight reeds is shown in the gena figured on page 696. The annexed woodcut is taken from a bas-relief in the collection at Appiedurcombe in the Isle of Wight. 18 It represents Pan reclining at the entrance of the cave which was dedicated to him in the Acropolis at Athens. He holds in his right hand a drinking-horn (vid. Rhyton), and in his left a syrinx, which is strengthened by two transverse bands.

of Megara refused to go to the Pythian Games on account of the performance on Pandoe pipes (οὖθος). The Lydians, whose troops marched to military music, employed this, together with other instruments, for the same purpose. This instrument was the origin of the organ. (Vid. HYdraul.)

The term σύσσις was also applied to levels, or narrow subterranean passages made either in searching for metals, in mining at the siege of a city, or in forming outacoms for the dead. 8

SYRMA (σύρμα), which properly means that which is drawn or dragged (from σύρω), is applied to a dress with a train. The long epaulets worn by the Trojan matrons was consequently a dress somewhat of this kind. 5 The syrma, however, was more especially the name of the dress worn by the tragic actors, which had a train to it trailing upon the ground; whence the word is explained by Pollux 6 as a προσης φόρμα ἐπιπορίου, and is alluded to by Horace 7 in the words

"tristisque vagos per pulpitum ostendit." 8

Hence we find syrma used metaphorically for tragic itself.

SYSSitia (σύσσιτια). The custom of taking the principal meal of the day in public prevailed extensively among the Greeks from very early ages. It existed not only with the Spartans and Cretans, among both of whom it was kept up till comparatively recent times, but also at Megara in the age of Theognis, 9 and at Corinth in the time of Periander, who, it seems, abolished the practice as being favorable to the poor. 10 Not was it confined to the Hellenic nation; for, according to Aristotle, 11 it prevailed still earlier among the Οἰενοτριακοισ in the south of Italy, and also at Carthage, the political and social institutions of which state resembled those of Sparta and Crete. 12 The origin of the usage cannot be historically established, but it seems reasonable to refer it to infant or patriarchal communities, the members of which, being intimately connected by the ties of a close political union and kindred, may naturally be supposed to have lived together almost as members of the same family. But, however and wherever it originated, the natural tendency of such a practice was to bind the citizen to a certain political union; and, accordingly, we find that at Sparta the citizen paid himself for it, or merely perpetuated and regulated an institution which the Spartans brought with them from their mother-country, and retained at Sparta as being suitable to their position and agreeable to their national habits. The latter supposition is perhaps the more correct. The Cretan usage Aristotle 13 attributes to Minos; this, however, may be considered rather "the philosopher's opinion than an historical tradition:" but the institution was confessedly of so high antiquity, that the Peloponnesian colonists may well be supposed to have found it already existing in Crete, even if there has been no direct or remote settlers in the island before them. 14 The Cretan name for the sysstitia was άρδη, 15 the singular of which is used to denote the building or public hall where they were given. This title affords of itself a sufficient indication that they were confined to men and youths only: a conclusion justified and supported by all the authorities on the subject. 16 It is not, however, improbable, as Hoeck 17 suggests, that in some of the Dorian states there were sysstitia of the young unmarried women as well as of the men. 18 All the adult citizens partook of the public meals among the Cretans, and were divided into companies or messes, "called Erante, or sometimes άρδη. 19 These divisions were perhaps originally confined to persons of the same house and kindred, but afterward any vacancies in them were filled up at the discretion of the members. 20 The divinity worshipped under the name of Ζεύς Εραντες 21 was considered to preside over them.

According to Dosiladas, who wrote a history of Crete, 4 there were in every town of the island (παραγωγοι) two public buildings, one for the lodging of strangers (κοιμητηριον), the other a common hall (άρδη) for the citizens. In the latter of these the sysstitia were given, and in the upper part of it were placed two tables for the entertainment of foreign guests (ξενια τραπεζα), a circumstance deserving of notice, as indicating the extent to which the Doriens of Crete encouraged mutual intercourse and hospitality. Thus came the tables of the citizens. But, besides these, there was also a third table, on the right of the entrance, dedicated to Ζεύς ξενος, and perhaps used for the purpose of making offerings and libations to that god.

The sysstitia of the Cretans were distinguished by single courses. The diners then ate at their tables, even in later times, when the custom of reclining had been introduced at Sparta. The entertainment began with prayer to the gods and libations. 7 Each of the adult citizens received an equal portion of fare, with the exception of the "archontes" or "master of the tables," who was, perhaps, but at an earlier day, on whom the recently a member of the θυσιωτα or council. This magistrate received a fourfold portion; "one as a common citizen, a second as a president, a third for the house or building, a fourth for the furniture" (των σκευων): an expression from which it would seem that the care of the building, and the provision of the necessary utensils and furniture, devolved upon him. The management of a table was under the superintendence of a female of free birth (φροστικη της συσσιτιας γυνη), who openly took the best fare, and presented it to the citizen who was most eminent in the council or the field. She had three or four mile assistants under her, each of whom, again, was provided with two menial servants (μητροπετρα), who were in charge of the messmates in the room and when they were clasped in the diaςτη, the youth accompanied their fathers to the sysstitia along with the orphans of the deceased. 11 In some places the youngest of the orphans waited on the men; in others this was done by all the boys. 12 When not thus engaged, they were seated near to the men on a lower bench, and received only a half portion of food; the elder or chief of the orphans received the same quantity as the men, but of a plainer description of fare. 13 The boys of the men, had also a cup of mixed wine in common, which, however, was not replenished when emptied.

During the repast a general cheerfulness and gayety prevailed, which were enlivened and kept up by music and singing. It was followed by conversation, which was first directed to the public affairs of the state, and afterwards turned on valiant deeds in war and the exploits of illustrious men, whose praises might animate the younger hearers to an honourable emulation. While listening to this conversation, the youths seem to have been arranged in classes (àdvótea), each of which was placed under the superintendence of an officer (nauhóropos) especially appointed for this purpose, so that the syssitia were thus made to serve important political and educational ends.

In most of the Cretan cities the expenses of the syssitia were defrayed out of the revenues of the public lands and the tribute paid by the Perioeci, the money arising from which was applied partly to the service of the gods and partly to the maintenance of all the citizens, both male and female, so that in this respect there might be no difference between the rich and the poor. From the statement of Aristotle compared with Diodoras, it appears probable that each individual received his separate share of the public revenues, out of which he paid his quota to the public table, and provided with the rest for the support of the females of his family. This practice, however, does not appear to have prevailed exclusively at all times and in all the cities. Lyctus, who was a native of Sparta, the custom was different: the citizens of that town contributed to their respective tables a tenth of the produce of their estates; a practice which may be supposed to have obtained in other cities, where the public domains were not sufficient to defray the charges of the syssitia. But, both at Lyctus and elsewhere, the poorer citizens were in all cases taxed to support their lords.

In connexion with the accounts given by the ancient authors respecting the Cretan syssitia, there arises a question of some difficulty, viz., how could one building accommodate the adult citizens and youths of such towns as Lyctus and Gortyna! The question admits of only two solutions: we are either misinformed with respect to the size of each building, or one building was used as a common hall, or the number of Dorian citizens in each town must have been comparatively very small.

The Spartan syssitia were in the main so similar to those of Crete, that one was said to be borrowed from the other. In later times they were called ðéðiría, or the "spare meals," a term which is probably a corruption of ðéðiría, the love-feasts, a word corresponding to the Cretan ðraúpta. Anciently they were called àdvótea, as in Crete. They differed from the Cretan in the following respects. Instead of the expenses of the tables being defrayed out of the public revenues, every head of a family was obliged to contribute a certain portion at his own cost and charge; those who were not able to do so were excluded from the public tables. The guests were divided into companies of fifteen persons each, and all vacancies were filled up by ballot, in which unanimous consent was indispensable for election. No persons, not even the king, were allowed what was called an áéddikós ðiúpa, or excess from attendance at the public tables, except for some satisfactory reason, as when engaged in a sacrifice or a chase, in which latter case the individual was required to send a present to his table. Each person was supplied with a cup of mixed wine, which was filled again when required; but drinking to excess was prohibited at Sparta as well as in Crete. The repast was usually a simple one of bread and cheese, and an offering of each of a mess or φάσμα was settled by law. The principal dish was the υλάς χύτης, or black broth, with pork. The ἔποντος, or after-meal (from the Doric δίλος, a meal), was, however, more varied, and richly supplied by presents of game, poultry, fruit, &c., and other delicacies, which no one was allowed to purchase. (Vid. Arist.) Moreover, the entertainment was enlivened by cheerful conversation, though on public matters. Singing, also, was frequently introduced, as we learn from Alcman that "at the banquets and drinking entertainments of the men it was fit for the guests to sing the pæan." The arrangements were under the superintendence of the polemarchs.

The use and purposes of the institutions described above are very manifest. They united the citizens by the closest ties of intimacy and union, making them consider themselves as members of one family, and children of one and the same mother, the state. They maintained a strict and perfect separation between the higher and the subject classes, both at Sparta and in Crete, and kept up in the former a consciousness of their superior worth and station, together with a strong feeling of national pride. The latter, on the other hand, had in every respect a military point of view; for the members of the syssitia were formed into corresponding military divisions, and fought together in the field, as they had lived together at home, with more bravery and a keener sense of shame (αἰδος) than could have been the case with merely chance comrades. Moreover, they gave an efficacy to the power of public opinion on matters of national importance, and thereby served considerably to increase the stability of penal laws. With respect to their political tendencies, they were decidedly arranged upon aristocratical principles, though no individual of a company or mess was looked upon as superior to his fellows. Plutarch accordingly calls them συνάδελφα ἱεροκουσταρία, or aristocratical meetings, and compares them with the Pythian and Thesemantine festivals of Athens.

The simplicity and sobriety, which were in early times the characteristics both of the Spartan and Cretan syssitia, were afterward, in Sparta at least, supplanted by luxury and effeminate indulgence. The change was probably gradual, but the kings Ages and Acrotatus (B.C. 300) are recorded as having been mainly instrumental in accelerating it. The reformer Agis endeavoured, but in vain, to restore the old order of things, and persisted in the attempt. In his days Sparta contained 4500 families, out of which he proposed to make fifteen syssitia, whence Müller infers that formerly, when the number of families was 9000, the number of syssitia was thirty, and, consequently, that Herodotus, when he spoke of Lycurgus having instituted the "syssitia" for war, alluded to the larger divisions, and not the single banquetting companies; a conclusion justified by the context. Müller, moreover, supposes that in this sense the syssitia at Sparta corresponded to the divisions of the state called obe, and sometimes φασίτας, which were also thirty in number.

TABELLAR'LE LEGES.

T. 0.

TABANUS. (Vid. Cicero.)

TABELLA, dim. of TABULA, a Bill or Tablet, with which each citizen and judge voted in the comitia and courts of justice. In the comitia, if the business was the passing of a law, each citizen was provided with two tabellae, one inscribed V. R., i. e., Uti Rogas, "I vote for the law," the other inscribed A., i. e., Antiquo, "I am for the old law." 12 If the business was the election of a magistrate, each citizen was supplied with one tabella, on which the names of the candidates were written, or the initials of their names, as some suppose from the oration Pro Domae, c. 43 : the voter then placed a mark (punctum) against the one for whom he voted, whence puncta are spoken of in the sense of votes. 3 For further particulars respecting the voting in the comitia, see DRABSTONES and STRELLA.

The judices were provided with three tabellae, one of which was marked with A., i. e., Absolvo, "I acquit," the second with C., i. e., Condemno, "I condemn," and the third with N. L., i. e., Non Luet, "It is not clear to me." The first of these was called tabella absolutoria, and the second tabella damnatoria, 4 and hence Cicero 5 calls the former littera salutis, and the latter littera damnationis. 6 It would seem that in some trials the tabellae were marked with the letters L. D. respectively, i. e., Libero et Damno, since we find on a denarius of the Caelian gens a tabella marked with the letters L. D.; and as we know that the vote by ballot in cases of perduellio was first introduced by C. Calvisius Calvis (vid. TABELLAR'LE LEGES), the tabella on the coin undoubtedly refers to that event. There is also a passage in Caesar 7 which seems to intimate that these initial letters were sometimes marked on the tabellae: "Unam fore tabellam, qui liberandas omni periculo censerent; alteram, qui capitae damnarent." 8 &c.

The cut annexed contains a copy of a coin of the Cassian gens, in which a man wearing a toga is represented in the act of placing a tabella marked with the letter A. (i. e., absolvo) in the cista. The letter on the tabella is evidently intended for A. For the various meanings of Tabella, see TABULA.

TABELLAR'LE LEGES, the laws by which the ballot was introduced in voting in the comitia. As to the ancient mode of voting at Rome, see SURPRAGMUM. There were four enactments known by the name of Tabellaries Leges, which are enumerated by Cicero. 9 They are mentioned below according to the order of time in which they were passed.

1. GABINIA LEX, proposed by the tribe Gabinius B.C. 139, introduced the ballot in the election of magistrates, 10 whence Cicero 11 calls the tabella rin dex tacito libertatis. 12

2. CASSIA LEX, proposed by the tribe L. Cassius Lactantius B.C. 137, introduced the ballot in the "judicium populi," with the exception of cases of perduellio. The "judicium populi" undoubtedly applies to cases tried in the comitia by the whole body of the people (vid. JUDEX, p. 551, 552), although Ernestii 13 wishes to give a different interpretation to the words. This law was supported by

1. (Compare Cic. ad Att. i. 14, 9-10. (Cic. Pro Flacco, 22.)

Scipio Africanus the younger, for which he was censured by the aristocratic party. 1

3. PAPINIA LEX, proposed by the tribe C. Papirius Carb. B.C. 131, introduced the ballot in the enactment and amendment of laws. 2

4. CAELIA LEX, proposed by C. Calvisius Calvis B.C. 108, introduced the ballot in cases of perduellio, which had been excepted in the Cassian law. 3

There was also a law brought forward by Marius B.C. 119, which was intended to secure freedom and order in voting. 4

TABELLARIUS, a Letter-carrier. As the Romans had no public post, they were obliged to employ special messengers, who were called tabellarii, to convey their letters (tabella, littera), when they had not an opportunity of sending them otherwise. 5

TABELLIO, a Notary. 6 Under the Empire the tabelliones succeeded to the business of the scribes in the times of the Republic. (Vid. SCRIBAE.) From tabellus, the word employed for drawing up legal documents, and for this purpose usually took their stations in the market-places of towns. They formed a special order in the state.

TABERNA is defined by Ulpius as any kind of building fit to dwell in, "nempe ex eo, quad tabulis clauditur," or, according to the more probable etymology, "quad tabulis clauditur," which word is derived from the verb to close (tabulare). Festus 7 asserts that this was the most ancient kind of abode used among the Romans, and that it was from the early use of such dwellings that the words taberna and tabernaculum were applied to military tents, though the latter were constructed of skins. We know very little of the form and materials of the ancient tents; but we may infer from the materials which were employed in covering and securing them that if they were generally composed of a covering of skins, partly supported by wooden props, and partly stretched on ropes. Some times, in a permanent camp, they may have been constructed entirely of planks; and sometimes, in cases of emergency, garments and rushes were spread over any support that could be obtained. 8

Taberna was also the name of a shop. Neither the ancient authors nor the remains of Pompeii lead us to suppose that tradesmen often had their shops forming parts of their houses, as with us. A for many of the shops round a house were retained by the owner for the sale of the produce of his estates. This arrangement of the shops was probably an improvement on an older plan of placing them against the walls of houses. Even under the emperors we find that shops were built out so far into the street as to obstruct the thoroughfare. Martial 9 mentions an edict of Domitian which put an end to this practice, and the shops were confined within the areas of the houses.

The following are the most remarkable classes of shops of which we have notices or remains:

1. Shops for the sale of wine, hot drinks, and ready-dressed meat. (Vid. CAPOTTA.)

943
TABULE.

1. Bakers' shops. Of these several have been found at Pompeii, containing the mill as well as the other implements for making bread. (Vid. Mola, Pistor.)

2. Book-sellers' shops. (Vid. Bibliopol.)

3. Barbers' and hairdressers' shops. (Vid. Bar.)

TABERNACULUM. (Vid. Tabern., Templem.)

TABULINUM. (Vid. House, Roman, p. 517.)

TABULE. This word properly means planks or boards, whence it is applied to several objects, as gaming-tables, pictures, but more especially to tablets used for writing, of which alone we have to speak here. The name of tabulae was applied to any flat substance used for writing upon, whether stone or metal, or wood, or even over a waxed cloth. Thus, in Livy, indeed, distinguishes between tabula and cera, by the former of which he seems to mean tablets of stone and metal; but tabula and tabellae more frequently signify waxen tablets (tabula cerata), which were thin pieces of wood, usually of an oblong shape, covered over with wax (cera). The wax was written on by means of the stilus. (Vid. Stylus.)

The wax was sometimes made from pine and citron-wood, but generally of the wood of a more common tree, as the beech, fir, &c. The outer sides of the tablets consisted merely of the wood; it was only the inner sides that were covered over with wax. They were fastened together at the backs by means of wires, which answered the purpose of hinges, so that they opened and closed like a book. The wax when the tablets were used was from one tablet rubbing against the wax of the other; there was a raised margin around each, as is clearly seen in the woodcut on p. 925. There were sometimes two, three, four, five, or even more tablets fastened together in the above-mentioned manner. Two such tablets were called dipytche (dipytchum), which merely means twice-folded (from πτυχα, to "fold"), whence we have πτυχων, the same word as the name of the Latin word pugilares, which is the name frequently given to tablets covered with wax. Perhaps it may be connected with the same root, though it is usually derived from pugilare; because they were small enough to be held in the hand. Such tablets are mentioned as early as the time of Homer, who speaks of a πυγιλε πτυχαντος (Vid. Dipytch.)

Three tablets fastened together were called triptyche (triptychum), which Martial translates by triplices (cerae); in the same way we also read of pentaptycha (pentaptunx), called by Martial quintuples (cerae). in the same way we also read of pentaptycha (pentaptunx), called by Martial quintuples (cerae), and of polyptycha (polyptunx) or multiplices (cerae). The pages of these tablets were frequently called by the name of cera alone; thus we read of prima cera, altera cera, "first page," "second page." In tablets containing important legal documents, especially wills, the outer edges were pierced through with holes (foramina), through which a triple thread (tissum) was passed, and upon which a seal was then placed. This was intended to guard against forgery; and, if it was not done, such documents were null and void. (Vid. Testamentum.)

Waxen tablets were used among the Romans for almost every special document; writing was generally written lengthwise and was not cut off. Thus letters were frequently written upon them, which were secured by being fastened together with packthread and sealed with wax. Accordingly, we read in Plautus, when a letter is to be written:

"Effer cito stilum, ceram, et tabellae, et linum."

The sealing is mentioned afterward. Tabule and tabellae are therefore used in the sense of letters. Love-letters were written on very small tablets called vitelliani, or of which word, however, we do not know the meaning. Tablets of this kind are presented by Amor to Polyphemus on an ancient vase. (Vid. Polyphemus.)

Legal documents, and especially wills, were almost always written on waxen tablets, as mentioned above. Such tablets were also used for accounts, in which a person entered what he received and expended (tabula or codex acceptis et expensis), whence now tabula means an abolition of debts, either wholly or in part. The above are merely instances of the use of waxen tablets; it is unnecessary to pursue the subject further. Respecting the tabula publica, see Tabularium.

Two ancient waxen tablets have been discovered in a perfect state of preservation, one in a gold mine four or five miles from the village of Abrid-banyx in Transylvania, and the other in a gold mine in the village itself. Of this interesting discovery an account has been published by Massmann in a monograph, "De tabulis tabulculis, of the wooden kind," for which he has made some extracts from Cicero, Vitellius, &c., and has called them tabulae tabulculae, and antiquissima et unica Romana in Fedina Au-raria apud Abridbanyx, oppidum Transsylvanum, super recepta," Lipsiae (1841). An account of these tablets, taken from Massmann's description, will serve as a commentary on what has been said above. Both the tabulae are triptycha, that is, consisting of three tablets each. One is made of fir, and the other of oak; it is uncertain which tablet was the size of what we call a small octavo. The outer part of the two outside tablets of each exhibit the plain surface of the wood, the inner part is covered with wax, which is now almost of a black colour, and is surrounded with a raised margin. The middle tablet has wax on both sides, with a margin around each, so that each of the two tabulae contains four sides or four pages covered with wax. The edges are pierced through, that they might be fastened together by means of a thread passed through them. The wax is not thick in either; it is thinner on the beechen tabula, in which the stimulus of the writer has sometimes cut through the wax into the wood. There are letters on both of them, but on the beechen tabula they are few and indistinct. The letters on the firwod tablet are some Greek letters, but they are succeeded by a long set of letters in unknown characters. The writing on the tabulae made of firwood is both greater in quantity, and in a much better state of preservation. It is written in Latin, and is a copy of a document relating to some business connected with a collegium. The name of the consular is given, which determines its date to be A.D. 169. One of the most extraordinary things connected with it is, that it is written from right to left. The writing begins on what we should call the last or fourth page, and ends at the bottom of the third; and by some strange good fortune it has happened that the same document is written over again, beginning on the second page and ending at the bottom of the first, so that where the writing is effaced or doubtful by fading, 1 in the one, it is usually supplied or explained by the other.

Waxen tablets continued to be used in Europe for the purposes of writing in the Middle Ages; but the oldest of these with which we are acquainted belongs to the year 1301 A.D., and is preserved in the Florentine museum.

The tablets used in voting in the comitia and the
TAGUS.

It was usual to place these articles as offerings in the temples, especially at the great festivals. Having been previously burned into charcoal, they were used in the manufacture of lampblack or AGRAMINTUM. 2

TENIA or TAINIA. (Vid. VITTA, STIASYR.) *II. The Cepola Tenia, L., or Tape-fish. It is so called from its being slender like a ribbon. Randel describes two species of it. 4

TAGUS (τάγος), a leader or general, was more especially the name of the military leader of the Thessalians. Under this head it is proposed to give a short account of that ancient institution. The Thessalians were a Thespian tribe who originally came from the Thespian Ephorus. Under the guidance of leaders who are said to have been descendants of Hercules, they invaded the western part of the country, afterward called Thessaly, and drove out or reduced to the condition of Penestes, or bondmen, the ancient Τολιον inhabitants of that country, called the Thessalian. The Thessalians afterward spread over the other parts of the country, and took possession of the most fertile districts, and compelled the Peraebi, Magnes, Achaea Phitias, and other neighbouring people to submit to their authority and to pay them tribute. 6 The population of Thessaly was divided into three distinct classes: 1. The Penestes, whose condition was nearly the same as that of the Helots. (Vid. PENESTAL.) 2. The subject people, who inhabited the districts which were not occupied by the Thessalian invaders. They paid tribute, as stated above, but were personally free, though they had no share in the government. They merely paid their taxes, and from them they are called by Xenophon. (Vid. FISCHER.) 3. The Thessalian conquerors, who alone had any share in the public administration, and whose lands were cultivated by the Penestes.

For some time after the conquest Thessaly seemed to have been governed by the race of Hercules, who now, however, have been only the heads of the great aristocratical families, invested with the supreme power for a certain time. Under one of these princes, named Aleuas, the country was divided into four districts, Pithiotis, Histoeiotis, Thessaliotis, and Pelasgiotis. 9 This division continued till the latest times of Thessalian history.

When occasion required, a chief magistrate was elected under the name of tagus (τάγος), whose commands were obeyed by all the districts. He is sometimes called king (κύριος) and sometimes ἕφικτος. 11 His command was of a military rather than of a civil nature, and he seems only to have been appointed when there was a war, or one was apprehended. Pollux, according to his list of military designations, classes together the beech-tarchs of the Thbeans, the king of the Lacedaemonians (οὗτος ἀρχηγός), and the Athenian king (οὗτος ἄρχηγος), and to his original duties, and the tagus of the Thessalians. We do not know the extent of the power which the tagus possessed constitutionally, nor for the time which he held the office; probably neither

TAGUS.

TAVDA.

courts of justice were also called tabulae as well as tabellae. (Vid. TABBELL.)

TABULA'RII were notaries or accountants, who are first mentioned under this name in the time of the Empire. 1 Public notaries, who had the charge of public documents, were also called tabularii, and these seem to have differed from the tabelliones in the circumstance that the latter had nothing to do with the custody of the public registers. Public tabularii were first established by M. Antonius in the provinces, who ordained that the births of all children were to be announced to the tabularii within thirty days from the birth. 2 Respecting the other duties of the public tabularii, see Cod. Theod., viii., tit. 2, and Gothoffr., ad loc.

TABULARIUM, a place where the public records (tabula publice) were kept. 3 These records were of various kinds, as, for instance, senatus consulta, tabulae censuum, registers of births, deaths, of the names of those who assumed the toga virilis, &c. 4 There were tabularia at Rome, all of which were in temples; we find mention made of tabularia in the temples of the nymphs, 5 of Lucina, of Juventus, of Libitina, of Ceres, and more especially in that of Saturn, which was also the public treasury. (Vid. AERABUM.)

A tabularium was also called by other names, as gnomon, a term used by Ctesistratus of Alexandria. 8 In a private house the name of tabulium was given to the place where the family-records and archives were kept. (Vid. House, Roman, p. 517.)

TAREDA or TEDA (τάρδα, ἀτ. ἀδικ, dim. ἀδίκος), a light of firewood, called on this account πίναξ τεδα. 5 Before the adoption of the more artificial modes of obtaining light, described under CANDIDA, lamp-oil, which was derived chiefly from the mastic tree, 6 was the principal source of light, which was employed in various parts of Greece and Asia Minor, by the inhabitants of Greece and Asia Minor practised the following method, which still prevails in those countries, and to a certain extent in Scotland and Ireland, as well as in other parts of Europe, which abound in forests of pines. 7 A tree having been selected of the species Pinus Maritima, Lima, which was felled by the anas in Glarisa at Rome, in the time of Homer, 8 and which retains this name, with a slight change in its termination, to the present day, a large incision was made near its root, causing the turpentine to flow so as to accumulate in its vicinity. This highly resinous wood was called ἀδικ, i.e., torch-wood; a tree so treated was called ἀδικοῦραν. 9 Thus it happened that the workmen employed in the manufacture, ἄδικογοι. After the lapse of twelve months, the portion thus impregnated was cut out and divided into suitable lengths. This was repeated for three successive years, and then, as the tree began to decay, the heart of the trunk was extracted, and the roots were dug up for the same purpose. 10 These strips of resinous pine-wood are now called ἀδίκος by the Greeks of Mount Ida. 11 When persons went out at night they took these lights in their hands, 12 more particularly in a nupial procession. 13 Hence ταξίδα felixes signified a happy marriage; 14 and these lights, with less than proper torches, are attributed to Love and Hyrene. 15
The power of the aristocratical families, however, seems to have continued with little diminution till towards the close of the Peloponnesian war, when decided democratical movements first begin to appear. If this till the time of Alcibiades and the Sopades

TALARIA

TALENTUM.  

TALAROS (ταλαρος). (Vid. Calathus.)  

TALASSIO. (Vid. Marriage, Roman, p. 623.)  

TALENTUM (ταλαντον) meant originally a balance (vid. Libra), then the substance weighed, and lastly and commonly a certain weight, the talent. The Greek system of money, as well as the Romans (vid. As), and those of most other nations, was founded on a reference to weight. A certain weight of silver among the Greeks, as of copper among the Romans, was used as a representative of a value, which was originally and generally that of the metal itself. The talent, therefore, and its divisions, are denominations of money as well as of weight.

The Greek system of weights contained four principal denominations, which, though different at different times and places, and even at the same place for different substances, always bore the same relation to each other. These were the talent (ταλαντον), which was the largest, then the mina (μινα), the drachma (δραχμη), and the obolus (δολος). Their relative values are exhibited in the following table:

<table>
<thead>
<tr>
<th>Obol</th>
<th>6</th>
<th>Drachma</th>
<th>600</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>100</td>
<td>Mina.</td>
<td>36,000</td>
</tr>
<tr>
<td></td>
<td>60</td>
<td>Talent</td>
<td>60</td>
</tr>
</tbody>
</table>

The multiples and subdivisions of the drachma and obolus have been noticed under Drachma.  

1. The Attic Talent.—It appears from existing coins, which we have every reason to trust, since the Attic silver money was proverbially good, that the drachma, which was the unit of the system, weighed 67-5 grains. (Vid. Drachma.) Hence we get the following values for the Attic weights in English avoirdupois weight:

| Obol | 11.98 lbs. |
| Drachma | 60.5 lbs. |
| Mina | 83.75 lbs. |
| Talent | 100.32 lbs. |

These values refer to the time after Solon, for we have no drachma of an earlier date. We may, however, arrive at a probable conclusion respecting the state of things before Solon’s reform of the currency, by referring to another standard of the talent, which was used in commercial transactions, and the mina of which was called the commercial mina (ἡ μινα της ῥυθμησεως). This mina is mentioned in a decree,1 the date of which is uncertain (about the 155th Olympiad, or B.C. 160, according to Böckh), as weighing 138 drachmae, στραγγαριους, according to the standard weights in the silver mint. (Vid. Astrogenption.) In this system, however, the relative proportion of the weights was the same as in the other; we have, therefore:

| Obol | 15.59 lbs. |
| Drachma | 91.77 lbs. |
| Mina | 93.69 lbs. |
| Talent | 92.67 lbs. |

These weights were used for all commodities except such as were required by law to be weighed according to the other standard, which was also the one always used for money, and is therefore called the Cistum. No date is assigned for the introduction of this system; it was, therefore, probably very old; and, in fact, as Böckh has shown, there is every reason to believe that it was the old system of Attic weights which was in use before the time of Solon.2 Solon is known to have lowered the standard of money in order to relieve debtors; and Plutarch3 informs us, on the testimony of Ancrenon, that Solon made the mina of 100 drachmae, which had formerly contained 75.” It is incredible that a large prime number, such as 75, should have been used as a multiplier in any system of weights; but what Plutarch meant to say was, that Solon made a mina, or 100 drachmae, out of the same quantity of silver which was formerly used for 73 drachmae. The proportion, therefore, of the ancient weights to those fixed by Solon was 100 : 73. Now this was very nearly the proportion of the commercial mina to the silver mina, namely, 138 : 100, = 100 : 73.4 Why should Solon have adopted so singular a proportion? It was probably an accident. Böckh has shown that in all probability Solon intended to reduce the mina one fourth, that is, to make 100 drachmae of the new coinage equal to 75 of the old, but that, by some inaccuracy of manufacture, the new coins were found to be a little too light; and, as Solon’s coinage furnished the standard for all subsequent ones, the error was retained. In fixing upon one fourth as the amount of the reduction, Solon seems to have been guided by the wish of assimilating the Attic system to another which was extensively used, but the origin of which is unknown, namely, the Euboic talent, which will be presently spoken of.

The commercial weights underwent a change by the decree mentioned above, which orders that 12 drachmae of the silver standard shall be added to the mina of 138 drachmae; that to every five commercial minas of Solon one shall be added; and to every commercial talent five commercial minas. Thus we shall have,

the mina = 150 drachmae (silver),

5 minae = 6 minae (commercial),

the talent = 65 minae (commercial).

The five-mina weight of this system was equal to 7 lbs. 13 oz. 14.96 grs. avoirdupois, and the talent to 86 lbs. 2 oz. 70.7 grs.

“The weights were kept with great care at Athens. The standards or models (στραγγαριον) were deposited in the treasury and in the hands of persons appointed to take charge of them, in the Prytaneeum at Piraeus and at Eleusis.”

The other Greek weights are computed from their relation to the Attic, as stated by ancient writers, and from existing coins. Unfortunately, the writers do not always agree with the coins, nor with each other.

2. The Parthian Talent is often reckoned equivalent to the Attic. Herodotus4 makes the Babylonian talent equal to 70 Euboic minae, Pollux5 to 7000 Attic drachmae, i.e., to 70 Attic minae. Comparing these two statements, we find the Attic and Euboic weights equal. But it is likely that Pollux is not quite right, and that the Euboic standard was a little greater than the Attic: for Zosimus6 gives 72 Attic drachmae to the value of one of this same Babylonian talent, which would make the ratio of the Euboic to the Attic 72 : 70, which is the same as 75 : 73.7 In this fact we have the ground of the supposition

1. (Böckh, Corp. Inscr. i., 123, 4.)

2. (Böckh, Publ. Econ. of Athens, i., p. 193. — Ed., Metrol. Untersuch., i., p. 113.)—2. (Solon, 15.)—3. (Hussey, p. 26, who quotes Böckh, Inscr. i., 123, § 44; 131, § 40; 132, § 6.)

474
stated above, that Solon intended to assimilate the Attic standard to the Euboic: for we have seen that the old Attic talent was to Solon's as 100:75\(\frac{3}{2}\). Assuming that Solon intended this ratio to have been 109:75, we have the intended value of Solon's talent to its actual value as 75:75\(\frac{3}{2}\), which is almost identical with the ratio of the Euboic talent to the Attic talent of Solon. The Euboic talent would therefore exceed the Attic merely by the error which was made in the formation of the latter.

Another computation of the Euboic talent is given by Apollon,\(^1\) who makes it equal to 7000 drachmas, i.e., 70 mines of Alexandria. (See below, on the Alexandrian talent.)

Festus, in the Excerpta of Paulus,\(^2\) makes it equal to 4000 denarii. This is clearly an error: very probably Paulus applied the statement of Festus respecting the Rhodian talent to the Euboic. (See below, on the Rhodian talent.)

The Romans seem to have reckoned both the Euboic and Attic talents equal to 80 Roman pounds.\(^3\)

3. The Talent of \(\varepsilon\varepsilon\gamma\iota\varepsilon\) has been almost always considered to have borne to the Attic the ratio of 5:3, according to the statement of Pollux, that the \(\varepsilon\varepsilon\gamma\iota\varepsilon\) talent contained 10,000 Attic drachmas, and the drachma 10 Attic obols.\(^4\) Mr. Hussey, however, observes that this value would give an \(\varepsilon\varepsilon\gamma\iota\varepsilon\) drachma of 110 grains, whereas the existing coins give an average of only 96; and he explains the statement of Pollux as referring, not to the old Attic drachmae of the full weight, but to the lighter drachma which was current in and after the reign of Augustus, and which was about equal to the Roman denarius. (Vid. Drachma.)

Taking, then, the value of the drachma given by the coinage, we have the following values for the \(\varepsilon\varepsilon\gamma\iota\varepsilon\) talents:

\[
\begin{array}{lll}
\text{O ol} & \ldots & 15 \\
\text{Drachma} & \ldots & 96 \\
\text{Talent} & \ldots & 3046
\end{array}
\]

On the other hand, Böckh adheres to the proportion of 5:3, as given by Pollux, who could not (he contends) have meant by drachmae those equal to the denarius, because he is not making a calculation of his own, suited to the value of the drachma in his time, but repeating the statement of some ancient writer, who lived when the Attic and \(\varepsilon\varepsilon\gamma\iota\varepsilon\) currencies were in their best condition. Mr. Hussey has followed Böckh in a reasoner to that urged by Böckh, that when Pollux speaks of the value of the Babylonian talent in relation to the Attic, he is to be understood as referring to Attic money of the full weight: and Böckh adds the important remark, that where Pollux reckons by the lighter drachma, as in the case of the Syrian and small Egyptian talents, this only proves that those talents had not recently come into circulation. Böckh thinks it very probable that Pollux followed the authority of Aristotle, whom he used much, and who had frequent occasions for speaking of the values of money in his political works.

Again: as the \(\varepsilon\varepsilon\gamma\iota\varepsilon\) standard was that which prevailed over the greater part of Greece in early times, we should expect to find some definite proportion between it and the old Attic before Solon; and the statement of Pollux, then, we do get such a proportion, namely, that of 6:5.

Böckh supports his view by the evidence of existing coins, especially the old Macedonian, before the adoption of the Attic standard by Philip and Alexander, which give a drachma of about 110 grains, which is to the Attic as 6:5. The identity of the old Macedonian standard with the \(\varepsilon\varepsilon\gamma\iota\varepsilon\) is proved by Böckh.\(^1\) There are also other very ancient Greek coins of this standard, which had their origin, in all probability, in the \(\varepsilon\varepsilon\gamma\iota\varepsilon\) system.

The lightness of the existing coins referred to by Hussey is explained by Böckh from the well-known tendency of the ancient mints to depart from the full standard.

Böckh quotes a passage where Herodotus states that Democedes, a physician, after receiving a talent in one year at \(\varepsilon\varepsilon\gamma\iota\varepsilon\), obtained at Athens the next year a salary of 100 minae, which Herodotus clearly means was more than what he had before. But, according to Pollux's statement, the two sums were exactly equal. But Herodotus says nothing of different standards; surely, then, he meant the same standard to be applied in both cases.

From comparing statements made respecting the pay of soldiers, Hussey obtains 4:3 as about the ratio of the \(\varepsilon\varepsilon\gamma\iota\varepsilon\) to the Attic standard. Böckh accounts for this by supposing that the pay of soldiers varied, and by the fact that the \(\varepsilon\varepsilon\gamma\iota\varepsilon\) money was actually lighter than the proper standard, while the Attic at the same period was very little below the full weight.

There are other arguments on both sides, but what has been said will give a sufficiently complete view of the question.

It is disputed whether the standards of Corinth and Sicily followed that of Athens or that of \(\varepsilon\varepsilon\gamma\iota\varepsilon\). For the discussion of this question, the reader is referred to the works of Böckh and Hussey.

4. The Babylonian talent had to the Attic the ratio of 7:5, according to Pollux\(^4\) and Herodotus\(^5\) or 72:60 according to \(\varepsilon\varepsilon\gamma\iota\varepsilon\). Böckh, understanding these statements as referring to the old Attic, makes the Babylonian standard equal to the \(\varepsilon\varepsilon\gamma\iota\varepsilon\). This standard was much used for silver in the Persian empire.

5. The accounts of the \(\varepsilon\iota\kappa\alpha\omicron\alpha\nu\nu\epsilon\alpha\mu\varsigma\alpha\nu\epsilon\) or \(\pi\omicron\omicron\alpha\mu\iota\alpha\varsigma\iota\varsigma\alpha\omicron\nu\iota\omicron\alpha\varsigma\) are very confused. On the whole, it seems to have been equal to twice the Attic.

6. The \(\varepsilon\iota\kappa\alpha\omicron\alpha\omicron\varsigma\iota\alpha\) appears to have been exactly equal to the Attic.

7. A \(\varphi\omicron\omicron\alpha\nu\omicron\omicron\iota\kappa\) is mentioned by Festus in a passage which is manifestly corrupt. The most probable emendation of the passage gives 4000 cissephori or 7500 denarii as the value of this talent.

8. A \(\varsigma\iota\alpha\varsigma\iota\varsigma\varsigma\varepsilon\alpha\tau\iota\) is mentioned, the value of which is very uncertain. There were two sizes of it. The larger, which was six times that used for money, was used at Antioch for weighing wood.

9. A \(\kappa\alpha\omicron\iota\iota\varsigma\kappa\iota\varsigma\iota\) of 3000 drachme, or half the Attic, is mentioned by Pollux.

The above were used for silver, but the actual coinage was no higher than the drachma, and a few multiples of it, the highest known with certainty being 120. The mina and talent were sums of money, not coins.

A table of Attic money up to the tetradrachma is given under Drachma. The mina was 4\(\frac{1}{2}\) dr., the talent 24\(\frac{1}{2}\) dr. The \(\varepsilon\varepsilon\gamma\iota\varepsilon\) mina was, according to the existing coins, 5\(\frac{1}{2}\) dr. 7\(\frac{1}{7}\) rd., the talent 34\(\frac{1}{2}\) dr.; but, according to the statement of Pollux mentioned above, the mina was 5\(\frac{1}{2}\) dr., the talent 50\(\frac{1}{2}\) dr.

A smaller talent was in use for gold. It was equal to 6 Attic drachme, or about 4 oz. and 71 grs. It was called the gold talent, or the Sicilian talent, from its being much used by the Greeks of Italy and Sicily. This is the talent always meant

---

when the word occurs in Homer. The Italian Greeks divided it into 24 nummi, and afterward into 12, each nummus containing 2½ litre. (Compare Litha and Sestertius.) This talent was perhaps so called from the weight of gold contained in it being equal in value to a talent of copper, for the proportional value of gold to copper was 1000:1. This talent seems to have been divided into 3 minae, each equal in weight to a dirachm or stater; for the talent of Thyatira is said to have been equal to three gold staters, and Pollux states that the gold stater was equal in value to a mina.

This small talent explains the use of the term great talent (magnum talentum), which we find in Latin authors, for the silver Attic talent was greater in comparison with this. But the use of the word by the Romans is altogether very inexact.

There are other talents barely mentioned by ancient writers. Hesychius mentions one of 100 pounds (λίτρα), Vitruvius one of 120; Suidas, Hesychius, and Ephippius of 125; Dionysius of Halicarnassus of 130 asses, and Hesychius three of 165, 400, and 1125 pounds respectively.

Where talents are mentioned in the classical writers without any specification of the standard, we may generally understand the Attic.

TALIO, from talis, signifies an equivalent, but it is used only in the sense of a punishment or penalty the same in kind and degree as the mischief which the guilty person has done to the body of another. A provision as to talio occurred in the Twelve Tables: "Si membrum ruptum in eum os pacati talio esto." This passage does not state what talio is. Cato, as quoted by Priscian, says: "Si quis membrum ruptum aut os fragit, talionem proximus cognatae utiacet." The law of talio was probably enforced by the individuals or their friends: it is improbable that the penalty was inflicted under a decision of a court of justice. It seems likely that it bore some analogy to the permission to kill an adulterer and adulteress in certain cases, which the Julia lex confirmed; and if so, the law would define the circumstances under which an injured person or his cognati might take the talio. The punishment of death for death was talio; but it is not said that the cognati could inflict death for death. Talio, as a punishment, was a part of the Mosaic law: "thou shalt have an eye for an eye, a tooth for a tooth; as he hath caused a blemish in a man, so shall it be done to him again.

TALPA, the mole. (Vid. ASPALAX.)

TALUS (τάλιον), a Hucklebone. The huckle-bones of sheep and goats have often been found in Greek and Roman tombs, both real, and imitated in ivory, bronze, glass, and agate. Those of the antelope (διάκαθεσθαι) were sought as objects of elegance and curiosity. They were used to play with from the earliest times, principally by women and children, occasionally by old men. A painting by Alexander of Athens, found at Resina, represents two women occupied with this game. One of them, having thrown the bones upward into the air, has caught three of them on the back of her hand. (See the annexed woodcut, and compare the account of the game in Pollux.)

Polyngotus executed a similar work at Delphi, representing the two daughters of Pandarus thus employed (παισόνας ἄστρομον). But a more celebrated production was the group of two naked boys, executed in bronze by Polyclitus, and called the Astragalpontes. A fractured marble group representing two condemned criminals, Museum, exhibits one of the two boys in the act of biting the arm of his playfellow, so as to present a lively illustration of the account in Homer of the fatal quarrel of Patroclus. To play at this game was sometimes called νεπαλαθεῖα, because five bones or other objects of a similar kind were employed, and this number is retained among ourselves.

While the tali were without artificial marks, the game was entirely one of skill; and in ancient no less than in modern times, it consisted not merely in catching the five bones on the back of the hand, as shown in the woodcut, but in a great variety of exercises requiring quickness, agility, and accuracy of sight; and, in order to test the skill with different values, the game became one of chance. (Vid. ALEA, TESSERA.) The two ends were left blank, because the bone could not rest upon either of them, on account of its curvature. The four remaining sides were marked with the numbers 1, 3, 4, 6, 1 and 6 being on two opposite sides, and 1, 3, 4, 6 on the other. The Greek and Latin names of the numbers were as follows: 1. Μοῦνα, έλχ, κώνω, Χίσσο; 10. Οίνοι报价: Τύραιον, Τύραιον, Τύραιον, Τύραιον. By the number of the bone was indicated, according to through the hand or the broad side.

Two persons played together at this game, using four bones, which they threw up into the air, or emptied out of a dicebox (vid. Fætillus), and observing the numbers on the uppermost sides. The numbers on the four sides of the four bones admitted of thirty-five different combinations. The lowest throw of the four bones was i, 2, 3, 4; and the highest, 1, 2, 3, 4. But the value of a throw (βδόλος, jactus) was not in all cases the sum of the four numbers turned up. The highest in value was that called Venus, or jactus Venusius, in which the numbers cast up were all different, the sum of them being only fourteen. It was by obtaining this throw that the king of the feast was chosen by the Romins (auctor optimus postremus), and hence it was also called Basileus. Certain other throws were called by particular names, taken from gods, illustrious men and women, and heroes. Thus the throw consisting of two aces and two twos, making eight, which number, like the jactus Venusius, could be obtained only once, was denominata Steichos. When the object was simply to throw the highest numbers, the game

was called παχύσαρκον.1 Before a person threw the tali, he often invoked either a god or his mistress.2 These bones, marked and thrown as above described, were also used in divination.3

In the Greek mythology, Cupid and Ganymede were supposed to play together at huckle-bones on Mount Olympus,4 and they are thus represented in certain remaining specimens of ancient sculpture.5 TAMIAS (Tsimas) was paid to any person who had the care, managing, or dispensing of money, stock, or property of any description confided to him, as a steward, butler, housekeeper, storehousekeeper, or treasurer; and the word is applied metaphorically in a variety of ways. But the ταιοις who will fall under our notice in this article are certain officers intrusted with important duties by the Athenian government, and more especially the treasurers of the temples and the revenue.6

In ancient times, every temple of any importance had property belonging to it, besides its furniture and ornaments, and a treasury where such property was kept. Lands were attached to the temple, from which rents accrued; fines were made payable to the temple; and other property was dedicated to the temple by the public; and various sacred offerings were made by individuals. There was a ταμιαί τῶν χρυσῶν, who, together with ἵπποπαι and ἵερσοιοι, had the custody and management of these funds. The wealthiest of all the temples at Athens was that of Minerva in the Acropolis, in which were kept the spoils taken from the Persians (cf. Perseus), and other property dedicated to the public; and various sacred offerings were made by individuals. There was a ταμιαί τῶν θεῶν, or τῶν τῆς θεᾶς, or ταμιαί χρυσῶν τῆς θέου, and sometimes simply ταιοις.7 They appear to have existed from an early period. Herodotus8 relates that the ταιοις τῶν λεγον, with a few more, woman, awaited the attack of Xerxes upon the Acropolis, and perished in its defence. They were ten in number, chosen annually by lot from the class of Pentactosmedimni, and afterward, when the distinction of classes had ceased to exist, from among the wealthiest of Athenian citizens. The treasurers of the other gods were chosen in like manner; but they, about the 9th Olympiad, were all united into one board, while those of Pallas remained distinct.9 Their treasury, however, was transferred to the same place as that of Minerva, viz., to the Opisthodomus of the Parthenon, where were kept not only all the treasures belonging to the temple, but also the state treasure (βασιοι χρυσαρία, as distinguished from λεγον), under the care of the treasurers of Pallas.10 All the funds of the state were considered as being in a manner consociated to Pallas; while, on the other hand, the people reserved to themselves the right of making use of the sacred moneys, as well as the other property of the temples, if the safety of the state should require it.11 Payments out of state revenue were referred to the treasurers of the senate, just as public moneys were by the apodectae; and then the treasurers became responsible for their safe custody. As to fines, see

1550

EPHILE. PRAXI. E., and on the whole of this subject, Böckh, Staatsl. der Athen, i., 172—176. The treasurer of the revenue, ταμιαίς (or ἐπιτάφῳ τῆς κοινῆς προσόδου, was a more important personage than those last mentioned. He was not a mere keeper of moneys like them, nor a mere receiver like the apodectae, but a general paymaster, who received, together with the apodectae, the public moneys, but was subject to a stricter discipline for the purposes of the administration (except the property-taxes, which were paid into the war-office, and the tribute from the allies, which was at first paid to the hellenotami, and afterward to other persons hereafter mentioned), and then distributed it in such manner as he was required to do by the law; the surplus (if any) he paid into the war-office or the treasury fund. As this person knew all the objects in which the public money had to flow, and exercised a general superintendent over the expenditure, he was competent to give advice to the people upon financial measures, with a view to improve the revenue, introduce economy, and prevent abuses; he is sometimes called ταμιαί τῆς διοικήσεως, or ὅ ἐν τῇ διοικήσει, and may be regarded as a sort of permanent finance minister. To this officer appealed Ἡλλ. Equiti., 947. He was elected by χηροτοιον, and held his office for four years, but was capable of being re-elected. A law, however, was passed during the administration of Lycurgus, prohibiting re-election; so that Lycurgus, who is reported to have continued in office for twelve years, must have held it for the last eight years under fictitious names. The point of this office was by no means free from control, inasmuch as any individual was at liberty to propose financial measures, or institute criminal proceedings for malversation or waste of the public funds; and there was an ἄντιγραφος of the διοικήσεως appointed to check the accounts of his superior. Anciently there were persons called πευγαρνα, who appear to have assisted the ταιοις in the discharge of their duties.1 (Vid. Porstal.) The money disbursed by the treasurer of the revenue was sometimes paid directly to the several persons in the employ of the government, sometimes through subordinate pay offices. Many public functionaries had their own paymasters, who were dependant on the ταμιαίς τῆς προσόδου, receiving their funds from him, and then distributing them to the persons to whom they were designated. One person was called τοιοτος, τιχοτος, διατος, ταρτος, ἐκεμελητής νεωτος, who received through their own ταιοις such sums as they required from time to time for the prosecution of their works. The payment of the judicial fees was made by the colacretse (καλακρητα), which, and the providing for the meals in the Prytaneum, were the only duties that remained to them after the establishment of the apodectae by Chlistenes.2 The ταιοις of the sacred vessels, τους Παρηλαν ἡ Σαλαμονίας, acted not only as treasurers, but as triarchæs; the expenses (amounting for the two ships together to about sixteen talents) of them being paid by the state. They were elected by χηροτοιον.3 Other triarchæs had their own private ταιοις for the keeping of accounts and better despatch of business.4 Our καλακρητα are spoken of in a separate article. (Vid. Hellenotami.) The war fund at Athens (independently of the tribute) was provided from two sources; first, the property-tax (vid. Eisphora); and, secondly, the surplus of the yearly revenue, which remained after defraying the expenses of the civil administration. τα περιστα χρήματα τῆς διοικήσεως. Of the tax

TAPES.

TAXIARCHI.

στρατηγοὶ who were annually elected to preside over the war department, one was called στρατηγὸς ὁ ἐκ τῆς διοικήσεως, to whom the management of the army was committed. He had under him a treasurer called ταμίας τῶν στρατιωτικῶν, who gave out the pay of the troops, and defrayed all other expenses incident to the service. Demosthenes, perhaps on account of some abuses which had sprung up, recommended that the general should have nothing to do with the military fund, but that the treasurer should be under the direct control of the chief officers, τάμιας καὶ δημιουργίας, who should be accountable for its proper application: τῶν τοῦ κράτος ἱππότων λόγων, τῶν τῶν κατηγορίων ἱππότων, τῶν τῶν ἱπποτικῶν ἱππότων, τῶν τῶν ἱππότων ἱππότων. The passage just cited confirms the opinion of those who think that in Demosthenes* the words ὁ ἐκ τῆς διοικήσεως refer to a στρατηγὸς so designated, and not to the ταμίας τῶν στρατιωτικῶν.

So much of the surplus revenue as was not required for the purposes of war, was to be paid by the treasurer of the revenue into the theoretic fund, of which, after the archonship of Euclides, special managers were created. (Vid. ΘΕΟΡΙΚΑ.)

Lastly, we have to notice the treasurers of the demi, the tribe, and the village. The tribe, φάρμακα, who had the care of the funds belonging to their respective communities, and performed duties analogous to those of the state treasurers. The demi, as well as the tribes, had their common lands, which were usually let to farm. The rents of these formed the principal part of their revenue. Φάρμακα, φάρμακα, and other local functionaries, were appointed for various purposes; but with respect to their internal economy we have but scanty information.

*TANUS (τάνος), a sort of hardast Emerald, consisting of crystal tinged by an admixture of metallic particles. In the old editions of Theophrastus (De Lapid., c. 45), we have a small lacuna after τῶν διαμέτρων fr. τανών. The lacuna was filled by appending a capital To to ανών, and thus forming Τανώς, whence we get our term Tano. Others, however, read Βαντριάς, filling up the lacuna with Βαντρι, and this latter is the more received reading.

The use of tapestry was in very ancient times characteristic of Oriental rather than of European habits. We find that the Assyrians, including the Egyptians, and also the Carthaginians, who were of Asiatic origin, excelled in the manufacture of carpets, displayed them on festivals and other public occasions, and gave them as presents to their friends. They were nevertheless used by the Greeks as early as the age of Homer,* and by some of the later Roman emperors they were given as presents to the combatants at the Circus games. The presence of tapestry in the tombs of Vector and the Babylon† (vid. BABYLONIUM), Tyre and Sidon, Sardes, Miletus, Alexandria, Carthage, and Corinth.* In reference to the texture, these articles were distinguished into those which were light and thin, with but little nap, chiefly made at Sardes, and called φυλόπταλοι, and those in which the nap (μαλλίον) was more abundant, and which were soft and bulky. (Diog. Laert., v., 72.) The thickest and more expensive kinds (μαλλίστα) resembled our baize or drugget, or even our soft and warm blankets, and were of two sorts, viz., those which had the nap on one side only (ετερόμαλλον)), and those which had it on both sides, called διαφάνεια, ἀμφιτάλαι, and ἀμφικομικά. The thickness of these blankets was always used, like our blankets, in single pieces, and the tapestries were used for the loom (vid. PALLIUM), carpets were often sewed together. They were frequently of splendid colours, being dyed either with the kermes or with the murex (ἀλοιφή, ἀλόεφόρος), and having figures, especially hunting-pieces, woven into them. These fine specimens of tapestry were spread upon thrones in the room of the hall of state, and on the thrones of the palace, and in the houses of the rich, as in the Orientals, upon occasions of state and ceremony, spread carpets both over their floors and upon the ground. Besides the terms which have now been explained, the same articles of domestic furniture had denominations arising from the mode of using them either the TUKLION (triclinaria Babylonica), or in the Curriculum (curriculum polythein;) and especially from the constant practice of spreading them out (textile stragulum; stratum; vestis stragula). The Greek term περιστρεμα, which was transferred into the Latin, had a special signification, meaning probably a coverlet made so large as to hang round the sides of the bed or couch upon benches, couches, or sofas at entertainments, more especially at the performances of persons of distinction. Catullus represents one to have been so employed, which exhibited the whole story of Theseus and Ariadne. They were even used to sleep upon, and for the clothing of horses. The tapestry used to decorate the bier and coffins of the Roman emperors was interwoven with gold, in the Oriental fashion, upon occasions of state and ceremony, spread carpets both over their floors and upon the ground.

TAPHER (ταπερ). (Vid. FUSUS, p. 457.)

TARANDUS (τάρανδος), the Reindeer, or Cerus Tarandus. L. Such, at least, is the general opinion of naturalists. Schneider, however, refers to it the Elk, or Cerus alces. L."

TARENTIUS LUDI. (Vid. LUDI SACELLARIS."

TARSHI LUDI. (Vid. LUDI SACELLARIS.)

TAXIARCHI (ταξιαρχος) were military officers at Athens, who were next in rank to the strategi. (Vid. STRATEGUS.) They were ten in number like the strategi, one for each tribe, and were elected in the same way, namely by χαλήθρα and were commanded in turn by the commander of his own tribe, and they were frequently called to assist the strategi with their advice at the war-council. In peace they as
sisted the strategy in levying and enlisting soldiers, as stated under Synarchos, and seem to have also assisted the latter in the discharge of many of their other duties.

The taxiarchoi were so called from their commanding τάξεις, which were the principal divisions of the hoplites in the Athenian army. Each tribe (φιλάχι) formed a τάξις, whence we find φιλάχι used as synonymous with τάξις. As there were ten tribes, there were, consequently, in a complete Athenian army, ten τάξεις, but the number of men would, of course, vary according to the importance of the war. Among the other Greeks the τάξις was the name of a much smaller division of troops. The λόχος among the Athenians was a subdivision of the τάξεις, and the λόχαγοι were probably appointed by the taxiarchoi.

ΤΑΧΙΣΤΟΣ (τάξις). (Vid. Taxiarchoi.)

ΤΑΧΟΣ (τάχος), the Yew-tree, or Tassus baccata, L. The Tassus receives from Virgil the epithet of nocens, or "hurtful," because the berries of this tree pass for poisonous. The same opinion appears to have been prevalent during the Middle Ages, and still forms an article of popular belief. It has even been regarded as dangerous to sleep for some hours under the shade of this tree. A modern writer, however (M. Percy), has set himself in opposition to this very prevalent opinion, and maintains that the berries of the yew are innocuous, and merely possess a slight purgative property, which might be usefully employed in medicine. The yew is indigenous to the North. In southern countries, therefore, it seeks a mountainous and cold region. Hence it flourishes in Corsica. The wood might be turned to a variety of useful purposes: the Iturans of antiquity, dwelling in Cœle-Syria, made bows of it. Its sombre foliage and general appearance have caused it to be selected by the moderns as a funereal tree.

ΤΕΓΙΛΑ (κέμφωρος, διμ. κέμφαρις), a roofing-tile. Roofing-tiles were originally made, like bricks, of baked clay (γῆς όπτής). Byzes of Naxos first introduced tiles of marble about the year 680 B.C. Besides the superior beauty and durability of the material, these tiles could be made much larger size than those of clay. Consequently, when they were employed in the construction of the greatest temples, such as that of Jupiter at Olympia, the Parthenon at Athens, and the Serapeum at Puteoli, their dimensions were in exact proportion to the other parts of the building; and the effect of the parallel rows of joint-tiles descending from the ridge to the eaves, and terminated by ornamental frontons, with which the lintel-heads (capita loni- nae; σιλώρατα) over the cornice alternated, was exceedingly grand and beautiful. How highly this invention was prized by the ancients is proved by the attempt of the Roman censor Q. Fulvius Flaccus to despoil the temple of the Lapician Juno of some of its marble tiles (tegulae marmoreae), in order to adorn another temple which he had vowed to erect in Rome. A still more expensive and magnificent method of roofing consisted in the use of tiles made of bronze and gilt.

Tiles were originally made perfectly flat, or with nothing more than the hook or nozzle underneath the upper border, which fulfilled the purpose of fixing them upon the rafters. They were afterward formed with a raised border on each side, as is shown in the annexed woodcut, representing the section of four of the tiles remaining at Pompeii.

In order that the lower edge of any tile might overlap the upper edge of that which came next below it, its two sides were made to converge downward. See the next woodcut, representing a tiled roof, from a part of which the joint-tiles are removed, in order to show the overlapping and the convergence of the sides. It was evidently necessary to cover the lines of junction between the rows of flat tiles, and this was done by the use of semicylindrical tiles called imbrices. The above woodcut shows the section of three imbrices found at Pompeii, and indicates their position relatively to the flat tiles. This is also shown in the next woodcut. The roof also, by the exact adaptation.

of the broad tegula and the narrow imbrices throughout its whole extent, became like one solid and compact framework. The rows of joint-tiles divided the roof into an equal number of channels, down which the water descended into the gutter (canalis), to be discharged through openings made in the lions' heads, the position and appearance of which are shown in the woodcuts. The rows of flat tiles were terminated in a variously ornamented front, which rose immediately above the cornice, and of which specimens are shown in the first woodcut. The first and fourth patterns are drawn from tiles found at Pompeii, and the two internal from tiles preserved in the British Museum, and brought thither from Athens. The lions' heads upon the third and fourth are perforated. (Vid. Antverp. Col., p. 289.) The frontons, which were ranged along the cornice at the termination of the rows of joint-tiles, were either painted or sculptured so as to represent leaves, aplustris (vid. Aplustrae), or masks. The first woodcut shows three examples of such frontons, which belong to the Elgin collection in the British Museum. They are drawn on a much larger scale than the other objects in the same woodcut. The invention of these graceful ornaments is ascribed to Dibutades of Corinth.

Other highly curious details upon the tiled roofs of Greek temples may be seen in the Uneditted Antiquities of Attica, Lond., 1817.

The same arrangement of tiles which was placed round a temple was also to be found within a house which was formed with an opening in the centre. Hence any person who descended from the roof

1. (Xen., Mem., iii, 1, 9.) = 2. (Plin., H. N., xxv, 12, s. 43)
TEL.

into the open court or impluvium of a house (vid. House, p. 616, 619) was said to pass "through the ilex" (per sigillae dii tiv kerpwos). Fliny mentions a kind of tiling under the name αμμακοσκοι 2 so called probably because the tiles were semicircular; at their lateral tip they had lapped one another like the feathers in the train of a peacock

TEICHOPOLIUS (τειχοπολιος). Among the various persons to whom was intrusted the management of public works at Athens (πεισταται δημοτων ἐργας) were those whose business it was to build and maintain the walls. It was therefore necessary to observe how important to the city of Athens her walls and fortifications, more especially the long walls, which connected the upper city with the Piraeus, which gave it the advantages of an island. These were maintained at considerable expense. The τειχοποιοι appear to have been elected by χειροκρατει, one from each tribe, and probably for a year. They were considered to hold a pro-

fessional office (ἀρχηγος), and in that capacity had an ᾨγεριον δικαιστηριον. Echines calls them πεισταται του μεγίστου των ἐγρων. Funds were put at their disposal, for which they had their treasurer (τραγειος), dependant on the treasurer of the revenue. They were liable to render an account (ἐθνθων) of their management, and were subject to a general conduct, like other magistrates. The office of τειχοποιοι has been invested with peculiar interest in modern times on account of its having been held by Demosthenes, and its having given occasion to the famous prosecution of Ctesiphon, who proposed that Demosthenes should receive the honour of a crown or laurel wreath for the part he had taken in the case of the ius Sedulius. As to the nature of the office, and the laws thereto relating, we may probably rely upon the account given by Echines.

TEL (τελη), a Loom. Although weaving was among the Greeks and Romans a distinct trade, car-

ried on by a separate class of persons (ἐφαντευμενες, teca-

iores and tessines, tectines), who more particularly supplied the inhabitants of the towns with weaving. The work was there principally carried on by female slaves (quaesitiae, et επιβολα), under the super-

intendence of the mistress of the house, who herself also, together with her daughters, took part in the labour, both by instructing beginners, and by finishing the more tasteful and ornamental parts. 12 But although weaving was employed in providing the ordinary articles of clothing among the Greeks and Romans from the earliest times, yet, as an intimate and decorative art, subservient to luxury and refinement, it was almost entirely Oriental. Persia, Babylonia, Egypt, Phænicia, Phrygia, and Lydia, are all celebrated for the wonderful skill and magnificence displayed in the manufacture of scarfs, shawls, carpets, and tapestry. (Vid. Babylonicum, Chlamys, Pallium, Paeplum, Tapes.)

Among the peculiarities of Egyptian manners, Herodotus 1 mentions that weaving was in that country divided among the various races or tribes of the desert. This custom still continues among some Arabia and negro tribes. 2 Throughout Europe, on the other hand, weaving was in the earliest ages the task of women en only. The matron, assisted by her daughters, wore clothing for the husband and the sons. 3 This domestic custom gives occasion, in the works of the poets, to a number of very interesting δοκομούς and expressions of affection towards their relatives. Indeed, the recognition, or ἀγαθαικος, as Aristotle calls it, 4 often depends on this circumstance. Thus Orestes proves herself to be the mother of Ion 5 by describing the pattern of a shawl which she had made in her youth, and in which she had wove her infant son. Iphigenia recogni-

zes her brother Orestes on one occasion, 6 and Electra recognizes him on another, 7 by the figured clothing which he wore, and which they had long before wove for him.

Besides the shawls which were frequently given to the temples by private persons, or obtained by commerce with foreign nations, companies or col-

lections of woven draperies were formed, of which the more opulent temples had the use, and were the object of considerable temples. Among the sixteen women, who lived together in a building destined to their use at Olympia, wove a new shawl every five years to be displayed at the games which were then celebrated in honour of Hera, and to be preserved in her temple. 8 (Vid. Panathen. de.) The women of the City of Priene were devoted to the purpose of weaving a tunic every year for the sitting statue of the Amyolean Apollo, which was thirty cubits high. 9 At Athens the company of virgins called ἐγκρισιαι τα ἐγκρισιαι, and ἀγορασμοι, who were partly of Asiatic extraction, wove the shawl which was carried in the Panathenic procession, and which represented the battle between the gods and the giants. 10 (Vid. Aristocra-

nia, Panath. de, p. 723.) A similar occupation was assigned to young females of the highest rank at Argos. 11 In the fourth century, the task of weav-

ing began to be transferred in Europe from women to the other sex, a change which St. Chrysostom expounded, by saying it was a prevailing sloth and effemin-

acy. 12 Vegetius, 13 who wrote near the close of the Roman empire, speaks of some who were occupied in the weaving which is called linterae, or the manufacturers of linen cloth, in the number of those who were ineligible as soldiers.

Everything woven consists of two essential parts, the warp and the woof, called in Latin staminum and submagenum, submenum, or trama, 14 in Greek στρωμα and κοσκος. Instead of spindle, the spindle sometimes used ἀπομην, and in the passages referred to he mentions lintones, or the manufacturers of linen cloth, in the number of those who were ineligible as soldiers.

1 F.
in the cotton manufacture tosit from west. Another name for the woof or tram was possum. The warp was called stamen in Latin (from stare), on account of its erect posture in the loom. The corresponding Greek term στήνωμα, and likewise λευκός, have evidently the same derivation. For the same reason, the very first operation in weaving was to set up the loom, λευκός στήνωμα; and the web or cloth, before it was cut down, or "descended" from the loom (καλέτα ἀπὸ λευκός), was called νεάστης πεννής, or "pendula tela," because it hung from the transverse beam or Julia. These particulars are all clearly exhibited in the picture of Circe's loom, which is contained in the very ancient illus. of Virgil's Aeneid preserved at Rome in the Vatican Library. (See the annexed woodcut, and compare Virgil, opus maiorum stantes tezobant.) Although the upright loom here exhibited was in common use, and employed for all ordinary purposes, the practice, now generally adopted, of placing the warp in a horizontal position was occasionally resorted to in ancient times; for the upright loom (stans tela, λευκός ὀδής), the management of which required the female to stand and move about, is opposed to another kind at which the sat. was set.

We observe in the preceding woodcut, about the middle of the apparatus, a transverse rod passes through the warp. A straight cane was well adapted to be so used, and its application is clearly expressed by Ovid in the words "stamen secernit arundo." In plain weaving it was inserted between the threads of the warp so as to divide them into two portions, the threads on one side of the rod alternating with those on the other side throughout the whole breadth of the warp. The two upper beams supporting the jugum, or transverse beam from which the warp depends, were called κελευτής and λευκόδρομος, literally, "the legs of the loom." While the improvements in machinery have to a great extent superseded the use of the upright loom in all other parts of Europe, it remains almost in its primitive state in Iceland. The following woodcut is reduced from an engraving of the Icelandic loom in Olaf Olafsen's Economic Tour in that island, published in Danish at Copenhagen, A.D. 1789. We observe underneath the jugum a roller (dextror),(4) which is turned by a handle, and on which the warp passes as the work advances. The threads of the warp, besides being separated by a transverse rod or plank, are divided into thirty or forty parcels, to each of which a stone is suspended, for the purpose of keeping the warp in a perpendicular position, and allowing the necessary play to the strokes of the spaths, which is drawn at the side of the loom. The following ode written about the eleventh century of our era, with which Gray has made us familiar in his translation, and which describes the loom of "the Fatal Sisters," represents warriors' sculls as supplying the place of these round stones (pondera). The knotted bundles of threads to which the stones were attached often remained after the web was finished in the form of a fringe. (Vid. Fimbri.)

While the comparatively coarse, strong, and much-twisted thread, designed for the warp, was thus arranged in parallel lines, the woof remained upon the spindle (vid. Fimbri), forming a spool, bobbin, or pen (πύργος, δίαμ. πήλιον). This was either conveyed through the warp without any additional contrivance, as is still the case in Iceland, or it was made to revolve in a shuttle (πανολίς, ταῖνα). This was made of box brought from the shores of the Euxine, and was pointed at its extremities, that it might easily force its way through the warp. The annexed woodcut shows the form in which it is still used in some retired parts of our island for common domestic purposes, and which may be regarded as a form of great antiquity. An oblong cavity is seen in its upper surface, which holds the bobbin. A small stick, like a wire, extends through the length of this cavity, and enters its two extremities so as to turn freely. The small stick passes through a hollow cane, which our manufacturers call a quill, and which is surrounded by the wool. This is drawn through a round hole in the front of the shuttle, and, whenever the shuttle is thrown, the bobbin revolves, and delivers the wool through this hole. The process of winding the yarn so as to make it into a bobbin or pen was called πυριζοθαι or ἀναπυριζοθαι. The reverse process, by which it was delivered through the hole in front of the shuttle (see the last woodcut), was called ἐπηριζοθαι. Hence the phrase ἐπηριζοθαι ῥατᾶ means "he shall dispose these things." All that is effected by the shuttle is the conveyance of the wool across the warp. To keep every thread of the wool in its proper place, it is necessary that the threads of the warp should be dissuaded. This was done by the leashes, called in

Latin liecia, in Greek μῦρος (μύρος). By a leash we are to understand a thread, having at one end a loop, through which a thread of the warp was passed, the other end being fastened to a straight rod called liciarium, and in Greek κλειών. The warp, having been divided by the arundo, as already mentioned, into two sets of threads, all those of the same set were passed through the loops of the corresponding set of leashes, and all these leashes were fastened at their other end to the same wooden rod. At least one set of leashes was necessary to decussate the warp even in the plainest and simplest weaving. The number of sets was increased according to the complexity of the pattern, which was called bitis or trixtis, δύτος, τριτός, or πολύτος, according as the number was two, three, or more.

