The four assemblies which were anciently held were, as we are told by Harpocrates, the ἐνεται. Afterward they were transferred to the Pyx, and at last to the great theatre of Dionysus, and other places. Thus Thucydides speaks of the people being summoned to the Pyx, the usual place of assembly in his times; and Aristophanes, in describing “Demos,” the representative of the Athenian people, just as “John Bull” is of the English, calls the place ἐνεται, or “pavements.” When Herodotus, or Demosthenes of the (parish-) of Pyx: a joke by which that place is represented as the home of the Athenians. The situation of it was to the west of the Areopagus, on a slope connected with Mount Lyceanion and partly, at least, within the walls of the city. It was said that the Athenians used it for religious exercises, for games, and part machinery, and an area of about 15,000 square yards. On the north the ground was filled up and paved with large stones, so as to get a level surface on the slope; from which fact some grammarians derive its name (παρὰ τῶν ἡδίων παράκτη). Towards this side, and close to the wall, was the βίβλιον, a stone platform or hustings ten or eleven feet high, with an ascent of steps; it was cut out of the solid rock. This it is sometimes called ὁ βίδος, as in Aristophanes we read ἄρτες κρετεῖν τοῦ ἡδίου τόν τῷ Πυκνῷ. The position of the βίβλιον was such as to command a view of the sea from behind (on which account the thirty tyrants are said to have altered it), and of the Propylaea and Parthenon in front, though the hill of the Areopagus lay partly between it and the Acropolis. Hence Demosthenes, when reminding the Athenians from this very βίβλιον of the other splendid works of their ancestors, says emphatically Προπύλαια τῶν ἡδίων: and we may be sure that the Athenian orators would often rouse the national feelings of their hearers by pointing to the assemblage of magnificent edifices, “monuments of Athenian gratitude and glory,” which they had in view from the Pyx. That the general situation of the place was sacred to the old worship of Dionysus is proved by the fact, that it was named ἐκκλησία, and the words πᾶς ὁ δήδος ὡς καθένα, applied to a meeting of the people in the Pyx. After the great theatre of Dionysus was built, the assemblies were frequently held in it, as it afforded space and convenience for a large multitude; and in some particular cases it was specially determined by law that the people should assemble there. An assembly of the people was held in the Piraeus, and in the theatre at Mounychia. We will now treat of the right of convening the people. This was generally vested in the prytanes or presidents of the council of Five Hundred (vid. Boule, p. 168); but in cases of sudden emergency, and especially during wars, the strategy also had the power of calling extraordinary meetings, for which, however, if we may judge by the form in which several decrees have come down, the consent of the senate appears to have been necessary. The four ordinary meetings of every prytany were, nevertheless, always convened by the prytanes, who not only gave a previous notice (προγράφειν τὴν ἐκκλησίαν) of the day of assembly, and published a program of the subjects to be discussed, but also, as it appears, sent a crier round to collect the citizens (καθότερων τῶν δήδων). At any rate, when the strategy wished to convene one of the extraordinary assemblies, notice was certainly given of it by a public proclamation; for, as Ulpius observes, these assemblies were called συγκληταί, because the people were summoned to them by officers sent round for that purpose (ὑπὸ συνεκκλησίαν ἡμῶν συγκλητών). But, independent of the right which we have just mentioned, the right of convening an extraordinary meeting, it would seem, from the case of Péricles, that a strategus had the power of proposing any assembly being called. It is, however, important to observe, that such an exercise of power would perhaps not have been tolerated except during wars and commotions, or in the person of a

The IonelGis, or foreigners, who enjoyed nearly equal privileges with the citizens, are by some thought to have had the same rights as adopted citizens, with respect to voting in the assembly. This, however, seems very doubtful; at any rate, the etymology of the word IonelGis does not justify such an opinion.

In the article BouIe it is explained who the parents and their families were drove by them towards the ecclesia, and those who refused to go were marked by the rope and fined. Aristophanes alludes to this subject in the line, "the colour of vermilion, the ancient public slave (Σκιάθος or τοῦ γέρων) were sent round to sweep the church and other places of public resort, with a rope coloured with vermilion. The different persons whom these ropemen met were driven by them towards the ecclesia, and those who refused to be so driven were attended by the state, the presiding archon (Δημοτ., Schol.), to lay before the people the subjects to be discussed; to read, or cause to be read, the previous bill (τὸ προδιάδειμα of the senate; and to give permission (γνωρίζειν τοιχών) to the speakers to address the people.

They must probably sat on the steps near the βῆμα, to which they were on some occasions, called by the people. In later times they were assisted in keeping order (εἰκονία) by the members of the presiding tribe, η προδιάδειμα φύλα (vid. BouIe); and the officers who acted under them, the "sergeants-at-arms," were the crier (ἐκρήγας) and the Scythian bowman. Thus, in Aristophanes, the crier says, "we are the archon who, when we don't allow the city to sit, is our duty, and in another passage the τοῦτος are represented as dragging a drunken man out of the assembly.

When the discussion upon any subject had terminated, the chairman of the proedr, if he thought proper, put the question to the vote: we read, in some instances, of his refusing to do so. Previous to this proceeding, it was usual to make a lustration or purification of the place where the assembly was held. This was performed by an officiating priest, called the Peristarch, a name given to him because he went before the lustral victims (Τὰ περιτικά) as they were carried round the boundary of the place.

The term προεδρία is derived from προ and δια, and is, therefore, properly applied to sacrifices carried round the hearth by way of lustration: hence it means any lustral victims. Thus the crier says, "παρὰ εἰς τὸ προεδρεῖον πάρθης ἀτ ίς λόγος ἕτοι τοῦ καθάρισματος. The favourite victims were sucking pigs (χοίροι), the blood of which was sprinkled about the place, and the bodies afterward thrown into the sea. After the purification, the assembly was followed, burning incense in a censer. When these ceremonies were concluded, the crier proclaimed silence, and then offered up a prayer, in which the gods were implored to bless the proceedings of the meeting, and bring down destruction on all those who were hostile disposed towards the state, or who traitorously plotted its overthrow, or received bribes for misleading and deceiving the people.

Onward from the conclusion of this prayer business began, and the first subject proposed was said to be brought forward πρῶτον μετὰ τα λέπα.

We must, however, understand that it was illegal to propose to the ecclesia any particular measure unless the proedr previously received the sanction of the senate, or been formally recommended to the people, under the title of a προδιάδειμα.

The assembly, nevertheless, had the power of altering a previous decree of the senate as might seem fit. Further information on this point will be found under BouIe, to which we may add, according to Seebmann, that the object of the law mentioned by the grammarians (Ἀριστοφανῆς, ἕν τῷ βῆμα) seems to have been, not to provide that no motion should be proposed in the assembly.
The privilege of addressing the assembly was not confined to any class or age among those who had the right to be present: all, without any distinction, were invited to do so by the proclamation (Τίς ἀνιότις ποιεῖται) which was made by the crier after the proœđria had gone through the necessary preliminaries, and laid the subject of discussion before the meeting; for though, according to the institutions of Solon, those persons who were above fifty years of age ought to have been called upon to speak first, this regulation had, in the days of Aristophanes, become quite obsolete. The speakers are sometimes simply called οἱ παρώνες, and appear to have worn a crown of myrtle on their heads while addressing the assembly, to intimate, perhaps, that they were then representatives of the people, and, like the archons when crowned, inviolable.1 They were by an old law required to confine themselves to the subject before the meeting, and keep themselves to the discussion of one thing at a time, and forbidden to indulge in scurrilous or abusive language: the law, however, had, in the time of Aristophanes, become neglected and almost forgotten. The most influential and practised speakers of the assembly were generally distinguished by the name of βοτρύς. (Vid. Ranx.)

After the speakers had concluded, any one was at liberty to propose a decree, whether drawn up beforehand or framed in the meeting (Ἐν τῷ δήμῳ συνυπογραφοσκέοι), which, however, it was necessary to present to the proœđria, that they might see, in conjunction with the νομοφόραι, whether there was an accusation called a χώρος τοῖς παρωνευομένοις. If, however, the chairman refused to give his answer to the question of the people, he might be proceeded against by ἄρνησις; and if he allowed the people to vote upon a proposal which was contrary to existing constitutional laws, he was in some cases liable to ἀμιλία.2 If, on the contrary, no opposition of this sort was offered to a proposed decree, the votes of the people were taken, by the permission of the chairman, and with the consent of the rest of the proœđri: whence the permission is said to have been given sometimes by the proœđri and sometimes by the chairman, who is also simply called δὲ προέδρος, just as the proœđri are sometimes styled πρυτανεία.3 The decision of the people was given either by show of hands or by ballot, i. e., by casting lots (κύριοι); the former was expressed by the word χειροτονία, the latter by ψηφοφορία, although the two terms are frequently confounded. The more usual method of voting was by show of hands, as being more expeditious and convenient (χειροτονία). The process was as follows: The crier first proclaimed that all those who were in favour of a proposed measure should hold up their hands (ὅς κτιστεί κ. τ. λ. ἀρέσι τὰς χεῖρες): then he proclaimed that all those who were opposed to it should do the same (ὅς μὴ δοξεί κ. τ. λ. ἀρέσι τὰς χεῖρες): they did so; and the crier then formed as accurately an idea as possible of the numbers for and against (προεδρία τῆς ψηφοφορίας), and the chairman of the meeting pronounced the opinion of the majority. In this way most matters of public interest were determined. Vote by ballot (ψηφοφορία), on the other hand, was only used in a few special cases determined by law; as, for instance, when a proposition was made for allowing those who had suffered ἀμιλία to appeal to the people for restitution of their former rights, or for inflicting extraordinary punishments on traitors and informers, and, generally, upon any matter which affected private persons. In cases of this sort, it was settled by law that a decree should not be valid unless six thousand citizens at least voted in favour of it. This was by far the majority of those citizens who were in the habit of attending; for in time of war the number never amounted to five thousand, and in time of peace seldom to ten thousand.4

With respect to the actual mode of voting by ballot in the ecclesia, we have no certain information; but it was probably the same as in the courts of law, namely, by means of black and white pebbles, or shells put into urns (κεῖσθαι τὸ κείσθαι). The white for adoption, the black for rejection of any given measure. (Vid. Cadis.)

The determination or decree of the people was called a δικαστήριον, which properly signifies a law proposed to an assembly, and approved by the people. The form for drawing up the ψηφοφορία varied in different ages. (Vid. Boule and Graemus.)

We now come to the disposal of the assembly; the order for which, when business was over, was given by the prytaνεια (ὅλον τὸν ἐκκλησίαν), through the head of the people, who might be either the chairman, or if it was not customary to continue meetings, which usually began early in the morning, till after sunset, if one day were not sufficient for the completion of any business, it was adjourned to the next. But an assembly was sometimes broken up if any one, whether a magistrate or private individual, declared that he saw an unfavourable omen, or perceived a certain sign or omen of ill omen. The sudden appearance of rain, also, or the shock of an earthquake, or any natural phenomenon of the kind called δυσμαία, was a sufficient reason for the hasty adjournment of an assembly.5

We have already stated, in general terms, that all matters of public and national interest, whether foreign or domestic, were determined upon by the people in their assemblies, and we shall conclude this article by stating in detail what some of these matters were. On this point Julius Pollux6 informs us, that in the first assembly of every prytaneia, which was called κυβεία, the κτησιστορία of the magistrates was held; i. e., an inquisition into their conduct, which, if it proved unfavourable, was followed by their deposition. In the same assembly, moreover, the αἰσθανομέναι, or extraordinary information, which referred to the people, as well as to all matters relating to the watch and ward of the country of Attica; the regular officers also read over the lists of confiscated property, the names of those who had entered upon inheritances. The second was devoted to the hearing of those who appeared before the people as suppliants for some favour, or for the privilege of addressing the assembly without incurring a penalty, to which they otherwise would

have been liable, or for indemnity previous to giving information about any crime in which they were accomplices. In all these cases it was necessary to obtain an idean, i.e., a special permission or immuni, whence Pohxas says of the second assembly, 'It seems to me that the magistrates would not have any objection to the fact that the people might have taken cognizance of them in assembly, and decided upon them as judges, just as they did in some instances of heinous and notorious crimes, even when no one came forward with an accusation. Moreover, in turbulent and excited times, if any one incurred the displeasure of the people, they not infrequently passed summary sentence upon him, without any regard to the regular and established forms of proceeding: as examples of which we may mention the cases of Demosthenes and Phocion. The proceedings called ἕρωος and ἀπείγελα were also instituted before the people: farther information with respect to them is given under the names of Helias and Thalia. The legislative powers of the people in assembly, so far as they were defined by the enactments of Solon, were very limited; in fact, strictly speaking, no laws could, without violating the spirit of the Athenian constitution, be either repealed or enacted, except by the court of the Νομοδέται: it might, however, be generally understood that it was the prerogative of the people to determine the office of the magistrates by the assemblies had reference to general and permanent objects, and were therefore virtually ἐναίκοι or laws; moreover, if we may judge by the complaints of Demosthenes, it appears that in his days the institutions of Solon had in this respect fallen into disuse, and that new laws were made by the people exclusively in assembly, with the exception of the inter-vention of the court of the nomothetai. The foreign policy of the state, and all matters connected with it, and the regulation and appropriation of the taxes and revenues, were, as we might expect, determined upon by the people in assembly. The domestic economy of the state was under the same superintendence: a fact which Pho- tolus informs us that the people decided in the fourth assembly περί τινων και δημοσίων, i.e., on all matters, whether spiritual or secular, in which the citizens collectively had an interest. Such, for example, says Scholman, are the priesthood, the temples of the gods, and all other sacred things; the treasury, the public land, and publicRevenue. In general, the magistrates, the courts, the laws and institutions of the state, and, in short, the state itself, is in connexion with which we may observe, that the meetings for the election of magistrates were called ἄρρηται. Lastly, as Scholman remarks, the people likewise determined in assembly upon the propriety of conferring rewards and honours on such citizens or strangers, or even foreign states, as had in any manner signally benefited the commonwealth. It is hardly necessary to add, that the signification of a religious assembly or church, which ἐκκλησία bore in later times, sprung from its earlier meaning of an assembly in general, whether of the constituency of a certain locality, or of a certain body, as tribes and cantons. (Vid. Tribus and Demus.)

EKK ᾿ΛΤΟΣ ΠΟΙΑΣ. (Vid. Symbola.)

ΕΚΚΛΗΣΤΟΙ (ἐκκλήστοι) was the name of an assembly at Sparta, and seems to have been the same as the so-called lesser assembly (_female καλομενὴ ἐκκλησίαν). Its name seems to indicate a select assembly, but it is difficult to determine of what personnel it was made up. In some cases, it consisted of a large number of older men, and in others, of a smaller number of younger men, while in the number of the later assembly it appears to have been considerably thinned, it does not seem improbable that the lesser assembly consisted exclusively of ancient citizens, either in or out of office; and this supposition seems very well to agree with the fact, that they appear to have always been jealously watchful in upholding the ancient constitution, and in preventing any innovation that might be made by the ephors or the new citi-zens.

The whole subject of the ἐκκλήστοι is involved in difficulty. Tittmann thinks, that the name of this assembly is not mentioned, it existed long before the Persian war, and that in many cases it may have been a much larger body than the popular assembly, or even the ἑδρικὸς ἐκκλησίας, and has been said to have made decrees, the magistrates are mentioned instead of the ἐκκλήστοι, of whom they were the chief members. This last supposition is rejected by Müller, who observes that the magistrates were often said to have decreed a measure (especially in foreign affairs), though it had been called in question, and was finally determined upon by it; for the magistrates were the representatives of the people, and the organ of the assembly, and acted in its name. Müller is also of opinion that ἐκκλήστοι and ἐκκλησία are identical, and distinct from the lesser assembly, which he considers to have been a kind of select assembly. But his arguments on this point are not convincing. The ἑδρικὸς ἐκκλησίας and the lesser assembly are mentioned about the same time in Grecian history, and previous to that we hear of no assembly except the regular ἐκκλησία of all the Spartans.

ECEDOSIS. (Vid. Naukton.)

ECLECTIC. (ἐκλεκτικός), an ancient medical sect, which must not be confounded with the school of philosophers of that name, founded by Diogenes Laertius, though it is probable that they assumed this title in imitation of them. Their name is derived from their founder (like Potamo the physician) having selected from each sect the opinions that seemed most probable (ἐκλεξέσθαι μὲν ἀρέσαντα ἐκ ἐκκλησίας τῶν ἀρέσαντων). From a passage in the PROTOM, which Dr. Clerke conjectures, that instead of ἐκκλησία, we should read ἐκλεκτικός) and which is falsely attributed to Galen, it appears

The Edictum may be described generally as a rule promulgated by a magistratus on entering his office, which was done by writing it on an album and placing it in a conspicuous place. Under the Roman law, the distinction between law and edict is significant. When the Edictum was considered to be a part of the jurisprudence.

As the office of a magistratus was annual, the rules promulgated by a predecessor were not binding on a successor; but he might conform or adopt the rules of his predecessor, and introduce them into his own Edict, and hence such adopted rules were called edictum tralatitium or vetus, as opposed to edictum novum. A repentinum edictum was that rule which was a (proe res ludit) for the occasion. A perpetuum edictum was that rule which was made by the magistratus on entering upon office, and which was intended to apply to all cases to which it was applicable during the year of his office; hence it was sometimes called, also, annua lex. Until it became the practice for magistrates to adopt the edicts of their predecessors, the edicta could not form a body of permanent binding rules; but when this practice became common, the edicta (edictum tralatitium) soon constituted a large body of law, which was practically as much important as any other part of the law.

The several edicta, when thus established, were designated by the names of their promulgators, as the Edictum Carvianum; or they were named with reference to the form and the action by which they were established, as Aquiliana, Publiciana, Radiana, &c.

The origin of the edictal power cannot be historically shown; but as the praeator was a magistratus established for the administration of justice, on account of the occupation of the consuls, and the consular power was the representative of the kingly power, it seems that the jus edictum might have been a remnant of the kingly prerogative. However it may be, the edictal power was early exercised, and so far established that the jus praeorium was a recognised division of law, and perhaps somewhat before, the time of Cicero, in whose age the study of the Edict formed a part of the regular study of the law. The edict of the ediles about the buying and selling of slaves, as mentioned by Cicero, the Edictiones Edulliae and Edulliae, and an edict of the praeator Peregrinus is mentioned in the Lex Aquiliae Cisalpine, which probably belongs to the beginning of the eighth century of the city. The Lex Cornelia, B.C. 67, provided against abuses of the edictal power, by declaring that the praeors should decide in particular cases conformably to their edictal edicta. The edicta made in the provinces are often mentioned by Cicero. They were founded on the edictum urbanum, though they likewise comprehended special rules, applicable only to the administration of justice in the provinces, and so far they were properly edictum provincial. Thus Cicero says that he promulgated in his province two edicta; one provincial, which, among other matters, contained everything that related to the publican, and another, to which he gave the name relating to matters of which he says, "ex elicto et postulati et fieri solent." As to all the rest he made no edict, but declared that he would frame all his decrees (decreta) upon the edicta urbana. It appears, then, that in the time of Cicero the edicta already formed a large body of law, which is confirmed by the fact that in his time an attempt had been already made to reduce it into order, and to comment on it. Servius Sulpicius, the great jurist

1. (Cic. ad Att. v., 21 ; ad Fam. iii., 8 ; in Afr., 45,)—3
and orator, the friend and contemporary of Cicero, addressed to Brutus two very short books on the Edict, which was followed by the work of Oflinus; 1 though we do not know whether the work of Oflinus was an attempt to arrange and collect the various edicta, like the subsequent compilation of Julian, or a commentary like those of many subsequent jurists (Oflinus edictum praeoris primus diligenter commentato). 2

The object of the Edict, according to the Roman jurists, was the following: "Adjuvandi vel supplendi vel corrigendi juris civilis gratia proper utilitatem publicam:" the Edict is also described as "viva vox juris civilis." It was, in effect, an indirect method of legislating, sanctioned, not only by public opinion, but by the judge, who, before the municipal system by which numerous rules of law became established, it was found to be more effectual, because an easier and more practical way of gradually enacting and altering the existing law, and keeping the whole system in harmony, than the method of direct legislation; and it is undeniable that the most valuable part of the Roman law is derived from the edicts. It may be observed that, as a rule, an edict may be inconvenient or injurious, it fell into disuse if not adopted by his successor. The publicity of the Edict must also have been a great security against any arbitrary changes, for a magistrates would hardly venture to promulgate a rule to which opinion had not by anticipation already given its sanction. This law (referred to) promulgated by the Edict may probably have been a cery in conformity to existing custom, more particularly in cases of, contracts, and thus the edict would have the effect of converting custom into law. When Cicero, however, says that the Edict depends in a great degree on custom, he probably only means that it was usual to incorporate some of the old customs that the magistrates had adopted from former edicts. Thus the edictum tralatitium obtains its validity by being continually recognised by every successive magistrates.

As to the matter of the Edict, it must be supposed that the defects of the existing law must generally have been acknowledged and felt before any magistrates ventured to supply them; and in doing this, he must have conformed to that so-called natural equity which is recognised by all mankind. Under the emperors, also, it may be presumed that the opinions of legal writers would act on public opinion, and on those who had the judicidem. Hence a large part of the edictal rules were founded on the so-called jus gentium, and the necessity of some modifications of the strict rules of the civil law, and of additional rules of law, would become the more apparent with the extension of the Roman power and their intercourse with other nations. But the method in which the preator introduced new rules of law was altogether conformable to the spirit of the Edict. In the Empire, it (the method of) was gradual; it was not effected by the destruction of that which existed, but by adapting it to circumstances. Accordingly, when a right existed or was recognised, the preator would give an action if there was none; lie would interfere by way of protecting possession, but he could not make possession into ownership, and, accordingly, that was effected by

The old forms of procedure were few in number, and certainly they were often inconvenient and fail to do justice. Accordingly, the preator extended the remedies by action, as already intimated in the case of the Publician act. This change probably commenced after many of the leges actiones were abolished by the Abutia lex, and the necessity of new forms of actions arose. These were introduced by the preator, and it is the subject of doubt that, in establishing the formula, they followed the analogy of the leges actiones. It is the conclusion of an ingenious writer, "that the edict of the preator urbanus was in the main part relating to actions arranged after the model of the old leges actiones, and that the system is apparent in the Code of Justinian, and still more in the Digest." Under Diocletian there were many commentaries on the Edict. Thus we find that Laheo wrote four books on the Edict, and a work of his in thirty books, Ad Edictum Praetoris Peregrini, is cited by Upianus. 3 When the imperial rescripts became common, the practice of making annual edicts became less common, and after the time of Hadrian probably fell nearly into disuse; but the existence of several comparatively modern distinguished modern writers. However this may be, Salvius Julianus, a distinguished jurist, who lived in the time of Hadrian, and filled the office of preator, composed a systematic treatise on the edict, which was called Edictum Perpetuum; and it seems that, from the date of this treatise, the name Perpetuum was more generally applied to this edictum than to that which was originally called the Edictum Perpetuum. Julian appears to have collected and arranged the old edicts, and he probably omitted both what had fallen into disuse, and abridged many parts, thus giving to the whole a systematic character. The work of Julian must have had a great influence on the study of law, and the commentaries, instead of the edicts, which were incorporated into it much of the Edictum Provincialia, and a large part of the Edictum Antiileum, as an appendage at least. The Edict thus arranged and systematized was, it is further supposed, promulgated in the provinces, and thus became, as far as its provisions extended, a body of law for the Empire.

1. (Dig. 1, tit. 2, s. 2.) — 2. (De Invent., i. 22.) — 3. (Gaiss., 40, 50.)
The Eicoste.II (Dieoayct) is a tax or duty of one
(a and) per cent. upon all commodities
exported or imported by sea in the states
of the allies subject to Athens. This tax
was first imposed B.C. 413, in place of the direct tribute which had up to that time been paid by the subject allies; and the change was made with the hope of obtaining a greater revenue. This tax, like all others, was farmed, and the farmers of it were called elxostodv-
yoii. It continued to be collected in B.C. 405, as
Aristophanes mentions an elxostodvugos in the
Jogs.1

EISANGEIA. 391

exercise a direct influence over his junior, and was
instructed with the command of troops in battle.
The word appears to have originally signified a com-
mander. authority of the council. When the offence was obviously beyond the reach of the senate's competency, the trial was dispensed with, and a decree immediately drawn up for submitting the cause to a superior court.

When a cause of this kind was so referred, the decree of the senate, or vote of the people, associated other citizens to the accusation, or arrested the person, with the informer, who received a drachma ea-^4 from the public treasury (ευνύγγοιοι). And besides these, permission was given to any other citizen to volunteer his services on the side of the prosecution. If the information were laid before the assembly, either by the accuser himself or the senate, the first accused had to pass the onus of proof to their object to establish the penalty of the offence, on the apparent culpability of the accused; and this being decided by a vote of the people after a public discussion, the mode of conducting the trial and the penalty were next fixed. In the case of the ten generals, the assembly directed that the senate should propose the requisite arrangements. The plan of this sort of proceeding might be adapted, but might be combated by rival proposals of any private citizen. The assembly very often referred the matter to the Heliastic court, but occasionally undertook the trial itself; and when the prisoner was accused of treason, we are told that he made his defence to the assembly in chains, and with a groan upon either side; and, according to another authority, that the time for such defence was limited. After this the tribes voted by ballot, two urns being assigned to each tribe for this purpose. The informant, in the event of the prisoner being acquitted, was subjected to no penalty if he obtained the votes of as many as a fifth of the people; and he was liable to a fine of one thousand drachmas. For a more ample discussion of the trials in question, the reader is referred to Schömann. 3

Besides the class of causes hitherto described, there were also two others which equally bore the name of ελαττυγολα, though by no means of the same importance. The most important of these, and those mentioned by Polliu as taking part in bringing the matter before the assembly, but upon what occasion they were so employed we can only conjecture. In cases intended for the cognizance of the council only, after the reception of the denunciation, the body, with reference to it might be adopted by that body. If the alleged fact was punishable by a fine of no greater amount than five hundred drachmas, the council itself formed a court competent for its trial; if it was of a graver character, they might pass a decree, such as that in the case of Antipion already mentioned, directing the proper officers to introduce the cause to a Heliastic court, and punishing the persons and forms of the trial, and the penalty to be inflicted upon the conviction of the criminals; lastly, if the matter were highly important, and from doubts or other reasons they required the sanction of the assembly, they might submit the case as it stood to the consideration of that body. In the first case, the trial was conducted before the council with all the forms of an ordinary court; and if, upon the assessment of the penalties, the offence seemed to deserve a heavier punishment than fell within its competency, the trial was transferred to a Heliastic court, by the delivery of the sentence of the council (καταγγείως) to the two councilors by the scribe of the prytanes, and upon these they then devolved to bring the cause to a superior tribunal. These penalties were a mean while put into prison for safe custody by the

EISPHORA.

Zenē and Athenæ.1 The sacrifice was accompanied by libations, and a common meal for all the senators.2 

Suidas3 calls the elosphoría a festive day—the first of every year on which all the Athenian magistrates entered upon their office, and on which the senate offered up sacrifices for the purpose of obtaining the good-will of the gods for the new magistrates. But this statement, as well as the farther remarks he adds, seem to have arisen from a gross misunderstanding of the passage of Demosthenes4 to which he refers. Schömann5 adopts the account of Suidas, and rejects the other statement without giving any reason.

EISPHORA (εἰσφορὰ), literally a contribution or tribute, was an extraordinary tax on property, raised at Athens whenever the means of the state were not sufficient to carry on a war. The money thus raised was sometimes called ἐκ καταλύματος.6 We must carefully distinguish between this tax and the various liturgies which consisted in personal or direct services which citizens had to perform, whereas the elosphora consisted in paying a certain contribution towards defraying the expenses of a war.

Some ancient writers do not always clearly distinguish between the two, and Ulpian on Demosthenes7 entirely confounds them; and it is partly owing to these inaccuracies that this subject is involved in great difficulties. At the time when armies consisted of armed private persons, these levied themselves and served without pay, the military service was indeed nothing but a species of extraordinary liturgy; but when mercenaries were hired to perform the duties of the citizens, when wars became more expensive and frequent, the state was obliged to levy contributions on the citizens in order to be able to carry them on, and the citizens then paid money for the services which previously they had performed in person.

It is not quite certain when this property-tax was introduced; for, although it is commonly inferred, from a passage in Thucydides,8 that it was first instituted in 429 B.C. in order to defray the expenses of the siege of Mytilene, yet we find elosphora mentioned at an earlier period, and even the passage of Demosthenes should be taken in no sense in accordance with this, for it is certainly not impossible that he merely meant to say that so large an amount as 200 talents had never before been raised as elosphora. But, however this may be, after the year 429 B.C. this property-tax seems to have frequently been raised, for a few years afterward Aristides expresses it as an inconvenience of common occurrence. Such a contribution could not have been raised without a decree of the people, who also assigned the amount required; and the generals superintended its collection, and presided in the courts where disputes connected with, or arising from, the levying of the tax were settled.10 Such disputes seem to have occurred rather frequently; personal grievances commonly obliged the officers to tax persons higher than was legal, and the amount of the property of. The usual expressions for paying this property-tax are, εἰσφορέων χρήματα, εἰσφορέων εἰς τὸν πόλεμον, εἰς τὴν συνοικίαν τῆς πόλεως, εἰσφορέων εἰσφορεῖν, and those who paid it were called εἰσφορεῖτες. On the occasion mentioned by Thucydides, the amount which was raised, as we have seen, 200 talents, which if we suppose the taxable property to have been 20,000 talents, would have been a tax of one per cent.11 At other times the rates were higher, so that in 411 B.C., according to the wants of the Republic at the time: we have accounts of rates of a twelfth, a fiftieth, a hundredth, and a five hundredth part of the taxable property.

The census of Solon was during the first period the standard according to which the elosphoría was raised, until in 377 B.C., in the archonship of Nausinicus, a new census was instituted, in which the property-tax for the purpose of fixing the rates of the property-tax, were divided into a number of symmoria (συμμορίας) or classes, similar to those which were afterward made for the trierarchy.2 The nature of this new census, notwithstanding the minute investigation of Böck,13 is still involved in great obscurity. Each of the ten phyle, according to Ulpian, appointed 120 of its wealthier citizens, who were divided into two parts, according to their property, called symmoria, each consisting of sixty persons; and the members of the wealthier of the two symmoria were obliged, in case of urgent necessity, to advance to the less wealthy the sum required for the elosphoría.2 When the wants of the state had been thus supplied, those who had advanced the money could at their ease, and in the usual way, exact their money back from those to whom they had advanced the same. The whole number of persons included in the symmoria was 1200, who were considered as the representatives of the whole Republic; it would, however, as Böck justly observes, be absurd to suppose, with Ulpian, that these 1200 alone paid the property-tax, and that all the rest were exempt from it. The whole census of 6000,14 or, more accurately, of 5750 talents, was surely not paid, because of the expense and the inconvenience of raising property, the whole property of the whole Republic. Many others, therefore, though their property was smaller than that of the 1200, must have contributed to the elosphoría, and their property must be considered as included in the census of 5750 talents of taxable property.

The body of 1200 was, according to Ulpian, also divided into four classes, each consisting of 300. The class of the middle, or the richest, were the leaders of the symmoria (γεμίσματα συμμορίων), and are often called the three hundred κατ᾽ ἐξοχήν. They probably conducted the proceedings of the symmoria, and they, or, which is more likely, the demarchs, had to value the taxable property. Other officers were appointed to make out the lists of the rates, and called τραπεζαριαὶ, βιομασταὶ, or ἐκοιλάται. When the wants of the state were pressing, the leaders, perhaps in connexion with the 300 included in the second class—for Ulpian, in the first portion of his remark, states that the richer symmoria of every phyle had to perform this duty—advanced the money to the others on the above-mentioned terms,15 which, however, was never done unless it was decreed by the people.16 The rates of taxation for the elosphoría from 363 B.C. have been made out with great probability by Böck,17 from whose work the following table is taken:

Every one had to pay his tax in the phyle where his landed property lay, as appears from the oration of Demosthenes against Pólycles; and if any one refused to pay, the state had a right to confiscate his estate, but not to punish the individual with death. It is clear that if his property was taxed higher than that of another man on whose just claims could be made, he had the right to call upon this person to take the office in his stead, or to submit to a complete exchange of property. (Vid. Antipodes.) No Athenian, on the other hand, if belonging to the tax-paying classes, could be exempt from paying the property-tax even the descendant of Harmodius and Aristogiton. Orphans, though exempt from liturgies, were obliged to pay the property-tax as well, in the instance of Demosthenes, who was one of the leaders of the symmoric for ten years. Even trierarchies were not exempt from paying the eisphora themselves, although they could not be compelled to pay the proskopos. It seems, therefore, that all archives were likewise subject to it, for the only instance we have of any exception being made is one of aliens.

For further information concerning the subject of the eisphora, vid. the fourth book of Böckh’s Public Economy of Athens.—Wolf, Prologomena in Lepid.,—Wachsmuth, Hellen. Alterth., ii., 1 p. 136.—Herrmann, Pol. Ant. of Greece, § 162.

### ELISPOIESTHAI (ελισποιεσθαι).

(Vid. Apollon., Græek.)

### ELETHESIUM.

(Vid. Bath., p. 148.)

**ΕΛΑΙΑ (ελια), the Olive.** The common Ήλια of the Greek authors is the Olea Europaea, L. The Ήλια Althaeae, called also Αργολια and κόστος, is referred by Mathiolius and Sprengel to several species of the genus Olea, namely, O. sylvestris, O. hermaphroditica, and O. orientalis.

**ΕΛΑΙΑΓΟΝ/ΕΛΙΑΓΟΝ (ελαιαγος or ελιαγος), a plant mentioned by Theophrastus, that is, and which is thought, from the description which he gives of it, to have been in the same genus with the Dutch Myrtle, or Myrica Gale.** Sprengel, however, is in favor of the Sycus Holmii, or Weeping Willow.

**ΕΛΑΙΟΜELI (ελαιομελι), according to Dr. Al-**

[Note: The text appears to be a mixture of Greek and Latin, discussing the classification and properties of olive oil, as well as historical and legal aspects related to the taxation and ownership of land in ancient Greece. The text includes references to historians like Diiodorus Siculus, who noted that the olive tree was a symbol of the power and prosperity of the Athenians.]
Elephant (Elephas indicus), as well as the Annua 'Lotostoma Africana)."

ELEVEN, THE (οἱ ἐνδεκα), were magistrates at Athens of considerable importance. They are all ways called by this name in the classical writers; but in the time of Demetrius Phalereus, their name is said to have been changed into that of νομοθέται, who were, however, during the Democracy, distinct functionaries. (Vid. Nomothylakes.) The grammarians also give other names to the Eleven and the Areiopes.

The time at which the office of the Eleven was instituted is disputed. Ulrich considers the office to have been of an aristocratical character, and concludes, from a passage in Heralides Ponticus, that it was established by Aristides. Meier, on the other hand, maintains that the office existed not only before the time of Cleisthenes, but probably before the legislation of Solon; but it seems impossible to come to any satisfactory conclusion on the subject. They were annually chosen by lot, one from each of the ten tribes, and a secretary (ἥραματες), who must properly be regarded as their servant (φύγαι, τῇς τε ἐπισκοπῇς). When torture was inflicted in cases affecting the state, it was either done in the immediate presence of the Eleven, or by their servant (ὁ δήμαρχος). (Vid. Banaea.)

The Eleven usually only had to carry into execution the laws which were promulgated in the courts of law and the public assemblies; but in some cases they possessed an ἀγεμονία δικαστηρίου. This was the case in those summary proceedings called ἀστική ἐγκύρεια, ἐνδεκα, and ἄνδρεις, in which the penalty was fixed by law, and might be inflicted by the court on the confession or conviction of the accused without appealing to any of the jury courts. (Vid. Arkesous.) They also had an ἀνακάθαρσις δικαστηρίου in cases of κακοδικον, because the summary proceedings mentioned above were chiefly adopted in the case of such persons: hence Athipon calls them ἐνεργοφόροι τῶν κάκων δικαστηρίων. The word κακοδικον properly means any kind of malefactors, but is only applied in Athenian law to thieves (κλεπτοί), housebreakers (κοιμωρίται), man-stealers (εὐφανεροτοιεύτικαι), and other classes of a similar kind.

The Eleven was also said to have possessed ἀγεμονία δικαστηρίου in the case of confiscated property, which statement is confirmed by an inscription published by Böckh. ELEUSINIA.

ELEUSINIA (Eleusis), a festival and mysteries, originally celebrated at Elesis in Attica, in honour of Demeter and Persephone. All the ancients who have occasion to mention the Elesiniain mysteries, or the rites they were sometimes called, agree that they were the holiest and most venerable of all that were celebrated in Greece. Various traditions were current among the Greeks respecting the author of these mysteries; for, while some considered Eumolpus or Musæus to be their founder, others stated that they had been introduced from Egypt by Erechtheus, who at a subsequent period supplied the benefits of agriculture, and imported from the same quarter the sacred rites and mysteries of Eleusis. A third tradition attributed the institution to Demeter herself, who, when wandering about in search of her daughter Persephone, was believed to have come to Aetia, in the reign of Erechtheus, to have supplied its inhabitants with the benefits of agriculture, and to have introduced the Eleusinian Mysteries and Mysteries of Elesis. This last opinion seems to have been the most current among the ancients, and in subsequent times a stone, called ἀγέλαστος πέτα (triste saxum), was shown near the well Callischorus on Elesis, on which the goddess, overwhelmed with grief and fatigue, was believed to have remained on her arrival in Attica. Around the well Callischorus the Elesinian women were said to have first performed their chorus, and to have sung hymns to the goddess. All the accounts and allusions in ancient writers seem to warrant the conclusion that the legends concerning the introduction of the Eleusinian Mysteries are descriptions of a period when the inhabitants of Attica were heathen, and that the benefits of agriculture, and of a regularly constituted form of society, remained with the descendants of Eumolpus (vid. Eleusiniae), the daughters of the Eleusinian king Celeus, and a third class of priests, the Kerykes, who seem likewise to have been connected with the family of Eumolpus, though they themselves traced their origin to Hermes and Aegaeus. The Elesinian Mysteries were not celebrated at Athens itself, but at several townships of Attica; and Athens, the capital became also the centre of religion, and several deities who had hitherto only enjoyed a local worship were now raised to the rank of national gods. This seems also to have been the case with the Eleusinian goddess; for in the sanctuary of the national goddess, or the mysteries, at Athens, called Eleusinon, probably the new and national sanctuary of Demeter. Her priests and priestesses now became naturally attached to the national temple of the capital, though her original place of worship at Eleusis, with which so many sacred associations were connected, still retained its importance and its special share in the celebration. And though, as we shall see hereafter, the great Eleusinian festival was commenced at Athens, yet a numerous procession always went on, on a certain day, to Eleusis:

it was here that the most solemn part of the sacred rites was performed.

We must distinguish between the greater Eleusinon which were celebrated at Athens and Eleusis, and the lesser which were held at Agræ on the Ilissus. From the tradition respecting the institution of the lesser Eleusinon, it seems to be clear that the initiation into the Eleusinian mysteries was originally confined to Atteis, and there is said that Heracles, before descending into the lower world, wished to be initiated; but as the law did not admit strangers, the lesser Eleusinon were instituted in order to evade the law, and not to disappoint the great benefactor of Atteis. Other legends concerning the initiation of Heracles do not mention either the Eleusinon or the lesser Eleusinon. After the time when the Eleusinian ceremony was said to have been instituted, we no longer hear of the exclusion of any one from the mysteries except barbarians; and Herodotus expressly states, that any Greek who wished it might be initiated. The lesser Eleusinon were held every year in the month of Antheitherion, and, according to some accounts, in honour of Persephone; others state that they were initiated in them bore the name of mysteries (μυσταρίας), and had to wait at least another year before they could be admitted to the great mysteries. The principal rites of this first stage of initiation consisted in the sacrifice of a sow, which the mystae seem to have fasted in the Carnyards, and in the purification of the mystae with water from the holy spring of Plutone. Mystae had also to take an oath of secrecy, which was administered to them by the mystagogus, also called ἴεροφάνης προφήτης: they received some kind of preparatory instruction, which enabled them afterward to understand the mysteries which were revealed to them in the great Eleusinon; they were not admitted into the mysteries of Demeter, but remained during the solemnities in the vestibule.

The great mysteries were celebrated every year in the month of Bœdocmiion, during nine days, from the 15th to the 23d, both at Athens and Eleusis. The initiated were called ἐποντάς or ἐφόροι. On the first day they went into Athens; and the entrance of the lesser Eleusinon assembled at Athens, whence its name was θυγρός; but strangers who wished to witness the celebration of these national solemnities likewise visited Athens in great numbers at this season, and we find it expressly stated that Athens was crowded with visitors on the occasion. The second day, in solemn procession to the sea coast, where they underwent a purification. Hence the day was called ΑἿς Ῥυπα ταις, probably the conventional phrase by which the mystae were invited to assemble for the purpose. Suidas mentions two rivulets, called Phlor, as the place to which the mystae went in order to be purified. Of the third day scarcely anything is known with certainty; we only learn from

ELEUSINIA.

Clemens of Alexandria¹ that it was a day of fasting, and that in the evening a frugal meal was taken, which consisted of cakes made of same and barley, and of a beverage called 

hymeniac, which was administered on this day, as Meursius supposes, is uncertain; but that which he assigns to it consisted of two kinds of sea-fish, (τρίγυς and 

mamis), and of cakes of barley grown in the Rharian plain.² It may be, however, that this sacrifice belonged to the fourth day, on which also, the καλότος κάτωδος seems to have taken place. This was a procession with a ball containing pomegranates and poppy-seeds, which was carried on a waggon drawn by oxen, and women followed with small mystic cases in their hands.³ On the fifth day, which appears to have been called the torch-day (ἡ τῶν λαμπάνον ὠμέα), the mystes, led by the διάτοιχος, went in the evening with torches to the Temple of Demeter at Eleusis, where they seem to have remained during the following night. This rite was probably a symbolic 

representation of Demeter wandering about in search of Persephone. The sixth day, called Iacchos,⁴ was the most solemn of all. The statue of Iacchos, son of Demeter, adorned with a garland of myrtle, and bearing a torch in his hand, was carried along the sacred road⁵ amid joyous shouts (εὐκρήστεις) and songs, from the Ceramicus to Eleusis.⁶ This second procession was accompanied by great numbers of maidens carrying banking materials, and is related by Herodotus⁷ is founded on the supposition that 30,000 persons walking along the sacred road on this occasion was nothing uncommon. During the night from the sixth to the seventh day, the mystes remained at Eleusis, and were initiated into the last mysteries (ἐπιστρεφία). Those who were not initiates, however, were sent away by a herald. The mystes now repeated the same ceremony which had been administered to them at the lesser Eleusis, underwent a new purification, and then they were led by the mystagogus, in the darkness of night, into the lighted interior of the sanctuary (φωταγωγία), and were allowed to see (ἀφαίρεσις) what none except the epiptes ever beheld. The awful and horrible manner in which the initiation is described by later, especially Christian writers, seems partly to proceed from their ignorance of its real character, partly from their horror and aversion to these pagan rites. The more ancient writers always abstained from entering upon any description of the subject. Each individual, after his initiation, is said to have been dismissed by the words of ἀφείτησις and ἀσαθρότητι, to take rank under another mystes. On the seventh day the initiated returned to Athens, amid various kinds of railery and jests, especially at the bridge over the Cephissus, where they sat down to rest, and poured forth their ridicule on those who passed by. Hence the words γενεφίλος

and γενεφίλος.⁸ These σκωλείαι seem like, the procession with torches to Eleusis, to have been drawn from the symbolic representations of the journey by which, according to the legend, Demeter in her rage at the loss of Persephone or Baubo had dispersed the grief of the goddess and made her smile. We may here observe, that probably the whole history of Demeter and Persephone was in some way or other symbolically represented at the Eleusis. Hence Clements of Alexandria⁹ calls the Eleusinian mysteries a „mythical drama.¹⁰ The eighth day, called Ἐπιστρεφία, was a kind of additional day for those who by some accident had come too late, or had been prevented from being initiated on the sixth day. It was said to have been added to the Eleusinian mysteries, when Asclepius, coming over from Epidaurus to be initiated, arrived too late, and the Athenians, not to disappoint the god, added an eighth day.¹¹ The ninth and last day bore the name of παραχώροι,¹² from a peculiar kind of vessel called παραχώροι, which is described as a small kind of κόταν. Two of these vessels were on this day filled with water or wine, and the contents of one was poured to the east, and those of the other to the west, while those who performed this rite uttered some mystical words.

Besides the various rites and ceremonies described above, several others are mentioned, but it is not known to which day they belonged. Among them we shall mention only the Eleusinian games and contests, which Meursius assigns to the seventh day. They are mentioned by Gellius,¹³ and are said to have been the most ancient in Greece. The prize of the victors consisted in ears of barley. It was considered as one of the greatest provocations of the Eleusinians if, during their celebration, an ἵππος came as a suppliant to the temple (the Eleusinon), and placed his olive-branch (ιεράπετρα) in it;¹⁴ and whoever did so might be put to death without any trial, or had to pay a fine of one thousand drachmas. At the time of these festivals, no less than at the Eleusinia, no man, while celebrating the festival, could be seized or arrested for any offence.¹⁵ Lycurgus made a law that any woman using a carriage in the procession to Eleusis should be fined one thousand drachmas.¹⁶ The custom against which this law was directed seems to have been very common before.¹⁷ It was perhaps for this reason that the mysteries long survived the independence of Greece. Attempts to suppress them were made by the Emperor Valentinian, but he met with strong opposition, and they seem to have continued down to the time of the elder Theodosius. Respecting the secret doctrines which were revealed in them to the initiated, nothing certain is known. The general belief of the ancients was that they offered to the dead a comforting prospect of a future state.² But these were doctrines which had been originally connected with these mysteries, and was probably added to them at the period which followed the opening of a regular intercourse between Greece and Egypt, when some of the speculative doctrines of the latter country and the East may have been introduced into the mysteries, and followed by the names of the venerable bard of the mythical age. This supposition would also account, in some measure, for the legend of their introduction from Egypt. In modern times many attempts have been made to discover the nature of the mysteries revealed to the initiated, but the results have been as various and as fanciful as might be expected. The most sober and probable view is that, according to which, they were the remains of a worship of the dead, which the rise of the Hellenic mythology and its attendant rites, grounded on a view of nature less fanciful, more earnest, and better fitted to awaken both philosophical thought and religious feeling.²² Respecting the Attic Eleusis, see Meursius, Eleusinar, Lugd. Bat. 1619.—St. Croix, Recherches, Hist. et Crit. sur les Mystères du Paganisme (second edition was published in 1817 by Sylvestre de Sacy, in 2 vols., Paris).—Ou.
ELMINS

Eleusinia were also celebrated in other parts of Greece At Ephesus they had been introduced from Athens. In Laconia they were, as far as we know, only celebrated by the inhabitants of the ancient town of Helos, who, on certain days, carried a wooden statue of Persephone to the Eleusinion, in the heights of Taygetus 4 Crete had likewise its Eleusinian festivals.

ELEUTHERIA (*Ελευθερία, the feast of liberty,* a festival which the Greeks, after the battle of Plataea (479 B.C.), instituted in honour of Zeus Eleutherios (the deliverer). It was intended not merely to be a token of their gratitude to the god to whom they believed themselves to be indebted for their victory over the barbarians, but also as a bond of unity. 

Every fifth year these solemnities were celebrated with contests (Δία γινών Ελευθεριών), in which the victors were rewarded with chaplets (Δία γινών οσταφάνια). The annual solemnity at Plataeae, which continued to be observed down to the time of Plutarch, is this: On the sixteenth of the month of Maimacteria, a procession was formed, with a trumpeter, who blew the signal for battle, marched at daybreak through the middle of the town. It was followed by wagons loaded with myrtle boughs and chaplets, by a black bull, and by free youths, who carried the vessels containing the libations for the dead. No slave was permitted to minister on this occasion. At the end of this procession followed the victorious youths, who were not allowed to eat any other food during his office to touch a weapon, or to wear any other but white garments, now wearing a purple tunic, and with a sword in his hand, and also bearing an urn, kept for this solemnity in the public archive (γραμματείον). When the procession came to the place where the Greeks who had fallen in the battle stood, the urn was opened, the Worms were put into the sepulchres, and then the dead had fallen in the defence of their country to take part in the banquet prepared for them. This account of Plutarch agrees with that of Thucydides. 

The latter, however, expressly states that the Greeks, Aristides carried a decree that delegates (πρόεδροι και φιλευθεροί) from all the Greek states should assemble every year at Plataea for the celebration of the Eleutheria. The town itself was at the same time declared sacred and inviolable, as long as its citizens offered the annual sacrifices which were performed on the first day of the feast. 

It was not, however, until the fiftieth year, that this festival was observed by an instrument contrived for the purpose, "Et producit aequum supras humore carentes." The bronze lamps found in ancient sepulchres, besides exhibiting all the varieties depending on the number of holes or nozzles, have sometimes been attached to them by a chain the needle which served to trim the wick. 

The fungus-shaped excrescences which form on the top of the wick (μύκτερα, fungí) were thought to indicate rain. 

*ELMINS or HELMINS* (*Ελμών* or *Ελμώς*). 

"Standing alone, this term is applied to intestinal worms in general. The *Ελμών plάτεια is the Tανία laïta.* Thelephorastus says it is congenital in Egypt. The Arabian *Ελμός plάτεια can describe the *Draconemus*, or Guinea Worm, which the Greeks call *δρακοπτόν* and the translators of the *Arabian* *Vena medinensis*." Thus far Adams. 

"The word *Elmins*," observes Griffith, "which is

EMANCIPATIO

frequently employed by Hippocrates in many of his works, and, among others, in his General Treatise on Diseases, was applied by him to those animals which are at present known under the denomination of intestinal worms, or, as he was acquainted with but a small number of species. Aristotle has employed it in the same manner, as well as Ælian, every time that he speaks of the substances which are used to rid dogs of the worms to which they are subject. The Latin authors, and Pliny among the rest, have restricted the word lumbresicus to the intestinal worms, and have rendered the three Greek denominations (σακκυδας, ελκας, and ἐμμες) by a single one, that of worms, from which it has happened that the moderns have been led into the same confusion by the word worms, which, as well as the French word vers, is evidently derived from the Latin.¹

*ELOPS (Ελόπ), a species of harmless Serpent mentioned by Nicander. Belon says it is called Laphiata in Lemnos. *ELYMUS (Ελυμ), a species of Grain. The Elymus of Hippocrates is, according to Dierbach, the Panicum italicum; while that of Dioscorides is, according to Sprengel, the Panicum miliaceum. Panic is a plant of the millet kind.²

EMANCIPATIO was an act by which the patri potestas was dissolved in the lifetime of the parent, and it was so called because it was in the form of a sale (emancipatio). By the laws of the Twelve Tables it was necessary that a son should be sold three times in order to be released from the paternal power, or to be sui jure. In the case of daughters and grandchildren, one sale was sufficient. The father transferred the son by the form of a sale to another person, who manumitted him, upon which he returned into the power of the father. This act was regulated by the law of the Twelve Tables. After a third sale, the paternal power was extinguished, but the son was resold to the parent, who then manumitted him, and so acquired the rights of a patron, who emancipated his son, which would otherwise have belonged to the purchaser who gave him his final manumission.

The following clear and satisfactory view of emancipation is given by a German writer: "The patri potestas could not be dissolved immediately by manumission, because the patri potestas must be viewed as an imperium, and not as a right of property, like the power of a master over his slave. Now it was a fundamental principle that the patri potestas was extinguished by exercising once or thrice (as the case might be) the right which the father families possessed of selling, or, rather, pledging his child. Conformably to this fundamental principle, the release of a child from the patri potestas was clothed with the form of a mancipatio, effected once or three times. The patri potestas was indeed thus dissolved, though the child was not yet free, but came into the condition of a nexus. Consequently, a manumission was necessarily connected with the mancipatio, in order that the proper object of the emancipation might be attained. This manumission must take place once or thrice, according to circumstances. In the case when the manumission was not followed by a return into the patri potestas, the manumission was attended with important consequences to the manumissor, which consequences ought to apply to the emancipating party. According to this view, it was necessary to provide that the decisive manumission should be made by the emancipating party; and for that reason, a mancipatio, which preceded the final manumission, was a parte of the form of emancipation.³

The legal effect of emancipation was to dispossess all the rights against the person emancipated, but did not enable him to be capable of becoming, a pater familias; and all the previously existing relations of agnation between the parent's family and the emancipated child ceased at once. But a relation analogous to that of patron and freedman was formed between the person who gave the final emancipation and the child, so that if the child died without children or legal heirs, or if he required a tutor or curator, the rights which would have belonged to the father if he had not emancipated the child, were secured to him as a kind of paternal right, in case he had taken the precaution to secure to himself the final manumission of the child. Accordingly, the father would always stipulate for a remancipatio from the purchaser; this stipulation was the pactum fiduciae. The emancipated child could not take any pan of his parent's property as heres, in case the parent died intestate. This rigour of the civil law (juris iniquitates) was modified by the prator's edict, which placed emancipated children, and those who were in the parent's power at the time of his death, on the same footing as to succeeding to the intestate parent's property.

The Emperor Anastasius introduced the practice of emancipation by an imperial rescript. Justinian enacted that emancipation should be effected before a magistrate; and by an edict (edictum principis) the parent had still the same right to the property (bona) of the emancipated person that a patron had to the bona of his freedman. But he still allowed, what was probably the old law, a father to emancipate a grandson without emancipatio mancipatio. In this act he emancipated the grandson, or to emancipate them all. Justinian, also,⁴ did not allow a parent to emancipate a child against his will, though it seems that this might be done by the old law, and that the parent might so destroy all the son's rights of agration.

The Emperor Anastasius allowed an emancipated child (under certain restrictions) to succeed to the property of an intestate brother or sister, which the prator had not allowed; and Justinian put an emancipated child in all respects on the same footing as one not emancipated, with respect to such succession.

An emancipation effected a capitum diminutum, in consequence of the servile character (errinis causa) into which the child was brought by such act.⁵

EMANSOR. Vid. Dextrum.

EMBAS (ημας), a shoe worn by men,⁶ which is frequently mentioned by Aristophanes and other Greek writers. This appears to have been the most common kind of shoe worn at Athens (πατέλας θρηματικής). Pollux⁷ says that it was invented by the Thracians, and that it was like the low clog. The ἡμας was also worn by the Boeotians, and probably in other parts of Greece.⁸

EMBATEIA (ἐμπάτησις). In Attic law this word (like the corresponding English one, entry) was used to denote a formal taking possession of real property. Thus, when a son entered upon the land left by his father, he was said ἐμπάτησεν, or ἐμπάτησις.
EMBATEIA.

EMISSARIUM.

EMISSAKIUM.

possessed (H. 1st, Meier, 78.) and, 5, The adopted mere thenes, i-ather land) resembles the earth though the land was supposed to have been awarded the defendant, and was found useless, and were discontinued; yet the ceremony of ejecting was still kept up as a form of law, being deemed by lawyers a necessary foundation of the subsequent legal process. Thus at Rome, in the earlier times, one party used to summon the other by the words "ex jure te manus consertii me voco," to go to him with the land in dispute, and if the presence of the defendant was not there turn him out by force. Afterward this was changed into the symbolic act of breaking a eul of earth upon the land, by which the person who broke intimated that he claimed a right to deal with the land as he pleased. We may observe, also, that the English action of ejectment in this respect resembles the Athenian, although the proceedings were: the plaintiff, and an auster of him by the defendant are supposed to have taken place, and are considered necessary to support the action, yet both entry and ouster are mere fictions of law.

These proceedings by entry, ouster, &c., took place also at Athens in case of resistance to an executor, to defeat partitions, and to give up the land or the chattel adjudged, or to pay the damages awarded to the plaintiff by the appointed time, and thus being a procedura, i.e., the time having expired by which he was bound to satisfy the judgment, the plaintiff proceeded to satisfy himself by seizure of the defendant's lands. This he certainly made with the consent of the parties though whether it was lawful in all cases does not appear. The Athenian laws had made no provision for putting the party who succeeded in possession of his rights; he was, therefore, obliged to levy execution himself, without the aid of a ministerial officer, or any other person. If, in doing so, he encountered the eul of earth, which (if the subject-matter was land) must have been grounded upon his own previous entry. The action could be brought against any one who impeded him in his endeavour to get possession, as well as against the party to the former suit. The cause of Demosthenes against One- tor was this: Demosthenes having recovered a judgment against Apherates, proceeded to take his lands in execution. OneTor claimed them as mortgages, and turned him out (district), whereupon Demosthenes, continuing that the mortgage was collusive and fraudulent, brought the eul of earth, which is called eul of earth, or Emissarium, because the process was collateral to another object, rather than a direct contest by the parties in the cause. The consequence to the defendant, if he failed in the action of ejectment, was that, being

side his (ability to the plaintiff) he was, as a public officer, enjoined to pay to the treasury a sum equal to the damages, or to the value of the property recovered in the first action. While this remained unpaid (and we may presume it could not be paid without also satisfying the party), he became, as a state debtor, subject to the disabilities of tyranny.

EMBLEMA (βελτίωμα, ἐμβλημα), an inlaid ornamental art. The art of inlaying (ἐπίτρυπτη ἐμβλημα) was employed in producing beautiful works of two descriptions, viz.: 1st, Those which resembled our marquetry, oulue, and Florentine me saies; and, 2nd, those in which crosses (crusta) especially wrought in bas-relief, and of precious materials, were fastened upon the surface of vessels or other pieces of furniture.

To productions of the former class we may refer all attempts to adorn the walls and floors of houses with the figures of flowers and animals, or with any other devices expressed upon a common ground by the insertion of varicoloured woods or marbles, all of which were polished so as to be brought into actual contact with each other. To the second class, which includes exceedingly valuable works of first-rate artists, and some of them were, moreover, esteemed sacred, being the figures of the penates and household gods of the proprietors. Athenaeus, in describing two Corinthian vases, distinguishes between the emblema in bas-relief (προότια) which adorned the body and neck of each vessel, and the figures in high relief (περιστροφή περιτροπή) which were placed upon its brim. An artist, whose business it was to make works ornamented with emblems, was called "crustrarius."

EMERITI was the name given to those Roman soldiers who had served out their time, and had exchanged their military for citizenship. The average time of service was twenty years for the legionary soldiers, and sixteen for the praetorians. At the end of their period of service they received a bounty, or reward, either in land or money, or in both. Dion Cassius, states that it was arranged by Augustus that a prætorian should receive 6000 drachmai (20,000 sesterces), and a legionary 5000 (12,000 sesterces). Caligula, he says, because he could not give 6000 to 6000 sesterces. We find this bounty called justa militia commoda, commoda missionum, and also emeriti.

EMERITUM. (Vid. Emeritus.)

EMISSARIUM, an artificial channel formed to carry off any stagnant body of water (unde aqua emittitur) from the site. Of the latter part, we have the 468.

Some works of this kind are among the most remarkable efforts of Roman ingenuity. Remains still exist to show that the lakes Trasimene, Albano,
Nemi, and Fucino were all drained by means of emissoraries, the last of which is still nearly perfect, and open to inspection, having been partially cleared by the present King of Naples. Julius Caesar is said to have first conceived the idea of this stupendous undertaking, which was carried into effect by the Emperor Claudius. 9

The following account of the works, from observations on the spot, will give some idea of their extent and difficulties. The circumference of the lake, including the bays and promontories, is about thirty miles in extent. The length of the emissary, which lies nearly in a direct line from the lake to the River Liris (Garigliano), is something more than three miles. The number of workmen employed was 30,000, and the time occupied in the work eleven years. 3 For more than a mile the tunnel is carried under a mountain, of which the highest part is 1000 feet above the level of the lake, and through a stratum of rocky formation (carnelian) so hard that every inch required to be worked by the chisel. The remaining portion runs through a softer soil, not much below the level of the earth, and is vaulted in brick. Perpendicular openings (putes) are sunk at various distances into the tunnel, through which the excavations were partly discharged; and a number of lateral shafts (cumculit), some of which separate themselves into two branches, one above the other, are likewise directed into it, the lowest at an elevation of five feet from the bottom. Through these the materials excavated were also carried out. Their object was to enable the prodigious multitude of 30,000 men to carry on their operations at the same time without inconveniencing one another. The immediate mouth of the tunnel is some distance from the present margin of the lake, which space is occupied by two ample reservoirs, intended to break the rush of water before it entered the emissary, connected by a narrow passage, in which were placed the sluices (epistomium). The mouth of the tunnel itself consists of a splendid xi-i-way of the Doric order, nineteen feet high and nine wide, formed out of large blocks of stone, resembling in construction the works of the Claudian aqueduct. That through which the waters dis-charged themselves into the Liris was more simple, and is represented in the preceding woodcut. The river lies in a ravine between the mountains, and formerly in the beds of 60 feet below, and consequently, cannot be seen in the cut. The small aperture above the embouchure is one of the culi orifices mentioned above.

It appears that the actual drainage was relinquished soon after the death of Claudius, either from the perversity of Nero, as the words of Pliny 10 seem to imply, or by neglect; for it was reopened by Hadrian.

EMMHNIOI ΔΙΚΑΙ (ημηνίοι δίκαι) were suits, which were not allowed to be pending above a month. This regulation was not introduced till after the date of Xenophon's treatise on the revenue, in which it was proposed that a more rapid progress should be allowed to commercial suits, 6 and it appears to have been first established in the time of Philip. 7 It was confined to those cases which required a speedy decision; and of these the most important were disputes respecting commerce (μι-νηιηιεικά δίκαι), which were heard during the six winter months from Boeotia to Munchyia, so that the merchants might quickly obtain their rights and sail away; 8 by which we are not to understand, as some have done, that a suit could be protracted through this whole time, but it was necessary that it should be decided within a month. 9

All causes relating to mines (μειαλλικά δίκαι) were also ημηνίοι δίκαι; 4 the object, as Böckh remarks, 5 being, no doubt, that the mine proprietor might not be detained too long from his business. The same was the case with cases relating to ρα-νοια 10 (vide. Er. Ant.) and Pollux 11 includes in the list suits respecting downy, which are omitted by Hardouin.

EMPERIUM (εμπερέων), a plant, about which botanical writers are still undecided. Stephens and Hardouin call it Peuce-piire; but if by it they mean the Alchemilla arvensis of Hooker, which is often called Peuce-piire, or Parsley-breakstone, its characters, according to Adams, are by no means suitable to the εμπερέων of Dioscorides. The conjecture of Cassius, which Syngelus adopts, namely, that it was a species of Salada, is, according to the same writer, much more probable. Pée, however, declares against this opinion without giving any one in its place. Pliny says of it, "Εμπερεως, quam nostri calefragrum vocant," &c., identifying it with the Calcefraga. 12

EMPHRIOUXI (εμφριουξί), from έμφριω, was the name given to the Spartan citizens during the period in which they were liable to military service. 13 This period lasted to the fortieth year from man-hood (αυ δήος), that is to say, to the sixtieth year from birth; and during this time a man could not go out of the country without permission from the authorities. 14

EMPHYTEUSIS (εμφετεύως, literally, an "in-planting") is a perpetual right in a piece of land that is the property of another: the right consists in the legal power to cultivate it, and treat it as our own, on condition of cultivating it properly, and paying a fixed sum (canon, pensio, reditum) to the owner (domina) at fixed times. The right is founded on contract between the owner and the lessee.

So-called from the word ἵππειξις because they pretended to derive their knowledge from experience only, and in this particular set themselves in opposition to the Dogmatici. Serapion of Alexandria, and Philinus of Cos, are regarded as the founders of this school, in the third century B.C. The arguments by which the Dogmatici supported their opinions, as summed up by Celsius, 1 are given under that head; those of the Empirici are thus stated by the same author: 'On the other hand, the land, according to the first part of the tractus of lands so let, with a distinction of them into agri vectigales and non vectigales, according as the lease was perpetual or not; but in either case the lessee had a real action (utitis in rem actio) for the protection of his rights, even against the owner.

The term Empythisis first occurs in the Digest. The Praxia Empythistica are also frequently mentioned in the Theologians and Justinian, however, put the empythisis and the ager vectigalis on the same footing; and in the case of an empythisis (whether the lessor was a community or an individual), the law was declared to be the same as in the case of leases of town property. The ager vectigalis was not a lease at all, but a possession in re only, and the lessee is constantly distinguished from the owner (dominus). Yet the occupier of the ager vectigalis and the empythisa had a juridical possession; a kind of inconsistency, which is explained by Savigny, by showing that the ager vectigalis was formed on the analogy of the ager publicus, and the empythisis was formed on the analogy of the ager privatius. Between them, there was nothing inconsistent in the notion of possession, as applied to the public land, being transferred to the ager vectigalis as a modified form of the ager publicus.

Though the empythisis had not the ownership of the land, he had an almost unlimited right to the enjoyment of it, unless there were special agreements limiting his right. He could sell his interest in the land after giving notice to the owner, who had the power of choosing whether he would buy the land at the price which the purchaser was willing to give. But the lessee could not sell his interest to a person who was unable to maintain the property properly. The lessee was bound to pay all the public charges and burdens which might fall on the land, to improve the property, or, at least, not to deteriorate it, and to pay the rent regularly. In case of the lessee's interest being transferred to another, a fifth part of the price, or of the value of the property, when the nature of the transfer did not require a price to be fixed, was payable to the owner on the admission of the empythisa, and which, as a general rule, was payable by him. The heredes of the empythisa were not liable to such payment.

The origin of the Empythisis, as already stated, was by contract with the owner and by tradition; or the owner might make an empythisis by his use and occupation, or perhaps in certain cases, be founded on prescription.

The right of the empythisa might cease in several ways: by surrender to the dominus, or by dying without heirs, in which case the empythisis reverted to the owner. He might also lose his right by injuring the property, by non-payment of his rent or the public burdens to which the land was liable, by alienation without notice to the dominus, &c. In such cases the dominus could take legal measures for recovering the possession. 2

1. (De Med., Pral.)
2. 1. (De Med., Pral.)
method generally answered best, and afterward began to prescribe the same to the sick. That this was the rise of the art of medicine, which, by the frequent recovery of some and the death of others, distinguishes what is pernicious from what is salutary; and that, when the remedies were found, men began to discourse about the reasons of them. That medicine was not invented in consequence of their reasoning, but that reasoning sprang from the discovery of medicine. They ask, too, whether reason preserves the same as experience, or something different: if the same, they infer it to be needless; if different, mischievous. That at first, however, there was a necessity for examining remedies with the greatest accuracy; but now they are sufficiently ascertained; and that we neither meet with any new kind of disease, nor want any new method of cure. That if some unknown distemper should occur, the physician would not therefore be obliged to have recourse to the occult things, but he would presently see to what distemper it is most nearly allied, and make trial of remedies like to those which have often been successful in a similar malady, and by the resemblance between them would find some proper cure. For they do not affirm that judgment is useless in the practice of medicine; and that the rational animal is capable of practising this art, but that those conjectures which relate to the occult things are of no use, because it is no matter what causes, but what removes a distemper; nor is it of such great importance in what manner the distribution is performed, but what is easiest distributed: whether conception, gestation or birth; or, whether it is properly a conception or the effect of a distemper; nor are we to inquire how we breathe, but what relieves a difficult and slow breathing; nor what is the cause of motion in the arteries, but what each kind of motion indicates. That these things are known by experience; that in all disputes of this kind a good deal may be said on both sides, and, therefore, that elocution and eloquence obtain the victory in the dispute; but diseases are cured, not by eloquence, but by remedies; so that if a person without any eloquence be well acquainted with those remedies that have been discovered by practice, he will be a much greater physician than one who has cultivated his talent in speaking without experience. That these are the true, however, which have been mentioned are only little distempers, which are not always open the abdomen and precordia of living men, and make that art, which presides over the health of mankind, the instrument, not only of inflicting death, but of doing it in the most horrid manner; especially if it be considered that some of those things which are sought after with so much barbarity cannot be known at all, and that may be known without any cruelty; for that the colour, the softness, hardness, and such like, are not the same in a wounded body as they were in a sound one; and, farther, because these qualities, even in bodies that have suffered no external violence, are often changed by fear, grief, hunger, indigestion, fatigue, and a thousand other inconsiderable disorders, which makes it much more probable that the internal parts, which are far more tender, and not exposed to the light itself, are changed by the severest wounds and mangled. And that nothing can be more ridiculous than to imagine anything to be the same in a dying man, nay, one already dead, as it is in a living person; for that the abdomen, indeed, may be opened while a man breathes, but as soon as the knife has reached the bones, and the transverse septum is cut, which, by a kind of membrane, divides the upper from the lower parts (and by the Greeks is called the diaphragm—diaphragma), the man immediately expires, and thus the pre-

EMTIO ET VENDITIO

With respect to Bacchis, however, it should be mentioned, that Kühn considers the passage in Galen, which seems to class him among the Empirici, to be corrupt. None of these have left any works behind them except Sextus, Marcellus, and Plineus Valerianus, a few of whose writings are still extant. The sect existed a long time, as Marcellus lived in the fourth century A.D.; it appears conjectural to some, and they have maintained its retention as long as its members remained true to their original principles; and it was only when they began to substitute ignominious and indiscriminate experiments for rational and philosophical observation that the word Empiric sank into a term of reproach. A parallel has been drawn between the worst part of the system of the ancients in medicine and the modern Homoeopaths by Francis Ford. By an inaugural class, entitled "Philines et Hahnemannus, seu Veteris Sectae Empirici cum Hodierina Secta Homoeopathica Comparatio," Stn, Berol, 1834, p. 38.

EMPIST (ηπιστ), a species of insect, often confused with the κόκων, or Gnat. Schneider thinks the term is more properly applicable to certain species of Tipula. "The Tipula cicutiformis," observes Adams, "is very like the gnat; it would, then, appear to correspond to the ηπιστ of the Greeks." 1 EMPORICAL DICAII (ηπορικαί δίκαι). (Vid. EMPORIUM.)

EMPORIUM (τὸ ἐμπόριον), a place for wholesale trade in commodities carried by sea. The name is derived from a seaport town, and it properly signifies only a particular place in such a town. Thuc. Amphitryo says that he had looked for a person, "Απὸ ἐμπορίου, ἀτικά καὶ μικρά ἀτικά σε ἐν ποιόν,

In medicinis, in tonstrinis, apud omnis adiis saeculis."

The word is derived from ἐμπορος, which signifies in Homer a person who sails as a passenger in a ship belonging to another person; but in later writers it signifies the merchant or wholesale dealer, and differs from κυπέλλος, the retail dealer, in that it is applied to the merchant who carries on commerce with foreign countries, while the κυπέλλος purchases his goods from the ἐμπορος, and retails them in the market-place (δὲ κατά πλοὶ καλούμενος τοῦ πρὸς ἄλλην τε καὶ κυπέλλων διάφορον ἀγοράς, τοῦ δὲ πλοίατος ἐπὶ τῶν πόλεων ἐμποροῦν). 2

At Athens, it is said 3 that there were two kinds of emporia, one for foreigners, and the other for natives (ἑνμίκων καὶ ἄστικων), but this appears doubtful. 4 The emporium at Athens was under the inspection of certain officers, who were elected annually (ἐμπεριττοῖ τοῦ ἐμπορίου). (Vid. ΕΝΗΜΕΡΙΩΤΗΣ.)

EMTI ET VENDITI ACTIO. The seller has an actio venditi, and the buyer has an actio emti, upon the contract of sale and purchase. Both of them are actions directe, and their object is to obtain the fulfilment of the obligations resulting from the contract.

EMTI ET VENDITIO. The contract of buying and selling consists in the buyer agreeing to give a certain sum of money to the seller, and the seller agreeing to give to the buyer some certain thing for his money. After the agreement is made, the buyer is bound to pay his money, even if the thing which is the object of purchase should be accidentally destroyed before it is delivered; and the seller must deliver the thing with all its intermediate increase. The seller must also warrant a good title to the purchase (vid. ENGastos), and he must also warrant that the thing has no concealed defects, and that it has all the good qualities which he (the seller) attributes to it. It was with a view to check frauds in sales, and especially in the sales of slaves, that the seller was obliged, by the edict of the curule aediles (vid. EMPIST), to inform the buyer of the defects of any slave offered for sale: "Qui municipia vendunt, certiores faciant emptores quod morti vitique," &c. 5 In reference to this part of the law, in addition to the usual action arising from the contract, the buyer had against the seller, according to the circumstances, an actio exit or an actio emporica, according to whether he possessed the defaced slave, or had sold it. This law, however, was not applicable to landed property and houses (ἐκτίσμα τῆς καὶ οἰκίας) in a foreign country, which was frequently granted by one Greek state to another, or to separate individuals of another state. 6 'Εκτίσματα were such possessions in a foreign country, and are opposed by Demosthenes 7 to κτίσμα, possessions in one's own country. The term 'Εκτίσμα was also applied to the landed property or house of an Athenian possessed in a different δῆμος from that to which he belonged by birth, and, with respect to such property, he was called 'Εκτιστήμων: whence we find Demosthenes 8 speaking of οἱ δημοτες καὶ οἱ 'Εκτιστήμονοι. For the right of holding property in a δῆμος to which he did not belong, he had to pay such δημοτες as were inscribed under the name of 'Εκτιστήμων. 9 ENCTETIKON (ἐκτιστικόν). (Vid. ENCTETIA.)

ENDEXIXIS (ἐνδείκτης) properly denotes a prosecution instituted against such persons as were alleged to have exercised rights or held offices while labouring under a peculiar disqualification. Among these are the persons that have been deprived of their liability, sat in court as dicasts, or took any other part in public life; exiles, who had returned clandestinely to Athens; those that visited holy places after a conviction for impiety (ἀνθεδωρία); and all such as, having incurred a partial disfranchisement (ἱπτίσμα κατὰ προσφάτωτα), presumed to exercise their former rights, under the notion of their condemnation. Besides these, however, the same form of action was available against the chairman of the proedri (ἐκτιστάτης), who wrongly refused to take the votes of the people in the assembly, 10 against malfeasors, especially murderers (which Schömann thinks was probably the course pursued when the time for an apogage had been suffered to elapse), traitors, and those who had received an indemnity, and persons who furnished supplies to the enemy during war. 11 The first step taken by the prosecutor was to lay his information in writing, also called ἐνδείκτις, before the proper magistrate, who might be the archon or king archon, or one of the three athletic kings, according to the subject-matter of the information; but the prosecution was rejected without the being accused person, the Eleven were the officers applied to. (Vid. ELEVEN, TEN.) It then became the duty of the magistrate to arrest or hold

403
ENOEIKOU DIKE.

in a d the person criminated, and take the usual steps for bringing him to trial. There is great ob-

jection to the result of condemnation in a prosecution of this kind. Heraclids 1 ridicule the idea that it was invariably a capital punishment. The accuser, if unsuccessful, was responsible for bringing a malicious charge (ἐνδοικού συναφείς εκτελεύον). EΝDROMIS (ἐνδρόμος), a thick, coarse blanket, manufactured in Gaul, and called “endromis” because these who had been exercising in the stadium for their sport (ἐν δρόμοι) threw it over them to obviate the effects of strong exposure when they were heated. Not-

withstanding its coarse and shaggy appearance, it was worn on other occasions as a protection from the cold by rich and fashionable persons at Rome. Ladies also put on an endromis of a finer description (ἐνδρομιάδα Τύριας) when they partook, as they sometimes did, of the exercises of the palestra. Moreover, boots (vid. Cortinae) were called ἐνδρόμιακει on account of the use of them in running.

ΕΝ-ԴΥΜΑ (ἐνδύμα). (Vid. ΑΜΙΤΟΙΣ.)

ΕΝΕΚΥΡΑ (ἐνεκύρα). In private suits at Athens, whether tried by a court of law or before an arbitrator, whenever judgment was given against a defendant, a certain period was at the same time fixed (ἐν προθεσμία), before the expiration of which it was incumbent upon him to comply with the verdict. In default of discharge the lien was continued (τὸ ἐν δύμακειον) for one day as it was called, and the plaintiff was privileged to seize upon (ἐνεκύρασθαι) his goods and chattels as a security or compensation for non-compliance. The property thus taken was called ἐνεκύρα, and slaves were generally seized before anything else. This “taking in execution” was usually left to the party who gained the suit, and who, if he met with resistance in making a seizure, might take his remedy in a δίκη ἐνέκυρα; if with personal violence, in a δίκη ἀλαδης. On one occasion, indeed, we read of a public officer (τιφρέτος παρὰ τῆς ἁρπάς) being taken to assist in, or, perhaps, to be a witness of a seizure; but this was in a case where public interests were concerned, and consequent upon a decision of the δικας. The same oration gives an amusing account of how Englishmen were considered worthy of “a discharge of trespass,” committed by some plaintiffs in a defendant's house, though the amount of damages which had been given (ὁ καταδίκης) was, according to agreement, lying at the bank (ἐπὶ τοῦ παρατέρου), and there awaiting their receipt.

It seems probable, though we are not aware of its being expressly so stated, that goods thus seized were left in the house, until the party from whom they were taken could sue his opponent, perhaps by a δίκη βαλαίνος, for any surplus which might remain after all legal demands were satisfied. No seizure of this sort could take place during several of the religious festivals of the Athenians, such as the Dionysia, the Lenaea, &c. They were, in fact, dies mori in Athenian law.

ΕΝΕΚΥΡΑ. In public suits, bail or sureties, were in very frequent requisition, both in the private and public affairs of the Athenians. Private agreements, as, for instance, to abide by the decision of arbitrators, or that the evidence resulting from the application of torture to a slave should be conclusive, were corroborated by the parties reciprocally giving each other sureties; and the same took place generally in all money-lending or mercantile transactions, and was invariably necessary when persons undertook to farm tolls, taxes, or other public property. In judicial matters, bail or sureties were provided upon two occasions: first, when it was requisite that it should be guaranteed that the accused should be forthcoming at the trial; and, secondly, when security was demanded for the satisfaction of the avowed debt. In the first case, bail was generally required when the accused was other than an Athenian citizen, whether the action were public or private; but if of that privileged class, upon no other occasion except when proceeded against by way of Apagoge, Enechixos, Ephexgesis, or Eiasangelia. Upon the last-mentioned form being adopted in a case of high treason, bail was not accepted. The technical rules of procedure required bail of an accused person to καταγγείλω, that for being surety in such case, ξεγγυότατη. Surely of the other kind was demanded at the beginning of a suit upon two occasions only: first, when a citizen as-

serted the freedom of a person detained in slavery by another; and, secondly, when a litigant, who had suffered judgment to go by default before the arbitrator (διακηρύχον), had recommenced his action within the given time (διακηρύχον ἑαυτοῦ). Among the security of this kind was required in all mercantile and some other private causes; and state debtors, who had been sentenced to remain in prison till they had acquitted themselves of their liabilities, were, by a law of Timocrates,1 allowed to go to large if they could provide three sureties that the money should he paid within a limited period. If the principal in a contract made default, the surety was bound to make it good; or, if he refused to do so, might be attacked by an ἐγγύεσις, if such action were brought within a twelvemonth after the obligation was undertaken. If, however, a person accused in a public action by one of the forms above mentioned failed to appear to take his trial, his bail became liable to any punishment that such person had incurred by contempt of court, and, consistently with this, it appears, a passage in Xenophon,3 that the law allowed the bail to secure the person of the accused by private com-

other sureties; and the same took place generally in all money-lending or mercantile transactions, and was invariably necessary when persons undertook to farm tolls, taxes, or other public property. In judicial matters, bail or sureties were provided upon two occasions: first, when it was requisite that it should be guaranteed that the accused should be forthcoming at the trial; and, secondly, when security was demanded for the satisfaction of the avowed debt. In the first case, bail was generally required when the accused was other than an Athenian citizen, whether the action were public or private; but if of that privileged class, upon no other occasion except when proceeded against by way of Apagoge, Enechixos, Ephexgesis, or Eiasangelia. Upon the last-mentioned form being adopted in a case of high treason, bail was not accepted. The technical rules of procedure required bail of an accused person to καταγγείλω, that for being surety in such case, ξεγγυότατη. Surely of the other kind was demanded at the beginning of a suit upon two occasions only: first, when a citizen asserted the freedom of a person detained in slavery by another; and, secondly, when a litigant, who had suffered judgment to go by default before the arbitrator (διακηρύχον), had recommenced his action within the given time (διακηρύχον ἑαυτοῦ). Among the security of this kind was required in all mercantile and some other private causes; and state debtors, who had been sentenced to remain in prison till they had acquitted themselves of their liabilities, were, by a law of Timocrates, allowed to go to large if they could provide three sureties that the money should he paid within a limited period. If the principal in a contract made default, the surety was bound to make it good; or, if he refused to do so, might be attacked by an ἐγγύεσις, if such action were brought within a twelvemonth after the obligation was undertaken. If, however, a person accused in a public action by one of the forms above mentioned failed to appear to take his trial, his bail became liable to any punishment that such person had incurred by contempt of court, and, consistently with this, it appears, a passage in Xenophon, that the law allowed the bail to secure the person of the accused by private com-
part of the demand would involve the loss of the whole cause. Thus the title of a party to the land itself might have expired, as, for instance, where he held under a lease for a term; yet he would be entitled to recover certain by-gone profits from one who had dispossessed him. Therefore it is not improbable that the ókeas &v. and kap. might, in practice, be confined to those cases where the rents and profits only were the subject of claim. We are told that if the defendant, after a judgment in one of these actions, still refused to give satisfaction, an apócr. (Vitruv., v. 4.) might be commenced against him, of which the effect was, that the plaintiff obtained a right to indemnify himself out of the whole property of the defendant. Schömann observes that this was a circuitous proceeding, when the plaintiff might take immediate steps to execution by means of entry and ejectment. His conjecture, however, that the giving to the party the choice between a milder and a more stringent remedy, accords with the general tenor and spirit of the Athenian laws. We may add that our own law furnishes an illustration of this, viz., where a plaintiff has obtained a judgment, he has the option of proceeding at once to execution, or bringing an action on the judgment; though with us the latter measure is considered the more vexatious, as it increases the costs, and is rendered less necessary by the facility with which executions can be levied. At Athens the ἔπατος ἔπαν, as it was the ultimate and most efficacious remedy, drew with it also more penal consequences, as explained under Ἐμπατέα. 1

ENSIS. (Vid. GLADIUS.)

ENTASIS (ἐντασία). The most ancient columns now existing are remarkable for the extreme diminution of the shaft between its lower and upper extremity, the sides of which, like those of an obelisk, converge immediately and regularly from the bottom upward. This convergence is the result of construction which is wanting in grace and apparent solidity. To correct this, a swelling line, called entasis, 2 was given to the shaft, which seems to have been the first step towards combining grace and grandeur in the Doric column.

The original form is represented by the figure on the left in the preceding woodcut, which is taken from the great temple at Posidonia (Pestum), which is one of the most ancient temples now remaining; that on the right shows the entasis, and is from a building of rather later construction in the same city. Two other examples of the same style are still to be seen in Italy, one belonging to an ancient temple at Alba Fucensisa, and the other at Rome on the steps of C. P. Publius. 3

1. Ἐπαντώμα (ἐπαντώμα), INSECTA, INSECTS.* Aristotle and Pliny used the terms ἐπαντώμα and ἐντάσες respectively in the same sense in which the latter is applied by Baron Cuvier and the naturalists of the present day, and did not include the Crustacea in this class of animals, as was done by Linnaeus with singular want of judgment. The metamorphosis of insects is correctly described by Theophrastus, ἐκ κύματος γόρο χρυσάλιδας, εἴτ' ἐκ τάσσες τ' ψήθ. By κύματε is evidently meant here the Larva or Ereca, L., and by χρυσάλιδα, the Chrysalis or Pupa, L.: the ψήθ is the Image, L. 4

EPANGELIA (ἐπαγγελία). If a citizen of Athens had incurred ἁμας, the privilege of taking part or speaking in the assembly first, 5 was given to the party who, according to Law (Vide ATTI.), had committed such crimes as would, on accusation, draw upon him this punishment, it was, of course, desirable that such individuals, like real ἁμας, should be excluded from the exercise of the rights of citizens. When, therefore, a person ventured to speak in the assembly, any Athenian citizen had the right to come forward in the assembly itself, 6 and demand of him to establish his right to speak by a trial or examination of his conduct (δοκιμασία τοις βιοι), and this demand, denouncement, or threat, was called ἐπαγγελία, or ἐπαγγέλλεις δοκιμασία. The party thus compelled to desist from speaking, and to submit to a scrutiny into his conduct, 7 and if he was convicted, a formal declaration of ἁμας followed.

Some writers have confounded the ἐπαγγελία with δοκιμασία, and considered the two words as synonyms; but from the statements made above, it is evident that the ἐπαγγελία is only the threat to subject a man to the δοκιμασία: hence the expression ἐπαγγέλλεις δοκιμασίας. 8 Other writers, such as Harpocrates and Suidas, do not sufficiently distinguish between ἐπαγγελία and ἑνδείκτης: the latter is an accusation against persons who, though they had been declared ἁμας, nevertheless ventured to speak in the assembly, whereas the ἐπαγγελία applied only to those who had not yet been convicted of the crime laid to their charge, but were only threatened with an accusation for the first time. 9 Wachsmuth 10 seems to be inclined to consider the ἑπαγγελία γραφοι to be connected or identical with the ἐπαγγελία; but the former, according to the definitions of Photius and Suidas, was in reality quite a different thing, inasmuch as it was intended to prevent orators from saying or doing unlawful things in the assembly where they had a right to come forward; whereas the ἐπαγγελία was a denunciation, or a promise to prove that the orator had no right at all to speak in the assembly.

EPARITOI (ἐπαριτοί), a select corps of Area.

405
sian troops, who appear to have been held in high estimation by their countrymen.1

EPAULIA. (Vid. Marriage, Greek.)

EPEUNACTAI (ἐπεύνακται) were a class of citizens at Sparta, who are said to have been the offspring of the widows of Spartan citizens. Theopompos tells us2 that in the Messenian war, in consequence of the great losses which they sustained, the Spartans married the widows of those who were slain to Helots, and that these Helots were admitted to the citizenship under the name of ἐπεύνακται. Diodorus3 also calls the partisans of Phaistus ἐπεύνακται. (Vid. Parthenal.)

EPEBUS (ἐπεβος) was the name of Athenian youths after they had attained the age of 18.4 The state of ἐφεβεία lasted for two years, till the young men had attained the age of 20, when they became men, and were admitted to share all the rights and duties of a citizen, for which the law did not prescribe a more advanced age. That the young men, when they became ἐφεβοι, did not receive all the privileges of full citizens, is admitted on all hands; but from the assertion of Pollux and Hapocration, who state that their names were not entered in the lexicarial registers until they had completed their 20th year, that is to say, until they had gone through the period of ἐφεβεία, it would seem that they were not looked upon as citizens as long as they were ἐφεβοι, and that, consequently, they enjoyed none of the privileges of full citizens. But we have sufficient ground for believing that the names of young men, at the time they became ἐφεβοι, were entered as citizens in the lexicarial registers, for Íycyrgus5 uses the expressions ἐφεβος γύρισθαι and εἰς τὸ λαρσακίῳ γαρματιστόν γεγονομένον as synonymous. The statement of Harpocration and Photius is therefore probably nothing but a false inference from the fact, that young men, before the completion of their 20th year, were not allowed to take an active part in the public assembly; or it may be that it arose out of the law which, as Schömann6 interprets it, prescribed that no Athenian should be enrolled in the lexicarial registers before the attainment of the 18th, or after the completion of the 20th year. (Vid. Docomia.) From the same authority we learn that in the 12th and 13th years of age we see that some of the privileges of citizens were conferred upon young men on becoming ἐφεβοι: Demosthenes himself, at the age of 18, entered upon his patrimony, and brought an action against his guardians; one Mantitheus7 relates that he married at the age of 18; and these facts are stated in such a manner that we must infer that their occurrence had nothing extraordinary, but were in accordance with the usual custom.

Before a youth was enrolled among the ephebi, he had to undergo a δοκυμαία, i.e. object of which was partly to ascertain whether he was the son of Athenian citizens, or adopted by a citizen, and partly whether his body was sufficiently developed and strong to undergo the duties which now devolved upon him.18-4 (Thribal) believed that this δοκυμαία only applied to orphans, but Aristophanes and Plato mention it in such a general way, that there seems to be no ground for such a supposition. After the

loco,ma, the young men received in the assembly a shield and a lance;1 but those whose fathers had fallen in the defence of their country received a complete suit of arms in the theatre.1 It seems to have been on this occasion that the ἐφεβοι took their oath in the Temple of Artemis Aglauros,2 by which they pledged themselves never to disgrace their arms or to desert their comrades; to fight to the last in the defence of their country, its altars and hearths; to leave their country, not in a worse, but in a better state than they found it. To obey the magistrates and the laws; to resist all attempts to subvert the institutions of Attica, and finally to respect the religion of their forefathers. This solemnity took place towards the close of the year (by ὀρθομενίαν), and the festive season bore the name of ἐφεβεία. The external distinction of the ἐφεβοι consisted in the χλωρίων and the πέτασις.

During the two years of the ἐφεβεία, which may be considered as a kind of apprenticeship in arms, and in which the young men prepared themselves for the higher duties of full citizens, they were generally sent into the country, under the name of ἐπίσκοποι, to keep watch in the towns and fortresses, on the coast and frontier, and to perform other duties which might be necessary for the protection of Attica.8

EPHESIUS (ἐφέσιος) denotes the method of proceeding against such criminals as were liable to be summarily arrested by a private citizen (ἀραβόσες) when the prosecutor was unwilling to expose himself to personal risk in apprehending the offender.9 Under these circumstances, he made an application to the proper magistrate, as, for instance, to one of the Eleven, if it were a case of burglary or robbery attended with murder,9 and conducted him and his officers to the spot where the capture was to be attempted. In the event of success, the blackmail and the rewards of the ensuing trial, we have no notion; in all probability they differed but little, if at all, from those of an apagoge.10

EPHIMERON (ἐφεμερόν), I. a plant, the same with the Colechium autumnale, or Meadow Saffron. Such, at least, is the ἐφεμερόν of Theophrastus11 and Nicander.12 "Dioscorides"13 also gives it as one of the synonyms of his κολυξίδος. But in the following context he is evidently speaking of another ἐφεμερόν, which it is more difficult to determine. Sprengel inclines to the Convallaria verticillata.14

11. The Ephemer, L., or May-fly. "The name of Ephemer a has been given to the insects so called, in consequence of the short duration of their lives, when they have acquired their final form. There are some of them which never see the sun; they are born after he is set, and die before he reappears on the horizon."15

EPHESIA (Εφέσια), a great panegyric of the Ionians at Ephesus, the ancient capital of the Ionians in Asia. It was held every year, and had, like all panegyrics, a twofold character, that of a bond of political union among the Greeks of the Ionian race, and that of a common worship of the Ephesian Artemis.16 The Ephesia continued to be held in the time of Theudobrodus and Strabo, and the former compares it17 to the ancient panegyric of Delos (vid. Delia), where a great number of the Ionians as
EPHETAE. 

EPHEPPIUM. 

... Although becomes the and any position, when the day, and, therefore, no expiation of the Theopetrae. The judges so called at Athens were fifty-one in number, selected from noble families (αριστογεῖς αξίθηρες) and more than fifty years of age. They formed a tribunal of great antiquity, so much so, indeed, that Pollux6 ascribed their institution to Draco; moreover, if we can depend upon the authority of Plutarch,5 one of Solon’s laws (Δώγος) speaks of the courts of the Ephetae and Areopagus as coexistent before the time of that legislator. Again, as we are told by Pollux,7 the Ephetae formerly sat in one or other of five courts, according to the nature of the causes they had to try. In historical times, however, they sat at first, it is said, in the Prytaneion, the court of the Palladium (rō ἐν Παλλῳδίῳ), by the Delphinium (rō ἐν Δελφίνιῳ), by the Prytaneion (rō ἐν Πρυτάνειω), and the court at Phreatto or Zen (rō ἐν Φρεάττῳ). At the first of these courts they tried cases of unentailment, at the second of intentional, but justifiable, homicide, such as slaying another in self-defense; the third, that of a night’s or a nightly murder. At the Prytaneion, by a strange custom, somewhat analogous to the imposition of a deodand, they passed sentence upon the instrument of murder when the perpetrator of the act was not known. In the court at Phreatto, on the seashore at the Peiraeus, they tried such persons as, when accused with wilful murder, had been living in a temporary exile for unintentional homicide. In cases of this sort, a defendant pleaded his cause on board ship (τῆς γῆς μὴ ἀστικῆσαι), the judges sitting close by him on shore.10 Now we know that the jurisdiction in cases of wilful murder was, by Solon’s laws, intrusted to the court of the Areopagus, which, however, had the power, and, according to others, the power with the four courts in which the Ephetae sat. Moreover, Draco, in his Θεομι, spoke of the Ephetae only, though the jurisdiction of the Areopagus in cases of murder is admitted to have been of great antiquity. Hence Müller11 conjectures that the court of the Areopagi was anciently included in the five courts of the Ephetae, and infers the early existence of a senate at Athens, resembling the Gerousia at Sparta, and invested with the jurisdiction in cases of homicide.12 The name of Εφέτειος given to the members of this council was, as it conceives, rather derived from their granting a license to avenge blood (οἱ ἔφετεῖς τῷ ἀνδρομέοιν τῷ ἀνδρόμεοιν) than from their being appealed to or from the transfer to them of a jurisdiction which, before the time of Draco, had belonged to the kings.13 If this hypothesis be true, it becomes a question, Why and when was this separation of the courts made? Both of these questions Müllner answered, that an act of homicide was not punished by death or perpetual banishment, the perpetrator had to receive expiation. (Vid. BANISHMENT, GREEK.) Now the atonement for blood, and the purification of a shedder of blood, came under the sacred law of Athens, the knowledge of which was confined to the Areopagite, and, therefore, no expiation (καθότατος) was connected with the administration of justice in such cases, so that there could be no objection against their being tried by the court of the Areopagus, though its members did not of necessity belong to the old aristocracy. 

Soch, briefly, are the reasons which Müllner alleges in support of the above hypothesis; and if they are valid there can be little doubt that the separation alluded to was effected when the Athenian nobility lost their supremacy in the state, and a timocracy or aristocracy of wealth was substituted for an aristocracy of birth. This, as is well known, happened in the time of Solon. Let us add, as a (last remark, that the comparatively unimportant and antiquated duties of the Ephetae sufficiently explain the statement in Pollux,4 that their court gradually lost all respect, and became at last an object of ridicule.

EPHEPPIUM (Αὐτράτας, ἐφίππιων, ἐφίππων), a Saddle. Although the Greeks occasionally rode within and without the saddle (ἰγκραστός), yet this mode of riding was generally used, and from them the name, together with the thing, was borrowed by the Romans.6 It has, indeed, been asserted, that the use of saddles was unknown until the fourth century of our era. But Ginzrott, in his valuable work on the history of carriages,7 has shown, both from the general practice of ancient and modern nations, and from the pictures preserved on the walls of houses at Herculaneum, and from the expressions employed by J. Cesar and other authors, that the term "epphipium" denoted not a mere horsecloth, a skin or a flexible covering of any kind, but a saddle-tree, or frame of wood, which, after being filled with a stuffing of wool, &c., was covered with soft materials, and fastened by means of a girth (cangu- lum, zona) upon the back of the animal. The ancient saddles appear, indeed, to have been thus different from ours, that the cover stretched upon the hard frame was probably of stuffed or padded
The cloths, which were either spread over the saddle or hung from it on each side, were often dyed with different colours ("Jam purpurea vestit armas\(^1\)"; "ephippia fascata\(^2\)"), and were sometimes rendered still more ornamental by the addition of fringes.

The term "Ephippium" was in later times in part supplanted by the word "sella," and the more specific expression "sella equestris."

**EPHORI:** "Εφόροι"

Magistrates called 'Εφόροι or overseers were common to many Dorian constitutions in times of remote antiquity. Cyrene and the mother state of Thera may be mentioned as examples: the latter colonized from Laconia in early ages, and where, as we are told, the elders were ἰδίωματι, i.e., gave their name to their year of office.\(^3\) The ephorality at Sparta is classed by Herodotus\(^4\) among the institutions of Lycurgus. Since, however, the ephors are not mentioned in the oracle which contains a general outline of the constitution ascribed to him,\(^5\) we may infer that no new powers were given to them by that legislator, or in the age of which he may be considered the representative. Another account refers the institution of the Spartan ephorality to Theopompus (B.C. 770–730), who is said to have founded this office with a view of limiting the authority of the kings, and to have justified the innovation by remarking that "he handed down the royal power to his descendants more durable, because he had diminished it.\(^6\)"

The inconsistency of these accounts is still further complicated by a speech of Cleomenes the Third, who\(^7\) is represented to have stated that the elders were originally appointed by the kings, to act for them in a judicial capacity (τράπος τὸ κρίνειν) during their absence from Sparta in the first Messenian war, and that it was only by gradual usurpations that these new magistrates had made themselves paramount even over the kings themselves. Now, according to some authorities,\(^1\) Polydurus, the colleague of Theopompus, and one of the kings under whom the first Messenian war (B.C. 743–720) was accomplished, appropriated a part of the conquered Messenian territory to the augmentation of the number of portraits of land possessed by the Spartans—an augmentation which implies an increase in the number of Spartan citizens. But the ephors, as we shall see hereafter, were the representatives of the whole nation; and, therefore, if in the reign of Theopompus the franchise at Sparta was extended to a new class of citizens,\(^2\) which Cicero\(^3\) draws between the ephorality and the Roman tribunate would be more applicable than he himself suspected, and would throw a light on the seeming contradiction of the ephors being all-powerful, though the class which they more especially represented enjoyed only a limited franchise.\(^4\)

But, after all, the various accounts which we have been considering merely show how difficult ent were the opinions, and how little historical the statements, about the origin of the ephorality.\(^5\) We shall therefore proceed to investigate the functions and authorities of the ephors in historical times, after first observing that their office, considered as a counterpoise to the kings and council, and in that respect peculiar to Sparta alone of the Dorian states, would have been altogether inconsistent with the constitution of Lycurgus, and that their gradual usurpations and encroachments were facilitated by the vague and indefinite nature of their duties. Their number, five, appears to have been always the same, and was probably connected with the five divisions of the town of Sparta, namely, the four κώμαι, Limnai, Messa, Pitaia, Cynosura, and the Ἱλας, or city properly so called, around which the κώμαι lay.\(^6\) They were elected from the κώμαι by the judges (ἐκ χρηστίων, κάτω τινάριον ἀριθμόν), without any qualification of age or property, and without undergoing an scrutiny (οἱ τεκτόνες); so that, as Aristotle remarks,\(^7\) the δήμοι enjoyed through them a participation in the highest magistracy of the state. The precise mode of their election is not known, but Aristotle\(^8\) speaks of it as being very puerile; and Plato\(^8\) describes their office as ἐγγίζει τῆς κλάσας, ἀνήθες; words which may apply to a wide range of different citizens, directing them to the electors, without of necessity implying an election by lot. They entered upon office at the autumal solstice, and the first in rank of the five gave his name

---

to the year, which was called after him in all civil transactions. Their meetings were held in the public building called ἄρχειον, which in some respects resembled the Prytaneion at Athens, as being the place where foreigners and ambassadors were entertained, and where, moreover, the ephors took their meals together.

The ephors also possessed judicial authority, on which subject Aristotle remarks that they decided in civil suits (δικαία τῶν συμβαλλόντων), and generally in actions of great importance (ἐργάτεως μεγάλου κόσμου): whereas the counsellors presided over capital crimes (δικαίον φυλακᾶς). In this arrangement we see an exemplification of a practice common to many of the Oriental states, to entrust to a few individuals the functions of the courts. The criminal jurisdiction was given to courts of aristocratic composition, while civil actions were decided by popular tribunals. (Compare Ephesos and Aristarch.) But with this civil jurisdiction was united a censorial authority, such as was possessed by the ephors at Cyrene: for example, the ephors punished a man for having brought money into the state of Laconia in order to buy the votes of those who inspected the clothing and the bedding of the young men. Moreover, something like a superintendence over the laws and their execution is implied in the language of the edict, which they published on entering upon their office, ordering the citizens "to shave the upper lip (μετανοεῖν), i.e., to be one of the sect, and obey their laws." Now the symbolic and archaic character of this expression seems to prove that the ephors exercised such a general superintendence from very early times, and there can be no doubt that, in the hands of able men, it would alone prove an instrument of unlimited power.

The judicial and power were still farther increased by the privilege of instituting scrutinies (ἑνδήματα) into the conduct of all the magistrates, on which Aristotle observes that it was a very great gift to the ephory (ταύτα δὲ τῇ ἑρμήνευτη μέγαν κόσμον ἀποδείξει). Nor were they obliged to wait till a magistrate had completed his term of office, since, even before his termination, they might exercise the privilege of deposition. Even the kings themselves could be brought before their tribunal (as Cleomones was for bribery, δροσοπωρία), though they were not obliged to answer a summons to appear there till it had been repeated three times. In extreme cases, the ephors were also competent to lay an accusation against the kings as well as against all other magistrates, and bring them before the great court of justice. If they sat as judges themselves, they were only able, according to Müller, to impose a fine, and compel immediate payment; but they were not in any case, great as was their judicial authority, bound by a written code of laws.

In later times the power of the ephors was greatly increased; and this increase appears to have been principally owing to the fact that they put themselves in connexion with the assembly of the people, convened its meetings, laid measures before it, and were constituted its agents and representatives. When this connexion arose is matter of conjecture; some refer the origin of it to Asterope, who, coming to Sparta, posterity ascribed all the powers of the ephory to himself, and who is said to have lived many years after the time of Theopompos, probably about B.C. 560. That it was not known in early times appears from the fact that the two ordinances of the oracle at Delphi, which regulated the assembly of the people, made no mention of the functions of the ephors. It is clear, however, that the power which such a connexion gave, would, more than anything else, enable them to establish in the royal authority, and make themselves virtually autocrats of the state. Accordingly, we find that they transacted business with foreign ambassadors; dismissed them from the state; decided upon the government of dependent cities; subscribed in the presence of other persons to treaties of peace; and in time of war sent out troops when they thought necessary. In all these and other matters in which the representatives of the nation and the agents of the public assembly, being, in fact, the executive of the state. Their authority in this respect is further illustrated by the fact that, after a declaration of war, "they intrusted the army to the king or some other general, who received from them instructions how to act, sent back to them for fresh instructions, and were returned to them every year. The extraordinary plenipotentiaries, were recalled by means of the scytale, summoned before a judicial tribunal, and their first duty after return was to visit the office of the ephors.” Another striking proof of this representative character is given by Xenophon, who informs us that the ephors, acting on the king’s behalf, laid the laws of the state before the kings every month an oath, by which the latter bound themselves to rule according to law; and that, in return for this, the state engaged, through the ephors, to maintain unshaken the authority of the kings if they adhered to their oath.

It has been said that the ephors emaciated upon the royal authority, and in course of time the kings became completely under their control. For example, they fined Agesilaus on the vague charge of trying to himself popular, and interfered even with the domestic arrangements of other kings; moreover, as we are told by Theopompus, they could even imprison the kings, as they did Pausanias. We know, also, that when the kings were followed by two ephors, who belonged to the house of war; the three who remained at home received the booty in charge, and paid it into the treasury, which was under the superintendence of the whole College of Five. But the ephors had still another prerogative, based on a religious foundation, which enabled them to effect a temporary deposition of the kings. We know, also, that when the ephors were followed by two ephors, who belonged to the house of war; the three who remained at home received the booty in charge, and paid it into the treasury, which was under the superintendence of the whole College of Five. But the ephors had still another prerogative, based on a religious foundation, which enabled them to effect a temporary deposition of the kings. When these are told, they chose a calm and cloudless night to observe the heavens, and if there was any appearance of a falling meteor, it was believed to be a sign that the gods were displeased with the kings, who were accordingly suspended from their functions until an oracle allowed of their restoration. The ephors in this capacity were assumed by the ephors, and they alone kept their seats while the kings passed; whereas it was not considered below the dignity of the kings to rise in honour of the ephors.

The position which, as we have shown, the ephors occupied at Sparta, will explain and justify the state of things which, in the last century of the life of the city, was the invariable one in the Spartan constitution, and, in the end, the cause of its dissolution. In confirmation of this opinion we may cite the authority of Aristotle, who observes, that from the excessive and absolute power (ευσυνεπευσικές) of
the ephors, the kings were obliged to court them (διότι για την ευκαιρία), and eventually the government became a democracy instead of an aristocracy. Their relaxed and dissolve mode of life too (απειροτώς δικαιούνται, ὑπάρχειν δὲ αὐτῶν, ἐστιν ἐκ τοῦ πνεύματος τῆς καθολικῆς καὶ ἐν τῷ κόσμῳ καὶ ἐν τῷ οἴκῳ) was contrary to the spirit of the constitution; and we may remark that it was one of the ephors, Epictetus, who first carried through in practice the inalienable inheritance of property in contravention of the regulation of Lycurgus, by which an equal share in the common territory was secured to all the citizens. This change, indeed, to which Aristotle alludes, might have been described as a transition from an aristocracy to an oligarchy; for we find that in latter times, the ephors, instead of being demagogues, invariably supported the oligarchy. In the same volume of Plutarch, Ch. 358, B.C. 399, is an instance of this; and the fact is apparently inconsistent with their being representatives of the whole community, and as much so of the lower (συμβουλικοῦ) as of the higher (δημοτικοῦ) class of citizens, that Wachsmuth supposes the δημοτζία, from and by whom the ephors were chosen, to mean the whole body of privileged or patrician citizens only, the most onerous or dangerous duties being allotted to serve as εὐρυτεροί. This supposition is not itself improbable, and would go far to explain a great difficulty; but any analysis of the arguments that may be urged for and against it is precluded by our limits. 8 We shall, therefore, only add, that the ephors became at last thoroughly identified with all opposition to the extension of popular privileges. For the and other reasons, when Agis and Cleomenes undertook to restore the old constitution, it was necessary for them to overthrow the eparchy, and, accordingly, Cleomenes murdered the ephors for the time being, and abolished the office (B.C. 225); it was, however, restored under the Romans.

EPIBATE. (εἰπόβατα) were soldiers or marines appointed to defend the vessels in the Athenian navy, and were entirely distinct from the rowers, and also from the land soldiers, such as hoplites, peltasts, and cavalry. 9 It appears that the ordinary number of epibate on board a trireme was ten. Dr Arnold remarks, that by comparing Thucyd., iii. 95, with c. 91, 94, we find three hundred epibate as the complement of thirty ships; and also, by comparing ii., 92, with c. 102, we find four hundred as the complement of forty-five ships; and the same proportion results from a comparison of i., 76, with c. 101. In Thucydides, vi., 42, we find seven hundred epibate for a fleet of one hundred ships, sixty of which were equipped in the ordinary way, and forty had troops on board. In consequence of the number of heavy-armed men ἐκ τοῦ καταλαγοῦν on the expedition, the Athenians appear to have reduced the number of regular epibate from ten to seven. The number of forty epibate to a ship, mentioned by Herodotus, 8 Dr Arnold justly remarks, "belongs to the earlier state of Greek naval tactics, when victory depended more on the number and prowess of the soldiers on board than on the manoeuvres of the seamen;" and it was in this very point that the Athenians improved the system, by decreasing the number of epibata, and relying on the more skilful management of the men in the ship.
such person making his claim before the archon, whose duty it was to ἐπιμελθεῖν τῶν ἐπικλήρων καὶ ἀξιόλογων ἀνθρώπων, to decide the case, and if no one appeared to dispute it, the archon adjudged the heirless to him (ἐπιδίδοντι ὑπὸ τῶν ἐπικλήρων). If another claimant appeared (μεταφεύγειν αὐτῷ τῆς ἐπικλήρως), a court was held for the decision of the right (διάδοσις τῆς ἐπικλήρου), which was determined according to the Athenian law of consanguinity (γένος καὶ γένεια). The court then found out whether the husband had been obliged to give her up to a man with a better title; and men often put away their former wives in order to marry heiresses. A man without male issue might bequeath his property; but if he had a daughter, the devisee was obliged to marry her. If the daughter was poor, and the nearest relative did not choose to marry her, he was bound to give her a portion corresponding to his own fortune. The husband of an heirless took her property until she had a son of full age (ἐπὶ δυνάμει ἄνδρα), who was usually adopted into his maternal grandfather's family, and took possession of the estate. He then became his mother's legal protector (🔐μος), and the state was obliged to find her maintenance (σιτίον). If there were more sons, they shared the property equally.

When there was but one daughter, she was called ἐπικλήρος ἐπὶ πατρὶ τὸ ὄνομα. If there were more, they inherited equally, like our co-partners, and were severally married to relatives, the nearest relation or debtor being accepted. They did not share with the daughter, the law being ὅτι ἐναὶ ἀγγέλισται μὴ ἰερὸν μὴ δόλων. The heiress was under the special protection of the archon; and if she was injured by her husband or relatives, or by strangers ejecting her from her estate, the law gave a criminal prosecution against the offender, κατ' ἐκκλήσια ἐκκλήσαι λαῷ.

EPICLINTRON. (Vid. Lectus.)

EPIDARIA. (Vid. Elusinia, p. 396.)

EPIDEMIURGI. (Vid. Demiurgi.)

EPIDISCAIA (ἐπίδισκαια, κλῆρον) was the proceeding by which a legatee or heir, other than the natural descendant and acknowledged successor, became entitled to the property of the intestate, subject to the claim of a legitimate son. Under these circumstances, the claimant was said λαγγέλειν οἱ ἐπὶ δίσκαιοι τοῦ κλῆρον, and the property itself termed ἐπίδισκος until it was formally awarded to its rightful owner. Notice of a claim of this kind might be given to the archon eumynous during any month in the year except Scirrophorion, and that magistrate was bound, upon receiving it, to direct that it should be inscribed upon a tablet, and exposed to public inspection, as if it were an indictment or declaration (γραφὴ οὐ λαβέ) in an ordinary lawsuit. After this it was rescinded by the herald in the first ensuing regular assembly of the people (παρὰ ἐκκλησία), and a proclamation to the same effect was again made before the archon, who for the first time called upon the legitimate claimants. If, however, any other parties made their appearance, a diadicasia ensued between them and the original suitor. (Vid. Diadicasia.) An analogous proceeding took place when the surviving issue of the deceased consisted of one or more daughters only (ἐπὶ κλῆρον, ἐπιδισκάια, πατροσύνη, γυναῖκες, or ἐπίκληρος), in which case the person in whose favor the will of the deceased had been made, the nearest male relative of the intestate, or one of the female relatives, if he had been left with their portions to different persons, the legatees or relatives were required to prefer their claim to the archon. The proclamation by the herald followed, in the same manner as when an estate was the subject of the petition; αἱ the paracatalebole, or the tenth part of the estate or portion, was set aside as a forfeit, in case they failed to establish their claim, which was referred to others that undertook a diadicasia. (Vid. Epicleirer.)

EPID'OSEIS (ἐπίδοσεις) were voluntary contributions, either in money, arms, or ships, which were made by the Athenian citizens in order to meet the extraordinary demands of the state. When the ex penses of the state were greater than its revenue, it was usual for the archons to summon an assembly of the people, and, after explaining the necessities of the state, to call upon the citizens to contribute according to their means. Those who were willing to contribute then rose, and mentioned what they would give; while those who were unwilling to give anything remained silent, or retired privately from the assembly. The names of those who had promised to contribute, together with the amount of their contributions, were written on tablets, which were placed before the statues of the Eponymi, where they remained till the amount was paid. These ἐπίδοσες, or voluntary contributions, were frequently very large. Sometimes the more wealthy citizens voluntarily undertook a triremis, or the expenses of equipping a trireme. We read that Dionysius furnishing 1000 shields, together with five triremes, which he equipped at his own expense. Chrysippus presented a talent to the state when Alexander moved against Thebes. Aristophanes, the son of Nicophemus, gave 30,000 drachmas for an expedition against Cyprus. Charidemus and Dimitrius made two more, and 400 shields, and similar instances of liberality are mentioned by Böckh, from whom the preceding examples have been taken.

EPIGAMIA. (Vid. Marriage, Greek.)

EPIP'GRAPHEIS. (Vid. Epigrapheis, p. 392.)

EPIMELE'TAE (ἐπιμεληταί), the name of various officials. 1. Ἐπιμελητής τῆς κοινῆς προσούδου, more usually called ταμίας, the treasurer or manager of the public revenue. (Vid. Tamias.)

2. Ἐπιμεληται τῶν μορίων Ἐλαθών were persons chosen from among the areopagites to take care of the sacred olive-trees.

3. Ἐπιμεληται τῶν Ἐπομηνίων were the overseers of the emporium. (Vid. Emporion.) They were ten in number, and were elected yearly by lot. They had the entire management of the emporium, and had jurisdiction in all breaches of the commercial laws. According to Aristotle, it was part of their duty to compel the merchants to bring into the city one third of the corn which had been brought by sea; and so we learn that only one third could be carried away to other countries from the port of the Peiraeus. 4. Ἐπιμεληται τῶν Μυστηρίων were, in connexion with the king archon, the managers of the Eleusinian mysteries.
EPISYNTHE\'I (Bickh., rafpoTroioi, all (Feslus, 'Enijis^uTiTal secretary.'—' and p. 5, Ml, 7.)—a tot., — 1840,)—placed called thinks, (kiAui in extraordinary (No. AOMAPTTPIHN Matthiolus, supposes ovvs, (ging, by Eumolpidae, and Spider.'" we learn from the same inscriptions that their office was yearly, and that they were ten in number. It also appears that they were elected by lot from those persons who possessed a knowledge of shipbuilding.

The principal duty of the inspectors of the dockyards was to take care of the ships, and all the rigging, tools, &c. (secevi), belonging to them. They also had to see that the ships were seaworthy; and for this purpose they availed themselves of the services of a δοκουστής, who was well skilled in such matters. They had at one time the charge of various kinds of military equipment which did not necessarily belong to ships, such as engines of war, which were afterward, however, intrusted to the generals by a decree of the senate and people. They had to make out a list of all those persons who owed anything to the docks, and also to get in what was due. We also find that they sold the rigging, &c., of the ships, and purchased new, under the contract, not on the basis of their own responsibility. They had εγκαύμων διεσπερασμον in conjunction with the ἀποστολεῖς in all matters connected with their own department. To assist them in discharging their duties, they had a secretary (γραμματῆς) and a public servant (δῆμοικος εν τοις ναυσικαῖοι). For a farther account of these inspectors, see Bickh, Urkunden, &c., p. 48-54.

The principal duties of the officers of the φιλα or tribes. (Vid. TRAUS.)

*EPI\'IMELIS (τιμωπλα), a species of Medlar. Sprengel sets it down for the Μαιπύλοις germanicos, L.

*EPI\'OLON (τιπλαγε), an insect described by Aristotle, and the same, most probably, as Adams thinks, with the πωράς of Zelian. Schneider supposes it to be the Asopus tavanus, L., or Red Spider.

*EPI\'ACTIS (ἐπιακτικ), according to Sprengel, the Hornia grastra. Nothing satisfactory, however, is determined, with regard to this herb, by Matthiolus, Baubin, and other botanical writers.

EPIRHE\'DIUM. (Vid. Rzaxa.)

ΕΠΙΧΥΡΗΣ ΚΤΙΩΟΜΑΡΓΙΤΗΡΙ. (Vid. ΦΕΤ-ΔΟΜΑΡΠΗΝ ΔΙΚΗ.) EΠΙ\'ΣΩΠΟΙ (τίπσωσαυ) were inspectors, who were sometimes sent by the Athenians to subject states. Harpocration compares them to the Lacedaemonian harrostes, and says that they were also called φιλάκει. It appears that these ἐπισωσαυ received a salary at the cost of the cities over which they presided.

EPISYNTHE\'TICI (ἐπισύντητικοι), an ancient medical sect, so called because they heaped up in a manner (ἐπισύντητικα), and adopted for their own opinions of different, and even opposite; schools. They appear to have been a branch of the Method

classes of functionaries in the Athenian state, namely, of the chairman of the senate and assembly of the people, respecting whose duties, see the articles Boule, p. 168, and Ecclesia, p. 386, and also of the directors of the public works (ἐπισρατα τῶν δημοσίων ἐργασιῶν). These directors had different names, as τεκτοναγι, the repairers of the walls; τροποστοιοι, the builders of the trenties; τεκτοναγι, the repairers of the trenches, &c.; all of whom were elected by the tribes, one from each: but the most distinguished of these were the τεκτοναγι. Over other public buildings a manager of public works had the superintendence; and it was in this capacity that Pericles, and subsequently Lycurgus, undertook so many works of architecture. In the inscriptions relating to the building of the Temple of Athena Polias, we find ἐπιστάται mentioned. Similar authorities were appointed for the care of the roads, and of the supply of water (δωσιοι, ἐπίσταται τῶν ἡδουτων).