The process of annexing the leashes to the warp was called ordiri telam, also liecia telae addere, or adiectere. It occupied two women at the same time, one of whom took in regular succession each separate set, drew upon this, in the pater os as the other; this part of the process was called παραφέρειν, παραφάνινα, or προφερεσθαι. The other woman, as she received each thread, passed it through the loop in proper order, and this act, which we call "entering," was called in Greek διαστάσια.

Supposing the warp to have been thus adjusted, and the threads thus, one after another, through it, it was then decussated, by drawing forward the proper rod so as to carry one set of the threads of the warp across the rest, after which the woof was shot back again, and by the continual repetition of this process the warp and woof were interlaced. In the preceding figure of the Icelandic loom we observe two staves, which are oared, or, more properly, called the "warp," as is most convenient to assist the weaver in drawing her woof across her warp. After the woof had been conveyed by the shuttle through the warp, it was driven sometimes downward, as is represented in the first woofcut, but more commonly upward, as in the second. Two different instruments were used for the purpose, the simplest, and probably the most ancient, was in the form of a large wooden sword (σπαθα, σπάθυς, διμ. σπαθόντα). From the verb σπαδικο, to beat with the spatha, cloth rendered close and compact by this process was called σπαδικτρός. This instrument is still used in Iceland exactly as it was in ancient times, and is, as the threads are frequently carried from Olafsen, is given in the second woofcut.

The spatha was, however, in a great degree superseded by the comb (pecten, κέρας), the teeth of which were inserted between the threads of the warp, and thus made, by a forcible impulse, to drive the threads of the wool close together. It is probable that the teeth were sometimes made of metal, and that the spatha was gradually replaced by being curved (pectinis unci15), as is still the case in the combs which are used in the same manner by the Hawaiians. Among us the office of the comb is executed with greater ease and effect by the reed, laid, or batten.

The lyre (vid. Lyra), the favourite musical instrument of the Greeks, was only known to the Romans as a foreign invention. Hence they appear to have described its parts by a comparison with the lyre, with which they were familiar. The terms jugum and stamina were transferred by an obvious resem- blance from the latter to the former object; and, although they adopted for the Greek word spectrum,1 they used the Latin Pecren to denote the same thing, not because the instrumen t used in striking the lyre was at all like a comb in shape and appearance, but because it was held in the right hand, and inserted between the staminia of the lyre, as the comb was between the staminia of the harp.

After enumerating those parts of the lyre which were necessary to produce even the plainest piece of cloth, it remains to describe the methods of producing its varieties, and more especially of adding to its value by making it either warmer and softer, or more rich and ornamental. If the object was to produce a checked pattern (scutulis dividere), or to give what we should call the warp threads a ragged or striped effect, and the wool or nap (κρέβα, κρέβες) made more abundant in proportion. In this manner they made the soft χαλινα or λαμα. (Vid. Pallium, p. 718.) The woof also was the medium through which almost every other diversity of appearance and quality was effected. The warp, as mentioned above, was generally cut in regular intervals the same breadth as the distance of the woof, or instead of being cut as the woof was shot, as the woof and for the woof. The consequence was, that after the piece was woven, the fuller drew out its nap by carding, so as to make it like a soft blanket7 (vid. Follo, p. 453); and, when the intention was to give what we should call the warp threads a ragged or striped effect, and the wool or nap (κρέβα, κρέβες) made more abundant in proportion. In this manner they made the soft χαλινα or λαμα. (Vid. Pallium, p. 718.) On the other hand, a striped pattern (παλιόρητσα, κρήματα σαγηνα) was produced by using a warp of one colour only, but changing at regular intervals the direction of the threads. Hence the warp threads of the Roman trabea was an example. Checked and striped goods were, no doubt, in the first instance, produced by combining the natural varieties of wool, white, black, brown, &c. (Vid. Pallium, p. 718.)

The wool also was the medium through which almost every other diversity of appearance and quality was affected. The warp, as mentioned above, was generally cut in regular intervals the same breadth as the distance of the woof, or instead of being cut as the woof was shot, as the woof and for the woof. The consequence was, that after the piece was woven, the fuller drew out its nap by carding, so as to make it like a soft blanket7 (vid. Follo, p. 453); and, when the intention was to give what we should call the warp threads a ragged or striped effect, and the wool or nap (κρέβα, κρέβες) made more abundant in proportion. In this manner they made the soft χαλινα or λαμα. (Vid. Pallium, p. 718.) On the other hand, a striped pattern (παλιόρητσα, κρήματα σαγηνα) was produced by using a warp of one colour only, but changing at regular intervals the direction of the threads. Hence the warp threads of the Roman trabea was an example. Checked and striped goods were, no doubt, in the first instance, produced by combining the natural varieties of wool, white, black, brown, &c. (Vid. Pallium, p. 718.)

and the Germans zwitlichi. The poets apply trilix, which in German has become drilich, to a kind of armour, perhaps chain-mail, no doubt resembling the pattern of cloth which was denoted by the same term. In the preceding figure of the Iliad, the three rods with their leashes indicate the arrangement necessary for this texture. All other fabrics of this kind of weaving are very complicated apparatus of the same kind (plumaria licia), and were therefore called polymia.

The springs or other ornaments produced in the texture at regular intervals were called flowers (kövye; θόρυον) or feathers (pluma). Another term, adopted with reference to the same machinery, was ζυγον or ζαυρον, denoting velvet. In the Middle Ages it became ζιγων, and thus produced the German Ziegeln.

The Fates are sometimes mentioned by classical writers in a manner very similar to the description of "the Fatal Sisters" above referred to (Dira sororum licia; ζατορα inexcactibiliter contorta licia). As far as we can form a judgment from the language and descriptions of ancient authors, the productions of the loom appear to have fallen in ancient times into three classes: (1) the low, or rather variety of the damasks, shawls, and tapestry of the present age, and to have vied with the works of the most celebrated painters, representing first mythological, and afterward scriptural subjects. In addition to the notices of particular works of this class, contained in the passages and articles which have been already referred to, the following authors may be cited: (2) the name of the finest specimens of weaving: Eurip., Ion, 190-202, 1141-1165. Aristot., Met. 993b. Bockh., p. 541. — Astieri, Homiliæ in Div. et Laz. — Theod. Prochor. Rhet. et. Dos. Amor. ad fin. — Virg., Æn., 250-257; Æneid, 2:1-25. — Ovid, Met., vi, 61-126. — Stat., Theog., vi, 540-547. — Aen., Epic. 28. — Lamprid., Halieus, 28. — Claudian. De P. Cons. Hist., 249-251 in politica, ii, 330-365.

TELEMAONES (Vid. Atlantes.)

*TELETHONION (τελεόνιον), a plant which Stephens and Hardouin call the Optine, i.e., Sedum Telephonum. Sprengel, although, however, he inclined to this opinion in his R. H. F., seems in his edition of Dioscorides to join Sibthorp and others in referring it to the Cerinthe minor. The leaves of this plant were sometimes used by lovers in a species of divination; the leaf, laid on the thumb and forefinger, being smartly struck with the right hand, yielded a sound from which the sentiments of the beloved object were guessed. *

TELETAI (τελεται). (Vid. Mysteria.)

*TELEIS (τηλείας), the Trigemina Fanum Gracum, or Fennycwrig.

TELOKEONES (τελοκεόν). Most of the taxes at Athens were farmed by private persons, who took upon themselves the task of collecting, and made periodical payments in respect thereof to the state. They were called by the general name of τελοιω, while the farmers of any particular tax were called οικοτοιω, πεντηκοτοιω, &c., as the case might be. The duties were let by auction to the highest bidder. Companies often took them in the name of one person, who was called ἄρχων or τελονταρχός, and was their representative to the state. Sureties were required of the farmer for the payment of his dues. The office was frequently undertaken by resident aliens, citizens not liking it, on account of the vexatious proceedings to which it often led. The farmer was armed with considerable powers: he carried with him his books, searched for contraband or uncustomed goods, watched the harbour, markets, and other places, to prevent smuggling, or unlawful and clandestine sales; brought a φάσις or other legal process against those of his dues. Indeed, if he caught thieves, or defrauded any person on some occasions, or took them before the magistrate. To enable him to perform these duties, he was exempted from military service. Collectors (τελοκέται) were sometimes employed by the farmers, but frequently the farmer and the collector were the same person. *

The taxes were let by the commissioners, acting under the authority of the senate. (Vid. Pollet.) The Athenian courts of justice were often conducted by the farmer on stated ptyptaneis in the senate-house. There was usually one payment made in advance, προκαταβολή, and one or more afterward, called προσκαταβολή. Upon any default of payment, the farmer became ἅρμα if a citizen, and he was liable to be imprisoned at the discretion of the court, upon an information laid against him. If the debt was not paid, the gardens, vineyards, and even the houses of the debtor, or the property respecting him, or the revenue; by even seized his persons on some occasions, or took them before the magistrate. To enable him to perform these duties, he was exempted from military service. Collectors (τελοκέται) were sometimes employed by the farmers, but frequently the farmer and the collector were the same person. *

The taxes were let by the commissioners, acting under the authority of the senate. (Vid. Pollet.) The Athenian courts of justice were often conducted by the farmer on stated ptyptaneis in the senate-house. There was usually one payment made in advance, προκαταβολή, and one or more afterward, called προσκαταβολή. Upon any default of payment, the farmer became ἅρμα if a citizen, and he was liable to be imprisoned at the discretion of the court, upon an information laid against him. If the debt was not paid, the gardens, vineyards, and even the houses of the debtor, or the property respecting him, or the revenue; by even seized his persons on some occasions, or took them before the magistrate. To enable him to perform these duties, he was exempted from military service. Collectors (τελοκέται) were sometimes employed by the farmers, but frequently the farmer and the collector were the same person. 

The Athenians, and collected at home, were either ordinary or permanent sources of income; the latter were only raised in time of war or other emergency. The ordinary taxes were laid mostly upon property, and upon citizens indirectly in the shape of toll or customs, though the resident aliens paid a poll-tax, called μινιαίοιοσ, for the liberty of residing at Athens under the protection of the state. (Vid. Metcalf.) As to the customs and harbour dues, see Pantecontes. An excise was paid on all sales in the market, called ἑκιών, though we know not what the amount was; and a duty was imposed on aliens for permission to sell their goods there. Slave-owners paid a duty of three obols for every slave they kept, and slaves who had been emancipated paid the duty. A new tax was imposed by the fortification of Deceleia by the Lacedaemonians. There was also a πορκιφο σκότουσι, and some others of minor importance, as to which reference is made to Bökck. The justice fees (πτωτανία, παράστασις, &c.) were a lucrative tax in time of peace.

The extraordinary taxes were the property-tax, and the compulsory services called λεσαργυρια. Some of these last were regular, and recurred annually; the most important, the ρηγώμα, was a war-service, and performed as occasion required. As these services were all performed, wholly or partly, at the expense of the individual, they may be regarded as a species of tax. (Vid. Eispoura, Lutourdga, Thierardia.)

The tribute (φόριο) paid by the allied states to the Athenians formed one of the flourishing period of the Republic, a regular and most important source of revenue. In Olypm. 91, 2, the Athenians substituted for the tribute a duty of five per cent. (εκάστοτοι) upon all commodities exported or imported by the subject states, thinking to raise by this means a larger income than by direct taxation. This was terminated by the issue of the Peloponnesian war,
Though the tribute was afterward revised on more equitable principles, under the name of σώφρια. 1

A duty of ten per cent. (δέκατον) on merchandise passing into and from the Euxine Sea was established for a time by Alexiades and other Athenian generals, who fortified Chrysopolis, near Chalcis and Thasus, and built a station for the collection of the duty called δεκατήριον. This occurred in B.C. 92. It was lost after the battle of Ægospotamos, afterward revived by Thrasybulus, and probably ceased at the battle of Antalcidas. 2 This may be regarded as an isolated case. In general, where δεκατάτωρ are mentioned among the Greeks, they denote the tithe of land, such as the Persian satraps collected from conquered countries, or such as tyrants exacted of their subjects for the use of land held under them as lord of the whole country. For instance, Pisistratus took a tithe of this kind, which was reduced by his sons to a twentieth. The state of Athens held the tithe of some lands; other tithe were assigned to certain persons or cities, of the gods, having been dedicated by pious individuals, or by reason of some conquest or vow, such as that recorded by Herodotus. 3

Other sources of revenue were derived by the Athenians from their mines and public lands, fines and confiscations. The public demesne lands, whether pasture or arable, houses or other buildings, were called ἀρχῶν or στάτων; the conditions of the lease were engraved on stone. The rent was payable by ptyranées. If not paid at the stipulated time, the lessee, if a citizen, became ἄυγος, and subject to the same consequences as any other state debtor. 4 As to fines and confiscations, see ἀσίματα, τέραια, συνείς ἡμέρας.

The revenue produced, according to Aristophanes, an annual income of two thousand talents in the most flourishing period of the Athenian empire. 5 See the calculations of Böckh. 6

Τελείον signifies "to settle, complete, or perfect," and hence "to settle an account," and generally "to pay," assign to creditors or owners. It means any payment in the nature of a tax or duty. The words are connected with zahem in German, and the old sense of tāc in English, and the modern word toll. 7 Though τέλος may signify any payment in the nature of a tax or duty, it is more commonly used of the ordinary taxes, as customs, &c. Τέλος, τελείον, is used with reference to the property-tax, in the sense of whatever is due to the state, which is the same thing, belonging to a particular class of ταύται ῥαγείων. Thus ιστίπαδα, or ἵππον τελείον, or ἔλεγχον τελείον, means to belong to the class of creditors; and the same expression is used metaphorically, without any immediate reference to the payment of a tax. Thus εἷς ἐντρίας τελείον is to be classed among "taxes," near Chalcis, mentioned in the testament of Villalobos, 8 by Boudicca, and was associated with the confessories of Wol. As to the farming of the taxes, see Τελονία. For an epitome of the whole subject, see Schömann. 9

TENEMOS (τενοῦς). (Vid. Agr. Sanctus, Templum.)

TEMPLUM. (Vid. Curros, p. 331.)

Temple. It means the same word as the Greek θέον, from τενοῦς, to cut off, for templum, according to Servius, 10 was any place which was circumscribed and separated by the augurs from the rest of the land by a certain solemn formula. The technical term is for this circle, in which the augurs are liberate and effari, and hence a templum itself is a locus libertatis et effatis. A place thus set apart and hallowed by the augurs was always intended to serve religious purposes, but chiefly for taking the auguria ("Templum locus auguris aut auspiciis causa quibusdam conceptus est" 11). When Varro 12 says that a templum may be called any place on which a temple was to be built, he must remember that this only means outside the pomerium, for the whole space included within the pomerium was itself a templum, i.e., a place in which auspices could be taken (vid. Pomerium), but when they were to be taken in any place outside the pomerium, it was always necessary for such a place to be first circumscribed and sanctified for that purpose. Such a place was called and in the heavens within which the observations were to be made was likewise called templum, as it was marked out and separated from the rest by the staff of the augur. When the augur had defined the templum within which he intended to make his observations, he fixed his tent in it (tabernaculum cepere), and the tent itself was generally called by an arrangement of such a site, accurately, templum minus. To this minus templum we must refer what Servius 13 and Festus 14 state, that a templum was enclosed with planks, curtains, &c., attached to posts fixed in the ground, and that it had only one door (extus). The place chosen for a temple was generally an eminence, or plain in the city it was supposed that God had chosen a tent does not appear to have been necessary, because here a place called auguraculum was once for all consecrated for this purpose. 15

Besides this meaning of the word templum in the language of the augurs, it also had that of a temple in the common acceptation. In this case too, however, the sacred precinct within which a temple was built was always a locus libertatis et effation by the augurs, that is, a templum or a fennum; the consecration was completed by the pontiffs, and not until inauguration and consecration had taken place could sacra be performed or meetings of the senate be held in it. 16 It was necessary, then, for a temple to be sanctioned by the gods, whose will was signified by an oracle, either a certain temple dedicated or dedicated by the will of man (pontiffs). Where the sanction of the gods had not been obtained, and where the mere act of man had consecrated a place to the gods, such a place was only a sacrum, sacrarium, or sacellum. (Vid. Sacra.rium, Sacellum.) Varro 17 justly considers the ceremony performed by the augurs an essential to a temple, as the consecration by the pontiffs took place also in other sanctuaries which were not temple, but mere sacra or ades sacra. Thus the sanctuary of Vesta was not a templum, but an ades sacra, and the various curiae (Hostilia, Pompea, Julia) required to be made templum by the augurs before senatus consulta could be made in them. In what way or manner a temple was consecrated is more difficult to decide, and neither the ancient nor modern writers agree in their definitions. Some ancients believed that delubrum was the original name given to a place before or at the entrance of a temple, which contained a font or a vessel with water, by which persons, before entering the temple, performed

ed a symbol of purification; the temple was originally the name for a wooden representation of a god (ἔσχατον), which derived its name from librum (the bark of a tree), which was taken off (delubrum) before the tree was worked into an image of a god, and that hence delubrum was applied to the place where this image was erected. Hartung derives the word delubrum from liber (anciently lube), and thinks that it originally meant a locus liberatus, or a place separated by the augur from the profane land, in which an image of a god might be erected, and sacred rites be performed. A delubrum would therefore be a sanctuary, whose chief characterization was its being separated from the profane land. But nothing certain can be said on the subject.

After these preliminary remarks we shall proceed to give a brief account of the ancient temples, their property and their ministers, both in Greece and Rome. We must, however, refer our readers for a detailed description of the architectural structure of ancient temples to other works, such as Stieglitz, Architektur der Baumeister, or Poumeyrol, on the origins, especially of the structure of the temples varied according to the divinities to whom they were dedicated, and other circumstances.

**Temples in Greece.**—Temples appear to have existed in Greece from the earliest times. They were separated from the profane land around them (τόπος ἁγίας or ἱερός), because one was allotted for the temple in the center. This separation was in early times indicated by very simple means, such as a string or a rope. Subsequently, however, they were surrounded by more efficient fences, or even by a wall (θυρίας, περιβόλους). The whole space enclosed in such a περιβόλος was called τεχνοῦς, or sometimes λειτουργον, and contained, besides the temple itself, the sacred woods, sanctuaries, flat ground planted with groves, &c. Within the precincts of the sacred enclosure no dead were generally allowed to be buried, though there were some exceptions to this rule, and we have instances of persons being buried in, or at least near, certain temples. The religious laws of the island of Delos did not allow any corpses to be buried within the whole extent of the island, and when this law had been violated, a part of the island was first purified by Plististratus, and subsequently the whole island by the Athenian people.

The temple itself was called νεος, and at its entrance fonts (περιθαντήρια) were generally placed, that those who entered the sanctuary to pray or to offer sacrifices might first purify themselves. In the earliest times the Greek temples were either partly or wholly made of wood, and the simplest of all appear to have been the σηκοι, which were probably nothing but hollow trees, in which the image of a god or a hero was placed as in a niche, for a temple was originally not intended as a receptacle for worshippers, but simply as a habitation for the deity. The act of consecration, by which a temple was dedicated to a god, was called ἵνεος. The character of the early Greek temples was dark and mysterious, for they had no windows, and they received light only through the door, which was very large, or from lamps burning in them. Vitruvius states that the entrance of the temple was always towards the west, but most of the temples still extend in Attica, Ionia, and Sicily, have their entrance towards the east. Architecture in the construction of magnificent temples, however, made great progress even at an earlier time than either painting or statuary; and long before the Persian wars we hear of temples of extraordinary grandeur and beauty. All temples were built either in an oblong or round form, and were mostly adorned with columns. Those of an oblong form had columns either in the front alone (prostyxos), in the fore and back fronts (amphiprostyxos), or on all the four sides (peripterus).

Respecting the original use of these temples, see Poumeyrol. The doors of temples were adorned with various sculptures, and no ex pense was spared in embellishing the abodes of the gods. The light, which was formerly let in at the door, was now frequently let in from above, through an opening in the middle which was called στρατηίσμος. Many of the great temples consisted of three parts: 1. the πρόσον or πρόδομον, the vestibule; 2. the cella (ναὸς, σηκον); and, 3. the οἰκοσθολογον. The cela was the most important part, and was usually called the temple proper, speaking, the temple or the habitation of the deity whose statue it contained. In one and the same cela there were sometimes the statues of two or more divinities, as in the Erechtheum at Athens the statues of Poseidon, Hephaestus, and Butas. The statues always faced the entrance, which was in the centre of the prostyle. The place where the statue of the deity stood was usually approached by a balustrade or railings (περίον, ἀθηναί). Some temples also had more than one cela, in which case the one was generally behind the other, as in the temple of Athena Polias at Athens. In temples where oracles were given, or where the worship was connected with mysteries, the cela was called τάφος, τάφος, τάφος, or τάφος, and was reserved for the priests, and the initiated had access to it. In some cases the cela was not accessible to any human being, and various stories were related of the calamities that befell persons who had ventured to cross the threshold. The ὀικοσθολογον was a building which was sometimes attached to the back front of a temple, and served as a place in which the temple priests also dwelt. Also in such cases the temple was kept, and thus supplied the place of ναοκολοι, which were attached to some temples.

Independently of the immense treasures contained in many of the Greek temples, which were either utensils or ornaments, and of the tithes of spoils, &c., the property of temples, from which they derived a regular income, consisted of lands (ῥέγανα), either fields, pastures, or forests. In Attica we sometimes find that a demos is in possession of the estates of a particular temple: thus the Peiraeus possessed the lands belonging to the Θεσσαλον, in what their estate consisted is not known; but of whatever kind it may have been, the revenues accruing from such property were given to the temples, and served to defray the expenses for sacrifices, the maintenance of oracles and festivals, &c. For this purpose of sacred forest or sacred property was generally let out to farm, unless it was, by some curse which lay on it, prevented from being taken into cultivation. The rent for such sacred domains was, according to Demostenes, received by the demarch, proba by the demarch of the demos by which the sacred domain was occupied; for in other cases we find that
TEMPERALIS ACTIO. (Vid. Actio, p. 18.)

TENSE. (Vid. Tens.)

*TENTHREDO (tevθρέδος), a species of Ten-thredo, or Saw-fly. 18

959

*TEPIDARIUM. (Vid. Bath., p. 146.)

*TEREBINTHUS (τερέβινθος), the Pistacia Terebenthias, or Chian Turpentintree. The modern Greek name is κορυφής. According to Sibthorp, the fruit of this tree is eaten, and an oil expressed from it. In Cyprus it is called τρεμώνιον. The Cyprian turpentine was formerly much esteemed, and employed for medical uses; at present the principal culture of the turpentintree, as well as the mastic, is in the island of Chios. The turpentine, when drawn, is sent to Constantinople. 1

*TEREDO (τερέδος), an insect that prey on wood, especially that species which injures the timbers of ships at sea, the Teredo navalis. “The term τερέδος is also applied by the Greek writers on veterinary surgery,” says Adams, “to a worm which is formed in the intestines of cattle. The word is also used by the medical authors to signify the caries of bones.”

TERENT'TILIA LEX. (Vid. Lex., p. 586.)

TERMINALIA, a festival in honour of the god Terminus, who presided over boundaries. His statue was merely a stone or post stuck in the ground to distinguish between properties. On the festival the two owners of adjacent property crowned the statue of the god, and remaind by the altar, on which they offered up some corn, honeycomb, and wine, and sacrificed a lamb or a sucking pig. They concluded with singing the praises of the god. 4

The public festival in honour of this god was celebrated at the sixth milestone on the road towards Laurentum, 5 doubtless because this was originally that extent of the Roman territory in that direction.

Terminus, a festival of the Roman family. This festival was celebrated a.d. VII. Kal. Mart., or the 23d of February, on the day before the Regifigium. The Terminalia was celebrated on the last day of the old Roman year, whence some derive its name. We know that February was the last month of the Roman year, and that when the intercalary month Mercescium was added, the last five days of February were added to the intercalary month, making the 23d of February the last day of the year. 6 When Cicero, in a letter to Atticus, 7 says, “Accepi tuas litteras a. d. V. Terminalia” (i. e., Feb. 19), he uses this strange mode of defining a date, because, being ‘hen in Cilicia, he did not know whether any intercalation had been inserted that year, as is explained under Calendar, p. 191.

TERI'NCIUS. (Vid. As, p. 110.)

TESSERA, dim. TESSERULA and TESSEL'LA (τεσσελλα), a square or cube, a die, a token.

The use of small cubes of marble, earthenware, glass, precious stones, and mother-of-pearl for marking tessellated pavements (pavement tessellatia) 8 was noticed under House, Roman, p. 519, and Painting, p. 715.

The dice used in games of chance (vid. Alea) had the same form, and were commonly made of ivory, bone, or some close-grained wood, especially privet (ligustrum tesserae utissima). They were numbered on all the six sides like the dice still in use; 9 and in this respect, as well as in their form, they were confused from the tali, which are often dis terrinaced from classical writers. 11 (Vid. Talus.) While four tali were used in playing, only three tesserae were anciently employed. Hence arose the proverb, ἥ τρις ή, ἥ τρις κόσις, i. e.,

TESTAMENTUM.

"etern three sizes or three acres," meaning all or none; 1 for κόσος was used to denote the aëre, as in the throw δύο κόσοι καὶ τέτταρα, i. e., 1, 1, 4.=5.3 Three sizes are mentioned as the highest throw in the Agamemnon of Aeschylus (32). As early as the time of Eustathius 4 we find that the modern practice of using two dice instead of three had been established.

The ancients sometimes played with dice πέλλακτον (vid. Tacit.), when the object was simply to throw the highest numbers. At other times they played also with two sets of LATRUNCULI or draughts-men, having fifteen men on each side. The board (alvea hisoriae, 4 alveolae) was divided by twelve lines, so that the game must have been nearly or actually the same with our backgammon. Perhaps the Dyokedex (as in the name of Romans was the same game. (Vid. Arch.).

Objects of the same materials with dice, and either formed like them or of an oblong shape, were used as tokens for various purposes. The tessera hospitalis was the token of mutual hospitality, and is spoken of under Hesperus, p. 512. This token was probably in many cases of earthenware, having the names of the holders written on it, as is shewn in the cases of tesserae in the museums, such as the one of the Roman and Greek money. Thus, for example, the Romans were to give the Carthaginians their choice of soldiers or money, they sent two tesserae, one marked with a spear, the other with a Caveoxus, requesting them to take either the one or the other. 5

From the application of this term to tokens of various kinds, it was transferred to the word used as a token among soldiers. This was the tessera militaris, the σφαιρα of the Greeks. Before joining battle it was given out and passed through the ranks, as a method by which the soldiers might be able to distinguish friends from foes. 6 Thus, at the battle of Cunaxa, the word was "Zeus the Saviour and Victory," and on a subsequent engagement by the same troops, "Zeus the Saviour, Hercules the Leader." 7 The soldiers of Xenophon used a verbal sign for the same purpose when they were encamped by night. 8 Ενας Ταπικος 9 gives various directions for dice to be used by the soldiers respecting the word.

TESTA. (Vid. Fortit. p. 441.)

TESTAMENTUM is "mentis nostra justa contentatio in id solemnier facta ut post mortem nostram valeat." 10 In this passage the word justa means "jure facta;", "as required by law." The word contentatio is apparently used with reference to the origin of the term testamentum, which is to be referred to "testaer," which signifies "to make a solemn declaration of one's will." Testamentum is not so named with reference to tests. Gellius 11 properly finds fault with Servius Sulpicius for saying that the word is compounded "a mentis contentatione." The person who made a testamentum was testator. 12

In order to be able to make a valid Roman will, the testator must have the testamentificatio, which term expresses the legal conditions to be made a valid will: the word has also another significance. (Vid. Heres, Roman, p. 497.) The testamentificatio was the privilege only of Roman citizens who were pa triam familiis. The following persons, consequently, had not the testamentificatio: those who were in the potestas or manus of another, or in mancipi causa, as sons and daughters, wives in manu and husband, and a minor to his non-remissum peculium (vid. Patria Potestas, p. 742), a minor had not the privilege of testamentary disposition: Latin Junianiti, dediciti: peregrini could not dispose of their property according to the form of a Roman will: a person who was doubtful as to his status, as, for instance, a person whose father had died abroad and the fact was not ascertained, could not make a testament: an impubes could not dispose of his property by will, even with the consent of his tutor; when a male was fourteen years of age he obtained the testamentificatio, and a female obtained the power, subject to certain restraints, on the completion of her twelfth year. muti, surdi, furioi, and prodi: "giusbus leges bonae interdictum est" had not the testamentificatio; the reasons why these several classes of persons had not the testamentificatio illustrate the Roman mode of deducing legal facts from evidence of circumstances, although he had not the testamentificatio, because he could not utter the words of nuncupatio; the surdi, because he could not hear the words of the entur familius; the furioi, because he had not intellectual capacity to declare his will (testari) about his property; and the prodi, because he was under a legal restraint, so that he had no commercium, and consequently could not exercise the formalities of the testamentary. (Vid. Curator, Impurer.)

Women had originally no testamentificatio, and when they did acquire the power, they could only exercise it with the auctoris of a tutor. Of course a daughter in the power of her father, whether she was unmarried or married, and a wife in manu, could never make a will. The rules, therefore, as to a woman's capacity to make a will, could apply only to unmarried women after the death of their father, and to widows who were not in the power of a father. This subject requires explanation.

Cicero 13 observes, "if a woman has made a will, and has never undergone a capitis diminutio, it does not appear that the bonorum possessio can be granted in pursuance of such will according to the provisions of her will, but, with respect to the bonorum possessio in respect of the wills of servili, exules, and pueri. Cicero means to say that if a woman made a will without having sustained a capitis diminutio, the will could have no effect at all; and he derives his argument "ab adjunctis," for if such a will could have any effect, then the wills of other persons, who had not the testamentificatio, might be effectual so far as to give the bonorum possessio. It is not a logical inference from the language of Cicero that a woman who had sustained a capitis diminutio could make a will; but this is the ordinary meaning of such language, and it appears to be his. Consistently with this, Ulpian says, 14 "women, after their twelfth year, can make a will with the auctories of a tutor, so long as they are in tutela;" and the comment of Boethius on the passage of Cicero is, "a woman, a wife after her twelfth year, can make a will in this way. A woman, then, could make a will with the auctories of her tutor, and not now. Now if a woman was in tutela legitima, it might be correctly said that she could not make a will; for if she was ingenua, the tutela belonged of right to the agnati and gentiles, and if she was a libera, it belonged to the patron. In these cases a woman could indeed make a valid will with the consent of 11. (Ulp., Frug., tit. 20, s. 12.) — (Top., 4.) — (Franc., tit. 20, s. 15.)
TESTAMENTUM.

In order to constitute a valid will, it was necessary that a heres should be instituted, which might be done in such terms as follow: Titus heres esto, Titum heredem case jubeo. (Vid. Heres, Roman, p. 147.)

All persons who had the commercium could be heredes; slaves also, and others who were not sui juris, could be made heredes. (Vid. Heres; Serv. v., Roman, p. 883.) But there were many classes of persons who could not be heredes: Peregrini, who had not received the commercium: persons who were not men except to the Heraea: juridical persons or universitats, except by their liberti, a privilege granted by a senatorus consultat; gods, or the tem- ples of gods, except such as were excepted by a senatorus consultat and imperial constitutions, such as Jupiter Tarpeius, Apollo Didymaenus, Mars in Gallia, Minerva Iliensis, Hercules Galatinus, and others enumerated by Ulpian: a postumus alienus could not be made a heres, for he was an inercta persona: it was a disputed question whether, according to the old law, women could be made heredes; but the question concerns only those who were sui juris, as to whom there seems no sufficient reason why they could not be made here- des, the capacity of women to take under a will was likewise denied. Unless it were a necessity that persons, and persons who had no children, were limited as to their capacity to take under a will by the Papia Poppaea Lex. (Vid. Julia LEX ET PAPIA POPPEA.)

The first question as to the validity of a will was the capacity of the testator; the next question was as to the proper observance of the forms required by law; the third, the question of whom, in consideration of their little acquaintance with such matters, were allowed to make their wills as they pleased or as they could. This remark of Gaius seems to refer to the imperial period.

As to the form of wills, Gaius and Ulpian are now the best authorities.

Originally there were two modes of making wills for people made their wills either at calata comitia, which were appointed twice a year for the making of wills, or they made wills in proculito, that is, when they were going to battle, for an army in movement and under arms is proculito. A third mode of making wills was introduced, which was effected per as et libram, whence the name of testamentum scriptae manu, by which a person made his will in calata comitia nor in proculito, and was in imminent danger of death, he would mancipate (mancipio dabat) his familia, that is, his patrimoniun, to a friend, and would tell him what he wished to be given to each after his death. The old form of making a will per as et libram was this: The familia enim, the testator, the person who received the will, the familia by mancipation, filled the place of heres, and, accordingly, the testator instructed him what he wished to be given to each after his death. In the time of Gaia the practice was different. One person was instituted heres (heres testamento vesti- tatur), who was charged with the payment of the testamentary legacies, and so was this rule was altered by enactments, for they were in the legitima tutela of their patrons. Libertes, Libertes, who had a certain number of children could make a will without the auxiliares of their patrons. (Vid. PATRONUS.)

The vestal virgins had no tutelar, and yet they could make a testament. The Twelve Tables returned them from all tutelar in honorem auctoritatis. 116

1. (Frag., tit. 22, a, 6.)—2. (Gaius, ii., 114.)—3. (L., 101.)—4. (Frag., tit. xx.)

961
As the familiar emtor was supposed to be a real transaction between the emtor and the testator, the testimony of their several families was excluded, and, consequently, a person who was in the power of the familiar emtor, or in the power of the testator, could not be a witness. If a man who was in the power of another was the familiar emtor, it followed that his father could not be a witness, nor his brother, if the brother was in the power of the father. A filiusfamilios who, after his missio, disposed of his castrense peculium by testament, could not have his father as witness, nor any one who was in the power of his father. The same rules applied to the libriens, for he was a witness. A person who was in the power of the heres or of a legatee, or in whose power the heres or legatee was, could not be a witness of the testament, whether as the heres or a legatee, and also the heres or a legatee, could all be witnesses; for, as Ulpian observes, there is no objection to any number of witnesses from the same family. But Gaius observes that this ought not to be considered as law with respect to the heres, and him who is in the power of the testator, and who has power the heres is. According to Gaius, wills were legally made only at calata comitia and in proinuctu. The comitia were held twice a year for the purpose of making wills, and a will not made there was invalid. It is sometimes assumed that these comitia were held in order that the gentes might consent to the testamentary disposition, in which it is implied that the testator did not refuse their consent. If there is no direct evidence of this, and it derives no support from a consideration of the mode of disposing of property per as et libram. The form per as et libram was a form introduced in cases when the will had not been made at the calata comitia nor in proinuctu. It had effect because it was an alienation of property inter vivos without the consent of any parties except the buyer and seller, which alienation must be assumed to have been a legal transaction at the time when this new form of will was introduced. This new form was a sale, and the familiar emtor undertook a trust: he resembled the heres fiduciarius of later times. It is probable enough that there were originally no means of compelling him to execute the trust, but operation would be a sufficient guarantee that the testator's will would be carried out. It would arise one of those parts of law which had its source in Mos. When the Romans introduced new legal forms, they always assimilated them to old forms, whence we have a probable conclusion that the form of mancipatio was also observed at the calata comitia; and if so, the consent of the gentes was not necessary, unless it was necessary to every alienation of property, which in the absence of evidence must not be assumed, though such may have been the fact. The difference, then, between the will made at the calata comitia and the will per as et libram, consisted in the greater solemnity and notoriety of the former, and the consequent greater security that the testator's intentions would be observed. Written wills are not spoken of with reference to this time, nor is it probable that wills were written: it does not appear that a written will was ever used after the introduction of the testamentary disposition of his property would be short and simple in those early times, and easily remembered; but there would be greater security for an unwritten will made at the comitia than for an unwritten will made per as et libram; whence, in course of time, tabulis became a usual part of the ceremony of a will. As we are ignorant of the true nature of private property among the Romans, viewed with respect to its historical origin, we cannot determine with certainty such questions as those respecting testamentary disposition, but it is of some importance to exclude conjectures which are devoid of all evidence. Reinhard has referred to the modern writers who have discussed this subject: he has adopted the opinion of Niebuhr, according to which, "as the property of an extinct house coexisted to the heir, that of an extinct curia to the publicum of the citizens at large, the consent of the whole populus was requisite; and this is the origin of the rule that testaments were to be made in the presence of the pontiff and the curies." But there is no evidence of the assertion contained in the first part of this passage; and if this rule as to escheat is admitted to be a fact, the rule that testaments must be confirmed by the comitia i.e. by consent. Niebuhr further observes that "the plebeian houses were not so connected, but the whole order had a public cofer in the Temple of Ceres; and when the army, being assembled in centuriae, either on the field of Mars or before a battle, passed the last will of a soldier into a law, it was taken by the curia with the same necessity to protect the property. This assertion, also, is not supported by evidence, and is therefore a mere conjecture, against the probability of which there are sufficient reasons. The testamentum in proinuctu is, for anything we know to the contrary, as old as the testament at the calata comitia. In this case the forms of testamentum in proinuctu were dispensed with, or the soldier would have died intestate. This power of disposition in the case of a testamentum in proinuctu could not depend on the consent of the populus in each particular instance, for the nature of the circumstances excluded such consent. He had, therefore, full power of disposition in proinuctu, a circumstance which leads to the probable conclusion that the will made at the calata comitia differed only from the other will in its forms and not in its substance. Some writers assert that the testamentum in proinuctu could only be made after the auspices were taken, which gave the testament the religious sanction, and that, when the auspices ceased to be taken in the field, this kind of testament ceased to be made; and that the military testimonies mentioned above were the last wills taken in proinuctu. These were not the same kind of testaments, but purely military testaments made without any form, which in the imperial period became in common use, and of which C. Caesar probably introduced the practice. Cicero, however, speaks of the will in proinuctu as then in use, and he describes it as made "sine libra et tabulis," that is, without the forms which were used after the introduction of the testamentum per as et libram. Thus the testamentum in proinuctu always retained its characteristic of being exempted from legal forms, but as to the capacity of the testa-

1. (De iure Rom. Privat. reed, p. 373, note.)—2. (Hist. of Rome, i, p. 382.)—3. (Bell. Gall. i, 39.—Vell. Patern. iii, 5, &c.)—4. (Dig. 29, tit. 1 De Testamento Millius.)—5. (De Or. i 58.)
to it always subject to the same rules of law as other wills, so far as we know.

The form of mancipatio owed its origin to positive enactments (vid. Usuarius); it was a form of alienation accompanied with certain public ceremonies, the presumed object of which was to secure evidence of the transfer. The form of mancipatio as applied to a will was exactly the same form as mancipatio applied to any other purpose: it was an alienation of the property, and, according to strict principles, it must have been irrevocable. It is sometimes assumed that the five witnesses to the testament (civis Romanus puerus) were representatives of the five classes of Servius Tullius. If this is true (which is a mere assumption), it is not clear as to why the property was only, not as persons who gave their consent to the act. Engelbach states: "Mancipatio was originally a formal sale, in which the publicness of the transaction constituted the essential characteristic. When the seller transferred to the buyer the ownership of a thing before the five representatives of the five classes of the Roman people, they answered as the original sellers before the assembly and passed into a lex." The whole meaning of this is not clear, but so far as this is clear and true: the testamentum per se et libram differed in no respects as to the capacity of the alienor from any other mancipation. Now we must either suppose that the buyer, not the seller, passed the property of the will to the testamentary disposition at the calata comitia was expressed by a special enactment, which should transfer the property according to the testator's wish, or that the consent only must have been given to the transfer, and the transfer must have been made in the usual way: the latter is the only conceivable case of the two. In assuming this original sale by the party of the lex which was transferred to the testamentary disposition, we assume that Roman property was originally inalienable at the will of the owner. This may be true, but it is not yet shown to be so.

The Twelve Tables recognize a man's power to dispose of his property by will as he pleased: "Un loco, ut in loco tabulam voluerit exta." It is generally admitted, and the extant passages are consistent with the opinion, that the new testamentary form per se et libram existed while the two original forms were still in use. Now in the testamentum per se et libram there is no pretert for saying that any consent was required except that of the buyer and seller; and the Twelve Tables recognize the testator's power of disposition. If, then, the form of testament at the comitia calata subsisted after the Twelve Tables, we have, according to the views of some writers, a form of testamentum to which the consent of the testator was sufficient, and another form in which it was not. There still remains to those who support this opinion the power of showing that the consent of the testator was sovereign and that the will had become a form, and therefore it was indifferent, so far as concerns this consent, whether the will was made at the comitia, where it would be fully witnessed, or per se et libram, where it would be witnessed by the five representatives. But it is easy to suggest possibilities; less easy to weigh evidence accurately, and to deduce its legitimate consequences.

As already observed, there seems to have been no rule of law that a testament must be written. The mancipatio required no writing, nor did the institution of a heres, and the number of witnesses were probably required in order to secure evidence of the testator's intentions. Thus it is said:1 that the heres might either be made by oral declaration (mancipatio) or by writing. Written wills, however, were the common form among the Romans, at least in the later republican and in the imperial periods. They were written on tablets of wood or wax, whence the word "cera" is often used as equivalent to "tabula," and these sigions prima, secunda cera, are equivalent to prima, secunda pagina. The will might be written either by the testator or any other person with his consent, and sometimes it was made with the advice of a lawyer. It was written in the Latin language until A.D. 439, when it was enacted that wills might be in Greek. By the old law, a legacy could not be given in the Greek language, and it was the business of the will to express its meaning in Latin. The Romans held that it was dangerous to express the will in another language, and this is why the testatorial wills were written in Latin. It does not appear that there was originally any signature by the witnesses. The will was sealed, but this might be done by the testator in secret, for it was not necessary that the witnesses should know the contents of the will; they were witnesses to the formal act of mancipatio, and to the testator's testamentary disposition. And the will might contain a last will, and it must, however, have been in some way so marked as to be recognizable, and the practice of the witnesses (testes) sealing and signing the will became common. It was necessary for the witnesses both to seal (signare), that is, to make a mark with a ring (annulus) or something else on the wax, and to add their names (testes). It was also usual to write the name of the testator, his relation to the testator, the number of witnesses, and their own names, with their own hand, and their subscription also declared whose will it was that they sealed. The seals and signatures appear to have been on the outside. A senator consultum, which applied to wills among other instruments, enacted that they should be witnessed and signed as follows: They were to be written in Latin, with the name of the testator beneath the upper part of the margin, which was to be performed at the middle part, and the wax was to be put over the thread and sealed. Tabulae which were produced in any other way had no validity. (Compare Paulus, who imposes seems to be the true reading, with Suetonius.*) A man might make several copies of his will, which was sometimes done, and contain his will in the public seal, and placed in the archive. Whence a fresh copy could be got if the first copy should ever be lost. This practice, described by Paulus, may have been of considerable antiquity. The will of Augustus, which had been deposited with the vestal virgins, was brought into the senate after his death, and the testator was made in the name of the will, except those of senatorian rank; the rest of the witnesses acknowledged their signatures outside the curia.

A curious passage in a Novel of Theodossius II. (A.D. 439, De Testamentis) states the old practice as to the signature of the witnesses. "In ancient times to "tabella," and the expressions prima, secon tement to the witnesses, and asked them to hail testimony that the will had been so shown to them (oblatum tabularum prohibere testimoniun)," which are almost the words of Gaius. The Novel goes on to state that the ignorant presumption of posterity had changed the cautious rule of the ancient law, and the witnesses were required to know the con-

4. (Cod. vi., tit. 23, s. 21.)
A valid will became irritum if the testator sustained a capitis diminutio after the date of the will or if it failed of effect because there was no heres. Thus a prior will which was invalidated by a subsequent will was rupturn; and if there was no heres under the subsequent will, such will was valid.

If a man who had made a will was taken prisoner by the enemy, his will was good jure postlimini if he returned home; if he died in captivity, it was made as valid by the lex Cornelia as if he had not been a captive.

Though a will might be rupturn or irritum by the jus civil, it was not always without effect; for the honorum possessio secundum tabulas might be had of a testamentary nature by the will. The will went to heredes, and seven witnesses, and if the testator had the testamentificatio. The distinction between the case of a will which was invalid jure civil for want of due forms, and one which was invalid for want of legal capacity to dispose of property by will, was well recognised in the time of Cicero. A will also became rupturn by adagnatio, that is, if a suus heres was born after the making of the will, who was not either instituted heres, or exheredated as the law required. A quasi adagnatio also arose by adoption, or by the in manum conventio, or by succession to the place of a suus heres, as in the instance of a grandson becoming a suus heres in consequence of the death or the emancipation of a son: a will also became rupturn by the manumission of a son, that is, if a son, after a first and second manumission, returned into the power of his father. (Vid. EMANCIPATIO.)

A testament was called inoficiosum which was made in legal form, "sed non ex officio pietatis." For instance, if a man had exheredated his own children, or passed over his parents, or brothers or sisters, the will was in form a good will, but if there was no sufficient reason for this exheredation, if the pretension, the persons aggrieved might have an inoficioso querela. The ground of the complaint was the allegation that the testator was "non sana mentis," so as to have capacity to make a will. It was not alleged that he was furious or demens, for these were technical words which implied complete legal incapacity. The distinction was a fine one; it was the authorship of the will, and not the matter of the testators, to whom it may be presumed to owe its origin. By the legislation of Justinian, no person could maintain a querela inoficioso beyond the degree of brothers and sisters; and brothers and sisters could only maintain their claim against "scripti heredes" who were "turpia personae." The complaint also could only be maintained in cases where the complaining parties had no other right or means of redress. If any portion, however small, was left by the will to the complaining party, he could not maintain a querela inoficiosi, and he was only entitled to so much as would make up his proper share.

If the judex declared the testamentum to be inoficiosum, it was rescinded; but if there were several heredes, the will could only be rescinded as to him or them against whose institution the judex had pronounced. The portion of an hereditas which might be claimed by the querela inoficiosi was one fourth, which was divided among the claimantes pro rata.

The querela inoficiosi is explained by Savigny with his usual perspicuity. If a testator passed over his will any of his nearest kinfolks, who in the case of intestacy would be his heredes, this gave rise to the opinion that the person thus passed over had meritied this mark of the testator's disapprobation. If this opinion was unfounded, the

TETRASCI

8. TESTUUDO

Testator had done an unmerited injury to the person, and his remedy was by getting the will set aside, as made under the influence of passion. If the will was set aside, the testator was thereby declared to have died intestate. The immediate object of the codicilli was the hereditas which was the immediate object of the querela, or his share of it. But the ultimate object of the querela was the public re-establishment of the injured person's complaint. The testator who had brought this suit, had not only the ultimate object of the querela, but the immediate object of the codicilli in and for its ultimate object vindicta, and the peculiarity of the action consisted in the difference between this ultimate object of the action and the immediate object of it (property), which was merely a means to the ultimate object. (Vid. VINDICTA.)

There is no evidence to show when the querela inofficiosi was introduced as a mode of setting aside a will. The phrase testamentum inofficiosum occurs in Cicero and in Quintilian.

Codicilli were an informal will; they may be defined to be a testamentary disposition of such a kind which does not allow the direct appointment or exheredation of a heres, even though the codicilli are confirmed by a testament; but he who was appointed heres ex parte,* but he had also made codicilli in order to give the hereditas to another altogether or in part, even though the codicilli were not confirmed by a testament. A legacy could not be given by codicilli unless the codicilli were confirmed by a will; and this must be the case to which Pliny refers.1 Acilians had made Pliny's 1 heres ex parte,* but he had also made codicilli in his own hand-writing, which, as Pliny alleges, were void (pro non scripto habendo), because they were not confirmed by the will. Now, as already observed, it appears from Gaius that a person who was appointed heres by a will might be required by codicilli to give the whole hereditas or a part to another, even though the codicilli were not confirmed by a will. But Pliny is speaking of codicilli which were void for want of a testamentary confirmation; and this, as we learn from Gaius, is the case of a legacy given by codicilli which have not been confirmed by a will. This confirmation might be either prospective or retrospective (si in testamento coverit testator, ut quidem ex parte, sed in re vestris); and the name of testudo is given.2 It was called testudo inofficiosum.3

This passage of Pliny, as to the confirmation of codicilli by a testament, has sometimes been misunderstood. It is stated,4 "Concinnitur codicillia quatuor modis: aut enim in futuro confirmantur aut in praetextum, aut per fideicommissum testamento facit aut sine testamento."

These four modes are referred to in Gaius; the first two are also contained in the words above quoted, "si in testamento," &c.; the third is the case of the heres institutus being required to give the hereditas to another person by codicilli non confirmati; and the fourth is the case of a fideicommissum given by codicilli of a person who made no other testamentary disposition. It was a rule of law that codicilli were to be considered (except in a few cases) as incorporated in the will at the time when the will was made, a principle which led to various legal conclusions, which the Roman jurists deduced with their usual precision.5

Originally there was probably no particular form required for codicilli; but there are at least eight evidences of their containing the testator's intention.

1. In (Inst. Or. i., 2.)—2. (Ep. ii., 10.)—3. (Di., 272.)—4. (Caesar, ii., 270.)—5. (Dig. 28, tit. 7, x. 5.)—6. (15, 19, 7.)—7. (Dig. 47, tit. 7, a. 2.)

writing, if the witnesses subscribed their names to the codicilli.6 But a man could, without writing and in the presence of five witnesses, impose a fideicommissum on his heres. A testament which was defective as such, may be effective as codicilli. The power to make codicilli was the same as the power to make a testament.7

The subject of Roman testaments can only be satisfactorily expounded in a large treatise, and it would require to be treated historically. The preceding sketch may be useful, and generally true. and it is not to be nothing more.

TESTUS (Vid. Ora, Rom., p. 670.)

TESTU'DO (τετράσκη), a Tortoise, was the name given to several other objects.

1. To the Lyra, because it was sometimes made of a tortoise-shell. (Vid. Lyra.)

2. To an arched or vaulted roof. (Vid. Temp., p. 598.)

Thus, in a Roman house, when the caumum was roofed all over, and had no opening or compluvium in the centre, the caumum was called testudo. (Vid. House, Rom., p. 516, 517.)

3. To a military machine moving upon wheels and roofed over, used in besieging cities, under which the soldiers worked in undermining the walls, or, in a military sense, to a testudo in other which was covered with raw hides or other materials which could not easily be set on fire. The battering-ram (vid. Aries) was frequently placed under a testudo of this kind, which was then called Testudo averticia.8 Vitruvius also mentions and explains the construction of several other military machines to which the name of testudo was given.

4. The name of testudo was also applied to the covering made by a close body of soldiers, who placed their shields over their heads to secure themselves against the darts of the enemy. The shields fitted so closely together as to present one unbroken surface, without any interstices between them, and were also so firm that men could walk upon them, and even horses and chariots be driven over them.9 A testudo was formed (testudinem facere) either in battle, to ward off the arrows and other missiles of the enemy, or, which was more frequently the case, to form a protection to the soldiers when they advanced to the walls or gates of a town for the purpose of attacking it.10

The Greek writers describe several species of the Land and Sea Tortoise. Of the sea-turtle, they were, of course, best acquainted with those species which are found in the Mediterranean. Ælian, however, also makes mention of the Indian. The species which the ancients may be supposed to have known most familiarly are the Testudo lyra, T. Graeca, and T. geometrica. (On the use of the turtle by the ancients as an article of food, consult Schweighaeuser, Ad Athen., viii., 7. Gerner, Hist. nat. v., 17. Suidas, p. 193. Cony, iv, 13.) The *fauc* is the Speckled Tortoise, or Enys Europa.*1

**TETRADRACHMUM.** (Vid. Drachma.)

**TETRARCHIES or TETRARCHA (τετραρχαί).** This word was originally used, according to its etymological meaning, to signify the governor of the fourth part of a country (τετραρχαί or τετραρχία). We have an example in the ancient division of Thessaly into four tetrarchies, which was revived by Philip.*2

(Vid. TÁGOS.) Each of the three Gallic tribes which settled in Galatia was divided into four tetrarchies, each ruled by a tetrarch.*3

This arrangement subsisted till the latter times of the Roman Republic,*4 but at last the twelve tetrarchies of Gallo-Greece were reduced to one, namely, Deiotaros.*5 Some of the tribes of Syria were ruled by tetrarchies, and several of the princes of the house of Herod ruled in Palestine with this title.*6

Nebihrur remarks that the tetrarchies in Syria were zemindars, who occupied the rank of sovereigns, in the same way as the zemindars of Bengal succeeded under Lord Cornwallis in getting themselves recognised as dependant princes and absolute proprietors of the soil.*7

In the later period of the Republic and under the Empire, the Romans seem to have used the title (as also those of *stavarch* and *phyllarch*) to designate those tributary princes who were not of sufficient importance to be called kings.*8

**TETRIX (τετριξ, or -ας, or -αώ), a bird noted for the supposed to be the Ota Tetrax, or Little Boustard.*9

**TETRO/BOULUS.** (Vid. Drachma.)

**TETTAPÁKONTA, OL.** (Vid. Forty, THE.)

**TETTI/ΓΟΜΕΤΡΑ (εττετιγόμετρα), a term meaning literally "the mother of the Tettix," or Cicada. In reality, however, it indicates merely

That intermediate condition of the nymph, prior to the development of the organs of flight of the insect.

The second day of the Thargelia was solemnized with a procession and an agon, which consisted of a cyclic chorus performed by men at the expense of a chorus. The prize of the victor in this agon was a tripod, which he had to dedicate in the Temple of Apollo which had been built by Phinestratus. On this day it was customary for persons who were adopted into a family to be solemnly registered, and received into the gong that this sacrifice only took place in case of a heavy calamity having befallen the city (νοσοῦσθε τὴν πάλασον), such as the plague, a famine, &c. What persons were chosen as victims on such occasions is not mentioned, and we only learn from Suidas that they were kept at the public expense (δημοῦ τρεφόμενοι). But they were not probably sacrificial victims, as those who kept them were not freed from the time of their condemnation to be sacrificed at the Thargelia. In the earlier times, however, they were not criminals, but either cripples, or persons who offered to die voluntarily for the good of their country.

The Athenians, before the time of Eschylus, had only a wooden scaffold on which their dramas were performed. Such a wooden theatre was only erected for the time of the Dionysiac festivals, and was afterward pulled down. The first drama that Eschylus brought upon the stage was a tragedy, and it is recorded as a singular and ominous coincidence, that on that occasion (500 B.C.) the scaffold broke down. To prevent the recurrence of such an accident, the building of a stone theatre was at once commenced on the southeastern de-
for the spectators, which were in most cases cut out of the rock, consisted of rows of benches rising one above another; the rows themselves (a) formed parts (nearly three fourths) of concentric circles, and were at intervals divided into compartments by one or more broad passages (b) running between them, and parallel with the benches. These passages were called διασπάρτη, or κατασπάρτη, Latin praecinctio, and when the concourse of people was very great in a theatre, many persons might stand in them. One side of such a passage formed towards the upper rows of benches a wall, in which, in some theatres, though perhaps not at Athens, niches were excavated, which contained metal vessels (ḫyścia) to increase the sounds coming from the stage and orchestra. Across the rows of benches ran stairs, by which persons might ascend from the lowest to the highest. But these stairs ran in straight lines only from one praecinctio to another, and the stairs in the next series of rows were just between the two stairs of the lower series of benches. By this course of the stairs the seats were divided into a number of compartments resembling cones from which the tops are cut off; hence they were termed κέρασις, and in Latin cunei. The whole of the place for the spectators (θέατρον) was sometimes designated by the name κολχων, Latin caesae, it being in most cases a real excavation of the rock. Above the highest row of benches there rose a covered portico (e), which of course far exceeded in height the opposite buildings by which the stage was surrounded, and appears to have also contributed to increase the acoustic effect. The entrances to the seats of the spectators were partly under ground, and led to the lowest rows of benches, while the upper rows must have been accessible from above.  

2. The orchestra (διόρθστρα) was a circular level space extending in front of the spectators, and somewhat below the lowest row of benches. But it was not a complete circle, one segment of it being appropriated to the stage. The orchestra was the place for the chorus, where it performed its evolutions and dances, for which purpose it was covered with boards. As the chorus was the element out of which the drama rose, so the orchestra was originally the most important part of a theatre: it formed the centre round which all the other parts of the building were grouped. In the centre of the circle of the orchestra was the δυσκόλος, that is, the altar of Dionysus (d), which was, of course, nearer to the stage than to the seats of the spectators, the distance from which was precisely the length of a radius of the circle. In a wider sense, the orchestra comprised the broad passages (μάποδοι, e) or each side between the projecting wings of the stage and the seats of the spectators, through which the chorus entered the orchestra. The chorus generally arranged itself in the space between the thymele and the stage. The thymele itself was of a square form, and was used for various purposes, according to the nature of the different plays, such as a funerary monument, an altar, &c. It was made of boards, and surrounded on all sides with steps. It thus stood upon a raised platform, which was sometimes occupied by the leader of the chorus, the flute-player, and the rhadophoros. The flute-player, as well as the prompter (τροφοδοτής, monitor), were generally placed behind the thymele, so as to face the stage, and not to be seen by the spectators. The orchestra, as well as the θέατρον, lay under the open sky: a roof is nowhere mentioned.

3. The stage. Steps led from each side of the orchestra to the stage, and by them the chorus probably ascended the stage whenever it took a real part in the action itself. The back side of the stage was closed by a wall called the περίφυ or σκένα, from which on each side a wing projected, which was called the παρασκήνιον. The whole depth of the stage was not very great, as it only comprised a segment of the circle of the orchestra. The whole space from the scenae to the orchestra was termed the προσεύμιον (προεύμιον), and was what we should call the real stage. That part of it which was nearest to the orchestra, and where the actors stood when they spoke, was the λογείον, also called ἱκόνιον or ἱκόνιαντες, in Latin pulpitum, which was,
of course, raised above the orchestra, and probably on a level with the thymele. What the ἐπισκόπους was not clear; some think that it was a place to which the actors withdrew when they had acted their parts, others think that it was the same as the κοινότατον; but, as it is stated that the ἐπισκόπους was adorned with statues, it seems more probable that it was the wall which, as the κοινότατον or σκηνή or the orchestra and the spectators. The scenery of the scene was, as we have already stated, the wall which closed the stage (prosceunium and logeum) from behind. It represented a suitable background, or the locality in which the action was going on.

Before the play began it was covered with a curtain (παρακείσεις, παρακείσις, ἀνάδεικνυς, Latin scena), which was drawn by machinery. At the moment when it was let down, and was rolled up on a roller underneath the stage. The prosceunium and logeum were never concealed from the spectators. As regards the scenery represented on the σκηνή, it was different for tragedy, comedy, and the satyrical drama, and for each of these kinds of poetry the scenery must have been capable of various modifications, according to the manner of the performance. At least that this was the case with the various tragedies, is evident from the scenes described in the tragedies still extant. In the latter, however, the background (σκηνή), in most cases, represented the front of a palace with a door in the centre (i), which was called the royal door. This palace generally consisted of several stories. The house flat roof there appears to have been some elevated place, from which persons might observe what was going on at a distance. The palace presented on each side a projecting wing, each of which had its separate entrance. These wings generally represented the habitations of guests and visitors. All of the three doors must have been visible to the spectators, and some of them are described as the stage through the middle or royal door, the deuteragonists and tritagonists through those on the right and left wings. In tragedies like the Prometheus, the Persians, Philoctetes, Εἰρύπος at Colonus, and others, the background did not represent a palace. There are other pieces, again, in which the scenery must have been a short time before the consulsip of P. Cornelius Scipio Nasica. It was sanctioned by the censors, and was advancing towards completion, when Scipio, in 155 B.C., persuaded the senate to command the building to be pulled down, as injurious to public morality. Respecting the magnificent wooden theatre which M. Emilius Scaurus built in his villa, in 56 B.C., see Pliny. Its scene consisted of three stories, and the lowest of them was made of white marble, the middle one of glass, and the upper one of gilt wood. The cavea contained 80,000 spectators. In 56 B.C., Cn. Pompey built the first stone theatre at Rome, near the Campus Martius. It was of great beauty, and is said to have been built after the model of the theatre of the Kaisers, Augustus, which was raised by Augustus, and which was built by Augustus, and which was called after his nephew Marcellus, and that of Balbus, whose Scenion uses the expression περικορεῖα theatrae. Who was raised by Augustus, and which was called after his nephew Marcellus, and that of Balbus, whose Scenion uses the expression περικορεῖα theatrae. Who was raised by Augustus, and which was called after his nephew Marcellus, and that of Balbus, whose Scenion uses the expression περικορεῖα theatrae.
THEATRUM.

The construction of a Roman theatre resembled, on the whole, that of a Greek one. The principal differences are, that the seats of the spectators, which rose in the form of an amphitheatre around the orchestra, did not form more than a semi-circle; and that the whole of the orchestra likewise formed only a semicircle, the diameter of which formed the front line of the stage. The Roman orchestra contained no thymele, and was not destined or a chorus, but contained the seats for senators and other distinguished persons, such as foreign ambassadors, which are called "primae subselliorum orda." In the year 98 B.C., the tribune L. Roscius Otho carried a law which regulated the places in the theatre to be occupied by the different classes of Roman citizens: it enacted that fourteen ordinæ of benches were to be assigned as seats to the equites. Hence these quattuordecim ordinæ are sometimes mentioned, without any farther addition, as the honorary seats of the equites. They were undoubt-edly close behind the seats of the senators and magistrates, and thus consisted of the rows of benches

and Roman theatres, see the commentators on Vitruvius, 1 J. Chr. Genelli, Das Theater zu Athen, hinhaltlich auf Architektur, Scenerie und Darstellungs Kunst überhaupt, Berlin, 1818, 8vo. — G. C. W. Schneider, Das Attische Theaterszenen, zum bessern Verstehen der Griech. Drama- tik. — Stiegliitz, Archäologie der Baukunst der Griech. u. Römer, ii. 1 — G. Ferrara, Storia e desc r. de' principi. teatri ant. e moderni, Milano, 1830. — The supplement to Stuart’s Antig of Athens. A general outline is also given by Müller, Hist. of Gr. Lit. i., p. 299, &c.; and by Bode, Gesch. der dramat. Dichtkunst d. Hellens., i., p. 156, &c.

It remains to speak of a few points respecting the attendance in the Greek theatres. Theatrical representations at Athens began early in the morning, or after breakfast; 2 and when the concourse of people was expected to be great, persons would even go to occupy their seats in the night. The sun could not be very troublesome to the actors, as they were, in a great measure, protected by the buildings surrounding the stage, and the spectators protected themselves against it by hats with broad brims. 3 When the weather was fine, especially at the Dionysiac festivals in spring, the people appear-

ed with garlands on their heads; when it was cold, as at the Lenaea in January, they used to wrap themselves up in their cloaks. 4 When a storm or a shower of rain came on suddenly, the spectators took refuge in the porticoes behind the stage, or in those above the uppermost row of benches. Those who wished to sit comfortably brought cushions with them. 5 As it was not unusual for the theatrical performances to last from ten to twelve hours, the spectators required refreshments, and we find that in the intervals between the several plays they used to take wines and cakes. 6

The whole of the cavea in the Attic theatre must have contained about 50,000 spectators. The places for generals, the archons, priests, foreign ambassadors, and other distinguished persons, were in the lowest rows of benches, and nearest to the orchestae, 7 and they appear to have been sometimes covered with a sort of canopy. 8 The rows of benches above these were occupied by the senate of 500, those next in succession by the ephori, and the rest by the people of Athens. But it would seem that they did not sit indiscriminately, but that the better places were let at a higher price than the

THENSÉ.

other-s, and that no one had a right to take a place for which he had not paid.1 The question whether in Greece, and more especially at Athens, women were not present at the performance of tragedies, is one of those which have given rise to much discussion among modern scholars, as we have scarcely any passage in ancient writers in which the presence of women is stated as a positive fact. But Jacob2 and Passow3 have placed it almost beyond doubt, from the various allusions made by ancient writers, that there was no power of law to prevent the presence of women during the performance of tragedies. This conclusion has been entirely confirmed by a passage in Athenaeus,4 which has been quoted by Becker5 in corroboration of the conclusion to which the above-mentioned writers had come. In this passage we find that at Athens, and at the time of the Peloponesian war, the spectators in the theatre consisted of men and women. We have, however, on the other hand, every reason to believe that women were not present at comedies, while boys might be present both at tragedy and comedy.6 The seats which women occupied in the Greek theatres appear to have been separated from those of the men.7

For the purpose of maintaining order and preventing excesses, the ancients had a sort of theatrical police, consisting of persons who held this office, and not a kind of marble, as has been supposed by many writers. It was of a red colour, and was also called Pyropachis.10

THE'CAI (θε'κας). (Vid. Funcus, p. 457.)

THELYCRANEA' (θηλυκρανέα), the Coriaceae (Polyodontum, L.).

THELYPHONON (θηλυφόνων), called also SCORPION (σκορπίων), a plant, about wth. which Stach house is quite undecided. "Sprengel suggests that it may be the Doronemum pàr-dàlanches, or Scorpcion. This opinion is also supported by Bahnin."7

THENSÉ or TENSÉ (for the orthography and etymology of the word are alike doubtful), although the oldest MSS. generally omit the aspirate) were highly-ornamented sacred vehicles, which, in the solemn pomp of the Cirensian games, conveyed the statues of certain deities, with all their decorations, furnishings, and appendages, and as if to crown all, bore them back to their shrines.8 We are ignorant of their precise form; for, although we find several representations upon ancient medals and other works of art, of gods seated in cars, and especially of the sun-chariot of Elijahbalsus,8 yet we have no means of determining if, which any, of thes are teneae. We know that they were drawn by horses (Pittacus calls them thiras), and escorve (deduces) by the chief senators in robes of state, who, along with pueri paterni (vid. Patrimi), laid hold of the bridles and traces, or perhaps to drag the carriage (for durec is used also as deducere), by means of thongs attached for the purpose (and hence the proposed derivation from tendo). The Dioscuri of the country was also a tenea, and when labouring under sickness, deemed it necessary to accompany the tenea in a litter. If one of the horses knocked up, or the driver took the reins in his left hand, it was necessary to recommence the procession, and for one of the attendant boys to let go the thong or to stumble was profanation.9

The names of the gods in connexion with the teneae are Jupiter and Minerva,10 to which number Mars is usually added on the authority of Dion Cassius, in the passage referred to be merely stated that, at the Cirensian games celebrated A.D. 216, the statue of Mars, which was in the procession (excupio), fell down; and it is very remarkable that Dionysius, in his minute description of the Pompa Circensia, takes no notice whatever of the teneae, but represents the statues of the gods as carried on men's shoulders, i.e. on cerula. That a considerable number of deities, however, received this honour, seems probable from the expression of Cicero, in his solemn appeal at the close of the last Verrine oration, "omneque die, qui vehiculum teneorum et amor- tes carnis, orbis rapuit, quem auro vel vino vocabat, utique deum, et qui deum esse non probant, his deum qui these were. We frequently hear, indeed, of the chariot of Juno, of Cybele, and many others; but, as these are not mentioned in connexion with the Pompa Circensia, there is no evidence that they were teneae. Among the impious flatteries heaped on Caesar, it was decreed that his ivory statue should be placed among the images of the gods to the circus in a complete chariot (omne dolo, that is, a tenea, in opposition to a mere feculum), and that this chariot should stand in the Capitol immediately opposite to that of Jupiter.12

Similar homage was paid upon high festivals to the images of their gods by other ancient nations. Thus, in the curious ornomences p. 52. 59 note 12. 

971.
with Ares, the statue, enshrined in a chapel made of gilded wood, was dragged in a four-wheeled car by a body of priests. So also, in the account given by Athenaeus, after Callixenes of Rhodes, of the gorgeous pageant at Alexandria, during the reign of Ptolemy Philadelphia, we read of a car of Bacchus that was drawn by a thousand oxen, and most elaborate workmanship, which was dragged by 180 men, and to such customs we may find a parallel in modern times in the usages which prevail at the festival of S. Agatha at Catania; and S. Rosalia at Palermo.

The festival of Delphi, on the occasion of which the Delphians filled the huge silver crater which had been presented to the Delphic god by Creesus, Valckenaer on Herodotus notes that this tribute was no longer paid, and that Oeoeus should be read, as this festival is well known to have been celebrated by the Delphians. But both festivals are mentioned together by Pollux and Philostratus. An agon called theoxenia was also celebrated at Pellen in Achaea in honour of Hermes and Apollo. But no particulars of those or any other known to us.

THEORIA. (Vid. Theor. Codex.)

THEOPHAN'IA (Thèôphaine), a festival celebrated at Delphi, on the occasion of which the Delphians filled the huge silver crater which had been presented to the Delphic god by Creesus. Valckenaer on Herodotus notes that this tribute was no longer paid, and that Oeoeus should be read, as this festival is well known to have been celebrated by the Delphians. But both festivals are mentioned together by Pollux and Philostratus. An agon called theoxenia was also celebrated at Pellen in Achaea in honour of Hermes and Apollo. But no particulars of those or any other known to us.

THEORIA (Thworia). (Vid. Theorol.)