EPIST\'OLA. (Vid. Constutuio.)

EPISTOLEUS (ἐπιστολεῦς) was the officer second in rank in the Spartan fleet, and succeeded to the command if anything happened to the ναυαρχις or admirai. Thus, when the Chians and the other allies of Sparta on the Asiatic coast sent to Sparta to request that Lysander might be again appointed commander of the sea, he was sent with the title of ἐπιστολεύς, because the laws of Sparta did not permit the same person to hold the office of ναυαρχις twice.

EPISTYLIUM, the architrave of a member of an entablature (σωθοί) which lies immediately over the column. When an intercolumniation of the kind called acrostyle, that is, when the columns were more than three diameters apart, the epistylus was necessarily made of wood instead of stone; a construction exemplified by the restoration in the annexed woodcut of the Doric portion which surrounds three sides of the Forum at Pompeii. The boles seen at the back of the frieze received the beams which supported an upper gallery.

EPISYNTHETICI (ἐπισυνθετηκόλ), an ancient medical sect, so called because they heaped up in a manner (ἐπίσυνθετηκα), and adopted for their own opinions of different, and even opposite; schools. They appear to have been a branch of the Method

412
The Equites formed a college, and were one of the four great religious corporations at Rome; they consisted of those of the Pontifices, Augures, and Quindecemviri.

EQUITES.

EQUITES. (Vid. Equules.)

EQUULUM JOVIS. (Vid. Equules.)

EQUULULATIA were horse-races, which are said to have been instituted by Romulus in honour of Mars, and were celebrated in the Campus Martius. There were two festivals of this name, of which one was celebrated A.D. III. Cal. Mart., and the other prid Id. Mart. If the Campus Martius was overthrown by the enemy (as is said) to take place on a part of the Mons Ceelius, which was called from that circumstance the Martialis Campus.

EQUITES. The institution of the Equites is attributed to Romulus. Livy says that Romulus formed three centuries of equites, the Ramnes, Tiitenses, and Luceres. He does not mention the number of which these centuries consisted; but there can be little doubt that the 300 celeres, whom Romulus kept about his person in peace and war, were the same as the three centuries of equites Dionysius, who does not speak of the institution of the equites, says that the celeres formed a body-guard of 300, divided into three centuries; and Pliny and Festus state expressly that the Roman equites were originally called celeres. (Vid. De Leevs.)

To the 300 equites of Romulus, ten Allian turmes were added by Tullus Hostilis. As the turma in the legion consisted of 30 men, there is no reason for supposing a different number in these turmes; and the equites would therefore, in the time of Tullus Hostilis, amount to 600. Tarquinus Priscus, according to Livy, wished to establish some new centuries of horsemen, and to call them by his own name, but gave up his intention in consequence of an angry resolution of the Althenian Senate. After the anger of the Senate had subsided, only doubled the number of the centuries. The three centuries which he added were called the Ramnes, Tiitenses, and Luceres Posteriores. The number ought, therefore, now to be 1200 in all, which number is given in many editions of Livy, but is not found in any MS. The number in the MSS. is different, but the Florentine and the War- mas edition have, which has been adopted by Paulus, and appears to be the correct one. Livy has apparently forgotten to mention that the 300 equites of Romulus were doubled on the union with the Sabines; which Plutarch alludes to when he says that the Roman legion consisted 300 horsemen, and, after the union with the Sabines, 600.

The complete organization of the equites Livy attributes to Servius Tullus. He says that this king formed (scripturis) 12 centuries of equites from the leading men of the state (ex primoribus civitatis); and that he also made six centuries out of the three established by Romulus. Thus there were now 18 centuries. As each of the 12 new centuries probably contained the same number as the six old centuries, if the latter contained 1800 men, the former would have contained 3600, and the whole number would be 4200.

The account, however, which Cicero gives is quite different. He attributes the complete organization of the equites to Tarquinus Priscus. He agrees with Livy in saying that Tarquinus Priscus increased the number of the Ramnes, Tiitenses, and Luceres, by adding new centuries under the name of Ramnes, Tiitenses, and Luceres secundi (not secundorum).}

EQUITES.

however, posteriorae, as Livy states; compare Festus, s. v. Sex Vestae); but he differs from him in stating that this king also doubled their number after the conquest of the Æqui. Scipio, who is represented by Cicero as giving this account, also says that the arrangement of the equestrian class which was made by Tarquinius Priscus continued unchanged to this day (B.C. 1500). The account which Cicero gave of the equestes in the constitution of Servius Tullius is unfortunately lost, and the only words which remain are duodeviginti census maximo; but it is difficult to conceive in what way he represented a division of the 18 centuries in the Servian constitution, after he had expressly said that the organization of the body by Tarquinius Priscus had continued unaltered through all the centuries of the state. Cicero also differs from Livy respecting the number of the equestes. Scipio states, according to the reading adopted in all editions of the "De Republica," that Tarquinius Priscus increased the original number of the equestes to 1200, and that he subsequently doubled this number after the conquest of the Æqui, and then that it remained at this number 2400. The MS., however, has 2000, which is interpreted to mean mille ac ducentos; but, instead of this, Zumpt1 proposes to read 2000, justly remarking that such a use of ac never occurs in Cicero. This reading would make the number 3000, which Zumpt believes to have been the same as that which existed at the time of the Æqui. It appears, however, impossible to determine their exact number, though there are strong reasons for believing that it was fixed, whether we suppose it to have been 5400, 3600, or 2400.

Both authors, however, agree in stating that each of the equestes received a horse from the state (equestes publici), or money to purchase one, as well as a sum of money for its annual support; and that the expense of its support was defrayed by the orphans and unmarried females: since, says Niebuhr, in a military state it could not be esteemed unjust that the women and the children were to contribute largely for those who fought in behalf of them and of the Commonwealth. According to Galus, the purchase-money for a knight's horse was called equester, and its annual provision as hordeariun. (Vid. E S Hordeariun.) The former amounted, according to Livy, to 10,000 ases, and the latter to 2000: but these sums are so large as to be almost incredible, especially when we take into account that 1500 Æqui, from that time till the 20th of December, 10, and an ox at 100 ases in the tables of penalties. The correctness of these numbers has accordingly been questioned by some modern writers, while others have attempted to account for the largeness of the sum. Niebuhr remarks that the sum was doubtless intended not only for the purchase-money but also for the annual provision of the horse, which would be incomplete without a groom or slave, who had to be bought and then to be mounted. Bisch2 supposes that the sums of money in the Servian census are not given in asses of a pound weight, but in the reduced asses of the first Punic war, when they were struck of the same weight as the sextans, that is, two ounces or one sixth of the original weight. (Vid. As, p. 110.) Zumpt considers that 1600 asses of the old weight were given for the purchase of the horse, and 200 for its annual provision; and that the original sum has been retained in a passage of Varro (equus publicum mille assearum).

All the equestes, of whom we have been speaking, received a horse from the state, and were included in the 18 equestrian centuries of the Servian constitution; but, in course of time, we read of another class of equestes in Roman history, who did not receive a horse from the state, and were not included in the 19 centuries. This latter class is first mentioned by Livy3 in his history of the siege of Veii B.C. 403. He says that during the siege, when the Romans had at one time suffered great disasters, all those citizens who had an equestrian fortune, and no horse allotted to them (quibus census eques ter erat, equi publici non erant), volunteered to serve with their own horses; and he adds, that from this time equestes first began to serve with their own horses that were publicly owned. As they served on horseback, they were called equestes; and, when spoken of in opposition to cavalry, which did not consist of Roman citizens, they were also called equestes Romani; but they had no legal claim to the name of equestes, since in ancient times this title was strictly confined to those who received horses from the state, as Pliny4 expressly says, "Equum nonem subsistebat i: ternus equorum publieorum."

But here two questions arise. Why did the equestes, who belonged to the 18 centuries, receive a horse from the state, and the others not? and how was a person admitted into each class respectively? These questions have occasioned much controversy among modern writers, and the following account is perhaps the most satisfactory: In the constitution of Servius Tullius, all the Roman citizens were arranged in different classes according to the amount of their property, and it may therefore be presumed that a place in the centuries of equestes was determined by the same qualification. We are, however, only assured that they were chosen by Servius out of the richest and most illustrious families; and Cicero,5 that they were of the highest census (census maximo). Livy5 also states that the twelve centuries formed by Servius Tullius consisted of the leading men of the state. None of these writers, however, mention the property, the requisite qualification, on which a man was entitled to hold a place among the equestes; but it would probably be of the same amount as in the latter times of the Republic, that is, four times that of the first class. Every one, therefore, who possessed the requisite property, and whose character was unblemished (for the latter qualification appears to have been always necessary in the ancient times of the Republic), was admitted among the equestes, and it may be presumed that the twelve new centuries were created in order to include all those persons in the state who possessed the necessary qualifications. Niebuhr,6 however, supposes that the qualification

of property was only necessary for admission into the twelve new centuries, and that the statement of Dionysius, quoted above, ought to be confined to these centuries, and not applied to the whole eighteen. He maintains that the twelve centuries consisted exclusively of plebeians; and that the six old centuries, which were incorporated by Servius into his comitia, under the title of the sex auffragia, comprised all the patricians, independent of the amount of property which they possessed. This account, however, does not seem to rest on sufficient evidence; and we have, on the contrary, an express instance of a patrician, L. Tarquiniius, B.C. 458, who was compelled, on account of his poverty, to serve on foot. 1 That the six old centuries consisted entirely of patricians is most probable, since the plebeians would certainly not have been admitted among the equites at all till the Servian constitution; and as by this constitution new centuries were created, it is not likely that any plebeians would have been placed among the ancient six. But we have no reason for supposing that these six centuries contained the whole body of patricians, or that the twelve consisted entirely of plebeians. We may suppose that those patricians who belonged to the six were allowed by the Servian constitution to continue in them, if they possessed the requisite property; and that all other persons in the state, whether patricians or plebeians, who possessed the requisite property, were admitted into the twelve new centuries. That the latter were not confined to plebeians may be inferred from Livy, who says that they consisted of the leading men in the state (principes civitatis), not by the constitution.

As vacancies occurred in the eighteen centuries, the descendants of those who were originally enrolled succeeded to their places, whether plebeians or patricians, provided they had not dissipated their property; for Niebuhr goes too far when he asserts that all vacancies were filled according to birth, independent of any property qualification. But in course of time, as population and wealth increased, the number of persons who possessed an equestrian fortune also increased greatly; and as the number of equites in the 18 centuries was limited, those persons whose ancestors had not been enrolled in the centuries could not receive horses from the state, and were therefore allowed the privilege of serving with their own horses among the cavalry, instead of the infantry, as they would otherwise have been obliged to do. Thus arose the two distinct classes of equites, which have been already mentioned.

The inspection of the equites who received horses from the state belonged to the censors, who had the power of depriving an eques of his horse, and reducing him to the condition of an euripian, 2 and also of giving the vacant horse to the most distinguished of the equites who had previously served at their own expense. For these purposes they made, during their censorship, a public inspection in the Forum of all the knights who possessed public horses (equitium recognoscunt; 3 equitium centuries recognoscunt). The tribes were taken in order, and each knight was summoned by name. Every one, as his name was called, walked past the censors, leading his horse. This ceremony was represented as the reverse of some of the censual coins which have been published by Spanheim, 4 and which are copied in the annexed woodcuts. The first is a dexter of the Licinian gens, and is supposed by Spanheim to have been struck during the censorship of P. Licinius Crassus, who was censor with Julius Caesar. 1

The next is the reverse of one of the coins of the Emperor Claudius, in which the emperor is represented sitting, while a knight stands before him leading his horse. The word censor is written underneath, which title we know, from Dion Cas-

If the censors had no fault to find either with the character of the knight or the equipments of his horse, they ordered him to pass on (traducere equum); but if, on the contrary, they considered him unworthy of his rank, they struck him out of the list of knights, and deprived him of his horse, 5 or ordered him to sell it, 6 with the intention, no doubt, that the person thus degraded should refund the money which had been advanced to him for its purchase. 7 At the same review, those equites who had served the regular time, and wished to be discharged, were accustomed to give an account to the censors of the campaigns in which they had served, and were then dismissed with honour or disgrace, as they might have deserved. 8

This review of the equites by the censors must not be confounded with the Equitum Transvecto, which was a solemn procession of the body every year on the Ides of Quintilis (July). The procession started from the Temple of Mars outside the city, and passed through the city, over the Forum, and by the Temple of the Dioscuri. On this occasion the equites were always crowned with olive chaplets, and wore their state dress, the trabea, with all the honourable distinctions which they had gained in battle. 9 According to Livy, 10 this annual procession was first established by the emperors Q. Fabius and P. Decius; but, according to Dionysius, 11 it was instituted after the defeat of the Latins near the Lake Regillus, of which an account was brought to Rome by the Dioscuri.

It may be asked, how long did the knight retain his public horse, and a vote in the equestrian century to which he belonged? On this subject we have no positive information; but, as those equites who served with their own horses were only obliged to serve for ten years (stipendia, sparetalg), under the age of 46, 12 we may presume that the same rule extended to those who served with the public horses, provided they wished to give up the service. For it is certain that in the ancient times of the Republic a knight might retain his horse as long as he pleased, even after he had entered the senate.

provided he continued able to discharge the duties of a knight. Thus the two censors M. Livius Salinator and C. Scipio Asiacicus, who were deprived of his horse by the censors in B.C. 191, had himself been censor in B.C. 191. This is also proved by a fragment in the fourth book of Cicero’s “De Republica,” in which he says, equi·tius, in quo sufragia sibi etiam senatus; by which he evidently means that most of the senators were enabled to vote at the election in Centuria in consequence of their belonging to the equestrian centuries. But during the later times of the Republic, the knights were obliged to give up their horses on entering the senate, and, consequently, ceased to belong to the equestrian centuries. This regulation is alluded to in the fragment of Cicero already referred to, in which Scipio says that many persons were anxious that a plebiscitor should be passed, ordaining that the public horser should be restored to the state, which decreed was, in all probability, passed afterward; sinon, as Niebuhr observes, “when Cicero makes Scaevola speak of any measure as intended, we are to suppose that it actually taken place, but, according to the information possessed by Cicero, was never passed.” That the greater number of the equites qu·eb publico, after the exclusion of senators from the equestrian centuries, were young men, is proved by a passage in the work of Q. Cicero, De Petitionibus Consulatis.

The equestrian centuries, of which we have hitherto treated, were only regarded as a division of the army; they did not form a distinct class or order in the constitution. The political point of view, was only divided into patricians and plebeians; and the equestrian centuries were composed of both. But in the year B.C. 123, a new class, called the Ordo Equestris, was formed among the equestrian centuries, which was introduced by C. Gracchus. By this law all the judges had to be chosen from those citizens who possessed an equestrian fortune. We know very little respecting the provisions of this law; but it appears from the lex Sertiliana, passed 18 years afterward, that every person who was to be chosen judge must be able to maintain his family during 20 years of age, to have either an equus publicus, or to be qualified by his fortune to possess one, and not to be a senator. The number of judges who were required yearly was chosen from this class by the praetor urbani.

As the name of equites had been originally restricted to those who possessed the public horses to those who served with their own horses, it now came to be applied to all those persons who were qualified by their fortunes to act as judges, in which sense the word is usually used by Cicero. Pliny, indeed, says that those persons who possessed the equestrian fortune, but did not serve as equites, were only called judges, and that the name of equi·tus was not properly confined to the property of equites publici. This may have been the correct use of the term; but custom had long since given the name of equites to the judges chosen in accordance with the lex Sempronii.

After the reform of Sulla, which entirely deprived the equestrian order of the right of being chosen as judges, and of possessing the lex Sempronii, which of which ordained that the judges should be chosen from the senators, equites, and tribuni sacri, the influence of the order, says Pliny, was mainly

EQUITAS.

The number of equites increased greatly under the early emperors, and all persons were admitted into the order, provided they possessed the requisite property, without any inquiry into their character, or into the free birth of their father and grandfather, which had always been required by the censors under the Republic. Property became now the only qualification; and the order, in consequence, gradually began to lose all the consideration which it had acquired during the later times of the Republic. Thus Horace says, with no small degree of contempt,

“Si quadringentes sex septem militia desunt, Plebe cris.”

Augustus formed a select class of equites, consisting of those equites who possessed the property of a senator, and the old requirement of free birth up to the grandfather. He permitted this class to wear the clavus, and to possess the tribunes of the plebs to be chosen from them as well as the senators, and gave them the option, at the termination of their office, to remain in the senate or return to the equestrian order. This class of knights was distinguished by the special title illustres (sometimes insignes and splendidi) equites Romanis.

The formation of this distinct class tended to lower the others still more in public estimation. In the ninth year of the reign of Tiberius an attempt was made to improve the order by requiring the old qualifications of free birth up to the grandfather, and by strictly forbidding any one to wear the gold ring unless he possessed this qualification. This regulation, however, was of little avail, as the emperors frequently admitted freedmen into the equestrian order. When private persons were no longer appointed judges, the necessity for a distinct class in the community, like the equestrian order, ceased entirely; and the gold ring came at length to be worn by all free citizens. Even slaves, after their

G 4 4

EQUUS.

This have (Tacit., Sall., Capit., appears unknown. p. 218.) —

The practice of filling all the higher offices in the state from these equites appears to have continued as long as Rome was the centre of the government and the residence of the emperor. They are mentioned in the time of Severus and of Caracalla, and perhaps later. After the time of Diocletian, the equites became only a city guard, under the command of the current prefect. They were still retained, in the time of Valentinianus and Valens, A.D. 364, the second rank in the city, and were not subject to corporeal punishment.

The preceding account of the equites has been principally taken from the essay of Zumpt already referred to; to which, and to the valuable work of Marquart, Historia Equitum Romanorum libri iv., Berlin, 1840, the reader is referred for a fuller explanation of this class of individuals which have been necessarily treated with brevity in this article. Respecting the Magister Equitum, vid. Dictator, p. 361.

EQUULEUS or EECULEUS was an instrument of torture, which is supposed to have been so called because it was in the form of a horse. We have no description of its form given by any of the ancient writers, but it appears not to have differed greatly from the currus. It appears to have been commonly used at Rome in taking the evidence of slaves.

*EQUUS (ἵππος), the Horse. The native country of this animal is unknown. The horse was highly esteemed among the Egyptians, who appear to have had an excellent breed, and, besides those required for the army and private use, many were sold to foreign traders who visited the country. Among the Greeks, the public games, where racing formed so conspicuous a part, always induced great attention to be paid to this noble animal. The Greek horse appears to have been quite small in size, if any idea can be formed of its proportions from the bas-reliefs of the frieze of the Parthenon, forming part of the Elgin marbles. Flaxman speaks in terms of high eulogium of the manner in which these steeds were represented by the artists. "The beholder," he remarks, "is charmed with the deer-like lightness and elegance of their make; and, although the relief is not above an inch from the background, and they are so much smaller than nature, we can scarcely suffer reason to persuade us that they are not alive." Horses were sold in Attica for comparatively high prices, not only on account of their utility, but the difficulty of keeping them, but from the disposition of the Athenians to extravgance and display: while the knights kept expensive horses for military service and processions at the festivals, and while men of ambition and high rank trained them for the games and races, there arose, particularly among the young men, an excessive passion for horses, of which Aristophanes gives an example, the Cynosura, which is recorded by several ancient writers, so that many persons were impoverished by keeping them. The price of a common horse was three

ERICA.

**ERANOL (Eranos)** were clubs or societies established for charitable or convivial purposes, or for both. They were very common at Athens, and anathema to them was the practice of carelessness, sloth, and idleness.

**EREBINTHUS** is a small sort of small pea or vetch, Chickpea.

*ERE'TRIA (Eretria) was a prison, situated on the island of Lesbos.

**ERE'TRIA** was entitled to the privileges of a sanctuary, and obtained near the city of Eretria, in Euboea.

**ERGASTULUM** was a private prison attached to most Roman farms, called *carcer rusticus* by Juvenal, where the slaves were made to work in chains. It appears to have been usually under ground, and, according to Columella, ought to be lighted by narrow windows, which should be too high from the ground to be touched by the hand. The slaves confined in an ergastulum were also employed to cultivate the fields in chains. Slaves who had displeased their masters were punished by imprisonment in the ergastulum; and in the same place all slaves who could not be depended upon, or whose trust their masters had cause to fear, were generally kept. A trusty slave had the care of the ergastulum, and was, therefore, called *ergastularius.*

According to Plutarch, these prisons arose in consequence of the conquest of Italy by the Romans, and the great number of barbarous slaves who were employed to cultivate the conquered land. The time of Hadrian and Antoninus, many enactments were made amended the condition of slaves; and, among other salutary measures, Hadrian abolished the ergastula, which must have been liable to great abuse in the hands of tyrannical masters.

**ERICA (Erica or {Ericae), the Tree-heath, or Erica arborea; mentioned by Theophrastus and Dioscorides.**

**SAMEAD** reckons among the assets of a person. 

**Societas civium per orbem terrarum** is applied to an established society, it means only a convivial club, and that there were no regular associations for the purposes of charity; but others have held a different opinion. It is not probable that many permanent societies were formed to carry on the office of charitable assistance. We know that at Athens, as well as in the other Greek Republics, there were clubs for various purposes, political as well as social; the members of which would naturally meet, and dine together at certain periods. Such were the religious companies (Diakon), the commercial (Erotrrupilai), and some others. Unions of this kind were called by the general name of *eiria.* The word is derived from a certain tribe to which the inhabitants of Corinth, or the Corinthians, were traced. It is evident that various objects such as bribery, overawing the public assembly, or influencing courts of justice, 1. In the days of the Roman Empire, friendly societies, under the name of *Eranos,* were frequent among the Greek cities, but were looked on with suspicion by the emperors as leading to political combinations. The guide, or fraternities for mutual aid, among the ancient Grecian and Roman writers, are compared in general to the modern lodges of that name.

**The word Eranos is often used metaphorically, to signify any contributions or friendly advance of money.**

*ERE'BINTHUS (Erebinthos), a sort of small pea or vetch, Chickpea.

Of the three species or varieties of the *Erebinthos* noticed by Dioscorides, the only one that can be satisfactorily determined, observes Adams, is the *crius,* which is undoubtedly the *Geric artemiam.*

*ERE'TRIA TERRA (Eretria) was a place on the southern coast of Cyprus, obtained near the city of Eretria, in Euboea.

**ERGASTULUM** was a private prison attached to most Roman farms, called *carcer rusticus* by Juvenal, where the slaves were made to work in chains. It appears to have been usually under ground, and, according to Columella, ought to be lighted by narrow windows, which should be too high from the ground to be touched by the hand. The slaves confined in an ergastulum were also employed to cultivate the fields in chains. Slaves who had displeased their masters were punished by imprisonment in the ergastulum; and in the same place all slaves who could not be depended upon, or whose trust their masters had cause to fear, were generally kept. A trusty slave had the care of the ergastulum, and was, therefore, called *ergastularius.*

According to Plutarch, these prisons arose in consequence of the conquest of Italy by the Romans, and the great number of barbarous slaves who were employed to cultivate the conquered land. The time of Hadrian and Antoninus, many enactments were made amended the condition of slaves; and, among other salutary measures, Hadrian abolish the ergastula, which must have been liable to great abuse in the hands of tyrannical masters.

ESSEDA.

ERECHTHODANUM.

ERCHTUS was a military engine, full of sharp spikes, which was placed by the gate of the camp to prevent the approach of the enemy.1

*ERINEUS (ξαφνής), the Wild Fig-tree, or Ficus Carica. (Vid. Ficus.)

*ERYNUS (ἔρυνος), according to Sprengel, the Campanula rapunculus, John in Bawhun, however, has quite undecided about it.2

*EPIOFORON ΔΕΝΑΓΩΝ, the Cotton-tree, or Gossypium arboreum. Virgil is supposed to allude to it in the following line: "Quid necnor Aethiopum, mollis canaeta lana."9

*ERO DIUS, the Heron. (Vid. Ardea.)

EROTIA or EROTIDIA (Ερωτία or Ερωτίδια) was the most solemn of all the festivals celebrated in the ancient Thespiae. The establishment of this festival was every fifth year, and in honour of Eros, the principal divinity of the Thespians. Respecting the particulars nothing is known, except that it was solemnized with contests in music and gymnastics.3

The worship of Eros seems to have been established at Thespiae from the earliest times; and the ancient symbolic representation of the god, a rude stone (ἔρυς λέες), continued for a long time to be looked upon with particular reverence even when sculpture had attained the highest degree of perfection among the Greeks.6

*ERUCA, I. a species of Palmer or Camker-worm, very injurious to trees, the leaves and blossoms of which it eats completely off. This scourge of vegetation is produced, according to Pliny; during a humid season, and one only moderately warm.10

*II. The herb Rocket, or Brassica Erucop, the same with the ερυκόων of the Greeks. The seed were used by the ancients as a condiment in food, and were employed in place of mustard in Iberia. They were also used as an aphrodisiac. Dioscorides5 and Pliny5 make mention of two kinds, the sativum and agrestes, the latter being the wild kind. Sibthorp found this plant at Athens, and also among the vineyards in the islands of the Archipelago— the Greek name ερυκόων comes from ερυκόω, "broth," indicating its being employed in seasoning broth, the Latin appellation is explained by Pliny, with reference to the pungent properties of Rocket, "quaed vellicando linguar um quasi erodicat."6

ERUSUM, the Tare, or Erum Ervilia, the same with the Greek ἔρυος. The ancient writers speak of two kinds; the sativum and eyeestre. Dioscorides8 subdivides the former into the red and the white, from the colour of the flowers. Aristotle, Columella,11 and Pliny12 make mention of it as used to fatten cattle. The modern Greeks still call it ἄροβολον, applying this name to both the cultivated and the wild kind.13

*ERYCINTUM (γραφεύω), the herb Eryngium, otherwise called Sea-holm or Sea-holly. "Eryngum," says Woodville, "is supposed to be the ἔρυγυος of Dioscorides."14 Sprengel, however, makes the ἔρυγυος of Theophrastus15 to be the Eryngium mari- timum, but Stockhouse prefers the Eryngium campestre. Sprengel, in his R. H. II., refers the ἔρυγυος of Dioscorides to the Eryngium planum, but in his chief work on Dioscorides he admits his uncertainty about the species.16

*ERYTHRODANUM (ἐρυθρόδανος). "It can admit of no doubt," observes Adams, "that the ἐρυθρόδανος of Dioscorides and Galen is the Rubia tectorum or dyer's Madder. Sprengel is disposed to quest whether the ἐρυθρόδανος of Theophrastus1 is the same, and hesitates whether to make it the Rubia lacidea, Galium cruciatum, Sm., or the Asperula odorata. Stockhouse, however, holds it also to be the Rubia tinctoria.17

*ERYTHROTEMUS (ἐρυθρότεμος), a bird mentioned in the lines of Aristophanes.1 It was most probably, according to Adams, either the Redshank (Scopola calidris) or the Bileneck (Rallus aquaticus).

*ERYTHRONIUM (ἐρυθρονίω), a plant, about which it is difficult to form any certain opinion. It is most probably, however, what is called Dogtooth, or Erythronium dens Canis.2

ERYTHERES (ἐρυτέρες), was the name given to the men of Erythrae, who, after they had followed their masters to the war, and who appear to have been beaten out of course of time, manumitted. The name is supposed by Maller to have been given to them in allusion to their duty of drawing (ἀρτος) the wounded from the ranks.3

*ESCHARIUS (ἐσχάραος), the name of a fish briefly noticed by Athenaeus, and called also κόρη. Rondelet supposes it a species or variety of Sole, namely, the Hippoglossus solea.

*ESPOTIDES (ἐσποτίδες) (Vid. Scopulinum.)

ESSEDARIIL (Vid. Esseda.)

ESSEDA or E'SSEDUM (from the Celtic Etn, a carriage)6, the name of a chariot used, especially in war, by the Britons, the Gauls, and Belges,6 and also by the Germans.10

According to the account given by Caesar,14 and agreeably to the remarks of Diodorus Siculus,15 the use of the chariot in the ancient Greek army was very similar to the practice of the Greeks in the heroic ages, as described by Homer, and in the article CURRUS, p. 322, 323. The principal difference seems to have been that the essedum was stronger and more ponderous than the δίφορος; that it was open before instead of behind; and that, in consequence of these circumstances and the width of the pole, the owner was able, whenever he pleased, to run along the pole (δε ὀπερ Βρατον ακττειδει)16, and even to raise himself upon the yoke, and then to retreat with the greatest speed into the body of the car, which he drove with extraordinary swiftness and skill. It appears, also, that these cars were purposely made as noisy as possible, probably by the clacking and clanging of the wheels (ἐπιπαθεν τατνεσον), and not as a signal for making off, but as a measure intended to disconcert the enemy.7

The formidable British warriors who drove these chariots, the "car-born" of Ossian, were called in Latin essedarii.9 There were about 4000 of them in the army of Cisbalianus.7 Having been captured, they were sometimes exhibited in the gladiatorial shows at Rome, and seem to have been great favourites with the people.15 They must have had the highest rank in the armies of their own country; and Tacitus8 observes that the driver of the car ranked above his fighting companion, which was the reverse of the Greek usage.

The essedum was adopted for purposes of convenience and luxury among the Romans.10 Cicero10 mentions the use of it on one occasion by the tribune of the people as a piece of extravagance; but in the time of Senecon it seems to have been much

more common; for he reckons the sound of the "essede transurrentes" among those noises which did not disturb the sleeper. As used by the Romans, the term was, however, derived from the Latin、“esse", that the cicium was drawn by one horse (see Woodcut, p. 257), the essedum always by a pair. The essedum must have been similar to the Covinus, except that the latter had a cover.

EULAI. (eulai), Worms. This term is used by the Greek writers on Natural History in much the same sense as our word worms, which is derived from the Latin term Vermes is applied by Cuvier and our late naturalists. "The names of worms, skoléi, eulai, lomei, in Greek, and Vermes in Latin, were employed by the ancients," observes Griffith, "to designate certain animals which to a certain degree they suited, with much more reference, however, to the same animal, although often in many respects of their composition. But, as we have just seen, the Greeks had three words for these beings, each of which had its peculiar signification. From what Aristotle tells us of his skoléi (a word, the root of which is undoubtedly skolios, 'tortuous'), it is evident that it applied to all the animals which exhibited the form of the common worm, or rather, perhaps, some species with this habit. It might be the nature of the change which they were subsequently to undergo. It would seem, however, that it was more especially applied to the first degree of development in insects, to the state in which they appear on issuing from the egg of the parent. Aristotle certainly extends its application beyond this state. Such, however, is not the case with Zelian. In two places of his work on the nature of animals, where this expression occurs, he evidently intends the lumbrici, or intestinal worms; in a third, it is probable that he alludes to the caterpillar of the cabbage-butterfly; and in a fourth, he thus designates, after Ctesias, some bastard bears of this nature. It is not very clear. Eulai likewise employs it to designate what, in all probability, was a larva, when he tells us that in India the peasants remove the land-tortoises from their shell with a mattock, in the same manner as they remove the worms from plants which are infested by them. Finally, the word lomei, which is frequently used in their provisions, to indicate certain species, and, among others, in his General Treatise on Diseases, was applied by him to those animals which are at present known under the denomination of intestinal worms, of which he was acquainted with but a small number of species. Aristotle has employed it in the same manner, as well as Zelian, evidently to connote certain species of worms, which were used to rid dogs of the worms to which they are subject. The Latin authors, and Pliny among the rest, appear to have restricted the word lumbricus to the intestinal worms, and to have rendered the three Greek denominations by a single one, that of Vermes, from which it has happened that the modern use of the word worms, which, as well as the French word vers, is evidently derived from the Latin. All the other animals, which they comprehended under the name of Exsanguea, meaning by that term that they had not red blood, were divided into the three classes of Insecta, Malusca, and Zoophyta. The term Vermes did not then possess that undue extension which it obtained among the naturalists of the last century, with whom it at last comprehended all animals with the exception of the Vertebrata, the Insecta, and the Malusca.

EUMOLPIDAI (Eumolpidai), the most distinguished and venerable among the priestly families in Attica. They were devoted to the service of Demeter at Athens and Eleusis, and were said to be the descendants of the Thracian bard Eumolpus, who, according to some legends, had introduced the Eleusinian mysteries. At the request of the high-priest of the Eleusinian goddess (ιεροφόρων ου ηγε
tyγωνος), who conducted the celebration of her mysteries and the initiation of the mystae, was always a member of the family of the Eumolpides, as this family was believed to have been the first hierophant. In his external appearance the hierophant was very extraordinary; a great part of his body was covered by his hair, a kind of diadem (στρώσιον), and a long purple robe. In his voice he seems always to have affected a solemn tone suited to the sacred character of his office, which he held for life, and which obliged him to remain unmarried. The hierophant was attended by four ἐκποδατοι, one of whom likewise belonged to the family of the Eumolpides. He was an indispensable assistant in the Eleusinian mysteries, and seems to have had any particular functions at the Eleusinia, though they undoubtedly took part in the great procession to Eleusis. The Eumolpides had on certain occasions to offer up prayers for the welfare of the state, and in case of neglect they might be taken to account and punished; for they were, like all other priests and magistrates, responsible for their conduct, and for the sacred treasures intrusted to their care. (Compare Ἐυθύνης.)

The Eumolpides had also judicial power in cases where religion was violated (πετρα ιταθειας). This power probably belonged to this family from the earliest times, and Solon as well as Pericles do not seem to have had a law of their own, but only the one general law, which was administered by the archon, king, or under his guidance, is uncertain. The law, according to which they pronounced their sentence, and of which they had the exclusive possession, was not written, but handed down by tradition; and the Eumolpides alone had the right of using the mystical phrase "black magic," called ἔγγυται. (Vid. Εὐχέται.) In cases for which the law had made no provisions, they acted according to their own discretion. Respecting the mode of proceeding in these religious courts, nothing is known. In some cases, when a person was convicted of gross violation of the public institutions of his country, the people, besides sending the offender into exile, added a clause in their verdict that a curse should be pronounced upon him by the Eumolpides. But the Eumolpides could pronounce such a curse only at the command of the people, and might afterward be compelled by the people to revoke it, and purify the person whom they had cursed by the rite of purification.

EUPTO' RION (ἐπτορίω), a plant, the same with the Agrimony, or Agrimonia Eupatorium. Another name is Liverwort, from its being used in complaints of the liver, and hence we find it called in Orbiusus ἱπταριοσ. The name of Eupatorium

1. (Epit., 57.)
was given it, according to some of the ancient writers, from that of Mithradates Eupator, who discovered the medicinal properties of this plant. 1 It was more probable, however, that it was so called from the city of Eupatoria, near the river Amisos, in Pontus, where it grew abundantly. Pliny says, that its seed, taken in wine, formed an excellent remedy for dysentery. The islanders of Zante call it φάσσαμος, and the Turks Çofiam ott. Sibthorp found it in the Peloponnesus, and also around Byzantium, and along the road between Smyrna and Ionia. 2

EUPATRIDÆ (Eúpatridás; descended from noble ancestors) is the name by which, in early times, the nobility of Attica was designated. Who the Eupatridæ originally were has been the subject of much dispute; but the opinion now almost universally adopted is, that they were the noble Ionie or Hellenio families who, at the time of the Ionian migration, settled in Attica, and there exercised the power and influence of an aristocracy of warriors and conquerors, possessing the best parts of the land, and commanding the services of a numerous class of dependants. 3 The chiefs who are mentioned as kings of the several Attic towns, before the organization of the country ascribed to Theseus, belonged to the highest or ruling class of the Eupatridæ. Their complete possession of the sovereign power for the whole country, it must have been chiefly those nobles of the highest rank that left their former residences and migrated to Athens, where, after Theseus had given up his royal prerogatives and divided them among the nobles, they occupied a station similar to that which they had previously held in their several districts of Attica. Others may have been from the not of the highest rank, or were less desirous to exercise any direct influence upon the government, remained in their former places of residence. 4

In the division of the inhabitants of Attica into three classes, which is ascribed to Theseus, the Eupatridæ were the first class, 5 and thus formed a compact order of nobles, united by their interests, rights, and privileges. The first, or, at least, the most ambitious among them, undoubtedly resided at Athens, where they enjoyed nearly the same privileges as they had before the union in the separate townships of Attica. They were in the exclusive possession of all the civil and religious offices in the state, ordered the affairs of religion, and interpreted the laws, human and divine, and valued the power and influence of their station and offices above all else, only distinguished from them by the duration of his office; 7 and the four kings of the phyle (φυλοβασιλέων) who were chosen from the Eupatridæ, were more his colleagues than his counsellors. 8

The kingly power was in a state of great weakness; and while the overbearing influence of the nobles, on the one hand, naturally tended gradually to abolish the helotage, and the last vestiges of tyrannical government in its stead, 6 it produced, on the other hand, effects which threatened its own existence, and at last led to the entire overthrow of the hereditary aristocracy as an order: for the commonalty, which had likewise gained in strength by the union of all the Attic townships, soon began to feel the oppression of the aristocracy, which in Attica required no fear of the ruling class in the same manner as the Eupatridæ at Athens. The legislation of Draco seems to have arisen out of the growing discontent of the commonalty with the oppressive rule of the nobles. 10

but his attempts to remedy the evil were more exalted in imagination than in fact; and, consequently, not having any real results. The disturbances which, some years after, arose from the attempt of Cylon, one of the Eupatridæ, who tried to overthrow the aristocratical government and establish himself as tyrant, at length led to the legislation of Solon, by which the political power and influence of the Eupatridæ as an order was broken, and property instead of birth was made the basis of rights. 19 Solon, like all ancient legislators, abstained from abolishing any of the religious institutions, those families of the Eupatridæ in which certain priestly offices and functions were hereditary, retained these distinctions down to a very late period of Grecian history. 20

EUPHORBIA (εὐφόρβια), a plant belonging to the genus Euphorbia, or Spurge. It grows wild in Africa, and is said to have been discovered by King Juba, 2 who gave it the name of Euphorbia in honour of his physician Euphorbus, brother to Antonius Musa, the medical attendant of Augustus. 4 This prince also wrote a treatise on the virtues of the plant, which was in existence in Pliny's day. 5 The Euphorbus was discovered by him near Mount Atlas. Its stem, according to Pliny, 6 was straight like a thyrus, and its leaves resembled the leaves of a wine-press. Its odour was so powerful, that they who collected the juice were compelled to stand at a distance. An incision was made into the stem by means of a pole tipped with iron, and the juice which exuded was caught in a goscinthus. This goscinthus became, by exposure to the air, a gum-ressum resembling frankincense. Pliny speaks of it as a remedy against the plague, and for seeping wounds. The name of the Euphorbus was also given to Euphorbus, 7 who is stated in the Edinburgh Dispensatory, remarks Adams, "that the Euphorbus is got from the species called Euphorbia antiquorum; but Sprengel prefers Euphorbia maritima." Sibthorp informs us that the Greek fishermen, at the present day, use the Euphorbus Choracias (called by them φάλακας) to pois the fish, but that, when caught by these means, they become putrid a short time after they are taken. 8

EUPH. (Vid. Amphitheatrum, p. 53.)
EUTHYDICIA (εὐθυδίκια). (Vide, p. 380.)
EUTHYNE (εὐθύνη). All public officers at Athens, especially generals, ambassadors, 9 the archons and their assessors, the dietetes, priests and priestesses, the archons, and the secretaries among the menials, the assessors, the magistrates, the notaries, the proclaves, the superintendents of state buildings, the tax-gatherers, and even the senate of the Five Hundred and the members of the Areopagus, were accountable for their conduct, and the manner in which they acquitted themselves of their official duties. The judges in the popular courts seem to have been the only authorities who were not responsible, 10 for they were themselves representatives of the people, and would, therefore, by the theory, have been responsible to themselves. This account, which officers had to give after the time of their office was over, 11 being καταβολή, and the officers subject to it, καταβολος. Every public officer had to render his account within thirty days after the expiration of his office; 11 and as long as this duty was not fulfilled, the whole property of the ex-officer was in bondage to the

EUTHYNE.

He was not allowed to travel, beyond the frontiers of Attica, to consecrate any part of his property as a donarium to the gods, to make his will, or to pass from one family into another by adoption; no public honours or rewards, and no new office could be given to him. If within the stated period an officer did not send in his account, an action called εὑρομενήν prosφοραν brought against him. At the time when an officer submitted to the εὐκτικόν, any citizen had the right to come forward and impeach him. Those who, after having refused to submit to the εὐκτικόν, also disobeyed the summons to defend themselves before a court of justice, thereby forfeited their rights as citizens.

It will appear from the list of officers subject to the euthyne, that it was not confined to those whose office was connected with the administration of the public money, or any part of it; but in many cases it was only an inquiry into the manner in which a person had behaved himself in the discharge of his official duties. In the former case the scrutiny was usually conducted by various means to check and control the proceedings of its officers; in the latter, the euthyne may in many instances have been no more than a personal attendance of the ex-officer before the representatives of the people, to see whether any charge was brought against him. When no accuser appeared, the ex-officer was usually dismissed (εὐκτικόν) against him. After an officer had gone through the euthyne, he became δικτυμον.

The officers before whom the accounts were given were in some places called εὐκτικόν or λογαρίται, in others εὐρυτατά or συνώροι. At Athens we meet with the first two of these names, and it is most common to mention them together; hence far their name is given, and is the Rhian Ratai, Schurtzianians state that λογαρίτας was the name of the same officers who were formerly called εὐκτικόν. But from the manner in which the Greek orators speak of them, it can scarcely be doubted that their functions were distinct. From the authorities referred to by Böckh, it seems, moreover, clear that the office of the λογαρίτας, though closely connected with that of the εὐκτικόν, was of greater extent than that of the latter, who appear rather to have been the assessors of the former than a totally distinct class of officers, as will be seen hereafter.

All accounts of these officers who had anything to do with the public money fell under the eye of the first ex-en to the λογαρίτας, who examined them; and if any difficulty or incorrectness was discovered, or if charges were brought against an ex-officer within the period of 30 days, the farther inquiry devolved upon the euthyne, before whom the officer was obliged to appear and plead his cause. If the εὐκτικόν found that the accounts were properly drawn up, the officer had only to be responsible as to the use of the public money, that he had accepted bribes, or that charges brought against him were well founded, they referred the case to a court of justice, for which the λογαρίτας appointed the judges by lot, and in this court their herald proclaimed the question to which the ex-officers sent their accounts to be examined by the λογαρίτας, and was called λογαρίτας.

It can scarcely be doubted that the εὐκτικόν took an active part in the trials of the λογαρίτας: whether they acted only as the assessors of the λογαρίτας, or whether they, as Pollux states, exacted the embezzled sums and fines instead of the praetores, is uncertain. The number of the εὐκτικόν, as well as that of the λογαρίτας, was ten, one of them being taken from every tribe. The λογαρίτας were appointed by the senate, and chosen by lot; whether the εὐκτικόν were likewise chosen by lot is uncertain, for Photius uses an expression derived from εὐκτικόν (lot), while Pollux states that the εὐκτικόν ημερομενοφαίναν, scil. τοις λογαρίτας, were like the assessors of the archons; the latter account, however, seems to us more probable. Every εὐκτικόν had two assessors (παράτηροι).

The first traces of this truly democratic institution are generally found in the establishment of the archonship (ἀρχη εὐκτικοῦ) instead of the kingly power, by the Attic nobles. It was from this state of dependence of the first magistrates upon the orators that the use of the euthyne seems to date. If, therefore, the regular euthyne arose. Similar institutions were established in several other republics of Greece.

EUTHYNOI (Εὐθυνοι). (Vid. Euthyne.)

EVICTIO. If the purchaser of a thing was by legal means deprived of it (excvto), the seller was bound to make good the loss (excvtoin prasturie). If the seller knew that he had no title, but he was not his own, this was a case of dolus, and he was bound, in case of eviction, to make good to the purchaser all loss and damage that he sustained. If there was no dolus on the part of the seller, he was simply bound to make good to the purchaser the value of the thing at the time of eviction. It was necessary for the purchaser to have acted in good faith, when an attempt was made to evict him; and it was his duty to give the seller notice of the adverse claim (litem denunciare), and to pray his aid in defence of the action. The stipulatio duplas was usual among the Romans; and, in such case, if the purcharer was evicted from the whole thing, he might, by virtue of his agreement, demand from the seller double its value.

EVCOTA/TI were soldiers in the Roman army who had served out their time and obtained their discharge (misisio), but had voluntarily enlisted again at the invitation of the consul or other commander. There appears always to have been a considerable number of these soldiers in every army of importance; and when the general was either near the end of his service, or the army was on the point of being disbanded, the number of veterans who joined his standard would of course be increased. The evocati were doubtless released, like the vexillarii, from the common military duties of fortifying the camp, making roads, &c., and held a higher rank in the army than the common legionary soldiers. They are sometimes called the equites Romani, and sometimes classed with the centurions. They appear to have been frequently promoted to the rank of centurions. Thus Pompey induced a great many of the veterans who had served under him in former years, to join his standard at the breaking out of the civil war, by the promise of rank, and the command of centuries (ordinarium). All the evocati could not, however, have held the rank of centurions, as we read of two
EXAIRESEOS DIKE.

EXEGETAI.

The name of Evocati was also given to a select body of young men of the equestrian order, who were apointed by Domitian to guard his bedchamber. This body is supposed by some writers to have existed under the succeeding emperors, and to have been the same as those called Evocati Adu-gusti.

EXAIRESEOS DIKH (ἐξαίρεσις δίκη), a suit of a public nature, which might be instituted against one who, assuming to act as the protector (ἀριστος) of an Athenian woman, married her to a foreigner in a foreign land. This was contrary to law, intermarriage with aliens being (as a general rule) prohibited. In the speech of Demosthenes against Timocrates, they are charged by having sold his mistress to Corecyren, on pretence of giving her in marriage.

EXAIRESAIOS DIKH (ἐξαίρεσις δίκη). This was an action brought to recover damages for the attempt to deprive the plaintiff of his slave; not where the defendant claimed a property in the slave, but where he asserted him to be a freeman. As the condition of slavery at Athens incapacitated a man to take any legal step in his own behalf, if a runaway slave wished to recover his rights as a free man, he could only do it by the assistance of one who was himself a freeman. He then put himself under the protection of such a person, who was said to ἐξαίρεσις των ὀδραμενίων αὐτῶν ἔλεγχων, in libertatem vindicaret. If the master sought to reclaim him, he proceeded to take manual possession, ἐστιν ἐκατον τῶν ἐλεφθερίων, a runaway slave might at any time be seized by his master, either in the open street or elsewhere, except in a sanctuary. If the friend or person who harboured the slave meant to contest the master's right, the proper course was to go with him before the magistrate, and give security for the value of the slave and costs, in case a court of law should decide against him. The magistrate who took cognizance of the cause was the archon, where a man claimed to be a citizen; the polemarch, where he claimed to be an alien freeman. It was the duty of the archon or polemarch to set the man at liberty pendente lite. In the suit that followed, the plaintiff had to prove his title to the ownership of the slave, and, if successful, obtained such compensation as the jury chose to award; this being a ἔργασις ἐπε γευ, and half of the costs of the suit had to be paid by the defendant. A verdict for the plaintiff drew with it, as a necessary consequence, the adjudication of the ownership, and he would be entitled to take possession of his slave immediately: if, however, the slave had escaped in the mean time, and evidence of such fact were produced, the jury would probably take that into consideration in estimating the damages.

If during the capture of the slave, he had used actual violence, he was subject to a ἔργασις βιαία. And if the so-called master had failed in the ἔργασις, the injured party might maintain an action against him for the attempted seizure.

In a speech of Isocrates, the defendant, a banker, from whom it is sought to recover a deposit, is charged with having asserted the freedom of his own slave, in order to prevent his being examined by torture respecting the sum of money deposited in his hands. This remark is remarkable on two accounts first (as Meier observes), because it seems to prove that one not the owner of the slave could bring the ἔργασις, if he had an interest in the matter; secondly, because it was optional with a man to give up his slave to the torture or not, the refusal being only matter of observation to the jury; and, therefore, it appears strange that any one should have recourse to a measure, the result of which (if successful) would be to deprive him of his property.

EXAUCTORATIO. (Vid. Missio.)

EXAGURAGA is the act of changing a sacred thing into a profane one, or, taking away from it the sacred character which it had received by inauguratio, consecratio, or dedication. That such an act was performed by the augurs, and never without consulting the pleasure of the gods by augury, is implied in the name itself. Temples, chapels, and other consecrated places, as well as priests, were considered as belonging to the gods. No consecrated place whatever could be employed for any profane purpose, or dedicated to any other divinity than that to which it originally belonged, without being previously exaugurated; and priests could not give up their sacred functions, or (in case they were obliged to live in celibacy) enter into any union, without first undergoing the process of exauguratio.

EXCEPTIO. (Vid. Acto, p. 16.)

EXCULTE. (Vid. Castra, p. 220.)

EXCUBIBUS RES, which properly means water, men or sentinels of any kind, was the name more particularly given to the soldiers of the cohort who guarded the palace of the Roman emperor. Their commanding officer was called praefectus castrorum. When the emperor went to an entertainment at the house of another person, the excubitori appear to have accompanied him, and to have kept guard as in his own palace.

EXEDRE. (Vid. Gymnasion, House.)

EXEGETAI (ἐξήγησαί, interpreters; on this and other meanings of the word, vid. Ruhnken, ad Timae. Glos. p. 109, dcr.) is the name of the Eumolpi, by which they were designated as the interpreters of the laws relating to religion and of the sacred rites. (Vid. Eumolpidae.) They were thus, at Athens, the only class of persons who in some measure resembled the Roman jurists; but the laws, of which the ἐξήγησαί were the interpreters, were not written, but handed down by tradition. Plutarch applies the term to the learned and priest of the Eumolpid family, properly speaking, it belonged only to certain members of the god, i. e., the Eumolpi. The Etymologicon Magn, in accordance with the etymological meaning of the word, states that it was applied to any interpreters of laws, whether sacred or profane; but we know that at Athens the name was principally applied to three members of the family of the Eumolpi, who were called ἐξήγησαί: 1. Hesiodus, 2. Philemaeus, 3. Ephesius. 11 (Leg. ii., 27—12.) (Compare Pollux, Onom., viii. 244 and 188.)

EXODA.

in the most remarkable towns and places of Greece, who showed to strangers the curiosities of a place, and explained to them its history and antiquities. 1

Respecting the κέγυρις of the laws of Lycurgus at Sparta, see Müller, Dör., i., 11, 2.

EXENGYSTHAI (ἐξεγυσθάι). (Vid. Enosv.)

EXE'RCITUS AD: this has been acted against the edict by the executor natis. By the term natis was understood any vessel, whether used for the navigation of rivers, lakes, or the sea. The executor natis is the person to whom all the ship's gains and earnings (obversiones et reeditus) belong, whether he is the owner, or has hired the ship from the owner for a time definite or indefinite. The executor natis was appointed as the manager for the management of the ship, and was appointed (proposito) by the executor. The executor was bound generally by the contracts of the magister, who was his agent, but with this limitation, that the contract of the magister must be with reference to furthering the object for which he was appointed as; for instance, if the magister purchased a cargo for the navigation of the ship, or entered into a contract or incurred expense for the ship's repairs, the executor was bound by such contract: the terms of the master's appointment (proposito) accordingly determined the rights of third parties against the executor. If the magister, being appointed to manage the ship, attempted to use it for a particular purpose, used it for a different purpose, his employer was not bound by the contract. If there were several magistri, with undivided powers, a contract with one of them was the same as a contract with all. If there were several executors, who appointed a magister either out of their own number or not, they were severally answerable for the contracts of the magister. The executor, therefore, might be his employer either against the executor or the magister, so long as the magister continued to be such.

A party might have an action ex delicto against an executor in respect of the act either of the magister or the sailors, but not on the contract of the sailors. If the magister substituted a person in his place, the party was forbidden to do so, the executor would still be bound by any proper contract of such person.

The term Nauta properly applies to all persons who are engaged in navigating a ship; but in the Pretor's Edict2 the term Nauta means Exercitor (qui manum exercet).

(Dig. 14. 3. 4; — Pockius, in Tit. Dig. et Cod. ad Rem Nauicam pertinentia Comment. —Abbott on Shipping, Index, Exercitor Nautis.)

EXE'RCITUS. (Vid. Army.)

EXETASTAI (ἐξετασάι) were commissioners sent out by the Athenian people to ascertain whether there were as many mercenaries as the generals reported. It appears they had no uncommon plan for the commanders, who received pay for troops, to report a greater number than they possessed, in order to receive the pay themselves; in which case they were said "to draw pay for empty places in the mercenary force" (μαθητορεύειν ἐν τοῖς κεναῖς κέρασις). The commissioners, however, who were sent to make inquiries into the matter, often allowed themselves to be bribed. 4

This name was also probably given to commissioners who were appointed to investigate other matters.

EXHERES. (Vid. Heres.)

EXHIBENDUM, ACTIO AD. This action was introduced mainly with respect to vindications, or actions about property. "Exhibere" is defined to be "facere in publico potestate, ut ei qui agents perundis sit orpa." This was a personal action, and he had the right of action who intended to bring an actio in rem. The actio ad exhibendum was against a person who was in possession of the thing in question, or had fraudulently parted with the possession of it; and the object was the production of the thing for the purpose of its being examined by the plaintiff. The thing, which was, of course, a movable thing, was to be produced at the place where it was at the commencement of the legal proceedings respecting it; but it was to be taken to the place where the action was tried at the cost and expense of the plaintiff.

The action was extended to other cases: for instance, a man claimed the privilege of taking his property off another person's land, that other person not being legally bound to restore the thing, though bound by this action to allow the owner to take it; and to some cases where a man had in his possession something in which his own and the plaintiff's property were united, as a jewel set in the same. In such cases, there might be an actio ad exhibendum for the purpose of separating the things.

If the thing was not produced when it ought to have been, the plaintiff might have damages for loss caused by such non-production. This would be to produce a slave in order that he might be put to the torture to discover his master's secret. 2

The object of the right to the production of a thing was either property in the thing or some interest; and it was the business of the judge to declare whether there was sufficient reason (jus et probabilis causa) for production. The word "interest" was obviously a word of doubtful import. Accordingly, it was a question if a man might bring this action to prevent his adversary from counting, though it was a general rule of law that all persons might have this action who had an interest in the thing to be produced (quorum intereat); but the opinion as given in the Digest is not favourable to the production on the mere ground of its being for the plaintiff's advantage. A man might have the right to prevent his adversary from counting, for instance, if he had a legacy given to him of such a slave as Titius might choose, he had a right to the production of the testator's slaves in order that Titius might make the choice; when the choice was made, then the plaintiff might claim the slave as his property, though he had no power to prevent the counting; or, in short, he might have wished to assert the freedom of a slave (in libertatem vindicare), he might have this action.

This action was, as it appears, generally in aid of another action, and for the purpose of obtaining evidence; in which respect it bears some resemblance to a Bill of Discovery in Equity.

(Müllnabr, Deocrina Pandectarum.—Dig. 10, tit. 4.)

EXIT'RIA (ἐξίτρησις) or EXEP'ODA (ἐπεξεδίκα) are the names of the sacrifices which were offered generally by the magistrates before they set out on their expeditions. 3

The principal object of these sacrifices always was to discover from the accompanying signs the favourable or unfavourable issue of the undertaking on which they were about to enter. According to Hesychius, ἐξίτρησις was also the name of the day on which the annual magistrates laid down their offices.

EXODA (Ἐξόδα, from ἐξ and ὄδος) were old-fashioned and laughable interludes in verses, inserted in other plays, but chiefly in the Attic. The name is derived from the characteristic of the character of the actors, but, from the words of Livy, we must infer

1 (Dig. 10, tit 4, s. 19)—2 (Xen. Anab., vi. 5, 7, 2.—Liv., vii. 2.)

426
that, although distinct from the Attalans, they were closely connected with them, and never performed alone. Hence Juvenal calls them exomia Atlanea, and Suetonius exorita 1 Atletenium. They were, like the Attalians themselves, played by young and well-born Romans, and not by the histriones. Since the time of Joe. Scaliger and Casaubon, the exodia have almost generally been considered as short comedies or farces which were performed after the Attalians; and this opinion is founded upon the vague and incorrect statement of the scholiast on Juvenal. 2 But the words of Livy, exodia converta fabelis, seem rather to indicate interludes, which, however, must not be understood as if they had been played between the acts of the Attalians, which would suggest a false idea of the Attalians themselves. But as several Attalans were performed on the same day, it is probable that the exodia were played between them. This supposition is also supported by the etymology of the word itself, which signifies something ἵππον, extra viron, or something not belonging to the main subject, and thus is synonymous with ἀπεικόνισις. The play, as well as the name of exodium, seems to have been introduced among the Romans from Italian Greece; but after its introduction it appears to have become very popular among the Romans, and continued to be played down to a very late period. 4

EXOMIS (ἐξομίς) was a dress which had only a sleeve for the left arm, leaving the right, with the shoulder and a part of the breast, free, and was, for this reason, called exomia. It is also frequently called χιτόν ἐπιρρομάγαλος. 5 The exomia, however, was not only a chiton (τόνικα), but also an ἱματιον or περίλημα. (Vid. Pallium.) According to Hesychus 6 and Aelius Dionysius, 7 it served at the same time both purposes of a chiton and an himation; but Pollux 8 speaks of two different kinds of exomia, one of which was a περίλημα, and the other a χιτόν ἐπιρρομάγαλος. His account is confirmed by existing works of art. Thus we find in the Mon. Pio-Clement, 9 Hephæstos wearing an exomia, which is an himation thrown round the body in the way in which this garment was always worn, and which clothes the body like an exomia when it is girded round the waist. The following figure of Charon, on the contrary, taken from Stackelberg, Die Gräber der Hellenen, pl. 47, represents the prop χιτῶν ἐπιρρομαγαλοῦ.

The exomia was worn by slaves and working people, 10 whence we find Hephæstos, the working deity, frequently represented with this garment in works of art. 2 The chorus of old men in the Ly. sistrata of Aristophanes wear the exomia, which is in accordance with the statement of Pollux, 3 who says that it was the dress of old men in comic plays.

According to Aulus Gellius, 4 the exomia was the same as the common tunic without sleeves (ἐν ὁμορνίσματι); and that the statement is opposed to the accounts of all the Greek grammarians, and is, without doubt, erroneous. 5

EXOMOSIA (ἐξομοσία). Any Athenian citizen, when called upon to appear as a witness in a court of justice (ἵλατέντες οἱ ἐκλεγέντες), was obliged by law to obey the summons, unless he could establish by oath that he was unacquainted with the case in question. This oath was called ἐξομοσία, and the act of taking it was expressed by ἐξομοσιάζειν. 6 Those who refused to obey the summons without being able to take the ἐξομοσία, incurred a fine of one thousand drachmæ; and if a person, after promising to give his evidence, did, nevertheless, not appear when called upon, an action called λεγουργοῦν, or ἄπλος δίκαι, might be brought against him by the parties who thought themselves injured by his having withheld his evidence. 7

When the people, in their assembly, appointed a man to a magistracy or any other public office, he was at liberty, before the δοκυμασία took place, to decline the office, if he could take an oath that the state of his health or other circumstances rendered it impossible for him to fulfil the duties connected with it (ἐξομοσιάσα τὸν ἁγιυν, οὐ τὴν χειροτονια). 8 Those who were likewise called ἐξομοσία, or sometimes ἀπυμοσία. 9

EXOSTRA (ἐξώστρα, from ἐξωθήλος) was one of the many kinds of machines used in the theatres of the ancients. Cicero, 10 in speaking of a man who formerly concealed his vices, expresses this sentiment by post siparium heliacatur; and then stating that he now shamelessly indulged in his vicious practices in public ways, says in exostra heliacator. From an attentive consideration of this passage, it is evident that the exosta was a machine by means of which things which had been concealed behind the siparium were pushed or rolled forward from behind it, and thus became visible to the spectators. This machine was therefore very much like the ἐκκάλαμος, with this distinction, that the latter was moved on wheels, while the exosta was pushed forward by men. 11 But both seem to have been used for the same purpose, namely, to exhibit to the eyes of the spectators the results or consequences of such things—a. g., murder or suicide—as could not consistently take place in the proscenium, and were therefore described as having occurred behind the siparium or in the scene.

The name exosta was also applied to a peculiar kind of bridge, which was thrown from a tower of the besiegers upon the walls of the besieged town, and across which the assailants marched to attack those of the besieged who were stationed on the ramparts to defend the town. 12

EXOULES DIKE.

Hudwulcker seem obscure, but simply mean that if one person claimed a property as their own, and another as mortgagee, or as having a lien upon it, the dispute was settled by an έξώουσια δίκη. In such a case, it would, of course, be merely a civil action to which a right.

EXPLETUS is opposed to "implied," and signifies unencumbered with armour or with baggage (impedimenta). Hence the light-armoured soldiers in the Roman army (p. 104) were often called the Expedite; and the epithet was also applied to any portion of the army, when the necessity for haste, or the desire to conduct it with the greatest facility from place to place, made it desirable to leave behind every weight that could be spared.

EXPLORATORES. (VID. SPECCULATORES.)

EXSEQUE. (VID. FUNUS.)

EXÆTIUM. (VID. BANISHMENT, ROMAN.)

EXSUJ. (VID. BANISHMENT, ROMAN.)

EXTISPEX. (VID. HAOPEX.)

EXTRAORDINARII (interpreted by Polyhymnus and Suidas by the Greek word Ἐξελέκτος, selected) were the soldiers who were placed about the person of the consul in the Roman army. They consisted of about a third part of the cavalry and a fifth part of the infantry of the allies, and were chosen by the prefects. Hence, for a legion of 4200 foot and 300 horse, since the number of the infantry of the allies was equal to that of the Roman soldiers, and their cavalry twice as many, the number of extraordinarii would be 840 foot and 200 horse, forming two cohorts, which are mentioned by Livy; or, in an army of two legions, four cohorts.

From the extraordinarii a body of chosen men was taken to form a body-guard for the consul. These were called alae, and were united under their number is uncertain. Lipsius conjectures that they consisted of 40 out of the 200 cavalry, and 168 out of the 840 infantry of the extraordinarii, making the whole number of the ablest in a consular army 80 horse and 336 foot.

F.

*FABA (καυκός), the Bean. Dioscorides makes mention of two kinds, the Grecian and Egyptian (Ἐλληνικός καὶ Ἐλγύιτικος). The καυκός Ἐλληνικός is generally held to be the Vicia Faba, but there is considerable diversity, according to Adams, in determining the names by the type of the bean and the reference to the descriptions of the ancient beans. The most probable opinion appears to be that of Dickson, who thinks that the Faba minor of Miller, namely, the Horse-bean, answers best to the descriptions of Theophrastus. The καυκός Ἐλγύιτικος is the Nas lumbum espicium. Its edible root was termed κολοκυδία, and its fruit κιπλάρα. The ancients made a kind of bread out of beans, called δρόσος κυάμος, or πανίς εἰς fada. Galen remarks that beans were much used by gladiators for giving them flesh, but adds that it was not firm or compact. Dr. Cullen notices the nutritious qualities of these things, but omits to mention that the flesh which they form is deficient in firmness. Actuarius states that they are nutritious, but dissuades from using them freely, on account of their flatulence. According to Celsus, both beans and lentils are stronger food than pease. Seth agrees with Galen, that the flesh formed from them is fleshy and soft. Galen directs to fry beans, or boil them with wine, which will be tender and less flatulent. The bean is said to have come origi

L. S. T. A. N. H. (ἔξωουσία δίκη). This process so called in Athenian law seems to have been originally used as a remedy against those who wrongfully "kept others out" (ἐκκελείων, ἐξελεγέων) of real property which belonged to them. The etymology of the word indicates this, and the speeches of Demosthenes against Oestrus furnish an example of it. (Vid. Embatia.)

The δική ἐξώουσία, however, does not generally appear in this simple shape, but rather as an "actio rei judicatae," or an action consequent upon the nonfulfilment of a judgment in a previous suit; the nature of which, of course, modified the subsequent proceedings. In order to consider, first, the circumstances in which the action had reference to real property. If a plaintiff was successful in an action of this sort, and the defendant did not give up possession by the time appointed, two processes seem to have been open to the former. Thus he might, if he chose, proceed at once to take possession (ἐξελεγέων), and if resisted, then bring his action for ejectment; or he might adopt a less summary process, which, so far as we can understand the grammarians, was as follows: If the property in question, and which the defendant refused, after judgment given, to surrender, was a house, the plaintiff brought an action for the rent (δική εκκελείων): if a landed estate (χωρᾶς), for the produce (δική καρπῶν). If the property thus determined was a δική ὀνόμασι, or an action for the proceeds of all his property by way of indemnification; and after that followed the δική ἐξώουσία. The statement we have given from Hudwulcker rests mainly on its inherent probability and the authority of Suidas. Some grammarians, however, do not represent the δική ἐξώουσία as an action consequent upon a previous action, but as the first steps taken before a δική ἐξώουσία was commenced. For a probable explanation of this, vid. Εναυσιαν Δίκαι. The question now arises, What was done if the defendant refused to give up possession, even after being cast in the δική ἐξώουσία? We are almost bound to suppose, though we have no express authority for it, that a plaintiff would, under such circumstances, receive aid from the public authorities to assist him in ejecting the defendant; but, independent of this, it appears from Andocides that a defendant incurred the penalty of ἁμαρτία if defeated in a δική ἐξώουσία.

We will now explain the proceedings when the defendant refused to surrender, and who he could compel to go to law. For, for example, the δική καρπῶν, which in Meidias allowed judgment to go by default (ἐγκατέληφε), and neglected or refused to pay the damages given against him, so as to become ὑπερήμορος. Demosthenes, the plaintiff in the case, says, that he might have seized upon Meidias's property by way of pledge, but that he did not so act, and was referring to bring a δική ἐξώουσία at once. It is, of course, implied in this statement, that if he had attempted to make a seizure, and been resisted, the same process would have been equally open to him. In fact, Ulpian informs us that a δική ἐξώουσία was the consequence of such a resistance being made. Moreover, in cases of this sort, it was peculiarly a penal action; for the defendant, if cast, was required to pay to the public treasury a fine of the same amount as the damages (ὁ καταθέν) due to the plaintiff. The penalty of ἁμαρτία also was inflicted till both the fine and damages were paid. Lastly, Pollux informs us, ὡς δὲ καὶ καταζητώμενος ἐμάζωσετε κτήματος, ὁ δὲ ημῶν ἐξώουσιαν ἔχων, ἤ δική ἔχων, δική, which which —
The Romans held it in high estimation, and Pliny assigns it the first rank among leguminous plants. Pythagoras, as is well known, prescribed beans, a prohibition which would seem to have been rather dietetic than physical or moral. The abstaining from beans was also enjoined on the Egyptians. Herodotus says that beans were never sown in any part of Egypt, and that, if some happened to grow there, the Egyptians would not eat them, either crude or dressed. As for the priests, ndo,—there was the very sight of that pulse, accounting it impure and abominable. The Pythagorean prohibition, therefore, would seem to have been of Egyptian origin.

FABRI are workmen who make anything out of hard materials, as fabri tignarii, carpenters, fabri ararii, smiths, &c. The different trades were divided by Numa into nine colleges, which correspond to our companies or guilds. In the constitution of Servius Tullius, the fabri tignarii (täkrovec) and the fabri ararii or ferrarii (salnotontoc) were formed into two centuries, which were called the centurie fabrum, and not fabrorum. They did not belong to any of the five classes into which Servius divided the people; but the fabri signus probably voted with the first class, and the fabri ar. with the second. They used name both the centuries together: the former says that they voted with the first class; the latter, that they voted with the second. Cicero names only one century of fabri, which he says voted with the first class; but as he adds the word tignarium, he must have recognised the existence of the second century, which we suppose to have voted with the second class.

The fabri in the army were under the command of an officer called praefectus fabrum. It has been supposed by some modern writers that there was a praefectus fabrum attached to each legion; and this may have been the case. No genuine inscriptions, however, contain the title of praefectus fabrum with the name of a legion added to it. There were also civil magistrates at Rome, and in the municipal towns, called praefecti fabrum; but we know nothing respecting them beyond their name. Thus we find in Gruter, Pref. Fab. Rom, F Praefectus Fabr. Carb. The subject of the praefecti fabrum is discussed with great accuracy in a letter of Hagenhochius, published by Orelli.

FALX. (Vid. Comed. p. 300.)

FABULA FALLACIA. (Vid. Comed. p. 300.)

FABULA PRAETEXTATA. (Vid. Comed. p. 300.)

FABULA TOGATA. (Vid. Comed. p. 300.)

FACTIONS AURIGA-RUM. (Vid. Circ. p. 256.)

FAGUS, the Beech-tree. The name is supposed to be derived from the Greek φαῦς, "to eat," as indicating that its fruit served for the nourishment of the early race of men. The fabrum of Pliny is the same with that of Virgil, both writers meaning the beech; but the φαῦς of Theophrastus is a species of oak. (Vid. Écclus.) La Cerda falls into the mistake of confounding the fagus and φαῦς.

FALA RICA. (Vid. Hasta.)

FALCIDALEX. (Vid. Legatum.)

FALX. The crime of falsum was the subject of a Judicium Publicum, and it was the object of a ex Cornelii (passed by Sulla), which Cicero also calls testamentaria and numeraria, with referer to the crimes which it was the object of the law to prevent. The provisions of this lex are stated by Paulus, who also entitles it lex Cornelia testamentaria, to apply to any person "qui testamentum quodque aliquum instrumentum falsum scelens dominando scripsisset, r e c l a v i s e t, subjiciens, suppresserit, amovere, resignaverit, eludaverit," &c. The punishment was death, or life imprisonment (at least when Paulus wrote) for the "honestiores," and the minor criminals for the "hi miliores." In place of deportatio, the law probably contained the punishment of the interdictio aequae et ignis. According to Paulus, the law applied to any instrument as well as to a will, and to the adulteration of gold and silver coin, or refusing to accept in payment genuine coin stamped with the head of the princes. But it appears from Ulpian (scriv. titulo de pana legibus, &c.) that there were these subsequent additions made to the lex Cornelii by various senatus consultata. By a senatus consultum, in the consulship of Statilius and Taurus, the penalties of the law were extended to the case of other than testamentary instruments. It is conjectured that, for the consulship of Statilius and Taurus, as it stands in the text of Ulpian, we should read Statilius and Taurus, and that the consulship of Statilius and Taurus and L. S. Libo (A.D. 160) meant. A subsequent senatus consultum, in the fourteenth year of Tiberius, extended the penalties of the law to those who for money undertook the defence of a (criminal) cause, or to procure testimony; and by a senatus consultum, passed between the dates of those just mentioned, conspiracies for the ruin of innocent persons were comprised within the provisions of the law. Another senatus consultum, passed A.D. 26, extended the law to those who received money for selling, or giving, or not giving testimony. There were probably other legislative provisions for the purpose of checking fraud. In the time of Nero, it was enacted against fraudulent persons (falsarii) that tabulae or written contracts should be pierced with holes, and a triple thread passed through the holes, in addition to the signature. In the time of Nero, it was also provided that the first two parts (cerus) of a will should have only the testator's signature, and the remaining one that of the witnesses: it was also provided that no man who wrote the will should give himself a legacy in it. The provisions as to adulterating money and refusing to take legal coin in payment were also probably extended to other cases of fraud, or inoperative, or invalid testamentaries. Allusion is made to the latter law by Ausonius. It appears, from numerous passages in the Roman writers, that the crime of falsum in all its forms was very common, and especially in the case of wills, against which legislative enactments are a feeble security.

FALX, FROM FALCULA (δοράς, ὁ ὀρέανων, ποτὶ ὀρέανων, dim. ὀρέανων), a sickle; a scythe; a pruning-knife or pruning-hook; a bill; a falchion; a halbert.

As CULVER denoted a knife with a straight edge, "falx" signified a similar instrument, the single edge of which was curved (ὑπὸ τὸν ὀρέαν ἐκμετάλλευσεν; γυμνὸς ὁ ὀρέανων; curvus falces; curvus falces alae or; invaria falces alae or; advena falces). By additional epithets, it is sometimes of the falx ferrea extus, and its corresponding varieties, the form and size. Thus the sickle, because it was used by reapers, was called falx messoria; the scythe, which was employed in mowing hay, was called falx fanaria;
The lower figure in the same woodcut is taken from the MSS. of Columbus, and illustrates his description of the various parts of the falx victoria. 6 (Vid. Culter.) The curvature in the forepart of the blade is expressed by Virgil in the phrase praecura falx. 6 In this form the bill must have been used by hunters to cut their way through thickets. After the removal of a branch by the pruning-hook, it was often smoothed, as in modern gardening, by the chisel. 7 The edge of the falx was often toothed or serrated (adove karaedovniva, denticulata). 8 The indispensable process of sharpening these instruments (adove karasomene, adove eikamai xeudhjas) 9 was effected by whetstones, which the Romans obtained from Crete and other distant places, with the addition of oil or water, which the mower (femas) carried in a horn upon his thigh. 10

Named as were the uses to which the falx was applied in agriculture and horticulture, its employment in battle was almost equally varied, though not so frequent. The Geleni were noted for its use. It was the weapon with which Jupiter wounded Typhon, 11 and that which was used by Perseus to slay the Lernae Hydra, 12 and with which Mercury cut off the head of Argus (falce atene, harpes Cylendidus). 13 Perseus, having received the same weapon from Mercury, or, according to other authorities, from Vulcan, used it to decapitate Medusa and to slay the sea-monster. 14 From the passages now referred to, we may conclude that the falchion was a weapon of the most remote antiquity; that it was little more than a dagger upon the waist; that it was held in the hand by a short hilt; and that, as it was, in fact, a dagger or sharpen-pointed blade, with a proper falx projecting from one side, it was thrust into the flesh up to this lateral curvature (carro tenus abditi lario). In the annexed woodcut, four examples are selected from works of ancient art to illustrate its form. One of the four cameos here copied represents Perseus with the falchion in his right hand, and the head of Medusa in his left. The two smaller figures are heads of Saturn, with the falx in its original form, and to the fourth belongs the same divinity at full length, was probably engraved in Italy at a later period than the others, but early enough to prove that the scythe was in use among the Romans, while it illustrates the adaptation of the appellation of Saturn (Xévos: se- nex falces) for the purpose of personifying Time (Xévos), who, in the language of an ancient epigram, 4 destroys all things (muV evravloV) with the same scythe. 5

If we imagine the weapon which has now been described to be attached to the end of a pole, it would assume the form and be applicable to all the purposes of the modern half-team. Such must have been the asseres falcati used by the Romans at the siege of Ambrasia. 6 (Vid. Afries, Antenna.) Sometimes the iron head was so large as to be fastened, instead of the ram's head, to a wooden beam, and worked by men under a testudo. 6

Lastly, the Assyrians, the Persians, the Medes, and the Syrians in Asia, 7 and the Gauls and Britons in Europe (vid. Conines), made themselves formidable on the field of battle by the use of chariots with scythes, fixed at right angles (elc pr;gyon) to the axle and turned downward, or inserted parallel to the axle into the felly of the wheel, so as to revolve, when the chariot was put in motion, with more than thrice the velocity of the chariot itself; and sometimes also projecting from the extremities of the axle.

FAMILIA. The word "familia" contains the same element as the word "famulus," a slave, and the verb "famulari." In its widest sense it signifies the totality of that which belongs to a Roman citizen who is sui juris, and therefore a paterfamilias. Thus, in the third kind of testamentary disposition mentioned by Gaius, 8 the word"familia" is sometimes the person who received the family from the testator (qui a testator familiam acceptabat manus) was called "familie emptor." In the same sense we find the expression " SUCCESSU DOMI familie." 9

But the word "familiaris" is sometimes limited to signify "persons," that is, all those who are in the

2. — Falx, i., 137.
FAMILIA.

power of a paterfamilias, such as his sons (filii-"fami-
lias), daughters, grandchildren, and slaves. When "fami-
lia" is used in this sense, it is opposed to in-
animate things; and this extras is to be the sense of the
word familia in the formula adopted by the "fa-
milis emptor" on the occasion of taking the testa-
tor's familia by a fictitious purchase: "Familium pe-
cumunque tuum," &c. In another sense "familia"
signifies all the free persons who are in the power of
a paterfamilias; and in a more extended sense of this
kind, all those who are agnati, that is, all
who are sprung from a common ancestor, and would
be in his power if he were living (vid. Coonan). With
this sense of familia is connected the status famili-
arii, by virtue of which a person belonged to a par-
ticular familia, and thereby had a capacity for certain
rights which only the members of the familia could
claim. A person who changed this status ceased
to belong to the familia, and sustained a capsus diminu-
tio minima. (Vid. Adopto, Captus.) Members of the
same family were "familiares," and hence familia-
riae came to signify an intimate friend. Slaves who
belonged to the same familia were called, with re-
spect to this relation, familiares. Generally, "fami-
liares" might signify anything relating to a familia.

Sometimes "familia" is used to signify the slaves
belonging to a person, or to a body of persons (so-
citias), in which sense they are sometimes opposed
in Cicero to brothers who have been delivered to
libertas. (Vid. Coonan.)

In the passage of the Twelve Tables, which de-
clares that in default of any heres suos, the property
of the intestate shall go to the next agnatus, the
word "familia" signifies the property only: "Ag-
natus proximus familia habet." In the same sec-
tion in which Uplian quotes this passage from the
Twelve Tables, he explains agnati to be "agnati
wider than heres per manum descendentes ejusdem fami-
lius," where the word "familia" comprehends only per-
sons.

The word familia is also applied (improperly)
to sects of philosophers, and to a body of gladiato-
s: in the latter sense with less impropriety.

A paterfamilias and a materfamilias were respect-
ively a Roman citizen who was sui juris, and his
lawful wife. A filiusfamilias and a filiafamilias were a
son and daughter in the power of a paterfamilias.
The familia of a paterfamilias, in its widest sense,
comprehended all his agnati; the extent of which
term, and its legal import, are explained under Coc-
nati. The relation of familia and gens is explain-
ed under Gener.

The five following personal relations are also com-
prehended in the notion of familia: 1. Manus, or
the strict marriage relation between husband and
wife; 2. Servitus, or the relation of master and
slave; 3. Patronatus, or the relation of former mas-
ter to former slave; 4. Mancipi causa, or that
intermediate state between servitus and libertas, which
characterized a child who was mancipated by his
father (vid. Emancipatio); 5. Tuela and Curatio,
the right which must be traced to the Patria
Potestas. These relations are treated under their ap-
propriate heads.

The doctrine of representation, as applied to
the acquisition of property, is connected with the
doc
tion of the relations of familia; but, being limited
with reference to potestas, manus, and municipium,
it is not coextensive nor identical with the relations
of family. Legal capacity is also connected with
the relations of familia, though not identical with,
but rather distinct from them. The notions of li-
heri and servi, sui juris and alieni, are comprised in
the above-mentioned relations of familia: The dis-
1. (Cic. ad Div. xiv. 4.—Ad Quint. ii., Epist. 5.)—2. (Cic.
Brut. 32.)—3. (Cic. ad Fam., ii., 3.)—4. (Frag. tit. 36, l.)—5.
(Dig. 50, tit. 16, 2; 190; tit. 2.)

FARTOR.

tinction of Gives, Latini, Peregrini, are entirely un-
connected with the relations of familia. Many of
the relations of familia have also no effect on legal
capacity, for instance, marriage as such. That fam-
ilia is, in the common law, the necessary element on legal ca-
pacity is the Patria Potestas, in connexion with
which the legal capacities and incapacities of filius
familias, filiifamilias, and a wife in manu, may be
most appropriately considered.

FAMILLE EMPTOR. (Vid. FAMILIA.)
FAMILLE ERCISCUNDE ACTIO. Every
heres, who had full power of disposition over his
property, was entitled to a division of the heredita-
tum, unless the testator had declared, or the co-heredes
had agreed, that it should remain in common for a
fixed time. The division could be made by agree-
ment among the co-heredes; but in case they could
not agree, the division was made by a judex. For
this purpose every heres had against each of his co-
heredes an actio familiae eriscundae, which, like the
actio communi dividendo, and finium regulam,
was of the class of Mixtae Actions, or, as they
were sometimes called, Duplicita Judicia, because,
as in the familiae eriscundae judicium, each heres
was both plaintiff and defendant (actor and rues);
though he who brought the actio and claimed a jo
dictum (ad judicium provocavit) was properly the ac-
tor. A heres, either ext testamento or ab intestato,
might bring this action. All the heredes were liable
to be divided, even to the heres of the collateral (vid.
Annexus Collator). That is, bound to allow, in taking the account of the
property, what they had received from the testator
in his lifetime, as part of their share of the hereditas,
at least so far as they had been enriched by such
donations.

This action was given by the Twelve Tables.
The word Familia here signifies the "property," as explained in the previous article, and is equivalent
to hereditas.

The meaning and origin of the verb et-iscere or
here-iscere, have been a subject of some dispute.
It is, however, certain that the word means "di-
vision." 1

PANUM. (Vid. TEMPLUM.)

FAR, Spelt, often put for corn generally. Ac-
cording to Martyn, it is a sort of corn very like
wheat; but the chaff adheres so strongly to the
grain that it requires a mill to separate them, like
barley. The far of the Romans was the same with
the δεμ or δεα of the Greeks: "The Ἃγαθος of The-
phratus, the δῆμος of Homer, as well as the far
and adorem of the Romans, were in all probability,"
says Adams, "merely varieties of Spelt." Far
was the corn of the ancient Britons (vid. Remes-
lius Martyn., and was frequently used in their sacrifices
and ceremonies, whereas it is no wonder that this
word was often used for corn in general." The
modern botanical name of Far is Triticum spelta.
Dioscorides mentions two kinds of Zera: one the
simple kind, μούκκωκκος, Triticum monoeoccus; the
other the double, διάκοκκος, Triticum spelta. Homer
names "θυγατρία" of Zera, as does also Theophratus;
the latter gives its epithet of robust or handy, which
is also applied to it by Virgil.

FARTOR (aertor Vic) was a slave who fattened
poultry. 2 Donatus says that the name was given
to a maker of sausages; but compare Becker,
Galeus, ii., p. 190.

The name of fartores or crommers was also given
to the nomenclators, who accompanied the candi-
date to the voting-stalls; a slave among whom gave
them the names of such persons as they might meet. 3

430
FASCIAE.

The next two woodcuts, which are taken from the consular coins of C. Norbanus, contain, in addition to the fasces, the one a spica and caduceus, and the other a spica, caduceus, and prora.

The fasces appear to have been usually made of aaroch (betalda), but sometimes also of the twigs of the elm. They were used to bind the fasces on their shoulders; in the second, two fasces, and between them a s ella eurulis; in the third, two fasces crowned, with the consul standing between them; and in the fourth, the same, only with no crowns around the fasces.

ded for the day, and it was not till the second decemvirate, when they began to act in a tyrannical manner, that the fasces with the axe were carried before each of the ten. The fasces and secures were, however, carried before the dictator even in the city, and he was also preceded by 24 lictors, and the magister equitum by six.

The fasces were preceded to the city by two lictors with the fasces, but out of Rome and at the head of an army by six, with the fasces and secures, whence they are called by the Greek writers σφαίρας hρατελείκας. The proxconsuls also were allowed, in the time of Ulpius, six fasces. The tribunes of the plebs, the ediles, and questors, had no fasces, but in the consular fasces the questors were permitted to have the fasces.

The lictors carried the fasces on their shoulders, as is seen in the coin of Brutus given above; and when an inferior magistrate met one who was higher in rank, the lictors lowered their fasces to him. This was done by Valerius Publicola when he addressed the people, and hence came the expression surn, which to this day is used to denote that one's self inferior to another.

When a general had gained a victory, and had been saluted as Imperator by his soldiers, he usually crowned his fasces with laurel.

FASCIA, dim. FASCIO LA, a band or fillet of cloth, worn, 1. round the head as an ensign of royalty. 2. as a bandage for the head. 3. 2. By women over the breast. 4. (vid. Strophium): 3. round the legs and feet, especially by women. Cicero reproached Clodius for wearing fasciae upon his head. Afterward, when the toga had fallen into disuse, and the shorter pallium was worn, women wore it in the same, but the longer was exposed, fasces crurales became common even with the male sex. The Emperor Alexander Severus always used them, even although, when in town, he wore the toga. Quintilian, nevertheless, asserts that the adoption of them could only be excused on the plea of infirm health. White fasces, worn by men, were a sign of extraordinary refinement in dress: the mode of clearing them was by robbing them with a white tenacious earth, resembling our pipe-clay (fasces crettati). The finer fasciae, worn by ladies, were purple. The bandages wound about the legs, as shown in the illuminations of ancient MSS., prove that the Roman usage was generally adopted in Europe during the Middle Ages.

By means of the term 'fascia' was applied to architecture to a long, flat band of stone, marble, or wood. Thus the architrave of an Ionic or Corinthian entablature consists of three contiguous horizontal fasciae.

On the use of fasciae in the nursing of children, see Incusur.

FASCINUM (fexaxanf&), fascination, enchantment. The belief that some persons had the power of injuring others by their looks, was as prevalent among the Greeks and Romans as it is among the superstitious in modern times. The forvalambos βακανος, or evil eye, is frequently mentioned by ancient authors as a means of securing personal happiness and prosperity. Fasces were also used as a symbol of authority and power, particularly by the Roman Senate and the Roman Forum. They were carried by the consuls, praetors, and quaestors, and were used in the processions and festivals of the city. The fasces were made of wood, usually the larch, and were bound together with a leather cord. The axe was sometimes included in the fasces, and sometimes not. The fasces were an important symbol of Roman power and authority, and were used in various ceremonies and rituals. They were also used as a symbol of victory and success in ancient Rome. The fasces were an important symbol of Roman power and authority, and were used in various ceremonies and rituals. They were also used as a symbol of victory and success in ancient Rome.

writer. 1 Plutarch, in his Symposium, 2 has a separate chapter upon τοὺς κατακαίνεις λεγόμενον, καὶ βιάσανθον ἥκειν ὁδόλων. The eye evil was supposed to injure children particularly, but sometimes cattle also; whence Virgil 3 says,

"Nescio quis teneros oculars mihi fascinat agnos."

Various amulets were used to avert the influence of the evil eye. The most common of these appears to have been the phallus, called by the Romans fascinus, which was hung round the necks of children (turbicula rea). 4 Pliny, 5 also, says that Scyrurgia sigma, by which he means the phallus, were placed in gardens and on hearths as a protection against the fascinations of the evens; and we learn from Pollux 6 that stones were accredited to place the same figures before their forges for the same purpose. Sometimes other objects were employed for this purpose. Pisistratus is said to have hung the figure of a kind of grasshopper before the Acropolis as a preservative against fascination. 7

Another common mode of averting fascination was by spitting into the folds of one’s own dress. 8 According to Pliny, 9 Fascinus was the name of a god, who was worshipped among the Roman sacra by the vestal virgins, and was placed under the chariot of those who triumphed as a protection against fascination; by which he means, in all probability, that the phallus was placed under the chariot. 10

*FASELUIS, the Kidney Bean, Phascolus vulgaris, L., called by the Greeks φάσκολος. The kidney beans are said to have been very common among the Romans, and hence the epithet elis ap- plied to the fastulos by Virgil. 11 According to Pliny, 12 the Romans ate both seeds and shells, as we do now. Transferred before the altar, they were technically denominated fasti dies, i.e., lawful days. Varro and Festus derive fastius directly from fari, 13 while Ovid 14 may be quoted in support of either etymology.

The sacred books in which the fasti dies of the year were marked, were themselves denominated fasti; the term, however, was employed in an extended sense, as well as in a literal sense; and many mistakes have arisen among commentators from confounding fasti of different kinds. It will be useful, therefore, to consider separately the two great divisions, which have been distinguished as Fasti Sacri or Fasti Kalendares, and Fasti Annales or Fasti Historici.

For several centuries. For nearly four centuries and a half after the foundation of the city, a knowledge of the calendar was possessed exclusively by the priests. One of the pontifices regularly proclaimed the appearance of the new moon, which would intervene the announced period which would intervene between the Kalends and the Nones. On the Nones the country people assem- 1. (Alciph., Ep. 1, 15.—Heliod., Ethiopian, iii., 7.—Compare with Pip. Helv., ii., 3.—v. 1.—v. 8.—Bolck., iii. 105.—(Varro, De Ling. N., xviii. 7.—10. (Müller, Archexh., Art. Kunst, 430. 11. A.—H. Stögl., Klein. Schr., p. 111.—Becker, Chippin. 2, 191.—12. (St.-v. Gisors.—44.—(H. N., xviii. 7. 13.—12. (Frore de Virginig, p. 11.) 14.—(Varro, De Ling. Lat. v. 1.) 1.—19.—(Estin., s. v. Fasti.) 15.—(Fasti, i., 47.) bled for the purpose of learning from the rex sa- crorum the various festivals to be celebrated during the month, and the days on which they would fall. In the six days which were obliged to inquire of the privileged few on what day they might bring their suit, and received the reply as if from the lips of an astrologer. 2 The whole of this lore, so long a source of power and profit, and therefore jealously enveloped in mystery, was at length made public by a certain Cn. Flavius, scribe to Apicus Cænsus, who, having gained access to the pontifical books, copied out all the requisite information, and exhibited in the Forum for the use of the people at large. From this time forward such tables became common, and were known by the name of Fasti. They usually contained an enumeration of the months and days of the year; the Nones, Ide, Numine, Dies Fasti, Nefasti, Comitia, Atri, &c. (vid. Calendar), together with the different festivals, were marked in their proper places: astronomical observations on the rising and settings of the fixed stars, and the commencement of the seasons, were frequently inserted, and sometimes brief notices annexed regarding the introduction and significance of certain rites, the dedication of temples, glorious victories, and terrible disasters. In later times it became common to pay homage to the members of the imperial family by noting down their exploits and honours in the calendar, a species of flattery with which Antonius is charged by Cicero. 4 It will be seen from the above description that these fasti closely resembled a modern almanac (Pastorum libri appellantur tothis annius description); and the celebrated work of Ovid may be considered as a poetical Year-book or Compendium to the Alman- ac, having been composed to illustrate the Fast published by Julius Caesar, who remodelled the Roman year. All the more remarkable epochs are examined in succession, the origin of the different festivals explained, the various ceremonies described, the legends connected with the principal con- stellations narrated, and many curious discussions interwoven upon subjects likely to prove interesting to his countrymen; the whole being seasoned with frequent allusions to contemporary figures.

Several specimens of fasti, more or less perfect, on stone and marble, have been discovered at differ- ent times in different places, none of them, how- ever, older than the age of Augustus. The most remarkable, though one of the least entire, is that known as the Kalendarium Praetorium or Fasti Verriani. Suetonius, in his short treatise on distin- guished grammarians, tells us that a statue of Verrius Flaccus, preceptor to the grandsons of Augustus, stood in the lower part of the forum of his native town, Prænestes, opposite to the Hemicyclium, on which he had exhibited to public view the fasti arranged by himself, and engrafted on marble slabs. In the year 1770 the remains of a circular building were discovered in the immediate vicinity of the Prænestes, and among the objects which were there with the slabs of marble tablets, which were soon recognised as forming part of an ancient calendar; and, upon further examination, no doubt was entertained by the learned that these were the very fasti of Ver- rius described by Suetonius. An Italian antiquary, named Foggini, continued the excavations, collected and arranged the scattered morsels with great patience and skill; and in this manner the months of January, March, April, and December, to which a very small portion of February was afterward added.

II. FASTI ANNALES OF HISTORIC. Chronicles such as the Annales Maximi (vid. ANNALES), contain the particular discovery, but also the complete fasti of the Roman year, so far as such a compilation can be extracted from the ancient calendars now extant. Of these he enumerates eleven, the names being derived either from the places where they were found, or from the family who possessed them when they first became known to the literary world.

1. Calendarium Magiicornum, which contains the twelve months complete.
2. Cal. Præmaximus, described above.
3. Cal. Capraniicornum, August and September complete.
4. Cal. Amiernicornum, fragments of the months from March to December.
5. Cal. Aniicornum, fragments of the last six months.
6. Cal. Esquillum, fragments of May and June.
7. Cal. Fornerisum, a few days of February and March.
10. Cal. Vaticinum, a few days of March and April.
11. Cal. Allisum, a few days of July and August.

Some of the above, with others of more recent date, are given in the Corpus Inscriptionum of Gruter, in the Historia Rom. Antiqu. of Gravius, and in other works of a similar description; but the fullest information upon all matters connected with the Fasti Sacri is imbibed in the work of Foggini, entitled Fastorum annis Romanis a Verro Placco ordinatorum reliquia, &c., Rome, 1779; and in Juc. Van Waassen Animadversiones ad Rom. Sacros fragmenta, Traj. ad Rhom., 1795 to which add Ideer's Handbuch der Mathematischen und Technischen Chronologie, Berlin, 1828.

Before quitting this part of our subject, we may make mention of a curious relic, the antiquity of which has been called in question without good cause, the Calendarium Rusticum Forseninum. The Rural Almanacs, called Fastorum anvs Romani a Verro Placco ordinatorum reliquia, &c., Rome, 1779; and in Juc. Van Waassen Animadversiones ad Rom. Sacros fragmenta, Traj. ad Rhom., 1795 to which add Ideer's Handbuch der Mathematischen und Technischen Chronologie, Berlin, 1828.

FEL TERRÆ

The dwelling-houses of the Romans had no gallery-ends; consequently, when the word is applied to them,8 it is not in its strictly technical sense, but designates the roof simply, and is to be understood of one which rises to an apex as distinguished from a flat one. The fastigium, properly so called, was appropriated to the temples of the gods, from the original construction of which its form naturally sprang;4 and, when the Romans began to bestow divine honours upon Caesar, among other privileges which they decreed to him was the liberty of erecting a fastigium to his house,5 that is, a portico and pediment towards the street, like that of a temple. In like manner, the pent of a pavement, which slopes away on each side from its central line, so as to allow of the water draining off in hypostyle buildings, &c., is termed fastigium;6 and the piles of the bridge which Caesar threw across the Rhine are described as fastigii,7 converging like the two sides of a pediment.

FAX ( φανός), a Torch. The descriptions of poets and mythologists, and the works of ancient art, represent the torch as carried by Diana, Ceres, Bellona, Hymen (woodcut, p. 209), Phoebus, by females in Bacchanalian processions (p. 257), and, in an inverted position, by Sleep and Death. In the annexed woodcut, the female figure in the middle is copied from a fictile vase. The winged figure on the left of Αὐτέρως,4 or “Letheus Amor.” In ancient marbles, the torch is sometimes more ornamental than in the examples now produced; but it always appears to be formed of wooden staves or twigs, either bound by a rope drawn round them in a spiral form, as in the above middle figure, or surrounded by circular bands at equal distances, as in the two exterior figures, and in the woodcut p. 257. The inside of the torch may be supposed to have been filled with flax, tow, or other vegetable fibres, the whole being abundantly impregnated with pitch, resin, wax, oil, and other inflammable substances.

This inference from the representations of torches on ancient monuments of all kinds is confirmed by the testimony of Athenæus4 and Pliny,5 who mention that the branches of the oak, ilex, hazel, and hornbeam were chiefly used for making them by being cut into staves of the requisite forms. They were also made of the branches of the vine,5 which are exceedingly vascular, and certainly well adapted for imbuing and retaining fluids. A torch of vine was called λοφικός. Another admirable plant for making torches was the Spanish broom,6 the long twigs of which resemble rushes, and are full of pith.

As the principal use of torches was to give light to those who went abroad after sunset, they were apt to be extinguished and rendered useless by a shower of rain. Hence the expression, “This torch is full of water.”7 In allusion to the time when they were used, the portion of the Roman day immediately succeeding sunset was called fux or prima fux.8

Torchers, as now described, appear to have been more common among the Romans than the Greeks, who usually employed the more ancient and more simple torch (fux in Latinus), both because they were often occult ceremonial occasions, and because it was used to set fire to the pile. Hence the expression of Propertius,12 “Vivimus insignes inter utramque facem.”13 The torcher-bearer turned away his face from the pile in setting it on fire.14

FEBRUA'RIUS. (Vid. Calendar, Roman.)

FECIA'LES. (Vid. Pecia'ales.)

FELICES, the Cat. The αἰσθήμα of the Greeks is the Ψιλó Catus, L., or Wild Cat. Some apply the term κάτρυ to the Domestic Cat. “The common Cat,” observes Griffith, “is said to be originally from the forests of Europe. In the savage state it is of a brown-grey colour, with transverse deeper stripes; the tail has two or three dark bands, and the extremity is black. The genuine Wild Cat is to be found in the remote parts of Great Britain, and may be called, as Mr. Pennant remarks, the English Tiger. Its manners are similar to those of the Lyxus, living in woods, and preying during the night on every animal it can conquer.”

434
FERIAE.

on account of its bitterness, "propter amaritudinem
summae.

PENMINAIAE were worn in winter by Augustus
Cesar, who was very susceptible of cold. 1 Cas-
abon supposes them to have been bandages or fillets
(vid. Fecita) wound about the thighs; it seems
more probable that they were breeches resembling
ours, since garments for the thighs (perputiura) were

Trajan, the arch of Constantine, and other monu-
ments of the, show that numerous examples of both
horse and foot soldiers who wear breeches,
closely fitted to the body, and never reaching much
below the knees. (See woodcuts, p. 11, 78, 95.)

FENESTRA. (Vid. House.)

FENUS. (Vid. Interest of Money.)

FERIAE. (Vid. Fenus.)

FERIUM (from ferre) is applied to any kind
of tray or platform used for carrying anything.
Thus it is used to signify the tray or frame on which
several dishes were brought in at once at dinner; 3
and hence ferula came to mean the number of
courses at dinner, and even the dishes themselves. 4

The feruleum was also used for carrying the
images of the gods in the procession of the circus; 5
and often the victorious, or several other principal
personages, 6 and the spoils in a triumph; 7 in all
which cases it appears to have been carried on the
shoulders or in the hands of men. The most illustrious
captives were sometimes placed on a feruleum in a
triumph, in order that they might be better seen. 8

FERETRUM. (Vid. Fenus.)

FERIAE were days generally speaking, days or
seasons during which freeborn Romans suspend-
ed their political transactions and their lawsuits,
and during which slaves enjoyed a cessation from
labour. 9 All feriae were thus dies nefasti. The
feriae included all days consecrated to any deity;
consequently, all days on which public festivals
were held, and on which there were no feriae. But
some of them, such as the feriae vicennalia, and the
feriae sextiae, seem to have had no direct connexion
with the worship of the gods. The nudine, how-
ever, during the time of the kings and the early peri-
of the Republic, were feriae only for the popular,
and days of business for the plebeians, until, by the
laws of the ten tertiarii, they became fasti, or days of
business for both orders. 10

All feriae were divided into two classes, feriae pub-
icae and feriae privatae. The latter were only ob-
served by single families or individuals, in commem-
oration of some particular event which had been of
importance to them or their ancestors. As family
feriae, are mentioned the feria Claudia, Emilia, Ju-
ia, Cornelius, &c., and we must suppose that all the
great Roman families had their particular feriae, as
they had their private sacra. Among the family-holi-
days we may also mention the feriae demitaticae, i.
.e., the day on which a family, after having lost one
of its members by death, underwent a purification. 11

Individuals kept feriae on their birthdays, and other
occasions, and there was no doubt their use was
connected with the happiness of their lives. During
the time of the Empire, the birthday of an emperor sometimes assumed the char-
acter of a feria publica, and was celebrated by the
whole nation with games and sacrifices. Thus the
birthday of Augustus, called Augustalia, was cele-
bated with great splendour even in the time of

Dion Cassius. 1 The day on which Augustus had
returned from his wars was likewise for a long time
made a holiday of. 2 The same natural period of the
cities of Rome and Constantinople were at a still
later period likewise reckoned among the feriae. 3

All feriae publica, i.e., those which were ob-
served by the whole nation, were divided into feriae
stativa, feriae conceptiva, and feriae imperativa. Fe-
riae stativa or state were those which were held
regularly, and on certain days marked in the calen-
der of the year. 4 These have the name of festi-
vals, such as the Agonalia, Carmentalia, Imberi-
calia, &c. Feriae conceptiva or conceptives were held
every year, but not on certain or fixed days, the
time being every year appointed by the magistrates or
priests ('quotannis a magistratibus vel sacerdotibus
conspicuum'). Among these we may mention the
feriae Latinae, feriae Artemis, Pagana, and Com-
pitana. Feriae imperativa are those which were
held on certain emergencies at the command of the
consuls, pretors, or of a dictator. The books of
Livy record many feriae imperativa, which were
chiefly held in order to avert the dangers which
some extraordinary prodigy seemed to forebode, but
also after great victories. They frequently lasted
for several days, or several weeks, and so long as
the importance of the event which was the cause of
their celebration. But whenever a rain of stones
was believed to have happened, the anger of the
gods was appeased by a saecrum novemdiua, or feria
per novem dies. This number of days had been fixed
at the time when this prodigy had first been ob-
erved. The feriae conceptiva or conceptives were
those in the feriae conceptiva and imperativa were
announced and appointed, see Brisson, De Form., p.
107, &c.

The manner in which all public feriae were kept
bears great analogy to our Sunday. The people
generally visited the temples of the gods, and of-
ford up their prayers and the sacrifices, and the
ious and solemn times seem to have been the feriae
imperativa, but all the others were generally attended
by rejoicings and feasting. All kinds of business,
especially lawsuits, were suspended during the pub-
lic feriae, as they were considered to pollute the
sacred season: the rex sacrum and the flamines
were not even allowed to touch any thing, nor to
feriae; hence, when they went out, they were preceded by their heralds (pracicia,
practimantiores, or calatones), who enjoined the people
to abstain from working, that the sanctity of the
day might not be polluted by the priests seeing persons
at work. 5 Those who neglected this admonition
were not only liable to a fine, but, in case their diso-
bedience was intentional, their crime was considered
to be beyond the power of any atonement; where-
as those who had unconsciously continued their work
might atone for their transgression by offering a
pig. It seems that doubts as to what kinds of
work might be done at public feriae were not unfrre-
quent, and we possess some curius and interesting
glimpses of the legislation. One Usurbius declared it to be no violation of the fer-
iae if a person did such work as had reference to
the gods, or was connected with the offering of sac-
rifices; all work, he moreover declared, was allow-
ed which was necessary to support the urgent wants of human life. The pontif Scaevola,
when asked what kind of work might be done on a
feriatus, answered that any work might be done if

4, v.—Macrobi., 1, c—6.)—5. (Macrobi., 1, c.—Varro, De Ling. Lat.

any sufferer or injury should be the result of neglect or delay, e.g., if an ox should fall in a pit, the owner might employ workmen to lift it out; or if a house threatened to fall down, the inhabitants might take such measures as would prevent its falling, without polluting the feria. 1 Respecting the various kinds of legal affairs which might be brought before the praetor on days of public feria, vid. Digest, 2, tit. 15, s. 2. It seems to have been owing to the immense increase of the Roman Republic, and of the accumulation of business arising therefore, of some of the feria, such as the Compitalla and Lupercalia, in the course of time ceased to be observed, until they were restored by Augustus, who revived many of the ancient religious rites and ceremonies. 2 Marcus Antonius again increased the number of days of business (dies fasti) to 230, and the remaining days were feriae. 3 After the introduction of Christianity in the Roman Empire, the old feriae were abolished, and the Sabbath, together with the Christian festivals, were substituted; but the manner in which they were kept was nearly the same as that in which the feriae had been observed. Lawsuits were accordingly illegal on Sundays and holydays, though a master might emancipate his slave if he liked. All work, and all political as well as juridical procedure, were likewise suspended; and people were allowed freely and unrestrainedly to apply themselves to their agricultural labours, which seem at all times to have been distinguished from, and thought superior to, all other kinds of work: for, as mentioned below, certain feriae were instituted merely for the purpose of enabling the country people to follow their rural occupations without being interrupted by lawsuits and other public transactions.

At this general view of the Roman feriae, we shall proceed to give a short account of those festivals and holydays which were designated by the name of feriae.

Feria Latina, or simply Latina (the original name was Latinae), had, according to the Roman legends, been instituted by the last Tarquin in commemoration of the alliance of the Romains and Latins. 4 But Niebuhr 5 has shown that the festival, which was originally a panegyric of the Latins, is of much higher antiquity; for we find it stated that the towns of the Friscans and Latins received their shares of the sacrifice on the Alban Mount—which was the place of its celebration—along with the Albanians, and the other cities of the Alban commonwealth. All that the last Tarquin did was to convert the original Latin festival into a Roman one, and to make it the means of hallowing and cementing the alliance between the two nations. Before the union, the chief magistrate of the Latins had presided at the festival; but Tarquin now assumed this distinction, which subsequently, after the destruction of Carthage, and the destruction of the commonwealth, remained with the chief magistrates of Rome. 6 This ceremonial panegyric on the Alban Mount was the worship of Jupiter Latialis, and, as at least as long as the Latin republic existed, to deliberate and decide on matters of the confederacy, and to settle any disputes which might have arisen among its members. As the feriae Latina belonged to the conceptius, the time of the panegyric was consequently very dependent on the state of affairs at Rome, as the consul had always power to take the field until they had held the Latinae. 7

This festival, was a great engine in the hands of the magistrates, who had to appoint the time of its celebration (consepsa editio, or indicere Latinae), and it might often suit their purpose either to hold the festival at a particular time or to delay it, in order to prevent or delay such public proceedings as seemed injurious and pernicious, and to promote others to which they were favourably disposed. This feature, however, the feriae Latinae had in common with all other feriae conceptives. Whenever all the public ceremonies customary at the Latinae had been neglected, the consuls might have the right to propose to the senate, or the college of pontiffs, that their celebration should be repeated (restaurari). 8 Respecting the duration of the feriae Latinae, the common opinion formerly was, that at first they only lasted for one day, to which subsequently a second, a third, and a fourth were added; 9 but it is clear that this supposition was founded on a confusion of the festival Latina with the Ludus Maximus, and that they lasted for six days, one for each decury of the Alban and Latin towns. 10 The festive season was attended by a sacred truce, and no battle was allowed to be given during those days. 11 In early times, during the alliance of the Romans and Latins, the chief magistrates of both nations met on the Alban Mount and conducted the solemn ceremony of the Latinae. Those times are said to have been prosperous and pacific. But afterward the Romans alone conducted the celebration, and offered the common sacrifice of an ox to Jupiter Latinus, in the name and on behalf of all who took part in it. The flesh of the victim was distributed among the several towns whose common sanctuary stood on the Alban Mount. Besides the common sacrifice of an ox, each of the several towns offered each separately lambs, cheeses, or a certain quantity of milk 12 or cakes. Multitudes flocked to the Alban Mount on the occasion, and the season was one of great rejoicings and feasting. Various kinds of games were not wanting, among which may be mentioned the acalato (swinging). 13 It was a symbolic game, and the legend respecting its origin shows that it was derived from the Latins. Pliny 14 mentions that during the Latin holydays a race of fourfooted objects (quadriga errant) took place in the Capitol, in which the victor received a drachm of abbathynum.

Although the Roman consuls were always present on the Alban Mount, and conducted the solemn sacrifice of an ox, yet we read that the superintendence of the Latinae, like that of other festivals, was given by turns to the curules, who, therefore, probably conducted the minor sacrifices, the less solemn games, and other solemnities. 15 While the consuls were engaged on the Alban Mount, their place at Rome was filled by the prefectus urbi. (Vid. Prefectus Urbis.)

The two days following the celebration of the Latin holydays were considered as dies religiosus, so that all contracts should be contracted. 16 From Dion Cassius we see that in this time of the year were still strictly observed by the Romans, whereas the Latin towns had, at the time of Cicero, almost entirely given up taking any part in them. The Romans seem to have continued to keep them down to the fourth century of our era. 17

Feria Sementesia, or Sementina dies, was kept seidtime for the purpose of praying for a good

crop; it lasted only for one day, which was fixed by the pontiffs. 

Feria thumbefales lasted from the 23rd of August 

to the 15th of October, and was instituted for the purpose of enabling the country people to get in the fruits of the field and to hold the vintage. 

Feria astrea were holydays during the hotes-

sell season of summer, when many of the wealthier Romans went into the country. They seem to have been the same as the messis fe-

ria, and lasted from the 24th of June till the 1st of August. 

Feria procidentes are said to have been prepara
tory days, or such as preceded the ordinary feriae; although they did not belong to the feriae, and often even were dies atri, they were on certain occasions inaugurated by the chief pontiff, and thus made feriae. 

FER'ULA, the feral or fennel-giant, Ferula 

communis, L. Martyn4 describes it as "a large plant, growing to the height of six or eight feet, with leaves cut into small segments, like those of fennel, but larger. The stalk is thick, and full of a pungent odor. The fescennina use it at weddings. The farenna was employed from the country, to satisfy the fenders, and to account for its light-

ness." The pith was used by the ancients as a kind of tinder, and is said to be still employed for that purpose in Sicily. According to the old classical legend, Prometheus, when he stole the fire from the skies, brought it to earth in the hollow of a feru-

la, or ferula, and the Greeks termed it, vapidia. The flowers of this plant are yellow, and grow in large um-

bels, like those of fennel. Fta5 thinks that the 

ferula of Virgil ought rather to be identified with the Ferula Orientalis of Tournefort, which that trav-

er met with very frequently in Greece. The people of Cyprus, at the present day, call the vapi-

dia, of which the Greeks had an old superstition, as very abundant in this island. The long form feru-

la is derived, according to etymologists, from ferire, "to strike," because scholars were anciently cor-

rected with the ferula by their teachers. From the lightness of the stalk, the infestation must have been more alarming than painful. The ferula of the modern preceptor resembles the classical ferula only in size, being capable of giving much greater pain. A willow-stick or branch would bear a much nearer resemblance to the ancient instrument of punishment. Martial6 alludes to the custom of employing the ferula for correction in the following lines: 

"Feralaque friates, sceptra pedagogorum . 

Cesset," and Juvenal7 also says, 

"Et nos ergo manum ferales subduximus." 

"FERULA/GO (vapidio), a smaller species of 

ferula." 

FESCENNINA, scil. carmina, one of the earliest 
kinds of Italian poetry, which consisted of rude and jocose songs, obscene and obscene verses, in which the merry country folks assailed and ridiculed one another. This amusemen 

t seems originally to have been peculiar to country 

people, but it was also introduced into the towns of Italy and at Rome, where we find it mentioned as one of those in which young people indulged at weddings. The fescennina were one of the popular 

amusments at various festivals, and on many

other occasions, but especially after the harvest 

was over. After their introduction into the towns, they seem to have lost much of their original rustic 

character, and to have been modified by the in-

fluence of Greek refinement; they remained, how-

ever, in so far the same, as they were at all times 

irregular, and mostly extemporaneous verses. The ferula did have no malicious character, and were not in 
tended to hurt or injure, may be inferred from the 
circumstances that one person often called upon an-
	her to answer and retort in a similar strain. The 
fescennina are generally believed to have been in 

roduced among the Romans from Etruria, and to 

have derived them from the Fescennia, a term of that 

kind. But, in the first place, the fescennia was not an Etruscan, but a Faliscan town; and, in the 

second, this kind of amusements has at all times 

been, and is still, so popular in Italy, that it can 

scarcely be considered as peculiar to any particular 

place. The derivation of a name of this kind from 

that of some particular place was formerly a fa-

cultative feature with the Romans. From the den-

ominations of the fescenni from Caece. Festus endeavours to solve the question by supposing fescennina to be derived from fasicum, either because they were thought to be a protection against sorcerers and witches, or because fasicum (phasis), the symbol of fertility, had in early times, or in rural districts, been con-

nected with the ceremonial giving of gifts. But, whatever may be thought of this etymology, it is 
of importance not to be misled by the common 

opinion that the fescennina were of Etruscan origin. 

FESTUCA. (Vid. SEERED.) 

FETIALES, a college of Roman priests, who 

acted as the guardians of the public faith. It 

was their duty to preserve the public order, and 

to punish the crimes of the citizens with a view to 

the maintenance of the public peace, and the 

eign state, to demand satisfaction, to determine the 
circumstances under which hostilities might be 

commenced, to perform the various religious rites 

attendant on the solemn declaration of war, and to 

preserve at the formal ratification of peace. 

These functions are briefly but comprehensively 

defined by Varro: "Fetiales . . . publicas inter 

populos praevent . nam per hos faciatur ut juxta eorum 

bellum et inde desertum, ut faderde fides popii constitu-

etur. Es iniitibantur, antequam concitetur, qui 

res repellentur, et per hos eitam veni fit fadus," in 

which we may add the old law quoted by Cicero, 

"FEDERUM, PACIS, BELLi, INDIURIAM GRATORES 

FETIALES . . . BELLQ DISCEPTANTQ. 

Dionysus4 and Livy3 dwelt at considerable length on the ceremonies observed by the Romans in the 

earlier ages, when they felt themselves aggrieved by a 

neighbouring people. It appears that, when an in-

jury had been sustained, four fetiales4 were deput

to seek redress, who again elected one of their num-

ber to act as their representative. This individual 

was called the praeposites or praeposites, and the 

filet of white wood was bound round his head, to-

gether with a wreath of sacred herbs gathered 

within the enclosure of the Capitoline Hill (vid. 

VERBENAE, SAGMINA), whence he was sometimes 

named Verbenarius. Thus equipped, he proceeded to the confines of the offending tribe, where he 

balked and addressed a prayer to Jupiter, calling the 

god to witness, that heavy imprecations upon him 

were well-founded and his demands rea-

sonable. He then crossed the border, and the same 

form was repeated in nearly the same words to the 

first native of the soil whom he might chance to

FIBULA.

FIBULA (περισσ. περισσ., περισσíτις: σφραγ. καὶ πορικ. en, εἰπερ. 
περισσότερος: εὖνετο, a Brooch, consisting of a pin (σει) 
and of a curved portion furnished with a hook 
(κλείς). The curved portion was sometimes a 
circular ring or disc, the pin passing across the 
centre (woodcut, figs. 1, 2), and sometimes an arc, the 
pin being as the chord of the arc (fig. 3). The 
Forms of brooches, which were commonly of 
gold or bronze, and more rarely of silver, were, 
however, as various in ancient as in modern times; for 
the fibula served in dress, not merely as a fastening, 
but also as an ornament. 7

Women wore the fibula both with the Amictus 
and the indusius; men wore it with the amictus only. 
Its most frequent use was to pin together two parts 
of the robe (e.g. chlamys), shawl, or blanket, which 
could be so adapted as to form the shoulder 
right shoulder. 6 (Woodc., p. 11, 15, 79, 171, 227, 
235, 244, 291.) More rarely we see it over the 
breast. (Woodc., p. 47, 186, 235.) The epithet 
ετέρωποςτατασ was applied to a person wearing 
the fibula on one shoulder only; for women often 
weore it on both shoulders. (Woodc., p. 96, 218, 257.) 
In consequence of the habit of putting on the amictus 
with the aid of a fibula, it was called πορικ. or 
ιμπεργία, πόρπια, 8 or ἱμπεργία πορικής. The 
Splendid shawl of Ulysses, described in the 
Odyssey, 11 was provided with two small pipes for 
admitting the pin of the golden brooch; this 
contrivance would secure the cloth from being torn. 
The highest degree of ornament was bestowed upon 
brooches after the fall of the Western Empire. 
Justin II., and many of the emperors who preceded 
him, as we perceive from the portraits on their 
medals, wore upon their right shoulders fibulae, from 
which jewels, attached by three small chains, 
depended. 13

It has been already stated that women often wore 
the fibula on both shoulders. In addition to this, a 
lady sometimes displayed an elegant row of brooches 
in the same place, which are often termed the 
examples of which are seen in many ancient statues. 
It was also fashionable to wear them on the 
breast, 14 and another occasional distinction of female 
attire, in later times, was the use of the fibula 
in tucking up the tunic above the knee.

Not only might slight accidents to the person 
result from wearing brooches, but they were some-
what in danger of being dislodged by the least 
unintentional movement of the wearer. The motto 
scutum in situ. quantum aequae

FICTILE.

vases used, especially by females, to inflict serious injuries. The pin of the fibula is the instrument which the Phrygian women employ to deprive Polyphemus of his sight, by piercing his pupils, and with which the Athenian women, having first blinded a man, then dispatch him. (Edipsus strikes the pupil of his own eyeball with a brooch, taken from the dress of Jocasta.) For the same reason, Eosipto meant to pierce as with a fibula (περιφυρέω, "pinned limb").

Very large brooches are sometimes discovered, evidently intended to hold up curtains or tapestry. (Vid. Tapes, Velum.)

Brooches were succeeded by buckles, especially among the Romans, who called them by the same name. The preceding woodcut shows on the right hand the forms of four bronze buckles from the collection in the British Museum. This article of dress was chiefly used to fasten the belt (vid. Balkes) and the girdle (vid. Zona). It appears to have been, in general, much more richly ornamented than the brooch; for, although Hadrian was simple and unmixed in his usual dress, there is no instance of his wearing a buckle. (Pliny observed, yet many of his successors were exceedingly prone to display buckles set with jewels (fibula gemmata).