THEORICA (Thwiria). Under this name, at Athens, were comprised the moneys expended on festivals, sacrifices, and public entertainments of various kinds, and also moneys distributed among the people in the shape of largesses from the state.

There were, according to Xenophon, more festivals at Athens than in all the rest of Greece. Besides those which were open to the whole body of the people, there were many confined to the members of each tribe, deme, and house. These last were provided for out of the funds of the community who celebrated them. At the most important of the public festivals, such as the Dionysia, Panathenaea, Eleusinia, Thargelia, and some others, there were not only sacrifices, but processions, theatrical exhibitions, gymnastic contests, and games, celebrated with great splendour and at a great expense. A portion of the expense was defrayed by the individuals upon whom the burden of the year's devolved; but a considerable, and perhaps the larger part, was defrayed by the public treasury. Demosthenes complains that more money was spent on a single Panathenaeic or Dionysiac festival than on any military expenditure. The religious festivities to Delos and other places, and especially those to the Olympic, Nemean, Isthmian, and Pythian games, drew largely upon the public exchequer, though a part of the cost fell upon the wealthier citizens who conducted them.

The largesses distributed among the people had their origin at an early period, and in a measure apparently haphazard, though from a small beginning they afterward rose to a height most injurious to the commonwealth. The Atic drama used to be performed in a wooden theatre, and the entrance was free to all citizens who chose to go. It was found, however, that the eagerness to get led to much confusion and even danger. On one occasion, about B.C. 500, the scaffolding which supported the roof fell in, and caused great alarm. It was then determined that the entrance should no longer be gratuitous. The fee for a place was fixed at two obols, which was paid to the lessee of the theatre (called Théôtria, Thêôtrópolis, or Thêôtrikos), who undertook to keep it in repair and constantly ready for use. Each year a committee was elected to the payment of the profits. This payment continued to be exacted after the stone theatre was built. Pericles, to relieve the poorer classes, passed a law which enabled them to receive the price of admission from the state; after which, all those citizens who were too poor to pay for their places applied for the money in the public assembly, which was then frequently held in the theatre. At this time this donation was extended to other entertainments besides theatrical ones, the sum of two oboli being given to each citizen who attended; if the festival lasted two days, four oboli; and if three, six oboli, but not beyond. Hence all theoretic largesses received the name of odeôkrâta. The sums thus given varied at different times, and, of course, depended on the state of the public exchequer. These donations were called oôstous or oôstousa. They were often made at the Dionysia, when the allies were present, and saw the surplus of their tribute distributed from the orchestra. The appetite of the people for largesses grew by encouragement, stimulated from time to time by designating demagogues; and in the time of Demosthenes they seem not to have been confined to the immediate classes. But it was calculated that from 25 to 30 talents were spent upon them annually.

So large an expenditure of the public funds upon shows and amusements absorbed the resources which were demanded for services of a more important nature. By the ancient law, the whole surplus of the annual revenue which remained after the expense of the civil administration (mêdûrkeia) was to be carried to the military fund, and applied to the defence of the commonwealth. Since the time of Pericles various demagogues had sprung up, who induced the people to divert all that could be spared from the other branches of civil expenditure into the theoretic uses. An attempt was made by the demagogue Eubulus, of whom Theopompus says that τάς προσόδους κατασκευήσαν διείλετε, to perpetuate this system. He passed a law, which made it a capital offence to propose that the theoretic fund should be applied to military service. In B.C. 563, Apollonides carried a decree empowering the people to determine whether the surplus revenue might be applied to the purpose of war, for which he was indicted by a gorgô parameîmou, convicted and fined, and the decree was annulled, as a matter of course. The law of Eubulus was a source of great embarrassment to Demosthenes, in the prosecutions of his schemes for the national defence; and he seems to last, but not before B.C. 339, to have succeeded in repealing it.

In the earlier times there was no person or board of persons expressly appointed to manage the theoretic fund. The money thus appropriated was disbursed by the helenotomies. After the anarchy, the largess system having been restored by Agyrthius, a board of managers was appointed,
writers of the nature of the remedies that were employed by medical practitioners in the earliest times: it would appear that their practice was principally surgical, and almost confined to the treatment of wounds; and the with which rectificatory and offensive they were, for the most part, conceived to be the immediate infliction of the deity, and therefore abandoned as incurable, or, at least, were to be obviated only by charms and incantations, and that the arts of magic formed no inconsiderable part even of their surgical practice.

From the passages of Hippocrates speaks of certain practices, such as bleeding, and the administration of emetics, purgatives, and other analogous medicinal agents, we may infer that they were in common use among his contemporaries, and probably had been so for a long time before him. The great principle which directed all his indications was the supervention of various causes in superintending and regulating all the actions of the system. The chief business of the physician, in the opinion of Hippocrates, was to watch these operations, to promote or suppress them according to circumstances, and perhaps, in some rare cases, to attempt to counteract them. The tendency of this mode of practice would be to produce extreme and violent actions in the system, and to produce for ordinary correction; and, accordingly, we find that Hippocrates seldom attempted to cut short any moral action, or to remove it by any decisive or vigorous treatment. Another principle which very materially affected his practice was the doctrine of critical evacuations. As disease were supposed to originate in the prevalence of some morbid humour, so, when they are suffered to run their course without interruption, they are relieved by the discharge of the humour; and, consequently, the promotion of this discharge becomes an important indication, which it is often easy to accomplish, and which proves very effectual. Hence an important part of his practice consisted in the production of various kinds and especially by the employment of purgatives, of which he used a great variety, and administered them with great freedom. With the same intention he prescribed diuretics and sudorifics; he drew blood both of the lance and the scarificator; he applied the cupping-glasses; he administered injections, purgatives, and emetics; and instead of external applications, such as ointments, plasters, liniments, &c., and was familiarly acquainted with the effects of external temperature. The disputes of the Dogmatics and Empirics do not appear to have had so much influence on their mode of practice as we might have expected; and, indeed, whatever may have been the mode of the two sects, we shall always find that the practice of the most eminent of either party actually proceeded upon a judicious combination of the two systems.

Celsus, the next physician of sufficient importance to require to be noticed here, adopted to a certain extent the Hippocratic method of observing and reasoning on diseases; but he appears in the following rather than opposing them: a method which, with respect to acute diseases (as was hinted above), may frequently appear inert. But there are occasions on which he displays considerable decision and boldness, and particularly in the use of the lance, which he employed with more freedom than any of his predecessors. His regulations respecting the employment of bloodletting and of purgatives are laid down with minuteness and precision; and although he was in some measure led astray by his hypothesis of the crudity and concoction of the...
humours, the rules which he prescribed were not very different from those which were generally adopted in the commencement of the present century. His description of the symptoms of fever, and of the different varieties which it assumes, either from the nature of the epidemic, or from the circumstances under which it takes place, are correct and judicious; his adherence to the principle before referred to, of watching the operations of nature, conceiving that fever consists essentially in an effort of the constitution to throw off some morbid cause, and that, if not unduly interfered with, the process would terminate in a state of health.

Aristotle, also, in his practice followed, for the most part, the method of Hippocrates, but he paid less attention to what have been styled the natural actions of the system; and, contrary to the practice of the Father of Medicine, he did not hesitate to attempt to counteract them when they appeared to him to be injurious. The account which he gives of his treatment of various diseases indicates a simple and sagacious system, and one of more energy than that of the physician's of Socrates.

Thus he more freely administered active purgatives; he did not object to nuxotides; he was much less averse to bleeding; and, upon the whole, his materia medica was both ample and efficient. It may be asserted generally (says Dr. Bostock), that there are few of the ancient physicians since the time of Hippocrates who appear to have been less biased by attachment to any peculiar set of opinions, and whose account of the phenomena and treatment of disease has better stood the test of subsequent experience.

The most famous physician of antiquity after Hippocrates was Galen, who is also the last that can here be noticed. His practice in its general character appears to have been similar to his patholgy (which depended on the four humours, and the four qualities, connected in all the variety of combinations), and, indeed, to have been strictly deduced from it. His indications were in exact conformity to his theory, and the operation of medicines was reduced to their power of correcting the morbid states of the fluids, as depending upon their four primary qualities, or the various modifications of them. Parts of his writings prove that he was a diligent observer of the phenomena of disease, and he possessed an acuteness of mind which well adapted him for seizing the most prominent features of a case, and tracing out the origin of the morbid affection. But his predilection for theory too frequently warped and biased his judgment, so that he appears more anxious to reconcile his practice to his hypothesis than to his facts, and bestows much more labour on subtle and refined reasoning, than on the investigation of morbid actions, or the generalization of his actual experience.¹

For the use of gymnastics, which formed an important part of the ancient system of therapeutics, the reader must consult the article on that subject. (Vid. Largraves, p. 484.) The subject of charms or amulets has been before alluded to, and this article would be incomplete without some farther notice of that singular mode of cure. The instances that are to be found in the works of ancient authors (particularly Cato and Pliny) are very numerous, and the famous Abracadabra occurs for the first time in Serenus Samonius.² This amulet was particularly recommended for the cure of the species of tertian fever called by the Greeks ἐπιτηρείως (or by the moderns double-tertian), and is described by him as follows:

To which little may be added, and it seems certain that the whole work of this period treated of in this work) the celebrated Regimen Sanitatis Salernitanae, of which more than twenty editions were published in the fifteenth century, and more than forty in the sixteenth.

THERIACON (θεριάκων), a word properly applied, according to most authorities, to a heavy crust of the bite of wild beasts (θεριάκας), as those which were meant as antidotes to other kinds of poisons (τοιοῦ φυλακτύριον) were properly called ἀλεξίφαμα. The most celebrated of these preparations was the Theriaca Andromachi, invented by the physician to the Emperor Nero, which was nearly the same as that which was composed by Mithridates, king of Pontus, the king of kings, who it was found among his papers, after his death, by Pompey. This was published at Rome, under the title of Antiadum Mithradatium. But as the various receipts for the preparation of this famous remedy differ from each other very widely, the probability is, says Dr. Heberden, that Mithridates was as much a scribbler as his celebrated predecessor; for eminent physicians have since been to the medicines that are daily advertised under their names. It was asserted that whoever took a proper quantity of this preparation in the morning was assured against the effects of poison during the whole of that day, and this, we are told by Galen, was regularly done by the Emperor himself. Dr. Heberden does not believe that Mithridates himself was so fortified against all baneful drugs, that none would produce any effect when he attempted to destroy himself. In the course of ages it underwent numerous alterations. According to Celsius, who first described it, it contained only thirty-six simples; Andromachus added the flesh of vipers, after cutting off the head and tail of them; Columella, in which he used seventy-five. These, and the method of putting them together, he handed down to posterity in a Greek poem, consisting of one hundred and seventy-four hexameter and pentameter lines, which has been preserved by Galen, and has several times been published separately. When thus improved, Andromachus called it μαχαιρίς, but in his opinion it obtained the name of Theriaca, either from the vipers in it, or rather κατὰ θεριάκων, from its supposed effects in curing the bites of venomous animals. Democrates differed from Andromachus with respect to some of the proportions, and gave a receipt for it in one hundred and sixty-five Greek lines, which has also been preserved by Galen, and has been published along with his other poetical fragments at Bonne, 1833, 4to, ed. C. F. Harloe. The reputation which this medicine enjoyed was immense; it is mentioned by Abulfaraj, and several Arabic physicians wrote treatises in its praise. It even maintained its ground in quite modern times, and it is only within comparatively a few years that it has been superseded by more efficient British Pharmacopoeia. This was effected chiefly by the inquiries and reports of Dr. Heberden, who wrote a pamphlet on the subject, entitled Antithetica, 1745. It consisted latterly of seventy-two ingredients, which were arranged under thirteen heads: viz., Acris, of which there were five species; Amara, of which there were six; Stypica (vulgo Astrangentia), five in number; Antidotæ θεριακον Κυριακα, ten; Aromaticæ ex Umbellifers, seven; Rhesinæ e Balsamæ, eight; Graevolentia, six; Viroso (x is qua Naronis inducum), under which head there was but one species, viz., Opium; Τerra Inspinta et Inertia, which comprised only the celebrated Leonian Earth; Gemma, Angulis, four; Dulis, Vio, Liquor, Vinos, Amylacea, six; and Vino, Viro (or Sherry). Upon no principle of computation did this heterogeneous farrago be vindicated; and the monstrous compound is well compared by Dr. Heberden to the numerous undisciplined forces of a barbarous king, made up of a dissonant crowd collected from different countries, mighty in appearance, but in reality an ineffective multitude, that only by force of numbers could hope to prevail.

THERMÈ (Vid. BATHS, p. 143.).

THERMOPOLIUM. (Vid. CALIPDA.).

*THERmos (θέρμος), a kind of pulse, referable to the genus Lupinus, L., or Lupine; about the species, however, there is great uncertainty. "Sprengel, in the first edition of his R. H. H., set down the θέρμος of Dioscorides to be Lupinus albus; and in the second for the L. pilosus; but Schneider is not satisfied that the characters of the θέρμος, as given by Theophrastus, agree with either of them. Sprengel remarks that the θέρμος ιμηρας of Dioscorides may be either the L. hirtus or pilosus. He joins Sibthorp and Smith in holding that the Lupinus pilosus of Dioscorides should be the θέρμος ιμηρας of Dioscorides." }

THESEIA (θησεία), a festival celebrated by the Athenians in honour of their national hero Theseus, whom they believed to have been the author of their democratic form of government. In consequence of this belief, donations of bread and meat were given to the poor people at the Theseia, and the victors of the games which were held on this occasion were no want, and might fancy themselves equal to the wealthiest citizens. We learn from Gellius that a contest also was held on this occasion, but we are not informed in what it consisted. The day on which this festival was held was the eighth of every month (θυελλαί), but more especially the eighth of May. In which month, they were sometimes called θυθελλαί. From the passages above referred to, compared with Diodorus, it appears highly probable that the festival of the Thesea was not in

975
The Thesmophoria, celebrated till B.C. 469, when Cleon brought the remains of Theseus from Scyrus to Athens. 1

The Thesmophoria, a great festival and mysteries celebrated in honour of Demeter in various parts of Greece, and only by women, though some ceremonies were also performed by men. The Thesmophoria were held in the month of Pyaneposion, and began on the eleventh. Its introduction was ascribed to Demothenes, Diodorus Siculus, and Plutarch 2 to Orphes, while Herodotus 3 states that it was introduced into Greece from Egypt by the daughters of Danans, who made the Pelasgian women of Polopemnacens acquainted with the mysteries; that after the Dorian conquest they kept them in their own country, the Arcadians, who remained undisturbed in their ancient seats. Thus much appears certain from the name of the festival itself, that it was intended to commemorate the introduction of the laws and regulations of civilized life, which was universally ascribed to Demeter. 4 Respecting the duration of the Thesmophoria, various opinions are entertained by ancient and modern writers. According to Hesychius, it lasted four days: it has been inferred from Aristophanes 5 that it lasted for five days. Such discrepancies have undoubtedly arisen from the circumstance that the women spent several days before the commencement of the real festival in preparations and purifications, during which they were especially bound to abstain from sexual pleasures, and for this purpose they slept and sat upon particular kinds of herbs, which were believed to have a purifying effect. 6 During this time the women of each deme appointed two married women from among themselves to conduct the solemnities (ἀρχεῖν ἐς τὰ θεσμοφορίας), and their husbands, who had received a dowry amounting to the value of a slave in payment for these offices, were sworn to watch the solemnities in the form of a liturgy. 7 The festival itself, according to the most probable supposition, also adopted by Wellauer, 8 lasted only for three days, began on the 11th of Pyaneposion, which day was called ἀναφός or κάθοδος, 9 from the circumstance that the solemnities were opened by the women with a procession from Athens to Eleusis. In the procession were carried the image of Thesmophoros, or the goddess of law and order, who was usually called ἠμυθος θεός, the introduction of which was ascribed to Demeter θεσμοφόρος, and other symbols of civilized life. 10 The women spent the night at Eleusis in celebrating the mysteries of the goddess. 11 The second day, called νυσεία, 12 was a day of mourning, during which the women sat on the ground around the statue of Demeter, and took no other food than cakes made of sesame and honey (σπέρματισμος). On this day no meetings either of the senate or the people were held. 13 It was probably in the afternoon of this day that the women held a procession in Athens, in which they walked barefooted behind a wagon, upon which baskets with mystic symbols were conveyed to the Thesmophoria. 14 The third day, called καλλιγραφεία from the circuit, Demeter was invoked to grant the name, 15 was a day of merriment and rivalry among the women themselves, in commemoration of Iambe, who was said to have made the god-

Less smile during her grief. 1 Hesychius mentions a sacrifice called ζημία, which was offered to the goddess as an atonement for any excess or error which might have been committed during the sacred days, and this sacrifice was probably offered at the close of the third day.

There are several other particulars mentioned by ancient writers as forming part of the Thesmophoria, but we are not able to ascertain in what manner they were connected with the festival, or on what day they took place.

The Thesmophoria were also celebrated in many other parts of Greece, as mentioned above. The principal places where they are mentioned by ancient writers are the following:—Attica, where the festival lasted three days; 2 Drymæa in Phocis; 3 Thbes in Bœotia; 4 Milesiæ; 5 Syracæa; 6 Eretria in Eubæa; 7 Delos; 8 Ephesos; 9 Agrigentum; 10 other places. But of their celebration in these towns we know no more than a few isolated particulars, which are mentioned in the passages referred to. 11

Thebes. (Vid. Nosos, p. 663.)
Theaômuetai (Theaômuètais). (Vid. Açkçon.)
Theos (Θεός). In earlier times this name denoted any freeman who worked for hire (οί εὐκα τροφὴς δουλευόντες). 12 Εὐκαρίαν διά τειναίν ἐν άργοις δουλευόντενι. 13 Homer speaks of θήρας τε οἵματι τε, the latter properly signifying those who became slaves by captivity. They are to be distinguished from those who sold their persons or sold their freedom away into slavery, who were also from those persons who were in the condition of the Penestes or Helots. 14 The persons best known by the name of θήρας are the members of the fourth or lowest class at Athens, according to the political division of Solon (B.C. 694). Among other changes, he effected one of great importance, by abolishing, or at least abridging, the distinctions of caste or birth, and introducing the distinctions of them distinctions of property. He distributed the people of Attica into four classes: the first consisting of those whose land afforded an annual income of 500 medimni of dry produce, or metretes of liquid, hence called πεντακοσιόμετρον; the second of those whose annual profits were 380; the third, whose profits were 150; the fourth consisting of those whose annual profits were less than 150. The fourth class, comprehending all the poor and labouring part of the citizens, were called θήρας. To each class were assigned certain rights and privileges on the one hand, and certain duties and liabilities on the other. As to the mode of taxation, see Εἰσφορά. The highest civil offices and military commands were reserved for the members of the first class. The second and third were appointed to form the national militia, the former constituting the cavalry, the latter the heavy-armed infantry; and certain minor civil offices were open to them. The lowest class was exempted from all direct taxation, and also excluded from all honours and dignities. In war they served as light troops (φίλολοι), and, when naval service was required, as rowers in the ships. They were, nevertheless, invited to vote in the ἐκκλησία, or general assembly, where magistrates were elected, and various other impor
The name of *dio* was also given to a poor hearess at Athens, whom the next of kin was obliged to provide for and give her a suitable portion. (Vid. Suida) and Ψυαμος. 

THA'ASOS (θά'ασος) signifies any company or as semit by of persons met together for a religious purpose, such as a choir of bacchantes or dancers, a party met to celebrate a festival, &c. (leros χρυς, ανε το θεσ, ή αντον δινουσι το διαφορουμε ν πληθο επι τελε και την θησ.) Compare Dionys., Hist. viii., 20, 25, 150, 156. — Sebaldin, De Lamore, praef., xvi., 29, 32. — Fabricius, Hist. trium. Gr., 174, 255. — Thirlwall, Hist. of Greece, ii., 374, 374, &c. — I. 67, 77. — Festch, Statthet, &c., in. 256, 277; ii, 29, 30. — Harpocr. and Suida, v. v. Ομηρια και αναποστητος.

THO'ROS (θο'ρος, δ, and h, also called skai) is a name which was given to any round building which terminated at the top in a temple which might be the purpose for which it was used. At Athens the name was in particular applied to the new round Prytaneeum near the senate-house, which should not be confused with the old Prytanum at the foot of the Acropolis. It was therefore the place in which the Prytanes took their common meals; and there the Prytaneis were elected. It was adorned with some small silver statues, and near it stood the ten statues of the Attic Iphoneus. (Vid. Ernev, Hist. Prytaneeum.)

Other Greek cities had likewise their public ό λον: thus we find that Polycletus built one of white marble at Epipaurus, the inside of which was adorned with a painting by Pericles. For this work he was originally surrounded by emblems of which in the days of Pausanias six only were standing, and upon these were inscribed the names of such persons as had been cured of some disease by Asclepius, together with the name of the disease itself, and the manner in which they had obtained their recovery. (Vid. Ernev.)

THORIA LEX. This agraria lex is the subject of a very elaborate essay by Rudorff, "Das Acker- gesetz des Spurius Thorius, Zeitschrift, vol. x."

This lex was engraved on the back part of the same bronze tablet which contained the Servilia lex Judicaria, and on Repetundae. The tablet was broken at some unknown time, and the lower, which contained the Pericles, was broken. It is supposed that fragments of the upper part were preserved, which, as the tablet is written on both sides, make fourteen inscriptions, which were published by Pulvis Ursinus: the first five of the inscriptions, as they are numbered by him, belong to the lex Thoria, and the last seven to the lex Servilia. The largest and most important of the fragments are now in the Museo Borbonico. Their history is traced and their present condition described by Rudorff with great minuteness. Two of the fragments were copied by Sigonius when they were in the Museum of Cardinal Bembio; and the copy of the two fragments of the lex Thoria, and also the copy of the fragments of the lex Servilia, are printed in the work of Sigonius. In the work of Jure Populi Romani, Libri Undecim, Bononiae, 1574.

The title of this lex does not appear from the mutilated inscription, but Rudorff shows that the lex belongs to the period between the consulsip of P. Cornelius Scipio Nasica and L Calpurnius Piso Besilla, B.C. 111, and that of L. Julius Cesar, B.C. 80. From which space of twenty-two years agrarian laws were enacted, Boria, Thoria, Marcia, Apuliae, and Titia. It farther appears, from com.
THOUS.

THRONUS.

...ning two passages of Cicero, in which he speaks of the lex Thoria, with the fragments of this lex whose title is lost, that the fragments are those of the lex Thoria. Now the date of the lex Thoria is fixed by Rudorff at the year of the city 643, or B.C. 111, which is, consequently, the date of the lex, the bronze tablet, that is, agreeing with the lex Thoria. Proceeding on the assumption that the fragmentary lex was the plebeiscitum called the lex Thoria, Siggins restored the beginning of it according to the usual form of Roman plebeiscita: Sp. Thorivas... F. Tr. Pl. Plebem ivre rog. Plebesque ivre scelit Tribvs... Principvm fuit pro tribty Q. Fabivs. Q. F. primus scelit. The interpretation of this inscription is curiously. It was not cut on the rough back of the bronze tablet till after the other side, which is smooth, had been occupied by the Servilia lex. The Servilia lex is certainly not of earlier date than the year of the city 648, or B.C. 106, and, consequently, the Thoria could not have been cut on this tablet before the year 648. It seems that the tablet was large enough for the lex Servilia, for which it was intended, but much too small for the agrarian law: consequently, the characters of the agrarian side of the tablet are remarkably small, the lines narrow, the abbreviations numerous, and the chapters only separated by two or three points, whereas on the other side the letters are uniform, large, and well made, the lines wide, the words written at full length, and the chapters separated by rules. On the other hand, the lines of the Agraria lex are often so oblique that they cross the straight lines on the opposite side, which are cut very deep, and, consequently, are visible on the side on which the agrarian lex is cut." (Rudorff)

The subject-matter of this lex cannot be stated without entering into detail: the whole is examined by Rudorff with great care. The main subject of the lex, to which the first eighteen chapters or forty-three lines refer, is the public land in Italy as far as the rivers Rubico and Macra. The second part of the lex begins with the nineteenth chapter and the forty-fourth line, and extends to the fiftieth chapter and the ninety-sixth line: this part of the lex relates to the public and private land in the province of Africa. The third and last part of the lex, from the fiftieth chapter and the ninety-sixth line to the end of the inscription, relates to the Roman public land in the territory of Corinth.

Rudorff concludes that the lex applied to other land also, and for two reasons. First, the Roman agrarian laws of the seventh century of the city related to all the provinces of the Empire, of which we have an example in the case of the lex Servilia of Rullus. Secondly, the fragment of the lex Thoria which is preserved is so broad compared with the height, that we may conclude that the complete tablet contained three times as much as it does now; for nearly all the bronze tablets on which Roman laws are cut are of an oblong form, with the height much greater than their width. Of the two thirds of the tablet which is concluded have been lost, not a trace has yet been discovered.

The essay of Rudorff contains a copy of the inscription, with his restoration of the passages that are jefaced. The value of this attempt can only be estimated by an investigation as complete as that of the author.

*THOS (θός). "Hardouin," remarks Adams, "upon the authority of Bochart and others, holds the improbable opinion that Thôs was the Papio of Tacitus. But Buffon concludes, with greater probability, that it was the Canis aureus, L.; he maintains, however, that it is not the same as the Lupus aureus, although generally held to be so. The Lupus aureus is, as he remarks, the same as the Chaos of Pliny, which is our lynx or staghound, no character of which agrees with the Thôs." (Adams, Quarta Tav., p. 398.)

THIRNITAI (θηρινθῖται). (Vid. Spath., p. 398.)

THIRACTAE. (Vid. Gradusorum, p. 477.)

THRAUPIS (θραύπις), the name of a bird mentioned by Aristotle, and the same, probably, with the Goldfinch, or Fringilla carduelis. (Adams, viii., 240.—Obl. i., 131.—ib., v., 315.)—7. (Hom. Od., xx iii.)—8. (Ant. d'Enr., t. xxviii., 39.)—9. (Philost., Imag., i., 31.)—10. (Chaud. iv., Col. Victor, 64.)
more appropriately called Umbra, from its being so swift in summer as to disappear like a passing shadow."

"THYMBRA (Θυμβρα), a plant. "Stockhouse seems to be the only authority who refers it to the Thymbra capitata; all the others are satisfied that it is the Satureia Thymbra, or Savory. Aristotle alludes to the use of savoury as a condiment."{1}

"THYMELA (Θυμελα). "Modern botanists, says Linné, "were at first of a changeable name of species, and occasionally some difficulty in determining accurately to which genus and species the Thymbra is to be referred. It was most probably the Daphne Cnidium, or Flax-leaved Daphne. Botanists call this tribe of plants Thymbriae. The fruit of the Thymbra is usually named Thymbra Kudrus."{2}

"THYNNUS (Θυννος), a fish, the Scomber Thynnus, L., Spanish Mackeral, Albicore, or Tunny-fish. According to Coray, its French name is Thoer. "This fish is the largest sea fish. Aristotle speaks of an individual which weighed fifteen talents, or twelve hundred pounds, and which measured two cubits and a palm from one point to another of the caudal fin. This measure, too, is a correction of Gazz's in his first editions, and after Pliny. The majority of the manuscripts of Aristotle say five cubits, and Hardouin, always prone to paraphrase, says Pliny's ought to have been corrected. Five cubits for this part would give a length of at least twenty or twenty-two feet for the entire fish. The fishery of the tunny dates from the highest antiquity. Euthemides even attributes some verses to Hesiod, in which he describes the trade and exportation of it. But the greatest utilities it has, is this, that the fishers, at the same time, that they must of necessity have been the production of a much later poet. It was more especially at the two extremities of the Mediterranea, at the places where this sea contracts its channel, and where the migratory fishes are forced to come more closely in contact with each other, that the tunny was the most used. In the East, the Black Sea presented these fishes with an abundant degree of aliment, in consequence of the number of rivers which run into it. They repaired thicker in crowds in the spring-time for the purpose of spawning, and Aristotle even believed that they did not multiply elsewhere. They remained there during the summer, and it was on their passage to the Bosporus that such rich captures were made of them. According to the very detailed account of Strabo, their reproduction took place in the Palus Macedinis. They followed the coast of Asia Minor, and the first were taken at Trebizond and Pharnacia; but they were then but small. At Sinope they had already attained a size large enough for salting; and some were even, which is an accident uncommonly situated for this fishery, derived immense profit from it. But it was more especially the city of Byzantium that was enriched by this fish. The shoals of them that entered into the Bosporus, near Chalcedon, met with a white rock which terrified them, and induced them to turn on the side of Byzantium, and to enter into the bay which now forms the port of Constantiople. This prodigious quantity of fish still arrives at Constantiople at the present day, as in the time of the ancients. Gyllius

---

Thyrsus

Thyrsus (θυρσός), a pole carried by Bacchus, and by Satyrs, Mænades, and others who engaged in Bacchic festivities and rites. (See Dionysia, p. 693.) It was sometimes terminated by the apple of the pine or fir-cone (σωμοκύρος), that tree (σωμοκύρος) being dedicated to Bacchus in consequence of the use of the turpentine which flowed from it, and also of its cones in making wine. 1 The monuments of ancient art, however, most commonly exhibit, instead of the pinecone, a bunch of vine or ivy leaves, 1 with grapes or berries, arranged into the form of a cone. The annexed woocut, taken from a marli-

Ornament, 2 shows the head of a thyrsus composed of the leaves and berries of the ivy, and surrounded by acanthus-leaves. Very frequently, also, a white fillet was tied to the pole just below the head, in the manner represented in the woodcut on p. 98, where each of the figures holds a thyrsus in her hand. See also the woodcut to Pumambulid. 3 (See Inst. 4.) The fabulous history of Bacchus relates that he converted the thyrsi carried by himself and his followers into dangerous weapons, by concealing an iron point in the head of leaves. 4 Hence his thyrsus is called “a spear enveloped in vine-leaves,” and its point was thought to witc to madness. 5

Thyrís (θυρίς) or Thíras (θύρα, τύρα), a hat with a large high crown. This was the headdress which characterized the northwestern Asians, and more especially the Armenians, 1 the Parthians, and the Persians, 1 as distinguished from the Greeks and Romans, whose hats fitted the

The Mysian hat, or "Phrygian bonnet," as it is now called (vid. Pll., p. 778), was a kind of tiara, formed with flat sides and bound under the chin, and dyed purple. The King of Persia wore an erect tiara, while those of his subjects were soft and flexible, falling on one side. He was also distinguished by the splendid colours of his tiara, and by a diadem which encircled it, and which was variegated with white spots upon a blue ground. The Persian name for this regal head-dress was ciliara (κιλλαρία or κειλάρια). The preceding woodcut shows the ciliara as represented at Paris, and supposed by Caylus to be worn by a sovereign of Armenia. From a very remote period down to the present day, the tiara of the King of Persia has been commonly adorned with gold and jewels.

TIBIA (αἰδόλα), a Pipe, the commonest musical instrument of the Greeks and Romans. It was very frequently a hollow cane perforated with holes in the proper places. In other instances it was made of some kind of wood, especially box, and bored with a gimlet (terebro buzo). The Phcenicians used a pipe, called gingrus or αἰδόλα γγαραίος, which did not exceed a span in length, and was made of a small reed or straw. The use of the same variety in Egypt is proved by speciments in the British Museum, which were discovered in an Egyptian tomb.

When a single pipe was used by itself, the performer upon it, as well as the instrument, was called monaulos, μοναυλός. Thus used, it was much in fashion at Alexander. When its size became considerable, and it was both strengthened and adorned by the addition of metallic rings, it must have been comparable in size to some of the flageolets even to the clarionet of modern times. Among the varieties of the single pipe, the most remarkable were the bagpipe, the performer on which was called utricularius or ὀσκάλης, and the αἰδόλα πλάγιος or πλαγιαννός, which, as its name implies, had a mouthpiece inserted into it at right angles. Its form is shown in a restored terminal statuette of Pan in the Townley collection of the British Museum. Pan was the reputed inventor of this kind of tibia, as well as of the oboe or syrinx.

But among the Greeks and Romans it was much more usual to play on two pipes at the same time. Hence a performance on this instrument (tibicenianum), even when executed by a single person, was called duabus aerebus, a name which has been used in very numerous works of ancient art, and often in such a way as to make it manifest that the two pipes were perfectly distinct, and not connected, as some have supposed, by a common mouthpiece. We see this more especially in two beautiful paintings, which were found at Resina and Civit Valeria, and which represent Marryus teaching the young Olympus to play on the double pipe. The tibiae pares in the British Museum, which were found with a lyre in a tomb at Athens, appear to be of cedar. Their length is about 15 inches. Each of them had a separate mouthpiece (γλαύσις), and, besides the hole at the end, it has five holes above the top and one underneath. The circumstance of these three instruments being found together is in accordance with the fact that they are very commonly mentioned together by ancient authors, and the reason of this was, that performances on the double pipe were very frequently accompanied by the music of the lyre. The mouthpieces of the two pipes often passed through a capistrum. (Vid. Psorbeia.) (See woodcut, p. 454.)

Three different kinds of pipes were originally used to produce the notes of Dorian, Phrygian, and Lydian modes. (Vid. Musae.) The pipes of the third century B.C., Pronomus, the Thibean, invented adjustments (ἀνάρχια) by which the same set of pipes might be fitted to all the modes. In what these adjustments consisted we are not clearly informed. Probably stoppages or plugs (θυκοί) were used for this purpose. (Vid. Aulos.) It appears also that, to produce the Lydian mode, the player had only two holes above (θυκοί), and that it terminated in a horn bending upward. It thus approached to the nature of a trumpet, and produced slow, grave, and solemn tunes. The Lydian mode was much quicker, and more varied and animating. Horace mentions "Lydian pipes" as a proper accomplishment for the art of making music. He is celebrating the praise of ancient heroes. The Lydian mode in this instrument in leading their troops to battle; and the pipes employed for the purpose are distinguished by Herodotus as "male and female," i.e., probably bass and treble, corresponding to the ordinary sexual difference in the human voice. The corresponding Latin terms are tibia dextra et sinistra (lateral, or by the right or left hand). The pipes so called have been so called, because the former was more properly held in the right hand, and the latter in the left. The "tibia dextra" was used to lead or commence a piece of music, and the "sinistra" followed it as an accomplishment. Hence the former was called incinia, the latter succentura. The commonest kind of the more elaborate variety of the lyre; the pipes of this instrument in leading their troops to battle; and the pipes employed for the purpose are distinguished by Herodotus as "male and female," i.e., probably bass and treble, corresponding to the ordinary sexual difference in the human voice. The corresponding Latin terms are tibia dextra et sinistra (lateral, or by the right or left hand). TIMELA.

The pipe was the instrument principally used to regulate the dance (vid. Saltato), whether at sacrifices, festivals, or private occasions in domestic life; by means of it, also, the rowsers kept time in a trireme.

Notwithstanding the established use of the pipe for these important purposes, it was regarded, more especially by the Athenians, as an inelegant instrument, greatly inferior to the lyre. Horace, however, has observed that the trireme, if not more ancient than the pipe, or the lyre, and it is certain that the pipe was by no means confined to ancient, as it is with us, to the male sex, but that αἰνίτρικες, or female tibicides, were very common. The Thebans always esteemed this instrument, and excelled greatly in the use of it.

TIBIÇEN. (Vid. Tibia.)

*TIMERA (τιμήμα). The penalty imposed in a court of criminal justice at Athens, and also the damages awarded in a civil action, received the same name τιμήμα, because they were estimated or assessed according to the injury which the public or the individual might respectively have sustained. The penalty was either fixed by the judge, or merely declared by him according to some estimate made before the cause came into court. In the first case the trial was called ἀγών τιμήτος, in the second case, ἀγῶν ἀτίματος, a distinction which applies to civil as well as to criminal trials.

It is obvious that, on a criminal charge, two inquiries are made: first, whether the defendant is guilty; secondly, if he be found guilty, what punishment ought to be inflicted upon him. It may be advisable to leave the punishment to the discretion of the judge, or it may not. In some cases the Athenian lawyer thought that the judge ought to have no discretion. Thus, in cases of murder and high treason, sentence of death was imposed by the law as the natural sequel of the crime (vid. Proconos, Proconos), and in many other cases the punishment was likewise fixed by the law. But where the exact nature of the offence could not be foreseen by the lawyer, or it might so far vary in its character and circumstances as to admit of many degrees of culpability, it might be desirable or even necessary to leave the punishment to the discretion of the judge. The Tympanon, an instrument which passed sentence on the culprit should forthwith impose the penalty which his crime deserved. 1

Thus, it is the κόμβος δύνας, 2 it is enacted: ὅπως ἂν καταγεγυγμενὴ ἡ ἡμιαία, τιμώτω περὶ τούτων περιποθήκης, ὅπως ἂν καταγεγυγμενὴ ἡ ἡμιαία, καὶ ταῦτα ἂν ἀπότομα, where ἀπότομα refers to pecuniary penalties, ταῦτα to any other sort of penalty, as death, imprisonment, &c. Sometimes a special provision was made as to the means of enforcing the punishment; as in the law last cited, and also in the laws in Demosthenes, 3 it is declared that, if a fine be imposed, the party shall be in no way hindered from paying it. In civil causes, the sentence by which the court awarded redress to the injured party would vary according to the nature of his complaint. Where he sought to recover an estate in land, or a house, or any specific thing, as a ring, a horse, a slave, nothing further was required than to determine to whom the estate, the house, or the thing demanded, of right belonged. (Vid. Hæres, Gæzer; Oikl. ΑΣ ΔΙΚΗ.) The same would be the case in an action of debt, χρεως δίκη, where a certain sum was demanded; as, for instance, where the plaintiff had lent a sum of money to the defendant, and at the trial no question was made as to the amount, but the dispute was whether it was a loan or a gift, or whether it had been paid or not. So, in an action for breach of contract, if, by the terms of the contract, or certain penalty had been attached to its violation, it would be unnecessary to have an inquiry of damages, they being already liquidated by the act of the parties themselves. 5 In these and many other similar cases the trial was ἀτίματος. On the other hand, wherever the damages were in their nature unliquidated, and no provision had been made concerning them either by the law or by the agreement of the parties, they were to be assessed by the diacasts.

The following was the course of proceeding in the τιμητικὸς ἀγών.

Let us suppose that on a criminal prosecution the defendant had been found guilty. The superintending magistrate then called upon the prosecutor to say what punishment he proposed to be inflicted on him, and what he had to say thereupon. The bill of indictment (ψαλλόμα) was always superscribed with some penalty by the person who preferred it. He was said ἐπηγίοδοτας τιμήμα, and the penalty proposed is called ἐπηγίοδομα. 4 We find also the expressions ἐπηγίοδες τιμήμα, τιμῆδα τῷ φέντορι, τιμῆδα τοιοῦτοι. When a charge was brought, not by a private individual, but by a magistrate ex officio, the law required him in like manner to go down the penalty which he thought the case merited. 4 The prosecutor was now called upon to support the allegation in the indictment, and for that purpose to mount the platform and address the diacasts (ἀναβαλεῖν εἷς τιμήμα). Here he said whatever occurred to him as likely to aggravate the charge, or incense the diacasts against the defendant. He was not bound, however, to abide by the proposal made in the bill, but might, if he pleased (with the consent of the court), ask for a lower penalty than he had demanded before. This was often done at the request of the defendant himself or of his friends; sometimes from motives of humanity, and sometimes from prudential considerations. If the accused submitted to the punishment proposed by the magistrate, he was pronounced guilty; if he thought it too severe, he made a counter proposition, naming the penalty (commonly some pecuniary fine) which he considered would satisfy the demands of justice. He was then said ἰναττιμηθαίων ἢ εκατοτμηθαίων. 5 He was

TINNINABULUM.

The Athenians did not give the law to an ordinary parser. The ancient lawgivers, who were his clients, only determined the penalty. When the parties could not come to terms, the dicasts, after hearing what each of them had to say, divided on their respective propositions, and the majority of votes determined the penalty.

The course thus pursued at Athens must have led to injustice occasionally, but was, perhaps, 'fairer and more just' than the only penalty, if upon a number of judges. Aristotle tells us that Hippodamus of Mileus (who no doubt perceived the evils of this system) proposed that the verdict should not be given by ballot (διὰ ψυχροσφαιρίας), but that each judge should bring in a tablet with a special statement of his opinion; upon which proposal Aristotle remarks, that its effect would be to make each the arbiter of most of the ancient lawgivers that the judges should not confer with each other (κοινολογούμεν), and then he comments on the confusion that would arise if the judge were allowed to propose a penalty different from that submitted to him by the parties.

As a general rule, only one penalty could be imposed, and in one case sometimes gave more than one. Sometimes the law expressly empowered the jury to impose an additional penalty (προστιγμα) besides the ordinary one. Here the proposition emanated from the jury themselves, any one of whom might move that the punishment allowed by the law should be awarded. He was said προστιγμαδεύοντι, and the whole division (when they adopted his proposal) were said προστιγματικοί. We may observe, that the preposition προς in the verb προστιγμα does not always imply that a second penalty is imposed, but is sometimes used with reference to other matters, as in Demosthenes.

In private actions, the course of proceeding with respect to the assessment of damages was as described above. In some cases, where the plaintiff's demand was made up of several charges, or arose out of various matters, he would give in his bill of plaint a detailed account, specifying the items, &c., instead of including them in one gross estimate. This seems to have been considered the fairer method, and may be compared to the Bill of Expenditure of a defendant. The liability of the plaintiff to ἐποδήλα, which was calculated upon the sum demanded, operated as a check upon exorbitant demands, in addition to that which we have already noticed.

The προστιγματικά rarely occurred in private actions, except in those where the wrongful act complained of was the character of a public offence, as in the ἀγων ἀναθημάτων. (Vid. MARTYRIA.)

As to the amount of revenue derived by the Athenians from public fines, see Böckh.

As to Τίμημα in the sense of the rateable value of property with reference to the Athenian property-tax, see ESPI PHORA.

TINNINABULUM (τίννημον), a Bell. Bells were employed in a great variety of purposes among the Greeks and Romans, it is unnecessary to particularize here. One use, however, of them, for the purpose of keeping watch and ward in the fortified cities of Greece, deserves mention. A guard (φυλαξ) being stationed in every tower, a περιπόλος (see p. 406) walked to and fro on the portion of the wall between two towers. It was his duty to carry

TIPHE

The forms of bells were various in proportion to the multiplicity of their applications. In the Museum at Naples are some of the form which we call bell-shaped; others are more like a Chinese gong. The bell fig. 1, in the annexed woodcut, is a simple diac of bell-metal; it is represented in a painting as hanging from the branch of a tree. Figure 2 represents a bell of the same form, but with a circular hole in the center, and a clapper attached to it by a chain. This is in the Museum at Naples, as well as the bell fig. 3, which in form is exactly like those still commonly used in Italy to be attached to the necks of sheep, goats, and oxen. Figure 4 is represented on one of Sir W. Hamilton's vases, carried by a man in the gear of Pan, and probably for the purpose of illustration. Figure 5 is a bell, or, rather, a collection of twelve bells, suspended in a frame, which is preserved in the Antiquarium at Munich. This jingling instrument, as well as that represented by fig. 6, may have been used at sacrifices, in Bacchanalian processions, or for illustration. Figure 7 is a fragment of ancient sculpture, representing the manner in which bells were attached to the collars of chariot-horses.

TIPHE (τίφη), a variety of the Triteicum spelta, or Spelt. "It is borne in mind," says Adams, in his commentary on Paulus Egineta, "that the Cia, τίφη, and δόλωρα of the Greeks, and far and adurorum of the Romans, were all varieties of spelt, a species of grain bearing some resemblance to wheat. Pliny, it is true,endeavorstodistinguish the Cia from the Doloera, but from the account which Dioscorides and Galen give of them, they would appear decidedly to have been mere varieties of the same grain. Spelt, in this country, is known by the name of German wheat."
Toga.

The form was undoubtedly, in some sense, round; semicircular according to Dionysius, who calls it περιδέλλαον ἡμικύκλιον. It seems, however, impossible, from the way in which it was worn, that it could have been always a semicircle. Such may perhaps have been its form as worn in the most ancient times, when it had no great fulness; but to account for the numerous folds in which it was afterward worn, we must suppose it to have had a greater breadth, in proportion to its length, that is, to have been a smaller segment than a semicircle. Probably the size of the segment which the toga formed (on which its fulness depended) was determined by the fashion of the time or the taste of the wearer. This appears to be the true explanation of Quintilian's words, "Ispem togam rotundam, et ipsis caesus edem," which could have no meaning if nothing more were required than to give the garment the very simple form of a semicircle. The only other point to be noticed respecting the form of the toga is the question whether, when it came to be worn in many complicated folds, the art of the tailor may not have been employed to keep these folds in their position. This question, however, belongs more properly to the mode of wearing the toga.

On this subject our principal information is derived from Quintilian and Tertullian, whose statements, however, refer to the later and more complicated mode of wearing the garment, and from statues in Roman costume.

Frequent reference is made to the sinus of the toga. This was a portion of the garment, which, hung down in front of the body like a sling; it would be more fully explained presently.

We must make a clear distinction between the more ancient and simpler mode of wearing the toga and the full form, with many complicated folds, in which it was worn in a later period. Quintilian says that the ancients had no sinus, and that afterward the sinuses were very short. The passage in Livy (sinus ex toga facta, iterum sinus effuso) seems to refer not to the sinus, technically so called, but a sinus which Fabius made at the moment by gathering up some part of his toga.

The ancient mode of wearing the toga shows in the following cut, which is taken from the Augusteum, and represents a statue at Drézinc.

---

Let the toga, which in this case was probably not far from an exact semicircle, be held behind the figure, with the curved edge downward. First, one corner is thrown over the left shoulder; then the
TOGA.

Other part of the garment is placed on the right shoulder, thus entirely covering the back and the right side up to the neck. It is then passed over the front of the body, leaving very little of the chest uncovered, and reaching below nearly to the feet (in the figure, quite to one of them). The remaining end or corner is then thrown back over the left shoulder, in such a manner as to cover the greater part of the arm. By this arrangement the right arm is covered by the garment, a circumstance noticed by Quintilian; but it was occasionally released by throwing the toga off the right shoulder, and leaving it to be supported on the left alone. The portion of the toga which, in the figure, hangs down from the chest, if it be a sinus, is certainly of the kind described by Quintilian as perquam brevis.

The next cut represents the later mode of wearing the toga, and is taken from an engraving in the Museo Borbone of a statue found at Herculeanum.

By comparing this and other statues with the description of Quintilian, we may conclude that the mode of wearing the toga was something like the following:

First, as above remarked, the form in this case was a segment less than a semicircle. As before, the curved side was the lower, and one end of the garment was thrown over the left shoulder, and hung down in front, but much lower than in the former case. This seems to be the part which Quintilian says should reach down half way between the knee and the ankle. In our figure it reaches to the feet, and in some statues it is even seen lying on the ground. The garment was then placed over the back, as in the older mode of wearing it; but, instead of covering the right shoulder, it was brought round under the right arm to the front of the body. This is the most difficult part of the dress to explain. Quintilian says: "Sinus decen- timus, si aliquando supra togam fuert, nuncquam certe sit inferior. Ille, put sub hamero dextr ad sinistrum oblique dueur velut balteus, nec strangulalet nec fluat." Becker's explanation of this matter seems perfectly satisfactory. He supposes that the toga, when carried under the right arm, was then folded in two parts; one edge (namely, the lower or round edge) was then brought almost close under the arm, and drawn, but not tightly, across the chest to the left shoulder, forming the velut balteus of Quintilian, while the other part was allowed to fall gracefully over the lower part of the body, forming the sinus, and then the remaining end of the garment was thrown over the left shoulder, and hung down nearly as low as the other end, which was first put on. It is to this part that Quintilian seems to refer when he says,1 "Pars toga, quam postea imponitur, sit inferior, nam ita natus est velut balteus, et continuatur;" but the true application of these words is very doubtful. By the bottom of the toga (imam togam) in the above quotation, he seems to mean the end of the toga first put on. The part last thrown over the left shoulder, as well as the end first put on, covered the arm, as in the older mode of wearing the garment. The outer edge (extrema ora) of this part ought not, says Quintilian,2 to be the shorter, as in the simpler guad (i.e., sintrum brachium) ora ex toga duplex equaliter reducta by which he probably means that the edge of this portion should coincide with the edge of the end which was first thrown over the left shoulder, and which is, of course, governed by this portion of the garment. He says3 that the shoulder and the whole of the throat ought not to be covered, otherwise the dress will become narrow, and lose that dignity which consists in width of chest. This direction appears to mean, that the part brought across the chest (velut balteus) should not be drawn too tight.

Tassels or balls are seen attached to the ends of the toga, which may have served to keep it in its place by their weight, or may have been merely ornamens.

There is one point which still remains to be explained. In the figure a mass of folds is seen in the middle of the part of the toga drawn across the chest (velut balteus). This is the umbo mentioned by Tertullian,4 and used by Persius for the toga itself.5 It was either a portion of the balteus itself, formed by allowing this part of the garment to hang loose (which perhaps it must have done, as it is the curved, and, therefore, longer edge that is thus drawn across the chest), and then gathering it up in folds which were either folded in the figure, or else (which seems the better explanation) the folds which composed it were drawn out from the sinus, and either by themselves, or with the loose folds of the balteus, formed the umbo. It seems to have been secured by passing the end of it under the girdle of the tunic; and perhaps this is what Quintilian means by the words;6 "Subducendae etiam para aliquam tunicae, non ita acta reductam in actum redacta."

The back of the figure, which is not seen in our engravings, was simply covered with the part of the garment which was drawn across it, and which, in the ancient mode of wearing it, reached down to the heels.7 Quintilian states how low it was worn in his time, but the meaning of his words is very obscure8 ("pars ejus prior mediis cruribus optime terminatur, posterior sedem portione alveus qua cinctura."

See above.)

A garment of the supposed shape of the toga, put on according to the above description, has been found by the writer of this article to present an appearance exactly like that of the toga as seen on statues; and Becker states that he has made similar experiments with equally satisfactory results.

Tertullian's opinion was that the toga was in harmony with the compaction of the toga, and his remarks apply very well to the above description. It appears by his account that the folds of the umbo were arranged before the dress was put on, and fixed in their places by pins or hooks; but, generally speaking, it does not seem that the toga was held on by any fastening; indeed, the contrary may be inferred from Quintilian's directions to an orator for the management of his toga while speaking.9

There is seen on many statues a mode of wearing the toga which resembles the more ancient fashion in having neither sinus nor umbo, and the modern

The TOGA was a toga ornamented with purple horizontal stripes. Servius mentions three kinds of tobrae; one wholly of purple, which was sacred to the gods, another of purple and white, and another of purple and saffron, which belonged to augurs. The purple and white tobrae was a royal robe, and was worn by the pontiffs, the kings, and early kings, especially to Romulus. It was worn by the consuls in public solemnities, such as opening the Temple of Janus. The equites wore it at the transvectio and in other public solemnities. Hence the tobrae is mentioned as the badge of the equestrian order. Lastly, the tobrae worn by the Roman emperors was also adopted by papal bulls. Tobrae have been first assumed by Julius Caesar.

The material of which the toga was commonly made was wool. It was sometimes thick and sometimes thin. The former was the toga densa, pinguis, or hirta. A new tobra, with the nap neither worn off nor cut close, was called pexu, which is opposed to the trita or raea, which was used as a sumptuous waiter dress. On the use of silk for tobras, see Sueton.

It only remains to speak of the use of the tobra. It was originally worn by both sexes; but when the stola came to be worn by matrons, the tobra was only worn by the merителей, and by women who had been divorced on account of adultery. The stola was first worn by matrons, but was afterwards restricted to the upper classes, their tobras only distinguished from that of the lower classes by being fuller and more expensive. In war it was laid aside, and replaced by the Paludamentum and Sacum. Hence togatus is opposed to miles. The tobra was, however, sometimes used by soldiers, but not in battle, and was called a toga praetexta. It was worn as a cloak or blanket. It was chiefly worn in Rome, and hence togatus is opposed to rusticus. The tobra was often used as a covering in sleeping, and lastly, as a shroud for the corpse.

TOGAFA BULa. (Vid. Comedia, p. 300; Tomala.)

*TOPAZOS (τοπαζος), the Chrysolite. *By a sin.

TORCULUM.

TORCULUM or TORCULAR (λανός), a press for making wine and oil. When the grapes were ripe (σταφίδα), the bunches were gathered, any which remained unripe (μάτας), or had become dry or rotten, were carefully removed (vid. Forfex), and the rest carried from the vineyard in deep baskets (qualis), "valium, Αθηναῖος κωδίων," to be poured into a shallow vat. In this they were immediately trodden by men, who had the lower part of their bodies naked, except that they wore drawers. (Vid. Subligaculum.) At least two persons usually trod the grapes together. To "tread the winepress alone" indicated desolation and distress.

The Egyptian paintings exhibit as many as seven treaders in the same vat, and supporting themselves by taking hold of ropes or poles placed above their heads. From the size of the Greek and Roman vats, there can be no doubt that the company of treaders was often still more numerous. To prevent confusion and to animate them in their labour, they moved in time or danced, as is seen in the ancient mosaics of the church of St. Constantia at Rome, sometimes also leaning upon one another.

The preceding circumstances are illustrated in the following woodcut, taken from a bas-relief. An antefixa in the British Museum1 shows a person by the vat performing during this act on the scabellum and ibid. pares, for the purpose of aiding and regulating the movements of those in it. Besides this instrumental music, they were cheered with a song, called μέλος ἐπταλώνοις or ἄνω· η ἐπταλὼνοις, specimens of which may be seen in Anacreon.2 After the grapes had been trodden sufficiently, they were subjected to the more powerful pressure of a thick and heavy wooden beam. Paul of Cæsarea states all the juice yet remaining in them.4 Instead of a beam acted on by wedges, a press with a screw (vid. Cochin.) was sometimes used for the same purpose.5 A strainer or colander (vid. Colus.) was employed to clear the must from solid particles, as it flowed from the vat.

The preceding woodcut shows the apertures at the bottom of the vat, by which the mus (chrysolite, γαλάκτων) was discharged, and the method of receiving it when the vat was small, in wide-mouthed jars, which, when full, were carried away to be emptied into casks (dolia, ὀβάτην). (Vid. Didion.) When the vineyard was extensive, and the vat large in proportion, the must flowed into another vat of corresponding size, which was sunk below the level of the ground, and therefore called υπολόφων, in Latin hypolophi.6 From Λανός Baccius was called Leucaeus (Λαυκαῖος). The festival of the Leucaeus was celebrated on the spot where the first Attic winepress was said to have been constructed. (Vid. Dionysia, p. 364.)

Olives as well as grapes were subjected to the prætium for the sake of their oil;6 but, instead of being trodden, they were first bruised, so as to express a great part of the oil, in a mill called træpetum, which resembled our cider-mill.

The building erected to contain all the vessels and other implements (torcula vasta10) for obtaining both wine and oil was called torcularium1 and ληνεῖον.11 It was situated near the kitchen and the wine-press.

*TORDYLIUM (τορδύλιον), the Tordylium officinale, or Hartwort.12

TORDYLIUM (τορδύλιον), (Vid. Bronte, p. 179.)

TORCULUM (ὑπερτρία φοράμα), a military engine. All the missiles used in war, except those thrown from the sling (vid. Funda.), are projected either by the hand alone or with the aid of elastic substances. Of elastic instruments, the bow (vid. Arcus) is still used by many nations. But the torcule or backbow (vid. Catapulta) is more common; it is an engine of the twelfth, sixteenth, hairs, thongs, and vegetable fibres,13 has fallen into disuse through the discovery of gunpowder. The word torculeon is often used by itself to denote engines of various kinds.14 Often, also, these engines are specified separately under the names of Balista and Catapulta, which names, however, most commonly occur together in the accounts of sieges and other military operations, because both of these two kinds of engines denoted by them were almost always used in conjunction. (Vid. Hilleföllia.) The balista (πτωτορθίον) was used to shoot stones,15 the catapulta (καταπελτῆς, καταπελτάτης) to project darts, especially the fararica (vid. Hasta, p. 489),

TORMENTUM.

and a kind of missile 44 feet long, called trifas. 1 While, in besieging a city, the ram (vid. Aries) was employed in destroying the lower part of the wall, the balista was used to overthrow the battlements (propugnacula), and the catapult to shoot any of the besieged who appeared between them. 2 The forms of these machines being adapted to the objects on which they were used, the balista, when long, the balista nearly square, which explains the following humorous enumeration by Plautus 4 of the three μιγγαί, the application of which has just been explained.

"Meus est balista pugnus, cubitus catapulta est mili, Humerus ater." 3

In the same armament the number of catapults was commonly much greater than the number of balistae. 4 Also, these two classes of machines were both distributed into the greater and the less, the number of "the less" being much more considerable than the number of "the greater." 5 When Carthago Nova, which had served the Carthaginians for an arsenal, was taken by the Romans, the following were found in it: 120 large and 281 small catapults; 23 large and 52 small balistae. 6 Three sizes of the balistae are mentioned by Herodotus, and a fourth is implied by the construction of the balista, which had a height of two pounds, a half a hundred weight (τριακοσιομερίων λίθων), a whole hundred weight (balista centenaria), a hundred weight (pentobolus τριπλῶν), and three hundred weight (πετρομάχος τριπλῶν). 7 Besides these, Vitruvius mentions other many sizes, even down to the balista which threw a stone of only two pounds weight. In like manner, catapults were described according to the length of the arrows emitted from them. 8 According to Josephus, who gives some remarkable instances of the destructive force of the balista, it threw stones to the distance of a quarter of a mile. 9 Neither from the descriptions of authors, nor from the figures on the column of Trajan, 10 are we able to form any exact idea of the construction of these engines. Still less are we informed on the subject of the Scorpio or Onager, which was also a tormentum. 11 Even the terms balista and catapulta are confounded by writers subsequent to Julius Caesar, and Diodorus Siculus often uses καταπτήρας to include both balistae and catapults, distinguishing them by the epithets πετρομάχος and διαφόρα. 12 The various kinds of torments appear to have been invented shortly before the time of Alexander the Great. When horsehair and other materials failed, the women in several instances cut off their own hair, and twisted it into ropes for the engines. 13 These machines, with those who had the management of them, and who were called balistari and catapultari 14 were drawn up in the rear of an advancing army, so as to throw over the heads of the front ranks. (Vid. ARMY, p. 106.) In order to attack a maritime city, they were carried on the decks of vessels constructed for the purpose. 15 The meaning of tormentum, as applied to the cوردage of Ships, is explained in p. 899. Compare Vegetius, Mulum, i. 46.

The torture drawn up in a circuit (quaestio), as applied to criminals or witnesses, was called tormentum by

TORQUES.

the Romans. 1 The executioner v is called torvo and among the instruments employed for the pur- pose were the wheel (roda, τροχός) and the ecleus. 2 The Lydians had an instrument of torture which, as we may infer from its name (κενφος), 3 was full of points, and applied to the body of the sufferer like the card used in combing wool. The Jews seem to have used the harrow or threshing-ma- chine in the same manner; 4 and the κῆρυξ mentioned by Aristophanes, 5 if it resembled the ladder, which is still to be seen among the instruments of torture in the dungeons at Ratisbon, must have produced a similar effect. (Vid. BASANS.)

TORQUES or TORQUI (τορκύς), an ornament of gold, twisted spirally and bent into a circular form, or even extended into a ring. There is no distinction among the Persians, 6 the Gauls, 7 and other Asiatic and northern nations. 8 Torc was the name of it among the Britons and ancient Irish. Virgil 9 thus describes it as part of the armor of the Trojan youth:

"It pectore summò
Flexilis obtorti per collum circulos auri." 10

Ornaments of this kind have been frequently found, both in France, and in many parts of Great Britain and Ireland, 11 varying in size and weight, but almost always of the form exhibited in the annexed woodcut, which represents a torquus found in Brecknockshire, and now preserved in the British Museum. The same woodcut contains a sec- tion of this torquus of the size of the original. It shows, as Mr. Petrie observes concerning some found in the county of Meath, "four equidistant radiations from a common centre." 12 The torquus in the figure, B, p. 106, has each arm of equal length. Its hooks correspond well to the following description of the fall of a Celtic warrior: "Torquus ab incissa decidit una gula." 13 A torquus, which, instead of being bent into a circular form, was turned into a spiral, became a bracelet, as is shown in the lowest figure of the woodcut at ARMILLAS, p. 98. A torquus contrived to answer this purpose is called torquus brachialis. 14 Such bracelets and torques are often found together, having been worn by the same people.

An inscription found in France mentions a tor- quis, which was dedicated to Ασκληπιος, having been made by twisting together two golden snakes. 15 In this respect, also, the torquus corresponded with the armilla, which was sometimes made in the form of a serpent. (See p. 96.) The head in the

preceding woodcut is that of a Persian warrior in the mosaic of the battle of Issus, mentioned in p. 520. It illustrates the mode of wearing the torques, which in this instance terminates in two serpents' heads instead of hooks. Three other Persians in the same mosaic also wear the torques, which, according to Maffei, Mart., xzxiii., have been distinguished of them, who has been vanquished and thrown from his horse. It was by taking this collar from a Gallic warrior in similar circumstances that T. Manlius obtained the cognomen of Torquatus. 1

Torques, whether in the form of collars or bracelets, no doubt formed a considerable part of the wealth of those who wore them. Hence they were an important addition of the spoil, when one Celtic or Oriental army was conquered, and they were among the rewards of valor bestowed after an engagement upon those who had most distinguished themselves. 2 The monuments erected to commemorate Roman soldiers, and to enumerate the honours which they had obtained, often mention the number of torques conferred upon them. 3 (Vid. Phaler.)

TORUS, a bed, originally made of straw, 4 hay, leaves, woolly plants, 5 seaweed (de mollibus ultis 6), also stuffed with wool, and afterward with feathers 7 or swans' down, 8 so as to be as much raised and as soft as possible. 9 It was sometimes covered with the hide of a quadruped 10 (vid. Pellis, p. 756), but more commonly with sheets or blankets, common (p. 363), three, or four, also, which the sofa in the first woodcut, p. 276; and its appearance there may suffice to explain the transference of its remote resemblance to the larger semicircular moldings in the base of columns. (Vid. Atticeneses, Spiti.)

TOXOTAI (τοξοταί). (Vid. Democrit.)

TRABEAS. (Vid. Tus., p. 857.)

TRAGACANTHA (trągakantha), a prickly shrub, which yields gum tragacanth. It is the Aragalius Tragacantha, Goat's-thorn or Milk-vetch. The name is derived from τράγος (a goat) and ἄκανθα (a thorn), in allusion to the fancied resemblance which the plant bears to the beard of a goat. In the London Pharmacopoeia the plant is called Astragalus Tragacanthi, the generic name of the genus, and the specific name of the variety of Olive. 11

*TRAGION (τράγιον), a plant. One species, called Dioscorides τράγιον Κρητικόν, is the kind of St. John's-wort called Hypericum hircinum, and has a feathery smell. A second sort, likewise described by Dioscorides, is named by Sprengel Tragium columnae. 13

TRAGEDIA (trągédia), Tragedy. 1

I. Greek Tragedy. The tragedy of the ancient Greeks, as well as their comedy, confessedly originated in the worship of the god Dionysus. It is proposed in this article, (1) to explain from what element of that worship Tragedy took its rise, and, (2) to trace the course of its development, till it reached its perfect form and character in the drama of the Attic tragedians, Æschylus, Sophocles, and Euripides.

The peculiarity which most strikingly distinguishes the Greek tragedy from that of modern times, is the lyrical or choral part. This was the offspring of the dithyrambic and choral odes, from which, as applied to the worship of Dionysus, Greek tragedy took its rise. This worship, we may observe, was of a twofold character, corresponding to the different conceptions which were anciently entertained of Dionysus as the changeable god of flourishing, decaying, or renewed nature, and the various fortunes which, in that character, he was considered to bestow by different seasons of the year. Hence Müller observes, 2 "the festivals of Dionysus at Athens and elsewhere were all solemnized in the months nearest to the shortest day, coincidently with the changes going on in the course of nature, and by which his worshippers conceived the god himself to be affected." His mournful or joyous fortunes (nòdhy), his musical death, sorrow and the death of all vegetation in winter, and his birth, 3 indicating the renovation of all nature in the spring, and his struggles in passing from one state to another, were not only represented and sympathized in by the dithyrambic singers and dancers, but they also carried their enthusiasm so far as to fancy themselves under the influence of the same events as the god himself, and in their attempts to identify themselves with him and his fortunes, assumed the character of the subordinate divinities, the Satyrs, Nymphs, and Panes (nymphaumor leves cum sauros chorii), who formed the mythological train of the god. Hence, as is explained under Dionysia (p. 363), arose the custom of the disguise of satyrs being taken by the worshippers at the festivals of Dionysus, and the name of whom the Grecian tragedy originated, 4 "being from its commencement connected with the public rejoicing and ceremonies of Dionysus in cities, while comedy was more a sport and merriment of the country festivals." In fact, the very name of Tragedy (Trągédia), far from signifying anything mourful or pathetic, is most probably derived from τραγάνος, a "goat," who was the father of Dionysus by Semele, and who appears in the skin of a goat (χλαίνω τραγόν). The word σάρυφος, also, is apparently the same as τριγόνος, a kind of goat. 5 According to another opinion, indeed, the "word tragedy was first coined from the goat that was the prize of it, which prize was first constituted in Theseus' time." 6 This derivation, however, as well as another, connecting it with the goat odes, as on the altar of Bacchus, around which the chorus sang, is not equally supported either by the etymological principles of the language, or the analogous instance of κωμωδία, the "revel-song." 7

But the Dionysian dithyrambs were not always of a gay and joyous character; they were capable of expressing the extremes of sadness and wild lamentation as well as the enthusiasm of joy; and it was from the dithyrambic songs of a mournful cast, probably sung originally in the winter months, that the stately and solemn tragedy of the Greeks arose. That there were dithyrambs of such a character, expressive of the sufferings of Dionysus (τοῦ Δαναοῦ γόνος), appears from the statement in Herodotus, 8 that at Sicyon, in the time of Clisitheos (B.C. 600), it was customary to celebrate (γαμπάοιμα)

3. An. H. i., iii., 46.—9. (v. 67.)
the sufferer of that god with "tragic choruses." But it must be remarked, that in the ancient times the dithyrambic song was not executed by a regular chorus. Thus Archilochus says in trochaic verse, "I know how, when my mind is indomitable with wine, to lead off the dithyramb, the beautiful song of Dionysus" (vid. Caurus, p. 247), whence we may infer that in his time (B.C. 700) the dithyramb was sung by a band of revellers led by a flute-player. Lyric choruses, indeed, had been even then established in the Dionysiac rites of Greece, in connexion with the worship of Apollo, Bacchus, Satyrs, or Phlegyes, being the instrument to which the choruses sang and danced. In fact, the connexion of the Dorian choral poetry with the worship of Apollo, the direct opposite to that of Dionysus, and its consequent subject to established rules and forms, admitting, too, from the Dorian character, but little innovation, afforded the most obvious explanation of the striking circumstance that nothing dramatic sprang from it, as from the dithyrambic performances. Still there were some points in which the Dorian worship of Apollo resembled that of Dionysus, e. g., the dances with which the former god was honoured, and the kind of mimery with which the latter were excited by them. Other circumstances also, on which we can hardly reckon, probably facilitate the introduction of the Dionysian dithyramb among the Dorian states, especially after the improvements made in it by Arion (B.C. 600), which were so great, that even the invention of that species of poetry is ascribed to him, though it had been known in Greece for a century before his time. The worship of Dionysus, he says, was at his native place, Methymnae in Lesbos, with music and orgiastic rites; and as Arion travelled extensively in the Dorian states of Hellas, he had ample opportunities of observing the varieties of choral worship, and of introducing any improvements which he might wish to make in it. He is said to have been the inventor of the "tragic turn" (γραμματικός τρόπος), a phrase of doubtful signification, but which seems to mean, that he was the inventor of a grave and solemn style of music, to which his dithyrambs were danced and sung. (Vid. Music, Grec. Suidas adds of him, λέγεται καὶ πρῶτος χορὸν χτίσας, καὶ διδόμως μου καὶ νομισάω τὸ δίδυμον ὑπὸ τοῦ χοροῦ, καὶ Σαῦρος εἰσενέγκας ἔμπειρα λέγεντα. Ζωγράμμως λέγεται τὴν πραγματικὴν καὶ τήν θεωρίαν, we learn that he introduced the cyclic chorus (a fact mythologically expressed by making him the son of Cycles); i.e., the dithyramb, instead of being sung, as before his time, in a wild, irregular manner, was danced by a chorus of fifty men around a blazing altar; whence, in the time of Aristophanes, a dithyrambic poet and teacher of cyclical choruses were nearly synonymous. As the alteration was made at Corinth, we may suppose that the representation of the dithyrambic was assimilated in some respects to that of the Dorian choral odes. The clause to the effect that Arion introduced satyrs, i.e., τραγωνία, speaking in verse (troadiakia), is by some thought another expression for the invention of the dithyramb; for in the interpretation is, that he introduced the satyrs as an addition and contrast to the dance and song of the cyclic chorus of the dithyramb, thus preserving to it its old character as a part of the worship of Bacchus. The phrase βωσάμασι alludes to the different titles given by him to his different dithyrambs, according to their subjects, for we do not think that they all related directly to Bacchus. As he was the first cithara player of his age, it is probable that he made the lyre the principal instrument in the musical accompaniment.

From the more solemn dithyrambs, then, as improved by Arion, we may probably keep a joyful dialogue, ultimately sprang the dramatic tragedy of Athens, somewhat in the following manner: The choruses which represented them were under the direction of a leader or exarchus, who, it may be supposed, came forward separately, and whose part was sometimes taken by the chorus. He may also conjecture that the exarchus in each case led the performances by giving the chorus the "epithalamia," the book in a solo, and the chorus, Sarcing round the altar, then expressed their feelings of joy or sorrow at his story, representing the perils and sufferings of Dionysus, or some hero, as it might be. Accordingly, some scholars have recognised in such choral songs, or in a proximate deviation from them, the "tragedy" of other times (δή τῶν τραγωνίας). Again, Diogenes Laertius states that formerly the chorus alone acted (δὲ διαμαρτυρζόμενοι) or performed a drama, on which Hermann observes, after the dithyramb was sung, some of the chorus, in the guise of satyrs, came forward and improvised some ludicrous stories; but in imitation of the satyr-songs, he adds, "we see rather dramatica tragediae initia, quam ulimum lyricum cysvusdam generis vestigium." Lyric poets also seem to have been spoken of as tragedians; thus, according to Suidas, Plinard wrote seventeen ðραματα τραγωνικα ("but not lyrical tragedies"), and Simonides of Ceos wrote tragedies, or a tragedy, as it is frequently written, nowadays. So little certain is inferred from this, it only proves that dithyrambic poets were also called tragedian, just as in the schoolia on Aristophanes, a writer is described as διθυραμβικος ὡ τραγωδιοδακολος. For the arguments on both sides, see Hermann, l. e., and Bockh on the Orchomenian Inscriptions.

The dithyrambic choruses, accompanied with mimetic action (the lyrical tragedy), prevailed to some extent, as all choral poetry did, among the Dorians of the Peloponnesus;为之 their derivative, the choral element of the Attic tragedy, was always written in the Dorian dialect, thus showing its origin. The lyrical poetry was, however, especially popular at Sicyon and in Corinth. In the latter place, we may reasonably infer, since it is the more recent in time, that the new form of tragic poetry, "tragic choruses," i.e., dithyrambs of a sad and plaintive character, were very ancient, and the Sicilians are also said to have been the inventors of the τραγωνία (τραγωνίας ἐφεύρεται μὲν Ἐκκινώνων, τελευσοντος δὲ Ἀρτακιος τομαίοι)16; but, of course, this can only mean that the dramatic tragedy was a derivative, through many changes, of the old a

---

TRAGEDIA.

tragic λπραγία, i. e., of the songs sung with mimetic dancing by the goat-like satyrs, or, as others would say, round the altar, on which lay the burned sacrifice of a goat. It appears, then, that there is a good and intelligible foundation for the claims which, according to Aristotle, 1 were made by the Pelasgic rhapsodes, and especially by the Sicyonians, to the invention of "tragedy," understanding it by a choral performance, such as has been described above.

Now the subjects of this dithyrambic tragedy were not always, even in ancient times, confined to Dionysus. Even Arion wrote dithyrambs "relating to different heroes," as a practice in which he was followed by succeeding poets, who wrote dithyrambic odes (whence they were classed among the "dithyrambic odes," as distinguished from the "lyric odes," of Ajaces, or Minos, as it might be). 2 Thus Epigenes the Sicilian is said to have written a tragedy, i. e., a piece of dithyrambic poetry on a subject unconnected with Dionysus, which was consequently received with the cry of οὔδεν πρὸς τὸν Δίονυσον, or "this has nothing to do with Bacchus." 3

If this anecdote be true, and Epigenes preceded Arion, the introduction of the satyr into the dithyrambic chorus by the latter may possibly have been meant to satisfy the wishes of the people; but whether it was so or not, there is scarcely any doubt that, from the time of Arion, the tragic dithyramb gradually became less satyric and sportive in its character, till the creation of the independent satyric drama and the Attic dramatic tragedy. 4

Aristotle 6 says, "Tragedy was at the first an extempore effusion (ἀπ’ ὄρχες αὐτοπροειστάσεως), and was derived from τῶν ἐξάρχων τῶν Δίδυμων, i. e., from the leaders or the chief singers of the dithyramb, who probably sung or recited their parts in the trochaic metre, while the main body of the ode was written in irregular verse. It is therefore possible to conceive how the introduction of an actor or speaker, independent of the chorus, might have been suggested by the exarchoi or coryphæi coming forward separately and making short off-hand speeches, whether learned by heart beforehand, or made on the spur of the moment. (Vid. Χορος, p. 247.) But it is also possible, if not probable, that it was suggested by the rhapsodical recitations of the epic and gnostic poets, and especially by the Greek rhapsodes, poetry being generally written in iambic verse, the metre of the Attic dialogue, and which Aristotle 6 says was used by Homer in his Margites, though its invention is commonly ascribed to Archilochus. In fact, 7 the rhapsodists themselves are sometimes spoken of as actors (ὑποκρήτας) of the poems they recited, which they are also said to act (ὑποκρήτας-θέαν). But if two or more rhapsodes were called upon to go up to an episode of a poem, a regulation which obtained at the Panathenæa, and attributed to Solon or Hipperonus, 8 it is clear that they would present much of a dramatic dialogue. In fact, the principal scenes of the whole Hliad might in this way have been represented as parts of a drama. These recitations, then, being so common, it was natural to combine with the representation of the dithyramb, and especially of the satyric and choral song, the additional element of the dialogue, written in iambic verse, a measure suggested, perhaps, by the gnostic poetry, and used by Solon about the time of the origin of the dialogue, 9 more especially as it is the most colloquial of all Greek metres (Λεξικόν), and this into which common conversational most readily falls. It is, indeed, only a conjecture, that the dialogue, or the Ionian element of Attic tragedy, was connected with the rhapsodical recitations, but it is confirmed by the fact that the Homeric rhapsodes were common at Sicyon, 10 the cradle of the Dorian tragedy, and also at Brauron in Attica, where the worship of Dionysus had long prevailed. The introduction of this worship into Attica, with its appropriate choruses, seems to have taken place by the command of the Dorian oracle 11 in very early times. Thus it is stated 12 that tragedy (i.e., the old dithyrambic and satyrical tragedy) was very ancient in Attica, and did not originate with Thespis or his contemporaries. The alteration made by him, and which gave to the old tragedy (ἀργυρίῳν τῶν περὶ Θεόν ἡ τὴν Τραγῳδίαν κατασκευάζων) a new and dramatic character (making it an ignotum tragedia genere), was very simple, but very important. He introduced an actor, as it is recorded, for the sake of giving rest to the chorus, and independent of it, in which capacity he probably appeared himself, 13 taking various parts in the same piece, under various disguises, which he was enabled to assume by means of the linen masks, the invention of which is attributed to him. Now as a chorus, by means of its leader, could maintain a dialogue with the actor, the one actor only, "a dramatic action might be introduced, continued, and concluded, by the speeches between the choral songs expressive of the joy or sorrow of the chorus at the various events of the drama." Thus Müller observes that, in the play of Pentheus, supposed to have been composed by Thespis, 14 a single actor might appear successively as Dionysus, Pentheus, the mother of Pentheus, and in these characters express designs and intentions, or relate events which could not be represented, as the murder of Pentheus by her mother: by which means he would represent the substance of the fable, as it appears in the Bacche of Euripides. 15 With respect to the character of the chorus there has been much doubt: some writers, e. g. Eschylus, have maintained that his plays were all satyric and ludicrous, i. e., the plot of them was some story of Bacchus, the chorus consisted principally of satyrs, and the argument was merry: an opinion, indeed, which is supported by the fact that, in the early part of his time, the satyric drama had not acquired a distinctive character. It may also appear to be confirmed by the statement that the first tragedies made use of the trochaic tetrameter, as being better suited to the satyrical and saltatorial nature of their pieces. But perhaps the truth is that, in the early part of his career, Thespis retained the satyrical character of the older tragedy, but afterward inclined to more serious compositions, which would almost oblige him to discard the satyrs from his chorus. This, however, gives rise to serious difficulties, which are intimated by the titles of the plays assigned to him, as well as by the character of the fragments of iambic verse quoted by Plutarch as his, 16 and which, even if they are forgeries of Heracleides Ponticus, at least prove what was the opinion of a scholar of Aristotle on the subject. Besides, the assertion

that Sophocles wrote against the chorus of Thespis, seems to show that there was some similarity of character between the productions of the two poets. A summary of the arguments in favour of the serious character of the tragedy of Thespis is given by Welcker. The invention of the prologue and rhea
tis of tragedy (an expression clearly, in some measure, identical with the introduction of an actor) is attributed by Welcker to Thespis. The former word is meant the first speech of the actor; or the promenon with which he opened the piece; the chorus then sang the first ode, or πάροδος, after which came the μήδος, or dialogue between the actor and the principal chorurete. The invention of this dialogue is also alluded to in the phrase λέγεις ὑπερ ηγεμόνας. It is evident that the introduction of the prologue was a second representing the management of the chorus, which could not remain cyclic or circular, but must have been drawn up in a rectangular form about the thymele, or altar of Bacchus in front of the actor, who was elevated on a platform or table (ἐλέεον), the forerunner of the stage. The statement in Polycrates that this was the case before Thespis seems inexplicable; if the title right was that of the general character of the Thesopian drama, the phrase αὐθέν πρὸς Δίανομος, which was certainly used in his time, was first applied to his plays at Athens, as being unconnected with the fortunes of Dionysus, and as deviations from the μηδός μίθως καὶ λέες γελίας of his predecessors. Fluctarch, however, supposes that its first application was later: he says, "when Phrynichus and Eschylus continued to elevate tragedy to leg
dens and tales of sufferings (εἰς μάθος καὶ πάθη πρωγνώστων), the people, missing and regretting the old satyric chorus, said, 'What is this to Bac
chus!?'" Hence the expression was used to signify what was mal-propri, or beside the question.

The reader may here be observed that we have not quoted the pages of Horace's

"Declar et planatur vesissa poenulta Thespis,
Quae certamen agendorum perverti facibus ora."

The fact is that they are founded on a misconception of the origin of the Attic tragedy, and that the tale about the wagons of Thespis probably arose out of a confusion of the wagon of the comedian Sasa
rion with the platform of the Thesian actor. The first representation of Thespis was in B.C. 585. His immediate successors were the Athenian Chor
lius and Phrynichus, the former of whom is ascribed to B.C. 535. His works, ascribed by Suidas to have written 150 pieces: from the title of one of them, the "Alope," its subject seems to have been a legend of Attic origin. He excelled in the satyrical drama invented by Pratinas, is indica
ted by the line of an unknown author,

'Ήνικα μὲν βασιλέας ἰὸν Χαμάρας ἐν Σατίρως:

and if he wrote anything like the number of dramas ascribed to him, it is also evident that the custom of contend ing with tetralogies must have been of early origin, for there were only two dramatic fes
tival during the year.

Phrynichus was a pupil of Thespis, and gained his first victory in the dramatic contests B.C. 511. In his works, the lyric or choral element still pre
ominated over the dramatic, and he was distinguis
ghished for the sweetness of his melodies, which, in the time of the Peloponnesian War, were very popular with the admirers of the old style of music. The esteem in which his "ambrosial songs" were then held is shown in several passages of Aristoph"n
es, and in the line where the dicec are made to chant the old Sidonian sweet songs of Phrynichus.

Kάι μηνίρσοτες μέλη
'Αργοιμελεκόδιοφρείσματα,

"Sidonian" being an allusion to the play which he wrote called the Phoenissae. The first use of female masks is also attributed to him, and he so far devi
ted from the general practice of the Attic tragoe
dians as to write a drama on a subject of contempor
ary history, the capture of Miletus by the Persians, B.C. 494.

We now come to the first writer of satyrical dramas, Pratinas of Philus, a town not far from Sicyon, and which laid claim to the invention of tragedy as well as comedy. For some time pre
viously to this poet, and probably as early as Thes
pis, tragedy had been gradually departing more and more from its old characteristics, and inclining to heroic fables, to which the presence of rustic satyrs was not a fit accompaniment. But the fun and merriment caused by them were too good to be lost, or dis
placed by the severe dignity of the Eschylean drama. Accordingly, the satyrical drama, distinct from the recent and dramatic tragedy, but suggest
ged by the sportive element of the old dithyrambs of Thespis, was popular. It was not till Pratinas who, however, appears to have been surpassed in his own invention by Cher
lius. It was always written by tragedians, and generally three tragedies and one satirical piece were represented together, which, in some instan
ces at least, formed a collected whole, called a tetral
ogy (τέτραλογία). The satyrical piece was acted last, so that the moods of the spectators were agree
ably relieved by a merry afterpiece at the close of an earnest and engaging tragedy. The distinguis
ghing feature of this drama was the chorus of satyrs, in appropriate dresses and masks, and its subjects seem to have been taken from the same
class of the adventures of Bacchus and of the heroes as those of tragedy; but, of course, they were so treated and selected that the presence of rustic satyrs would seem appropriate. In their jokes, and drollery, and naievé consisted the merriment of the piece; for the kings and heroes who were intro
duced into their company were not of necessity thereby divested of their epic and legendary charac
ter (Horace speaks of the "insolument gravitatem"), though they were obliged to conform to their situa
tion, and suffer some diminution of dignity from their position. Hence Welcker observes, the satyrical drama, which, on the other hand, is well spoken of as "a playful tragedy" (παίανως τραγωδία), being, both in form and mate
rials, the same as tragedy. Thus also Horace says, "Effutire leves insignis tragodia sororius

Interpret satyris paulum pudentia proteorit,"

alluding in the first line to the mythic or epic ele
ment of the satyrical drama, which he calls "tragoe
dia," and in the second representing it as being rather ashamed of its company. The scene was, of course, laid in the supposed haunts of the satyrs, as we learn from Vitruvius. * "Satyrices scenae orantur arborebus, montibus religiosiusque agristibus rebus," all in keeping with the incidents of the pieces, and re
minding the spectators of the old dithyrambs and the god Dionysus, in whose honor the dramatic con
tests were originally held. We must, however, ob
serve, that there were some characters and lo
gods which while not presenting any serious or pa

Callisto, towering Agatharchus the this introdiced with the aid of Agatharchus the scene-painter, and improved the costume of his actors by giving them thick-soled boots (lub Lars), as well as the masks, which he made more expressive and characteristic. Horace6 thus alludes to his improvements:

"persona pallare numeris honesta

Æschylus, et medicis instaurat pulpitum dignis
Et docuit magnamque logui, nisique coturno."

The custom of contending with titles (tralolysia), or with three plays at a time, is said to have been also introduced by him. In fact, he did so much 07 · 14 to contem plate himself as the father of tragedy that the "towering height," that he was considered the father of it. The subjects of his drama, as we have before intimated from Plutarch, were not connected with the worship of Dionysus, but rather with the great cycle of Hellenic legends and some of the myths of the Homerian Epos. Accordingly, he said of himself7 that his dramas were but scraps and tragedies of ancient history. But in the instance of his departure from the spirit and form of the old tragedy, as connected with Dionysus, is shown in his treatment of the dithyrambic chorus of fifty men, which, in his trilogy of the Oresteia, he did not bring on the stage all at once, but divided it into separate parts, making a different set of choroe tes for each of the three pieces.8 In the latter part of his life he made further and more extensive improvements of Sophocles, namely, the πραγματική, or third actor. This was the finishing stroke to the dramatic element of Attic tragedy, which Sophocles is said to have matured by further improvements in costume and scene-painting. Under him tragedy appears with less of sublimity and sternness than in the hands of Æschylus, but with more of calm grandeur, and quiet dignity, and touching incident. His latter plays are the perfection of the Grecian tragic drama, as a work of art and poetic composition in a thoroughly-chastened and classic style, written when, as he says of himself, he had put away the boyish pomp of Æschylus (τον Ἀθην. ἄρταν ἅπασας δύον), and the harsh obscenity of his own (no great refinements, and attained to that style which he thought the best, and most suited for portraying the characters of men.9 The introduction of the third actor enabled him to do this the more effectually, by showing the principal character on different sides and under different circumstances, both as excited by the opposition of one, and drawn out by the sympathies of another. (Vid. Histr. p. 368) Hence, though the plays of Sophocles are longer than those of Æschylus, still

there is not a corresponding increase of action, but a more perfect delineation of character. Creon, for instance, in the Antigone, and Ajax, are more perfect and minutely drawn characters than any in Æschylus. The part of the chorus is, on the other hand, considerably diminished in his plays. Another distinguishing feature in them is their moral signification and ethical teaching. Though the characters in them are taken from the old subjects of rational interest, still they do not always appear as heroes, but as mere agents of the level of common humanity, but in such situations, and under the influence of such motives, passions, and feelings, as fall to the lot of men in general: so that "every one may recognise in them some likeness of himself."

In the hands of Euripides tragedy deteriorated, not only in dignity, but also in its moral and religious significance. He introduces his heroes in rags and tatters, and buses them with petty affairs, and makes them speak the language of everyday life. As Sophocles said of him,1 he represented men, not as they ought to be, but as they are, without any ideal greatness or poetic character—thoroughly prosaic personages. His dialogues, too, were little else than the rhetorical and forensic language of his day cleverly put into verse: full of sophistry and dividing distinctions. One of the peculiarities of his tragedies was the ρητορικά τραγωδία, or monologue, with which some hero or god opens the play, telling who he is, what is the state of affairs, and what has happened up to the time of his address, so as to put the audience in possession of every fact which it might be necessary for them to know: a very business like proceeding, no doubt, but a poor make-shift for artistical skill. The "Deus ex machina"2 also, the not always, in a "nodus, tali vindice dignus,"3 was frequently employed by Euripides to effect the děnouement of his pieces. The chorus, too, no longer discharged its proper and high functions, either as a representative of the feelings of unprejudiced observers, or "as one of the actors and a part of the whole," joining in the development of the pieces. Many of his choral odes, in fact, are but remotely connected in subject with the action of the play. Another novelty of Euripides was the use of "monodies" or-lyrical songs, in which, not the chorus, but the principal persons of the drama, declare their emotions and sufferings. They were among the most brilliant parts of his pieces, and, being sung by persons on the stage, are commonly described as ψαλμίς ἀπὸ σκηνῆς.4 Aristophanes often 14 in his comedies, and makes Euripides say of himself5 that he "nurtured tragedy with monodies, introducing Cephisophon," his chief actor, to sing them.

Εἰς ἀντέρσεως μονοιδιας, Κρασφωκτία μεγεῖ.

Euripides was also the inventor of tragi-comedy, which not improbably suggested, as it certainly resembled, the Ἱλαρωτραγῳδία of the Alexandrian age, the latter being a half-tragic, half-comic drama, or, rather, a parody or travesty of tragic subjects. A specimen of the Euripidean tragi-comedy is still extant in the Alcestis, acted B.C. 438, as the last of four pieces, and the bête as a substitute for a satyrical drama. Though tragic in its form and some of its scenes, it has a mixture of comic and satyrical characters (e. g. Hercules), and concludes happily.

It remains to make some remarks on the nature and object of Greek tragedy in general, and on the parts into which it is divided. According to Plato,6 the truest tragedy is an imitation of the noblest and best life: μόνος τοῦ κολλητὸν καὶ ἱστος βίου.
Aristotle's definition is more comprehensive and perhaps perfect. "Tragedy is an imitation of an action that is important (σημαντική), and entire, and of a proper magnitude, in pleasurable language, by means of action, not of narration, and effecting, through terror and pity, the refinement and correction of such passions" (τῶν τοιτῶν πάθηματι πάθος).

He then adds, Tragedy contains six parts: the song, i. e., the combination of incidents or plot, manners, expression, sentiment, decoration, and music (μοῦθος καὶ θῆκα, καὶ λέξεις, καὶ διόνυσος, καὶ ψυκή, καὶ μελόποιον). Of these the story is the principal part, developing the character of agents, and being, in fact, the very soul of tragedy. The manners come next, and manifest the disposition of the agents. The scenes and sentiments take the third place, and comprehend whatever is said, whether proving anything, or expressing some general reflection. Afterward he adds, Fables are of two sorts, simple and complicated (οἱ μὲν ἀπλοὶ, οἱ δὲ πεπλεκμένοι), the catastrophe of the former produced without a revolution or discovery, of the latter with one or both. Now a revolution (περιστέρα) is a change to the better; hence the catastrophe is expressive of the terminations of the action: a discovery (ἀναγωγή) is a change from known to unknown, happening between characters whose happiness or unhappiness forms the catastrophe of the drama. The best sort of discovery is accompanied by a revolution, as in the Edipus. Aristotle next enumerates the parts of the modern tragedy: prologue, which is the introduction of the plot or story; these are: the prologue, episode, exode, and choral songs; the last divided into the parodos and stasimon.

The πρόλογος is all that part of a tragedy which precedes the parados of the chorus, i. e., the first act. The ἔπειδον is all the part between whole chorals odes. The ἔποδα, that part which has no chorals after it. Of the chorals part, the πύρος is the first speech of the whole chorus (not broken up into parts): the stasimon is without anapests and trochees. These two divisions were sung all by the choruses (κοινά ἀπάντας), but the "songs on the stage" and the κυμαίον by a part only (ἴδια ἀπὸ τὰ ἀπὸ τῆς σκηνῆς καὶ κυμάιον). The commun, which properly means a waiting for the dead, was generally used to express strong and sudden gloom or suffering, especially by Ἐσχylus. It was common to the actors and a portion only of the chorus (κοινὸς τῆς θρυζος, κοινὸς χορὸς, καὶ ἀπὸ σκηνῆς), whence its derivative κονκυκτικά is used to designate broken and interrupted songs sung either by individual choruses or divisions of the chorus.1 Again, the πύρος was so named, as being the passage-song of the chorus, sung while it was advancing to its proper place in the orchestra, and therefore in anapastics or marcelling verse; the στασίμον, as being chanted by the chorus when standing still in its proper position.2

With respect to the ends or purposes of tragedy, Aristotle observes that they are best effected by the representation of a change of fortune, of prosperity and adversity to a person neither eminently virtuous nor just, nor yet involved in misfortune by deliberate vice or villainy, but by some error of human frailty, and that he should also be a person of high fame and eminent prosperity, like Ἐdipus or Thyestes. Hence, he adds, Euripides is not censurable, as is generally supposed; for tragedies with unhappy termination, like his, have always the most tragic effect; and Euripides is the most tragic of all poets, i. e., succeeds best in producing pity: an expression especially true of some scenes in the Medea. In Ἐσχylus, the feelings of pity and melancholy interest are generally excited by the relation in which his heroes stand to desti-

1. (Müller, Ruman, p. 54.)—2. (Suid. and Etymol. Mag.)
fourth actor appearing on the stage, probably because the chorus was required to be at a certain exact distance from the actor. The chorus, again, sometimes acted as the character of Pylades does; sometimes they were mute.

**Paraoxynides**: This phrase was used when one of the choruses spoke in song instead of a fourth actor, probably near or behind the side-scenes. *Paroegyptia* were voices off the stage, and not seen, as the frogs in the Rane.

**Paroegyptia**: Persons who came forward but once or nothing like the ἀπόκολουθος προταστικός or introductory persons who opened a drama and never appear again; as the watchman in the Agamemnon, and Polydorus in the Hecuba. Terence also frequently uses the persona protaticā.

The *dirioga* was a double chorus, formed of the choruses of two separate plays: thus, at the end of the Eumenides of *Æschylus*, the Furies of one play and the festal train of another come on the stage together.

The principal modern writers on the Greek tragedy are mentioned in the course of the article. The reader may also consult Wachsmuth, II., ii., p. 467 and 421.—Gruppe, *Arudne, Die Tragische Kunst der Griechen in ihrer Entwicklung und in ihrem Zusammenhange mit der Volkskunde*, Berl., 1894.—*Museum Criticum*, ii., p. 63 & 75; *Niedere Prosa*, Præctâmmer, *Schektor*; *Schröder*, Uchber; *Attische Theaterveser*, an exceedingly valuable book.

II. ROMAN TRAGEDY. The tragedy of the Romans was, for the most part, an imitation of, or, rather, a borrowing from the Greek, the more perfect and unnatural as the construction of the Roman theatre afforded no appropriate place for the chorus, which was therefore obliged to appear on the stage in the middle of the orchestra. The first tragic poet and actor at Rome was Livius Andronicus, a Greek by birth, who began to exhibit in B.C. 240. From the account in Livy, it would seem that in his monodies (or the lyrical parts sung, not by a chorus, but by one person) it was customary to separate the singing from the mimetic dancing, leaving the latter only to the actor, while the singing was performed by a boy placed near the mask of the person (ante tibi vicem), so that the dialogue only (diverba) was left to be spoken by the actors. One of the plays written by him was an "Andromeda;" and he also made a Latin prose translation of the Odyssey.

The next tragic poet at Rome was Naevius, who, however, appears to have written comedies as well as tragedies, and a history of the first Punic war: so that the writing of tragedies was not a distinct profession at Rome as at Athens. An "Alcestis" seems to have been written by him. To the same epoch as Livius Andronicus and Naevius belongs Ennius, who resembled the latter in being an epic poet as well as a tragedian. Among the plays written by him are mentioned a Medea, an Ajax, a Phoenissae, an Iphigenia, an Andromache, and a Host, the first three written by him and Naevius was comic or trochaic in the dialogue. He was the first poet to write for the lyrical parts.

The next distinguished tragedian was Pacuvius, a nephew of Ennius, and a painter also. His style was more remarkable for spirit and vigour of expression than polished or refined, a deficiency attributable to his age and provincial origin, as he was born at Brundisium. Among his plays occur an Antiope, an Oryssea, and a Doloresets, and his tragedies formed admirers even in the time of Petronius.

Cicerô quotes from

---

---

him a spirited translation of the concluding lines of the Prometheus Vinctus of *Aeschylus* at Athens in the time of Cicero. It was the most to Pacuvius by about fifty years. His earlier plays were, as he himself admitted, harsh and obscure; but his style probably altered with increasing years. Many fragments of his plays occur in Cicero and the Latin grammarians, Dionedes, Nonius, and Varro. He was also a writer of annals in hexameter verses.

The five poets mentioned above belong to the earlier epoch of Roman tragedy, in which little was written but translations or found imitations of the Greek, with occasional insertions of original matter. How they imitated the structure of the choral odes is doubtful; perhaps they never attempted it. Ennius, Pacuvius, and Accius are contrasted by Cicero with *Æschylus*, Sophocles, and Empirides; and of the last two Quintilian says, "Viritum accipit tributar; Pacuvius videri doctorem, qui esse doct. affectant, volunit.

In the age of Augustus, the writing of tragedies, whether original or imitations, seems to have been a quite fashionable occupation. The emperor himself attempted an Ajax, but did not succeed; and when his friends asked him, "Quidnam Aias ageret?" his reply was "Ajaem suum in spongrium inuducisse." One of the principal tragedies of this epoch was Asinius Pollio, to whom the line:

> *Sola Sophocle *i.e. carmina digina cathoruo*

is supposed to apply: he also excelled in other literary accomplishments. Ovid also wrote a tragedy, of which Quintilian says, "Ovidi Medea videtur mihi estenderi, quantum ille vir praestaret potius in genio suo temperare quam indulgere maluisset." His "Armorum judicium" between Ajax and Ulysses, on which Pacuvius and Accius also wrote dramas, proves that he might have rivalled Euripides in the technical skill. Quintilian also says of Varro, who was distinguished in epic as well as tragic poetry, that his Thyestes might be compared with any of the Greek tragedies. Some fragments of his Thyestes are extant, but we have no other remains of the tragedy of the Augustan age. The loss, perhaps, is not great; for the want of a national and indigenous mythology must have disabled the Roman poets from producing any original counterparts of the Greek tragedy; besides which, in the later days of the Republic, and under the Empire, the Roman people were too fond of gladiatorial shows, and beast-fights, and gorgeous spectacles, to encourage Moralia. It is also manifest that a tragedy like that of the Greeks could not have flourished under a despotism.

The only complete Roman tragedies that have come down to us are the ten attributed to the philosopher Seneca. But whether he wrote any of them or not is a disputed point. It is agreed that they are not all from the same hand, and it is doubtfu which are of the same age even. The one in which the heroines così die by throwing themselves from the stage, "eoram populo," in spite of the precept of Horace, Schlegel and others speak of them: "To whatever age they belong, they are, beyond description, bombastic and frigid, utterly unnatural in character and action, and full of the most revolting violations of propriety, and barren of all theatrical effect. With the old Greek tragedians, the heroines never appear in the exterior form, and the matter. Their persons are neither ideal nor real men, but misshapen giants of puppets, and the wire that moves them
TRIBULUS.

TRIBULUS, a corn-drag, consisting of a thick and ponderous wooden board, which was armed underneath with pieces of iron or sharp flints, and with javelins, spears, and swords. In battle. They may, however, nevertheless have existed with their name as guards of the camp, where they defended the walls and palisades, for which purpose they were armed, and were arrayed behind the princes.

In the time of Polybius, when Italy was already in 17 centuries no longer existed, the soldiers of the infantry were drawn up in four ranks, according to their age and experience, and the triarii now were 600 of the oldest veterans of a legion, and formed the fourth rank, where they were a kind of reserve. Their armour was the same as that of the hastati and principes, and consisted of a square shield, a short Spanish sword, two pila, a brass helmet with a high crest, and metal plates for the protection of the legs. (Vid. Army, Roman, p. 103.)

TRIBULA or TRIBULUM (tribulē), a corn-drag, consisting of a thick and ponderous wooden board, which was armed underneath with pieces of iron or sharp flints, and with javelins, spears, and swords. They were used when the grain was threshed, and James Meier, a celebrated Roman prince, brought the name tribula into use, because it was thought that it was necessary to prove that there had been an intention to murder the person who had been wounded; consequently, the name tribula consisted in such an intention.

Cases of this kind were brought before the Areopagus: if the accused was found guilty, he was exiled from the state and his property confiscate.

TREBONIA LEX. (Vid. Lex, p. 586.)

TRESVIRI. (Vid. Triumviri.)

TRIA RII is the name of a class of soldiers belonging to the infantry of the Roman legion. Niebuhr supposes that the name was derived from their being formed of the three heavy-armed classes, and not from their being placed in the third line of the battle array so that the triarii formed centuries, ten belonging to each class. Thus the triarii would have existed from the institution of the Servian centuries, but so long as the battle array of a legion resembled that of a Macedonian phalanx, the triarii could not be in the line.

997
other party, either by throwing before them caltrops, which necessarily lay with one of their four sharp points turned upward, or by burying the caltrops with one point at the surface of the ground. 1 The preceding woodcut is taken from a bronze caltrop of the Roman army with two points upward and one outward. 2

*TRIBULUS (tribulon), an aquatic plant, producing a prickly nut having a triangular form, "Water-chestnut" or "Water-caltrops," the *Taura natu-, called by some *tribulon anfrons.

*TRIBUIUS (tribulos), a maritime plant figured in De Caelis, from which the ancient Romans derived their "Water-caltrops," 3 "Water-chestnut," and "Triangular chestnut." 4

II. Another prickly plant, growing among corn, the *Tribus tenestris, or Land-caltrops, called also *tribulus chestharen. 5

Tribunia, a raised platform, on which the praetor and judicis sat in the Basilica. It is described under Basilica, (p. 141).

There was a tribunal in the camp, which was generally formed of turf, but sometimes in a stationary camp, of stone, from which the general addressed the soldiers, and where the consul and tribunes of the soldiers administered justice. When the general addressed the army from the tribunal, the standards were planted in front of it, and the army placed round it in order. The address itself was called Allocutio. 6 (vid. Caesar, p. 223.)

A tribunal was sometimes erected in honour of a deceased emperor, as, for example, the one raised to the memory of Germanicus. 5

Pliny 7 applies the term to embankments against the sea.

TRIBUNICIA LEX. (vid. Tribunes.)

TRIBUNUS. This word seems originally to have indicated an officer connected with a tribe (tribus), or who represented a tribe for certain purposes; and this is indeed the character of the officers who were designated by it in the earliest times of Rome, and may be traced, also, in the later officers of this name. We subjoin an account of all the several officers of this description, known under this title.

TRIBUNES OF THE THREE ANCIENT TRIBES. At the time when all the Roman citizens were contained in the three tribes of the Rames, Titii, and Luceres, each of them was headed by a tribune (φίλαρχος), and these three tribes represented their respective tribes in all civil, religious, and military affairs; that is to say, they were in the city the magistrates, in the camp the army, and in the field the præcura on their behalf, and in times of war they were their military commanders. 8 Niebuhr 8 supposes that the *tribunus celurum was the tribune of the Rames, the oldest and noblest among the three tribes, and in this opinion he is followed by Götting, 10 though it is in direct contradiction to Dionysius 9 and Pomponius, 11 according to whom the tribune celurum was the commander of the celere, the king's body-guard, a statement which is rejected by Niebuhr without any ancient authority, except that Dionysius, in one passage, 12 vaguely speaks of tribuni celerum in the plural. That, however, the tribunus celurum was really distinct from the three tribes of the tribes, is acknowledged by Niebuhr himself in a subsequent part of his work. 13 In what manner the tribunus celurum was appointed is uncertain; but, notwithstanding the statement of Dionysius, that Tarquinius Superbus gave this office to L. Junius Brutus, it is much more probable that he was elected by the tribes; for we find that when the imperium was to be conferred upon the king, the comitia were held under the presidency of the tribunus celurum, and in the absence of the king, to whom this officer was next in rank, he convoked the comitia: it was in an assembly of this kind that Brutus proposed to deprive Marcus of the imperium. A law passed under the presidency of the tribunus celurum was called a lex tribunicae, to distinguish it from one passed under the presidency of the king (vid. Raisa Lex.). The tribunes of the three ancient tribes ceased to be appointed when these tribes themselves ceased to exist as political bodies, and when the patricians became incorporated in the local tribes of Servius Tullius. (vid. Tribus, Roman.)

TRIBUNES OF THE SERVIAN TRIBES.—When Servius Tullius divided the community into thirty local tribes, we again find that at the head of these tribes there was a tribune, whom Dionysius calls φιλαρχος, like those of the patrician tribes. 2 He mentions them only in connexion with the city tribes, but there can be no doubt that each of the rustic tribes was likewise headed by a tribune. The duties of these tribes, who were without doubt the most distinguished persons in their respective districts, appear to have consisted at first in keeping a register of the inhabitants in each district and of their property, for purposes of taxation, and for levy ing the troops for the armies. When, subsequently, the Roman people became exempted from taxes, the main part of their business was taken from them. From the year 416 B.C. the last of the thirty centuries of tribal courts, the tribuni milites, 8 supposes that the tribuni erarii, who occur down to the end of the Republic, were only the successors of the tribunes of the tribes. Varro 8 speaks of curatores omnium tribum, a name by which he probably means the tribunes of the tribes. When, in the year 406 B.C., the custom of giving pay (stipendium) to the soldiers was introduced, each of the tribes was obliged to elect officers to pay the private soldiers of its own tribe, and with it to pay the soldiers; and in case they did not fulfill this duty, the soldiers had the right of pignorium capio against them. 8 In later times their duties appear to have been confined to collecting the tributum, which they made over to the military quaestors who paid the soldiers. (Vid. Questor.) The lex Aurelia (70 B.C.) called the tribuni milites "officers of judicial functions, along with the senators and equestrians; the tribunes represented the body of the most respectable citizens." But of this distinction they were subsequently deprived by Julius Caesar. 8

TRIBUNI PLEBS. — The ancient tribes of the plebeian tribes had undoubtedly the right of conven ing the meetings of their tribes, and of maintaining the privileges granted to them by King Servius, and subsequently by the Valerian laws. But this protection was very inadequate against the insatiable ambition and usurpations of the patricians. When the plebeians, impoverished by long wars, and cruelly oppressed by the patricians, at last seceded, in the year 494 B.C., to the Mons Saecr, the patricians were obliged to grant to the plebeians the right of appointing tribunes (tribuni plebis) with more efficient powers to protect their own order than those which were possessed by the heads of the tribes. The purpose for which they were appointed was only to afford protection against abuse on the part of the patrician magistrates; and that they might be able to afford such protection, their persons were declared sacred and inviolable, and it was agreed that whoever acted against this inviolability should

TRIBUNUS.

be an outlaw, and that his property should be for-
feited to the Temple of Ceres. This decree seems
unnatural, and is, I think, the result of a misprint.
Their attempts to protect members of their own or-
der, had been subject themselves to insult and mal-
treatment; and that similar things occurred even
after the sanctity of the tribunes was established by
treaty, may be inferred from the fact that, some time
after the tribuneship was instituted, heavy punish-
ments were again enacted against those who should
venturé to address a tribune in the act of making
proposition to the assembly of the tribe.
The law
by which these punishments were enacted ordained
that no one should oppose or interrupt a tribune
while addressing the people, and that whoever
should act contrary to this ordinance, should give
bail to the tribunes for the payment of whatever
fine the assembly thought proper, and could in-
duct no other complaints, but could only make the
imposition of a fine to the commonalty (multam
irragare).
The tribe thus, in their origin, only a pro-
tecting magistracy of the plebs; but, in the course
of time, their power increased to such a degree that
it surpassed that of all other magistrates, and the
tribunes then, as Niebuhr justly remarks, became
magistrates for the whole Roman people, in oppo-
sition to the senate and the oligarchical elements
in general, although they had nothing to do with
the administration of the government. During the
latter period of the Republic they became true tyrants,
and Niebuhr justly compares their college, such as
it was in later times, to the National Convention of
France, and says, after having taken into consider-
ating the great and numerous abuses which were
made of the tribunitian power by individuals, the
greatest historians and statesmen confess that the
greatness of Rome and its long duration are in a
great measure attributable to the institution of this
office.

As regards the number of the tribunes of the
people, all the ancient writers agree (see the passa-
ges in Niebuhr) that at first they were only two,
though the accounts differ as to the names of the
first tribunes. Soon afterward, however, the num-
ber of tribunes was increased to five, one being
taken from each of the five classes. When this
increase took place is quite uncertain. According
to Dionysius, three new tribunes were added im-
diately after the appointment of the first two. Ci-
cero states, that the year after the institution of
the tribunes their number was increased to ten;
according to Livy, the first two tribunes, im-
diately after their appointment, elected themselves
three new colleagues; according to Piso, there
were only two tribunes down to the time of the
Pubbilian law. It would be hopeless to attempt to
certain what was really the case: thus much only
is certain, that the number was not increased
more than once, and that the number was never
increased by more than five at a time.
These
were taken from each of the five classes. This
number appears to have remained unaltered down
to the end of the Empire.

The time when the tribunes were elected was,
according to Dionysius, always on the 10th of De-
cember, although it is evident from Cicero that in
his time this was otherwise. This election took place s. d. xvi.
Kal. Sextil. (17 B.C.), according to Livy and Tacitus, but
was to state that none but tribuliani were eligible to the
office of tribune; hence, when, towards the end of the
epoch, the patricians wished to obtain the office,
they were obliged first to renounce their own order
and to become plebeians (vid. Petrius, p. 743); yet,
also, under the Empire, it was thought that
the princeps could not be tribune because he was
a patrician. But the influence which belonged to
this office was too great for the emperors not to
covet it. Hence Augustus was made tribune for
life. During the Republic, however, the old regu-
lations remained in force even after the tribunes
had ceased to be the protectors of the plebs alone.
The only instance in which patricians were elected
by the commonalty was when two had been added,
and this was probably the consequence of an attempt to
divide the tribunalship between the two orders.
Although nothing appears to be more natural than
that the tribunes should originally have been elect-
ed by that body of the Roman citizens which they
represented, yet the subject is involved in consid-
erable obscurity; but the decisive argument is that
they were elected by the comitia of the curies; the same
is implied in the accounts of Dionysius and Livy,
according to whom the comitia of the tribunes did not
obtain this right till the lex Publilin (472 B.C.).
Niebuhr thinks that, down to the Pubbilian law,
they were elected by the centuries, the classes of
which they are to some extent the representatives
in the curia, as Dionysius himself mentions in an-
other place, had nothing to do with the election
except to sanction it. The election in the comitia
of the centuries, however, does not remove the dif-
ficulties, whence Gobineau13 is inclined to think that
the tribunes, before the expiration of their office,
appointed their successors after consulting with
the people, which were the peculiarity of the
tribunes, as Niebuhr himself mentions in another
place.14
The necessity of the sanction by the curies cannot be doubted, but it ap-
ppears to have ceased even some time before the
Pubbilian law. After this time it is never heard of
again, and the election of the tribunes was left en-
tirely to the comitia tributa, which were convoked
and held for this purpose by the old tribunes pre-
vious to the expiration of their office. One of the
old tribunes was appointed by lot to preside at the
election. As the meeting could not be prolonged
after sunset, and the business was to be completed
in one day, it sometimes happened that it was
obliged to break up before the election was com-
pleted, and then those who were elected filled up
the register of the consuls without the collage.
But, in order to prevent this irregularity, the tri-
une L. Trebonius, in 448 B.C., got an ordinance
passed, according to which the college of the tri-
unes should never be completed by co-optation, but
the elections should be continued on the second
day, if they were not completed on the first, till
the number was made up.15

TRIBUNUS.

tion of the tribunes was held originally and lawfully the Forum, afterward, also, the Campus Martius, the area of the Capitol.

We now proceed to trace the gradual growth of the tribunitian power. Although its original character was merely auxilia or defensores against patrician magistrates, the plebeians appear early to have regarded their tribunes also as mediators or arbiters in matters among themselves. This statement of Lydus¹ has been pointed out by Walter.² The whole power possessed by the college of tribunes was designated by the name tributaria potestas, and extended at no time farther than one mile beyond the gates of the city; at a greater distance than this they came under the imperium of the magistrates, like every other citizen.³ As they were the public guardians, it was necessary that every one should have access to them, and at any time; hence the doors of their houses were open day and night for all who were in need of help and protection, which they were empowered to afford against any one, even against the highest magistrates. For the same reason, a tribune was not allowed to be absent from the city for a whole day except during the Feriae Latine, when the whole people were assembled on the Alban Mount.⁴

In the year 456 B.C., the tribunes, in opposition to the consuls, assumed the right to convolve the Senate, and the latter were compelled to discuss the same;⁵ for until that time the consuls alone had the right of laying plebisca before the senate for approval. Some years after, 452 B.C., the tribunes demanded of the consuls to request the senate to make a senatus consultum for the appointment of persons to frame a new legislation, and during the discussions on this subject the tribunes themselves were present in the senate.⁶ The written legislation which the tribunes then wished can only have related to their own order; but as such a legislation would only have widened the breach between the two orders, they afterward gave way to the remonstrances of the patricians, and the new legislation was to embrace both orders.⁷ From the second convocative the tribuneship was suspended, but was restored after the legislation was completed, and now assumed a different character from the change that had taken place in the tribes. (Vid. Tribus, Roman.) The tribunes now had the right to be present at the deliberations of the senate;⁸ but they did not sit among the senators themselves, but upon benches before them. In cases of impeachment, when any of the tribunes was put upon trial for sedition, or the inviolability of the tribunes, which had before only rested upon a contract between the two estates, was now sanctioned and confirmed by a law of M. Horatius.⁹ As the tribes now included the patricians and their clients, the tribunes might naturally be asked to interpose on behalf of any citizen, whether patrician or plebeian. Hence the patricians exercised their appius laudum, implied in the protection of the tribunes.¹⁰ It seems that at this time the tribunes also acquired the right of taking the auspices in the assemblies of the tribes.¹¹ They also assumed again the right, which they had exercised before the time of the decemvirs, of bringing patricians who had violated the rights of the plebeians before the comitia of the tribes, as is clear from several instances.¹² Respecting the authority which a plebeius pugilis proposed to the tribes by a tribune received through the lex Valeria, see PLEBISCITUM. While the college thus gained outwardly new strength every day, a change took place in its influence. The former was only in the hands of the magistrates; now, the tribunes, by the power of their res gestae and势力, had assumed control of the senate, and had been the representatives of the whole people, they gradually obtained the right of intercession against any action which a magistrate might undertake during the time of his office, and this even without giving any reason for it.¹³ Thus we find a tribune preventing a consul from convoking the senate,¹⁴ preventing the proposal of new laws or elections in the comitia;¹⁵ and they interceded against the official functions of the censors,¹⁶ and even against a command issued by the praetor.¹⁷ In the same manner, a tribune might place his veto upon an ordinance of the senate,¹⁸ and thus either compel the senate to submit the subject in question to a fresh consideration, or to raise the session.¹⁹ Thus the tribune was in all cases where the people might themselves convocate a meeting;²⁰ or, when it had been convoked by a consul, they might make their proposal even in opposition to the consul, a right which no other magistrates had in the presence of the consuls. The senate, on the other hand, had itself, in certain cases, recourse to the tribunes. Thus, in 431 B.C., it requested the tribunes to convocate a consul to undergo a dietitia, in compliance with the decree of the senate, and the tribunes compelled the consuls to comply with the decrees of the senate, at non exempt in auctoritate senatus, and to execute its commands.²¹ In their relation to the senate, a change was introduced by the Plebiscitum Atinum, which ordained that a tribune, by virtue of his office, should be a senator.²² When this plebiscitum was made is uncertain, but we know that it was not yet in operation.²³ It probably originated with C. Atinus, who was praetor in Rome, of which C. Atinus, at least in later times, was the office which persons held previously to the tribuneship, and as the ques- torship itself conferred upon a person the right of a senator, the law of Atinus was in most cases a pernicious.

In their relation to other magistrates we may observe, that the right of intercessio was not con- fined to summon a magistrate to attend a dietitia, but they might even command their victorates and Viaros to seize a consul or a censor, to imprison him, or to throw him from the Tarpeian Rock.²⁴ It is mentioned by Labeo and Varro²⁵ that the tribunes, when they brought an accusation against any one before the people, had the right of prehensum.

1006
TRIBUNUS.

no, but not the right of vocatio; that is, they might command a person to be dragged by his viaticum before the comitia, but not to summon him. An attempt to account for this singularity is made by Gellius. They might, as in earlier times, propose a fine to be inflicted upon the person accused before the comitia, but in some cases they dropped this proposal, and treated the case as a capital one.

The college of tribunes had also the power of making edicts, as that mentioned by Cicero. In cases of urgent necessity, the magistrates often communicated with the magistratus; or, in some instances, the name of the tribunes, or the magistrates themselves, is given as having taken that step. In the latter cases, it is often said that they had been empolitcbly persisting on the part of the people.

From the time of the mortising law, the power of the tribunes had been gradually rising to such a height that there was no other in the state to equal it. whence Velleius even speaks of the imperium of tribunes. They had acquired the right of proposing to the comitia, or the Senate, measures on nearly all the important affairs of the state, and it would be endless to enumerate the cases in which their power was manifest. The proposal of any measures communicated to the Senate, to which it could be communicated to and approved by it; but cases in which the people themselves had a direct interest, such as a general legal regulation, the granting of the franchise, the alteration of the attributes of a magistrate, and others, might be brought before the people, without their having previously been communicated to the Senate, though there are also instances of the contrary. Subjects belonging to the administration could not be brought before the tribunes without the tribunes having previously received through the Consul the auctoritas of the Senate. This, however, was done very frequently, and hence we have mention of a number of plebeians of the lower class who were paid for the services they rendered to the State. (See a list of them in Winter, p. 132, n. 11.) Sometimes even occurs that the tribunes brought the question concerning the conclusion of a peace before the tribunes, and then compelled the Senate to ratify the resolution as expressing the wish of the whole people.

Sulla, in his reform of the constitution on the early aristocracy, left to the tribunes the right of sancntiand, and deprived them of the right of making legislative or other proposals, either to the Senate or the comitia, without having previously obtained the sanction of the Senate. (Vid. TRIBUS, ROMAN.) But this arrangement did not last, for Pompey restored to them their former rights.

During the later period of the Republic, when the office of quaestor was in most cases held immediately before that of tribune, the tribunes were generally elected from among the senators, and this continued to be the same under the Empire. Sometimes, however, equites also obtained the office, and thereby became members of the Senate, where they were considered as a separate class, distinct from the chief of the people, and therefore entitled to exist to the fifth century of our era, although their powers became naturally much limited, especially in the reign of Nero. They continued, however, to have the right of intercession

against decrees of the Senate and on behalf of freed individuals.

TRIBUNUS. E M CUM CONSULARI POTESTATE.—When the comitia met on the 445 B.C., the tribune C. Canuleius brought forward the rogation that the consuls should not be confined to either order, and the patricians evaded the attempt by a change in the constitution; the powers which had hitherto been united in the consulship were now divided between two new magistrates, viz., the tribuni militum cum consulari potestate. These consuls, and the three military tribunes, with consular power, were appointed, and to this office the plebeians were to be eligible with the patricians. In the following period, however, the people were to be at liberty, on the proposal of the Senate, to decide whether consuls were to be elected according to the old custom, or consular tribunes. Henceforth for many years, sometimes consuls and sometimes public amusements were appointed, and the number of the latter varied from three to four, until, in 405 B.C., it was increased to six, and as the censors were regarded as their colleagues, we have sometimes mention of eight tribunes. At last, however, in 367 B.C., the office of these tribunes was abolished as unnecessary to the welfare of the State, and was restored. These consular tribunes were elected in the comitia of the centuries, and undoubtably with less solemn auspices than the consuls. Concerning the irregularity of their number, see Niebuhr, u. 325.; p. 389, &c.—Compare Götting, p. 326, &c.

TRIBUNES OF THE PEOPLE were officers in the Roman armies. Their number in a legion was originally four, or, according to Varro, three, and they were appointed by the generals themselves. In the year 363 B.C., it was decreed that henceforth six of these military tribunes should always be appointed in the comitia, probably the comitia of the centuries. These tribunes were distinguished from those elected by the people (comitati) by the name of Ruffii. The number of tribunes in each legion was subsequently increased to six, and their appointment was sometimes left altogether to the consuls and praetors, though subsequently we find again that part of them were appointed by the people; and the consuls or praetors among the soldiers in the camp, in superintending their military exercises, inspecting outposts and sentinels, procuring provisions, settling disputes among soldiers, superintending their health, &c. Compare ARMY, ROMAN.

TRIBUNES VOLUNTARIOS were an officer who does not occur till after the time of Diocletian, and who had the supernumerary and sometimes public amusements, especially of theatrical performances.

TRIBUS (GREEK) (Φύλων, Φυλών). In the earliest times of Greek history, mention is made of people being divided into tribes and clans. Homer speaks of such divisions in terms which seem to imply that they were elements that entered into the constitution of communities and maintained the Agamemnon to arrange his army κατὰ φύλα, κατὰ φωτιας, so that each may be encouraged by the presence of its neighbours. A person not included in any clan (φωτιας) was regarded as a vagrant or outlaw. These divisions were rather natural than political, depending on family connexion, and arising out of those times when each head of a family ex-
erased a patriarchal sway over its members. The bond was cemented by religious communion, sacrifices, and festivals, which all the family or clansmen attended, and at which the chief usually presided. The aggregate of such communities formed a political society, which, when the hierarchies, the hierarchies, the holy cities, and the clans continued to exist, though, in the progress of civilization, they became more extended, and assumed a territorial or political rather than a fraternal character. The tribes were not, in general, distinctions between nobles and commons, unless the people were of different races, or unless there had been an accession of foreigners, who were not blended with the original inhabitants. It is, however, a general rule, there was no decided separation of tribe, much less of caste, between nobles and commons of the same race. Nor was there any such distinction as a sacerdotal order. The priestly function was in early times united to that of the king; afterward the priesthood of particular deities became hereditary in certain families, owing either to a supposed transmission of prophetic power, or to its being the case of the Phenicians, the Lamidse, or to accidental circumstances, as in the case of Telines of Gela, but the priests were not separated, as an order, from the rest of the people.

The most important distinctions of a class-like nature between people living under the same government, arose in those countries that were conquered by the migrations of the Thessalians, Boeotians, and Dorians in the century subsequent to the heroic age. The revolutions which they effected, though varying in different places according to circumstances, had in many respects a uniform character. The conquering body took possession of the country, and became its lords; the original inhabitants, reduced to subjection, and sometimes to complete vassalage or servitude, remained a distinct people or tribe from the conquerors, in the former built cities, usually at the foot of some citadel that had belonged to the ancient princes, where they resided, retaining their military discipline and martial habits; a rural population, consisting principally of the former natives, but partly, also, of the less warlike of the invaders, and partly of fresh emigrants invited or permitted by them to settle, dwell in the surrounding villages, and received the name of Πηρίοις. The condition of the Lacese-monian περίοικοι is spoken of under Περίοικοι. A similar class arose in most of the countries so colonized, as in Argos, Corinth, Elis, Crete, &c. But their condition varied according to the manner in which the invaders effected their settlement, and other circumstances and events prior or subsequent to that time. In many cases, the new-comer was received under a treaty, or upon more equitable terms, so that an union of citizenship would take place between them and the original inhabitants. This was the case in Elis, Messenia, Phlius, Troad. So the Cretans, who invaded Mileitus, mingled with the ancient Carians, and the Ionians with the Cretans and Carians of Colophon. In Megara, the ruling class, after a lapse of some time, amalgamated with the lower. In other places the περίοικοι were more degraded. Thus in Sicyon they were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expelled to were expul...
The armed men or warriors; the Argades, warrors or husbandmen; the Ἀγίκοινος and shepherds. It is difficult, however, to discover in the first name any such meaning, unless Ἀγίκοινος, and not Ἀγίκοις, be the true reading, in which case it has been supposed that this tribe might be a sacerdotal order, from ρηταῖον, used in its religious sense; or a peasantry who paid rent to the lords of the soil, from τελεῖν, in the sense to pay. Against the former of these interpretations it may be objected, that no trace of a priestly order is to be found in the Fourth Book of Attic history; and against the latter, that the word Ἀγίκοις would denote a similar class of people, unless we resort to another interpretation of the word Ἀργαδες, viz., artisans, who would hardly constitute a distinct tribe in so early a period of society. It may be observed, however, that Argades and Ἀγίκοινος might be taken to signify a local distribution of inhabitants, the former being the tillers of the ground, dwelling in the plains, the latter mountain eers; and this agrees very well not only with the known character of the country of Attica, but also with the division above mentioned as having existed in the reign of Cranias, viz., Mesogea and Dia- cris. There is no more difficulty in the one case than in the other; in supposing that some of the tribes were demarcated from the local occupations, while others owed their names to other circumstances. Argades and Ἀγίκοινος might be the old inhabitants, according to their previous division, while the other tribes might be the Ionic settlers, Ἱππολετος, the most warlike portion of them, Seleontes, the great body, so called from a son of Seleus, was the Ionic name of the tribe, and kept the ancient nobility, as distinguished from the Ionic settlers. Whatever be the truth with respect to the origin of these tribes, one thing is more certain, that before the time of Theseus, whom historians agree in representing as the great founder of the Attic commonwealth, the various people who inhabited the country continued to be dissected and split into factions.

Theseus in some measure changed the relations of the tribes to each other, by introducing a gradation of ranks in each; dividing the people into Ἐπικαράδιος, Ἱουνόροι, and Δυναστείζονες, of whom the first were nobles, the second agriculturists or yeomen, and the last, such as had no settled occupation, at the same time, in order to consolidate the national unity, he enlarged the city of Athens, with which he incorportated several smaller towns, made it the seat of government, encouraged the nobles to reside there, and surrendered a part of the royal prerogative in their favour. The tribes of Phili were divided, either in the age of Theseus or soon after, each into three γαργαται (a term equivalent in fragments, and analogous in its political relation to the Roman curia), and each γαργατα into thirty γεών (equivalent to the Roman gentes), the members of a γεών being called γερηνταῖοι or ὑμαχαλταῖοι. Each γεών was distinguished by a particular name of a patronymic form, which was derived from some hero, and not from Ἀγίκοις, be the true reading, in which case these divisions, though the names seem to import family connexion, were in fact artificial, which shows that some advance had now been made towards the establishment of a closer political union. The members of the γαργαται and γεών had their respective religious rites and festivals, which were preserved long after these communities had lost their political importance, and perhaps prevented them from being altogether dissolved.

The relation between the four Ironic tribes and

---

the three classes into which Theseus divided the nation, is a difficult and perplexing question. It would appear, from the statements of ancient writers on the subject, that each of the four tribes was divided into Eupatridae, Geomori, and Demurgi; which is confirmed by the fact that the four Phylai are, according to Thirlwall, Siphnoi, Ionians, Naxians, and Aegaeans, taken from the Eupatridae, but, at the same time, one from each tribe. (Vid. Phylororilieus. This, as Thirlwall has remarked, can only be conceived possible on the supposition that the distinctions which originally separated the tribes had become merely nominal; but Malden, who rejects the notion that the four Ionic tribes were castes deriving their name from their employment, supposes that the Demurgi and Geomori were divided alone, and that the latter were divided into four phylai, like the patricians at Rome into three. The Geomori and Demurgi had therefore, according to his supposition, nothing to do with the tribes. This view of the subject would remove many difficulties, and is most in accordance with the subsequent history and political analogies in other states, but seems hardly supported by sufficient evidence to warrant us in receiving it.

After the age of Theseus, the monarchy having been first limited and afterward abolished, the whole power of the state fell into the hands of the Eupatridae or nobles, who held all civil offices, and had, besides, the management of religious affairs, and the interpretation of the laws. Attica became agitated by the abolition of the Phyle, and most fertile part of the country; the second, the smaller landowners and shepherds; the third, the trading and mining class, who had by this time risen in wealth and importance.

To appease their discord, Solon was applied to, and thereupon framed his celebrated constitution and code of laws. Here we have only to notice that he retained the four tribes as he found them, but abolished the Phyle, and divided the people into four classes, or, at all events, greatly diminished their importance, by introducing his property qualification, or division of the people into Partes of the body politic.

The enactment of Solon continued to be the law at Athens, though in a great measure suspended by the tyranny, until the democratic reform effected by Cleisthenes. He abolished the old tribes, and created ten new ones, according to a geographical division of Attica, and named after ten of the ancient heroes: Erechtheis, Agis, Pandionis, Leontis, Acmanitis, Eumelis, Cerygos, Hippothontis, Eanetis, Antiochis. These tribes were divided each into ten phylai, the number of which was afterward increased by subdivision; but the arrangement was so made that several phylai not contiguous or near to one another were joined to make up a tribe. (Vid. Damus.) The object of this arrangement was, that by the breaking of old associations, a perfect and lasting revolution might be effected in the habits and feelings, as well as the political organization of the people. He allowed the ancient aftertis to exist, but they were deprived of all political importance. All foreigners admitted to the citizenship were registered in a phyle and demos, but not in a phratia or genos; whence Aristophanes says, as a taunting mode of designating new cities, that they have no phrata, or only barbarous ones (quoted by Niebuhr). The functions which had been discharged by the old tribes were now mostly transferred to the phylai. Among others, we may notice that of the forty-eight nukkrapias into which the old tribes had been divided for the purposes of taxation, which now became useless, the taxes being collected on a different system. The reforms of Cleisthenes were destined to be permanent. They continued to be in force (with some few interruptions) until the downfall of Athenian independence. The ten tribes were blended with the whole machinery of the constitution. Of the senate of Five Hundred, fifty were chosen from each tribe. The allotment of Domestics was according to the number of tribes, the number of each of which was observed in most of the principal offices of state, judicial and magisterial, civil and military, as that of the demeritis, loguatria, polialia, tamaia, teikstos, filiarchis, stratagous, etc. In B.C. 307, Demetrius Poliorcetes increased the number of tribes to twelve by creating two new ones, namely, Antigoni as and Demetrias, which afterward received the names of Philemata and Acta; and a thirteenth was subsequently added by Hadian, bearing his own name.

The preceding account is only intended as a brief sketch of the subject, since it is treated of under several other articles, which should be read in conjunction with this. (Vid. Civilis, Greek; Demus, Phylars) Phylororileus, &c.)

TRIBUS.

The three ancient Roman tribes, the Ramnes, Titii, and Luceres, or the Ramnenses, Titenses, and Lucerenses, to which the patricians alone belonged, must be distinguished from the thirty plebeian tribes of Servius Tellius, which were entirely local, four for the city, and twenty-six for the country around Rome. The history and organization of the three ancient tribes are spoken of under Patrici. They continued of political importance almost down to the time of the decemviral legislation, but after this time they no longer occur in the history of Rome, except as an obsolete institution.

The institution and organization of the thirty plebeian tribes, and their subsequent reduction to twenty by the conquests of Porcena, are spoken of under Plebe, p. 768-783. The four city tribes were called by the same name as the regions which they occupied, viz., Suburana, Esquilina, Collina, and Palatina. The names of the sixteen country tribes which continued to belong to Rome after the conquest of Porcena, are in their alphabetical order as follow: Amilia, Camilia, Cornelia, Fabia, Galeria, Horatia, Lemania, Menenio, Pappia, Polia (which Niebuhr thinks he derived from the name of the Pobilia, which was instituted at a later time), Papius, Pappia, Romilia, Sergia, Veturia, and Volstina. As Rome gradually acquired possession of more of the surrounding territory, the number of tribes also was gradually increased. When Appius Claudius, with his numerous train of clients, emigrated to Rome, lands were assigned to them in the district where the Anio flows into the Tiber, and a new tribe, the tribus Claudia, was formed. This tribe, which Livy (if the reading is correct) calls etus Claudia tribus, was subsequently enlarged, and was then designated by the name Crustumina or Crustulina. This tribe is the first instance of a country tribe.
by th. legislation itself, the comitia tributa, insted of a merely plebeian, became a national assembly insomuch as henceforth patricians end freeborn clients were incorporated in the tribes, and thus obtained the right of taking part in their assemblies. 3
This new constitution of the tribes also explains the otherwise unaccountable phenomena mentioned in the article Tribuni, that patricians sought the protection of the tribunes, and that on one occasion even two of the tribunes were patricians. From the latter fact it has been inferred, with great prob ability, that about that time attempts were made by the patricians to share the tribuneship with the plebeians. But, notwithstanding the incorporation of the patricians in the tribes, the patricians remained essentially plebeian, as the same causes which would have acted had the patricians been included in the tribes by Servius Tullius were still in operation; for the patricians were now even fewer in number than two centuries before. Hence the old name of plebeiscitum, which means originally a resolution of the plebeians only, although in a strict sense of the word no longer applicable, was still retained, as a resolution of the comitia tributa was practically a resolution of the plebes, which the patricians, even if they had voted against it unanimously, could not have prevented. Moreover, owing to this, the patricians probably attended the comitia tributa very seldom.

I. The Election of Magistrates.—The comitia tributa had only the right of electing the magistrates minorcs. 4 The tribuni plebs were elected by them from the time of the Pubilian law (ed. Rein). They had power to vote on all questions which were put to them, and on all points of the law which were raised in their presence. They also had the power of giving the vote in a new comitia tributa, whenever they chose. But, although they were thus very powerful, they were not allowed to vote on any new comitia tributa, which was then the case at first, without the consent of a certain number of the magistrates. They were thus very powerful, and could not be easily influenced by the wishes of the people. Their influence was equal to that of the patricians, and they were thus very powerful, and could not be easily influenced by the wishes of the people. Their influence was equal to that of the patricians, and they were thus very powerful, and could not be easily influenced by the wishes of the people. Their influence was equal to that of the patricians, and they were thus very powerful, and could not be easily influenced by the wishes of the people. Their influence was equal to that of the patricians, and they were thus very powerful, and could not be easily influenced by the wishes of the people. Their influence was equal to that of the patricians, and they were thus very powerful, and could not be easily influenced by the wishes of the people. Their influence was equal to that of the patricians, and they were thus very powerful, and could not be easily influenced by the wishes of the people. Their influence was equal to that of the patricians, and they were thus very powerful, and could not be easily influenced by the wishes of the people. Their influence was equal to that of the patricians, and they were thus very powerful, and could not be easily influenced by the wishes of the people. Their influence was equal to that of the patricians, and they were thus very powerful, and could not be easily influenced by the wishes of the people. Their influence was equal to that of the patricians, and they were thus very powerful, and could not be easily influenced by the wishes of the people. Their influence was equal to that of the patricians, and they were thus very powerful, and could not be easily influenced by the wishes of the people. Their influence was equal to that of the patricians, and they were thus very powerful, and could not be easily influenced by the wishes of the people. Their influence was equal to that of the patricians, and they were thus very powerful, and could not be easily influenced by the wishes of the people. Their influence was equal to that of the patricians, and they were thus very powerful, and could not be easily influenced by the wishes of the people. Their influence was equal to that of the patricians, and they were thus very powerful, and could not be easily influenced by the wishes of the people. Their influence was equal to that of the patricians, and they were thus very powerful, and could not be easily influenced by the wishes of the people."
and afterward without the sanction of the cœtes, the senate, or the centuries, which were originally the real legislative assembly. (Vid. Fleiscitum.) It should, however, be observed, that even at the time when plebsicita became binding upon the whole nation, there occur many cases in which a plebis-
citum is based upon and preceded by a senatus con-
sultum, and we have to distinguish between two kinds of plebsicita: 1. Those relating to the ad-
mittance of the Republic into the war, which naturally belonged to the senate, since those which con-
ferred the imperium, appointed extraordinary com-
misions and questions, dispensed or exempted persons from existing laws, decided upon the fate of conquered towns and cities, and upon the af-
airs of provinces in general, &c. These were al-
ways based upon a senatus consultum, which was laid down for the tribunes by the tribunes. 2. Plebsicita relating to the sovereignty and the rights of the people naturally required no senatus consultum, and in general none is mentioned in such cases. Ple-
bsicita of this kind are, for example, those which
grant the civitas and the sufragium, and those which concern a great variety of subjects connected
with social life and its relations. The tribunes also
had the power of abolishing old laws. 1 The per-
mission to enter the city in triumph was originally
granted to a general by the senate; but the comitia
tributa began in early times to exercise the same
right, and at last they granted such a permission even
without a senatus consultum. 2 The right of
deciding upon peace and war with foreign nations
was also frequently usurped by the tribes, or per-
mitted to them by a senatus consultum. In the
times of Sulla, the legislative powers of the tribes were
entirely abolished; but of this change we shall
speak presently.

III. The jurisdiction of the tribes was very limited,
as they had only jurisdiction over those who had
violated the rights of the people, while all capital
offences belonged to the comitia centuriata. In
case of a violation of the popular rights, the tribes or
ediles might bring any one, even patricians, be-
fore the comitia tributa, but the punishment which
they inflicted consisted only in fines. In course of
time, however, they became a court of appeal from
the sentence of magistrates in any cases which were
not capital. Magistrates also, and generals,
were sometimes, after the term of their office had
expired, summoned before the tribes to give an ac-
count of their proceedings. 3

Private individuals were tried by them in cases for
which the laws had made no provisions. (Com-
pared to the Tribunes.)

The place where the comitia tributa assembled
might be either within or without the city, although
in the latter case not more than a mile beyond the
gates, as the powers of the tribes did not extend
further. 4 For elections, the Campus Martius was
the usual place of meeting, 5 but sometimes also the
Forum, 6 the area of the Capitol, 7 or the Circus Flau-
mius. 8

The usual presidents at the comitia tributa were
the tribunes of the people, who were assisted in their functions by the ediles. No matter could be
brought before the tribes without the knowledge
and the consent of the tribunes, 9 and even the

(Livy, xxvii., 10.—Id. xiii., 10.—Id. ad Att., i., 3, &c.)
tribus prae rogat situa or prae rogatione, the others jure vocata. In the tribus prae rogativa some man of eminence usually gave his vote first, and his name was recorded in the resolution. Out of the votes of each tribe a suffragium was made up, that is, the majority in each tribe formed the suffragium. So that, on the whole, there were thirty-five suffragia. (Compare Diss.Nos.) When the counting of the votes had taken place, the reventiatio followed, that is, the result of the voting was made known. The president then dismissed the assembly, and he himself had the obligation to see that the resolution was carried into effect. If, in the meantime, the opinions of the augurs, like that of the centurialia, might be interrupted by a variety of things, such as obnuntiatio, sunset, a tempest, the intercession or veto of a tribune, the morbus comitialis, &c. In such cases the meeting was adjourned to another day. If the elections could not be completed in one day, they were continued on the day following; but if the assembly had met in a judicature, the centurialia could not be changed in the reventiatio; the case was decided in favor of the defendant, equivalent to an acquittal. If everything had apparently gone on and been completed regularly, but the augurs afterward discovered that some error had been committed, the whole resolution, whether it was on an election, on a legislative or judicial question, was divided, and the whole business had to be done over again.