The terms which have now been illustrated as applied to articles of dress, were also used to denote pins variously introduced in carpentry; e. g., the line of a vessel inserted through the sides of a boat, to which the sailors fasten their lines or ropes; the trenails which unite the posts and planks of a wooden bridge; and the pins fixed into the top of a wooden triangle, used as a mechanical engine.

The practice of inlaying singers, alluded to by Juvenal and Martial, is described in Rhodius (De deo) and Phileceus.

FICTILE (κεραμίς, κέραμον, δατρακόν, δοτράκι- wo), earthenware, a vessel or other article made of baked clay.

The instruments used in pottery (ars figurinae) were the following: 1. The wheel (τροχίς, aritha, rota, "rotula figurinae"), which is mentioned by Homer, and is among the most ancient of all human inventions. According to the representations of it on the walls of Egyptian tombs, it was a circular table, placed on a cylindrical pedestal, and turning freely on a point. The workman, having placed a lump of clay upon it, whirled it swiftly with his left hand, and employed his right in moulding the clay to the requisite shape. Hence a dish is called "the daughter of the wheel" (τροχίλατος κόψων). 2. Pieces of wood or bone, which the potter (κεραμεύς, figurinae) held in his right hand, and applied occasionally to the surface of the clay during its revolution. A pointed stick, touching the clay, would inscribe a circle upon it, and circles were in this manner disposed parallel to one another, and in any number, according to the fancy of the artist. By having the end of the stick curved or indented, and by turning it in different directions, he would impress many beautiful varieties of form and outline upon his vases. 3. Moulds (forma, τόνωσ). Used either to decorate with figures in relief (περιστυλέω) vessels which had been thrown on the wheel, or to produce foliage, animals, or any other appearances on Antefixa, or cornices, of terra-cotta, and imitate or ornamental pottery of all other kinds, in which the wheel was not adapted to give the first shape. The annexed woodcut shows three moulds, which were found near Rome by M. Seroux d'Agincourt. They are cut in stone. One of them was probably used for making antefixa, and the other two for making hearts and logs, designed to be suspended by persons "ex voto" in the temples and sanctuaries (Vid. Donaria.) Copies of the same subject, which might, in this manner, be multiplied to any extent, were called "estylpa." 4. Gravers or scalpels, used by skilful modellers in giving to figures of all kinds a more perfect finish and a higher relief than could be produced by the use of moulds. These instruments, exceedingly simple in themselves, and deriving their efficiency altogether from the ability and taste of the sculptor, would not only contribute to the more exquisite decoration of earthen vessels, but would be almost the only tools applicable for making "Dii fictiles," or gods of baked earth, and other entire figures. These were among the earliest efforts of the plastic art, and even in times of the greatest refinement and luxury they continued to be regarded with reverence.

Vessels of all kinds were very frequently furnished with at least one handle (ansa, oisín, &c.). The Amphora was called Dicta because it had two. The name of the potter was commonly stamped upon the handle, the rim, or some other part. Of this we have an example in the amphora, adapted for holding grain or fruits, oil or wine, which is here introduced from the work of Seroux d'Agincourt. The figure on the right hand shows the name in the genitive case, "Maturi," impressed on an oblong surface, which is seen on the handle of the amphora.

The earth used for making pottery (κεραμίκη) was commonly red, and often of so lively a colour as to resemble coral. Vanquelin found, by analysis, that a piece of Etruscan earthenware contained the following ingredients: silica, 63; alumina, 15; lime 8; oxide of iron, 24. To the great abundance

FICTILE.

of the last constituent the deep red colour is to be attributed. Other pottery is brown or cream-coloured, and sometimes white. The pipe-clay, which must have been used for white ware, is called "Etrusean creta." Some of the ancient earthenware is throughout its substance black, an effect produced by mixing the earth with comminuted asphaltum (gagates), or with some other bituminous or oleaginous substance. It appears, also, that asphaltum, with pitch and tar, both mineral and vegetable, was used to cover the surface like a varnish. In the fine kinds of earthenware this varnish served as a black paint, and to its application many of the most beautiful vases owe the decorations which are now so highly admired. But the coarser vessels, designed for common purposes, were also smeared with pitch, and had it burned into them, because by this kind of encaustic they became more impervious to moisture and less liable to decay. Hence a "cholium pictum facie," was used, as well as a glass jar, to hold pickles. Also the year of the vintage was inscribed by the use of pitch, either upon the amphoreums themselves, or upon the labels (pittacia, schedia) which were tied round their necks. Although oil or bituminous substances were most commonly employed in pottery, to produce, by the aid of fire (et di melanbates), the various shades and brown and grey, now being sent for the last time to the furnace (vide. Fornax), were sometimes immersed in that finely-prepared mud, now technically called "slip," by which the surface is both smoothed and glazed, and at the same time receives a fresh colour. Ruddle, red or ocherous (μέθρο, rubrīa), was primarily employed for this purpose. To produce a farther variety in the paintings upon vases, the artists employed a few brightly-coloured earths and metallic ores.

As we might expect concerning an art so indispensable as that of the potter, it was practised to a great extent in every ancient nation; even the most uncivilized not being strangers to it, and sometimes displaying a surprising degree of dexterity. The remains of an ancient pottery have been found in Britain, and some of the potters' names, preserved on their works, are probably British. We are told of a place called the Potters (Pigtolon) in Gaul. Numa instituted a corporation of potters at Rome. Mention has already been made of Egypt, and there are frequent allusions to the art in the ancient writings: and the productions of the potters of Tralles, Pergamus, Castiis, Chios, Sicym, Corinth, Cume, Adria, Modena, and Nola, from which the city the exports of earthenware were considerable, and where some of the most exquisite specimens are still discovered. But three places were distinguished above all others for the extent and excellence of their beautiful manufacture: 1. Samos, to which the Romans resorted for the articles of earthenware necessary at meals, and intended for use rather than display. 2. Athens, a considerable part of which was called Ceramicus, because it was inhabited by potters. In this quarter of the city were temples dedicated to Athena, as presiding over every kind of handicraft, and to the two fire-gods of the State and the household. The latter of whom was also the mythical inventor of that art of modelling. Various traditions respecting Corebus and others point to the early efforts of the Athenian potters; and it is a remarkable circumstance, that the enemies of free trade, and especially of Athenian influence at Aegina and Argos, imposed restrictions on the use of these productions. The Athenian ware was of the finest description: the master-pieces were publicly exhibited at the Panathenaïa, and were given, filled with oil, to the victors at the games; in consequence of which, we now read on some of them, in the British Museum and other collections, the inscription ΤΟΟ Aφθονια δέλων, or other equivalent expressions.

Many other specimens were presented given in relations and friends on particular occasions, and often distinguished by the epithets καλὸς καὶ καλύτερος added to their names. A circumstance which contributed to the success of the Athenians in this manufacture, was a mine of fine potters' clay in the Colian Promontory, near Phalerum. The articles made from it became so fashionable, that Plutarch, describing an art of extreme folly, compares it to that of the man who, having swallowed poison, refuses to take the antidote unless it be administered to him in a cup made of Colian clay. Some of the "Panathenaic" vases, as they were called, are two feet in height, which accords with what is said by ancient authors of their uncommon size. A diota was often stamped upon the coins of Athena, in almost every city of Attica, and the Promontory of Cola. 3. Etruria, especially the cities of Arethusa and Tarquinii. While the Athenian potters excelled all others in the manufacture of vessels, the Tuscan's, besides exercising this branch of industry to a great extent, though in a less tasteful and elaborate manner, were very remarkable for their skill in producing all kinds of statuary in baked clay. Even the most celebrated of the Roman temples were adorned, both within and without, by the aid of these productions. The most distinguished among them was an entire quadriga, made at Veii, which surmounted the pediment of the Temple of Jupiter Capitolins. The Etrurians also manifested their partiality to this branch of art by recurring to it for the purpose of interment; for while Pliny mentions that many persons preferred to be buried in earthen jars, and in other parts of Italy the bones of the dead have been found preserved in amphoræ, Etruria alone has afforded examples, some of them now deposited in the British Museum, of large sarcophagi made wholly of terra-cotta, and ornamented with figures in bas-relief and with recumbent statues of the deceased.
FIDICOMMISUM.

FICTIO. Fictions in Roman law are like fictions in English law, of which it has been said that they are "those things that have no real essence in their own nature, are unauthorized, and are not accepted in law for some especial purpose." The fictions of the Roman law apparently had their origin in the edictal power, and they were devised for the purpose of providing for cases where there was no legislative provision. A fiction supposed something to be which was not; but the thing supposed to be was such a thing as, being admitted to be a fact, gave to some person a right, or imposed on some person a duty. Various instances of fictions are mentioned by Gaius. One instance is that of a person who had obtained the bonorum possessio ex ficto. As he was not heres, he had no direct action; he could neither claim the property of the deceased by inheritance, nor the claim a debit due to the decedent as his (legal) debt. He therefore brought his suit (intendit) as heres (facto se herede), and the formula was accordingly adapted to the fiction. In the Publician Actio, the fiction was that the possessor had obtained usucaption the ownership of the thing of which he had lost the possession, and by the coemptio or by the coemption, being adrogated, ceased, according to the civil law, to be debtors, if they were debtors before; for by the coemption and adrogation they had sustained a capitis diminuto, and there could be no direct action against them. But as this capitis diminuto might be made available for fraudulent purposes, an act was passed to prevent that, and call upon work, entitled Systema des haest R. R., vol. ii.

FICUS, the Fig-tree ("avKJj"), and also its fruit ("av.

"The fruit of Theophrastus and Dioscorides is properly the Ficus Carica. The wild Fig tree is called "mykon" by Homer, and "Eustathius, in a commentary on that poet, describes pretty accurately the process of caprication. The "avKJj Avojy 3n, called also veporwpia, is the Ficus Religiosa, according to Stackhouse; Schneider, however, makes it the Ceratonia Siliqua, L., or Carob-tree. The "avKJj 'Alexandria is the Pyrus Melanthera according to Sprengel, but the Lamiera Pyrenacea according to Justinian, the Diospyros communis according to Banyan, or Banyan, according to Sprengel, and, as Stackhouse maintains, the Rhizophora Mangle, or Mangrove. The Banyan, or Indian Fig-tree, is noticed by Theophrastus, Pliny, Strabo, Solinus, Diodorus Siculus, Quintus Curtius, Arrian, and Athenaeus. This tree forms a conspicuous object in Hindu mythology, and is a symbol of some certain distance, drop and take root in the earth. These branches, in their turn, become trunks, and give out other branches, and thus a single tree forms a little forest." "The fig," says Adams, in his Commentary on Paul of Aegina, "was a great favourite with the ancients. Galen states that it is decidedly nutritious, but that the flesh formed from it is tough and coarse. It is esteemed by the Orientals for its agreeable perfume, and is used in the manufacture of bread, but soft and spongy, like that from beans. He says that figs increase the urinary and alvine discharges. Galen speaks doubtfully of dried figs." 

FIDEICOMMISUM. Fideicommissum may be defined to be a testamentary disposition, by which a person who gives a thing to another imposes on him the obligation of transferring it to a third person. The obligation was not created by words of legal binding force (civilia verba), but by words of request (praecipitavit), such as "fideicommittit," "peto," "volo dari," and the like: which were the operative words (verba utilia). If the object of the fideicommissum was the hereditas, the whole or a part, it was called fideicommissam hereditatis, or a universal fideicommissum; if it was a single thing or a sum of money, it was called fideicommissum singularis. The obligation to transfer the former could only be imposed on the heres; the obligation of transferring the latter might be imposed on a legatee.

By legislation of Justinian, a fideicommissum of the hereditas was a universal succession; but before his time the person entitled to it was sometimes "hereditis loco," and sometimes "legatarii loco." The heres still remained heres after he had parted with the hereditas. Though the fideicommissum resembled a vulgar substitution, it differed from it in this, that a vulgar substitute on the substituted person only became heres when the first person named heres failed to become such; in the case of the fideicommissum, the second heres had only a claim on the inheritance when the person named the heres had actually become such. There could be no fideicommissum unless there was a heres.

The person who created the fideicommissum must be a person who was capable of making a will; but he might create a fideicommissum without having made a will. The person who was to receive the benefit of the fideicommissum was the fideicommissarius; the person on whom the obligation was laid was the fideicommittor. The fideicommissarius himself might be bound to give the fideicommissum to a second fideicommissarius. Originally the fideicommissarius was considered as a pursuaher (emptorius locis); and when the heres transferred to him the hereditas, mutual covenants (cauciones) were entered into, by which the heres was

1 (Adams, Append., s. v. avKJj).
not to be a averable for anything which he had been bound to do as hers, nor for what he had given bona fide; and if an action was brought against him as hers, he was to be defended. On the other hand, the fideicommissarius (qui recipiat hereditatem) was to have whatever part of the hereditas might fall to the hers, and was to be allowed to prosecute all rights of action which the hers might have. But it was enacted by the senatus consultum Trebélianum, in the time of Nero, that when the hers had given up the property to the fideicommissarius, all right of action by or against the hers should be transferred to the fideicommissarius. The pretor accordingly gave utiles actiones to and against the hers, or of the fideicommissarius, which were promulgated by the edit. From this time the hers ceased to require from the fideicommissarius the covenants which he had formerly taken as his security against his general liabilities as hers. As fideicommissa were sometimes lost because the hers would not accept the inheritance, it was enacted by the senatus consultum Pegasianum, in the time of Claudius, that the hers might retain one fourth of the hereditas, and the same power of retainer was allowed him in the case of single things. In this case the hers was liable to all debts and charges (onera hereditaria); but the same agreement was made between him and the fideicommissarius which was made between the hers and the legatus partarius, that is, the profit or loss of the property passed to him as hers. The hers was entitled to a share of all the hereditas according to their shares (pro rata parte). Accordingly, if the hers was required to restore not more than three fourths of the hereditas, the senatus consultum Trebélianum took effect, and any loss was borne by him and the fideicommissarius in proportion to their shares. If the hers was required to restore more than three fourths or the whole, the senatus consultum Pegasianum applied. If the hers refused to take possession of (adire) the hereditas, the fideicommissarius could compel him, by application to the pretor, to take possession of it, and to restore it to him; but all the costs and charges accompanying the hereditas were borne by the fideicommissarius. Whether the hers was sole heir (ex ase), and required the provision of the whole or a part of the hereditas, or whether he was not sole heir (ex parte), and was required to restore the whole of such part, or of a part of such part, was immaterial: in all cases, the S. C. Pegasianum gave him a fourth.

By the legislation of Justinian, the senatus consultum Trebélianum and Pegasianum were consolidated, and the following rules were established: The hers who was charged with a universal fideicommissum always retained one fourth part of the hereditas, now called Quarta Trebélianum, and all claims on behalf of or against the hers were shared between the fideicommisarius and fideicommissarius, who was considered heredis loco. If the fideicommisarius suffered himself to be compelled to take the inheritance, he lost his Quarta, and any other advantage that he might have derived as hers. If the hers was in possession, the fideicommissarius had a personal action ex testamento against him for the hereditas. If not in possession, he must at least verbally assent to the claim of the fideicommissarius, who had then the hereditatis petitio fideicommissaria against any person who was in possession of the property.

The Quarta Trebélianum is, in fact, the Falcidia applied to the case of universal fideicommissa. Accordingly, the hers only was entitled to it, and not a fideicommissarius, who was himself charged with a fideicommissum. If there were several heredes charged with fideicommissa, each was entitled to a quarter of his portion of the hereditas. The hers was entitled to retain a fourth out of the hereditas, not including therein what he took as legate.

The fideicommisarius was bound to restore the hereditas, if at the time of the hers, or, if no time was named, immediately after taking possession of it. He was entitled to be indemnified for all proper costs and charges which he had sustained with respect to the hereditas; but he was answerable for any damage or loss which it had sustained through his culpa.

Res singulæ might also be the objects of a fide commissum, as a particular piece of land, a slave, a practice or a right, where the testator, or the party to whom the property was transferred, might require the duty of giving it to the fideicommissarius might be imposed either on the hers or on a legatee. In this way a slave also might receive his liberty, and the request to manumit might be addressed either to the hers or to the legataries. The slave, when manumitted, was the liberter of the person whom manumitted him. There were many differences between angles and hers in matters affecting the hers. A person about to die intestate might charge himself with a fideicommissum, whereas a legacy could only be given by a testament, or by a codicil which was confirmed by a proper declaration of the testator a will; but a fideicommissum could be given by a simple codicil not so confirmed. A hers instituted by a will might be requested by a codicil, not so confirmed as a will, to transfer the whole hereditas, if the hers were a third. The hers might be prevented by the provisions of the Vocationa lex from taking a certain hereditas, might take it as a fideicommissum. The Latini, also, who were prohibited by the lex Junia from taking hereditates and legacies by direct gift (direto jurè), could take by fideicommissum. It was not legal to name a person a hers, and also to name another who, after the death of the hers, should become hers; but it was lawful to request the hers, on his death, to transfer the whole or a part of the hereditas to another. In this way a testator indirectly exercised a testamentary power over the property for a longer period than the law allowed him to do directly. A man sued for a legacy per formam; but he sued for a fideicommissum before the consul or pretor for fideicommissarii, and, in the proceeding before the presiding praetor. A fideicommissum was valid if given in the Greek language, but a legacy was not until a later period. It appears that there were no legal means of enforcing the due discharge of the trust called fideicommissum till the time of Augustus, who gave the consular jurisdiction in fideicommissa. In the time of Claudius, praetores fideicommissarii were appointed to in the provinces, the praesides took cognizance of fideicommissa. The consular still had the jurisdiction, but only exercised it in important cases. The proceeding was always extra ordinem. Fideicommissa seem to have been introduced in order to evade the civil law, and to give the hereditas, or a legacy, to a person who was either incapacitated from taking directly, or who could not take as much as the donor wished to give. Gaius, when explaining what a person could take by fideicommissum, observes that "this" (the object of evading the law) "was probably the origin of fideicommissa," but by a senatus consultum made in the time of Hadrian, such fideicommissa were claimed by the fide-commissarius. They are supposed to be the commendations mortuorum mentioned by Cicero. We have an example in the case of Q. P. Rufus, who, being in Africa, was legally incapacitated from taking anything under the will of a Roman citizen, but could claim

1. (Quint. Inst. iii., 8.-.) (Gaius, ii 225.—Up. Frug. ii 22 c. 12.—De Fud. iii 20 c 4.—Val. Max. iv. 24 4.)
from his mother, who was the heres fiduciarius. They were also adopted in the case of gifts to women, in order to evade the lex Vaconia (vid. Vocaena Lex), and in the case of proscribed persons: 1 iner-
tae personas, Latini, peregrini, caelibus, orbi. 2 But the senatus consultum Pegasianum the capacity of
caelibus and orbi to take fideicommissa, and gavo them to those persons mentioned in the will for
who had children, and in default of such to the po-
nych. (Cic., Vid. Bona Cardeca.) Municipia could not take as
heredes (vid. Collegium); but by the senatus con-
sultum Aproianum, which was probably passed in
the time of Hadrian, they could take a fideicommis-
sa hereditas. 3 (Vid. Hereditas.) Fideicommissa
were ultimately assimilated to legacies. (Vid. La-
ges.)

FIDEJUSSIO. (Vid. Interessicio.)
FIDEPROMISSIO. (Vid. Interessicio.)
FIDES. (Vid. LVx.)

FIDICULAE is said to have been an instrument of
torture, consisting of a number of strings. Ac-
ccording to some modern writers, it was the same as
the queules, or, as all events formed part of it. (Vid. Equus.) The queules, or strings, appears to be
applied to any strings, whether forming part of the
queules or not, by which the limbs or extrem-
ties of individuals were tied tightly. 4

FIDUCIA. If a man transferred his property to
another on condition that it should be restored
to him, this contract was called fiduria, and the
person to whom the property was so transferred
was said fiduciam accipere. 5 A man might transfer
his property to another for the sake of greater security
in time of danger, or for other sufficient reason. 6
The contract of fiducia or pactum fiducia also ex-
cisted in the case of pignus, and in the case of man-
cipation. (Vid. Emancipatio.) The hereditas it-
self may also be considered as fiducia, or Fideicom-
missio. 7 The trustee was bound to discharge his
trust by restoring the thing: if he did not, he was
liable to an actio fiduciae or fiduciaria, which was
an actio boni fidei. 8 If the trustee was condemned
in the action, the consequence was infamia. Ci-
cero enumerates the judicium fidicium with that
in other actions, as "Fiduciam, et Fideicommissi-
nis et Kane capsita," 9 where he is evidently alluding
to the consequence of infamia. 10

When the object for which a thing was trans-
ferred to another was attained, a remanecipatio
of these things which required to be transferred by
mancipatio or in jure cessio was necessary; and
which was sometimes called "Fideicommis-
siota," was inserted in the formula of mancipatio. If
no remanecipatio took place, but only a simple restitutio,
usuacipio was necessary to restore the Quiritian
ownership, and this was called usuereceptio. The
contract of fiducia might be accompanied with a
condition, by virtue of which the fiducia might cease
in a given case, and thus the fiducia was connected
with the Commissior lex, as we see in Paulus 11
and in Cicero, "id fidicium commissa," which may be
explained by reference to Commimium. 12

FIDUCIARIA ACTIO. (Vid. Actio.)
FIGILINE. (Vid. Ficile.)

FILIX, Fern. The general resemblance which
several of the Ferns have to one another, has led
more than a fanciful writer to apprehend that the an-

ver, Synagoge, ed. Hebelholt.)

 clients did not distinguish very neatly between that.
The "Fide" of the Greeks, therefore, though Spre-
gen sets it down for the Aspidium Filix mas, was
probably not restricted to it. 11 The Filix of Virgil
appears to have been the Pteria Aquilina. . . Land
which abounds with fern is always very poor. 2 The
Latin name Filix was given to this plant in allusion
to the radical fibres, which resemble so many threads
(filos). The Greek name is derived from "fidos," "a
wing," because the leaves are unclean and expand-
ed like wings. The specific appellation given by
Linnaeus to the female Fern, namely, Aquilina, is
said to be derived from the following remarkable cir-
cumstance, that when the root of this plant is cut
transversely, it presents a very exact representation
of an eagle (aquilus) with two heads. Hence this
species of Fern is called in Germany the "I'empire.
" 12

FIMBRIAE (Fيمبريه, iomh.e, dihow. Greg. Co-
rinth.,) frutus; tassels; a fringe.

When the weaver had finished any garment on
the loom (vid. TLs), the thums, i. c., the extrem-
ties of the threads of the warp, hung in a row at
the bottom. In this state they were frequently left,
being considered ornamental. Often, also, to pre-
vent them from raveling, and to give a still more
artificial and ornamented appearance, they were
separated into bundles, each of which was twisted
(oMepQnrolroM s6aKov), and tied in one or more knots.
The thums were thus, by a very simple process,
transformed into a row of tassels. The linen shirts
found in Egyptian tombs sometimes show this or-

Among barbarous nations, the amictus was often
worn by men with a fringe, as is seen very con-
spicuously in the group of Sarmatians at p. 171.
By crossing the bundles of thums, and tying them
at the points of intersection, a kind of network was

With the progress of luxury it appears that the ancient manufactured fringes separately, and sewed them to the borders of their garments. They were also made of gold thread and other costly materials. Of this kind was the ornament, consisting of a hundred golden tassels, which surrounded the mythical shield of Jupiter, the aegis {σαπήνωσα}, and which depended from the girdle of Juno.  

In consequence of the tendency of wool to form itself into separate bundles like tassels (σαπήνωσα), the poets speak of the golden fleece as consisting of them; and Cicero, declaring against the effeminacy of Gabinius, applies the same expression to his curling locks of hair.  

RENNETUM ACTIO  If the boundaries of contiguous estates were accidentally confused, each of the parties interested in the re-establishment of the boundaries might have an action against the other for that purpose. This action belonged to the class of duplicia judicia. (Vid. FAMILIE ERISSUNDUM ACTIO.) In this action each party was bound to account for the fruits and profits which he had received from any part of the land which did not belong to him, and to make good for any injury which it had sustained through his culpa. Each party was also entitled to compensation for improvements made in the portion of land which did not belong to him.  

FISCUS. The following is Savigny's account of the origin and meaning of this term: The word Fiscus signifies wickerbasket or panier, in which the Romans used to carry and carry about large sums of money, and hence Fiscus came to signify any person's treasure or money chest. The importance of the imperial Fiscus soon led to the practice of appropriating the name to that property which the Caesar claimed as Caesar, and the word Fiscus, without any adjunct, was used in this sense. (res fisc. e.)  

Fiscus, Fiscus, Fiscalis (Fiscus privatus, ratio Caesaris) was quite distinct from that of the Fiscus. The word Fiscus signifies a wickerbasket or panier, in which the Romans used to carry and carry about large sums of money, and hence Fiscus came to signify any person's treasure or money chest. The importance of the imperial Fiscus soon led to the practice of appropriating the name to that property which the Caesar claimed as Caesar, and the word Fiscus, without any adjunct, was used in this sense. (res fisc. e.)

When intended for a fly-flapper, it was less stiff, and was called *macrarium* and *mucoidea.* In short, the manner of using fans was precisely that which is still practised in China, India, and other parts of the East; and Euripides and the ancient scholiasts upon it, compared with representations of the flabellum in ancient paintings, it also appears to have been made by placing the two wings of a bird back to back, fastening them together in this position, and attaching a handle at the base.

A very homey application of the fan was its use in cookery (vid. *Focula*). In a painting which represents a sacrifice to Isis, a priest is seen fanning the fire upon the altar with a triangular flabellum, such as is still used in Italy. This practice gave origin among classical writers to expressions corresponding to ours, meaning to fan the flame of hope, etc. (flabellare, etc.).

**FLAGRUM.**

**FLAGELLUM** (*flagellus*), a Whip, a Scourge, to the handle of which was fixed a lash made of cords (*flagellum*) or thongs (*loris*; *exvixiae*), especially thongs made from the ox's hide (*bubuiue exvixiae*). The lash was often twisted. A whip with a single lash was called *scutica;* but it often had two lashes (*Seceps scuticae*), and is so represented on various ancient monuments. (Vid. woodcut, p. 65.)

The whip was used in a great variety of ways: 1. by boys in whipping the top (vid. *Buxum*); 2. in threshing corn, when it was formed as a flail (*pericis flacciatae*); 3. in driving a chariot, or riding on horseback. For this purpose the whip was sometimes splendidly ornamented (*gaspod*). As a check to the cruel treatment of animals, Constantine enacted a law forbidding any one in riding and driving to use a severer instrument than a switch or whip with a short point or spur at the end. 4. In Spartan and Roman education. The weapon of the Roman pedagogue was an ox's skin, and was whined on the necks of his pupils. 5. A Roman punishment for fighting among Asiatic monarchs. 6. In granting private resentment. 7. In punishing criminals, especially before crucifixion. (Vid. *Crux.*) 8. In punishing slaves for running away or deserting to the enemy, or merely to gratify the caprice and cruelty of their owners. Thus females were punished by their mistresses. The whip used to punish slaves was a dreadful instrument (*horrible flagellum*), knotted with bones, or heavy, indented circles of bronze (*doppayalos*), or terminated by hooks, in which case it was aptly denominated a *scorpion.* The infliction of punishment with it upon the naked back of the sufferer was sometimes fatal, and was carried into execution by a class of persons, themselves slaves, who were called *larii.* It appears that there was another class, who submitted to be thus whipped for hire. A slave who had been flogged was called *flagro* (*pastra*), which, of course, became a term of mockery and contempt. During the Saturnalia the scourge was deposited under the seal of the master. In the contests of gladiators, two of whom seem to be represented on the coin here introduced. (Vid. woodcut.) 10. In the worship of Cybele, whose priests pretended to propitiate her, and excited the compassion and reverence of the multitude by flogging themselves with scourges such as that here represented, from a bas-relief of this goddess in the museum of the Capitol at Rome. They were strung with tali (*doppayalos*) from the feet of sheep, and resembled the scourges employed to punish slaves.

In the hands of Bellona and the Furies.

**FLAMEN,** the name for any Roman priest who was devoted to the service of one particular god (Divus Alis Ales Sacerdotis, Omnibus Pontificibus, Singulis Flaminibus Sunt), and who received a distinguishing epiphlet from the deity to whom he ministered. (Horom, sc. Fiaminum, singuli cognomina habebat ab eo quo sacra faciant.) The most dignified were those attached to Divus Mars, and Quirinus, the Flamen Diaul, Flamen Martialis, and Flamen Quirinalis. The first two are said by Plutarch to have been established by Romulus; but the greater number of authorities agree in referring the institution of the whole three, in common with all other matters connected with state religion, to Numa. The name was annually increased to fifteen. The three original flamen were always chosen from among the patricians, and styled *Maiores;* the rest from the plebeians, with the epithet *Minores.* Two rude lines of Ennius preserve the names of six of these, appointed, says the poet, by Numa.

"Vulturinem, Palatulcem, Furinalem, Fliorelumque, Poniem et Poniem facit
Hic idem: . . . ."

... to which we may add the Flamen Volcanalis and the Flamen Carmentalis. We find in books of antiquities mention made of the *Virbanalis, Laurentiianus, Lucullianus,* and Lucullarius, which would complete the list; but there is nothing to prove that these four were Roman, and not merely provincial priests. It is generally stated, upon the authority of Aulus Gellius, that the flamen were elected at the Com-
FLAMEN.

Flamen.

The office was understood to last for life; but a flamen might be compelled to resign (flamino abire) for a breach of duty, or even on account of the occurrence of an illomened accident while discharging his functions.

Their characteristic dress was the apex (vid. Augustus) by the Pontifex Maximus. The name, according to Varro and Festus, was derived from the band of white wool (flamum, flamen, flamen) which was wrapped round the apex, and which they wore, without the apex, when the heat was oppressive.

This etymology is more reasonable than the transformation of pilacines (from pilae) into flamineae. The most distinguished of all the flamines was the Flamen; the lowest in rank the Pontifex.

The former enjoyed many peculiar honours. When a vacancy occurred, three persons of patrician descent, whose parents had been married according to the ceremonies of confarreatio (vid. Marriage) were nominated by the Comitia, one of whom was selected (aptus), and consecrated (inauguravit) by the Pontifex Maximus.

From that time forward he was emancipated from the control of his father, and became sui ius. He alone, of all priests, wore the albo galerus (vid. Albus Galerus); he had a right to a lictor, to the toga praetexta, the sella curule, and to a seat in the senate in virtue of his office. This last privilege; after having been suffered to fall into disuse for a long period, was restored to C. Valerius Flaccus (B.C. 209), and the claim allowed, more, however, says Livy, in deference to his high personal character than from a conviction of the justice of the demand.

The Rex Sacrificial alone was entitled to recline above him at a banquet: if one in bonds took refuge in his house, the chains were immediately struck off, and conveyed through the impluvium to the forum, where they were cast down into the street. If a criminal on his way to punishment threw himself at his feet, and fell suppliant at his feet, he was respited for that day; insages which remind us of the right of sanctuary attached to the persons and dwellings of the papal cardinals.

To counterbalance these high honours, the Flamen was subjected to a multitude of restrictions and privations, a long catalogue of which has been compiled by Aulus Gellius from the works of Fabius Pictor and Masurius Sabinius, while Plutarch, in his Roman Questions, endeavours to explain their import. Among these were the following:

It was unlawful for him to be out of the city for a single night; a regulation which seems to have been modified by Augustus, in so far that an absence of ten days was permitted, and he was forbidden to sleep out of his own bed for three nights consecutively. Thus it was impossible for him to undertake the government of a province. He might not mount upon horseback, nor even touch a horse, nor look upon an army marshalled without the præmierum, and hence was seldom elected to the consulship. Indeed, it would seem that originally he was altogether precluded from seeking or accepting any civil magistracy; but this last prohibition was certainly not enforced in later times. The object of the above rules was manifestly to make it less easy for the Flamen to enter upon the discharge of his official duties, and to draw attention to the duties of the priesthood; to leave him in a great measure without any temptation to neglect them. The origin of the superstitions which we shall next enumerate is not so clear, but the curious will find abundance of speculation in Plutarch, Festus, and Pliny. He was not allowed to swear an oath, nor to wear a ring nisi pater per ilicat; that is, as they explain it, unless plain and without stones; nor to strip himself naked in the open air, nor to go out without his proper head-dress, nor to have a knot in any part of his attire, nor to walk along a path overcanopied by vines. He might not touch flour, nor leaven, nor leavened bread, nor a dead body; he might not enter a buatum (vid. Buxus), but was not prevented from attending a funeral. He was forbidden either to touch or to pass near any bathing place, any ivy, beans, or raw flesh.

None but a free man might cut his hair; the clippings of which, together with the parings of his nails, were buried beneath a feftor arbor. No one might sleep in his bed, the legs of which were smeared with fine clay; and it was unlawful to place a box containing sacrificial cakes in contact with the bedstead.

Flaminia was the name given to the wife of the flamineo. It was required to wed a virgin according to the ceremonies of confarreatio, which regulation also applied to the two other flamines majors; and he could not marry a second time. Hence, since her assistance was essential in the performance of certain ordinances, a divorce was not permitted, and if she died the flamines was obliged to resign. The restrictions imposed upon the flaminia were similar to those by which her husband was fettered.

Her dress consisted of a dyed robe (senato oppressum); her hair was plaited up with a purple band in a conical form (tutulum); and she wore a small square cloak with a border (scuto), to which was attached a slip cut from a feftor arbor.

It is difficult to determine what the rice really was, though it appears to have been a kind of napkin thrown over the head. She was prohibited from mounting a staircase consisting of more than three steps (the text of Aulus Gellius is uncertain, but the object must have been to prevent her ankles from being seen); and when she went to the arget (vid. Arpet), she neither combed nor arranged her hair. On each of the mundina a ram was sacrificed to Jupiter in the regia by the flaminia.

After the death of the flamen Merula, who was chosen consul suffectus on the expulsion of Cinna, and who, upon the restoration of the Marian faction, shed his own blood in the sanctuary (B.C. 87), calling down curses on his enemies with his dying breath, the priesthood remained vacant until the consecration of Servius Mallognusius (B.C. 11) by Augustus, then Flamen Dialis, to the Flaminus Major. Cinna, who had been nominated in his 17th year, but was never installed, and during the whole of the above period.

1. (Liv., xxvii., 8., id., xxix., 35.—Val. Max., V., 18., 2.)
2. (Liv., xxxi., 33.—Val. Max., 1., 11.)

6. (Liv., v., 29.)
7. (Tact., Ann., iii., 58, 7.)
The municipal towns also had their flamines. Thus the celebrated affair between Milo and Closius took place while the former was on his way to Lanuvium, of which he was then dictator, to declare the election of a flamens (ad flamarem proponendum). After the dedication of the emperors, Flamens were appointed to superintend their worship in Rome and in all the provinces; and we find constantly in inscriptions such titles as Flamen Augustalis; Flamen Tiberii Caesaris; Flamen D. Juliaii, &c., and sometimes Flamen Divorum Omnium (ex imperatorum).

Flaminia, according to Festus and Anius Gallus, was the house of the Flamen Dialis, from which it was unlawful to carry out fire except for sacred purposes.

Flaminia, according to Festus, was also a name given to a little priestess (sacerdotula), who assisted the flamenca in her duties.

FOCALAE, a covering for the ears and neck, made of wool, and worn by infantry and delicate persons.

FOCALES, or FOCCUS (heria: brya, brya, brya, dim. bryapora), a fireplace, a hearth, a brazier. The fireplace, considered as the highest member of an altar, is described under Ara, p. 77. Used by itself, it possessed the same sacred character, being, among the Romans, dedicated to the Lares of each family. It was, nevertheless, made subordinate to all the requirements of ordinary life. It was sometimes constructed of stone or brick, in which case it was elevated only a few inches above the ground, and remained on the same spot; but it was also frequently made of bronze, and it was then variously ornamented, and was carried continually from place to place. This movable hearth or brazier was properly called foculus, and its representation is shown at p. 148. Another, found at Cierie in Etruria, and preserved in the British Museum, is represented in the annexed woodcut.

In Aristophanes' persons are told "to bring in a brazier and the fan." (Vid. Flabellum.) When a brazier was brought to Alexander the Great, scantily supplied with fuel in very cold weather, he requested to have either wood or frankincense, giving his host the option of treating him either as a man or a god. In the time of the Roman emperors, the brazier of burning charcoal was sometimes brought to table with the meat for the purpose of keeping it hot, so that, as Seneca says, the kitchen accompanied the dimer.

In accordance with the sentiments of veneration with which the domestic fireplace was regarded, we find that the exercise of hospitality was at the same time an act of religious worship. Thus the roasting of a hog in the cottage of the swineherd in the Odyssey is described as a sacrifice. To swear "by the royal hearth" was the most sacred oath among the Scythians. Supplicants, strangers, all who sought for mercy and favour, had recourse to this domestic hearth as to an altar. The phrase

FOLLIS.

Among the Romans the focus was placed in the atrium, which, in primitive times, was their kitchen and dining-room. There it remained, as we see in numerous examples at Pompeii, even after the progress of refinement had led to the use of another part of the house for eating. On festive occasions the railings decorated the hearth with garlands; a woolen fillet was sometimes added. In farmhouses, the servants, who were often very numerous, were always disposed for the purpose of taking their meals around the hearth.

The focus, though commonly square, admitted of a great variety of forms and ornaments. At Phare, in Achaia, a marble hearth was placed before a statue on a pedestal, the Forum, having bronze lamps fastened to it with lead. To adapt the focus to culinary purposes, a gridiron, supported by four feet, was placed over the fire, so as to hold pots and pans as well as steaks, chops, and other pieces of meat which were to be roasted. Some of the braziers found at Pompeii also include contrivances for boiling water.

SOCII. In the seventh century of Rome these names expressed those Italian states which were connected with Rome by a treaty (fœdus). These names did not include Roman colonies or Latin colonies, or any place which had obtained the Roman civitas. Among the federati were the Latini, who were the most nearly related to the Romans, and the foederati, who were not. The rest of the federati were comprised under the collective name of Socii or Federati. They were independent states, yet under a general liability to furnish a contingent to the Roman army. Thus they contributed to increase the power of Rome, but they had not the privileges of Roman citizens. The relations of any particular federate state to Rome might have some peculiarities, but the general relation was that expressed above; a kind of condition, inconsistent with the sovereignty of the federates, and the first stage towards unconditional submission. The discontent among the federati, and their claims to be admitted to the privileges of Roman citizens, led to the Social War. The Julia lex (B.C. 80) gave the civitas to the Socii and Latii; and a lex of the following year contained, among other provisions, one for the admission to the Roman civitas of those peregrini who were entered on the lists of the citizens of federate states, and who complied with the provisions of the lex. (Vid. Civitas.) It appears, however, that this lex Julia, and probably also the lex of the following year, contained a provision that the federate state should consent to accept what the other states offered, or, as it was technically expressed, "populus fundus eret." Those who did not become fundi populi did not obtain the civitas. Balbus, the client of Cicero, was a citizen of Gades, a federate town in Spain. Pompey had conferred the Roman civitas on Balbus, by virtue of certain powers given to him by a lex. It was objected that Balbus that he could not have the civitas, unless the state to which he belonged, "fundus factus esset," which was a complete misapprehension, for the term fundus, in this sense, applied to a whole state or community, whether federate or other free state, which accepted what was offered, and not to an individual of such state or community who might accept the Roman civitas without asking the consent of his fellow-citizens at home, or without all of them retaining the same privilege that was offered to him himself. The people of a state which had accepted the Roman civitas (fundus factus esset) were called, in reference to their condition after the acceptance, "fundani." This word only occurs in the Latin inscription (the lex Romana) of the tablet of Hercules, I. 85, and proves that the inscription is posterior to the lex Julia de Civitate. It has, indeed, been supposed that the word may refer to the acceptance by the state of Hercules of this lex which is on the tablet; but there is no doubt that it really related to the prior lex which gave the civitas. (Vid. Fendes.)

It must be observed that the acceptance of the two leges above mentioned could only refer to the federate states and the few old Latin states. The Latine colonies also received the civitas by the Julia lex; but, as they were under the sovereignty of Rome, their consent to the provisions of this lex was not required.

Before the passing of the Julia lex, it was not unusual for the Socii and Latini to adopt Roman leges into their own system, as examples of which Cicero mentions the lex Furia de Testamentis and the lex Volumnia de Mulierum Hereditatibus; and he adds that there were other instances. In such cases, the state which adopted a Roman law was said to "em adoptare denum fundus hanc." It hardly needs remark, that the state which adopted a Roman lex did not thereby obtain for its citizens any privileges with respect to the Roman state: the federate state merely adopted the provisions of the Roman lex as being applicable to its own circumstances.

An apparent difficulty is caused by the undoubted fact that provisions of the lex Julia required that the states which wished to avail themselves of its benefits should consent to accept them. As the federate states commenced the war in order to obtain the civitas, it may be asked, why was it given to them on the condition of becoming "fundus!" In addition to the reasons for such condition, which are suggested by Saviugy, it may be observed that the lex Julia was only expressed in terms what would necessarily have been implied if it had not been expressed: a federate state must of necessity declare by a public act its consent to accept such a proposal as was contained in the lex Julia. It appears from the cases of Hercules and Naples, that the citizens of a federate state were not in all cases unanimous in changing their former alliance with Rome into an incorporation with the Roman state. (Vid. Civitas.)

There were federate cities beyond the limits of Italy, as shown by the example of Gades, Saguntum and Massalia are enumerated among such cities.

*FECUNUM GRECEUM, Fenugreek. (Vid. Telit and Bouberas.)

FECUNUS. (Vid. Interest of Money.)

FOLLIS, dim. FOLLICULUS, an inflated ball of leather, perhaps originally the skin of a quadruped filled with air: Martial calls it "light as a feather." Boys and old men, among the Romans, threw it from one to another with their arms and hands, as a gentle exercise of the body, unattended with dangers. The Emperor Augustus became fond of the exercise as he grew old.

Boxers practised upon an inflated skin hung up for the purpose (foliis pygiiulaturs). 

The term foli is also applied to a leather purse or bag; and the diminutive foliiculus to the swollen capsule of a plant, the husk of a seed, or anything of similar appearance. 

Two inflated skins (dieum yiaza, €wmapa, quiqapaprec), constituting a pair of bellows, and having valves adjusted to the natural aperture at one part for admitting the air, and a pipe inserted into another part for its emission, were an essential piece of furniture in every forge and foundry. Among the Egyptians, the two bellows were blown by a man who stood with his right and left foot pressing upon each alternately, so as to fill it with air again as soon as the weight of the bellows was taken away from it. According to the nature and extent of the work to be done, the bellows were made of the hides of oxen (taurinis foliibus), or of goats (hairesinis 5) and other smaller animals. The nozzle of the bellows was called ékerofianon ou aérastómov.11 

In bellows made after the fashion of those exhibited in the lample here introduced from Bartoli, 12 we may imagine the skin to have been placed between the two boxes, so as to produce a machine like that which we now commonly employ.

FORCEPS (papigrapa), Tongs or Pincers; an instrument invented, as the etymology indicates, for taking hold of what is hot (forumw), used by smiths, and therefore attributed to Vulcan and the Cyclopes. (Vid. Icovs, Malpica.) 

A forceps of an appropriate form (δοκουγrapa) was employed for drawing teeth, 14 and another to extract from the wounded the heads of arrows and other missiles (ápodothepa).15 Pincers were used from the earliest times by tyrants as an instrument of torture. 16 

The term karpw, which properly meant a crab, was applied metaphorically to pincers, on account of the similarity of this instrument to the claw of the crab.18

FORES. (Vid. House.)

FORFEX, dim. FORFICULA (ψαλις, dim. ψαλιδων), Shears,19 used, 1. In shearing sheep, as represented in the annexed woodcut, which is taken from a caricature in the Stocchi collection of antique gems at Berlin; 2. In cutting hair; 23 In clipping hedges, myrtles, and other shrubs (ψαλις μυρωνίκεως); 4. In clearing bad grapes from the bunch. 19 

In military manoeuvres the forfex was a tenaille, i.e., a body of troops arranged in the form of an acute angle, so as to receive and overcome the opposite body, called a Cunulus. 19 

In architecture the term ψαλις denoted a construction which was probably the origin of the arch, consisting of two stones leaning against each other so as to form an acute angle overhead, as is seen in the entrance to the Pyramid of Cheops and in the ruins of Mycenae, and gradually brought nearer to the forms which we now employ. (See woodcut. P. 85.)

The same terms were also metaphorically applied to the mandibles of insects, which are like minute shears, and to the claws of crustacea (ψαλιδοισι). 

FORI. (Vid. Navis.)

FORMA, dim. FORMULA, second dim. FORMELLA (riwce), a Pattern, a Mould; any contrivance adapted to convey its own shape to some plastic or flexible material, including moulds for making, 1 pottery (vid. Formulae). 2 Pastry (formella). Some of these, made of bronze, have been found at Pompeii. 3 Cheese. 4 Hence the cheeses themselves are called formula. 5 The finer moulds for this purpose were made of boxwood (formæ baccæ). (Vid. Brixus.) 4 Bricks. 8 Coins. These moulds were made of a kind of stone, which was indestructible by heat. 11 The mode of pouring into them the melted metal for casting the coins will be best understood from the annexed woodcut, which represents one side of a mould, engraved by Servius d'Agincourt. 12 Various moulds are engraved by Ficoroni. 13 6. Wells of the kind now called pisi.
which were built in Africa, in Spain, and about Taruntum. 7. The shoemaker's last was also called forma and tentespellium, in Greek καλυκτος, whence Galen says that physicians who want discrimination in the treatment of their patients are like shoemakers who make shoes from the same last (ἐν καλυκτoις) for all their customers.

The spouts and channels of aqueducts are called forma, perhaps from their resemblance to some of the moulds included in the above enumeration. FORMULA. (Vid. Actio.)

Fornaclia was a festival in honour of Fornax, the goddess of furnaces, in order that the corn might be properly baked. 7. This ancient festival is said to have been instituted by Numa. The time for its celebration was proclaimed every year by the Curio Maximus, who announced in tablets, which were placed in the Forum, the different part each of which each curia had to take in the celebration of the festival. Those persons who did not know to what curia they belonged, performed the sacred rites on the Quirinal, called from this circumstance the Stullorum fereas, which fell on the last day of the Fornacalia. 9

The Fornacalia continued to be celebrated in the time of Lactantius. 19

Fornax. dim. Fornac'cula (καμιονος, καμιονον), a Klin, a Furnace. The construction of the kilns used for baking earthenware (vid. Ficetlia) may be seen in the annexed woodcut, which represents a part of a Roman pottery discovered at Castor, in Northamptonshire. The dome-shaped roof has been destroyed, but the flat circular floor on which the earthenware was set to be baked is preserved entire. The middle of this floor is supported by a thick column of brickwork, which is encircled by the oven (furnas, Kalbavco). The entrance to the oven (praefurnum) is seen in front. The lower part of a smelting-furnace, shaped like an inverted bell, and sunk into the earth, with an opening and a channel at the bottom for the discharge of the melted metal, has been discovered near Arles. In Spain these furnaces were raised to a great height, in order that the noxious fumes might be carried off. They were also provided with long flues (longinqua fornas ecclesiost), and with chambers (camera) for the purpose of collecting more plentifully the oxides and other matters by sublimation. Homei describes a blast-furnace with twenty crucibles (τα ωρα). Melting-pots or crucibles have been found at Castor, and at different places in Egypt, in iron and material very like those which we now employ.

Furnaces of an appropriate construction were erected for casting large statues of bronze, and is making lampblack. (Vid. Atraminentum.) Thimeklín (fornax calcaria) is described by Cato. 9 The mode of heating baths, vid. p. 151

The early Romans recognised, under the name of Fornax or Dea Fornacalis, a divinity who presided over ovens and furnaces. (Vid. Fornacalia.) Fornix, in its primary sense, is synonymous with Arcus, but more commonly implies an arched vault, consisting both roof and ceiling to the apartment which it encloses. It is composed of a semicylindrical and oblong arch like the Camera, but differs from it in construction, consisting entirely of stone or brick, whereas the other was formed upon a framework of wood, like the skeleton of a ship (vid. Camara); both of which methods appear to have been sometimes united, as in the roof of the Tullianum, described by Sallust, 22 where the ribs of the Camera were strengthened by alternate courses of stone arches. "Tullianum ... munium un vitiae partietes, atque insuper Camera, lapides fornicatus vincina." If the stone chamber now seen at Rome under the Mamertime prisons was really the Tullianum, as commonly supposed, it is not consistent in the manner described, being neither camera nor fornicatum, but consisting of a circular dome, formed by projecting one course of stone beyond the course below it, like the treasury of Atreus at Mycenae, described at p. 85. (Vid. Arcus.)

From the roof alone, the same word came to signify the chamber itself, in which sense it designates a long narrow vault, covered by an arch of brick or masonry (iectum fornicatum), similar to those which occupy the ground-floors of the modern Roman palaces. Three such cells are represented in the annexed woodcut, from the remains of a villa at Mola di Gaieta, which passes for the Forinica of Cicero. They are covered internally with a coating of stucco, tastefully ornamented, and painted in stripes of azure, pink, and yellow.

Being small and dark, and situated upon the level of the street, these vaults were occupied by prostitutes (vid. Circus, p. 255); whence comes the meaning of the word fornicatio in the ecclesiastical writings, and its English derivation.

Fornix is also a saltpit in the walls; 14 a triumphal arch; 15 and a street in Rome, which led to the Campus Martius, was called Via Fornicana, probably on account of the triumphal arches built across it.

FORTY, THE.

FORUM. The Roman Forum, which is an open place (area) before any building, especially before a securulum, and seems, therefore, etymologically to be connected with the adverb fora. The characteristic features of a Roman forum were, that it was a levelled space of ground of an oblong form, and surrounded by buildings, houses, temples, basilicae, or public edifices and the place where justice was administered, and where goods were exhibited for sale. We have, accordingly, to distinguish between two kinds of fora, of which some were exclusively devoted to commercial purposes, and were real market-places, while others were places of meeting for the popular assembly and for the courts of justice. Mercantile business, however, was not altogether excluded from the latter, and it was especially the bankers and usurers who kept their shops in the buildings and porticoes by which they were surrounded. The latter kinds of fora were sometimes called fora judicia, to distinguish them from the mere market-places.

Among the fora judicia, the most important was the Foro Romano, which is simply called Forum as long as it was the only one of its kind which existed at Rome. At a late period of the Republic, and during the Empire, when other fora judicia were built, the Forum Romanum was distinguished from them by the epithet vetus or magnum. It was situated between the Palatine and the Capitoline Hills, which were the chief thoroughfares of the city, and it was called the "Septem jugera foresis." It was originally a swamp or marsh, but was said to have been filled up by Romulus and Tatius, and to have been set apart as a place for the administration of justice, for holding the assemblies of the people, and for the transaction of other kinds of public business. In this widest sense the Forum included the comitium, or the place of assembly for the curia, which was separated from the Forum in its narrower sense, or the place of assembly for the comitia tributa, by the Rostra. These ancient rostra were an elevated space of ground or a stage (suggestum), from which the orators addressed the people, and which derived its name from the circumstance that, after the conquest of Troy, it was yielded to the Hellespont and with the beaks (rostra) of the ships of the Antians. In subsequent times, when the curia had lost their importance, the accurate distinction between their comitia and forum likewise ceased, and the comitia tributa were sometimes held in the Circus Flaminius; but towards the end of the Republic the Forum seems to have been chiefly used for judicial purposes. Cicero distinguishes between a speaker in the popular assembly (orator) and the mere pleader: "Ego istos non modo oratoria nomine, sed nec foro guidem dignos putarm." The orators, when addressing the people from the rostra, and even the tribunes of the people in the early times of the Republic, used to front the comitia as the Rostra were called. According to Varro and Cicero, C. Licinius, introduced the custom of facing the Forum, thereby acknowledging the sovereignty of the people. In 308 B.C., the Romans adorned the Forum, or, rather, the bankers' shops (argentariae) around, with gilt shields which they had taken from the Samnites; and this custom of adorning the Forum with these shields and plaques of gilt bronze was generally always observed during the time of the Ludi Romani, when the iilides rode in their chariots (trensa) in solemn procession around the Forum. After the victory of C. Duillius over the Carthaginians, the Forum was adorned with the celebrated column restoration. (Vid. COLUMN.) In the upper part of the Forum, at H. Flavian, the "Septem jugera foresis," the Tables were exhibited for public inspection, and it was probably in the same part that, in 304 B.C., Cn. Flavius exhibited the Fasti, written on white tables (in albo), that every citizen might be able to know the days on which the law allowed the administration of justice. Besides the ordinary business which was carried on at the Forum, the Festivals were held there, and that prisoners of war and faithless colonists or legionaries were put to death there. A second forum judicarium was built by J. Caesar, and was called Forum Cesaris or Julii. The leveling of the ground alone cost him above a million of sesterces, and he adorned it, besides, with a magnificent temple of Jupiter, Causa, and Fortuna, which was dedicated by the Senate, with the decree (decationes judicium) that should take place in it. After the Forum Augusti had severely suffered by fire, it was restored by Hadrianus.

The three fora which have been mentioned seem to have been the only ones that were destined for the transaction of public business. All the others, which were subsequently built by the emperors, such as the Forum Traiani or Ulpianum, the Forum Sallustii, Forum Duodeciani, Forum Aureliani, etc., were probably more intended as embellishments of the city than to supply any actual want.

Different from these fora were the numerous markets at Rome, which were neither as large nor as beautiful as the former. They are always distinguished by the name which is given by the expression of particular kinds of things which were sold in them, as, e.g., forum boarium, according to Festus, the cattle-market; according to others, it derived the name boarium from the statue of an ox which stood there. Forum olitorium, the vegetable market; forum piscatorium, the fish market; forum vinorum, the wine market; forum coffinariorum, the shopkeepers of liquors; forum vestitorum, the market of clothing; forum loricariorum, the market of armors; forum servorum, the market of domestic servants; forum venatorum, the market of wild beasts; forum effigies, the market of statues, etc., etc.
carum, ash-market; forum cupedinis, market for dainties; forum equinum, a market in which cooked and prepared dishes were to be had, &c.

(Respecting the fora in the provinces, see the articles Colonia and Conventus; compare Sigonius, De Antiq. jur. Ital., ii. 18, and Walter, Gesch. des Röm. Reiches, p. 261.)

**FRAGUM**, the Strawberry, *Fragaria Vesca, L.* It is worthy of remark, that the Strawberry was unknown to the ancient Greeks. Not so, however, with the Romans. It is described by Pliny, and had been previously mentioned by Virgil and Ovid. The Strawberry appears to have come originally from the Alps and the forests of Gaul. Myrtillus, a physician of the thirteenth century, was the first Greek writer that makes mention of it. *The name which he gives it, ἀργυρόκλειτη, is still applied to it by the modern Greeks, dropping, however, the fourth letter (φοινικήτη).* Pluнийdes, in his Greek version of Ovid, translates *fragum* by *κύκαρον*. This, however, is an error, since *κύκαρον* is the fruit of the wild Strawberry, which is a very different thing from that which we are here considering. (Vid. *Arales.*)

**FRAMAE.** (Vid. *Hasta.*)

**FRATRES ARVALES.** (Vid. *Arvaes Fratres.*)

**FRAXINUS**, the Ash, *Fraxinus Ornus, L.*, called by the Greeks *μελία*. The *μελία* of the Greeks was the *Fraxinus excisior.*

"There are about forty species of the Ash: the common Ash (*Fraxinus excisior*) is one of the most useful of trees. It has been known from the remotest period of history, and is very generally diffused. The Ash is called, by way of eminence, "the Husbandman's tree," nothing being equal to it for agricultural implements, and for all sorts of poles, ladders, long handles, and other purposes which require strength and elasticity combined with comparative lightness. Hesiod derives his brazen man from it; and the Edda, or sacred book of the Northmen, gives the same origin to all the human race. From one species of Ash, which grows wild in the mountains of Calabria, and does not attain to a great size, manna is gathered. It is procured by cutting the trunk towards the end of July, and collecting the juice which exudes from the wounds thus made.*

**FRENUM (ξελανδρώ), a Bridle.** That Bellerophon might be enabled to perform the exploits required of him by the King of Lyctia, he was presented by Minerva with a bridle as the means of subduing the winged horse Pegusus, who submitted to receive it while he was slaking his thirst at the fountain Peirene. See the annexed woodcut, from a bas-relief which represents this event, and compare Pindar, *Olymp.*, xiii. 85-115. Such was the Grecian account of the invention of the bridle, and in refer- ence to it Minerva was worshipped at Corinth un- der the titles *Ipsia* and *Xalwvra.* The several parts of the bridle, more especially the bit, are engraved from ancient authorities in the treatises of *De Frenis*, *Ginzow* (*Uebcr Wagen*), and *Brady Clark* (*Chalcopy tology, Lond.*, 1865).

The bit (orces, δούμα, *στόιλα*) was commonly made of several pieces, and flexible, so as not to hurt the horse's mouth; for the Greeks considered a kind and gentle treatment the best discipline, and, though, when the horse was intractable, they taught it submission by the use of a bit which was armed with protruberances resembling wolves' teeth, and therefore called *krapa.* The bit was held in by the *pardeia,* or lower member, which passed under the chin, and called *μάσκαλον,* for which a chain (τάλαι) was often substituted; a rope or thong, distinct from the reins, was sometimes fastened to the chain or strap by means of a ring, and was used to lead the horse (ποραγωγήτη). The upper part of the bridle, by which it was fixed round the ears, is called by Xenophon *κόρυφα.*

Not only was the bridle dispensed with in the management of creatures invented by the imagination of the poet, but of some which were actually trained by man to go without it. Thus the Timnian *Δεσπότα* guided his two horses by the whip, and the Gallic *εἰκοσαριά*, or, on the banks of the Rhone, directed and animated his mules entirely by the voice. (Vid. woodcuts, p. 217, 269, 323, 376, 408.)

**FRIGIDARIUM.** (Vid. *Batris*, p. 148.)

**FRITILLUS (φιόνος), a Dicebox, of a cylindroid form; and therefore called also *turricula,* and formed with parallel indentations *γραδας* on the inside, which excited the rolling noise when the dice were shaken in it.*

When you game, you change your name general among the Romans, so that even boys engaged in them, they had frictili small in proportion to their age.

**FRONTALE.** (Vid. *Amykx.*)

**FRUCTUS.** (Vid. *Ususfructus.*)

**FRUMENTARII** were officers under the Roman Empire, who acted as spies in the provinces, and reported to the emperors anything which they considered of importance.18 They appear to have been called *Frumentarii* because it was their duty to collect information in the same way as it was the duty of other officers, called by the same name, to collect corn. They were accustomed to accuse persons falsely, and their office was at length abolished by Diocletian. They were succeeded in later times by the agents *ducatu.*19 We frequently find, in inscriptions, mention made of *Frumentarii* belonging to:

---

---

The ancients were not acquainted with soap, but they used in its stead different kinds of alkali, by which the dirt was more easily separated from the clothes. Of these, by far the most common was the urine of men and animals, which was mixed with the water in which the clothes were washed. To procure a sufficient supply of it, the fullones were accustomed to place at the corners of the streets vessels, which they carried away after they had been filled by the passengers. We are told by Suetonius* that Vespassian imposed a urinae neglecta, which is supposed to be the ancestor of the fullonica.

*FUGA (φοίκη), a marine shrub (according to some, the same with red alkanet), from which the ancients made a dye or paint. Various species of Fagia, observes Adam*., are described by Theophrastus and Dioscorides, but in such general terms that it appears to them a vain task to attempt to determine them. It is farther deserving of remark, that Galen, Aetius, and Orisius, describe a sort of cera under this name. It would appear that it was used as a paint, and in this sense it occurs in Lucian’s fine epigram in the Anthology.

Pliny gives an account, and was also mixed with the water by the scourers. Fuller’s earth (creta fuliginosa,* of which there were many kinds, was employed for the same purpose. We do not know the exact nature of this earth, but it appears to have acted in the same way as our fuller’s earth, namely, partly in scouring and partly in absorbing the greasy dirt. Pliny says that the clothes should be washed with some Fuller’s earth. After the clothes had been washed, they were hung out to dry, and were allowed to be placed in the street before the doors of the fullonica. When dry, the wool was brushed and carded to raise the nap, sometimes with the skin of a hedgehog, and sometimes with some plants of the thistle kind. The clothes were then hanging on a vessel of basket work (vinumica caena), under which sulphur was placed in order to whiten the cloth; for the ancient fullers appear to have known that many colours were destroyed by the volatile steam of sulphur.*

A fine white earth, called Cimolian by Pliny, was often rubbed into the cloth to increase its whiteness.* The preceding account is well illustrated by the following woodcut.

On the left we see a fullo brushing or carding a white tunic, suspended over a rope, with a card or brush, which bears considerable resemblance to a modern horsebrush. On the right, another man carries a frame of wicker-work, which is, without doubt, intended for the purpose described above; he has a card in his hand, perhaps intended for holding the sulphur. On his head he wears a kind of garland, which is supposed to be an olive garland, and above him an owl is represented sitting. It is thought that the olive garland and the owl indicate that the establishment was under the patronage of Minerva, the tutelary goddess of the loom. Sir W. Gell imagines that the owl is probably the picture of a bird which really existed in the family. On the left a well-dressed female is sitting, examining a piece of work which a younger girl brings to her. A calantica (vid. Calantica) upon her head, a necklace, and bracelets, denote a person of higher rank than one of the ordinary work-people of the establishment.

In the following woodcut we see a young man in a green tunic giving a piece of cloth, which appears to be finished, to a young woman, who wears a green under-tunic, and over it a yellow tunic with red stripes. On the right is another female in a white tunic, who appears to be engaged in cleaning one of the cards or brushes. Among these paintings there was a press, worked by two upright screws, in which the cloth was placed to be smoothed. A drawing of this press is given in the article COCHLEA, p. 272.

The establishment or workshop of the fullers was called Fullonica, 1 Fullonicum, 2 or Fullonium. 3 Of such establishments there were great numbers in Rome, for the Romans do not appear to have washed at home even their linen clothes. 4 The trade of the fullers was considered so important, that the censors C. Flaminius and L. Aemilius, B.C. 220, prescribed the mode in which the dresses were to be washed. 5 Like the other principal trades in Rome, the Fullones formed a collegium. 6 To large farms a fullonica was sometimes attached, in which the work was performed by the slaves who belonged to the familia rustica. 7

The fulo was answerable for the property while it was in his possession; and if he returned by mistake a different garment from the one he had received, he was liable to an action ex locato; to which action he was also subject if the garment was injured. 8 Woollen garments which had been once washed were considered to be less valuable than they were previously; 9 hence Martial 10 speaks of a toga lata terque quaeterque as a poor present.

The Greeks were also accustomed to send their garments to fullers to be washed, and a new sort of fuller, who appear to have adopted a similar method to that which has been described above. 11 The word πλάτων denoted the washing of linen, and γναφέφες or γναφύφες the washing of woollen clothes. 12

FULLONICA. (Vid. Fullo.)

FUNA LÉ (σκολιά), a Link, used in the same manner as a torch (vid. Pux), but made of papyrus and other fibrous plants, twisted like a rope, and smeared with pitch and wax. 13 It was, indeed, as Antipater describes it, "a light coated with wax" (λαμπρός κρυστάνnu). For this reason it was also called eresus. Funalia are sculptured upon a monument of considerable antiquity preserved at Padua. 14 At the Saturnalia they were presented by clients to their superiors, and were lighted in honour of Saturn. 15

FUNA LÍS EQUUS. (Vid. Carroso, p. 332.)

FUNAMBULUS ( καλοβάλτης, στροφαλάγγας), a Ropewalker. The art of dancing on the tight-rope was carried to as great perfection among the Romans as it is with us. 16 If we may judge from a series of paintings discovered in the excavations from which the figures in the annexed woodcut are selected, the performers, who were principally Greeks, placed themselves in an endless variety of graceful and sportive attitudes, and represented the characters of bacchantes, satyrs, and other imaginary beings. Three of the persons here exhibited hold the tyrannus, which may have served for a balancing-pole. Two are performing on the double pipe, and one on the lyre; two others are pouring wine into vessels of different forms. They all have their heads enveloped in skins or caps, probably intended as a protection in case of falling. The Emperor Antinous, in consequence of the fall of a boy, caused feather beds (cuscitas) to be laid under the rope, to obviate the danger of such accidents. 17 One of the most difficult exploits was running down the rope at the conclusion of the performance. It was a strange attempt of Germanicus, and of the Emperor Galba to exhibit elephants walking on the rope.

FUNDA (φονδος), a Sling. The light troops of the Greek and Roman armies (p. 94) consisted in great part of slingers (fundatores, φονδοτρύχοι). The sling was also very much employed by the Jews, Phoenicians, and Egyptians, by the Carduchi and the Persians, 4 by the Spaniards, and by many other nations. The manner in which it was wielded may be seen in the annexed figure 18 of a soldier

with a provision of stones in the sinus of his pallium, and with his arm extended in order to whidh the sling about his head. 19 Besides stones, plum-
huits, called glanders (μολόθροδες), of a form between acorns and almonds, were cast in moulds to be thrown with sling. They have been found on the plain of Marathon, and in other parts of Greece, and are remarkable for the inscriptions and devices which they exhibit, such as thunderbolts, the names of persons, and the word ΑΕΩΑΙ, meaning "Take this."

The celebrity of the natives of the Balearic Isles as slingers is said to have arisen from the circumstance that, when they were children, their mothers obliged them to obtain their food by striking it with a sling. Among the Greeks, the Achaeans and Achaemenians attained to the greatest expertness in the use of this weapon. The sling, as depicted in the Egyptian tombs, had at one end a loop for making it fast to the hand. It was made of wool, hair, hemp, or leather (στιχερία, ἑβανη). Its advantages were, that it might be carried any distance without the slightest inconvenience; that soldiers accustomed to the use of it might employ it when their other weapons were unavailable (πολύ ἀπαθέα); and that it was very effective in checking an enemy, especially in stony places, in mountain passes, and upon eminences. Hunters also used the sling to kill their game. While the sling was a very efficacious and important instrument of ancient warfare, stones thrown with the hand alone were also much in use both among the Romans and with other nations (εὐρωπολοῖ). The Libyans carried no other arms than three spears and a bag full of stones.

The casting-net was sometimes called fundus. (Vid. Rete.)

**Fundus.** The primary significations of this word appear to be the bottom or foundation of a thing; and the bottom or foundation of something.
ally white. These duties were not performed by hired persons, like the πολικαρχοι among the Romans, but the women of the family, upon whom the work of the corpse always devolved. 2

The corpse was then laid out (πρόθεσις, προθεσθα) on a bed (κάτω), which appears to have been of the ordinary kind, with a pillow (προσκεδάλων) for supporting the head and back. 3

It is said that the bed on which the corpse was laid out was originally placed outside the house; 4 but at Athens we know it was placed inside, by one of Solon's laws. 5

The object of the formal πρόθεσις was, that it might be seen that the deceased had died naturally, and that no violence had been done to him. 6

Plato 7 assigns another reason, namely, that there might be no doubt that the person was dead, and says that the body ought only to be kept in the house so long as may be necessary to ascertain that fact. By the side of the bed there were placed painted earthen vessels called ημεσυνν, 8 which were also buried with the corpse; examples of which may be seen in the drawings of the coffins given by Bottiger 9 and Stackelberg. 10

Great numbers of these painted vases have been found in modern times, and they have been of great use in explaining many matters connected with antiquity. A honey-cake, called μελιττώνα, which appears to have been intended for Cerberus, was also placed by the side of the corpse. 11

Before the door a vessel of water was placed, called δωκάυξ, δρόκαυξ or δραυκτ, in order that persons who had been in the house might purify themselves by sprinkling water on their persons. 12

The relatives stood around the bed, the women uttering great lamentations, rending their garments, and tearing their hair. 13

Solon attempted to put a stop to this, 14 but his regulations on the subject were too late to be observed or preserved. It was formerly the practice to sacrifice victims before carrying out the dead; but this custom was not observed in the time of Plato. 15

No females under 60 years of age, except the nearest relatives (εὐγείρας), were allowed to be present while the corpse was in the house. 16

On the day after the πρόθεσις or the third day after death, the corpse was carried out (ἐξερήμοσθα, ολοΚοιμυσθα) for burial early in the morning and before sunrise, by a law of Solon, which law appears to have been revived by Demetrius Phalerus. 17

A burial soon after death was supposed to be pleasing to the dead. Thus we find the shade of Patroclus saying to Achilles, 18

Πάθε με ὑπὶ τιχώσα, τόπες ἄθανα περίσσω.

In some places it appears to have been usual to bury the dead on the day following death. 19

The men walked before the corpse, and the women behind. 20

The funeral procession was preceded or followed by hired mourners (ธรωνικόλ), who appear to have been usually Carian women, though Plato speaks of men engaged in this office. They played mournful music. 21

The body was either buried or burned. Lucian 22 says that the Greeks burn the Persians bury their dead; but modern writers are greatly divided

in opinion as to which was the usual practice. Wachsmuth 23 says that in historical times the dead were usually burned; but this statement is not strictly correct. Thus we find that Socrates speaks of his body being either burned or buried; 24 the body of Timoleon was burned, 25 and so was that of Philopoemen. 26

The word ψάθτευν was used in connection with either mode; it is applied to the collection of the ashes after burning, and accordingly we find the words καλείν and δάκτυλον used together. 27

The proper expression for interment in the earth is καταθήκη, whence we find Socrates speaking of τοῦ σώματος καταθήκην. In Homer the bodies of the dead are burned, 28 but interment was also used in very ancient times. 29

Cicer 30 says that the dead were buried at Athens in the time of Cecrops; and we also read of the bones of Orastes being found in a coffin at Tegaea. 31

The dead were commonly buried among the Spartans 32 and the Iberians, 33 and the prevalence of this practice is proved by the great number of skeletons found in coffins in modern times, which have evidently not been exposed to the action of fire. Both burning and burying appear to have been always used to a greater or less extent at different periods, till the spread of Christianity at length put an end to the former practice.

The dead were usually burned on piles of wood, as was the custom. The body was placed on the top; and in the heroic times it was customary to burn with the corpse animals, and even captives or slaves. Thus, at the funeral of Patroclus, Achille killed many sheep, oxen, horses, and dogs, and also twelve captive Trojans, whose bodies he burned with those of his friend. 34 Oils and perfumes were also thrown into the flames. When the pyre was made up, the corpse was covered with a mantle, and the ashes were then put on the urn. The body was washed with wine, and the relatives and friends collected the bones. 35

The bones were then washed with wine and oil, and placed in urns, which were sometimes made of gold. 36

The corpses which were not burned were buried in coffins, which were called by various names, as σαρκα, σάκος, λειψανοι, λειψάνους, δομή, though some of these names were also applied to the urns in which the bones were collected. They were made of various materials, but were usually of baked clay or earthenware. Their forms are various, as may be seen by a reference to Stackelberg, Die Gräber der Hellenen, pl. 7, 8. The following woodcut contains two of the most ancient kind; the figure in the middle is the section of one.

The dead were usually buried outside the city, as it was thought that their presence in the city brought pollution to the living. At Athens the dead were formerly buried in their own houses, 37 but in historical times none were allowed to be buried within the city. 38 Lycurgus, in order to remove all superstition respecting the presence of the dead, allowed of burial in Sparta. 39 and at Megara, also, the dead were buried within the town. 40 In Athens, however, the tombs were frequently buried in them, and we therefore read of tombs in the fields. 41

Tombs, however, were most numerous.

FUNUS.

frequently built by the side of roads and near the gates of the city. Thus the tomb of Thucydides was near the Melitian gate; but the most common place of burial was outside of the Itonian gate, near the road leading to the Peireus, which gate was for that reason called the burial-gate ("θαλαι τάφων"). Those who had fallen in battle were buried at the public expense in the outer Ceramicus, on the road leading to the Academia. The tombs were regarded as private property, and belonged exclusively to the families whose relatives had been buried in them.

Tombs were called θίναια, τάφοι, μνήματα, μνημεῖα, σήματα. Many of these were only mounds of earth or stones (χώματα, σαλάβων, τάφοι). Others were built of stone, and frequently ornamented with great taste. Some of the most remarkable Greek tombs are those which have been recently discovered in Lydia by Mr. Fellows.* In the neighbourhood of Antipheus the tombs are very numerous. They all have Greek inscriptions, which are generally much destroyed by the damp sea-air. The following are examples taken from Mr. Fellows’s work; it contains one of these tombs, and will give an idea of the general appearance of the whole.

At Xanthus the tombs are still more numerous. They are cut into, or are formed by cutting away, the rock, leaving the tombs standing like works of sculpture. The same is the case at Telmesus, where they are cut out of the rock in the form of temples. They are generally approached by steps, and the columns of the portico stand out about six feet from the entrance to the cella; the interiors vary but little; they are usually about six feet in height, and nine feet by twelve in size. One side is occupied by the door, and the other sides contain benches on which the coffins or urns have been placed.

Some Greek tombs were built under ground, and called hypogeα (ὑπόγεια) or ἱπτύες). They correspond to the Roman conditoria. (Vid. Conditorium.)

At Athens the dead appear to have been usually buried in the earth, and originally the place of their interment was not marked by any monument. Afterward, however, so much expense was incurred in the erection of monuments to the deceased, that it was provided by one of Solon’s laws that no one should erect a monument which could not be completed by ten men in the course of three days. This law, however, does not seem to have been strictly observed. We read of one monument which cost twenty-five minas, and of another which cost more than two talents. Demetrius Philerus also attempted to put a step to this expense by forbidding the erection of the funeral monument more than three cubits in height.

The monuments erected over the graves of persons were usually of four kinds: 1. στήλαι, pillars or upright stone tablets; 2. κόλονα, columns; 3. ναόα or θρόα, small buildings in the form of temples; and, 4. τράπεζαι, flat square stones, called by Cicero* mensae. The term στήλα is sometimes applied to all kinds of funeral monuments, but properly designates upright stone tablets, which were usually terminated with an oval heading called κτιβύαα. These κτιβύεαα were frequently ornamented with a kind of arabesque work, as is the following example taken from Stackelberg. The shape of the κτιβύαα, however, some-

times differed: among the Sicelyans it was in the shape of the ἀρχία or fastigium (vid. Fastigium), which is placed over the extremity of a temple.

The κόλονα or columns were of various forms. The three in the following woodcut are taken from Stackelberg and Millin.*

The following example of an ἱπτύεα, which is also taken from Stackelberg, will give a general idea of monuments of this kind. Another ἱπτύεα is given in the course of this article.

The inscriptions upon these funeral monuments usually contain the name of the deceased person, and that of the demus to which he belonged, as well as frequently, some account of his life. A work on these monuments, entitled Περὶ Μνημείων, was written by Diodorus Periegetes. Orations in praise of the dead were sometimes pronounced; but Solon ordained that such orations should be confined to persons who were honoured with a public funeral. In the heroic ages games

457
were celebrated at the funeral of a great man, as in the case of Patroclus; but this practice does not seem to have been usual in the historical times.

All persons who had been engaged in funerals were considered polluted, and could not enter the temples of the gods till they had been purified. Those persons who were reported to have died in foreign countries, and whose funeral rites had been performed in their own cities, were called ἄνερροτομοι and δευτεροτομοι if they were alive. Such persons were considered impure, and could only be delivered from their impurity by being dressed in swelling clothes, and treated like newborn infants.

After the funeral was over the relatives partook of a feast which was called περιδεσμον or περιδέσμον. This feast was always given at the house of the nearest relative of the deceased. Thus the relatives of those who had fallen at the battle of Chaeroneia partook of the περιδέσμον at the house of Demosthenes, as if he were the nearest relative to them all. These feasts are frequently represented on funeral monuments. In one corner a horse's head is usually placed, which was intended to represent death as a journey. The following woodcut, which represents a περιδέσμον or περιδέσσα, is taken from the Marmor Osco, i., tab. 52, No. 135. A similar example of a περιδέσμον is given at the beginning of Pococke's Travels.

On the second day after the funeral a sacrifice to the dead was offered, called τρίτα. Pollux enumerates in order all the sacrifices and ceremonies which followed the funeral: τρίτα, ἐνερα, τριπάλαι,

The νεκρωτα mentioned by Herodotus appear to have consisted of offerings of the same kind, which were presented on the anniversary of the burial day of the deceased. The νεκρωτα were probably offerings on the anniversary of the day of the death; though, according to some writers, the νεκρωτα were the same as the νεκρα. Meals were also presented to the dead, and burned.

Certain criminals, who were put to death by the state, were also deprived of the rites of burial, which was considered as an additional punishment. There were certain places, both at Athens and Sparta, where the dead bodies of such criminals were cast. A person who had committed suicide was not deprived of burial, but the hand with which he had killed himself was cut off and buried by it-

self. The bodies of those persons who had been struck by lightning were regarded as sacred (lepad sepolvi); they were never buried with others, but usually on the spot where they had been struck. (Vid. BIBENTAL.)

We now proceed to give an account of Roman funeral rites. They were conducted, in some respects, in the same manner as those of the Etruscans; but as they differ in many important particulars, a separate account of each is given in this article.

When a Roman was at the point of death, his nearest relative present endeavoured to catch the last breath with his mouth. The ring was taken off the finger of the dying person, and as soon as he was dead, his eyes and mouth were closed; and by these means the corpse was supposed to be at rest. The corpse was then washed, and anointed with oil and perfumes by slaves, called Pollinatores, who belonged to the Libitarini, or undertakers, called by the Greeks vepkópatóni. The Libitarini appear to have been so called because they dwelt near the house of the Libitum, Libitum being the Latin name for funeral requisites for funerals were sold. Hence we find the expressions vilaire Libitum and ovadare Libitum nam used in the sense of escaping death. At this temple an account (ratio, epemheres) was kept of those who died, and a small sum was paid for the registration of their names. A small coin was then placed in the mouth of the corpse, and the body was laid on the funerary in Hades, and the body was laid on a couch in the vestibule of the house, with its feet towards the door, and dressed in the best robe which the deceased had worn when alive. Ordinary citizens were dressed in a white toga, and magistrates in their official robes. If the deceased was an old man, a crown of laurel was placed on his head; and the couch on which he was laid was sometimes covered with leaves and flowers. A branch of cypress was also usually placed at the door of the house, if he was a person of consequence.

Funerals were usually called funerae justa or excepta, and the word justa term was generally applied to the funeral procession (pompa funebris). There were two kinds of funerals, public and private; of which the former was called funus publicum or indictum, because the people were invited to it by a herald; the latter, funus tacitum, translaticum, or plebeium. A person appears to have usually left a will in his testament to pay the expenses of his funeral; but if he did not do so, nor appoint any one to bury him, this duty devolved upon the persons to whom the property was left, and if he died without a will, upon his relatives according to their order of succession to the property.

The expenses of the funeral were in such cases decided by the will, which was read at the funeral, or by the law and status of the rank of the deceased, whence arista was used to signify the funeral expenses. The following description of the mode in which a funeral was conducted only applies strictly to the funerals of the great; the same pomp and ceremony could not, of course, be observed in the case of persons of ordinary circumstances.

All funerals in ancient times were performed at night; but after the poor only were buried by night, because they could not afford to have a funeral procession. The corpse was usually carried out of the house (affectatio) on the eighth day after the death. The funeral procession was regulated by a person called Designator or Dominus Funera, who was attended by全年 dressed in black. It was headed by musicians of various kinds (cornices, sititines), who played mournful songs, and next came mourning women, called Frapea, who were hired to lament and sing the funeral song (lamentum); the paternal (gens) in praise of the deceased. These were sometimes women, or more frequently hearers and bussoms (secur s, histriones), of whom one, called Archimenes, represented the character of the deceased, and imitated his words and actions. Then came the slaves whom the deceased had liber.ated, wearing the cap of liberty (pilenti); the number of whom was occasionally very great, since it was a mark of magnificence to have a numerous retinue of slaves. They were sometimes carried on a common kind of bier or coffin, called Sandapila. The Sandapila was carried by bearers, called Vespae or Vepsoles, because, according to Festus, they carried the corpse in the evening (vespertino tempore). The couches on which the corpses of the rich were carried were usually covered with a rich velvet, and covered with gold and purple. They were sometimes carried on the shoulders of the nearest relatives of the deceased, and sometimes on those of his freedmen. Julius Caesar was carried by the magistrates, and Augustus by the senators.

The relatives of the deceased walked behind the corpse in mourning; his sons with their heads veiled, and his other relatives with their hair dishevelled, contrary to the ordinary practice of both. They often uttered loud lamentations, and the women beat their breasts and tore their cheeks, though this was forbidden by the Twelve Tables (Mulieres genas ne radunt). If the deceased was of illustrious rank, the funeral procession went through the Forum; and the Senate, before the rostra, where a funeral oration (laudatio) in praise of the deceased was delivered. This practice was of great antiquity among the Romans, and is said by some writers to have been first introduced by Poplicola, who pronounced a funeral oration in honour of his colleague Brutus. Women, also, were sometimes admitted to the funeral rites. From the Forum the corpse was carried to the place of burning or burial, which, according to a law of

The Twelve Tables, was obliged to be outside the city.

The Romans in the most ancient times buried their dead, though they also early adopted, to some extent, the custom of burning, which is mentioned in the Twelve Tables. Burning, however, does not appear to have become general till the later times of the Republic; Marius was buried, and Sulla was the first of the Cornelian gens whose body was burned. Under the Empire burning was adopted universally practiced, but was gradually discontinued as Christianity spread, so that it had fallen into disuse in the fourth century. Persons struck by lightning were not burned, but burned on the spot, which was called Bidental, and was considered sacred. (Vid. Bidental.) Children, also, who had not cut their teeth, were not burned, but buried in a place called Saggardaram. Those who were buried were placed in a coffin (arca or loculns), which was frequently made of stone, and sometimes of the Assam stone, which came from Assos in Tras, and which consumed all the body, with the exception of the teeth, in 40 days, whence it was called Sarophagus. This name was in course of time applied to any kind of coffin or urn.

The corpse was burned on a pile of wood (pyra or raga). Some believed this distinction to be due to the difference between pyra and raga: "Pyra est lignorum congeries; raga, cum sum ardere cæperit, dictor." This pile was built in the form of an altar, with four equal sides, whence we find it called ara sepulcrum and funerae ara. The sides of the pile were, according to the Twelve Tables, to be left rough and unpolished, but were frequently covered with dark leaves. Cypress-trees were sometimes placed before the pile. On the top of the pile the corpse was placed, with the couch on which it had been carried, and he nearest relative then set fire to the pile with his own hand. (Vid. Fasc.) When the flames began to rise, various perfumes were thrown into the fire (called by Cicero anumtuata resperio), though this practice was forbidden by the Twelve Tables; cups of oil, ornaments, clothes, dishes of food, and other things, which were supposed to be agreeable to the deceased, were also thrown upon the flames.

The place where a person was burned was called Bustum if he was afterward buried on the same spot (vid. Buroam), and Ustrina or Ustrinum if he was buried at a different place. Persons of property frequently set apart a space, surrounded by a wall, near their sepulchres, for the purpose of burning the dead; but those who could not afford the space appear to have sometimes placed the funeral pyre against the monuments of others, which was frequently forbidden in inscriptions on monuments (Huia monumento ustrinum applicari non licet).

If the deceased was an emperor or an illustrious general, the soldiers marched (decurrebant) three times round the pile, which custom was observed, annually at a monument built by the soldiers in honour of Drusus. Sometimes animals were slaughtered at the pile, and in ancient times captives and slaves, since the Manes were supposed to be

...of blood; but afterward gladiators, called Beafluri, were hired to fight round the burning pile (Vid. Bostum).

When the pile was burned, down, the embers were soaked with wine, and the bones and ashes of the deceased were gathered by the nearest relatives, who sprinkled them with perfumes, and placed them in a vessel called arua, which was made of various materials, according to the circumstances of individuals. Most of the funeral urns in the British Museum are made of marble, alabaster, or baked clay. They are of various shapes but most commonly square or round; and upon them there is usually an inscription or epitaph (ticianus or epitiaphum), beginning with the letters D. M. S. or only D. M., that is, Des Manibus Saebum, followed by the name of the deceased, with the length of his life, &c., and also by the name of the person who had the urn made. The following examples, taken from urns in the British Museum, will give a general knowledge of such inscriptions. The first is to Serullia Zosimenes, who lived 26 years, and is dedicated by her son Prodeckus:

D. M.

SERYLLIA ZOSIMENI

QVÆ VIXIT ANN. XXVI.

BENE MERN. FRUIT

PRODECKU S FILIVS.

The next is an inscription to Liciinian Successus, who lived 13 years, one month, and 19 days, by his most unhappy parents, Comiius and Auriola:

DIS. MAN.

COMIUS. ET

AURIOLA. PARENTES

INFLICISSIMI

LICINIO SVCEESSO.

V. A. XIII. M. I. D. XIX.

The following woodcut is a representation of a sepulchral urn in the British Museum. It is of an upright rectangular form, richly ornamented with foliage, and supported at the sides by pilasters. It is erect to the memory of Costusma Prima. Its height is twenty-one inches, and its width, at the base, fourteen inches six eights. Below the inscription an infant genius is represented driving a car drawn by four horses.
After the bones and ashes of the deceased had been placed in the urn, the persons present were sprinkled with pure water from a branch of olive or laurel for the purpose of purification; after which they were dismissed by the praefect, or some other person, by the solemn word *I libet.* At their departure they were accustomed to bid farewell to the deceased by pronouncing the word *Gabrius.*

The urns were placed in sepulchres, which, as already stated, were outside the city, though in a few cases we read of the dead being buried within the city. Thus Valerius, Publicola, Tubertus, and Fabricius were buried in the city; which right their descendants also possessed, but did not use. The vestal virgins and the emperors were buried in the city, according to Servius, because they were not bound to die, to throw some earth upon the bones. The place where a person in the city was liable to a penalty of 40 aurei, which was to be paid to the fiscus; and the spot where the burial had taken place was consecrated. The practice was also forbidden by Antoninus Pius and Theodosius II.

The verb *sepelire*, like the Greek *σταφυλεύω*, was applied to every mode of disposing of the dead, and *sepulchrum* signified any kind of tomb in which the body or bones of a man were placed (*Sepulcrum est, ubi corpus esseae hominis condita sunt*). The term *cumare* was originally used for burial in the earth, but was afterward applied, like *sepelire*, to any mode of disposing of the dead; since it appears to have been the custom, after the body was burned, to throw some earth upon the bones.

The places for burial were either public or private. The public places of burial were of two kinds; one for illustrious citizens, who were buried at the public expense, and the other for poor citizens, who could not afford to purchase ground for the purpose. The former was in the Campus Martius, which was formerly ornamented with the tombs and sepulchres of illustrious dead (*vid. Campus Martius*), and in the Campus Esquiline. The latter was also in the Campus Esquiline, and consisted of small pits or caverns, called *puticula* or *puticula*. But as this place rendered the neighborhood unhealthy, it was given to Macenas, who converted it into gardens, and made it a charming park. The first public place for burial was usually by the sides of the roads leading to Rome; and on some of these roads, such as the Via Appia, the tombs formed an almost uninterrupted street for many miles from the gates of the city. They were frequently built by individuals during their lifetime; thus Augustus, in his sixth consulship, built a mausoleum for Hadrian, and others between the Via Flaminia and the Tiber, and planted round it woods and walks for public use.

The heirs were often ordered by the will of the deceased to build a tomb for him; and they sometimes did it at their own expense (*de suo*), which is not unfrequently recorded in the inscription on funerary monuments, as in the following example taken from an urn in the British Museum:

```
Dias Mancius
L. Lepidus
Patris Optimi
I. Lepidus
Maximvs F.
De Svo.
```

Sepulchres were originally called *bustae*, but this word was afterward employed in the manner mentioned under *Bosum*. Sepulchres were also frequently called *Monuments*, but this term was also applied to a monument erected to the memory of a person in a different place from where he was buried. *Conduitoria* or *conditiva* were sepulchres under ground, in which dead bodies were placed entire, in contradistinction to those sepulchres which contained the bones and ashes only. They answered to the Greek *σφάνγεοι* or *σφανγματικά*.

The tombs of the rich were commonly built of marble, and the ground enclosed with an iron railing or wall, and planted round with trees. The extent of the burying-ground was marked by Cippi. (*Vid. Cippi.)* The name of Mausoleum, which was originally the name of the magnificent sepulchre erected by Artemisia to the memory of Mausolus, king of Caria, was sometimes given to any splendid tomb.

The open space before a sepulchre was called *Forum* (*vid. Forum*), and neither this space nor the sepulchre itself could become the property of a person by usuaption.

Private tombs were either built by an individual for himself and the members of his family (*sepulcrum familiaria*), or for others, to which he was admitted. A tomb which was fitted up with niches to receive the funeral urns was called *colubarium*, on account of the resemblance of these niches to the holes of a pigeon-house. In these tombs the ashes of the freedmen and slaves of great families were frequently placed in vessels made of baked clay, called *canae*, which were set into the thickness of the wall within these niches, the lids only being seen, and the inscriptions placed in front. A representation of a *colubarium* is given on page 288.

Tombs were of various sizes and forms, according to the wealth and taste of the owner. The following represents part of the street of tombs at Pompeii, is taken from Mazzol, *Pompeiana*, part i., pl. 18.

All these tombs were raised on a platform of masonry above the level of the footway. The first building on the right hand is a funeral triclinium, which presents to the street a plain front about twenty feet in length. The next is the family tomb of Nevoleia Tyche; it consists of a square building containing a small chamber, and from the level of the outer wall steps rise, which support a marble cippus richly ornamented. The burial-ground of Nestacidius follows next, which is surrounded by a low wall; next to which comes a monument erected to the memory of C. Calvinentius Quetius. The
building is solid, and was not, therefore, a place of burial, but only an honorary tomb. The wall in front is scarcely four feet high, which three steps lead up to a cippus. The back rises into a pediment; and the extreme height of the whole from the footway is about seventeen feet. An unoccupied space intervenes between this tomb and the next, which bears no inscription. The last building on the left is the tomb of Scaurus, which is ornamented with bas-reliefs representing gladiatorial combats and the hunting of wild beasts.

The tombs of the Romans were ornamented in various ways, but they seldom represented death in a direct manner. A horse's head was one of the most common representations of death, as it signified departure; but we rarely meet with skeletons within tombs. The following woodcut, however, has been given at the time of the funeral, sometimes on the Novendiae, and sometimes later. The name of Silicennium was given to this feast, of which the etymology is unknown. Among the tombs at Pompeii there is a funerary triclinium for the celebration of these feasts, which is represented in the annexed woodcut. It is open to the sky, and the walls are ornamented by paintings of animals in the centre of compartments, which have borders of flowers. The triclinium is made of stone, with a pedestal in the centre to receive the table.

After the funeral of great men, there was, in addition to the feast for the friends of the deceased, a distribution of raw meat to the people, called Furcatores, and sometimes a public banquet. Combs of gladiators and other games were also frequently exhibited in honour of the deceased. Thus, at the funeral of P. Licinius Crassus, who had possessed a maximum, raw meat was distributed to the people, a hundred and twenty gladiators fought, and funeral games were celebrated for three days, at the expense of this royal banquet being given in the Forum. Public feasts and funeral games were sometimes given on the anniversary of deaths. Faustus, the son of Sulla, exhibited in honour of his father a show of gladiators seven years after his death, and gave a feast to the people, according to his father's testament. At all banquets in honour of the dead, the guests were dressed in white. The Romans, like the Greeks, were accustomed to visit the tombs of their relatives at certain periods, and to offer to them sacrifices and various gifts, which were called Inferia and Parentalia. The Romans appear to have regarded the Naves or departed souls of their ancestors as gods, whence arose the practice of presenting to them oblations, which consisted of victims, wine, milk, garlands of flowers, and other food. The tombs were sometimes illuminated on these occasions with lamps. In the latter end of the month of February there was a festival, called Feralia, in which the Romans were accustomed to carry food to the sepulchres for the use of the dead.

The Romans, like ourselves, were accustomed to wear mourning for their deceased friends, which appears to have been black, under the Republic, both sexes. Under the Empire, the men continued to wear black in mourning, but the women wore white. They laid aside all kinds of ornaments, and did not cut either their hair or beard. Men appear to have usually worn their mourning for only a few days, but women for a year when they lost a husband or parent.

In a public mourning on account of some signal calamity, as, for instance, the loss of a battle or the death of an emperor, there was a total cessation from business, called Justitium, which was usually official by public appointment. During this period

---

FURTIUM.

ne courts of justice did not sit, the shops were shut, and the soldiers freed from military duties. In a public mourning the senators did not wear the latus clavus and their rings, nor the magistrates their badges of office. FURCA, which properly means a fork, was also the name of an instrument of punishment. It was a piece of wood in the form of the letter A, which was placed upon the shoulders of the offender, whose hands were tied to it. Slaves were frequently punished in this way, and were obliged to carry about the furca wherever they went; whence the appellation of furcaria was applied to a man as a term of reproach. It was also used in an offensive mode of capital punishment among the Romans: the criminal was tied to it, and then scourged to death. The patibulum was also an instrument of punishment, resembling the furca; it appears to have been in the form of the letter L. Both the furca and patibulum were also employed as crosses, to which the sufferer appear to have been nailed (in furca suspendere).

FURIO'SIS. (Vid. CURATOR, p. 329.)

FURNUS. (Vid. FORNAX, PISTOR.)

FUROR. (Vid. CURATOR, p. 329.)

FURTII ACTIO. (Vid. FURTUM.)

FURTUM, "theft," is one of the four kinds of delicts which were the foundation of obligations; it was simply a thing uno- nec (Vid. furtum.)

Movable things only could be the objects of furtum; for the fraudulent handling (contractual fraudulosa) of a thing against the owner's consent was furtum, and contractio is defined to be "loco movere." But a man might commit theft without carrying off another person's property. Thus it was furtum to use a thing deposited (depositum) with consent. It was also furtum to use a thing which had been lent for use, in a way different from that which the lender had agreed to; but with this qualification, that the borrower must believe that he was doing it against the owner's consent, and that the owner would not consent to such use if he was aware of it; for dolus malus was an essential ingredient in furtum. Accordingly, both dolus malus on the part of the person charged with furtum, and the want of consent on the part of the owner of the thing, were necessary to constitute furtum. Another requisite of furtum is the "lucrum faciendo gratia," the intention of appropriating another person's property. This was a thing which both the law and equity insisted on in the intention (furtum ex affectis constitit). It was not necessary, in order to constitute furtum, that the thief should know whose property the thing was. A person who was in the power of another, and a wife in manum, might be the objects of furtum. A debtor might commit furtum by taking a thing which he had given as a pledge (pignori) to a creditor, or by taking his property, even in the possession of a bona fide possessor. Thus there might be furtum of a thing itself, of the use of it, and of the possession.

A person might commit furtum by aiding in a furtum, as if a man should jostle you in order to give another the opportunity of taking your money; or drive a wedge between you and another, so that he might or she might get possession of them: but if it were done merely in a sportive way, and not with a view of aiding in a theft, it was not furtum, though per-

haps there might be in such case an actio utilis under the lex Aquilia, which gave such an action even in the case of culpa. (Vid. DAMNUM.)

Furtum was either manifestum or nec manifestum. It was clearly manifestum when the person was caught in the act; but in various other cases there was a difference of opinion as to whether the furtum was manifestum or not. Some were of opinion that it was furtum manifestum so long as the thief was engaged in carrying the thing to the place to which he designed to carry it; and others maintained that it was furtum manifestum if the thief was ever found with the stolen thing in his possession. This difference of opinion occurred in the case of a slave, and a slave and a freeman. The penalty for furtum manifestum by the law of the Twelve Tables was capitalis, that is, it affected the person's caput: a freeman who had committed theft was flogged and consigned (addictus) to the injured person; but whether the thief became a slave in consequence of this additio, or an adja- cendus, was a matter in dispute among the ancient Romans. The edict subsequently changed the penalty into an actio quadrupli, both in the case of a slave and a freeman. The penalty of the Twelve Tables, in the case of a furtum nec manifestum, was duplum, and this was retained in the edict: in the case of the conceptum and oblatum it was triplo, and this was also retained in the edict. In the case of prohibitum, the penalty was quadruplum, according to the provisions of the edict; for the law of the Twelve Tables had affixed no penalty in this case, but merely enjoined that if a man would search for stolen property, he must be naked all but a cloth round his middle, and must hold a dish in his hand, and must seek to recover the thing in this manner. The absurdity of the law, says Gaius, is apparent: for if a man would not let a person search in his ordinary dress, much less would he allow him to search undressed, when the penalty would be so much more severe if anything was found.

The actio furti was given to all persons who had an interest in the preservation of the thing stolen (cujus interret rem salvi esse), and the owner of a thing, therefore, had not necessarily this action. A creditor might have this action even against the owner of a thing pledged, if the owner was the thief. A person to whom a thing was delivered (bailed) in order to work upon it, as in the case of clothes given to a tailor to mend, could bring this action, though the owner of the clothes had already custody of the thing (custodiam praestare), and he was under no liability except in the case of doles;
FURTUM.

3. Actio furti adversus nautas et cautæs, agimus nautas et cau¬
apes (vid. Exercitus), who were able for the acts of the men in their employment.

There were two cases in which a bona fide possessor of another person’s property could not obtain the ownership by usucaption; and one of them was the case of a res furtiva, which was provided for in The Twelve Tables.

The Roman state, which had been the subject of the passage quoted, was under the rule of the Twelve Tables, which were a code of laws that regulated the conduct of the people and were the foundation of Roman law. The Twelve Tables were compiled by the Roman Senate and were written down on bronze tablets and placed in the Capitol in Rome. They were the first written laws in the Western world and remained in force until supplanted by the Twelve Tables.

The Twelve Tables were divided into two parts: the first part dealt with public law, and the second part dealt with private law. The first part dealt with such matters as the rights of the state, the duties of the citizens, and the obligations of the government. The second part dealt with matters of private law, such as contracts, property, and personal injury.

The Twelve Tables were a significant milestone in the development of Roman law and were considered to be a model for other legal systems throughout the Western world. They established the principles of law that would eventually develop into the legal systems of modern times.
The spindle was a stick ten or twelve inches long, having at the top a slit or catch (dema, δυναντις) in which the thread was fixed, so that the weight of the spindle might continually carry down the thread as it was formed. Its lower extremity was inserted into a small wheel, called the whorl (vorticellum), made of wood, stone, or metal (see woodcut), the use of which was to keep the spindle more steady, and to promote its rotation: for the spinner, who was commonly a female, every now and then twisted round the spindle with her right hand, so as to twist the thread still more completely; and whenever, by its continual prolongation, it let down the spindle to the ground, she took it out of the slit, wound it upon the spindle, and, having replaced it in the slit, drew out and twisted another length. All these circumstances are mentioned in detail by Homer, and Pliny for white wool.

The accompanying woodcut is taken from a series of bas-reliefs representing the arts of Minerva upon a frieze of the Forum Palatium at Rome. It shows the operation of spinning at the moment when the woman has drawn out a sufficient length of yarn to twist it by whirling the spindle with her right thumb and forefinger, and previously to the act of taking it out of the slit to wind it upon the bobbin (πυγνον) already formed.

The distaff was about three times the length of the spindle, strong and thick in proportion, commonly either a stick or a reed, with an expansion near the top for holding the ball. It was sometimes of richer materials, and ornamented. Theocritus has left a poem written on sending an ivory distaff to the wife of a friend. Golden spindles were sent as presents to ladies of high rank, and a golden distaff is attributed by Homer and Pindar to goddesses, and other females of remarkable dignity, who are called χρυσόπλάσται.

It was usual to have a basket to hold the distaff and spindle, with the balls of wool prepared for spinning, and the bobbins already spun. (Vid. Callatius.)

In the rural districts of Italy, women were forbidden to spin when they were travelling on foot, the act being considered of evil omen. The distaff and spindle, with the wool and thread upon them, were carried in bridal processions; and, without the wool and thread, they were often suspended by females as offerings of religious gratitude, especially in old age, or on relinquishing the constant use of them. (Vid. Donauria, p. 376.) They were most frequently dedicated to Pallas, the patroness of spinning, and of the arts connected with it. This goddess was herself rudely sculptured with a distaff and spindle in the Trojan Palladium. They were also exhibited in the representations of the three Fates, who were conceived, by their spinning, to determine the life of every man; and, at the same time, by singing, as females usually did while they sat together at their work, to predict his future lot.

G.

GABINUS CINCTUS. (Vid. Toga.)

G.ESUM (γασύμ), a term probably of Celtic origin, denoting a kind of javelin which was used by the Gauls. Wherever the tridentsions extended Hody, in order to prove the comparatively late date of the Septuagint version of the book of Joshua, in which this word occurs, has proved that it was not known to the Romans, Greeks, or Egyptians until some time after the death of Ptolemaeus Lagi. It was a heavy weapon, the shaft being as thick as an ax- or cudgel, and the iron head barbed, and of an extraordinary length compared with the shaft. The Romans adopted the use of the gæsum from the Iberians.

*GAGATES LAPIS (γαγατίτις λίθος), a species of Fossil, supposed to have been the same with the modern Jett. This last is still even called Gagates by some mineralogists, a name derived from the river Gagas, in Lyca, about whose mouth this mineral was found. "The Gagates," says Adams, "is a fossil bituminous substance, containing carbon and ethereal oil. Without doubt it is jet, which, in the systems of modern mineralogists, is held to be a variety of lignite. The Gagates is called 'Black Amber' by Pliny; and, in fact, it is nearly allied to amber; for, when rubbed for some time, it becomes electric like amber." GS

GAUS. (Vid. Institutiones.)

*GALACTITUS LAPIS (γαλακτίτις λίθος), stone of an ash colour, according to Dioscorides sweet taste, and yielding a milky juice when triturated. Pliny makes it to have been of a milky colour, and to have been brought from the vicinity of the Nile. (Vid. Galatia.)

*GALAXIUS LAPIS (γαλάξιας), a stone of an ash colour, intersected sometimes with white and red veins. "It may be gathered from Dioscorides and Pliny," observes Dr. Moore, "as authors cited in the notes of Hardouin, that galaxites, galactites, moraxites, morochites, morochas, leukogera, leucographia, leucographicus, were described in little except name, or were, in fact, varieties of the same substance, which came either from the Nile or the Achelous; was ash-coloured, or greenish, or black-coloured, sometimes with red and white veins; was readily soluble; and when rubbed on stone or a rough garment, left a white mark; besides which, when dissolved, or when triturated in water, it appears to have resembled milk in colour and in taste. Now minerals that answer the above description tolerably well are Spanish chalk and certain other varieties of statite, which are found of the colours indicated; may be mixed with, and suspended in, water, so as to give it a milky appearance, and a smooth, sweetish taste; and which, moreover, make a white mark when rubbed upon stone or cloth."

II*, a name given by Galen to the Lamprey, according to Arzied. GS

GALBANUM. (Vid. Chalke.)

*GALE (γαλῆ), commonly thought to have been the Mustela vulgaris, or Weasel. There are, how-

N E N
ever, according to Adams, objections to this opinion. The Puttorius, or Funnart, is noted by Sis- 
ides, but no mention of it occurs in the works 
of the Greek authors now extant. 1

GALEA (καλέα, ποιημ. κόρος, πτέρυς), a Helmet, a 
Cassque. The helmet was originally made of skin 
or leather, whence is supposed to have arisen its 
appellation καλέα, meaning properly a helmet of dog- 
skin, but applied to caps or helmets made of the 
hide of other animals (tawny, κτίλη, atýlē, gα- 
lea u p i r i a t). 2

3. The two cheek pieces (bascula, p a r a p h y 
δέος), which were attached to the helmet by hinges, 
so as to be lifted up and down. They had butons 
or ties at their extremities for fastening the hel- 
met on the head.3

4. The beaver or visor, a peculiar form of which 
is supposed to have been the ακλέας τρομαίκας, i.e., 
the perforated beaver.4 The gladiators wore 
the helmet of this kind, and specimens of them, not 
unlike those worn in the Middle Ages, have been 
found at Pompeii.

Woodcuts illustrative of these four classes of 
additions to the simple cap or morion occur at p. 28, 
27, 94, 95, 135, 256, 322, 381, 429. The five follow- 
ing helmets, more highly ornamented, are selected 
from antique gems, and are engraved of the size of 
the originals.

1. Bosses or plates, proceeding either from the 
 top (φίλακος) 5 or the sides, and varying in number 
from one to four (δώδεκα δόμινος, δυοδεκατον 
τετράφακος). The φίλακος was often an emblematical figure, 
re- 
fer- 
ring to the character of the wearer. Thus, in the 
colossal statue of Minerva in the Parthenon at 
Athens, she bore a sphinx on the top of her 
helmet, and a griffin on each side.5

2. The helmet thus adorned was very commonly 
 surmounted by the crest (κρίστα, λόβος 6), which was 
of horsehair (υστήρων υπενθύμισε, λόβον ή- 
ερια; λιγνη χαλκοτία), and made so as to look im- 
posing and terrible, as well as handsome (τελεφόρος). 6

In the Roman army the crest served solely as an 
ornament, but to also distinguish the different cen- 
trions, each of whom wore a casque of a peculiar 
form and appearance. 7

*TALEOS ΑΣΤΗΡΙΑΣ (γαλέας ἄστηριας), a spe- 
cies of Fish, either a variety of the Squalus Mus- 
elus, or else the Spotted Dog-fish, Squalus Canic- 
ules.

*TALEOS ΚΤΩΝ (γαλέας κτῶν), the Squalus Ge- 
elus, I., or Tope. It is a very voracious species of 
Shark, and its flesh has an offensive smell. 

*TALEOS ΕΙΡΙΟΣ (γαλέας εἰρίος), a species of 
Fish, the Squalus Mustelus, I., or Smooth Hound, a 
Smooth Shirk of Pennant. Mustelus is the Latin 
translation of γαλέας, and generic for the Squalus. 

*TALEOS ΓΟΔΙΟς (γαλέας θόδιος), a variety of the 
Accipiter Striatus, or Storcuse. 8

GALERUS. (Vid. Cora. p. 293.)

*GALIOSPSIS (γαλίοψις), a plant, of which the 
following description is given by Dioscorides: 9

"The whole plant, with its stem and leaves, resem- 
bles the nettle; but its leaves are smoother, and 
considerably felt when rubbed; its flowers are 
small and purplish. "It is difficult to say," re- 
marks Adams, 10 whether this description applies 
better to the Galipos Tetragon (common Hemp-nelt- 
tle), or to the Lamium purpureum (Red Dead-nettle). 
Bothin prefers the latter; and, indeed, I am not 
aware that any of the commentators acknowledge 
it as the former, although it appears to me not 
inapplicable. "Sithorp, however, has fixed on a plant 
different from either, namely, the Scrophularia per- 
grina, or Nettle-leaved Figwort. I am wholly un- 
 acquainted with it. "11

*GALIUM (γαλιον), the Galium Verum, or 
Yellow Bedstraw. The Greek name is derived from 
γαλ, "milk," because the plant was used instead of 
nettle to curdle milk. Sithorp found it in Samos 
and in the Peloponnesse. The Galium Verum is 
the οπαλή of Dioscorides. 12

GALLI was the name of the priests of Cyzicus, 
whose worship was introduced at Rome from Perga-
GALLUS

GALLUS

(G. C. 204). The Galli were, according to an ancient custom, always castrated (spadones, seminare, seminari, nec viri nec feminæ), and it would seem that, impelled by religious fanaticism, they performed this operation on themselves. In their wild, enthusiastic, and boisterous rites, they resembled the Corybantes, the worship of whom for fancy's sake and probably because they mutilated their own bodies. They seem to have been always chosen from a poor and despised class of people; for, while no other priests were allowed to beg, the Galli (famuli Idaeæ matris) were allowed to do so on certain days. The chief priest among them was called archigal- 

The origin of the name of Gallus is uncertain: according to Ovid, the cock}* was given to the Gauls by Mercury, who originated from the river Gallus in Phrygia, which flowed near the temple of Cybele, and the water of which was said to be the source of those persons who drank of it to such a state of madness that they castrated themselves. The supposition of Hieronymus that Gallus was the name of the Gauls, which had been in the past mistranslated, is unfounded, as the Romans must have received the name from Asia or from the Greeks, by whom, as Suidas informs us, Gallus was used as a common noun for euchum. There exists a verb gallare, which signifies to rage (insanire, bacchari), and which occurs in a verse of Ovid's Fasti (1. 344) and in the Archilochus (fr. 13). En., p. 84, ed. Burmann.

*GALLUS (ἀλέκτορ or ἀλέκτρων), the Cock.

“Those are few facts in natural history,” observes Griffith, “so difficult to determine with precision as to point out the places which the species of our common cock inhabited at first in its state of freedom and independence. Our common cock, according to the schools, has originated from the Jago Cock (Gallus Giganteus), a very large wild species, which inhabits the island of Sumatra, and from the species Banksia, another primitive cock, found in the forests of Java. If, as there is every reason for believing, the temperate climates of Asia and the countries of Europe did not in ancient times contain cocks in a wild state, we must ascend to the earliest epoch of navigation, and presume the domestication of this useful bird to date from those remote periods. Under the reign of that great prince, who ruled with so much glory over the tribes of Israel, the cockpit constituted an acquisition worthy of being enumerated in the list of riches imported. The cock, in our modern language, is esteemed a symbol of courage. It is probable that this discovery of the cock was made in the time of Solomon, it cannot be deemed very extraordinary that the cock, which inhabits the same countries as that bird, should about the same time have attracted the attention of the Hebrews. Be this as it may, it is quite certain that the cock, as well as the peacock, was known to man in the different countries in which these species exist at the present day in a state of domestication.” — Mention is made of the crowing of the cock in the Bar apros™o™a™ of Homer. On the supposition, therefore, that the poem is genuine, this would be the first notice of the domestic fowl occurring in the Greek writers. As, however, all the other early poets are silent in relation to this bird, Knight founds on this circumstance, an argument against the authenticity of the poem in question. He admits, however, at the same time, that a representation of the cock appears on the silver coins of the people of Sambucrace and Himera at least six centuries before the Christian era. Athenæus cites a passage from a Greek writer named Menodotus, in which the cock is spoken of as a native of Persia; and in another part of his work he quotes from Cratinus, who calls the cock a Persian bird. Athenæus mentions that the domestic fowl is a bird of Persian origin in his comedy of the Aes. Beck, however, in his com- mentary on Aristophanes, thinks that the cock was called Persian from the resemblance of its comb to the Persian covering for the head; but the passage cited by Athenæus from Menodotus assigns a much more probable reason. — Cock-fighting became in time one of the most popular amusements in Greece and Rome. Pliny says that battles of this kind were annually exhibited at Pergamum, in the same manner as combats of gladiators. Cock-fights were also represented by the Greeks on coins and cut stones. Various means were also employed to increase the irritability and courage of these birds. Dioscorides and Pliny speak of a plant named adiantum having been used for this purpose. Garlic was also given, as we are told by Xenophon. — The following singular description of the cock is given by Pliny: “After the cock, the birds which are most sensible to glory are those active sentinels which Nature has furnished to arouse us from our main slumber. These birds have a voice like the music of the stars, and are acquainted with the stars, and every three hours they indicate by their crowing the different periods of the day. They retire to repose with the setting sun, and from the fourth military watch they recall us loudly to our cares and labours. They do not suffer the daybreak to surprise us without timely warning. We are roused by the cock's morning cautions, and the crowing itself is announced by the clapping of their wings. Each farmyard has its peculiar king, and among these monarchs, as among princes of our own race, empire is the most of victory. They appear to comprehend the design of those weapons with which their feet are armed. It is not uncommon for two rivals to perish in the combat. If one be conqueror, he immediately sings forth his triumph and proclaims his supremacy: the other retreats and disappears, ashamed of his defeat. The gait of the cock is proud and commanding; he walks with head erect and elevated crest. Alone of all birds, he habitually looks up to the sky, raising the crest of his head, and using with this advantage he has, a voice which is a kind of imitator of the birds of the three and four hours, appearing to copy them. Indeed, he imitates them, it is true, but perhaps more truly worthy of the Roman purple. Their repasts are solemn presages; they regulate daily the conduct of our magistrates, and open or close to them their dwellings. They prescribe the time of daybreak or movement to the Roman fasces; they command or prohibit battles; they have announced all the victories gained throughout the universe in a word, they lord it over the masters of the world. Their very entrails and fibres are not less agreeable to the gods than the richest victims. Their prolonged noises in the evening, and at extraordinary hours, constitute presages. By crowing all night long, they announced to the Boeotians a celebrated victory over the Laconians; the victorious diviners interpreted these cries, which we never fail to note. — The cock was sacred to Mars, on account of its courageous spirit and pug-
GENISTA.

The demes and phratries of Attica possessed various means to prevent intruders from assuming the rights of citizens. (Vid. De PASSIBUS.) Among other regulations, it was ordained that every bride, previous to her marriage, should be introduced by her parents or guardians to the phratry of her husband (γυμνλιαν υπ' γεναιος εισφρονοι). This introduction of the young women was accompanied by presents to their new phratries, which were called γυμνα. The women were enrolled in the lists of the phratries, and this enrolment was also called γυμνα. The presents seem to have consisted in a feast given to the phratries, and the phratries, in return, made some offerings to the gods on behalf of the young bride. The acceptance of the presents, and the permission to enrol the bride in the registers of the phratry, was equivalent to a declaration that she was considered a true citizen, and that, consequently, her children might come within the rights and privileges of citizens.

Γυμνα was also the name of a sacrifice offered to Athena on the day previous to the marriage of a girl. She was taken by her parents to the temple of the goddess in the Acropolis, where the offerings were made on her behalf.

The plural, γυμνα, was used to express wedding festivities and similar ceremonies.

GA-MOS (Vid. MARRIAGE. GREEK.)

GAUSAPA, GAUSAPE, or GAUSAPUM, a kind of thick cloth, which was on one side very woolly, and was used to cover tables, beds, and by persons to wrap themselves up after taking a bath, or in general to protect themselves against rain and cold. It was worn by men as well as women. It came to be used among the Romans about the time of Augustus, and the wealthier Romans had it made of the finest wool, and mostly of a purple colour. The gausapum seems, however, sometimes to have been made of linen, but its peculiarity of having one side more woolly than the other always remained the same. Martial calls it gausapum quadrata, which may be supposed to mean that it was often used as a tablecloth, and might be used, square or oblong piece of cloth. The word gausapa is also sometimes used to designate a thick silk, woven in one side, and sometimes with a single woolly side.

The word gausapa is also sometimes used to designate a kind of thick wool, such as was made for the hair of Germans, and worn by the fashionable people at Rome in the term of the emperors. Persius applies the word in a figurative sense to a thick and stubborn character.

GENESIA. (Vid. FUNUS, p. 458.)

*GENISTA, Spanish Broom, or Spartium junceum, L. It grows abundantly in most parts of Italy, and the peasants weave baskets of its slender branches. The flowers are very sweet, last long, and are agreeable to bees. Pliny says it was used in dyeing, but he means the Genista tinctoria, called by some Wood-wax and Green-weed. Many thinks that the Spanish Broom might be used for the same purpose.

GENS. This word contains the same element as the Latin gen, us and gi, gen, o, and as the Greek γεν, γενος, &c., and it primarily signifies kin. But the word has various significations, which have either a very remote connexion with this primary notion, or perhaps none at all.

Gens sometimes signifies a whole political community, as Gens Latiorum, Gens Ruscantium, &c.; though in this application of the term, the notion of a distinction of race or stock is implied, or at least the notion of a totality of persons distinguished from other totalities by intermarriage and increase of their numbers among themselves only. Cicero speaks of "Gens, universa in civilitate recepta, ut Sabinorum, Volscorum, Herniacorum." It is a consequence of such meaning of gens, rather than an independent meaning, that the word is sometimes used to express a people with reference to their territorial limits.

The meaning of the word in the expression gens gentium is explained under Jus.

The words Gens and Gentiles have a special meaning in the system of the Roman law and in the Roman constitution. Cicero has preserved a definition of gentiles which was given by Scævola the orator. Gentiles are persons whose political and legal position must be considered complete. Those were gentiles, according to Scævola, (1) who bore the same name, (2) who were born of freemen (ingenui), (3) none of whose ancestors had been a slave, and, (4) who had suffered no capitation diminution. This definition contains nothing which shows a common bond of union among gentiles, except the possession of a common name. The persons who bear a common name are not gentiles, if the three other conditions contained in this definition were not applicable to them.

There is also a definition of gentilic by Festus: "That is called Gens Ælia which is composed (conflatior) of many families. Gentilia is both one who is of the same stock (genus) and one who is called by the same name (simili nomine), as Cinna says, those are my gentiles who are called by my name." "Gentilis déictor et ex coeleb genere orbis, et qui simili nomine appellatur." The second et is sometimes read ut, which is manifestly not the right reading, as the context shows. Besides, if the words "ut" is qui simili nomine appellatur are to be taken as an illustration of "ex eodem genere orbis," as they must be if ut is the true reading, then the notion of a common name is viewed as that necessity being contained in the notion of common kin, whereas there may be common kin without common name, and common name without common kin. Thus neither does common name include all common kin, nor does common kin include all common name, yet each includes something that the other includes.

We cannot conclude anything more from the conflatior of Festus than that a gens contained several families, or that several families were comprehended under one gens. According to the definition, persons of the same genus (kin) were gentiles, and also persons of the same name were gentiles. If Festus meant to say that all persons of the same genus and all persons of the same name were gentiles, his statement is inconsistent with the definition of the pontifex; for persons might bo of the same genus and might have sustained a capitation diminution either by adoption, or adrogation, or by emancipation: in all these cases the genus would remain, but the natural relationship was not affected by any change in it.
the juristist status of a person: in the cases of adoption and adrogation the name would be lost, in the case of emancipation it would be retained. If the definition of Festus means that among those of the same genus there may be gentes, and among those of the same name gentes may also be individual, as the Marcelli is termed the initiata part of a name, the definition is absolutely true, nor, if both parts are taken together, is the whole definition absolutely true. It seems as if the definition of gentiles was a matter of some difficulty; for while the possession of a common name was the simplest general characteristic of gentiliss, there were other conditions that were especially necessary. The name of the gens was always characterized by the termination *s*, as Julia, Cornelia, Valeria. When a man died intestate and without agnati, his familia (vid. *familia*), by the law of the Twelve Tables, came to the gentes; and in the case of a lunatic (*fearous*) who had no guardians, the guardianship of the lunatic and his property belonged to the agnati and to the gentes; to the latter, we may presume, in case the former did not exist. Accordingly, one part of the jus gentilium or jus gentilis related to succession to the property of intestates who had no agnati. A notable example of a dispute on this subject between the Claudii and Marcelli is mentioned in a difficult passage of Cicero (De Nat. Deor. 1. 5; 2. 2), who tells of an intestate son of one of the liberti or freedmen of their familia (*etrite*); the Claudii claimed the same by the gentile rights (*gente*). The Marcelli were plebeians, and belonged to the patrician Claudii gens. Niebohr observes that this claim of the Claudii is inconsistent with Cicero's definition, according to which the right of a freedman could not belong to a gens; and he concludes that Cicero (that is, *Scalvola*) must have been mistaken in this part of his definition. But it must be observed, though the descendants of freedmen might have no claim as gentiles, the members of a gens might, as such, have claims against them; and in this sense the descendants of freedmen might be gentiles. It would seem as if the Marcelli united to defend their supposed paternal rights to the inheritance of the sons of freedmen against the claims of the gens; for the w of the Twelve Tables gave the inheritance of a freedman only, who died intestate and without heirs, to his patron, and not the inheritance of the son. Marcellus, Cicero says (De Nat. Deor. 1. 5; 2. 2), whether the law, in the case supposed, gave the hereditas to the gens as having a right paramount to the paternal right. It may be that the Marcelli was being considered in the Claudia gens, were supposed to have merged their paternal rights (if they really existed in the case in dispute) in those of the gens. Whether, as members of the gens, the plebeian Marcelli would take as gentiles what they lost as patrioni, may be doubted. It is generally said or supposed that the hereditas which came to a gens was divided among the gentes, which must mean the heads of families. This may be so; at least, we must conceive that the hereditas, at one period at least, must have been a benefit to the members of the gens: Caesar is said to have been deprived of his gentilic hereditas. In determining that the property of intestates should ultimately belong to the gens, the law of the Twelve Tables was only providing for a case which, if a new civilization, is covered by law for the protection of the persons who dies without having disposed of it, or leaves him whom the law recognizes as entitled to it. The gens had thus a relation to the gentes similar to that which subsists in modern states between the sovereign power and persons dying intestate and without heirs or next of kin. The mode in which such a succession was applied by the gens was probably not determined by law; and as the gens was a kind of juridical person, analogous to the community of a civitas, it seems not unlikely that originally and before a system of legal gens was set up, this gens was such, and were common property. The gens must have had some common property, such as sacella, &c. It would be no difficult transition to imagine, that what originally belonged to the gens as such, was in the course of time distributed among the members, which would easily take place when the family included in a gens were reduced to a small number. There were certain sacred rites (*sacra gentilitia*) which belonged to a gens, to the observance of which all the members of a gens, as such, were bound, whether they were members by birth, adoption, or adrogation. A person was freed from the observance of such sacra, and lost the privileges connected with his gentile rights, when he lost his gens, that is, when he was adrogated, adopted, or even emancipated; for adrogation, adoption, and emancipation were accompanied by a diminution of the gentile rights. When the adoption was from one familia into an other of the same gens, the name of the gens was not changed; and when a son was emancipated, the name of the gens was still retained; and yet, in both these cases, if we adopt the definition of Scalvola, the adopted and emancipated persons lost the gentile rights, though they were also freed from the gentile burdens (*sacra*). In the case of adrogation and adrogation, the adopted and adrogated person was called a Marcellus, Cicero says, but had passed into the gens of such familia, and so must have acquired the rights of that gens. Such a person had sustained a capitis diminution, and it's effect was to destroy his former gentile rights, together with the rights of agnation. The gentile rights were, in fact, implied in the rights of agnation, if the patrified families had a gens. Consequently, he who obtained, by adrogation or adoption, the rights of agnation, obtained also the gentile rights of his adopted father. In the case of adrogation, the adrogated person renounced his gens at the Comitia *Curiata*, which solemnity might also be expressed by the term "sacra detestari," for sacra and gens are of the same origin. If a gentile, the adoption, or the adoption, was not only a part of the adopted father, corresponded to detestatio sacrorum on the part of the adrogated son. This detestatio sacrorum is probably the same thing as the sacrum alienum mentioned by Cicero. It was the duty of the pontifices to look after the due observation of the gentile sacra, and to see that they were not neglected. Each gens seems to have had its peculiar place (*sacculum*), for the celebration of the sacra gentilitia, which were performed at stated times. The sacra gentilitia, as already observed, were a burden on the members of a gens as such. The sacra privata were a charge on the property of an individual; the two kinds of sacra were thus quite distinct. According to the traditional accounts of the old Roman constitution, the gentes were subdivisions of the curiæ analogous to the curiæ, which were subdivisions of the tribes. There were ten in each curiæ, and, consequently, one hundred gentes in each tribe, and three hundred in the three tribes. Now if there is any truth in the tradition of this origin, the organization of the Roman people is a perfect mixture of the two curiæ, curiæ, and gentes, it follows that there was no necessary distinction among those families which belonged
ed to a gens, and more than among those families which belonged to one curia.

We know nothing historically of the organization of civil society, but we know that many new political bodies have been hatched out of the materials of existing political bodies. It is useless to conjecture what was the original organization of the Roman state. We must take the tradition as it has come down to us. The tradition is not, that families related by blood were formed into gentes, that these gentes were formed into curiae, that these en-
ties were formed into tribes. Such a tradition would contain its own refutation, for it involves the notion of the construction of a body politic by the aggregation of families into units, and by further combinations of these new units. The tradition is of three fundamental parts (in whatever manner formed), and of the divisions of them into smaller parts. The smallest political division is gens. No further division is made, and thus, of necessity, when we come to consider the component parts of gens, we come to consider the individuals comprised in it. According to the fundamental principles of Roman law, the individuals arrange themselves into families under their respective patres- familiae. It follows, that if the distribution of the people was effected by a division of the larger into smaller parts, there could be no necessary kin among the families of a gens; for kinship among all the members of a gens is necessarily united only by belonging to the same kindred family, and forming them into a gens. If the gens was the result of subdivision, the kinship of the original members of such gens, whenever it existed, must have been accidental.

There is no proof that the Romans considered that there was kinship among the families originally included in a gens. Yet as kinship was evidence of the rights of agnatio, and, consequently, of gentile rights, when there had been no capitis diminutio, it is easy to see how that which was evidence of the rights of agnatio, and, consequently, of gentile rights, might be viewed as part of the definition of gentiles, and, so extended, to comprehend a supposed kinship among the original members of the gens. The word gens itself would also favour such an interpretation. And any gens, finally, seems to be often used in the same sense. 1

This notion of kinship appears also to be confirmed by the fact of the members of the gens being distinguished by a common name, as Cornelia, Julia, &c. But many circumstances besides that of a common origin may have given a common name to the gentiles; and, indeed, there seems nothing more strange in all the gentiles having a common name, than there being a common name for all the members of a curia and a tribe.

As the gentes were subdivisions of the three ancient tribes, the populus (in the ancient sense) alone had gentes, so that to be a patrician and to have a gens were synonymous; and thus we find the expressions gens and patricii constantly united. Yet it appears to have been, as if a gentile married a woman not a gentilis, it followed that the children might not be gentiles; yet they might retain the gentile name, and thus, in a sense, the family might be gentile without the gentile privileges. Such mar-

1. (Cic., Pro Balbo, c. 14.)—2. (Liv., iv. 1.)
been included in the same decuria. But to assume this is nothing more than to say that the political system was formed by beginning with aggregations of families. The origin of the distinction of the decuria, was to consist of aggregates of gentes (thus understood), such arrangement could only be effected by making aggregation of families the basis of the political system, and then ascending from them to decuria, from decuria to curie, and from curie to tribes; a proceeding which is inconsistent with saying that the tribus were formed before the decuria, for this mode of expression implies that the curie were formed before the decuria. But the introduction of new gentes is conceivable even on the hypothesis of the gens being a mere political division. If the number was originally limited, it is perfectly consistent with what we know of the Roman constitution, which was always in a state of progressive change, to suppose that the strict rule of limitation was soon neglected. Now if a new gens was introduced, it must have been assimilated to the old gentes by having a distinctive name; and if a number of foreigners were admitted as a gens, it is conceivable that they would take the name of some distinguished person among them, who might be the ancestor from whom they all traced their birth, each with a numerous body of retainers. And this is the better tradition as to the patrician Claudii, who came to Rome with Atta Claudius, their head (gentis princeps), after the expulsion of the kings, and were co-opated (co-opatii) by the patres among the patricii; which is the same thing as saying that the immigrating body was recognized as a Roman gens. According to the tradition, Atta Claudius received a tract of land for his clients on the Anio, and a piece of burying-ground, under the Capitol, was given to him by the state (public). According to the original constitution of a gens, the possession of a common burying-place, and the gentile right to interment therein, were a part of the gentile sacra. It is probable that even in the time of Cicero the proper notion of a gens and its rights were ill understood; and still later, owing to the great changes in the constitution, and the extinction of so many ancient gentes, the traces of the Jus gentilium, were gradually lost. The names gens and familia are used indifferently by later writers, though Livy carefully distinguishes them. The older Pliny speaks of the sacra Serviliae familiae; Macrobius of the sacra familie Claudiae, Aemiliae, Juliae, Corneliae; and an ancient inscription mentions an Editus and a Sacedorum Ser-giae familiae, though those were all well-known ancient gentes, and these sacra, in the more correct language of the older writers, would certainly have been called sacra gentilitia. In the time of Gaius (the age of the Antonines), the jus gentilium had entirely fallen into disuse. Thus an ancient institution, which formed an integral part of the constitution of the state, was gradually lost together by the conservative power of religious rites, gradually lost its primitive character in the changes which circumstances impressed on the form of the Roman state, and was finally extinguished. The word gens has recently been rendered in English by the word House, a term which has here been purposely neglected, as it is not necessary, and may be misleading. The subject of the gens is discussed with great acuteness both by Niebuhr and by Melden. The views of Goettling are contained in his Geranium.
The flesh of the young is delicate; it used to constitute one of the dishes at the banquet of Rome and in the market of Corinth. The Crane is said to be a long-lived bird. The philosopher Leonius Thomeus, according to Paulus Jovius, kept one alive for forty years. 5

GERMANI (Vid. COGNATI)

GEROUSSIA (γερουσία). In connexion with this subject, it is proposed to give a general view of the Spartan constitution, and to explain the functions of its legislative and administrative elements. In the later ages of Sparta it was one of the most prominent of these was the college of the five ephors; but, as an account of the ephorship is given in a separate article (vid. EPHORI), we shall confine our inquiries to the kings, the γερουσίαι or councils, and the ekklesia, or assembly of Spartan freemen.

I. The Kings. The kingly authority of Sparta was, as it is well known, coeval with the settlement of the Dorians in the Peloponnesus, and continued to the descendants of Aristodamus, one of the Heraclid leaders, under whom, according to the Spartan legend, the conquest of Laconia was achieved. To him were born twin sons, Eurysekes and Procles; and from this cause arose the diarchy, or divided royalty, the sovereignty being always shared by the representatives of the two families which claimed descent from them. 2 The sons of Procles, however, granted to the older branch, which were called Agenorians, as the younger house was styled Euryponides, from certain alleged descendants of the twin brothers. 3 Such was the national legend; but, as we read that the sanction of the Pythian oracle was procured for the arrangement of the diarchy, 4 we may conclude that it was not altogether fortuitous, but rather the work of policy and design; nor, indeed, is it improbable that these nobles would gladlyavail themselves of an opportunity to weaken the royal authority by dividing it.

The descent of the Spartan kings from the national heroes and leaders contributed in no small degree to support their dignity and honour; and it is, perhaps, from this circumstance particularly that they were considered as heroes, and enjoyed a certain religious honours. The honour was, however, of a simple and heroic character, such as a Spartan might give without derogating from his own dignity or forgetting his self-respect. Thus we are told that the kings united the character of priest and king, the priesthoods of Zeus Uranus 5 and the Laocidian Zeus being filled by them; and that, in their capacity of national high-priests, they officiated at all the public sacrifices offered on behalf of the state. 6 Moreover, they were ample provided with the means for exercising the heroic virtue of hospitality; for this purpose, public or domain lands were assigned to them in the district of the perioeci, or provincial subjects, and certain requisites belonged to them whenever any animal was slain in sacrifice. Besides this, the kings were entitled to various payments in kind (ραταὶ τῶν ἄρτων τομῆς), that they might never be in want of victuals to sacrifice; in addition to which, they received, twice a month from the state, an ἀρτοφυλακίον, to be offered as a sacrifice to Apollo, and then served up at the royal table. Whenever, also, any of the citizens made a public sacrifice to the gods, the kings were invited to the feast, and lookoured above the other guests: a double portion of food was given to them, and they were the chief objects of the libations to the gods. 7 All these distinctions are of

v. Over, there can be no doubt that the kings were, or their return home, accountable for their conduct as generals, and more especially after the increase of the ephoral authority. Their military power, also, was necessary for the performance of political functions, for the kings were not allowed to go abroad to decide the fate of cities without communicating with the authorities at home. In former times the two kings had a joint command; this, however, led to inconvenience, and a law was in consequence passed, that for the future one only of the two kings should hold the command of the army on foreign expeditions.

II. The yepovria, or Assembly of Elders. This body was the aristocratical element of the Spartan polity, and not peculiar to Sparta only, but found in other Dorian states, just as a Boule, or democratical council was an element of most Ionian consti-
tutions.

The yepovria or yepovria at Sparta included the two kings, its presidents, and consisted of thirty members: a number which seems connected with the divisions of the Spartan people. Every Dorian state, in fact, was divided into three tribes: the Hylleis, the Dymanes, and the Pampylly, whence the Dorians are called ηπξαι, or thrice divided. The members of these were the deceased kings as superior to those of all his predecessors.

In comparison with their dignity and honors, the constitutional powers of the kings were very limited. In fact, they can scarcely be said to have possessed any; for, though they presided over the council of yepovvros as δίκαιοι, or principalis senatus, and the king of the elder house probably had a sealing vote (a supposition which Dr. Thrillwill thinks may perhaps reconcile the difference between Herodotus, v., 57, and Thucydides, i., 20), still the voice of each counted for no more than that of any other senator: when absent, their place was sup-
plied and their proxies tendered by the councillors who were most nearly related to them, and thence-
fore of a Heraclid family. Still the kings had some important prerogatives; thus they had, in common with other magistrates, the right of addressing the public assembly; besides this, they sat in a separate court of their own, where they gave judgment in all cases of heresies claimed by different parties: a speech was delivered by them, and then a written verdict issued by the council, but afterward transferred to the archon eponymus. They also appointed the four "Pythians," whose duty it was to go as messengers to consult the god at Delphi. Adoptions also took place in their presence, and they held a court in all cases connected with the maintenance of the public roads; probably in their capacity of generals, and as superintendents of the intercourse with foreign nations. In foreign affairs, indeed, their prerogatives were considera-
tible: thus they were the commanders of the Spa-
tan forces, and had the privilege of nominating from among the citizens persons to act as "proxeni," or protectors and entertainers of foreigners visiting Sparta. But their chief power was in war; for after they had once crossed the borders of Laconia in command of troops, their authority became unlimited. They could send out and assemble armies, despatch ambassadors to collect money, and refer those who applied to themselves for justice to the proper officers appointed for that purpose. Two epedrai were held, as well as their edra and tria-
petitions, but those magistrates had no authority to interfere with the kings' operations: they simply

watched over the proceedings of the army. Moreover, there can be no doubt that the kings were, or

473

O o r

473

O o r
The functions of the councillors were partly de-
liberative, partly judicial, and partly executive. In
the discharge of the first they presided over the measures
and laws which were to be laid before the popular assembly, so that the im-
portant privilege of initiating all changes in the govern-
ment or laws was vested in them. As a criminal
court they could punish with death and civil degra-
dation (adymia), and that, too, without being restrain-
ed by any code of written laws, for which national
feeling and recognised usages would form a suffi-
cient substitute. They also appear to have exercised,
like the Arispomata, a general superin-
tendence and inspection over the lives and manners
of the citizens (arbitri et magistri disciplina pub-
cis), and probably were allowed "a kind of patri-
archal authority to enforce the observance of ancient
usage and discipline." It is not, however, easy to
define with exactness the original extent of their
functions, especially as respects the last-mentioned
duty, since the elders not only encroached upon the
prerogatives of the king and council, but also pos-
sessed, in very early times, a censorial power, and
were not likely to permit any diminution of its extent.

III. The Æxeia, or Assembly of Spartan Freemen.
This assembly possessed, in theory at least, the
supreme authority in all matters affecting the general
interests of the state. Its original position at Sparta
is described by Plutarch (vii., 6.), Alcibiades, and
Lycurgus, which, in the form of an oracle, exhibits
the principal features of the Spartan polity: "Build
a temple," says the Pythian god, "to Hellenian Zeus
and Hellenian Athena; divide the tribes, and
institute thirty obas; appoint a council with its
princes; call an assembly (ανελλελοντες) between
Babyea and Knakion, then make a motion and de-
part the chief and upper princes from the people
(διέμενε δε εκυρών ημών κει κρατοῦν)."

By this ordinance full power was given to the
people to adopt or reject whatever was proposed to
them by the king and other magistrates. It was,
however, found necessary to define this power
more exactly, and the following clause, ascribed to
the kings Theogenus and Polydorus, was added to
the original recitation: "If, after discussion and power
and power to the people, the king should follow a
crooked opinion, the elders, and the chief and
upper princes shall withdraw" (τοις πρεσβυνευσι και χρυσοταξίας ἀποσταρεῖς ἡμῖν). Plutarch interprets these words to mean,
"That in case the people do not either re-
ject or approve in toto a measure proposed to them,
the kings and councillors should dissolve the as-
sembly, and declare the proposed decree to be in-
valid." According to this interpretation, which is con-
firmed by some verses in the Eumonia of Tyr-
taeus, the assembly was not competent to originate
any measures, but only to pass or reject, without
modification, the laws and decrees proposed by the
proper authorities: a limitation of its power, which
almost determined the character of the Spartan
constitution, and justifies the words of Demosthenes,
who says, "The Æxeia of Sparta was in many respects
superior to other Æxeia of the Greeks."

All citizens above the age of thirty, who were not
labouring under any loss of franchise, were admi-
ssible to the general assembly, or ἀνέλλελον, as it was
called in the old Spartan dialect; but no one except
public magistrates, and chiefly the ephors and kings,
dressed the people without being specially called
upon. The same public functionsaries also put the
question to the vote. Hence, as the magistrates
only (τα τείχη οραγι) were the leaders and speak-
ers of the assembly, decrees of the whole people
are often spoken of as the decision of the author-
ities, precisely in matters relating to foreign
affairs. The intimate connexion of the ephors with
the assembly is shown by a phrase of very frequent
occurrence in decrees (ἐκδοσι τοις εἴροις καὶ τη
ἐκκλησία). The method of voting was by accla-
mation; the place of meeting between the brook
Knakion and the bridge Babyca, to the west of the
city, and enclosed. The regular assemblies were
held every full moon; and on occasions of emer-
gency, extraordinary meetings could be convened.

The whole people alone could proclaim "a war,
conclude a peace, enter into an armistice for any
length of time, and all negotiations with foreign
states, though conducted by the kings and ephors,
could be ratified by the same authority only." With
to regard to domestic affairs, the highest offices, such
as magistracies and priesthoods, were filled by the
votes of the people; a disputed succession to the
throne was decided upon them; changes in the
constitution were proposed and explained, and all
new laws, after a previous decree in the senate,
were confirmed by them. It appears, therefore, to
use the words of Muller, that the popular assembly
really possessed the supreme political and legislative
authority at Sparta, but it was so hampered and
checked by the spirit of the constitution, that it could not act in matters within certain
described limits, so that the government of the state
is often spoken of as an aristocracy.

Besides the Æxeia which we have just described,
we read in later times of another, called the small
assembly, which appears to have been convened on
occasions of emergency, or which were not of suf-
cient importance to require the decision of the entire
body of citizens. This more select assembly was a kind of political jury of citizens, or of some class enjoying a similar pre-
dence, together with some of the magistrates of the state (vid. Ecclesia); and if, as appears to have been
the case, it was convened more frequently than the
greater assembly, it is evident that an additional
restraint was thus laid upon the power of the lat-
er, the functions of which must have often been
superintended by the former.

The preceding remarks will enable us to decide
a question which has been raised, What was the real
nature of the constitution of Sparta? From the
expressions of Greek writers, every one would at
once answer that it was aristocratic; but it has been
asserted that the aristocracy at Sparta was an arist-
craty of conquest, in which the conquering people,
or Dorians, stood towards the conquered, or Achae-
ans, in the relation of nobles to commons, and that it
was principally in this sense that the constitution
of Sparta was so completely anti-popular or oligar-
chical. Now this, indeed, is true; but it seems no
less true that the Spartan government would have
been equally called an oligarchy or aristocracy even
if there had been no subject class at all, on account
of the disposition and administration of the state.

The fact is, that, in theory at least, the Spartan con-
stitution, as settled by Lycurgus, was a decided de-
ocracy, with two hereditary officers, the generals
of the commonwealth, at its head; but in practice (at
least before the encroachment of the ephors) it was
a limited aristocracy, that is, it worked as if the
supreme authority was settled in the hands of a
minority. The principal circumstances which per-
mit us in considering it as such are briefly the

GLADIATORES

*GITH or GIT, the seed of the Melanthion or Pepper-wort, the Nigella sativa. It was employed by the ancients as a condiment. (Vid. MELANTHIUM).

GLADIATORES (μαθητεία) were men who fought with swords in the amphitheatre and other places like the Etrurians and other barbarous people (Graeci, qui in arena, popula spectantes, pro seimmers). They are said to have been first exhibited by the Etrurians, and to have had their origin from the custom of killing slaves and captives at the funeral pyres of the deceased. (Vid. BUSTM, FONUS, p. 490.) A show of gladiators was called munus, and the person who exhibited (edesbat) it, editor, manufer, or minister of the gladiators, was honoured during the day of exhibition, if a private person, with the official signs of a magistrate.

Gladiators were first exhibited at Rome in B.C. 264, in the Forum Boarium, by Marcus and Decimus Brutus, at the funeral of their father. They were at first confined to public funerals, but afterward fought at the funerals of those who had attained a certain influence, and even at those of women. Private persons sometimes left a sum of money in their will to pay the expenses of such an exhibition at their funerals. Combats of gladiators were also exhibited at entertainments, and especially at public festivals by the adiles and other magistrates, who sometimes exhibited immense numbers with the assistance of the people, and who held the power of granting shows as an exercise of popular rights. (Vid. BUSTM, p. 196.) Under the Empire, the passion of the Romans for this amusement rose to its greatest height, and the number of gladiators who fought on some occasions appears almost incredible. After Trajan's triumph over the Dacians, there were more than 10,000 exhibitors.

Gladiators consisted either of captives, slaves, condemned malefactors, or of freeborn citizens who fought voluntarily. Of those who were condemned, some were said to be condemned ad gladium, in which case they were obliged to be killed at least within a year; and others ad ludum, who might obtain their discharge at the end of three years. Freemen, who became gladiators for hire, were called auctorati, and their hired auctorummentum or gladiatorium. They also took an oath upon entering upon the service, which is preserved by Petronius: "In verba Eumolpi sacramentum juravimus, uiri, vincari, verberari, ferroque necari, et quicquid alius Eumolpus juraisset, tamquam legism.—Coll. in gladiatorum auctoritate." Even under the Republic freeborn citizens fought as gladiators, but they appear to have belonged only to the lower orders. Under the Empire, however, both knights and senators fought in the arena, and even women; which practice was at length forbidden in the time of Severus.

Gladiators were kept in schools (bursa), where they were trained by persons called lanista. The whole body of gladiators under one lanista was frequently called famulis. They sometimes were the property of the lanista, who let them out to persons who wished to exhibit a show of gladiators;

GINNUS

Restrains imposed upon the assembly, the extensive powers of the councillors, their election for life, their irresponsibility, the absence of written laws, of paid offices, of offices determined by lot, and other things thought by the Greeks characteristic of a democracy. Independent of other views, we must remark, that Sparta was at the head of the oligarchical interest in Greece, and always supported, as at Corycyra and Argos, the oligarchical party in opposition to the democratic, which was aided by Athens. In fact, Dr. Arnold himself observes, that even in the relations of the conquering people among themselves, the constitution was far less popular than that of Sparta. He says that the constitution, as settled by Lycurgus, was completely altered in feature by the usurpation of the ephors. To such an extent was this the case, that Plato doubted whether the government at Sparta might not be called a "tyranny," in consequence of the extensive powers of the ephory, though it was as much like a democracy as any form of government could well be; and yet, he adds, not to call it an aristocracy (i. e., a government of the αριστοκρατία) is quite absurd. Moreover, Aristotle, when he enumerates the reasons why the Spartan government was called an oligarchy, makes no mention of the relations between the Spartans and their conquered subjects, but observes that it received from the aid of some of the most powerful oligarchical institutions, such as that of none of the magistrates were chosen by lot; that a few persons were competent to inflict banishment and death.

Perhaps the shortest and most accurate description of the constitution of Sparta is contained in the following observations of Aristotle: "Some affirm that the constitution of government in Sparta is mixed of all the forms, whereas they praise the Spartan constitution; for some say that it is composed of an oligarchy, and a monarchy, and a democracy: a monarchy on account of the kings, an oligarchy on account of the councillors, and a democracy on account of the ephors; but others say that the oligarchy is a "tyranny," whereas, on the other hand, the public tables and the regulations of daily life are of a democratic tendency."

GERRA. (Vid. Ecclesia, p. 385.)

*GETEUM (γήτειον), also called Cethyos (γήθυς), a plant to be referred to the genus Althum, or Garlic, but the particular species of which cannot be determined. (Vid. DEEUM, p. 385.)

*GETYLLIS (γητύλλις), most probably the same as the preceding.

*GEUM, the herb Avens or Bennet, the Caryophyllata vulgaris, L. The French term is Benette, the German Bénetütz. It grows in shady, woody grounds. The root is bitter and aromatic, and was prescribed by the ancient physicians not only in affections of the breast and side, but also in cases of dyspepsia.

*GINGDIIUM (γιγνίδιον), according to Kellius and Stephens, a species of Chervil. This opinion, however, is controverted by Matthiolas and Bahnin. Adams makes it the Daucus Gingildium, a variety of the Daucus Carota, or wild Carrot. We must, however, suspect this to be an error."

*GINNUS or HINNUS (γινος, ινος). Buffon remarks, that Aristotle applies the term γινος in two senses: first, to denote an imperfect animal, proceeding sometimes from the horse and ass; and, secondly, to signify the particular production of the great mule and the mule. Aristotle, therefore, was aware of the fact that the mule can sometimes propagate its species.

476
**GLADIATORES.**

Showed gladiators were abolished by Constantine, but appear, notwithstanding, to have been generally exhibited till the time of Honorius, by whom they are first mentioned in 392.

Gladiators were divided into different classes, according to their arms and different modes of fighting, or other circumstances. The name of the most important of these classes is given in alphabetical order:

1. *Andabata* wore helmets without any aperture for the eyes, so that they were obliged to fight blindfold, and thus excite the horror of the spectators. Some modern writers say that they fought on horse back, but this is denied by Orelli.

2. *Caterwari* was the name given to gladiators when they did not fight in pairs, but when several fought together.

3. *Dimacheri* appear to have been so called, because they fought with two swords.

4. *Equites* were those who fought on horseback.

5. *Esquarari* fought from chariots like the Gauls and Britons. (Vid. *Esquarari*.) They are frequently mentioned in inscriptions.

6. *Fiscales* were those, under the Empire, who were trained and supported from the fiscus.

7. *Hoplomachi* appear to have been those who fought in a complete suit of armour.

8. *Lagocatares* were those who used a noose to catch their adversaries.

9. *Meridiani* were those who fought in the middle of the day, after combats with wild beasts had taken place in the morning. These gladiators were very slightly armed.

10. *Mirmilones* are said to have been so called from the shape of the image of a fish (mirmys, μηρμύς) on their helmets. Their arms were like those of the Gauls, whence we find that they were also called Galli. They were usually matched with the retiares or Thracians.

11. *Ordinarii* was the name applied to all the regular gladiators, who fought in pairs, in the ordinary way.

12. *Postulatios* were such as were demanded by the people from the editor, in addition to those who were exhibited.

13. *Provocatores* fought with the Samnites, but we do not know anything respecting them except their name. They are mentioned in inscriptions.*

14. *Ratari* carried only a three-pointed lance, called *tridentes* or *fuscicata* (vid. *Fuscicata*), and a net (*rete*), which they endeavoured to throw over their adversaries, and then to attack them with the fuscina while they were entangled. The retarius was dressed in a short tunic, and wore nothing on his head. If he missed his aim in throwing the net, he betook himself to flight, and endeavoured to prepare his net for a second cast, while his adversary followed round him in order to kill him before he could make a second attack. His adversary was usually a secutor or a mirmillo.

In the following

---

GLADIATORES.

woe-leut, taken from Winckelmann, a combat is represented between a retiarius and a mirrillo; the former has thrown his net over the head of the latter, and is proceeding to attack him with the fasci-na. The lanista stands behind the retiarius.

Samnites were so called because they were armed in the same way as that people, and were particularly distinguished by the oblong scutum. Secutores are supposed by some writers to be so called, because the secutor, in his combat with the retiarius, pursued the latter when he failed in securing him by his net. Other writers think that they were the same as the suppositori, mentioned by Martial, who were gladiators substituted in the place of those who were weary or were killed. If the old reading in a letter of Cicero's is correct, Julius Caesar had no less than 500 secutores in his ludus at Capua; but it appears probable that we ought to read securitorum instead of securorum.

Suppositori. (Vid. Secutores.)

Thracian or Thracis were armed, like the Thrae-clans, with a round shield or buckler, and a short sword or dagger (sica'), which is called faix supina by Juvenal. They were usually matched, as already stated, with the mirrillones. The preceding woodcut, taken from Winckelmann, represents a combat between two Thracians. A lanista stands behind each.

Paintings of gladiatorial combats, as well as of the other sports of the amphitheatre, were favourite subjects with the Roman artists. Several statues of gladiators have come down to us, which are highly admired as works of art: of these, the most celebrated is the gladiator of the Borghese collection, now in the Louvre, and called gladiator, as it is called, in the Capitoline Museum. Gladiatorial combats are represented in the bas-reliefs on the tomb of Scaurus at Pompeii, and illustrate in many particulars the brief account which has been given in this article of the several classes of gladiators. These bas-reliefs are represented in the following woodcuts from Mazois. The figures are made of stucco, and appear to have been moulded separately, and attached to the plaster by pegs of bronze or iron. In various parts of the frieze are written the name of the person to whom the gladiators belonged, and also the names of the gladiators themselves, and the number of their victories. The first pair of gladiators on the left hand represents an equestrian combat. Both wear helmets with viles, which cover the whole face, and are armed with spears and round bucklers. In the second pair, the gladiator on the left has been wounded; he has let fall his shield, and is imploring the mercy of the people by raising his hand towards them. His antagonist stands behind him, waiting the signal of the people. In the other gladiators represented on the frieze, they wear the subligaculum, or short apron fixed above the hips. The one on the left appears to be a mirrillo, and the one on the right, with an oblong shield (securum), a Samnite. The third pair consists of a Thracian and a mirrillo, the latter of whom is defeated. The fourth group consists of four figures; two are secutores and two retiarii. The secutor on his knee appears to have been defeated by the retiarius behind him, but as thefuscina is not adapted for producing certain death, the other secutor is called upon to do it. The retiarius in the distance is probably destined to fight in his turn with the surviving secutor. The last group consists of a mirrillo and a Samnite the latter is defeated.

In the next woodcut two combats are represented. In the first a Samnite has been conquered
by a mirrillo; the former is holding up his hand to the people to implore merely, while the latter apparently wishes to strike his opponent before giving the signal to the people, but the lanista holds him back. In the other combat a mirrillo is mortally wounded by a Samnite.

It will be observed that the right arm of every figure is protected by armour, which the left does not require, on account of the shield. (Vid. Best. Mag. Vol. vi., p. 11.)

GLAECION (γλάέκιον ουδέ θαλακαίον). Corn-flag or Sedge-grass. Gaza, in his version of Theophrastus, renders the Greek term by enesis. The people of Zante call it, at the present day, άγκροκόκορας; the rest of the modern Greeks, σταθύκοτον. Sibthorp found a variety, which he names G. tripthylus. The botanical name for the Gladiolus of the ancients is G. communis or vulgaris. This is found in the fields of the Ειγειαν islands at the beginning of spring.

GLADIUS (γλάδιος, poet. άγκρα, φλαγαών), a Sword or Glaive, by the Latin poets called enesis. The ancient sword had generally a straight, two-edged blade (άγκρας), rather broad, and nearly of equal width from hilt to point. Gladiators, however, used a sword which was curved like a cimeter. In times of the remotest antiquity swords were made of bronze, but afterward of iron. The Greeks, Romans, and Hebrews wore them on their offensive weapons (Virg., G. 93; woodcut, p. 597), so as to draw them out of the sheath (regina, κόλος) by passing the right hand in front of the body to take hold of the hilt with the thumb next to the blade. Hence ἐσχύλιος distinguishes the army of Άρης by the denomination of μαχαιροφόροι ένθρος, alluding to the obvious difference in their appearance in consequence of the use of hilted weapons. (Erostratus, ii., 14.)

The early Greeks used a very short sword. (Vid. woodcut, p. 94.) Iphicrates, who made various improvements in armour about 400 B.C., doubled its length, so that an iron sword found in a tomb at Athens, and represented by Dodwell, was two feet five inches long, including the handle, which was also of iron. The Roman sword, as was the case also with their other offensive weapons, was larger, heavier, and more formidable than the Greek. Its length gave occasion to the joke of Lentulus upon his son-in-law, who was of very low stature, "Who tied my son-in-law to his sword!" To this Roman sword the Greeks applied the term σαπηνῆς, which was the name of a piece of wood of the same form used in weaving. (Vid. Tull.) The British glaive was still larger than the Roman. In a monument found in London, and preserved at Oxford, the glaive is represented between three and four feet long.

The principal ornament of the sword was bestowed upon the hilt. (Vid. Capit.)

Gladius was sometimes used in a wide sense, so as to include the Pseudo-Gladius.

GLANCES. (Vid. Funda.)

*GLANS.* This term, observes Martyn, "seems to have been used by the Romans in the same sense that we employ the word Mast, namely, to indicate the fruit of the beech, oak, or other forest-trees. Thus the fruit of the beech is called glans by Pliny, *fagi glani, nuclei similes.* But, strictly speaking, it means only such fruits as contain but one seed, which is covered in the lower part with a husk, and is naked at the upper part, thus the fruit of an oak, which we commonly call an acorn, is properly a glane. *'Glandem,' says Pliny, 'qua proprie intelligetur, furunt robur, quercu, asculu, cerru, iles, suber.'"

*GLASTUM (γλαστός), Wood, or Ictis tinctura, long celebrated for producing a dye of a beautiful blue colour. The ancient Britons, according to Caesar and other writers, stained their bodies with the juice of this plant, which, according to Pliny, extended even to females. Two kinds of Ictis are mentioned by the ancient writers; the domesticated, or sativa, the same with the I. tinctoria, and the wild, or ύπαλα, corresponding to the I. luzitaniae."

*GLAUCIUM (γλαυκόν), the Horned Poppy, named by Bauhin Papaver coniunctum, and by many more modern botanists, Glaucium corniculatum, Curt. Sibthorp found it growing abundantly along the sandy shores of Greece."

*GLAUCUS (γλαύκος), the blue Shark, or *Stomia Glaucus,* called in French Le Chien de Mer. Αιλιν describes the paternal care of this fish for its offspring in guarding it against dangerous foes; τα πίδακα θέλεϊν γλαυκόν άλον κόταν κατά μνήμη."

*GLAUX (γλαύξ)," says the Strix Bufo, L. known by the English name of Eagle Owl, Great Owl, and Great Horned Owl. The ερώς is the Strix Otus, or Horned Owl. The αίγολος of Aristot. may be conjectured to be the Strix nyctea, or Great White Owl." Dodwell, speaking of the owls in modern Greece, observes, *There are many varieties of owls at Athens; the most common is the Strix passerina, which is very small and tame, and is the same that is represented on Athenian coins. For the rest their variety is very great. They have a peculiar note, of which their Greek name, Κοκκώλας, is perfectly expressive, and to which that circumstance has given rise, since the euckoo has received its appellation from a similar resemblance. It is a singular circumstance, that the Athenians are pleased with seeing the bird of Minerva perched upon their houses. In all other countries it is supposed as an ancient portent calamity and death." The selection of the owl as the emblem of Minerva originated, as is thought, from the circumstance of this bird's having a particular air of intelligence, owing to the elevation of the facial line."

*II. a plant, which dugus and Bauhin are inclined to refer to a species of Polygala, or Milkwort; but Sprengel follows Clusius in holding it to be the Astragrus Glarum, the English name of the Astragalis in Milk-vetch.

*GLECHON (γλέχων), the Mentha pulegium, or Pennyroyal. Apuleius says, *Græci Blechon, ati Glecbon, et Latini Pulegium.* The former of these two Greek expressions, namely, Blechon (βλεχω), of which the other (Glechon) is merely a diacritic variation, comes, according to the ancient writers, from βλάχων, bleeding, because the plant, when cut and kept together, makes them bleed. The Latin name pulegium was given to it because it was believed to kill flies (pulices) by its odor. Two kinds of pulegium are mentioned by the ancients, the domesticated (satomium) and wild (sylvestre). Pliny gives a long enumeration of its medical properties, and often the saying of Varro, that a crown of Pennyroyal was more fit to adorn an apartment than one of roses. The same writer distinguishes also between the male and female plant.
gree of the people which were made during the time of his office, and to deliver to the thesauri the decrees of the senate. Demosthenes, in another place, says that trials of public documents, which were deposited in the Metron, were in the keeping of a public slave; whence we must suppose, with Schömann, that this servant, whose office was probably for life, was under the γραμματεὺς, and was his assistant. Previous to the archonship of Eucleides, the name of this scribe was attached to the archonship, as if the name of the γραμματεὺς who officiated during the administration of the first prytany in a year was that of the archon eponymus, used to designate the year.

The second γραμματεὺς was elected by the senate by χρυσοτιμία, and was intrusted with the custody of the laws (ἐπὶ τῶν νόμων). His usual name was χρυσοτιμίας, and the principal part of his office was to read any laws or documents which were required to be read in the assembly or in the senate.

A class of scribes inferior to these were those persons who were appointed clerks to the several civil or military officers of the state, or who served any of the three γραμματεῖα mentioned above as under-clerks (ὑπογραμματεῖα). These persons were either public slaves or citizens who served in the armies, who kept the control of the expenditure of the sacred money, &c.13 The higher class of ἀντιγραφές, on the other hand, were public officers. Their number was, according to Harpocrates, only two, the ἀντιγραφὴς of the δουκείας, and the ἀντιγραφὴς of the βούλης. The office of the former was to control the accounts of the state, and to deposi-7 τειχῶν; the latter was always present at the meetings of the senate, and recorded the accounts of money which was paid into the senate.14 He had also to lay the account of the public revenue before the people in every prytany, so that he was a check upon the ἀντιγραφή. He was at first elected by the people by χρυσοτιμία, but was afterward appointed by lot.15

The great number of clerks and counter-clerks in Athens was a necessary consequence of the insti-10 tution of the ἐπώνυμος, which could not otherwise have been carried into effect.16

GRAPhIE (γραφεῖα), in its most general acceptance, comprehends all state trials and civil proceedings whatever in the Attic courts; but in its more limited sense, those only which were not dis-
facto to a fine of a thousand drachmae. The same
sum was also forfeited when the prosecutor failed
to obtain the voices of a fifth of the dicasts in all ca-
ses except those brought before the archon that he
had reference to injury (κινήσεις) done to women or or-
phans; and besides this penalty, a modified disfear
ishment, as for, in capacity to bring
a similar accusation, was incurred upon several oc-
casions.
Upon the conviction of the accused, if the
sentence were death, the presiding magistrate of
the court delivered the prisoner, who remained in
the custody of the Scythe during the trial, to the
Eleven, whose business it was to execute judgment
upon him. (Vid. Eleven, Th.).
If the punishment
were confiscation of property, the demarchs made
an inventory of the effects of the criminal, which
was read in the assembly of the people, and deliv-
ered to the poteleis, that they might make a sale
of the goods, and pay in the proceeds to the public
treasury.

GREGORIANUS CODEX. (Vid. Codex Gra-
orianus.)

GROSFOS (γρόσος). (Vid. Hast.)

GUBERNA/CULUM, ant. GUBERNUN (γο-
βερνος), a Rudder. Before the invention of the rudder,
which Flinius ascribes to Tiphys, the pilot of the
ship Argo, vessels were both propelled and guided
by oars alone. This circumstance may account
for the form of the ancient rudder, as well as for
the mode of using it. It was like an oar with a very
broad blade, and was commonly placed on each side
of the stern, not at its extremity. The annexed
woodcut represents examples of its appearance as it
is frequently exhibited on coins, gems, and other
works of art. The figure in the centre is one of
Bartoli's lamp, and displays a Triton blowing the
Buccina, and holding a rudder over his should-
er in his left hand. The first figure in the same
woodcut is from a cameo in the Stosch collection. It
represents a rudder with its helm or tiller (vid. Anas.
Claves) crossed by the cornucopia. These two em-
blems of abundance and success are often found to-
gether, especially in representations of Fortune. It
is the third figure, taken from another cameo in the
same collection. Venus leans with her left arm upon
a rudder, which indicates her origin from the sea.

The usual position of the rudder at the side of
the stern is seen in the woodcuts at p. 58, 62, 69.

The gubernaculum was managed by the guberna-
tor (κυβερνάτορ), who is also called the rector, as
distinguished from the magister, and by the Greek
poets oikodrōn and oikowdrōn, because he tends
and directs the helm.

1. (Meier, Att. Proc., 355.)—2. (Meier, Att. Proc., 740, &c
11. (Pto. V., 22, &c.—Sparte, v. vii., p. 646, ed. Reiske.—Gen.,
12. (Hesych., Sept. v. Theb., 3.)

Distinguished as the kíropos in behalf of the aggrieved woman,
minor, or slave; his prōxestēs probably gave some assistance
to the resident alien in the commencement
of proceedings, though the accusation was,
in the name of the person aggrieved, who also made
his appearance at the trial without the intervention
of the patron; and a complete foreigner would
upon this occasion require the same or a still far-
ther protection from the proxens of his country.
With the exception of cases in which the apoge,
ephesis enekistis, or ciasangela was adopted, in
the first three of which an arrest actually did
and in the last might take place, and accusations at the
ute, and ciasangela, when the accused was,
or was supposed by the law to be present, a public
action against a citizen commenced, like an ordi-
ary lawsuit, with a summons to appear before the
proper magistrate on a fixed day. The
anasis
then followed (vid. Anacrisi); but the bill of ac-
cussion was called a γροσ or φεύσω, as the ease
might be, and not an ἐνοχή or ἐφέσω; as in pri-
ate actions; neither could a public prosecution
be referred to an arbitrator (vid. DIASTEME); and if it
were compromised, would in many cases render the
issue liable to an action καθυστερος, if not ipso
A ship had sometimes one, but more commonly two rudders; and they were distinguished as the right and the left rudder (δεστρα, σατεστρα). In the case of the Athenian trireme, the oarsmen and soldiers already referred to, who held the rudder in their left hand, the right rudder, or rather the boat rudder, which was equally important, remained in force, a modern traveller was nearly shipwrecked because the rudders were in the hands of two pilots who spoke different languages. To obviate such disasters among the ancients, the same steersman held both tillers, if the boat was small, as is clearly shown in the representation of one on a lamp.1 In large ships the extremities of one tiller being joined by a boat rudder, the tiller was moved by one man, and kept the rudders always parallel. This construction is seen in the model of a ship which is preserved in the collection of Egyptian antiquities at Berlin, and which was discovered in the tomb of a priest. The contrivances for attaching the two rudders to one another, and to the sides of the ship, in the ancient age naturally conformed.2

Ships constructed with a double prow and stern (vid. Ἀμφυττόμνοι Νέας) had two rudders at each end.3 In the great ship built at Alexandria by Ptolemy Philopator, the four rudders were each thirty cubits in length.4

**Gubernator.** (Vid. Gubernaculum.)

**Guttus.** (Vid. Bath, p. 151.)

**Gymnasiarcheis.** (Vid. Gymnasion.)

**Gymnasia.** (Vid. Gymnasia.)

**Gymnasia (γυμνασία).** The whole education of a Greek youth was divided into three parts, grammar, music, and gymnastics (γυμναστική, μουσική, κ. α.), to which Aristotle adds a fourth, the art of drawing or painting. Gymnastics, however, were thought by the ancients a matter of such importance, that this part of education alone occupied as much time and attention as all the others put together; and while the latter necessarily ceased at a certain period of life, gymnastics continued to be cultivated by persons of all ages, though more gracefully and less fatiguing exercises than boys and youths.5 The ancients, and more especially the Greeks, seem to have been thoroughly convinced that the mind could not possibly be in a healthy state unless the body was likewise in perfect health, and no means were thought, either by philosophers or physicians, to be more efficacious in preserving the health of the mind than well-regulated exercise. The word gymnastics is derived from γυμνός (naked), because the persons who performed their exercises in public or private gymnasia were either entirely naked, or merely covered by the short χιτών.6

The great partiality of the Greeks for gymnastic exercise was productive of infinite good: they gave to the body that healthy and beautiful development by which the Greeks excelled all other nations, and which, at the same time, impeded to their minds that power and elasticity which will ever be admired in all their productions.7 The plastic art, in particular, must have found its first and chief honours in the gymnastic and athletic performances; and it may be justly observed, that the Greeks would never have attained their pre-emience in sculpture had not their gymnastic and athletic exhibitions made the artists familiar with the beautiful forms of the human body and its various attitudes. Respecting the advantages of gymnastics in a medical point of view some remarks are made at the end of this article. But we must, at the same time, confess, that at a later period of Greek history, when the gymnasium had become a place of resort for idle loungers, their evil effects were not less striking. The chief objects for which they had originally been instituted were gradually lost sight of; and instead of being places of education and training, they became mere places of amusement.

Gymnastics, in the widest sense of the word, comprehended all those athletic exercises connected with the agonistic and gymnastic contests, (γυμναστική and ἄγονοντα,) that is, the art of those who contended for the prizes at the great public games in Greece, and of those who made gymnastic performances their profession. (Vid. Athletēs and Αγονοντατης.) Both originated in the gymnasium, in as far as the athlete, as well as the agonist, were originally trained in them. The athlete, however, story how they were, as might be supposed, unconnected with the gymnasia; while the gymnasia, at the time when they had degenerated, were in reality little more than agonistic schools, attended by numbers of spectators. On certain occasions, the most distinguished pupils of the gymnasium were selected for the exhibition of public contests (see vid. gymnastics). There was, however, there was always a closer connexion between the gymnastic and agonistic than between the gymnastic and athletic arts. In a narrower sense, however, the gymnasia had, with very few exceptions, nothing to do with the public contests, and were places of exercise for the purpose of strengthening and improving the body. Those, therefore, who did not go to gymnasia for physical education and training; and it is chiefly in this point of view that we shall consider them in this article.

Gymnastic exercises among the Greeks seem to have been as old as the Greek nation itself, as may be inferred from the fact that gymnastic contests are mentioned in many of the earliest legends of the Greeks. Thus, Solon, in one of his laws, 8 which, however, are merely supposed, of a rude and mostly of a warlike character. They were generally held in the open air, and it prone near a river, which afforded an opportunity for swimming and bathing. The Attic legends, indeed, referred the regulation of gymnastics to Theseus; and, according to Plato, it seems to have been about the time of Cretan. It appears, however, that the exercises were reduced to a regular and complete system. Great progress, however, must have been made as early as the time of Solon, as appears from some of his laws which are mentioned below. It was about the same period that the Greek towns began to build their regular gymnasia as places of exercise for the young, with baths, and other conveniences for philosophers and all persons who sought intellectual amusements. There was probably no Greek town of any importance which did not possess its gymnasia. In many places, such as Ephesus, Hierapolis, and Alexandria in Troas, the remains of the ancient gymnasium have been discovered in modern times. Of the three great gymnasia, the Lyceum (Ἀλεξανδρεία), Cynosarges (Κυνοσαργής), and the Academia (Ακαδήμης); to which, in later times, several smaller ones were added. All buildings of this kind were, on the whole, built on the same plan, though from the remains, as well as from the descriptions still extant, we must infer that there were many differences in their detail. The most complete description of a gymnasia which we possess is that given by Vitruvius,9 which, however, is very obscure, and at the same time defective, in as far as many parts which seem to have been essential to a gymnasia are not mentioned in it. Among the numerous plans which have been

1-2. (Paus., i., 30, 18.)—2. (Paus., 11.)
The peristyle (D) in a gymnasium, which Vitruvius incorrectly calls palestra, are placed in the form of a square or oblong, and have two stadia (1500 feet) in circumference. They consist of four porticoes. In three of them (A B C), spacious exer-
drare, with seats, were erected, in which philosophers, rhetoricians, and others, who delighted in intellectu-
side, conversation, might assemble. A fourth portico (E), towards the south, was double, so that the interior walk was not exposed to bad weather.

The double portico contained the following apartments: The Ephebium (F), a spacious hall with seats, is in the middle, and by one third longer than breadth. On the right is the Coryceum (G), perhaps the same room which in other cases was called Apodyterium; then came the Conisterum (H), ad-
joining; and next to the Conisterum, in the return of the portico, is the cold bath, λαονος (I). On the left of the Ephebium is the Elseoeismus, where persons were anointed by the alipstes (K). Adjoining the Elseoeismus is the Frigidarium (L), the object of which is unknown. From thence is the entrance to the Propinicum (M), on the returns of the portico; near which, but more inward, be-
hind the place of the frigidarium, is the vaulted sudatory (N), in length twice its breadth, which has on the return the Lacoicum (O) on one side, and opposite the Lacoicum, the hot bath (F). On the outside three porticoes are built: one (Q) in passing out from the peristyle, and on the right and left the two stadal porticoes (R S), of which the one (S) that faces the north is made double and of great breadth, the other (R) is single, and so designed that in the parts which encircle the walls, and which adjoin to the columns, there may be margins for paths not less than ten feet; and the middle is so excavated that there may be two steps, a foot and a half in descent, to go from the margin to the plane (R), which plane should not be less in breadth than 12 feet; by this means, those who walk about the margins in their apparel will not be annoyed by those who are exercising themselves. This portico is called by the Greeks ἑυστρος, because in the winter season the athlete exercised themselves in these covered stadia. The ἑυστρος had groves or planta-
tions between the two porticoes, and walks between the trees, with seats of signe work. Adjoining to

The peristyle (D) in a gymnasium, which Vitruvius incorrectly calls palestra, are placed in the form of a square or oblong, and have two stadia (1500 feet) in circumference. The double portico contained the following apartments: The Ephebium (F), a spacious hall with seats, is in the middle, and by one third longer than breadth. On the right is the Coryceum (G), perhaps the same room which in other cases was called Apodyterium; then came the Conisterum (H), adjoining; and next to the Conisterum, in the return of the portico, is the cold bath, λαονος (I). On the left of the Ephebium is the Elseoeismus, where persons were anointed by the alipstes (K). Adjoining the Elseoeismus is the Frigidarium (L), the object of which is unknown. From thence is the entrance to the Propinicum (M), on the returns of the portico; near which, but more inward, behind the place of the frigidarium, is the vaulted sudatory (N), in length twice its breadth, which has on the return the Lacoicum (O) on one side, and opposite the Lacoicum, the hot bath (F). On the outside three porticoes are built: one (Q) in passing out from the peristyle, and on the right and left the two stadal porticoes (R S), of which the one (S) that faces the north is made double and of great breadth, the other (R) is single, and so designed that in the parts which encircle the walls, and which adjoin to the columns, there may be margins for paths not less than ten feet; and the middle is so excavated that there may be two steps, a foot and a half in descent, to go from the margin to the plane (R), which plane should not be less in breadth than 12 feet; by this means, those who walk about the margins in their apparel will not be annoyed by those who are exercising themselves. This portico is called by the Greeks ἑυστρος, because in the winter season the athlete exercised themselves in these covered stadia. The ἑυστρος had groves or plantations between the two porticoes, and walks between the trees, with seats of signe work. Adjoining to

The peristyle (D) in a gymnasium, which Vitruvius incorrectly calls palestra, are placed in the form of a square or oblong, and have two stadia (1500 feet) in circumference. They consist of four porticoes. In three of them (A B C), spacious exerdare, with seats, were erected, in which philosophers, rhetoricians, and others, who delighted in intellectual conversation, might assemble. A fourth portico (E), towards the south, was double, so that the interior walk was not exposed to bad weather. The double portico contained the following apartments: The Ephebium (F), a spacious hall with seats, is in the middle, and by one third longer than breadth. On the right is the Coryceum (G), perhaps the same room which in other cases was called Apodyterium; then came the Conisterum (H), adjoining; and next to the Conisterum, in the return of the portico, is the cold bath, λαονος (I). On the left of the Ephebium is the Elseoeismus, where persons were anointed by the alipstes (K). Adjoining the Elseoeismus is the Frigidarium (L), the object of which is unknown. From thence is the entrance to the Propinicum (M), on the returns of the portico; near which, but more inward, behind the place of the frigidarium, is the vaulted sudatory (N), in length twice its breadth, which has on the return the Lacoicum (O) on one side, and opposite the Lacoicum, the hot bath (F). On the outside three porticoes are built: one (Q) in passing out from the peristyle, and on the right and left the two stadal porticoes (R S), of which the one (S) that faces the north is made double and of great breadth, the other (R) is single, and so designed that in the parts which encircle the walls, and which adjoin to the columns, there may be margins for paths not less than ten feet; and the middle is so excavated that there may be two steps, a foot and a half in descent, to go from the margin to the plane (R), which plane should not be less in breadth than 12 feet; by this means, those who walk about the margins in their apparel will not be annoyed by those who are exercising themselves. This portico is called by the Greeks ἑυστρος, because in the winter season the athlete exercised themselves in these covered stadia. The ἑυστρος had groves or plantations between the two porticoes, and walks between the trees, with seats of signe work. Adjoining to
In his legislation thought them worthy of great attention; and the transgression of some of his laws relating to the gymnasia was punished with death. His laws mention a magistrate, called the gymnasiarch (γυμνασιάρχης or γυμνασιαρός), who was in-trusted with the management of a gymnasi-on, and with everything connected therewith. His office was one of the regular liturgies, like the cho-riegia and tricarachy; and he was attended with considerable expense. He had to maintain and pay the persons who were preparing themselves for the games and contests in the public festivals, to pro-vide them with oil, and perhaps with the wrestlers' dust; he was also empowered to direct the games in the gym-nasium, or the place where the agones took place. The gymnasiarch was a real magistrate, and in-vested with a kind of jurisdiction over all those who wished or were connected with the gymna-sias; and his power seems even to have extended beyond the gymnasium, for Plutarch states that he warded and controlled the conduct of the epheb in general. He had also the power to remove from the gymnasia teachers, philosophers, and sophists, whenever he conceived that they exercised an in-jurious influence upon the young. Another part of his duties was to conduct the solemn games at certain great festivals, especially the torch-race (λαμπροδρόμιον) he seems to have been dis-tinguishe on the ephebi of the gymnasia. The number of gymnasias was, according to Libani-us on Damasthenes, ten, one from every tribe. They seem to have undertaken their official duties in turn, but in what manner is unknown. Among the external distinctions of a gymnasiarch were a purple cloak and white shoes. In early times the office of gymnasiarch lasted for a year, but under the Roman emperors we find that sometimes they held it only for a month, so that there were 12 or 13 gymnasiarchs in one year. This office seems to have been considered so great an honour, that even Roman Emperors and emperors were ambitious to hold it. Other Greek towns had, like Athens, their own gymnasiarchs, but we do not know whether or to what extent, their duties differed from the Athenian gymnasiarch. In Cyrene the office was sometimes held by women.

Another office which was formerly believed to be connected with the superintendence of the gymna-sia is that of the ephebarch (ἐπεθηβάρχης). It is not mentioned previous to the time of the Roman em-pers, and then only in Italy and Crete. Kranes has shown that this office had nothing to do with the gymnasia properly so called, but was only con-nected with the schools of the athlete.

An office which is likewise not mentioned before the time of the Roman emperors, but was, never-theless, distinctly connected with the gymnasia, is that of Cosmetics. He had to arrange certain games, to register the names, and keep the lists of the ephebi, and to maintain order and discipline among them. He was assisted by an anticosmetes and two hyposcosmetes.  

An office of very great importance, in an educa-tional point of view, was that of the sophontes (σοφοντής). Their province was to inspice with a view of σωφρόνησιν, and to protect this virtue against all injurious influences. In early times their number at Athens was ten, one from every tribe, with a salary of one drachma per day. Their duty not only required them to be present at all the games of the ephebi, but to watch and correct their conduct wherever they might meet them, both within and without the gymnasia. At the time of the Emperor Marcus Aurelius, only six sophontes, assisted by as many hyposophontes, are mentioned.

The instructions in the gymnasia were given by the gymnasiarch (γυμνασιάρχης) and the pedotribes (παδο-τριβης); at a later period hypopedotribes were added. The pedotribes were required to possess a knowledge of all the various exercises which were performed in the gymnasia; the gymnasiarch was the practical teacher, and was expected to know the physiological effects and influences on the constitut-ions of the body, while the pedotribes were supposed to know those exercises which he thought most suit-able. These teachers were usually athletes who had left their profession, or could not succeed in it.

The anointing of the bodies of the youths, and strewing them with dust, before they commenced their exercises, as well as the regulation of their diet, was the duty of the altiputs. These men sometimes also acted as surgeons to the teachers. Galen mentions, among the gymnastic teachers, a σωφρονιστής, or teacher of the various games at ball; and it is not improbable that in some cases particular games may have been taught by separate persons.

The times and exercises which were performed in the gymnasia seem, on the whole, to have been the same throughout Greece. Among the Dorian, however, they were regarded chiefly as institutions for hardening the body and for military training, among the Ionians, and especially the Athenians, they had an additional and higher object, namely, to give to the body and its movements grace and beauty, and to make it the basis of a healthy and sound mind. But among all the different tribes of the Greeks, the exercises which were carried on in a Greek gymnasia were either mere games, or the more important exercises which the gymnasia had in common with the public agones in the great festivals.

Among the former we may mention. 1. The ball (σφαίρα, σφαιραμία, &c.), which was in univers-al favour with the Greeks, and was here, as at Rome, played in a variety of ways, as appears from the words ἄθλος, ἀθλον, σφαιρα, σφαιράς, &c. Every gymnasia contained one large room reserved for the playing at ball; it was called the σφαιροτάτον.  

Πάλλεια, πράσινος, καθήμενος, δίκαιον ή δια γραμμής, was a game in which one boy, holding one end of a rope, tried to pull the boy who held its other end across a line marked between them on the ground. 3. The top (βελόνα, βελονία, ρόδος, στροφόλος), which was as common an amusement with Greek boys as in our own days. 4. The παιδαλλός, which was a game with five stones, which were thrown up from the upper part of the hand and caught in the palm. 5. Σκαλίστρον, which was a game in which a rope was drawn across the upper part of a tree or a post. Two boys, one on each side of the post, turning their backs towards one another, took hold of the ends of the rope and tried to pull each other up. This sport was also one of the amusements at the Attic Dionysia. These few games will suffice to show the character of the gymnastic sports.

The more important games, such as running (δρόμος), throwing of the discus and the κίρκον, jumping and leaping (άληθα, with and without δροντα), wrestling (πολίενν), boxing (γονίμον), the pancratium (πάνκρατιν)
GYMNASIUM.

1. The science of gymnastics was known to the ancients before the Roman era. It was a popular form of exercise and sport in ancient Greece. The Romans adopted and expanded upon this practice, making the gymnasiu.s an integral part of their cultural and physical development. Physical fitness was considered an essential component of a citizen's life, and the gymnasium served as a hub for physical training and education.

2. The gymnasiu.s was not just for the strong and fit, but for all citizens, regardless of gender. It was a place where men could meet, socialize, and engage in physical activity. The gymnasium was also used for important social and political gatherings, reflecting its importance in the daily lives of the Romans.

3. The Romans built gymnasiums throughout their empire, from the smaller baths for personal use to larger, more public structures. These structures were often extravagant, with luxurious facilities such as swimming pools, saunas, and libraries. The gymnasium was a symbol of Roman power and wealth.

4. The Romans also exported the gymnasium concept to their colonies and other parts of the Roman Empire. This spread of gymnastic culture helped to spread Roman values and ideas, contributing to the unification and cultural homogenization of the empire.

5. The gymnasiu.s played a significant role in Roman culture and society. It was a place for physical activity, education, and social interaction, and its influence can be seen in various aspects of Roman life, from sports to architecture to political gatherings.
violent practices of the *gymnasia*, but approves of the more moderate exercises as subservient to the ends of a physician, and, consequently, part of that art. The other Greek writers express a similar opinion; and the sense of most of them in this matter is collected in Orbisius's "Collecta Medicinae." 1

In those relations which appear to be copies of the writings of Antyllus, we read of some sorts of exercises that are not mentioned by Galen or any former author; among the rest, the *Criociausia*, as the translators by mistake call it, instead of *Criocotiasia*. This, as it had for many ages been disused, Mercu- rialis himself, who has made the most judicious inquir- ies into this subject, 2 does not pretend to explain it. 3

"The ancients have the description of it set down in Orbisius, 4 it will be hard to form any idea of what it was.

The ancient physicians relied much on exercise in the eure of the dropsy, 5 whereas we almost to- tally neglect it. 6 Hippocrates 7 prescribes for one that has a dropsy ἁλασσιας, or fasting exercises, and he makes it the first of his ordi- nes, and almost always when he speaks of the regi- men of a dropsical person, implying that, though it be a labour for such people to move, yet they must undergo it; and this is so much the sense of Hip- pocrates, that Spohn has collected it into one of the new Aphorisms which he has drawn out of his works. 8 This is expressed very truly, as is evident from his words, ἐν ἑλαστωσει δεμε μελαντεσ σε κερτος σεμαντος." The Romans placed great reliance upon exercise for the care of dis- eases; and Aesoppiades, who lived in a time of the Pomp of the Great, brought this mode of treatment into great request. He called exercises the common "aids of physic, and wrote a treatise on the subject, which is contained in his work De Alimentis, and Frightiones, 9 but the book is lost. He carried these

The dress of these deities stood in a part of the Agora called ἀργός, and it was round these statues that, at the gymnopedia, Spartan youth used to parade, statues being carried about with a garland of flowers on the arm or shoulder as offerings to Apollo. 4 The festival lasted for several, perhaps for ten days, and on the last day men also performed choruses and dances in the theatre; and during these gymnastic exhibitions they sang the songs of Thaïetas and Alcman, and the panegyrics of Dionysos- dotus. The leader of the chorus (μπρόταρις or γο- πωτόρις) wore a kind of chaplet, called τρίφωμα or χροσσιας, in commemoration of the victory of the Spartans at Thryca. This event seems to have been closely connected with the gymnopedia, for those Spartans who had fallen on that occasion were always praised in songs at this festival. 5

The boys in their dances performed such rhythmical movements as those of the euryphonic leaves of the op- stra and the panderion, and also imitated the wild gestures of the worship of Dionysus. 6 Müller sup- presses, with great probability, that the dances of the gymnopedia partly consisted of mimetic representa- tions, as the establishment of the dances and musical entertainments at this festival was ascribed to the musicians, at the head of whom was Thaïetas. 7 The whole season of the gymnopedia, during which Sparta was visited by great numbers of strangers, was one of great merriment and rejoicings, 8 and old bachelors alone seem to have been excluded from the festivities. 9 The introduction of the gymnoped- ia, which subsequently became of such importance as an institution for gymnastic and orche- stic performances, and for the cultivation of singing, and musical arts at Sparta, is generally assigned to the year 685 B.C. 10

HALimus

GYNAICONOMOI (γυναϊκονόμοι) or GYNAI- COCO/SMOI (γυναϊκοκοκσμοί) were magistrates at Athens who superintended the conduct of Athenian women. We know little of the duties of these officers, and even the time when they were instituted is not quite certain. Dörckes has endeavoured to show that they did not exist until the time of Demetrius Phalereus, whereas, according to others, they were instituted by Solon, whose regulations concerning the female sex certainly rendered some special officers necessary for their maintenance. Their name is also mentioned by Aristotle as something which he supposed to be well known to his readers. These circumstances induce us to think that the γυναϊκονόμοι, as the superintendents of the conduct of women, existed ever since the time of Solon, but that their power was afterward extended in such a manner that they became a kind of police for the purpose of preventing any excesses or indecencies, whether committed by men or by women. (See the Fragm. of Timocles and Menander, ap. Athen., ii, p. 245, where a κατάγονος νόμος is mentioned, which Solomon had to see that the regulations concerning the conduct of Athenian women were observed, and to punish any transgressions of them; in the latter capacity they seem to have acted as ministers of the ariepogaus, and, as such, had to take care that those domestic duties of women observed in private as well as in public. Hence they superintended even the meetings of friends in their private houses, e.g., at weddings and on other festive occasions. Meetings of this kind were not allowed to consist of more than thirty persons, and the γυναϊκονόμοι had the right to enter any house and send away all the guests above that number; and that they might be able, previous to entering a house, to form an estimate of the number of persons assembled in it, the cooks who were engaged for the occasion had to give in their names to the γυναϊκονόμοι. They had also to punish those men who showed their effeminate character by fraticle or immoderate wailing at their own or other persons' misfortunes. The number of these officers is unknown. Meier thinks that they were appointed by lot; but Hermann, referring to Menander, reckons them among those officers who were elected.

H. ASPHARTS.

HABENE (ァベネ) were, generally speaking, leathern thongs, by means of which things were held and managed. Hence the word was in particular applied, 1. To the reins by means of which horses were guided and managed. 13 The habene were, as with us, fixed to the bit or bridle (freum). 2. To the thongs attached to a lance, by which it was held and wielded. 19 (Compare Amentum.) 3. To the thong which was formed into a sling, by means of which stones were thrown. 14 (Vid. Funda.) 4. To thongs by means of which the sandals were fastened to the feet. From this passage it is also clear that the habene in this case were not merely made of leather, but of strings or cords, whereas Celsius calls them tertes habena. 5. To the thongs formed into a scourge with which young slaves were chastised. The commentators on this passage, indeed, differ about the meaning of habene; but if we consider the expressions of Ulpian, "impudere eti terrae tunc habene praebere, red fugi soli," it is clear that the habene is the scourge itself. 6. HEDUS (ヘデス), I. the Kid.—II. (Heel, ίππος), two stars on the arm of Aurora, called the Kids, and regarded as indicative of stormy weather. They were also called by the singular term Capella. 8 HEMACHATES (αληχάτης), a species of Gage, sprinkled with spots of Jasper, or blood-red chalcedony; now called Dotted Gage. (Vid. Achatc.) HEMADORON (αλεχάδορον), a parasitic plant briefly noticed by Theophrastus. Stockborne hazards the conjecture that it was the Orobancha, L. 9 HEMATITES (αληχάτιτες), the well-known stone called Bloodstone. It is of a ferruginous col- our, and consists principally of oxide of iron. The Hematites of the ancients, observes Dr. Moore, "comprehended, besides our red hematite, several other oxides of iron, as may be seen from Pliny's description of five varieties of oxides besides the magnets. For magnetic oxide of iron was also classed with hematite; but that, no doubt, because of the appearance it exhibited after having been exposed to a strong heat." From the descriptions given by Theophrastus and Pliny, it would appear, as remarked by the same writer, that compact and ochre red and brown oxides of iron were included under hematite. 6. Heres. (Vid. Heres.) HALCYON (δαλκύον), the Kingfisher, or Aler- do Isipda, L. "The Greek naturalists," observes Adams, "describe two species, or, more properly, varieties of this bird. The scholar on Theocriss derives the word παρα τον ἐν ἔλα κνη, an etymology which we may with great safety reject. The Kingfisher builds its nests on the banks of rivers, and does not commit them to the sea, as some of the ancients represent. What they took for the nests of this bird were the bones which it had swallowed and vomited up. Pliny's description of its nest is tolerably accurate. Aristotle and several of the ancient poets represent the Kingfisher as frequenting the seaside, and this is probably true of it in the wild states of nature, and is perhaps applicable to it in northern latitudes. It remains to be mentioned, that Bonn hazards the very improbable conjecture that the Vocal Kingfisher of Aristotle was the Greater Reed-sparrow; and that Aldrovandus could never determine satisfactorily what bird was meant by the Halcyon of the ancients, although it appears to me that Aristotle's description of the δαλκύον applies in the main very well to the "Alder A."") HALIETUS (δαλιετος), the Osepsy. This bird is the "Nissiv" of Virgil and Ovid. Naturalists, according to Adams, have recently adopted the opinion that the Osepsy is the same as the Sea Eagle. Its scientific name is Pandion haliaetus. Savigny.

HALACACAMUM (δαλακακάμον), a plant, the Wintercherry, or Physalis Alkekengi. The berry steeped in wine was employed as a diuretic. Sibthorp found it growing on Parnassus, and on the Bithynian Olympus, as well as around Constantinople. 6. HALIMUS (δαλιμος), a plant, a species of Orache, the Atriplex halimus, L.—Τα δαλίμα are certain saline plants and their fruits, mentioned in the Sev.

tuagnt version of the Scriptures. On the other hand, ἀμύξα were certain herbs, so called because used by the Pythagoreans, who lived solely on a vegetable diet, and hence were termed ἀμύξα, as only eating in order to assuage hunger (ὑπ' ἔργα, and ἀμύξαν, "hunger")

HALOA. (Vid. Aloma.)
HALITÈRES (ἄλατίζετε) were certain masses of stone or metal, which were used in the gymnastic exercises of the Greeks and Romans. Persons who practiced leaping frequently performed their exercises with halitères in both hands; but they were also frequently used merely to exercise the body in somewhat the same manner as our dum-bells. Pausanias speaks of certain statues of athletes who were represented with halitères. They appear to have been made of various forms and sizes. The preceding woodcut is taken from Tassie, "Catalogue, &c., vol. 46, No. 7978."

HAMA. (Vid. Batilleus.)
HARMAXA. (Vid. Harmonaxa, Plastureum.)
HARMA. (Vid. Harmonaxa, Harmaxus.)
HARMAXA. (ἀκρόσυνη) is evidently compound of ἀκρός, a general term, including not only the Latin CURUS, but other descriptions of carriages for persons; and ἀκράσα, which meant a cart, having commonly four wheels, and used to carry loads or burdens as well as persons. The harmaxa was a carriage for persons, in its construction very similar to the CURUS, being covered over-head and enclosed with curtains, so as to be used at night as well as by day; but it was in general larger, often drawn by four horses, or other suitable quadrupeds, and attired with ornaments more splendid, luxurious, and expensive, and in the Oriental style. It occupied among the Persians the same place, which the chariot did among the Romans, being used, especially upon state occasions, for the conveyance of women and children of eunuchs, and of the sons of the king with their tutors. Also, as persons might lie in it at length, and it was made as commodious as possible, it was used by the kings of Persia, and by men of high rank in travelling by night, or in any other circumstances when they wished to consult their ease and their pleasure.

The body of Alexander the Great was transported from Babylon to Alexandria in a magnificent harmaxa, the construction of which occupied two years, and the description of which, with its paintings and ornaments in gold, silver, and burnished the pan of more than one historian. The harmaxa was occasionally used by the kings of Greece. A priestess of Dion was represented as riding in one which is drawn by two white cows.

HARMOSTE (from ἀρχώμενος, to fit or join together) was the name of the governors whom the Lacedaemonians, after the Peloponnesian war, sent into their subject or conquered towns, partly to keep them in submission, and partly to abolish the democratical form of government, and establish in its stead one of aristocratical form. Although in many cases they were ostensibly sent for the purpose of abolishing the tyrannical government of a town and to restore the people to freedom, yet they themselves acted like kings or tyrants, whence Dionysius thinks that harmostes was merely another name for kings. How little sincere the Lacedaemonians were in their professions to restore their subject towns to freedom, was manifest enough from the peace of Antalcidas; for, although they had pledged themselves to re-establish free governments in the various towns, yet they left them in the hands of the harmostes. The character of their rule is sufficiently described by the word κάτοικε, which Isocrates and Demosthenes use in speaking of the harmostes. Even Xenophon could not help censuring the Lacedaemonians for the manner in which they allowed their harmostes to govern.

It is uncertain how long the office of an harmostes lasted; but, considering that a governor of the same kind, who was appointed by the Lacedaemonians in Cythera, with the title of Cytheridces, held his office only for one year, it is not improbable that the office of harmostes was of the same duration.

'ΑΡΙΠΑΣΤΗΣ ΓΡΑΦΗ (ἀρκίσεις γραφή) This section seems, according to Lucian, to have been applicable to cases of open robbery, attended with violence. Under these circumstances, the offenders would be included in the class of κακοπότος, and, as such, be tried before a court under the management of the Eleven. With respect to the punishment upon conviction, we have no certain information, but there seems no reason to doubt that it was capital, as in cases of burglary and stealing from the person.

HARPAGO (αρπάγα: κρεπάγα, κινητ. κρεπος), a Grappling-iron, a Drag, a Flesh-hook. The iron-fingered flesh-hook (κρεπάγα κυκλοφόροντα ρόδος) is described by the scholiast on Aristophanes as an instrument used in cookery, resembling a hand with the fingers bent inward, used to take boiled meat out of the caldron. Four specimens of it, in bronze, are in the British Museum. One of them is here represented. Into its hollow extremity a wooden handle was inserted.

A similar instrument, or even the flesh-hook it

1.)—pole
Spear. (U., t, Tages.)—213.—Niebuhr Athen., appears, 3
of the consuls during the term of office, both for the
epithet of the law and the statement of Galen, that a ball
was thrown among the players, each of whom en-
devoured to obtain possession of it. Hence Martial
speaks of the hargesta pulverulenta. The game
required a great deal of bodily exertion.

HARUSPICES or HARUSPICES were sooth-
sayers or diviners who interpreted the will of the
gods. They originally came to Rome from Etru-
sia, whence haruspices were often sent for by the
Romans on important occasions. The art of the
haruspices resembled in many respects that of the
augurs, but they never acquired that political im-
portance which the latter possessed, and were
regarded rather as means for ascertaining the will of
the gods than as possessing any religious authority.
They did not, in fact, form any part of the eccle-
siastical polity of the Roman state during the Repub-
lic; they never called aediles, nor did they form a
collegium, and had no magister at their head.
The account of Dionysius, that the haruspices
were instituted by Romulus, and that one was chos-
en from each tribe, is opposed to all the other au-
thorities, and is manifestly incorrect. In the
time of the emperors, we read of a collegium or ordo
of sixty haruspices, but the time of its institution is
uncertain. It has been supposed that such a col-
legium existed in the time of Cicero, since he speaks
of a summus magister; but by this we are proba-
bly to understand, not a magister collegii, but merely
the most eminent of the haruspices at the time.

The art of the haruspices, which was called ha-
ruspica, consisted in explaining and interpreting
the will of the gods from the appearance of the or-
trails (cuspis) of animals or men in sacrifice, whence
they are sometimes called exstips, and their art
extrispicium: and also from lightning, earthquakes,
and all extraordinary phenomena in nature, to which
the general name of portenta was given. Their
art is said to have been invented by the Etruscan
Tages, and was contained in certain books called
libri haruspicini, fulgurales, and tombrales.

This art was considered by the Romans so im-
portant at one time, that the senate decreed that a
certain number of young Etruscans, belonging to the
principal families of the state, should always be
instructed in it. Niebuhr appears to be mistaken
in supposing the passage in Cicero to refer to the
children of Roman families. The senate some-
times consulted the haruspices, as did also private
persons. In later times, however, their art fell
disparage with well-educated Romans and Cicero
relates a saying of a Cato, that he wondered
that one haruspex did not laugh when he saw an-
other. The Emperor Claudius attempted to revive
the study of the art, which had then become neg-
lected at the senate, under his directions, passed a
decree that the pontifices should examine what
parts of it should be retained and established; but
we do not know what effect this decree produced.
The name of haruspices is sometimes applied to
any kind of soothsayer or prophet, whence Jure-
nal speaks of Armenius vel Commagenus harus-
ary.

The latter part of the word haruspex contains the
root spex, and Domusius derives the former part
from harus, a victim.

(Götting, Gesch. der Röm. Staaten., p. 238.

us, De Formulis, 1, 29, &c.)

HASTA (ἔξογχος). A Spear. The spear is defined
by Homer, ὁδοίς χαλίστες, "a pole fitted with
bronze," and ὁδοὶ χαλίσσας, "a pole heavy with
bronze." The bronze, for which iron was after-
ward substituted, was indispensable to form the
point (ἀχύρμα, ψαλίς, ἀγγυρίς) of the spear.
Each of these two essential parts is often put for the
whole, so that a spear is called ὁδοὶ καὶ ὁδωτεία, ἀγγυρίς,
and ἀγγυρίς. Even the more especial term μελέτα, meaning an ash-tree,
was used in the same manner, because the pole of the spear
was often the stem of a young as, stripped of its bark and polished.

The bottom of the spear was often enclosed in a
pointed cap of bronze, called by the Ionic writers 
σαρμωρίθρον and σαρμοθήρον, and in Attic or common
Greek στριπτή. By forcing this into the ground,
the spear was fixed erect. Many of the lanceurs
(ἀρχοφόρον, ἀρχοφόρος, γοργόφορος, woodcut, p. 207)
who accompanied the King of Persia had, instead of this spike at the bottom of their spears, an
apple or a pomegranate, either gilt or silvered. With
this, or a similar ornament, the spear is often
10. (See Orrelli, ad loc., 90.—10. (Cic, De div. i., 43.—Id., ib., 35.—Liv., xxvii., 37.)—11. (Cic, De div., ii., 29.)—12. (Cic, Div. ii., 52.)

HASTA

minated both on Persian and Egyptian monuments. Fig. 1 in the preceding woodcut shows the top and bottom of a spear which is held by one of the king's guards in the sculptures at Persepolis. It may be compared with those in the hand of the Greek warrior at p. 94, which have the spike at the bottom. The head and the bottom of the spear was used in fighting by the Greeks and Romans when the head was broken off. A well-finished spear was kept in a case (doparos, dioia), which, on account of its form, is called by Homer a pipe (epiyppos). The spear was used as a weapon of attack in three different ways: 1. It was thrown in short range, as a javelin (Vid. Tormentum). 2. It was thrust forward as a pike. In this manner Achilles killed Hector by piercing him with his spear through the neck. 3. The Eubones were particularly celebrated as pikemen. 3. It was commonly thrown by the hand (arquias maspodin). The warrior, preparing to hurl it, raised his hand to his right shoulder, and sometimes derived assistance from the use of the Ame- tum or the Asna. He generally went to the field with two spears. (Woodcut, p. 94, 227, 332.) On approaching the enemy, he first threw either one spear or both, and then, on coming to close quarters, drew his sword (pilia coniunctur—gladius ge- "rupes)."

Under the general terms hasta and iypos were included various kinds of missiles, of which the principal were as follow: Lancia (loctt), the lance, a comparatively slender spear commonly used by the Greeks. Iphicrates, who doubled the length of the sword (vid. Gra- xros), also added greatly to the diameter and length of the lance. The Termes, was carried by the Thracian horsemen; and by means of an appendage to it, which is supposed by Stuart (woodcut, fig. 2) to be exhibited on the shafts of three spears in an ancient bas-relief, they mounted their horses with greater facility. The lance, on account of its length and its lightness, was carried by hunstman. Pilum (teocos), the javelin, much thicker and stronger than the Grecian lance, as may be seen on comparing the woodcuts at p. 94 and 95. Its shaft, often made of cornel, was partly square, and 5 or 6 feet long. The head, nine inches long, was of iron, and is therefore now found only in the state described by Virgil, "as scarsam pila vinisset," (Georg. ii., 360). It was usually carried to thrust with; it was peculiar to the Romans, and gave the name of pilum (p. 103) to the division of the army by which it was adopted (pilatum agmen). When Marius fought against the Cimbri, he ordered that, of the two nails or pins (repousa) by which the head was fastened to the staff, one should be of iron and the other of wood. The consequence was that when the pilum struck the shields of the enemy, the tre- ntail gave way, and the shaft was turned on one side, so that the spear could not be sent back again.

While the heavy-armed Roman soldiers bore the long lance and the thick and ponderous javelin, the light-armed user smaller missiles, which, though of different kinds, were included under the general term hasta velitares. From yppos, the corresponding Greek term, the velites, or light-armed, are called by Polybius ypposeutos. According to his description, the yppos was a dart, with a shaft 4 feet long. The iron head was 3 inches long, and so thin and acum- inated as to be bent by striking against anything, and thus rendered unfit to be sent back against the enemy. Fig. 3 in the preceding woodcut shows one which was found, with nearly four hundred others, in a Roman intrenchment at Meon Hill, in Gloucestershire.

The light infantry of the Roman army used a similar weapon, called a spic (verum, verutum, sar- rion). It was adopted by them from the Samni- tes and the Volsci. Its shaft was 31 feet long, its point five inches. Fig. 4, in the preceding woodcut, represents the head of a dart in the Royal Collection at Naples; it may be taken as a speci- men of the verutum, and may be contrasted with fig. 5, which is the head of a lance in the same collection. The Romans adopted, in like manner, the Gxeno, which was properly a Celtic weapon, and it was given as a reward to any soldier who wound- ed an enemy. Sparus is evidently the same word with the English spear and speare. It was the rudest missile of the class, and only used when better could not be obtained.

Besides the terms jactulum and spiculum (diow, Jactv), which probably denoted darts resembling in form the lance and javelin, but much smaller, adapted, consequently, to the light-armed (jactulator- es), and used in hunting as well as in battle, 14 we find in the Greek language various words for darts, or speaking generally, for spears, which were characteristic of particular nations. Thus Servius states that, as the piliw was proper to the Romans, and the gaxen to the Gauls, so the sarissa was the spear peculiar to the Macedonians. This was used both to throw and as a pike. It exceeded in length all other missiles. (See p. 101.) It was made of cornel, the tall, dense stem of which also served to make spears of other kinds. The Thracian rompha, which had a very long point, like the hinde of a sword 18 (rumpia, Ibo- gala), was probably not unlike the sarissa, since Livy asserts that, in a country partly covered with wood, the Macedonian phalanx was ineffective on account of the depth of the forest. The consol- phana of the Thracians was a hindrance for the same reason. With these weapons we may also class the Illyrian elvina, which resembled a hunting-pole 19 (elvion).

The iron head of the German spear, called fra- mea, was short and narrow, but very sharp. The Germans used it with great effect either as a lance or a pike: they gave to each youth a framea and a shield on coming of age. 24 The Falarica or Phala- rica was the spear of the Saguntines, and was im- pelled by the aid of twisted ropes: it was large and ponderous, having a head of iron a cubit in length, and a ball of lead at its other end; it sometimes

HELENUS

For JnnpOmsi, distance, (Plaut., this.
The say, the leaves are angular, and make neat than those of ivy, which has the round leaves and simple. He adds also that it is barren. For as the white ivy, it seems to be unknown to us. Some, indeed, imagine it to be that variety of which the leaves are variegated with white. But Theophrastus express-
ly mentions the whiteness of the fruit; for he says some have only the fruit white, and others the leave also. Dioscorides also mentions these three principal sorts of ivy, the white, the black, and the helix. The white bears a white fruit; the black has either a black or saffron-coloured fruit; this kind is called also Dionysia; the helix bears no fruit at all, but has white twigs, and small, angular, reddish leaves. Pliny has confounded the ivy with the cistus, being deceived by the similarity between 

HELENIUM (βάτους), a plant, Scabellor or Elecampane, Inula Helianum, L. "Helium," says Lister, "Inula Campala Iialis dictum." It is probably," remarks Woodville, "that the Elecampane, the Helium militis, and Elecampane, and the Inula of Pausanias, is the same plant." Spranger and Dierbach also agree

1. (Theophr., II. P., vii. 7.—Dioscor., iii. 36, 9.— Dioscor., iv. 130.—Adams, Append., s. v.—3. (Andosc., c. 482, 115.—c. 1 em., 17)—5. (Meier, Ath. 432.)

in referreting it to the Idesia Helenium, L. The other species described by Dioscorides is referred by Bauhin and Sprengel to the Teuerium marum.1

HELEPOLIS (στελορυμ). When Demetrius Poliorcetes, the great conqueror, despatched machinery by sea to besiege Rhodes, he caused a machine to be constructed which he called "the taker of cities." Its form was that of a square tower, each side being 90 cubits high and 45 wide. It rested on four wheels, each eight cubits high. It was divided into nine stories, the lower of which contained machines for throwing great stones, the middle large catapults for throwing spears, and the higher other machines for throwing smaller stones, altogether with smaller catapults. It was manned with 200 soldiers, besides those who moved it by pushing the parallel beams at the bottom.2

At the siege of Rhodes, 306 B.C., Demetrius employed a heliopolis of still greater dimensions and more complicated construction. Besides wheels, it had easors (αυτοκτρέτηα), so as to admit of being moved laterally as well as directly. Its form was pyramidal. The three sides which were exposed to attack were rendered fireproof by being covered with iron plates. In front, each story had portoles, which were adapted to the several kinds of missiles, and were furnished with shutters that might be opened and closed with skill by the aid of a catapulta, made of skins stuffed with wool. Each story had two broad flights of steps, one for ascending, the other for descending.3 This heliopolis was constructed by Epimachus the Athenian; and a much esteemed description of it was written by Diosclides of Abdera.4 It was, no doubt, the greatest and most remarkable of all the engines which were then constructed.5 In subsequent ages we find the name of "heliopolis" applied to moving towers which carried battering-rams, as well as machines for throwing stones and spears.6 Towers of this description were used to destroy the walls of Jerusalem when it was taken by the Romans.7 (Vid. Aris, Tom. I.)

HELLICA. (Vid. Demastro.)

HELIOCAMPUS. (Vid. House.)

*HELIOTROPUM (οιοτρποισ). I, a plant, the Heliotrepe, or Great Turnsole, Heliotropium Europaeum, L. This is the species called μεγα by Dioscorides. Sprengel joins Lobelius and Gesner in referring the other species, or οιοτρποισ μεγος, to this plant.8

II. A precious stone, the Heliotrope of Jameson. It is a sub-species of Jasper.9

HELIX. (Vid. Hedera.)

HELLANO'TICE (Ἑλλανοτικη), the judges in the Olympic games, of whom an account is given under OLYMPIC GAMES. The same name was also given to the judges, or court-martial, in the Lacedaemonian army;10 and they were probably first called by this name when Sparta was at the head of the Greek confederacy.

*HELLEPOL'OS (Ἑλλερπολοος), Hellebore, a celebrated remedy among the ancients for the cure of insanity. Two kinds are spoken of, namely, the white and the black (Quinque and μελανη), but as to the identity of the plant itself much discussion has arisen. Modern authorities on Botany, observes Adams,11 differ widely in opinion respecting the white Hellebore of the ancients. Sibthorp most unaccountably decides it to have been the Digitalis ferruginea. Schelze, who is too prone to seek doubts on botanical questions, expresses himself with great hesitation regarding it, but, upon the whole, inclines to the Adonis vernalis. Woodville and Dierbach are quite undecided. On the other hand, Matthius, Dodoens, Bauhin, Hill, and others, do not hesitate. Stahl, at least, speaks of the Hellebore of the Veratum album, L. Geoffroy also, no mean authority on these subjects, maintains that the description of Dioscorides agrees very well with the characters of the white Hellebore. And from the similarity of the effects produced by the administering of the ινοτρποισ, as described by the ancient writers on Toxicology, to the known effects of the Veratum album, L. I had no hesitation, same time age, in recognising their identity; and it now gives me pleasure to discover that Sprengel, in his annotations on Dioscorides, comes to the same conclusion. I had called the attention of the profession to this fact in the London Medical and Physical Journal, July, 1823; about eighteen months afterward, the Veratula veratum, a Mexican species of Helleboræ, was much cried up in this case.—The ινοτρποισ μελανη, or Black Hellebore, is marked as being the H. Orientalis, Lam. Is it not a variety of the Helleborus niger, L.? This plant is the Christmas Rose of this country.

*HELLEBOR'INE (Ἑλλερποινη), a plant, which Sprengel regards as the Helleborus fidelus; Stockhouse, the Seraphis Helleborine. "The latter," remarks Adams, "is the same, I suppose, as the Epi pactus ensifolia of Hooker."12

HELLENOTAM'IAS (Ελλενοταμηαί), or treasurers of the Greeks, were magistrates appointed by the Athenians to receive the contributions of the allied states. They were first appointed B.C. 477, when Athens, in consequence of the conduct of Pausanias, had obtained the command of the allied states. The money paid by the different states, which was originally fixed at 460 talents, was deposited in Delos, which was the place of meeting for the discussion of all common interests; and there is no doubt that the Hellenotamia not only received, but were also the guardians of these moneys, which are called by Xenophon Ελλενοταμηαί. The office was retained after the treasury was transferred to Athens on the proposal of the Samians,13 but was, of course, abolished on the conquest of Athens by the Lacedaemonians. The Hellenotamia were members of the council of fifty of the democracy, for which reason the grammarians afford us little information respecting their duties. Böckh, however, concludes from inscriptions that they were probably ten in number, chosen by lot, like the treasurers of the gods, out of the Panathesian and the first Prytanées. With regard to their duties, Böckh supposes that they remained treasurers of the moneys collected from the allies, and that payments for certain objects were assigned to them. In the first place, they would, of course, pay the expenses of wars in the common cause, as the contributions were originally destined for that purpose; but as the Athenians, in course of time, considered the money as their own property, the Hellenotamiae had to pay the Theorica and military expenses not connected with wars on behalf of the common cause.14

HEMEROCALLIS

and (Ephorus, vi., i.e. Xen., were dwellings state, from mark Guinea-worm, which the Greeks call ῥόκετινον, and the translators of the Armenians 之意 medicinis.

(Vid. Elag.)

HELOTES (Ελευθέραι) were a class of bondsmen peculiar to Sparta. Different etymologies are given of their name. The common account is, that they were originally the people of the town of Helos, in Laconia, and that they were reduced to bondage after an unsuccessful revolt against the Spartans. But the people of Ἑλος were not called Ἑλευθέραι, but Ἑλευθήρ or Ἑλευθαρά. The name has been also derived from Ἑλος, marches, as it signified inhabitants of the lowlands. But Müller seems to be nearer the mark in explaining Ἑλευθέραι as meaning prisoners, from the root of ἔλευς, to take, like ἑλπίς from the root of ἑλπίζω. The ancient writers considered them to be Achaeans, who had resisted the Doric invaders to the last, and had been reduced to slavery as the punishment of their obstinacy. Müller, however, supposes that they were an aboriginal race, which was subdued at a very early period, and which immediately passed over as slaves to the Doric conquerors. But this theory, as Thirwall has observed, does not account for the hereditary enmity between them and their masters; for, unless they lost their liberty by the Doric conquest, there is no probability that it placed them in a worse condition than before.

The Helots were regarded as the property of the state, which, while it gave their services to individuals, reserved to itself the power of emancipating them. They were attached to the land, and could not be sold away from it. Several families, as many, perhaps, as sixes of the Helots, cultivated a portion of land in their own dwellings. They cultivated the land, and paid to their masters as rent a fixed measure of corn, the exact amount of which had been fixed at a very early period, the raising of that amount being forbidden under heavy impositions. The annual rent paid for each ἄλβος was eighty-two medimni of barley, and a proportionate quantity of oil and wine. As they were being engaged in the cultivation of the land, the Helots attended on their masters at the public meal, and many of them were, no doubt, employed by the state in public works. In war the Helots served as light-armed troops (φιλοί), a certain number of them attending every heavy-armed Spartan to the field; at the battle of Plataea there were seven Helots to each Spartan. These attendants were peculiar to Plat. (i.e., ἄλβοι), and one of them, in particular, the διήρων, or servant, also was used by the Dorians as a general name for armed slaves. The Helots only served as hoplites in particular emergencies, and on such occasions they were generally emancipated. The first instance of this kind was in the expedition of Brasidas, B.C. 424.

The treatment to which the Helots were subjected, as described by the later Greek writers, is marked by the most wanton cruelty. Thus Myron states that "the Spartans impose upon them every ignominious service, for they compel them to wear a cap of dog's skin, and to be clothed with a garment of sheep's skin, and to have stripes inflicted upon them every year for no fault, that they may never forget that they are slaves. And, besides all this, any rise by their qualities above the condition of a slave, they appoint death as the penalty, and their masters commonly, if they do not destroy the most excellent." And Plutarch states, that Helots were forced to intoxicate themselves, and perform indecent dances as a warning to the Spartan youth. These descriptions are probably exaggerated; but we have abundant evidence, in addition to the direct assertion of Thucydides, that the Spartans always regarded the Helots with the greatest suspicion. Every means was taken to mark the distinction between them, and their masters; they were obliged to wear the rustic garb described above, and they were not permitted to sing one of the Spartan songs. That the cruelty of their masters knew no restraint when it was stimulated by fear, is manifest enough from the institution of the κρυστέα (vid. Χρυστέα), and from the fact related by Thucydides, that on one occasion, two hundred of the Helots, who had rendered the greatest service to the state in war, were induced to come forward by the offer of emancipation, and then were put to death.

At the end of the second Messenian war (B.C. 688), the conquered Messenians were reduced to slavery, and included under the denomination of Helots. Their condition appears to have been the same, with some slight differences, as that of the other Helots; but they appear to have been distinguished by the remembrance of their freedom, and a readiness to seize any opportunity of regaining it, in which they at length succeeded, after the battle of Leuctra.

The Helots might be emancipated, but there were several steps between them and the free citizen; and it is doubtful whether they were ever admitted to the equal political rights of the freemen. The following is a table giving the several classes of emancipated Helots: the ταλα, ἀδεστοὶ, κρυστέες, δευτεροσύνατα, and νεοὶ μύθηες. Of these the ταλα were probably rascally from all service; the κρυστέες were those employed in war (vid. Χρυστέες); the δευτεροσύνατα served on board the fleet; and the νεοὶ μύθηες were those who had been possessed of freedom for some time. Besides these, there were the μύθηεδες κρυστέες, who were domestic slaves, brought up with the young Spartans, and then emancipated. Upon being emancipated, they received permission to dwell where they wished. (Compare Κίλια, Grec., p. 260.)

(Müller, Dorians, iii., 3.—Thirwall, Greece, vol. i., p. 309.—Herrmann, Political Antiquities of Greece, i., 217, 19; ii., 50, 104, 209, 211, 370; ii., 361.)

*HEMERIS (χιαρυκιόν), a plant of which Dioscorides describes two species: the latter of these is the Pellitory of the Wall, or Parietaria officinalis; the former is referred by Baulin and others to the Convolvulus arvensis, or Gravel-blind.

HOMER ORIG. (Vid. Orus.)

*HEMEROCALLES (χιεροκαλλιέρος). Sprangled, in the first edition of his H. H., sets this plant down for the Pancreatum maritimum, having adopted the opinion of Lobel and Baulin; but in the second edition he holds it to be the Lilium Macaboninum.

*HEMEROCALIS (χιεροκαλλιέρος), a plant. The
HEREA.

earlier commentators," says Adana, "had remarked that the *heraekollas of Dioscorides is different from that of Theophratus. The H. of Dioscorides is referred by Matthiolius to the Lilium bulbiferum, and by Dodoneus to the L. Martagon. Sprunghal seems to regard the former Sibthorp marks it as the "Lilium Chalcodemum.""

HERMIMA. (Vid. Cordyla.)

"HEMOPHONUS. (Vid. Mulus.)"

"ENAEKA, ‘OI. (Vid. Eleven, the.)"

"HEPETAS (επ'ητας, ου επετητις), the well-known species of Aloes called Hispanic. Dioscorides calls the species τον επηταν."

"HEPETAS (επητας) is a name of a fish briefly noticed by Aristotle, Elian, and Athenaeus. "Artedi and Rondel vet it is the fish called seipurus by the modern Greeks; but this opinion is rejected by Coray, who, however, decides upon nothing satisfactory respecting it. Camus, in his notes on Aristotle, concludes that it was the Ostrea margaritefa."

HERA (Hera). The name of various festivals celebrated in honour of Hera in all the towns of Greece where the worship of this divinity was introduced. The original seat of her worship, from which it spread over the other parts of Greece, was Argos; whence her festivals in other places were, more or less, imitations of those which were celebrated at Argos.1 The Argives had three temples of Hera: one, by Agias, in Argolis, 65 stadia from Argos; the second lay on the road to the Aegropia, and near it was the stadium in which the games and contests at the Heraea were held; and the third was in the city itself. Her service was performed by the most distinguished priestesses of the place; one of them was the high-priestess, and the Argives could not count the number of the other priestesses. The Heraea of Argos were celebrated every fifth year, and, according to the calculation of Bökkt, in the middle of the second year of every Olympiad. One of the great solemnities which took place on the occasion was a magnificent procession to the great Temple of Hera, between Argos and Mycenae. A vast number of young men—for the festival is called a panegyris—assembled at Argos, and marched in armour to the temple of the goddess. They were preceded by one hundred oxen (ἐκατούρθη, whence the festival is also called ἐκατούρθεια). The high-priestess accompanied this procession, riding in a chariot drawn by two white oxen, as we see from the story of Cleobis and Biton related by Herodotus.2 They were covered with gold and silver, and their flesh distributed among all the citizens.3 The sacrifice itself was called ἁλεχρωσ,4 or the "hed of twigs." The games and contests at the Heraea took place in the stadium, near the temple on the road to the Aegropia. A bronze shield was fixed in a place above the theatre, which was scarcely accessible to any one, and the young man who succeeded in getting it down received a shield and a garland of myrtle as his prize. Hence Pinza calls the contest ἄγων κλαξεος. It seems that this contest took place before the procession went out to the Heraeon, for Strabo states that the victor went with his prizes in solemn procession to that temple. This contest was said to have been instituted, according to some traditions, by Actius and Praxidemus.6 The Heraea and Hecatombea of Eginia were celebrated in the same manner as those of Argos.7 The Heraea of Samos, which island also derived the worship of Hera from Argos, were perhaps the most brilliant of all the festivals of this divinity. A magnificent procession, consisting of maidens sacrified to Hera, and adorned with their own painted likeness in the temple of the goddess. The sixteen matrons were attended by as many female attendants, and performed two dances; the one called the dance of Phyesa, the other the dance of Hippodameia. Respecting farther particulars, and the history of this solemnity, see Paus., v, 6, § 6, Heres.

Heraea were celebrated in various other places; e.g., in Cos,13 at Corinth,14 at Athens,15 at Coscoss in Crete.16

HEREDITAS. (Vid. Heres, Roman.)

HEREX (GREEK). The Athenian laws of inheritance are to be explained under this title. The subject may be divided into five parts, of which we shall speak: 1st, of personal capacity to inherit; 2ndly, of the rules of descent and succession; 3rdly, of the power of devising; 4thly, of the remedies of the heir for recovering his rights; 5thly, of the obligations to which he succeeded.

1. Of Personal Capacity to Inherit.—To obtain the right of inheritance as well as citizenship (αγοραση και πολιτευση), it was necessary to be born of a legitimate parent and to belong to the order or "genus" to which the deceased belonged. Those children were legitimate who were born in lawful wedlock.17 The validity of a marriage depended partly on the capacity of the con-

tracing parties, on the nature of the contract. 1 Furthermore, the part that points little need to be noticed here, except that brother and sister by the same mother were forbidden to marry; but consanguinity in general was so far from being deemed an objection, that marriage between collateral relations was encouraged, in order to keep the property in the family. 1 The contract was made by the husband with the father, brother, or other legal guardian (σύγκρυς) of the intended wife; then only was she properly betrothed (γυνηρίζω). An heiress, however, was assigned or adjudged to the next of kin (τὰς ἱκανέν) by process of law, as explained under Epicureus. 2 No ceremony was necessary to ratify the contract; but it was usual to betroth the bride in the presence of witnesses, and to give a marriage feast, and invite the friends and relatives, for the sake of publicity. 4 A marriage without proper espousals was irregular; but the issue lost their inheritable rights, not their franchise: and the former, it seems, might be restored, if the members of their father's clan would consent to their being registered. 4 As it was necessary for every man to be enrolled in his clan in order to obtain his full civil rights, so was the registration the best evidence of legitimacy, and the φατοχρίς and συγγενίας were usually called to prove it in courts of justice. 4 For further particulars, see Plutarch, De Diragie, 104, &c.

Wachsmuth, i., 2, 31, and 143; ii., 1, 204, &c. Schömann, Ant. J. P. Gr. et V. s. 91, 51, 88.

II. Of the Rules of Descent and Succession. — Here we would premise that, as the Athenian law made no difference, in this respect, between real and personal estate, the words heir, inheritor, &c., will be applied indiscriminately to both. When an Athenian died leaving sons, they shared the inheritance, like our heirs in gavelkind, and not, as in the law of France, 4 a law no less favourable to that balance of property which Solon meant to establish, than the law of primogeniture was suited to the military aristocracies created in the feudal times. The only advantage possessed by the eldest son was the first choice in the division. 7 If there was but one son, he took the whole estate; but if he had sisters, it was incumbent on him to provide for them, and give them suitable marriage portions; they were then called ἐκείπασσα. 8 There was no positive law making it imperative on a brother to give his sister a portion of a certain amount; but the moral obligation to assign her a fortune corresponding to his own rank was strengthened by custom and public opinion so much, that, if she was given in marriage portiopode, she was deemed a snare upon her character, and might even raise a doubt of her legitimacy. 8

On failure of sons and their issue, daughters and their issue had succeeded (as to the law concerning heiresses, vid. Epicureus); and there seems to have been no limit to the succession in the male line. 5 If the deceased left grandsons by different sons, it was clear that they would take the shares of their respective fathers. So if a son had a granddaughter by one son, and a grandson by another, the latter would not exclude the former, as a brother would a sister, but both would share alike.

Of this there is direct evidence, but it follows from a principle of Attic law, by which, on the death of a son, his title to his father's inheritance, or a share thereof, immediately acceded; if then he died before his father, but leaving issue, they claimed his grandfather's inheritance as representing him. It was otherwise with daughters. Their title did not thus accrue; and, therefore, it was the practice for the son of an heiress to be adopted into his maternal grandfather's house. De Agnati, 494.

On failure of lineal descendants, the collateral branches were resorted to. And first came the issue of the same father with the deceased, viz., brothers and brothers' children, the children of a deceased brother taking the shares of their father; and after them, sisters and sisters' children, among whom the principle of representation also prevailed, but whether sisters' children took per stirpes or per capita, does not appear.

Next come the descendants of the same grand father with the deceased; cousins and cousins' children. Here the law declared that males and the issue of males should be preferred to females and their issue. 5 Thus the son of an uncle might exclude the son of an aunt, while the son of an aunt would exclude the daughter of an uncle.

On the same principle, Issus contains that the son of a female first cousin prevented his mother's sister from inheriting, although he was farther removed from the deceased (γένος ἄνωταρος) by one degree. This preference, however, was confined to those whose title was from the same common ancestor, that is to say, from the grandfather of the deceased; for the words ἐκ τοῦ αὐτῶν in Demosthenes are to be explained by the τίτρα γένει of Issus. Therefore, a first cousin once removed, claiming through a female, had a better title than a second cousin claiming through males; for a second cousin is descended, not from the grandfather, but only from the great-grandfather of the deceased, and so is beyond the legal degrees of succession (for τίτρα is αὐγεσταλι or συγγενεῖα). On this Embulides found his pretension to the estate of Hagnias, because he claims as representative (son by adoption) of the maternal grandfather, who was first cousin to Hagnias; whereas the father of his opponent, Macartus, was second cousin to Hagnias, and (as Demosthenes expresses it) was not in the same branch of the family (ἀρραβονία τοῦ σικερ ρετον ἀνέντευξιν). On failure of first cousins and their issue, the inheritance went to the half-blood by the mother's side; brothers and sisters, nephews and nieces, cousins and their children, as before. But if there were no maternal kinsmen within the legal degree, it returned to the agnati, or next of kin on the paternal side (τοῖς προὶ πατρίς), whose proximity was reckoned in assigning the degrees from the common ancestor.

The succession of parents to their children is matter of dispute among the learned. From the silence of the orators, the absence of any example, and the express declaration of Issus respecting the mother, it may be inferred that parents could not inherit at Athens. At Athens, the maxim ἀρραβονίας μακραῖας ascends held only of lineal, not of collateral ascent. For example, an uncle might

obviate this misfortune, an Athenian had two cous-

obes open to him. Either he might bequeath his

obes, and in his time, he might not adopt a son in his life-

obes, (vid. Aperotet, Gr.)

Wills were in writing, and usually had one or more attest-
V. Of the Obligations to which the Heir succeeded.

—the first duty of an heir, as with us an executor, was to bury the dead and perform the customary funeral rites (τα νεκροποιεια ποιειν). It is well known what importance was attached to this by the ancients. The Athenian law regulated the time of burial, and the order in which the female relatives had to be buried. The costs of burial, including expenses for the coffin, might add up to a considerable amount. When a rich man died, there was no backwardness about his funeral. It is rather amazing to see how eagerly the relatives hastened to show respect to his memory, as if to raise a presumption of their being the heirs. 2  

Children who neglected to bury their parents were liable to a criminal prosecution (τα καθαρα ημων γεγονων), just as they were for refusing to support or assist them in their lifetime. The word υπηρετει, in this case, includes all ancestors. 2

Among heritable obligations may be reckoned that of marrying a poor heiress (Θησα), or giving her in marriage with a suitable portion. (Vid. Epilepsia, and Meurs., Them. Ath. I., 13.)

The heir, moreover, paid the debts of the deceased, as far as the assets would extend, cannot be doubted. Five years seems to have been the period for the limitation of actions against him (ετεοι). In case of a mortgage, he was entitled only to the surplus of the mortgaged property, remaining after payment of the debt charged thereon. 3

State debtors, such as farmers of the public revenue, who had made a false declaration, to save or forward an action against the successful candidate, to recover the estate. He was then obliged to pay his deposits (παρακαταβαλλω), summon the defendant, and proceed in other respects as in an ordinary suit. This he might do at any time during the life of the person in possession, and within five years after his death. 4 It has hitherto been supposed that a simple issue was raised between the litigant parties, viz., who was entitled to possess the estate; and that they proceeded at once to the trial of such issue. This was called καθαρως εισεται. The cause, however, might become more complicated, if one of the parties chose to make exception to the right of any other to dispute his title: this was done by tendering an oath (κατακλησις ἡμων), sworn either by himself or by another, whereby he declared that the estate was not the subject of litigation (μη ἐπίκλεος), and alleged some matter of fact or law to support his assertion. Sons, adopted sons, and persons in legal possession were allowed this advantage. For example, a witness might depose that the last occupier had left male issue surviving him, and therefore the property could not be divided by any collateral relative or devisee: or that the title had already been legally determined, and that the new claimants were not at liberty to reopen the question. This had the effect of a dilatory plea, and stayed farther proceedings in the cause. 4 If then the suitor was resolved to prosecute his claim, he had no other course but to procure a conviction of the original litigants (κατακλησις ἡμων), and, in an action for false testimony (δικαιωμενω) Examples of such actions are the causes in which Demostenes was engaged against Leochares, and

Heres. 496

Heres for the estate of Philoctemus. On the trial of the witness, the questions were, first, the truth of the facts depose to; secondly, their legal effect, if true. With respect to the witness, the consequences were the same as in any other action for false testimony. (Vid. Mart. 1.) With respect to the original cause, nothing farther was determined than that it could or could not be entertained; the διακριτα ται, was not a particular point. If the court decided that the suit could not be entertained, parties proceeded to trial in the manner before explained.

As to the farther remedies to be pursued by the successful party in order to obtain the fruits of his judgment, vid. Embatieia, Enokiotics, and Eyot. AH2 AIKAI. And on this part of the subject, vid. Mener, Ath. Proc., p. 453, 616, 683; Platner, Ath. Proc., 1, 163; l. c. 309.

1. (Issus, De Abstiph.和谐., 40; De Cis.和谐., 29—33; De Nicost.和谐., 9, 35.—Demosth. c. Macart. 1061, 1071).—2. (Meier, De Proper. Don., 126).—3. (Lys, De Xen. Publ. 4; ικανονοις τον πατερα μου).—4. part of the value of the property, in dispute, and was relieved to the party if successful. 1 If a pleader or claimant appeared, the archon adjudged the estate to the first suitor (τετελεσαν αυτον τον οικον). If, however, there were adverse claims, he proceeded to prepare the cause for trial (διακριτα ται). First came the ανακριτα, in the usual way, except that no party was considered as plaintiff or defendant; and the bills, in which they set forth their respective titles, were called διακριτα ται. 2 The diacritas were then to be summoned, and, whatever the number of parties, one court was held for the decision of all their claims. If any one neglected to attend on the appointed day, and had no good excuse to offer, his claim was struck out of the record (δηγαρον ο άμφιστος, and the contest was carried on between the remaining parties, or if but one, the estate was awarded to him. 3 The trial was thus managed. The diacritas had to give their verdict either for one person proving a title to the whole, or for several persons coming in under the same title, as (for instance) two brothers entitled each to a moiety. One balloting box, therefore, was provided for every party who appeared in a distinct interest. The speeches were measured by the clype-syll. Each party was given an equal share, and half that, or three clype for, the second. 4 That these arrangements gave rise to fraud and collusion, is clearly shown by the cases and collations above cited.

The verdict, if fairly obtained, was finally laid against the parties to the cause. But any other person, who by absence or unavoidable accident was prevented from being a party, might, by complaint and suit, bring an action against the successful candidate, to recover the estate. He was then obliged to pay his deposits (παρακαταβαλλω), summon the defendant, and proceed in other respects as in an ordinary suit. This he might do at any time during the life of the person in possession, and within five years after his death. 4 It has hitherto been supposed that a simple issue was raised between the litigant parties, viz., who was entitled to possess the estate; and that they proceeded at once to the trial of such issue. This was called καθαρως εισεται. The cause, however, might become more complicated, if one of the parties chose to make exception to the right of any other to dispute his title: this was done by tendering an oath (κατακλησις ἡμων), sworn either by himself or by another, whereby he declared that the estate was not the subject of litigation (μη ἐπίκλεος), and alleged some matter of fact or law to support his assertion. Sons, adopted sons, and persons in legal possession were allowed this advantage. For example, a witness might depose that the last occupier had left male issue surviving him, and therefore the property could not be divided by any collateral relative or devisee: or that the title had already been legally determined, and that the new claimants were not at liberty to reopen the question. This had the effect of a dilatory plea, and stayed farther proceedings in the cause. 4 If then the suitor was resolved to prosecute his claim, he had no other course but to procure a conviction of the original litigants (κατακλησις ἡμων), and, in an action for false testimony (δικαιωμενω) Examples of such actions are the causes in which Demostenes was engaged against Leochares, and
HERES.

may be seen from the speeches of Lysias, c. Philoc., and de bon. Arist.\(^1\)

The posterity of those who were put to death by the people, or were convicted of certain infamous crimes, such as theft, inherited the \textit{tyrilia} of their ancestors, a \textit{damnosa hereditias}, which they could not decline or renounce. It is impossible to be compared to the accessory of heir and of heir in the feudal law. The legislator seems to have thought that such children must be the natural enemies of their country, and ought to be disarmed of all power to do mischief. We cannot wonder at this, when we consider that, with respect to private fends, it was deemed honourable and meritorious in the Athenians to make the father of the public man an exile; we find public prosecutors (as in the opening of the speech of Lysias against Agoratus, of Demosthenes against Theocrines) telling the dicasts that they had been induced to come forward by a desire to avenge the wrongs of their family. In the same spirit, the Athenian law required that men guilty of unlawful homicide should remain in exile until they had appeared the nearest relatives of the deceased, to whom it more especially belonged to ressent and forgive the injury.\(^5\)

Isaeus tells us that parents who apprehended their own insolveney used to get their children adopted into other families, that they might escape the consequences of their own misfortunes. This, however, would not be done after the infancy had once attacked.\(^4\)

We find no mention of property escheating to the state of Athens for want of heirs. This probably arose from a principle of Athenian law, according to which no civic family was subject to expire; and, therefore, the property of an intestate was always assigned to such a person in sufficient possession, or to his nearest representative. With aliens, and those illegitimate children who were regarded as s\'iens, it was, no doubt, otherwise.\(^6\)

HERES (ROMAN). When a man died, a certainty person or certain persons succeeded to all his property, under the name of heres or heredes: this was a universal succession, the whole property being considered a unity. Such a succession was preferred to intestacy, and all the rights and liabilities of the person deceased, and was expressed by the term hereditias. The word hereditias is accordingly defined to be a succession to all the rights of the deceased.\(^6\)

The term \textit{heres} is sometimes used to express the whole property of the intestate, or of that person having the intestate's property in possession. The word \textit{jure} excludes the \textit{honorum possessio}, in opposition to which the hereditias is appropriately called \textit{justa}. The \textit{heres} was the owner who had acquired all that had belonged to another, morte et jure; the etymological relation of the word \textit{heres} seems probable.

A person might become a heres by being named as such (\textit{institutus, scriptus, factus}) in a will, executed by a competent person, according to the forms required by law. (\textit{Vid. Testamentum.}) If a person died intestate \textit{institutus}, or having made a will which was not valid, the inheritance came to those to whom the law gave it in such cases, and was called \textit{hereditas legisitma} or \textit{ab intestato}. But a man could not die testate as to part of his property and intestate as to another part, except he were a soldier, whose testamentary dispositions were considered with great indulgence. The reason of this appears to be the legal unity of the hereditias; a testamentary disposition of a part was not a disposition of the whole, and, consequently, it was no disposition at all.

In order that a testamentary succession should take place, the person dying must have such property or such rights as are capable of being transmitted to another; consequently, neither a slave nor a thing in which he had no interest (\textit{caderedi}), and he might make a heres. Also, the person who is made heres must have a legal capacity to be heres. Generally, all persons who had the commercium could be made heredes, and, consequently, all Roman cives, and even slaves. (\textit{Vid. Testamentum}.)

The institution of a heres was that formal which uses the property, or is made the owner of the thing, by a will. If the testator named no heres or heredes, and complied with all the other legal forms, still his disposition of his property was not a will. The heres called heres directus, or simply heres, represented the testator, and was thus opposed to the heres fideicommissarius. (\textit{Vid. Fideicommisius.}) The testator might either name one person as heres, or he might divide the hereditias among them as he pleased. The shares of the heredes were generally expressed by reference to the division of the \textit{Ae}: thus \textit{heres ex asse} is heres to the whole property, \textit{heres ex dodrante}, heres to three fourths; \textit{heres ex semuncia}, heir to one twelfth. If there was no heir named, without any definite shares being given to them, the property belonged to them in equal shares.