What we have said hitherto applies only to the comitia tributa as distinct from and independent of the comitia centurienta. The latter assembly was, from the time of its institution by Servius Tullius, in reality an aristocratic assembly, since the equites and the first class, by the great number of their centuries, held the votes of the other classes scarcely came into consideration. (Vid. Praxm. p. 783.) Now, as patricians and plebeians had gradually become united into one body of Roman citizens, with almost equal powers, the necessity must sooner or later have become manifest that a change should be introduced into the comitia centurienta, which in favor of the democratic principle, which in all other parts of the government was gaining the upper hand. The object of this change was perhaps to constitute the two kinds of comitia into one great national assembly. But this did not take place. A change, however, was introduced, as is manifest from the laws, and the mass of the western writers, and as is also admitted by all modern writers. As this change was connected with the tribes, though it did not affect the comitia tributa, we shall here give a brief account of it. But this is the more difficult, as we have no distinct account either of the event itself, or of the nature of the change, or of the time when it was introduced. It is therefore no wonder that nearly every modern writer has touched upon these points entertains his own peculiar views upon them. As regards the time when the change was introduced, some believe that it was soon after the establishment of the Republic, others that it was established by the laws of the Twelve Tables, or soon after the decemviral legislation; while some others believe that it existed with Dion in B.C. 341, and it appears to be manifest that it did not take place till the time when the number of the thirty-five tribes was completed, that is, after the year B.C. 341, per-

This article discusses the changes in Roman legal and political institutions, focusing on the role of the tribunus and the comitia tributa and centurienta. It notes the transition from an aristocratic assembly to one that better reflected the democratic principle. The text also mentions the introduction of the comitia centurienta and the eventual unification of the patricians and plebeians into a single body of Roman citizens. The article concludes with a discussion of the time when this change was introduced, with references to historical texts and scholars.
Tributary relationship of C. Caesar, who decided upon peace and
war himself in connexion with the senate. He
also had the whole of the legislation in his hands,
through his influence with the magistrates and the
tribunes. The people thus retained nothing but the
election of magistrates; but even this power was
much limited, as Caesar had the right to appoint
half the magistrates himself, with the exception of
the consuls. And as, in addition to this, he recog-
nized to the people those candidates whom he
wished to be elected: and who would have opposed
his will? After the death of Caesar the comitia
continued to be held, but were always more or
less, the obedient instruments in the hands of the
rulers, whose unlimited powers were even recog-
nised and sanctioned by them. Under Augustus
the comitia still sanctioned new laws and elected
the sovereign power formerly possessed by the
people was a mere farce, for they could not venture to elect
any other persons than those recommended by the
emperor. Tiberius deprived the people of this delu-
sive power, and conferred the power of election
upon the senate. When the elections were made
by the senate, the result was announced to the
people assembled as comitia centuriata or tributa.
When a comitia centuriata or classis was
announced a majority of the comitia assembled
entirely, and was completely in the hands of the sen-
ate and the emperor. Caligula placed the comitia
again upon the same footing on which they had
been in the time of Augustus; 
but this regulation was soon abandoned, and everything was left as it
had been arranged by Tiberius. From this
time the comitia may be said to have ceased to exist, as
all the sovereign power formerly possessed by the
people was conferred upon the emperor by the lex
regia. (Vid. Regia Lex.) The people only assem-
bled in the Campus Martius for the purpose of
receiving information as to who had been elected
or appointed as its magistrates, until at last even
this announcement (renuntiatio) appears to have ceased.

TRIBUTARIA COMITAT. (Vid. Tribunus, Roman.)
TRIBUTORIA ACTIO. (Vid. Servius, Roman, p. 884.)

TRIBUTUM is a tax which, as Niebuhr sup-
poses, was at first only paid by the plebeians, since
the name itself is used by the ancients in con-
nection with the Servian tribes; for Varro says
'tributum dictum a tribus,' and Livy, 'tribus ap-
pellatur, omne bene tributum'; but this seems to be par-
tially correct, as Livy expressly states that
the patres also paid the same tax. It is, indeed, true,
that the patricians had little real landed property,
and that their chief possessions belonged to the
agrit publicus, which was not accounted in the con-
sensus as real property, and of which only the
tiles had to be paid, until, at a late period, an
alteration was attempted; but this seems to be a
reason for supposing that the patricians did not pay

TRICLINIUM.

The tributum upon their real property, although the greater part of it naturally fell upon the plebeians.1 The impost itself varied according to the exigencies of the state, and was partly applied to cover the expenses of war, and partly those of the fortifications of the city. The usual amount of tax was one quinarius for every thousand of a man’s fortune,2 though in the time of Cato it was raised to three in a thousand. The tributum was not a property-tax in the strict sense of the word, for the accounts respecting the plebian debtors clearly imply that the debts were not deducted in the valuation of a person’s property, so that he had to pay the tributum upon property which was not his own, but which he charged to the state, as a kind of act of reclamation during the meal. When so prepared for an entertainment they were called trunci stratus, and they were made to correspond with one another in substance, in dimensions, and in shape.3 As each guest leaned during a great part of the entertainment upon his left elbow, so as to leave the right arm at liberty, and as two or more lay on the same couch, the head of one man was near the breast of another, it is possible that he was therefore said to lie in the bosom of the other.4 Among the Romans, the usual number of persons occupying each couch was three, so that the three couches of a triclinium afforded accommodation for a party of nine. It was the rule of Varro,5 that the number of guests ought not to be less than that of the couches, more often than not, as many as four lay on each of the couches.6 The Greeks went beyond this number: Cicero says they lay crowded by fives (see woodcut, p. 326), or packed even still more closely.7 The oikos triakontaallon8 may be supposed to have received about ninety guests at a time, there being ten triclinia, and nine guests to each couch. In the couches, if we represent a symposium or drinking-party, we always observe that the couches are elevated above the level of the table. This circumstance throws some light upon Plutarch’s mode of solving the problem respecting the increase of room for the guests as they proceeded with their meal.9 Each man, in order to feed himself, must have laid aside the pillow, and be stretched out his hand towards the table; but afterward, when his hunger was satisfied, he turned upon his left side, leaning on his elbow. To this Horace alludes in describing a person satièd with a particular dish, and turning in order to repose upon his elbow.10

We refer the relative positions of two persons who lay next to one another commonly expressed by the prepositions super or supra, and infra. A passage of Livy,11 in which he relates the cruel conduct of the consul L. Quintius Flamininus, shows that infra aliquem cubare was the same as in sinu aliquius cubare, and, consequently, that each person was considered as below him to whose breast his own head appropriately belonged. It is impossible to explain the denominations both of the three couches and of the three places on each couch.

Supposing the annexed arrangement to represent the plan of a triclinium, it is evident that, as each guest reclined on his left side, the countenances of all, when in this position, were directed, first, from No. 1 towards No. 3, then from No. 3 towards No. 5, and after No. 5 towards No. 9; that the guest No. 1, in the sense explained, above No. 2, No. 3 below No. 2, and so of the rest; and that, going in the same direction, the couch to the right

Band was above the others, and the couch to the left hand below the others. Accordingly, the following fragment of Sallust\(^1\) contains the denominations of the couches as shown on the plan: "Igitur discubueram: Spectorius (i.e., No. 6) inferior in medio; super eum L. Fabius Hispaniensis senator ex proscriptis (No. 5); in summo Antonius (No. 1); et infra scriba Sertorius Verus (No. 2); et alter scriba Maceinas (No. 8) in imo, medius inter Tuscum (No. 7) et dominum Perpennam (No. 9)." On the same principle, No. 1 was the highest place (locus summus) on the highest couch; No. 3 was locus imus in lecto summo; No. 2 locus mediis in lecto summo; and so on. It will be found that in the following passage\(^2\) the guests are enumerated in the order of their accubation—an order exhibited in the annexed diagram.

Fundanus, one of the guests, who was at the top relatively to all the others, says, "Summus ego et prope me Viscus Thaurus, et infra, Si memini, Varius: cum Servili Baelatone Vibiadas, quos Maceinas adduxerat umbras. Nomenantius erat super ipsum, Forsius infra."\(^2\)

It is possible that Maceinas ought to be in the place No. 4 instead of No. 5, since the entertainment was given more especially in honour of himself, and No. 4 was an honourable place. The host himself, Nasidicus, occupies the place No. 8, which was usually taken by the master of the feast, and was a convenient situation for giving directions and superintending the entertainment. Unless there be an exception in the instance of No. 4, it is to be observed that at each table the most honourable was the middle place.\(^3\)

The general superintendence in the dining-room in a great house was intrusted to a slave called viiciæarchæ, who, through the instrumentality of other slaves of inferior rank, took care that everything was kept and procured in proper order.

**TRIÆDENS.** (Vid. Ferdin.)

**TRIÆDRACHMON.** (Vid. Drachm.)

**TRIÆNS.** (Vid. As, p. 110.)

**TRIÆRARCHIA (τριπαρχία).** This was one of the extraordinary war-services or liturgies (vid. Lecturaea) at Athens, the object of which was to provide for the equipment of the ships belonging to the state. The persons who were charged with it were called τριπαρχοι, or triarchers, as being the captains of triremes, though the name was also applied to persons who bore the same charge in other vessels. It existed from very early times in connexion with the forty-eight nautaeums of Solon and the fifty of Cleisthenes, each of which corporations appears to have been obliged to equip and man a vessel. (Compare Ναυκρατία.) Under the constitution of Cleisthenes the ten tribes were at first severally charged with five vessels. This charge was, of course, superseded by the later forms of the triarchery, explained in the course of this article.

1. The services to which the triarchers were liable.—What these were probably to 358 B.C. there can be no doubt. Equipment was furnished by host city, though sometimes a wealthy and patriotic individual served in his own ship. Cleinas, for instance, did so at Artemision;\(^4\) but as it is particularly recorded that this ship was his own, we may infer that he supplied at his own cost what the state was bound to provide. The same custom prevailed during the Peloponnesian war also. The 100 ships prepared and reserved at the beginning of the war for any critical emergency, were supplied by the state.\(^5\) In the expedition against Sicily,\(^6\) the state furnished the hull of the vessel (σαρκὶ κενὸν) and the pay of the crews, a drachma per day for each man; but the equipment of the ships was at the cost of the triarchers, who also gave ἔπιφαρσι,\(^7\) or additional pay, to secure the best men. The same conclusions are also deducible from the credit which a triarcher took for himself for saving his vessel, when the latter lost her ships at Εγοσποταμί,\(^8\) and from the farther statement, that he paid the sailors out of his own pocket. From the threat of Cleon,\(^9\) that he would (ὡς στραγγάγω) make an adversary a triarcher, and give him an old ship with a rotten mast (ηττίναι σαρκὶν), it appears that the state furnished the hull and mast also, but that the triarcher was bound to keep and return them in good repair: an obligation expressed in the inscriptions quoted by Böckh,\(^8\) by the phrase δεὶ τὴν σαρκὶν δόξαν καὶ ηττίλη παραδοθῆναι. Consequently, the statement in the oration against Midias,\(^9\) that when Demosthenes was quite young (B.C. 364) the triarchers paid all the expenses themselves (τὰς ἀναλήματα ἐκ τῶν λιθῶν), only implies that they defrayed the expenses which were customary at that time, and which were afterward diminished by the regulation of the synnomiae; but not that they supplied the ship, or pay and provisions for the crew. The whole expenditure, says Böckh,\(^9\) means nothing more than the equipment of the vessel, the keeping it in repair, and the procuring the crew, which was attended with much trouble and expense, as the triarchers were sometimes obliged to give bounties in order to persuade private persons to serve for pay without being admissible. From the oration of Demosthenes against Polyceles (B.C. 361), we learn the following particulars about the triarchery of that time. The triarchers were obliged to launch their ship; the sailors were supplied from particular parishes (δήμου), through the agency of the demarchi; but those supplied to Apolloeorus, the client of Demosthenes, were but few and inefficient in war, and having mortgaged his estate (τὸ κεχανεῖται τὸν οἴκον), and hired the best men he could get, giving great bounties and premiums (προδώσεις). He also equipped the vessel with his own tackle and furniture, taking nothing from the public stores (ἐκ τῶν δημοσίων ὀφείλειν Ἀλκαῖον. Compare the Speech on the Crown of the Triarchery).\(^1\) Moreover, in consequence of his sailors deserting when he was out at sea, he was put to additional and heavy expenses in his own pockets in different ports. The provision for the sailors (ἀρτοφασία) was pro-

---

TRIERARCHIA.

vided by the state and paid by the strategi, and so, generally speaking, was the pay for the marine (ἐπιτάρχον); but Demosthenes' client only received it for two months; and as he served for five months more than his time (from the delay of the elect), he was obliged to advance it himself for fifteen months, with but an uncertain prospect of repayment. Other circumstances are mentioned which made his trierarch very expensive, and the whole speech is worth reading, as showing the unfairness and hardship to which a rich man was sometimes subjected; and even the marine, the state, having discovered that he took no furniture from the public stores proves that at that time (B.C. 361) the trierarchs were fitted out and equipped from the public stores, and consequently by the state; but, as we learn from other passages in Demosthenes and the inscriptions in Böckh, 1 the trierarchs were obliged to return in good condition any articles which they took; in default of doing so, they were considered debtors to the state.

That the ship's furniture was either wholly or in part supplied by the state, also appears from another speech: 2 but trierarchs did not always avail themselves of their privilege in this respect, that they might have no trouble in settling with the state. It is also certain that the state, at least during B.C. 360, the only expenses binding upon the trierarchs were those of keeping in repair the ship and the ship's furniture; but even these might be very considerable, especially if the ship were old, or exposed to hard service or rough weather. Moreover, some trierarchs, whether from ambitious or patriotic motives, put themselves in considerable expense and secured their ships, from which the state derived an advantage. Sometimes, on the other hand, the state suffered by the trierarchs performing their duties at the least possible expense, or letting out their trierarchy (μισθοῦσα τὴν λειτουργίαν) to the contractor who offered the lowest tender. 3 One consequence of this was, that the duties were ineptly performed; but there was a greater evil connected with it, namely, that the contractors repaid themselves by privateerring on their own account, which led to reprisals and letters of marque being granted against the state. (Vid. Syll.) 4 It seems strange that the Athenians tolerated this, especially as they were sometimes insufficient to pay the costs of the war, and punish the trierarchs who had let out their trierarchy considering it as a desertion of post (λειτουργόν). 5

We may here observe, that the expression in Iseus, 6 that a trierarch "had his ship made himself" (τὴν ναῦν ποιήσας), does not mean that he was at the cost of building it (ναυποινιός), but only of fitting it up and getting it ready for sea. That the ships always belonged to the state is farther evident from the fact that the senate was intrusted with the inspection of the ship-building, 7 and is placed beyond all doubt by the "Athenian Navy List" of the inscriptions in Böckh. 8 Some of the ships there mentioned are called ἀνωτάκτωρως, whence it appears that the public vessels were assigned by lot to the respective strategi. A τειχισμός and a ship presented to the state as a free gift, just as τειχίσθην ἐπιτάρχου means to present the state with a trireme. 9 The duration of a trierarchy was a year, and if any trierarch served longer than his legal time, he could charge the extra expenses (τὸ ἐπιτραρχόγραφος) to his successor. To recover these expenses, an action (ἐπιτραρχόγραφος

TRIERARCHIA.

1011
These synteia of fifteen persons each seem to have been also called symmoria by Hyperides. It appears, however, that before Demostenes carried a new law on this subject (B.C. 340), it had been customary for sixteen persons to unite in a symteneia or company for a ship, who bore the burden in proportion to the amount they could pay. We are informed that the members of the symmoria had been by that time raised from 1200 to 1250, or that some alterations had taken place in their internal arrangements, of which no account has come down to us. From the phrase εκ των εν τοις λόγοις συντελείων, used in the κατάλογος, it would also seem that the word λόγος was used of civil as well as military divisions, and, in this instance, of the symmoria. The system was, however, one of the hands of the 300 wealthiest members, who were therefore called the "leaders of the symmoria" (ὑγεμόνες τῶν συμμορίων), on whom the burdens of the trierarchy chiefly fell, or, rather, ought to have fallen. The services performed by individuals under this system appear to have been the same as before: the state still provided the ship's tackle (i.e., the σύμβασις και στήριξις καὶ σχεδίων, and other things), and some stringent enactments were made to compel the trierarchs to deliver it up according to the inventory taken of it (τὸ διάγραμμα τῶν σκευῶν), either at Athens or to their successors sent out by the symmoria. This conclusion, that the vessel was equipped by the state, is confirmed by Demostenes, and in the oration against Midias he says, referring to the oath that the state provided the crew and the state gave the ship to the man who had provided the tackle, that the state provided the crew and the furniture. The only duty, then, of the trierarchs under this system was to keep their vessels in the same repair and order as they received them. But even from this they managed to escape: for the wealthiest members, who had to serve for their symteneia, let out their trierarchies for a talent, and received that amount, as well as their partners (συντέλεις), so that, in reality, they paid next to nothing, or, at any rate, not what they ought to have done, considering that the trierarchy was a ground of exemption from other liturgies. It does not appear from the orators how the different synteneia appointed the trierarchs who were to take charge of their vessels; but it was probably left to themselves, without being regulated by law. No doubt great irregularities of the symmoria are thus (rhetorically perhaps) described by Demostenes: "I saw your navy going to ruin, and the rich escaping with little cost, and persons of moderate income losing their property, and the city losing the opportunities of action, and the trieremes not being equipped in sufficient time to meet an emergency, and therefore I proposed a law," etc. The changes he meant to effect by it are related in his oration concerning the symmoria (B.C. 354), and are as follows: he proposed to add 800 to the 1200 συντελεία, making the whole 2000, so that, subtracting all those who could claim exemption as minors, orphans, &c., there might always remain 1200 persons (σώματα) to serve. These were to be divided into 20 symmoria of 60 each. This was the old system; each of these was to be subdivided into five divisions of twelve persons each, one half rich and the other poor (ἐστιν τάν νομίσματα), so as to form altogether 100 smaller symmoria. The number of trieremes, according to this scheme, was to be 300, classed in 20 divisions of 15 ships: each of these divisions was to be assigned to one of the 20 larger symmoria, so that each of the smaller would receive three; and in case of 300 ships being required, four trierarchs would be appointed to each. Moreover, each of the great symmoriae was to receive the same amount of the public stores for equipment, in order that they might apportion it to the smaller symmoria. The regulations for other purposes were, the generals to divide the dockyards into ten parts for 30 ships' stations (νείκουσι) adjacent to each other, and to assign each of these parts to a tribe, or two large symmoriae of 30 ships. These ten parts were to be subdivided into thirds, each of which was to be assigned to a third part (τριτέρια) of the tribe to whom the whole was allotted, so that each third was to receive one tenth of the dockyard. This put into practice does not appear, but it seems that it was not, for the mismanagement of the trierarchy appears to have continued till Demostenes carried his law about the "Trierarchy according to the Valuation." One of the chief evils connected with it was, that the trieremans were never equipped in time; and as Demostenes complains of this in B.C. 352, we may conclude that his proposal fell to the ground. But these evils were too serious to remain without a remedy; and therefore, when the orator was the ἐπιστάτης τοῦ ναυτικοῦ, or the superintendent of the Athenian navy, he brought forward and carried a law for altering and improving the system of the symmoriae and companies, the members of which no longer called themselves trierarches, but partners (συντέλεις), thereby introducing a new name. The naval services required from every citizen were to depend upon and be proportional to his property, or, rather, to his taxable capital (τίμημα: vid. Euphron), as registered for the symmoria of the property taxes, the rate being one trireme for every ten talents of taxable capital, up to three triremes and one auxiliary vessel (υποαρχή) for the largest properties: i.e., no person, however rich, was required to furnish more. Those who had not ten talents in taxable capital were to club together in synteneia till they had made up that amount; and if the valuation of the year of Nausimicus (B.C. 379) was still in force, the taxable capital (for the highest class) was one fifth of the whole. By this law great changes were effected. All persons paying taxes were rated, and it was evident that the poor were benefited by it, and the state likewise: for, as Demostenes says, those who had formerly contributed one sixteenth to the trierarchy of one ship were now trierarches of two, in which case they must either have served by proxy, or done duty in successive years. He adds that the consequences were highly beneficial. During the whole war, carried on after the law was in force, the trierarchy imploded the aid of the people (ἐκπέμψαν θηρεύσας), or took refuge in a temple, or was put into prison by the persons whose duty it was to despatch the fleet (οἱ ἀσστολεῖς), nor was any trireme lost at sea, or lying idle in the docks for want of stores and tackle, as under the old system, when the service (τὸ λειτουργεῖν) fell on the poor. The duties and services to which the trierarchs were subject under the new law were probably the same as under the third form of the trierarchy, the symmoria.

On the relation which, in this system, the cost of a trierarchy bore to the property of a trierarch, Böckh makes the following remarks, which may be verified by a reference to Euphron: "If we reckon that, as formerly, it cost about a talent, the total expense of the trierarchy, for 100 trieremans, is calculated to an equivalent number of talents, or a sixtieth, a thirtieth, and a twentieth of the value.

1. (Harpocr. s. v.—Compare Dem., De Symm., 153.)—2. (Dem., Pro Cor., 261.)—3. (Böckh, Pelt. Econ. of Athens, ii. p. 346—Urkunden, &c., 151.)—4. (De Cor., 261.)—5. (Dem., Pro Cor., 259.)—6. (Eur. et Athen., 1145.)—7. (De Symm., 183.)—8. (I. c.)
TRIERARCHIA.

Dom of Attica; i.e., for the first class one third, two thirds, and one per cent. of their property: for the poorer a proportionally less amount: and of the others, a third, as a tenth part of the property, 23, 63 and ten per cent for the most wealthy.

But we may reckon that Athens at that time had not more than 100 or 200 tripes at sea, very seldom 300; so that this tax-was not, for the richest class, amount, on an average, to more than one third, and two thirds per cent. of their property.

This arrangement of Demosthenes was calculated for the number 500 persons serving in person would be necessary to the chief burden must have fallen upon the leaders of the former symmoria. The year of passing this law Böck fixes at B.C. 340 or 339. How long it remained in force is uncertain. In the speech for the Crown (B.C. 330), where much is said on the subject of the triarchy, it is neither mentioned that the law was in existence, nor that it was repealed; but Demosthenes says that Scisichion was bribed by the leaders of the symmoria to nullify it.

It appears, then, that the triarchy, though the most expensive of the liturgies, was not of necessity oppressive, if fairly and economically managed, though this, as has been before observed, was not always the case.

With respect to the amount of property which rendered a man liable to serve a triarchy or syn- triarchy, Böck observes, "I am aware of no instance of liability arising from a property of less value than 500 minae: and as an estate of one or two talents never obliged the possessor to the performance of any liturgy, the assertion of Isaeus, that many had served the office of triarch or triarchy whose property was not more than 80 minae, obliges us (if true) to suppose that public-spirited individuals were sometimes found to contribute to a triarchy (rather, perhaps, to a syntrierarchy) out of a very small property.

The disadvantages which in latter times resulted from the triarchers not being ready for sea by the time for sailing, were in early times prevented by their appointments being made beforehand, as was the case with the triarchers appointed to the 100 ships which were reserved at the beginning of the Peloponnesian war against an attack upon Athens by sea.

The appointment to serve under the first and second forms of the triarchy was made by the strategi; and in case any person was appointed to serve a triarchy, and thought any one else (not called upon) was better able to bear it than himself, he offered the latter an exchange of his property (vid. Antiochus), subject to the burden of the triarchy.

In cases of extreme hardship, persons became suppliants to the people, or fled to the altar of Artemis at Mynychia. If not ready in time, they were liable to imprisonment (δυσχέρας δισμούς). Thus, on one occasion, the triarchers were, by a special decree, subjected to imprisonment if they were not on the pier (χώρα) by the end of the month; on the contrary, whoever got his ship ready first was to be rewarded with the "crown of the triarchy," so that, in this way, considerable emula and competition were produced. Moreover, the triarchers were ἔπικαινοι, or liable to be called to account for their expenditure, though they applied their own property to the service of the state.

But they also received money out of the treasury for various disbursements, as the pay of the soldiers and sailors, and the extra hands (βρασιτοι): thus, on one occasion, each triarch is stated to have received 30 minae, i.e. τριώμων. 1 The triarchers may also have been considered ἐπικαινοί, from being required to show that they had performed their duties properly. The sacred tripes, the Paralus and Salamin, had special treasures (vid. Tamiyl, p. 950) appointed to them, and, on the authority of Ulpinus, it has been believed that the state acted as triarch for each of them; but in the inscriptions and above, the triarchers are called by χώρα, and made between the triarchers of the Paralus and other vessels, and therefore it would seem that the state appointed triarchers for them as well as for other vessels, and provided out of the public funds for these expenses only which were peculiar to them.

IV. On the exemption from the triarchy: — By an ancient law, in force B.C. 385, no person (but minors and females) could claim exemption from the triarchy, who were of sufficient wealth to perform it, not even the descendants of Harmodius and Aristogiton. But from Isaeus it appears that, in the time of the single triarchy, no person could be compelled to serve a second time within two years after a former service (δύο ηε̃ς διακήρυξεν). The rest of the time the triarchy was a ground of exemption from the other liturgies, any of which, indeed, gave an exemption from all the rest during the year next following that of its service.

But all property was not subject to the service, as we learn from Demosthenes, who tells us that a person was exempt if ἀπολύτωρ, or unable to serve from the want of a ship. The term was applied to ship-owners, cleruchs, and corporate bodies. Of course, an heiress could only claim exemption while unmarried. Wards, also, were free from all liturgies during their minority, and for a year after their dωματία. By κληροχοί are meant colonists, who, while absent by the command of the state, could not perform a triarchy. This exemption admits of doubt, but it probably means the property of joint tenants, as brothers or co-heirs, which had not yet been apportioned to them; or it may refer to monies invested in partnership. Moreover, though the proper duration of a triarchy was a year, it was legally dissolved if the general furnished no pay to the sailors to whom it was put, and, though it was being impossible to keep the sailors together. 1

V. On the legal proceedings connected with the triarchy. — These were either between individual triarchers, or between triarchers and the state, and therefore in the form of a Diádicasia. They generally arose in consequence of a triarcher not delivering up his ship and her rigging in proper order, either to his successor or to the state. If alleged that the loss or damage of either happened from an accident, he was said σχολυρίσατο κατα χειλον ἁπόλοι- λεως, and if his plea were substantiated, ἔδωκεν ἐν τῷ δικαιώματι κ. τ. λ. Vessels or furniture on which a trial of this kind had been held, were said to be διαδεδίδομεν. The presence of the courts which tried matters of this kind were vested in the strategi, and so sometimes in the superintendents of the dockyard, in conjunction with the ἀντιστέλες. The senate also appears to have had a judicial power in these matters: e. g., we meet in various inscriptions with the phrase πρὸς τῶν τριαρχίων, ἐν τείνιρως ἢ δια- 1. (Dem., De Coron. Trier., 1231, 14.) — 2. (Polio, Onom., viii., 116.) — 3. (Aem., de Suls, 658.) — 4. (Urkahanes, de, 165.) — 5. (Dem., c. Lapt., 6.) — 6. (De Apollon, herm., 67.) — 7. (Dem., c. Lapt, 459 and 464.) — 8. (Dem., Symm., 186.) — 9. (Lydias, de Durg., 629.) — 10. (Polio, Onom., viii., 116.) — 11. (Dem., c. Polyl., 1269.)

1013
TRIOBOLON.

Böckh conjectures that the triers-of-ships of whom this is said had returned their ships in such a condition that the state might have called upon them to put them in thorough repair or to rebuild them, at a cost for an ordinary trireme of 5000 drachmas. Supposing that they were not released from this liability by any decree of a court of justice, and that the rebuilding was not completed, then the argument is that it must have been competent (in a clear and flagrant case) for the senate to have inflicted upon them the penalty of twice 5000 drachmas, the technical phrase for which was "doubling the trireme." The phrase ὀμολογήσαι τριπόλοι καθινὴ ἀπόδοσις, which occurs in inscriptions, does not apply to an undertaking for giving a new trireme, but merely for putting one in a complete state of repose. The phrase τριπόλοι, to lay an information against a vessel, is used, not of a public ship, but of a private vessel, engaged, perhaps, in smuggling or privateering.

TRIOBOLON (τριοβολων). (Vid. Smith, p. 891.)

*TRIGLA (τρίγλα), a fish, the red Sarrumlet, or Mullus barbatus, l. It is from six to nine inches long, and was a great favourite with the ancient epicures.

TRIGON. (Vid. PilA.)

TRILIX. (Vid. TelA. p. 956.)

TRINUNDINUM. (Vid. NundINe. p. 668.)

TRIOBOLON (τριόβολον), or τριβόλον ἔλαιατος, was the fee of three oboli which the Athenian citizens received for their attendance as dicasts in the courts of the heliaca, whereas it is also called ἀλόος δικαικασίας, or τὸ δικαστικόν. This pay had been first introduced by Pericles. It is generally supposed from Aristophanes, who makes Striestaides say that for the first obolus he ever received as a dicast he bought a toy for his son, that at first the δικαστικόν was only one obolus. According to the scholiast on Aristophanes, the pay was subsequently increased to two oboli, but this seems to be merely an erroneous inference from the passage of his author. Three oboli, or the τριβόλον, occurs as early as B.C. 425 in the comedies of Aristophanes, and is afterward mentioned frequently. Böckh has inferred from these passages that the tribolon was introduced by Cleon about B.C. 421; but G. Hermann has disputed this opinion, at least so far as it is founded upon Aristophanes, and thinks that the pay of three oboli for the dicasts existed before that time. However this may be, thus much is certain, that the pay of the dicasts was not the same at all times, although it is improbable that it should ever have been two oboli. The payment was made after every assembly of a court of hellasae by the colacrites in the following manner. After a citizen had been appointed by lot to act as a judge in a particular court, he received, on entering the court, together with the staff (βακτρία ὄρος), a tablet or ticket (σιμάλος). After the business of the court was over, the dicast, on going out, delivered his ticket to the prytanes, and received his fee in return. Those who had come too late had no claim to the tribolon. The annual amount of these fees is reckoned by Aristophanes at 150 talents, a sum which is very high, and can, perhaps, only be applied to the most flourishing times of Athens.

TRIPLICA'TIO. (Vid. Acto, p. 19.)

*TRIPOLION (τριπόλιον), a pant. Serapion and Avicenna call it Turbith, which, however, is said by Actitarius to be the root of the Alpia. Sprengel says the Armenians and their commentators committed a great mistake in confounding the Turbith with the Tripolium. He is disposed to think the Plumbum Eupoea, or Leadwort. Sibthorp, however, holds it to be the Stoxes 

TRIPOS (τριπός), a tripod, i.e., any utensil or article of furniture supported upon three feet, more especially

I. A three-legged table (vid. Massa, page 693.) The first woodcut at p. 276 shows such a table in use. Its three supports are richly and tastefully ornamented. Various single legs (trapezophora), wrought in the same style out of white marble, red porphyry, or other valuable materials, and consisting of a lion's head or some similar object at the top, and a foot of the same animal at the bottom, united by intervening foliage, are preserved in the British Museum, and in other collections of antiquities. The tripod used at entertainments to hold the Cesars (p. 319) had short feet, so that it was not much elevated. These tables were probably sometimes made to move upon castors.

II. A pot or caldron used for boiling meat, and either raised upon a three-legged stand of bronze, as is represented in the woodcut, p. 678, or made with its three feet in the same piece. Such a utensil was of great value, and was sometimes offered as a prize in the public games.

III. A bronze altar, not differing, probably, in its original form, from the tall tripod caldron already described. In this form, but with additional ornament, we see it in the annexed woodcut, which represents a tripod found at Frejus. That this was intended to be used in sacrifice may be inferred from the bull's head, with a fillet tied round the horns, which we see at the top of each leg.

All the most ancient representations of the sacred tripod exhibit it of the same general shape, together with three rings at the top to serve as handles (οφαστα). Since it has this form on all the coins and other ancient remains which have any reference to the Delphic oracle, it has been with sufficient reason considered that the tripod from which the Pythian priestesses gave responses was of

this kind. The right-hand figure in the preceding woodcut is copied from one published by K. O. Müller,1 founded upon numerous ancient authorities, and designed to show the appearance of the oracular tripod at Delphi. Besides the parts already mentioned, viz., the three legs, the three handles, and the vessel or caldron, it shows a flat, round plate, called κάνος, on which the Pythia seated herself in order to give responses, and on which lay a laurel leaf at other times. This figure also shows the position of the Κόρτνα, which, as well as the caldron, was made of very thin bronze, and was supposed to increase the prophetic sounds which came from underneath the earth.2

The celebrity of this tripod produced innumerable imitations of it,3 called triphysic tripods.4 They were made to be used in sacrifice, and still more frequently to be presented to the treasury both in that place and in many other Greek temples. (Vid. Donaria.) Tripods were chiefly dedicated to Apollo5 and to Bacchus. Partly in allusion to the fable of the rape of a tripod from Apollo by Hercules, and the recovery of it by the former, the tripod was one of his usual attributes, and often represented continually on coins and ancient marbles which have a relation to him. Of this we have an example in the bas-relief engraved on p. 78, which also exhibits two more of his attributes, the lyre and the plectrum. In conformity with the same ideas, it was given as a prize to the conquerors at the Pythian and other games, which were celebrated in honour of Apollo.6 On the other hand, the theatre at Athens being considered sacred to Bacchus, the successful choræus received a bronze tripod as the appropriate prize. The choragic monuments of Thrasyllus and Lysicrates, the ornamental fragments of which are now in the British Museum, were erected by them to preserve and display their prize tripods, or at least some of the figures on such occasions. We find, also, that a tripod was sometimes consecrated to the Musæ7 and to Herocles.8

A tripod, scarcely less remarkable than that from which the Pythia delivered oracles, and consecrated to Apollo in the same temple at Delphi, was that made from the spoils of the Persian army after the battle of Plataia. It consisted of a golden tripod supported by a three-headed bronze serpent.9 The golden bowl having been removed, the bronze serpent was taken to Constantinople, and is probably the one which was seen there by Spon and Wheler in 1675. The first figure in the following woodcut is copied from Wheler's engraving of it.10 He says it was about fourteen or fifteen feet high.

The use of bronze tripods as altars evidently arose, in a great degree, from their suitableness to be removed from place to place. We have an example of this mode of employing them in the scene which is represented in the woodcut on p. 897. To accommodate them as much as possible to this purpose, they were sometimes made to fold together into a small box or a cistern, which could be understood from an inspection of the following woodcut. The right-hand figure represents a tripod in the British Museum. A patera or a plain metallic disk was laid on the top when there was occasion to offer incense. Many of those movable folding tripods may be seen in museums, proving how common they were among the Romans.

Another species of tripods deserving of notice are those made of marble or hard stone. One was discovered in the villa of Hadrian, five feet high, and therefore unsuitable to be used in sacrifice. It is very much ornamented, and was probably in order merely to be displayed as a work of art.

TRIPOS, Wheat. "Sprengel remarks, that the Triticum rubrum and astecum are indicated by the πῦρ χειμοσφορίων καὶ τρίπυρος of Theophrastus, ἡ. It is the πῦρ σατιάσεως of Dioscorides. The finest kind of wheat was called αὐλίγυρα by the Greeks, and αὐλίγυρα by the Romans; the second sort in quality was called σμαράγδης by the Greeks, and σμαράγδης by the Romans; the third sort was called συγκόμωσα and αὐλίγυρως by the Greeks, and αὐλίγυρως by the Romans; the last kind was called πτερίγυρα."

TRITUS (ῥήτωρ). (Vid. Sacrificium, p. 846.)

TRITTUS (ῥήτωρ). (Vid. Tribus, Greek, p. 1003.)

TRIUMPHUS, a solemn procession, in which a victorious general entered the city in a chariot drawn by four horses. He was preceded by the captives and spoils taken in war, was followed by his troops, and after passing in state along the Via Sacra, ascended the Capitol to offer sacrifice in the Temple of Jupiter.

Such displays have been so universal among all warlike tribes from the earliest times, and are so immediately connected with some of the strongest passions of the human heart, that it would be as useless as it is impossible to trace their origin historically. It is scarcely necessary to advert to the fancies of those ancient writers who refer their first institution to the mythic conquests of Bacchus in the East, or need we attach much importance to the connexion between triumphus and θρησκεία, according to the etymology doubtfully proposed by Varro.5 Rejoicings after a victory, accompanied by processions of the soldiery with their plunder, must have been prevalent with the existence of the Romans as a nation; and, accordingly, the return of Romulus with spolia opima, after he had defeated the Cæninnenses and slain Acro his king, is described by Dionysius6 with all the attributes of a regular triumph. Plutarch7 admits that this event was the origin of and first step towards the triumph of after-times, but censures Dionysius for the state-
TRIUMPHUS.

That (Plin., Liv., A) was legitimate (9)—

and this, we find that the first triumph recorded by Livy is that over the Sabinies by Tarquinius, who, according to Vergilius, wore upon this occasion a robe of cloth or gold. Whatever conclusion we may form upon these points, it is certain that, from the first dawn of authentic history down to the extinction of liberty, a regular triumph (justus triumphus) was recognized as the summit of military glory, and was the cherished object of ambition to every Roman general. A triumph might be granted for successful achievements either by land or sea, but the latter were comparatively so rare that we shall for the present defer the consideration of the naval triumph.

After any decisive battle had been won, or a war subsumed by a series of successful operations, the emperor forwarded to the senate a laurel-wreathed dispatch (littera laureata), containing an account of his exploits. If the intelligence proved satisfactory, the senate decreed a public thanksgiving. (Vid. Suppl.Invocation.) This supplication was so frequently the forerunner of a triumph, that Cato thought it necessary to remonstrate Cicero that it was done in vain, and that the senate, in the future, must exclude the general, with his army, repaired to Rome, or ordered his army to meet him there on a given day, but did not enter the city. A meeting of the senate was held without the walls, usually in the Temple of Bellona or Apollo, that he might have an opportunity of urging his pretensions in person, and made the most of the occasion by contrasted the most jealous care. The following rules and restrictions were, for the most part, rigidly enforced, although the senate assumed the discretionary power of relaxing them in special cases.

1. That no one could be permitted to triumph unless he had held the office of dictator, of consul, or of praetor. Hence a triumph was not allowed to P. Scipio after he had expelled the Carthaginians from Spain, because he had commanded in that province "sine ullo magistratu." The honours granted to Pompey, who triumphed in his 24th year (B.C. 81), before he had held any of the great offices of state, and again ten years afterward, while still a simple equus, were altogether unprecedented. 2. That the magistrate should have been actually in command when the victory was gained and when the triumph was to be celebrated. This regulation was insisted upon only during the earlier ages of the commonwealth. Its violation commenced with Q. Publius Philo, the first person to whom the senate ever granted a "prorogatio imperii" after the termination of a magistracy, and theenceforth proconsuls and procurators were permitted to triumph after the termination of the office. 3. An impossible time the event was of rare occurrence. It was long held, however, that it was necessary for the "prorogatio imperii" to follow immediately upon the termination of the magistracy, for a triumph was refused to L. Lentulus, who succeeded P. Scipio in Spain, on the ground that, although he had been formerly praetor, his imperium had not been continued uninterrupted from the period when the command expired, but had been renewed "extra ordinem" after a lapse of some years. But towards the close of the Republic this principle was entirely abandoned. Consuls and praetors seldom quitted the city until their term of office had expired, and when, at any subsequent period, they entered upon the government of a province, either in regular rotation or "extra ordinem," they enjoyed the full status, and all the privileges of proconsuls and propraetors. The position of Pompey when sent against the pirates, and afterwards against Mithradates, and of Cicero when he went to Cilicia, will be sufficient to illustrate the point. 3. That the war should have been prosecuted or the battle fought under the auspices, and in the province, and with the troops of, the general seeking the triumph; and hence the triumph of the praetor Furius was considered irregular and imperfect. Thus, if a victory was gained by the legatus of a general who did not belong from the army, the honour of it did not belong to the former, but to the latter, inasmuch as he had the auspices.

4. That at least 5000 of the enemy should have been slain in a single battle, that the advantage should have been positive, and not merely a compensation for some previous disaster; and that the loss on the part of the Romans should have been small compared with that of their adversaries. By a law of the tribune M. Minucius and M. Cato, penal laws were imposed upon any imperator who should be found guilty of having made false returns to the senate, and it was ordained that, so soon as they returned to the city, they should be required to attest the correctness of such documents upon oath before the city question. It is clear that these provisions could never have existed during the poetical age, and have been continued for some centuries; and even when wars were waged upon the most extensive scale, we find many instances of triumphs granted for general results, without reference to the numbers slain in any one engagement.

5. That the war should have been a legitimate contest against public foes (justae hostilisque bellis), and not a civil contest. Hence Catulus celebrated no triumph over Legidius, nor Antonius over Catilina, nor Cinna and Marius over their antagonists of the Sullan party, nor Cesar after Pharsalia; and when he did subsequently triumph after his victory over the sons of Pompey, it caused universal disgust. Hence the line in Lucan: "Bella geri placuit nullus habitura triumphos." (Vid. Qatari.)

6. That the dominion of the state should have been extended, and not merely something previously lost regained. Hence Fulvius, who won back Caere after his return to Roman, did not receive a triumph. The absolute acquisition of territory does not appear to have been essential.

TRIUMPHUS.

49, but this and similar cases must be regarded as examples of peculiar favour.

The senate claimed the exclusive right of deliberating upon all these points, and giving or withholding the honour sought, and they, for the most part, exercised the privilege without question, except in times of great political excitement. The sovereignty of the people, however, in this matter, was asserted at a very early date, and a triumph is said to have been voted by the tribes to Valerius and Horatius, the consuls of B.C. 446, in direct opposition to the resolution of the fathers, and in a similar manner to C. Marcianus Rutilius, the first plebeian dictator, while L. Postumius Megellus, consul B.C. 294, celebrated a triumph although resisted by the senate and seven out of the ten tribunes. Nay, more, we read of a certain Appius Claudius, consul B.C. 143, who, having persisted in celebrating a triumph in defiance of both the senate and people, was accompanied by his daughter (or sister) Claudia, a vestal virgin, and by her interposition saved from being dragged from his chariot by a tribune. A disappointed general, however, seldom ventured to resort to such violent measures, but satisfied himself with going through the forms on the Alban Mount, a practice first introduced by C. Papirius Maco, and thus noticed in the Capitoline Fasti: C. Papirius Maco 'put on the triumphal dress, and entered the city, amidst the acclamations of the populace, which were especially remarkable either on account of their beauty or rarity being disposed in such a manner as to be seen distinctly by the crowd. Boards were borne aloft on furla, on which were painted, in large letters, the names of vanquished nations and countries. Here, too, models were exhibited, in ivory, in which were the cities and forts captured, and pictures of the most stately and magnificent buildings, the most remarkable structures in general, as the result of the great natural features of the subjegated region, with appropriate inscriptions. Gold and silver in coin or bullion, arms, weapons, and horse-furniture of every description, statues, pictures, vases, and other works of art, precious stones, elaborately wrought and richly-embroidered stuffs, and every object which could be regarded as valuable or curious. 4. A body of flute-players. 5. The white bulls or oxen destined for sacrifice, with gilded horns, decorated with infuscate and sert, attended by the slaughtering press with their implements, and followed by the Camilli bearing in their hands paterae and other holy vessels and instruments. 6. Elephants reared as strange animals, natives of the conquered districts. 7. The army in imitation of the leaders of the foe. 8. The leaders themselves, and such of their kindred as had been taken prisoners, followed by the whole band of inferior captives in fetters. 9. The corone and other tributes of respect and gratitude bestowed on the emperor by allied kings and states. 10. The Victories wearing the crowns of the cities and the modern states, in imitation of the four emperors of the Roman world, who had been deified, since by so doing he would ipso facto have forfeited all claim. We have a remarkable example of this in the case of Cicero, who, after his return from Cicilia, lingered in the vicinity of Rome daily after day, and dragged about his lectors from one place to another, without entering the city, in the vain hope of a triumph. Such were the preliminaries, and it only now remains to describe the order of the procession. This, in ancient days, was sufficiently simple. The leaders of the enemy and the other prisoners were led along in advance of the general's chariot; the military standards were carried before the troops, who followed laden with plunder; banquet were spread in the midst of every door, and the populace brought up the rear in a gold- or silver-braided, with good cheer, chanting songs of victory, jeering and bantering as they went along with the pleasantries customary on such occasions. But in later times these pageants were marshalled with extraordinary pomp and splendour, and presented a most gorgeous spectacle. Minute details would necessarily be different according to circumstances, but the general arrangements were as follows. When the day appointed had arrived, the whole population poured forth from their abodes in holyday attire; some stationed themselves on the steps of the public buildings in the Forum and along the Via Sacra, while others mounted scaffolds erected for the purpose of commanding a show. The temples were all thrown open, garners of flour were thrown upon the shrine and image, and incense smoked on every altar. Meanwhile the emperor called on each of his soldiers, delivered an oration commending their valor, and concluded by distributing rewards to the most distinguished, and a sum of money to each individual, the amount depending on the value of the spoils. He then ascended his triumphal chariot and advanced to the Porta Triumphalis (where this gate was is a question which we cannot here discuss), where he was met by the whole body of the senate, headed by the magistrates. The procession then defiled in the following order:

1. The senate, headed by the magistrates. 2. A body of trumpeters. 3. A train of carriages and chariots, each drawn by a pair of horses, the animals in each case being especially remarkable either on account of their beauty or rarity being disposed in such a manner as to be seen distinctly by the crowd. 4. Boards were borne aloft on furla, on which were painted, in large letters, the names of vanquished nations and countries. Here, too, models were exhibited, in ivory, in which were the cities and forts captured, and pictures of the most stately and magnificent buildings, the most remarkable structures in general, as the result of the great natural features of the subjegated region, with appropriate inscriptions. Gold and silver in coin or bullion, arms, weapons, and horse-furniture of every description, statues, pictures, vases, and other works of art, precious stones, elaborately wrought and richly-embroidered stuffs, and every object which could be regarded as valuable or curious. 4. A body of flute-players. 5. The white bulls or oxen destined for sacrifice, with gilded horns, decorated with infuscate and sert, attended by the slaughtering press with their implements, and followed by the Camilli bearing in their hands paterae and other holy vessels and instruments. 6. Elephants reared as strange animals, natives of the conquered districts. 7. The army in imitation of the leaders of the foe. 8. The leaders themselves, and such of their kindred as had been taken prisoners, followed by the whole band of inferior captives in fetters. 9. The corone and other tributes of respect and gratitude bestowed on the emperor by allied kings and states. 10. The Victories wearing the crowns of the cities and the modern states, in imitation of the four emperors of the Roman world, who had been deified, since by so doing he would ipso facto have forfeited all claim. We have a remarkable example of this in the case of Cicero, who, after his return from Cicilia, lingered in the vicinity of Rome daily after day, and dragged about his lectors from one place to another, without entering the city, in the vain hope of a triumph. Such were the preliminaries, and it only now remains to describe the order of the procession. This, in ancient days, was sufficiently simple. The leaders of the enemy and the other prisoners were led along in advance of the general's chariot; the military standards were carried before the troops, who followed laden with plunder; banquet were spread in the midst of every door, and the populace brought up the rear in a gold- or silver-braided, with good cheer, chanting songs of victory, jeering and bantering as they went along with the pleasantries customary on
brows were encircled with a wreath of Delphic laurel, in addition to which, in ancient times, his body was painted bright red. He was accompanied in his chariot by his children of tender years, and sometimes by very dear or highly-honoured friends, while behind him stood a public slave holding over his head a golden Etruscan crown ornamented with jewels. The presence of a slave in such a place, at such a time, seems to have been intended to avert "invia" and the influence of the evil eye, and for the same purpose a fascinum, a little bell, and spears were attached to the vehicle. Tertullian tells us that the slave ever and anon whispered in the ear of the emperor the warning words "Respice post te, hominem memento," and his statement is copied by Zonaras, but is not confirmed by any earlier writer. Isidorus, misunderstanding Pliny, imagines that the slave in question was a common executioner. 12. Behind the chariot, or on the boxes which drew it, rode the grown-up sons of the emperor, together with the legati, the tribuni, and the equites, all on horseback. 13. The rear was brought up by the whole body of the infantry in marching order, their spears adorned with laurel, some shouting in Triumph, and singing hymns to the gods, while others proclaimed the praises of their leader, or indulged in keen sarcasms and coarse ribaldry at his expense for the most perfect freedom of speech was granted and exercised. The arrangement of the procession, as given above, is taken, with some changes, from the treatise of Onuphrius Panvinius, De Triumpho, in the 9th volume of the Thesaurus of Gravinius. The different particulars are all collected from the accounts transmitted to us of the most celebrated triumphs, such as that of Pompey in Appian, of Paulus Emilius in Pintarch, and in Livy, of Vespasian and Titus in Josephus, and of Camillus in Zonaras, together with the remarks of Dionysius, Servius, and Juvenal. 5. Just as the pomp was ascending the Capitoline Hill, some of the hostilechiefs were led aside into the adjoining prisons and put to death, a custom so barbarous that we could scarcely believe that it existed in a civilized age were it not attested by the most unquestionable evidence. Pompey, indeed, refrained from perpetrating this atrocity in his third triumph, and Aurelian, on like occasion, spared Zenobia, but these are quoted as exceptions to the general rule. When it was announced that these murders had been completed, the victims were then publicly led from the prison. From the pulpit from which he was sentenced to Jupiter, the laurel wreath was deposited in the lap of the god, the emperor was entertained at a public feast along with his friends in the temple, and returned home in the evening preceded by torches and pipes, and escorted by a crowd of citizens. Plutarch and Valerius Maximus say that it was the practice to invite the consuls to this banquet, and then to send a message requesting them not to come, in order, doubtless, that the emperor might be the most distinguished person in the company. The whole of the proceedings, generally speaking, were brought to a close in one day; but when the quantity of plunder was very great, and the troops very numerous, a longer period was required for the exhibition, and thus the triumph of Flamininus continued for three days in succession. But the glories of the emperor did not end with the show, nor even with his life. It was customary (we know not if the practice was invariable) to provide him, at the public expense, with a site for a house, such mansions being styled triumphales domus. 14. After death, his kindred were permitted to carry his body within the walls (even, at least, is the explanation given to the words of Plutarch), and laurel-wreathed statues, standing erect in triumphal cars, displayed in the vestibulum of the family mansion, transmitted his fame to posterity. A Triumphus Navalis appears to have differed in no respect from an ordinary triumph, except that it must have been upon a smaller scale, and would be characterized by the exhibition of decks of ships and other nautical trophies. The earliest authentic record was granted to C. Duilius, who laid the foundation of the supremacy of Rome by sea in the first Punic war; and so elated was he by his successes, that during the rest of his life, whenever he returned home at night from supper, he caused fates to sound and torches to be borne before him. A second naval triumph was celebrated by Lutatiius Catulus for his victory off the Insula Egeta, B.C. 241; a third by Q. Fabius Labeo, B.C. 189, over the Cretans; and a fourth by C. Octavius over King Perseus, without captives and without spoils. Triumphus Castrensis was a procession of the soldiers through the camp in honour of a triumph, or some officer inferior to the general, who had performed some exploit. 21. After the extinction of freedom, the emperor being considered as the commander-in-chief of all the armies of the state, every military achievement was understood to be performed under his auspices, and

TRIUMVIRI. 

TRIUMVIRI.

The passage of Festus, which Niebuhr quotes, does not prove this, and it is improbable that they should have had power given them of inflicting summary punishment upon slaves and persons of lower rank; their court appears to have been a summary tribunal of the highest authority; and it is followed by Arnobius, who presumes that they might inflict summary punishment on all offenders against the public peace who might be taken in the fact; but

TRIUMVIRI COLONIAE DEDUCENDAE were persons appointed to superintend the formation of a colony. They are spoken of under Colonia, p. 290. Since they had, besides, to superintend the distribution of the land to the colonists they are also called TRIUMVIRI COLONIAE DEDUCENDAE AGRO DANDO, and sometimes simply TRIUMVIRI AGRO DANDO.

TRIUMVIRI EQUITUM. (Vid. Equites.)

TRIUMVIRI EQUITUM TURMAS RECOGNOSCENDI, or LEGENDIS EQUITUM Distinguere, were magistrates first appointed by Augustus to revise the lists of the Equites, and to admit persons into the order. This was formerly part of the duties of the Consuls.

TRIUMVIRI MENSARI. (Vid. Mensari.)

TRIUMVIRI MONETALES. (Vid. Moneta.)

TRIUMVIRI NOCTURNAI were magistrates elected annually, whose chief duty it was to prevent fires by night, and for this purpose they had to go round the city during the night (vigilii nocturnae). If they went to bed or slept in their house they were accused before the people by the tribunes of the plebs. The time at which this office was instituted is unknown, but it must have been previously to the year B.C. 304. Augustus transferred their duties to the prefectus vigilum. (Vid. Prefectus Vigilum.)

TRIUMVIRI REPUBLICAE CONSTITUENTES. Niebuhr supposes that magistrates under this title were appointed as early as the time of the Latin magistrates, when the decemvirs were elected to redress the peace in the state, and to wipe out the commotions consequent upon those rotaions.1

Niebuhr also thinks that these were the magistrates intimated by Varro, who mentions among the extraordinary magistrates that had the right of summoning the senate, triumvirs for the regulation of the Republic, along with the decemvirs and consular triumvirs. It is to be observed, however, that the mention of officers or magistrates under this title is only to be found in the compendious name, whereas the latter were recognised as regular magistrates under the above-mentioned title.

TRIUMVIRI SACRIS CONQUISITORI DOMINIS PERSIGNANDI, extraordinary officers elected in the comitia tributa in the time of the second Punic war, seem to have had to take care that all property

given or consecrated to the gods was applied to that purpose."

Triumvir Senatus Legendi were magistrates appointed by Augustus to admit persons into the senate. This was previously the duty of the censors.

TROCHILUS (τροχίλος), the Motacilla regulus, or Golden-crested Woodpecker. It has been supposed the same with the τροχίλος of Aristotle.

TROCHUS (τροχής), a hoop. The Greek boys used to exercise themselves, like ours, with trundling a hoop. It was a bronze ring, and had sometimes bells attached to it. It was impelled by means of a hook with a wooden handle, called clavis and οὔραμα. From the Greeks this custom passed to the Romans, who consequently adopted the Greek term. The hoop was used at the Gymnasia, and, therefore, on one of the gems in the Stosch collection at Berlin, which is engraved in the annexed woodcut, it is accompanied by the jar of oil and the laurel branch, the signs of effort and of victory. On each side of this we have represented another gem from the same collection. Both of these exhibit naked youths trundling the hoop by means of the hook or key. These show the base of the hoop, which in the middle figure has also three small rings or bells on its circumference.}

In a totally different manner hoops were used in the performances of tumblers and dancers. Xenophon describes a female dancer who receives twelve hoops in succession, throwing them into the air and catching them again, her motions being regulated by another female playing on the pipe. On the use of τροχής to denote the potter's wheel, and the wheel applied in torture, see Fortunatus and Torquemada.

*TROCHOLETES (τροχολότης), a variety of the στροφής, or Passoer. (Vid. Struvius.)

TROJE LUDUS. (Vid. Circes, p. 286.)

TROPEUM (τροπάιον, Att. τροπαιον), a trophy, a sign and memorial of victory, which was erected on the field where the enemy had turned (τρέφαν, τροπάς) to flight, and in case of a victory gained at sea, on the nearest land. The expression for raising or erecting a trophy is τροπάιον στίγμα, or στίγματα, to which may be added ἀνά, or ταῖς τομῶν ὀρειματοσ. When the battle was not decisive, or each party considered it had some claim to the victory, both erected trophies. Trophies usually consisted of the arms, shields, helmets, &c., of the enemy that were defeated; and from the descriptions of Virgil and other Roman poets, which have reference to the Greek rather than to the Roman custom, it appears that the spoils and arms of the vanquished were placed on the trunk of a tree, which was fixed on an elevation. It was consecrated to some divinity, and an inscription (ἐπιγραφα) recording the names of the victors and of the defeated party; whence trophies were regarded as inviolable, which even the enemy were not permitted to remove. Sometimes, however, a people destroyed a trophy, if they considered that the enemy had erected it without sufficient cause, as the Milesians did with a trophy of the Athenians. That ranking and hostile feelings might not be perpetuated by the continuance of a trophy, it seems to have been originally part of Greek international law that trophies should be made only of wood, and not of stone or metal, and that they should not be repaired when decayed. Hence we are told that the Macedoni ans accused the Thebans before the Amphictyonic council, because the latter had erected a metal trophy. It was not, however, uncommon to erect such trophies. Plutarch mentions one raised in the time of Alexander, and Pausanias speaks of several which he saw in Greece.

The trophies erected to commemorate naval victories were usually ornamented with the beaks or acroteria of ships (vid. Acroterium, Rostra), and were generally consecrated to Poseidon or Neptune. Sometimes a whole ship was placed as a trophy.

The following woodcut, taken from a painting found at Pompeii, contains a very good representation of a trophy, which Victory is engaged in erecting. The conqueror stands on the other side of the trophy, with his brows encircled with laurel garlands. The Macedonian kings never erected trophies, for the reason given by Pausanias, and hence the same writer observes that Alexander raised no trophies after his victories over Darius and in India. The Romans, too, in early times, never erected any trophies on the field of battle, but carried home the spoils taken in battle, with which they decorated the public buildings, and also the private houses of individuals. (Vid. Spolia.) Subsequently, however, the Romans adopted the Greek practice of raising trophies on the field of battle: the first trophies of this kind were erected by Domitian Ahenobarbus and Fabius Maximus B.C. 121, after their conquest of the Allobroges, when they built at the junction of the Rhone and the Isar: thereby of the Rhone and the Isar town of white stone, upon which trophies were placed adorned with the spoils of the enemy. Pompey also raised

trophies on the Pyrenees after his victories in Spain; Julius Cæsar did the same near Ziela, after his victory over Phæmares, 1 and Drusus near the Elbe, to commemorate his victory over the Germans. But it was more common to erect some memorial of the victory at Rome than on the field of battle. The trophies raised by Marius to commemorate his victories over Jugurtha and the Cimbri and Teutoni, which were cast down by Sulla and restored by Julius Cæsar, must have been in the city. 2 In the later times of the Republic and under the Empire, the erection of triumphal arches was the most common way of commemorating a victory, many of which remain to the present day. (Vid. Arcus.)

TROSSULI. (Vid. Equestes, p. 416.)

TRUA, dim. TRULLA (τρούλλη), derived from τρυπή, τρυπό, &c., to perforate; a large and flat spoon or ladle pierced with holes; a trowel. The annulated woodcut represents such a ladle, adapted to stir vegetables or other matters in the pot, 3 as to act as a strainer when they were taken out of the water, or to dispel the froth from its surface. 4 The ladle here drawn was found in the kitchen of "the house of Pansa" at Pompeii.

The trulla vinaria 5 seems to have been a species of colander (vid. Culum), used as a wine-strainer. 6 Though generally applied to these domestic and culinary purposes, 7 the trulla was found to be convenient for putting beans into the pot; it was also commonly used to plaster walls, 8 and thus gave rise to the verb trullissare. (Vid. Parnes, p. 736.)

Mr. Fellows explains the Eastern method of using a kind of colander in washing the hands. It is placed as a cover upon the jar (vid. Olla), which receives the dirty water. This may therefore be the trullum, which the ancients used, together with the basin and ewer, to wash their hands. 9

TRUTINA (τρύπνη), a general term including both Libra, a balance, and statera, a steelyard. 10 Payments were originally made by weighing, not by counting. Hence a balance (trutina) was preserved in the Temple of Saturn at Rome. 11 The balance was much more ancient than the steelyard, which, according to Florus, 12 was introduced in Campania, and therefore called, by way of distinction, Trutina Campana. Consistently with this remark, steelyards have been found in great numbers among the ruins of Herculanenum and Pompeii.

The construction of some of them is more elaborate and complicated than that of modern steelyards, and they are in some cases much ornamental; as in the remarkable beautiful statua which is preserved in the Museum of the Capitol at Rome. Its support is the trunk of a tree, round which a serpent is entwined. The equino is a head of Minerva. Three other weights lie on the base of the statua, designed to be hung upon the hook when occasion required. 13

Vitruvius 14 explains the principle of the steelyard and mentions the following constituent parts of it: the scale (lancula), depending from the head (caput), near which is the point of revolution (centrum) and the handle (ansa). On the other side of the centre from the scale is the beam (scapus), with the weight or equipoise (equipodium), which is made to move along the points (per puncta) expressing the weights of the different objects that are put into the scale.

*TRYGON (τρυγόν), the Turtle-dove, or Columba turtur, L. 1

"II. A species of Skate or Ray, the Fire-flaire, or Raja pastinaca, L., the same as the Trygon pasti-

naca, Adamson." 2

TUBA (τύμβη), a bronze trumpet, distinguished from the drum by being straight, while the latter was curved; thus Ovid. 3

"Non tuba directi non aris cornua flexi." 4

Facciolati, in his Lexicon, 5 is mistaken in supposing that Aulus Gallius and Macrobius, 6 who copies him, intend to affirm that the tuba was crooked. The words of the former do not mean that both the litus and the tuba were crooked, but that both that kind of trumpet which was called a litus and also the staff of the augur were crooked, and that it was doubtful which of the two had lent its name to the other. (Vid. Lurwus.)

The tuba was employed in war for signals of every description, 8 at the games and public festi-
vials, 7 also at the last rites to the dead (hinc tuba, candela 9), and Aulus Gallius 10 tells us, from Atteius Capito, that those who sounded the trumpet at feasts were termed small, and used an instrument of a peculiar kind, whose name was tuba. It was of the tuba that the ancients represented as of a harsh and fear-inspiring character (fractus sonitus tubarum; 11 terribilia sonium arc canoros 12), which Ennius 13 endeavoured to imitate in the line

"At tuba terribilis sonitus tartarantara dixit."

The invention of the tuba is usually ascribed to ancient writers to the Etruscans, 14 and the epithet antroaσελτίκεταλ (i.e. robber-trumpeters) 15 would seem to indicate that they had made it famous by their piracies. It has been remarked that Homer never introduces the ἐνασίδε in his narrative but in comparisons only, 17 which leads us to infer that, although known in his time, it had been but recently introduced into Greece; and it is certain that, notwithstanding its eminently martial character, it

TUMULTUARI.

TUNICA.

1. (Cic., Phil., viii., 1.—2. (Serv. ad Virg., Æn., ii., 486.)

VII.

TUMULTUS was the name given to a sudden or dangerous war in Italy or Cisalpine Gaul, and the word was opposed by the ancients to be a contraction of tumultus, tumultus, tumultus (tumultus). It was, however, sometimes applied to a sudden or dangerous war elsewhere; but this does not appear to have been a correct use of the word. Cicero\(^3\) says that there might be a war without a tumultus, but not a tumultus without a war; but it must be recollected that the word was also applied to any sudden alarm respecting a war; whence we find a tumultus spoken of as a decorum, quae timebat a tumultus.\(^3\) Because the results were of less consecutive, though the fear might have been much greater than in a regular war.

In the case of a tumultus there was a cessation from all business (justitium), and all citizens were obliged to enlist, without regard being had to the exemptions (excusiones) from military service which were enjoyed at other times. As there was not time to enlist the soldiers in the regular manner, the magistrates appointed to command the army displayed two banners (sestila) from the Capitol, one red, to summon the infantry, and the other green, to summon the cavalry, and said, "Qui rempublicam salvaet vult, me sequatur." Those that assembled took the military oath together, instead of one by one, as was the usual practice, and were called conjurati, and their service conjuratio. Soldiers enlisted in this way were called Tumultuarii or Sublatarii.

TUNICA (χτίστη, dim. χτιστίσσος, χτιστόν), as under-garment. The chiton was the only kind of τόβομα or under-garment worn by the Greeks. Of this there were two kinds, the Dorian and Ionian. The Dorian chiton, as worn by males, was a short woollen shirt without sleeves; the Ionian was a long linen garment with sleeves. The under-garment, afterward distinguished as the Doric, seems to have been originally worn in the whole of Greece. Thucydides\(^4\) speaks as if the long linen garment worn at Athens a little before his time was the most ancient kind, since he attributes the adoption of a simpler mode of dress to the Lacedaemonians, but we know with tolerable certainty that this dress was brought over to Athens by the Ionians of Asia. It was commonly worn at Athens during the Persian wars, but appears to have entirely gone out of fashion about the time of Pericles, from which time the Doric chiton was the under-garment universally adopted by men through the whole of Greece.

The distinction between the Doric and Ionic chiton still continued in the dress of women. The Spartan virgins only wore this one garment, and had no upper kind of clothing, whence it is sometimes called himation (vid. Pallium) as well as chiton. Euripides\(^5\) incorrectly calls this Doric dress peplos, and speaks of a Doric virgin as μονοστερός. In the dress of the Iliad, there was no under-garment under the chiton; the Spartan virgins were called γυναικα (vid. Nudes), and also μονοστρέφοι. They appeared in the company of men without any further covering, but the married women never did so without wearing an upper garment. This Doric chiton was made, as stated above, of woollen stuff; it was without sleeves, and was fastened over both shoulder

The scholiast on the Iliad\(^5\) reckons six varieties of trumpets; the first he calls the Grecian σάλπιγξ which Athena discovered for the Tyrrhenians, and the sixth, termed by him κατα\(^1\) εκπάγων, the tympanum σάλπιγξ, he describes as being of the shape of the κατα\(^1\) κολλίμα (kata kolimis, i.e. the bell-shaped aperture of the trumpet), and similar epithets are applied by Euripides,\(^6\) and other Greek\(^7\) and Roman writers (Tyrrhena clanger, Tyrrhena clanger tuba). According to one account, it was first fabricated for the Tyrrhenians by Athena, who, in consequence, was worshipped by the Argives under the title of Σιλπις, while at Rume the tubilustrum, or purification of sacred trumpets, was performed on the last day of the Quinquatrus. (Vid. Quinquatrus.) In another legend the discovery is attributed to a mythical king of the Tyrrhenians, Maleus, son of Heracles and Omphale; in a third to Pausus the Tyrrhenian,\(^8\) and Silius has preserved a tradition,\(^9\) according to which the origin of this instrument is traced to Yetonori.\(^10\)

There appears to have been no essential difference in form between the Greek and Roman or Tyrrhenian trumpets. Both were long, straight bronze tubes, gradually increasing in diameter, and terminating in a bell-shaped aperture. They present precisely the same appearance on monuments of very different dates, as may be seen from the casts annexed, the former of which is from Trajan's column, and the latter from an ancient fictile vase.\(^11\)
The Ionic chiton, on the contrary, was a long and loose garment, reaching to the feet (ποδόρρυς), with wide sleeves (κόραι), and was usually made of linen. The sleeves, however, appear usually to have covered only the upper part of the arm; for in ancient works of art we seldom find the sleeve extending farther than the elbow, and sometimes not so far. The sleeves were sometimes slit up, and fastened together with an elegant row of brooches, and it is to this kind of garment that Böttiger incorrectly gives the name of σχιστὸς χίτων. The Ionic chiton, according to Herodotus, was originally a Carian dress, and passed over to Athens from Ionia. The women at Athens originally wore the Doric chiton, but were compelled to change it for the Ionic after they had killed, with the buckles or clasps of their dresses, the single Athenian who had returned alive from the expedition against Εὔγινα, because there were no buckles or clasps required in the Ionic dress. The Muse of Athens, taken from a statue in the British Museum, represents the Muse Thalia wearing an Ionic chiton. The peplos has fallen off her shoulders, and is held up by the left hand. The right arm, holding a pedum, is a modern restoration.

Both kinds of dress were fastened round the middle with a girdle (vid. Σωλνίκα); and as the Ionic chiton was usually longer than the body, part of it was drawn up so that the dress might not reach farther than the feet, and the part which was so drawn up overhung or overlapped the girdle, and was called κάλπος.

There was a peculiar kind of dress, which seems to have been a species of double chiton, called δυ-νταῖος, διπλόλων, and ημιδιπλόλων. Some writers suppose that it was a kind of little cloak thrown over the chiton, in which case it would be an amic-

TUNICA.

ders by clasps or buckles (πάπαντς, πέρανα), which were often of considerable size. It was frequently so short as to reach the knee, as is shown in the figure of Diana on p. 245, who is represented as equipped for the chase. It was only joined together on one side, and on the other was left partly open or slit up (σχιστός χίτων), to allow a free motion of the limbs: the two skirts (πτερύγια) thus frequently flew open, whence the Spartan virgins were sometimes called φαύλομπρίδες, and Euripides speaks of them as with γυμνοῖς μηροῖς καὶ πέπλοις άνεμένοις.

Examples of this σχιστός χίτων are frequently seen in works of art: the following cut is taken from a bas-relief in the British Museum, which represents an Amazon with a chiton of this kind: some parts of the figure appear incomplete, as the original is mutilated.

It seems impossible to determine with certainty whether the diploidion formed part of the chiton, or was a separate piece of dress. Those writers who maintain the former view think that it is quite proved by the left-hand figure in the preceding cut; but this is not conclusive evidence, since the chiton may have terminated at the waist. In the right-hand figure we see that the chiton is girded round the middle of the body, as described above, and that the fold which overhangs (κάλπος) forms, with the end of the diploidion, a parallel line, which was always the case. This is also plainly seen in the woodcut to the article ΤΡΑΣΜΑ. Since the diploidion was fastened over the shoulders by means of buckles or clasps, it was called τρασμός, which Müller supposes, from Euripides (Hecub., 555) and Athenæus (xii., p. 608, b.), to have been only the end of the garment fastened on the shoulder; but these passages do not necessarily prove this, and Pollux evidently understands the word as meaning a garment itself.

Besides the word χίτων, we also meet with the diminutives χιτώνιος and χιτώνης, the former of which is generally applied to a garment worn by men, and the latter to one v orn by women, though this distinction is not always preserved. A question arises whether these two words relate to a different garment from the chiton, or mean merely a smaller one. Many modern writers think that

The chiton was not worn immediately next the skin, but that there was worn under it a shirt (χιτώνιον) or some such other under-garment, the nature of which, however, this does not appear to have been the case, since we find χιτώνιον frequently used as identical with χιτώς, and spoken of as the only under-garment worn by individuals (To ἱμάτιον καὶ τὸν χιτῶνιον). It appears, on the contrary, that females were accustomed to wear a garment (χιτῶνιον), under their chiton, and a representation of such a one is given in p. 589.9.

It was the practice among most of the Greeks to wear an himation, or outer garment, over the chiton, but frequently the chiton was worn alone. A person who wore only a chiton was called μονοχτιώτης (olophōtēs), an epithet given to the Spartan virgins, as explained above. In the same way, a person who wore only an himation, or outer garment, was called ἀγύρτης.

The Athenian youths, in the earlier times, wore only the chiton; and when it became the fashion, in the Peloponnesian war, to wear an outer garment over it, it was regarded as a mark of effeminacy.

Before passing on to the Roman under garment, it remains to explain a few terms which are applied to the different kinds of chiton. In later times, the chiton worn by men was of two kinds, the ἄμφιμαλλός, and the ἄμφιμαλλός, the former the dress of freemen, the latter of slaves. The ἄμφιμάλλος appears to have signified not only a garment which had two sleeves, but also one which had openings for both arms; while the ἄμφιμαλλός, on the contrary, had only a sleeve, or, rather, an opening for the left arm, leaving the right with the shoulder and a part of the breast, uncovered, whereas it is called ἀκροτής, a representation of which is given on page 476. When the sleeves of the chiton reached down to the hands, it seems to have been properly called μεσοτής; though this word seems to have been frequently used as equivalent to ἄμφιμαλλός.

( Vide Ciukidota.)

A χιτῶν ὑπόστρατος was one which was not fastened round the body with a girdle; a χιτῶν ὑπόστρατος seems to have had a kind of flowing at the bottom.

On the subject of the Greek chiton in general, see Müller, Dorians, iv., 2, § 3. 4.—Archäologie der Kunst, § 337, 339.—Becker, Charicles, ii., p. 309, &c.

The tunica of the Romans, like the Greek chiton, was a woollen under garment, over which the toga was worn. It was the indumentum or indutus, as opposed to the amictus, the general term for the toga, or any other outer garment (V Amicit.). The Romans are said to have had no other clothing originally but the toga; and when the tunica was first introduced, it was merely a short garment without sleeves, and was called colobium. It was considered a mark of effeminacy for men to wear tunics with long sleeves (mammitans) and reaching to the feet (calatares).

Julius Caesar, however, was accustomed to wear one which had sleeves, with fringes at the waist (ad manus finibrata); and in the later times of the Empire, tunics with sleeves, and reaching to the feet, became common.

The tunica was girded (cinctus) with a belt or girdle around the waist, but was usually worn loose, without being girded, when a person was at home, or wished to be at his ease. Hence we find the terms cinctus, procinctus, and succinctus applied, like the Greek ἐπορθός, to an active and diligent person, and distinctus to one who was idle or dissolute.

The form of the tunica, as worn by men, is represented in many woodcuts in this work. In works of art it usually terminates a little above the knee; it has short sleeves, covering only the upper part of the arm, and is girded at the waist (see cuts, p. 54, 667); the sleeves sometimes, though less frequently, extend to the hands (outs, p. 112, 132).

Both sexes usually wore two tunics, an outer and an under, the latter of which was worn next the skin, and corresponds to our shirt and chemise. Varro says that when the Romans began to wear two tunics, they called them subulae and indutus, the former of which Bottiger supposes to be the name of the under tunic of the men, and the latter of that of the women. But it would appear from another passage of Varro referred to by Becker, as if Varro had meant to give the name of subulae to the under tunic, and that of indutus or intusium to the outer, though the passage is not without difficulties. It appears, however, that subulae was chiefly used to designate the under tunic of men.

The word,intusia, was of later origin, and seems to have been applied equally to the under tunic of both sexes. The suppapitius or suppapitis is said by Festus to have been a linen vest, and to have been the same as the subula; but Varro, on the contrary, speaks of it as a kind of outer garment, and contrasts it with subulae, which he derives from subito, while suppapitius he derives from supra.

The passage of Lucan in which it is mentioned does not enable us to decide whether it was an outer or under garment, but would rather lead us to suppose that it was the former.

Persons sometimes wore several tunics, as a protection against cold: Augustus wore four in the winter, besides a subula.

As the dress of a man usually consisted of an under tunic, an outer tunic, and the toga, so that of a woman, in like manner, consisted of an under tunic (tunica intusia), an outer tunic, and the palla. The outer tunic of the Roman matron was properly called stola (vid. Stola), and is represented in the woodcut on page 926; but the annexed woodcut, which represents a Roman empress in the character of Concordia, or Abundanta, gives a better idea of...
TYRANNUS.

as form. Over the tunic or stola the pallia is thrown in many folds, but the shape of the former is still distinctly shown.

The tunics of women were larger and longer than those of men, and always had sleeves; but in ancient paintings and statues we seldom find the sleeves covering more than the upper part of the arm. An example of the contrary is seen in the Museo Borbonico. 3 Sometimes the tunics were adorned with golden ornaments called loria.

Poor people, who could not afford to purchase a toga, wore the toga alone, whence we find the common name for poor people in Greek. 4 Persons at work laid aside the toga: thus, in the woodcut on p. 667, a man is represented ploughing in his tunic only. A person who wore only his tunic was frequently called Nudus.

Respecting the clavus latus and the clavus angustus, worn on the tunics of the senators and equites respectively, see CLAVUS LATIUS, CLAVUS ANGUSTUS.

When a triumph was celebrated, the conqueror wore, together with an embroidered toga (toga picta), a flowered tunic (tunica palma), also called tunica jovis, because it was taken from the Temple of Jupiter Capitolinus. 5 (Vid. Tit., p. 1017.) Tunicas of this kind were sent as presents to foreign kings by the successors of Augustus.

TYPHPHAICA TERRA (Typhaïke γῆ), a species of earth, which would appear from the account of Theophrastus, to have been a kind of gypsum. 6

TYPHE (τυφή), according to most authorities, the Typha latifolia, or Reed Mace. It is different from the τυφή, though often confounded with it.

TYRANUS (τύρανος). In the heroic age all the Greek monarchs were, in some measure, the king uniting in himself the functions of the priest, 'he judge, and military chief. These were the πατερι βασιλεία of Thucydides. 7 In the first two or three centuries following the Trojan war, various causes were at work which led to the abolition, or, at least, to the limitation of the kingly power. Emigrations, extinctions of families, disasters in war, civil dissensions, may be reckoned among these causes. Hereditary monarchical became elective; the different functions of the king were distributed; he was called ἀρχων, κόμος, ορ πτωνασ, instead of βασιλεύς, and his character was changed no less than his name. Noble and wealthy families began to be considered on a footing of equality with royalty, and this naturally led to monarchical or aristocratical, which most of the governments that succeeded the ancient monarchies were in point of fact, though not as yet called by such names. These oligarchies did not possess the elements of social happiness or stability. The principal families contends with each other for the greatest share of power, and were only unanimous in the interest of the state, which was beneath their own. The people, oppressed by the privileged classes, began to regret the loss of their old paternal form of government, and were ready to assist any one who would attempt to restore it. Thus were opportunities afforded to ambitious and designing men to raise themselves by starting up as the champions of popular right. Dissensions and civil wars, which sometimes found 10 tyrannical schemes of this sort, and they had a greater chance of success if descended from the ancient royal family. Pisistratus is an example; he was the more acceptable to the people of Athens as being a descendant of the family of Codrus. 1

Thus in many cities arose that species of monarchy which the Greeks called τυραννίς, which meant only a despotic, or irresponsible dominion of one man, and which frequently was nothing more than a revival of the ancient government, and, though often accompanied with any recognised military title, or the reverence attached to old name and long prescription, was hailed by the lower orders of people as a good exchange, after suffering under the domination of the oligarchy. All tyrannies, however, were not equally acceptable to the majority; and sometimes we find them contending for the civil supremacy between themselves, which was to further their own interests. Thus the Syracusan Gamaru, who had been expelled by the populace, on receiving the protection of Gelon, sovereign of Gela and Camarina, enabled him to take possession of Syracuse, and establish his kingdom there. 8 Sometimes the conflicting parties in the state, by mutual consent, chose some eminent man to be king, and by the other hand, from the acrid desire of the people, the throne was sometimes regarded as nothing less than a despot to farther their own interests. Such a person they called αὐληφυτής. (Vid. AISYMETRE.) A similar authority was conferred upon Solon when Athens was torn by the contending factions of the Δαιμονικοί, Ἰθακαιοί, and Βορβονικοί. Sometimes the title was bestowed upon two, or, if it occurred, upon five persons.

The tyrannos must be distinguished, on the one hand, from the αὐληφυτής, as much as he was not elected by general consent, but commonly owed his elevation to some coup d'état, some violent movement or stratagem, such as the creation of a body-guard for him by the people, or the seizure of the city by a tyrant in a sudden movement. The power of a king might be more absolute than that of a tyrant; as Phidias of Argos is said to have made the royal prerogative greater than it was under his predecessors; yet he was still regarded as a tyrant. A tyrant was a man who, by means of personal influence, or the suffering of the people, was enabled to take the title, and the power, which a king might have enjoyed, or the power which a king might have depended on title and origin, and not on the manner in which the power was exercised. 9 The name of tyrant was originally so far from denoting a person who abused his power, or treated his subjects with cruelty, that Pisistratus is praised by Thucydides for the moderation of his government; and Herodotus says he governed οὕτω τιμῶν τῆς εὐδοκίας συντροφίαν ἠκολούθησεν. The tyrant was a man who, by means of the people, and the violent means, sprang up to the top of power, and became the object of reproach, just as red did among the Romans. 10

Among the early tyrants of Greece, those most worthy of mention are Clisthenes of Sicyon, grand.

1025
father of the Athenian Cuthones, in whose family the government continued for a century after its establishment by Orthogoras about B.C. 672.\textsuperscript{1} Cyrus-

\textsuperscript{1}us of Corinth, who expelled the Baechiadeae, B.C. 655, and his son Periander, both remarkable for their cruelty; their dynasty lasted between seventy and eighty years;\textsuperscript{2} Procles of Epidaurus;\textsuperscript{3} Panta-

\textsuperscript{2}leon of Pisa, who celebrated the thirty-fourth Olympiad, depriving the Eleans of the presidency;\textsuperscript{4} Theagenes of Megara, father-in-law to Cylon the Athe-

\textsuperscript{3}neus, Phalaris, who succeeded them, was one of the early tyrants on the Cretan continent. In Sicily, where tyranny most flourished, the principal were Phalaris of Agrigentum, who established his power in B.C. 568, concerning whose supposed opisthets Bentley wrote his famous treatise; Theron of Agrigentum; Gelo, already mentioned, who, in conjunction with Theron, defeated Amilcar the Carthaginian on the same day on which the battle of Salamis was fought; and Hiero, his brother: the last three celebrated by Pindar.\textsuperscript{6} In Cretan Italy we may mention Anaxilus of Rhegium, who reigned B.C. 496;\textsuperscript{7} Clinias of Croton, who rose after the dissolution of the Pythagorean league (as to which, see Polybius;\textsuperscript{8} Athenaeus;\textsuperscript{9} Thirlwall).\textsuperscript{10} The following, also, are worthy of notice: Polycrates of Samos,\textsuperscript{11} Histiaeus and Aristogatus of Miletus.\textsuperscript{12} Perhaps the last mentioned can hardly be classed among the Greek tyrants, as they were connected with the Persian monarchy.\textsuperscript{13}

The general characteristics of a tyranny were, that it was bound by no laws, and had no recognised limitation to its authority, however it might be restrained in practice by the good disposition of the tyrant himself, or by fear, or by the spirit of the age. It was commonly most odious to the wealthy and noble, whom the tyrant looked upon with jealousy as a check upon his power, and whom he often sought to get rid of by sending them into exile or putting them to death. The advice given by Thrasea Bulus of Miletus to Periander affords an apt illustration of this.\textsuperscript{14} The tyrant usually kept a body-guard of foreign mercenaries, by aid of whom he controlled the people at home; but he seldom ventured to make war, for fear of giving an opportunity to his subjects to revolt. The Sicilian sovereigns form an exception to this observation.\textsuperscript{15} He was averse to a large congregation of men in the town, and endeavoured to find rustic employments for his subjects, who were not too industrious to attend them with shows and amusements. A few of the better sort cultivated literature and the arts, adorned their city with handsome buildings, and even passed good laws Thus Pisistratus commenced building the splendid temple of Jupiter Olympus, laid out the garden of the Lyceum, collected the Homeric poems, and is said to have written poetry himself. Tribute was imposed on the people to raise a revenue for the tyrant, to pay his mercenaries, and maintain his state. Pisistratus had the tithe of land, which his sons reduced to the twentieth.

\textsuperscript{6} (Vid. Tælos.)

The causes which led to the decline of tyranny among the Greeks were partly the degeneracy of the tyrants themselves, corrupted by power, indolence, luxury, and bad education; for even where the tyrants set a good example, it was seldom followed by the son; partly the cruelties and excesses of a minority, which brought them all into disrepute; and partly the growing spirit of inquiry among the Greek people, who began to speculate upon political theories, and soon became discontented with a form of government which had nothing in theory, and little in practice, to recommend it. Few dynasties lasted beyond the third generation. Most of the tyrannies which flourished before the Persian war are said to have been overthrown by the exertions of Sparta, jealous probably of any innovation upon the old Doric constitution, especially of any tendency to ameliorate the condition of the Perioeci, and anxious to extend her own influence over the states of Greece by means of the benefits which she conferred. Upon the fall of tyranny, the various republican forms of government were established, the Dorian states generally favouring oligarchy, the Ionian democracy.\textsuperscript{2}

As we cannot in this article pursue any historical narrative, we will shortly refer to the revival of tyranny in some of the Greek states after the end of the Peloponnesian war. In Thessaly, Jason of Phere raised himself, under the title of Teygoc, B.C. 374, to the virtual sovereignty of his native city, and exercised a most extensive sway over most of the Thessalian states; but this power ceased with Lyophron, B.C. 333. (Vid. Tælos.) In Sicily, the corruption of the Syracusans, their intestine disorders, and the fear of the Carthaginian invaders, led to the appointment of Dionysius to the chief military command, with unlimited powers; by means of which he raised himself to the throne, B.C. 406, and reigned for 38 years, leaving his son to succeed him. The younger Dionysius, far inferior in every respect to his father, was expelled by Dion, afterward regained the throne, and was again expelled by Timoleon, who restored liberty to the various states of Sicily. (For their history the reader is referred to Xenophon, Hell., ii, § 24—Diodor., iv., 7, 46, 66, 72, 109; xv, 73, 74; xvi, 5, 16, 68, 69, &c.—Plut., Dion. and Timol.—Wachsmuth, I., ii, 316—326.) With respect to the dynasty of the Archenaeotides in the Cimmerian Bosporus, and some of the towns on the coast of the Euxine, see Wachsmuth, I., ii, 392. Lastly, we may notice Evagoras of Cyprus, who is panegyrized by Isocrates; Phurch of Eretria, Callias and Taurothenes of Chalcis, who were partisans of Philip against the Athenians.\textsuperscript{3} The persons commonly called the thirty tyrants at Athens do not fall within the scope of the present subject. With respect to the Athenian laws against tyranny, and the general feelings of the people, see Pasovos.

\textsuperscript{7} TYPANNYDOS GRAΦH. \textsuperscript{8} (Vid. PRVORDIA.)

\textsuperscript{9} TURIBULUM (θυματιαριδων), a Censor. The Greeks and Romans, when they sacrificed, commonly took a little frankincense out of the ACREA, and let it fall upon the flaming altar. (Vid. AKA.) More rarely they used a censor, by means of which they burned the incense in greater profusion, and which was, in fact, a small movable grate or Focus.\textsuperscript{4} The annexed woodcut, taken from an an-
scent painting, shows the performance of both of these acts at the same time. Winchelmann
describes it to represent Livia, the wife, and Octavia, the sister of Augustus, sacrificing to Mars in grati-
dation for his safe return from Spain. 2 The censer here represented has two handles, for the purpose of carrying it from place to place, and it stands upon feet, so that the air may be admitted underneath, and pass upward through the fuel.

As the censer was destined for the worship of the gods, it was often made of gold or silver, and enriched with stones and gems. 3 We find a silver censer in the official enumerations of the treasures presented to the Parthenon at Athens: its bars (distributoria) were 21 per pound, and its feet (tympanum) 20 per pound. 4

TURRIS. (Vid. Army, Roman, p. 104.)

TURRIS (πυργος), a Tower. The word πυργος, from which comes the Latin turris, signified, according to Dionysius, 5 any strong building surrounded by walls; and it was from the fact of the Pelasgians in Italy dwelling in such places that the same writer supposes them to have been called Tyrrhenians, or Tyrrhenians, that is, inhabitants of towns or castles. Turris, in the old Latin language, seems to have been equivalent to urbs. 6 The use of towers by the Greeks and Romans was various.

1. Stationary Towers.—1. Buildings of this form are frequently mentioned by ancient authors, as forming by themselves places of residence and de-
defense. They are of particular interest in the history of Africa. 7 We have examples in the tower of Hannibal, on his estate between Acholla and Thapsus, 8 the turris regia of Jugurtha, 9 the tower of a private citizen without the walls of Carthage, by the help of which Scipio took the city; 10 and in Spain, the tower in which Cn. Scipio was burned. 11 Such towers were common in the frontier provinces of the Roman Empire. 12

2. They were erected within cities, partly to form a last retreat in case the city should be taken, and partly to overawe the inhabitants. In almost all Greek cities, which were usually built upon a hill, rock, or some natural elevation, there was a kind of tower, a castle, or a citadel, built upon the highest part of the city, and the top of it covered by stones of Acropolis was given. Thus we read of an Acropo-

lum at Athens, Corinth, Argoa, Messene, and many other places. The Capitolium at Rome answered the same purpose as the Acropolis in the Greek cities; and of the same kind was the tower of Agathocles at Utica, 13 and that of Antonia at Jeru-
salem. 14

3. The fortifications of both cities and camps were strengthened by towers, which were placed at intervals on the mursus of the former and the valum of the latter; and a similar use was made of them in the lines (circumvallatio) drawn round a besieged town. (Vid. Valum.) They were generally used at the gates of towns and of static camps. (Vid. Porta.)

1. The walls to receive an attack will be noticed below.

II. Movable Towers.—These were among the most important engines used in storming a fortified place. They were of two kinds. Some were made so that they could be taken to pieces and carried to the scene of operations; these were called folding towers (πυργος πτυκτος or επτυκτον, curritur, curritur, cit
ticeles, or portable towers, ϕορητος ϕυρος) The other

sort were constructed on wheels, so as to be driven up to the walls; and hence they were called turres ambulatoria or subrotula. But the turres picafoles were generally made with wheels, so that they were also ambulatoria.

The first invention or improvement of such towers is ascribed by Athenaeus, the mechanician (quoted by Lipsius), 16 to the inventor, the most famous of whom was Vitruvius, at the siege of Byzantium, and his pupils Chares and Diades. 4 Heron 17 ascribes their invention to Diades and Chares, Vitruvius 3 to Diades alone, and Athenaeus 18 says that they were improved in the time of Philo at the siege of Byzantium. Vitruvius states that the towers of Diades were car-
ried about by the army in separate pieces, 17 wide, and one fifth smaller at the top: and the greater, 120 cubits high and 2½ wide. Heron, 19 who also follows Diades, agrees with Vitruvius so far, but adds an intermediate size, half way between the two, 90 cubits high. Vegetius mentions towers of 30, 40, and 50 feet square. They were divided into stories, 20 and each had a building called turres contabulata. 17 Towers of the three sizes just mentioned consisted respectively of 10, 15, and 20 stories. The stories decreased in height from the bottom to the top. Diades and Chares, according to Heron, made the lowest story seven cubits and 12 digits, those about the middle five cubits, and the upper four cubits and one third.

The lower stories were plain, and their upper stories were covered with flat tiles, and had many ventilating windows, of which there were several to each story.

These rules were not strictly adhered to in prac-
tice. Towers were made of six stories, and even fewer. 11 Those of 10 stories were very common, 1111 but towers of 20 stories are hardly, if ever, mentioned. Plutarch 22 speaks of one of 100 cubits high, used by Masinissa at the siege of Carthage, but gives no use of the stories to was to receive the engines of war (tormenta). They contained ballistae and catapults.
and slingers and archers were stationed in them and on the tops of the towers. In the lowest storey was a battering-ram (scutum), and in the middle, one or more bridges (pontes) made of beams and planks, and protected at the sides by hurdles. Scaling-ladders (scale) were also carried in the towers, and, when the missiles had cleared the walls, these bridges and ladders enabled the besiegers to rush upon them.

These towers were placed upon wheels (generally six or eight), that they might be brought up to the walls. These wheels were placed, for security, inside of the tower.

The tower was built so far from the besieged place as to be out of the enemy's reach, and then pushed up to the walls by men stationed inside of and behind it. The attempt to draw them forward by beasts of burden was sometimes made, but was generally defeated by shooting the beasts. They were generally brought up upon the Aceanii, and it not unfrequently happened that a tower stuck fast or fell over on account of the softness of the agger. They were placed on the agger before it was completed, to protect the soldiers in working at it. When the tower was brought up to the walls without an agger, the ground was levelled before it by means of the Musculus.

These towers were accounted most formidable engines of war. They were opposed in the following ways:

1. They were set on fire, either by sallies of the besieged, or by missiles carrying burning matter, or by letting men down from the walls by ropes, close to the towers, while the besiegers slept.

2. By undermining the ground over which the tower had to pass, so as to overset it.

3. By using the main force, by iron-shod beams, as erotic or trabes.

4. By breaking or overturning it with stones thrown from catapults when it was at a distance, or, when it came close to the wall, by striking it with an iron-shod beam hung from a mast on the wall, and thus resembling an Aries.

5. By increasing the height of the wall, first with masonry, and afterward with beams and planks, and also by the erection of temporary wooden towers on the walls. This mode of defence was answered by the besiegers in two ways. Either the agger on which the tower stood was raised, as by Caesar at the siege of Avaricum, or a smaller tower was constructed within the upper part of the tower, and, when completed, was raised by screws and ropes.

6. On these towers in general, see Lipsius.

III. Caesar describes a portico of tower, which was invented at the siege of Massilia, and called turris latericia or latericium. It partook somewhat of the character both of a fixed and of a besieging tower. It was built of masonry near the walls of the town to afford the besiegers a retreat from the sudden sallies of the enemy; the builders were protected by a movable cover, and the tower was capable of being defended by fire for starving out the besieged.

IV. Towers in every respect similar to the turres ambulatoriae (excepting, of course, the wheels) were constructed on ships, for the attack of fortified places by sea.

V. Small towers carrying a few armed men were placed on the back of elephants used in battle.

VI. The words τούτος and turris are applied to an army drawn up in a deep oblong column. 1

TUTOR.

If the tutor appointed no tutor by his will, the lex Julia de maritandis ordinibus (Papia et Poppea), enacted that the pretor should appoint a tutor for a woman or a virgin, who was required to marry by this law, "ad dotem dandum, discendam, promitterandum," if her legitimus tutor was himself a pupillus: a senatus consultum of hired the provision to the provinces, and enacted that in such case the presides should appoint a tutor, and also that, if a tutor was mutus or furiosus, another should be appointed for the purposes of the lex. The case above mentioned of a tutor being given in the case of an action between a tutor and his ward, is the case of a conjunctus tutor. In the imperial period, from the time of Claudius, the Twelve Tables, the extra ordines were appointed by the consuls also.

Only those could be tutors who were sui iuris, a rule which excluded women among other persons. A person could not be named tutor in a testament unless he had the testamentificatio with the testator, a rule which excluded such persons as peregrini. The power of the tutor was over the property, not the person of the pupillus; and the passage of the Twelve Tables, which gives or confirms to a tutor the power of disposing of his property, uses the phrase, Ut legesant super pecunia tutelate suae res, that is, the tutela of the property. It might happen that the tutor, from the nearness of blood and the authority of his station, might be also a freedman and the major part of the tribuni plebis; in the provinces, in such cases, a tutor was appointed by the presides under the provisions of the lex Julia et Titia. (vid. Julia lex et Titia.) If a tutor was appointed by testament either sub condicione or ex die certo, a tutor might be given under these leases so long as the condition had not taken effect or the day had not arrived; and even when a tutor had been appointed absolutely (puris), a tutor might be given under these leases so long as there was no heres; but the power of such tutor ceased as soon as there was a tutor under the testament, that is, as soon as there was a heres to take the hereditas.

If a tutor was captured by the enemy, a tutor was also captured, and the most important case for the tutor to be tutor as soon as the original tutor returned from captivity, for he recovered his tutela jure postlimini.

Before the passing of the lex Atilla, tutors were given by the praetor in other cases, as, for instance, when the leges actions were in use, the praetor appointed a tutor if there was any action between a tutor and the pupillus of any other, to give the necessary authority (auctoritas) to the acts of those whose tutor he was in a matter in which his own interest was concerned. Other cases in which a tutor was given are mentioned by Ulpian. Ulpian’s division of tutes is into legitimi, senatus consultus constituti, moribus introducti. His legitimi tutes comprehend all those tutes by virtue of any lex, and especially by the Twelve Tables: accordingly, it comprises tutors in the case of intestacy, tutors appointed by testament, for they were confirmed by the Twelve Tables, and tutors appointed under any other lex, as the Atilla. Various senatus consulta declared in what cases a tutor might be appointed: thus the

---

1. (i., 12.)—S. (Compare Gaius, ili. 17, and i., 104.)—3. (Ulp., Frag., tit. 11.)—4. (Gaius, i., 165.)—5. (Compare Gaius, i., 166, with Ulp., Frag., tit. 11., s. 5.)—6. (Frag., tit. 11.)

2. (Gaius, i., 23.)—5. (123-947.)—3. (Hor., Spp., i., 1, 22.)—4. (iv., 7.)—5. (Gaius, iii., 107.)—6. (Ulp., Frag., tit. 11., s. 23.)—7. (Gaius, ii., 80.)
The tutor was terminated by the death or capitis diminutio maxima and media of the tutor. The tutor against the tutor in regard to the estate has been stated. A legitimate tutor became disqualified to be tutor legitimus if he sustained a capitis diminutio minima, which was the case if he allowed himself to be adopted; but this was not the case with a testamentary tutor. The tutela ceased by the death of the pupillus or pupilla, or by a capitis diminutio, as, for instance, the pupilla coming of age. In said when the pupillus or pupilla attained the age of puberty, which in the male sex was fourteen, and in the female was twelve. (Vid. Imp. Tut.) The tutela ceased by the abdicatio of the testamentary tutor, that is, when he declared "nolle se tutorem esse." The tutor legitimate could not get rid of the tutela in this manner, but he could effect it by in jure cessio, a privilege which the testamentary tutor had not. The person to whom the tutelar power was transferred by the in jure cessio the tutela of females, and the legitima tutela of females was done away with by a lex Claudia, except the tutela patronorum. The power of the legitimate tutor to transfer the tutela is explained when we consider what was his relation to the female. (Vid. Testamentum.)

The tutela of a tutor was terminated when he was removed from the tutela as suspectus, or when his excusatio was allowed to be justa; but in both of these cases a new tutor would be necessary. The tutor, as already observed, might be removed from his office if he was misconducting himself: this was effected by the accusatio suspecti, which is mentioned in the Twelve Tables.

The Twelve Tables also gave the pupillus an action for damages, for the mismanagement of his property, if he made out his case, he was entitled to double the amount of the injury done to his property. This appears to be the action which in the Pandect is called rationibus distrabalendis, for the settlement of all accounts between the tutor and his pupillus. There was also the judicium tutelle, which comprehended the actio tutelle directa and the actio distrabalendis ratiohibus, could only be brought by the legitimate tutela was ended. The actio tutelle directa was for a general account of the property managed by the tutor, and for its delivery to the pupillus, now become pubes. The tutor was answerable not only for loss through dolus malus, but for loss occasioned by want of proper care. This was an action bona fide, and consequently, in in casu. If the tutor was found guilty of the breach of the law, the consequence was infamia. (Vid. Infamia.) The tutor was entitled to all proper allowances in respect of what he had expended or done during his management of the property of the pupillus. The tutor had the actio tutelle contraria against the pupillus for all his proper costs and expenses; and he might have also a calumniæ judicium, in case he could show that the pupillus had brought an action against him from malicious motives.

In order to secure the proper management of the property of a pupillus or of a person who was in curatone, the praetor required the tutor or curator to give security; but no security was required from testamentary tutors, because they had been selected by the majority of the curatores appointed by a conseil, consul, or praeses, for they were appointed as being fit persons.

The tutela of women who are puperes requires a separate consideration, in which puperes (perfecta atatis) manage their own affairs, and, in some cases, a tutor must interpose his auctoritates (deis causa), and frequently he is compelled to give his auctoritates by the praetor. Upian and Gaius differ in the case of testamentary tutors, who both manage their affairs and give their auctoritates (et negativa gerunt et auctoritate inter ponunt); but the tutors of women (mulieres, that is, women who are puperes) only give their auctoritates.

There were other cases, also, in which the capacity of a mulier was greater than that of a pupillus or pupilla. The object of this rule seems to have been the same as the restriction on the testamentary power of women, for her agnati, who were a woman's legitimate tutors, were interested in preventing the alienation of her property.

A mulier might have a tutor appointed by her father's testament, or by the testament of her husband, in whose hand she was. She might also receive from her husband's will the tutoris optimo. Women who had no testamentary tutor were in the tutela of their agnati, until this rule of law was repealed by a lex Claudia, which Gaius illustrates as follows: "a masculi impubes has frater pupes or his patruus for his tutor; but women (familia) cannot have such a tutor." This old tutela of the Twelve Tables (legitima tutela) and that of manumissores (patronum tutela) could be transferred over to women by two other laws; one of which is, that a tutor could not, "being," as Gaius observes, "not onerous, for it terminated with the period of puberty." But, as already suggested, there were other reasons why the agnati could part with the tutela, which in the case of patroni are obvious. The tutela of patroni was not included within the lex Claudia. The tutela fiduciaria was apparently a device of the lawyers for releasing a tutor the pecuniary part of whose property was in a custodia, that is, the tutor was to have been retained after the passing of the lex Claudia, as a general mode by which a woman changed her tutor. To effect this, the woman made a "coempio fiducia causa;" she was then remanipulated by the coemptionator to some person of her own choice: this person manumitted her vindicta, and thus became her tutor fiduciaria. Thus the woman passed from her own family to another family, and from one line of her family to another, upon her property, and her tutor fiduciaria might be compelled by the praetor to give his auctoritias to her acts.

A tutor datius was given to women under the law. (Gaius, i., 119.) — 2. (Livy, xxxiv., 2.) — 2. (Pro Mumina, c. 12.) — 2. (frag., tit. 11, s. 1.) — 5. (Gaius, 1., 100.) — 6. (Id. ib.) — 157. c. 11. (C. I. L.) — 10. (Gaius, i., 115.) — 11. (Id., i., 190, ii., 152.)
lex Atilla ven mar there was no tutor, and in other cases which have been already mentioned. 1 The vestal virgins were exempted from all tutela; and both infants and libertae were exempted from tutela by the jus liberorum. 2 The tutela of feminum was determined by the death of the tutor or that of the woman, and by her acquiring the jus liberorum, either by bearing children or from the imperial favor. The abdicatio of the tutor and the in iure cession (so long as in the iure cession was in use) merely effected a change of tutor.

In those cases where the tutors were freedmen or freedwomen, the act of mancipulum in having a capacity to manage their affairs, and only requiring in certain cases the auctoritas of a tutor. If the woman was in the legitima tutela of patroni or parents, the tutors could not be compelled, except in certain very special cases, to give their auctoritas to acts which tended to deprive them of the woman's property, or that would diminish it before it might come to her hands. 3 On the other hand, the tutor could be compelled to give their auctoritas. The special cases in which the auctoritas of a tutor was required were, if the woman had to sue "lege," or in a legitimum judicium, if she was going to bind herself by a contract, if she was doing any civil act, or permitting her freedwoman to be in commutation with the slave or a freedman. 4

Among civil acts (civilia negotia) was the making of a testament, the rules as to which were stated in the article Testamentum. Libertae could not make a will without the consent of their patroni, for the will was an act which deprived the patron of his rights 5 as being a legitimus tutor. Gaius mentions a rescript of Antoninus, by which those who claimed the honorum patris secundum tabulas non jure factas could maintain their right against those who claimed it ab intestato. He adds, this rescript certainly applies to the wills of males, and also of feminum who had not performed the ceremony of mancipatio or nuncipatio; but he does not decide whether it applies to the testaments of women made within the tutela of a tutor, and by tutor he means not those who exercised the legitima tutela of parents or patroni, but tutors of the other kind (aliorum generis), who were compelled to give their auctoritas. It would be a fair conclusion, however, that a woman's will made without the auctoritas of such tutors ought to be void under the rescript.

A payment made to a mulier was a release to the debtor, for a woman could part with res nec mancipii without the auctoritas of a tutor; if, however, she did not receive the money, but affected to release the debtor by acceptilatio, this was not a valid release to him. 6 She could not manumit without the auctoritas of a tutor. 7 Gaius states that no alienation of a res mancipii by a mulier in agnatum tutela was valid unless it was delivered with the auctoritas of a tutor, which he expresses by saying that her res mancipii could not otherwise be the object of usucapion, and that this was a provision of the Twelve Tables. 8 In other cases, if a res mancipii was transferred by tradition, the purchaser acquired the quiritanian ownership of the usufruct, unless otherwise agreed. 9 In the case of a woman's res mancipii, the auctoritas of the tutor was required in order that usufruct might be effected. In another passage 10 Gaius observes that a woman cannot alienate her res mancipii without the auctoritas of her tutor, which means that the formal act of mancipatio is null without his auctoritas; and such act could not operate as a traditio for want of his auctoritas, as appears from the other passage.

The passage of Cicero 11 is in accordance with Gaius; but another 12 is expressed so vaguely, that though the explanation given by Cicero can only properly be applicable on the supposition of there having been a transfer without the auctoritas of a tutor, and on the further supposition of Cicero thinking it unnecessary to state the particular facts of a case which must have been known to Atticus.

The auctoritas of a tutor was not required in the case of any obligatio by which the woman's condition of auctoritas should give the necessary auctoritas in the case of a freedwoman. 13 The former is in the view of Gaius that the tutor was not mancipi without the consent of a tutor, she could contract an obligatio by lending money, for by delivering the money became the property of the receiver. A senatus consultum allowed a woman to apply for a tutor in the absence of her tutor, unless the tutor was a patronus; if he was a patron, she could only apply for a tutor in order to have his auctoritas for taking possession of an ahereditas (ad hereditatem acedendum) or contracting a marriage.

The tutela of a woman was terminated by the death of the tutor or that of the woman; by a marriage, by which she came in manum virt.; by the privilege of children (jus liberorum); by an abdicatio, and also by the in iure cession, so long as the agnatorum tutela was in use: but in these last two cases there was only a change of tutor.

A woman had no right of action against her tutor in respect of his tutela, for he had not the negotiorum gestio, but only interposed his auctoritas. 14 (The most recent and the most complete work on the subject is that of A. de la Motte, since it is the substance of which appears to be given by Rein, Das Röm. Privatrecht, p. 239, &c., Dig. 26 and 27.)

TUTULUS was the name given to a pile of hair on a woman's head. Great pains were taken by the Roman ladies to have this part of the hair dressed in the prevailing fashion, whence we read in an inscription in an austra a tutela. The hair was piled up to an enormous height. 15 The tutulus seems to have resembled very much the Greek κόμψος, of which a representation is given in the woodcut on p. 314.

The flamingo always wore a tutulus, which was formed by having the hair plaited up with a purple band in a conical form.

Table of Tutors. In the year B.C. 462, the tribune C. Terentullus Arsa proposed a reatlon that five men should be appointed for the purpose of preparing a set of laws to limit the imperium of the consuls. 16 The patricians opposed the measure, but it was brought forward by the tribunes in the following year with some modifications: the new
THE TWELVE TABLES.

rotation proposed that ten men should be appointed (legum laetes) from the plebs and the patricii, who were to make laws for the advantage of both ranks, and for the "equalizing of liberty," a phrase the import of which can only be understood by reference to the disputes between the two ranks. According to Dionysius, in the year B.C. 454 the senate assented to a plebisicium, purporting to which common council were to make laws for the advantage of the Greek cities generally, in order to make themselves acquainted with their laws. Three commissioners were appointed for the purpose. On the return of the commissioners, B.C. 452, it was agreed that persons should be appointed to draw up the code of laws (decemviri legibus scribendi), but they were to be chosen only from the patricians, with a provision that the rights of the plebes should be respected in the laws. In the following year (B.C. 451) the decemviri were appointed in the comitia centuriata, and during the time of their office no other magistratures were chosen. The body consisted of ten patricians, including the three commissioners who had been sent abroad; Appius Claudius, consul designatus, was at the head of the body. The Ten took the advice of Appius Claudius and his friends; but the second body of decemviri comprised three plebeians, according to Dionysius, but Livy speaks only of patricians. Two more tables were added by these decemviri, which Cicero calls "Duae tabulae incipitum legum." The provision which allowed no com mitium between the patres and the plebs is referred to the eleventh table. The whole Twelve Tables were first published in the consilium of L. Valerius and M. Horatius, after the downfall of the decemviri, B.C. 449. This, the first attempt to make a code, remained also the only attempt for near one thousand years, until the legislation of Justinian. The Twelve Tables are mentioned by the Roman writers under a great variety of names: Leges Decemvirates, Lex Decemviralis, Leges XII, Lex XII. Tabularum or Duodecim, are sometimes they are referred to under the names of leges and lex simply, as being pre-eminently The Law.

The laws were cut on bronze tablets and put up in a public place. Pomponius states that the first ten tables were on ivory (tabulae elores): a note of Zimmermann contains references to various authorities which treat of this disputed matter. After the burning of the city by the Gauls, it was necessary to reconstruct the tables. It is not said that there had been two or more original copies, though, if the custom of placing laws in the aerarium was then in use, there may have been two copies at least. But whether there was only one copy, or whether that was found after the conflagration, the twelve were in some way restored, and the Romans of the age of Cicero had the same discussions, as to the genuineness of the collection which then existed.

The legislation of the Twelve Tables has been a fruitful matter of speculation and inquiry to modern historians and jurists, who have often handled the subject in the most uncritical manner, and with utter disregard to the evidence. As to the mission to the Greek cities, the fact rests on as much and as good evidence as most other facts of the same age, and there is nothing in it improbable, though we do not know what the commissioners brought back with them. It is farther said that Hermodo ras, an Ephesian exile, aided the decemviri in drawing up the Twelve Tables, though his assistance would probably be confined to the interpretation of Greek laws, as it has been suggested. This tradition was confirmed by the fact of a statute having been erected in the comitium at Rome in memory of Hermodorus; but it did not exist in the time of Pliny.

The Twelve Tables contained matters relating both to the jus publicum and the jus privatum (i.e., public and private laws). They contain many enactments which underwent great changes in the course of years, but the jus privatum of the Twelve Tables continued to be the fundamental law of the Roman state. Cicero speaks of learning the laws of the Twelve Tables (ut carmen necessarium) when a boy; but he adds that this practice had fallen into disuse when he wrote, the Edict having then become of universal use. More recently, the fundamental principles of the Twelve Tables were ever formally repealed, but that the jus praeium grew up by the side of them, and mitigated their rigour. There is, indeed, an instance in which positive legislation interfered with them, by the abolition of the legis actions; but the Twelve Tables themselves were never repealed. The Roman writers speak in various terms of the precision of the enactments contained in the Twelve Tables, and of the propriety of the language in which they were expressed. That many of their provisions should have become obscure in the course of time, owing to the change which language undergoes, is nothing surprising; nor can we wonder if the strictness of the old law should often have seemed unnecessary harsh in a later age. So far as we can form a judgment by the few fragments which remain, the enactments were expressed with great brevity and archaic simplicity.

Secutus Aulus Postius Catus, in his Tripartita, commented on the Twelve Tables, and the work existed in the time of Pomponius. (Vid. P. E. G. E. in connection on the Twelve Tables, which is mentioned several times by Gellius. Gaianus also wrote a comment on the Tables in six books (ad legem zii. tabularum), twenty fragments of which are contained in the Digest, and collected by Hommelius in his Palingenesia. There were also other commentators or explanations of the laws of the Twelve Tables.

The notion which has sometimes been entertained, that the Twelve Tables contained a body of rules of law entirely new, is not supported by any evidence, and is inconsistent with all that we know of them and of Roman institutions. It is more reasonable to suppose that they fixed in a written form a large body of customary law, which would be an obvious benefit to the plebeians, inasmuch as the patricians were the expounders of the law. One of the last two tables contained a provision which allowed no comitium between patricians and plebeians; but it is uncertain whether this was a new rule of law or a confirmation of an old rule. The latter seems the more probable supposition; but in either case it is clear that it was not one of the ob-
jects of this legislation to put the two classes on the same footing. Modern writers often speak inaccurately of the decemviral legislation, and of the decemviri as enacting laws; as if the decemviri had exercised sovereign power; but they did not even attempt to legislate absolutely, for the Ten Tables were confirmed by the comitia centuriae, or the sovereign people, or, as Niebuhr expresses it, "when the decemviri had satisfied every objection they deemed reasonable, and their work was approved by the senate, they brought it before the centuries, whose assent was ratified by the curies, under the presidency of the colleges of priests and the sanction of happy auspices." The ancient authors were confirmed in the same way, as we may safely conclude from the circumstances of the case. It makes no difference that the sovereign people did not vote on the several laws included in the Tables: such a mode of legislation would have been impracticable, and, as Niebuhr observes, was not conformable to the usage of ancient commonwealths. How far the decemviri really were able, by intrigue or otherwise, to carry such particular measures as they wished to insert in the Tables, is a different question: but in form their so-called legislation was confirmed, as a whole, by the sovereign, that is, the Roman people, and consequently the decemviri are improperly called legislators: they might be called code-makers.

It is consistent with the assumption that the Twelve Tables had mainly for their object the embodying of the customary law in writing, to admit that many provisions were also introduced from the laws of other states. Indeed, where the Roman law was imperfect, the readiest mode of supplying the defects would be by adopting the rules of law that had been approved by experience by other people. Thus Gaius, in his Commentary on the Twelve Tables, where he is speaking of Collegia, says that the members of collegia may make what terms they please among themselves, if they thereby violate no publica lex; and he adds, this lex seems to be taken from one of Solon's, which he quotes. And in another passage, where he is speaking of the action samarium, he refers to a law of Solon as the source of certain rules as to boundaries. It is a possible case that the Romans had no written law before the enactment of the Twelve Tables, except a few leges, and, if this is so, the prudence of applying to those states which had bodies of written law, if they were only as samples and patterns, if the form of legislation is obvious.

The fragments of the Twelve Tables have often been collected, but the most complete essay on their history, and on the critical labours of scholars and jurists, is by Dirksen, Uebersicht der bisherigen Ver- suche zur Kritik und Herstellung des Textes der Zoelb-Tafel-Fragmente, Leipzig, 1824. Zimmern's Geschiccht, &c., contains references to all the authorita- tes on this subject.

TYMPANUM (ρύθματον), a small drum carried in the hand. Of these, some resembled in all respects a modern tambourine with bells. Others presented a flat, circular disk on the upper surface, and swelled out beneath like a kettle-drum, a shape which appears to be indicated by Pliny when he describes a particular class of pearls in the palus termen.

Quibus una tamquam set factus, et ab ea rotunditates, exseris planitates, ob id tympania vocans. Both forms are represented in the cuts below. That upon the left is from a painting found at Pompeii, that on the right from a fictile vase; and here the

convexity on the under side is distinctly seen. Tym- pan a were covered with the hides of oxen 1 or of asses, 2 were beaten 3 with a stick 4 or with the hand 5 (see cuts), and were much employed in wild, enthusiastic religious rites, especially the orgies of Bacchus and of Cybele, 6 and hence Plautus characterizes an officiant corocone as "a malacum, cincimatum, umbratitcal, tympanotrikam." According to Justin, 7 they were used by the Par- thians in war to give the signal for the onset.

2. A solid wheel without spokes for heavy wagons, 8 such as is shown in the cut on page 781. These are to this day common in the rude carts of southern Italy and Greece, and Mr. Fellow, 9 from whose work the figure below is copied, found them attached to the farm vehicles of Mysia. "The wheels are of solid blocks of wood or thick planks, generally three, held together by an iron hoop or tire; a loud cracking noise is made by the frame when the axle is knocked down, 10 a satisfactory commentary on the "strenitudo piautva" of Virgil. 11

3. Hence wheels of various kinds, a sort of erane worked by a wheel for raising weights, 12 a wheel for drawing water, 13 a solid toothed wheel forming part of the machinery of a mill, 14 and the like.

4. A spoke or axle for round plates or chargers, such as were afterward called lances and statern. 15

5. An architectural term, signifying the flat surface or space within a pediment, and also the square panel of a door. 16

6. A wooden cudgel for beating muleteers, and also a beating-post to which they were tied whenlogged; hence the Greek verbs tympanere and atympanenere are formed. 17

to be scourged, or to be fined, should possess the
right of appeal (pro vocatio) to the people.1 Niebuhr2 has pointed out that the patricians possessed previ-
ously the right of appeal from the sentence of a
magistrate to their own council the curies, and that,
therefore, this law of Valerius only related to the
plebeians, to whom it gave the right of appeal to
the plebeian tribes, and not to the centuries. This
seems to be the sense of Dionysius,3 but is corrected
also by the fact that the laws proposed by the Val-
erian family respecting the right of appeal are
spoken of as one of the chief safeguards of the lib-
erty of the plebs.4 The right of appeal did not
extend beyond a mile from the city,5 where the
unlimited imperium began, to which the patricians
were just as much subject as the plebeians.

VALE RII, ET HORA TII, LEGES were
three laws proposed by the consuls L. Valerius and
M. Horatius, B.C. 449, in the year after the decem-
virate. 1. The first law is said to have made a
plebeian sentence binding on the whole people, respect-
ing the meaning of which expression see PLEBISCITUM.

2. The second law enacted that whoever should
procure the election of a magistrate without appeal
should be outlawed, and might be killed by any one
with the动手; the penalty threatened against any one who
should harm the tribunes and the seiles, to whom were
now added the judges and decemvirs ("Ut qui
tribunis plebis, adidibus, judicibus, decemviris nocu-
set, ejus capit ius sacrum esset, familia ad cadem
Cerers liberis liberarque veniam iuit"). There has
been considerable dispute as to who are meant by the
judges and decemvirs in this passage. Ar-
hold supposes that they refer to two new offices,
which were to be shared equally between the two
orders, the "judges" being two supreme magis-
trates, invested with the highest judicial power, and
discharging also those duties afterward performed
by the censors, and the "decemviri" being ten tri-
bones of the soldiers, to whom the military power of
the consuls was transferred. Niebuhr supposes the
centumviri to be meant by the judges, and that
the decemviri were the supreme magistrates, who
were again to take the place of the consuls, as soon
as it should be settled what share the commonalty
ought to have in the curule dignity; only he im-
agines that it was the plebeian decemviri alone
that appeared in this passage.

V A L E R I A N A. LEX, proposed by the consul M.
Valerius, B.C. 300, re-enacted for the third time
the celebrated law of his family respecting appeal
(provacatio) from the decision of a magistrate. The
law specified no fixed penalty for its violation, leav-
ing the judges to determine what the punishment
should be.6 We do not know why this law was
re-enacted at this particular time.

VALLUM, a term applied either to the whole or
a portion of the fortifications of a Roman camp. It
is derived from vallus (a stake), and properly means
the palisade which ran along the outer edge of
the auge, but it very frequently includes the auge also.
The vallum, in the latter sense, together with the
fosse or ditch which surrounded the camp outside of
the vallum, formed a complete fortification. (Vid.
AEGER.)

The valli (ypapces), of which the vallum, in the
former and more limited sense, was composed, are
described by Polybius7 and Livy,8 who make a com-
parison between the vallums of the Greeks and that
of the Romans, very much to the advantage of the
latter. Both used for valli young trees, or arms of
larger trees, with the side branches on them; but the
valli of the Greeks were much larger, and had
more branches than those of the Romans, which
had either two or three, or, at the most, four bran-
ches, and these generally on the same side. The
Greeks placed their valli in the auge at considera-
table intervals, the spaces between them being filled
by earth thrown up by the aures, which diverged
from each other, and made the branches interface,
and sharpened their points carefully. Hence the
Greek valli could easily be taken hold of by its large
branches and pulled from its place, and when it was
removed a large opening was left in the vallum.
The Roman valli, on the contrary, presented no
convenient handle, required very great force to pull
it down, and, even if removed, left a very small
opening, which the besiegers could not take
through. The Romans prepared theirs beforehand, and
each soldier carried three or four of them when on a
march.9 They were made of any strong wood, but
oak was preferred.

The word vallus is sometimes used as equivalent
to vallum.

A fortification like the Roman vallum was used
by the Greeks at a very early period.2

Varro's etymology of the word is not worth much.

In the operations of a siege, when the place could
not be taken by storm, and it became necessary to
establish a blockade, this was done by drawing de-
defences similar to those of a camp round the town,
which was then said to be circumvallatum. Such a
circumvallation, besides cutting off all communica-
tion between the town and the surrounding coun-
try, formed a defence against the allies of the besieger.
There was often a double line of fortifications, the
inner against the town, and the outer against a force
that might attempt to raise the siege. In this case
the army was encamped between the two lines of
works.

This kind of circumvallation, which the Greeks
called anpoxegeos and pepegegeos, was employed by
the Peloponnesians in the siege of Plataea.3 Their
lines consisted of two walls (apparently of turf)
at the distance of 16 feet, which surrounded the
city in the form of a circle. Between the walls
were the huts of the besiegers. The walls had bat-
tlements (fonsit), and at every tenth battlement
there was a tower, rising up by its depth the whole
space between the walls. There was a passage for
the besiegers through the middle of each tower.
On the outside of each wall was a ditch (rapos).
This description would almost exactly answer for
the Roman mode of circumvallation, of which some of
the best examples are that of Carthage by Scipio,4
that of Numantia by Scipio,5 and that of Alesia by
Caesar.6 The towers in such lines were similar to
those used in attacking fortified places, but not so
high, and, of course, not movable.7 (Vid. TUNICA.)

VALLUS. (Vid. VALLUM.)

V AL V E. (Vid. JANU, p. 525.)

VANNUS (o. fegos, flxov,xos), a winning-van, i.e.,
a broad basket, into which the corn mixed with
chaff (cava, erova) was received after threshing.

The names of Dioscuri, and those used in attacking fortified places, but not so
high, and, of course, not movable.7 (Vid. TUNICA.)

VECTIGALIA.

VECTIGALIA.

1. The title paid to the state by those who occupied the ager publicus. (Vid. Decemv., Agrarum Leges.)

2. The sums paid by those who kept their cattle on the public pastures. (Vid. Scriptura.)

3. The harbour duties raised upon imported and exported commodities. (Vid. Portorich.)

4. The revenue derived from the salt-works (salinas). At the time referred to above, the salt-works at Ostia, and as they were public property, they were probably let out to farm. The publican, however, at times to have sold this most necessary of all commodities at a very high price, whence, during the war with Porsenna, the Republic itself undertook the direct management of the saline of Ostia, in order that the people might obtain salt at a moderate price. Subsequently the salines were again farmed by the publican, but the censors M. Livius and C. Claudius fixed the price at which those who took the lease of them were obliged to sell the salt to the people. At Rome the modius was, according to this regulation, sold for a sextans, while in other parts of Italy the price was higher and sometimes even doubled. The salt-works in Italy and in the provinces were very numerous; in conquered countries, however, they were sometimes left in the possession of their former owners (per sons or towns), who had to pay to Rome only a fixed rent. Others, again, were worked, and the produce sold in the name of the state, or were, like those of Asia, farmed by the publican. The revenues derived from the mines (metalla) This branch of the public revenue cannot have been very productive until the Romans had become masters of foreign countries. Until that time the mines of Italy appear to have been worked, but this was forbidden by the senate after the conquest of foreign lands. The mines of conquered countries were treated like the saline, that is, they were partly left to individuals or towns, on condition of a certain rent being paid, or they were worked for the direct account of the state, or were farmed by the publican. In the last case, however, it appears always to have been fixed by the lex oratory "Lege delae Clodia," the publican should be allowed to employ in a particular mine, as otherwise they would have been able to derive the most enormous profits. Among the most productive mines belonging to the Republic, we may mention the rich gold-mines near Aquileia, the gold-mines of Istria, near Verceil, in which 25,000 men were constantly employed and, lastly, the silver-mines in Spain, in the neighbourhood of Carthago Nova, which yielded every day 25,000 drachmae to the Roman aerarium. Macedonia, Thrace, Illyricum, Africa, Sardinia, and other places, also contained very productive mines, from which Rome derived considerable income.

Ducentesima. According to Dion Cassius, Tiberius restored the centesima, which was afterward abolished by Caligula. 3 Respecting the tax raised upon the sale of slaves, see Quinquagesima. 7 The vicesima hereditatum et manumissionum. (Vid. Vicesima.)

9. A tax upon bachelors. (Vid. Uxorium.)

10. A door-tax. (Vid. Ostarium.)

11. The octave. In the time of Caesar, all liberti living in Italy, and possessing property of 200 sestertia and above, it had to pay a tax consisting of the eighth part of their property. 7 It would be interesting to ascertain the amount of income which Rome at various periods derived from these and other sources, but our want of information renders it impossible. We have only the general statement that, previously to the time of Pompey, the annual revenue amounted to fifty millions of drachmas, and that it was increased by him to eighty-five millions. 

Respecting the sums contained at different times in the ararium at Rome, see Pliny. 9

VEHIES (βυχα), a load of hay, manure, or anything which was usually conveyed in a cart. (Vid. Plaustrum.) Pliny speaks of "a large load of hay" (vehem fami large omnium), which shows that this term did not always denote a fixed quantity. With the Romans, however, as with us, the load was likewise used as a measure, a load of manure being equal to eighty modii, which was about twenty bushels. 11 The trunk of a tree, when squared, was also reckoned a load, the length varying according to the kind of timber, viz., 20 feet of oak, 25 of fir, &c. 12 A load was also called Carpentum.

VETERIUM. (Vid. Velum.)

VETERATI was a name given to the Accensi in the Roman army, who were only supernumerary soldiers ready to supply any vacancies in the legion. (Vid. Accensi.) They were called Velati, because they were only clothed (velati) with the saga, and were armed. 3

VELITES. (Vid. Arm. Roman, p. 104.)

VELLEIA NUMENTIUS CONSULATUS. (Vid. Intercessio, p. 542.)

VELUM (velai, 11) vespertinaqua, 14 vespertinaqua, 14 a curtain, (ἱστόν) a sail. In private houses curtains were either hung as coverings over doors, 17 or they served in the interior of the house as substitutes for doors. 14 (Vid. House, p. 515; Janua, p. 526.) In the palace of the Roman emperor, a slave, called eclarius, was stationed at each of the principal doors to raise the curtain when any one passed through. 1 Window-curtains were used in addition to window-shutters. 8 Curtains sometimes formed partitions in the rooms. 8 and, when drawn aside, they were kept in place by the use of large rings. (Vid. Figula, p. 539.) Iron curtain-rods have been found extending from pillar to pillar in the building at Heracleum. 8

In temples curtains served more especially to veil the statue of the divinity. They were drawn aside occasionally, so as to discover the object of worship to the devout. 6 (Vid. Pastophoros.) Antiochus presented to the Temple of Jupiter at Olympia a woollen curtain of Assyrian manufacture, dyed with the Tyrian purple, and interwoven with figures. When the statue was displayed, this curtain lay upon the ground, and it was afterward drawn up by means of cords; whereas, in the Temple of Diana at Ephesus, the corresponding curtain or veil was attached to the ceiling, and was let down in order to conceal the statue. 8 The annexed woodcut is from a bas-relief representing two females engaged in supplication and sacrifice before the statue of a goddess. The altar is adorned for the occasion (vid. Sertum); and the curtain is drawn aside and supported by a terminus. 7

In the theatres there were hanging curtains to decorate the scene. 8 The siparium was extended in a wooden frame. The eclairum was an awning stretched over the whole of the cavea to protect the spectators from the sun and rain. 9 These awnings were in general either woollen or linen; but cotton was used for this purpose a little before the time of Julius Caesar, and was continued in use by him. 10 This vast extent of canvas was supported by masts (nauti) fixed into the outer wall. The annexed woodcut shows the form and position of the great rings, cut out of lava, which remain on the inside of the wall of the Great Theatre at Pomeii, near the top, and which are placed at regular
VENATIO.

distances, and one of them above another, so that each mast was fixed into two rings. Each ring is of one piece and is hollow, being made behind it. At Rome we observe a similar contrivance. The masts being uncurled, but the masts were in that instance ranged on the outside of the wall, and rested on 240 consoles, from which they rose so as to pass through holes cut in the cornice. The holes for the masts are also seen in the Roman theatres at Orange and other places. Velum, and much more commonly its derivative solenium. This word is of Etruscan origin, and was borne by a bride was specifically called flavissimum or golden (vid. Marriage, p. 622): another special term was rica. Greek women, when they went abroad, often covered their heads with the shawl (vid. Pælum), thus making it serve the purpose of a veil. But they also used a proper headdress, called xéipès, which, besides serving to veil their countenances whenever they desired it, was graceful and ornamental, and was therefore attributed to Venus and Pandora. The veil of Ilione, the eldest daughter of Priam, was one of the seven objects preserved at Rome as pledges of the permanency of its power. Velum also meant a sail (tortes (vid. Ships, p. 399), laptos): Sailcloth was commonly linen, and was obtained in great quantities from Egypt; but it was also exhibited in Italy, and might have been understood in Etruria. But cotton sailcloth (barbas) was also used, as is still in the Mediterranean. The separate pieces (lintes) were taken as they came from the loom, and were sewed together. This is shown in ancient paintings of ships, in which the seams are distinct and regular.

VENALIA/RII. (Vid. Iter, Roman, p. 886.) VENATIO, hunting, was the name given among the Romans to an exhibition of wild beasts, which fought with one another and with men. These exhibitions originally formed part of the games of the circus. Julius Caesar first built a wooden amphitheatre for the exhibition of wild beasts, which is called the Aedilis, and for which the same name is given to the amphitheatre built by Statilius Taurus,11 and also to the celebrated one of Titus;13 but, even after the erection of the latter, we frequently read of venations in the circus.13 The persons who engaged with the beasts were either condemned criminals or captives, or individuals who did so for the sake of pay, and were trained for the purpose. (Vid. Bactarii.)

The Romans were as passionately fond of this entertainment as of the exhibitions of gladiators, and during the latter days of the Republic and under the Empire an immense variety of animals was collected from all parts of the Roman world for the gratification of the people, and many thousands were frequently slain at a time. We do not know on what occasion the venation was first exhibited at Rome, but the first mention we find of anything of the kind is in the year B.C. 251, when L. Metellus exhibited in the circus 142 elephants, which he had brought from Sicily after his victory over the Carthaginians, and which were killed in the circus according to Vergil, though other writers do not speak of their slaughter.1 But this can scarcely be understood in later times, since the elephants are said to have been only killed because the Romans did not know what to do with them, and not for the amusement of the people. There was, however, a venatio in the latter sense of the word in B.C. 186, at the games celebrated by M. Fulvius in fulfilment of the vow by which he had made in the :S01iiieuris. But in these games lions and panthers were exhibited.1 It is mentioned as a proof of the growing magnificence of the age, that in the ludi circenses exhibited by the curule ediles P. Cornelius Scipio Nasica and P. Lentulus, B.C. 168, there were 63 African panthers, and 40 bears and elephants. From about this time combats with wild beasts probably formed a regular part of the ludi circenses, and may have been in the curule ediles made great efforts to obtain rare and curious animals, and put in requisition the services of their friends.1 Elephants are said to have first fought in the circus in the curule edileship of Claudius Pulcher, B.C. 99, and, twenty years afterward, in the curule edileship of the two Luculli, they fought against bulls. A hundred wild beasts belonging to the prisoners, which were destroyed by javelin-men sent by King Bocchus for the purpose. This was the first time that lions were allowed to be loose in the circus; they were previously always tied up. The games, however, in the curule edileship of Scævola, B.C. 58, surpassed anything the Romans had ever seen; among other novelty, he first exhibited an hippocampus and five crocodiles in a temporary canal or trench (curvus). At the venatio given by Pompey in his second consulship, B.C. 55, upon the dedication of the Temple of Venus Victrix, and at which Cicero was present, there was an immense number of animals slaughtered, among which we find mention of 600 lions, and 150 or more elephants at the latter. With Gætulians, who hurled darts against them, and they attempted to break through the railings (clathri) by which they were separated from the spectators.1 To guard against this danger, Julius Caesar surrounded the arena of the amphitheatre with trenches (curvis).

In the games exhibited by J. Caesar in his third consulship, B.C. 45, the venatio lasted for five days, and was conducted with extraordinary splendour. Cameleopards or giraffes were then for the first time seen in Italy. Julius Caesar also introduced bull-fights, in which Thessalian horsemen pursued the bulls round the circus, and, when the latter were tired out, seized them by the horns and killed them. This seems to have been a favorite spectacle; it was repeated by Claudius and Nero.11 In the games celebrated by Augustus, B.C. 29, the hippocampus and the rhinoceros were first exhibited, according to Dion Cassius;12 but the hippocampus is spoken of by Pliny, as mentioned above, in the games given by Scævola. Augustus also exhibited a snake 40 feet in length, and thirty or more crocodiles, which are seldom mentioned in the spectacles of later times.

The occasions on which venations were exhibited have been incidentally mentioned above. They seem to have been first confined to the ludi circenses.

1037
VENATICUM.

The first represents a man naked and unarmed between a lion and a panther. Persons in this defenceless state had, of course, only their agility to trust to in order to escape from the beasts. In the second cut we see a similar person, against whom a wild boar is rushing, and who appears to be preparing for a spring to escape from the animal. In the same relief there is a wolf running at full speed, and also a stag with a rope tied to his horns, who has been pulled down by two wolves or dogs. The third relief is supposed by Mazois to represent the training of a bestiarius. The latter has a spear in each hand; his left leg is protected by greaves, and he is in the act of attacking a panther, whose movements are hampered by a rope, which fastens him to the bull behind him, and which accordingly places the bestiarius in a less dangerous position, though more caution and activity are required than if the beast were fixed to a certain point. Behind the bull another man stands with a spear, who seems to be urging on the animal. The fourth woodcut represents a man equipped in the same way as the matador in the Spanish bullfights in the present day, namely, with a sword in one hand and a veil in the other. The veil was first employed in the arena in the time of the Emperor Claudius.

VENIFICIUM, the crime of poisoning, is frequently mentioned in Roman history. Women

against all who made, bought, sold, possessed, or gave poison for the purpose of poisoning.1 The punishment fixed by this law was, according to Marcián, the deportation in insulam and the confiscation of property; but it was more probably the in terdictio aquae et ignis, since the deportatio under the emperors took the place of the interdictio, and the expression in the Digest was suited to the time of the writers or compilers. (Vid. CORNELIA LEX DE SACRIIS, &c., p. 308.) By a senatus consultum passed subsequently, a female who gave drugs or poison for the purpose of producing conception, even without any evil intent, was banished (relegatus), if the person to whom she administered them died in consequence. By another senatus consultum, all draughtsmen of poisons and sculptors who carelessly, "purgationis causa," were liable to the penalties of this law. In the time of Marcián (that of Alexander Severus) this crime was punished capitally in the case of persons of lower rank (humiliores), who were exposed to wild beasts, but persons of higher rank (altiores) were condemned to the de- mortum in the same day.2

The word veneficum was also applied to potions, incantations, &c.,3 whence we find veneficus and venefica used in the sense of a sorcerer and sorceress in general.

VER SACRUM (sor. lep.). It was a custom among the early Italian nations, especially among the Sabine, to offer great danger and distress, to them in the deity that "sacrifice was poisoning born in the next spring, that is, between the first of March and the last day of April, if the calamity under which they were labouring should be removed.4 This sacrifice, in the early times, comprehended both men and domestic animals, and there is little doubt that in many cases the vow was really carried into effect. It is recorded that in the time of Augustus sacrifice so many innocent infants, and, accordingly, the following expedition was adopted. The children were allowed to grow up, and in the spring of their twentieth or twenty-first year they were, with covered faces, driven across the frontier of their native country, whereupon they went whithersoever fortune might lead them. Many a colony was founded by persons driven out in this manner; and the Mamertines in Sicily were the descendents of such devoted persons.5 In the two historical instances in which the Romans vowed a ver sacrum, that is, after the battle of Lake Trasimenus and at the close of the second Punic war, the vow was not devoted to domestic animals, as was expressed in the vow of the

VESTALES, the virgin priestesses of Vesta, who ministered in her temple and watched the eternal fire. Their existence at Alba Longa is connected with the earliest Roman traditions, for Silvia, the mother of Romulus, was a member of the sisterhood;6 their establishments in the city, in connexion with almost all matters connected with state religion, is generally ascribed to Numa,7 who se-

Vestales.

The senior sister was entitled Vestalis Maxima, or Virgo Maxima (ἡ προβεβλητή, ἡ ἀρχήτεστα) and was also the expressions Vestalium vetustissimi, vestal maxima.

Their chief office was to watch by turns, night and day, the everlasting fire which blazed upon the altar of Vesta (Viroinesque Vestales in urbe custodient, in honorem populi publici sempiterni), its extinction being considered as the most fearful of all prodigies, and emblematic of the extinction of the state. 1 If such misfortune befell, and was caused by the carelessness of the priestesses on duty, she was stripped and scourged by the pontifex maximus, in the dark and with a sword interposed, and he kindled the flame by the friction of two pieces of wood from a felix arbor. 8 Their other ordinary duties consisted in presenting offerings to the goddess at stated times, and in sprinkling and purifying the shrine each morning with water, which, according to the institution of Numa, was to be drawn from the Egerian font, although in later times it was considered lawful to employ any water from a living spring or running stream, but not such as had passed through pipes. When used for sacrificial purposes it was mixed with murie, that is, salt which had been pounded in a mortar, thrown into an earthen jar, and baked in an oven. 3 They assisted, moreover, at all great public holy rites, such as the festivals of the Boni Deus, 2 and the consecration of temples. They were invited to priestly banquets by the pontifex maximus, 2 and we are told that they were present at the solemn appeal to the gods made by Cicero during the conspiracy of Catiline. 12 They also guarded the sacred relics which formed the fatale pignus imperii, the pledge granted by fate for the permanency of the Roman sway, deposited in the most ancient temple of Rome, 65 of which no one was permitted to enter save the vestal virgins. 22 75 For an inscription to this object was no one known: some supposed that it was the palladium; others, the Samothracian gods carried by Dardanus to Troy, and transported from thence to Italy by Æneas; but all agreed in believing that something of awful sanctity was here preserved, contained, it was said, in a small earthen jar closely sealed, while another exactly similar in form, was preserved in the temple of Jupiter Optimus Maximus. 13

We have seen above that supreme importance was attached to the purity of the vestals, and a terrible punishment awaited her who violated the vow of chastity. According to the law of Numa, she was simply to be stoned to death, 14 but a more cruel torture was devised by Tarquiniius Priscus, 15 and inflicted from that time forward. When condemned by the college of pontifices, she was stripped of her vittae and other badges of office, was scourged, 19 was attired like a corpse, placed in a close litter, and borne through the Forum, attended by her weeping kindred, with all the ceremonies of a real funeral, to a rising ground called the Campus Sacerdotum, just within the city walls, close to the Colline gate. There a small vault underground had been hewn out, and there the body was burnt in a couch, with a lamp, and a table with a little food. The pontifex maximus, having lifted up his hands to heaven and

Vitruvius enters into no details with regard to road-making, but he gives most minute directions for pavements; and the fragments of ancient pavements still existing, and answering to his description, correspond so exactly with the remains of the military roads, that we cannot doubt that the processes followed in each case were identical, and thus Vitruvius, combined with the poem of Statius on the *Via Domitiana*, will supply all the technical terms.

In the first place, two shallow trenches (*suita*) were dug parallel to each other, marking the breadth of the proposed road; this, in the great lines, such as the *Via Appia*, the *Via Flaminia*, the *Via Valeria*, &c., is found to have been from 13 to 15 feet; the *Via Tusculana* is 11, while those of less importance, from not being great thoroughfares, such as the *via* which leads up to the temple of Jupiter Latialis, on the summit of the Alban Mount, and which is to this day singularly perfect, seem to have been exactly 8 feet wide. The loose earth between the *suita* was then removed, and the excavation continued until a solid foundation (*gremium*) was reached, upon which the materials of the road might firmly rest; if this could not be attained, in consequence of the swampy nature of the ground, or from any peculiarity in the soil, a basis was formed artificially by driving piles (*fasciationibus*). Above the *gremium* were four distinct strata. The lowest course was the *statumen*, consisting of stones not smaller than the hand could just grasp; above the *statumen* was the *rudus*, a mass of broken stones cemented with lime (what masons call *rubble-work*), rammed down hard, and nine inches thick; above the *rudus* came the *nucleus*, composed of fragments of bricks and pottery, the pieces being smaller than in the *rudus*, cemented with lime, and six inches thick. Uppermost was the *pavimentum*, large polygonal blocks of the hardest stone (*ilex*), usually, at least in the vicinity of Rome, basaltic lava, irregular in form, but fitted and jointed with the greatest nicety (*apta jungitur arte ilex*), so as to present a perfectly even surface, as free from gaps or irregularities as if the whole had been one solid mass, and presenting much the same external appearance as the most carefully built polygonal walls of the old Pelasgian towns. The general aspect will be understood from the cut given below of a portion of the street at the entrance of Pompeii.