If the testator had a legal capacity to dispose, and if his will was made in due form, the first inquiry as to the heres was, whether he had a legal capacity to take what was given to him. He must have this capacity at the time of the institution, at the time of the testator's death, and at the time of accepting the inheritance. This capacity might be expressed by the words \textit{testamenti factio}, an expression which had reference not only to the legal capacity of the testator, but also to the legal capacity of the person named heres. As a general rule only Roman citizens might be named heredes in a will of a Roman citizen; but a slave could also be named heres, though he had no power to make a will, and a filius-familias could also be named heres, though he was under the same incapacity; for the slave, if he belonged to the testator, could, by testament, receive his freedom and become heres; and if he belonged to another person, he took the inheritance for the benefit of his master: the filius-familias, in like manner, acquired it for his father. Persons, not Roman citizens, who had received the commercium, could take hereditates by testament.\(^7\)

Heredes were either necessarius, sui et necessarii, or extranei. The heres necessarius was a slave of the testator, who was made a heres and liber at the same time; and he was called a necessarius, because of the necessity that he was under of accepting the hereditas. A slave was sometimes appointed heres, if the testator thought that he was not solvent, for the purpose of evading the \\textit{ignomina} which was a consequence of a person's property being sold to pay his debts, as explained above.

Here is the plain text representation of the document:

ters, and the sons and daughters of a son who were in the power of a testator; but a grandson or granddaughter could not be a suos heres unless the testator's son had ceased to be a suos heres in the testator's lifetime, either by death or being released from his power. These heredes sui were called necessarii, because of the necessity that they were under, according to the civil law, of taking the hereditas with its encumbrances. But the praeator allowed such persons to refuse the hereditas (abstinerer se ab hereditate), and to allow the property to be sold to pay the testator's debts (an instance is mentioned by Cicero); and he gave the same privilege to a mancipi, iudaei, and casus mancipii est. All other heredes are called extranei, and comprehend all persons who are not in the power of a testator, such as emancipated children. As a mother had no postes over her children, they were extranei heredes when named heredes in her will. Extranei heredes had the postes or jus deliberandi, or privilege of considering whether they would accept the hereditas or not; but if such extranei heredes, or those who had the abstinenteri postes, meddled with the testator's property, they could not, afterw ard, claim the inheritance, unless the person who had so meddled was under twenty-five years of age, and so belonged to a class who were relieved by the praeator in all cases where they were overreached (verba cessat in causa mancipii et). If a testator had accepted an insolvent hereditas (damassae hereditas), the Emperor Hadrian gave this relief to a person above twenty-five years of age who had accepted an hereditas, and afterw ard discovered that it was embumbered with a heavy debt. A certain time was allowed to extranei for the cretio hereditatis, that is, for them to determine whether they should accept the hereditas or not; hence the phrase cernere hereditatem. Thus, if the testator had written in his will "Heres Titius esto," he ought to add, "Cerniteque in centum diebus proximus quisque seces poterisse: quod non creveris exheres esto." If the extraneus wished to take the hereditas, he was required to make a formal declaration of it, or to become the heredes sui only within the time named (extra diem crevitionis). The formal declaration was called "eam hereditatem adeo cernaque." Unless he did this, he lost the hereditas, and he could not obtain it merely by acting as heres (pro herede gerendo). If a person was named heredes without any time of cretion being fixed, or if he succeeded (legitimo iure) to the property of an intestate, he might become heres by a formal declaration of his intention, and might take possession of the hereditas when he pleased: but the praeator was accustomed, upon the demand of the creditors of the testator or intestate, to name a time within which the heres should take possession, and in default of his doing so, he gave the creditors permission to sell the propriety. The common form of cretion in the will (vulgaris) was taken as already mentioned. Sometimes the words "quisque seces poterisset" were omitted, and it was then specially called "cretio cernuum dierum," which was the more disadvantageous to the heres, as the days began to be reckoned, or, as we say, the time began to run immediately, and it was not reckoned from the time when the heres knew that he was named heres, and had no informing of that testator.

It was not usual to make several degrees of heredes in a will, which was called substitutio. Thus, in the formula beginning "Herex Titius," &c., after the words "exheres esto," the testator might add, "Tum Mavius heres esto coniuncto in diebus cenbu;" &c.; and he might go on substituting as far as he pleased. The person first named as heres (primo grada) became heres by the act of cretion; and the substitutoe (secundae heres) was then entirely excluded. If the words "ab nono cenbu" were not followed by words of exheredation, this gave some advantage to the first heres: for instance, if he neglected the formality of cretion, and only acted as heres, he did not lose all, but shared the hereditas equally with the substituted person. This was the old rule: but a constitution of Aurelius made the acting as heres equivalent to cretion, provided such action took place within the time of cretion.

In the case of liber impubes, who were in the power of a testator, there might be not only the kind of substitution just mentioned (vulgaris substitution), but the testator might declare that if such children should live to become his heredes, and should die impubes, some other person, whom he named, should be his heres. This was expressed thus: "si prici moriturus quam in aem tularem erecti;" for the termination of impuberty and of the tutela were coincident. (Vid. Curatores.) Thus, as Gaius remarks, one testamentary disposition comprised two hereditates. This was called pupillaria substitutio. This kind of substitution was contained in a clause by itself, and in a separate part of the will, which was ordered by the testator's own hands and seal, with a provision that the substitution of the will that he second part should not be opened so long as the son lived and was impubes. A substitution could also be made in the case of children being exheredated (disinherited) by the parent's will, and the substituted person then took all that the pupilli acquired by hereditas, legata, legatuum et testa-

*1. (Cic. Top. 10.—Hor. Sat. ii., 5, 43.)—2. (Gaius, ii., 163.)—3. (Gaius, ii., 165.—Cic. De Orat. i., 22.) 499

---

1. (Cic. Phil. ii., 10.)—2. (Gaius, ii., 163.)—3. (Gaius, ii., 165.)—4. (Cic. De Orat. i., 22.) 499
time, he could take possession of the inheritance with the permission of his new master, who thus became his heir through the medium of his slave. If the slave who was made his heir was then the property of another person, and not of the testator, he could not take the inheritance without the consent of his master. If the testator had been his master at the time he was made his heir, the testator became his heres; if such slave was manumitted before taking possession of the inheritance, he might accept it or refuse it, as he pleased. If an ingenuus died intestate, either from not having made a will, or having made a will, but not in due form, or having made a will in due form, which did not leave all the heirs, the testator's male children and the children of his male grandchildren adopted children were considered as one another. But grandchildren could not be heredes, unless their father had ceased to be in the power of the intestate, either by death or in any other way, as by emancipation. A wife in manum being considered as a daughter, and a daughter-in-law (nura) being either a daughter or a granddaughter, were sui heredes; but the later she was in the possession of the intestate at the time of his death, which was consistent with the law in the case of grandchildren. Posthumous children, who would have been in the power of the intestate if he were living, were also sui heredes. The sui heredes took the hereditas in equal shares. If there was a son or daughter, and a deceased child of the testator, the children of the deceased son took the portion which their parent would have taken. But the distribution was in stirpes, that is, among the stocks or stems sprung from the ancestor, and not in capia, or among the individuals: thus, if there were a son, and the sons of a deceased son, the son would take half of the hereditas, and the sons of the deceased son would take the other half, in equal shares.

If an intestate had no sui heredes, the Twelve Tables gave the hereditas to the agnati. It is stated under Connatii who are agnati. The hereditas died ex ira and in neglecto (exhei) agnati. Agnati were those who were nearest at the time when it was ascertained that a person had died intestate. If the nearest agnatus either neglected to take the inheritance, or died before he had taken possession of it, in either case did the next in succession, as agnatus, take the inheritance. He was the nearest agnatus who was nearest at the time when it was ascertained that a person had died intestate; and not he who was nearest at the time of the death; the reason of which appears to be, that the hereditas was in a sense the property of the intestate until his heir was ascertained, and his heir could not be ascertained until it was certain that he had left no will; and, as Gaius observes, if he had left a will, still it might happen that no person would be heirs under that will; and, accordingly, it seemed better, as he observes, to look out for the nearest agnatus at the time when it is ascertained that there is no heres under the will. If there were several agnati in the same degree, and any one refused to take his share, or died before he had assented to take it, such share accordavit (adversi) to those who consented to take the hereditas.

In the case of women, there were some peculiarities which arose from their legal status. The hereditas of women intestate came to their agnati 'just as the inheritances of males; but women who were beyond the degree of consanguinei, (a term which legally means brothers and sisters) could not take hereditates ab intestato. Thus a sister might take from a brother or sister as legitimate heres, but an aunt or a brother's daughter could not be a legitimate heir, according to the principle of Roman law which gave the testator the power to give to those who he pleased the quality of children of the blood, was followed out in this case also: a mother or a stepmother who had come in manum viri thereby obtained the status of a daughter; and, consequently, as to legitimate succession, there were the same relations between such mother or stepmother and the husband's children as those of a mother and her own children, and such children themselves. But, by senatus consultus of Antoninus and Commodus, the sons of a wife not in manum might take as her legitimate heredes, to the exclusion of consanguinei and other agnati.

If a person died leaving no sui heredes, but only a brother and another brother's children, the brother took all, as the nearest agnatus; there being no brother surviving, and only children of brethren, the hereditas was divided among all the children in capita, that is, the whole was equally divided among all the children.

If there were no agnati, the Twelve Tables gave the hereditas to the gentiles. (Vid. Gaius, p. 468.) Gaius briefly recapitulates the six rules of the Twelve Tables to the distribution of intestates. The emancipated children could claim nothing, as they had ceased to be sui heredes: the same was the case if a man and his children were at the same time made Roman citizens, unless the emperor reduced the children into the power of the father; agnati who had sustained a capitio diminuto were excluded, and consequently, a son who had been given in adoption, and a daughter who was married and in manum viri: if the next agnatus did not take possession, he who was next in order could not, for that reason, make any claim: cognati, whose kinship depended on a female, had no mutual rights as to their hereditas, and consequently, there were no such mutual rights between a mother and her children, unless the mother had come in manum viri, and so the rights of consanguinity had been established between them.

If a man had his son in his power, he was bound either to make him heres, or to exheredate (exhere- datus) to his children, which was no over in silence (silentio pretariet), the will was altogether void (invitile, non jure factum). Some jurists were of opinion, that even if the son, so passed over, died in the father's lifetime, there could be no heres under that will. Other liberi could be passed over, and the will would still be a valid will; but the liber so passed over took a certain portion of the hereditas adscendente, but it was deemed, or just adscendente. For instance, if the heredes instituti were sui, the person or persons passed over took an equal share with them. If the heredes instituti were extranei, the person or persons passed over took a half of the whole hereditas; and as the praetor gave the contra tabulas bonorum possession to the person so passed over, the extranei were deprived of all the hereditas. A rescript of the Emperor Antoninus limited the amount which women could take by the bonorum possession to that which they could take jure adscendente; and the same was the law in the case of emancipated females.

It was necessary to exheredate posthumous children whose principal right to the hereditas was originally valid, became invalid (ruptum); and the will became invalid by the birth of either a posthumous son or daughter, or, as the phrase was, adnascen- do ruptur testamentum. Postumi were not only...
The purchaser then became heres, just as if he had been the legitimos heres. The scriptus heres could only alienate it after the aditio: after such alienation by him, or by the heres legitimos after aditio, both of them still remained heredes, and, consequently, answerable to creditors, but all debts due to the testator or intestate, thus did not cease.

The hereditates of freedmen are more properly considered under Libertati and Patronati.

Before it was determined who was heres, the hereditas was without an owner, and was said "in esse." When a heres was ascertained, such person was considered to possess all the rights incident to the hereditas from the time of the death of the testator or intestate. The next question is how we are to view the heredita in the interval between the death of the former owner and the time when the heres is ascertained. During such interval, according to one form of expression used by the Roman jurists, the hereditas is a juridical person (nica persona fuitgenitor), and is the dominum, that is, the dominus of itself; according to another form of expression, it represents the defunct, and to be divided among his successors. Both these forms are the same in meaning, and they express a fiction which has relation to the legal capacity of the defunct, and not to that of the future heres, and which does not involve the notion of any juridical personality of the hereditas. The relation to the legal capacity of the defunct is this:Slaves generally belonged to an hereditas. A slave, as it is well known, did not have a separate personal existence, even without his knowledge; but the validity of the act of acquisition, in some cases, depended on the legal capacity of his master to acquire. Now while the hereditas was without an ascertained owner, many acts of a slave, by which the hereditas might receive additions, were strictly void, and such acts could only have their legal effect on the supposition that the slave had an owner of a sufficient legal capacity; and, accordingly, the fiction of law gave validity to the act of the slave by relation to the known legal capacity of the late owner, and not by relation to the yet unascertained owner, who might not have such legal capacity. The following are examples: "When a Roman, who had a legal capacity to make a will, died intestate, and another person claims to have been the heres of the deceased, the hereditas, which was still without an owner, such institution of a heres would be valid by virtue of this fiction, because it had reference to the legal capacity of the defunct. If there had been no such fiction, the validity of the institution would have been doubtful, for the unascertained legitimos heres might be an intestabilis, who (at least according to the old law) could not be instituted heres. If a soldier died and left a will, which was not yet opened, another testator might institute as heres a slave belonging to the soldier's hereditas, because the institution, according to this fiction, had reference to the deceased; but if there were not this fiction, the institution might be void, inasmuch as the unascertained heres might be a peregrinus who had no capacity to institute heres. It was to provide for such cases as these only, that this fiction was introduced; and it had no other object than to facilitate certain acquisitions by means of the slaves who belonged to an hereditas."

This masterly exposition is by Savigny 1.

**HERMÆ, dimin. HERMULE (Equus).** The Greeks originally made use of unhewn stones (apoy zoion) to represent their divinities. 2. Their chief improvement was to cut these stones into square

blocks, thirty of which were exhibited to Pausanius in the city of Pharse.1 In the course of time, the square block was surmounted by the head of the deity it represented. Many images of this kind are described by Pausanius; one of Poseidon at Triclini in Arcadia,2 another of Zeus τελέσω at T'gea,3 and another of Aphrodite Urania at Athens. It is probable that the first statues of this imported nature were those of Hermes or Mercury, from whom they received their name; but the term was applied generally to that particular class of statues termed ἄργατα τερατών or σχήματα τερατών,4 even though the busts of other divinities, or persons of either sex, surmounted the pedestal.

The representation which is ascribed to the Athenians by Pausanius, the only parts of the human body developed were the head and sexual organs. But when the sculptor's art was still farther perfected, the whole torso was placed upon a pedestal; and, finally, the pedestal itself was sometimes chiselled to indicate the separation of the legs, as may be seen in a tetragonal female statue in the Villa Albani.5 Two fragments of the Hermes may be seen in the British Museum.6

Houses in Athens had one of these statues placed at the door,7 which were worshipped by the women as instrumental to fecundity, though not in the most delicate manner;8 and the great superstition attached to them is shown by the alarm and indignation which was felt at Athens in consequence of the mutilation of the whole number in a single night, just before the sailing of the Sicilian expedition.9

They were likewise placed in front of temples, near to tombs, in the gymnasia, libraries, and public places, at the corners of streets and high roads as signposts, and some are still to be seen at Athens which have been found on the floor of the temples, and were inscribed upon them.10 Among the Romans particularly they were used for boundary landmarks, either in their primitive form of large stones or with busts upon them, whence they were styled termini and lapidies terminales,11 and as posts for ornamental railings to a garden, in which case they were often decorated with the busts of philosophers and eminent men, some of which may be seen at the Vatican, with the square holes in their shoulders into which the transverse rail was inserted.

As the square part of the statue represented Mercury,12 his name is often compounded with that of the statue that supported it. Thus the Ηέρμαθεα which Atticus found at Athens in Cicero's13 bore the bust of Minerva; the Ηερμακελα14 those of Hercules. The story of Hermaphroditus had probably its origin in some ancient statue of this description, where the square Mercury was surmounted by a female torso, like the one in the British Museum.15

For the application of the Hermes and Hermula in the circus, see p. 445.

HERMÉA (Ἑρμαί) festivals of Hermes, celebrated in various parts of Greece. As Hermes was the tutelary deity of the gymnasia and pailestres, the boys at Athens celebrated the Herméa in the gymnasia. They were on this occasion dressed in their best, offered sacrifices to the god, and amused themselves with various games and sports, which were probably of a more free and unrestrained character than usual. Hence the gymnasiarch was prohibited by a law of Solon1 from admitting any adults on the occasion. This law, however, was afterward neglected, and in the time of Plato2 we find the boys celebrating the Herméa in a palestra, and in the presence of persons of all ages.3 (Compare Gymnium, p. 482.)

Herméa were also celebrated in Crete, where, on the occasion of the same festival of the same kind that was celebrated at Pella,5 there was a day of season of freedom and enjoyment for the slaves, and their masters waited upon them at their repasts.4

The town of Pheneos, in Arcadia, of which Hermes was the principal divinity, likewise celebrated Herméa, and celebrated them both in the same way. Thus the first Herméa of the same kind was celebrated at Pella,5 and on other days, likewise celebrated festivals of Hermes, but particulars are not known.

HERMATHENA. (Vid. HERME.)

HERMERACLE. (Vid. HERME.)

HERMODACTYLUS (Ἑρμόδακτυλος), the same as the Colchicum autumnale, or Meadow Saffron. "My garden is full of Colchicum. " (Adams, 15.) Tourism, in Boeotia,1 and some other places, likewise celebrated festivals of Hermes, but particulars are not known.

HERMODACTYLUS. (Vid. HERME.)

HERMPYLLUS (Ἑρμπυλλος), according to most authorities, the Wild Thyme, or Thymus serpyllum. L. Sibthorp, however, inclines to refer it to a species which he found in great abundance near the sea coast of Attica, and calls it Thymus Pyrrolis. And again, Serapin, in his chapter on Hermodactylus, gives the words of Paulus Εγκινετα along with Dioscorides' chapter on Colchicum. It seems undeniable, then, that the Africans held the Hermodactylus to be the same as the Colchicum; and, accordingly, the highest authorities in modern times on the subject of the herb, as Tournefort, Hunfelderius, Geoffroy, Prosper Alpinus, Dr. Paris, and many others, recognise the Hermodactylus as the Colchicum autumnale, or Meadow Saffron. Still, however, Sprengel joins Matthiolius and Dr. Murray in referring it to the Iris tuberosa. After impartially examining the evidence on both sides, I continue to be of the opinion expressed by me formerly, that the ancient Ερμοπυλλος was the Meadow Saffron.16

HERPYYLLUS (Ἑρπυλλος), according to most authorities, the Wild Thyme, or Thymus serpyllum. L. Sibthorp, however, inclines to refer it to a species which he found in great abundance near the sea coast of Attica, and calls it Thymus Pyrrolis. And again, Serapin, in his chapter on Hermodactylus, gives the words of Paulus Εγκινετα along with Dioscorides' chapter on Colchicum. It seems undeniable, then, that the Africans held the Hermodactylus to be the same as the Colchicum; and, accordingly, the highest authorities in modern times on the subject of the herb, as Tournefort, Hunfelderius, Geoffroy, Prosper Alpinus, Dr. Paris, and many others, recognise the Hermodactylus as the Colchicum autumnale, or Meadow Saffron. Still, however, Sprengel joins Matthiolius and Dr. Murray in referring it to the Iris tuberosa. After impartially examining the evidence on both sides, I continue to be of the opinion expressed by me formerly, that the ancient Ερμοπυλλος was the Meadow Saffron.16

HESPERIDES (Ἑσπερίδες), a plant, the same with the Hesperis matronalis, or Dame's Violet. Sprengel, however, prefers the Hesperis tristis.16

HERO/A. (Vid. Funus, p. 467.)

HEROD/ (Ἡρόδ). (Cham. 275, 2.)

HEROSTASIS (Ἡρόστασις) was a species of liturgy, and consisted in giving a feast to one of the tribes at Athens (Προ τοιν ηρόστασιν).17 It was provided for each tribe at the expense of a person belonging to that tribe, who was called τοιν υπηρότατος Armoporia18 states, on the authority of the speech of Demosthenes against Meidias, that this feast was sometimes provided by persons voluntarily, and at other times by persons appointed by lot; but, as Böckh remarks, nothing of this kind occurs in the speech, and no burden of this description could have
HETÆRÆ.

seen imposed upon a citizen by lot. The ἔστιν ἀνατόμωσις were doubtless appointed, like all persons serving liturgies, according to the amount of their property in some regular succession. These banquetts of the tribes, called γείτους δίδυμα by Athenæus, were introduced for sacred purposes, and for keeping up a friendly intercourse between persons of the same tribe, and must be distinguished from the great feasting of the people, which were defrayed from the Theorics. HETÆRÆ (τρίγονα). The word ἐτατοπα originally only signified a friend or companion, but at Athens and other towns of Greece it was afterward used as a euphemistic name for πόρος, that is, a prostitute or mistress. As persons of this class acted a much more prominent and influential part in some of the Greek states than in any of the most deliberative or capital cities of modern times, we cannot avoid, in this work, to state their position and their relations to other classes of society. But as their conduct, manners, ensnaring arts, and impositions have at all times and in all countries been the same, we shall confine ourselves to those points which were peculiar to the hetæra in Greece.

First we may mention that the young men at Athens, during their marriage age, spent a great part of their time in the company of hetærae without its being thought blamable in any respect whatever. Marriage, indeed, produced, on the whole, a change in this mode of living of young men, but in innumerable instances even married men continued their intercourse with hetærae, without drawing upon themselves the censure of public opinion. It seemed, on the contrary, evident, from the manner in which Demosthenes relates the history of Lysias the sophist, that such connexions after marriage were not looked upon as anything extraordinary or inconsistent, provided a man did not offend against public decency, or altogether neglect his legitimate wife and the affairs of his household, as was the case with Alcibiades. This irregular condition of private life among the Greeks seems to have arisen chiefly from two causes: first, from the great love of sensual pleasures, which the Greeks appear to have possessed even in a much higher degree than most other southern nations; and, secondly, from the generally prevailing indifference between husbands and wives. As regards the latter point, material differences in the condition of Greek women were very different from that which we find described in the heroic age. How this change was brought about is not clear; but it can scarcely be doubted that, generally speaking, the Greeks looked upon marriage merely as a means of producing citizens for the state. The education of women was almost entirely neglected; they were thought a kind of inferior beings, less endow'd by nature, and incapable of taking any part in public affairs, and of sympathizing with their husbands. In an intellectual point of view, therefore, they were not fit to be agreeable companions to their husbands, who consequently sought elsewhere that which they did not find at home. It is true, the history of Greece furnishes many pleasing examples of domestic happiness, between women whose husbands were exceptions, and only confirm the general assertion. The consequence of all this was, that women were bound down by rules which men might violate with impunity; and a wife appears to have had no right to proceed against her husband, even if she could prove that he was unfaithful, although she herself was subject to severe punishment if she was detected. The isolated testimony of a late writer like Alciphron, who represents a wife threatening her husband that, unless he would give up his dissolute mode of living, she would induce her father to bring a charge against him, can, as Becker observes, prove nothing, inasmuch as a neglect of family affairs, in this case, have been the ground for accusation.

But to return to the hetæra: the state not only tolerated, but protected them, and obtained profit from them. Solon is said to have established a παρενοῦ (also called παρακτεινον, εὐραγαρίων, or ἀκαματωμ) in which prostitutes were kept, and to have built the temple of Aphrodite Pandemos with the profit which had been obtained from this. At a later period the number of such houses at Athens was increased, and the persons who kept them were called παροικοδοτοι, λενονας. The conduct of the hetæra in these houses is described in Athenæus. All the hetærae of these houses, as well as individuals who lived by themselves and gained their livelihood by prostitution, had to pay to the state a tax (παρακτείων τεῖχος); and the collecting of this tax was made a separate office, as it was called the tax of the παροικοδοτοι. Thus were best acquainted with those who had to pay it. The hetærae were under the supervision of the ἀγορασμος, and their places of abode were chiefly in the Ceramicus.

The number of private hetærae, or such as did not live in a παρακτείων, was very great at Athens. They were, however, generally not more prostitute than those who lived in the houses of the hetærae, and as dancers, and were, as such, frequently engaged to add to the splendour of family sacrifices, or to enliven and heighten the pleasures of men at their symposia. Their private abodes, where other two, three, and more lived together, were also frequently places of resort for young men. Most of these hetærae not only took the greatest care to preserve their physical beauties, and to acquire such accomplishments as we just mentioned, but paid considerable attention to the cultivation of their minds. Thus the Arcadian Lasthenia was a disciple of Plato, and Leontion a disciple of Epicurus. Aspasia is even said to have instructed Socrates and Pericles. Whatever we may think of the historical truth of these and similar reports, they seem to show that the hetærae were skilled in those arts which show in what light these hetærae were looked upon by the ancients. It seems to have been owing especially to their superiority in intellectual cultivation over the female citizens, that men preferred their society and conversation to those of citizens and women, and that some hetærae, such as Aspasia, Lais, Phryne, and others, formed connexions with the most eminent men of their age, and acquired considerable influence over their contemporaries. The free and unrestrained conduct and conversation, which were not subject to the strict conventional rules which honest women had to observe; their wit and humour, of which so many instances are recorded, were well calculated to ennoble young men, and to draw the attention of husbands away from their wives. Women, however, in these respects exceptions; and even Athenian citizens did not scruple to introduce their wives and daughters to her circles, that they might learn there the secrets by which they might gain and preserve the affections of their husbands. 1

Disorderly life of the majority of Greek hetærae.

action was maintainable against such Athenian citizens as had administered to the unnatural lusts of another; but only if after such degradation they ventured to make use of political franchise, and to aspire to be office in the State, in which office they are recited byAESCHINES, we learn that such offenders were capitally punished. The cause was tried by the court of the thesmothetes.

HETAIRIÆ. (Vid. Ergani.)

HEXAPHRÖMÖS. (Vid. Lectica.)

HIERACION (liepásoun) a plant, of which Dioscorides mentions two kinds, the τοιον and the τω μακρον. The former of these Sibthorp makes the same with the Arneopogon pircvodes, Wild., and the latter with the Scorzonera elongata, Wild.3

HIERAX (liepás), a term applied to various species of Aescitirina, or the Hawk tribe. "The scho- lonist on Apollonius Rhodius says," remarks Adams, "that Callimachus described six species of Hawk; and Aristotle mentions that some had described six species.3 Liæanus applies the term rather loosely to three genera, namely, the Stiris, the Falco, and the Petiaca. The ἱερακές of the Greeks principally to the second of these. 1. The ἀστρο- φόνος is the Falco palmarumbars, or Goshawk; it is the largest of the genus.2 The albo-falcus of Aristotle is either Falco tyton, or Falco eleonorae, and it is the smallest of the genus. 3. The ἰωρής of Aristotle, rendered Butes by GAZA, is the species of Buzard called Ring-tail in English, namely, the Circus pyr- gargarus, L. 4. The υπτομήρος, or Subutus, it is probably only a variety of the last. 5. The κράος or third species of Aristotle, is not satisfactorily de- termined: Buxton supposes it to be the Moor Buzard, or Falco amigusin, L.; but Schneider thinks this point uncertain.5 Homer calls it ἀλαβρίον τετα- γυνω, 'the swiftest of birds.' 6. The πέρκος, or πτερις of Aristotle, in Latin Accipiter francolinus, was most probably the Sparrow-buzzard, or Falco nivola. 7. It is deserving of remark, that the Nilus of OVID was the Sea Eagle, that of the Ancients classifies the Sparrow-hawk. 7. The ἱαλακς, or κυκώνις of Homer, was most probably identical with the πτέρες, but cannot be otherwise satisfactorily deter- mined.8 The κεκρός, or κεκρόν, or κεκρός, or (as we read it in the Aves of Aristophanes) the κέκρος of ancient writers, is probably the Buzzard, namely, the Falco tinunculus, or Kestrel. 9. The two species named ἀστροφής and τερησίς of Aristotle cannot be satisfactorily ascertained.10 The ἰωτός or ἱεντός is the Kite or Gled, namely, the Milvus indicus, Savigny.11

11. A flying fish mentioned by Oppian and Ελιαν. None of the commentators can determine exactly what it is.

HERIEON. (Vid. Sacrificium.)

HIEROBOT'ANE (leopóbdón), a name given by Dioscorides and others to the Vervain, as being a plant much used in religious rites (lepóς,) 'sacred,' and βότανα, "plant." (Vid. Verraena.)

HIEROCLASIA. (Vid. Herren.)

HIEROMANUELIA. (Vid. Hieronymus.)

HIEROMENONES (leipoménones) were the more honourable of the two classes of representatives who composed the Amphictyonic council. An account of them is given under HIERONIMONES, p. 49. We also read of hieromonemes in Grecian states, distinct from the Amphictyonic representatives. The particular use of the term is not clear; at Megara, they were called hieromonemes; and at

HETAIRESOS GRAPHE. HIEROMENONES.
HIPPOMARATHRUM

Byzantium, which was a colony of Megara, the chief magistrate in the state appears to have been called by this name. In a decree of Byzantium, quoted by Demosthenes, a hierarchon is mentioned, who is given his name to the year, and we also find the same word on the coins of this city. At Chalcidion, another colony of Megara, a hierarchon also existed, as is proved by a decree which is still extant. An inscription found in Thasos also mentions a hierarchon who presided over the treasury.\(^1\)

\(^1\) EROI'NI C.E. (Vid. Athlet. p. 120.)

**HIEROPHANTES. (Vid. Eleusinia.)**

**HIEROPOIIOI** (ἱεροποιοί) were sacrificers at Athens, of whom ten were appointed every year, and conducted all the usual sacrifices, as well as those belonging to the quinquennial festivals, with the exception of those of the Panathenaea. They are frequently mentioned in inscriptions.\(^2\) The most honourable of these officers were the sacrificers for the revered goddesses or Eumeneses (ἐυμενεστὶς ταύτης), who were chosen by open vote, and probably only performed the commencement of the sacrifice, and did not kill the victim themselves.\(^3\)

\(^2\) ΙΕΡΟΣΟΛΑΙΑ ΠΡΑΣΗ (ἱερόσολαία γραφή). The action for sacrifice is distinguished from the κάλαθος γεννητός γραφή, in that it was directed against the offence of robbery, aggravated by violence and destruction, to which death was subsequently awarded. In the latter action, on the contrary, the theft and embezzlement, and its subject matter, only were taken into consideration, and the diceast had a power of assessing the penalty upon the conviction of the offender. With respect to the tribunal before which a case of sacrifice might have been tried, some circumstances seem to have produced some doubt as to which court the case might be transferred to the king archon, who would thereupon assemble the areopagus and preside at the trial, or to one of the thesclothetes in his character of chief of an ordinary heliastic body; or, if the prosecution assumed the form of an apopage or ephesia, would fall within the jurisdiction of the Eleves. Before the first-mentioned court it is conjectured\(^4\) that the sacrifice of the allegorical horse, as well as the fact itself, came in question; that the thesclothete took cognizance of those cases in which the sacrifice was obvious if the fact were established; and that the Eleves had jurisdiction when the criminal appeared in the character of a common robber or burglar, surprised in the commission of the offence while still alive, and which, after the body was put to death, his property confiscated, and his body denied burial within the Attic territory. There is a speech of Lyias\(^5\) extant upon this subject, but it adds little to our knowledge, except that slaves were allowed upon that occasion to appear as informers against their master—a resident alien—and anticipated their emancipation in the event of not being condemned.

**HILA'RIA** (ἱλάρα) seems originally to have been a name which was given to any day or season of rejoicing. The hilaria were, therefore, according to Maximus Monachus,\(^6\) either private or public. Among the former he reckons the day on which a person married, and on which a son was born; among the latter, those days of public rejoicing appointed by the emperor. Such days were devoted to general rejoicings and public sacrifices, and no one was allowed to show any traces of grief or sorrow.

But the Romans also celebrated hilarias, as a festa stativa, on the 25th of March, in honour of Cybele, the mother of the gods;\(^7\) and it is probably to distinguish these hilarias from those mentioned above, that Lampadius\(^8\) calls them *Hilariæ Matris Deæ.* The day of its celebration was the first after the vernal equinox, or the first day of the year which was longer than the night. The winter, with its gloom, had passed away, and the first day of a better season was spent in rejoicings. The manner of its celebration during the time of the Republic is unknown, except that Valerius Maximus\(^9\) mentions games in honour of the mother of the gods. Respecting its celebration at the time of the Empire, we learn from Herodian\(^10\) that, among other things, there was a solemn procession, in which the statue of the goddess was carried, and before this statue were carried the most costly specimens of plate and works of art belonging either to wealthy Romans or to the emperors themselves. All kinds of games and amusements were allowed on this day: masquerades were the most prominent among them, and every one might, in his disguise, bestate whomsoever he liked, and even sacrifies.

The hilaria were in reality only the last day of a festival of Cybele, which commemorated by too Gallus with various mysterious rites.\(^11\) It is also observed that the hilaria are neither mentioned in the Roman calendar nor in Ovid's Fasti.

\(^3\) *HIMANTOPOUS* (ἱμαντόπους), a species of bird, which Turner conjectures to be the Red-shank. Gesner, however, prefers the Sea-pie, or Oyster-catcher, the *Hematopus ostralegus,* L.\(^12\)

\(^4\) HIPPARCHUS (ἱππαρχος), an animal described by Opian. Probably the same with the *ἱππαρχος.*\(^13\)

\(^5\) HIPPAROMOSTES. (Vid. ARM. GREEK, p. 96.)

\(^6\) *HIPPELAPHUS* (ἱππελᾰπάθος), a large animal of the deer, or rather, antelope kind, mentioned by Aristotle.

\(^7\) HIPPOCAMPUS. (Vid. Flam. p. 49.)

\(^8\) *HIPPOCASTRUS* (ἱππόκαστρος), a fabulous animal, described by the ancient poets as a species of Seasehore, having a tail like a fish, on which the seagoing tradesmen, as well as the naturalists, however, only applied the term to a species of fish, the *Syngnathus Hippocampus,* called in Italian *Cavillino marino,* and in English Seasehore, because its head has some resemblance to that of a horse. It grows to the length of eight or twelve inches.\(^14\)

\(^9\) *HIPPOLAPATHRUM* (ἱππολαπάθρον), a plant, a kind of Dock; *Leposiphon hortense.* (Vid. Leposiph.)*

\(^10\) *HIPPOMANES* (ἱππόμανες), a plant, said to grow especially in Arcadia, sought for and eagerly devoured by horses; or, as others say, producing in them raging desire or madness.\(^15\)

\(^11\) I. A preparation from the *Sparge* or *Euphroney,* as far as, at least, we can infer from what Theophras- tus says.

\(^12\) *HIPPOMARATHRUM* (ἱππομαραθρόν), Adams observes that Stockhouse *makes the* *ἱππομαραθρόν* 

---

at Theophrastus to be the Ferula communis; but Sprengel, in his History of Botany, holds the I. of Theophrastus and Hippocrates to be the Cachrys sicula. In his edition of Dioscorides, he refers the first species of this author to the Cachrys Morrisonii, Vahl. Dierbergs agrees with Sprengel respecting the I. of Hippocrates, and he calls it Cachrys Sicula. Börner, however, also allows its presence, grindle, or Satureja glandulosa, and the name we have given it was only a name.

The second is probably the Swift; and the third the H. riparia, or Bank Swallow. Aristotle favours the opinion which received the cincturance of Linneas, but has since been exploded, that swallows hide themselves in holes during the winter, and do not migrate to distant countries. Herodotus states that the swallows do not migrate from Egypt. This is a belief generally held by the ancients, and from other countries. Some have conjectured that Homer meant the Swift by the bird which he names ὕφορα, or παγόφα, as some read it.

HISTOS (látos). (Vid. Malus.)

HISTrio, an Actor.

I. Greek Actors (σπουδαῖοι). It is shown in the Shaksperean dramas that the Greek drama originated in the choruses which accompanied the dramatical recitation of Dionysus danced around his altar, and that at first one person detached himself from the chorus, and, with mimic gesticulation, related his story either to the chorus or in conversation with it. If the story thus acted required more than one person, they were all represented in succession by the same actor who played the principal in the last scene, or, as in the Greek drama, the dramatist, at the same time, had an opportunity of showing two persons in contrast with each other on the stage. Towards the close of his career, Eschylus found it necessary to introduce a third actor, as is the case in the Agamemnon, Chophorô, and Eumenides. This number of three actors was also required in the later plays composed by Sophocles, and was but seldom exceeded in any Greek drama. In the Codpus in Colonus, however, which was performed after the death of Sophocles, four actors appeared on the stage at once, and this deviation from the general rule was called παραχορήγεια. The three regular actors were distinguished by the technical names of πρωταγωνίστης, δευτέραγωνίστης, and τριταγωνίστης, which indicated the more or less prominent part which an actor had to perform in the drama. Certain conventional means were devised, by which the spectators, at the moment an actor appeared on the stage, were enabled to judge which part he was going to perform; thus the protagonist always appeared at the door of the stage; the deuteragonist, a little farther back; and the tritagonist, at the centre, the deuteragonists from one on the right, and the tritagonists from a door on the left hand side. The protagonists was the principal hero or heroine of a play, in whom all the power and energy of the drama were concentrated; and whenever a Greek drama is called after the name of one of its personages, it is always the name of the character which was performed by the protagonistes. The deuteragonists, in the pieces of Eschylus for two actors, calls forth the various emotions of the protagonists, either by friendly sympathy or by painful tiding, &c. The part of a tritagonist is represented by some external and invisible power, by which the hero is actuated or caused to suffer; a character of a tritagonist was always the name of the personages assigned to him was generally that of an instigator, who was the cause of the sufferings of the protagonistes, while he himself was the least capable of depth of feeling or sympathy. The deuteragonists, in the dramas for three actors, is generally distinguished by loftiness and warmth of feeling, but has

1. (Hirundo, Nat. MAter.—Theophrast, H. P. vi., 2.—Di—
not its depth and vehemence peculiar to the prota-
gonists, and thus serves as a foil to set forth the
character of the chief hero in its most striking and
vivid colours. The female characters of a play were always per-
formed by young men. A distinct class of persons who
who made acting on the stage their profession, was
unknown to the Greeks during the period of their
great dramatists. The earliest and greatest dra-
matic poets, Thespis, Melanthius, Sophocles, and
probably Æsopus also, acted in their own plays, and
in all probability as protagonistes. We also
know of several instances in which distinguished
Athenian citizens appeared on the stage, and Æs-
achines, the orator, did not scruple to act the part of
orators. It is said that he showed so well how it was
that by no means thought degrading in Greece to
perform on the stage, and that no stigma whatever
was attached to the name of a man for his appear-
ing on the stage. Bad actors, however, to what-
ever station in life they belonged, were not, on that
account, spared; and the general mode of showing
displeasure on the part of the spectators seems to have
had the effect of compelling the culprit to
act better. It appears that when the spectators showed their displeasure too offensive or insulting a manner, the actors would sometimes
attack the most forward of the audience, and quar-
rels of this kind ended not infrequently in blows
and wounds. At a later period, however, persons
began to devote themselves exclusively to the pro-
fessionp and engaged themselves whenever they found it
profitable. They formed regular companies
or guilds, with their own internal organization, with
their common officers, property, and sacra. We
possess a number of inscriptions belonging to such
companies, with decrees to honour their superiors,
or to declare their gratitude to some king to whom they had been engaged. But these actors are gen-
erally introduced into very contemptuous terms; these
were, perhaps, in some cases slaves or freedmen,
and their ordinary pay seems to have been seven
drachmae for every performance.  

II. Roman Actors. The word histriones, by
which the Roman actors were called, is said to
have been formed from the Etruscan hister, which
signifies a dancer.

In the year 364 B.C. Rome was visited by a plague, and as no human means could stop it, the Romans are said to have tried to avert the anger of the gods by scenic plays
(ludi scenici), which until then had been unknown
to them; and as there were no persons at Rome
prepared for such performances, the Romans sent
to Etruria for them. The first histriones who were
thus introduced on the stage were dancers, and per-
formed their movements to the accompaniment of a
flute. That the art of dancing to this accompani-
ment should have altogether unknown to the Romans is hardly credible; the real secret must
have been in the mode of dancing, that is, in the
mimic representations of the dancers, such as they
are described by Dionysius and Appian. That the
Etruscans far excelled the Romans in these mimic
dances is more than probable; and we find that in
subsequent times, also, a fresh supply of Etruscan
dancers (histriones) came to Rome. Roman youths
afterwards danced and acted those dances. Cicero
called these dancers and clowns vere vas (adapted to the move-
ments of the dance and the melody of the flute).
This kind of amusement, which was the basis
of the Roman drama, remained unaltered until the
time of Livius Andronicus, who introduced a slave
upon the stage for the purpose of singing or reciting
the recitative, while he himself performed the ap-
propriate dance and spoke his lines. A nearer
capstone to this is the introduction of the flute;
A further step in the development of the drama, which is likewise ascribed to Livius, was
the dance and reciter carried on a dialogue,
and acted a story with the accompaniment of the flute.
The name histrion, which originally signifi-
ced a dancer, was now applied to the actors in the
play. The stage was played by freedmen
Romans, while the regular drama was left to the
histriones, who formed a distinct class of persons.
It is clear, from the words of Livy, that the histriones
were not citizens; that they were not contained
in the tribes, nor allowed to be enlisted as soldiers
in the Roman legions; and that, if any citizen entered
the profession of histrion, he on this account was
excluded from his tribe. Niebuhr takes differ-
ently, but does not assign any reason for his opin-
ion. He asserts that the histriones were never
in the service of the state nor of foreign rulers,
freedmen, strangers, or slaves, and many passages
of Roman writers show that they were generally
held in great contempt. Towards the close of
the Republic, it was only such men as Cicero, who, by
their Greek education, raised themselves above
the prejudices of their countrymen, and valued the
person no less than the talents of an Æsopus and
Liscus.

This law was partly abolished by Augustus, in as far as
he did entirely away with the juss virgurum, and
prohibited the interference of the magistrates in
time when, and the place where (ludi et scenae) the
actors performed. But he nevertheless inflicted
very severe punishments upon those actors who,
either in their private life or in their conduct on
the stage, committed any impropriety. After these
regulations of Augustus, the only legal punishments
that could be inflicted upon actors for improper
conduct seem to have been imprisonment and ex-
nunciation. The juss virgurum is indeed said to have been
restored to the prior by a law of Augustus himself;
not expressly, but by the interpretation put upon
this law by the jurists. But this interpretation
cannot have become valid until after the reign of Tiberius, of whom it is clearly stated that he refused
to restore the juss virgurum, because it had been abolished
by his predecessor. These circumstances

HONORES.

and the favour of the emperors, increased the arrogance and the loose conduct of the histrionem, and the theatres were not seldom the scenes of bloody fights. Hence Tiberius, on one occasion, found himself obliged to expel all histriones from Italy; but they were recalled and patronised by his successor. Some of the later emperors wore almost purely festive, and kept them for their private amusement (histriones auxiliares). They performed at the expense of the state, and were occasionally allowed, also, to play in the theatres before the people (publicabantur). In the Digest we read that all actors were infamous. From the time of Tacitus the word histrion was used as synonymous with pantomime and acrobat.

Respecting the ordinary pay which common actors received during the time of the Republic, nothing is known. The pay itself was called lucar, which word was perhaps confined originally to the payment made to those who took part in the religious services celebrated in groves. In the times of the Empire it seems that some dramaturgi or, according to others, seven dramatists, were the common pay for a histrion for one performance. Several emperors found it necessary to restrict the practice of giving immoderate sums to actors. The Emperor M. Antoninus, who was fond of all histrionic arts, ordained that every actor should receive five denarii a day, and that all representations should exceed the sum of ten aurei. But it is not clear whether in this distribution the actor or the populace was considered. The two acts received from the people gold and silver crowns, which were given or thrown to them upon the stage.

HONORA KIUM. JUS. (Vir. Emctm.)

HONORES. Cicero speaks of the "honor populi," and Horace of the populace.

"qui stultus honoris Sepe dat indignis." In both passages the word "honor" means the high offices of the state to which qualified individuals were called by the Roman citizens. Cicero calls the quosstimorium "honor," and the words "magistratus" and "honor" are sometimes coupled together. The capacity of enjoying the honor was one of the distinguishing marks of citizenship.

HORA. (Vir. Citian.)

There appears to be no exact definition of honor civilis, which has been so frequently a subject of dispute. The honor magistrorum is defined to be "administratio republaurum cum dignitatis gradu, sive cum sumpto, sive sine erogatione continenda." Munus was either publicum or privatum. A publicum munus was concerned with administration (in administrando republica), and was attended with some cost (sumptus), but not with rank (dignitas). A privatum munus was property and was said to have been "impono." Cicero uses the phrase "municia et republaurum munera perfunctio" to signify one who has attained all the honors the state can give, and discharged all the duties which are owed by a citizen. A person who held a magistratus might be said to discharge munera, but only as incident to the office (magnificientissimae munera elenchus perfuentus), for the office itself was the honor. Such munera as these were public games and other things of the kind.

HOPLITAI. (Vir. Arna, p. 94; Army, Greek p. 99.)

HOPLOMACHUS. (Vir. Gladiatores, p. 476.)

HORA (σήμα), in the signification of hour, the 12th part of the natural day, did not come into general use until the middle of the second century B.C. The equinoctial hours, though known to astronomers and philosophers, were not used in the affairs of common life till towards the end of the fourth century A.D. As the division of the natural day into twelve equal parts, both in summer and winter, rendered the duration of the hours longer or shorter according to the different seasons of the year, it is not easy, with accuracy, to compare or reduce the hours of the ancients to our equalinoctial hours. The hours of a Roman day would only coincide with the hours of our day at the two equinoxes. (Vir. Diges. and Hesiodus.) As the duration of the natural day was variable, it was thought necessary to mark the progress of a place by the natural hours and not by the equalinoctial hours of Italy or Greece. Idele, in his Handbuch der Chronologie, has given the following approximate duration of the natural days at Rome in the year 45 B.C., which was the first after the new regulation of the calendar by J. Caesar; the length of the days is only marked at the eight principal points in the apparent course of the sun.

The following table contains a comparison of the hours of a Roman natural day, at the summer and winter solstices, with the hours of our day.

1. (Cic. de Fam. vii. 17.) — 2. (Dig. 50, tit. 4, "De Magnific.
lan et Honoribus").

507
The custom of dividing the natural day into twelve equal parts or hours lasted, as we have observed, till a very late period. The first calendari-um in which we find the duration of day and night marked according to equinoctial hours, is the Calendarium rusticum Farnesianum. 4 Another question which has often been discussed is whether, in such expressions as prima, altera, tertia hora, &c., we have to understand the hour which is passing, or that which has already elapsed. 5 From the construction of ancient sundials, on which the hours are marked by eleven lines, so that the first hour had elapsed when the shadow of the gnomon fell upon the first line, it might seem as if hora prima meant after the lapse of the first hour. But the manner in which Martial, 6 when describing the various purposes to which the hours of the day were devoted by the Romans, speaks of the hours, leaves no doubt that the expressions prima, altera, tertia hora, &c., mean the hour which is passing, and not that which has already elapsed. 7

HORODEARIUM.
HOROLOGIUM.

Horologium was appointed in the courts for the purpose of watching the clepsydra, and stopping it when any documents were read, whereby the speaker was interrupted; and it is to this officer that Domothesen calls out, 'Sei d’alcuni horologi.' The time, and, consequently, the quantity of water allowed was not very accurately determined. The importance of the case; and we are informed that in a gravis parapetissin the water allowed to each party amounted to eleven amphoræ; whereas in trials concerning the right of inheritance only one amphora was allowed. Those actions in which the time was thus measured to the speakers are called by Pollic. dicta apo d’alco; others are termed dicas, but, as was usual in such cases, the water was generally measured to a certain space of time. The only instance of this kind of actions of which we know is the gravis parapetissin.

The clepsydra used in the courts of justice was, properly speaking, no horologium; but smaller ones, made of glass, and of the same simple structure, were undoubtedly used very early in families for the purposes of ordinary life, and for dividing the day into twelve equal parts. In those glass clepsydras the division into twelve equal parts must have been visible, either on the glass globe itself, or in the basin into which the water flowed. These instruments, however, did not show the time quite correctly. During the night or in cloudy weather, the water ran out of the clepsydra sometimes quicker and sometimes slower, according to the different temperature of the water; and, secondly, because the length of the hours varied in the different seasons of the year. To remove the second of these defects, the inside of the clepsydra was covered with a coat of wax, sometimes even with a coat of glass. As the water flowed, the wax came longer the water was gradually taken away again. Plato is said to have used a waxophylax or clepsydra in the shape of a large clepsydra, which indicated the hours of the night, and seems to have been of a complicated structure. This instance shows that at an early period improvements were made on the old and simple clepsydra. But all these improvements were excelled by the ingenious invention of Ctesibius, a celebrated mathematician of Alexandria (about 135 B.C.). It is called drolon of waxophylax, and is described by Vitruvius.

Water was made to drop upon wheels, which were thereby turned. The regular movement of these wheels, which are divided into twelve hours, or days, is thus excited. They have since been made in various parts of the world. The Roman clepsydra, however (about 150 B.C.), it seems to have been very common to reckon by hours.

The first horologium with which the Romans became acquainted was a sundial (solarium, or horologium staticochnic), and was, according to some writers, brought to Rome by Paprius Censorius twelve years before the war with Pyrrhus, and placed before the temple of Quirinus; others stated that it was brought to Rome at the time of the first Punic war, by the consul M. Valerius Messala, and erected on a column behind the Rostra. But this horologium, being made for a different meridian, did not show the time at such advance and basilica. In old Rome, the clepsydra which had been erected behind the Rostra seems to have existed on that spot till a very late period, and it would seem that the place was called ad Solarium, so that Cicero uses this expression as synonymous with Rostra or Forum. Horologia of various descriptions seem also to have been commonly kept by private individuals; and at the time of the emperors, the wealthy Romans used to keep slaves whose special duty was to announce the hours of the day to their masters.

From the number of solarium which have been discovered in modern times in Italy, we must infer that they were very generally used among the ancients. The following woodcut represents one of the simplest horologia which have been discovered: it seems to bear great similarity to that, the invention of which Vitruvius ascribes to Berosus. It was discovered in 1741, on the hill of Tusculum, among the ruins of an ancient villa, and is described by Gio. Luca Zuzzeri, in a work entitled Duna antica villa scoperta sulle case del Tuscolo, e d’antico orologio a sole, Venezia, 1746; and by G. H. Martin, in his Abhahnung von den Sonnenurkuren der Alten Leipzig, 1777, p. 49, &c.

The following woodcut shows the same solarium as restored by Zuzzeri.

HOROLOGIUM.

The breadth as well as the height (A O and P A) are somewhat more than eight inches, and the length (A B) a little more than sixteen inches. The surface (A O R B) is horizontal. S P Q T is the basis of the solarium, which originally was probably erected upon a pillar. Its side, A S T B, inclines somewhat towards the basis. This inclination was called tyche, or inclinatio solarii and enclima succinctum, and shows the latitude or polar altitude of the place for which the solarium was made. The angle of the enclima is about 40° 43', which coincides with the latitude of Tuscumel. In the body of the solarium is the almost spherical excavation H K D M I F N, which forms a double hemicycle (hemicyclicum excavationum ex quadrato). Within this excavation the eleven-hour lines are marked, which pass through three semi-circles, H L N, K E F, and D M I. The middle one, K E F, represents the equator, the two others the tropic lines of winter and summer. The curve representing the summer tropic is somewhat more than a semicircle, the two other curves somewhat smaller. The ten middle parts, or hours in each of the three curves, are all equal in distance from each other, but the two extreme ones, though equal to each other, are by one fourth smaller than the rest. In the middle, G, of the curve D K H N J, there is a little square hole, in which the gnomon or pointer must have been fixed, and a trace of it is still visible in the lead by means of which it was fixed. It must have stood in a perpendicular position upon the surface A B R O, and at a certain distance from the surface it must have turned in a right angle above the spherical excavation, so that its end (C) extended as far as the middle of the equator, as it is restored in the above woodcut. Vide the description of another solarium in G. H. Martini's Antiquorum Monumentorum Syll. p. 95, &c.

Oleipny, were used by the Romans in their granaries for the purpose of measuring accurately the four vigilia into which the night was divided.

The custom of using oleipny as a check upon the speakers in the courts of justice at Rome, was introduced by a law of Cn. Pompeius, in his third consulship. Before that time the speakers had been under no restrictions, but spoke as long as they deemed proper. At Rome, as at Athens, the time allowed to the speakers depended upon the importance of the case. Pliny states that on one important occasion he spoke for nearly five hours; ten large oleipny had been granted to him by the judges, but the case was so important that four others were added. Pompeius, in his law, is said to have limited the time during which the accuser was allowed to speak to two hours, while the accused was allowed three hours.

HORTUS.

clear from the case of Pliny and others, was not observed on all occasions, and we must suppose that it was merely the retention of Pompeius, to fix the proportions of the time to be allowed to each party that it, that all cases from the forum should only have two thirds of the time allowed to the accused. This supposition is supported by a case mentioned by Pliny.1 where, according to law (e 1a), the accuser had six hours, while the accused had nine. An especial officer was at Rome, as well as at Athens, appointed to stop the oleipny during the time when documents were read.

HORREUM (ἀρχομένιον, αρχομενάω, αρχομένω) was, according to its etymological signification, a place in which ripe fruits, and especially corn, were kept, and thus answered to our granary.2 During the Empire, the name horreum was given to any place destined for the safe preservation of things of any kind. Thus we find it applied to a place in which beautiful works of art were kept,3 to cellars (horrea subterranea, horrea vinaria);4 to deposits for merchandise, and all sorts of provisions (horreum generalum). Seneca5 even calls his library a horreum. But the more general application of the word horreum was to places for keeping fruit and corn; and, as some kinds of fruit required to be kept more dry than others, the ancients had, besides the horrea subterraneae, or cellars, two other kinds, one of which was in warehouses, or other houses, upon the ground; but others (horrea generic, or cellars) were erected above the ground, and rested upon posts or stone pillars, that the fruits kept in them might remain dry.

From about the year 140 A.D., Rome possessed two kinds of public horrea. The one class consisted of buildings in which the Romans might deposit their corn, and the other in which they kept other valuables, for which they had no safe place in their own houses. This kind of public horrea is mentioned as early as the time of Antoninus Pius,6 though Lampridius7 assigns their institution to Alexander Severus.8 The officers who had the superintendence of these establishments were called horrearii. The second and more important class of public horrea, which were called public granaries, were buildings in which a plentiful supply of corn was constantly kept at the expense of the state, and from which, in seasons of scarcity, the corn was distributed among the poor, or sold at a moderate price. The first idea of building such a public granary arose with C. Sempronius Gracchus (lex Sempronis frumentaria); and the rules of the great granary (horrea populi Romani), which he built, were soon seen down to the sixteenth century between the Aventine and the Monte Testaceo.9

The plan of C. Gracchus was followed out and carried farther by Clodius, Pompey, and several of the emperors; and during the Empire we thus find a great number of public horrea which were called after the names of their founders, e.g., horrea Antoninius, Varruginis, Servilii, Augusti, Domitiani, &c. The manner in which corn from these granaries was given to the people differed at different times.

HORTENSIA LEX. (Vid. Plebeiscitum.)

HORTUS (ἐφυαῖον). Garden.

I. Greek Gardens—Our knowledge of the horrea.

HOR'TUS. HOSPITIUM.

ticulture of the Greeks is very limited. We must not look for information respecting their gardens to the accounts which we find in Greek writers of the gardens of Alcinoës, filled with all manner of trees, and by other authors who adopt the same method, or of those of the Hesperides, or of the paradies of the Persian satrapes, which resembled our parks, for the former gardens are only imaginary, and the manner in which the paradies are spoken of by Greek writers shows that they were not familiar with anything of the kind in their own country. In fact, there seems to have had no great taste for landscape beauty, and the small number of flowers with which they were acquainted afforded but little inducement to ornamental horticulture.

The sacred groves were cultivated with special care. They contained ornamental and odoriferous plants and fruit-trees, particularly olives and vines. Sometimes they were without fruit-trees. The only passage in early Greek writers, in which flower-gardens appear to be mentioned, is one in Aristophanes, who speaks of κόπων εὐώδες. At Athens the flowers most cultivated were probably those used for making garlands, such as violets and roses. In the time of Ptolemy the art of gardening seems to have advanced in the favourable climate, for a subject on flower-growing was obtained all the year round. Longus describes a garden containing every production of each season; in spring, roses, lilies, hyacinths, and violets; in summer, poppies, wild pears (άχνοδες), and all fruit; in autumn, vines and figs, and pomegranates and myrtles. That the Greek idea of horticultural beauty was not confined to flowers as ours, may be inferred from a passage in Plutarch, where he speaks of the practice of setting off the beauties of roses and violets by planting them side by side with leeks and onions. Becker considers this passage a proof that flowers were cultivated more to be used for garlands than to beautify the garden. 11

II. ROMAN GARDEN.—The Romans, like the Greeks, laboured under the disadvantage of a very limited flora. This disadvantage they endeavoured to overcome, by arranging the materials they did possess in such a way as to produce a striking effect. We have a very full description of a Roman garden, which was surrounded by the gardens of the lenders, which describes the Tuscan villa. In front of the porticus there was generally a στυγαμ, or flat piece of ground, divided into flower-beds of different shapes by borders of box. There were also such flower-beds in other parts of the garden. Sometimes they were raised so as to form terraces, and their sloping sides planted with evergreens or creepers. The most striking features of a Roman garden were lines of large trees, among which the plane appears to have been a great favourite, planted in regular order; alleys or walks (ambulationes) formed by closely-clipped hedges of box, yew, cypress, and other evergreens; beds of acanthus, rows of fruit-trees, especially of vines, with statues, pyramidical fountains, and summer-houses (dactae). The trunks of the trees and the parts of the house, or any other buildings which were visible from the garden, were often covered with ivy. In one respect the Roman taste differed most materially from that of the present day, namely, in their fondness for the arboparia, which consisted in tying, twisting, or cutting trees and shrubs (especially the box) into the figures of animals, ships, letters, &c.

The importance attached to this part of horticulture is proved, not only by the description of Pliny, but by the fact that topiarius is the only name given by Greek or Roman writers for the ornamental gardener. Cicero mentions the topiarius among the higher class of slaves.

Attached to the garden were places for exercise the geastatio and hypodromus. The geastatio was a sort of avenue, shaded by trees, for the purpose of running horse exercise, such as riding in a litter. The hypodromus was a place for running horse exercise, in the form of a circus, consisting of several paths divided by hedges of box, ornamented with topiarian work, and surrounded by large trees.

The flowers which the Romans possessed, though few in comparison with the species known to us, were more numerous than some writers have represented; but the subject still requires investigation. Their principal garden-flowers seem to have been violets and roses, and they also had the crocus, narcissus, lily, gladiolus, iris, poppy, amaranth, and others.

Conservatories and hot-houses are not mentioned by any writer earlier than the first century of our era. They are frequently referred to by Martial. They were used both to preserve foreign plants, and to produce flowers and fruit out of season. Columella and Pliny speak of forcing-houses for grapes, melons, &c. In every garden there was a space kept for fruit, and a list of the fruit was usually written by the gardener.

Flowers and plants were also kept in the central space of the peristyle (sid. House), on the roofs, and in the windows of the houses. Sometimes, in a town, where the garden was very small, its walls were painted in imitation of a real garden, with trees, fountains, birds, &c. and the small area was ornamented with flowers in vases. A beautiful example of such a garden was found at Pompeii.

An ornamental garden was also called viridarium, and the gardener topiarius or viridarius. The common name for a gardener is viilicus or cultor hortorum. We find, also, the special names visitator, oltor. The word hortulanus is only of late formation. There were also smaller gardens in the house of the fountains both in the garden and in the house. 12

HOSPES. (Vid. Hospitium.) HOSPITIUM (Σεβία, προφείνια). Hospitality is one of the characteristic features of almost all nations previous to their attaining a certain degree of civilization. In civilized countries the necessity of general hospitality is not so much felt; but at a time when the state or the law of nations afforded scarcely any security, and when the traveller on his journey did not meet with any places destined for his reception and accommodation, the exercise of hospitality was absolutely necessary. Among the nations of antiquity, with whom the right of hospitality was hallowed by religion, it was, to some degree, more universal than in most other countries. This was the case both in its existence, and acquired a political importance which it has never had in any other state. It was in Greece, as well as at Rome, of a twofold nature, either private or public, in as far as it was either established between individuals or between two states (Horstium prioratum and hospium publicum, Σεβία and προφείνι). 13

What has been said hitherto only refers to hospitality privatum, that is, the hospitality existing between two individuals or families of different states. This kind of hospitality, however, was the hospitality publicum (proleventia), sometimes simply servi, or public hospitality which existed between two states, or between an individual or a family on the one hand, and a whole state on the other. Of the latter kind of public hospitality many instances are recorded, such as that between the Pisistratides and Sparta, in which the people of Athens had no share.

The hospitality publicum among the Greeks arises undoubtedly from the connexions of the Greeks with the barbarians, and may have originated in two ways. When the Greek tribes were governed by chieftains or kings, the private hospitality existing between the ruling families of two tribes may have produced similar relations between their subjects, which, after the abolition of the kingly power, continued to exist between the new republics as a kind of political inheritance of former times. Or a person belonging to one state might have either extensive connexions with the citizens of another state, or entertain great partiality for the other state itself, and thus offer to receive all those who came from that state either on private or public business, and act as their patron in his own city. This he at first did merely as a private individual, but the state to which he offered this kind service would naturally soon recognise and reward him for it. When two states established public hospitality, and no individuals came forward to act as the representatives of their state, it was necessary that in each state persons should be appointed to show hospitality to, and watch over the interests of, all persons who came from the state connected by hospitality. The persons who were appointed to this office as the representatives of their state were the proxenoi of the other state; but those who undertook it voluntarily were called proxeni.1

The office of proxenoi, which bears great resemblance to that of a modern consul or minister-resident, was in some cases hereditary in a particular family. When a state appointed a proxenoi, it either sent one out of its own citizens to reside in the state for which he was appointed, or it provided a state for the citizens of that state, and conferred upon him the honour of proxenoi. The former was, in early times the custom of Sparta, where the kings had the right to select from among the Spartan citizens those whom they wished to send out as proxenoi to other states.2

But in subsequent times this custom seems to have been given up, for we find that at Athens the family of Callias was the proxenoi of Sparta,3 at Elis the family of Elean Xenias,4 and at Argos, the Argei Aleiphron.5 A Spartan sent out as proxenvoi was sometimes also intrusted with the power of harmostes, as Clearchus at Byzantium.6

The custom of conferring the honour of proxenoi upon a citizen of the state with which public hospitality existed, seems in later times to have been uniformly adopted by the Greeks. Thus we find, besides the two families of Sparta mentioned above, Nicias the Athenian as proxenoi of Syracuse at Athens,7 and Arthemus of Zelea as the proxenoi of Athens at Zelea.8 The common mode of appointing a proxenoi was, with the exception of Sparta, by show of hands.9 The principal duties of a proxenoi were to receive those persons, especially ambassadors, who came from the state which

be represented; to procure for them admission to the assembly, and seats in the theatre; to act as host and guide to visitors, and, in short, to make the best of both worlds—between the two states if any disputes arose. If a stranger died in the state, the proxenus of his country had to take care of the property of the deceased. 3. When a stranger died in the state, the proxenus of his country had to take care of the property of the deceased.

Regarding the honours and privileges which a proxenus enjoyed from the state which he represented, the various Greek states followed different principles: some honoured their proxenoi with the full civic franchise, and others restricted them. But the right of acquiring property in the state of which he thus became a citizen seems not to have been included in his privileges, for we find that where this right was granted it was done by an especial document. 4. A foreigner who was appointed in his own country as proxenus of Athens, enjoyed for his benefit the right of inviolability. 5. Athens and whenever he visited this city, and all the other privileges that a foreigner could possess without becoming a real Athenian citizen. Among these privileges, though they were not necessarily included in the proxenoi, but were granted by special decrees, we may mention the, 1. Ἐπιστημα, which, in Greece, was granted by the state, generally being mutual. 6. The right to acquire property in Athens (πασινακη, πασιακ, πασιακα); 3. The exemption from paying taxes (ἀτίλεια or ἀπόλεια ἀνάτων); 7. And, 4. Inviolability in times of peace and war, both by sea and land. 8. Some of these privileges were granted to individuals and not to a whole state; but we have no instance of a whole state having received all of them, with the exception of those cases where the civic franchise or isopoli was granted to a whole state; and in this case the practical consequences could not become manifest, unless a citizen of the privileged state actually took up his residence at Athens. 9.

The hospitality of the Romans was, as in Greece, other hospitium privatum or publicum. Private hospitality with the Romans, however, seems to have been more accurately and legally defined than in Greece. The character of a hospes, i.e., a person connected with a Roman by ties of hospitality, was deemed even more sacred, and to have greater claims upon Roman protection, than those connected by blood or affinity. The relation of a hospes to his Roman friend was next in importance to that of a client. 10. According to Massonius Sabinius, a hospes has even higher claims than a client. 11. The obligations which the connexion of hospitality with a foreigner imposed upon a Roman were, to receive in his house his benefactor of inviolability. 12. To protect, and, in case of need, to represent him as his patron in the courts of justice. 13. Private hospitality thus gave to the hospes the claims upon his host which the client had on his patron, but without any degree of the dependence implied in the clientela. Private hospitality was established between two persons by a formal public or private mediation of a third person, 14. and hallowed by religion; for Jupiter hospitabilis was thought to watch over the jps hospitabilis, as Zeus xenios did with the Greeks; 15 and the violation of it was as great a crime and impiety at Rome as in Greece. When hospitality was formed, the two friends used to divide between themselves a tessaera hospitialis; by which the value of their joint property was appraised—\( f ascissa \) the connexion was hereditary, as in Greece might recognise one another. From an expression in Plautus (\textit{deum hospitalem ac tesseram mecum fero}), it has been concluded that this tessaera bore the image of Jupiter hospitabilis. Hospitality, when once established, could not be dissolved except by a formal declaration (\textit{renuntiatio}), and in this case the tessaera hospitialis was broken to pieces. 16. Hospitability was at Rome never exercised in that indiscriminate manner as in the heroic age of Greece, but the custom of observing the laws of hospitality was probably common to all the nations of Italy. 17. In many cases it was exercised without any formal agreement between the parties, and it was granted by the host to receive distinguished guests into the house.

Public hospitality seems likewise to have existed at a very early period among the nations of Italy, and the feuds hospitii mentioned in 

78. 185 he scarcely be looked upon in any other light than that of hospitium publicum. But the first direct mention of public hospitality being established between Rome and a foreign country is after Gaius Hostilius parted from Rome, when it was decreed that Cere should be rewarded for its good services by the establishment of public hospitality between the two cities. 19. The public hospitality after the war with the Gauls gave to the Cæsars the right of isopoli with Rome, that is, they were without the suffragium and the honores; and when a town was formed of a similar relation with Rome, it entered into clientela to some distinguished Roman, who then acted as patron of the client town. But the custom of granting the honour of hospes publicus to a distinguished foreigner by a decree of the senate seems to have existed at least till the end of the Republic. 20.

We have seen a patron of rites to wards Roman citizens, as the Greek proxenus, is uncertain; but his privileges were the same as those of a munific, that is, he had the evitas, but not the suffragium or the honores. Public hospitality was, like the hospitium privatum, hereditary in the family of the person to whom it had been conferred; and public hospes was sometimes also conferred upon a distinguished Roman by a foreign state. 21.

HOSTIA. (\textit{Vid. Sacrificium}.)

HOSPITIS. (\textit{Vid. Hospitium}.)

HOUSE (GREEK), (οίκος). The scanty notices of the domestic, or, rather, the palatial architecture of the ancient Greeks, is insufficient to give an accurate notion of the names, uses, and arrangement of the apartments, which appear, however, to have differed considerably from the usages of later ages. We first gain precise information on the subject about the time of the 10. Elopomeinen war; and from the allusions made to the houses of the 11. Greeks, we may infer that immediately successive, until the time of Alexander.

er, we may conclude that their general arrangement corresponded with that described by Vitruvius.\(^1\) In this description, however, there is one considerable difficulty: among others dealt with, that of the Greek family who lived in private apartments allotted to their exclusive use. Hence the house was always divided into two distinct portions, namely, the Andronitis, or men's apartments (άνδρωνιτίς), and the Gymnæonitis, or women's apartments (γυμνακωνιτίς). Now Vitruvius, after describing the entrance to the house, goes on to the Gymnæonitis, and then speaks of the Andronitis, as if the latter lay behind the former, an arrangement which is highly improbable from all we know of the careful seclusion in which the Greek women were kept, and which is also directly opposed to the accounts of the writers of the period we have referred to.

In the earliest times, as in the houses referred to by Homer, the women's apartments were in the upper story (έπερθρός). The same arrangement is found in the house spoken of by Lydias.\(^2\) But it does not follow that this was the usual custom at this period. On the contrary, we have the express testimony of several writers, and Lydias himself among the rest, that the Gymnæonitis was on the same story with the Andronitis, and behind it;\(^3\) and even the tragic poets transfer to the herodic ages the practice of their own, and describe both sets of apartments as on the same floor.\(^4\) There are different opinions which have been given of the inconsistency between these statements and the description of Vitruvius, the most plausible of which is that of Galliani, namely, that in the time of Vitruvius a slight change had taken place in the disposition of the apartments, by which the Andronitis and Gymnæonitis were placed side by side, each of them having its own front towards the street.

The front of the house towards the street was not large, as the apartments extended rather in the direction of its depth than of its width. In towns, the houses were often built side by side, with party walls between.\(^5\) The exterior wall was plain, being composed generally of stone, brick, and timber,\(^6\) and often covered with stucco.\(^7\) Plutarch speaks of Plataean houses as being ornamented with plates of iron.\(^8\)

That there was no open space between the street and the house door, like the Roman vestibulum, is plain from the law of Hippias, which laid a tax on house-doors opening outward, because they encroached upon the street.\(^9\) The πόρφυρα, which is sometimes mentioned,\(^10\) seems to be merely the space in front of the house. We learn, however, from the same law of Hippias, that houses sometimes stood back from the street, within enclosures of their own (πρόφυγματα ού δρόμου).\(^11\) In front of the house was generally an altar of Apollo Agyieus, or a rude obelisk emblematical of the god. Sometimes there was a bay-tree in the same position, and sometimes a head of the god Hermes.\(^12\)

The πόρφυρα (porphyra) led up to the house-door, which generally bore some inscription, for the sake of a good omen or as a charm, such as Ἑλεοσ Κόρης Ἀγαθὸς Διάμοιρος.\(^13\) The form and fastenings of the door are described under Janta. This door, as we have seen, sometimes opened outward; but this seems to have been an exception to the general rule, as is proved by the expressions used for opening, ἐπιζω αυτόν, and shutting it, ἐπιζω αὐτόν κατά ταύτα, κατά ταύτα.\(^14\) The handles were called ἐπίδωμα τίτικης.

The house-door was called ἀνάλυσις or ἀναλυτή (ἀνάλυτη) because it led to the ἀνάλυσις. It gave admission to a narrow passage (ὑπερμνητός, πύλως, τίτικης), on one side of which, in a large house, were the stable, on the other, the porter's lodge. The day of the porter (ὑπερμνήτης) was to admit visitors, and to prevent anything, as the porter was being carried into or out of the house.\(^15\) Plato gives a lively picture of an officious porter. The porter was attended by a dog.\(^16\) Hence the phrase ἀναλυθέντων τὸ κύων, corresponding to the Latin Case canem.

At the farther end of the passage Vitruvius places another door, which, however, does not seem generally to have existed. Plutarch\(^17\) mentions the house-door as being visible from the peristyle.

From the ἀναλυτή we pass into the peristyle or court (περίτροπον, ἀνάλυτη) of the Andronitis, which was a space open to the sky in the centre (τρωμήνην), and surrounded on all four sides by porticoes (οροίοι), of which one, probably that nearest the entrance, was called προσοπον.\(^18\) These porticoes were used for exercise, and sometimes for dining in.\(^19\) Here was commonly the altar on which sacrifices were made, and on which household gods and portable altars were used for this purpose.\(^20\) Vitruvius\(^21\) says that the porticoes of the peristyle were of equal height, or else the one facing the south was built with loftier columns. This he calls a Rhodian peristyle. The object sought was to obtain as much sun in winter, and as much shade and air in summer, as possible.

Round the peristyle were arranged the chambers used by the householders; such as banqueting-rooms (άκοα, ἀκονίτης), which were large enough to contain several sets of couches (τρεκλονίοι, ἐστρακόνιοι, τραγικόνιοι), and at the same time to allow abundant room for attendants, musicians, and performers of games;\(^22\) parlours or sitting-rooms (ἐβδομα, ἐβδομαδία), and smaller chambers and sleeping-rooms (δωμάτια, κοίτα) picture-galleries and libraries, and private apartments.\(^23\) The descriptions of these apartments, attention was paid to their aspect.

The peristyle of the Andronitis was connected with that of the Gymnæonitis by a door called μεγαλός, μεγαλος, or μεγαλός, which was in the middle of the portico of the peristyle opposite to the entrance. Vitruvius applies the name μεγαλός to a passage between the two ανάλυται or peristyles.\(^24\) The other name, μεγαλός, is taken by some writers as merely the Attic form of μεγαλός.\(^25\) But it seems rather to be derived from μέγα, as being the door leading into the

House

The house described by Vitruvius, if the Andronitis and Gynaeconitis lay side by side, the μεσόνος θύρα would not be opposite to the entrance, but in one of the other sides of the peristyle.

This door gave admittance to the peristyle of the Gynaeconitis, which differed from that of the Andronitis in having porticoes round only three of its sides. On the fourth side (the side facing the south, according to Vitruvius) were placed two ante (vid. Ant.), at a considerable distance from each other. A third of the distance between these ante was set off inward (Quantum inter antas distat, ex eo orta dempta spatium datur introreus), thus forming a chamber or vestibule, which was called προσάτης, παραστής, and perhaps παράστης, and also πρόθρος. On the right and left of this προσάτης were two bed-chambers, the θάλαμος and ἀμφίθαλαμος, of which the former was the bedchamber of the house, and here also seem to have been kept the vases and other valuable articles of ornament. Beyond these rooms (for this seems to be what Vitruvius means by in locis introreus) were large apartments (loctones), used for working in wool (see magi, in qua bus matres familiares cum lanificis habent habitat. nos). Round the peristyle were the eating-rooms, bed-chambers, store-rooms, and other apartments in common use (triclinia quotidiana, cubicula, et cella familiarica).

Besides the αὖθος θύρα and the μεσόνος θύρα, there was another door (προσάτης θύρα) leading to the garden. Λυσιάς speaks of another door, which probably led from the garden into the street.

The following plan of the ground-floor of a Greek house of the larger size is taken from Becker's Charikles. It is, of course, conjectural, as there are now no Greek houses in existence.

I, rooms for working in wool (latovne); Κ, garden door, ἐγκατ. θύρα.

There was usually, though not always, an upper story (στέρνων, ἄθροι), which seldom extended over the whole space occupied by the lower story. The principal use of the upper story was for the lodging of the slaves, as appears from a passage in De摩托enes, where the words ἐν τῷ πάρωυ seem to imply a building several stories high. The access to the upper floor seems to have been sometimes by a staircase from the opposite side of the street. Guests were also lodged in the upper story. But in some large houses there were rooms set apart for their reception (εξώνεια) on the ground-floor. In cases of emergency, store-rooms were fitted up for the accommodation of guests.

Portions of the upper story sometimes projected beyond the walls of the lower part, forming balconies or verandahs (προβολαὶ, περιβολαὶ).

The roofs were generally flat, and it was customary to walk about upon them. But pointed roofs were also used.

In the interior of the house, the place of doors was sometimes supplied by curtains (παραστέκατα), which were either plain, or dyed, or embroi- dered.

The principal openings for the admission of light and air were in the roofs of the peristyles; but it is incorrect to suppose that the houses had no windows (Φωλίδες), or, at least, none overlooking the street. They were not at all uncommon.

Artificial warmth was procured partly by means of fireplaces (χαλάνδραι, δωμάτια). It is supposed that chimneys were altogether unknown, and that the smoke escaped through an opening in the roof (σπονδός). It is not easy to understand how this could be the case when there was an upper story. Little portable stoves (θησάμα, θησαυρία) or chafing-dishes (ὑπιρίκαι) were frequently used. (Vid. Focus.)

The houses in the upper class of the country, at least in Attica, were much larger and more magnificent than those in the towns. The latter seem to have been generally small and plain, especially in earlier times, when the Greeks preferred expending the resources of art and wealth on their temples and public buildings, but the private houses became more magnificent as the public buildings began to be neglected.

The decorations of the interior were very plain at the period to which our description refers. The floors were of stone. At a later period coloured stones were used. Mosaics are first mentioned under the kings of Pergamus.

The walls, up to the fourth century B.C., seem to have been only whitew, The first instance of painting them is that of Alichabed. This innovation met with considerable opposition. Plato mentions the painting of the walls of houses as a mark of a γραφυς πάλας. These affusions, prove that the practice was not uncommon in the time of Plato and Xenophon. We have also mentioned of painted ceilings at the same period, but a later period this mode of decoration became general.

House (Roman) (Domus; Aedes privata). The

a. House-door, αὖθος θύρα: θύρα, passage, θυρομένων ο ἕθερα: A, peristyle or αὖθος of the Andronitis; B, the halls and chambers of the Andronitis; μ. μεσόνος or μεσόνος θύρα: Γ, peristyle of the Gynaeconitis; γ. chambers of the Gynaeconitis; π. προσάτης or παραστής: Θ, θάλαμος and ἀμφίθαλαμος.
houses of the Romans were poor and mean for many centuries after the foundation of the city. Till the war with Pyrrhus, the houses were covered only with thatch or shingles, and were usually built of wood or unburned bricks. It was not till the state of the public, which then had been acquired by conquests in the East, that houses of any splendour began to be built; but it thence became the fashion not only to build houses of an immense size, but also to adorn them with column, paintings, statues, and costly works of art.

M. Lepidus, who was consul B.C. 78, was the first who introduced Numidian marble into Rome for the pavement of the streets. But they did not exceed twelve feet in height, and were only six in number. He was, however, soon surpassed by M. Scævus, who placed in his atrium columns of black marble, called Lucullian, thirty-eight feet high, and of such immense weight that the contractor of the stones took security for any injury that might be done to the workmen in consequence of the columns being carried along the streets.

The Romans were exceedingly partial to marble for the decoration of their houses. Mamurra, who was Caesar's praefectus fabrum in Gaul, set the example of lining his room with slabs of marble. Some idea may be formed of the size and magnificence of the houses of the Roman nobles during the later times of the Republic by the price which they fetched. Thus six of the dwelling-houses of Autonius for 3700 estertia (nearly 33,000l.), and Cicero the house of Crassus, on the Palatine, for 3500 estertia (nearly 31,000l.). The house of Publius Clodius, whom Milo killed, cost 14,800 estertia (about 131,000l.); and the Tusculan villa of Scævus was fitted up with such magnificence, that when it was burned by his slaves, he lost 100,000 estertia (nearly 832,000l.). The house-rent which persons in poor circumstances usually paid at Rome was about 2000 estertices, between 17l. and 18l. It was brought as a charge of extravagance against Cælius that he paid 30 estertia (about 266l.) for the rent of his house.

Houses were originally only one story high; but as the value of ground increased in the city, they were built several stories in height, and the highest floors were usually inhabited by the poor. To guard against danger from the extreme height of houses, Augustus restricted the height of all new houses which were built by the side of the public roads to seventy feet. The time of Nero, the streets in Rome were narrow and irregular, and bare traces of the haste and confusion with which the city was built after it had been burned by the Gauls; but after the great fire in the time of that emperor, which by two thirds of Rome were burned to the ground, the city was built with great regularity. The streets were made straight and broad; the height of the houses was restricted, and a certain part of each was required to be built of Gabian or Albian stone, which was proof against fire.

Our information respecting the form and arrangement of a Roman house is principally derived from the description of Vitruvius, and the remains of the houses which have been found at Pompeii. The accounts, however, are still doubtful; but, without entering into architectural details, we shall confine ourselves to those topics which serve to illustrate the classical writers. The chief rooms in the house of a respectable Roman, though differing, of course, in size and splendour according to the circumstances of the owner, appear to have been usually arranged in the same manner, while the others varied according to the taste and circumstances of the master.

The principal parts of a Roman house were the

1. Vestibulum. The vestibulum did not properly form part of the house, but was a vacant space before the door, forming a court, which was surrounded on three sides by the house, and was open on the fourth to the street. The two sides of the house were connected by a passageway, but the middle part, where the door was placed, was at some little distance from the street. Hence Plautus says, 'Veni, vestibulum ante aedes hoc et ambulaerum quasi, modo i.'

2. Ostium. The ostium, which is also called janua and fores, was the entrance to the house. The street-door admitted into a hall, to which the narrow passage into the house was also given. This hall frequently was a small room (cella) for the porter (janitor or ostarius), and also for a dog, which was usually kept in the hall to guard the house. A full account of this part of the house is given under janua. Another door (janua interior) opposite the street-door led into the atrium.

3. Atrium or Cassum Edidum, as it is written by Varro and Vitruvius. Pliny writes it Cassum Eridum, which is probably preferred by the later writers. We consider the Atrium and Cassum Edidum to be the same; but Newton, Stratico, and, more recently, Becker, maintain that they were distinct rooms. It is impossible to pronounce a decisive opinion on the subject; but from the statements of Varro and Vitruvius, taken in connection with the fact that no houses in Pompeii have been yet discovered which contain both an Atrium and Cassum Edidum, it is most probable that they were the same. The etymology of Atrium is mentioned under that head.

The Atrium or Cassum Eridum was a large apartment, roofed over with the exception of an opening in the centre, called compluvium, towards which the roof sloped so as to throw the rain-water into a cistern in the floor, termed impluvium, which was frequently ornamented with statues, columns, and other works of art. It is, however, also employed to denote the aperture in the roof. Schneider, in his commentary on Vitruvius, supposes cavaum edidum to be the word of this apartment, including the impluvium, while atrium signifies only the covered part, exclusive of the impluvium. Mazoni, on the contrary, maintains that atrium is applied to the whole apartment, and cavaum edidum only to the uncovered part. The breadth of
the impluvium, according to Vitruvius, was not less than a quarter, nor greater than a third of the breadth of the atrium; its length was in the same proportion according to the length of the atrium.

Vitruvius distinguishes five kinds of atria or cava adunum, which were called by the following names:

1. Tuscanicum. In this the roof was supported by the beams crossing each other at right angles, with the included space forming the compluvium. This kind of atrium was probably the most ancient of all, as it is more simple than the others, and is not adapted for a very large building.

2. Tetrastyle. This was of the same form as the preceding, except that the main beams of the roof were supported by pillars placed at the four angles of the atrium. The name seems to have been given because the columns supporting the roof rested directly on the atrium. Thus the atrium appears originally to have been the only sitting-room in the house, and to have served also as a kitchen; and it probably continued to do so among the lower and middle classes. In the houses of the wealthy, however, it was distinct from the private apartments, and was used as a reception room, where the patron received his clients, and the great and noble the numerous visitors who were accustomed to call every morning to pay their respects or solicit favours. Cicero frequently complains that he was not exempt from this annoyance when he retired to his country houses. But, though the atrium does not appear to have been used by the wealthy as a sitting-room for the family, it still continued to be employed for many purposes which it had originally served. Thus the nuptial couch was placed in the atrium opposite the door (in aula), and also the instruments and materials for spinning and weaving, which were formerly carried on by the women of the family in the atrium. The atrium was also used in a similar manner by the mother of the house, and the local and provincial authorities were placed, and the focus or fireplace, which possessed a sacred character, being dedicated to the Lares of each family. (Vid. Focus.)

4. Atrium, wings, were small apartments or recesses on the left and right sides of the atrium. Atria.

5. Tablinum was, in all probability, a recess or room built into the wall opposite the door leading into the hall, and was regarded as part of the atrium. It contained the family records and archives.

With the tablinum the Roman house appears to have originally ceased; and the sleeping-rooms were probably arranged on each side of the atrium. But when the atrium and its surrounding rooms were used for the reception of clients and other public visitors, it became necessary to increase the size of the house, and the following rooms were accordingly added:

6. Fauces appear to have been passages, which passed from the atrium to the peristyle or interior of the house.

7. Peristyle was in its general form like the atrium, but it was one third greater in breadth, measured transversely, than in length. It was a court open to the sky in the middle; the open part, which was surrounded by columns, was larger than the atrium in the atrium, and was frequently decorated with flowers and shrubs.

The arrangement of the rooms which are next to be noticed, varied, as has been remarked, according to the taste and circumstances of the owner. It is, therefore, impossible to assign to them any regular place in the house.

1. Cubicula, bed-chambers, appear to have been usually separate cubicula for the day and night (cubicula diurna et nocturna); the latter were also called dormitoria. Vitruvius recommends that they should face the east, for the betterment of the rising sun. They sometimes had a small anteroom, which was called by the Greek name of spozorion.

2. Exedrae were treated of in a separate article.

3. Oec, from the Greek oikos, were spacious halls or saloons borrowed from the Greeks, and were frequently used as triclinia. They were to have the same proportions as triclinia, but were more spacious, on account of having columns, which triclinia had not. Vitruvius mentions four kinds of oeci.

1. The Tetrastyle, which needs no further description. Four columns supported the roof.

2. The Corinthian, which possessed only one row of columns, supporting the architrave (epistylium), cornice (corona), and a vaulted roof.

3. The Egyptian, which was more splendid and more expensive, and was used as a triclinium. In the Egyptian ecos, the pillars supported a gallery with paved floor, which formed a walk round the apartment; and upon these pillars others were placed, a fourth part less in height than the lower, which surrounded the roof. Between the upper columns windows were inserted.

4. The Fratresse (Koecsmata) and Bondusae are treated of in domestic articles.

4. Exedrae, which appear to have been in form of a cave or grotto, for Vitruvius says the form of the exedra in connexion with eci quadri, were rooms for conversation and the other purposes of society. They served the same purposes as the exedrae in the Therme and Gymnasium, which were semicircular rooms with seats for philosophers and others to converse in. (Vid. Baths, p. 152.)

5. The Praetorio (Koecsmata) and Bondusae (vid. Bondusae) are treated of in domestic articles.

8. Culina, the kitchen. The food was originally cooked in the atrium, as has been already stated; but the progress of refinement afterward led to the use of another part of the house for this purpose. In the kitchen of Pansa's house, of which a ground-plan is given below, a stove for stews and similar preparations was found, which was exactly like the charcoal stoves used in the present day. (See woodcut.) Before it lie a knife, a strainer, and a kind of frying-pan with four spherical cavities, as if it were meant to cook eggs.

In this kitchen, as well as in many others at Pom-

4. (Id., v., 6.—Plin., H. N., xxv., 17.)—5. (Vitr., vi., 5.)

with the lower part of the house, as we find to be the case in houses at Pompeii. Sometimes the stairs had no connexion with the lower part of the house, but ascended at once from the street. At Rome the highest floors, as already remarked (p. 516), were usually inhabited by the poor. 10. DIETA was an apartment used for dining in, and for the other purposes of life. 3 It appears to have been smaller than the triclinium. Dietia is also the name given by Pliny* to rooms containing three or four bed-chambers (cubicula). Pleasure houses or summer-houses are also called dietia. 4

11. SOLARIA, properly places for basking in the sun, were terraces on the tops of houses. 8 In the time of Seneca the Romans formed artificial gardens on the tops of their houses, which contained even fruit-trees and fish-ponds. 5 6

The two woodcuts annexed represent two atria of houses at Pompeii. The first is the atrium of what is usually called the house of the Quastor. The view is taken near the entrance-hall facing the tablinum, through which the columns of the peristyle and the garden are seen. This atrium, which is a specimen of what Vitruvius calls the Corinthisan, is surrounded by various rooms, and is beautifully painted with arabesque designs upon red and yellow grounds.

The next woodcut represents the atrium of what is usually called the house of Ceres. In the centre is the impluvium, and the passage at the farther end is the ostium or entrance hall. As there are no pillars around the impluvium, this atrium must belong to the kind called by Vitruvius the Tuscan.

The preceding account of the different rooms, and especially of the arrangement of the atrium, tablinum, peristyle, &c., is best illustrated by the houses which have been dismantled at Pompeii. The ground-plan of two is accordingly subjoined. The first is the plan of a house, usually called the house of the tragic poet.

Like most of the other houses at Pompeii, it had no vestibulum, according to the meaning which we have attached to the word. 1. The ostium or entrance hall, which is six feet wide and nearly thirty long. Near the street-door there is a figure of a large fierce dog worked in mosaic on the pavement, and beneath it is written Cave Canem. The two large rooms on each side of the vestibule appear, from the large openings in front of them, to have been shops; they communicate with the entrance hall, and were, therefore, probably occupied by the master of the house. 2. The atrium, which is about twenty-eight feet in length and twenty in breadth; its impluvium is near the centre of the room, and its floor is paved with white tesserae, spotted with black. 3. Chambers for the use of the family, or intended for the reception of guests who were entitled to claim hospitality. When a house did not

possess an hospitium, or rooms expressly for the reception of guests, they appear to have been lodged in rooms attached to the atrium. (Vid. Hospitium.) 4. A small room with a staircase leading up to the upper rooms. 5. Ala. 6. The tablinum. 7. The peristyle. 8. Peristyle, with Doric columns and garden in the centre. The large room on the right of the peristyle is the triclinium; beside it is the kitchen; and the smaller apartments are cubicula and other rooms for the use of the family.

The next woodcut contains the ground-plan of an insula, which was properly a house not joined to the neighbouring houses by a common wall. An insula, however, generally contained several separate houses, or, at least, separate apartments or shops, which were let to different families; and hence the term domus under the emperors appears to be applied to the house where one family lived, whether it were an insula or not, and insula to any hired lodgings. This insula contains a house, surrounded by shops, which belonged to the owner, and were let out by him. The house itself, which is usually called the house of Pansa, evidently belonged to one of the principal men of Pompeii. Including the garden, which is a third of the whole length, it is about 300 feet long and 100 wide.

A. Ostium, or entrance-hall, paved with mosaic. B. Tuscan atrium. I. Impluvium. C. Chambers on each side of the atrium, probably for the reception of guests. D. Ala. E. Tablinum, which is open to the peristyle, so that the whole length of the house could be seen at once; but as there is a passage (fauces), F, beside it, the tablinum might probably be closed at the pleasure of the owner. C. Chambers by the fauces and tablinum, of which the use is uncertain. G. Peristyle. D. Ala to the peristyle. C. Cubicula by the side of the peristyle. K. Triclinium. L. Cocus, and by its side there is a passage leading from the peristyle to the garden. M. Back door (posticum ostium) to the street. N. Cubana. H. Servata's hall, with a blind door. The street. P. Portico of two stories, which proves that the house had an upper floor. The site of the staircase, however, is unknown, though it is thought there is some indication of one in the passage. M. Q. The garden. R. Reservoir for supplying a tank, S.

The preceding rooms belonged exclusively to Pansa's house, but there were a good many apartments besides in the insula which were not in the occupation. a. Six shops let out to tenants. These on the right and left hand corners were bakers' shops, which contained mills, ovens, &c., at b. The one on the right appears to have been a large establishment; it contains many rooms. c. Two houses of a very mean class, having formerly an upper story. On the other side are two houses much larger, d.

Having given a general description of the rooms of a Roman house, it remains to speak of the (1) floors, (2) walls, (3) ceilings, (4) windows, and (5) the mode of warming the rooms. For the doors, vid. I. X. S. A. (1.) The floor (solum) of a room was seldom boarded, though this appears to have been sometimes done (strata solo tabulata). It was generally covered with stone or marble, or mosaics. The common floors were paved with pieces of bricks, tiles, stones, &c., forming a kind of composition called ruderatio. Another kind of pavement was that called opus Signinum, which was a kind of plaster made of tiles beaten to powder and tempered with mortar. It derived its name from Signia, a town of Italy, celebrated for its tiles. Sometimes pieces of marble were imbedded in a composition ground, which appear to have formed the floors called by Pliny bariteria or subegulanes, and which probably gave the idea of mosaics. As these floors were beaten down (pavita) with rammers (fistacea), the word pavimentum became the general name for a floor. The kind of pavement called sculpturatum was first introduced in the Temple of Jupiter Capitolinus by

Mosaic pavements, however, have been discovered at Pompeii, which represent figures and scenes of actual life, and are, in reality, pictures in mosaic. One of the most beautiful of these is given in its original colours in Gell’s *Pompeiana*, 2d. vol. plate xlv. It is composed of very fine pieces of glass, and represents the choragus, or master of the chorus, instructing the actors in their parts. A still more extraordinary mosaic painting was discovered in Pompeii in 1831: it is supposed to represent the battle of Issus.

(2.) The inner walls (parietes) of private rooms were frequently lined with slabs of marble, but were more usually covered by paintings, which in the time of Augustus were made upon the walls themselves. The prevalence of this practice is attested not only by Pliny, but also by the circumstance that even the small houses in Pompeii have paintings upon their walls. The following woodcut, which represents the side of a wall at Pompeii, is one of the simplest but most common kind. The compartments are usually filled with figures.

The general appearance of the walls may be seen from the woodcuts at p. 462, 518. Subjects of all kinds were chosen for painting on the walls, as may be seen by a reference to the Museo Borbonico, Gell, Mazzoi, &c. The colours seem usually to have been laid upon a dry ground, but were sometimes laid upon it wet, as in the modern fresco painting (coloris udo tectorio inducere). The walls also appear to have been sometimes ornamented with raised figures, or a species of bas-relief (typos in tectorio atriori includere), and sometimes with mosaics.

(3.) The ceilings seem originally to have been left uncovered, the beams which supported the roof or the upper story being visible. Afterward planks were placed across these beams at certain intervals, leaving hollow spaces, called lacunaria or lagunaria, which were frequently covered with gold and ivory, and sometimes with paintings. There was an arched ceiling in common use, called *camera*, which is described in a separate article.

(4.) The Roman houses had few windows (fenestrae). The principal apartments, the atrium, peristyle, &c., were lighted, as we have seen, from above, and the cubicula and other small rooms generally derived their light from them, and not from windows looking into the street. The rooms only on the upper story seem to have been usually lighted by windows. Very few houses in Pompeii have windows on the ground-floor opening into the street, though there is an exception to this in the house of the tragic poet, which has six windows on the ground-floor. Even in this case, however, the windows are not near the ground as in a modern house, but are six feet six inches above the foot-pavement, which is raised one foot seven inches above the centre of the street. The windows are small, being hardly three feet by two; and at the side there is a wooden frame, in which the window or shutter might be moved backward or forward.

The windows appear originally to have been merely openings in the wall, closed by means of shutters, which frequently had two leaves (before fenestrae), whence Ovid says, "Pare adaperta fuit, para altera clausa fenestra."

They are, for this reason, said to be joined when they are shut. Windows were also sometimes covered by a kind of lattice or trellis-work (cladura), and sometimes by network, to prevent serpents and other noxious reptiles from getting in. Afterward, however, windows were made of a transparent stone, called lapis specularis (mirabilis), which was first found in Hispania Citerior, and afterward in Cyprus, Cappadocia, Sicily, and Africa; but the best came from Spain and Cappadocia. It was easily split into the thinnest lamina, but no pieces had been discovered, says Pliny, above five feet long. Windows made of this stone were called specularia.

Windows made of glass (sturium) are first mentioned by Lucanius, but the discoveries at Pompeii prove that glass was used for windows under the early emperors, as frames of glass and glass windows have been found in several of the houses.

The rooms were heated in winter in different ways; but the Romans had no stoves like ours. The walls, floors, and other rooms, which were often heated for winter use, were in the part of the house upon which the sun shone most; and in the mild climate of Italy this frequently enabled them to dispense with any artificial mode of warming the rooms. Rooms exposed to the sun in this way were sometimes called heliocausti.

The rooms were sometimes heated by hot air, which was introduced by means of pipes from a furnace below, but more frequently by portable furnaces or braziers (focus), in which coal or charcoal was burned. (Vid. woodcuts, p. 149, 477.) The caminus was also a kind of stove, in which wood appears to have been usually burned, and probably only differed from the focus in being larger and fixed to one place. It was however a subject of much dispute among modern writers, whether the Romans had chimneys for carrying off the smoke. From many passages in ancient writers, it certainly appears that rooms usually had no chimneys, but that the smoke escaped through the windows, doors, and openings in the roof;[1] but chimneys do not appear to have been entirely unknown to the ancients, [2] as some are said to have been found in the ruins of ancient buildings. [3]

The lower part of the wall is occupied by a row of red panels four feet and a half high. The following woodcut represents part of the wall, with apertures for windows above it, as it appears from the street. The tiling upon the wall is modern, and is only placed there to preserve it from the weather.

HYBREA GRAPE.

HYDRAUL.

may also be inferred from Xenophon,1 who makes the pean the principal part of the Hyacinthia. The great importance attached to this festival by the Amycleans and Lacedaeomians is seen from the fact that the Amycleans, even when they had taken the field against an enemy, always returned home on the approach of the season of the Hyacinthia, that they might not be obliged to neglect its celebration,2 and that the Lacedaeomians on one occasion concluded a truce of forty days with the town of Etra, merely to be able to return home and celebrate the national festival.3 and that, in a treaty with Sparta, B.C. 421, the Athenians, in order to show their good-will towards Sparta, promised their envoy to attend the celebration of the Hyacinthia.4

*HYACINTHUS (νάκινθος), a plant. "The νακινθος of the poets," observes Adams, "would seem in some places to be referable to the Gladiolus communis, and in others to the Delphinium Ajacis, or Larkspur. Matthislin and Spregel concur in holding the νακινθος of Dioscorides to be the Hyacinthus Orientalis. The 'Vaccaea' of Virgil was most probably the Delphinium ajacis. The γαρστί νακινθος of Theocritus was no doubt the same."5

If a precious stone, about which considerable doubt prevails. De La Tinct thinks it was some species of Amethyst.6 Salammios, on the other hand, supposes it to have been our Ruby, which the Persians and Arabsians still call Yacut; a name derived from the palace of that name, where it was first discovered by Dr. Moore.7 may have been used with as little discrimination as that of ruby is at present, to designate several very different minerals, and among them may be some that are still called Hyacinth; as several varieties of zircon, and the Hyacinth of Conpostella, a red ferruginous quartz. Jameson enumerates several different minerals besides zircon to which the name Hyacinthus is applied in modern mineralogy; but it appears to Dr. Adams that the ancient Hyacinthus was either amethyst or sapphire."8

*HYALOIDES (βαλεοειδής), a precious stone. Sir J. Hill remarks, that it had been supposed to be the Asteria, the Iris, the Lapis specularis, and the Diamond. All that he can determine respecting it is, that it is the Aster of Pliny. (Vid. Asias.)9

*TYRENEΣ ΓΡΑΦ (θξελος γραφή). This action was the principal remedy prescribed by the Attic law for wanton and contumelious injury to the person, whether in the nature of indecent (δι αλεξορογιας) or other assaults (δι αληγρον). If the offence were of the former kind, it would always be available when the sufferer was a minor of either sex (for the consent of the infant was immaterial), or when an adult female was forcibly violated: and this protection was extended to all conditions of life, whether bond or free.10 The legal representative (κώμος), however, of such person might, if he pleased, consider the injury as a private rather than a public wrong, and sue for £ images in a civil action. (Vid. BIAUNAI AVKH.) With respect to common assaults, a prosecution of this kind seems allow- able only when the object of a wanton attack was a free person,11 as the essence of the offence lay in its contumely, and a slave could incur no degradation by receiving a blow, though the injury, if slight, might entitle the master to recover damages for the battery (άλδεια), or, if serious, for the loss of his services (vid. BAADAI AVKH), in a pri-

HYPOSCYAMUS, a poisonous herb, Henbane. Three species are described by Dioscorides, which Sprengel makes to be the *Hyoscyamus reticulatus, H. aureus, and H. albus.* "Upon what grounds he rejects the *H. niger,*" observes Adam II. "As applying to the first species, I am at a loss to comprehend. The *H. niger* now grows wild in Britain, but, considering the site on which it is found, I am disposed to think that it was brought thither by the Romans."  

HYPEREMEROS. (Vid. Enechvra.)  

HYPERESIA. (Vid. Hyperestor.)  

HYPERETES (υπερέτης). This word is derived from *επέτρεπεν, επέτρεπτος;* and, therefore, originally signified that which had later times the word was, with the exception of the soldiers or marines called *στεφανεύεται* the whole body of persons who performed any service in a vessel. In a still wider sense, *υπερέτης* was applied to any person who acted as the assistant of another, and performed manual labour for him, whether in sacred or profane things, where the word is sometimes used as synonymous with *πρίτανης,* and is applied even to a class of officers. Aristotle divides all public office into three classes: *άρχεια* or magistracies, *έπιμελεία* or administrations, and *υπερετοι* or services. Now all public officers at Athens, in as far as they were the representatives of the people or the executors of its will, were appointed by the people itself or by the senate; and with the exception of some subaltern military officers, we never find that one public officer was appointed by another. A public officer, therefore, when he appointed another person to perform the lower or more mechanical parts of his office, could not raise him to the rank of a public officer, but merely engaged him as his servant (*όπερτήρης*), and on his own responsibility. These *υπερέτης* are, therefore, those whom Aristotle calls *πρίτανες,* p. 308; speaking, but only in so far as they took a part in the functions of such officers. The original and characteristic difference between them and real public officers was, that the former received salaries while the latter had none. Among the *υπερέτες* were reckoned the lower classes of serfes (*οόικοι*), who received from the public *επιμέλεια* or part of the revenue of the Eleven, and others. This class of persons as might be supposed, did not enjoy any high degree of estimation at Athens, and from Aristotle it is clear that they were not always Athenian citizens, but sometimes slaves.  

HYPERICUM (υπερίκον), a species of Sain John's Wort, but there is some difficulty in deter mining to what particular species it belongs. Sib thorp prefers the *H. crispaum;* Sprengel the *barbatum Jacq.*  

HYPEROON. (Vid. House, Greek, p. 515.)  

HYPERUETHYNUS (υπεροθύνος). (Vid. Euthymne.)  

ΥΠΟΒΟΛΗΣ ΓΡΑΦΗ (υποβολής γραφή). Of this action we learn from the *Lex Rhet.* It was one of the most important duties calculated to preserve the purity of Attic descent, and preferred against persons suspected of having been supposititious children. If this fact was established at the trial, the pretended citizen was reduced to slavery, and his property confiscated.
HYPOCAUSTUM. (Vid. Baths, p. 151.)

HYPODEMA. (Vid. Calc.Us.)

HYPOGEUM. (Vid. Condit.ium.)

*HYPOGLOSSON (στόματον) plant, the Ruscus hypoglossum, according to Matthes, and Sprengel.

*HYPOGRAMMATEUS. (Vid. Grammat.)

*HYPOLAIS (ιστότατα), a bird mentioned by Aristotle, and the name of which Gaza translates into Latin by Curuca. Gesner inclines to the opinion that it is the Titlark, or Anthus pratensis, Bechstein.

HYPOMOSSA. (Vid. Dios.)

HYPOORCHEMA (στφορήμα), a lively kind of mimic dance which accompanied the songs used in the worship of Apollo, especially among the Doriens. It was performed by men and women. A chorus of singers at the festivals of Apollo usually danced around the altar, while several other persons were appointed to accompany the action of the song with an appropriate mimic performance (ιστροφίατα). The hyponoria was thus a lyric dance, and often passed into the playful and comic, whence Athenaeus compares it with the cordax of comedy. It had, according to the supposition of Müller, like all the music and poetry of the Doriens, originated in Crete, but was at an early period introduced in the island of Delos, where it seems to have continued to be performed down to the time of Lucian.

A similar dance, which was the γεγονός, or the Thesmophoria, on his return from Crete, was said to have performed in Delos, and which was customary in this island as late as the time of Plutarch. The leader of this dance was called γεγονόλος. It was performed with blows, and with various turnings and windings (ἐν ροθοῖς περικελέσεως καὶ ἀνωτείς ἕξως) and was said to be an imitation of the winding of the earth, or a Babylonian dance. When the chorus was at rest, it formed a semicircle, with leaders at the two wings.

The poems or songs which were accompanied by the hyponoria were likewise called hyponoria. The first poet to whom such poems are ascribed was Thales; their character must have been in accordance with the playfulness of the dance which bore the same name, and accompanied by the same music.

The fragments of the hyponoria of Pindar confirm this supposition, for their rhythms are peculiarly light, and have a very imitative and graphic character. These characteristics must have existed in a much higher degree in the hyponomastic songs of Thales.

HYPOTHÉCA. (Vid. Pind.)

HYPOTHECARIA ACTIO. (Vid. Pind.)

HYPOTIME'SIS. (Vid. Census.)

*HYS (ἡ). (Vid. Sus.)

*HYSSO'PUS (βοσντος), the Hysopp. Considerable doubts have been entertained," says Adams, "whether the ancient Hysopp was the same as the modern. Sprengel is disposed to hold the Origatum Egyptianum, as being the δέσωρος of the Greeks. However, Matthias, Corinna, Fuchs and, most of the older authorities, with the exception of Baun, refer it to the Η. officinalis. It is worthy of remark, that the medicinal properties of the Hysopp, as given by Dr. Hill, agree exactly with those of the δέσωρος as given by Dioscorides. This appears to me a strong presumption of their identity."

HYSTRIX (κτιτρίς), the Crested Porcupine, or

HYSTRIX CRISTATA, L. The domesticated animal of ancient and modern times, that the Forenseum dain out its quills when irritated, would have appeared to be an animal little adapted in mistake or imagination. The truth of the matter is, that, when frightened, many of its quills drop out. It is supposed to be the Kephod of Scripture.

I. J.

JACU'LUM. (Vid. Hasta, p. 489.)

JACUTOR. (Vid. Janua, p. 527.)

JANUA (πορτα), a door. Besides being applicable to the doors of apartments in the interior of a house, which were properly called oston, this term more especially denoted the first entrance into the house, i.e., the front or street door, which was also called ancilium, and in Greek ἥπειρον αἰδέος, αἰδίκειος, or αἰδία. The houses of the Romans commonly had a back door, called posticum, postia, or postica, and in Greek ἡπειρονδηθεῖα, ἡπειρονδηθεῖα...also calls it pseudothorium, "the false door," in contradistinction to janua, the front door; and, because it often led into the garden of the house, it was called the garden-door (γενική).

The doorway, when complete, consisted of two indispensable pars; the threshold or sill; the lintel; and the two jambs.

The threshold (limen, βυθός, οδός) was the object of superstitious reverence, and it was thought unfortunate to tread on it with the left foot. On this account, the steps leading into a temple were of an uneven number, because the worshipper, after placing his right foot on the bottom step, would then place the same foot on the threshold also. Of this an example is presented in the woodcut, p. 81.

The lintel (στυγμενίτημα, or supercilius) was also called the garden door. It was sometimes specially limen superum, to distinguish it from the sill, which was called limen infernum. Being designed to support a superincumbent weight, it was generally a single piece, either of wood or stone. Hence those lintels which still remain in ancient buildings astonish us by their great length. In large and splendid edifices, the jambs or door-posts (postes, σταφυλῖα) were made to converge towards the top, according to certain rules which are given by Vitruvius. In describing the construction of temples, he calls them antepagamenta, the propriety of which term may be understood from the ground-plan of the door at p. 215, where the hinges are seen to be behind the jambs. This plan may also serve to show what Theocritus means by the καθολος door-posts (σταφυλῖα καθολος ἁπλωθων). In the Augustan age it was fashionable to inlay the posts with tortoise-shell. Although the jambs was sometimes nearly twice the length of the lintel, it was made of a single stone, even in the largest edifices. A very striking effect was produced by the height of these doorways, as well as by their costly decorations, beautiful materials, and tasteful proportions.

One door in the front of a temple, as it reached nearly to the ceiling, allowed the worshippers to view from without the entire statue of the divinity, and to observe the rites performed before it. Also, the whole light of the building was commonly admitted.

524

JANUA.

HYSTRIX CRISTATA, L. The domesticated animal of ancient and modern times, that the Forenseum dain out its quills when irritated, would have appeared to be an animal little adapted in mistake or imagination. The truth of the matter is, that, when frightened, many of its quills drop out. It is supposed to be the Kephod of Scripture.
taken from a bas-relief. The term *anteaprementum*, which has been already explained, and which was applied to the lintel as well as the jamb (anteaprementum superius), implies that the doors opened inward. This is clearly seen in the same woodcut, and it seems likely that the construction of all ancient buildings at Pompeii and other places. In some of these buildings, as, for instance, in that called "the house of the tragic poet," even the marble threshold rises about an inch higher than the bottom of the door, so that the whole frame of the door was in every part behind the door-case. After the time of Hippias, the street-doors were not permitted to open outwardly at Athens, and hence *ενθάλυμα* meant to open the door on coming in, and *περισσάθρα* or *επεκτάθρα* to shut it on going out. In a single instance only were the doors allowed to open outwardly at Rome; an exception was made as a special privilege in honour of Marcus Valerius.

The lintel of the oblong door-case was, in all large and splendid buildings, such as the great temples, surmounted either by an architrave and cornice, or by a cornice only. As this is not shown in the bas-relief above introduced, an actual doorway, viz., that of the Temple of Hercules at Cora, is here added. Above the lintel is an architrave, with a Latin inscription upon it, and above this a projecting cornice, supported on each side by a console, which reaches to a level with the bottom of the lintel. The top of the cornice (corona summata) coincided in height with the tops of the capitals of the columns of the pronao, so that the doorway, with its superstructure, was exactly equal in height to the columns and the Arca. This superstructure was the *hypothymium* of Vitruvius, and of the Greek architects whom he followed. The next woodcut shows one of the two consoces which support the cornice of a beautiful Ionic doorway in the Temple of Minerva Polias at Athens. In the inscription referring to the building of that temple, which is now in the Elgin collection of the British Museum, the object here delineated is called *όντα ενθάλυμα*. Other Greek names for it, used by Vitruvius, are

parotis and ancon, literally a "side-ear" and "an above."

The use of consoles, or trusses, in this situation, was characteristic of the Ionic style of architecture, being never admitted in the Doric. It is to be observed that Homer, Hesiod, and Herodotus use the term *στέφναριον*, or its diminutive *στέφνιαριον*, to include the lintel. Upon some part of the hypothymium there was often an inscription, recording the date and occasion of the erection, as in the case of the Temple of Hercules above represented, or else merely expressing a moral sentiment, like the celebrated "Know thyself" upon the temple at Delphi.

The door itself was called *foris* or *valva*, and in Greek *σκις*, *κλάρα*, or *φώτρον*. These words are commonly found in the plural, because the doorway of every building of the least importance contained two doors folding together, as in all the instances already referred to. When foris is used in the singular, we may observe that it denotes one of the folding doors only, as in the phrase *foris crepat*, which occurs repeatedly in Plautus, and describes the breaking of a single valve, opened alone and turning round on its hinge. In other houses the valves were bivalve; hence we read of "the folding-doors of a bedchamber" (*foris cubiculari*; *συνίς εν οραματι*; *τύλαι διαλαμβανεται*). But in every case each of the two valves was wide enough to allow persons to pass through without opening the other valve also. Even each valve was sometimes double, so as to fold like our window-shutters (*dipthes complicitastheque*). The mode of attaching doors to the doorway is explained under the article *Cardo*.

The remaining specimens of ancient doors are all of marble or of bronze; those made of wood, which was by far the most common material, have perished. The door of a tomb at Pompeii is made of a single piece of marble, including the pivots, which were encased in bronze, and turned in sockets of the same metal. It is 3 feet high, 2 feet 9 inches wide, 42 inches thick. It is cut in front to resemble panels, and thus to approach nearer to the appearance of a common wooden door, and it was fastened by a lock, traces of which remain. The beautifully-wrought tombs of Asa Minor (see p. 457) and other Eastern countries have stone doors, made either to turn on pivots or to slide sideways.
In grooves. Doors of bronze are often mentioned by ancient writers. The doors of a supposed temple of Remus, still existing at Rome, and now occupied as a Christian church, are of this material. Mr. Donaldson has represented them as filling up the lower part of the doorways of the temple at Corinth, as shown in the last woodcut, which is taken from them. The four panels are surrounded by rows of small circles, marking the spots on which were fixed rossets or bosses, similar to those which are described and figured in the article Bulla, and which served both to strengthen and to adorn the doors. The leaves of the doors were sometimes overlaid with gold, as in the Temple of Solomon at Jerusalem, at other times they were enamelled with the most exquisite carving. Those in the Temple of Minerva at Syracuse are said by Cicero to have exceeded all others in the curious and beautiful workmanship executed upon them in gold and ivory. "It is incredible," says he, "how many Greeks have left writings descriptive of the elegance of these values." One of the ornaments was "a most beautiful Gorgon's head, with tresses of snakes, probably covering the centre of a panel. In addition to the sculptures upon the valves themselves, the finest statues were sometimes placed beside them, probably at the base of the antependia, as in the magnificent Temple of Juno in Samos. In the fanciful palace of Alcinous, the door-case, which was of silver, with a threshold of bronze, included folding-doors of gold; while doors were guarded, the approach, probably disposed like the avenue of sphinxes before an Egyptian temple. As luxury advanced among the Romans, metal took the place of wood, even in the doors of the interior of a house. Hence the quasar Sp. Carvillios reproved Camillus for having his chamber doors covered with bronze (serata osea). A lattice-work was to be observed through the bronze doors in the last woodcut. Mr. Donaldson has introduced it on the authority more especially of the Pantheon at Rome, where the upper part of the doorway is filled with a window such as that here represented. Πετάλεις calls it the hypatrum, and his language implies 126: ζών commonly used in temples. The folding-doors exhibited in the last woodcut, instead of a rebate such as we employ, have an upright bronze pilaster standing in the middle of the doorway, so as to cover the joining of the valves. The fastenings of the door (clavus) commonly consisted in a bolt (pesusculum, πόλυκαλός, κατακλειός, κλείδων, Ατε. κλείδους) placed at the base of each foris, so as to admit of being pushed into a socket made in the sill or reposing on it (τορηβός). The Pompeian doorways show two holes corresponding to the bolts of the two fores; and they agree with numerous passages which mention in the plural number the "bolts," or "both the bolts" of a door. The annexed woodcut shows an ancient bolt preserved in the Museum at Naples. By night the front door of the house was further secured by means of a wooden and sometimes an iron bar (sera, repugnata, μελόν) placed across it and inserted into sockets on each side of the door. Hence it was necessary to remove the bar (τον μελόν παραδείσω) in order to open the door.

(1) (Gorlsei, (Kurip., incredible," 617, (i.,442; One obiccs) his monly ple metal nn and secured folding- the in Cure, (Od.,551; The with other of Porap6i, (Ovid, small lattice-work I.,528); The represented in the article Bulla, and which served both to strengthen and to adorn the doors. The leaves of the doors were sometimes overlaid with gold, as in the Temple of Solomon at Jerusalem, at other times they were enamelled with the most exquisite carving. Those in the Temple of Minerva at Syracuse are said by Cicero to have exceeded all others in the curious and beautiful workmanship executed upon them in gold and ivory. "It is incredible," says he, "how many Greeks have left writings descriptive of the elegance of these values." One of the ornaments was "a most beautiful Gorgon's head, with tresses of snakes, probably covering the centre of a panel. In addition to the sculptures upon the valves themselves, the finest statues were sometimes placed beside them, probably at the base of the antependia, as in the magnificent Temple of Juno in Samos. In the fanciful palace of Alcinous, the door-case, which was of silver, with a threshold of bronze, included folding-doors of gold; while doors were guarded, the approach, probably disposed like the avenue of sphinxes before an Egyptian temple. As luxury advanced among the Romans, metal took the place of wood, even in the doors of the interior of a house. Hence the quasar Sp. Carvillios reproved Camillus for having his chamber doors covered with bronze (serata osea). A lattice-work was to be observed through the bronze doors in the last woodcut. Mr. Donaldson has introduced it on the authority more especially of the Pantheon at Rome, where the upper part of the doorway is filled with a window such as that here represented. Πετάλεις calls it the hypatrum, and his language implies 126: ζών commonly used in temples. The folding-doors exhibited in the last woodcut, instead of a rebate such as we employ, have an upright bronze pilaster standing in the middle of the doorway, so as to cover the joining of the valves. The fastenings of the door (clavus) commonly consisted in a bolt (pesusculum, πόλυκαλός, κατακλειός, κλείδων, Ατε. κλείδους) placed at the base of each foris, so as to admit of being pushed into a socket made in the sill or reposing on it (τορηβός). By night the front door of the house was further secured by means of a wooden and sometimes an iron bar (sera, repugnata, μελόν) placed across it and inserted into sockets on each side of the door. Hence it was necessary to remove the bar (τον μελόν παραδείσω) in order to open the door.

house of a superior description, there was a passage leading to the door from the public road, which was called vestibulum and στόλος. It was provided with seats. It was sometimes covered by an arch (οἴκος καμέλος), which was supported by two pillars, and sometimes adorned with sculptures. Here persons waited who came in the morning to pay their respects to the occupants of the house. In the same place was placed the domus alta (Vid. Aen. vii. 160.) The Athenians also planted a laurel in the same situation, beside a figure designed to represent Apollo; and statues of Mercury were still more frequent, being erected there on the principle of setting up a theft to catch a thief.

The Donia offered to the gods were suspended upon the branches of the donia or the donian tree, likewise from the door-posts and lintels of their temples, as well as of palaces, which in ancient times partook of the sanctity of temples. Victors in the games suspended their crowns at the door of a temple. In like manner, persons fixed to the jams and lintels of their own doors the spoils which they had taken in battle. Stage horns and boars' tusks were, on similar occasions, fixed to the lintels of private temples of Diana, and of the private individuals who had taken these animals in the chase. Owls and other nocturnal birds were nailed upon the doors as in modern times. Also garlands and wreaths of flowers were suspended over the doors of temples, in connexion with the performance of religious rites or the expression of public thanksgiving. These being composed in each case of productions suited to the particular divinity whom they were intended to honour. In this manner the corona spicae was suspended in honour of Ceres. Bay was so used in token of victory, especially at Rome, where it sometimes overshadowed the curia. On the occasion of the triumphs of the later emperors, garlands were placed on the doors of the imperial palaces. More particularly, garlands of cypresses or palm were the usual emblems of the imperial family. These garlands were sometimes replaced by the more graceful representations of the divinity in question. The doors of private houses were ornamented in a similar way, and with different plants, according to the occasion. More especially in celebration of a marriage, either bay or myrtle was placed about the door of the bridge-room. Catullus, in describing an imaginary marriage, supposes the whole vestibulum to have been tastefully overarched with the branches of trees. The birth of a child was also announced by a chaplet upon the door, and a death was indicated by cypress, probably in pots, placed in the vestibulum. In addition to trees, branches, garlands, and wreaths of flowers, the Romans sometimes displayed lamps and torches before the doors of their houses for a few days, as a mark of mourning and joy. Music, both vocal and instrumental, was sometimes performed in the vestibulum, especially on occasions when it was intended to do honour to the master of the house or to one of his family.

It was considered improper to enter a house without giving notice to its inmates. This was the custom among the Athenians and all other nations by using the knocker already describ-

bed, but more commonly by rapping with the knuckles or with a stick (κρυότις, κάρπος). In the houses of the rich, a porter (janitor, custos, νομοθετέω) was always in attendance to open the door. He was commonly a eunuch or a slave, and was chained to his post. To assist him in guarding the entrance, a dog was universally kept near it, being also attached to the chain by a chain to the wall, and they were all trained and kept by any of the leading poets or ancient authors, and the word is still used in modern times. In the days of the repose of primitive simplicity, the household gods of Greece, ἔννοον τοῦ κύριον, was sometimes written near the door. Of this a remarkable example occurs in "the house of the tragic poet" at Pompeii, where it is accompanied by the figure of a fierce dog, wroth in mosaic on the pavement. Instead of this harsh admonition, some walls or pavements exhibited the most gracious San Lorenzo. A similar practice was adopted in the family of an ancient Roman, in whose house the name for the portion of the house immediately behind the door (θυρωφόρος), denotes that it was a kind of apartment; it corresponded to the hall or lobby of our houses. Immediately adjoining it, and close to the front door, there was in many houses a small room for the porter (cella, or cellula janiarii). The writer Ed. Heindorff.)—IIATRALIPTES, IATRALIPTES, or IATROA-

IATRALIPTES (ιατρόελιπτης), the name given by the ancient physicians to that class of men who paid particular attention to that part of the medical practice which is called poisoning. The name is compounded of ἰατρός and ἐλιπτος, and signifies literally a physician that cures by amusing. According to Pliny, they were at first only the slaves of physicians, but afterward rose to the rank of physicians themselves, and we therefore, superior to the alippus. (Vid. Alippus.) The word
occur in Paulus Egineta, 1 Celsius, 4 and other medical writers.

IATRALIPITICE (ιατραλιπιτική), was that part of the art and science of medicine which had for its object the preservation or restoration of health by gymnastics and different kinds of bodily exercises, including unctions and frictiones. It was, according to Pliny, 5 first practised by Pordicus. (Vid. Gymnasia, p. 484.)

IATROS. (Vid. Medicus.)

IATROSOPHISTICA (ιατροσοφιστική), an ancient medical title, signifying apparently (according to Du Cange) 6 one who both taught medicine and also practised it himself; as the ancients made a distinct separation between the art and the science of medicine, the theory and the practice. 8 Eunapius Sardianus 8 calls them ἐξεργε- 

mένους λέγεν τε καὶ ποιητῶν λατρευτῶν. The word is somewhat varied in different authors. Socrates 9 calls Adamantius λατρευτῶν λόγων σοφίτης. Stephanus Byzantinus 8 mentions τῶν λατρευτῶν σοφίτων: Callithenes (quoted in Du Cange), λατρήσφοιτων: and Théophrastes' σοφίτως τῆς λατρευτῆς ἐπίστολας. Several ancient physicians are called by this title, e. g., Magnes, 10 Cassius, the author of "Questions Medicæ et Naturales," and others.

*IBERIS (Ibéris), a species of Pepperwort, now called Lepidium Iberis. The chapter of Dioscorides on the Iberis is most probably spurious. 11

IBIS (Ibis), the Ibis, a bird held sacred by the Egyptians, was also described by Herodotus and Aristotle, but there has been considerable difficulty in identifying these two. "Dr. Trail informs me," says Adams, 12 that, having compared the skeletons of the mummy bird and of the Ibis religiosa, he found them identical. It is the Tantalus B hijipicus of Latham. The other Ibis of Herodotus would appear to be the stork. 13 The Ibis is as large as a hen, with white plumage, except the end of the wing-quills, which are black. The last wing-coverts have elongated and slender bars, of a black colour, with violet reflections, and thus cover the end of the wing and tail. The bill and feet are black, as well as the naked part of the head and neck. In the young subject, however, this part is covered, at least on its upper face, with some white down. 1 It is only since the publication of Bruce's Travels, 14 observed by Griffith, "that positive notions have been gained respecting the genus to which we refer the bird which was so venerated by the ancient Egyptians, and which they used to embalm after its death. The Ibis of Perاعت and Buffon has since been recognised for a tantalus; that of Hasselquist for a heron, perhaps the same as the ox-bird of Strabo; and that of Maillet (Pharaon's chicken; Rachanak of the Arabs) for a vulture, Vultur Peruponeterus, L. But Bruce found in Lower Ethipia a bird which is there named A nub-amnens (Father John), and, on comparing it with the emblazoned individuals, he recognised it to be the true black and white Ibis, with reflections on several parts of the body, and the same as the Mengal or Abou-mengal (Father of the Sickle) of the Arabs. This fact has been fully confirmed by M. Cuvier, by an examination of mummies brought from Egypt by Colonel Grobert and M. Geoffroy, and from other mummies by M. Savigny, who also found in Egypt the very bird itself, and had an opportunity of examining it in the living state. M. Cuvier's memoir on the subject was first inserted in the Annals of the French Museum; and in the "Ossemsens Fossiles," M. Savigny has published a natural and mythological history of the same bird M. Cuvier having found in the mummy of an A nub the undigested remains of the skin and scales of serpents, concluding that these birds in reality fed upon those reptiles. M. Savigny had found any in the stomach of such individuals of the present time as he dissected, came to a contrary conclusion, which seemed to him to be substantiated by the natural habits and organization of the Ibis, confirmed by analogy, and farther corroborated by the testimony of the modern Egyptians. He does not, indeed, attempt to deny the fact stated by the ancients, but only to correct the idea, and to show the learned professor does not specify the exact position of the debris of serpents of which he speaks. M. Savigny adds, first, that, according to Herodotus, before the Egyptians proceeded to embalm an Ibis, they removed the intestines, which were reputed to be excessively long; secondly, that he himself found in the interior of one of these mummies, but in a very small quantity, a multitude of the larve or nymphae of insects of different species; thirdly, that, moreover, certain species of serpents were reckoned among the sacred animals, and that mummies of such serpents have been discovered in the grottoes of Thebes; fourthly, that many of the mummies of the Ibis, which were taken from the repositories in the plains of Saccara, contained, under a general envelope, aggregations of different animals, whose debris by the Egyptians were col-

lected. We may remark, also, that the remains of serpents mentioned by M. Cuvier were not yet digested, which would naturally be the case under the supposition that they had not even been introduced into the alimentary canal.

"When we consider the assertions of Herodotus respecting the supposed service rendered to Egypt by these birds, in delivering it from serpents, we shall find that the chief stress is laid upon their antipathy for these reptiles, which they were said to combat and destroy; but their organization seems but little calculated to enable them to succeed in enterprises of this kind. Besides, the animals which are wont to rid us of pernicious species, do so, not from a hatred and antipathy which they bear to such serpents, but because their pleasures are whetted by the experience in devouring and feasting on them. This, assuredly, is a distinction of some weight. It may also be remarked, that the food of animals is always the same, except in cases of death, which death is never wanted created by the animals themselves. If serpents of any kind were the natural aliment of the Ibis, instead of preventing them from penetrating into the country where these birds were destined to so long a portion of the year, the latter would rather follow them into the places of their retreat. If we add to these considerations the recollection that sandy countries are the suitable habi-

tats of serpents, while humic situations are best adapted to the Ibis, we shall find fresh cause to re-

ject the opinion of Herodotus as fabulous. It could not, indeed, have been received with any great de-

gree of credit, having been the first naturalist of Greece who has passed over in silence the antipathy of the Ibis to the serpent, and their supposed combats. If Herodotus, who tells us that he had himself seen, on the confines of Arabia, and at the place where the mountains open on the plains of Egypt, the fields covered with an incredible number of accumulated bones, and instances these birds in reality feeding upon serpents, it is evident that they were on the point or entering Egypt; it is merely a simple opinion which he gives upon a fact which could not have originated from any auth
ICHNEUMON

cause. These immense debris of fishes and other vertebrated animals, which in the course of time have been heaped up in some narrow place, after-ward abandoned by the waters, cannot possibly admit of such an explanation of their origin, which is truly ludicrous, and could only have been adopted by his method in consequence of its excessive credulity with which he was prone to swallow popular report. Such masses, moreover, would not have been preserved for any great length of time, had they consisted merely of the small bones of reptiles, incapable of making resistance against the attacks of birds so weak as the ibis.

So it is, in fact, not for several reasons than the destruction of serpents for the veneration paid to the Ibis by the ancient Egyptians, who admitted it even into their temples, and prohibited the killing of it under pain of death. In a country where the people, very ignorant, were governed only by superstitious ideas, it was natural that fictions should have been imagined to express with energy the reality of destruction; and the year attracts the Ibis into Egypt, and retains it there. Its constant presence at the epoch of that inundation which annually triumphs over all the sources of decay, and assures the fertility of the soil, must have appeared to the priests, and to those at the head of government, admirably calculated to lead them to suppose supernatural and secret relations between the movements of the Nile and the sojourn of these insinuous birds, and to consider the latter as the cause of effects exclusively owing to the overflow of the river.11 "The Ibis was sacred to Thoth, who was fabulously reported to be the creator of all things, in the form of this bird. It was greatly revered in every part of Egypt; and at Hermopolis, the city of Thoth, it was worshipped with peculiar honors, as the emblem of the deity of the place. Its Egyptian name was Hitch, from which Champollon supposes the town of Nibis to have been called, being a corruption of Hitch-nib, or Nib, the place of the Ibis. Such was the veneration felt by the Egyptians for the Ibis, that to have killed one of them, even involuntarily, subjected the offender to the pain of death. So pure, in fact, did they consider it, that those priests who were most scrupulous in the performance of their sacred rites, fetched the water they used in their purifications from some place where this bird had been seen recently, and could be observed of that bird that it never goes near any unwholesome and corrupted water. Plutarch and Cicero pretend, that the use which the Ibis made of its bill taught mankind an important secret in medical treatment; but the bill of the bird is not a tube, and the ἀλέξιμων ὑπ' ἄνω ἀναστρίσας is a mistake. The form of the Ibis is that of a large common crane, on account of the tail, the head under its feathers, or when in a mummied state, was supposed to resemble the human heart; the space between its legs, when parted asunder as it walks, was observed to make an equilateral triangle; and numerous fanciful peculiarities were discovered in this revered emblem of Thoth."

*ICHNEUMON (ἰχνεύμων), a well-known quadruped of the Weasel kind, the Viscera Ichnleon of naturalists. It has been long famous in Egypt, where it goes by the name of Pharaoh's Rat. "If, in the mythological system of the ancient Egyptians," observes Lieut. Col. Smith, "the various living beings which people the surface of the earth were supposed to exemplify the species of certain other beings in heaven, their actions being in consequence of the count of the influence which they exercise over the economy of nature, and the part which they can contribute to the general harmony of the universe, the Ichneumon unquestionably possessed more claims than any other animal to the homage of that singular people. It presented a lively image of a beneficent power perpetually engaged in the destruction of these noisome and dangerous pests, which propagate with such terrible rapidity in hot and humid climates. The Ichneumon is led by its instinct, and obviously destined by its peculiar powers, to the destruction of animals of this kind. Not that it dares to attack crocodiles, serpents, and the larger animals of the lizard tribe, by open force, or when these creatures are arrived at their complete growth. It is by feigning its death, and Ichneumon reduces the number of these intolerable pests. The Ichneumon, from its diminutive size and timid disposition, has neither the power to overcome nor the courage to attack such formidable adversaries. Nor is it an animal of the most decided carnivorous appetite. Urged by its instinct alone, which guides, and in no instant does it have the utmost prudence, it may be, at the close of day, gliding through the ridges and inequalities of the soil, fixing its attention on everything that strikes its senses, with the view of evading danger or discovering prey. If chance favours its researches, it never limits itself to the momentary gratification of its appetite, but makes efforts to destroy every living thing within its reach which is too feeble to offer it any effectual resistance. It particularly seeks after eggs, of which it is extremely fond, and through this taste it proves the means of destruction to so many cro-odiles. That it enters the mouth of this animal when asleep, as Diodorus gravely informs us, and, gliding down its throat, gnaws through its stoma- ch, is a story which cannot be相干. This is either a fable which never had any foundation, or, like many other marvels, it has ceased in our unbelieving and less favored age.—The colour of the Ichneumon is a deep brown, picked out with dirty white. The tail is terminated by a tuft of hairs entirely brown. The Ichneumon is aVery dangerous animal, measuring from the end of the tail to the tip of the nose, the tail itself being one foot four inches. The mean stature of the animal is about eight inches."

The Ichneumon was particularly worshipped by the Heracleopolites, who lived in a nome situated in the valley of the Nile, a little to the south of the entrance of the great canal by which that name of Heracleopolis and the vicinity of Cairo, still continue, according to Wilkinson, to be the chief resort of the animal in question; "and it is sometimes tamed and kept by the modern, as it was by the ancient Egyptians, to protect their houses from rats. But, from its great predilection for eggs and poultry, they generally find that the injury it does far outweighs the good derived from its ser- vices as a substitute for the cat. Herodotus says little respecting the Ichneumon, except that it received the same honours of sepulture as the domestics animals. But Ælian tells us that it destroyed the eggs of the asp, and fought against that poisonous reptile. Pliny, Strabo, and Ælian relate the manner in which it attacked the asp, and was protected from the effect of its poisonous bite. Ælian says it covered itself with a coat of mud, which rendered its body proof against the fangs of its enemy; or, if no mud was near, it wetted its body with water, and rolled itself in the sand. Its nose, which alone remained exposed, was then enveloped in several layers of mud, and this mechanism the attack. If bitten, its death was inevitable; but all the efforts of the asp were unavailing against its
artificial coat of mail, and the Icneuonem, attacking it on a sudden, seized it by the throat, and immediately killed it. Thus much for the ancient story. Modern experience, on the other hand, proves that, without having recourse to a cuirass of mud, the Icneuonem fearlessly attacks snakes, and, the moment it perceives them raise their head from the ground, it seizes them at the back of the neck, and with a single bite lays them dead before it." modern writers have to those wherein the judicial power, but these

were not explained what they precisely mean by the term "judicial power." It may be conjectured that the division of imperium, made by the jurists, was in accordance with the practice of the republican period: there was during the republican period an imperium within the walls which was incident to jurisdiction, and an imperium without the walls which was conferred by a lex Curia. There are no traces of this separation in the kings period, and it is probable that the king received the imperium in its full import, and that its separation into two parts belongs to the republican period. The imperium, which was conferred by a lex under the Republic, was limited, if not by the terms in which it was conferred, at least by usage: it could not be held or exercised within the city. It was sometimes specially conferred on an individual for the day of his triumph within the city, and, at least in some cases, by a plebiscitum. 7

The imperium was as necessary for the government of a province as for a general who merely commanded the armies of the Republic, as he could not, without its, exercise military authority (rem militarem attingere). So far as we can trace the strict practice of the Roman constitution, military command and imperium were not incident to any office, and might be held without any other office than that of imperator. It appears that in the time of Cicero there were doubts as to the necessity of the lex in some cases, which may have gradually arisen from the irregular practices of the civil wars, and from the gradual decay of the old institutions. Cicero, in a passage which is not very clear, refers to the use which an individual who had received a province ex secessio consulatus thereby acquired the imperium without the formality of a lex Curia.

The imperium (merum) of the Republic appears to have been (1), a power which was only exercised out of the city; (2), a power which was specially conferred by a lex Curia, and was not incident to any office; (3), a power which was not exercised as done in the name and on the behalf of the state. Of this a notable example is recorded in Livy, where the senate refused to recognise a Roman as commander because he had not received the imperium in due form.

In respect of his imperium, he who received it

IMPÜES.

was styled imperator: he might be a consul or a proconsul. It was an ancient practice, observes Tacitus, for the soldiers of a victorious general to salute him by the title of imperator; but in the instance referred to by Tacitus, the Emperor Tiberius allowed the soldiers to confer the title on an individual who had it not already; while under the Republic, the title, as a matter of course, was given with the imperium; and every general who received the imperium was entitled to the name of imperator. After a victory it was usual for the soldiers to salute their commander as imperator; but this custom neither gave nor confirmed the title. Under the Republic, the name of the several imperatores at a time: Augustus granted the title to some; but the last instance, he adds, of the title being conferred was in the case of Blaesus, under Tiberius. There were, however, later instances. The assumption of the name of imperator by Julius Caesar was a manifest usurpation. Under the Republic the title came properly by right of law; but the name sometimes appears on the imperial portraits, followed by a numeral (VI. for instance), which indicates that it was specially assumed by them on the occasion of some great victory; for, though the victory might be gained by their generals, it was considered to be gained under the auspices of the imperator.

The term was applied in the republican period to express the sovereignty of the Roman state. Thus Gaul is said by Cicero to have come under the imperium and díto of the populus Romanus; and the notion of the majestas populi Romani is said to be in imperio atque in nonani populi Romani dignitate.1

IMPULSIVUM. (Vid. House, Roman, p. 516.)

IMPÜES. An infans (vid. Infans) was incapable of doing any legal act. An infans, who had passed the limits of infantiæ, could do any legal act with the auctoritas of his tutor; without such auctoritas he could only do those acts which were for his benefit. Accordingly, such an infans, in the case of testamentary contracts, could only operate by amentes (promittere); in other words, as Gaius expresses it, a pupillus could only be bound by the auctoritas of his tutor, but he could bind another without such auctoritas. (Vid. Infans.)

But this remark as to pupilli does not apply to those who are infantes or infantí proximi, though in the case of the infantí proximi a liberal interpretation was given to the rule of law (of interpretation), by virtue of which a pupillus, who was infantí proximus, was placed on the same footing as one who was pubescent proximus, but this was done for their benefit only (propter utilitatem eorum); and, therefore, could not apply to a case where the pupillus might be a lesser. An infans who was in the capacity to confer the title on an infantí proximus, could not transmit the auctoritas of his father; for, in the case of a pupillus, the auctoritas of the tutor was only allowed in respect of the pupillus having property of his own, which a son in the power of his father could not have.

In the case of obligationes ex delicto, the notion of the auctoritas of a tutor was of course excluded, as such auctoritas was only requisite for the purpose of giving effect to rightful acts. If the imperium was of sufficient capacity to understand the nature of his delict, he was bound by it; otherwise he was not. In the case of a person who was publici proximi, there was a legal presumption of such capacity; but still, this presumption did not exclude a consideration of the degree of understanding of the impubes and the nature of the act, for the act might be such as either to be perfectly intelligible, as theft, or it might be an act which an impubes imperfectly understood, as when he was made the instrument of a crime. Hence it was observed, he was capable of being involved in crimes, but not of committing them. The recognition of the auctoritas of an infantí proximus was, consequently, applicable to cases of furtum, damnium infrauria, infrauria, and others; and also to crimes in which the nature of the act determined whether or not guilt should be imputed.

An impubes could enter into a contract by which he was released from a debt, but he could not remove a slave. He could take the hereditas of his tutor. He could not pay money without his tutor; nor could he receive money without his tutor, at least it was not a valid payment, because such payment was, as a consequence, followed by a release to the debtor. But since the rule as to the incapacity of an impubes was made only to save him from loss, he could not retain both the money and the title; or, if he retained both, he was, of course, entirely under his father's control.

An impubes could acquire a hereditas with the consent of his tutor, which consent was necessary, because a hereditas was accompanied with obligations. But as the act of creation was an act that must be done by the heirs himself; neither his tutor nor a slave could take the hereditas of his tutor, and he was, in consequence of his age, incapable of taking it himself. This difficulty was got over by the doctrine of pro herede gestio: the tutor might permit the pupillus to act as his heres, which had the effect of creatio: and this doctrine would apply even in the case of infants, for no expression of words was necessary. In order to the acquirement of the case of the heredes possessor, the father could apply for it on behalf of his child, and the tutor on behalf of his ward, without any act being done by the impubes. By the imperial legislation, a tutor was allowed to acquire the hereditas for his ward, and a father for his son, who was in his power; and thus the doctrine of pro herede gestio was rendered unnecessary.

A pupillus could not part with a possession without the auctoritas of a tutor; for, though possession of itself was no legal right, legal advantages were attached to it. As to the acquisition of possession, possession in itself being a bare fact, and the fundamental condition of it being the animus possessori, consequently the pupil could not acquire possession by himself, and when he had capacity to understand the nature of the act. But with the auctoritas of his tutor he could acquire possession even when he was an infans, and thus the acquisition of possession by a pupillus was facilitated, utilitatis causa. There was no formal difficulty in such an acquisition as the hereditas of a slave, in the case of pro herede gestio, for in neither instance was it necessary for words to be used. Subsequently the legal doctrine was established that a tutor could acquire possession for his pupilus.1

1. (Ann. iii., 74; 2. (Suet. Jul., 76; 3. (Proc. Font., 1.): 4. (Cic. Or. Part., 30. Compare the use of "imperium" in Hor. Carm., 1. 37; iii. 5. 3. (i. 107.); 5. (Compare Inst., v. 4. 1. 19; 4. 19; 10, with Gaius, iii., 107.)
With the attainment of pubertas, a person obtained the full power over his property, and the tutela ceased: he could also dispose of his property by will; and he could contract marriage. According to the legislation of Justinian, pubertas, in the case of a male, was attained with the completion of the fourteenth, and in a female, with the completion of the twelfth year. In the case of a female, it seems that there had never been any doubt as to the period of the twelve years, but a dispute arose among the jurists as to the period of fourteen years. The Sabiniiani maintained that the age of pubertas was to be determined by physical capacity (habitus corporis), to ascertain which a personal examination might be necessary: the Proculliani fixed the age of fourteen complete, as that which absolutely determined the attainment of puberty. It appears, therefore, that under the earlier emperors there was some doubt as to the time when pubertas was attained, though there was no doubt that with the attainment of puberty, whatever that time might be, full legal capacity was acquired.

Until a Roman youth assumed the toga virilis, he wore the toga praetexta, the broad purple hem of which (praetexta) at once distinguished him from other persons. The toga virilis was assumed at the Ludi Maximi of March, and he should be enrolled if he appeared to have been positively fixed for the ceremony, it probably took place, as a general rule, on the feast which next followed the completion of the fourteenth year, though it is certain that the completion of the fourteenth year was not always the time observed. Still, so long as a male wore the praetexta, he was impubes, and when he assumed the toga virilis, he was pupillus. Accordingly, ves- tiges was the same as pupes, and investes or praetexta the same as impubes. After the assumption of the toga virilis the son who was in the power of his father had a capacity to contract debts; and a pupillus was released from the tutela. But if neither the pupillus wished to get rid of his tutor, nor the tutor to be released from the responsibility of his office (for which he received no remuneration), the period of assuming the toga virilis might be deferred. If the pupillus and the tutor could not agree, it might be necessary that there should be a judicial decision. In such a case the Proculliani maintained as a theoretical question, that the age of fourteen should be taken as absolutely determining the question. fourteen being the age after the attainment of which the praetexta had been generally laid aside. The Sabiniiani maintained that, as the time of puberty had never been absolutely fixed, but had depended on free choice, some other mode of deciding the question must be adopted, where free choice was out of the question, and therefore they adopted that of the physical development (habitus corporis). But, though there are allusions to this matter, there is nothing in the text but inspection of the person was ever actually resorted to in determining the age of puberty. It appears that the completion of fourteen years was established as the commencement of pubertas. The real foundation of the rule as to the fourteen and the twelve years appears to be, that in the two sexes respectively, puberty was, as a general rule in Italy, attained about those ages. In the case of females, the time had been fixed absolutely by the comitia, and had no reference to any practice similar to that among males of adopting the toga virilis, for women wore the toga praetexta till they were married. And farther, though the pupillaris tutela ended with females

with the twelfth year, they were from that time subject to another kind of tutela.

A male had a capacity to make a will upon completing his fourteenth year; and a female upon completing her twelfth year; and the same ages, as already observed, determined the capacity, in the two sexes, for contracting a legal marriage. The dispute between the two schools as to the time when the capacity of puberty appears to have had reference to the termination of the period and his general capacity to do legal acts; for the test of the personal examination could hardly, from the nature of the case, apply to the capacity to make a will or contract a marriage, as Saviñon shows.

Spadone (males who could never attain physical puberty) might make a testament after attaining the age of eighteen.

INAUGURATIO was in general the ceremony by which the gods were, or endeavoured to be obtained, the sanction of the gods to something which had been decreed by man; in particular, however, it was the ceremony by which things or persons were consecrated to the gods, whence the term dedicatio and consecratio were sometimes used as synonymous with inauguration. The ceremony of inauguration was as follows: After it had been decreed that some person should be consecrated to the gods, or that a certain person should be appointed priest, a prayer was addressed to the gods by the augurs or other priests, soliciting them to declare by signs whether the decree of men was agreeable to the will of the gods. If the signs observed by the inaugurating priest were thought favourable, the decree of men had the sanction of the gods, and the inauguration was completed. The inauguration was, in early times, always performed by the augurs; but subsequently we find that the inauguration, especially that of the rex sacrificus and of the flamines, was sometimes performed by the college of pontiffs in the comitia calata. But all other priests, as well as new members of the college of augurs, continued to be inaugurated by the augurs, or sometimes by the augurs in conjunction with some of the pontiffs; the old pontiff had the right to enforce the inauguration, if it was refused by the augurs, and if he considered that there was not sufficient ground for refusing it. Sometimes one augur alone performed the rite of inauguration, as in the case of Numa Pomphilus; and it would seem that in some cases a newly-appointed priest might himself not only fix upon the day, but also upon the particular augur by whom he desired to be inaugurated.

During the kingly period of Rome, this inauguration of persons was not confined to actual priests; but the kings, after their election by the populace, were inaugurated by the augurs, and thus became the high-priests of their people. After the civil and military power of the kings had been conferred upon them, in such a manner as to be absolutely independent of the determination of a person, the rex sacrorum, he was, as stated above, inaugurated by the pontiffs in the comitia calata, in which the chief pontiff presided. But the high religious magistrates, notwithstanding, likewise continued to be inaugurated, and for this purpose they were summoned by the augurs (condictio divinatio) to appear on the Capitol on the third day after their election. This inauguration continued to be performed non pontifically, but was merely a method of obtaining the sanction of the gods.

a ring, a hook was often used, as shown in Nos. 6, 8. The women of Italy still continue the same practice, passing the hook through the lobe of the ear without any other fastening. The drops were sometimes of gold, very finely wrought (see Nos. 2, 7, 8), and sometimes of pearls and precious stones (Nos. 3, 5, 6). The pearls were valued for being exactly spherical, as well as for their great size and delicate whiteness; but those of an elongated form, called elenchi, were also much esteemed, being adapted to terminate the drop, and being sometimes placed two or three together for this purpose. In the Hail, by adornning the head with the most captivating manner, puts on earrings attached with three drops resembling multiberies. Pliny observes that greater expense was lavished on no part of the dress than on the ear. According to Seneca, the earring No. 3, in the preceding woodcut, in which a couple of pearls are strung both above and below the precious stone, was worth a patrimony. All the earrings above engraved belong to the Hamilton collection in the British Museum.

In opulent families, the care of the earrings was the business of a female slave, who was called Articula Ornatix. The Venus de' Medici, and other female statues, have the ears pierced, and probably once had earrings in them. The statue of Achilles at Sigeum, representing him in female attire, likewise has both the daughter, after the Emperor Claudius had set the example by marrying Agrrippina; but there was none between an uncle and a sister's daughter. There was no connexion between a man and his amita or matertera (vid. Coutrati) nor between a man and his sorsus, nurus, privigis, or noverca. In all such cases, when there was no connexion, the children had a mother, but no legal father.

Incest between persons in the direct line was punishable in both parties; in other cases only in the man. The punishment was relegatio, as in the case of adultery. Concubinage between near kinsfolk was put on the same footing as marriage. In the case of adulteries to the same connexion between persons who had no connexion, there was a double offence: the man was punished with deportation, and the woman was subject to the penalties of the lex Julia. Among slaves there was no incestum, but after they became free their marriages were regulated according to the analogy of the connexion among those who had no connexion. Incestum, therefore, was stigmata, aggraved by the circumstance of real or legal consanguinity, and, in some cases, affinity. It was not the form of marriage between such persons that constituted the incestum; for the nuptiae were incestae, and therefore no marriage, and the incestuous act was the sexual connexion of the parties. Sometimes incestum is said to be contra naturam, that is, an act in violation of religion.

INCITEGA. (Vid. Caput.)

INCESTUM. If a man married a woman whom it was forbidden for him to marry by positive morality, he was said to commit incestum. Such a marriage was, in fact, no marriage, for the necessary connexion between the parties was wanting.

There were two kinds of connexion related by blood in the direct line, as parents and children. If such persons contracted a marriage, it was nefariss et incestae nuptiae. There was no connexion between persons who stood in the relation of parent and child by adoption, not even after the adopted child was emancipated. There were also restricted connubial unions between persons who had no connexion, and were likewise entitled to have knowledge of a vestal virgin, and both parties were punished with death.

It does not appear that there was any legislation as to incestum: the rules relating to it were founded on usage (maribus). That which was stigmata was considered incestum when the connexion was between persons who had no connexion. If a connexion, therefore, was stigmata, aggravated by the circumstance of real or legal consanguinity, and, in some cases, affinity. It was not the form of marriage between such persons that constituted the incestum; for the nuptiae were incestae, and therefore no marriage, and the incestuous act was the sexual connexion of the parties. Sometimes incestum is said to be contra naturam, that is, an act in violation of religion.

INCITEGA, a corruption of the Greek aywyndphon or bywyndphon, a term used to denote a piece of domestic furniture, variously formed according to the particular occasion intended; made of silver, bronze, clay, stone, or wood, according to the circumstances of the person; sometimes adorned with figures; and employed to hold amphorae, bottles, etc.
art, show that the ancient anvil was formed for that of modern times. When the artist wanted to make use of it, he placed it on a large block of wood (dappulon) or made it, when he placed it in a hollow, on a point projecting from one side of the anvil. The annexed woodcut, representing Vulcan forging a thunderbolt, shows that the anvil was formed for that of modern times.

The annexed woodcut shows three dy- and steph, which are preserved in the British Museum. Those on the right and left hand are of wood, the one having four feet, the other six; they were found in Egyptian tombs. The third is a broad earthenware ring, which is used to support a Grecian amphora.

INCORPORALES RES. (Vid. Dominium.)

INCUNABULA or CUNA BULA (σπάργανος), swaddling-clothes.

The first thing done after the birth of a child was to wash it; the second, to wrap it in swaddling-clothes; and the rank of the child was indicated by the splendour and costliness of this, its first attire. Sometimes a fine white shawl, tied with a gold band, was used for the purpose; at other times a small purple scarf, fastened with a brooch (λαγκυ- 

The poor used broad fillets of common cloth (παμμ?). The annexed woodcut, taken from a beautiful bas-relief at Rome, which is supposed to refer to the birth of Telephus, shows the appearance of a child so clothed, and renders, in some degree, more intelligible the fable of the deception practised by Rhea upon Saturn, in saving the life of Jupiter, by presenting a stone enveloped in swaddling-clothes, to be devoured by Saturn instead of his new-born child. It was one of the peculiarities of the Laconian education to dispense with the use of incunabula, and to allow children to enjoy the free use of their limbs.

INCUS (σκίαν), an Anvil. The representations of Vulcan and the Cyclopes on various works of

INFAMIA.

for Jupiter, illustrates these circumstances; it is taken from a gem in the Royal Cabinet at Paris. It appears that in the "brassern age," not only the things made upon the anvil, but the anvil itself, with the hammer and the tongs, were made of bronze. (Vid. Malleus.) At this early period anvils were used as an instrument of torture, being suspended from the feet of the victim.

*INDICUM (Ibodacri).—Dioscorides applies the term ibodacri to two distinct substances; the one the vegetable pigment still called Indigo, which is prepared from the leaves and stalks of the Indigo plant. Several species are now cultivated for making indigo, but the one from which the ancients may be supposed to have procured their indigo is the Indigofera tinctoria. The other kind of indigo was, most probably, the mineral substance called Indian Red, and which is a variety of the red oxide of iron.
INFAMIA.

had not acted with good faith. Infamia was also a consequence of insolvency, when a man's bona were possessea, proscripta, vendita, of a widow marrying within the time appointed for mourning; the edict here speaks only of the infamia of the widow, but it was subsequently extended to her. Infamia was a consequence of a man being at the same time in the relation of a double marriage with the same person: to the man attached to the man if he was a paterfamilias, and if he was not, then to his father, and to the father of the widow if she was in his power: the edict does not speak of the infamia of the widow, but it was subsequently extended to her. Infamia was a consequence of a man's Rome, the rule of which was a personal act, and the magistrates, or the senate, or the censors, removed him into a lower tribe, or remove him out of all the tribes, and so deprive him of his suffragium, by reducing him to the condition of an emissarius. They could also affix a mark of ignominy or censure opposite to a man's name in the list of citizens, nota censoria or subscriptio, and in doing this, they acted without special impulse, but might follow general opinion. This arbitrary mode of proceeding was, however, partly remedied by the fact that such a censoria nota might be opposed by a colleague, or removed by the following censure or by a judicial decision, or by a lex. Accordingly the censorial nata was not perpetual, and therein it differed essentially from infamia, which was perpetual.

The consequences of infamia were the loss of certain political rights, but not all. It was not a capitis deminutio, but it resembled it. The infamia became an emissarius, and lost the suffragium and honors; that is, he lost the capacity for certain so-called public rights, but not the capacity for private rights. Under the Empire, the infamia lost its effect as to public rights, for such rights became unimportant.

It might be doubted whether the loss of the suffragium was a consequence of infamia, but the affirmative side is maintained by Sallust with such reasons as may be pronounced completely conclusive. It appears from the authorities, especially Valerius Maximus that the actores attellanum were not either removed from their tribe (ne tribo movantur), nor incapable of serving in the army: in other words, such actors did not become infames, like other actors. The phrase "tribu movantur" is ambiguous, and may mean either to remove from one tribe to another, or to remove from all the tribes, and so make him an emissarius. Notwithstanding, the removal from one tribe to another must have been an act of the censors only, for it was necessary to fix the tribe into which the removal was made: but this could not be the case in a matter of infamia, which was the effect of a general rule, and a general rule could only operate in a general way; that is, "tribu movantur" as a consequence of infamia, must have been a removal from all the tribes, and a degradation to the state of an emissarius.

The lex Julia Municipalis does not contain the word infamia, but it mentions nearly the same cases as those which the edict mentions as cases of infamia. The lex excludes persons who fall within its terms from being senators, deacons, conscripti of their city, from giving their vote in the senate of their city, and from magistracies which gave a man access to the senate: but it says nothing of the right of vote being taken away. Sallust observes that there would be no inconsistence in supposing that the lex refused only the honores or the centenaria; while the infames must have been a removal from all the tribes, and a degradation to the state of an emissarius.

Cicero speaks of the judicia fiduciae, tutelae, and societatis as "summa exactionem et pena capitis." In another oration he speaks of the possessio honorum as a captio causa, and as a complete loss of citizenship. This change manifestly arose from the circumstance of the public rights of the citizens under the Empire having become altogether unimportant, and thus the phrase capitus deminutio, under the Empire, applies solely to the individual's capacity for private rights.

In his private rights the infamia was under some incapacities. He could only postulate before the praeator on his own behalf, and on behalf of certain persons who were very nearly related to him, but not generally on behalf of all persons. Consequently, he could not generally be a cognitor or a procurator, and he could not publish, nor have access to the archives of the state.
INFAMIA.  

INFAMIA. (GK) (ἀτυμία). A citizen of Athens had the power to exercise all the rights and privileges of a citizen as long as he was not suffering under any kind of atimia, a word which in meaning is probably that of a complete civil death; that is, an individual labouring under atimia, together with all that belonged to him (his children as well as his property), had, in the eyes of the state and the laws, no existence at all. This atimia, undoubtedly the only one in early times, may be termed a total one, and in cases where it was inflicted as a punishment for any particular crime, was generally also perpetual. That Athens liked Demosthenes, in speaking of a person suffering under it, often uses the expression καθάπαξ ἀτυμίας, of ἀτυμίας ἀτυμία. A detailed enumeration of the rights of which an atimios was deprived is given by Ασχίνος. He was not allowed to hold any civil or priestly office whatever, either in the city of Athens itself, or in any town within the dominion of Athens; he could not be employed as herald or ambassador; he could not give his opinion, or speak either in the public assembly or in the senate; he was not even allowed to appear within the extent of the agora; he was excluded from visiting the public sanctuaries, as well as from taking part in any public sacrifice; he could neither bring an action against a person from whom he had sustained an injury, nor appear as a witness in any of the courts of justice; nor could, on the other hand, any one bring an action against him. The right which, in point of fact, included most of those which we have here enumerated, was that of taking part in the popular assembly (ἀγόρευν and γράφειν). Hence this one right is most frequently the only one which is mentioned as being forfeited by atimia. The service in the Athenian armies was not only required in the light of a duty which a citizen had to perform towards the state but as a right and a privilege; of which, therefore, the atimios was likewise deprived.  

The idea that an atimios had no right to claim the protection of the laws if he was suffering injuries from others, we must not imagine that it was the intention of the law to expose the atimios to the insults or ill-treatment of his former fellow-citizens, or to encourage the people to maltreat him with impunity, as might be inferred from the expression of δομω τοῦ εἶναι ἄτυμοι, but that all the law meant to do was, that if any such thing happened, the atimios might not enjoy the protection of the laws. We have already referred to two laws mentioned by Demosthenes, in which the children and the property of an atimios were included in the atimia. As regards the children or heirs, the infamy came to them as an inheritance which they could not avoid. (Vid. Hesæus, p. 497.) But when we read of the property of a man being included in the atimia, it can only mean that it shared the lawless character of its owner, that is, it did not enjoy the protection of the law, and could not be mortgaged. The property of an atimios for a positive crime, such as those mentioned below, was probably never confiscated, but only in the case of a public debtor, as we shall see hereafter; and when Andocides uses the expression ἄτυμοι ἢμιθοι, ἢ ἀθρίσκουσιν ἄτυμοι, the contrary was what he had in view when he only has ἀκωτικαῖοι. On the whole, it appears to have been foreign to Athenian notions of justice to confiscate the property of a person who had incurred personal atimia by some illegal act.  

The crimes for which total and perpetual atimia was inflicted on a person were as follow: The giving and accepting of bribes, the embezzlement of public money, manifest proofs of cowardice in the defence of his country, false witness, false accusation, and bad conduct towards parents. Moreover, if a person, either by deed or by word, injured or insulted a magistrate while he was performing the duties of his office; if, as a judge, he had been guilty of partiality; if he squandered away his paternal inheritance, or was guilty of prostitution. We have above called this atimia perpetual; for if a person had once incurred it, he could never hope to be lawfully released from it. A law, mentioned by Demosthenes, ordained that the releasing of any kind of atimios should never be proposed in the public assembly, unless an assembly consisting of at least 6000 citizens had previously, in secret deliberation, agreed that such might be done. And even then the matter could only be discussed in so far as the senate and people thought it was only in times of war that the Republic was threatened by great danger that an atimios might hope to recover his lost rights, and in such circumstances the atimios were sometimes restored en masse to their former rights.  

A second kind of atimia, which, though in its exten- tant a total one, lasted only until the person subject to it fulfilled those duties for the neglect of which he had been inflicted, was not so much a punishment for any particular crime as a means of compelling a man to submit to the laws. This was the atimia of public debtors. Any citizen of Athens who owed money to the public treasury, whether his debt

INFAMY. INFANS.

A child from a free to which he had been condemned, or from a part he had taken in any branch of the administration, or from his having pledged himself to the state for another person, was in a state of total atimia if he refused to pay or could not pay the fine which would have brought his lifetime not to be included in his atimia; they remained εξετάζοντο. If he persevered in his refusal to pay beyond the time of the ninth pyrathy, his debt was doubled, and his property was taken and sold. If the sum obtained by the sale was sufficient to pay the debt, the atimia appears to have ceased; but if not, the atimia not only continued to the death of the defaulter, but his children were also liable, and lasted until the debt was paid off. (Compare Heres, p. 496.) This atimia for public debt was sometimes accompanied by imprisonment, as in the case of Alcibiades and Cimon; but whether, in such a case, on the death of the prisoner, his children were likewise imprisoned, is uncertain. If a personal living in atimia for public debt petitioned to be released from his debt or his atimia, he became subject to εκτιμάζετο; and if another person made the attempt for him, he thereby forfeited his own property: if the procrods even ventured to put the question to the vote, he himself became atimias. The only, but almost impracticable, mode of obtaining release was that mentioned above in connexion with the mode of acquiring an atimia. A third and only partial kind of atimia deprived the person on whom it was inflicted only of a portion of his rights as a citizen. It was called the δύναμις κατά πρόσωποι, because it was specified in every single case which particular right was forfeited by the atimia. The following cases are expressly mentioned: If a man came forward as a public accuser, and afterward either dropped the charge or did not obtain a fifth of the votes in favour of his accusation, he was not only liable to a fine of 1000 drachmae, but was subjected to an atimia which deprived him of the right, in future, to appear as an accuser in a case of the same nature as that in which he had been defeated which he had given up. If his accusation had been a γραφή ὑπεραίνον, he also lost the right of visiting particular temples. Some cases are also mentioned in which an accuser, though he did not obtain a fifth of the votes, was not subjected to any punishment whatever. Such was the case in a cause brought by the archon against parents, orphans, or heiresses. In other cases the accuser was merely subject to the fine of 1000 drachmae, without incurring any degree of atimia. But the law does not appear to have been strictly observed. Andocides mentions some other kinds of partial atimia, but they seem to have had only a temporary application at the end of the Peloponnesian war; and the passage is so obscure or corrupt, that nothing can be inferred from it with any certainty. Partial atimia, when once inflicted, lasted during the whole of a man's life.

The children of a man who had been put to death by the law were also atimias (compare Heres, p. 407). But the nature or duration of this atimia is unknown.

If a person, under whatever kind of atimia he was labouring, continued to exercise any of the rights which he had forfeited, he might immediately be subjected to θάνατον ὁπλικόν εἰς ἔπειξιν; and if his transgression was proved, he might, without any further proceedings, be punished immediately.

The offences which were punished at Sparta with atimia are not so well known; and in many cases it does not appear to be a deliberate act, punished by the law, but to have depended entirely upon public opinion, whether a person was to be considered and treated as an atimos or not. In general, it appears that every one who refused to live according to the national institutions lost the rights of a full citizen (ῥηγόντις). It was, however, a positive law, that whoever did not give or could not give his consent to the distribution of public property, and lose his rights as a citizen.

The highest degree of infamy fell upon the coward (ῥήγα) who either deserted from the field of battle, or returned home without the rest of the army, as Aristodemus did after the battle of Thermopylae; though in this case the infamy itself, as well as its humiliating consequences, were manifest to all mankind. But he who was condemned to pay a public debt and continued to pay it, was considered equivalent to the civil death of an Athenian atimos, from which he was still actually to some extent, as a citizen, though always in a manner which made his infamy manifest to every one who saw him. (Leyvold, De Infamia, 2 ed. Attoch, 1836. — Wachsmuth, De Infamia, 101, &c. — Meier, De Infamia Diamat., p. 101, &c. — Schömann, De Comit. Ath., p. 67, &c. — Henneman, Poli. Ant. of Greece, § 124 — Meier und Schömann, Att. Proc., p. 563. On the Spartan atimia in particular, see Wachsmuth, i., 1, 368, &c. — Müller, Dor., iii., 10, § 3.)

INFANS, INF AN'TIA

In the Roman law there were several distinctions of age which were made with reference to the capacity for doing legal acts: 1. The first period was from birth to the end of the seventh year, during which time persons were called infantes, or qui fari non possunt. 2. The second period was from the end of seven years to the end of fourteen or twelve years, according as the person was a male or a female, during which persons were defined as those qui fari possunt. The persons included in these first two classes were imputers. 3. The third period was from the end of the twelfth or fourteenth to the end of the twentieth year, during which period persons were adolescents, adult. The persons included in these three classes were minors and, at the close of the second class, were often for bribery's sake, called minors.

10 x 10
The commencence of pubertas was the commencement of full capacity to do legal acts. Before the commencence of pubertas, a person, according to the old civil law, could do no legal act without the auctoritas of another. Such was made for those impubes who had property of their own; but it could have no application to impubes who were in the power of a father. Now the age of pubertas was fixed as above mentioned, on the supposition that persons were then competent to understand the nature of their acts, and the age of twelve or fourteen was only fixed because it was necessary to fix some age below which might apply to all cases, but it was evident in many cases when a person bordered on the age of puberty (pubertati proximus), and had not yet attained it, he might have sufficient understanding to do many legal acts. Accordingly, a person who was proximus pubertati was in course of time considered competent to do certain legal acts without the auctoritas of tutor; but, to secure him against fraud or mistake, he could only do such acts as were for his own advantage. This relaxation of the old law was beneficial both to the impubes and to others; but, owing to being confined to such narrow limits of time, it was of little practical use, and, accordingly, it was extended as a positive rule to a longer period below the age of puberty, but still with the same limitation. The impubes could do no act to his prejudice without the auctoritas of a tutor. It was, however, necessary to fix a limit here also, and, accordingly, it was determined that such limited capacity to do legal acts should commence with the termination of infantia, which, legally defined, is that period after which a person, either alone or with a tutor, is capable of doing legal acts. In properly meaning qui fari non potest; and he of whom could be predicated fari potest, was not infant, and was capable of doing certain legal acts. The phrase qui fari potest is itself ambiguous; but the Romans, in a legal sense, did not limit it to the mere capacity of uttering words, which a child of two or three years generally possesses, but they understood by it the degree of intellectual development; and, accordingly, the expression qui fari potest expressed not only that degree of intellectual development which is shown by the use of intelligible speech, but also a capacity for legal acts in which speech was required. Thus the period of infantia was extended beyond that which the strict etymological meaning of the word signifies, and its termination was fixed by a positive rule at the end of the seventh year, as appears by numerous passages.  

The expressions proximus pubertati, and proximus infantiae or infanti, are used by the Roman jurists to signify respectively one who is near attaining puberty, and one who has just passed the limit of infantia. (Vid. Impubes.)

INFÆRÆ. (Vid. Fœrus, p. 462.)

INFÆLUA, a flock of white and red wool, which was slightly twisted, drawn into the form of a wreath or fillet, and used by the Romans for ornament on festive and solemn occasions. In sacrificing it was tied with a white band (vid. Vírta) to the head of the victim, and also of the priest, more especially in the worship of Apollo and Diana. The "corta infælum" and "visor" worn by the Roman envoys (sacramentum), which seems analogous to that of the lock of wool worn by the flamines and salti. (Vid. Arx.) At Roman marriages, the bride, who carried wool upon a distaff in the procession (vid. Festus, p. 465), fixed it as an infæla upon the door-case of her future husband on entering the house.

INGENIÆ, INGENITAS. According to Gaius, ingenii are those free men who are born free. Children (liberinos) were not ingenii, though the sons of libertinæ were ingenii; nor could a libertinæ by adoption become ingenii. If a female slave (anquila) was pregnant, and was manumitted before she gave birth to a child, such child was born free, and therefore was ingenii. In other cases, also, the law favoured the claim of free birth, and, consequently, of ingenitæ. If a man's ingenii was a matter in dispute, there was a judicium ingenitús. 

The words ingenii and libertinæ are often op posed to one another; and the title of freeman (liber), which would comprehend libertinæ, is sometimes limited by the addition of ingenii (liber et ingenii). According to Cincius, in his work on Comitia, quoted by Festus, those who, in his time, were ingenii and libertinæ were called ingenii libertini, which is interpreted by Gotellius to mean that gen tiles were originally called ingenii also: a manifest misunderstanding of the passage. If this passage has any certain meaning, it is this: originally the name ingenii did not exist, but the word patricius was sufficient to express a Roman citizen by birth. This remark, then, refers to a time when there were no Roman citizens except patricii, and the definition of ingenii, if it had then been in use, would have been a sufficient definition of a patrician. But the word ingenii was introduced, in the sense here stated, at a later time, and when it was wanted for the purpose of indicating a citizen by birth, merely as such. Thus, in the speech of Apulius Claudius Crassus, he contrasts with persons of pat rician or plebeian birth, and libertinæ ingenii or ingenii ortus. Further, the definition of gentilis by Scævola (vid. Gnas, p. 468) shows that a man might be ingenii and yet not gentilis, for he might be the son of a freedman; and this is consistent with Livy. If Cincius meant his proposition to be as comprehensive as the terms will allow us to take it, the proposition is this: All (now) ingenii comprehend all (then) libertini; which is untrue.

Under the Empire, ingenitæ, or the juræ ingenitatis, might be acquired by the imperial favour; that is, a person not ingenii by birth was made so by the sovereign power. A freedman who had obtained the jus annulorum aucterus was considered ingenii; but this did not interfere with the parental rights. By the natalius restitutio, the princeps gave to a fatherless the character of ingenii; a form of proceeding which involved the theory of the original freedom of all mankind, for the libertinæ was restored, not to the state in which he had been born, but to his supposed original state of freedom. In this case the patron lost his patrocinium.
INJURIA.

natural rights by a necessary consequence, if the fiction were to have its full effect. It seems that questions as to a man's ingenuitas were common at Rome, which is not surprising when we consider that patrimonial rights were involved in them.1

INSIGNIS. An ornamental plant, the same with the bow-window or dape lustry, which see.2

INJURIA. Injury was done by striking or beating a man either with the hand or with anything; by abusive words (contraiectum); by the proscripitio honorum, when the claimant knew that the alleged debtor was not really indebted to him, for the hono-

rnum proscripitio was accompanied with infamia to the debtor.3

There were three kinds of injuries; by so liciting a masterfamilias or a pretexactus (vid. Insru-

sae), and by various other acts. A man might sustain injury either in his own person, or in the person of those who were in his power or in manu. No injury could be done to a slave, but certain acts done to a slave were an injury to his master, when the acts were such as appeared from their nature to be insulting to the master; as, for instance, if a man should fling another man's slave, the master had a remedy against the wrong-doer, which was given him by the pretor's formula. But in many other cases of a slave being maltreated, there was no regular formula by which the master could have a remedy, and it was not easy to obtain one from the law for it.

The Twelve Tables had various provisions on the subject of injury. Libellous songs or verses were followed by capital punishment, that is, death, as it appears.4 In the case of a limb being mutilated, the punishment was talio.5 In the case of a broken bone, the penalty was 300 asses if the injury was done to a free man, and 130 if it was done to a slave. In other cases the Tables fixed the penalty at 25 asses.6

These penalties, which were considered sufficient at the time when they were fixed, were afterward considered to be insufficient; and the injured person was allowed by the pretor to claim such damages as he thought that he was entitled to, and the judex might give the full amount or less. But in the case of a very serious injury (atrox injuria), when the pretor required security for the defendant's appearance to be given in a particular sum, it was usual to claim such sum as the damages in the plaintiff's declaration; and though the judex was not bound to follow the damages which the plaintiff had allowed to himself, he were seldom gave less. An injury had the character of atrox, either from the act itself, or from the place where it was done, as, for instance, a theatre or forum, or from the status of the person injured, as if he were a magistratus, or if he were a senator and the wrong-doer were a person of low condition.

A lex Cornelia specially provided for cases of palesatio, verberatio, and formal entry into a man's house (domus). The jurors who commented on this lex defined the legal meaning of palesatio, verberatio, and domus.7

The actions for injury were gradually much extended, and the pretor would, according to the cir-

cumstances of the case (causa cognita), give a pres-

son INJURIA/'RUM ACTIO.7

INo's, (1620), festivals celebrated in several parts of Greece, in honour of the ancient heroine Io. At Megara she was honored with an annual sacrifice, because the Megarians believed that her body had been cast by the waves upon their coast, and that it had been found and buried there by the followers of Apollo. Next year Io was celebrated at Epidaurus Limera, in Lacedaemon. In the neighbourhood of this town there was a small but very deep lake, called the water of Io, and at the festival of the heroine the people threw barley-cakes into the water. When the cakes sank, it was considered a propitious sign, but when they swam on the surface it was an evil sign. An annual festival, with contests and sacrifices, was instituted in honor of Io, and was also held on the Corinthian Isthmus, and was said to have been instituted by King Sisyphus.

INO'FICIO'SUM TESTAMENTUM. (vid Testamentum.)

INQUI'TUS. (vid. Banishment, Roman, p. 137.)

INSA'NIA, INSA'NUS. (vid. Curator.)

*INSECTA. (vid. Entomk.)

INSIGNI (γεμελιον, βιταντιον, παρογνω-

rov), a Badge, an Ensign, a mark of distinction. Thus the Bulla worn by a Roman boy was one of the insignia of his rank.8 Five classes of insignia more peculiar to the Roman were:

I. Those belonging to officers of state or civil functionaries of all description, such as the EAGLES: carried before the Consul at Rome, the latrinccho and shoes worn by senators (vid. Calders, p. 100; Clavus, p. 264), the cornucopia and the sword bestowed by the emperor upon the prefect of the praetorium. The Roman EAGLES were distinguished by the 'equus publicus,' the golden ring, or the augustus clavus, and the seat provided for them in the theatre and the circus.9 The insignia of the kings of Rome, viz., the trabea, the toga praetexta, the crown of gold, the ivory sceptre, the scilla curu-

lus, and the twelve lictors with fasces, all of which, with the Roman EAGLES, were transferred to subsequent denominations of magistrates, and were copied from the usages of the Tuscan and other nations of early antiquity.10

II. Badges worn by soldiers. The centurions in the Roman army were known by the crests of their helmets (vid. Gaules), and the common men by their shields, each cohort having them painted in a man-

ner peculiar to its designation. Among the Greeks, the devices sculptured or painted upon shields (see woodcut, p. 84), both for the sake of ornament and as badges of distinction, employed the fancy of poets and of artists of every description from the earliest times. Thus the seven heroes who fought against Thebes, all except Amphiaraus, had painted among their more conspicuous and most mar-

tially described, however, by different authors.12 ALCIBIADES, agreeably to his general character, wore a shield richly decorated with ivory and gold, and

1. (Gins, tit. 220-225.—Her., Sat., 1., 80.—Dig., 47, tit. 10.—Cod. Theod., ix. 34.—Cod. ex. 36.—Paulus, Sent. Recept., v., 4.—Paul., 45, § 3.—Bals., 35, § 4.)

3. (Gins, tit. 220-225.—Her., Sat., 1., 80.—Dig., 47, tit. 10.—Cod. Theod., ix. 34.—Cod. ex. 36.—Paulus, Sent. Recept., v., 4.—Paul., 45, § 3.—Bals., 35, § 4.)
exhibiting a representation of Cupid brandishing a thunderbolt. The first use of these emblems on shields is attributed to Scopas and Carius, and the fictitious employment of them to deceive and mislead an enemy was among the stratagems of war.

III. Family badges. Among the indignities practised by the Emperor Caligula, it is related that he abolished the ancient insignia of the noblest families, viz., the torques, the Cincinnati, and the cognomen "Magnus." 9

IV. Signs placed on the front of buildings. A figure of Mercury was the common sign of a Gymnasium, but Cicero had a statue of Minerva to fulfil the same purpose. 10 Cities had their emblems as well as separate edifices; and the officer of a city sometimes affixed the emblem to public documents, as we do the seal of a municipal corporation.

V. The figure-heads of ships. The insignia of a ship was an image placed on the prow, and giving its name to the vessel. Thus the ship figured in p. 58 would probably be called the "Triton." (Compare woodcut, p. 480.) Paul sailed from Melite to Puteoli in the Dioscuri, a vessel which traded between that city and Alexandria. 11 Enschöde has drawn out a list of one hundred names of ships which occur either in classical authors or in ancient inscriptions. 12 The names were those of gods and heroes; another class which the name of Minerva, on the helmet of Minerva, painted on the prow of the ship which conveyed Ovid to Pontus (a picta casside nomen habebat); of virtues and affections, as Hope, Concord, Victory; of countries, cities, and rivers, as the Po, the Mincius, 13 the Delia, the Syraucse, the Alexander; 14 and of men, women, and animals, as the boar's head, which distinguished the vessels of Samos. 14 (Woodcut, p. 429.) A popular version of this image was "Bovis cervis," the tiger, 15 the bull (περιγυμναμα ταυρος). 16 Plutarch mentions a Lycian vessel with the sign of the lion on its prow, and that of the serpent on its poop. 17 After an engagement at sea, the insignia of a conquered vessel, as well as its aplature, was often taken from it, and suspended in some temple as an offering to the god. 18 Figure-heads were probably used from the first origin of navigation. On the war-galleys of the Phœnicians, who called on them, as Herodotus says, 19 πασακοι, i. e., "carved images," they had sometimes a very grotesque appearance.

Besides the badge which distinguished each individual ship, and which was either an engraved and painted wooden image, forming part of the prow, or a figure often accompanied by a name and painted on both the bows of the vessel, other insignia, which could be elevated or lowered at pleasure, were requisite in naval engagements. These were probably flags or standards, fixed to the aplature or to the top of the mast, and serving to mark all those vessels which belonged to the same fleet or to the same nation. Such were "the Attic" and "the Persic insignia." 20

PNEITA (πνεύτωρος), a Flounce, a Fillet. The Roman matrons sometimes were a broad fillet, with ample folds, sewed to the bottom of the tunic, and reaching to the instep. The use of it indicated a superior regard to decency and decorum of man.

nors. 1 It must have resembled a modern flounce. By the addition of gold and jewelry, it took the form of the more splendid and expensive Cyclas.

When this term denoted a fillet, which was used by itself, as in the decoration of a Thyrsus, it was equivalent to Vita or Fantasia. (Vid. Torex.)

INSTITUT. (Vid. Institutor Actio.) INSTITUTIO ACTIO. This actio or formula was allowed against a man who had appointed either his heir or a person to whom he or his wife's, or his free men, or any other business for him. The contracts with such a manager, in respect of the taberna or other business, were considered to be contracts with the principal. The formula was called institoria, because he who was appointed to manage a taberna was called an institor. And the institor, it is said, was so called, "quod negato gerendo mactat insti- tori." If several persons appointed an institor, any one of them might be sued for the whole amount for which the persons were liable on the contract of their institor; and if one paid the demand, he had his redress over against the others by a societas judiciwm or common dividend. A great deal of business was done through the medium of institores, and the Romans thus carried on various lucrative occupations in the name of the man by whom they could not or would not have carried on personally. Institores are called with naute by Horace, and with the magistrate navis.

INSTITU'IT'IO. It was the object of Justinian to comprise in his Code of Digest or Pandects a complete body of law. But these works were not adapted to the purpose of elementary instruction, and the writings in the ancient jurisprudence of Rome were no longer known to have any authority, except so far as they had been incorporated in the Digest. It was, therefore, necessary to prepare an elementary treatise, for which purpose Justinian appointed a commission, consisting of Tribonianus, Theophilus, and Dorotheus. The commission was instructed to compose an institutional work which should contain the elements of the law (legum canisbula), and should not be encumbered with useless matter. Accordingly, they produced a treatise under the title of Institutiones, or Elementa, which was based on former elementary works of the same name and of a similar character, but chiefly on the Commentaries of Calus or Gaius, his Res Quodvutam, and various other commentaries. The Institutiones were published with the imperial sanction, at the close of the 5th century, and immediately after the Digest.

The Institutiones consist of four books, which are divided into titles. The first book treats chiefly of matters relating to personal status; the second treats chiefly of property and its incidents, and of testaments, legacies, and fideicommissa; the third treats chiefly of succeusions to the property of intestates, and matter incidental thereto, and on oblitration. The fourth book describes the chief obligations founded on delict, actions and their incidents, interdicts, and of the judicium public. The judicium publica is not treated of by Gaius in his Commentaries. Heineccius, in his Antiquissimum Romanarum Jurisprudentiam illustrantun, Syntagma, has followed the order of the Institutiones.

Theophilus, generally considered to be the author of the Institutiones, composed several other works. Two of these, written in Greek, were a Greek paraphrase upon them, which is still extant, and is occasionally useful. The best edition of the paraphrase of Theophilus is that of W. O. Reitz, Haag, 1751, 2 vols. 4to. There are
numerous editions of the Latin text of the Institutiones. The edition of Scherer is that of Mainz, 1499, fol., that of Kloze and Becher, Berlin, 1829, 4to, contains both the Institutiones and the Commentarii of Gaius; the most recent edition is that of Schrader, Berlin, 1832 and 1836.

There were various institutional works written by the Roman jurists. There is still fragment remains of the Institutiones of Ulpian, which appear to have consisted of two books; one of which was published by Gaeckel in 1817, and the Institutiones of Gaius were formerly only known from a few extracts in the Digest, from the Epitome contained in the Breviarium, from the Collatio, and a few quotations in the Commentary of Boethius on the Topics of Cicero, and in Friscian.

The MS. of Gaius was discovered in the library of the Chapter of Verona, by Niebuhr, in 1818. It was first copied, by Geschein, and published Holweg, and an edition was published by Geschein in 1820. The deciphering of the MS. was a work of great labour, as it is a palimpsest, the writing on which has been washed out, and in some places erased with a knife, in order to adapt the parchment for the purposes of the transcriber. The parchmen was transferred, and the parts of it not used were scribed upon it some works of Jerome, chiefly his epistles. The old writing was so obscure that it could only be seen by applying to it an infusion of gallnuts. A fresh examination of the MS. was made by Blume, but with little additional profit, owing to the condition of the manuscript. A second edition of Gaius was published by Geschein in 1839, with valuable notes, and an Index Siguram added in the MS. The preface to the first edition contains the complete demonstration that the MS. of Verona is the genuine Commentaries of Gaius, though the MS. itself has no title.

The arrangement of the matter in the Institutiones of Justinian, which were founded on them. The first book treats of the status of persons; the second treats of the sucessions of ab intestato, and obligations founded on contract and delict; the fourth treat of the delict, and matters connected therewith.

There has been a great difference of opinion as to the age of Gaius, but it appears from the Institutiones that he wrote that work under Antoninus Pius and M. Aurelius.

Many passages in the Fragments of Ulpian are the same as passages in Gaius, which may be explained by assuming that both the fragments are from such parts from the same original. Though the Institutiones of Justinian were mainly based on those of Gaius, it is clear that the compilers of the Institutiones of Justinian often followed some other work; and, in some instances, the Institutiones of Justinian are more clear and explicit than those of Gaius, as, for example, the account of Gaius and the Institutiones of Justinian.\* Gaius belonged to the school of the Sabini. (Vid. Jurisconsulti.) The jurists whom he cites in the Institutiones are Cassius, Fufidius, Iulianus, Laboe, Maximus, Q. Marcius, Offius, Poculus, Sabinus, Servius, Servius Sulpicius, Sex. Tubero, and others.

INSTITUTIO ACTIO. (Vid. Intercessio.) INPSULA. (Vid. House, Roman, p. 519.) INTE'NTIO. (Vid. Actio, p. 20.) INTEGRUM RESTITUTIO, IN. (Vid. Restitu'tio.) INTERCESSIO. The verb intercedere is variously applied to express the act of him who in any way undertakes an obligation for another. Sponsors, fidepromissores, and fidejussores, may be said to intercede. When a fidejussor is promised, two persons were fidejussores were conspensors.\* Sponsors and fidepromissores were nearly in the same condition; fidejussores were in a somewhat different legal relation.

Sponsors and fidepromissores could only become parties to an obligation volbourn, though in some cases they might be bound, when their principal (not a promissor) fidejussor was in the case of a fidejussor, it was, idem fidejussor. In the case of a fidejussor, the interro- gation was, Idem dare spondeis? In the case of a fidepromissor, it was, Idem fidepromissus? Sponsors and fidepromissores have been mortis causa of the principal, and could not remain in the title of a fidejussor, who promised without the ntercessor of his tutor, or of a man who promised something after his death.

A fidejussor might become a party to an obligation, whether contracted re, versibilia, consensa. In the case of a sponsor, the interrogatio was, Idem dare spondeis? In the case of a fidepromissor, it was, Idem dare spondeis? Sponsors and fidepromissores were conspensors.\* The object of having a sponsor, fidepromissor, or fidejussor, was greater security to the stipulator. On the other hand, the stipulator had an adstitulator only when the promise was to pay something after the stipulator's death; for there was no stipulator, the stipulatio was inutile or void.\* The sponsor or fidepromissor was the proper party to sue after the stipulator's death, and he could be compelled by a mandati judicium to pay to the hores whatever he recovered.

The hores of a sponsor and fidepromissor was not bound, unless the fidepromissor were a peregrinus, whose state had a different law on the matter; but the hores of the fidejussor was bound. If, for example, the Fufia, a sponsor and fidepromissor were free from all liability after two years, which appears to mean two years after the obligation had become a present demand. All of them who were alive at the time when the money became due could be sued, but each only for his share. Fidejussores were not mere persons who were released from all length of time, since each was liable for the whole sum; but by a re- script (epistola) of Hadrian, the creditor was required to sue the solvent fidejussores separately, each according to his proportion.

A lex Apuleia, which was passed before the lex Fufia, gave one of several sponsors or fidepromissores the power of bringing an action against the rest for contribution. Before the passing of this lex Apuleia, any one sponsor or fidepromissor might be sued for the whole amount; but this lex was obviously rendered useless by the subsequent lex Fufia, at least in Italy, to which country alone the lex Fufia applied, while the lex Apuleia extended to places out of Italy.

A fidejussor, who had been compelled to pay the whole amount, had no redress if his principal was insolvent; though, as already observed, he could, by the rescript of Hadrian, compel the creditor to limit his demand against him to his share.

A creditor was obliged formally to declare his ac- ceptance of the sponsors or fidepromissores who were bound to him in the obligation, and the object as to which they were security: if he did not comply with this legal requisition, the sponsors and fidepromissores might, within thirty days (it is not said what thirty days, but probably thirty days from the time of the sureties being offered), demand a praemunium (praemunium postulare), and if they proved that the creditor had not complied with the requisitions of the law, they were released.

A lex Cornelia limited the amount for which any person could be a security for the same person to the same person within the same year, but with some exceptions, one of which was a security "do- tis nomine." No person could be bound in a greater amount than his principal, but he might be bound

1. (Cic. ed Att., xii., 17, 5. (Gaie, iii., 106, 117.)
INTERDICTION.

In less, and every surety could recover on a mandatum judicium from his principal whatever he had been compelled to pay on his account. By a lex Publilia, special relief was given in duplium, which was called an actio aequi.

There is a passage in the Epitome of Gaius in the Breviarium, which is not taken from Gaius; it is to this effect: The creditor may sue either the debtor or his fidejussor; but after he has chosen to sue one of them, he cannot sue the other. — Cicero appears to allude to the same doctrine in a passage which is somewhat obscure, and is variously explained. Thus: "The actio aequi is to occur frequently in Cicero's letters, and in one case he was called upon in respect of a sponsio alleged to have been given him twenty-five years before. — Cicero does not raise any difficulty as to the time that had elapsed, from which it must be inferred either that the obligation had only recently become a demand, or that the rule about the two years did not exist in his time. Cicero uses the expression "appellare" to express calling on a surety to pay.

Women generally were incapacitated from doing many acts on account of the weakness of the sex. It was a general rule that any person might "intercedere," who was competent to contract and to dispose of his property; but minors, or women had only a limited capacity in respect of the actio, and therefore the same distinction was made. In the early part of the reign of Augustus and in that of Claudius, it was declared by the edict that women should not "intercedere" for their husbands. Subsequently, in the consilium of M. Silanus and Velleius Tutor (A.D. 10), the senatus consultum Velleianum was passed, which absolutely prohibited all intercessio by women; and the Novella, 134, c. 8, which is generally called the law of all intercessio, is a law of a husband for his wife. A woman who was sued in respect of her intercessio or her heres, might plead the senatus consultum, and she might recover anything that she had paid in respect of her intercessio. The senatus consultum, though it made null the intercessio of a woman, protected the creditor so far as to restore to him a former right of action against his debtor and fidejussor: this action was called restitutoria or rescissoria. In the case of a new contract, to which the woman was a party, the intercessio was null by the senatus consultum, and the creditor had the same action against the person for whom the woman "intercessit" as he would have had against the woman: this action, inasmuch as the contract had no reference to a former right, but to a right arising out of the contract, was institutio. In certain cases, a woman was permitted to renounce the benefit of the senatus consultum.

INTERCESSIO was the interference of a magistratus to whom an appeal (vid. APPELLATIO) was made. The object of the intercessio was to put a stop to proceedings, on the ground of informality or other grounds, and to set aside the right of the preter intercedere who was of equal rank with, or of the same rank superior to the magistratus from or against whom the appellatio was called. Cases occur in which one of the preterors interposed (intercessit) against the proceedings of his colleague. The intercessio is most frequently spoken of with reference to the tribunes, who originally had not jurisdiction, but used the intercessio for the purpose of preventing wrong which was offered to a person in their presence. The intercessio of the tribunes of the plebs was auxiliary.

and it might be exercised either in juro or in judicio. The tribune qui intercessit could prevent a judicial sentence. That there could be an intercessio after the litis contestatio appears from Cicero. The tribunes could also use the intercessio to prevent execution of a judicial sentence. T. Graecus interfered (intercessit) against the praetor Terentius, who was going to order execution in the case of L. Scipio, who was condemned for peculation; and he prevented Scipio being sent to prison, but he was not interfered with by the praetor, who had on his property. A single tribe could effect this, and against the opinion of his colleagues, which was the matter in the case of L. Scipio. (Vid. TRIBUNI.

INTERCISI DIES. (Vid. DIES, p. 363.)

INTERDICTIO AQUI ET IGNIS. (Vid. VANISHMENT, ROMAN.)

INTERDICTUM. In certain cases (cætus et cabala), the praetor or proconsul, in the first instance (principaliiter), exercises his authority for the termination of disputes. This he chiefly does when the dispute is about possession or quasi-possession; and the exercise of his authority consists in ordering something to be done, or forbidding something to be done. The formulae and the terms, which he uses on such occasions, are called, either interdicta or decreta. They are called interdicta when he orders something to be done, as when he orders something to be produced (exhiberi) or to be restored; they are called interdicta when he forbids something to be done, as when he orders that force shall not be used against a person who is in possession rightfully (sine vitio), or that nothing shall be done on a piece of sacred ground. Accordingly, all interdicta are either restitutoria, or exhibitoria, or prohibitoria.

This passage contains the essential distinction between an actio and an interdictum, so far as the praetor or proconsul is concerned. In the case of an actio, the praetor pronounces no order or decree, but he gives a judex, whose business it is to investigate the matter in dispute, and to pronounce a sentence consistently with the formula, which is his authority for acting. In the case of an actio, therefore, the praetor neither orders nor forbids anything to be done, but he says judicium dabo. In the case of an interdictum, the praetor makes an order that something shall be done or shall not be done, and his words are accordingly words of command: restitue, exhibe, vir mi et. This immediate interposition of the praetor is appropriately expressed by the word principaliiter, the full effect of which is more easily seen by its juxtaposition with other words of the passage, than by any attempt to find an equivalent English expression.

Savigny observes that it may be objected to this exposition, that in one of the most important interdicts, that of De VI, the formula is judicium dabo. But, as he observes, the old genuine formula was restitue, and the "judicium dabo" must have been added, when the "interdicta" were blended together, and at a time when the distinctions between the old formula had become a matter of indifference.

The mode of proceeding as to the interdict was as follows: The party aggrieved stated his case to the praetor, which was the foundation of his demand of an interdict, and was therefore analogous to the postulation actions. If the praetor saw sufficient reason to grant the interdict, which was often nothing more than the words of the edict addressed to the litigant parties; and in doing so, he...
The complainant either obtained the interdict or he did not, which would depend upon the case he made out before the praetor. If he failed, of course the litigation was at an end; and if he obtained the interdict it would continue in force, though the praetor's order did not dispose of the matter in this case also was at an end. The defendant simply did not obey the terms of the interdict, it would be necessary for the complainant again to apply to the praetor, in order that this fact might be ascertained, and that the plaintiff might give full satisfaction. If the defendant was dissatisfied with the order, he might also apply to the praetor for an investigation into the facts of the case: his allegation might be that there was no ground for the interdict. He might also apply to the praetor on the ground that he had satisfied the terms of the interdict, though the plaintiff was not satisfied, or on the ground that he was unable to do more than he did. The latter cases and the cases where the praetor's order did not terminate the dispute, he directed an inquiry by certain formulae, which were the instruction of the judex, recuperatores, or arbiter. The inquiry would be, Whether anything had been done contrary to the praetor's edict; or Whether that had been done which he had ordered to be done; or whether the defendant had satisfied the terms of a prohibitory interdict, and the latter in the case of an exhibitory or restitutory interdict. With regard to the expression just used, namely, "the praetor's edict," it must be observed that "edict" is the word used by Gaius, but that he means "interdict." He uses "edict" because the "interdict" would only be granted to a person as a weapon or a knight to the "edict" (certis ex causis), and thus an interdict was only an application of the "edict" to a particular case.

In the case of interdicta prohibitoria there was always a sponso; that is, the parties were required to deposit or give security for a sum of money, the loss of which was in the nature of a penalty (penalis). The praetor would order a bond to be given, thus: this sponso was probably required by the praetor. In the case of interdicta restitutoria and prohibitoria, the proceeding was sometimes per sponsoinem, and therefore before a judex or recuperatores, and sometimes, without any sponso, per formulam arbitriam, that is, before an arbiter. In the case of these two latter interdicts, it seems to have depended on the party who claimed the inquiry whether there should be a sponso or not: if such party made a sponso, that is, proffered to pay a sum of money if he did not make out his case, the opposite party was required to make one also. In the case of Cæcina a sponso had been made: Cicero says, addressing the recuperatores, "eponia facta est, sponso labore, de eponio vobis judicandum est." In fact, when the mater came before a judex or arbiter, the form of proceeding was similar to the ordinary judicium.

The chief division of interdicts has been stated. Another division of interdicts was into those for the purpose of acquiring possession, retaining possession, or recovering possession.

The interdictum adiacendae possessionis was given to him to whom the bonorum possession was granted to another, to give it up to such person, whether the person in possession of such property possessed it pro herede or pro possessor. The bonorum possession is a particular interdictum, which was not entitled to the interdictum, which was sometimes called possessionarium. It was also granted to him who bought goods at public auction, and in such case was called sectorium, the name "sectores" being applied to persons who bought property in such manner.

The interdictum salvianum was granted to the owner of land, and enabled him to take possession of the goods of the coloni, who had agreed that his goods should be a security for his rent.

This interdict was not strictly a possessorial interdict, as Savigny has shown. It did not, like the two other interdicts, presuppose a lawful possession, that is, a jus possessionis acquired by the fact of a rightful possession: the complainant neither alleged an actual possession nor a former possession.

The interdictum retinendae possessionis could only be granted to a person who had a rightful possession, and he was entitled to it in respect of injury sustained by being disturbed in his possession, in respect of anticipated disturbance in his possession, or (and), and a person to whom the property was given which the matter of possession was first to be inquired into. Its effect in the last case would be, as Gaius states, to determine which of two litigant parties should possess, and which should be the claimant. There were two interdicts of this class, named respectively uti possidetis and utrius, from the former inquiry would be made in the case of a prohibitory interdict, and the latter in the case of an exhibitory or restitutary interdict. With regard to the expression just used, namely, "the praetor's edict," it must be observed that "edict" is the word used by Gaius, but that he means "interdict." He uses "edict" because the "interdict" would only be granted to a person as a weapon or a knight to the "edict" (certis ex causis), and thus an interdict was only an application of the "edict" to a particular case.

and had been ejected by ' the defendant or his agents (familiia or procurationes). If the matter came before a judge, the defendant might allege that he had complied with the interdict, "restituisse," though he had not done so in fact; but this was the form of the spoliation, and the defendant, would succeed before the judge if he could show that he was not bound to restore the plaintiff's possession. But the plaintiff might put in an answer (exceptio) to the plaintiff's claim for restitution; he might show that the plaintiff's possession commenced either vi, clam, or precario with respect to the defendant; but this exceptio was not allowed in the case of vis armata. The defendant might also plead that a year had elapsed since the violence complained of, and this was generally a good plea for the interdict contained the words "in loco armato." But if the defendant was still in possession after the year, he could not make this plea, nor could he avail himself of it in a case of vis armata.

A clandestina possession is a possession in which the possessor takes a thing (which must, of course, be a movable thing) secretly (furtivus), and without the knowledge of the person whose adverse claim to the thing was entitled to be made. If after a year and a day it was a disturbance of a rightful possession, gave the rightful possessor a title to have the interdict de clandestina possessione for the recovery of his possession. All traces of this interdict are nearly lost; but its existence seems probable, and it must have had some resemblance to the interdictum de liberi. The exceptio clandestina possession was quite a different thing, inasmuch as a clandestina possession did not necessarily suppose the lawful possession of another party.

The interdictum de precaria possessione or de precario applied to a case of precarium. It is precarium when a man permits another to exercise ownership over his property, but retains the right of demanding the property back when he pleases. It is called precarium because the person who received such permission usually obtained it by request (prece), though request was not necessary to constitute precarium, for it might arise by tacit permission. The person who received the detention of the thing, obtained at the same time a legal possession, unless provision to the contrary was made by agreement. In either case the permission could not extend in time beyond the life of the person from which it originated, just as he was, as soon as restitution was refused. Restitution could be claimed by the interdictum de precario, precisely as in the case of vis; and the sole foundation of the right to this interdict was a vitiosa possesso, as just explained. The precarium was never viewed as a matter of contract. The interdictum de precario originated only, but it was subsequently extended to movable things. The obligation imposed by the edict was to restore the thing, but not its value, in case it was lost, unless dolus or lata culpa could be proved against the defendant. (Vid. Colpa.) But from the time that the demand is made against the defendant, he is in mora, and, as in the case of the other interdicts, he is given originally the thing, but it was subsequently extended to movable things. The obligation imposed by the edict was to restore the thing, but not its value, in case it was lost, unless dolus or lata culpa could be proved against the defendant. (Vid. Colpa.)

The origin of the precario is referred by Savigny to the relation subsisted between a patronus and his clients, to whom the patronus gave the use of a portion of the aeger publicus. If the client refused to restore the land upon demand the patronus was entitled to the interdictum de precario. As the relation between the patronus and the client was analogous to that between a parent and his child, it followed that there was no contract between, and the patronus's right to demand the land back was a necessary consequence of the relation between him and his clients. The process did not fall into disuse when the old aeger publicus ceased to exist, and in this respect it followed the doctrine of possessio generally. (Vid. Auraria Leges.) It was, in fact, extended and applied to other things, and, among them, to the case of pledge. (Vid. Plead.)

Gaines makes a third division of interdicta into simplicia and duplicia. Simplicia are those in which one person is the plaintif, (potior), and the other is the defendant (remus); all restitutoria and exhibition interdicta are of this kind. Prohibitoria interdicta are either simplicia or duplica: they are simplicia in such cases as those, when the prior forbids anything to be done in a locus sacer, in a flumen publicum, or on a ripa. They are duplica in the case of the interdictum ut possidetis. And as the latter, so called, says Gaines, because each of the litigant parties may be indifferently considered as actor or res, as appears from the terms of the interdict.

Interdicta seem to have been also called duplilia in respect of their being applicable both to the acquisition of a possession which had not been had before, and also to the recovery of a possession. An interdict of this class was granted in the case of a vindicatio, or action as to a piece of land against a possessor who did not defend his possession as, for instance, when he did not submit to a judicature, and give the proper sponsones or satisfactiones. A similar interdict was granted in the case of a vindicatio of an hereditas and a subsustracta. Proper security was always required from the person in possession, in the case of an in rem action, in order to secure the plaintiff against any loss or injury that the property might sustain while it was in the possession of the defendant. If the defendant refused to give such security, he lost the possession, which was transferred to the plaintiff (potitor).

INTEREST OF MONEY. Under this head it is proposed to give an account of the conditions upon which money was lent among the Greeks and Romans.

I. GREEK INTEREST. At Athens, Solon, among other reforms, abolished the law by which a creditor or was empowered to sell or enslave a debtor, and prohibited the lending of money upon a person's own body (ο μοιχόν άγονον σποδόνως δαιμονίωσιν). No other restriction, we are told, was introduced by him, and the rate of interest was left to the discretion of the lender (ον υποκάτων διέλειμον είναι σέλερον και δαιμονίωσιν). The only case in which the rate was prescribed by law was in the case of a man who made a loan of money or for not refunding the dowry he had received with her. Her trustees or guardians (οι κατάγωροι) could ensure this case proceed against him for the principal, with lawful interest at the rate of 18 per cent. (Vid. Ges., Drex.)

Any rate might be expressed or represented in

1. (Pestus, s. v. Patres.)—2. (iv., 156.)—3. (Gains, iv., 160.)
INTEREST OF MONEY.

One of the most important questions connected with the subject of usury is the determination of the rate of interest which can be lawfully exacted. The ancient writers on this subject have given various opinions on the subject, and the laws of different nations have been founded on their theories. The following extracts are from the works of some of the most eminent authorities on the subject.

(1.) By the number of oboli or drachms paid by the month for every mina: (2.) By the nature of the principal (τὸ ἐργαῖον or κεφαλῶν) paid as interest, either annually or for the whole period of the loan. According to the former method, which was generally used when money was lent upon real security (τάξιος ἐγγύς or ἐγγύς), different rates were expressed as follows: 10 per cent. by the former; i.e. 5 oboli per month for every mina, or 80 oboli a year = 10 drachms = 1, of a mina. Similarly, 15 per cent. by the first month, 16 per cent. by the second month, and so on. (2.) Another method was generally adopted in cases of bottomry, when money was lent upon the ship's cargo or freight (ἐπὶ τὸ ναῦλον), or the ship itself, for a specified time, commonly that of the voyage. By this method the following rates were thus expressed: 10 per cent. by the first month, 12½ per cent. by the second month, 13½ per cent. by the third month, &c., 10 per cent. for the first year, 12 per cent. for the second year, &c., probably.

These nearly corresponding expressions are not to be considered as identical, however closely the rates indicated by them may approach each other in value; although, in the age of Justinian, as Salmasius observes, the tóκων εὑρόδους, &c., expressed, or the εὑρόδους, by the first part of the year, and εὑρόδος, by the second part of the year, respectively. So that, as Böckh remarks, the tóκων εὑρόδους is equal to the ἐπὶ πέντε δραχμῶν.

The tóκων εὑρόδους, nearly, &c., εὑρόδους, &c., εὑρόδος, &c., are expressed, or the εὑρόδος, by the first part of the year, and εὑρόδος, by the second part of the year, respectively.

The rates above explained frequently occur in the orators: the lowest in ordinary use at Athens when the tóκων εὑρόδους, or 10 per cent., the highest the tóκων εὑρόδος, or 33½ per cent. The latter, however, was chiefly confined to cases of bottomry, when money was lent against the cargo or freight of a ship, and the time of a ship's voyage was generally less than a year. Its near equivalent, the ἐπὶ τριάδος δραχμάς, or 36 per cent., was sometimes exacted by bankers at Athens. The ἐπὶ δραχμᾶς, or rate of 12 per cent., was common in the time of Demosthenes, but appears to have been thought low. The interest of 6½ per cent., or the ἐπὶ τριάδος δραχμάς, occurs in that orator, and even in the age of Lysias (B.C. 440) and Isaeus (B.C. 400), nine oboli for the mina, or 18 per cent., appears to have been a common rate.

Chains also speaks of money being borrowed on the same terms; so that, on the whole, we may conclude that the usual rates of interest at Athens about the time of Demosthenes varied from 12 to 18 per cent. The principal (ἕξιον, ὅσιος ἵππος, &c.,) as well as the interest, could only be recovered in case the ship met with no disaster in its voyage (ὑπεράντων τῶν ναυτῶν), and sometimes on the money received or due for passengers and freight (ἐπὶ τὸ ναῦλον). The principal (ἕξιον, ὅσιος ἵππος, &c.), as well as the interest, could only be recovered in case the ship met with no disaster in its voyage (ὑπεράντων τῶν ναυτῶν), and sometimes on the money received or due for passengers and freight (ἐπὶ τὸ ναῦλον). The principal (ἕξιον, ὅσιος ἵππος, &c.), as well as the interest, could only be recovered in case the ship met with no disaster in its voyage (ὑπεράντων τῶν ναυτῶν), and sometimes on the money received or due for passengers and freight (ἐπὶ τὸ ναῦλον).

The loan itself was either a δέωμα ἑρπαλόνου, i.e., for a voyage out, or it was a δέωμα Ἴμποροπολίων, i.e., for a voyage out and home. In the former case, the principal and interest were paid at the place of destination, either to the creditor himself or to the agent of the shipowner. In the latter case the payment was made on the return of the ship, and it was specially provided in

the agreement between the contracting parties, that she should sail to some specified places only. A deviation from the terms of the agreement, in this or other respects, was, according to a clause usually inserted in the agreement, punishable by a fine of twice the amount of the money lent. Moreover, if the goods which formed the original security were sold, fresh articles of the same value were to be shipped in their place. Sometimes, also, the trader (ὁ ἵππος) was himself the owner of the vessel (τὸ ναῦσκον), which in that case might serve as a security for the money borrowed.

The rate of interest would, of course, vary with the risks and duration of the voyage, and therefore we cannot expect to find that it was at all fixed. Xenophon speaks of the fifth and third parts of the capital lent as being commonly given in bottomry, referring, of course, to voyages out and home. The interest of an eighth, or 12½ per cent., mentioned by Demosthenes, was for money lent on a trireme, during a passage from Sestos to Athens, but upon condition that she should first go to Hierum to convoy vessels laden with corn; the principal and interest were to be paid at Athens on her arrival there.

The best illustration of the facts mentioned above is found in a ναυτικὴ συγγραφή, given in the speech of Demosthenes against Laocratus. It contains the following statement and condition:

Two thousand talents went to Phaelitans 3000 drachmas upon a cargo of 3000 casks of Mendean wine, on which the latter were not to owe anything else, or raise any additional loan (οἴκ' κτισιανανταία) for them to sail from Athens to Mende or Scione, where the wine was to be shipped, and thence to the Bosporus, with liberty, if they preferred it, to continue their voyage on the东 side of the Black Sea as far as the Borysthenes, and then to return to Athens; the rate of interest being fixed at 22½ drachmas in 1000, or 25 per cent. for the whole time of absence. If, however, they did not return to Hierum, a port in Bithynia close to the Thracian Bosporus, before the early rising of Arcturus, i.e., before the 20th of September or thereabout, when night fell, they would have had to pay a higher rate of 30 per cent., on account of the additional risk. The agreement further specified that there should be no change of vessel for the return cargo, and that, if it arrived safe at Athens, the loan was to be repaid within twenty days afterward, without any deductions except for loss by payments made to enemies, and for jettisons (ὑπερταυρίας ἐπιχείρησις) upon the voyage on the ΝΑΟΣ side of the Black Sea, and of 8 drachmai upon the voyage to the ΝΑΟΣ side of the Black Sea, and of 8 drachmai on the voyage to the latter house (οἱ σώματα); that, till the money was repaid, the goods pledged (τὰ ὑποκείμενα) should be under the control of the lenders, and be sold by them, if payment was not made within the appointed time; that if the sale of the goods did not realize the required amount, the lender might raise the remainder by mortgage (ὁ προγονής) upon the property of both or either of the traders, just as if they had been cast in a suit, and became ἐπιτρέμενοι, i.e., had not complied with a judgment given against them within the time appointed. Another clause in the agreement provides for the contingency of their entering the Pontus; in that case they were to remain in the Hellespont, at the end of July, for ten days after the early rising of the dog-star (ζευσσώ), discharge their cargoes (ἐπιβατῆσαι) in the same manner as the Athenians had no right of reprisals (ὅτι δὲν ἐμὸς δίκαιος ἡ ἅπασαι ἀποξήρως), (which might be executed unfairly, and would lead to retaliations), and then, on their return to Athens, they were to pay the lower rate of interest, or 25 per cent. Lastly, if the vessel were to be wrecked, the cargo was, if possible, to be assigned to the lenders, and the agreement was to be concluded on all points.

From the preceding investigation, it appears that the rate of interest among the ancient Greeks was higher than in modern Europe, and at Rome in the age of Cicero. This high rate does not appear to have been caused by any scarcity of money, for the rent of land and houses in Athens and its neighborhood was not at all proportional to it. The lease says that a house at Thrise was let for only 8 per cent. of its value, and some houses at Melito and Eleusis for a fraction more. We should, therefore, rather refer it to a low state of credit, occasioned by a variety of causes, such as the division of Greece into a number of petty states, and the constitution and regulation of the courts of law, which do not seem to have been at all favorable to money-lenders in enforcing their rights. Bekk assigns as an additional cause "the want of moral principles."

II. Roman Interest. The Latin word for interest, fensus or fenus, originally meant any increase, and was thence applied, like the Greek τροφός to denote the interest or increase of money. "Fensus," says Varro, "is the name of a foot and a quarter per centum pecuniae atque incrementum. The same root is found in secundus. Fensus was also used for the principal as well as the interest. Another term for interest was usura, generally found in the plural, and also, inundemium, on which Varro remarks, "a quo (pondera) usura quod in sorte accidit, inundemium appellatur."

Towards the close of the Republic, the interest of money became due on the first of every month: hence the phrases tristes or celeres calendar and calendarius, the latter meaning a debt-book or book of accounts. The rate of interest was expressed in the time of Cicero, and afterward, by means of the as and its divisions, according to the following table:

<table>
<thead>
<tr>
<th>Asses usurae, or one as per month</th>
<th>=15 per cent.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Deusces usurae</td>
<td>=11</td>
</tr>
<tr>
<td>Decies usurae</td>
<td>=10</td>
</tr>
<tr>
<td>Dodrantes</td>
<td>=9</td>
</tr>
<tr>
<td>Besses</td>
<td>=8</td>
</tr>
<tr>
<td>Septunes</td>
<td>=7</td>
</tr>
<tr>
<td>Semisses</td>
<td>=6</td>
</tr>
<tr>
<td>Quinunces</td>
<td>=5</td>
</tr>
<tr>
<td>Trientes</td>
<td>=4</td>
</tr>
<tr>
<td>Quadrantes</td>
<td>=3</td>
</tr>
<tr>
<td>Unciae</td>
<td>=1</td>
</tr>
</tbody>
</table>

Instead of the phrase asses usurae, a synonym was used, viz., centesimae usurae, inasmuch as at this rate of interest there was paid in a hundred months a sum equal to the whole house bimill centesimae =24 per cent., and quattuor centesimae =48 per cent. So, also, in the line of Horace, "Quinis hic capital mercedes exsequi," we must understand quinas centesimae, or 60 centesimae, or the amount taken from the capital. Niebuhr is of the opinion that the monthly rate of the centesimae was of foreign origin, and first adopted at Rome in the time of Sulla. The old yearly rate established by the Twelve Tables (B.C. 450) was the uncarius fenius. This has been variously interpreted to mean (1) one twelfth of the centesima paid monthly, i.e., one per cent. per annum; and (2) one twelfth of the principal paid monthly, or a hundred per cent. per annum.

INTEREST OF MONEY.

The Roman law of debtor and creditor is given under Next.

1. The Roman law of debtor and creditor is given under Next.

N. is sufficient to remark here that the Liciun law is as follows. Among the grievances of debtors were to a certain extent redressed, did not lay any restriction on the rate of interest that might be legally demanded; and it is clear, from various circumstances, that the scarcity of money at Rome after the taking of the city by the Gauls had either led to the actual abolition of the maximum, or that it was suspended during the Twelve Tables, or caused it to fall into disuse. Nine years, however, after the passing of these laws, the rate of the Twelve Tables was re-established, and any higher rate prohibited by the bill (regatio) of the tribunes Dulleus and Mancius.

Still this limitation of the rate of interest did not enable debtors to pay the principal, and what Tacitus calls the "fenore malum" became at last so serious that the government thought it necessary to interfere, and remedy, if possible, an evil so great and inevitable. Accordingly, fourteen years after the passing of the Liciun laws, five commissioners were appointed for this purpose under the title of mensarii or bankers. These opened their banks in many of the Forum, or the Campus Martius, and were ready money to any debtor who could give security (casare) to the state for it: moreover, they ordered that land and cattle should be received in payment of debts at a fair valuation, a regulation which Caesar adopted for a similar purpose. By these means, Livy tells us that a great amount of debt was satisfactorily liquidated. Five years afterwards the legal rate of interest was still farther lowered to the "semuncarium fenus," or the twenty-fourth part of the whole sum (ad semuncernia reducata usurae); and in B.C. 346 we read of several usurers being punished for a violation of the law, by which they were subjected to a penalty of four times the amount of the loan. But all these enactments were merely palliatives; the termination and cure of the evil was something more decisive—not merely nor less than a species of national bankruptcy—a general abolition of debts, or χρέων ἀνακοπη. This happened in B.C. 341, a year remarkable for political changes of great importance, and was followed up by the enunciation of the Twelve Tables, prohibiting the taking of usury altogether. A law like this, however, was sure to be evaded, and there was a very simple way of doing so; it only affected Roman citizens, and therefore the usurers granted loans, not in the name of themselves, but of the Latins and allies who were not bound by it. To prevent this evasion, the Sempronian law was passed (B.C. 194), which placed the Latins on the same footing, in respect of lending money, as the full Roman citizens. At last, after many futile attempts to prevent the exactation of interest at any rate and in any shape, the idea was abandoned altogether, and the centesima, or 12 per cent. per annum, became the legal and recognised rate. Niebuhr, as is well known, always speaks of it as if it were a fact that it was first adopted at Rome in the time of Sulla; but whether it became the legal rate by any special enactment, or from general consent, does not appear. Some writers have inferred that it was first legalized by the edicts of the city preators, an inference drawn from the general resemblance between them and the enactments of the Twelve Tables, and coupled with the fact that some proconsular edicts

INTERREX.

 are extant, by which the centesima is fixed as the legal rate in proconsular provinces (in edicto fratric- ticii centesimae me observatorem habui). Whether this supposition is true or not, it is admitted that the centesima, or 12 per cent., was the legal rate towards the close of the Republic, and also under the Empire. Justinian reduced it to 6 per cent.

In cases of tenuis nauticum, however, or bottomry, as the risk was the money-lender's, he might demand any interest he liked while the vessel on which the money was lent was at sea; but after she reached harbour, and while she was there, no more than the usual rate of 12 per cent. or the centesima could be demanded.

The legal rate for tenuis nauticum under all circumstances.

INTERPRES, an Interpreter. This class of persons became very numerous and necessary to the Romans as their empire extended. Embassies from foreign nations to Rome, and from Rome to other states, were generally accompanied by interpreters to explain the objects of the embassy to the respective authorities.4 In large mercantile towns, the interpreters, who formed a kind of agents through whom business was done, were sometimes very numerous, and Pliny states that at Diocesarian in Colchis, there were at one time no less than 130 persons who acted as interpreters to the Roman merchants, and through whom all their business was carried on.

The term is applied to the de curias, proconsuls, and questores, who were intrusted with the administration of a province, to carry on all their official proceedings in the Latin language; and as they could not be expected to be acquainted with the language of the provincials, they had always among their servants (vid. APPARITORES) one or more interpreters, who were generally Romans, but in most cases unduly freedmen.5 These interpreters had not only to officiate at the comitatus (vid. CONVENTUS), but also explained to the Roman governor everything which the provincials might wish to be laid before him.6

INTERREGNUM. (Vid. INTURREX.)

INTERREGNUM. This office is said to have been instituted on the death of Romulus, when the senate wished to secure the sovereign power among themselves instead of electing a king. For this purpose, according to Livy,7 the senate, which then consisted of one hundred members, was divided into ten decuries, and from each of these decuries one senator was nominated. These together formed a board of ten, with the title of Interreges, each of whom, elected by the consuls in their ninth and tenth years, had the power of electing a king. If no king was appointed at the expiration of fifteen days, the rotation began anew. The period during which they exercised their power was called an Interregnum. Dionysius8 and Plutarch9 give a different account of the matter, but that of Livy appears the most probable. Niebuhr10 supposes that the first interregnum commenced in 720 B.C., and that they were the decem primi, or ten leading senators, of whom the first was chief of the whole senate.11

The interregges agreed among themselves who should be proposed as king; and if the senate approved of their choice, they summoned the assembly of the curiae, and proposed the person whom they had previously agreed upon; the power of the curie was confined to accepting or rejecting him. The choice of the senate was called patrum autoritas; the putting of his acceptance or rejection to the vote by the curie, rogatio; and the decree of the curie of the subject populus.12

Interregges were appointed under the Republic for holding the comitia for the election of the consuls, when the consuls, through civil commotions or other causes, had been unable to do so in their year of office.4 Each held the office for only five days, as under the kings. The comitia were hardly ever held by the first interrex; more usually by the second or third, but in one instance we read of an interrex, and in another of a fourteenth interrex.5 The comitia for electing the first consuls were held by Spurius Lucretius as interrex,7 whom Livy calls also prefectus urbis. The interregges under the Republic, at least from B.C. 489, were elected by the senate from the whole body, and were not confined to the decem primi, or ten chief senators, as under the kings.6 Plebeians, however, were not admissible to this office; and, consequently, when plebeians were admitted into the senate, the patrician senators met without the plebeian members to elect an interrex.8 For this reason, as well as on account of the influence which the interrex exercised in the election of the magistrates, we find that the tribunes of the plebs were strongly opposed to the appointment of an interrex.11 The interrex had jurisdiction.9

Interregges continued to be appointed occasionally till the time of the second Punic war;10 but after that time we read of no interrex till the senate, by command of Sulla, created an interrex to hold the comitia for his election as dictator, B.C. 89.11 In B.C. 55 another interrex was appointed to hold the comitia. In August, Pompey and others were elected consuls;12 and we also read of interregges appointed in B.C. 53 and 52, in the latter of which years an interrex held the comitia, in which Pompey was appointed sole consul.13

INTER RULA. (Vid. TENICA.)

INTESTABILIS. In the Twelve Tables it was declared "qui se sitaret testator libripensa fuerat, in testamento fuerat, improbus intestabilique custos." According to this, the testator who had made no testament or intestabili kept all the estate to himself. This is considered by Niebuhr as applicable to any solemn occasion, such as the making of a will, and afterward refused to give his testimony, was "intestabili," that is, disqualified from ever being a witness on any other occasion. The word afterward seems to have had its meaning extended, and to have been used to express one who could not make a will, and who was thereby deprived of any general civil capacity.18

INTESTATÓ, HEREDITATIS AB. (Vid. HERES, ROMAN, p. 497.)

INTESTATUS. (Vid. Heres, Roman, p. 497.)

INTUBUM or INTUBUS, a plant, of which two kinds, the wild and the cultivated, are mentioned by the ancient writers. The former is the Cichorium, or Intubum erraticum of Pliicy; our better acquaintance, or the Cichorium officinale of Linnaeus; the latter is Pliny's Intubum sativum, called also King's

and our Endive, the *Chichorium intybus*. L. The
*intybus* is said to have come originally from Egypt,
where great use was made of it; and, when intro-
duced into Europe, it brought along with it its
Egyptian or Coptic name, which became in Greek
*intypos* or *intybus*. The generic name, *Chichorium*,
by a name corrupted from the preceding. By the
epiphitis *erraticum* Pliny means "wild" or "savage,"
as appears from his own words: "Erraticum, 
vulgo apud nos quidam ambeleum appellatur, in
Egypto chichorium vocant, quod sysestis est." Fée,
however, insists, and with much appearance of
reason, that the correct name is *intybus* rather than
the long, numerous, and spreading roots of the
plant, whence Virgil speaks of the "amaris intula
fruits." The modern name *Endive*, as given to the
cultivated kind, comes from the barbarous word en-
viaca, which was used in the Middle Ages, and
was evidently corrupted from the Arabic *henidi* or
the classical Latin term *intybus*, most probably the
former.

**INVENTARIUM.** *(Vid. *Herbs, Roman, p. 500.)*

**INVESTIS.** *(Vid. *Impress,*.)

*I. VULGARIS.* Elicampane, the *Elecampane* of the
Greeks, and *Inula* (or *Enula*) Campana of the school of
Siumann. *(Vid. *Helium,*.)

*I. V. (lo), the Violets.* The *Viola odorata*, or
Sweet Violets of the *Theophrastus*, the *ov
pomorbius* of Dioscorides, and the species of
Violet so often celebrated by the poets. According
to Schneider, the *lov chirom* of Theophrastus is the
*Cheiranthus chiri*, or Wall-flower. Fée, however,
seems disdained to adopt this extension of the term
*vio* or *lov*, notwithstanding the immense er-
arthor of which Theophrastus has given us an
account, but he assigns to the limits of the genus
*Viola* (lov) among the ancients. The *Viola pallens* of Virgil appears
to have been the *V. palustris* of Linneaus, or else the
*V. montana* of the same botanist.

*I. V. (lo), a term properly denoting "a bed
of violets," but also applied to several species of
the Violet, and especially to the *Viola odorata*.

*VIPHYON* (lovo), a species of plant. Bauhin
states that some held the *Asphodelus luteus* to be
the *lovo* of Theophrastus. Stockhouse proposes the
*Levandula epica*, or Spike Lavender.

*IPS* (ips), an insect mentioned by Theophrastus,
most probably the same as the *Cynips*, L. The
*ips* is said to have been observed by Theophrastus
inful with its sting and to deposit its eggs in the
wound; the extravasated juices rise round it,
and form a gall which becomes hard; in this
the larva lives and feeds, and changes to a pupa.
In his country, the gall most common is that found on
the *Rosari canina*. It is worthy of remark, that
the grammarians *Ammonius* and *Cyrius* restrict this
term to the *Cynips* of the Vine and Carnobut (esp-
clio, so I propose to read instead of nepario)."

**IREN.** *(Vid. *Eirens,*.)

*I. R.* (lo), a plant, the Iris. The description
given of its flowers by Dioscorides makes them of
different colours, white, yellow, purple, &c., from
which it would clearly appear that under this name
we are comprehended more than one species of Iris.
Sprengel thinks that the *Iris Germanica* and *Flor-
nenia* are more particularly applicable to the
description of Dioscorides. Adams states that, as long as
the Galenic Pharmacopoeia continued in repute in
France, the *Iris Florentina* was invariably substitu-
ed for the ancient *Iris*. 1

1. *(Georg., 1, 183.)*—2. *(Fée, Flore de Virgile, l. xxx., &c.)*—

**IREPEX, HIRPEX, or URPEX,** a Harrow, used
to clear the fields of weeds, and to level and break
down the soil. The harrow of the ancients, like
ours, had iron teeth, and was drawn by oxen.

*I. SATIS* (*Itecric*), a plant, the *Glazum* of the
Latas, and the *Satis* of the *Virgil*, yielding a beautiful blue
dye. *(Vid. *Glazum,*.)

**ISELASTICI LUDI.** *(Vid. *Athlete, p. 120.)*

**ISOPOLITIEA.** *(Vid. *Citius, Greek, p. 259.)*

*I. SYPOYRON* (*Isoxyron*), a plant, probably the
Bog Bean, or *Menyanthes trifoliata*. From the
account of Galen and Paeonius Agemeta, it is
observed by Adams, "that the *V. trifolium*, or
Kerbitis, or *Fasel*, but Dioscorides clearly distinguishes
between these. Donoeden advanced the opinion that the
*Menyanthes trifoliata*, or Bog Bean, is the *Isoxyron*
of Dioscorides; but, as Sprengel remarks, its
botanical characters do not agree with those of the
*Isoxyron* as given by Dioscorides. At the same
time, it is worthy of remark, as a singular coin-
dence, that the Bog Bean is still used by the
common people in Scotland for the cure of those
complaints for which Dioscorides recommends the
*Isoxyron*. The opinion of Donoeden is farther
touched by Bauhin."

**ISOTELEIA, ISOTELEIS.** *(Vid. *Citius, Greek, p. 259.)*

**E. STHMIAN GAMES (Isthmio).** one of the four
great national festivals of the Greeks. This festi-
val derived its name from the Corinthian Isthmus,
where it was held. Where the Isthmus is narrow-
est, between the coast of the Saronic Gulf and the
western foot of the Ecean hills, was the Temple
of Poseidon, and near it was a theatre and a stadi-
um of which we have no exact knowledge. The
emporium of which the temple was adorned with an avenue of statues of the
victors in the Isthmian games, and with groves of
pines. These games were said originally to have been
instituted by Sisyphus in honour of Melicertes,
who was also called Palemon. Their original
mode of celebration partook, as Plutarch remarks,
more of the character of mysteries than of a
great and national assembly with its various
amusements, and was performed at night. Subsequent
to the age of Theseus, the Isthmian were celebrated in
honour of Poseidon; and this innovation is as-
scribed to Theseus himself, who, according to some
legends, was a son of Poseidon, and who, in the in-
duction of the Isthmian Games, was supposed to
be a worshipped Heracles, the founder of the Olympic
games. The celebration of the Isthmia was honco-
forth conducted by the Corinthians, but Theseus
had reserved for his Athenians some honourable
distinctions: those Athenians who attended the
Isthmia sailed across the Saronic Gulf in a sacred
vessel (*Aeolos*), and an honorary place (*poetoleia*),
as large as the sail of their vessel, was assigned to
them during the celebration of the games.

In times of war between the two states, a sacred truce
was concluded, and the Athenians were invited to
attend at the solemnities. The Eleans did not take
part in the games, and various stories were related to
account for this singular circumstance.

It is a very probable conjecture of some historians
that the Isthmia, after the changes ascribed to the
Theseus, were merely a panegyric of the Ionians
of Peloponessus and those of Attica; for it should be
observed that Poseidon was an Ionian deity, whose
worship originally to have been unknown

to the Dorians. During the reign of the Cypselids at Corinth, the celebration of the Isthmian games was suspended for seventy years. But after this time they gradually rose to the rank of a national festival of all the Greeks. In 608 B.C., they became periodical, and were henceforth celebrated regularly every third year, twice in every Olympic, that is, in the first and third year of every Olympic.

The Isthmia in the first year of an Olympic fell in the Corinthian month Panemus (the Attic Hecatombolion); and those which were held in the third year of an Olympic fell either in the month of Munychion or Thargelion. J. and Solinus erroneously state that the Isthmics were celebrated every fifth year. With this regularity the solemnities continued to be held by the Greeks down to a very late period. In 228 B.C., the Romans were allowed the privilege of taking part in the Isthmics; and it was at this solemnity that, in 196 B.C., Flaminius proclaimed before an innumerable assembly the independence of Greece. 1 After the fall of Corinth in 146 B.C., the Sicilians were honoured with the privilege of conducting the Isthmian games; but when the town of Corinth was rebuilt by J. Caesar, 2 the right of conducting the solemnities was restored to the Corinthians, and it seems that they henceforth continued to be celebrated till Christianity became the state-religion of the Roman Empire. 3

The prize of a victor in the Isthmian games consisted at first of a garland of pine-leaves, and afterward of a wreath of ivy; but in the end the ivy was again superseded by a pine garland. 4 Simple as such a reward was, a victor in these games gained the greatest distinction and honour among his countrymen; and a victory not only rendered the individual who obtained it a subject of admiration, but showed him to be a hero to his native community to which he belonged. Hence Solon established by a law, that every Athenian who gained the victory at the Isthmian games should receive from the public treasury a reward of one hundred drachmae. 5 His victory was generally celebrated in lofty odes, called Epinikia, or triumphal odes, of which we still possess some specimens among the works of Pindar. (See M. de Tocqueville, Encycl. des l. et des arts, 2, 214a. — Dessen, De Ratione Poeetica Carminum.)

JUDEX. 5

ITER. (Vid. Colon. p. 282.)

JUDEX. JUDICIUM. A Roman magistrate generally did not investigate the facts in dispute in such matters as were brought before him: he appointed a j udex for that purpose, and gave him instructions. (Vid. Actio.) Accordingly, the whole of civil procedure was expressed by the two phrases jus and judicium, of which the former comprehended all that took place before the magistratus (or juro), and the latter all that took place before the judex (in judicio). Originally even the magistratus was called judex, as, for instance, the consul and prae tor; 1 and under the Empire the term judex often designated the praetor. 2 In the intermediate period it designated a person whose functions may be generally understood from what follows.

In many cases a single judex was appointed; in others, several were appointed, and they seem to have been sometimes called recuperatores, as opposed to the single judex. 3 Under certain circumstances, the judex was called arbiter: thus judex and arbiter are named together in the Twelve Tables. 4

A judex, when appointed, was bound to discharge the duties of his office, unless he had satisfied the jurors (exclusus). A person might also be disqualified from being a judex. There were certain seasons of the year when legal business was done at Rome (cum res agbantur), and at these times the services of the jurists were required. These legal terms were regulated according to the seasons, so that there were periods of vacation 5 in the provinces, the terms dependent on the conventus. A judex was appointed to take part, as we must infer from Plutarch, 6 who, on the authority of Polemo, states, that in the treasury at Sicyon there was a golden book, which was presented to it by Aristomenes, the poetess, after she had gained the victory at the Isthmics. At a late period of the Roman Empire, the character of the government of the Isthmics appears greatly altered: for, according to the Emperor Justinian, 7 upon referring to it, it is stated that the Corinthians purchased bears and panthers for the purpose of exhibiting their fights at the Isthmics, and it is improbable that the custom of introducing fights of animals on this occasion commenced soon after the time of Caesar.

When Italy had received its organization from the Romans, the magistratus of the several cities had jurisdiction, and appointed a judex as the prae tor did at Rome (ex Rubria de Gallia Civilis). In the provinces, the governors appointed a judex or recuperatores, as the case might be, at the conventus which they held for the administration of justice, and the judex or recuperatores were selected both from Roman citizens and natives.

When the judex was appointed, the proceedings in jure or before the prae tor were terminated, which was sometimes expressed by the term Latitius Contra, the phrases Lis Constat and Judi ius Acceptum being equivalent in the classical jurists. (Vid. Lrnis Constat.) The parties appeared before the judex as the third of the persons connected with the cause (causa coniexia, collectio), and the advocates of each party supported the cause in a speech, (the evidence seems to have been given at the same time that the
The following is the distinction between an arbitrum and Judicium, according to Cicero. In a judicium the bond was of a certain limited amount (pecunia debita) against which the amount was not determined (incerta). In a judicium the plaintiff obtained all that he claimed or nothing, as the words of the formula show: "Si pariet H. S. 1000 dari opertere." The corresponding words in the formula arbitralia were, "Quantum aqua melius id dari," and their equivalents were, "Re fide hominem in delicto pacem esse aequitatis." In a dispute about dos, which Cicero calls "arbitrum rei suorior," the words "quid aquis, melius," were added. If the matter was brought before a judge, properly so called, the judicium was constituted with a poena, that is, per sponsonem; there was no poena when an arbitrator was demanded, and the proceeding was by the formula arbitralia. The proceeding by the sponsonus was, then, the strictest (angustissima, formula sponsonis); that of the arbitrum was ex fide bona, and the arbitrator, though he was bound by the instructions of the formula, was allowed a greater latitude by its terms. The engagement between the parties who accepted an arbitrator, by which they bound themselves to abide by his decision, was called a forum. When the forum had been agreed, the term was also employed, as it appears, to express the engagement by which parties agreed to settle their differences by arbitration, without the intervention of the praetor. Cicero appears to allude to this arbitration.

According to Cicero, all judicia had for their object either to adjudge a thing or to establish a fact (controversia), or the punishment of crimes (malefacia). This passage refers to a division of judicia, which appears in the jurists, in publica and privata. The term privata judicia occurs in Cicero, where it refers to the class of judicia which he indicates in the Cenoma by the term controversia. The term publica judicia might not then be in use, but the term publica causa is used by Cicero with reference to a judicium, which by the jurists would be called publicum. In the Digest it is stated that all judicia are not publica in which a crimem was the matter in question, but only those in which the offense was prosecuted under some lex, such as the Julia Majestatis, Cornelia de Securiss, and others. The term private is there employed to mean non publica when the inquiry was extra ordinem, that is, not according to the usual practice; and this might happen when the offense was one not provided for by law (legibus), but one that was punishable by immemorial usage and general opinion, of which there is an instance in Livy (see legibus seu moribus mallei enquirentur). The judicia popularia, or popular actions, as they are called, are defined to be those by which "sumum jus populus tuetur," and they agreed with the publica judicia in this, that any person might be the prosecutor who was not under some legal disqualification. The judicia populi were those in which the populi acted as judges; they were convened, summoned, and composed by the populi according to certain citia among others when he says "nihil de capite civis, aut de bonis, sine judicio senatus aut populi aut corum qui de quaque re constituti judices sin." De tali posse. As the judicia publica are defined by the jurists to be those in which criminala were tried by a special lex, it appears that the judicia populi, strictly so called, must have fallen into disuse, or have gradually become unnecessary after the judici
should be the judges (judicum genus): a difference however, which was not unimportant, as it secured the acquittal of Clodius. The judges voted by ballot, at least generally, and a majority determined the acquittal or condemnation of the accused. Each judex was provided with three tablets (absides) on one of which was marked A., Absolv.; on a second, C., Condemno; and on a third, N., Non liquet. The judges voted by placing one of these tablets in the urns (urnae), which were then examined for the purpose of ascertaining the votes. It was the duty of the magistrates to pronounce the sentence of the judges: in the case of condemnation, to adjudge the legal penalty; of acquittal, to declare him acquitted; and of doubt, to declare that the matter must be further investigated (ambitus cognoscendum).

Mention is often made of the judicia populi in the Latin writers. A judicium was commenced by the accuser, who must be a magistratus, declaring in a contio that he would on a certain day accuse a certain person, whom he named, of some offence, which he also specified. This was expressed by the phrase "je dicere" (Virg. Caes. cap. diem dicere). If the offender held any high office, it was necessary to wait till his time of service had expired before proceedings could be thus commenced against him. The accused was required to give security for his appearance on the day of trial; the security was called vades in a causa apologized (apologia); in a capital case, of which the alleged offence was pecuniary. If such security were not given, the accused was kept in confinement. If nothing prevented the inquiry from taking place at the time fixed for it, the trial proceeded, and the accuser had to prove his case by evidence. The investigation of the facts was called aquisstio with reference to the proposed penalty: accordingly, the praetor or a quaestor was authorized to order the accuser to summon his witnesses and to produce his documents, that he might have a fair opportunity of making his case. In fact, the investigation of cases of capital offenses is thus treated as inquisitio, a form of inquiry. When the investigation was completed, the magistrates promulgated a rogatio, which comprehended the charge and the punishment or fine. It was a rule of law that a fine should not be imposed together with another punishment in the same rogatio. The rogatio was made public during three sundays, like any other lex, and proposed at the comitia for adoption or rejection. The form of the rogatio, the effect of which was that of imposing punishment, is given in the Oration Pro Domna, c. 18. The accused sometimes withdrew into exile before the votes were taken; or he might make his defence, of which we have an instance in the oration of Cicero for Rabirius. Though these were called judicia populi, and properly so in the early ages of the state, the legses passed in such judicum in the latter period of the Republic were often plebiscita.

The offences which were the chief subject of judicia populi and publica were majestas, adulteria, and suprema, praetorium, falsum, vis publica, and privata, peculiatus, repetundae, ambitus, which are treated under their several heads.