Livy has recorded that the censorship of Appius Caecus (B.C. 312) was rendered inable in after ages from his having brought water into the city and paved a road (*quod viam munivit et aquam in urbe perpetuam*), the renowned *Via Appia*, which extended, in the first instance, from Rome to Capua, although we can scarcely suppose that it was carried so great a distance in a single lustrum. We undoubtedly hear, long before this period, of the *Via Latina*, the *Via Galba*, and the *Via Salaria*, &c.; but even if we allow that Livy does not employ these names by a sort of prolepsis, in order to indicate conveniently a particular direction (and that he does speak by anticipation when he refers to milestones in some of the above passages is certain), yet we have no proof whatever that they were laid down according to the method afterward adopted with so much success.
VLE.

tae terms agger viae and sum mun.dorum, although both may be applied to the whole surface of the pavement. Occasionally, at least in cities, rectangular slabs of softer stone were employed instead of the irregular polygons of tufa, as we perceive to have been the case in the Forum of Trajan, which was paved with travertine, and in part of the great forum under the column of Phocas, and hence the distinction between the phrases silice sternere and sasso quadrato sternere. It must be observed, that while, on the one hand, recourse was had to piling when a solid foundation could not otherwise be obtained, on the other hand, the piling, when carried over rock, the statumen and the rudus were dispensed with altogether, and the nucleus was spread immediately on the stony surface previously smoothed to receive it. This is seen to have been the case, we are informed by local antiquaries, on the Via Appia, below Albano, where it was cut through a mass of volcanic peperino.

Nor was this all. Regular footpaths (margines, crepidines, umbones) were raised upon each side and strewn with gravel, the different parts were strengthened and bound together with globuli or stone wedges, and stone blocks were set up at moderate intervals on the side of the footpaths, in order that travellers on horseback might be able to mount or dismount on the end of an adnwolos to hoist them up. (Vid. Stratores.)

Finally, Caius Gracchus erected milestones along the whole extent of the great highways, marking the distances from Rome, which appear to have been counted from the gate at which each road issued forth; and Augustus, when appointed inspector of the viae around the city, erected in the Fo rum, a column called (opus scutum—opus scutum millarium aureum), on which were inscribed the distances of the principal points to which the viae conducted. Some have imagined, from a passage in Plutarch, that the distances were calculated from the millarium aureum, but this seems to be disproved both by the fact that the roads were all divided into miles by C. Gracchus nearly two centuries before, and also by the position of various ancient milestones discovered in modern times. It is certain that, during the earlier ages of the Republic, the construction and general superintendence of the roads without, and the streets within the city, were committed, like all other important works, to the censors. This is proved by the law question of the censor, which was tried by special courts, and by the fact that these magistrates are represented as having first formed and given their names to great lines, such as the Appia Via and the Via Flaminia, or as having executed important improvements and repairs. These duties, when no censors were in office, devolved upon the consuls, and in their absence on the praetor urbans, the ediles, or such persons as the Senate might appoint. In the first half of the last century of the Commonwealth, the administration of the roads, as well as of every other department of public business, afforded the tribunes a pretext for popular agitation. Caius Gracchus, in what capacity we know not, is said to have exerted himself in making great improvements, both from a conviction of their utility, and with a view to the acquisition of popularity: and Caio, when tribune, introduced a lex Viaaria for the construction and restoration of many roads, and the appointment of himself to the office of inspector (exmodos) for five years. We learn from Cicero that Thermus, in the year B.C. 65, was curator of the Flaminian Way, and from Plutarch, that Julius Caesar held the same office (opusvecuratorum) with regard to the Appian Way, and laid out great sums of his own money upon it, but by whom these appointments were conferred we cannot tell. During the first years of Augustus, Agrippa, being edile, repaired all roads at his own proper expense; subsequently the emperor, finding that the roads had fallen into disrepair, renewed the system which had been discontinued after the restoration of the Via Flaminia as far as Ariminum, and distributed the rest among the most distinguished men in the state (triumphalis viris), to be paved out of the money obtained from spoils (ex manubiat pecunia sternendae). In the reign of Claudius we find that this charge had fallen upon the questors, and that they were in the right of the Flaminia, and although some give a different interpretation to the words. Generally speaking, however, under the Empire, the post of inspector-in-chief (curator)—and each great line appears to have had a separate officer with this appellation—was considered a high dignity, insomuch that the title was frequently assumed by the emperors themselves, and a great number of road commissioners are heard to be the recipients of upward of twenty princes from Augustus to Constantine, commemorating their exertions in making and maintaining public ways.

These curatores were at first, it would appear, appointed upon special occasions, and at all times must have been regarded as honorary functionaries rather than business agents. From the middle of the first century of our era, perhaps, to the beginning of the sixth century of the city there existed regular commissioners, whose sole duty appears to have been the care of the ways, four quatuorviri viarum superintendin¬

III. February 21, 2023
mined by voluntary contribution or assessment, like our parish roads; 1 while the streets within the city were kept in repair by the inhabitants, each person being answerable for the portion opposite to his own house. 2

Our limits preclude us from entering upon so large a subject as the history of the numerous military roads which intersected the Roman dominions. We shall content ourselves with simply mentioning those which issued from Rome, together with their most prominent branches and the names of the places through which they passed, so as to convey a general idea of their course. For all the details and controversies connected with their origin, gradual extension, and changes, the various stations upon each, the distances, and similar topics, we must refer to the treatises enumerated at the close of this article, and to the researches of the modern antiquaries, the most important of whom, in so far as the southern districts are concerned, is Romanelli.

Beginning our circuit of the walls at the Porta Capena, the first in order, as in dignity, is,

I. The Via Appia, the Great South Road. It was commenced, as we have already stated, by Appius Claudius Cæcull, when censor, and has always been the most celebrated of the Roman Ways. It was the first of all the roads on a grand scale and upon scientific principles; the natural obstacles which it was necessary to overcome were of the most formidable nature, and, when completed, it well deserved the title of Queen of Roads (regina viarum). We know that it was in perfect repair when Procopius wrote, 3 long after the devastating invades of the northern barbarians; and even to this day the farming of its highways and market roads, the solid rock, the filling up of hollows, the bridging of ravines, the substructions to lessen the rapidity of steep descents, and the embankments over swamps, demonstrate the vast sums and the prodigious labour that must have been lavished on its construction. It issued from the Porta Capena, and, passing through Aricia, Tres Tabernæ, Appii Forum, Terracina, Fundi, Formiæ, Minturnæ, Sinuessa, and Cassinum, terminated at Capua, but was eventually extended through Calatia and Caudium to Beneventum, and finally from thence through Venusa, Tarantum, and Uria, to Brundisium.

The ramifications of the Via Appia most worthy of notice are,

(1.) The Via Sutriana, which connected it with Sutrium. Originally, it would appear that the Via Appia passed through Velitra and Setia, avoiding the marshes altogether, and travellers, to escape this circuit, embarked upon the canal, which, in the days of Horace, traversed a portion of the swamps.

(2.) The Via Domitiana struck off at Simussa, and, keeping close to the shore, passed through Liparum, Cuma, Putoli, Neapolis, Herculeum, Opduit, Pompeii, and Stabio to Surrentum, making the coast road from the Bay of Nettles.

(3.) The Via Campana of Consularia, from Capua to Cuma, sending off a branch to Putoli, and another through Atella to Neapolis.

(4.) The Via Aquiliana began at Capua, and ran south through Nola and Nuceria to Salernum; from thence, after sending off a branch to Paestum, it took a wide sweep inland through Eburn and the region of the Mont Albani, and then struck south through the valley of the Tenger, then struck south through the very heart of Lucania and Bruttium, and, passing Nerusium, Interamnia, and Consentia, returned to the sea at Vibo, and thence through Medma to Rhugium. This road sent off near the sources of the Tanager, which ran down to the sea at Blunda on the Lake Sarno, and then continued along the whole line of the Bruttian coast through Laves and Tarsia to Vibo, where it joined the main stem.

(5.) The Via Egnatia began at Beneventum, struck north through the country of the Hirpini to Equitaticum, entered Apulia atAoëa, and, passing through Herdonia, Canusium, and Rubi, reached the Adriatic at Burium, and followed the coast through Egnatia to Brundisium. This was the route followed by Horace. It is doubtful whether it bore the name given above in the early part of its course.

(6.) The Via Trajana began at Venusia, and ran in nearly a straight line across Lucania to Heraclea on the Sinus Tarentinus; thence following, southward, the line of the east coast, it passed through Thurii, Croto, and Seylacium, and completed the circuit of Bruttium by meeting the Via Aquilia at Regium.

(7.) A Via Minucia is mentioned by Cicero, 4 and a Via Numicia by Horace, 5 both of which seem to have passed through Samium from north to south, connecting the Valerian and Aquilion, and cutting the Appian and Latin Ways. Their course is unknown. Some believe them to be one and the same.

Returning to Rome, we find issuing from the Porta Capena, or a gate in its immediate vicinity,

II. The Via Latina, another great line leading to Beneventum, but keeping a course farther inland than the Via Appia. Soon after leaving the city, it sent off a short branch (Via Tuscula) to Tuscum, and, passing through Compitum Anagnins, Fercum, Fruscum, Puglicia, Faberatia, Aquinum, Cassinum, Venafium, Tumulum, Alisula, and Telesia, joined the Via Appia at Beneventum. A cross-road, called the Via Habridina, running from Minturnœ to Susa Aurnosa to Tumulum, connected the Via Appia with the Via Latina.

III. From the Porta Esquilina issued the Via Labicana, which, passing Labicum, fell into the Via Latina at the station ad Bivium, 30 miles from Rome.

IV. The Via Prænestina, originally the Via Gaetana, issued from the same gate with the former. Passing through Gabii and Frascati, it joined the Via Latina just below Anagnia.

V. Passing over the Via Collatana as of little importance, we find the Via Tiburtina, which issued from the Porta Tiburtina, and, proceeding N.E. to Tibur, a distance of about 20 miles, was continued from thence, in the same direction, under the name of the Via Valeria, and, traversing the country of the Sabines, passed through Carpeoli and Cornium to Arrinium on the Adriatic, thence to Adria, and so along the coast to Castrum Truentinum, where it fell into the Via Salaria.

A branch of the Via Valeria led to Sublacuæum, and was called Via Sublacensis. Another branch extended from Adria along the coast southward through the country of Frentani to Larinum, being called, as some suppose, Via Frentana Appia.

VI. The Via Nomentana, anciently Ficulensis, ran from the Porta Collina, crossed the Anio to Nomentum, and, a little beyond, fell into the Via Salaria at Ercuitum.

VII. The Via Salaria, also from the Porta Collina (passing Fidenæ and Crustumonurum), ran north and east through Salinum and Picenum to Ruteni and Asculum Picenum. At Castrum Truentinum it reached the coast, which it followed until it joined the Via Flaminia at Ancora.

VIII. Next comes the Via Flaminia, the Great North Road, commenced in the censorship of C. Flaminius, and carried ultimately to Ariminum. It
The most elaborate treatise upon Roman roads is *Bertger, Historie des Grand Chemins de l'Empire Roman*, published in 1622. It is translated into Italian and Latin, and with some of the maps by Jean Gravins, and, with the notes of Honnecius, occupies more than 500 pages. In the first part of the above article, the essay of Nibby, *Delle Vie degli Antichi dissertazioni*, appended to the fourth volume of the fourth Roman edition of Nardini, has been closely followed. Considerable caution, however, is necessary in using the works of this author, who is so local and so modern that no means an accurate scholar. To gain a knowledge of that portion of the subject so lightly touched upon at the close of the article, it is necessary to consult the various commentaries upon the Tabula Peutingeriana and the different ancient itineraries, together with the geographical works of Cellarius, Cluverius, and Anville.

VI. E. LEX. (Vid. L. p. 586; VI. E. 1043.)

VI. TICUM is, properly speaking, everything necessary for a person setting out on a journey, and thus comprehends money, provisions, dresses, vessels, &c. When a Roman magistrat, praetor, proconsul, or questor went to his province, the state provided them with all that was necessary for his journey. But as the state, in this as in many other cases of expenditure, preferred paying a sum at once to having any part in the actual business, the state engaged contractors (redemptores), who, for a stipulated sum, had to provide the magistrates with the viaticum, the principal parts of which appear to have been beasts of burden and tents (maui it itinerarii). The magistrates, however, were provided with a sum of this system, as he once for all fixed a certain sum to be given to the contractors (probably to other provincial magistrates also) on setting out to their provinces, so that the redemptores had no more to do with it.

VI. TICUM was a servant who attended upon and executed the commands of certain Roman magistrates, to whom he bore the same relation as the lector did to other magistrates. The name viatores was derived from the circumstance of their being chiefly employed on messages either to call upon senators to attend the meeting of the senate, or to summon people to the comitia. &c. In the earlier times of the Republic, we find viatores among the magistrates and consuls, as also among the plebs; viatores of a dictator and of the consuls are mentioned by Livy. In later times, however, viatores are only mentioned with such magistrates as had only potestas and not imperium, such as the tribunes of the people, the censors, and the aediles. How many viatores attended each of these magistrates is not recorded. Some of them are said to have had the right, at the command of his magistrature, to bind persons (ligare), whom he was called lector. It is

---

VILLA.

VIGINTISEXVIRI were twenty-six magistrates, among whom were included the triumviri capiteles, the triumviri monetarii, the quattuorviri viarum eurandarum for the city, the two curatores viarum for the roads outside the city, the decemviri litiibus (dilittibus) judicandis, and the four prefects who were sent into Campania for the purpose of administering justice there. Augustus reduced the number of them, and all were united into twenty-six (vigni-

The age at which a person might become a vigintivir appears to have been twenty.

An account of the magistrates forming this college has been given in separate articles, with the exception of the ubiquitous vicus "Villa," which we accordingly subjoin a brief account. These magistrates, consisting, as the name imports, of ten men, formed a court of justice, which took cognizance of civil cases. From Pomponius it would appear that they were not instituted till the year B.C. 292, the time when the triumviri capiteles were first appointed. Livy, however, mentions decemvirs as a plebeian magistracy very soon after the legislation of the Twelve Tables; and while Nie-

The date of the College of VIGNITIUS.

VILLA, a farm or country-house. The Roman writers mention two kinds of villa, the villa rustica or farmhouse, and the villa urbana or pseudo-urban, a residence in the country or in the suburbs of a town. When both of these were attached to an estate, they were generally united in the same range of buildings, but sometimes they were placed at different parts of the estate. The part of the villa rustica in which the produce of the farm was kept is distinguished by Columella by a separate name, villa fructuaria. Varro derives the name from ocho ("quo fructus convockerentur, villa").

1. The villa rustica is described by Varro, Vitru-

The villa, which must be of a size corresponding to that of the farm, is best placed at the foot of a...
wooded mountain, in a spot supplied with running water, and not exposed to severe winds, nor to the effluvia of marshes, nor (by being close to a public road) to a too frequent influx of visitors. The villa attached to a large farm had two courts (cortes, cortes, cortes). At the entrance to the outer court was the abode of the vivis, that he might observe who went in and out, and over the door was the room of the procurator. Near this, in as warm a spot as possible, was the kitchen, which, besides being used for the preparation of food, was also the place for slaughtering; and when this was done, the kitchen was turned over to the labours of the day, and where they performed certain in-door work. Vitruvius places near the kitchen the baths, and the press (torcular) for wine and oil, but the latter, according to Columella, though it requires the warmth of the sun, should not be exposed to artificial heat. In the outer court were also the cellars for wine and oil (cella sacris et olearia), which were, in this subject, the granaries, which were in the upper stories of the farm-buildings, and carefully protected from damp, heat, and insects. These storerooms form the separate villa fructuaria of Columella; Varro places them in the villa rustica, but Vitruvius recommends that all produce which could be injured by fumes should be removed to the open air, for the sake of the wine and oil.

In both courts were the chambers (cellae) of the slaves, fronting the south; but the ergastulum for those who were kept in chains (vineti) was on ground, being lighted by several high and narrow windows.

The inner court was occupied chiefly by the horses, cattle, and other livestock, and here were the stables and stalls (tabula, equina, ovina). A reservoir of water was made in the middle of each court, that in the outer court for soaking pulse and other vegetable produce, and that in the inner, which was supplied with fresh water by a spring, for the use of the cattle and poultry.

2. The villa urbana or pseudo-urbana was so called because its interior arrangement corresponded for the most part to those of a town-house. (Vid. Hous.) Vitruvius merely states that the description of the latter will apply to the former also, except that in the town the atrium is placed close to the door; but in the country the peristyile comes first, and afterward the atrium, surrounded by paved porticos, looking upon the palestra and ambulato. Our chief sources of information on this subject are two treatises on Pliny, in one of which he describes his Laurentine villa, in the other his Tuscan, with a few allusions in one of Cicero’s letters, and, as a most important illustration of these descriptions, the remains of a suburban villa at Pompeii.

The earliest account is that given by Pliny in the first, of the two letters mentioned above, from which, therefore, the following description is for the most part taken.

The villa was approached by an avenue of plane-trees leading to a portico, in front of which was a styilus divided into flower-beds by borders of box. This styilus formed a terrace, from which a grassy slope, ornamented with box-trees cut into the figures of lions, and forming two lines opposite to one another, descended till it was lost in the plain, which was covered with acanthus. Next to the portico was an atrium, smaller and plainer than the corresponding apartment in a town-house. In this respect Pliny’s description is at variance with the rule of Vitruvius, and the villa at Pompeii also has no atrium. It would appear from Cicero that both arrangements were common. Next to the atrium in Pliny’s Laurentine villa was a small elliptic peristyile (porticus in Liber simulacuin remanente) where, however, the readings D and E are also given instead of O. The intervals between the columns of this peristyile were closed with pale windows (specularia; vid. Hous., p. 521), and the roof projected considerably, so that it formed an excellent retreat in unfavourable weather. The open space in the centre of this peristyile seems often to have been covered with moss and heath, and rings in a few cases as large a circle as the peristyile.

Such was the principal suite of apartments in Pliny’s Laurentine villa. In the villa at Pompeii the arrangement is somewhat different. The entrance is in the street of the tombs. The portico leads through a small vestibule into a large square peristyile paved with opus signinum, and forming an open space on the uncovered area. Beyond this is an open hall, resembling in form and position the tablinum in a town-house. Next is a long gallery extending almost across the whole width of the house, and beyond it is a large oecus, corresponding to the large triclinium in Pliny’s villa. This room looks out upon a spacious court, and is separated from it by a wall of a rustic wall, and which is surrounded on all sides by a colonnade supported by square pillars, the top of which forms a terrace. In the farthest part of this court is a gate leading out to the open country. As the ground slopes downward considerably from the front to the back of the villa, the terrace just spoken of is on a level with the oecus of the villa, which opened upon it; and beneath this range of retreats on the level of the large court, which were probably used in summer on account of their coolness.

The other rooms were so arranged as to take advantage of the different seasons and of the surrounding scenery. Of one of these, however, there are particular notice, a state bedchamber, projecting from the other buildings in an elliptic or semicircular form, so as to admit the sun during its whole course. This apartment is mentioned by Pliny, and is also found in the Pompeian villa. In Pliny’s Laurentine villa its wall was fitted up as a library.

The peristyile contained a set of baths, the general arrangement of which was similar to that of the public baths. (Vid. Baths.)

Attached to it were a garden, ambulato, geatatio, hippocromus, speristerium, and, in short, all necessary arrangements for enjoying different kinds of exercise. (Vid. Hortus, Gymnastum.)

(>Becker’s Gallus, i., p. 255, Schneider’s notes on Columella and Varro and Gierig’s on Pliny, contain many useful remarks.

VILLA ANNA L. LEX. (Vid. Ediles, p. 25.)

VILLICUS, a slave who had the superintendence of the villa rustica, and of all the business of the farm except the cattle, which were under the care of the magister poenae. The duties of the villicus were to obey his master implicitly, and to govern the other slaves with moderation; never to leave the villa except to go to market; to have no intercourse with soothsayers; to take care of the cattle and the implements of husbandry; and to manage

(Varro, l. c., i., 2.)
The vindication in this context refers to the process of proving the legitimacy of a claim. The actio vindicativa, as described by Cicero, is a legal action taken to establish the ownership of property. In Cicero's case, the defendant, who was accused of theft, used the vindication to prove his innocence. The vindication process was carried out through a series of legal proceedings, including the examination of witnesses and the presentation of evidence. The vindication was successful, and Cicero was exonerated of the charges. This case highlights the importance of vindication in Roman law and the role of the legal system in resolving disputes regarding property ownership.
The intentio in the formula was, that if the slave belonged to the plaintiff, the sum of money contained in the sponso was to be paid to the plaintiff (sponsio summanum actori dari deberet). The sponso, evidently took its name from the verb spondeo. If the plaintiff proved the slave to be his property, he was entitled to a judgment. Yet the sum of money was not paid, though it was the object of the intentio; for, says Gaius, "it is not poena, but prejudicium, for the sponso is introduced merely as a means of trying the right to the property, and this explains why the defendant has no restitutio." The sponso was said to be "pro prate lites et vindiciarium," because it took the place of the praednum, which, when the legal actions were in use, was given "pro lute et vindictiaca," that is, "pro re et fructibus," to the possessor to the plaintiff. (Vid. Procurator, Pas.)

This sponso prejudicium was merely a technical mode of converting an actio in rem into an actio in personam, and we must suppose that there was some good reason for the practice. It might be conjectured that it was introduced in order to obviate the trouble and difficulties attendant on the old procedure.

From the expression of Gaius, it appears that there was also a sponso penalis, that is, both the defendant made a sponso and the plaintiff made a restitutio. Thus, in the case of "certa pecunia credita," the defendant's sponso was made at the risk of losing the sum if he could not sustain his denial of the plaintiff's claim, and the plaintiff's restitutio was made at the risk if he could not support his claim. The penal sponso was to be given into the hand of the defendant and restitutio belonged to the successful party. There was also a penal sponso in the case of interdicts* and pecunia constituta. In the case of the defendant, the sponso was to the amount of one third of the sum demanded, which was called legiti-ma pars. In the case of constituta pecunia the sponso was to the amount of one half.* These stipulations were fixed by law, and in other cases they were fixed by the Edict.

These sponsores were introduced probably partly with a view to check litigation, and partly with a view to give compensation to the party who ultimately obtained a verdict; for otherwise there do not appear to be any Roman law to any direct provision for the punishment of litigants. There are four modes in which the actores calumniarum is checked: the calumniaria judicium, contrarium judicium, jusjurandum, and the restitutio. The restitutio, he says, "is allowed in certain cases; and, as in the contrarium judicium, the plaintiff has in all cases judgment against him if he cannot sustain his case; and in the jusjurandum or in the case of the plaintiff which is not he knows that his claim was not good, in all cases the plaintiff the (that is, if he cannot sustain his case) is condemned in the penalty of the restitutio." As to the form of the sponso, the passage of Gaius already referred to is an example; and there is another in the oration of Cicero, Pro Publ. Quin. The use of the word si or ni in the sponso would depend on the fate of the claim, which was affirmed, or, rather, on the mode of affirmation and the party affimating. Cicero alludes to the use of these words (sine, nisi). Brissius* has collected instances of them.

The other mode of procedure in the case of vindicatio, that is, in use after the leges actions fell into disuse, was per formulam petitorum, in which the plaintiff (actor) claimed the thing as his property (actio rem eam casu). In this form of proceeding there was the stipulation called judicium

VINEA.

VINEUM.

moved by wheels attached to the posts. The roof was formed of planks and wickerwork, and the uppermost layer or layers consisted of raw hides or wet cloth, as a protection against fire, by which the besieged frequently destroyed the vines. The sides of a vine were likewise protected by wickerwork. Such machines were constructed in a safe place at some distance from the besieged town, and then rolled along on runners or wheels. Here several of them were frequently joined together, so that a great number of soldiers might be employed under them. When vines had taken their place close to the walls, the soldiers began their operations, either by undermining the walls, and thus opening a breach, or by employing the battering-rams (arios). In the time of Vegetius, the soldiers used to call these machines earum. VINUM (owl). The general term for the fermented juice of the grape.

The native country of the vine was long a vexata quaestio among botanists, but, although many points still remain open for debate, it seems now to be generally acknowledged that it is indigenous throughout the whole of that vast tract which stretches southward from the woolly mountains of Mazandara to the Caspian Sea, and thence to the shores of the Persian Gulf and the Indian Sea, and eastward through Khosarans and Cabul to the base of the Himalaya—the region to which history and philology alike point as the cradle of the human race. Hence, when we consider the extreme facility of the process in its most simple form, we need little wonder that the art of making wine should have been discovered at a very remote epoch. In the earliest of profane writers, the cultivation of the grape is represented as familiar to the heroic Greeks, some of his most beautiful and vivid pictures of rural life being closely connected with the toils of the vineyard. It is worth remarking, that the only wine upon whose excellence Homer dilates in a tone approaching to hyperbole is represented as having been produced on the coast of Thrace, the region from which poetry and civilization spread into Hellas, and the scene of several of the most remarkable exploits of Bucebus. Hence we might infer that the Pelasgians introduced the culture of the vine when they wandered westward across the Hellespont, and that, in like manner, it was conveyed to the valley of the Po, when, at a subsequent period, they made their way round the head of the Adriatic. It is certain, from various legends, that wine was both rare and costly in the earlier ages of Italian and Roman history. Thus a tradition preserved by Varro told that, when Menzentius agreed to aid the Rutulians, he stipulated that the produce of the Latin vineyards should be his recompense. Rutilius is said to have used milk only in his offerings to the gods. Numa, to check extravagance, prohibited the spectacle of wine upon the funeral pyre, and, to stimulate the energies of the rustic population, he ordained that it should be held impious to offer a libation to the gods of wine which had flowed from an unpruned stock. So scarce was it at a much later period, that Papirius the dictator, when about to join battle with the Sammites, vowed to Jupiter a small cupful (vini poculum) if the whole mass of the enemy should be hurled into an amphitheatre and stored up in regular cellars as early as the era of the Gracchi. Pliny considers proved by the existence in his own day of the Vinum Optimianum, described hereafter. But even then no specific appellation was given to the produce of different localities, and

1050

5. Interdictum quod vi aut clam. This is a plaint which could be instituted by a filiusfamilias in his own name, because the object was vindicta. The ground of this capacity of a filiusfamilias was an injury done to him personally by a person who acted in the name of his father. Since the son had married, he inhabited a house belonging to his father or one hired from a stranger, and was disturbed in his enjoyment by some act of his neighbour, the filiusfamilias might have an action for the amount of the damage, but the pecuniary satisfaction would belong to the father, as in the case of the actio in juriarum. But the action was not in bonum et aequum concepto, since it had a definite object, which was either the restoration of things to their former condition, which might be immediately for the benefit of the filiusfamilias, or to ascertain the value of the wrong done (quod intereat).

6. The action against a libertus in respect of an in jus vocatio. (Vid. Patrone.) If the libertus had proceeded against the son of his patron, and the father was absent, the son could institute the suit himself, as the defendant of an action is not purely private: to this class belong such actions as the actio sepolcri violati. But if there are no persons who are individually interested in the matter complained of, or none such bring an action, any person (numus ex populo) may bring the action, as the procurator of the state, and he is not bound to give the security which an ordinary procurator must give. A filiusfamilias, acting such an action. By virtue of the litis contestatio, the action becomes the same as if it were founded on an obligation, and this right of action, as well as the money which may arise from it, is acquired by the filiusfamilias for his father. These actions being for fixed sums of money, are not in bonum et aequum concepto.

With the populariae actions may be classed, as belonging to the same kind, the interdict publicum or popularia, and that novi operis punctio which is for the protection of publicum jus; with this distinction, that the proceedings have not for their object the recovery of a sum of money. But in the general capacity of all persons to bring such actions, independent of the usual rules as to legal capacity, all these modes of proceeding agree.

VINEA, in its literal signification, is a bower formed of the branches of vines, and, from the protection which such a leafy roof affords, the name was applied to the Romans to a roof under which the besiegers of a town protected themselves against darts, stones, fire, and the like, which were thrown by the besieged upon the assailants. The description which Vegetius gives of such a machine perfectly agrees with what we know of it from the ancient historians. If, for instance, a machine formed a roof, resting upon posts eight feet in height. The roof itself was generally sixteen feet long and seven broad. The wooden frame was in most cases light, so that it could be carried by the soldiers; sometimes, however, when the purpose which it was to serve required great strength, it was heavy, and then the whole fabric probably was
The vineyard was marked with the name of the consul alone. For many years after this, foreign wines were considered far superior to those of Greece; and the times of Marius and Sulla, that a single draught only was offered to the guests at a banquet. The rapidity with which luxury spread in this matter is well illustrated by the saying of M. Varro, that Lucullus, when a boy, never saw an entertainment in his father's house before he was twelve or splendid, at which Greek wine was handed round blazing. When he was sent back to Athens in manhood, he returned from his Asiatic conquests, he bestowed on the people a largess of more than a hundred thousand eai. Four different kinds of wine are said to have been presented for the first time at the feast given by Julius Caesar in his third consulship (B.C. 46), these being Falernian, Chian, Lesbian, and Mamertine, and not until after this date were the merits of the numerous varieties, foreign and domestic, accurately known and fully appreciated. But during the reign of Augustus and his immediate successors the study of wines became a passion, and the most scrupulous care was bestowed upon every process connected with their production and preservation. Pliny calculates that the annual consumption of wine in Italy was then 1,000,000, 500,000 being reckoned to be accounted of high quality (notitia) amounting to eighty, of which his own country could claim two thirds; and in another passage he asserts that 195 distinct kinds might be reckoned up, and that, if all the varieties of these were to be included in the computation, the sum would be almost double.

The process followed in wine-making was essentially the same among all the Greeks and the Romans. After the grapes had been gathered, they were first trodden with the feet, and afterward submitted to the action of the press. This part of the process of wine-making is described in the article pressus.

The sweet, unfermented juice of the grape was termed θελίκος by the Greeks and mustum by the Romans, the latter word being properly an adjective signifying new or fresh. Of this there were several kinds, distinguished according to the manner in which each was originally obtained and subsequently treated. That which flowed from the clusters, in consequence of the natural ferment action upon each berry before any force was applied, was known as πρόφυμα or προφυτώμα, and was reserved for manufacturing a particular species of rich wine described by Pliny, to which the inhabitants of Mytilene gave the name of πρόφυμος or προφυτώμα. That which was obtained next, before the grapes had been fully trodden, was the mustum itzixum, and was considered best for keeping. After the grapes had been fully trodden and pressed, the mass was taken out, the edges of the husks cut, and the whole again subjected to the press; the result was the mustum torrentium or circumstrictum, which was set apart and used for inferior purposes.

A portion of the must was used at once, being drunk fresh after it had been clarified. When it was desired to preserve a quantity in the sweet state, an amphora was taken and coated with pitch within and without; it was filled with mustum itzixum, and corked so as to be perfectly air-tight. It was then immersed in a tank of cold, fresh water, or buried in wet sand, and allowed to remain for six weeks or two months. The contents, after this process, were found to remain unchanged for a year, and the name dei γλευκός, i.e., νεφρομενος mustum. A considerable quantity of mus from the best and oldest wines was insipid, and, as Pliny says, it flowed in a fixed stream (σαρκοφαγός). The Greeks under the general names of έφυμοι or γλευκοί, while the Latin writers have various terms, according to the extent to which the evaporation was carried. Thus, when the must was reduced to two thirds of its original volume, it became cerverum (Plut. Octobr. tit. xiii:); when one half had evaporated, defrutum; when little more than a third remained, alevrum (Plin. xxxi. 16); and when reduced to nothing, defrutum (Plin. xxxi. 16), these words are frequently interchanged. Similar preparations are at the present time called in Italy muso cotto and gala, and in France sable. The process was carried on in large caldrons of lead (vasa defrutaria), iron or bronze being supposed to communicate a disagreeable flavour, over a slow fire of chips, on a night when there was no sky-light, and carried to carefully removed with leaves, and the liquid constantly stirred to prevent it from burning. These grape-jellies, for they were nothing else, were used extensively for giving body to poor wines and making them keep, and entered as ingredients into many drinks, such as the barranica potio, so called from the coarse kind of wine, barranica, and the vine (siracum and laconae); but these words are always interchanged. The whole of the mustum not employed for some of the above purposes was conveyed from the laca to the cella vinaria (oivofheix, πιτεινω), an apartment on the ground floor or a little below the surface, placed in such a situation as to secure a moderate and steady humidity. The barrels were then closed sapis and covered with straw or hay, or even dung hulks or any objects emitting a strong odour. Here were the dotha (πίθοι), otherwise called seria or cupa, long, bell-mouthed vessels of earthenware (hooped tubs of wood being employed in cold climates only), very carefully formed of the best clay and lined with a coating of pitch (πωρονικα, πιτεινω), the operation (πιτεινος, πιτεινω) being usually performed while the barrels were hot. They were usually sunk (depressa, defossa, demersa) one-half or two thirds in the ground; to the former depth if the wine to be contained was likely to prove strong, to the latter if weak; and attention was paid that they should repose upon a dry bed. They were, moreover, sprinkled with sea-water, frequently covered with earth, and often with ashes, all rank smelling substances, such as rotten leather, garlic, cheese, and the like, being removed, lest they should impart a taint to the wine. In these dotha the process of fermentation took place. They were not filled quite full, in order that the seam only might boil over, and this was also cleared off at regular intervals by skimming, and carried to a distance. The fermentation usually lasted for about nine days, and as soon as it had subsided, and the mustum had become vinum, the dolia were closely closed, the upper portion of their interior surface as well as the lids (opercula dolorum) having been previously well rubbed over with a compound of defrutum, salfast, old pitch, mastice, and butter, after the whole were heated, and left to stand every thirty-six days, and often in hot weather, in order to cool and give air to the contents, to add any preparation that might be required to preserve

them sound, and to remove any impurities that might be thrown up. Particular attention was paid to the peculiar light scum, the ψύκος σίλιν (ψύκα κοφίν), which frequently appeared on the surface after a certain time, since it was supposed to afford indications by its colour and consistence of the quality of the wine. It was said that the wine was sound; if glutinous, it was a bad symptom; if black or yellow, it denoted want of body; if white, it was a proof that the wine would keep well (ψύκα κοφίν). Each time that the operacla were replaced, they were well rubbed with fr-cones. 1

(Vid. Thevynus.)

The commoner sorts of wine were drunk direct from the dolium, and hence draught wine was called "pearled wine," 2 as were those of the cheaper kinds, such as were yielded by choice localities, and possessed sufficient body to bear keeping, were drawn off (diffundere, μεταγγέλειν) into amphora or lagyno, many fanciful precautions being observed in transferring them from the larger to the smaller vessel. 3 These amphora were made of earthenware, and in later times occasionally of glass; they were stopped tight by a plug of wood or cork (cortex, σφέκτος), which was rendered impervious to air by being smeared over with pitch, clay, or gypsum. On the outside the title of the wine was painted, the date of the vintage being marked by the names of the consuls then in office, or when the jars were of glass, little tickets (pistacia, tesserae) were suspended from them indicating these particulars. 4 The names employed (apothecar, horrea, tabulata), completely distinct from the cella vinaria, and usually placed in the upper story of the house (whence descend, testa, dcriperre horreo), for a reason explained afterward.

It is manifest that wines prepared and bottled, if we may use the phrase, in the manner described above, must have contained a great quantity of dregs and sediment, and it became absolutely necessary to separate these before it was drunk. This was sometimes effected by fining with yolks of eggs, those of pigeons being considered most appropriate by the fastidious, 5 or with the whites whipped up with salt, 6 but more commonly by simply straining through small cup-like utensils of silver or bronze, perforated with numerous small holes, and distinct from the cupides, τρόφυος, κύβους column vinaria. 7 (Vid. Colux.) Occasionally a piece of linen cloth (εύκος, saccus) was placed over the τρόφυος or column, 8 and the wine (αν ακοει, sac- catus) filtered through. 9 The use of the saccus was considered objectionable for all delicate wines, since it was believed to injure, 10 if not entirely to destroy their flavour, and in every instance to diminish the strength of the liquor. For this reason it was employed by the dissipated, in order that they might be able to swallow a greater quantity without becoming intoxicated. 11 The double purpose of cooling and weakening was effectually accomplished by placing ice or snow in the filter, which under such circumstances became a column nigeria- rum or saccus nigerius. 12

The wine procured from the museum turrinum, which was always kept by itself, must have been thin and poor enough, but a still inferior beverage was made by pouring water upon the husks and stalks after they had been fully pressed, allowing them to soak, pressing again, and fermenting the liquor thus obtained. This, which was given to the labourers in winter instead of wine, was the ἵμων or deripæon of the Greeks, the lora or vinum operarium of the Romans, and, according to Varron, 1 was, along with sepi, destrum, and passum, the chief article of food provided for the slaves, who drank the water in the proportion of one third of the must previously drawn off, and then boiled down the mixture until one third had evaporated; the Italians added the water in the proportion of one tenth of the must, and threw in the skimmings of the drutum and the dregs of the lacaus. Another drink of the same character was the factum from wine-lees, and we hear also of vimnum pratigalenum given to the slaves, which appears to have been manufactured from inferior and half-ripe fruit gathered before the regular period. 3 We find an analogy to the above processes in the manufacture of cider, the best being obtained from the first squeezing of the apples, and the worst from the pulp and skins macerated in water.

In all the best wines hitherto described, the grapes are supposed to have been gathered as soon as they were fully ripe, and fermentation to have run its full course. But a great variety of sweet wines were manufactured by checking the fermentation, or by partially drying the grapes, or by converting them completely into raisins. The γάλακτος ἵμων of the Geoponica writers 13 belongs to the first class. Must obtained is the ordinary manner was thrown into barrels or jars, where it was allowed to remain for twenty days only, and were then partially covered for two more; a small aperture was left until the seventh day, when they were luted up. If the wine was wished to be still sweeter, the dolia were left open for five days, and then at once closed. The free admission of air being necessary for brisk fermentation, and this usually continuing for nine days, it is evident that it could proceed weakly off from the tenth day, and was found to be sweet, sound, and wholesome. 4 For the vimnum diachymum, more luminous still, the grapes were exposed to the sun for seven days upon hurdles. 5

Lastly, passum or raisin-wine was made from grapes dried in the sun until they had lost half their weight; or they were plunged into boiling oil, which produced a similar effect; or the bunches, after they were ripe, were allowed to hang for some weeks upon the vine, the stalks being twisted, or an incision made into the pith of the bearing shoot, so as to put a stop to vegetation. The stalks and stones were removed, the raisins were steeped in must or good wine, and then trudened or subjected to the gentle action of the press. The quantity of juice which flowed forth was measured, and an equal quantity of water added to the pulpy residuum, which was again pressed, and the product employed for an inferior passum called secundarium, an expression exactly analogous to the deripæon mentioned above. The passum of Crete was most prized, 6 and next in rank were those of Cilicia, Africa, Italy, and the neighbouring provinces. The kinds known as Puylygum and Melampygiwm possessed the praise.

VINUM.

cular flavour of the grape, and not that of wine; the Schubertes from Galatia and the Haluntum from Sicily, in like manner, tasted like must. The grapes most suitable for passum were those which ripened early, especially the varieties Apiens (called by the Greeks Stichia), Scirrupa, and Patheia. 1

The Greeks recognised three colours in wines: red (μέλας), white, e. e., pale straw-colour (λευκός), and brown or amber-coloured (κόσμος). 2 Pliny distinguishes four: albans, answering to λευκός, fulvous to κόσμος, while μέλας is subdivided into sanguineus and niger, the former being doubtless applied to bright, glowing wines, like 'Cent and Burgundy', while the niger or ater would resemble Port. In the ordinary Greek authors the epithet ερυθρός is as common as μέλας, and will represent the sanguineus.

We have seen that wine intended for keeping was raked off from the dolia into amphoeres. When it was necessary, in the first instance, to transport it from one place to another, or when carried by travellers on a journey, it was contained in bags made of goatskin (κόας, utea), well pitched over, so as to make the seams perfectly tight. The cut below, from a bronze found at Herculanenum, 3 exhibits a Silenus astride upon one of them. When the quantity was large, a number of hides were sewed together, and the leather tun thus constructed carried from place to place in a cart, as shown in the illustration on page 54. 4

As the process of wine-making among the ancients was based upon no fixed principles, and for the most part conducted in a most unscientific manner, it was found necessary, except in the case of the finest vintages, to have recourse to various devices for preventing or correcting acidity, heightening the flavour, and increasing the durability of the second growths. This subject was reduced to a regular system by the Greeks. Pliny mentions four authors who had written formal treatises, and the authors of the Geoponic collection, together with Cato, Varro, and Columella, supply a multitude of precepts upon the same topic. The object in view was accomplished sometimes by merely mixing different kinds of wine together, but more frequently by throwing into the dolia or amphoeres various concoctions (medicinae, conditum). When two wines were mixed together, those

were selected which possessed opposite good qualities and defects. 5 The principal substances employed as conditum were, 1. sea-water; 2. turpentine, either pure or in the form of pitch (πίκα), tar (πίκα liquida), or resin (resina); 3. lime, in the form of gypsum, burned marble, or lime marl (muri), 4. insipissated must; 5. aromatic herbs, spices, and gums; and these were used either singly, or cooked up into a great variety of complicated concoctions.

We have already seen that it was customary to line the interior of both the dolia and the amphoeres with a coating of pitch; but, besides this, it was common, as Pliny remarks, to sprinkle, to the must during the fermentation, from a conviction that it not only rendered the wine more full-bodied, but also communicated an agreeable bouquet, together with a certain degree of raciness or piqunacy. 6 Wine of this sort, however, when new (novitium resinetum), was accounted unwholesome, and apt to induce headache and giddiness. From this cause it was kept in large earthen vessels, and was itself found to be serviceable in checking the fermentation of the must when too violent.

It must be remembered, that when the vinous fermentation is not well regulated, it is apt to be renewed, in which case a fresh chemical change takes place, and the wine is converted into vinegar (σοκ, acetum), and then acid, again, if exposed to the air; it loses its properties, and becomes perfectly insipid, in which form it was called σεππα by the Romans, who used the word figuratively for a worthless blackhead.

Now the great majority of inferior wines, being thin and watery, and containing little alcohol, are constantly liable to undergo these changes, and hence the disposition to accense was closely watched, and combated as far as possible. With this view those substances were thrown into the dolia which it was known would neutralize any acid which might be formed, such as vegetable ashes which contain an alkali, gypsum, and pure lime, besides which we find a long list of articles, which must not be regarded as preventives, but as remedies, or rectives, such as the various preparations of turpentine already noticed, almonds, raisins steeped in must, parched salt, goats'-milk, cedar-cones, gall-nuts, blazing pine-torches, or red-hot irons quenched in the liquid, and a multitude of others. 7 But, in addition to these, which are all harmless, we find compressed clove-sticks, the heads of which were used as lead for the same purpose, 8 a practice which produced the most fatal consequences in the Middle Ages, and was prohibited by a series of the most stringent enactments. 9

Defrutum also was employed to a great extent; but, being itself liable to turn sour, it was not used until its soundness had been tested by keeping it for a year; it was then introduced, either in its simple state, in the proportion of a sextarius to the amphoeres, that is, of 1 to 48, or it was combined with a great variety of aromatics, according to a prescription furnished by Columella. 10 In this receipt, and others of the same kind, the various herbs were intended to give additional efficacy to the nourishing properties of the shellia; 4 insipissated must; 5 aromatic vinegars, 6 and spices were used as preventive from affecting the taste of the wine. But from a very early period it was customary to flavour wine highly by a large admixture of perfumes, plants, and spices. We find a spiced drink (ξίνωνάφως κατακεκαμένο) noticed under the name of τρίγμα by Athenæus and the writers of the

---

---

VINUM. new comency, and for the whole class Pliny has the
general term aromatizes. 1

There was another and very numerous class of wines,
which were introduced to produce medicinal effects. Such were vinum marrudi (horehound) for coughs; the scillites
(squill-wine), to assist digestion, promote expectoration,
and act as a gentle tonic; abstrahitites (wine of
wormwood), corresponding to the modern vermouth;
and, above all, the myrites (myrtleberry-wine),
which possessed innumerable virtues. 2

Pliny, under the head of una fictitia, includes not
only the clavo tycoon, but vast number of others,
bearing a strong analogy to our British home-
made wines, such as cowslip, ginger, elderberry,
and the like; and as we manufacture Champagne out of
gooseberries, so the Italians had their imitations of
the costly vintages of the most favoured Asiatic
Isles. These una fictitia were, as may be imagined,
almost countess, every variety of fruit, flower,
vegetable, shrub, and perfume being put in requisition
—figs, cornels, meddars, roses, asparagus, par-
ley, radishes, laurels, junipers, cassia, cinnamon,
saffron, nard, malabathrum, afford but a small sam-
ple. It must be remarked that there was one ma-
terial difference between the method followed by the
Greeks and that adopted by the Romans in cooking
these potions. The former included the drug, or
whatever it might be, in a bag, which was suspend-
ed in one end of a vessel during fermentation,
as was thought necessary; the latter mixed the
flavouring ingredient with the sweet must, and fer-
mented them together, thus obtaining a much more
powerful extract; and this is the plan pursued for
British wines, except that we are obliged to sub-
stitute sugar and water for grape-juice.

But not only were spices, fragrant roots, leaves,
and other aromatic plants employed, or incorporated
during fermentation, but even the precious perfumed
essential oils (unguenta) were mixed with it before
it was drunk. The Greeks were exceedingly partial
to this kind of drink. 3 We also learn from Ξελιαν 4
that it was named μπιστυρις, which seems to be the
same with the μπίστυρις of Poseidippus, 5 the μπιστυρις
of Theophrastus, the μπίστυρις of Pollich, 6 and the
marshmallow of our own days. Most modern authors
follow the example set them, valuing bitterness too
highly, says Pliny, 7 that they were resolved to enjoy
costly perfumes with two senses, and hence the ex-
pressions "soluta siue" in Martial, 8 and "perfusa
mela spumant uncernata Furino" in Juvenal. 9

In a more primitive age we detect the same fond-
ness for the admixture of something extraneous.
Hence, indeed, when preparing a draught for Nestor,
fills his cup with a Prannie wine, over which she
grates goat-milk cheese, and sprinkles the whole
with flower, 10 the latter being a common addition at a
much later epoch. 11 So, also, the draught admis-
tered by Circe consisted of wine, cheese, and hon-
ey; and, according to Theophrastus, 12 the wine
drunk in the pyraneum of the Thasians was ren-
coloured by their throwing into the jar which
contained it a cake of wheaten flour knoed up with
honey. 13

This leads us on to notice the most generally
popular of all these compound beverages, the oivòpili
of the Greeks, the mulsum of the Romans. This
was of two kinds; in the one honey was mixed

with wine, in the other with must. The former
was said to have been invented by the legendary
hero Aristeus, the first cultivator of bees, 1 and was
consumed either as such, or mixed with wine, the
delict and palatable when made of some old, rough (aurum mulsum, wine, such as Massic or Falernian (although Horace objects to the latter for this purpose), and new Attic honey. 2 The proportions, as stated in the Geoponic collection
were four, by measure, of wine to one of honey, and
various spices and perfumes, such as myrrh, cassia, costum, malabathrum, nard, and pepper,
might be added. The second kind, the anomumum
of Isidorus 3 according to the Greek authorities,
was made of must evaporated to one half of its
original bulk, Attic honey being added in the
proportion of one to ten. This, therefore, was merely
a very rich fruit sirup in no way allied to wine. The
virtues of mulsum are detailed by Pliny; it
was considered the most appropriate draught upon
an empty stomach, and was therefore swallowed
immediately after the regular business of a repast
began, 4 and hence the wont (guatiate) coming before
the cup of mulsum was called the promulm. 5 We
infer from Plautus 6 that mulsum was given at a
triunph by the emperor to his soldiers.

Mulsum (sc. vimum) or obvójéli is perfectly dis-
inct from mulsa (sc. aqua). The latter, or mead,
being made of honey and water mixed and ferment-
ed, is the melicoporo or εφημερες of the Greeks, 7
although Pollich confounds it with oivòpili. Again,
εφημερες 8 or hydromel 9 was cider; εφη-
mel 10 was a compound of vinegar, honey, salt, and
pure water, boiled together and kept for a long
season; ὀβολέλαι was a mere concoction of expressed
juice of rose-leaves and honey. 11

The ancients considered old wine not only more
grateful to the palate, but also more wholesome
and invigorating. Hence, Pliny 12 supposed that it
grew more strong and fiery by age, in consequence of the dissipation of the watery
particles. 13 Generally speaking, the Greek wines
do not seem to have required a long time to ripen.

Nestor, in the Odyssey, indeed, drinks wine ten
years old, 14 and wine kept for sixteen years is inci-
dentially mentioned by Athenaeus; 15 but the con-
ception of the ancients was, that all transmarine wines approached a moderate degree of
maturity (ad vetutatatem medium) in six or seven. 16
Many of the Italian varieties, however, as we shall
see below, required to be kept for twenty or twenty-
five years before they were drinkable (which is now
considered ample for our strongest Ports), and even
the humble growths of Sabinium were stored up for
four to fifteen. 17 Hence it became a matter of
importance to hasten, if possible, the natural pro-
cess. This was attempted in various ways, some-
times by elaborate compositions, 18 sometimes by
sinking vessels containing the must in the sea, by
which an artificial mellowness was induced (μελλω-
να vutetatea), and the wine, in consequence, termed
thalasses 19; but more usually by the application
of heat. Different writers state that mulsum
amphorae for some years to the full ferver of the
sun's rays, or to construct the apotheca in such
a manner as to be exposed to the hot air and smoke

at the bath furnaces, and hence the name "fumaria" applied to such apartments, and the phrases "fumo- nos, fumum bibere, fuliginis testa" in reference to the wines. In the operation, the wine was not conducted with care, and the amphore not stoppered down perfectly tight, a disagreeable effect would be produced on the contents; and it is in consequence of such carelessness that Martial pours forth his maladictions on the fumaria of Marseilles.1

The year B.C. 121 is said to have been a season singularly favourably to all the productions of the season; from the great heat of the autumn, the wine was of an unprecedented excellence, and remained long celebrated as the "vinum Opimium," from L. Opicius, the consul of that year, who slew Caius Gracchus. A great quantity had been treasured up, and sedulously preserved; so that samples were still in existence in the days of the elder Pliny, nearly two hundred years afterward. It was reduced, he says, to the consistency of rough honey, and, like other very old wines, so strong, and harsh, and bitter as to be undrinkable until largely diluted with water. Such wines, however, he adds, were useful for flavouring others when mixed in small quantities.

Our most direct information with regard to the price of common wine in Italy is derived from Col- umnius, who says it was sold for three denarii in B.C. 63, of the most ordinary quality was 300 testae for 40 nummi, that is, 15 testae for the amphora, or 6d. a gallon nearly. At a much earlier date, the triumph of L. Metellus during the first Punic war (B.C. 250), wine was sold at the rate of 8 asses the amphora, and the censor P. Licinius Crassus and L. Julius Caesar issued a proclamation that no one should sell Greek and Ammian wine at so high a rate as 8 asses the amphora; but this was probably intended as a prohibition to their being sold at all, in order to check the taste then beginning to display itself for foreign luxuries, for we find that at the same time they positively forbade the use of exotic unguents.2

The price of native wine at Athens was four drachmas for the metretes, that is, about 4½d. the gallon, when necessaries were dear, and Böckh considers that we may assume one half of this sum as the average of cheaper times. In fact, we find, in an agreement in Demosthenes,3 300 casks (κεραία) of Mendeian wine, which we know was used at the most eucharistic feasts, were expressly sold for 300 drachmas, which gives two drachmas for the metretes, or little more than 2d. a gallon; but still more astonishing is the remarkable cheapness of Lusitanian wine, of which more than ten gallons were sold for 3d. On the other hand, high prices were given freely for the varieties held in esteem, since as early as the time of Socrates a metretes of this kind was sold for 24 drachmas.4

With respect to the way in which wine was drunk, and the customs observed by the Greeks and Romans at their drinking entertainments, the reader is referred to the article Symposium.

1. (Columni, ii., 6.)—2. (Tibull., ii., 180.—Hor., Carm., iii., 8.)

The minister of Apollo, Maron, who dwelt upon the skirts of Thracian Issaurus, gave to Ulysses. It was red (ἐρυθρόν) and honey-sweet (μελονδία), so precious that it was unknown to all in the mansion save the wife of the priest and one trusty housekeeper who was manage(

) with twenty of water; so fragrant that even when thus diluted it diffused a divine and most tempting perfume.5 Pliny6 asserts that wine endowed with similar noble properties was produced in the same region in his own day. Homer mentions also, more than once, οἷον Ἰπαθοῦς, an epithet; so strong that a single cup was mingled7 with twenty of water; so fragrant that even when thus diluted it diffused a divine and most tempting perfume.6 Pliny7 asserts that wine endowed with similar noble properties was produced in the same region in his own day. Homer mentions also, more than once, οἷον Ἰπαθοῦς, an epithet; so strong that a single cup was mingled8 with twenty of water; so fragrant that even when thus diluted it diffused a divine and most tempting perfume.8

But the wines of greatest renown during the brilliant period of Grecian history and after the Roman conquest were grown in the islands of Thasos, Lesbos, Chios, and Cos, and in a few favoured spots on the mainland. In certain districts the coast of Mount Tmolus, the ridge which separates the valley of the Hermus from that of the Cayster, Mount Messogis, which divides the tributaries of the Cayster from those of the Meander, the volcanic region of the Catoeceanum, which still retains its fame,9 the environs of Ephesus,10 of Cnidos,11 of Mytilene,12 and of Chios; and the island of Lesbos, the native home of Sappho, has been so prized that it has maintained the name so long as it is known. It was thus that the wine of the island of Lesbos was so rare, it was distributed only in small quantities, and it was reserved for the use of royalty and the highest personages.13

The Thasian and Lesbian occupied the second place, and the Cnidian wine was considered equal to it.14 In Lesbos, the most highly prized vineyards were around Mytilene15 and Methymna.16 Pliny,17 who gives the preference over all others to the Clazomenian, says that the Lesbian had naturally a taste of salt water, while the epithet "innocens," applied by Horace, seems to point out that it was light and wholesome.

It may be observed that there is no foundation whatever for the remark that the finest Greek wines, especially the products of the islands in the Egean and Ionian seas, belonged, for the most part, to the luscious sweet class. The very reverse is proved by the epithets αὐτάρητος, φλογομένη, sweet, and the like, applied to a great number, while γλυκός and γλυκομεία are designations comparatively rare, except in the vague language of poetry. "Vini omnes dulces minus odoratum," says Pliny,18 and the ancients appear to have been fully sensible that sweet wines could not be swallowed either with pleasure or safety except in small quantities. The mistake has arisen from not perceiving that the expressions "οἷον γλυκὸς καὶ οἷον θέλος are by no means necessarily synonymous. The former signifies wine "positio venici," the latter wine agreeable.
to the use from the absence of acidity, in most cases indicating nothing more than sound wine. It is well known that all the most noble Italian wines, with a very few exceptions, were derived from Latium and Campania, and, for the most part, grew within a short distance of the sea. "The whole of these places," says Strabo, when describing this coast, "yield excellent wine; among the most celebrated are the Cecuban, the Fundanian, the Setinian, and so, also, are the Falernian, the Alban, and the Statianam." But the classification adopted by Pliny would prove our best guide, and this we shall follow to a certain extent.

In the first rank; then, we must place the Setinam, with its variety of wines, whose quality was far above that of the small vineyards, with which the Romans were satisfied, since the chosen beverage of Augustus and most of his courtiers. It grew upon the hills of Setia, above Forum Appii, looking down upon the Pompentine marshes (Peninsula Pompticina qua spectat Setia campo). Before the age of Augustus, the Cecuban was the most prized of all. It grew in the popular swamps bordering on the Gulf of Amylene, close to Pumilia. In the time of Pliny its reputation was entitled to great notice. The peculiarity of the cultivation, and partly from its proper soil, originally a very limited space, having been cut out by the canal of Nero, extending from Baiae to Ostia. Galen represents it as generous, full-bodied, and heady, not arriving at maturity until it had been kept for many years.

The second rank was occupied by the Falernanum, of which the Cecuban was the most choice variety, having gained its character from the care and skill exercised in the cultivation of the vines; but when Pliny wrote, it was beginning to fall in public estimation, in consequence of the growers being more solicitous about quantity than quality, just as was the case with Madeira a few years ago. The Falernanum ater, concerning the precise limits of which there have been many controversies, commenced at the Pons Campanionis, on the left hand of those journeying towards the Urbana Colonia of Sulla, the Faustianum ater at a village about six miles from Sinuesse, so that the whole district in question may be regarded as stretching from the massy hills to the river Vulturum. Falernian became fit for drinking in ten years, and might be used until twenty years old, but when kept longer gave headaches, and proved injurious to health, as the old wines contain three kinds, the rough (austerum), the sweet (dulce), and the thin (tenue). Galen, two only, the rough (aisterum) and the sweetish (glycolouros). When the south wind prevailed during the season of the vintage, the wine was sweetish and darker in colour (melanoluteros), but if the grapes were gathered during weather of a different description, it was rough, and tawny or amber-coloured (tibide). The ordinary appearance of Falernian, which has been made a theme of considerable discussion, seems to be determined by a passage in Pliny, in which we are informed that the finest amber was named Falerna. Others arranged the varieties differently: that which grew upon the hilltops they called Caesarianum; that on the middle slopes, Faustianum; that on the plain, Falernum.

The third rank was the Alburnum, from the Mons Alburnus (Mons Julusii), of various kinds, very sweet (predulce), sweetish (glykolouros), rough.

and sharp (baphachis), it was invigorating (hercias utile), and in perfection after being kept for fifteen years. Here, too, we place the Surrentinum, from the promontory forming the southern horn of the Bay of Naples, which was not drinkable until it had been kept for five and twenty years; for, being the abode of richness (aulas), and very dry (pharandia), it required a long time to ripen, but was strongly recommended to convalescents, on account of its thinness and wholesomeness. Galen, however, was of opinion that it agreed with those only who were accustomed to use it constantly; Tiberius was wont to say that the physicians had conspired to dignify what was only generous vinegar; while his successors gave the name of the wine to that which flowed from the mountains, the situation being the Massicum, from the hills which formed the boundary between Latium and Campania, although somewhat harsh, as would seem from the precautions recommended by the epigraph in Horace, and the Gauernum, from the ridge above Baiae and Puteoli, produced in small quantity, but of very high quality, full bodied (vritos), and thick (tibuc). In the same class are to be included the Eburnianum, the Surrentinum of Fundi. Both had formerly held a higher place; "but vineyards," moralizes Pliny, "as well as states, have their periods of rise, of glory, and of fall." The Calenianum was light (koufros), and better for the stomach than Falernian; the Fundanianum was full bodied (vritos) and nourishing, but apt to attack both stomach and head, therefore little sought after at banquets.

This list is closed by the Vulturinum, Prisernatunum, and Signinum, from Velitrae, Privernum, and Signia, towns on the Volscian hills: the first was a sound wine, but had this peculiarity, that it always tasted as if mixed with some foreign substance; the second was thin and pleasant; the last was looked upon only in the light of a medicine, valuable for its astringent qualities. We may safely bring in here the Formianum, from the Gulf of Capea (Lexisgynaea Buccha in amphorae), associated by Horace with the Cecuban, Falernian, and Calenianum, and compared by Galen to the Privernatunum and Rheginum, but richer (liapraplophros), and ripening quickly.

The fourth rank contained the Maneretunum, from the neighbourhood of Messana, first brought into fashion by Julius Caesar. The finest, called Potalanum, was cultivated on the sloping hills of Messana, that on the mainland, was sound (ffilos), light, and, at the same time, not without body. The Tauromentianum was frequently substituted fraudulently for the Maneretunum, which it resembled.

Of the wines in Southern Gaul, that of Baelerum alone bore a high character. The rest were looked upon with suspicion, in consequence of the notorious frauds of the dealers in the province, who carried on the business of adulteration to a great extent, and did not scruple to have recourse to noxious drugs. Among other things, it was known that they purchased aloe to heighten the flavour and improve the colour of their merchandise, and conducted the process of artificial ripening so unskilfully as to impart a taste of smoke, which called forth, as we have seen above, the malediction of Martial on the subject.

The produce of the Balearic Isles was compared

1. (Plin., I., c. 38, v. 6, c.).—2. (Mart., iii., 11, v. 6, c.).—3. (Mart., iii., 11, v. 6, c.).—4. (Mart., iii., 11, v. 6, c.).—5. (Mart., iii., 11, v. 6, c.).—6. (Mart., iii., 11, v. 6, c.).—7. to the first growths of Italy, and the same praise was shared by the vineyards of Tarracon and Lauron, while those of the Latakani were not so much famed for the quality as for the abundance of their supply.

Returning to the East, several districts of Pontus, Paphlagonia, and Bithynia, Lampsicus on the Hellespont, Tenedus in Caria, Cyprus, Tripolis, Berytus, and Tyre, all claimed distinction, and, above all, the vineyards of Egypt, from the Delta, but afterward grown in the neighbourhood of Damascenus also, was the chosen and only drink of the Great King, to which we may join the Babylonium, called nectar by Chereus, and the Bodeis from Phoenicia, which found many admirers. The last is spoken of elsewhere as Taracian, or Grecian, or Sicilian, which may have been the case, and the vineyards disseminated through these countries.

Pressing on, in the last place, to Egypt, where, according to Hellenics, the vine was first discovered, the Marseictum, from near Alexandria, demands our attention. It is highly extolled by Atheneus, being white, sweet, fragrant, light (λευκός), circulating quickly through the frame, and not lying to the heart, and having a long preservation. The vine variety of Coptos, was so thin and easily thrown off that it could be given without injury to fever patients; and ascending through Nubia to the confines of the Nile with the Astapus, we reach Meroë, whose wine has been immortalized by Lucretius. Martial appears to have held them all very cheap, since he pronounces the vinegar of Egypt to be the best. We read of several wines which received their designation, not from the region to which they belonged, but from the particular kind of grape from which they were made, or from some circumstance connected with their history or qualities. Names belonging to the former class were, in all likelihood, bestowed before the wines were known, and before the effects produced upon the vine by change of soil and climate had been accurately observed and studied. After these matters were better understood, habit and mercantile usage would tend to perpetuate the ancient appellation. Thus, down to a late period, we hear of the Ammodinum ('Aμυμοδόντος oinos'), from the Ammon Vitis, which held the first place among vines, and embraced many varieties, carefully discriminated and cultivated according to different methods. It was of Grecian origin, having been conveyed by a Thessalian tribe to Italy (a story which would seem to refer to some Pelasgian migration), and reared chiefly in Campania around Naples, and in the Passerian usages. Its characteristic body and consequent durability of its wine ('Firmissima vinea'). So, in like manner, the φύετος φόνος, from the ψέφια υπέρτολος, which Virgil tells us was particularly suitable for passum, and the κατάκαι (smoke-wine) of Plato the comic poet, pre-

pared in greatest perfection by Beneventum, from the κάτον υπέρτολος, so named in consequence of the clusters being neither white nor black, but of an intermediate dusky or smoky hue.

On the other hand, the ζαμπία, on whose divine fragrance Hermippos descants in such glowing language, is simply some rich wine of great age, toothless, and sere, and wondrous old ('ζάμπια καὶ ἀπόρριπτος τοῦ χαλικοῦ'). The origin of the title ψέβοντας is somewhat more doubtful: some will have it to denote wine from a sweet-smelling spot; others more reasonably refer it to the "bouquet" of the wine itself; according to Phanias of Eretrias, in one passage, it was a compound formed by adding one part of seawater to forty of wine. Thucydides, on the other hand, seemed to say that it was wine obtained from grapes gathered before they were ripe, in which case it might resemble Champagne.

Those who desire more minute details upon this very extensive subject may consult the Geoponik Collection, books ii. to viii. inclusive; the whole of the 14th book of Pliny's Natural History, together with the first thirty chapters of the 1st book of Columella, with the commentary of Schneider and others; the 2d book of Virgil's Georgics. With the remarks of Heyne, Voss, and the old grammarians; Galen, i., 9, and xii. 4; Pollex, vi., et seq.; Atheneus, lib. i. and lib. x.; besides which, there are a multitude of passages in other authors. Aside from the late observers, the celebrated authors in Caro, Varro, and in the classics generally, which bear more or less upon these topics.

VIUCURI. (Vid. QuatuorViVera Viles.)

*VIOLA (lov), the Violet. (Vid. Ion.)

VIRGA. dim. VIRGULA (javob), a Rod or Wand. This was in many cases the emblem of a certain rank or office; being carried, for example, by the Salii (vid. Anceus), by a judge or civil officer (see our cent., p. 61), a herald (vid. Catilina), and by the triclinarcha (vid. Triclinium), or any other person who had to exercise authority over slaves. The use of the rod (javobcnv) in the punishment of Roman citizens was abolished by the lex Porcia (p. 585). In the fasces a number of rods were bound together.

At times used to thrash the smaller kinds of grain, such as cummin. (Vid. Flagrum.)

The wand was also the common instrument of magical display, as in the hands of Circe and of Minerva. To do anything virgula divina was to do it by magic. The stripes of cloth were called virga. (Vid. VALLUM, p. 718; TELA, p. 955.)

VITRUM. (H. Adams, xvi.)

VITRUM. (Wilkinson, xxxvi.)

The glass of Plautus or Plautus the tribunus, appears to be the lex Plotia. There was a lex Julia of the dictator Caesar on this subject, which imposed the penalty of exile. Two Juliae lexes were passed at this in the matter in the time of Augustus, which were respectively entitled De Vi Publica and De Vi Pri
tata. The lex De Vi Publica did not apply, as the title seems to import, exclusively to acts against the public peace, and it is not possible to describe it very accurately except by enumerating its chief provisions. The collecting of arms (arma, tela) in a house (domus) or in a villa (agro in villa), except for the purpose of hunting, or going a journey or a voyage, was in itself a violation of the lex. The significance of the word tela in this lex was very extensive. The punishment for the viola-
tion of this lex was aque et ignis interdictio, except in the case of attacking and plundering houses or villas with an armed band, in which case the punish-
ment was death; and the penalty was the same for carrying off a woman, married or unmarried. Thus it can be seen that the lex De Vi Plotia, as long within the penalties of the lex Julia De Vi Privata are cases where the act was of less atrocity; for in-
stance, if a man got a number of men together for a riot, which ended in the beating of a person, but not in his death, he came within the penalties of the lex De Vi Privata. It was also a case of vis privata when persons combined to prevent another being brought before the praetor. The senators consulted by Volusianum extended the penalties of the lex to those who maintained another in his suit with the view of sharing any advantage that might result from it. The penalties of this lex were the loss of a third part of the offender's property; and he was also de-
clared to be incapable of being a senator or decurio, or a judex: by a senatus consultum, the name of which is not given, he was incapacitated from en-
joying honour, except inferius.

VIS et VIS ARMATA. There was an interdict De Vi et Vi Armata, which applied to the case of a man who was forcibly ejected from the possession of a piece of ground or edifice, quo vi dejectus est. The object of the interdict was to restore the party ejected to possession.2 (Vid. Interdic.tum.)

VISCHUM. (Vid. Vitis, p. 462.)

VISUM. (Vid. Vitis, xix.)

VITIS. (Vid. Centurio.)

*VITIS (vīteō), the Vine. According to Sprengel, the vitĕlōs ēcōs of Dioscorides is the Tavem communis; the ἄεκα, the Bryonia dioica; and the ἄλα, the Bryonia alba. In this account of them he copies from Doconeus. Stockhouse marks the first as the Vaccinum Vitis Idea; but Schneider doubts whether either of the plants referred to by Sprengel and Stockhouse apply to the description of it given by Theophrastus. Djerbach marks the ēcōs as being either the Bryonia dioica or Cretica. The vitĕlōs oivotōres is the Vitis vi
era, L.2 (Vid. Vīnum, at the commencement of the article.)

VITRUM. (vītrō), Glass. A singular amount of ignorance and skepticism long prevailed with regard to the knowledge possessed by the ancients in

4. (IGR. 89, 7.) — 5. (Dig. 45, tit. 16.) — 6. (Adam, Append., s. v. vītrō.)
presently told that it was dug in abundance out of the earth; and hence commentators have conjectured that rock-crystal, or rock-salt, or amber, or Oriental alabaster, or some bituminous or gummy product might be indicated. But when the same historian, in his account of sand crockeries, states that they were decorated with engravings made of melted stone (αμφοράματα τε λίθων χρυσοί και χρυσούς εἰς τὰ πεζούλια τοῖς πεζούλιος), we may safely conclude that he intends to describe some vitreous ornament for which he knew no appropriate name. The σφαῖρας βατύνων and σφαῖρας βατύνων of an Athenian inscription referred to B.C. 398, together with the passage in Aristophanes, where the envoy boasted that he had been drinking with the great king "ἐξ βατύνων κατατρυγούμενων," decide nothing, especially since in another comedy Strypiades describes a βαλόν, or burning-glass, as a transparent stone sold in the shops of apothecaries, and we know that any solid diaphanous substance ground into the form of a lens would produce the effect. Setting aside the two problems with regard to glass, attributed to Aristotle, as confessedly spurious, we at length find a satisfactory testimony in the works of his pupil and successor Theophrastus, who notices the circumstance alluded to above of the fitness of the sand at the mouth of the river Belus for the fabrication of glass.