When a number of specula enactments for the punishment of particular offenses was introduced the practice of forming a body of judges for the trial of such offenses as the enactments were directed against. Thus it is said that the lex Calpurnia De Pecuniae Repetundis established the album judicum, or the body of judges out of which the judges were to be chosen. It is not known what was the number of the body also constituted, but it has been conjectured that the number was 350, and that ten were chosen from each tribe, and thus the origin of the phrase decuriae judicum is explained. It is easy to conceive that the judicia populi, properly so called,
would be less frequent as special leges were framed for particular offences, the circumstances of which could be better known and told. Under this law, 130 B.C., than by the assembled people. It is affirmed that up to the passing of the Calpurnia lex, the judges were chosen from the senators only, but after this time they were not taken from that body exclusively; and farther, that not only the judges in the questions de repetundis, but also the judges in private matters, were, from the date of this lex, taken from the tribuni curiae, and that they usually made,1 for which there appears to be no evidence.

The lex Servilia (B.C. 104) enacted that the judges should not be under thirty nor above sixty years of age; that the accuser and accused should severally propose one hundred judges, and that each might reject fifty from the list of the other, so that one hundred and thirty-three judges were selected. This lex made some provisions for the mode of conducting the prosecution and the defence. The terms of the Sempronian lex of Gracchi, which was passed B.C. 123, about twenty years before the lex Servilia, are variously stated; but in general terms it is said that it took the judicia from the senators and gave them to the people. This novelty of a number of seventy-five was temporarily1,4 Ull Sulla (B.C. 80) restored the judicia to the senate, and excluded the equites from the album judicium. The lex Servilia apparently did not interfere with the main object of the lex Sempronian. Tacitus, indeed,4 speaks of the Servilian lexes restoring the judicia to the senate; but the passage is encumbered with difficulty. A lex Antonia (B.C. 70) enacted that the judges should be chosen from the three classes—of senators, equites, and tribuni curiae; and, accordingly, the judges were then said to be divided between the senate and the equites. The tribuni curiae were taken from the rest of the citizens, and were, or ought to have been, persons of some property. Thus the three classes of judges might be divided in a manner similar to that in which it was either in consequence of the lex Aurelia or some other lex, that, instead of one urn for all the tablets, the decurio had severally their ballotting urns, so that the votes of the three classes were known. Dion Cassius4 ascribes this regulation to a lex Fulia; and he says that the object, then, was to exclude from the judicia the plebs, which might be known, though those of individuals could not, owing to the voting being secret. It is not known if the lex Aurelia determined the number of judges in any given case. The lex Pompeia de Vi and De Ambitu (B.C. 52) determined that eighty judges were to be selected by lot, out of whom the accuser and accused must reject thirty. In the case of Clodius, in the matter of the Bona Dea, there were fifty-six judges. It is conjectured that the number fixed for a given case by the lex Aurelia was seventy judges.

Another lex Pompeia, passed in the second consulate of Pompey (B.C. 55), seems to have made some provision applicable to the pecuniaria, but the provisions of this lex, as to the qualification of the judges; but the new provisions of this lex are only known from Ausonius, who explains them in terms which are very far from being clear. A lex Judicaria of Julius Caesar took away the decuriae of the tribuni curiae, and thus reduced the judges to two classes (genera, the decuriae of Dion Cassius). A lex Judicaria, passed after his death by M. Antonius, restored the decuriae of the tribuni curiae, but required no pecuniaria qualification from them, that the only qualification which this lex required was, that a person should have been a centurion or have served in the legions. It appears that the

1. (Götting, Geschichte der Röm. Staatsverfassung, p. 425.)
2. (Cic. in Verr., Adv. Prim., c. 13.)—3. (Ann., xii., 60)—4. (Tit. 9.)

previous lex Pompeia, lex Aurelia, and a lex of Caesar had given to those who had been centuriones or decuriones (qui ordine erant, or judicatius), but still they required a pecuniaria qualification (cenarias). The lex of Antonius, besides taking away the pecuniaria qualification, opened the judicia to the soldiers.1 It seems probable that the expression ex centuribus, which is used by Ausonius in speaking of the change introduced by this lex Pompeia, had reference to the admission of the centurions into the third class of judges already mentioned. Augustus added to the existing three decuriae judicium a fourth decuria, called that of the Ducae narii, who had a lower pecuniaria qualification, and only decided in smaller matters (de levis tribunis summis). Caligula6 added a fifth decuria, in order to diminish the labours of the judicia. Augustus had already regulated the number of the judicia privata, in which the matter in dispute was of small value. It is often stated by modern writers, without any qualification, that the various changes in the judicia privata from the time of the lex Calpurnia to the end of the Republic had reference both to the judicia privata and judicia publica; though it is also stated that the objects of these various enactments were to repress or diminish the public debt or encumber the state, by extending or limiting the body out of which the judicia in any given case were to be chosen. But it is obvious that these reasons do not apply to the matter of judicia privata, in which a single judex generally acted, and which mostly concerned property and contract. Accordingly, a certain degree of caution, as well as some of his predecessors, that "there is no doubt that, from the time of Augustus, the album judicium had reference to the judicia in civil matters, but that as to earlier times a difficulty arises from the fact that, while the lex Sempronian was in force, by which the senators were excluded from the judicia privata, a consularius is mentioned as a judex; and, on the other hand, an equus is mentioned as a judex at a time when the lex of Sulla was in force, and, consequently, senators only could be judges."** These instances certainly are inconsistent with the fact of the judicia privata being regulated by the various legis judiciae; and it would appear that the reasons derivable from the character of the two kinds of judicia and the difference in the mode of procedure, which render it almost a matter of demonstration that the various changes in the judicia privata had reference to the questions and judicia publica. It is true that some of these leges may have contained provisions even as to judicia privata, for many of the Roman Laws contained a great variety of legislative provisions, and it is also true that we are very imperfectly acquainted with the provision of these legis judiciae; but that the

---

---

583
Judicia I. Legitima. —

Regulation of the judicia privata was included in their provisions, in the same form and to the same extent as that of the judicia publica, is an assertion totally unsupported by evidence, and one which leads to absurd conclusions. Two leges Julii, together with a lex Æbutila, put an end to the legal actions; and a lex Julia Judicaria limited the time of the judicia legitima; but it does not appear whether these leges were passed solely for these objects, or whether their provisions were part of some other leges.

Though the general character of the Roman judicaria, and the mode of procedure both in civil and criminal matters, are capable of a sufficiently clear exposition, there is much uncertainty as to many details, and the whole subject requires a careful examination by some one who combines with a competent knowledge of the original and modern languages accurate acquaintance with the nature of legal procedure.

The following works may be referred to: Walter, Geschichte des Röm. Rechts,—Götting, Geschichete der Röm. Staatsverfassung,—Heineccius, Syntagma, &c.—Tigerström, De Judicibus apud Romanos, Berl., 1829, valuable only for the collection of the original texts,—Keller, Ueber Rica Constantia und Urteile, &c., Zürich, 1827.—Also, Gaits, &c.; Dig. 5, tit. 1, De Judicis; Dig. 48, De Judicis Publicis; Inst., iv., tit. 18. JUDEX ORDINARIIUS. (Vid. Judex Pede-neus.)

Judex Peda-neus. — The origin and meaning of this term seem to be entirely unknown. The judices to whom the praetor or praetores referred a matter in litigation with the usual instructions, were sometimes called pedanei. Subsequently the praeses, who was now sometimes designated judex ordinarius, of the judex simus, decided most matters without the intervention of a judex; but still he was empowered to appoint a permanent body of judges for the decision of less important matters, and these also were called judges pedanei. "hoc est quia negotia humiliora disceptant.

The proceedings before this new kind of judges pedanei were the same as before the praeses. Some modern writers are of opinion that these new pedanei judges did not form a permanent court, but only decided on matters which were referred to them by a superior authority. JUDEX QUESTIVUS. (Vid. Judex, p. 552.)

Judex Questius. — A thing was a res judicata when the matter in dispute had been determined by a judicial sentence, and the actio judicata was a mode which the successful party might adopt for obtaining a decree of the magistrates, by which he could take possession of the property of the person who had lost the cause and had not satisfied the judgment. The plaintiff in the actio judicata was also protected in his possession of the defendant's property by a special interdict, and he was empowered to sell it. The party condemned was limited as to his defence. Originally the judicata was obliged to find a vindex (mandicem daret); but in the time of Gaius it had become the practice for him to give security to the amount of the judgment (judicatum salus attulera). If the defendant pleaded that there was no such plaintiff, the court was bound not to double the amount of the judgment if his plea was false.

Che, Pr. Praecl., 30.—Paulinus, S. R., tit. 10.—Dig., 42, tit. 1.)
The figure shows the method of tying the yoke to the pole (temp. pumice) by means of a leathern strap (στρεφεόντων); which was lashed from the two opposite sides over the junction of the pole and the necks of the horses, a strap of leather, also brought in gold, being placed between them. The passage above cited shows that when the carriage was prepared for use, the yoke, which had been laid aside, was first fastened to the pole, and the horses were then led under it. Either above them, or at the two ends of the yoke, rings were often fixed, through which the reins passed. These frequently appear in works of ancient art representing chariots.

Morning and evening are often designated in poetry by the act of putting the yoke on the oxen and taking it off (Boveiνος; τούτοις; τούτοις; ουτοίς).

By melomény jugum meant the quantity of land which a yoke of oxen could plough in a day.
JULIA LEGES.

The text appears to be a historical or legal document, discussing various legal and historical events. The text mentions terms like "Lex Maritalis," "lex Poppea," "Municipalism," and "hereditas," which are indicative of Roman law and society. The text seems to be discussing laws, regulations, and the legal rights and responsibilities of individuals during the Roman Empire.

The document contains references to the Lex Julia de Mariatis, which is a law concerning marriage, and the Lex Poppea, which is another law concerning marriage. The text also references contributions to the law by jurists like Julius Paulus and Ulpian.

Overall, the text provides a detailed account of the legal framework concerning marriage and family in ancient Rome, emphasizing the importance of these laws in the governance of the Roman Empire.
by a senatus consultum Perniciannum. A senatus consultum Claudianum so far modified the strictness of the new rule as to give to a man who married above sixty the same advantage that he would have had if he had married under sixty, provided he married a woman who was under fifty; the ground of which rule was the legal opinion that a woman of fifty was still capable of having children. If the woman was above fifty and the man under sixty, this was called impar matrimoniun, and by a senatus consultum Calvitanum it was entirely without effect as to releasing him from incapacity to take legata and dotis. On the death of the woman, therefore, the dos became caducus.

The consul who had several children was preferred to one who had fewer. Freedmen who had a certain number of children were freed "operarium obligatones;" and libertae who had four children were released from the tutela of their patrons. Those who had three children living at Rome, four in Italy, and five in the provinces, were excused from the office of tutor or curator. After the passing of this lex, it became usual for the senate, and afterward the emperor (princeps), to give occasionally, as a privilege, to certain persons who had not children, the same advantage that the lex secured to those who had children. This was called the jus liberorum. Pliny says that he had lately obtained from the emperor for himself and his wife four such a lex liberorum. This privilege is mentioned in some inscriptions, on which the abbreviation I. L. H. (jus liberorum habens) sometimes occurs, which is equivalent to "jura parentis habeant." The Emperor M. Antonius provided that children should be registered by name, within thirty days after their birth, with the prefectus arrari Sabinum.

The lex also imposed penalties on orbis, that is, married persons who had no children (qui liberos non habebant), from the age of twenty-five to sixty in a man, and from the age of twenty to fifty in a woman. By the lex Papia, orbi could only take one half of an hereditas or legatum which was left to them, as long as there was no child. It seems that an attempt was made in this new law to evade this part of the lex by adoptions, which the senatus consultum Neronianum declared to be ineffectual for the purpose of relieving a person from the penalties of the lex.11

As a general rule, a husband and wife could only leave to one another a tenth part of their property; but this was overruled by the lex which provided that either born of the marriage or by another marriage of one of the parties, which allowed of the free disposal of a larger part. This privilege might also be acquired by obtaining the jus liberorum.12

JULIA LEX PECULATUS. (Vid. Peculatus.)

JULIA LEX ET PLAUTIA, which enacted that there could be no usucapion in things obtained by robbery (pu: possessae). The Twelve Tables had already provided that there could be no usucapion in stolen things.13 This lex was probably passed B.C. 89.

JULIA LEX DE PROVINCIIS. (Vid. Provinciis.)

JURISCONSULTI.

De (Tor Dig.

There is they and it if they had severally been transferred by the in jure cesso.

The in jure cesso was an old Roman institution, and there were provisions respecting it in the Twelve Tables.

JURISCONSULTI or JURECONSULTI. The origin of the Romans of a body of men who were expounders of the law may be referred to the separation of the jus civele from the jus pontificum. (Vid Jus Civile Plavianum.) Such a body certainly existed before the time of Cicero, and the persons who professed to expound the law were called by the various names of jurisperiti, jurisconsulti, or consultuli simply. They were also designated by other names, as jurisprudentes, jurisdoctores, peritiores, and juris anctores. Cicero enumerates the jurisprudentes auctoritas among the component parts of the jus civile. The definition of a jurisconsultus, as given by Cicero, is a "person who has such a knowledge of the laws (leges) and customs (consuetudo) which prevail in a state as to be able to advise (respondendum), act (agendum), and to secure personal rights and dealings (cavendum)...." Sextus Aurelius Clemens (vid. Jus Enium.), M. Manlius, and P. Macius are examples. In the oration Pro Murena, Cicero uses "scribere" in the place of "ager." The business of the early jurisconsulti consisted both in advising and acting on behalf of their clients (consultores) gratuitously. They gave advice or answers (responsas) either in public places to whom they were addressed at certain times, or at their own houses, and not only on matters of law, but on anything else that might be referred to them. The words "scribere" and "cavere" referred to their employment in drawing up formal instruments, such as contracts or wills, &c. At a later period, many of these functions were performed by persons who were paid by a fee, and thus there arose a body of practitioners distinct from those who gave response, and who were writers and teachers. Tiberius Corunicianus, a plebeian, who was consul B.C. 281, and also pontifex maximus, is mentioned as the first who gave advice publicly (publice professus est), and he was distinguished both for his knowledge of the law and eloquence. He left no writings. Long before to the study of Roman law, he seems to have come a distinct branch from the study of oratory, and a man might raise himself to eminence in the state by his reputation as a lawyer, as well as by his oratorical power or military skill. There were many distinguished jurists in the last two centuries of the republican period, among whom are M. Manlius; P. Marcus Scævola, pontifex maximus (B.C. 131); P. Mucius Scævola, the son of Publius, who was consul B.C. 95, and afterward pontifex maximus, and one of the masters of Cicero (jurisperitorum eloquentissimi, eloquentium jurisprudentissimi). This Scævola the pontifex was considered to have been the first who gave the jus civile a systematic form, by a treatise in eighteen books. Servius Sulpicius Rufus, a contemporary of Cicero, and in the same treatise, speaks of him as a great orator as the pontifex Scævola, and more distinguished as a jurist. Many persons, both his predecessors and contemporaries, had a good practical knowledge of the law, but he was the first who handled it in a scientific manner, and, as he had both numerous scholars and was a voluminous writer, we may view him as the founder of that method.

JURISCONSULTI.

Legal treatment of the matter of law which characterized the subsequent Roman jurists, and in which they have been seldom surpassed.

The jurists of the imperial times are distinguished from those of the republican period by two circumstances, the jurisdiction, and the rise of two sects or schools of law.

It is said that Augustus determined that the jurists should give their opinions under his sanction (ex auctoritate quaestororum). Accordingly, Gaius speaks of the response and opinions of those jurists "qui permittas est jura condere." The object of Augustus was probably to obtain, by this indirect method, that control over the administration of the law which he could not obtain in any other way. It does not appear that the jurists who had not obtained this mark of imperial favor were excluded from giving opinions, but the opinions of such jurists would have little weight in comparison with those of the privileged class.

The unanimous opinion of the jurists was to have the force of law (legis vicem): if they were not unanimous, the judge might follow which opinion he pleased. Gaius refers the establishment of this rule to a rescript of Hadrian, but it seems probable that this rescript was written for the purpose of confirming the existing practice. The circumstances of the establishment of this body of jurists, and the mode of proceeding as to taking their opinions, are not known.

It is a reasonable conjecture that they formed a kind of college; otherwise, it is not easy to suppose how the opinions were taken. The power of making or declaring the law was limited to a decision in the cases which came before them, which, however, would be the most important cases. The opinions of the senators and judges, or the opinions of the two most distinguished teachers connected with them, Sabinus and Proculus. The followers of Labeo, whom we know with certainty to have been such, were Nerva, Proculus, Nerva the son, Pegasus, Celsus, Celsus the son, and Neratius Priscus. The followers of Capito were Massarius Sabinus, C. Cassius Longinus, Longinus Celsus Sabinus, Priscus Iulius, Aburus Vlena Tuscianus, Gaius (vid. Institutiones), and probably Pomponius. But the schools did not take their names from Labeo and Capito. The followers of Labeo were named Proculiani from Proculus. The followers of Capito derived their name from Sabinianus from Sabinianus, who lived under Tibersius, and as late as the reign of Nerva: they sometimes called Cassiani, because of their connection with Cassianus. It is easy to state with precision the differences which characterized the two schools. Whatever may have been the origin of these differences, which may, perhaps, be partly referred to the personal character of Capito and Labeo, the schools were subsequently distinguished by a difference in their manner of handling the matter of law.

1. (Cic. Brut., l. 41.—Dig., tit. 2, s. 2, § 43.—(l. 7).—Cic., l. 7.—Briss., De Form., iii., c. 85.)
JURISDICTIO.

The school of Capito adhered more closely to what was established, and to the letter of what was written. Lageo was a man of greater acquirements than those who wrote the Digest, which looked more to the internal meaning than to the external form, and thus, while apparently deviating from the letter, they approached nearer to true results, though the strict logic of this school might sometimes produce a result less adapted to general convenience than the conclusions of the Sabiniani, which were based on the prevailing notions of equity.

Their writings consisted of commentaries on the Twelve Tables, on the Edict, on particular leges, more especially on some of the Julia leges, and on other special matters. The later jurists also commented on the writings of the earlier jurists. They also wrote elementary treatises (elementa, commentarii), such as the Institutiones of Gaius, which is in 11 books, and the Digest, which consists of 12 books.

JURISDICTIO. The officium of him "qui jus dicit" is defined as follows: "Bonorum possessiorum dare potest, et in possessiorum militia, pupillus non habitantis tutoris constitutare, judiciis litigantibus dare." This is the general signification of the word jurisdictio, which expresses the whole "officiwm juris" (the officium in which those which are included in the "officium jus dicentis" belong either to the jurisdiction (in its special sense) or to the imperium mixtum, or they are those which are exercised by virtue of some lex, senatus consultum, or authority delegated by the princeps, as the "Tuttoris datio." The jurisdiction of those magistrates who are authorised to declare the law, and who exercise the functions of not having the imperium, and, therefore, was not jurisdictio in the full meaning of that term. (Vid. Magistratus.) Inasmuch as jurisdictio in its special sense, and the imperium mixtum, are components parts of jurisdictio in its wider sense, imperium may be said to be contained in, or incident to, jurisdictio (pergium) juris, juridicis ractionibus carrier.

Sometimes imperium is viewed as the term which designates the full power of the magistratus; and when so viewed, it may be considered as equivalent to jurisdictio in its wider sense, or as comprehending jurisdictio in its narrower sense. Thus imperium may be considered as containing or as contained in jurisdictio, according as we give to each term the more general or the more particular sense, of not having the imperium, and, therefore, not jurisdictio in the full meaning of that term. (Vid. Magistratus.)

The juridicis rationibus, or the jurisdictio, is a part of jurisdictio by which the magistrate himself makes a decree or gives a judgment; thus, in the case of the jure cessio, he is said "rem addicere." Addicere is to adjudicate a thing or the possession of a thing to one of the litigant parties. In the case of fortum manuscriptum, inasmuch as the facts would be certain, there was an addicere.

Other cases of the word addicere are collected in Faciociat.

It is with reference to the three terms, do, dico, addico, that Varro remarks that the preter must use one of these words "cum leges quid peragatur." Accordingly, those days were called Nebasti on which no legal business could be done, because the words of legal force could not be used.

JUS. "All people," says Gains, "who are governed by leges and mores, use partly their own law (ius), partly the law (jus) which is common to all mankind; for the law (jus) which a state establishes for itself is peculiar to such state, and is called jus civile, as the peculiar law (jus) of that state. But the law (jus) which natural reason (ratio naturalis) has established among all mankind is equally observed by all people, and is called jus gentium, as being that law (jus) which all nations follow. The Roman popularis, therefore, follows partly its own peculiar law (sum proprium jus), partly the common law (communes jus) of all mankind.

According to the Roman system, justice was divided into two parts, jus gentium and jus civile, and the whole body of law peculiar to any state is its jus civile. The Roman law, therefore, which is peculiar to the Roman state, is its jus civile, sometimes called jus civilis Romanorum, but more frequently designated by the term jus civile only, by which is meant the jus civile of the Romans.

The jus gentium is here viewed by Gains as springing out of the naturalis ratio common to all mankind, which is still more clearly expressed in another passage, where he uses the expression "omnia civitatum jus" as equivalent to the jus gentium, and as founded on the naturalis ratio.

In other passages he founds the acquisition of property, which is one of the main subjects of the law of the naturalis ratio, and on the naturalis jus indifferently, thus making naturalis ratio and naturale jus equivalent. He founds cognatio on naturalis ratio, as being common to all mankind, and agnatio on civitatis ratio, as being purely a Roman institution.

In two passages in the Digest, he calls the same thing naturale jus, as follows: 1.

1. (Proposita, De Origine Juris, Dig. 1, tit. 2.—Zimmermanns Geschichte des Rom. Privatrechts.—2. (Dig. 1, tit. 3. De Jurisdictione.)—3. (Dig. 1, tit. 5, n. 6.)—4. (Dig. 1, tit. 21, n. 1.)—5. (Puchta, "Uber das Inhalte der Lex Robert," Zeitschrift, x. 106.)—6. (Dig. 1, tit. 1, n. 2.)—7. (Gaius, lib. 106.)

Cicero\(^1\) opposes natura to leges, where he explains natura by the term jus gentium, and makes leges equivalent to jus civile. In the Partitio\(^2\) he also divides jus into natura and lex.

There is a threefold division of jus made by Ulpius and others, which is the same: jus civile; jus gentium, or that which is common to all mankind; and jus naturale, which is common to man and beasts. The foundation of this division seems to have been a theory of the progress of mankind from what is commonly termed a state of nature, first to a state of society, and then to a condition of independent states. This division had, however, no practical application, and must be viewed merely as a curious theory. Absurd as it appears at first sight, this theory is capable of a reasonable explanation; and Sallust shows that it is not meant to say that beasts have law, but only the matter of law; that is, some of those natural relations on which legal relations are founded, exist among beasts as well as men. Such natural relations are those by which the species is propagated. In the Institutes the three divisions are confined;\(^3\) for the explanation of jus naturale is first taken from the threefold division of Ulpius, and then the jus gentium and civil are explained according to the twofold division of Gaius already quoted, so that we have in the same section the jus naturale explained in the sense of Ulpius, and the jus gentium and jus civile explained in the naturalis ratio. Farther, in the second book,\(^4\) the jus naturale is explained to be the same as jus gentium, and the jus naturale is said to be coeval with the human race. Notwithstanding this confusion in the Institutes, there is no doubt that the twofold division of Gaius was that which prevailed in Roman jurisprudence.\(^4\) This twofold division, as has been already explained, was separated by the term jus civile from the jus gentium: and he adds, that the jus civile (of any state) is not, therefore, jus gentium, but that what is called jus gentium ought to be jus civile.\(^4\)

The jus civile of the Romans is divided into two parts,\(^5\) viz., jus civile in the narrower sense, and jus pontificium, or the law of religion. This opposition is sometimes defined by fas and ius \(\textit{seus et ius civitatis};\) and the law of things not pertaining to religion and of things pertaining to it, are also respectively opposed to one another by the terms res iuris humani and divini.\(^6\) (\textit{Vid. Dominum.}) Thus the pontifices maximi, P. Crassus and T. Co-rcuncanius, are said to have given responsa de omnibus divinis et humanis \(\textit{res} \).\(^7\)

The law of religion, or \(\textit{ius} \) pontificium, was under the control of the pontifices, who, in fact, originally had the control of the whole mass of the law, and it was only after the separation of the jus civile in its wider sense into the two parts of the jus civile in its narrower sense and the jus pontificium, that each part had its proper and peculiar limits. But after this separation was fully made, the effect had produced itself, and effect with respect to the law of religion that the auctoritas prudentium had on the jus civile.\(^8\)

Still, even after the separation, there was a mutual relation between these two branches of law; for instance, an adrogatus was not valid by the jus civile unless it was valid by the jus pontificium.\(^9\) (\textit{Vid. Annonem.}) Again, jus pontificium, in its wider sense, as the law which is supposed to have divided, as into jus naturale, jus gentium, 

---

\(^{1}\) \textit{Jus.} (1. i. 5.)--3. (i. cit. 2.) \textit{De Jure Naturali, Gentium et Civili.}\n

---

\(^{11}\) "Law," says Gaius,\(^1\) meaning the \textit{Roman} \(\textit{ius} \) law (\textit{juris}), "is composed of leges, plebisctis, senatus consulta, constitutiones principium, the edicta of those who have the jus ecclesiendi, and the responsa prudentium." The component parts enumerated by Cicero\(^2\) are \(\textit{legete} \) (which include plebiscita, senatus consulta, res judicata, jurisprudentia, edicta magistratuum, mos, and aequitas). A consideration of the different epochs at which these writers lived will account for part of the discrepancy; but the addition of mos in Cicero's enumeration is important.

Some of these component parts are also opposed; thus, jus civil is opposed to the jus pretorium or honorarium, which originated in the jus ecclesiendi. (\textit{Vid. Dominum.}) In this sense jus civile consists of leges and senatus consulta, and apparently of mos.

The component parts of this narrower jus civile, that is, of jus civile as opposed to pretorium, are also opposed to one another, that is, lex and mos are sometimes opposed to one another, as parts of component of the jus civile in this limited sense, but different in their origin. Horace\(^3\) speaks of "mos et lex;" Juvenal\(^4\) opposes "Juris nodos et legum amnigmatas;" jus civile is opposed to lex,\(^5\) and to senatus consultum.\(^6\) As then opposed to lege, jus civile appears to be equivalent to mos. In fact, the opposition between lex and mos follows the analogy of that between jus scriptum and jus non scriptum. (\textit{Civ. de leg., i. 3. viii.}) This branch of law then is, of course, as the whole doctrine seems to have been considered by the Roman jurists as law merely by force of custom, whereas such custom was only law when it had been recognized by a competent authority. There is, however, a passage of Ulpius,\(^7\) in which he distinctly speaks of confirming a consuetudo in a judicium, which can have no other meaning than that its force as law comes from the consent and custom of the people. And the meaning is clear, whether we read contradicto or contradicta in the passage just referred to.

The Roman writers, indeed, frequently refer to a large part of their law as founded on mos or on the mos majorum, and not on lege.\(^8\) Thus Ulpius\(^9\) says that the jus patriae potestas is mos receptum. But mos contained matters relating to religion, as well as to the ordinary affairs of life, and, therefore, we may also view mos and lex, when opposed, as component parts of the jus civile in its wider sense, not but making up the whole of it. Mos in the sense of immorality, that is to say, morality disapproves of, must not be confounded with mos founded on mos: the former is mos in respect of which there was once a jus mos. But mos, the latter, when it is just mos, there was a retentio in respect of the mos graviorum or majors, which was adulterum.\(^10\)

The terms jus scriptum and non scriptum, as explained in the Institutes,\(^11\) comprised the whole of the jus civil; for it was all either scriptum or non scriptum, whatever other divisions there might be.\(^12\) Jus scriptum comprehended everything; except that it was more comprehensive than jus scriptum and non scriptum does not appear in Gaius. It was borrowed from the Greek wri
A division of jus into publicum and privatum is mentioned by the Roman jurists.1 The former is defined to be that which relates to the status rei Romanae, or to the Romans as a state; the latter defined to be that which relates "ad singulorum aedilitate." The publicum jus is further defined by Ulpian2 "in sacris, in sacerdotibus, in magistratuibus constiterit." According to this view, it comprehends the law of religion, and all the rest of the jus civile which is not privatum. There are other significations of the jus publicum in the Roman jurists, but the whole division of jus into publicum and privatum is still preserved, and is very confused. The elementary treatises of Gaius do not mention this division, and it is limited to the jus privatum. Justinian in his Institutes, after making this division of jus into publicum and privatum, says, "we must therefore treat of jus privatum," from which it appears that he did not own the expressio dominus et dominium ex jure quiritium, as contrasted with in bonis (sed Dominium); and a Latins, if he obtained from the imperator the jus quiritium, obtained the Roman civitas. The terms jus quiritium and the Romananae civitates are therefore identical in this passage. Such part of the Roman law as was claimed from the imperator was the subject of discussion, letting, hiring, and such obligations as were not founded on the jus civile, were considered to belong to the jus gentium, that is, the jus naturale. Accordingly, when ownership could be acquired by tradition, occupation, or in any other way not specially provided for by the jus civile, such forms were not observed, there was no ownership jure civili or jure quiritium, but there was that interest which was called in bonis. It is not said by Gaius that in the bonis arose by virtue of the jus gentium, and as a consequence we may perhaps be allowed to view it; for in another passage he speaks of alienation or change of ownership being effected either by the jus naturale, as in the case of tradition, or by the jus civile, as in the case of mancipatio, in jure cessionis, and usucession. In this passage he is speaking of alienation, which is completely effected by tradition, so that there is a legal distinction recognized by the praetorian law, to which definition the praetor may be said to be based on the jus gentium, so far may the in bonis be said to be founded on it also. Properly speaking, the jus gentium was only received as Roman law when it did not contradict the jus civile; that is, it could only have its full effect as the jus gentium when it was not contradicted or limited by the jus civile. When it was so contradicted or limited, the praetor could only give it a partial effect, but in so doing, it is obvious that he was endeavouring to nullify the jus civile, and so to make the jus gentium as extensive in its operation as it would have been but for the limitation of the jus civile. The bounds that were placed to this power of the praetor were not very definite. Still he generally fashioned his jus prae- torium after the analogy of the jus civile, and though he made it of no effect as against his jus prae- torium, he maintained its form and left it to its full operation, except so far as he necessarily limited its operation by his own jus prae- torium.

Jus, used absolutely, is defined to be "ex boni et septimae," which is not expressed in any other way. With it really may be collected from the above definition of its parts or divisions. Its general significatio is law, and in this sense it is opposed to lex or a law. Lex, however, as already shown, is sometimes used generally for law, as in the instance from Cicero where it is opposed to natura. Lex, therefore, in this general sense, comprehends leges and all the other parts of the jus civile. In a special sense of a law, it is included in jus. Lex is also used in the plural number (jura) apparently in the sense of the component parts of jus, as in Gaius,3 where he says, "Constant autem jura ex legibus," &c.; and in another passage,4 where he says, with reference to the agnationis jus, or law of agnation, and the cognationis jus, or law of cognation.

Civitas Italiae civilis jura, etc., is the title of a book which has been published. In this passage, agnationis jus and cognationis jus are two of the jura or parts of jus, with which other jura make up the whole of jus. Again,5 that provision of the lex Julia de Adulteris, which forbade the alienation of the fundus dotalis, is referred to thus: "quod quia alium legem," which is not a rule of law, or to the law, but it is a rule of another law, which contained this and many other provisions. Thus, though law, in its strict sense of a law, is different from jus in its large sense, and though jus, in its narrower sense, is perhaps never used for a law, still jus, in this its narrower sense, is used to express a rule of law, or a law. Thus Gaius speaks of the other parts of the legal provisions comprised in the lex Julia Sextia, and of jura as based on the response pruduntum.

Jus has also the special meaning of a faculty or legal right. Thus Gaius says, "it is an actio in rem when we claim a corporeal thing as our own, or claim some jus as our own, such as a jus utendi, eundem, and a jus of possession, and a jus of property." And he says,6 "jus is a thing to which another's right in respect to it is opposed, as a rule of law, or a law, or a thing that is required by law, or a thing that is called a rule of law, or a law; and it is opposed to the lex in its strict sense." Indeed, in this passage, agnationis jus and cognationis jus are two of the jura or parts of jus, with which other jura make up the whole of jus. Again,7 that provision of the lex Julia de Adulteris, which forbade the alienation of the fundus dotalis, is referred to thus: "quod quia alium legem," which is not a rule of law, or to the law, but it is a rule of another law, which contained this and many other provisions. Thus, though law, in its strict sense of a law, is different from jus in its large sense, and though jus, in its narrower sense, is perhaps never used for a law, still jus, in this its narrower sense, is used to express a rule of law, or a law. Thus Gaius speaks of the other parts of the legal provisions comprised in the lex Julia Sextia, and of jura as based on the response pruduntum.

Jus has also the special meaning of a faculty or legal right. Thus Gaius says, "it is an actio in rem when we claim a corporeal thing as our own, or claim some jus as our own, such as a jus utendi eundem, and a jus of possession, and a jus of property." And he says,6 "jus is a thing to which another's right in respect to it is opposed, as a rule of law, or a law, or a thing that is required by law, or a thing that is called a rule of law, or a law; and it is opposed to the lex in its strict sense." Indeed, in this passage, agnationis jus and cognationis jus are two of the jura or parts of jus, with which other jura make up the whole of jus. Again,7 that provision of the lex Julia de Adulteris, which forbade the alienation of the fundus dotalis, is referred to thus: "quod quia alium legem," which is not a rule of law, or to the law, but it is a rule of another law, which contained this and many other provisions. Thus, though law, in its strict sense of a law, is different from jus in its large sense, and though jus, in its narrower sense, is perhaps never used for a law, still jus, in this its narrower sense, is used to express a rule of law, or a law. Thus Gaius speaks of the other parts of the legal provisions comprised in the lex Julia Sextia, and of jura as based on the response pruduntum.

JUS CIVILE PAPIRIANUM.

whole matter of jus which treats of the status of persons, in other words, the law of persons.

This leads to the mention of another division of the law of which appears among the Roman jurists, namely, the law of persons; the law of things, which is expressed by the phrase “jus quod ad res pertinent,” and the law of actions, “jus quod ad actiones pertinent.” In his first book Gaius treats of the law of persons, in the fourth he treats of the law of actions; and, accordingly, the second and third contain the law of things, to express which he does not use a phraseology analogous to that of “jus personarum,” but he says he will treat De Rebus. This division of the “jus quod ad actiones pertinent” is explained in the article Actio.

The adjective justum often occurs in the Latin writers in the sense of that which is consistent with jus or law, or is not contrary to law. Thus it is a justum (legal) matrimimonium if there is commu-
nity between the two parties to the marriage.

The word justum has many varieties of meaning, which may generally be derived, without much dif-
ficulty, from the meanings of jus.

Jus is opposed to judicium, and a thing was said to be done in jure or in judicio, according as it was done before the magistratus or before a judex. (Vid. Juricinum.) Thus all matters of legal ques-
tions were said to be “in jure,” or “ad iudicium.”

Jus, in the sense of the place “in quod jus redditur,” is only an application of the name of what is done to the place in which it is done. The expression jus dicere is explained under Jurisdiccion.

There are other meanings of jus, but they are unimportant, or may be deduced from what is here before mentioned.

JUS AELIANUM was a compilation by Sextus Aelius Patux, surnamed Catus, who was consul B.C. 198, and who is called by his contemporary Ennius “agregato coradus homo.” He is also fre-
quently mentioned with praise by Cicero. The Jus Aelianum, also called Tripterus, contained the laws of the Twelve Tables, an interpretatio, and the legal actions. This work existed in the time of Pomponius. Cicero also speaks of some com-
mentaries by Aelius. (Vid. Applicatio’nis. (Vid. Banishment."

JUS CIVILE. (Vid. Just.)

JUS CIVILE FLAVIANUM. Appius Claudius Cecconi, who was consul B.C. 312, is said to have drawn up a book of actions; or forms of procedure, which his clerk Cn. Flavius made public. According to one story, Flavius surreptitiously obtained possession of the book of Appius, and was reward-
ed by the people for his services by being made tri-
hunus plebis and curule edile. The effect of this publication was to extend the knowledge and the prac-
tice of the law to the plebeians, and to separate the jus civile from the jus pontificium.

JUS CIVILE PAPIRINUM or PAPIRISI-
NUM was a compilation of the laws of the reges, or laws passed in the kingly period of Rome. This compila-
tion was commented on by Granius Flaccus in the time of Julius Caesar, to which circumstance we probably owe the preservation of existing frag-
ments of the law of the plebeians, and to separate the jus civile from the jus pontificium.

remote

the earliest and most renowned labyrinth was that of Egypt, which lay beyond Lake Morris, at a short distance from the City of Crocodiles (Arinosio), in the province now called Paloum. Herodotus ascribes its construction to the dodecarchs (about 650 B.C.), and Mesla to Psammethicus the wise. But it was divided into courts, each of which was surrounded by a wall, and it lay buried under the earth, and at the time of Diodorus and of Pliny the Egyptian labyrinth was still extant. But the ruins which modern travellers describe as relics of the ancient labyrinth, as well as the place where they saw them, do not agree with what we know from the best ancient authorities respecting its architecture and its site. The pur-

pose which the labyrinth was intended to serve can only be matter of conjecture. It has been sup-

erised by some writers that the whole arrangement of the edifice was a symbolical representation of the zodiac and the solar system. Herodotus, who saw the upper part of this labyrinth, and went through it, was not permitted by the keepers to en-

ter the subterraneous part, and he was told by them that here were buried the kings by whom the labyrinth had been built, and the sacred crocodiles.

The second labyrinth mentioned by the ancients was that of Crete, in the neighbourhood of Cnossus: Dedalus was said to have built it after the model of the Egyptian, and at the command of King Mi-

nos. He made it so intricate that no one excepting the chief architects could possibly have seen a Cretan king could have had in view in raising such a building, have induced almost all modern writers to deny altogether the existence of the Cre-

tian labyrinth. This opinion is not only supported by some testimonies of the ancients themselves, but by the peculiar nature of some parts of the island of Crete. The author of the Physiognomia Magna, called the Cretan labyrinth "a mountain with a cavern," and Eustathius calls it "a subterraneous cavern;" and similar statements are made by several other writers quoted by Morsius. Such large caverns actually exist in some parts of Crete, espe-

cially in the neighbourhood of the ancient town of Gortys; and it was probably some such cavern in the neighbourhood of Cnossus that gave rise to the story of a labyrinth built in the reign of Minos.

A third labyrinth, the construction of which be-

longs to a more historical age, was that in the island of Lemnos. It was described by Smolian, an Egyptian architect, and completed by Rhoeus and Diodorus of Samos, about the time of the first Olympic.

It was in its construction similar to the Egyptian, and was only distinguished from it by a greater number of columns. Remains of it were still extant, in the time of Pliny. It is uncertain whether this labyrinth was intended as a temple of the Cabiri, or whether it had any connexion with the art of mining.

Samos had likewise a labyrinth, which was built by Theodorus, the same who assisted in building that of Lemnos; but no particulars are known.

Lastly, we have to mention a fabulous edifice in Etruria, to which Pliny applies the name of lab-

yrinthus. It is called by the ancients that of Clusium, and as the tomb of Lar Persenna. But no writer says that he ever saw it, or remains of it; and Pliny, who thought the description which he found of it too fabulous, did not venture to give it in his own words, but quoted those of Varro, who had probably taken the account from the popular stories of the Etruscans themselves. It was said to have been partly built under and partly above ground, whence the name labyrinth is correctly ap-

plied to it. But a building like this, says Niebuhr, is absolutely impossible, and belongs to the Arabian Nights.

LABRUM. (Vid. Batia.)

LABRUSCA, the wild Vine, the ἀετρακαί ἀγρία of the Greeks. "The Labrusca, or wild Vine of the ancients," remarks Martyn, "did not probably dif-

fer specifically from that which was cultivated. Pliny informs us that the grapes of the Labrusca were gathered before the flowers were gone off, dried in the shade upon linen cloths, and laid up in casks; that the best sort came from Pa-sapautia, the next from Antioch and Laodicea, and the third from the mountains of Media; that this last was the finest for medical uses; that some, however, preferred the kind which grew in Cyprus; that the African sort was used only in medicine, and was called mas-

saris, and that the white was better than the black, as described by the Pliny. Thucydes, in the sixth book, tells us that the Labrusca is called by the Greeks ampelos agría; that it has thick and whitish leaves, is jointed, has a chopped bark, and bears red ber-

ries. From these and other authorities, we may venture to affirm that the Labrusca is a real vine, running wild, without any culture." (Vid. Ar-

trio.)

LACERNA. (μαυδόν, μαυδόν) was a cloak worn by the Romans over the toga, whence it is called by Juvenal "munimentum toge." It differed from the paenula in being an open garment like the Greek pallium, and fastened on the right shoulder by means of a buckle (fiba), whereas the paenula was what is called a vestimentum clausum, with an open-

ing for the head. (Pav. Epit., 1, 136, note 1.) The Lacerna appears to have been commonly used in the army, but in the time of Cicero was not usually worn in the city. It soon appeared, however, became quite common at Rome, as we learn from Suetoni-

LADANUM.

us, who says that Augustus, seeing one day a great number of citizens before his tribunal dressed in the lacesa, which was commonly of a dark colour (pullarum), repeated with indignation the line of Virgil,

"Romano rerum dominos, gentemque togatam,"

gave orders that the ediles should henceforth allow no one to be in the Forum or circus in that dress.

Most persons seem to have carried a lacerum or pellum with them when they attended the public games, to protect them from the rays of the sun or rain; and thus we are told that the equites used to stand up at the entrance of Claudiunus, and lay aside their laceras.

The lacerca was usually, as already remarked, of a dark colour (fusci coloris), and was frequently made of the dark wool of the Bactric sheep (Baticum lacerce). It was, however, sometimes dyed with the Tyrian purple and with other colours. The laceras of the lacer of the former kind, which cost as much as 10,000 sesterces. When the emperor was expected at the public games, it was the practice to wear white laceras only.

The lacerca was sometimes thrown over the head for the purpose of concealment; but a cucullus or cowl was generally used for that purpose, which appears to have been frequently attached to the lacerus and have formed part of the dress.

(Vid. Cic., Fin., 7, 21.)—A LACERTA, the Lizard. (Vid. ASCARABOTES and SAURA.)

LACIUM, the angular extremities of the toga, one of which was brought round over the left shoulder. It was generally tucked into the girdle, but sometimes was allowed to hang down loose. Plautus frequently speaks of a pocket-handkerchief (At tu escopul sune laciniam atque abstinence sodore tubi: Velleius Paterculus represents Scipio Nasica as wrapping the lacinia of his toga round his left arm for a shield before he rushed upon Tiberius Gracchus; while, according to Servius, the cinetus ganibus was formed by girding the toga tight round the body by one of its laciniae, or loose ends. These expressions are quite reconcilable with the opinion of Ferrarius and others, that the lacinia was the lower border or skirt of the toga, while all the passages adduced by them admit of easy explanation according to the above view. The lacinia was undoubtedly permitted by some to sweep the ground, especially by such as wore their garments loosely. The lacinia also of Marcus I. remarks upon one of Cicero's Witticisms, "Jocatus in Cassarea quis ia praecisingatur, ut trahendo laciniam velut mollis incederet," which corresponds with the well-known caution of Sulla addressed to Pomp., "Cum tibi illum puerum male praecinctum;" and Suetonius tells how the Emperor Caius, being filled with jealousy on account of the plaudits lavished on a gladiator, hurled out of the theatre in such haste, "quando secus celeri mittens, celeri trahens," that it was a long time before the toga was straightened. Moreover, the secondary and figurative meanings of the word, namely, a rag, a piece of land, the point of a leaf, the excrescence: which hang down from the neck of a she-goat, accord perfectly with the idea of the angular extremity of a piece of cloth, but can scarcely be connected naturally with the notion of a border or skirt.

The corresponding Greek term was κράτυσκον, and perhaps πτερύγιον (Pollux considers this syn-

tonomous); and, accordingly, Plutarch and App. employ the former in narrating the story of Scipio alius to above, with this difference, however, that they describe him as throwing τὸ κρατύουν τὸν ιστριον αὐτῷ ἄνωθεν instead of turning it round his arm.

LACO/NICUM. (Vid. BATHS, pages 146, 150.)

LACTARIUS. (Vid. PISTOL.)—A LACTICA (φιδία), Lettuce. According to Pliny, the Greeks made three species of this plant, one with a broad stem (laticulius), another with a round stem (rotundanicus), and the third termed Laciconium, in Latin sessile. The stem of the first kind was so broad, that, as we are informed by the same authority, who copies from this Theophrastus, the gates of kitchen-gardens (ostica solida) were wont to be made of them. The variety of lettuce at the present day, offers a stem of such size as this. The second kind, namely, with a round stem, cannot be cited as a distinct variety, since every species of lettuce with which we are acquainted has a stem of this kind. The third kind, or Lacomium, obtained its Latin name from its having hardly any stem, and being, therefore, as it were, seated on the ground. Billerbeck considers one of these to be the Head Lettuce (kephale). Another Greek name for this kind is χαλινοίος. The ancients also distinguished between different kinds of lettuce by their colour and times of sowing. Thus the kind called nigre (dark green Summer Endive) was sown in January; the white, or alba, in March; the rubetens in April, &c. They had also the Cappadocian, the Greek, and many other species. The Romans named the Cappadocian Lettuce the epinor by the ancients, and were acquainted with the narcotic properties of the lettuce. Galen informs us that he frequently found good effects resulting from its use, and Dioscorides recommends both the domesticated and the wild kinds with the same view. The calming effects of the juice of the cultivated lettuce is acknowledged also by modern practitioners. A writer quoted by Athenæus ascribes to the Lettuce anti-aphrodisiacal properties. It was also believed, from its absorbing little nourishment, to be a very good article of food for the sick and those who required a low diet. We have given at the head of this article the Greek term φιδία, as corresponding to the Latin Lettuce, but φιδίακις and φιδιάκις were also employed. According to Nicander, the Lettuce, under the leaves of which Adonis was concealed, when he was slain by the boar, was called by the inhabitants of Cyprus Bmethis. According to Adams, the φιδίακις of Dioscorides would seem to be the Lactua sativa, or Garden Lettuce. The φιδίακις υγρα is held by Sprengel to be the Lactea virens. So, again, with regard to the term φιδίακις, Stockacke acknowledges this also to be the Lactea sativa. Schieler observes that the ancients who refer the φιδίακις and φιδιάκις to the Lactea, do not seem to have distinguished correctly, the φιδίακις being rather referable to the Cichorium endivia. I have been unable, however, to discover upon what ground he founds this opinion.

LACUNA. (Vid. HOLE, Roman p. 520.)

LADANUM (λαδανος).—All agree, remarks Adams, that this is a Greek word with the meaning that is, Lactoeleuthria C. ladanifera. It is a soft resin, still much used by the Grecoian ladies as a perfume, and is now procured from the tree by scraping it with leatner thongs. Anciently, it

LAGOS THALATTOS

LAGAPHEPHORIA.

1. LAMPADEPHORIA. a is the name given to the genus Lampaedia, and one of the main species of this genus is Lampaedia pyrus. The name is derived from the Greek lampaedia, which means "fire-lamp." The plant is a small shrub with globular leaves and a woody stem. The flowers are small and white, and the fruit is a small berry. The plant is found in the Mediterranean region, particularly in Italy and Greece.

II. A fish of a very different kind from the preceding. Schneider supposes it to be one of the species of the Diodon or Tetraodon.1

1. LAMPADEPHORIA (Lampadophoria), torch-bearing (as Herodotus calls it), or lampadophoria, torch-bearers (as some lexicographers), also lampadophorous, lampadophorous, and often simply lampas, was a game common, no doubt, throughout Greece; for though all we know concerning it belongs to Athens, yet we hear of it at Corinth, Pergamum, and Zerinthus, and a comic play, called "The Lampas," is preserved.2 It was copied below, the legend "lampas" is used.

At Athens we know of five celebrations of this game: one to Prometheus at the Prometheia,4 a second to Athena at the Panathenea5 (probably the greater Panathenea); a third to Hephaistos at the Hephaisteia6 (the ceremony at the Apatouria was different);7 a fourth to Pan;8 a fifth to the Thraconian Artemis or Bendis.9 The three former are of unknown antiquity; the fourth was introduced soon after the battle of Marathon, the last in the time of Socrates.

The race was usually run on foot, horses being first used in the time of Socrates;10 sometimes, also, at night.11 The preparation for it was a principal branch of the gymnasia, so much so, indeed, in later times, that the gymnasia seems to have been pretty much equivalent to the gymnasia.12 The gymnasiarch had to provide the lampas, which was a candlestick with a kind of shield set at the bottom of the socket, so as to shelter the flame of the candle, as is seen in the following woodcut, taken from a coin of Athens.13 With the second, the seed had also to provide for the training of the runners, which was of no slight consequence, for the race was evidently a severe one,14 with other expenses, which, on the whole, were very high, so that Isaeus15 classes this office with the choregias and the synodes, and reckons that it had cost him 12 minae. The discharge of this office was called gymnasiarche lambaion,16 so in tales làmpas was gymnasiarches.17 The victorious gymnasiarch presented his lampas as a votive offering (inopíthos).18

As to the manner of the lamphoria, there are some things difficult to understand. The case stands thus. We have two accounts, which seem contradictory. First, it is represented as a course, in which a lampas was carried from one point to another by a chain of runners, each of whom formed a successive link. The first, after running a certain distance, handed it on in like manner to the third, and so on, till it reached the point proposed. Hence the game is used by Herodotus19 as a comparison whereby to illustrate the Persian ágygarón, by Plato20 as a lively
LAMPADEPHORIA. 

The image of successive generations of men, as also in the well-known line of Lucrètes,1

"Et quasi curseos vitat lampada iridem.

And it is said that the art consisted in the several runners carrying the torch unexhausted through their respective distances, those who let it go out losing all share of honour. Now, if these were all, such explanation might content us. But, secondly, we are plainly told that it was an ágyw; the runners are said ámmássau; a some are said to have won (μικρά λαμπών); the scholar on Aristoph., Ran.,4 talks of τών ἱστών τρέχοντα, which shows that it must have been a race between a number of persons, not an individual play5 speak of ῥήμα, τοίς ῥήματοι, τοῖς τρέχοντος, which shows that a number must have started at once.

This second account implies competition. But in a chain of runners, each of whom handed the torch to the next man successively, where could the competition be? One runner might be said to lose—he who let the torch go out; but who could be said to win? We offer the following hypothesis in answer to this question. Suppose that there were several chains of runners, each of which had to carry the torch the given distance. Then both conditions would be fulfilled. The torch would be handed along each chain, which would answer to the first condition of successively delivery. That chain in which it travelled most quickly and soonest reached its destination would be the winner, which would answer to the second condition, its being a race between competitors.

In confirmation of this hypothesis, we observe as follows: The inscription in Böckh, No. 245, consists of the following lines:

λαμπότα νεκράς ςῶν ψώφων τῆς ἰ νεκρήλικα
Εὐτυχίδος τοῖς ὧν Εὐτυχίδος Ἀμανιτες.

This Eutychides was no doubt the gymnasiarch who won with the ξιφίτων he had trained, just as Andocides'7 talks of his νεκρικρήκει αὐτοὶ as a gymnasiarch; so, too, Inscr. No. 250 records a like victory of the tribe Cerecops. Now we know that the gymnasiarchs were chosen one from each tribe. If the gymnasiarch, a chieftain or a craftsman, there would have been ten (in later times twelve) chains of runners. Perhaps, however, the gymnasiarchs were not all called on to perform this service, but each once only in the year, which would allow us for each of the three greater celebrations (the Prometheia, Panathenæa, and Hephæstia) three or four chains of competitors. It may be here remarked, that Inscr. No. 244 gives the record of one of these κόσμων τῆς λαμπότα, the winners in the torch-race, fourteen in number. Who were these? If the several links of the winning chain, it is rather against analogy that they should be named. No one ever heard the names of a chorus: yet they can hardly be fourteen winning gymnasiarchs.

The origin of these games must be sought, we think, in the worship of the Titan Prometheus. The action of carrying an unexhausted light from the flame consecrated to the Acropolis is a lively symbol of the benefit conferred by the Titan upon man, when he bore fire from the habitations of the gods and bestowed it upon man.

But the gratitude to the giver of fire soon passed the Olympian gods who presided over its use; H paistos, who taught men to apply it to the mealt and moulding of metal, and Athena, who carried through the whole circle of useful and ornamental arts. To these three gods, then, were these games first devoted, as the patrons of fire. And lasting, if it was true in the Homeric hymns, Potters' quart—we are much inclined to ad Weleker's suggestion,8 viz. that the fire was given or pots which instituted the lampadophoria. Athena (as we learn from the Kérmais) was their patroness; and who more than would have reason to be thankful for the gift and use of fire! Periy would be one of the first modes in which would be made serviceable in promoting the way of life. In later times the same honour was paid to all gods who were in any way connected with fire, as to Pan, to whom a perpetual fire was kept up in his grotto under the Acropolis, and who in this capacity called by the Greeks Phaneus,9 the Romans Lucidus; so also in this capacity called by the Greeks Phaneus,10 the Romans Lucidus, we have a symbol of the protection of the hearth. The torch, as it was made use of material moulding fire (τῆς τεχνῆς πως τής ἀνάλοιποι) as Άρσελος calls it,8 though this special signification was lost sight of later times. Other writers, in their anxiety to give a common signification for all the times and modes of the lampadophoria, have endeavoured to prove that all who were honoured by it were connected with the heavenly body; i.e., lampas, as Ciceron11 and others; that it always had a more significant, alluding to the inward fire by which Prometheus put life into man (so Brinseet). In this legend of Prometheus was a later interpretation of the earlier one, as may be seen by comparing Plat. Protag., p. 321, D, with Hesiod, Theog., 565, 1. LAMPS. (Vid. LAMPADEPHORIA.)

"LAMPSANE, a plant mentioned by Dioscor., and by which most of the commoner plants take for the Sinapi arvensis. Springle, however, joins Columna in preferring Raphanus raphanistrum Adams will not decide between the two. Both plants get the English name of Charlock."

LANCEA. (Vid. HARTA, p. 488.)

LANYSTA. (Vid. GLADIATORIUM, p. 473.)

LANX, sim. LANCULA, a large dish, made silver or some other metal, and sometimes embellished, used at splendid entertainments to hold me or fruit12 (vid. CIENCE, p. 275), and consequently sacrifices13 and funeral banquets.14 (Vid. FINE page 462.) The silver dishes used by the Romans at their grand dinners were of vast size, so that boar, for example, might be brought whole to table. They often weighed from 100 to 500 pounds.15

LAPATHUM (λαπαθόν), a kind of Sorrel, Meli Rhubarb, or Dock. The five species described

566
Dioscorides is thus arranged by Sprengel, who in this, as Adams remarks, closely follows Buxhin-1. The ἔρεσσανον is the Rumes acuta; the 2d, the ἐρέσσα, 3d, the ὁλυμπουσσανον, and the 4th, the R. acetosa; and the 5th, the R. hydrolapathum, Huds. The Dock is named Rumes by Pliny, and Paratella by Macer. The Lapathum of Celsus, according to Adams, is not well defined, and Dr. Miligan refers it, as the same authority, remarks, to seven species of Rumex, in a very fanci-2.ful manner in which it was solemnized during the time of the Roman Em-3.pire is described by Pausanias. On the approach of the festival, the Pataeans placed in a circle, around the altar of the goddess, large pieces of green wood, each being sixteen yards in length, within the altar they placed dry wood. They then for-4.med an approach to the altar in the shape of steps, which were slightly covered with earth. On the first day of the festival a most magnificent pro-5.cession went to the Temple of Artemis, and at the end of it there followed a maidens who had to perform the worship by carrying the torches that they had thrown in a chariot drawn by stags. On the second day the goddess was honoured with numerous sacri-6.fices, offered by the state as well as by private in-7.dividuals. These sacrifices consisted of catabale birds, boars, stages, goats, sometimes of the cubs of wolves and bears, and sometimes of the old animals them-8.selves; and these animals were thrown upon the altar alive at the moment when the dry wood was set on fire. Pausanias says that he often saw a bear, or some other of the animals, when seized by the flames, leap from the altar and escape across the barricado of green wood. Those persons who had thrown them upon the altar caught the devoted vicims again, and threw them back into the flames. The Pataeans did not remember that a person had ever been injured by any of the animals on this occasion. LAPIS SPECULARIS. (Vid. House, Roman, p. 521.) L’AQUEAR. (Vid. House, Roman, p. 520.) L’AQUATORIUM. (Vid. Gladiators, p. 476.) LARA’RIUM was a place in the inner part of a Roman house, which was dedicated to the Lares, and in which their images were kept and wor-9.shipped. It seems to have been customary for re-10ligious Romans in the morning, immediately after they rose, to perform their prayers in the lararium. This custom is at least said to have been observed by the Emperor Alexander Severus, who had his images were sometimes of gold, is stated by Sue-11.tonius. We do not know whether it was custom-12.aroy to have more than one lararium in a house, or whether the case of Alexander Severus is merely to be looked upon as an exception. LARENTIA, sometimes written LARENTI-13.A and LAURENTIA, was a Roman festi-14.val in honour of Acca Larentia, the wife of Faustus, and the nurse of Romulus and Remus. It was celebrated in December, on the 10th before the calends of January. The sacrifice in this festival was performed in the Velabrum at the place which led into the Nova Via, which was outside of the old city, not far from the Porta Romanna. At this festival Acca Larentia was said to have been born. This festival appears not to have been confined to Acca Larentia, but to have been sacred to all the Lares. LARGITTO. (Vid. Amittus.) LARNAKES. (Vid. Pennis, p. 456.) *LARUS (λαρος), a species of Bird, generally re-15.garded as the Guil or Scæwam, the Larus canus, L. Some of its characters, however, as given by Ari-16.stotle, agree better with the L. parasiticus or L. marinus. "The poet Lycochon uses the word ψαῦς for λαρος. Tzetzes says that he calls an old man by this name, because in old age the hair be-17 comes hoary, like the feathers of the Seawam." *LATAX (λαταξ), the Otter. (Vid. Enhydrus.) LATER, dim. LATEROULUS (λατερούλος, dim. λατερός, &lt; λατός, a Brick. Besides the Greeks and Romans, other ancient nations employed brick for building to a great extent, especially the Babylonians and Egyptians. In the latter country, a painting on the walls of a tomb at Thebes exhibits slaves, in one part employed in procuring water, in mixing, tempering, and carrying the clay, or in turning the bricks in the moulds (vid. Fieschi, De Re Rustica), and arranging them in order on the ground to be dried by the sun, and in another part carrying the dried bricks by means of the yoke (vid. Asilata) to be used in building. In the annexed woodcut we see a man with three bricks suspended from each end of the yoke, and beside him another who returns with having deposited his load.

These figures are selected from the above-mentioned painting, being, in fact, original portraits of two Λεγοντας πυλοφόρους, girt with linen round the loins in exact accordance with the description given of them by Aristophanes, who at the same time alludes to all the operations in the process of brick-making, 1. The Latis (λατης), which is a foot broad, 15 feet long; the tetradoron, which was four palms square; and the pentadoron, which was five palms square. They used them smaller

LATERNA. 

LATINITAS.

We learn from Martial's epigrams that bladder was used for lanterns as well as horn. Some centuries later glass was also substituted. The most transparent horn lanterns were brought from Carthage. When the lantern was required, the lamp was lighted and placed within it. It was carried by a slave, who was called the lanternarius. When a lantern was not at hand, a basket (spongicium), as a cheaper and commoner utensil, was taken to hold the lamp.

Lanterns were much employed in military operations; and not only the common kind, but the dark lantern, which was square, with a white skin on the side next to the bearer, enabling him to see, and with black skins on the three other sides.

Laticla/vii. (Vid. CLAVUS, p. 264.)

LATINNE FERLE. (Vid. FEREK, p. 436.)

LATINITAS, LATIUM, JUS LATII (τὸ καλουθένον Δατσίον). All these expressions are used to signify a certain status intermediate between that of cives and peregrini. The word "Latinitas" occurs in Cicero. Before the passing of the lex Julia de Civitate, the above expressions denoted a certain nationality, and, as part of it, a certain legal status with reference to Rome; but after the passing of that lex, these expressions denoted only a certain status, and had no reference to any national distinction. About the year B.C. 69, a lex Pompea gave the jus Latii to all the Transpadani, and, consequently, the privilege of obtaining the Roman citizenship by having filled a magistratus in their own cities. To denote the status of these Transpadani, the word Latinitas was used, which, since the passing of the lex Julia, had lost its proper significance; and this was the origin of that Latinitas which thenceforth existed to the time of Justinian. This new Latinitas, or jus Latii, was given to whole towns and countries; as, for instance, by Vespasian to the whole of Spain, and to certain Alpine tribes (Latio dotati).

This new Latinitas was given not only to towns already existing, but to towns which were founded subsequently to the lex Pompea, as Latinae Colonic; for instance, Novum-Cumum, which was founded B.C. 59 by Cesar. Several Latin towns of this class are mentioned by Pliny, especially in Spain.

Though the origin of this Latinitas, which makes so prominent a figure in the Roman jurisprudence, is certain, it is not certain wherein it differed from that
LATRUNCUL.

Latinitas which was the characteristic of the Latin before the passing of the Julia lex. It is, however, clear that all the old Latin had not the same rights with respect to Rome, and that they could acquire the civitas on easier terms than those by which the new Latinitas was acquired. Accordingly, the rights of the new old Latin might be designated term majus Latium, and those of the new Latini by the term minus Latium, according to Niebuhr's ingenious emendation of Gaius. The majus Latium might be considered to be equivalent to the Latium antiquum and vetus of Pliny; for Pliny, in describing the towns of Spain, always describes the proper names of the towns as existing in an eighth mode, while he describes other towns as consisting sometimes "Latinorum" simply, and sometimes "Latinarum" or "Latini veteres," from which an opposition between Latini veteres and Latini simply might be inferred.

But a careful examination of Pliny rather leads to the conclusion that his Latini veteres and Latini are the same, and that by these terms he merely designates the Latin coloniae hereafter mentioned. The emendation of Niebuhr is therefore not supported by these passages of Pliny, and though ingenious, it ought, perhaps, to be rejected; not for the reasons assigned by Madvig, which Savigny has answered, but because it does not appear to be consistent with the whole context.

The new Latini had not the connubium, and it is a doubtful question whether the old Latin had it. The new Latini had the commercium, and herein their condition was the same as that of the twelve or eighteen old Latin colonies, which were specially favoured. (Vid. Civitar.)

The Latin colonia, which was given to the Transpadani, was that legal status which the lex Junia Norbana gave to a numerous class of freedmen, hence called Latini Juniani. The date of this lex is not ascertained.

The Latin colonia, which are mentioned by Ulpian, are the inhabitants of towns beyond Italy, to whom the Latinitas was given. These are the towns which Pliny calls "oppida Latinarum veterum," and enumerates with the "oppida civium Romanorum," which were military colonies of Roman citizens. The passages in which the Latini colonia are mentioned as a class then existing, must have been written before Caesar gave the civitas to the whole nation.

These, the most recent views of Savigny on this difficult subject, are contained in the Zeitschrift, vol. ix., Der Roman. Volkschuls der Tafel von Heraclea.

The Latini could acquire the jus Quiritium, according to Ulpian, in the following ways: By the beneficium principale, liberati, militia, navis, sepulchrum, patrimonium; and by a so-called usus consulti it was given to a female wife "quasi sit ter enixa." These various modes of acquiring the civitas are treated in detail by Ulpian, from which, as well as the connexion of this title "De Latiniis" with the first title, which is "De Libertis," it appears that he only treated of the modes in which the civitas might be acquired by those Latini who were liberi. The same remark applies to the observations of Gaius on the same subject (Quibus melius Latini ad civitatem Romanam pervenirent). In speaking of the mode of acquiring the civitas by means of liber, Gaius speaks of a Latinus, that is, a libertus Latinus, marrying a Roman citizen, or a Latina colonia, or a woman of his own condition, from which it is clear that all his remarks under the head of canvus to Liberti Latin; and it also appears that Gaius speaks of the Latin colonia as a class existing in his time. Neither Ulpian nor Gaius says anything on the mode by which a Latinus coloniarius might obtain the civitas Roman.

1.LATOS ( Latitude), the name of a fish mentioned by Strabo and Athenaeus. It would appear to have been some variety of the swordfish, or libel.

LATRUNCULI ( παντοκράτορ, ὑπάτος). Draughts. The invention of a game resembling draughts was attributed by the Greeks to Palamedes, whom they held as one of their greatest benefactors. (Vid. Abacus, § 7.) The game is certainly mentioned by Homer, who represents the authors of Penelope amusing the household with it. Others ascribe the invention to the Egyptian Thoth, and the paintings in Egyptian tombs, which are of a far higher antiquity than any Greek monuments, not unfrequently represent persons employed in this recreation. The painting, from which the accompanying woodcut is taken, is on a papyrus preserved in the Museum of Antiquities at Leydon, and was probably made about 1700 years B.C. It is remarkable that a man is here represented playing alone; whereas, not only in works of Egyptian art, but also on Greek painted vases, we commonly observe two persons playing together. For this purpose there were two sets of men, one set being black, the other white or red. Being intended to represent a miniature combat between two armies, they were called soldiers (militia), foes (hostes), and marauders (latrones, dim. latrunculi); also Calculi, because stones were often employed for the purpose. Sometimes they were made of metal or ivory, glass or earthenware, and they were various and often fanciful in their forms. The object of each player was to get one of his adversary's men between two of his own, in which case he was entitled to the man kept in check, or, as the phrase was, altituras. Some of the men were obliged to be moved in a certain direction (order), and were therefore called ordinarii; others might be moved any way, and were called vaga in this respect the game resembled chess, which is certainly a game of great antiquity.

Seneca calls the board on which the Romans played at draughts, tabula latruncularis. The spa in which the draughts were divided was called manda. The abacus, represented at page 10, is crossed by five lines. As five men were allowed on each side, we may suppose one player to arrange his five men on the lines at the bottom of the abacus, and the other to place his five men on the same lines at the top, and we shall have them disposed according to the accounts of ancient writers, who 1. LECTICA.

Lectica for sick persons and invalids seem like wise to have been in use in Greece and some other Oriental countries.

Besides playing with draughtsmen only, when the game was altogether one of skill, the ancient used dice (vid. Tesser., κυβίον), at the same time, as to combine chance with skill, as we do in backgammon.

LATUS CILAVUS. (Vid. C. Laetus, 2.)

LATO FANCIBRIS. (Vid. Fundus, p. 459.)

LAURENTIA. (Vid. L. Aurelia.)

*Laurus, the Bay-tree. (Vid. Daphne.)

LAVTIA. (Vid. Legatus, p. 575.)

LAVMIÆ, LATOMIÆ, LATOMIÆ, or LATOMIAE (ἰπτυοτροχια or λατοβια, Lat. Lapicidiae), are literally places where stones are cut, or quarries, and in this sense the word lapicida used by the Sicilian Greeks. 4 In particular, however, the name lapicida was given to the public prison of Syracuse. It lay in the steep and almost inaccessible part of the town which was called Epipola, and had been built by Dionysius the tyrant. 5 Cicero, who had undoubtedly seen it himself, describes it as an immense and magnificent work, worthy of kings and tyrants. 6 It was cut to an immense depth, so that the solid rock could have been imagined to be a safer or stronger prison than this, though it had no roof, and thus left the prisoners exposed to the heat of the sun, the rain, and the coldness of the nights. 7 The whole was a stadium in length, and two plethra in width. 8 It was not only used as a prison for Syracuse's criminals, but the Sicilian towns also had their criminals often removed to it. The Tellium at Rome was also sometimes called latomium. (Vid. Caer.)

*LAVER, a plant of the aquatic class, supposed by some to be the Water Parsley, or yellow Water-resses. It is the same with the Stesam. (Vid. Str.)

LECTICA (λεκτικα, λεκτικῶν, or φαραρίων) was a kind of couch or litter, in which persons, in a lying position, were carried from one place to another. They may be divided into two classes, viz., those which were used for carrying the dead, and those which served as conveniences for the living.

The former of these two kinds of lectica (also called lectica funebria, lectica funebris, lectica funebra, lectica funebra, or campum), in which the dead were carried to the grave, seems to have been used among the Greeks and Romans from very early times. In the beauty and costliness of their ornaments these lectica varied according to the rank and circumstances of the deceased. (Vid. Fundus, p. 459.)

The lectica on which the body of Augustus was carried to the grave was made of ivory and gold, and was covered with costly drapery, and of simple and gold. 9 During the latter period of the Empire, public servants (lectarii) were appointed for the purpose of carrying the dead to the grave without any expense to the family to whom the deceased belonged. 10 Representation of lectica funebrae have been found on several sepulchral monuments. The following woodcut represents one from the tombstone of M. Antonius Antii Lupus. 11

From very early times, and their construction probably differed very little from that of a lectica funebra. 2 We also frequently read that generals in their camps, when they had received a severe wound, or when they were suffering from ill health, made use of a lectica to be carried from one place to another. 3

Down to the time of the Gracchi we do not hear that lectica were used at Rome for any other purpose than those mentioned above. The Greeks, however, had been long familiar with a different kind of lectica (ἐλεκτικα or φαραρία) which was introduced among them from Asia, and which was more an article of luxury than anything to which an actual want. It consisted of a bed or mattress, and a pillow to support the head, placed upon a kind of bedstead or couch. It had a roof consisting of the skin of an ox, extending over the couch and resting on four posts. The sides of this lectica were covered with curtains (στείλεια). It appears to have been chiefly used by women, 4 and by men only when they were ill. 5 It was a man without a house, who sometimes in the necessity made use of a lectica, he drew upon himself the censure of his countrymen as a person of effeminate character. 6 But in the time subsequent to the Macedonian conquests in Asia, lectica were not only more generally used in Greece, but were also more magnificently adorned. 7 The persons or slaves who carried their masters or mistresses in a lectica were called φαραριοφόροι, and their number was generally two or three.

When this kind of lectica was introduced among the Romans, it was chiefly used in travelling, and only very seldom in the city of Rome itself. The first trace of such a lectica is in a fragment of a speech of C. Gracchus, quoted by Gellius. 8 From this passage it seemed probable that the mode of luxury was introduced into Italy from Asia, and that at the time scarcely any other lectica than the lectica funebra was known to the country people about Rome. It also appears from this passage that the lectica, there spoke of was covered, otherwise the countryman could not have asked whether they were carrying a dead body. 9 The resemblance of such a lectica used by the Romans, and that which is received from Asia is manifest from the words of Martial. 10 "lectica tuta pelle veloque." 11 It had a roof, consisting of a large piece of skin or leather expanded over it and supported by four posts, and the sides also were covered with curtains (vela, plaga, or plagula). During the time of the Empire, how-

1. (Cic. De Or., i., 50.—Quintili, xii., 2.—Ovid, Art. Amat., ii., 203.—2. (Niebuhr, Reisebesch. nach Athenien, i., p. 172.)
ever, the curtains were not thought a sufficient pro-
tection for a lectica; and, consequently, we find
that lectica, used by men as well as women, were
dressed, if not actually worn, of a bright
stone (lapis specularis), whence Juvenal calls such
a lectica an antrum clausum latis specularibus. We
sometimes find mention of a lectica aperta, 3 but we
have no reason to suppose that in this case it had
no roof, for the adjective aperta probably means no-
thing more than that the curtains were removed,
If, either temporarily or for a special occasion. It
handbook of the lec
tistica of an oblong form, and the person con-
veyed in it lay on a bed (pulvinum), and the head
was supported by a pillow, so that he might read
and write in it with ease. To what extent the luxury
of having a soft and pleasant bed in a lectica was
carried, as early as the time of Cicero, may be seen
from one of his orations against Verres. Feath-
erybeds seem to have been very common. 5 The
framework, as well as the other apparatuses,
were, with wealthy persons, probably of the most
costly description. The lectica, when standing,
rested on four feet, generally made of wood. Per-
sons were carried in a lectica by slaves (lecticarii)
by means of poles (asseves) attached to it, but not
fixed, so that they might easily be removed when
necessary. 6 There can be no doubt that the asses
rested on the shoulders of the lecticarii, and not
on thongs which passed round the necks of these
slaves and hung down from their shoulders, as some
modern writers have thought. 7 The act of taking
the lectica upon the shoulders was called succolare, 8
and the persons who were carried in this manner
were called succuli. 9 From this passage we also
learn that the name lecticarii was sometimes incor-
rectly applied to those slaves who carried a person
in a sella or sedan-chair. The number of lecticarii
employed in carrying one lectica varied according to
its size, and the display of wealth which a person
might wish to make. The ordinary number was
probably two; 10 but it varied from two to eight,
and the lectica is called hexaphoron or octophoron,
accordingly as it was carried by six or eight persons.
11 Wealthy Romans kept certain slaves solely as their
lecticarii; 12 and for this purpose they generally se-
lected the tallest, strongest, and most handsome
men, and had them always well dressed. In the
time of Martial it seems to have been customary
for the lecticarii to wear beautiful red liveries.
The lectica was generally preceded by a slave called
antemabulo, whose office was to make room for it. 13

Shortly after the introduction of these lectica
among the Romans, and during the latter period of
the Republic, they appear to have been very com-
mon, though they were chiefly used in journeys, and
in the city of Rome itself only by ladies and sla-
" But the love of this, as well as of other kinds
of luxury, increased so rapidly, that J. Caesar thought
it necessary to restrain the use of lectica, and to
confine the privilege of using them to certain per-
sons of a certain age, and to certain days of the
year. 14

In the reign of Claudius we find that the privilege
of using a lectica in the city was still a great dis-
tinction, which was only granted by the emperor to
his especial favourites. 15 But what until then had
been a privilege, became gradually a right assumed
by all, and every wealthy Roman kept one or more
lectica, with the requisite number of lecticarii. The
Empire of Domitian, however, includes the prohibi-
tion of the use of lectica. 16 Entering individuals
gradually began to form companies (corpus le-
ticarium), and to establish public lectica, which
had their stands (castra lecticarium) in the regio
Transitberina, and probably in other parts also,
where any one might take a lectica on hire. 2 The
persons of whom these companies consisted were
probably the lower orders or freedmen. 3

The lec
tica of which we have hitherto spoken were all portable, i. e., they were constructed in such
a manner that the assers might easily be fastened
to them whenever it was necessary to carry a per-
son in them from one place to another. But
that name lectica, or, rather, the diminutive lectula,
was also sometimes applied to a kind of sofa, which
was not moved out of the house. On it the Ro-
mans frequently reclined for the purpose of reading
or writing, for the ancients, when writing, seldom
sat at a table as we do, but generally reclined on a
couch; in this posture they raised one knee, and,
upon it they placed the parchment or tablet on
which they wrote. From this kind of occupation
the sofa was called lectulae lucubraria, 4 or, more
commonly, lectules. 5

LECTICARII. (Vid.LECTICA.)

LECTISTERNIUM. Sacrifices being of the
ature of feasts, the Greeks and Romans, on occasion
of extraordinary solemnities, placed images of the
gods reclining on couches, with tables and viands
before them, as if they were there partaking of the
things offered in sacrifice. This ceremony was
called a lectisternium. Three specimens of the
coaches employed for the purpose are in the Glyp-
toteck at Munich. The woodcut here introduced
exhibits one of them, which is represented with a
cushion covered by a cloth hanging in ample folds
down one side. This beautiful pulvinus 6 is wrought
altogether in white marble, and is somewhat more
than two feet in height. At the Eupulum Josia,
which was the most noted lectisternium at Rome,
and which was celebrated in the Capitol, the
statue of Jupiter was laid in a reclining posture on a
couch, while those of Juno and Minerva were seated
on couches. M. Varro says that this display was
indicated in allusion to the ancient custom, according
to which only men reclined, and women sat at table. 7
(Vid. Cæs., p. 276.) Nevertheless, it is probable
that at a later period both gods and goddesses were
represented in the same position: at least four of
them, viz., Jupiter Serapis and Juno or Isis, togeth-
er with Apollo and Diana, are so exhibited with a
table near them, on which is carved a grain camp
engraved by Bartoli. 8 Livy 9 gives account of a

very splendid lectisternium, which he asserts to have been the origin of the practice.

**LECTUS.** (λέκτος, κλίνω, ενθάλτης), a Bed. In the heroic ages of Greek beds were very simple; the bedsteads, however, are sometimes represented as ornamented (τριγώνω, λέγοντας). The principal parts of a bed were the χαλίνα and ἱγεῖα; the former, were a kind of thick woollen cloak, sometimes coloured, which was in bad weather worn by men over their χιτῶν, and was sometimes spread over a chair to render the seat soft. That these χαλίναι served as blankets for persons in their sleep, is seen from Ὀδυς., xiv. 488, 500, 504, 513, 699; xx. 11. The ἱγεῖαι, on the other hand, were probably a softer and more costly kind of woollen cloth, and were used chiefly by persons of high rank. They were, like the χαλίναι, sometimes used to cover the seat of chairs when persons wanted to sit down. 2 To render this thick woollen stuff less disagreeable, a linen cloth was sometimes spread over it. 4 It has sometimes been supposed that the χαλίναι were bolster or pillows, but this opinion seems to be refuted by the circumstance that, in Ὀδυς., vi., 38, they are described as being washed, without anything being said as to any operation which would have necessarily preceded the washing had they been pillows. Beyond this supposition respecting the ἱγεῖα, we have no traces of pillows or bolsters being used in ancient times. The ἱγεῖαι, however, were used by private persons as well as by persons of high rank, and there were also on the runners (ἐκλεγμον, δάρῳ) of persons of high rank was covered with skins (κέπα), upon which the ἱγεῖαι were placed, and over these linen sheets or carpets were spread; the χαλίναι, lastly, served as a cover or blanket for the sleeper. 5 Poor persons slept on skins or beds of dry herbs spread on the ground. 6 These simple beds, to which, shortly after the Homeric age, a gilded or painted top was added, were used by the poorer classes among the Greeks at all times. Thus the bed of the orator Lycurgus is said to have consisted of one sheepskin (κέπα) and a pillow. 7 But the complete bed (ἐγκώπας of a wealthy Greek in later times generally consisted of the following parts: κλέαν, ἐπίπτων, τείχους or κυβάλων, προσκεφαλίων, and στήλων. The κλέαν is, properly speaking, only the bedstead, and seems to have consisted of posts fitted into one another, and resting upon four feet. At the head part alone there was a board (ἀνάεικλων or ἐπίκλων) to support the pillow and prevent its falling out. Sometimes the ἐπίκλων is wanting. 8 (Compare the first woodcut in page 188.) Sometimes the bedstead was likewise protected by a board, so that in this case a Greek bedstead resembled a modern so-called French bedstead. The κλέαν was generally made of wood, which in quality varied according to the means of the persons for whose use it was destined; for in some cases we find that it was made of solid maple or oak, and in others veneered with a coating of these more expensive woods. At all periods, the bedsteads were not only made of solid ivory or veneered with tortoise-shell, but sometimes had silver feet. 9

The bedstead was provided with girders (πόρσων, ἐπίπτων, κεφάλων), on which the bed or mattress (κλέαν, πεδία, κοτός, καθίζως τείχως) rested; instead of these, however, a box-structure of carved or ticking a mattress was made of linen or woollen cloth, or of leather, and the usual material with which it was filled (τὸ εμπλακόμενον πλημμύρων or γνώσιμων) was either wool or dried weeds. At the head part of the bed, and supported by the ἐπίκλων, lay a round pillow (προσκεφαλίων) to support the head; and in some ancient pictures two other square pillows are seen, which were intended to support the back. The covers of such pillows are striped in several pictures on ancient vases (see the woodcut page 336), and were therefore probably of various colours. They were undoubtedly filled with the same materials as the beds and mattresses.

The bed-covers, which may be termed blankets or counterpanes, were called by a variety of names, such as περιστρωμάτω, ἔμπροσθωμάτω, ἐπιστρωμάτω, ἔφεστραδιότ, χαλίναι, ἀντιτραμβάς, ἑπετείλημα, ὑκτάδες, χιλιόπεδες, ἑωτόμια, χρυσοστάτα, τάππες, or ἀμφιπτάτες. The common name, however, was στρῶματα. They were generally made of cloth, which was very thick and woolly either on one or on both sides. 1 It is not always easy to distinguish whether the ancients, when speaking of κλέαν, mean beds in our sense of the word, or the couches on which they lay at meal-times. We consequently do not know whether the descriptive epithets of κλέαν, enumerated by Pollux, belong to beds or to couches. But this matters little, as there was scarcely any difference between the beds of the ancients and the sofas of the moderns. The former, and latter, being made for appearance as well as for comfort, were, on the whole, undoubtedly more splendid and costly than the former. Considering, however, that bedsteads were often made of the most costly materials, we may reasonably infer that the coverings and other ornaments of beds were little inferior to those of couches. Notwithstanding the important part the bedstead held in ancient Greece, the bedsteads of the Greeks, and the bedsteads of the Asiatics, who have at all times excelled the Europeans in these kinds of luxuries, said that the Greeks did not understand how to make a comfortable bed. 2 The places most celebrated for the manufacture of splendid bed-covers were Miletus, Corinith, and Carthage. 3 It appears that the Greeks, though they wore nightgowns, did not simply cover themselves with the στρῶματα, but wrapped something around them in addition. Less wealthy persons continued, according to the ancient custom, to use skins of sheep and other animals, especially in winter, as blankets. 4 The bedsteads of the poorer classes are designated by the names κλέαν, ἐπιστρωμάτω, κότες, καθίζως τείχως, and ἔφεστραδας, and an exaggerated description of such a bed is given by Aristophanes. 5 The words χαλίνη and χαλινία, which originally signified cushions or dry herbs made on the ground, were afterward applied to a bed which was only near the ground, to distinguish it from the κλέαν, which was generally a high bedstead. The χαλίνη was the usual bed for slaves, soldiers in the field, and poor citizens, and the mattresses used in them were mere matted straws, or rushes. The beds of the Romans (lecti cubiculares) in the earlier periods of the Republic were probably of the same description as those used in Greece; but towards the end of the Republic and during the Empire, when Asiatic luxuries were imported into Italy, the richness and magnificence of the beds of the wealthy Romans far surpassed everything we find described in the earlier periods. The bedstead was generally rather high, so that persons entered the bed by a ladder or steps (ἀναίσθον, ἀναγεγεγράμμαται) by means of steps placed beside it.

572
LEGATUM.

(Legebatum). It was sometimes made of metal, and sometimes of costly kinds of wood, or veneered with tortoise-shell or ivory; its feet (fulere) were frequently of silver or gold. The bed or mattress (cuccia and torus) rested upon girders or strings (testes, fasciae, instilae, or funes) which connected the two horizontal side-posts of the bed. In beds destined for two persons, the bunks are distinguished by different names; the side at which persons entered was open, and bore the name sponda; the other side, which was protected by a board, was called planice. The two sides of such a bed are also distinguished by the names torus exterior and torus interior, or sponda exterior and sponda interior; and from these expressions it is not improbable that the names torus and planice were borrowed from the sides of their foundations for each person. Mattresses were in the earlier times filled with dry herbs or straw, and such beds continued to be used by the poor. But in subsequent times, wool, and, at a still later period, feathers, were used for the wealthier for the beds as well as the pillows. The cloth or ticking (openi- murum or inriveni) with which the beds or mattresses were covered was called filo, torale, litineum, or segresta. The blankets or counterpanes (nestes stragula, stragula, peristromata, peristrepesme- ta) were in the houses of wealthy Romans of the most costly description, and generally of a purple colour (stragula conchylia tincta, peristromata conchylia, coccina stragula), and embroidered with beautiful figures in gold. Covers of this sort were called peristrepesmatum Attalica, because they were said to have been first used at the court of Attalus II. The pillows were likewise covered with magnificent casings. Whether the ancients had curtains to their beds is not mentioned anywhere; but as curtains, or, rather, a kind of canopy (galaia), were used, it is probable that they were employed in preventing the dust falling upon the persons lying on it, it is not improbable that the same or a similar contrivance was used in the couches cubiculares.

The lectus genialis or adversus was the bridal bed, which stood in the atrium, opposite the janus, whence it derived the epithet adversus. Compare Horat. C. 2. v. 297. It was generally high, with steps by its side and in later times beautifully adorned. Respecting the lectus funebres, see the articles FUNUS and LECTIC. An account of the disposition of the couches used at entertainments, and of the place which each guest occupied, is given under this head.

LICUITH (ΣΩΘΩΒ). (Vid. Funus, p. 456.)

LEGATIA LIBERA. (Vid. Lexatus, p. 576.)

LEGATUM, A Legacy, is variously defined by the Roman jurists, but there can be no exact definition except reference be made to a hered. Unless there is a hered in this genus, no legacy can be given. A legacy, then, is a part of the heredi- tates or the movables of the testator (ab herede); that is, it is a gift to a personal heir of that whole (universum) which is diminished to the hered by such gift. Accordingly, the phrase "ab herede legere it becomes intelligible ("ex testamento legat gr. andem pecuniab a filio"). A legacy could not be charged with the payment of a legacy out of what was given to him, a rule of law which was thus expressed: "A legatario legari non po- test." A legacy could only be given in the Latin language.

The word "legatum," from the verb lego, contains the same element as lex. Lexo has the sense of appointing or disposing of a matter, as in the phrase "legatum negotium;" and it is used in the Twelve Tables to express generally a testator's disposition of his property (ui legasst, &c.). Ulpian accordingly explains the word legatum by referring to its etymology, and likening a legacy to a lex, proper thus: legatum is a property of which it is said that it is left by a testament, legitimis modo, that is, im- perative; for those things which are left procativo modo are called fideicommissa. A legatee was named legatarius; those to whom a thing was given jointly (conjunctum) were collegariari. A legacy which was legally valid or good was legatum utile; a void legacy was legatum nullum. A legacy which was given absolutely or unconditionally must be given pure; one which was given conditionally was said to be given sub condicio. The expression purum legatum, an unconditional legacy, also occurs.

Gaius apologizes for treating of legata in that part of his institutional work in which he has placed them. In the first ninety chapters of his book he treats of the acquisition of property in res singulare, to which class legacies belong. But as the matter of legacies is not intelligible without reference to the matter of hereditas or universal acquisition, he places the law of legacies (leges juria ma- teria) immediately after that of hereditas.

There are two kinds of legatees to which a legacy could be left: per vindicationem, per damnationem, siren- di modo, per praepositionem.

A legatum per vindicationem was given in these words: "Hominem stichum do, lego," or the words might be with reference to the legatee. *Capito, nume, nihil habeas." A legacy per vindicationem was a void legacy; it was reference to the legal means by which the legatee asserted his right to the legacy against the heres or any possessor, which was by a vindicatio or an actio in rem; for as soon as the he- reditarius aditio had taken place, the legatee had the quiritarian (ex jure quiritium) ownership of the lega- tory. The two schools raised a question as to this. Whether in such circumstances, the legatee ob- tained the quiritarian ownership of the thing before he had consented to take it. The opinion of the Proculian, who contended for such consent, was confirmed by a constitution of Antoninus Pius. It was consistent with the nature of the per vindicatio, that those things only could be so given in which the testator had quiritarian ownership; and it was only by virtue of the ownership both at the time of making his will and at the time of his death, otherwise the legacy was void (inutilis). But there was an exception in respect of things "que pondere, numero, mensura constant," as wine, oil, corn, and the precious metals in the form of coin (pecusia numerata), in regard to which it was sufficient if the testator had the quiritarian ownership at the time of his death. This was the civil law (jura civile), but it was altered by a senatus consultum of the time of Nero, which enacted that if a testator left n thing as a legacy which had never been his, the legacy should be equally good as if it had been left in the form most

advantageous to the legatee (optima jure), which form was the legatum per damnationem. But if a testator gave a thing of his own by his testament which he afterward alienated, it was the best opinion that the legacy was inutile by the jus civil, and that the senatus consultum did not make it good. If the same thing was given to more than one person, either jointly (conjunctim), so as to make them collegatarii, or severally (disjunctim), each to have the whole share. A legatum was given conjunctim thus: "Titio et Seio hominem stichum do, lego;" disjunctim, thus: "Titio hominem stichum do, lego; Seio eundem hominem do, lego." If one collegatarius failed to take, his portion went to the others. In the case of a conditional legacy left per vindicandam, the schools were divided in opinion: the Sabiniann said that it was the property of the heres during the pendency of the condition; the Procullians said that it was "res nullius." The form of the per damnationem was this: "Heres meus stichum seruam meam dare damnas esto;" but the word esto was equally effective. A thing which belonged to another (alia res) could be thus left, and the heres was bound to procure the thing for the legatee, or to pay him the value of it. A thing not in existence at the death of the testator could not be left to the future product of a female slave (unclis). The legatee did not acquire the quiritian ownership of the legacy by virtue of the hereditatis aditio; the thing still remained the property of the heres, and the legatee could only sue for it by an actio in personam. If it was a thing mancipate, the legatee could only acquire the quiritian ownership of it by the manoeuvre of in jus cessio from the heres: if it was merely delivered, the legatarius only acquired the complete ownership (plessum just) by usucapion. If the same thing was left to two or more conjunctim, each had an equal share; if disjunctim, the heres was bound to give the thing to one, and its value to the rest. In the case of a gift conjunctim, the share of the legatee who failed to take belonged to the hereditates; but the lex Papia made it caduces, and gave it first to a collegatarius who had children, then to the heredes who had children, and then to the other legataries who had children (legatarii), a privilege which Juvenal alludes to (ducile caducum).

The legatum sinendi modo was thus given: "Heres meus damnas esto sineere Lucium Titum hominem stichum 

For the senatus consultum made those legacies valid which were not valid by the jus civil on account of the words of the gift (perborum vitio), but not those legacies which were invalid on account of the incapacity of the legatee (vitio personae), which was the case with a peregrinus. The Sabiniann also maintained that a man could leave in this manner only what he was his own; for the only thing that could be left by legatum was by a judicium fideicommisandi, in which judicium it was necessary that the judex should adjudicate that which was given per praecipitum, and he could adjudicate on nothing else than the res hereditaria. But the same senatus consultum made a legacy valid which was given in this form, even if the thing did not belong to the testator. The Procullians contended that a legacy could be given to an extraneous per praecipitum; and further, that if the thing was the testator's ex juris quiritium, it could be sued for (vindicari) by the legatee, whether he was a heres or not (extraneus); if it was the testator's in bonis, it was a utile legatum to the extraneous by the senatus consultum, and the heres could obtain it in a judicium fideicommisandi. If it did not belong to the testator in either way, and he was an extraneus, it was a case of an extraneous to the heres and the extraneous by the senatus consultum. If the same thing was thus left to more than one either disjunctum or conjunctum, each had only his share.

By the law of the Twelve Tables, a man could dispose of his property as he pleased, and he might exhaust (regera) the whole hereditas by legacies and bequeath the whole to one person, or come to be left the heres nothing. The consequence was, that in such cases the scriptu heredes refused to take the hereditas, and there was, of course, an intestacy. The first legislative measure on this subject was the lex Furia, called Testamentaria, which did not allow a testator to give as a donatio mortis causa or as a legacy more than a thousand asses to one person, certain relative exceptions. But this measure was a failure, for it did not prevent a man from giving as many several thousands to as many persons as he pleased, and so exhausting his estate. The lex Vocinia (B.C. 169) afterward enacted that no person should take by way of legacy or donatio mortis causa more than the heredes (severally, as it seems; but this lex was ineffectual; for, by distributing the hereditas among numerous legataries, the heres might have so small a portion as not to make it worth his while to assume the burdens attached to the hereditas. The lex Falcidia (B.C. 40) at last took away all means of evasion by declaring that a testator should not give more than three fourths in legacies, and thus a fourth was secured to the heres; and "this law," says Gaiss, "is now in force. The senatus consultum Paganum extended the same rule of law to fideicommisandi (vid. Fideicommisam); and the Emperor Antonius Pius applied it to the case of fideicommisam when there was an intestacy. The lex Falcidia applied to the wills of persons who died in captivity (epid hostis), for a previous lex Cornelia had given to the wills of such persons the same force as if they had died cives (in civitate).
LEGA7TJS.

(a) icratile if given in form on the day before the death of the testator, for which rule of law, says Gaius, there seems to be no good reason (praeiosa vito). A legatum could not be left in the way of a penalty; the person who easily ascended (for instance, who expelled the herd to do, or restraining him from doing, any particular act. A legacy could not be left to an uncertain person (incerta persona). The notion of an uncertain person was not of a person who could never be ascertained for, in several of the instances mentioned by Gaius, the person or persons who most easily ascended (for instance, quip post testamentum consules designati erant); but the notion of the uncertainty was referred to the mind of the testator at the time of making his testament. Accordingly, the persona was not considered incerta where he was one of a certain class, such as cossign, though the individual of the class might be uncertain till the event happened be- ing the testator. Such a form of bequest was called a certa demonstratio incertae personas. A legacy could not be left to a postumus alienus, nor could such a person be a heres institutus, for he was an incerta persona. It has been explained elsewhere who is a postumus alienus (Dip. 40); a postumus is one who, when born, cannot be among the sui heredes of the testator.

It was a question whether a legacy could be legally (recte) left to a person who was in the power of another person who was made heres by the same will. The Proculani denied that such a legacy could be left either (recte) or sub insigne. If a person who was in the power of another was made heres, a legacy might be left (ab ole legari) to the person in whose power he was; for if such latter person became heres thereby (per eum), the legacy was extinguished, because a man cannot owe a thing to himself; but if the son was emancipated, or, when the testator had given security, brought to another, and so the son became heres, or so the slave made another person heres, the legacy was due to the father or former master. Not only res singules could be given as a legacy, but also a part of a universitas of things (universal rerum) could be so given; thus the heres might be directed to share a half with another, or to be heres of the estate from which he was called partite. By the jus civile there might be a legacy of a usufructus of those things which were capable of being used and enjoyed without detriment to the things. By a senatus consultum there might be a legacy of the abusus of those things which were consumed in the use, as wine, oil, wheat, but the legatarius had to give security for the restoration of them when his right to the enjoyment ceased. This technical meaning of abusus, that is, the use of things which are consumed in the use, is contrasted with usufructus by Cicero.

A legacy might be transferred to another person, or taken away (adimis) by another will or codicilli contained in one will, or by a will otherwise made, merely as the measure of the gift from the will. Such a revocation of legacies (adempto legatorum) seems to have been only effected in the way mentioned. The expression ademption of legacies in English law has a different meaning, and in the case of a specific thing corresponds to the Roman extinction of legacies, which took place if the testator disposed of the thing in his lifetime.

If a legatee died after the day on which the legatum had become his (post diem legati cedendum), it passed to his heres; or, to use a phrase of English law, the legacy was vested. The phrase "vesed legatums" accordingly means "the time is come at which the legacy belongs to the legatee," though the time may not have come when he is entitled to receive it; and "dicta sedent" denotes the arrival of the day on which, if it can be demonstrated that the legacy was left conditionally, there was no vesting of the condition was fulfilled. By the old law, legacies which were left unconditionally, or from a time named (in diem certum), were vested from the time of the testator's death; but by the lex Papia they vested from the time of opening the will. The leg- acy might vest immediately on the death of the testator, and yet the testator might defer the time of payment. A legacy might also be left on a condition of time only, as a legacy to Titius when or if he should attain the age of fourteen years, in which case the words when and if were considered equivalent, a decision which has been adopted in English law, in cases in which there is nothing in the will which gives the words "when" or "if" a different significance.

LEGA7TJS. Legati may be divided into three classes: 1. Legati or ambassadors sent to Rome by foreign nations; 2. Legati or ambassadors sent from Rome to foreign nations and into the provinces; 3. Ambassadors, who accompanied the Roman generals into the field, or the proconsuls and praetors into the provinces.

1. Foreign legati at Rome, from whatever country they came, had to go to the Temple of Saturn and deposit their names with the quaestors, which Plutarch explains as a remnant of an ancient custom; for the Roman ambassador was considered to have escorted all legati, which were called lautia; and if any ambassador was taken ill at Rome, he was in the care of the quaestors, who, if he died, had also to pay the expenses of his burial from the public treasury. When, afterwarid, the number of foreign ambassadors increased, in proportion as the Roman power was extended, the former hospitable custom was reduced to the mere formality of depositing the name with the keepers of the public treasury.

Previous to their admission into the city, foreign ambassad0rso seem to have been obliged to give notice from what nation they came and for what purpose; for several instances are mentioned in which ambassa- dators were refused admission or were sent away. It is not improbable that this was especially in case of a war between Rome and the state from which they came. In such cases the ambassadors were either not heard at all, and obliged to quit Italy, or an audience was given to them by the senate (senatus legatis datum) outside the city, in the Temple of Bellona. This was evid- ently a sign of mistrust, but the ambassador was nevertheless treated as public guests, and some public villa outside the city was sometimes assigned for their reception. In other cases, however, as soon as the report of the landing of foreign ambassadors on the coast of Italy was brought to Rome, especially if they were persons of great distinction, or as the result of the treaty by which they were admitted, or on the advice of the Roman people, some one of the inferior magistrates, or a legatus of a consul, was despatched by the senate to receive and conduct them to the city at the expense of the Republic. When they were introduced into the city by the praetor or consul, they first explained what they had to communicate, and then the praetor invited the senators to put their questions to the ambassadors. The manner in which this questioning was frequently

1. (Gaius, ii, 225.)—2. (Cic. Legg. ii, 89; Pro Caece. 4.—Ulp. Frag. cit. 24, s. 25.)—3. (Top. 3,—Uebcr das alter des quasi-ruairzet aus Puebla, Rhodische Misc., 1929.)
LEGUMEN.

The provinces, (Liv., Lit., etc.), were sometimes called legati, the original meaning being that of a deputy or agent, a court of justice, than an inquiry made with a view to gain a clear understanding of what was proposed. 1

The whole transaction was carried on by interpreters, and in the Latin language (Vid. Interprets.)

Valerius Maximus states that the Greek rhetorician Molo, a teacher of Cicero, was the first foreigner who ever addressed the Roman senate in his own tongue. After the ambassadors had thus been examined, they were requested to leave the assembly of the senate, who now began to discuss the subject brought before them. The result was communicated to the ambassadors by the praetor. 2

In some cases, ambassadors not only received rich presents on their departure, but were, at the command of the senate, conducted by a magistrate, and at the public expense, to the frontier of Italy, and even farther. 4

By the lex Gabinia it was decreed, that from the first of February to the first of March, the senate should every day give audience to foreign ambassadors. 3

There was at Rome, as Varro expresses it, a place on the right-hand side of the senate-house called Graecostasis, in which foreign ambassadors waited.

All ambassadors, whosoever they came, were considered by the Romans throughout the whole period of the Roman Republic, as being in an inferior situation and capacity, and their number varied according to the greatness or importance of the war, or the extent of the province. 5

The consuls were absent from the army, or when a proconsul left his province, the legati, or one of them, took his place, and then had the insignia as well as the power of his superior. 6 He was in this case called legatus pro praetore, 7 and hence we sometimes read that a man governed a province as legatus, without any mention being made of the proconsul whose vicegerent he was. 8

During the latter period of the Republic, it sometimes happened that a consul carried on a war, or a proconsul governed his province through his legati, while he himself remained at Rome, or conducted some other more urgent affairs.

When the provinces were divided at the time of the Empire (vid. Provincia), those of the Roman people were governed by men who had either been consuls or praetors, and the former were always accompanied by three legati, the latter by one. 9

The provincials, who was himself the proconsul, were governed by persons whom the emperor himself appointed, and who had been consuls or praetors, or were at least senators. These viceregents of the emperor were called legati augusti, or legati Caesaris, and were sometimes called simply legati, and they, like the governors of the provinces populi Romani, had one or three legati as their assistants. 10

During the latter period of the Republic, it had become customary for senators to obtain from the senate the permission to travel through or stay in any province at the expense of the provincials, without having any of his duties to perform. At the time of Cicero, the privilege of legato libera was abused to a very great extent. Cicero, therefore, in his consilium, endeavoured to put an end to it, but, owing to the opposition of a tribe, he only succeeded in limiting the time of its duration to one year. 11

Julius Caesar afterward extended the time during which a senator might avail himself of legato libera to five years, 12 and this law of Caesar (lex Julia) seems to have remained in force down to a very late period. 13

LEGÉS. (Vid. Lex.)

LEGIO. (Vid. Army, Roman.)

LEGIS ACTIO. (Vid. Actio, p. 16.)

LEGIS AQUILLÆ ACTIO. (Vid. Damni Intima Actio.)

LEGUMANA ACTIO. (Vid. Actio, p. 16.)

LEGITIMA HEREDITAS. (Vid. Heres, Romanorum, p. 497, 499.)

*LEGUMEN, a general name among the Romans for Pulse, of which beans were esteemed the principal sort. The term is derived from lego, "to gather," because pulse are gathered by hand, and not reaped. 14

1. (Liv., i. c., with the note of Gronovius.)—2. (J. J. 2, 3, 1.)

All liturgies may be divided into two classes: 1. ordinary or encyclical liturgies (ἐκκλησίας λειτουργίας), and, 2. extraordinary liturgies. The former were called encyclic, because they occurred every year at certain festive seasons, and comprised the χορεία, γυμναστρία, λαυραρκία, ἀρχάρια, and ἐρατία, which are all described in separate articles. (Vid. Chorag. Grec. p. 486, Append.; Theophr., Hist., p. 389.)

Every Athenian who possessed three talents and above was subject to them, and they were undertaken in turns by the members of every tribe who possessed the property qualification just mentioned, unless some one volunteered to undertake a liturgy for another person. But the law did not allow any one to be compelled to undertake a liturgy for himself; for no one, who had in one year performed a liturgy, was free for the next (ἐκατορνοῦ διαλειτουργῶν κτήτωρ ἐκτίτων γεγονός); so that legally a person had to perform a liturgy every other year. Those whose turn it was to undertake any of the ordinary liturgies, were always appointed by their own tribe, or, in other words, by the elected representatives of the citizens and the shared praise as well as blame with its leitourgoi.

The persons who were exempt from all kinds of liturgies were the nine archons, heires, and orphans, until after the commencement of the second year of their coming of age. Sometimes the exemption from liturgies (ἀρεία) was granted to persons for special merits towards the Republic.

The term ἐκκλησίας λειτουργίας, which is used in the text, is the class of liturgies to which the name is properly applied is the trierarchia (τριεράρχια); in earlier times, however, the service in the armies was in reality no more than an extraordinary liturgy. (Vid. Eisch. and Trierarchia.)

In later times, during and after the Peloponnesian war, when the expenses of a liturgy were found too heavy, the Athenians were to find in most cases two persons combined to defray the expenses of a liturgy (συνελείπον). Such was the case with the choragia and the trierarchia.

Liturgies in regard to the persons by whom they were performed were also divided into λειτουργίας πολιτικάς, such as were incumbent upon citizens, and those of a personal nature, in which the liturgies which are mentioned as having been performed by the μέτοικοι, are the choregia at the festival of the Lenaia, and the κτητορία, to which may be added the hydraphoria and ekakidephoria. (Vid. Hydra-

ähoria.)

That liturgies were not peculiar to Athens has been shown by Böckh, for choragia and other liturgies were mentioned at Sinnes; and that they were even before the Persian wars: in Mytilene during the Peloponnesian war; at Thbes in the time of Epanimonidas; at Orchomenos, in Rhodes, and in several towns of Asia Minor.

LEMNIA TERRA (Λέμνιο ἔδαφος). Lemnian earth "There were among the ancients," observes Si John, "two kinds of extraordinary liturgies: one in which the Athenian democracy was at Athens considered as a disgrace, and in some cases a wealthy Athenian, even when it was not his turn, would volunteer to perform a liturgy.

677
LEMNIScus.

Lemniscus and Rubrica Lemnica, or γαλακτίων, λιονείας, the Lemnian Earth and Lemnian Red-Clay. The latter of these was used by painters as it takes on the red color of the former when mixed with linseed oil, cakes, and sealed with great ceremony, and was in very high esteem in medicine. The great occasion of the errors about the Lemnian earth is the mistake of Pliny in confounding them together, as he evidently has done, not distinguishing the medicinal sealed earth of that island from the redde used by painters. The sealed earth was esteemed sacred, and the priests alone were allowed to meddle with it. They mixed it with goat's blood, and made the impression of a seal upon it. The Rubrica Lemnica, on the other hand, was a kind of reddle of firm consistence and deep red colour, dug in the same island, and never made into any form or sealed, but purchased in the rough globes by artificers of many kinds, who used it in colouring. The Lemnian earth was a fat, unctuous clay, of a pale red colour. It is sometimes called Lemnus sigillum. A common Greek name for it is appagik, in allusion to its having been sealed, whence the spiragide of Jameson. The stamp before the time of Diodoricus was the figure of a goat; afterward, in Galen's time, with the image of Diana. Of late years it has been stamped with the seal of the Turkish Empire. It acts as an astringent, but was much more frequently used as a medicine than a reddle for the former days as a medicine than at the present day.  

*LEMNA (Léena), a plant, which Stockhouse conjectures was the Lemna trisulca, but Sprengel the Marsica quadrifolia.*

LEMNISCUS (Λεμνισκός). This word is said to have originally been used only by the Syracusans. It signified a kind of coloured riband, which hung down from the golden rings around the horns of the head. The earliest crowns are said to have consisted of wool, so that we have to conceive the lemnisci as a riband wound about the wool in such a manner that the two ends of the riband, where they met, were allowed to hang down. See the representations of the corona obisdonialis and civica in p. 310, where the lemnisci not only appear as in the above, but also keep the three branches of the crowns together, but also serve as an ornament. From the remark of Servius, it appears that corona adorned with lemnisci were a greater distinction than those without them. This serves to explain an expression of Cicero* (palmra lemnisata), where palmra means a victory, and the epithet lemnisata indicates that the victory was ascribed to infamis, and, at the same time, implies an honourable as well as a lucrative victory. It seems that lemnisci were also worn alone, and without being connected with crowns, especially by ladies, as an ornament for the head. To show honour and admiration for a person, flowers, garlands, and lemnisci were sometimes showered upon him while he walked in public.

A lemniscus was originally to have been made of wool, and afterward of the finest kinds of bast (phia-tyrae); but, during the latter period of the Republic, the wealthy Crassus not only made the foliage or leaves of crowns of thin sheets of gold and silver, but the lemnisci likewise; and P. Claudius Pulcher embellished the metal-lemnisci with works of art in relief and with inscriptions.  

The word lemniscus is used by medical writers in the signification of a kind of liniment applied to wounds.
LEX.

four hundred. The same abundances continued, also, under the first emperors. Adrian often destroyed one hundred in the circuses; Antoninus, on one occasion, one hundred; and Marcus Aurelius the like number on another. The latter exhibition Eutropius considers as particularly magnificent, whence Cuvier infers that the number of the species displayed in that contest being, though Gordan the third had seventy which were trained; and Proclus, who possessed a most extensive menagerie, had one hundred of either sex."

"11. A sea-animal of the class Crustacea, described by Atheneus and Pliny. It is a species of "Lo-

ewia or Crab. Aldrovandus holds that the "Lo-

ewia is the same as the "Elephantus of Pliny, i.e., the Cow-fish. The name is also applied by "Elian and Oppian to a cetaceous fish. (Vid. III.)

"12. A cetaceous fish briefly noticed by Oppian and others.

LEONIDEA ("Oeuvolida) were solemnities cele-

brated every year at Sparta in honour of Leonidas, who, with his 300 Spartans, had fallen at Thermopy-

lae, 480 B.C. The name is also applied by "Elian and Oppian to a cetaceous fish. (Vid. III.)

LEX.
Great care was taken with such clauses as were proposed to alter a former lex, and great care was also used to avoid all interference with a former lex, when no change in it was intended. The leges were often divided into chapters, each of which concluded with the sanction or punishment which was intended to be the object. The title of the lex was generally derived from the personal name of the magistrate who proposed it, as the lex Hortensia from the dictator Hortensius. Sometimes the lex took its name from the two consuls or other magistrates, as the Acilia Callinna, Elia or Ælia Sentia, Papia or Papia Poppea, and others.

It seems to have been the fashion to omit the word et between the two names, though instances occur in which it was used. (Vid. Julia.) A lex was also often designated with reference to its object, as the lex Cincia de Donis et Muneribus, lex Furia Testamentaria, lex Julia Municipalis, and many others. Leges, which related to a common object were often designated by a collective name, as leges Agrariae, Judiciae, and others. Sometimes a chapter of a lex was referred to under the title of the lex, with the addition of a reference to the chapter, as lex Julia de Furtis Dotalis, which was a chapter of the lex Julia de Ambiv. A lex sometimes took its name from the chief contents or its first chapter, as lex Julia de Maritandis Ordinibus. Sometimes a lex comprised"very various provisions, relating to matters essentially different, and in that case it was called lex Saturae. (Vid. Lex Caecilia Didia, Lex Julia Me- naea.)

The number of leges was greatly increased in the later part of the republican period, and J. Caser is said to have contemplated a revision of the whole body. Under him and Augustus numerous enact- ments were passed, which are known under the general name of Julia's leges. (Vid. Julia Lex.) It is often stated that no leges, properly so called, or plebiscita, were passed after the time of Augustus; but this is a mistake. Though the voting might be a mere form, still the form was kept; and if this were not so, the passage of Gaius, in which he speaks of leges and plebiscita as forms of legislation still in use, would be hardly correct. Besides, various leges are mentioned as having been passed under the Empire, such as the Lex Julia de Tri- bunita, the Lex Julia de Consulibus, the Lex Julia de Digesta, and a lex Claudia de Tuteleae of women. It does not appear when the ancient forms of legislation were laid aside, but they certainly long sur- vived the popular elections to which alone the pas- sage of Tacitus refers.

In the Digest a senatus consultum is sometimes referred to as a lex, in which there was no great impropriety if we have regard to the time, for sena- tuses were then laws. Still a senatus consultum, properly so called, must not be confounded with a lex properly so called; and there is no rea- son for supposing that the lex Claudia of Galus was a senatus consultum, for when he speaks of a senatus consultum of the time of Claudius, he calls it such. It remains farther to explain the words rogatio and privilegium.

A lex was proposed by Festus to be a command of the populus to one or more persons, but not to all persons; or relating to one or more things, but not to all. That which the populus has command- ed (ac uit) with respect to all persons or things is a lex; and Ælius Gallus says rogatio is a genus le- gis; that which is lex is not consequently (continuo) rogatio, but rogatium must be lex if it has been pro-
LEX.

posed (roga a) at legal comitia (justia comitia). According to this definition, a rogatio, when enacted, is a lex; there is also lex which is not rogatio: therefore we must assume a general name lex, comprehending lex proper and rogatio. The passage of laws (lex) or of decrees (comitia) of the Twelve Tables of Gellius, that deduction is founded on his usual fault in mistaking the sense of a passage, and converts the clear meaning of Gallus into nonsense. According to the definition of Gallus, rogatio was equivalent to privilegium, a term which occurred in the Twelve Tables, and it signified, according to Gallus, an enactment that was not for a single person, which is indicated by the fact of the Twelve Tables (juris origo) "privileges," being the same as "singuies res." The word privilegium, according to the explanation of Gallus, did not convey any notion of the character of the legislative measures: it might be beneficial to the party to whom it was referred, or it might not. It is generally used by Cicero in the unsavourable sense (rogationem privilegii acustem). Under the Empire, the word is used in the sense of a special grant proceeding from the imperial favour.

The meaning of lex, as contrasted with jus, is stated in the article Jus. Some other significations of lex, which are not its proper significations, are easily explained; for instance, the letters L. S. S. in the phrase "lostitia lex," the letters L. P. L. in the phrase "with a law," etc., are indications of a law or laws of a particular kind, or the letters L. P. L. in the phrase "a law," are a reference to the binding force of all legal contracts. In English instruments of contract, it is often expressed that it shall be lawful for one or more of the parties to do a certain act, by which is simply meant that the parties agree upon something which is legal, and which therefore, may or may not be done. Noting, we find the expression lex censurae to express the conditions on which the censors let the public property to farm; and perhaps the term also signified certain standing regulations for such matters, which the censors were empowered to make. In both the cases just referred to, the phrase lex censurae is used (in the singular number), and this lex, whether a lex proper or not, seems to have been divided into chapters.

Lex simply sometimes signifies the laws of the Twelve Tables.

A particular enactment is always referred to by its name. The following is a list of the principal laws (ordo legis) called lex, but the list includes also various plebiscita and privileges.

ACILIA. (Vid. Repertundse.)

ACILIA CALPURNIA or CALPURNIA. (Vid. Ambitus.)

ÆBUTIA, of uncertain date, which, with two Julia leges, put an end to the legis actions, except in certain cases. (Vid. Jurex, Actio, p. 17.)

This law, or one or another law of the same name, prohibited the proposer of a lex, which created any office or power (curatio ac potestas), from having such office or power, and even excluded his colleague, cognati, and affines.

ÆLIA. This lex, and a Fufia lex passed about the end of the sixth century of the city, gave to all the citizens the absolute property in or possession of or dissolving the comitia, by observing the umes, and declaring them to be unfavourable.

ÆLIA SENTIA. This lex contained various provisions as to the manumission of slaves. (Vid. Ælia Sentia Lex, Manumission.)

ÆMILIA. A lex passed in the dictatorship of Marcus Æmilius (B.C. 493) by which the cen-

sors were elected for a year and half instead of a whole lustrum. After this lex they had accordingly only a year and a half allowed them for holding the census and letting out the public works to farm.

ÆMILIA BÆBIA. (Vid. Cornelia Bæbia.)

ÆMILIA LEPIDILÆMILIA SACUARI. (Vid. Semtuaræ Leges.)

AGRARIA. (Vid. Apuleia, Cassia, Cornelia, Flamina, Flavia, Julia, Licinia, Mamia, Sempronius, Servilia, Thoria.)

AMBITUS. (Vid. Ambitus.)

ANTILIA VILLIA. (Vid. Emilia.)

ANTÌA. (Vid. Semtuaræ Leges.)

ANTÒNIÌ. The name of various enactments proposed or passed by the influence of M. Antonius, after the death of the dictator J. Caesar, such as the judicatoria. (Vid. Jurex, page 553.) Another lex that was promulgated allowed an appeal to the popular after conviction for visc or majestas. Various other measures proposed by M. Antonius are mentioned by Cicero, Dion Cassius, and Appian.

APuleia gave a surety an action against his cosuenta for whatever he paid above his share. (Vid. Interessio.)

APULEIA AGRAFIA, proposed by the tribune L. Apuleius Saturninus, B.C. 101. (Vid. Augea, Section 19.)

APULEIA MAJESTATIS. (Vid. Majestas.)

AQUILLIA. (Vid. Damn. Injuria Actio.)

ATERNIA TERTIA. (B.C. 441.) This lex empowerd all magistrates to fine persons who resisted their authoritie; but it fixed the highest fine at two thousands five hundred asses, which was twenty-five marks, and thirty sheep, for the authorities vary in this.

A'TIA DE SACERDOTIS (B.C. 63), proposed by the tribune T. Atius Labienus, repeale the lex Cornelia de Sacerdotis.

ATILIA. (Vid. Julia Lex et Titia, Tutor.)

ATINIA allowed no usucapion in a stolen thing. (Vid. PURUM.)

ATINIA, of uncertain date, was a plebiscium which gave the rank of senator to a tribune. The measure probably originated with C. Atinlus, who was tribune B.C. 130. (Vid. Jurex, Actio, p. 17.)

AUTYDIA. (Vid. Ambitus.)

AURELIA. (Vid. Tribunus.)

AURELIA JUDICARIA. (Vid. Jurex, page 552.)

BÆBIA (B.C. 195 or 189), which enacted that four pretors and six pretors should be chosen alternatly: but the law was not observed.

CÆCITIA DE CENSORIBUS or CENSORIA (B.C. 64), proposed by Metellus Scipio, repealed a Cælia lex (B.C. 59), which had prescribed certain regular forms of procedure for the censors in exercising their functions as inspectors of mores, and had required the concurrence of both censors to inflict the censors. When a senator had been already convicted before an ordinary court, the lex permitted the censors to remove him from the senate in a summary way.

CÆCITIA DE VECTIGALIBUS (B.C. 65), released lands and harbours in Italy from the payment of taxes and duties (portoria). The only vestigal

1. (Geschichte der Röm. Staater, sec. p. 310.)—2. (Cic., Log., 11., 12. 9.)—3. (Festus, s. v. Regulat.)—4. (Pro Demo, 17. 4. Pro Seneo, 36.)—5. (Brut., 20. 16. 40. (Proc. de Favo Fisco, 6.)—6. (Dig. 20. 16. 262.)—7. (Cic. in Rull., ii. 9.)—8. (Cic., Phal., vi., 32. 1d. Pro Seneo, 15. 50. 1d. ad Att., ii. 9.)
remaining after the passing of this lex was the Vicesina.  