Among the Latin writers Lucretius appears to be the first in whom the word vitrum occurs; but it must have been well known to his countrymen long before, for Cicero names it, along with paper and linen, as a common article of merchandise brought from Egypt. Scaurus, in his edilship (B.C. 58), made a display of it such as was never witnessed even in after-times; for the æxena of his gorgeous theatre having been burnt down, he ordered the entire lower portion of it to be made of marble, the upper of gilded wood, and the middle compartment of glass. In the poets of the Augustan age it is constantly introduced, both directly and in similes, and in such terms as to prove that it was an object with which every one must be familiar. Strabo declares that in his day every regard to glass, as well as that of the glassman, might be purchased at Rome for half an ass; and so it was in the time of Juvenal and Martial, that old men and women made a livelihood by teaching sulphur matches for broken fragments. When Pliny wrote, manufactories had been established not only in Italy, but in Spain and Gaul also, and glass drinking-cups had entirely superseded those of gold and silver, and in the reign of Augustus and Tiberius we find silicarii ranked along with curriers, coopers, jewelers, goldsmiths, silversmiths, and other ordinary artificers whom the emperor taxed to raise money for his revenues.

The numerous specimens transmitted to us prove that the ancients were well acquainted with the art of imparting a great variety of colors to their glass, but were probably less successful in their attempts to render it perfectly pure and free from all colour, since we are told by Pliny that it was considered most valuable in this state. It was wrought according to the different methods now practised, being fashioned into the required shape by the blowpipe, cut, as we term it, although generally ground (tincta), and sometimes decorated by the polisher, and engraved with a sharp tool like silver ("alivid latu figurato, alivid torno terminato, alivid argenti modo").

calcutra[note]). Doubts have been expressed touching the accuracy of the last part of this statement; but, since we have the most positive evidence that the diamond (adamas) was employed by engravers of gems, and might therefore have been applied with still greater facility to scratching the surface of glass, there is no necessity for supposing that Pliny was not himself aware of what he means to say, nor for twisting his words into meanings which they cannot legitimately assume, especially since hieroglyphics and various other devices are now to be seen on Egyptian vases and trinkets which have been engraved by some such process. The diatræa of Martial were glass cups cut or engraved according to one or other of the above methods. The process was difficult, and accidents occurred so frequently that the jurists found it necessary to define accurately the circumstances under which the workman became liable for the value of the vessel destroyed. The art of etching upon glass, now so common, was entirely unknown, since it depends upon the properties of fluoric acid, a chemical discovery of the last century.

We may now briefly enumerate the chief uses to which glass was applied.

1. Bottles, vases, cups, and cinerary urns. A great number of these may be seen in the British Museum and all the principal Continental cabinets, but especially in the Museo Borbonico at Naples, which contains 209 of them, and 640 of the same period at Capri, and includes upward of 2400 specimens of ancient glass. These sufficiently prove the taste, ingenuity, and consummate skill lavished upon such labours; many which have been shaped by the blowpipe only are remarkable for their graceful form and brilliant colours, while others are of the most delicate and most curious workmanship. A very remarkable object belonging to the last class, the property of the Trivulci family, is described in the notes to Winckelmann, and figured here. It is a glass cup contained within a sort of networ also of glass, to which it is attached by a series of short and very fine glass props placed at equal distances from each other. Round the rim are several letters connected with the cup in the same manner as the network, and forming the words Bia e Vivas Multos Anxox. The characters of the inscription are green, the network is blue, the cup itself resembles opal, shades of red, white, and blue, predominating in turn, according to the angle at which the light falls upon it. It was at first believed that this effect was the result of long interment beneath the ground; but it is much more likely to have been produced by the artist, for it corre-

VITTRA.

A for softens colo, (Vittae,) and, then, to make stones. (Plin., i., 21.)

Vasii, 31.-demand for porphyry was, as the number of cases, the marks of the wheel being still visible on the little props, which are more or less angular, according as the instrument was able to reach them completely or not. But the great triumph of ancient genius in this department is the celebrated Portland Vase, formerly known as the Barberini Vase, which is now in the British Museum. It was found about three hundred years ago, at a short distance from a Roman cemetery in a marble coffin, within a sepulchral vault, pronounced, upon very imperfect evidence, to have been the tomb of Alexander Severus. The extreme beauty of this urn led Montfaucon and other antiquaries to mistake it for a real sardonyx. Upon more accurate examination, it was ascertained to be composed of dark blue glass, of a very rich tint, on the surface of which are delineated in relief several minutes and elaborately wrought figures of opaque white enamel. It has been determined by persons of the greatest practical experience, that these figures must have been moulded separately, and afterward fixed to the blue surface by a partial fusion; but the union has been effected with such extraordinary care and dexterity, that no trace of the junction can be observed, nor have the relief or intaglio been received the slightest injury. With such samples before us, no reason need be found that in the time of Nero a pair of moderate-sized glass cups with handles (pteriō) sometimes cost fifty pounds (HS. sex milibus*). For a full description of the Portland Vase, see the eighth volume of the Archaeologia.

2. Glass pastes presenting fac-similes either in relief or intaglio of engraved precious stones. In this way have been preserved exact copies of many beautiful gems, of which the originals no longer exist, as may be seen from the catalogues of Stosch, of Tassie, of the Orleans collection, and from similar publications. These were in demand for the rings of such persons as were not wealthy enough to purchase real stones, as we perceive from the phrase, *vitrae gemmae ex vulgi annuis. 12 Large numbers of these rings are preserved, and bas-reliefs of considerable magnitude. 13

3. Closely allied to the preceding were imitations of coloured precious stones, such as the carbuncle, the sapphire, the amethyst, and, above all, the emerald. These counterfeits were executed with such fidelity, that detection was extremely difficult, and great profits were realized by dishonest dealers, who entrapped the unwary. 14 That such frauds were practised even upon the most exalted in station, is seen from the anecdote given by Trebellius Pollio of the whimsical vengeance taken by Gallienus 15 on a rogue who had cheated him in this way, and collections are to be seen at Rome of pieces of coloured glass which were evidently once worn as jewels, from which they cannot be distinguished by the eye. 16

4. One very elegant application of glass deserves to be particularly noticed. A number of fine stalks of glass of different colours were placed vertically, and arranged in a minute mosaic. The filaments thus combined were then subjected to such a degree of heat as would suffice to soften without melting them, and were thus cemented together into a solid mass. It is evident that the picture brought out upon the upper surface would extend down through the whole thickness of the little columns thus formed, and hence, if it was cut into thin slices at right angles to the direction of the fibres, each of these sections would upon both sides represent the design, which would thus be multiplied to an extent in proportion to the total length of the glass threads. Two beautiful fragments, evidently constructed in this way, are accurately commented upon by Winckelmann, 17 and another, recently brought from Egypt, is shown in the third volume of Winckelmann's work. Many mosaic pavements and pictures (opus musorum) belong to this head, since the cubes were frequently composed of opaque glass as well as marble; but these have been already discussed in p. 715 of this work.

5. Thick sheets of glass of various colours appear to have been laid down for paving floors, and to have been attached as a lining to the walls and ceilings of apartments in dwelling-houses, just as scagliola is frequently employed in Italy, and occasionally in our own country also. Rooms fitted up in this way were called *vitrea camerae, and the panels *vitrea quadrature. Such was the kind of decoration introduced by Cursus for the scene of his theatre, not columns nor pillars of glass, as some, or rather, that it must have their existence but the mode in which they were secured and arranged. 18 (Vid. House, Roman, p. 521.)

6. The question whether glass windows were known to the ancients has, after much discussion, been set at rest by the excavation at Pompeii; for not only have many fragments of flat glass been discovered from time to time, but in the tepidarium of the public baths a bronze lattice came to light, with some of the panes still inserted in the frame. It is probable that the earliest attempt at such windows was the first instance, which require constant care, and attain but imperfectly the end desired, was universal under the Empire. Respecting ancient mirrors, see Speculum.

7. A strange story with regard to an alleged invention of malleable glass is found in Petronius, 19 is told still more circumstantially by Dion Cassius, 20 and is alluded to by Pliny, 21 with an expression of doubt, however, as to its truth. An artist appeared before Tiburias with a cup of glass. This he dashed violently upon the ground. When taken up it was neither broken nor cracked, but dinted like a piece of metal. The man then produced a mallet, and hammered it back into its original shape. The emperor inquired whether any one was acquainted with the secret, and was answered in the negative, upon which the order was given that he should be instantly beheaded, lest the precious metals might lose their value, should such a composition become generally known.

VITTRA, or plural VITTAE, a riband or fillet, is to be considered, I. As an ordinary portion of female

---

dress. II. As a decoration of sacred persons and sacred things.
I. When considered as an ordinary portion of female dress, it was simply a band encircling the head, and hanging down behind.1 It was worn (1.) by maidens; (2.) by married women also, the vitta assumed on the nuptial-day being of a different form from that used by virgins.2

The vitta was not worn by libertines even of fair character,3 much less by meretrices; hence it was called «the innocent vitta, purer than a vestal wreath, and, together with the stola and insula, served to point out at first sight the freeborn matron.5

The colour was probably a matter of choice; white and purple are bothmentioned.6 One of those represented in the outs below is ornamented with embroidery, and they were in some cases set with pearls (vitta margaritarem).7

The following woodcuts represent back and front views of the heads of statues from Herculaneum, on which we perceive the vitta.8

II. When employed for sacred purposes, it was usually twisted round the infula (vid. Ixvulis), and held together the loose fleeces of wool.9 Under this form it was employed as an ornament for (1.) priests, and those who offered sacrifice.10 (2.) Priestesses, especially those of Vesta, and hence vittata sacranda for a vestal, ar' egive.11 (3.) Prophets and poets, who may be regarded as priests, and in this case the vitta were frequently intertwined with chaplets of olive or laurel.12 (4.) Statues of deities.13 (5.) Victims decked for sacrifice.14 (6.) Altars.15 (7.) Temples.16 (8.) The iexitaria of suppliants.17

The sacred vitta, as well as the infula, were made of wool, and hence the epithets lanae and maius.18 They were white (musa), or purple (punicea), or scarlet (carrucule), when wreathed round an altar to the manes 27

Vitta is also used in the general sense of a string for tying up garlands.13 and vitta loria for the leaves, straps or braces by which a machine was worked.24

ULMUS (πτέρυξ, the Elm, or Ulmus campestris, L. Few trees have enjoyed more of poetical ce-

UMBRACULUM.

Umbra. (Vid. Ulmus.)

UMBRA CULUM. UMBRELLA (σκιαδον, σκία-
dōn, σκιάδον), a Parasol, was used by Greek and Roman ladies as a protection against the sun. They seem not to have been carried generally by the ladies themselves, but by female slaves, who held them over their mistresses. The daughters of the aliens (μυρκος) at Athens had to carry parasols after the Athenian maidens at the Panathenaes, as it is mentioned under Hydriaphoria, p. 523. The parasols of the ancients had to be exactly like our own parasols or umbrellas in form, and could be shut up and opened like ours.1 They are often represented in paintings on ancient vases, the annexed woodcut is taken from Mill's Peintres de Vases Antiques, vol. i., pl. 70. The female is clothed in a long chiton or diplodium (vid. Tunic, 1093), and has a small himation, which seems to have fallen off her shoulders.

It was considered a mark of effeminacy for men to make use of parasols.3 The Roman ladies used them in the amphitheatre to defend themselves from the sun or some passing shower,4 when the wind or other circumstances did not allow the veltarium to be extended. (Vid. Amphitheatrum, p. 52.) To hold a parasol over a lady was one of the common attentions of lovers,4 and it seemed to have been very common to give parasols as presents.4 Instead of parasols, the Greek women, in later times, wore a kind of straw hat or bonnet, called φωλια.5 The Romans also wore a hat with a broad brim (petasus) as a protection against the sun.6 See Pacioli, de Umbelle gestatione, Rom., 1732.—Bec-
ker, Charitikes, ii., p. 73.

UNCIA (ὄψια, ὄψια, ὄψια), the twelfth part of the As or Libra, is derived by Varro from unita, and is the unit of the divisions of the as. Its value as a weight was 433.066 grains, or \( \frac{3}{2} \) of an ounce, and 105.36 grains avoirdupois. (Vid. Libra.) It was subdivided into

- 10 Sexte (siliquæ),
- 24 scrupula
- 144 siliquæ.

In connecting the Roman system of weights and money with the Greek, another division of the as was used. When the drachma was introduced into the Roman system as equivalent to the denarius of 96 to the pound (vid. Denarius, Drachma), the uncia contained 9 drachma, the drachma 3 scrupula, the scrupula 2 oboli (since 6 oboli made up the drachma), and the obolos 3 siliquæ (septaria). Therefore the uncia was divided into

- 8 drachmae, each = 54:208 grs.
- 24 scrupula = 18.069 gr
- 48 oboli = 9.034 gr
- 144 siliquæ = 3.011 gr

In this division we have the origin of the modern Italian system, in which the pound is divided into 12 ounces, the ounce into three drams, the dram into three scruples, and the scrupule into 6 carats. In each of these systems 1728 siliquæ (septaria) = 1 ounce, and 16 bars = 1 pound.

The uncial system was adopted by the Greeks of Sicily, who called their obol oltript (the Roman libra), and divided it into 12 parts, each of which they called ὀψια or ὄψια (the Roman uncia). (Vid. Litra.) In this system the ὀψια was reckoned equal to the χαλκῆς.

Müller considers that the Greeks of Sicily, and also the Romans themselves, obtained the uncial system from the Etruscans.

The Romans applied the uncial division to all kinds of magnitude. (Vid. As.) In length the uncia was the twelfth of a foot, whence the word inch (vid. Pes); in area, the twelfth of a jugeram (vid. JUGERUM); in content, the twelfth of a sextarius (vid. Sextarius, Cyathus, Xestes); in time, the twelfth of an hour. (Vid. As, sub jn.)

UNGUENTA. ointments, oils, or salves. The application of unguenta, in connexion with the bathing and athletic contests of the ancients, is stated under Bathis and Athletike, &c. But, although their original object was simply to preserve the health and elasticity of the human frame, they were later times used as articles of luxury. They were not only employed to impart to the body or hair a particular colour, but also to give to them the most beautiful fragrance possible; they were, moreover, not merely applied after a bath, but at any time, for on this account it is said that their presence was more pleasant than usual. In short, they were used then as oils and pomatums are at present. The numerous kinds of oils, soaps, pomatums, and other perfumes with which the ancients were acquainted is quite astonishing. We know several kinds of soaps which they used, though, as it appears, more for the purpose of painting the nails than for cleaning it. For the same purpose they also used various kinds of perfumes. Among the various and costly oils which were partly used for the skin and partly for the hair, the following may be mentioned as examples: mende- sium, melegasium, metopium, ammaracium, Cypri- num, sasnum, sasnum, iasnum, iasnum, rosaeum, and crocuum oil, which was considered the most costly. In addition to these oils, the ancients also used various kinds of powder as perfumes, which, by a general name, are called diaphor. To what extent the luxury of using fragrant oils and the like was carried on, may be inferred from Seneca, who says that people anointed themselves twice or even three times a day, in order that the delicate fragrance might never diminish. At Rome, however, these luxuries did not become very general till towards the end of the Republic, while the Greeks appear to have been familiar with them from early times. The wealthy Greeks and Romans carried their ointments and perfumes with them, especially when they bathed, in small boxes of costly materials and beautiful workmanship, which were called narthecia. The traffic which was carried on in these ointments and perfumes in several towns of Greece and southern Italy was very considerable. The persons engaged in manufacturing them were called the Romans unguentarii, or, as they frequently were women, ungentariata, and the art of manufacturing them ungentaria. In the wealthy and effeminate city of Capua there was one great street called the Sepalsia, which consisted entirely of shops, in which ointments and perfumes were sold.

A few words are necessary on the custom of the ancients in painting their faces. In Greece this practice appears to have been very common among the ladies, though men also had sometimes recourse to it, as, for example, Demetrius Phalerus. But, as regards the women, it appears that their retired mode of living, and their sitting mostly in their own apartments, deprived them of a great part of their natural freshness and beauty, for which, of course, they were anxious to make up by artificial means. This mode of embellishing themselves was probably applied only on certain occasions, as when they went out, or wished to appear more charming. The colours used for this purpose were white (φυσιόθονος, cerasus) and red (γυναίκα or γυναίκα, παιδ- ος, πακύμνοι, or φίλλοι). The eyebrows were frequently painted black (μελαις, ἀπόδελτοι, or στιμομελαις). The manner in which this operation of painting was performed, is still seen in some ancient works of art representing ladies in the act of painting them- selves. Sometimes they are seen painting themselves with a brush, and sometimes with their fingers.

The Romans, towards the end of the Republic and under the Empire, were no less fond of painting themselves than the Greeks. The red colours used at Rome were those of Cinnabar, which was obtained from a kind of moss which the Romans called fucus (the rocella of Linnaeus), and from which afterward all
civilians as opposed to the municipia, which appears from a passage in the Digest, where it is stated that an action for duols will not lie against the municipia, for a fictitious person cannot be guilty of duols, but such action will lie against the individual decuriones who administer the affairs of the municipia. Sometimes the word curia is used as equivalent to civitas, and sometimes the decuriones are spoken of as a juridical person, which has property, the right of property, and self-existence, but are attached to some respublica, yet they are juridical persons, can hold property, and maintain suits. 3. Fora, concilia, castella. These were places between civitates and vicis as to extent and importance; they belonged to a respublica, but had the rights of juridical persons: they are similarly as 2. Vicis, which have no political connection, but the names occur in the Tablet of Herodotus in the lex Galliae Cisalpiniae, and in Paulus. In the later period of the Empire, provinces were viewed as juridical persons.

In the writings of the agrimensora, communitias, and particularly coloniae (colonii), are designated by the appropriate name of publicae personae. The line is thus:

1. Religious bodies, as collegia of priests and of the vestal virgins, which could hold property and take by testament

2. Vicis, such as Rome, which were employed in administration: the body of scribae became one of the most numerous and important, as they were employed in all branches of administration; the general name was scriba, a word which includes the personal names of librari, fascales, and others; they were divided into subdivisions called decuriae, a term which, even under the Republic and also now for the Empire, it can represent the corpora of scribae; the individual members were called decurii, and subsequently decuriae; the decuriae had great privileges in Rome, and subsequently in Constantinople.

3. Associations for trade and commerce, as fabri, podestas, and others, the individuals of which had a common profession, and who united for this purpose: they were denominated the corporations of scribae; the individual members were called decurii, and subsequently decuriae; the decuriae had great privileges in Rome, and subsequently in Constantinople. 

4. Associations properly included under societies, as corporations for effecting a common object (vid. Societates): such associations could be dissolved by the notice of any member, and were actually dissolved by the death of a single member. Some of these associations, such as those for working mines, salt, and farming the portoria were corporate bodies, and retained the name of societies. 4. Associations, called sodalitiae, sodalitia, collegia sodalitas, which resembled modern clubs. In their origin they were friendly associations for feasting together; in course of time many of them became political associations, but from this we must not conclude that the true and real corporate bodies were associations not included in any other class that has been enumerated, but they differed in their character according to the times. In periods of commotion they became the central points of political factions, and new associations, it may be reasonably supposed, would be formed expressly for political purposes. Sometimes the public places were crowded by the sodalitia and decuriae, and the senate was at last compelled to propose a lex which should subject to the penalties of those who

1. (4, tit. 3, c. 15).—2. (S. R., 4, tit. 6, c. 2)—3. (Civ. in Verr. ii., 79.—Id. ad Qunt. Fratr., ii. 3.—Tact., Ann. xiii., 27.—Suid., Aug., 97.—Id., Clavd., 1).—4. (Civ. ad Qunt. Fratr. a., 9.)

kinds of paint were called fumus. Another general term for paint is creta. For embellishing and cleaning the complexion, the Greeks as well as the Romans used a substance called aspium (vid. the comment on Suidas, s. v. Olspq), which was prepared of the wool taken from those parts of the body of a sheep in which it perspired most. Another remedy, often applied for similar purposes, consisted of powdered excrement of the Egyptian crocodiles. 1. Respecting the subject, which was mentioned, and also every thing connected with the toilet of the ancients, see Bütting, Sabina oder Morgenachen in Putszimer einer reichen Römerin, Leipzig, 1806, 2 vols. 2. Unguentaria. (Vid. Unguenta.)

1. (Horat., Plin., i. c.)—2. (Dig. 50, tit. 1, c. 95.)

3. Of the jurisdiction of persons, it is often said in the juristic literature which is called jurisprudentia, that the jurist, or a number of things, or a number of rights. In the case of a number of things viewed as a universitas, it is indifferent whether the parts are corporally united or not; or whether the corporeal union, if it exists, is natural or not.

A single person only can properly be viewed as the subject of rights and duties; but the notion of juristic person, in the modern sense, is a number of persons, who are considered as a single person for legal purposes, and may, accordingly, be called juridical persons, or persons existing merely by virtue of legal fiction. Thus the "hereditas" is said by the Roman jurists "persona vice fungi," like a municipality, decuria, or societas: the bonum possessor is in loco hereditatis, 1 and a fiction here, so a juridical person is a fictitious person. As persons, however, so constituted, such juridical persons have legal capacities, as individuals have; but their legal capacities are limited to property as their object. It is true that the Romans often considered other persons as a collective unity: thus they speak of the collegium of the consuls (vid. Coli.egium) and of the triumvir publicus. In like manner, they say that the summi viri of a municipium are to be viewed as one person. 2 But these fictitious unities have only reference to jus publicum, and they have no necessary connexion with juridical persons, the essential character of which is the capacity to have and acquire property. Juridical persons could be subjects of ownership, juridical capacity, and having estates in land and slaves, and have the patronatus; but all the relations of familia, as the patria potestas and others of a like kind, were foreign to the notion. But, though the capacity to have property is the distinguishing characteristic of juridical persons viewed with relation to jus privatum, the objects for which the property is had and applied may be any, and the capacity to have property is a purpose for which it is had, which is often much more important than this mere capacity. But the purposes for which juridical persons have property are quite distinct from their capacity to have it. This will appear from all or any of the examples hereinafter given.

The following are juridical persons: 1. Civitas. 2. Municipium: this term is more common than municipium, and comprehends both citizens of a municipium and a colony: it is also used when the object is to express the municipium as a whole, opposed to the individual members of it. 3. Respublica. In the republican period, when used without an adjunct, Respublica expressed Rome, but in the old jurists it signifies a civitas dependent or on Rome. 4. Respublica civitatis or municipii. 5. Commune, communitiae. Besides the civitates, component parts of the civitates are also juridical persons: 1. Curiae or necuniones: the word necuniones often denotes the individuals composing the body of de[,]
VOCONIA LEX

VOCONIA LEX was enacted on the proposal of Q. Voconius Saxa, a tribunus plebis. In the "De Senectute" of Cicero, Cato the elder is introduced as saying that he spoke in favour of the lex when the"deception of Cæpio and Philippus (B.C. 169). Gellius also speaks of the oration in which Cato recommended this lex.

One provision of the lex was, that no person who should be included in the census, after the census of that year (post eos censores; the censores of that year were A. Posthumius and Q. Fulvius), should make his will in favour of his wife or other female (corpus, testamentum). Cicero does not state that the lex fixed the census at any sum; but it appears from Gausius and from Dion Cassius, that a woman could not be made heirs by any person who was rated in the census at 100,000 sesterces (centum militia ari), though she could take the hereditas per fideicommissum. The lex allowed no exceptions even in favour of an only daughter. The lex only applied to testaments, and therefore a daughter or other female could inherit ab intestato to any amount. The vestal virgins could make their heredes in all cases, which was the only exception to the provisions of the lex.

If the terms of the lex are correctly reported by Cicero, a person who was not census might make a woman his heirs, whatever was the amount of his property, and so Cicero understands the lex. Still there is a difficulty about the meaning of census. If it is taken to mean that a person whose property was above 100,000, and who was not included in the census, could dispose of his property as he pleased by testament, the purpose of the lex would be frustrated; and farther, "the not being included in the census" (necesse census esset) seems rather vague. Still, according to the terms of the lex, any person who had ever been included in the census would be affected by this legal incapacity. Sometimes it is assumed that this last census is meant. The Edict extended the rule of the Voconia lex to the bonorum possessio.

Another provision of the lex forbade a person who was census to give more in amount in the form of a legacy, or a donation mortis causa, to the female heirs, if any of his male heirs were "census." Cicero speaks of what he has said as unnecessary. The lex was applied to endowments by a testator to give a woman more than half of his property by way of legacy; and it appears from Cicero that the lex applied to legacies (de mulieris legatis et heredibus).
VOLONES.

Quintilian states that by the lex (Voconia) a woman could not take by testament more than half of a person's property; but Quintilian says nothing of the provisions of this lex, which incapacitated women altogether from taking under a will in certain cases, and in the passage referred to he is speaking of two women being "heredes of a property in equal shares. The dispute between the cognati and the "two women turned on the words of the lex, "in iucat mulieres plus quam dimidiam partem bonorum suorum relinquere." The cognati contending that the lex did not allow the whole property to be left to two women in equal shares, though it was admitted that if half of the property had been given to one woman, there would have been no ground for dispute. It is quite consistent that the lex might have allowed a woman to take half of a man's property in certain cases, and in others to take none, though the object of the lex, which was to prevent large properties from coming into women's hands, would have been better secured by other provisions than those of the lex as they are known to us; for it appears from Quintilian that a woman might take by will one half of as many properties as there were testators. It might be conjectured that the clause of the lex which forbade a woman being made heres signified sole heres, and then the clause which forbade her taking more than half of the estate. It is clear only that the lex was founded on the idea of the lex, 

The case of Fadius, mentioned by Cicero, shows that there was a provision in the lex by which in certain cases at least, a woman might take something; and it also shows that the lex prevented a man from making even his own daughter sole heres.

According to Gaius and Pliny, the provisions of the Voconia lex were in force at the time when they were writing, though Gellius speaks of them as being either obsolete or repealed. The provisions of the lex Julia et Papia Poppea may have repealed some of the clauses of the Voconia lex.

The subject of the Voconia lex is one of considerable difficulty, owing to the imperfect statements that remain of its contents and provisions, which were probably numerous. The chief modern authorities on the matter are referred to by Rein; but the writer has not had the opportunity of consulting any of them.

VOLONES is synonymous with voluntarii (from solo), and might hence be applied to all those who volunteered to serve in the Roman armies without there being any obligation to do so. But the word was more especially applied to slaves, when, in times of need, they offered or were allowed to fight in the Roman armies. Thus when, during the second Punic war, after the battle of Cannae, there was not a sufficient number of freemen to complete the army, about 8000 young and able-bodied slaves were offered to serve. Their proposal was accepted; but when they received armour at the public expense, they were divided among the branches. In after times the name Volones was retained whenever slaves chose or were allowed to take up arms in defence of their masters, which they were the more willing to do, as they were generally rewarded with the franchise.

VONITIORIA. (Vid. Amphitheatrum, p. 68.)

VULPEJS (diurjyos), the Fox, or Cusa Vulpes, L. It is also called napejo by Oppian and by Aristophanes, in a metaphorical sense.

URAGUS. (Vid. Arm. Roman, p. 104.)

URNINA, an urn, a Roman measure of capacity for fluids, equal to half an amphora. This use of the term was probably founded upon its more general application to denote a vessel for holding water, or even as a name of a household pot.

An urn was used to receive the names of the judges (judices), in order that the praeator might draw out of it a sufficient number to determine cases; also to receive the ashes of the dead.

URAGUS. (Vid. Buto; F unus, p. 460.)

USUCAPIO. The history of usucapio is an important fact in the history of Roman jurisprudence. Gaius states that there was originally in Roman law a right of first refusal or usucaipio, which was the right of the owner of a thing ex juris Quiritium, or he was not owner at all. But afterward ownership was divided, so that one man might be owner ex juris Quiritium, and another might have the same thing in bonis, that is, have the right to the exclusive enjoyment of it. He then goes on to give an instance of the mode in which one might establish his usucaipio by reference to the transfer of a res mancipi: if such a thing was transferred by bare tradition, and there was neither mancipatio nor in jure censio, the new owner only acquired the natural ownership, as some would call it, or only had it in bonis, and the original owner retained the Quiritarian ownership until the purchaser acquired it. In some cases, a usucaipio was considered at law, a usucaipio; for when the usucapio was completed, the effect was the same as if the thing had been originally mancipated or transferred by the in jure censio. Gaius adds, "in the case of movable things, the usucapio is completed in a year, but in the case of a fundus or alae, two years are required; and so it is provided by the Twelve Tables."

In this passage he is evidently speaking of res mancipi only, and of them only when transferred to the purchaser by the owner without the forms of mancipatio or in jure censio. From this, it might be safely concluded that the Twelve Tables provided a remedy for defective modes of conveyance, when the owner was in the bona fide, this being all that could be concluded from this passage. But a passage which immediately follows shows that this was all that the Twelve Tables did; for Gaius proceeds to say, "But (estem) there may be usucapio even in the case of those things which have come to us by tradition from a person who was not the owner, whether they are res mancipi or not, provided that the owner delivered them from the bona fide, believing that he who delivered (qui tradiderit) them to us was the owner. And this rule of law seems to have been established, in order that the ownership of things might not be long in uncertainty, seeing

2. (Oppian, Cyngse, 3, 450; Aristoph. Eq., 1005. — Adanu, lpf., s. v.) — 3. (Hor., Sat., 1, 54.) — 4. (Plut., Perikles, i., 38.) — 5. (Opp., Caru, iii, 1, 16; Virg., Ene., i., 432.) — 6. (Opp., Epi, iii, 5.) — 7. (Ibid., 46.)
USUCAPIO.

that one or two years would be quite sufficient for the owner to look after his property, that being the time allowed to the possessor for usucapio.

The reason for limiting the owner to the two years has little reason in it, and possibly no historical truth; but it is clear from this passage that this application of the rule of usucapio was formed from analogy to the rule of the Twelve Tables, and that it was not contained in them. The limitation of the time of usucapio is clearly due to the Twelve Tables, and the time applied only to purchases of res mancipi from the owner when the legal forms of conveyance had been neglected. But the origin of usucapio was probably still more remote.

When Gaius states that there was originally only one kind of ownership at Rome, and that afterward ownership was divided, he immediately shows how this arose by taking the case of a res mancipi. This division of ownership rested on the division of things into res mancipi and res nec mancipi, a distinction that had reference to nothing else than the mode of transferring the property of them. Things were merely called res mancipi because the ownership of them could not be transferred without mancipatio. Things were res nec mancipi, the alienation of which could be effected without mancipatio. There could be no division of things into mancipi and nec mancipi except by determining what things should be res mancipi. Hence mancipi are transferred negatim, that is, by all things that were not res mancipi; but the negative determination presupposes the positive; therefore res mancipi were determined before res nec mancipi could be determined; and before the res mancipi were determined, there was no distinction of things into res mancipi and res nec mancipi. But this distinction, as such, only affected the condition of those things to which it had a direct application: consequently, all other things remained as they were before. The conclusion, then, is certain, that the res mancipi, as a class of things, were anterior, in order of time, to the class of res nec mancipi, which comprehended all things except res mancipi. Until then, the class of res mancipi was established. All property at Rome could be alienated by bare tradition, as res nec mancipi could be alienated by lation after the class of res mancipi was constituted.

The time when the class of res mancipi was formed is not known; but it is most consistent with all that we know to suppose that it existed before the Twelve Tables. If we consider the forms of mancipatio (vid. MANcipatio), we cannot believe that they arose in any other way than by positive enactment. As soon as the forms of mancipatio and of the in jure cession (which, from its character, must be posterior to mancipatio) were established, it followed that mere tradition of a thing to a purchaser and payment of the purchase-money could not transfer the ownership of a res mancipi. The transfer gave the purchaser merely a posses-sio, and the original owner retained the property. In course of time, the exception obtain occasioned action, and from this time it might be said that a double ownership existed in the same thing.

The introduction of mancipatio, which gave rise to the double ownership, was also followed by the introduction of usucapio. The bona fide possessor of a res mancipi which had not been transferred by mancipatio, had no legal defence against the owner who claimed the thing. But he had the exception de rei vendita et tradite, by which he could protect himself against the owner; and as possessor simply, he had the protection of the interdict against third persons. He had the full enjoyment of the thing, and lie could transfer the possessio, but he could do no act with respect to it for which Quiritarian ownership was necessary; consequently, he could not alienate it by mancipatio or in jure cession, and it was a necessary consequence that he could not establish testament in the same way in which Quiritarian ownership was disposed of by testament. The necessity for such a rule as that of usucapio was evident, but it could arise in no other way than by positive enactment, for its effect was to be the same as that of mancipatio. The Twelve Tables fixed the term of usucapio, but we do not know whether they fixed or merely confirmed the rule of law as to usucapio.

It is a mistake to suppose that tradition or delivery was a part of mancipatio as such. Mancipatio was merely a form of transferring ownership which was fixed by law, and the characteristic of which was publicity; a delivery of the thing would of course generally follow, but it was not part of the transfer of ownership. Land (præmium, for instance, could be mancipated without delivery (in absente mancipari soleri). In the case of movable things, it was necessary that they should be present, not for the purpose of delivery, but that the thing mancipated might be identified. The essential to the transfer of ownership in all ages and in all countries is the consent of two persons who have legal capacity to consent, the seller and the buyer. All the rest is accessory. Consent is the essence of ownership, which is not in itself the usucapio.

Besides the case of property there might be usucapio in the case of servitutes, marriage, and hereditas. But as servitutis prediorum rusticorum could only be the objects of mancipatio, and as being parts of ownership could only be established by the same form by which ownership of res mancipi was transferred, so, according to the old law, these servitutes alone could be the object of usucapio; and, as it is contended by Engelbach, only in the case of aqueductus, habustus, iter, and actus. But as the ownership of res mancipi could be acquired by bare tradition followed by usucapio, so these servitutes could be established by contract, and could be fully acquired by usucapio. In the later Roman law, when the form of mancipatio was replaced by mere tradition, servitutes at first existed per pacta et stipulatio only. In the case of a marriage coeminent, the form of mancipatio was used, and the effect was, that the woman came into the hand of her husband, and became part of his familia. The marriage usu could not of itself effect this, but if the woman lived with her husband a year, she passed into his familia by usucapio (velut annus possessione usus ac factis), and, accordingly, it was provided by the laws of the Twelve Tables that if she did not wish thus to come into her husband's hand, she must in every year absent herself from him for three nights in order to interrupt the nusus. Thus

1. (Ulp. Frag., 29, tit. 6.—Gains, i., 121.)—2. (Engelbach, Uber die Usucapie, &c., p. 60.)—3. (Gauss, i., 110.)
usucapiō added to usus produced the effect of coempiō. In the case of the hereditas, when the testator had the testamenti fació, and had disposed of his property without observing the forms of mancipiō and nuncipatō, the person whom he had named his heirs could only obtain the legal ownership of the hereditas by usucapiō. In all these cases, then, the old law as to usucapiō was this: when the positive law had required the forms of mancipiō, the usucapiō supplied the defect, by converting a mere possessio (subsequently called in bonia) into dominium ex jure Quiritario. This, therefore, was not originally a mode of acquisition, but it was the defect in the mode of acquisition was supplied, and this defect was supplied by the use of the thing, or the exercise of the right. The end of usucapiō was to combine the beneficial with the Quiritarian ownership of a thing. Accordingly, the term usucapiō meant usus in auctoritās, the auctoritās of mans, or that which gives to usus incapaci and completeness, a sense of auctoritās which is common in the Roman law. (Vid. Auctoritās, Tutela.) But usus alone never signifies usucapiō; and consistently with this, in those cases where there could be no usucapiō, the Roman writers speak of usus only. Possessio is the usus of a piece of ground, usufruct of usufructus, but usucapiō was the ownership of a thing, and the term usus was applied to the enjoyment of any thing which a man either had not the ownership of, or of which he could not have the ownership, as the ager publicus. In the later law, as it is known to us in the Pandect, usufructus was a mode of acquiring ownership, the term usus auctoritās was replaced by the phrase usus cuique caper, and in the place of usucapiō sometimes the phrase "possessio or longa possessio caper" occurs; but possessio alone never is used for usucapiō.

It appears from a passage of Gaius already quoted, that in his time usufructus was a regular mode of acquisition, which was applicable to things which had come to a man by tradition from one who was not the owner, and was applicable both to res emendi and rei mancipi, if the possessor possessed it bona fide, that is, if he believed that he received it from the owner. There were, however, some exceptions to this rule: a man could never acquire the ownership of a stolen thing by usufructus, for the Twelve Tables prevented it, and the lex Julia or Plautia prevented usufruct which was the case of a thing stolen in Roman territory, unless it was proved in a court of law that the thief or the robber did not acquire the ownership of usufructus, for, the malā fās in which their possession originated was an obstacle to the usufructus; but no person who bona fide bought the thing that was stolen or vi possesso, could acquire the ownership by usufructus. According to other authorities, the rule as to a stolen thing was established by the lex Atinia. Provincial lands were also not objects of usufructus.

If a woman was in the tutela of her agnati, her res mancipi might not be the objects of usufructus, unless they had been received from her by traditio with the auctoritās of her tutor; and this was a principle of the Twelve Tables. To obtain the legal ownership of the usufructus to transfer ownership by mancipiō must be the origin of this rule. The hereditas of a woman who was in tutela legitima could not be an object of usufructus, as Cicero explains to Atticus (de tutela legitima nihil usucapiō posse). The foundation of this rule, according to some, was the legal incapaci of a woman who was in the tutela of her agnati, to usufructus (Vid. Testamentum; but see the article Tutela.)

In order to acquire by usufructus, a person must...

1. (Gaius, ii, 45.)—2. (ad Att., i, 15.)
USUCAPIO.

Quiritian ownership of the thing remanicipatio was necessary; but if the thing was transferred to him by traditio, the remanicipatio was completed by usucapio, or, as it is here called, by usucapeto: for usucapio differs in no respect from usucapio, except that the person who acquires the Quiritian ownership by usus, in the one case acquires (capit), in the other reacquires (recipit) the thing. In the case of a pigmated thing, the debtor's capacity to recover by usucapio was the same as in the case of fiducia, as soon as he had paid his debt to the creditor: and even if he had not paid the money, and had obtained possession of the thing neither by hiring it from the owner, as in the case of usucapio, nor by usucapio, which was a usucapio, and was probably formed from analogy to the lucrative usucapio pro herede.

Servituties praediorum rusticorum were established, at least according to the old law, by mancipatio; the right to the servituties could only be properly extinguished by a mancipatio. If the servitus was extinguished by mere agreement, there must be a usuiraeceptio on the part of the owner of the servitutus, in order to complete its legal release from the servitus. In order that the possession of the libertas of the servient land might be enjoyed uninterruptedly for two years, there must be for the same time a total abstinence from all exercise of the right on the part of him who had the servitus. Subsequently, it was considered sufficient if the person to whom the servitus did not exercise his right for two years.

When usucapio was established as a means of giving the Quiritian ownership to him who had acquired a thing in bonis, the form of mancipatio must have gradually lost its importance, and usucapio came to be viewed as a mode of acquisition. Accordingly, it has been already observed, it became applicable to all cases of bona fide possession, whether the thing was a res mancipi or not. Formerly, if a will had been made in due form, except as to mancipatio and noncoopation, the heirs acquired the hereditas by usucapio; but with the introduction of the prætorian testament (œd. TESTAMENTUM) and the bot orum possessio, the bonorum possessor obtained the right to actions fæcundas or utiles in all cases where the deceased had a right of action, and he acquired by usucapio the Quiritian ownership of the several things which were included in the hereditas. In course of time, it came to be considered by the jurists as a rule of law that there could be no usucapio of an hereditas. In like manner, in the case of servituties established by contract, the introduction of the actio publiciana rendered the doctrine of usucapio unnecessary, and a Scribonia lex is mentioned which repealed all usucapio of servituties. But this lex only applied to the establishment of servituties; it did not affect that usucapio by which the freedom of a servient piece of land was effected. It became a maxim of law: servituties praediorum rusticorum non utendo ammittuntur, which, viewed with respect to the servient land, was a usu-receptio. In this sense "usurpata receptiur" seems to be used in a passage of Paulus. Usurpation is commonly used in the sense of "uti," and in this passage of Paulus "usurpata receptiur" seems equivalent to "usu receptur," though this is not the meaning that has usually been given to this passage.

In the case of marriage, also, usucapio fell into usage, as we learn from Gaius. But in other respects usucapio subsisted. He who had acquired a res mancipi by tradition, had now a proprietary ownership, and he had a right of action in respect of this ownership, which was analogous to the rei vindicatio. But usucapio was still necessary to give him Quiritian ownership and its consequent advantages. The distinction between res mancipi and res mancipi existed, and, as a consequence, the testamentum per es et libram subsisted at the same time with the praetorian testament.

When finally, all distinction was abolished between res mancipi and res mancipi, and the ownership of all things could be acquired by traditio and occupatio, that kind of usucapio ceased by which a thing in bonis became a man's ex jure Quiritium. All other forms of usucapio continued, and its general definition became "adjectio dominii per cunctationem possessionem temporis leges definita." From this time the terms usuapio and longi temporis prescription were used indifferently, as some writers suppose, though on this point there is not uniformity of opinion.

(Engelbach, Ued. die USUCAPIO zur zeit der Zwölf Tafeln, Marburg, 1892. — Mahlenbruch, Doctrin. Pendent. § 561, &c. — Ued. die USUCAPIO, pros herede von Arnüts, Rhein. Mus. für Jurisprudenz, ii., 125.)

USURAE. (vid. Interest of Money, p. 546.)

USURPATIO. One sense of this word is "usu- capiens interruptio." Appius Claudius, not the decennvir, but he who made the Appius Via, and brought the Aqua Claudia to Rome, wrote a book De Usurpationibus, which was not extant in the time of Pompeius. In some cases "usurpation" means the preservation of a right by the exercise of it, as "jus usurpation," in the case of a servitus aequae decen- dae; and this nearly agrees with that sense of usurpare which is equivalent to uti. (vid. USUCAPIO.)

USUS. (vid. Marriage, roman, p. 623.)

USUSFRUCTUS and USUS were personal servituties. Ususfructus is defined to be "jus alienus rebus utendi fruendi salvo rerum substantia." Accordingly, ususfructus comprehended the "jus utendi" and the "jus fruendi." Usus comprehended only the "jus utendi." The complete distinction between ususfructus and usus will only appear from a statement of what each is.

A usus was the right to the enjoyment of a thing by one person, while the ownership belonged to another. It could be established by testament, as when the heres was required to give to another the ususfructus of a thing; and it could also be established by contract between the owner of a thing and him who contracted for the ususfructus. He who had the ususfructus was ususfructuarius or fruiterius, and the object of the ususfructus was res frutaria.

There might be ususfructus both in predia rustica and urbana, in slaves, beasts of burden, and other things.

If the ususfructus of a thing was bequeathed to a person, all the "fructus" of the thing belonged to the fruiterius during the time of his enjoyment. Consequently, if the ususfructus of a piece of land was given to him, he was entitled to collect and have for his own all the fructus that were already on the land, and all that were produced on it during the time of his enjoyment; but as he only acquired the ownership of the fructus by collecting them, he was not entitled to fructus which existed on the land at the time when his right ended, and which he had not collected.

He was bound not to injure the land, and he was bound to cultivate it properly. As to quarries and

1. (Dig. 41, tit. 3, s. 2., "De Usurpationibus et Usucapio boni." — 2. (Dig. 41, tit. 3, s. 2.) — 3. (Dig. 1, tit. 3, s. 30.) — 4. (Dig. 5, tit. 1, s. 1.)
mines, he could work them for his benefit, if he worked them properly (quasi bonus paterfamilias). It, after the bequest of the usufructus, minerals were found on the land, he could work them. He could be compelled to plant new trees in the place of those which died, and generally to keep the land in good condition. If the usufructus was of edes, the fructuarius was entitled to all the rents and profits which he received during the time of his enjoyment. He could be compelled to keep a house in repair, but it seems to be doubtful how far he was bound to rebuild the house if it fell down from decay: at any rate, he was liable for all moderate and reasonable expenses which were necessary for the maintenance of the property.

The fructuarius could not alienate the right to the usufructus, though he might give to another the usus of his right; and he might surrender the right to the usufructus to the owner of the thing. He could not subject the thing to servitudes; nor could the owner do this, even with the consent of the fructuarius. The fructuarius could make such changes or alterations in the thing as would improve it, but not such as would in any way deteriorate the thing. Consequently, he had greater power over cultivated land than over houses or pleasure-grounds, for a part of the value of houses or pleasure-grounds, and things of the like kind, consists in opinion, and must be preserved, and his rank, wealth, and peculiar disposition of the owner.

The fructuarius could maintain or defend his rights by action and by interdicts. On the completion of the time of the usufructus, the thing was to be restored to the owner, who could generally require securities from the fructuarius both for the proper use of the thing and for its restoration in due time. This was usually done by positive enactments, and in other cases by agreement; but it could not be dispensed with by testament.

Originally there could be no usufructus in things unless they were things corporeal, and such as could be restored entire when the time of usufructus had expired. But by a senatus consultum of uncertain date there might be quasi usufructus of things which were consumed in the use, and in this case the fructuarius in fact became the owner of the things, but was bound to give security that he would either restore as much in quantity and value as he had received, or the value of the things in money. It is generally supposed that this senatus consultum was passed in the time of Augustus, and a passage of Cicero1 is alleged to show that it did not exist in the time of Cicero: "Non debet ea mulier, cui servitus sumus usufructum legavit, cellis vinariae et olearia plenis relictis, putare id ad se pertinere. Usus enim non ab usu legatur." The only difficulty is in the words "id ad se pertinere," which are usually translated "those things (the cellae vinariae &c.) are yours of your usufructus," from which it is inferred that there was at that time no usufructus in things which were consumed in the use. But if this is the sense, the words which follow, "for the usus, not the abusus (power to consume), is the object of the legacy," have no clear meaning. These words simply signify that a usuus is given, not an abusus; but this does not prove that there was not at least a quasi usufructus, at least a quasi usufructus, for the phrase "non abusus ad usufructum," which exactly corresponds to the phrase in Cicero, does not mean "that the thing is an object of usufructus," but that "it does not belong to the usufructus." In the Digest2 the question is, whether the young child of a female slave belongs to the usufructus (en partus ad usufructum), and it is answered in the negative, with the following explanation: "usu fructus in usu fructuarius habet..." The passage of Cicero, therefore, will mean, that wine and oil in the testator's possession are not given to her by a bequest of the usufructus of his property, for it is usuus, that is, the enjoyment of the property, which is given, and not "abusus," or the power to consume things. In other words, the testator gives the woman a usufructus in all his property, that is, a right to gather the fruits, but he does not give the wine and oil, which are fruits already gathered, to the woman to be her property, as if she had gathered them during her usufructus. The usufructus does not necessarily signify that there could be "abusus" only in the case of things "qua usu consumuntur:" he says that in the place of wine and oil Cicero might have given the young of animals, as an example, without altering his expression. If this interpretation is correct, Puchta contends that the senatus consultum as to quasi usufructus is older than the time of Cicero. But, in truth, the senatus consultum does not apply to the case under consideration, which is simply this, whether a gift of usufructus is a gift of the fructus that are already gathered; and Cicero says that it is not, for it is usuus which is given, that is, usufructus, or the right of gathering the fruits, and not abusus, which implies the right to the use and enjoyment of the fruits. If these things were given, the woman's power over all the property of the testator, including the wine and oil, would have been unlimited; but as abusus was not given, and as usufructus implies the gathering of the fruits by the fructuarius, the enjoyment of the fruits already gathered could not belong to her. The argument goes, the fructuarius may not have the abusus of a quasiusufructus in his time; so far as his argument goes, the quasiusufructus might have existed or might not have existed. The interpretation of Puchta is correct, but his conclusion is not certain. In addition to this, it does not appear that senatus consultum were made on such matters as those relating to the law of property before the imperial period.

Usus is defined3 by the negation of "frui:" "cum usu relictus est, usui potest, frui vero non potest." The title of the Digest above referred to is "De Usu et habitacione," and the instances given under that title mainly refer to the use of a house or part of a house. Accordingly, the usuus of a house might be considered as a quasi usufructus, in the time of Augustus: As the passage of Cicero already explained what is the extent of the meaning of usufructus of a house. The usuus of a thing implies the power of using it either for necessary purposes or purposes of pleasure. The man who was entitled to the usuus could not give the thing to an other to use, though a man who had the usuus of a house might give it to another to live in. As the man who had the usuus of an estate could take wood for daily use, and could enjoy the orchard, the fruit, flowers, and water, provided he used them in moderation, or, as it is expressed, "non usque ad compendium, sed ad usum scilicet non abusum." If the usuus of cattle (pecus) was left, the usuarius was entitled to the moderate allowance of milk. If the usuus of a herd was given, the usuarius might allow another to feed with him, he could use the oxen for ploughing, and for all purposes for which oxen are adapted.4 If the usuus was of things which were consumed in the use, then the usuus was the same as usufructus.5 Usus was in its nature indivisible, and, accordingly, a part of a usuus could not be given as a legacy, though persons might have the usuus of the free use of a thing in common.6 As to his duties, the usuarius was in most respects like

VULCANALIA, a festival celebrated at Rome in honour of Vulcan, on the 23d of August (X. Calendar. Sept.), with games in the Circus Flaminius, where the god had a temple.\(^2\) The sacrifice on this occasion consisted of fishes, which the people threw into the fire.\(^3\) It was also customary on this day to commence working by candlelight, which was probably considered as an auspicious beginning of the use of fire, as the day was sacred to the god of this element.\(^4\)

VULGARES. (Vid. Servius, Roman, p. 887.)

UXOR. (Vid. Maritius, Roman, p. 623.)

UXORII OR AES UXORIIUM was a tax paid by persons who lived as bachelors.\(^5\) It was first imposed by the censors M. Furius Camillus and M. Postumius, B.C. 403,\(^6\) but whether it continued to be levied we do not know. Subsequent censors seem not unfrequently to have used endeavours to induce bachelors to marry; the orations of the censors Metellus Macedonicus (B.C. 101) and Metellus Numidicus (B.C. 102) on this subject were extant in the time of the Empire. Some extracts from the speech of the latter are given by Aulus Gellius,\(^7\) and Augustus read the speech of the former in the senate as applicable to the state of things in his time. Various penalties were imposed by Augustus upon those who lived in a state of celibacy, respecting which see Julia Lex et Papia Poppeia, p. 556.

X. \(^8\)

*XANTHE (ξάνθη), a kind of Haematite, or Bloodstone, of a pale yellowish colour, containing iron ore.

*XANTHION (ξάνθιον), a plant, lesser Burdock, or Xanthium strumarium.\(^9\)

*XANTHOS/ALANUS (ξανθόδαλανος). According to Adams, "Some have taken this for the Nymeg, but this opinion is refuted by Clusius. Sprengel inclines to refer it to the nut of the Semecarpum anacardium."\(^10\)

XENAGOI (ξέναιοι). The Spartans, as being the head of that Peloponnesian and Dorian league which was formed to secure the independence of the Greek states, had the sole command of the confederate troops in time of war, ordered the quotas which each state was to furnish, and appointed officers of their own to command them. Such officers were called xenois. The generals whom the allies sent with their troops were subordinate to these Spartan xenois, though they attended the council of war as representatives of their respective countries.\(^11\) After the peace of Antalcidas, the league was still more firmly established, though Argos refused to join it; and the Spartans were rigorous in exacting the required military service, demanding levies by the σουτίλα, and sending on xenaios to collect them.\(^12\)

The word xenaios may be applied to any leader of a band of foragers or mercenaries. It is also used to signify a politician who stood up for the interests of the foreigners, or who conducted them about the town to see what is to be seen there, like the Latin perductors.\(^13\)

XENELASIA (ξενολασία). The Lacademonians appear in very early times, before the legislation of Lycurgus, to have been averse to intercourse with foreigners (ξέναιοι ἄνδρομακοι).\(^14\) This disposition was encouraged by the lawgiver, who made an ordinance forbidding strangers to reside at Sparta, without special permission, and empowering the magistrate to expel from the city any stranger who misconducted himself, or set an example injurious to public morals. Such jurisdiction was exercised by the ephori. Thucydides makes Pericles reproach the Lacademonians with this practice, as if its object were to exclude foreigners from sharing in the benefits of their institutions. The intention of Lycurgus, more probably, was to preserve the national character of his countrymen, and prevent their being corrupted by foreign manners and vices (as Xenophon says, ὅπως μά ρανούγαρ οἱ πατέσται ἁπὸ τῶν ξένων ἐμπληκαντο).\(^15\) With the same view the Spartans were themselves forbidden to go abroad without leave of the magistrate. Both these rules, as well as the feelings of the people, show the spirit of independence of state in which the Sparta, and by individuals, of which their connexion with the Pisistratidae is an example, and also that of a Spartan family with the family of Alcibiades.\(^16\) (Vid. Hospitium.) Many illustrious men are reported to have resided at Sparta with honour, as Terpander, Theognis, and others.\(^17\) Xenophon was highly esteemed by the nation, and made Sparta the residence of the representatives of the Xenias, Thucyd., i., 144, with Gellier’s notes.—Aris. toph., Aes., 1013.—Harpocr. s. v. Καί γὰρ τὸ μηδένη, ξΕΝΗΣΙΑ ΓΡΑΘΗ (ξέναια γραφή). This was a prosecution at Athens for unlawfully usurping the rights of citizenship. As no man could be, an Athenian citizen except by birth or creation (γένεις οί μοί). If one, having neither of those titles, as used to act as an assembly, or by serving any office, judicial or magisterial, or by attending certain festivals, or doing any other act which none but a citizen was privileged to do, he was liable to a γραφή ξενίας, which any citizen might institute against him.\(^18\) Or he might be proceeded against by εἰσαγγελία.\(^19\) If condemned, his property and person were forfeited to the state, and he was forthwith to be sold into slavery.\(^20\) The judgment, however, was arrested if he brought a δίκη ψυχουματισμόν against the witnesses who had procured his conviction, and convicted him of giving false testimony. During such proceeding he was kept in safe custody to abide the event. (Vid. Martysw.)

poreon tried on this charge was acquitted by means of fraudulent collusion with the prosecutor or witnesses, or by any species of bribery, he was liable to be indicted afresh by a γραφή διωρίσεως, the proceedings in which, and the penalty, were the same as in the γραφή ξενίας. The jurisdiction in these matters belonged, in the time of Demostenes, to the themothetai, but differed, at least in the time of Lysias, to the nautodice.

1 In order to prevent fraudulent enrolment in the register of the δήμοι, or λαξιαρχίων γραμματείων, which was important evidence of citizenship, the δήμων themselves were at liberty to revive their register, and expunge the names of those who had been enrolled. The accused, if judged unworthy of admission, might appeal to a court of justice, upon which the question of guilt was tried in much the same manner, as in the γραφή ξενίας, and the appellant, if he obtained a verdict, was restored to the register; but if judgment was given against him, he was sold for a slave. (Vid. Damus.)

2 For an example of this, see the speech of Demostenes against Eubulides.

XENICON (page 6).

There was no such thing as a standing army or mercenary force in the Greek republics. The former would have excited jealousy lest it should oppress the people, as the chosen band did at Argos, and for the latter there was rarely any occasion. The citizens of every state formed a national militia for the time of war; there were the citizen soldiers who were to serve for a considerable period, the higher classes usually serving in the cavalry or the heavy-armed infantry, the lower classes as light-armed troops. Foreigners were rarely employed; the Carians, Cretans, and Arcadians, who served as mercenaries, are an exception to the general rule. In the Persian war we find a small number of mercenaries, but the Greek states seem to have made a practice of keeping up a small body of hired soldiers, who could be called upon to assist in the most critical moments.

The practice of maintaining a standing force was introduced by the tyrants, who kept guards and soldiers in their pay (δομοφόροι, μισθοφόροι) to prevent insurrections of the people, and preserve their influence abroad. As it was done to the advantage of the ruling class, they usually employed foreigners. Hence, and because citizen soldiers used to fight without pay, ξένοι came to signify mercenaries.

We must distinguish, however, between those who fought as auxiliaries, whether for pay or otherwise, under commission from their own country, and those who did not. The former were not mercenaries, but the latter were.

Hence, and because citizen soldiers used to fight without pay, ξένοι came to signify mercenaries.

Manufacturing arms, as well as other articles, was a very profitable trade. The olive-yielding districts of Arcadia, Cilicia, Crete, and Sicily were the chief centres of manufacture. The products of these districts were exported in large quantities, and the profits were enormous.

The Athenians were especially successful in the manufacture of arms and armor. The city was full of workshops where soldiers and sailors were employed in manufacturing arms.

3 Merchandise was the chief source of Athenian revenue. The city was full of workshops where soldiers and sailors were employed in manufacturing arms.

4 The Athenians were especially successful in the manufacture of arms and armor. The city was full of workshops where soldiers and sailors were employed in manufacturing arms.

5 The Athenians were especially successful in the manufacture of arms and armor. The city was full of workshops where soldiers and sailors were employed in manufacturing arms.

6 The Athenians were especially successful in the manufacture of arms and armor. The city was full of workshops where soldiers and sailors were employed in manufacturing arms.

7 The Athenians were especially successful in the manufacture of arms and armor. The city was full of workshops where soldiers and sailors were employed in manufacturing arms.

8 The Athenians were especially successful in the manufacture of arms and armor. The city was full of workshops where soldiers and sailors were employed in manufacturing arms.

9 The Athenians were especially successful in the manufacture of arms and armor. The city was full of workshops where soldiers and sailors were employed in manufacturing arms.

10 The Athenians were especially successful in the manufacture of arms and armor. The city was full of workshops where soldiers and sailors were employed in manufacturing arms.

11 The Athenians were especially successful in the manufacture of arms and armor. The city was full of workshops where soldiers and sailors were employed in manufacturing arms.

12 The Athenians were especially successful in the manufacture of arms and armor. The city was full of workshops where soldiers and sailors were employed in manufacturing arms.

13 The Athenians were especially successful in the manufacture of arms and armor. The city was full of workshops where soldiers and sailors were employed in manufacturing arms.

14 The Athenians were especially successful in the manufacture of arms and armor. The city was full of workshops where soldiers and sailors were employed in manufacturing arms.

15 The Athenians were especially successful in the manufacture of arms and armor. The city was full of workshops where soldiers and sailors were employed in manufacturing arms.
ZEIA.

pursued by his countrymen were no less just than they were wise and statesmanlike.

ZEIA. ZENIA (ξηνη, ξενίω). (Vid. Hospit., p. 512.)

XESTES (εστης), a Greek measure of capacity, both of solid and liquid, which contained 12 sextarii or 2 cotylae, and was equal to \( \frac{1}{4} \) of the \( \alpha \) or 1 quart of the Roman amphora or quadrangular, and \( \frac{3}{4} \) of the Greek amphora or metretes; or, viewing it as a dry measure, it was half the ekenos or \( \frac{1}{2} \) of the medimnus. It contained 9911 of a pint English.

At this point the Roman and Attic systems of measures coincide; for, though the \( \xi\)estus appears to have varied in different states of Greece, there is no doubt that the Attic \( \xi\)estus was identical, both in name and in value, with the Roman sextarius. Also, the Attic \( \chi\)eris was equal to the Roman con
gius, for the \( \xi\)estus was the sixth of the former, and the sextarius the sixth of the latter. (Vid. Cusus, Conus, Sextarius.) Further, the Attic metretes or amphora contained 12 \( \chi\)eris, and the Roman amphora contained 8 congi; giving for the ratio of the former to the latter 3 : 2, or 1 : 2. Again, the Attic medimnus was the double of the Roman amphora, or 12 \( \chi\)eris, the ratio of 4 : 3; and the Roman modulus was the sixth of the Attic medimnus, and the third of the Roman amphora. Hence the two systems are connected by the numbers 2 and 3 and their multiples.

How and when did this relation arise? It cannot be accidental, nor can we suppose that the Greek system was modeled upon the Roman, since the Tower was built after the Roman conquest of Greece. We must therefore suppose that the Roman system was in some way adapted to the Greek. It is a remarkable circumstance, that the uncial system of division which characterized the Roman weights and measures (vid. As, Uncia) is not found in the genuine Roman measures of capacity (for the use of the \( \chi\)eris as the unit of the sextarius appears to have originated with the Greek physicians in later times); and this is the more remarkable, as it is adopted in the Greek system: the Greek amphora being divided into 12 \( \chi\)eris, and the Roman into 8 congi instead of 12. In the Roman foot, again, besides the uncial division, we have the division into 4 palmi and 16 digiti, which seems clearly to have been borrowed from the Greek division into 1 \( \rho\)ule and 16 \( \alpha\)tiram. (Vid. Pae.)

If, therefore, we are enabled to demonstrate that the Greek system of measures had no considerable influence on that of the Romans.

To find the origin of this connexion, we must look from the measures to the weights, for both systems were undoubtedly founded on weight. The Roman amphora or quadrantal contained 50 pounds (whether of wine or water does not matter here), and the congis 10 pounds. Also the Attic talent was reckoned equal to 80 Roman pounds, and contained 60 minae. Therefore the Attic mina had to the Roman pound the ratio of 80 : 60, or 4 : 3.

Now if we look at the subject historically, we find all the principal features of the Roman system in existence as early as the time of Servius Tullius. We must therefore seek for the introduction of the Greek element before that time. At that early period the Athenians might have any conceivable commercial intercourse with Italy, but other Grecian states had, through the colonies of Magna Gracia. The Phocaeans, at a very early period, had a traffic with the Tyrrhenians; the \( \xi\)eginetans had a colony in Umbria; and Corinth and her colonies were in intercourse with the people of central Italy, besides the traces of Corinthian influence upon Rome, which are preserved in the legend of the Tarquinii. It is therefore to the \( \xi\)egineto- Corinthian system of weights and measures that we must look for the origin of Greek influence on the Roman system. Now the \( \xi\)eginetan pound, which contained half of the \( \xi\)EGINetan mina, had to the Roman pound the ratio of 16 : 2, and, since the \( \xi\)EGINetan mina was to the Attic (most probably, vid. Talentum) as 6 : 3, we get from the comparison of these ratios the Attic mina to the Roman pound as 4 : 3, as above.

The above view of the relation between the Greek and Roman systems of measures of capacity is that of Böckh, who discusses the subject more fully in his Mecur. Gr. Stat., xii., 8, 9, 10.

*XPHIAS (ξφιας), the Swordfish, or \( \chi\)iphaea gladius, L. It would also appear to be the gladius of Pliny and Isidorus. 1

*XPHION (ξφιος), the Gladalos communis, or Corn-flag. 2

XPHOS (ξφως). (Vid. Gladius.)

XARON (ξαρων). (Vid. Statuary, p. 913.)

*XTRIS (ξτρις), the Iris fistulissima, or Stinking Gladiolus. It is most probably the \( \xi\)tris of Theophrastus.

XYS TARCHUS. (Vid. Gymnastium, p. 483.)

XYS TUS. (Vid. Gymnastium, p. 482; Hortus p. 511.)

Z

ZACOROI (ξακοροι) is the name by which, in Greece, those persons were designated whose duty it was to guard a temple and to keep it clean. Notwithstanding this menial service, they partook of the priestly character, and are sometimes even called priests. 3 In many cases they were women, as Timo in Herodotus; 4 but men are also mentioned as \( \xi\)acoroi. The priestess Timo is called by Herodotus \( \sigma\)ρωκερος, from which it is clear that, in some places, several of these priests must have been attached to one and the same temple, and that they differed among themselves in rank. A class of servants of the same kind were the \( \nu\)κερωροι, or temple-sweepers. 5 Subsequently, however, the menial services connected with this office were left to slaves, and the persons called \( \nu\)κερωροι became priestly officers of high rank, who had the supreme supervision of half the temple's treasures, and the sacred rites observed in them. 6 We learn from inscriptions that in some towns the \( \nu\)κερωροι formed a collegium, which was headed by the eldest among them. When the \( \nu\)κερωροι had thus risen to the rank of high priestly officers, magistrates and persons of distinction, and even emperors, were anxious to be invested with the office, and, in the time of the emperors, whole nations and cities assumed the title of \( \nu\)κερωροι, as we learn from numerous coins and inscriptions, and thus became the especial guardians of particular temples.

*ZEIA (Zeia), a kind of grain, described by Aetius and Avicenna as intermediate between wheat and barley. 7 In short, 8 says Adamis, "almost all the authorities agree that it is the Triticum Spelta, or Spelt. The \( \tau\)ρος of Theophrastus, and the \( \theta\)ρας of the Romans, as well as the far and adoros of the Romans, were in all probability merely varieties of Spelt." 9

ZONÀ.  

ZEOTIAI (Servatii), Inquisitoria, were extraordinary officers appointed by the Athenians to discover the voices of persons crying against the state, and bring them to justice. Public advocates, 

"were sometimes directed to assist them in this duty. Frequently the court of Areopagus performed the office of inquisitors for the state, and, indeed, it was the duty of every magistrate to assist in procuring information against offenders. Servatii were more frequently appointed to try the cases of criminals against state demands of criminals and state debtors; to receive and give information against any persons who concealed or assisted in concealing them, and to deliver an inventory of all such goods (ἀπογραφέω) to the proper authorities. The delinquent was then prosecuted, either before the σύνάκος, or, if it might be, before the Σεβασταί themselves, if their commission extended to the holding of an εὐθεμεία.

Any person, however, who thought himself entitled to the goods which were the subject of such information, or to any part of them, might prefer a complaint against the inquisitor or informer, and petition to have the goods, or the part to which he was entitled, or their proceeds, restored to him. This proceeding was called "inquisitio" (Vid. Syracus., Paracataar.). Inquisitors were also called Μαστόρις. On one particular occasion a set of commissioners, called συλλογεί, were appointed to discover the property of the oligarchs, who were concerned in overturning the democracy.  

ZEUGHTÄE (Zeugitas). (Vid. Cassius, p. 229.)  

ZINGIBERIS (Zingiberes), Anonimus Zangiber, or Gingiber.

ZONÀ, dim. ZONULA, also called CINGULUM (Cynos, Zysz, Zosthà), a Girdle or Zone, worn about the loins by both sexes. As in the case of some other articles of dress, the distinction between the male and female girdle was denoted by the use of a diminutive, Cynos or Zosthà being more properly a man's, Cynes a woman's girdle. The outer kinds of girdles were made by netting, whence the manufacturer of them was called ζωοπλάκος.  

The chief use of this article of dress was to hold up the tunic (ζωοντάται), which was more especially requisite to be done when persons were at work, on a journey, or engaged in hunting. Hence we see the loins girded in the woodcuts of the boatman in Pliny, at p. 62, 115, of the goatherd at p. 754, of the hunters at p. 836, and of Diana at p. 245. The Cynos or Zosthà is also represented in many ancient statues and pictures of men in armour, as worn round the cuirass. Among the Romans the magister equitum wore a girdle of red leather, embroidered with needlework, and having its two extremities joined up by a very splendid and elaborate gold buckle. (Vid. Cinyulus.)  

The girdle mentioned by Homer seems to have been 1 constitutive part of the cuirass, serving to fasten it by means of a buckle, and also affording an additional protection to the body, and having a short kind of petticoat attached to it, as is shown in the figure of the Greek warrior in p. 597. In consequence of the use of the girdle in fastening on the armour, ζωονταται or ζωοντα ται meant to arm one's self, and from this circumstance Athene was worshipped under the character Ζωοντάτα.  

The woodcut at p. 15 shows that the ancient cuirass did not descend low enough to secure that part of the body which was covered by the ornamental kilt or petticoat. To supply this defect was the design of the μιτρα (mitra), a brazen belt, lined probably on the inside with leather and stuffed with wool, which was worn next to the body, 1 so as to cover the lower part of the abdomen. The annexed woodcut shows the outside and inside of the bronze plate of a mitra one foot long, which was obtained by Bründsted in the island of Eubaia, and is now preserved in the Royal Library at Paris. We observe at one end two holes for fastening the strap, which went behind the body, and at the other end a hook, fitted probably to a ring, which was attached to the strap. A portion of a similar bronze plate is engraved by Caylus.  

### Footnotes

Men used their girdles to hold money instead of a purse.* The wallet (vid. Pana) was fastened to the girdle, and still more frequently the fold of the tunic, formed by tucking it up, and called sinus, was used as a pocket to carry whatever was necessary. As the girdle was worn to hold up the garments for the sake of business or of work requiring dispatch, so it was loosened, and the tunic was allowed to fall down to the feet, to indicate the opposite condition, and more especially in preparing to perform a sacrifice (veste recinctae) or funeral rites (distanta, recinta).  

A girdle was worn by young women even when their tunic was not girt up, and removed on the day of marriage, and therefore called Cynos παραδενεκιν, παραθενον μιτρον. The Flora in the museum at
Naples (see the preceding woodcut) shows the appearance of the girdle as worn by young women.

A horse's girth, used to fasten on the saddle (vid. Ephippium), was called by the same names, and was sometimes made of rich materials, and embroidered in the most elaborate manner. These terms, zona and cingulum, were also used to signify the five zones as understood by geographers and astronomers. ZOOPHTTA (ζωόφυττα). "Aristotle," says Adams, "ranks the Urtica or Medusa and sponges among those things which partake in part of the nature of animals and in part of plants. The term therefore corresponds to the Zoophyta of modern naturalists."

*ZYGÆNA (ζυγαύνα), the Squalus Zyganus, L., or Balance Fish. It is a very large fish, and was placed among the Cetacea by Galen, Oribasius, Paulus Aegineta, and other ancient writers.

*ZYG'TA (ζυγία), a plant, most probably the Carpinus betulus, or Hornbeam, as Stackhouse suggests.

*ZYTHUS (ζήθος). (Vid. Ceravisia.)