Cæcilia Di'RIA (B.C. 89) forbade the proposing of a lex Satura, on the ground that the people might be compelled either to vote for something which they did not approve, or to reject something which they did approve, if it was proposed to them in this manner. This lex was not always operative.  

LEX. (Ascon. 361, Polybius. B.C. (Dion Ann., Liv., Cic., Tacit., 553.) tribune eivitas deetricta, and pronounced therefore, that from CiNciA censers in the populi, in might be passed. Cassius, 2, 13. Paterc, 11.)—There Clodia CORNE'LI^, Ci.oDiA, CLAU'DIA, CA'SSIA, and the plebs, might have been convicted in a judicium populi, or whose imperium had been abrogated by the populus.  

CASSIA, e which empowered the dictator Cesar to add to the number of the patricii, to prevent their extinction. CASSIA AGRA'RIA, proposed by the consul Sp. Cassius, B.C. 486.  

CASSIA TABELL'ARIA. (Vid. TABBILARIA Leges.) CASSIA TERE'NTIA FRUMENTARIA (B.C. 63), for the distribution of corn among the poor citizens and the purchasing of it.  

Ci'Ncia DE DONIS ET MUNE'RIBUS. (Vid. CiNcia Lex.) CLAU'DIA, a lex passed in the time of the Emperor Claudius, took away the agnatione tuta, in the disposition of women.  

CLO'DIA, the name of various plebsicia, proposed by Clodius when tribune, B.C. 59.  

CLO'DIA DE AUSPICIS proposed the magistratus from dissolving the comitia tributa, by declaring that the auspices were unfavorable. This lex, therefore, repeated the Ælia and Futa. It also enacted that a lex might be passed on the Dies Fasti. (Vid. Ælia Lex.)  

CLO'DIA DE CENSIBUS. (Vid. Cæcilia.) CLO'DIA DE Civibus ROMANIS INTEREMPTIS, to the effect that "qui cive Romanum indennatum interemittet et aqua et igni interdicetur," 19 It was in consequence of this lex that the interdict was pronounced against Cicero, who considers the whole proceeding as a privilege.  

CLO'DIA FRUMENTARIA, by which the corn, which had been sold to the poor citizens at a low rate, was given.  

CLO'DIA DE SODALITATIBUS DE COLLEGIIS, restored the sodalitia, which had been abolished by a senatus consultum of the year B.C. 80, and permitted the formation of new sodalitia.  

There were other so-called leges Clodia, which were however, privilegia.  

CÆCILIA (Vid. CÆCILIA Leges.) CORNE'LLE. Various leges passed in the dictatorship of Sulla, and by his influence, are so called. ADRIADA, by which many of the inhabitants of Etruria and Latium were deprived of the some civitas and retained only the commercial, and a large part of their lands were made publicum, and given to military colonists.  

De FALSIS. (Vid. FALSiUM.) De INVENT. (Vid. INVENT.)  

JUDICARIA. (Vid. JUDEX, p. 553.) MAESTAS. (Vid. MAESTAS.)  

NUMMARIA. (Vid. FALSiUM.) De PROSCRIPTIONE et PROSCRIPTIBUS. (Vid. PROSCRIPTIBUS.)  

De PARECIDIO. (Vid. CORNELIA LEX DE SOLI'ris.) De SACERDOTIS. (Vid. SACERDOTTIA.) De SUCURIS. (Vid. CORNELIA LEX DE SICARIIS SUMPTUARIAE.)  

Testamentaria. (Vid. FALSiUM.) UNCIARIA appears to have been a lex which low rate of interest, and to have been passed about the same time with the leges Sunturiae of Sulla.  

De VA'DIOMON. (Vid. VA'DIOMONUM.)  

There were also other leges Cornelie, such as that 4. Sponsorius (vid. INTERCESSOR), which may be leges of L. C. Sulla. There were also leges Cornelie which were proposed by the tribune C. Cornelius about B.C. 77, and limited the edictal power by compelling the praetors jus dicere ex edictis suis perpetua.  

(Vid. EDICTUM.) Another lex of the same tribune enacted that no one "legibus subroctet," unless such a measure was agreed on in a meeting of the senate at which two hundred members were present, and afterward approved by the people; and it enacted that no tribune should put his veto on such a senatus consultum.  

There was also a lex Cornelie concerning the wills of those Roman citizens who died in captivity (causa victoriae). (Vid. PLAGIUM.)  

De VI PUBLICA. (Vid. VI PUBLICA.) CORNELIA BÆBIA DE AMBITU? proposed by the consule P. Cornelius Cethegus and M. Bæbus Tampullis, B.C. 181. This law is sometimes, but erroneously, attributed to the consules of the preceding year, L. Aemiliius and Cn. Bæbutius. (Vid. AMBITU.)  

DOMI'TIA. (Vid. SUMPTUARIA Leges.) DOMITIA DE SACERDO'TI'bis. (Vid. SACERDOTTIA.)  

DUI'LIA (B.C. 449), a plebisctum proposed by the tribune Duilius, which enacted "qui plebem sine tribunis religuisset, quisque magistratus sine provocazione consuest, tergo ac caelo pameturet."  

DUI'LIA MÆ'NIA de univarii genera, B.C. 357. The same tribunes, Duilius and Manlius, carried a measure which was intended in future to prevent such unconstitutional proceedings as the enactment of a lex by the soldiers out of Rome, on the proposal of the consul.  

FA'BIA DE PLAGI'GO. (Vid. PLAGIUM.) FALCI'DIA. (Vid. LEGATUR.)  

FA'NIA. (Vid. SUMPTUARIA Leges.) FA'NIA, LEX SUMPTUARIA, was an agraria lex for the distribution of lands in Picenum, proposed by the tribune C. Flaminus in B.C. 248 according to Cicero, or in B.C. 232 according to Polybius. The latter date is the more probable.  

FLAVIA AGRARIA, B.C. 60, for the distribution of lands among Pompey's soldiers, proposed by the tribune L. Flavius, who committed the consul Caecilius Metellus to prison for opposing it  

FRUMENTARIA. Various leges were so called

LEX.

which had for their object the distribution of grain among the people at a low price or gratuitously. (Vid. Apuleius, Cassia Terentia, Cloidia, Livia, Octavia, Sempronius.)

Furiia De religione, B.C. 61, was a privilege which related to the trial of Clodius. Furiia judicia, (Vid. Jusep, p. 553.) Furiia, or Furiia Caninia, limited the number of slaves to be manumitted by testament. (Vid. Manilius.)

Furia de sponsu. (Vid. Interessius.)

Furia or Fusa Testamenta, (Vid. Legatum.)

Gabinia tabellaria. (Vid. Tabellaria.)

There were various Gabinius leges, some of which were privileges, as that for conferring extraordinary power on Cn. Pompeius for conducting the war against the pirates.

A Gabinius lex, B.C. 58, forbade all loans of money to Rome at legationes from foreign parts (Sallamini cum Rome versuram facere velit, non poterat, quod lex Gabinita estlabat). The object of the lex was to prevent money being borrowed for the purpose of bribing the senators at Rome.

Gellia Cornelia, B.C. 72, which gave to Cn. Pompeius the extraordinary power of conferring the Roman citizenship on Spaniards in Spain, with the advice of his consilium (de consili sententia).

Genucia, B.C. 341, forbade altogether the taking of interest for the use of money. Other plebiscita of the same year are mentioned by Livy.

Gallia cisalpina. (Vid. Rubria.)

Hieronica was not a lex properly so called. Before the Roman conquest of Sicily, the payment of the tenth of wine, oil, and other produce had been fixed by Hiero, and the Roman questors, in letting these tenth farms to follow, followed the practice which was left behind.

Horatia, proposed by M. Horatius, made the persons of the tribunes, the eediles, and others sacrosancti, Another lex Horatia mentioned by Gelius was a privilege.

Hortensia de plebiscito. (Vid. Plebiscitum.)

Another lex Hortensia enacted that the nudindle, which had hitherto been ferre, should be dies fasti. This was done for the purpose of accommodating the inhabitants of the country.

Hostilia de fastis is mentioned only in the Institutes of Justinian.

Icilia, B.C. 456, by which the Aventine was assigned to the plebs. This was the first instance of the ager publicus being assigned to the plebs.

Another lex Icilia, proposed by the tribune Sp. Icilius, B.C. 470, had for its object to prevent all interruption to the tribunes while acting in the discharge of their duties. In some cases the penalty was death.

Juvia licinia. (Vid. Juvia leges.)

Juvia de perigrinis, proposed B.C. 156 by M. Junius Pannus, a tribune, banished peregrini from the city.

A lex of C. Fannius, consul, B.C. 122, contained the same provisions respecting the Latin and Italici; and a lex of C. Papius, perhaps B.C. 65, contained the same respects all persons who were not domiciled in Italy.

Juvia licinia. (Vid. Licinia junia.)

Juvia norba, of uncertain date, but probably about A.D. 17, enacted that when a Roman citizen had manumitted a slave without the requisite formalities, the manumission should not in all cases be ineffectual, but the manumitted person should have the status of a Latinus. (Vid. Latinitas, libertas.)

Juvia repetundarum. (Vid. Repetundarum.)

Juvia vellica, A.D. 9, allowed a postumus to be instituted heres, if he should be born in the lifetime of the testator. It also so modified the old law, that a person who, by the death of a heres institutus, after the testator had made his will, became a heres quasi agnascendo, did not break the will. The law was thus modified.

Lectoria. (Vid. Curator.)

Sometimes the lex proposed by Volero for electing plebeian magistrates at the comitia tributa is cited as a lex Lectoria.

Licinia de sodalitiis. (Vid. Ambitus.)

Licinia Juvia, or, as it is sometimes called, Junia de licinia, passed in the consulship of L. Licinius Mancinus and M. Junius Silanus, B.C. 62, enforced the Caecilia Didia, in connexion with which it is sometimes mentioned.

Licinia mucia de civibus regundis, passed in the consulship of L. Licinius Crassus and Q. Mucius Scvolora, B.C. 95, which enacted a strict examination as to the title to citizenship, and deprived of the exercise of civic rights all those who could not make out a good title to them. This measure partly led to the Marse war.

Licinia sumtaria. (Vid. Sumtaria leges.)

Licinius Rogers. (Vid. Rogers, leges.)

Lille were various enactments proposed by the tribune M. Livius Drusus, B.C. 91, for establishing colonies in Italy and Sicily, distributing corn among the poor citizens at a low rate, and admitting the federate civitates to the Roman civitas. He is also said to have been the mover of a law for abridging silver by mixing with it an eighth part of copper. This was passed and the senate declared that all his leges were passed contra auspicia, and were therefore not leges.

Lutaia de vi. (Vid. Vis.)

Maeonia lex is only mentioned by Cicero, who says that M. Curius compelled the patres "anice an mores fieri," in the case of the election of a plebeian consul. "This was a great thing to accomplish, as the lex Maelia was not yet passed." The lex therefore required the patres to give their consent, at least to the election of a magistratus, or, in other words, to confer, or agree to confer, the imperium on the person whom the comitia should elect. Livy appears to refer to the same law, probably proposed by the tribune Manlius, B.C. 287.

Majestatis. (Vid. Majestas.)

Manilia de coloniis. The subject of this lex and its date are fully discussed by Uodolf, who shows that the lex Manilia, Roscia, Peduncula, Alliena, Fablia, is the same as the lex Agraria quain Gaius Caesar tulit, and that this Gaius Caesar was the Emperor Caligula.

Manilia, proposed by the tribune C. Manilius.
LEX.

LEX.

B.c. 66, was a privilege by which was conferred on Pompey the command in the war against Mithridates. The lex was supported by Cicero when prex. The lexes Manilius, mentioned by Cicero, were evidently not lexes proper, but probably forms which it was prudent for parties to observe in buying and selling.

MANNIA, also called LICINIA, B.C. 196, created the triumvirate epulones. MANIA DE VICE SIMA. (Vid. VICESIMA.) MACRIA, probably about the year B.C. 352, a decessor senator. MARCIA, an agrarian law proposed by the tribune L. Marcus Philippus, B.C. 104. MARIA, proposed by Marius when tribune, B.C. 119, for narrowing the pontes at elections. MEMMIA or REMMIA. (Vid. Calumnia.) MENSIA. This lex enacted that if a woman who was a Roman citizen (civis Romanis) married a peregrinus, the offering was to be received. If there was connubium between the peregrinus and the woman, the children, according to the principle of connubium, were peregrini, as the legal effect of connubium was that children followed the condition of their father (liberi semper patrem sequantur). If there were no connubium, the children, according to another rule of law, by which they followed the condition of the mother, would have been Roman citizens; and it was the object of the law to prevent this. MINUCIA, B.C. 216, enacted the triumvir men-sarial.

OCTAVIA, one of the numerous lexes frumentariae which regulated a Sempronia Frumentaria. It is mentioned by Cicero as a more reasonable measure than the Sempronia, which was too pro-flux. OGULNIA, proposed by the tribunes B.C. 300, increased the number of pontifices to eight and that of the augurs to nine; it also enacted that four of the pontifices and five of the augurs should be taken from the plebe. OPPIA. (Vid. Sentibilis Lex.) OVIANIA, of uncertain date, was a plebiscitum which gave the censors certain powers in regulating the lists of the senators (ordo senatorius): the main object seems to have been to exclude all improper persons from the senate, and to prevent their admission, if in other respects qualified. The lex Oviana of Gaius, if the reading is right, was perhaps a different lex. PAPIA DE PEREGRINIS. (Vid. Junia de Perigrinis.) PAPIA POPPEA. (Vid. Julia Leges.) A lex Poppea on the manner of choosing the vestal virgins is mentioned by Gellius; but the reading appears to be doubtful, and perhaps it ought to be called Pappia.

PAPIA OR JULIA PAPPIA DE MULCTA-RUM ESTIMATIONE (B.C. 430), fixed a money value according to which fines were paid, which formerly were paid in sheep and cattle. Gellius and Festus make this valuation part of the Aetolian law (vid. Aeterna Tarpeia), but in this they appear to be mistaken, according to Niebuhr.

PAPIA, by which the ast was made semunci-alis, one of the various enactments which tempered with the coinage.

PAPIA, of uncertain date, enacted that no aedes should be declared consecrate without a plebiscitum (coiusa Pluria). PAPIA PLANUS, a plebiscitum of the year B.C. 89, proposed by the tribunes C. Papius Carbo and M. Plautius Silvanus, in the consilium of Cn. Pompeius Strabo and L. Porcius Cato, is called by Cicero a lex of Silvanus and Carbo. PAPPIA POETELLA. (Vid. Portelai.) PAPPIA TABELLARIA. (Vid. Tabellaria Leges.) PEDUCAEA. B.C. 113, a plebiscitum, seems to have been merely a privilege; and not a general law against incestum.

PESULANIA provided that if an animal did any damage, the owner should make it good or give up the animal. There was a general provision to this effect in the Twelve Tables, and it might be inferred from Paulus that this lex extended the provisions of the old law to dogs.

PETRANIA, a lex under this title, De Docencia, is enacted, the issue of mutiny, is mentioned by Appian.

PETRONIA, probably passed in the reign of Augustus, and subsequently amended by various senatus consulta, forbade a master to deliver up his slave to fight with wild beasts. If, however, the master thought that his slave deserved such a punishment, he might take him before the authorities (judices) and condemn him to fight if he appeared to deserve it.

PINARIA related to the giving of a judex with in a limited time.

PLAUTIA. (Vid. Curator.) PLAUTIA OR PLOTTIA DE VI. (Vid. Visc.) PLAUTIA or PLOTIA JUDICIA RIA is mentioned by Asconius as having enacted that fifteen persons should be annually taken from each tribe to be placed in the album judicum.

POETELIA, B.C. 356, a plebiscitum, was the first lex against ambitus.

POETELIA PAPPIA. B.C. 326, made an important change in the liabilities of the Nexti.

POPELE. There were various lexes so called POMPEIA, proposed by Cn. Pompeius Strabo, the father of Cn. Pompeius Magnus, probably in his consilium, B.C. 89, gave the jus Latii or Latinitas to all the towns of the Transpadani, and probably the civitas to the Cispadani.

POMPEIA DE AMBITU. (Vid. Amnibus.) POMPEIA JUDICIA RIA. (Vid. Judex.) POMPEIA DE JULIUS MAGISTRATUM acquiesced in the candidate for public office (petitio honorum) who was not at Rome; but Julius Caesar was excepted. This was, doubtless, the old law, but it had apparently become obsolete.

POMPEIA DE PARIETAEIS. (Vid. Cornelia de Siciaris.) POMPEIA TRIBUNITIA (B.C. 70) restored

LEX.

This was effected by a lex, the name of which is unknown, but a large part of it, on a bronze tablet, is preserved in the Museum at Athens. The lex arranged the judiciary establishment of the former province, and, according to Livy, the temple of Castalia. The subject is discussed by Savigny and by Puchta.

This lex has been published several times; the latest edition is "Tavola legislativa della Galia Cisalpina ritrovata in Velesia et restituita alla sua vera lezione da D. Pietro di Lena, Parma, 1830." We only possess the end of the nineteenth chapter of this lex, which treats of the Navi Opera Nuntialis, the twentieth chapter, on the Dammum Infestum, is complete; the twenty-first treats of Pecunia Certe Credita, but only of Execution; the twenty-second treats in like manner of similar actions; there is only the beginning of the twenty-fourth, which treats of the division of an hereditas ("quae de familia excerpte levando reddita abit habeat redditeri", &c.), postulandorum. The matter of this lex, therefore, so far as we know it, purely concerns procedure, as Puchta remarks.

LEXP.

This lex was proposed by T. Quintus Crispinus, consul B.C. 9, and enacted by the popularus for the preservation of the aqueductus. The lex is preserved by Frontinus.

REGIA. (Vid. Regia Lex.)

REPUGNA. (Vid. Just Civile Papirianum.)

REPUTANDARUM. (Vid. Repetundae.)

ROH'DIA. The Rhodians had a maritime code which was highly esteemed. Some of its provisions were adopted by the Romans, and have thus been incorporated into the maritime law of European states. Strabo speaks of the wise laws of Rhodians in regard to the admirality policy, especially in naval matters; and Cicero to the same effect. The Digest contains so much of the lex Rhodiorum as relates to jactus, or the throwing overboard of goods in order to save the vessel or remainder of the cargo. This lex Rhodiorum de Jactu is not a lex in the proper sense of the term.

The lex Rhodiorum de Jactu was proposed by the tribune L. Roscius Otho, B.C. 67, which gave the equites a special place at the public spectacles in fourteen rows or seats (in quattuordecim gradibus usque ordinibus) next to the place of the senators, which was in the orchestra. This lex also assigned a certain place to spendrifs (deootores). The phrase "sedeque in quattuordecim ordinibus" is equivalent to having the proper census equestris which was required by the lex. There are numerous allusions to this lex, which is sometimes simply called the Lex of Otho, and referred to by his name. Lex Rhodiorum de Jactu in the Senate was for this reason not enacted, and it was not a lex proper. The powers given to the commissioners by the lex Julia Municipalis were of a similar kind.

SACRA. (Vid. Sacra.)

SACRITNIA, proposed by a tribune; the date and contents are not known, but its object was to suppress unnatural crimes. It existed in the time of Cicero.

The lex Julia de Adulteris ceased to be a provincial, and became a part of Italia about the year B.C. 43. When this change took place, it was necessary to provide for the administration of justice, as the usual modes of provincial administration would cease with the determination of the provincial government of government.

4 E
LEX.

I. L. D. ANOTIS.

It is, perhaps, doubtful if the passage of Cicero¹ should be alleged in proof of this usage formerly existing.

SEMPRO'NIE. Various leges proposed by the Gracchi were so named. (Vid. Sempronie Leg.)

SEMPRO'NIA DE FÉ'NORE, B.C. 193, was a plebiscitum proposed by the tribune M. Sempronius, which enacted that the law (jus) about money lent (pecunia rotunda) should be the same for the Socii and Latini (Soci ac nomen Latum) as for Roman citizens. The object of the lex was to prevent Romans from lending money in the name of the Socii, who were not bound by the fines leges. The lex could obviously only apply within the jurisdiction of Rome.

SERVILIA AGRÁ'RIA, proposed by the tribune P. S. Rullus in the consulship of Cicero, B.C. 63, was a very extensive agraria rotagio. It was successfully opposed by Cicero,² but it was in substance carried by J. Caesar, B.C. 59 (vid. Julia Lex Agraria), and is the lex called by Cicero lex Campana, from the public hand called Ager Campanus being assigned under this lex.

SERVILIA GLAU'CIA DE CIVITATE (Vid. Repetundae.)

SERVILIA GLAU'CIA DE REPETUNDIS. (Vid. Repetundae.)

SERVILIA JUDICIARIA, B.C. 106. See the articles Julia, B.C. 593, and the various passages in Cicero.² It is assumed by some writers that a lex of the tribe Servilius Glauca repealed the Servilia Judicaria two years after its enactment.³

SIL'IA. The legis actio condicio was established by this lex in the case when the demand was a determinate sum of money (cota pecunia).⁴

SIL'VIA ET CARBON'IS. (Vid. Papiria Puteana.)

SUL'PICLIE, proposed by the tribune P. Sulpiicius Rufus, a supporter of Marius, B.C. 88, enacted the recall of the exiles, the distribution of the new citizens and the libertini among the thirty-five tribes, that the command in the Mithradatic war should be taken from Sulla and given to Marius, and that a senator should not contract debt to the amount of more than 16,000 denarii.² The last enactment may have been intended to expel persons from the senate who should get in debt. All these leges were repealed by Sulla.⁴

SUL'PICIA SEMPRO'NIA, B.C. 304. No name is given to this lex by Livy,¹ but it was probably proposed by the consuls. It prevented the dedication of a temple or altar without the consent of the senate or a majority of the tribunes.¹

SUM'TUARIE. (Vid. Sumptuaria Leges.)

TABELLIA'RIE. (Vid. Tabellariae Leges.)

TARPEIA ATER'NIA. (Vid. Aeterna Tarpeia.)

TENTENTILIA, proposed by the tribune C. Tertentilius, B.C. 462, but not carried, was a rogatio which had for its object an amendment of the constitution, though forming in only a limited sense an amendment of the imperium consulis.¹ This rogatio probably led to the subsequent legislation of the Decemviri.

TESTAMENTARIE. Various leges, such as the Cornelia, Fadila, Furius, and Voconia, regulated testamentary dispositions.

THOIRIA. The importance of this lex requires it should have a separate notice. (Vid. Tho'ria Lex.)

TI'TIA, similar in its provisions to the lex Publia. (Vid. Julia Lex et Titia, and Gaius, i., 185.)

TREBONIA, a plebiscitum proposed by L. Trebonius, B.C. 448, which enacted that if the ten tribunes were not chosen before the comitia were dissolved, those who were elected should not fill up the number (co-optare), but that the comitia should be continued till the ten were elected.²

TRIBUNITIA. (Vid. Tribunitia Lex.)

ULIA DE AMBITU (Vid. Ambitus.)

ULIA DE REQUAMNAE'RIE LIVELLA. (Vid. Legatus, p. 576.)

VALERI'Z of P. Valerius Publicola. (Vid. Valerius Leges.)

VALE'RIA HORA'TIA. (Vid. Plebiscitum.)

VARIA. (Vid. Majestas.)

VATINIA DE PROVINCIS was the enactment by which J. Caesar obtained the province of Gallia Cisalpina with Illyricum for five years, to which the senate added Gallia Transalpina. The plebiscitum was proposed by the tribune Vatinius.³ A Trebonia lex subsequently prolonged Caesar's imperium for five years.

VATINIA. (Vid. Repetundae.)

VATINIA DE COLONIS, under which the Latina Colonia (vid. Latinitas) of Novum-Comum in Gallia Cisalpina was planted, B.C. 59.⁴

VIARI'Z. (Vid. Vatinius.)

VIA'RIA. A Viairi lex which Cicero says the tribune C. Curio talked of; but nothing more seems to be known of it.

Some modern writers speak of leges Vatianae, but there do not appear to be any leges properly so called. The provisions as to roads in many of the agrarian laws were parts of such leges, and had no special reference to roads.⁵

VICESIMA'RIA. (Vid. Vicesimaria.)

VILI'ANNA'RIA. (Vid. Ediles, p. 25.)

VISE'LLIA. Made a man liable to a criminal prosecution who, being a Latinus, assumed to exercise the rights of an ingenius.⁶

VOCIONIA. (Vid. Voconia Lex.)

This list of leges may not be quite complete, and the dates assigned to them may not be perfectly accurate. Still it contains all the leges that are of any importance for the understanding of Roman History and Jurisprudence. Those which are not specially noticed here are referred to their proper heads, particularly when there are many leges relating to one subject, as ambitus, repetundae, &c. Several of the Roman leges were modified by senatorial consultae. The senatorial consultae, which are properly laws, are enumerated under Senatori Consultum.

LEXIA'RIC CON. (Vid. Demus, p. 348.)

LEXIA'RICHOL. (Vid. Ecclesia, p. 385.)

LEXIS. (Vid. Dices, p. 358.)

LIV'ANOTIS (Adavoric), a plant, our Ros'maria. The Greek name is derived from ἠλάντος αἰσθήσις, and has reference to the strong aromatic odour of the plant, which is of the Latin name Rosmarina, which the poets commonly write as two words, Ros mar'ina, alludes to the circumstance of the plant's being "used by the ancients in sprinkling, as we read in the Scriptures of hisspop, and of its growing in places near the seacoast. Virgil is supposed to be the first author who mentions it by the name of Ros (marina). Theophrastus describes two species, the first, or ἀλάντις ἀσαφής, is the true Ros'marina officinalis; the other, the ἀλαντις ἀσαφής, is the Ath-

Liberellus.

Sanctus libellus, according to Stachouss. Spen-
gel is decidedly of opinion that the first species of
Dioscurides is the Cachrys libanotis; the second,
the Furula nodiflora; the third he hesitates about
admitting as the Prenanthe purpurata.

Liberanotus (ζελανοτος), Frankencense. The
name, however, is also applied to the Frankincense-
tree itself. "Forshael, the Danish traveller," ob-
erves Adams, "gave the name of Amyris Kafou
to the tree which produces Frankincense, but most
dubious was its generic name, selcana turfera.
However, as Stackhouse and Spen-
gel state, there is still great uncertainty about the
tree which produces the frankencense. Dr. Harris
remarks, that 'what is called "pure incense" is
do double the same as the mancula thera of Virgil.'
Dr. Martyn farther states, that the ancients called
the best sort of incense "male." A later writer on
this subject of medicinal substances, Dr. Martin, says,
'Some authors have considered the genuine liba-
roo (Thisbe) to have been obtained from the Junipe-
rus Lycia, and to constitute the Olibanum of our
shops, but I cannot find any passage in the ancient
authors sufficiently precise to corroborate this
conjecture.' According to Ammonius and the scholi-
astics, the frankencense, or, as they state, the frank-
cense in Latin, was called to be named libanot, and
the term libanotus is to be restricted to the Frankencense itself.
Theo-
phratus, however, does not use the terms in this
sense. 1

Libatio. (Vid. Sacrificiu m.)

Libella. (Vid. Demaris.)

Libellus is the diminutive form of liber, and
gives its name to a book. A libellus was disinguished
from other kinds of writing by being written,
like our books, by pages, whereas other
writings were written transsera charta. 2 A libel-
lus, however, did not necessarily consist of several
pages. It was used by the Romans as a technical
term in the following cases:
1. Libellus accusatorius or accusativus were the writ-
ten accusations which in some cases a plaintiff,
after having received the permission to bring an
action against a person, drew up, signed, and sent
to the judicial authorities, viz., in the city to the
pre-
tor, and in a province to the procurus. 3 (Compare
Acrost, p. 17.) The form in which a libellus ac-
cusatorius was written was a perfect duplicate
drawn up in the case of a disability. 4 The
accuser had to sign the libellus, and if he could not
write, he was obliged to get somebody else to do it for him.
If the libellus was not written in the proper legal form, it
was invalid, but the plaintiff still had the right to bring
the same action again in its legal form.

2. Libelli famosi were what we call libels or pas-
quindies, intended to injure the character of
persons. A law of the Twelve Tables inflicted very
severe punishments on those who composed defam-
atory writings against any person. 5 During
the latter part of the Republic this law appears to
have been suspended, for Tacitus says, that previous
to the time of Augustus, libels had never been legally
punished; 6 and that Augustus provoked this
anxiety with which Livius Severus brought it
dispute the most illustrious persons of the age,
ordained, by a lex majestatis, that the authors of
libelli famosi should be brought to trial. On
this occasion, Augustus, who was informed of the exist-
ence of several such works, had a search made at

Rome by the ediles, and in other places by the
local magistrates, and ordered the libels to be burn-
ed; some of the authors were subjected to punish-
ment. 1 A law quoted by Ulpius 2 ordained that the
author of a libellus famosus should be intestastables;
and during the latter period of the Empire we find
that capital punishment was not only inflicted upon
the author, but upon those persons in whose pos-
session a libellus famosus was found, or who did
not destroy it as soon as possible. 3 (Dig., tit. 10, s. 5.)

3. Libellus memoriae, a pocket or memorandum
book. 4 The libellus, from which Cicero 5 commu-
nicates a memorandum of Brutus, appears to have
been a book of this kind.

4. The word libellus was also applied to a varie-
ty of writings, which in most cases, probably, con-
sisted of one page only:

1. a. To short letters addressed to a person for
the purpose of cautioning him against some dan-
ger which threatened his life, 6 and to any short letters
or reports addressed to the senate or private indi-
viduals. 7

2. To the bills called libelli gladiatori or minera-
rii, which persons who gave gladiatorial exhibitions
were distributed among the people. (Vid. Gladiators,
p. 476.)

3. To petitions to the emperors. 8 The emperors
had their special officers or secretaries who at-
tended to all petitions (libelli prefectus), and who
read and answered them in the name of the em-
peror. 9 Such a libellus is still extant. 10

4. To the bill of appeal called libellus appallatorius,
which was paid for when bills were pulled down by such
persons who found his property and brought it back
to him. 11

5. To the bills stuck up in the most frequented
parts of the city, in case of a debtor having ab-
sconded. 12 Such bills were also stuck upon
the estates of such a debtor, and his friends who wished
to guard against deception. (Cod. 9, tit. 10, s. 5.)

5. To bills in which persons announced to the
public that they had found things which had been
lost, and in which they invited the owner to claim
his property. 14 The owner gave to the finder a
reward (ebptoc), and received his property back.
Sometimes the owner also made known to the
public by a libellus what he had lost, stated his name and
rank, and paid a reward to the person who found his property
and brought it back to him. 15

6. Libeer (βιβλιον), a Book. The most common
material on which books were written by the Greeks
and Romans was the thin coats or rind (liber, whence
the Latin name for a book) of the Egyptian papyrus.
This plant was called by the Egyptians Bybios (βιβ-
λος), whence the Greeks derived their name for a
book (βιβλιον). It formed an article of commerce
long before the time of Herodotus, 16 and was exten-
sively used in the western part of Europe, as is
proved by the number of rolls of papyri found at
Herculaneum. In the sixth century of the Christian
era the duty on imported papyrus was abolished by
Theodoric the Great, on which occasion Cassiodo-
rus wrote a letter, 17 in which he congratulates the
world on the cessation of a tax so unfavorable to
the progress of learning and of commerce.

The papyrus-tree grows in swamps to the height of
ten feet and more, and paper was prepared from the
thin coats or pellicules which surround the plant in the following manner according to Pliny. The different pieces were joined together by the torrid Nile water, as it has a kind of glutinous property. A layer of papyrus (scheda or phylora) was laid flat on a board, and a cross layer put over it; and being thus prepared, the layers were pressed, and afterward dried in the sun. The sheets were then fastened or pasted together, the best being taken first, and then the inferior sheets. There were never more than twenty in a scapus or roll. The papyri found in Egyptian tombs differ very much in length, but not much in breadth, as the breadth was probably determined by the usual length of the strips taken from the plant. The length might be carried to almost any extent by fastening one sheet to another. The writing was in columns, with a blank slip between them. The form and general appearance of the papyri rolls will be understood from the following woodcut, taken from paintings found at Pompeii.

The paper (charia) made from the papyrus was of different qualities. The best was called after Augustus, the second after Livia, the third, which was originally the best, was named Hieratica, because it was appropriated to the sacred books. The finest paper was subsequently called Claudin, from the Emperor Claudius. The inferior kinds were called Amphiheatraca, Saitica, Leonetica, from the places in Egypt where it was made, and also Funia, from one Eunnius, who had a celebrated manufacture at Rome. The kind called Emporetica was not fit for writing, and was chiefly used by merchants for packing their goods, from which circumstance it obtained its name. Next to the papyrus, parchment (membrana) was the most common material for writing upon. It is said to have been invented by Eumenes II., king of Pergamum, in consequence of the prohibition of the export of papyrus from Egypt by Ptolemys Epiphanes. It is probable, however, that Eumenes introduced only some improvement in the manufacture of parchment, as Herodotus mentions writing on skins as common in his time, and says that the Ionians had been accustomed to give the name of skins (phylora) to books. Other materials are also mentioned as used for writing on, but books appear to have been almost invariably written either on the papyrus or parchment. The ancients wrote usually on only one side of the paper or parchment, whence Juvenal speaks of an extremely long tragedy as

"summi plena jam margine libri
Scriptus et in turguo nectum fantus Orestes."

Such works were called Opistographia, and are also said to be written in a versa charta.

The back of the paper, instead of being written upon, was usually stained with saffron colour or the cedrus (corocor membrana tabella). We learn from Ovid that the cedrus produced a yellow colour.

As paper and parchment were dear, it was frequently the custom to erase or wash out writing of little importance, and to write upon the paper or parchment again, which was then called Palimpsestus (παλιμπηστος). This practice is mentioned by Cicero, who praises his friend Trebatius for having been so economical as to write upon a palimpsest, but wonders what those writings could have been which were considered of less importance than a letter.

The paper or parchment was joined together so as to form one sheet, and when the work was finished, it was rolled on a staff, whence it was called a volumen; and hence we have the expression codex were libraries. If a man or a woman divided a work into several volumes, it was usual to include only one book in a volume or roll, so that there were generally the same number of volumes as of books. Thus Ovid calls his fifteen books of Metamorphoses "mutua ter quinque volumina formae." When a book was long, it was sometimes divided into two volumes; thus Pliny speaks of a work in three books, "in saeculorum propriam amplitudinem divis." In the roll of papyri found at Herculaneum, the stick on which the papyrus is rolled does not project from the papyrus, but is concealed by it. Usually, however, there were halls or bosses, ornamented or painted, called umbilici or cornua, which were fastened at each end of the stick, and projected from the papyrus. The ends of the roll were carefully cut, polished with pumice-stone, and coloured blue, and was called the gremia front. To protect the roll from injury, it was frequently put in a parchment case, which was stained with a purple colour, or with the yellow of the lutum. Martial calls such a covering a purpurea luga. Something of the same kind is meant by the Greek sytpe (εσσυτηία), which Heacychius explains by δειμτηριω σφρατ. The title of the book (titulus, index) was written on a small strip of papyrus or parchment with a light red colour (soccam or minimum). Winkelmann supposed that the title was on a kind of ticket suspended to the roll, as is seen in the paintings at Herculaneum (see woodcut), but it was most probably stuck on the papyrus itself. We learn from Seneca and Martial that the portraits of the authors were often placed on the first page of the work. Concerning the articles A TRAMUNTAN, MANZOPOL, BIBLIOTHECA, CLAMUS, CAPS, SYLVIUS, LIBERALIA. (Vid. Dionysia, p. 366.) LIBERALIS CAUSA. (Vid. Asser tor.) LIBERI. (Vid. Ingenii, Libertus.) LIBER ORIUM JUS. (Vid. JULIA ET PALLA POR PARA LEX.) LIBERTUS, LIBERTY NUS. Freemen (liberi) were either ingenii (vid. Ingenii) or libertini. Libertini were those persons who had been released from legal servitude (qui ex jussa servitutem manumisi si sumus). A manumitted slave was libertus (that is, libertus) with reference to his master; with reference to the class to which he belonged after manumission, he was libertinus. According to Suettius, libertinus was the son of a libertus in the time of the censor Appius Claudius, and for some time after; but this is not the meaning of the word in the extant Roman writers.

There were three modes of legitima manumission, the vindicta, the census, and the testamentum: if...
the manumitted slave was above thirty years of age, if he was the quiritarian property of his mas- ter, and if he was manumitted in proper form (legitima, justa et legitima manumissiones), he became a civis Romanus: if any of these conditions were wanting, he became a Latinus, and in some cases only a dedicarius. (Vid. Manumissio.) Thus there were, as Ulpian observes, three kinds of liberti: cives Romani, Latini Luniani, and dedicati.

The status of a civis Romanus and that of a dedicarius had already been described. (Vid. Civilitas, Deporrtt.)

Originally, slaves who were so manumitted as not to become cives Romani, were still slaves; but the pretor took them under his protection, and maintained their freedom, though he could not make them cives Romani. The lex Junia gave them a certain status, which was expressed by the phrase Latin Luna. They were called Latini, says Gaius, because they were put on the same footing as the Latin coloni, and Junians, because the Junia lex gave them freedom, whereas before they were by strict law (ex jure Quiritis) slaves. Gaius says that the lex Junia declared such manumitted persons to be as free as if they had been Roman citizens. They could, therefore, have bought and sold other slaves. It went out from Rome to join a Latin colony, and thereby had become Latin coloni: this passage, which is not free from difficulty, is remarked on by Savigny. A Latinus could attain the civitas in several ways. (Vid. Latinitas.) As the patria potestas was a jus peculiar to Roman citizens, it followed that a Latinus could not become a citizen save by adoption. If, however, he had married either a Latina and had beget a child, who would, of course, be a Latinus, or had married a Roman civilian, and had beget a child, which, by a senatus consultum of Hadrian, would be a Romanus civis, he might, by complying with the provisions of the lex Julia, have freed himself, his wife, and child, and in both cases acquire the patria potestas over his child just as if the child had been born in justa nuptiis.

In considering the legal condition of libertinii, it is necessary to remember that even those who were cives Romani were not ingeni, and that their patria potestas continued over them. The Latini were under some special incapacities; for the lex Junia, which determined their status, neither gave them the power of making a will, nor of taking property under a will, nor of being named tutees in a will. They could not, therefore, take either as heredes or legatarii, but they could take by way of fiduciarsium. The sons of libertinii were ingeni, but the fathers did not have legitimate rights; and the descendants of libertinii were sometimes tamuted with their servile origin.

The law which concerns the property (bona) of libertinii may be appropriately considered under Patremes: see also Inewing.

LIBERTUS (GREEK) (Ἀπελευθερως), a freedman. He was at first employed to restore a slave to freedom, or to allow him to purchase it. The state into which a slave thus entered was called ἀπελευθερως, and he was said to be καθαρὲς κυνὸν. It is not quite certain whether those persons who were termed ἄπειροι ἀκούντες were likewise freedmen, as the grammarians assert, or whether they were persons yet in slavery, but living separated from their master's household; but in Domesticon the expression ἄπειροι ἀκούντες is evidently used as synonymous with "he has been emancipated." A slave, when manumitted, entered into the status of a meticulus, vid. Manus, and, as such, he had not only to pay the meticulus, but a triobolon in addition to it. This triobolon was probably the tax which slaveholders had to pay to the Republic for each slave they kept, so that the triobolon paid by freedmen was intended to indemnify the state, which would otherwise have lost by every manumission of a slave. The connexion of a freedman's tax and his colony could not be broken off entirely on his manumission, for he had throughout his life to regard him as his patron (προστάτης), and to fulfil certain duties towards him. In what these duties consisted beyond the obligation of showing gratitude and respect towards his deliverer, and of taking him for his patron in all his affairs, is uncertain, though they seem to have been fixed by the laws of Athens. Whether the relation existing between a person and his freedman descended to the children of the latter, is likewise unknown. That a master, in case his freedman died, had some claims to his property, is clear from Isaeus. The neglect of any of the duties of a freedman had towards his former master was proscribed by the lex regia.

The Spartans likewise restored their slaves some times to freedom, but in what degree such freedmen partook of the civic franchise is not known. That they could never receive the full Spartan franchise is expressly stated by Dion Chrysostornns; but Muller entertains the opinion that Spartan freedmen, after passing through a certain stage in the state, might in the end obtain the full franchise; this opinion, however, is more than doubtful. Spartan freedmen were frequently used in the armies and in the fleet, and were, according to Myro, designated by the name of ἱππητα, ἄλαςτροι, ἐρκάτης, ἐπέστολον ἄρης, and νεκρομόδες.

LIBITUS. (Vid. Fucus, p. 459.)

LIBRÁ: dim. LIBELLA (σταθμή), a Balance, a pair of Scales. The principal parts of this instrument were: 1. The beam (ὑπεροτον), whence anything which is to be weighed is said ἐπὶ ὕπεροτον ἀνα- δύναμα, literally, "to be thrown under the beam." 2. The two scales, called in Greek τάλαντα and ὀρία. The beam was of铜, and the dishes were of bronze. Hence the verb τάλανυον is employed as equivalent to σταθμύνω and to the Latin libra, and is applied as descriptive of an eagle balancing its wings in the air. The beam was made without a tongue, being held by a ring or other appendage (ligula, βύς), fixed in the centre. (See the woodcut.) Specimens of bronze balances may be seen in the British Museum, and in several collections of antiquities, and also of the stair-yolk (vid. Stateria), which was used for the same purpose as the libra. The woodcut to the article Catena shows some of the chains by which the scales are suspended from the beam. In the works of ancient art, the balance is also introduced emblematically in a great variety of ways, which will be found in the collection of emblems of us, in which the good things of the soul were put into one scale, and those of the body and all external things into the other, and the first was found to outweigh the second, though it included both earth and sky.
and sea. In Egyptian paintings the balance is often introduced for the sake of exhibiting the mode of comparing together the amount of a deceased man's merits and of his defects. The annexed woodcut

is taken from a beautiful bronze patera, representing Mercury and Apollo engaged in exploring the fates of Achilles and Memnon, by weighing the attendant genius of the one against that of the other. A balance is often represented on the reverse of the Roman imperial coins; and, to indicate more distinctly its signification, it is frequently held by a female in her right hand, while she supports a cornucopia in her left, the word aureus being inscribed on the margin, so as to denote the justice and impartiality with which the emperors dispensed their bounty.

The constellation libra is placed in the zodiac at the equinox, because it is the period of the year at which day and night are equally balanced. The mason's or carpenter's level was called libra or libellus (whence the English name) on account of its resemblance in many respects to a balance. Hence the verb libra meant to level as well as to weigh. The woodcut to the article Creatura, which is inserted sideways, shows a libella fabriliis having the form of the letter A, and the line and plummet (perpendiculum) depending from the apex.

LIBRA or AS, a pound, the unit of weight among the Romans and Italians. Many ancient specimens of this weight, its parts and multiples, have come down to us; but of these some are imperfect, and the rest differ so much in weight that no satisfactory conclusion can be drawn from them. The difference between some of these specimens is as much as two ounces. An account of some of the most remarkable of them is given by Hussey and Böckh. This variety is to be accounted for partly by the well-known carelessness of the Romans in keeping to their standards of weights, and partly by the fact that many of the extant weights are from provincial towns, in which this carelessness was notoriously greater than in the metropolis.

The Roman coin furnish a mode of calculating the weight of the libra, which has been much relied on by most modern writers. As will not help us in this calculation, because its weight, though originally a pound, was very early diminished, and the existing specimens differ from each other very greatly. (Vid. AS.) We must therefore, look only to the silver and gold coins. Now the average weight of the extant specimens of the denarius is about 60 grains, and in the early ages of the coinage 64 denarii went to the pound. (Vid. Denarius.) The pound, then, by this calculation, would contain 5040 grains. Again, the aureus of the early gold coinage were equal in weight to a scrupulum and its multiples. (Vid. Aurem.) Now the scrupulum was the 288th part of the pound (vid. Uncia), and the average of the scrupular aurei bore to the Roman pound the ratio of 1 to 2905. Hence the pound would be 288 x 2905 = 5034.8 grains, as before. The next aurei coined were, according to Pliny, 40 to the pound, and, therefore, if the above calculation be right, = 128 grains; and we do find many of this weight. But, well as these results hang together, there is great doubt of their truth; for, besides the uncertainty which always attends the process of calculating a larger quantity from a small one, and of the multiplication of a small error, we have every reason to believe that the existing coins do not come up to their nominal weight, for there was an early tendency in the Roman mint to make money below weight (compare As, Annum, Denarius), and we have no proof that any extant coins belonged to the very earliest coinage, and, therefore, no security that they may not have been depreciated. In fact, there are many specimens of the denarius extant which weigh more than the above average of 60 grains. It is therefore probable that the weight of 5040 grains, obtained from this source, is too little.

Another mode of determining the pound is from the relation between the Roman weights and measures. The chief measures which aid us in this inquiry are the amphora, or quadrangular measure ofcapacity. Thecontents of the amphora were equal to a cube of which the side was one Roman foot, and the weight of water it contained was 80 pounds. Hence, if we can ascertain the length of the Roman foot independently, it will give us the solid contents of the amphora, from which we can deduce the weight of the Roman pound. But we may be obtained at once from the congrus of Vesuvius, which holds 10 Roman pounds, and was found by Dr. Hase (in 1721) to contain 55337 grains Troy of distilled water. (Vid. Congius.) This would give for the pound 5303759 grains Troy, or very nearly 53040 grains = 111 ounces and 60 grains. But another experiment (in 1860), Auzout found the congrus to contain 54653 grains Troy. This would make the pound 51460.9 grains Troy, or 113 ounces and 6 grains less than before. Hase considers that Dr. Hase's experiment is more to be relied on than Auzout's, as being more recent. The difference may be partly owing to another cause, which throws doubt on the whole calculation. The interior surface of the congrus may have been injured by time and other causes, and its capacity therefore increased. Worm ascribes this as a fact. Again, the nature of the fluid employed in the experiment, its temperature, and the height of the barometer, would all influence the result, and the error from these sources must occur twice, namely, at the original making of the congrus, and at the recent weighing of its contents. Still these errors are probably small, and therefore we may take the weight of 53040 grains Troy, as obtained from this experiment, as the nearest approximation to the weight of the Roman pound. This result very little exceeds that obtained from the coins; and as we have seen that the latter give too small a weight, the excess may be viewed rather as a correction than a contradiction. For it gives as the weight of the denarius of 84 to the pound nearly 62 grains, and many denarii weight more than 60 grains. The group would contain 97 grains, which only exceeds the average of extant specimens by about half a grain. Wurm, who de-
LICHEN.

LICHEN, Liburna, Liburnica (Albopur, Albopur), commonly a bireme with the mast amidship, as it appears from Lucian,6 but not unfrequently of larger bulk. Its description is clearly indicated by the same writer, as quoted by A. Cellarius,7 they appear to have been originally somewhat similar to the light Indian boats, literally sewn together, which are now used to cross the surf in Madras Roads. The Liburni stitched the planks of their boats together probably only in their earliest and rudest shape, as is still the practice in Malabar. Pliny8 informs us that the material of which these vessels were constructed was pine timber, as clear from resin as could be obtained. The piratical habits of the Illyrian nation, from whose ships the Romans affixed this term to their own, are described by Appian,9 who also confirms Lucian in the statement that they were commonly biremes. From its resemblance in shape to the present Liburnian boat, it is often called the Roman bireme, which name is, however, erroneous. Its convenience is well described by Juvenal,10 though some commentators think that this passage refers to Liburnian slaves who carried the litter. The sharpness of the beak of these ships, which was probably of also great weight (Böckh conjectures in the trierries of nearly four talents), is clearly deduced from the Plautian phrase adopted by Varro,11 informs us that they were constructed sharp in the bows, to offer the least possible resistance to the water. The Navis Rostrata and Liburnica were the same.12

The term Liburna became incorporated into the Latin tongue simply from the assistance rendered to A. Augustus in the battle of Actium. From this period, experience having shown their efficiency, this class of vessels became generally adopted by the Romans.13 In a similar manner, many naval terms, from the excellence of a foreign construction, have been introduced into our language from the Dutch, French, Spanish, and Italian, as brigantine, galleon, felucca, etc. Originally the word at the disposal of the Latin language, it lost its local and particular force, and became applied to other kinds of ships.

LICHAS. (Vid. Pers.)

*Lichen (Lib#), the Lichen. "The Lichen of Pliny," observes Adams, would appear to be different from that of the Macheria comic. The other is not so easily determined. Sprengel inclines to the Peltigera.

LIGUSTUM.

LIMBUS.

canina, sive Aptholoma, Hoffm.: The _ligustrum ligustri_, described in the M.M. of the ancients, were the true bindweeds or bindweeds, names which form the names of horses, called _spasin_ in English, and _Ligustrum_ in French. The term _ligustrum_ was also applied to a cutaneous disease allied to leprosy."

*LICYTIE ROGATIUS.* (Vid. Rogationes Liciniae.)

LICTOR, a public officer, who attended on the chief Roman magistrates. The number which waited on the different magistrates is stated in the article._ Licitiae._

The office of lictor is said to have been derived by Romulus from the Etruscans. 1 The etymology of the name is doubtful; Gellius 2 connects it with the verb _ligare_, because the lictors had to bind the hands and feet of criminals before they were punished. The lictors went before the magistrates one by one in a line; he who went last or next to the magistrate was called _præsum lictor_, to whom the magistrate gave his commands, 3 and, as this lictor was always the principal one, we also find him called _primus lictor_, 4 which expression some modern writers have erroneously supposed to refer to the lictor who went first.

The lictors had to inflict punishment on those who were condemned, especially in the case of Roman citizens; 5 for foreigners and slaves were punished by _taxifer_, 6 and they also, probably, had to assist in some cases in the execution of a decree or judgment in a civil suit. The lictors also commanded (animadverterent) persons to pay proper respect to a magistrate passing by, which consisted in dismounting from horseback, uncovering the head, standing out of the way, 7 etc.

The lictors were originally chosen from the plebs, 8 but it appeared they had been generally freedmen, probably of the magistrate on whom they attended. 9

Lictors were properly only granted to those magistrates who had the imperium. Consequently, the tribunes of the plebs never had lictors, 10 nor several of the other magistrates. Sometimes, however, lic- tors were granted to persons as a mark of respect or for the sake of protection. Thus by a law of the tribunes, every vestal virgin was accompanied by a lictor whenever she went out, 11 and the honour of one or two lictors was usually granted to the wives and other female members of the imperial family. 12

There were also thirty lictors, called _Lictores Curii_, whose duty it was to summon the curia to the comitia curiata; and when these meetings became little more than a form, their suffrages were represented by the thirty lictors. 13

LIGO (ικάλλια or μικάλλια) was a hatchet formed either of one broad iron or of two curved iron prongs, which was used by the ancient husbandmen to clear the fields from weeds. 14 The ligo seems also to have been used in digging the soil and breaking the crust of the earth.

LIGULA, a Roman measure of capacity, containing one fourth of the _Cyathus_, and therefore equal to 0.0206 of a pint English. 15

*LIGUSTRUM_, a plant about which considerable uncertainty prevails. It is commonly, however, regarded as the _Privet_. Virgil mentions it in

one of his Elogia, but all that can be gathered from what he says of it, is that the flowers are 'v.(d) without value.' Piny, 16 observes Marty, 17 says it is a tree, for in the 24th chapter of the 18th book, where he is speaking of the _cypros of Egypt_, he uses the following words: 'Quidam hanc ome- diunct arborum que in Italia Ligustrum vocatur.' Thus, also, we find in the tenth chapter of the 24th book, 'Ligustrum cadem arbor est qua in Orientalibus._

If the _ligustrum_ of Pliny was that which is commonly called _ligustrum_, it seems to be a tree, as called _privet_ or _privrncpt_, and by the Italians _chimera_, which seems a corruption of _ligustrum_, then he was mistaken in affirming it to be the same with the _cypros of Egypt_, which is the _elaeune_ or _aloe_.

Matthioli, in his commentaries on Dioscorides, says that Servius, among others, took the _ligustrum_ to be that sort of _convolvulus_ which we call great _bindweed_. Where Matthioli found this opinion of Servius I cannot tell, unless he made use of some copy very different from those which we now have. We find no more in our copies of Servius than that the _ligustrum_ is a very white but contemptible flower.

Still it must be acknowledged that the great bindweed has a very fair claim to be accounted the _ligustrum_ of Virgil, on account of its name being derived from 'binding' (a _ligando_), from the pure whiteness of its flower, and from its being, at the same time, a contemptible weed. He may also, with good reason, suspect that our _privet_ is not the plant intended, because the flowers are not fair enough, and yet are too sweet to be rejected with contempt. But it weighs something on the other side, that Pliny has called the _ligustrum_ a tree in two different places. In conformity, therefore, with the most common opinion, I have translated the _ligustrum_ as _privet_; if any one should change it for _bindweed_, I shall not greatly contend with him. 18

*LIGUSTICUM* (Ἀγυρντικόν). 19 Woodville agrees with the earlier commentators on Dioscorides and Galen, in referring to this the well-known plant, the _Ligusticum Lociumiium_, or _common Locu- rage_; but this opinion is questioned by Alston Sprang in, also, is not quite satisfied, and rather inclines to the _Lepiscyri_, Siler. Apicius recommends it frequently as a condiment. 20

*LILUM* (ποισον), the _Lily, or Liliun candidum_. 1 The Persian term _lath_, which is a name for all the liliaceous plants, and especially for the tulip (of which last the ancients knew nothing), has passed, on the one hand, into the family of Northern languages, under the forms of "_lily," _lily", _lily", and _lily", and, on the other, into the Greek and Latin, for _lilium_ and _lilium_ only differ by a very usual change of letters. (Vid. _Liliun_). "We need have no hesitation," remarks Adams, 21 in determining the common _poison_ of the Greeks to have been the _Lilium candidum_, L. Dioscorides describes another species with purple flowers, which Sprangiel is in doubt whether to set down as the _Lilium martagon_ or the _Lilium candidum_.

LIMA, a Flile, was made of iron or steel, for the purpose of polishing metal or stone, and appears to have been of the same form as the instruments used for similar purposes in modern times. 22

LIMBUS (σαρφίδ), the border of a tunic or a scarf. 23 This ornament, when displayed upon the tunic, was of a similar kind with the _Cyclas_ and _Isauria_, but much less expensive, more costly, and more simple. It was generally woven in the

LIPARUS

and (Cato, agris stone Lini

called likewise. 188, (from

LIMITATIO. (Vid. Agrimensores.)

LIMITA'TIO. (Vid. Agrimensores.)

LINEA, dim. LINE'OLA, a linen thread or string (from linum, flax), a line.* A string smeared with raddle (rubrica, μήτρα) and drawn tight, was used by carpenters, if needed, to mark a straight mark upon boards of wood, slabs of marble, &c. &c. Hence arose the proverb στρατός ἐκσφέρεται, meaning "more exact than rectitude itself." Since the string made no mark unless coloured, the pursuit of an object without discrimination and distinctness of purpose was called using the linea alba, or lēivative, or box used to hold the raddle was called μητριόν. By an extension of the signification, any straight mark (γραμμή), however produced, was called linea; and hence the same terms, both in Latin and Greek (linea, γραμμή), were applied to a mathematical line. Hence, also, a narrow boundary of any kind was denoted by these terms, and especially

nect the boundary of human life, and the boundary in the stadium from which the combatants started or at which they stopped. 2

Lipara* also meant a fishing-line; the line used in sounding (vid. CATHARAX); that employed in agriculture, called the meandering-line. 4

Linospartum (λινοσπαρτον), according to Stackhouse, the Lygum spartum. Sprengel holds that it is either this or the Stipa terracissima. 5

LinospERMUM (λινόσπερμον), Linn. Fred., 1806, as an article in the ancient Materia Medica. 6

Linier, a boat similar to the μονόδελφα πλοῖα, used in building to Pliny the Elder, Natural History. 7

The ancient British boat, at present in the court-yard of the Museum, formed of one tree, gives an excellent exemplification of the rudest form of the linter. Pliny* tells us that the Germans had boats of this description that held thirty men, and the British vessel just alluded to would certainly carry nearly this complement. The passage in Tacitus is too corrupt to be admitted as any authority for a larger description of ships being included under this term. In Ovid it is applied to Charon's bark, which was obviously worked by a single man. Caesar separates the linter from the navis, and also represents the former as one remove, in early boat-building, from the rats or rat. In another passage he speaks of it as resembling the scapha. Tholus* represents them to have been of light draught of water, like our wherries.

"Et qua Velabri regio patet ire scelobat Eunucus pulsa per vada linter aqua." 8

Auxonius* indicates that a chain of them formed a pontoon, and also classes them with the other light boats. 9 Horace describes the linter as a towboat worked by a single mule, which differs from the sense affixed to it by Propertius, who distinguishes between the swift linter and the slow rats or tow boat.

"Et modo iac. celeres mirerr currire lintera Eto modo tam tardas funibus ire rates." 10

These passages give a twofold sense to linter or wherry and towboat.

The name linter was also applied to a kind of tub or vessel of the block of pumice, which was used by country people for various purposes, such as for conveying and pressing the grapes. 11

Lignum (λίθον), the Lignum usitatissimum, or common Flax. "Most authors agree with Virgil," observes Martyn, "that flax burns or impoverishes the soil. Columella says it is so exceedingly noxious that it is not safe to sow it, unless you have a prospect of great advantage from it. Líni seminí, nisi magnus est ejus in ea regione quam colia provenus, et pretium proravit, serendum non est; agris enim præcipue nostrum est." 12

Lignum Vivum, Ashaene linen, or linen made out of Ashbees. 13

Liparæus Lapis, a stone of which Sir John Hill speaks as follows: "The Lipara stone is a small stone, usually about the bigness of a filbert, of an irregular and uncertain shape, and porous, friable constitution, like that of the pumices, but more easily crumbling into powder between the fingers than even the softest kind of them. The colour is generally a dusky gray, and the whole ex-

...
toral face of it evidently shows that it has suffered a change by fire. Dr. Moore thinks that it was a kind of obisid.2
LITARGYRUS (lidûgyrûs), Litargy. "The ancient Lithargy, like the modern, was procured during the purification of silver from the lead with which it was usually combined in its natural state. The scoría or dross which was formed during the process, obtained the name of Lithargy. In the language of modern chemistry, it is called the semi-vitrified protoxyde of lead."3
LITOSPERUM (lidôspërûm), the Lithospernum officinale, or Gromwell.4
LITHOSTROTA. (Vis. Housh, Roman, p. 520.) LITIS CONTESTATIO. "Contestatio" is when each party to a suit (uterque reus) says, "Testes estote," and the other party to a suit (adversarius) are said contestari litem, because, when the judicium is arranged (ordinato judicio), each party is accustomed to say, "Testes estote."5 The Litis Contestatio was therefore so called because persons were called on by the parties to the suit to "bear witness," "to be witnesses." It is not here said what they were to be witnesses of, but it may be fairly inferred from the use of the words contestatio and testatio in a similar sense in other passages, that this contestatio was the formal termination of certain acts, of which the persons called to be witnesses were at some future time to bear record. Accordingly, the contestatio, spoken of in the passage of Festus, must refer to the words ordinato judicio, that is, to the whole business that had taken place, and which is now completed. This interpretation seems to be confirmed by the following considerations.
When the leges actions were in force, the procedure consisted of a series of oral acts and pleadings. The whole procedure, as was the case after the introduction of the formulae, was divided into two parts, that before the magistrates, or in jure, and that before the judge, or in judicio. That before the magistrates consisted of acts and words by the parties and by the magistrates, the result of which was the determination of the form and manner of the future proceedings in judicio. When the parties appeared before the judge, it would be necessary for him to be fully informed of all the proceedings, for this was effected in later times by the formula, a written instrument under the authority of the prector, which contained the result of all the transactions in jure in the form of instructions for the judge. But there is no evidence of any such written instructions having been used in the time of the leges actions, and this must therefore have been effected in some other way. The Litis Contestatio, then, may be thus explained: the whole process of jure took place before witnesses, and the contestatio was the conclusion of these proceedings; and it was the act by which the litigant parties called on the witnesses to bear record before the judex of what had taken place in jure.
This, which seems a probable explanation of the original meaning of Litis Contestatio, may be compared, to some extent, with the appearance in its original sense of recorder and recording in English law.7
When the formula was introduced, the Litis Contestatio would be unnecessary, and there appears no trace of it in its original sense in the classical jurists. Still the expressions Litis Contestatio and Litis Contestata frequently occur in the Pan-
dect, but only in the sense of the completion of the proceedings in jure, and this is the meaning of the phrases Ante litem contestatum, Post litem contestatum.1 As the Litis Contestatio was originally and properly the termination of the proceedings in jure, it is easily conceivable that, after this form had fallen into disuse, the name should still be retained in the common law of such proceedings. When the phrase Litis Contestatio occurs in the classical jurists, it can mean nothing more than the proceedings by which the parties determine the procedure in jure, and so prepare the matter in dispute for the investigation of the judex.
It appears from the passage in Festus that the phrase Contestari litem was used because the words "Testes estote" were uttered by the parties after the judicum ordinatum. It was therefore the uttering of the words "Testes estote" which gave rise to the phrase Litis Contestatio; but this does not inform us what the Litis Contestatio properly was. Still, as the name of a thing is derived from that which constitutes its essence, it may be that the name here expresses the thing, that is, that the Litis Contestatio was so called for the purpose of effecting the act and things said, in the litigant parties calling on the witnesses to bear record. But as it is usual for the whole of a thing to take its name from some special part, so it may be that the Litis Contestatio, in the time of the leges actions, was equivalent to the whole proceedings in jure, and that the whole was so called from that part which completed it.
The Litis Contestatio fell into disuse cannot be determined, though it would seem that this must have taken place with the passing of the Abhutia lex and the two leges Julii, which did away with the leges actions in certain cases. It is also uncertain if the proper Litis Contestatio still existed in those leges actions which were not interfered with by the legis above mentioned; and if so, whether it existed in the old form or in a modified shape.
This view of the matter is by Keller, in his well-written treatise "Ueber Litis Contestatio und Ueber nachlassischem Römischen Recht," Zurich, 1827. Other opinions are noticed in his work. The author labours particularly to show that the expression Litis Contestatio always refers to the whole proceedings in jure, and never to those in judicio.
LITRA, a Sicilian silver coin, which was equal in value to the Æginetan obol. (Vis. Drachma.) Since the word has no root in the Greek language, but is merely the Greek form of the Latin libra, and since we find it forming part of an alludic system similar to that used in the Roman and Italian weights and money (as in Latin, obis, or Spanish, onza), it is evident that the Greeks of Sicily, having brought with them the Æginetan obol, afterward assimilated their system of coinage by that used by their Italian neighbours, making their obis to answer to the Latin libra, under the name obis. In the same way, a Corinthian stater of 80 obols was called in Syracusan a dékalótria, or pice of ten litras.
The cotylia, used for measuring oil, which is mentioned by Galien (vid. Cotyl.), is also called by him dégra. Here the word is only a Greek form of libra. (Vis. Libra, sub fin.)

LOGOGRAPHOI. Müller1 supposes this to be an Etruscan word signifying crooked. In the Latin writers it is used to denote
1. The crooked staff borne by the augurs, with which they divided the expanse of heaven, when viewed with reference to divination (tempulum), into regions (regiones); the number of these, according to the Etruscan discipline, being sixteen, according to Roman practice, four.2 Cicero3 describes the litus as "incurvum et leviter a mmum inflexum baculum;" and Livy4 as "laculum sine nodo adanumum." It is very frequently exhibited upon works of art.
2. The figure in the middle of the following illustrations is from a most ancient specimen of Etruscan sculpture in the possession of Inghirami,5 representing an augur; the two others are Roman deities.

2. A sort of trumpet slightly curved at the extremity.6 It differed both from the tubus and the cornu,7 the former being straight, while the latter was bent round into a spiral shape. Lydus8 calls the litus the saccoidal trumpet (lepantik ékèsigýs), and says that it was employed by Romulus when he proclaimed the title of his city. Acro9 asserts that it was peculiar to cavalry, while the tuba belonged to infantry. Its tones are usually characterized as harsh and shrill (stridor litum);9 somites acuta10). The following representation is from Fabretti.

LOGCATIO, LOCATIO, CONDUCTIO ACTIO. (Vid. LOGISTAI.

LOGISTAI. (Vid. Euthyne.)

LOGOCRAPHOI (λογογραφοί) is a name applied by the Greeks to two distinct classes of persons.
1. To the earlier Greek historians previous to Herodotus, though Thucydides11 applies the name logographer to all historians previous to him;12 and Herodotus and Thucydides are included under this title. The Ionians were the first of the Greeks who cultivated history; and the first logographer, who lived about Olym. 60, was Cadmus, a native of Miletus, who wrote a history of the foundation of his native city. The characteristic feature of all the logographers previous to Herodotus is, that they seem to have been more interested in amusing their hearers, or readers, than at imparting accurate historical knowledge. They described in prose the mythological subjects and traditions which had previously been treated of by the epic, and especially by the cyclic poets. The omissions in the narratives of their predecessors were probably filled up by traditions derived from the poets, so as to render, at least in form, a connected history.13
2. To persons who wrote judicial speeches or pleadings, and sold them to those who were in want of them. These persons were called λογογραφου̇ς as well as λογογραφοί. Antiphon, the orator, was the first who practised this art at Athens, towards the close of the Peloponnesian war. After this time, the custom of making and selling speeches became very general; and though the persons who practised it were not very highly thought of, and placed on a par with the sophists,14 yet we find that orators of great merit did not scruple to write speeches of various kinds for other persons. Thus Lysias wrote for others numerous λόγους εἰς διακαταφρονή τε καὶ βιανομον τοῖς ἄνθρωποις τοιούτους, and besides, παρα φρενος, ιδρυτικος, and κτιστικος.15

LONCHÉ (Λόνχη). (Vid. HARTA, p. 488.)

*LONGHI "ΤΗΣ (Λόνχης), a plant, a kind of Fern. Dioscorides mentions two species, the first of which Matthiolus and Sprengel make to be the *Sparapius lingua. The other, according to Sprengel, is the *Aspindum Lonichtis, Sw. 2

LOPE (Λόπε), LOPOS (Λόπης), *dim. LOPION (Λοπίον), the ancient Greek name of the Ammoc, whether consisting of the hide of an animal or of cloth. Having fallen into disuse as a colloquial or prosaic term, 3 it was retained, though employed very sparingly, by the poets. 4 We also find it retained in *λοποφόρυς, literally, *one who puts on the amictus, a term properly applicable to those persons who frequented the thermes in order to steal the clothes of the bathers (vid. *Bathia, p. 147), but used in a more general sense to denote thieves and highwaymen of all classes.

From the same root was formed the verb *κολωτίζων, meaning to take off the amictus, to denude. 5

LOPHOS. (Vid. *Galax.)

LORA/RII. (Vid. *Flagrum.)

LORICA (Λόρικα), a Cuirass.

The epithet *λαιοθόντως, applied to two light-armed warriors in the Ilid, 6 and opposed to *χαλλοθηγτως, the common epithet of the Greek soldiers, indicates the early use of the linen cuirass. It continued to be worn to much later times among the Asiaties, especially the Persians, 7 the Egyptians, the Phœnicians, and the Chalybes. 8 Iphicrates endeavoured to restore the use of it among the Greeks, 9 and it was occasionally adopted by the Romans, though considered a much less effectual defence than a cuirass of metal. 10

A much stronger material for cuirasses was horn, which was applied to this use more especially by the Sarmatians and Quadi, being cut into small pieces, which were planed and polished, and fastened like feathers upon linen shirts. 11 Hoofs were employed for the same purpose. Pausanias, 12 having made mention of a thorax preserved in the Temple of *Zeuxipus at Athens, gives the following account of the Sarmatians: Having vast herds of horses, which they sometimes kill for food or for sacrifice, they collect their hoofs, cleanse and divide them, and shape them like the scales of a serpent (φαλάνθης): they then bore them and sewed them together, so that the scales overlap one another, and in general appearance they resemble the surface of a green fir-cone. This author adds, that the lion's male of these hornly scales are much more strong and impenetrable than linen cuirasses, which are useful to hunters, but not adapted for fighting. The preceding woodcut, taken from Meyerick's Critical Inquiry into Ancient Armour (plate iii.), exhibits an Asiatic cuirass exactly corresponding to this description. It consists of pieces of some animal's hoof, which are stitched together, overlapping each other in perpendicular rows, without being fastened to any under garment. The projection nearest the middle must be supposed to have been worn over the breast, and the other over the back, so as to leave two vacant spaces for the arms.

This invention no doubt preceded the metallic scale armure. The Rhoxtolani, a tribe allied to the Sarmatians, defended themselves by wearing a dress consisting of thin plates of iron and hard leather. 13 The Persians wore a tunie of the same description, the scales being sometimes of gold (θησαυρος καλαθοντων); but they were commonly of bronze (θορκα indutus aenix aquam). 14 The method of hooking them together, so as to be imbricated, and to fit closely to the body, at the same time not hindering its free motion, is described by Hellenorus, 15 who says that the Persians covered their horses also with this kind of armour. The basis of the cuirass was sometimes a skin, or a piece of strong linen, to which the metallic scales, or "feathers," as they are also called, were sewed. 16 The warriors of Parthis, Dacia, and other countries, armed in this species of mail, are compared to moving stances of resplendent steel; and that this description was not the mere extravagance of poetry, is manifest from the representation of men so attired on the column of Trajan.

The epithet *λεπτηνός, as applied to a thorax, is opposed to the epithet *φαλάνθως. 17 The former denotes a similitude to the scales of fish (λεπτος), the latter to the scales of serpents (φαλανθω). The resemblance to the scales of serpents, which are long and narrow, is exhibited on the shoulders of the Roman soldier of the woodcut at page 28. These scales were imitated by long flexible bands of steel, made to fold over one another according to the contraction of the body. They appear very frequently on the Roman monuments of the times of the emperors, and the following woodcut places in

lower region of the body in concert with the belt (έγων) and the band (μήρα)." They are well shown in both the figures of the preceding woodcut. (See also the woodcuts at pages 86, 268, 418.)

Instead of the straps here described, which the Greeks called πτέρυγες, the Chalybes, who were encountered by Xenophon on his retreat, had in the same situation a kind of cordage. Appendages of a similar kind were sometimes fastened by hinges to the lories at the right shoulder, for the purpose of protecting the part of the body which was exposed by lifting up the arm in throwing the spear or using the sword. 3

Of Grecian outrisses the Attic were accounted the best and most beautiful. 4 The outriss was worn universally by the heavy-armed infantry and by the horsemen (vid. Anax. p. 107), except that Alexander the Great gave to the less brave of his soldiers breastplates only, in order that the defenceless state of their hacks might decrease their propensity to flight. 5 These were called half-outrisses (μισθωρακία). The thorax was sometimes found to be very oppressive and cumbersome. 6

LOTUS (λωτός). "The lotus of the ancients may be arranged under the following heads: 1. The λωτός upon which the horses pastured was a sort of Clover; it may be confidently set down as the Trifolium officinale, or common Melilot. It is very probable, however, that the term may not have been restricted to it, but may have comprehended others of the trefoils. 2. Under the Lotus aequinicus the ancients comprehended three Egyptian plants of the Water-lyle family, namely, the Nymphaea lotus, Nymphaea neslumbu, and Arum colocasia: the first two are well described by Herodotus. 7 III. Under the Lotus arbor were comprehended the Celtis Australis, several species of Rhamnus, and the Diospyros lotus.—This is the celebrated Lotus of the Lotophagi, an African people, whom Dionysius the geographer and Ptolemy place in the vicinity of the Great Syrtis, or Gulf of Sidra. But, according to Remni and Park, the tree which produces the lotus-bread is widely disseminated over the edge of the Great Desert, from the locality indicated by the ancients to the borders of the Atlantic." For further information respecting the ancient Loti, more especially the kind from which the Lotophagi obtained both bread and wine, see Eustachius in Hom., Od., p. 337, ed. Basil.—Schol. in Plat. Repub., viii.—Sprangel's Dissertation on the Loti.—Schweighaeuer ad Athen., xiv., 16.—Heeren's Researches, &c., vol. iv., c. 1; v., 4.—Fécq, Flore de Viggile, p. lxxx., &c., &c.

LOUTRON, LOETRON (λούτρον, λοτέριον), a Bath. The use of the bath in the Homeric ages is explained on pages 143, 144; it remains to speak of the Greek baths in the republican period. At Athens the frequent use of the public baths was regarded in the time of Socrates and Demosthenes as a mark of luxury and effeminacy. 1 According, Phocion was said to have never bathed in a public bath (ἐν βαλανείῳ δημοσιοτάτῳ), and Socrates had made use of it very seldom. 2 It was, however, only the warm baths (βαλανεία, called by Homer θηραίον λωτήριον) which objection was made, and not which in ancient times were not allowed to be built within the city. 3 The estimation in which such baths had been expressed is shown in the following lines of Hermippus: 4

Μά τον Δί, ου μεντος μιμος τον ομοίων γης
τον έγκηδον, οθελον θεραλοετιν,' ο σοι ποιεις.

In the Clouds of Aristophanes, the δίκαιος λόγος warns the young man to abstain from the baths (βαλανείων ἀπέχεσθαι), which passage, compared with I. 1028—1037, shows that warm baths are intended by the word βαλανεία.

The baths (βαλανεία) were neither public (δημόσια, δημοσιοτάτα) or private (θεα, ἰτικα). The former were the property of the state, but the latter were built by private individuals, and were opened to the public on the payment of a fee (τελοστρων). Such private baths are mentioned by Plutarch 5 and Isaeus, 6 who speak of one which was sold for 3000 drachmae. 7 Baths of this kind may also have been intended sometimes for the exclusive use of the persons to whom they belonged. 8 A small fee appears to have been also paid by each person to the keeper of the public baths (βαλανεία), which in the time of Lucian was two oboli. 9

We know very little of the baths of the Athenians during the republican period, for the account of Lucian in his Hiippias relates to baths constructed after the Roman model. On ancient vases, on which persons are represented bathing, we never find anything corresponding to a modern bath in which persons can stand or sit; but there is always a round or oval basin (λουτήριον or λουτρόν) resting on a stand (φοδάταρον), by the side of which those who are bathing are represented standing undressed and washing themselves, as is seen in the following woodcut, taken from Sir W. Hamilton's vases. 10 The word ΛΗΜΟΣΙΑ upon it shows that it belonged to a public bath.

The next woodcut is also taken from the same work, 11 and represents two women bathing. The one on the right hand is entirely naked, and holds a looking-glass in her right hand; the one on the left wears only a short kind of chiton. Eros is represented hovering over the bathing vessel.

Besides the λουτήρια and λουτρα, there were also vessels for bathing large enough for persons to sit in.

1. (Xen., De Re Equit., xii. 4.)—2. (Anab., iv., 7, 15.)
2. (Xen., De Re Equit., xii. 6.)—3. (Elian., V. H., iii. 24.)
however, states that it was a female who fetched the water on such occasions, and Demosthenes speaks of λουτροφόρος on the monument of a person who had died unmarried. In remains of ancient art we find girls represented as λουτροφόροι, but never boys.

LOUTROPH'ORUS. (Vid. Loutron.)

LUCAR. (Vid. Histrio, p. 507.)

LUCERES. (Vid. Triu.s.)

LUCERNA (Loxos), an Oil-lamp. The Greeks and Romans originally used candles, but in later times candles were chiefly confined to the houses of the lower classes. (Vid. CANDELABRUM.) A great number of ancient lamps has come down to us, the greater part of which are made of terra-cotta (τριτακτός), but also a considerable number of bronze. Most of the lamps are of an oval form, and flat upon the top, on which there are frequently figures in relief. (See the woodcuts, p. 114, 366, 408.) In the lamps there are one or more round holes, according to the number of wicks (ελλονία) burned in it; and as these holes were called, from an obvious analogy, μυκτήρας or μύκα, literally, nostrils or nozzles, the lamp was also called Monomyzos, Dimyzos, Tri-

myzos, or Polymyzos, according as it contained one, two, three, or a greater number of nozzles or holes for the wicks. (Vid. ELYCURNIUM.) The following examples in this lamp lucerna, upon which there is a winged boy with a goose, is taken from the Museo Borbonico, iv., 14.

The next woodcut, taken from the same work, represents one of the most beautiful bronze lamps which has yet been found. Upon it is the figure of a standing Silenus.

The lamps sometimes hung in chains from the ceiling of the room, but generally stood upon a stand. (Vid. CANDELABRUM.) Sometimes a figure holds the lamp, as in the following woodcut, which also exhibits the needle or instrument spoken of under ELYCURNIUM, which served to trim the wick, and is attached to the figure by means of a chain.

We read of lucerna cubiculares, balnearae, trich-

99
LUDI.

LUDI are, sepcularles, &c.; but these names were only given to the lamps on account of the purposes to which they were applied, and not on account of a difference in shape. The lucerna cubilea was burned in the chambers all night. Perfumed oil was sometimes burned in the lamps. LUDI is the common name for the whole variety of games and contests which were held at Rome on various occasions, but chiefly at the festivals of the gods; and as the ludi at certain festivals formed the principal part of the solemnities, these festivals themselves are called ludi. Sometimes, however, ludi were also held in honour of a magistrate or of a deceased person, and in this case the games may be considered as ludi privati, though all the people might take part in them.

All ludi were divided by the Romans into two classes, viz., ludi circenses and ludi scenici, accordingly as they were held in the circus or in the theatre; in the latter case they were mostly theatrical representations with their modifications: in the former, they consisted of all or a part of the games enumerated in the articles Circus and Gladiators. Another division of the ludi into stati, imperativi, and votivi, is analogous to the division of the ferriae. (Vid. Feriae, p. 435.)

The superintendence of the games and the solemnities connected with them was in most cases intrusted to the aediles. (Vid. Aediles.) If the lawful rites were not observed in the celebration of the ludi, it depended upon the decision of the pontiffs whether they were to be held again (instauraturi) or not. An alphabetical list of the principal ludi is subjoined.

LUDI APOLLINARISRES were instituted at Rome during the second Punic war, after the battle of Cannas (212 B.C.), at the command of an oracle contained in the books of the ancient seer Marcus (carmina Marciana). It was stated by some of the ancient annalists that these ludi were instituted for the purpose of obtaining from Apollo the protection of human life during the hottest season of summer; but Livy and Macrobius adopt the account founded upon the most authentic document, the carmina Marciana themselves, that the Apollinarian games were instituted partly to obtain the aid of Apollo in expelling the Carthaginians from Italy, and partly to preserve, through the favour of the god, the Republic from all dangers. The oracle suggested that the games should be held every year, under the superintendence of the praetor urbanus, and that ten men should perform the sacrifices according to Greek rites. The senate, complying with the advice of the oracle, made two senatus consulta; one that, at the end of the games, the praetor should receive 12,000 asses to be expended on the solemnities and sacrifices, and another that the ten men should sacrifice to Apollo, according to Greek rites, a bull with gilded horns, and two white goats also with gilded horns, and to Latona a heifer with gilded horns. The games themselves were held in the Circus Maximus, the spectators were adored with chaplets, and each citizen gave a contribution towards defraying the expenses. The Roman matrons performed supplications, the people took their meals in the propylaeum with open doors, and the whole day—for the festival lasted only one day—was filled up with ceremonies and various other rites. At this first celebration of the ludi Apollinarisres, no decree was made respecting the annual repetition suggested by the oracle, so that in the first year they were simply ludi votivi or dedicati. The year after (211 B.C.), the senate, on the proposal of the praetor Calpurnius, decreed that they should be repeated, and that, in future, they should be vowed afresh every year. The day on which they were held varied every year according to circumstances. A few years after, however (208 B.C.), when Rome and its vicinity were visited by a plague, and the Romans were suffering, the senate brought a bill before the people to ordain that the Apollinarian games should in future always be vowed and held on a certain day (dies status), viz., on the Sixth of July, which day henceforward remained a dies solemnis. The games thus became votivi et stativii, and continued to be conducted by the praetor urbanus. But during the Empire the day of these solemnities appears again to have been changed, for Julius Capitolinus assigns them to the 26th of May.

LUDI AUGUSTALES. (Vid. Augustales.) LUDI CAPITOLINAE were said to have been instituted by the senate on the proposal of the dictator M. Furius Camillus, in the year 387 B.C., after the departure of the Gauls from Rome, as a token of gratitude towards their liberator & benefactor, who had saved the Capitol in the hour of danger. The decree of the senate at the same time intrusted the superintendence and management of the Capitoline games to a college of priests, to be chosen by the dictator from among those who resided on the Capitol and in the citadel (in are), which can only mean that they were to be patricians. These priests were called Capitolini. One of the first arrangements at the Capitoline games, which was observed as late as the time of Plutarch, was that a herald offered the Sardians for public sale, and that some old man was led about, who, in order to produce laughter, wore a toga praetexta, and a bulla perruna which hung down from his neck. According to some of the ancient, this ceremony was intended to recall the time when the Romans were subdued, when two bulls were carried in triumph after long wars with Rome, and numbers of them sold as slaves, while their king, represented by the old man with the bulla (such was said to have been the costume of the Etruscan kings), was led through the city as an object of ridicule.

The Veientines were designated by the name Sardini or Sardi, because they were believed to have come from Libya, the capital of which was called Sardes. This specimen of ancient etymology, however, is set at naught by another interpretation of the term.
LUDI.  

They may have introduced more particular details, and the author, with some of the cereali, were superintended by the curule aediles. For further particulars, see Cicero, p. 255, &c.

LUDI COMPITALI'CHI. (Vid. Compitalli.)
LUDI FLORALES. (Vid. Flora1.)

Ludi circenses, romani or magni, were celebrated every year during several days, from the fourth to the twelfth of September, in honour of the three great deities, Jupiter, Juno, and Minerva, or, according to others, in honour of Jupiter, Consus, and Neptunus equestrii. They were conducted by the curule aediles. For further particulars, see Cicero, p. 255, &c.

LUDI HONORARI'RI. (Vid. Fonsus, p. 462.)

Ludi honorarii are expressly mentioned only by Suetonius, who states that Augustus devoted thirty days, which had been occupied till that time by ludi honorarii, to the transaction of legal business. What is meant by ludi honorarii is not quite certain. According to Festus, they were the same as the Libellaria. Scaliger, however, in his note on Suetonius, has made it appear very probable that they were the same as those which Tertullian says were given for the purpose of gaining the name of libertini, i.e., of being emancipated from the service of others, and which were intended either as an honour to the gods, or as doia for the dead. At the time of Augustus, this kind of ludi, which Tacitus seems to designate by the name inania honoris, were so common that no one obtained any public office without having a consideration of his property on the exhibition of games. Augustus, therefore, wisely assigned thirty of the days of the year, on which such spectacles had been exhibited previously, to the transaction of business. i.e., he made the games a necessary law of the state.

LUDI LIBERALE'S. (Vid. Dionysia, p. 366.)
LUDI MARTIALES were celebrated every year on the first of August, in the circus, and in honour of Mars, because the Temple of Mars had been dedicated on this day. The ancient calendaria mention also other ludi martiales, which were held in the circus on the 12th of March, on the Ides of March, and on the Ides of April.

LUDI NATALE'S. (Vid. Megaleia.)
Ludi Natales, the games with which the birthday of an emperor was generally celebrated. They were held in the circus, whence they are sometimes called circenses. They consisted generally of fights of gladiators and wild beasts. On one occasion of this kind, Hadrian exhibited gladiatorial combats for six days, and one thousand wild beasts.

LUDI PALATIN'I. were instituted by Livia in honour of Augustus, and were held on the Palatine. According to Dion Cassius they were celebrated during three days, but according to Josephus they lasted eight days, and commenced on the 27th of December.

LUDI PISCATORI'RI were held every year on the 6th of June, in the plain on the right bank of the Tiber, and were conducted by the praetor urbani on behalf of the fisherman of the Tiber, who made the day a holiday.

LUDI PLEBE'I. were, according to Pseudo-Asconius, the games which had been instituted in commemoration of the freedom of the plebeians after the banishment of the kings, or after the accession of the plebes to the Aventine. The first of these accounts is not borne out by the history of the plebeian order, and it is more probable that these games were instituted in commemoration of the reconciliation between the patricians and plebeians after the first accession to the Mons Sacer, or, according to others, to the Aventine. They were held on the 16th, 17th, and 18th of November, and were conducted by the plebeian aediles. It is sufficiently clear from the ancient calendaria, that the ludi plebei were not, as some have supposed, the same as, or a part of, the ludi Romani.

Ludi quaestoriai are probably nothing but a particular kind of the ludi honorarii mentioned above. They were for the first time given by Augustus, when, after the death of Lepidus, he obtained the office of pontifex maximus.

LUDI QUESTOR'RI were of the same character as the preceding games. They were instituted by the Emperor Claudius, who decreed that all who obtained the office of questor should, at their own expense, give gladiatorial exhibitions. Nero did away with this obligation for newly-appointed questors, but it was revived by Domitian.

LUDI SCAECULARE's. If we were to judge from their name, these games would have been celebrated once in every century or sesquium; but we must conclude that they were of no uncommon occurrence at any period of Roman history, and the name ludi secularia itself was never used during the time of the Republic. In order to understand their real character, we must distinguish between the time of the Republic and of the Empire, since at
these two periods these ludi were of an entirely different character.

During the time of the Republic they were called ludi Tarentini, Terentini, or Taurii, while during the Empire they bore the name of ludi sacrales.¹ Their origin is described by Valerius Maximus, who attributes their institution to the miraculous recovery of three children of one Valerius, who had been attacked by a plague raging at that time in Rome, and whose restoration to health, by offering some victims, was warmed at a place in the Campus Martius called Tarentum. Valerius afterward offered sacrifices in Tarentum to Dis and Proserpina, to whom the recovery of his children was supposed to be owing, spread lectisternia for the gods, and held festival games for three successive nights, because his three children had been saved. The account of Valerius Maximus agrees in the main with those of Censorinus² and of Zosimus,³ and all appear to have derived their information from the ancient annalist, Valerius Antias. While, according to this account, the Tarentine games were first celebrated by Valerius, another legend seems to consider the fight of the Horatians and Curatians as connected with their first celebration. A third account⁴ ascribes the first institution to the reign of Tarquinus Superbus, a fearful plague breaking out while all pregnant women were affected in such a manner that the children died in the womb. Games were then instituted to propitiate the infernal divinities, together with sacrifices of sterile cows (taureæ), whereas the games were called ludi Taurii. These games and sacrifices took place in the Circus Flaminius, that the infernal divinities might not enter the city. Festus⁵ and Censorinus ascribe the first celebration to the consul Valerius Poplicola. This account admits that the worship of Dis and Proserpina had existed long before, but states that the games and sacrifices were now performed for the first time to avert a plague, and in that part of the Campus Martius which had belonged to the last king Tarquinus, from whom the place derived its name Tarentum. Valerius Maximus and Zosimus, who knew of the celebration of these games by Valerius Poplicola, endeavored to reconcile their two accounts by representing the celebration of Poplicola as the second in chronological order. Other less important traditions are mentioned by Servius⁶ and by Varro.⁷

According to the accounts, the names Tarenti or Tauri, they are perhaps nothing but different forms of the same word, and of the same root as Tarquinius. All the accounts mentioned above, though differing as to the time at which, and the persons by whom, the Tarentine games were first celebrated, yet agree in stating that they were celebrated for the purpose of averting from the state some great calamity by which it had been afflicted, and that they were held in honour of Dis and Proserpina. From the time of the consul Poplicola down to that of Augustus, the Tarentine games were only held three times, and again only on certain emergencies, and not at any fixed time, so that we must conclude that their celebration was in no way connected with certain cycles of time (sacra). The delites in which it had been held during the Republic, continued, as at first, to be Dis and Proserpina. At about the times at which these three celebrations took place, the commentarii of the quindecimviri and the accounts of the annalists did not agree,⁸ and the discrepancy of the statements was still more evident, for we find various accounts of the times, places, and persons of the sacrifices. The quindecimviri made this assertion: ludi Tarentini.

The celebrated jurist and antiquary Ateneus Capito received from the emperor the command to determine the ceremonies, and Horace was requested to compose the festive hymn for the occasion (carmen sacrale), which is still extant. But the festival which was now held was in reality very different from the ancient Tarentine games; for Dis and Proserpina, to whom formerly the festival belonged exclusively, were now placed among the divinities in the temple of whom the ludi sacrales were celebrated. A description of the various solemnities is given by Zosimus. Some days before they commenced, heralds were sent out to invite the people to a spectacle which no one had ever before beheld. The people, said to be invited to the actors in the dramatic representations which were performed during the festival days. The festival took place in summer, and lasted for three days and three nights. On the first day the games commenced in the Tarentum, and sacrifices were offered to Jupiter, Juno, Neptune, Minerva, Venus, Apollo, Mercury, Ceres, Vulcan, Mars, Diana, Vesta, Hercules, Latona, the Parcae, and to Dis and Proserpina. The solemnities began at the second hour of the night, and the emperor opened them by the river side with the sacrifice of three lambs to the Parcae upon three altars erected for the purpose, and which were sprinkled with the blood of the victims. The lambs themselves were burned. A temporary scene like that of a theatre was erected in the Tarentum, and illuminated with lights and fires.

In this scene the festivity was sung by a chorus, and various other ceremonies, together with theatrical performances, took place. The morning of the first day, the people went to the Capitol to offer solemn sacrifices to Jupiter; thence they returned to the Tarentum, to sing choruses in honour of Apollo and Diana. On the second day, the noblest matrons, at an hour fixed by the emperor, accompanied by the Capitol, people and others, went to the actors in the dramatic representations, sang hymns to the gods, and also visited the altar of Jupiter. The emperor and the quindecimviri offered sacrifices, which had been vowed before, to all the great divinities. On the third day, Greek and Latin choruses were sung in the sanctuary of Apollo by three times nine boys and maidens of great beauty, whose parents were still alive. The Syrian choruses were employed in the protection of the gods for all cities, towns, and officers of the Empire. One of these hymns was the Carmen Sacrale by Horace, which was especially composed for the occasion, and adapted to the circumstances of the time. During the whole of the three days and nights, games of every description were carried on

LUPERCIA.

In all the circuses and theatres, and sacrifices were offered in all the temples.

The first celebration of the luperci sacrae in the reign of Augustus took place in the summer of the year 17 B.C. The second took place in the reign of Claudius, A.D. 47; the third in the reign of Domitian, A.D. 88; and the last in the reign of Philippus, A.D. 248, and, as was generally believed, just 1000 years after the building of the city.4 LUDI TARENTINI or TAURITI. (Vid. Ludi Seculares.)

LUDIS. (Vid. Gladiatorium, p. 475.)

LUDUS DUO DECIM SCRIPTORUM. (Vid. Latrunculo.)

LUDUS LATRUNCULORUM. (Vid. Latrunco-

LUDUS TROJÆ. (Vid. Circus, p. 256.)

LUPATUM. (Vid. Ferunum, p. 452.)

LUPERCALIA, one of the most ancient Roman festivals, which, as we have seen, was applied to women, was without doubt originally applied to the flocks, and to the people of the city on the Palatine.2 Festus9 says the Luperci were also called crepi or creppi, from their striking with goatskins (a crepitum pellicularium), but it is more probable that the name crepi was derived from creps, which was the ancient name for goat.

The festival of the Lupercalia, though it necessarily lost its original import at the time when the Romans were no longer a nation of shepherds, was yet always observed in commoration of the founders of the city. Antonius, in his consulate, was one of the Luperci, and not only ran with them, half-naked, and with pieces of goatskin, through the city, but even addressed the people in the Forum in this rude attire.6 After the time of Cesar, however, the Luperci seem to have been neglected, for Augustus is said to have restored it, but he forbade youths (imberbes) to take part in the running. The festival was henceforth celebrated regularly down to the time of the Emperor Anastasius.12 Thesewoah of the Luperci also are mentioned in inscriptions of Velitrae, Pramaeste, Nemausus, and other places.7

LUPERCI were the priests of the god Lupercus. They formed a college (votidati, triaepi), the members of which were originally youths of patrician birth, who, after being initiated, became priestly members of the Luperci, first named by Romulus and Remus. The college was divided into two classes, the one called Fathi or Fabiani, and the other Quinctili or Quincutia. These names, which are the same as those with which the followers of Romulus and Remus were designated in the early Roman legends, seem to show that the priesthood was originally confined to certain gentes.8 But if such were the case, this limitation does not seem to have existed for a very long time, though the two classes retained their original names, for Festus says that in course of time the number of Luperci increased, "Quia honoris gratia multi in Lupercis adscribendarunt." What was Lupercus? We are not certain of the origin of Luperci, and how long their office lasted, is unknowable. But we have at least one inscription9 that a person held the office of Lupercus twice, and another three times, and this fact shows, at least, that the priests were not appointed for life. Julius Caesar added to the two classes of the college a third, with the name of Juli or Juliani, and made Antonius their high-priest. He also assigned to them certain revenues (rectigala), which were afterwards withdrawn from them.13 But it is uncertain whether Caesar assigned these revenues to the whole college, or merely to the Juli. From this time the two ancient classes of the Luperci are sometimes distinguished from the new one by the name Luperci veteres.14 Although in early times the Luperci were taken only from noble families, their scope and influence at the time of the Emperors was offensive to the more refined Romans of a later age,15 and Cicero16 characterizes the college as designated a februum and lustrare.1 The goat'skin itself was called februum, the festive days die febru-

---

LUSTRIAT. | LUSTRIUM.

1. "Fera quadam sodaliitas et plane pastoria ac tuae agratis, quorum cotiis illa seipsetiae ane esto instituta quam humanitas atque leges." Respecting the rites with which they solemnized the Lupercalia, *vid. Lupercalia.*

*LUPUS* (Lycop), the Wolf, or *Canis lupus.* (Vid. *Cantis.*)

*LUPUS FERREUS,* the Iron Wolf used by the besieged in repelling the attacks of the besiegers, and especially when wounding the Roman and destroying its blots. (Vid. *Aen., ii. 932.*)

LUSTRATIO (καθαρος) was originally a purification by ablution in water. But the lustrations, of which we possess direct knowledge, are always connected with sacrifices and other religious rites, and consisted in the sprinkling of water by means of a branch of laurel or olive, and at Rome sometimes by means of the aspergillum (vid. *Cernipes,* and in the burning of certain materials, one of the smoke of which was thought to have a purifying effect. Whenever sacrifices were offered, it seems to have been customary to carry them around the person or thing to be purified. Lustrations were made in ancient Greece, and probably at Rome also, by private individuals when they had polluted themselves with any criminal action. Whole cities and states, also, sometimes underwent purifications, to expiate the crime or crimes committed by a member of the community.

The most celebrated purification of this kind was that of Athens, performed by Epimenides of Crete, after the Cylonian massacre. Purification also took place when a sacred spot had been unhallowed by profane use, as by burying dead bodies in it, such as was the case with the island of Delos. The Romans performed lustrations on many occasions on which the Greeks did not think of them; and the object of most Roman lustrations was not to atone for the commission of crime, but to obtain the blessing of the gods upon the persons or things which were lustrated. Thus fields were purified after the business of sowing was over, and before the sickle was put to the corn. (Vid. *Annulares Praters,* p. 109.) The manner in which sheep were lustrated every year at the festival of the Pallia is described by Ovid. The shepherd towards evening sprinkled his flock with water, adorned the fold with branches and foliage, burned pure sulphur and various herbs, and offered sacrifices to Pales. The object of this lustration was to preserve the flock from the diseases and other evils. All Roman armies, before they took the field, were lustrated; and, as this solemnity was probably always connected with a review of the troops, the word lustratio is also used in the sense of the modern review.

The rite customary on such occasions are not mentioned, but they probably resembled those with which a fleet was lustrated before it set sail, and which are described by Appian. All dangers Hereupon the priests divided the sacrifices into two parts, one of which was thrown into the sea, and the other burned upon the altars, while the multitude around prayed to the gods. (Vid. *Livy* IV, a prayer)

604

is recorded, such as generals used to perform on these occasions.) When a Macedonian army was lustrated, a dog was cut in two pieces in the place where the army was to assemble, and one half of the dog was thrown at a distance on the right and the other to the left. The army then assembled in the place between the spots where the pieces had fallen. But to return to the Romans. The establishment of a new colony was always preceded by a lustration with solemn sacrifices. The city of Rome itself, as well as other towns within its dominion, always underwent a lustration after they had been visited by some great calamity, such as civil bloodshed, awful prodigies, and the like. A regular and general lustration of the whole Roman people took place after the completion of every lustrum, when the censor had finished his census and before he laid down his office. This lustration (also called lustratio) was conducted by one of the censors, and held with sacrifices called Suovetaurilia, because the sacrifices consisted of a pig (or ram), a sheep, and an ox. This lustration, which continued to be observed in the days of Dionysius, took place in the Campus Martius, where the people assembled for the purpose. The sacrifices were carried three times around the assembled multitude. Another regular lustration was performed every year in the month of February, was said to have been instituted because the god Februus was believed to be potens lustrationem, and because in this month the solemnities in honour of the dii manes took place.

LUSTRUM (from luo, Gr. λέον) is, properly speaking, a lustration or purification, and in particular, the purification of the whole Roman people performed by one of the censors in the Campus Martius after the business of the census was over (Vid. *Censura, Lustratio.*) As this purification took place only once in five years, the word lustrum was also used to designate the time between two lustra. Varro erroneously derives the word lustrum from luo (I pay), because the vestal and tributa were paid every five years to the censors. The first lustrum was performed in B.C. 566, by King Servius, after he had completed his census, and afterward it is said to have taken place regularly every five years after the census was over. The first censors were appointed in 443 B.C., and from this year down to 394 B.C., there had, according to Livy, only been 26 pairs of censors, and only 21 lustra. General purifications, although, if all had been regular, there would have been 60 censors and 30 lustra. We must therefore conclude that sometimes the census was not held at all, or, at least, not by the censors. We also learn from this statement that the census might take place without the lustrum, and, indeed, two cases of this kind are recorded, which happened in 459 and 314 B.C. In these cases the lustrum was not performed, to prevent the great calamities which had befallen the Republic.

The time when the lustrum took place has been very ingeniously defined by Niebuhr. Six ancient Romulian years of 365 days each were, with the difference of one day, equal to five solar years of 365 days each, or the six ancient years made 1824 days, while the five solar years contained 1825 days. The first lustrum, therefore, was thus a cycle, at the end of which the
LYRA
beginning of the ancient year nearly coincided with that of the solar year. As the coincidence, however, was not perfect, a month of 24 days was calculated in every eleventh leustrum. Now it is highly probable that the recurrence of such a cycle or great year was, from the earliest times, solemnized with sacrifices and purifications, and that Servius Tullius did not introduce them, but merely connected them with his census, and thus set the example for subsequent ages, which, as we have seen, was not observed with regularity. At first the irregularity may have been caused by the struggles between the patricians and plebeians, when the appointment of censors was purposely neglected to increase the disorders; but we also find that similar neglects took place at a later period, when no such excuse existed. The last leustrum was solemnized in Rome in A.D. 74, in the reign of Vespasian.

Many writers of the latter period of the Republic and during the Empire use the word leustrum for any space of five years, and without any regard to the census, while others even apply it in the sense of the Greek pentecost, which is never used in the modern language. Diodorus, who uses the expression leustrum ingenia for seculum.

LYCIA (Λυκία), a festival with contests, celebrated by the Arcadians in honour of Zeus, called 

LYCAEA (Λύκεα), a species of Fish, the Trigla Lyra, L. It is called in French, Gronau; in English, the Piper, from a sort of hissing which it makes by the expulsion of the air through the gills when taken. Pennant says it is often caught on the western coast of great Britain, and that the Lyra (Lyra, Lat. fides), a Lyre, one of the most ancient musical instruments of the stringed kind. There can be scarcely any doubt that this and similar instruments were used by the Eastern nations and by the Egyptians long before the Greeks became acquainted with them, and that they were introduced among the Greeks from Asia Minor.

The Greeks themselves, however, attributed the invention of the lyra to Hermes, and have described the instrument of a tortoise-shell, over which he placed gut-strings. As regards the original number of the strings of a lyre, the accounts of the ancients differ so widely that it is almost impossible to arrive at any definite conclusion. Diodorus states that Hermes gave his lyre three strings, one with an aputa, the other with a grave, and the third with a middle sound. Macrobius says that the lyre of Mercury had four strings, which symbolically represented the four seasons of the year; while Lucian, Ovid, and others, assume that the lyre from the first had seven strings. All ancient writers who mention this invention of Hermes apply to the lyra, though with a grave, in the description of Apollo and Servius, rather resembles that of the instrument which in subsequent times was designated by the name cithara (κιθάρα or κιθάρας), and in some degree resembled a modern guitar, in as far as in the latter the strings were drawn across the sounding bottom, whereas in the lyra of better times they were free on both sides. In the Homeric poems the name is given to the instrument, with the exception of the Homeric hymn to Hermes; and from the expression which occurs in this hymn (λύρα κιθάριστη), it appears that originally there was very little or no difference between the two instruments; that is to say, the instrument formerly used was a cithara in the later sense of the word.

The instruments which Homer mentions as used to accompany songs are the φορίας and κιθάρας. Now that the φορίας and the κιθάρας were the same instrument, appears to be clear from the expression φορίας κιθάριστην, and κιθάρα φορίας. The lyra is also called χέλων at χέλων, and in Latin testudo, because it was made of a tortoise-shell.

The obscurity which hangs over the original number of strings of the lyre is somewhat removed by the statement made by several ancient writers, that Terpander of Assia (about 650 B.C.) added to the original number of four strings three new ones, and thus changed the tetrachord into a heptachord.
The heptachord introduced by Terpander henceforth continued to be most commonly used by the Greeks, as well as subsequently by the Romans, though in the course of time many additions and improvements were made, as well as a cithara, and both are taken from the work of Blanchini.

The heptachord thus had the compass of an octave, or, as the ancients called it, a diapason (διὰ πασῶν). The intervals between the seven strings in the diatonic scale were as follows: between one and two, a whole tone; between two and three, a whole tone; between three and four, a whole tone and a semitone; between four and five, and five and six, a whole tone each; between six and seven, a semitone. The seven strings themselves were called, beginning from the highest, νήστη, παρανηστή, παραπετή, μεσία, λιχανός, παραλιχανό, οὔτατη. 2 Pindar himself made use of the heptachord, though in his time an eighth string had been added. In the time of Philip and Alexander, the number of strings was increased to eleven by Timotheus of Milethus, an innovation which was severely censured by the Spartans, who refused to go beyond the number of seven strings. 3 It is, however, clear that the ancients made use of a variety of lyres, and in the representations which we still possess, the number of strings varies from three to eleven. About the time of Sappho and Anacreon, several stringed instruments, such as magas, barbiton, and others, were used in Greece, and especially in Lesbos. They had been introduced from Asia Minor, and Noemos, a stringed instrument far exceeded that of the lyre, for we know that some had a compass of two octaves, and others had even twenty strings, so that they must have resembled a modern harp than a lyre. 4 It has been remarked above that the name lyra occurs very seldom in the earliest Greek writers, and that originally this instrument and the cithara were the same. But about the time of the Ionian innovations seem to have been introduced, by which the lyra became distinct from the cithara, the invention of which was ascribed to Apollo, and hence the name of the former now occurs more frequently. 5 Both, however, had in most cases no more than seven strings. The difference between the two instruments is described above; the lyra had a great and full-sounding bottom, which continued, as before, to be made generally of a tortoise-shell, from which, as Lucian 6 expresses it, the horns rose as from the head of a stag. A transverse piece of wood, connecting the two horns at or near their top ends, served to fasten the strings; and was called ζώνη, and in Latin transtibulum. The horns were called πυργὸς or cornua. 7 These instruments were often adorned in the most costly manner with gold and silver, and as a lyre was considered as a more manly instrument than the cithara, which, on account of its smaller-sounding bottom, excluded full sounding and deep tones, and was more calculated for the middle tones. The lyre, when played, stood in an upright position between the knees, while the cithara stood upon the knees of the player. Both instruments were held with the left hand, and played with the right. 8 It has generally been supposed that the strings of these instruments were always touched with a little staff called plectron (πλήκτρον) (see woodcut, p. 188), but among the paintings discovered at Herculanum, we find several instances where the persons play the lyre with their fingers. 9 The lyre was at all times only played as an accompaniment to songs.

The Latin name fides, which was used for a lyre as well as a cithara, is probably the same as the Greek σφάλαξ, which, according to Hesychius, 10 signifies gut-string; but Festus 11 takes it to be the same as fides (faith), because the lyre was the symbol of harmony and unity among men. The lyre (cithara or phorminx) was at first used in the recitations of epic poetry, though it was probably not played during the recitation itself, but only as a prelude or accompaniment to the story, and in the intervals or pauses between the several lyras. The lyre has given its name to a species of poetry called lyric; this kind of poetry was originally never recited but sung without the accompaniment of the lyre, and sometimes, also, of an appropriate dance. (Compare the article MUSICA.—Plutarch, De Musica.—Döbich, De Metria Pindari.—Driberg, Musikalische Wissenschaften der Griechen; and by the same author, Ausflüsse über die Musik der Griechen.—Müller, Hist. der Gr. Lit., i., p. 148, &c.)

**MAGISTRARUM.**

1. **Sprengel** confidently determines the λ. of Dioecorides to be the *Ligeminia vulgaris*, or yellow Loosestrife; but the *Ligeminium anomalum* of Pliny he holds to be the *Ligustrum salicaria*.1

2. **M. MACEDONIA IN SUMMA SENATUS CONSULTUM.**

(Vid. Senatus Consultum.)

3. **MACCHUS.** (Vid. Atell. Fab. p. 119.)

4. **MACELLUM (δήμηλης, δήμηλας, κρεοπώλης**).

- Division-market, frequented by cooks, fishermen, poulterers, confectioners, butchers, and men of similar occupations.2

5. **(Vid. Forum, p. 451.)**

- From a classification-merchant was called *macellarius* (δήμηλης, κρεοπώλης). The Athenians called their macellum *eic tov són²v*, just as they called their slave-market *eic τα ἄνδρονδη*, their wine-market *eic τὸν ὄσον*, and other markets by the names of the commodities sold in them.3

6. **MACER (μάχης),** according to Moses Charras, the same as Mace. "This, however, is denied by Matthioli," observes Adams, "with whom Sprengel agrees, although he admits that the Athenians confounded them together. He is disposed to believe it the bark of a Malabar tree described by COSTA, and said to be called 'Mace.'"4

7. **MAGADIS.** (Vid. Lyra; Musica, Greek.)

- MAGISTER, which contains the same root as mag-is and mag-nus, was applied at Rome to persons possessing various kinds of offices, and is thus explained by Festus: "Magisteres, moderari. Unde magistris non solam doctorem armis, sed etiam pagorum, societatem, vicorum, collegorum, equestri dicuntur; qui atque homin magis ceteris possunt." Paulus5 thus defines the word: "Quibus praecipua cura rerum incumbit, et qui magis quam ceteri deditigentia et sollicitudinem robu, quibus praebunt, debeni, hi magistri appellantur." The following is a list of the principal magistri:

8. **MAGISTER ADSCENSIUM.** (Vid. Admissionales.)

- The Magister appears to have been the same officer as the magister militum.6

9. **MAGISTER AUCTIONIS.** (Vid. Bonorum Emto.)

10. **MAGISTER BIBENDI.** (Vid. Symposium.)

11. **MAGISTER COLLEGI.** was the president of a college or corporation. (Vid. Collegium.)

- MAGISTER EPIDORUM answered letters on behalf of the consuls. (Vid. Epidorum.)

12. **MAGISTER EQUITUM.** (Vid. Dictator, p. 361.)

- MAGISTER LIBELLORUM was an officer or secretary who read and answered petitions addressed to the emperors. (Vid. Libellus, 4, c.) He is called in an inscription "Magister libellorum et cognitionum procurator."7

13. **MAGISTER MEMORIÆ, an officer whose duty it was to receive the decision of the emperor on any subject, and communicate it to the public or the persons concerned.8

14. **MAGISTER MILITUM.** (Vid. Army, Roman, p. 106.)

15. **MAGISTER NAVIS.** (Vid. Exercitior Umto.)

16. **MAGISTER OFFICIORUM** was an officer of high rank at the imperial court, and had the superintendence of all audiences with the emperor, and also had extensive jurisdiction over both civil and military officers.9

ores in various matters which came under their cognizance, and the want of it also removed other matters. Procrustes, who was the public prosecutor in this country (in its general sense). Those matters which belonged to jurisdiction in its limited sense were within the competence of the magistrates minores (vid. JURISDICTIO); but those matters which belong to the imperium were, for that reason, not within the competence of the magistrates minores. As proceeding from the imperium, we find enumerated the praetorius stipulations, such as the cautio danni inficti, and ex nvo operis nunciata; and also the missio in possessionem, and the in integrum restitution. Thus it appears that the limited jurisdiction was confined to the ordo judiciorum privatorum, and all the proceedings extra ordinem were based on the imperium: consequently, a minor magistrate could not exercise cognito, properly so called, and could not make a decretum. This consideration explains the fact of two praetors for questions as to deditioemissis being assigned under Claudius: they had to decide such matters for all Italy, inasmuch as such matters were not within the competence of the municipal magistrates. The jurisdiction of the municipal magistrates of Cisalpine Gaul was limited, in many cases, to a certain sum of money, and this limitation was afterward extended to all Italy. Added to this, these magistrates had the imperium, which, as already observed, limited their jurisdiction. The magistrates minores could take cognizance of matters which were not within their jurisdiction, by delegatio from a superior magistrate. Thus, in the case of damnum infectum, inasmuch as delay might cause irreparable mischief, the praetor could delegate to the municipal magistrates, who were under the imperium, for hearing such matters. It became necessary to reorganize the administration of Gallia Cisalpina on its ceasing to be a province; and, as the jurisdiction was placed in the hands of municipal magistrates who had no imperium, it was farther necessary to determine what should be the form of procedure before such magistrates in all matters that were extra ordinem, that is, in matters as not belonging to their competence because they were magistrates minores, but were specially given to them by a lex. The determination of this form of procedure was the object of the lex Rubria. (VID. LEX RUBRJA.)

The case of adoption (properly so called) illustrates the distinction of magistrates into majors and minores, as forming itself on the possessing or not possessing the imperium. This adoption was effected "imperio magistratuum," as, for instance, before the praetor at Rome: in the province the same thing was effected before a proconsul or legatus, both of whom, therefore, had the imperium. The municipal magistrates, as they had not the imperium, could not give validity to such an act of adoption.

*MAGNES (μάγνης, μαγνήτης, and καλός, the Loadstone or Magnet. "The story of the discovery of this stone by one Magnes, a shepherd on Mount Ida, who found his hob-nailed shoes and iron-pointed staff cling to the rock upon which he trod, seems to be a poetical fiction, derived by Pliny from Nicander. The name is undoubtedly derived from the locality where the stone was first found." (Cuvier, the following article.)

*MAGNIEUS LAPIUS, a stone found both at Magnesia in Thessaly, and near a city of the same name in Asia Minor. "As one and the same mineral substance," observes Dr. Moore, "received among the ancients different names, according as it was procured by different methods from different places, or from substances apparently alike: so it is highly probable that these were called by the same name, merely because of some accidental agreement in colour, place of origin, or use to which they were applied. Thus the name 'magnet' (or Magnesian stone) was given not only to what we call the native magnet, magnetic oxide of iron, but to a substance wholly different, and which appears to have been some variety of ferrite: it is highly probable that these were minerals, so different in nature, and called by different names; but having both denominated the magnetic (or Magnesian) stone, from their being both found in a country named Magnesia; for, of the five localities specified by Pliny, whence as many varieties of magnet were obtained, one is Magnesia in Thessaly, and another a city of Asia bearing the same name. And it was here, he says, a magnet was found, of a whitish colour, somewhat resembling porphyry, and not attracting iron; which, taken in connexion with what Theophrastus says of the magnet, that it was suited for turning in the lathe, and of a silvery appearance, leads to the inference that this magnet was tale or steatite. This mineral contains a large proportion of the earth called magnesia, a name of which we may thus trace the origin, though perhaps a much purer form than this steatitic affords, of the earth usually called magnesia, may have been sometimes designated as the magnesian stone; for, when Hippocrates prescribes the use of it as a cathartic, it seems highly probable that he meant the native carbonate of Magnesia. He certainly does not intend the magnet, as well because it is not purgative, as because he elsewhere describes that differently as the stone which draws iron, and would not have given it, not the Magnesian, but the Herculanian stone."

*MAGUIARIS (μαγοτρίας). Dioscorides applies this name to the root of the plant which produces asafetida. Theophrastus, however, would seem to make it a distinct species or variety. (Vid. Siliquum.)

*MAIA (μαια), a sort of Crab-fish described by Aristotle and Gesner says it is called Arengode mer, or Sea Spider. It is probably, says Adams, the Cascara araneus, L.

*MAINIS (μαίνις), a species of fish, the Sparus maco, called in French Mondole; and in modern Greek, according to Coray, κασκόλα.

MAJESTAS is defined by Ulpian to be "crimen illud quod adversus populum Romanum vel adversus cessionem cuiuscumque." He then gives various instances of the crime of majestas, some of which pretty nearly correspond to treason in English law; but all the offences included under majestas comprehend more than the English treason. One of the offences included in majestas was the effecting, aiding in, or planning the death of a magistrate populi Romani, or of one who had impleaded himself "through the name of majestas" was used, the complete expression was "crimen laeva, immatura, diminuta, minute, majestatis.""

The word majestas, consistently with its relation to magnus, signifies the magnitude or greatness of a thing. "Majestas," says Cicero, "est quodam magnitudine populi Romani; majestas est imperii aspersion inominis populi Romani dignitas." "The proper "magnificat populi Romani, "imperi majestatis," signify the whole of that which

1. (Dig. 20, tit. 2, s. 4.)—2. (Pulta, Zeitchrift, x., p. 195.)—3. (Guis., 90.)—4. (Moore's Anc. Minerals, p. 116.)
MAJESTAS.

constituted the Roman state; in illa 

The expression minure majestatem consequently signifies any act by which this majestas is impaired; and it is thus defined by Cicero: "Majestatem minure est de dignitate, aut amplitudine, aut potestate populi aut corum populi populus potestatem dedit, aliquip derogat."

The phrase "majestas" in the Digest is equivalent to the majestas populi Romani. In the republican period, the term majestas lex or minuta was most commonly applied to cases of a general betraying or surrendering his army to the enemy, exciting sedition, and generally by his bad conduct in administration impairing the majestas of the state.

The laws of the Twelve Tables punished with death a person who stirred up an enemy against Rome, or surrendered a Roman citizen to an enemy. The leges majestatis seem to have extended the offence of majestas generally to all acts which impaired the majestas publica; and several of the special provisions of the lex Julia were enacted to prevent impairments of majestas. It seems difficult to ascertain how far the lex Julia carried the offence of majestas with respect to the person of the princes. Like many other leges, it was modified by senatus consulta and imperial constitutions; and we cannot conclude from the title in the Digest, "Ad Legem Julia Majestatis," that the old punishment of majestas was that which were comprehended in the original lex Julia. It is stated byMarcianus, as there cited, that it was not majestas to repair the statues of the Caesar which were going to decay; and a rescript of Severus and his son Antoninus Caracalla declared that if a stone was thrown and accidentally struck a statue of the emperor, it was not majestas; and they also graciously declared that it was not majestas to take down the statues of the Caesar before they were consecrated. Here, then, is an instance, under the title "Ad Legem Julia Majestatis," of the imperial rescripts declaring what was not majestas. But there is also an extract from Saturninus, De Judicia, who says that if a person mucked down the statues or imagines of the imperial which were already consecrated, or did any similar act, he was liable to the penalties of the lex Julia Majestatis.

But even this does not prove that this provision was a part of the Julia lex as originally passed, for a lex, after being amended by senatus consulta or imperial constitutions, still retained its name. The old punishment of majestas was that under the perpetual interdictio from fire and water; but now, says Paulus, that is, in the later imperial period, persons of low condition are thrown to wild beasts, or burned alive; persons of better condition are simply put to death. The property of the offender was confiscated, and his memory was infamous. In the lex Julia, the trial of every act of a citizen which was injurious to the state or its peace was called perduellio, and the offender (perduellio) was tried before the populus (populi judicato), and, if convicted, put to death. Cn. Fulvius was charged with the offence of perduellio for losing a Roman army. According to Gaius, "perduellio" originally applied to "hostes," and thus the old offence of perduellio was really a foro or public act on the Roman state. The trial for perduellio (perduellionis judicium) existed to the later times of the Republic; but the name seems to have almost fallen into disuse, and various leges were passed for the purpose of determining more accurately what should be impe-

MAJESTAS.

These were a lex Apuleia, probably passed in the fifth consulship of Marius, the exact contents of which are unknown; a lex Varia, B.C. 91; a lex Cornelia, passed by L. C. Sulla, and the lex Julia already mentioned, and which, as we have seen, continued under the Empire to be the fundamental enactment on this subject. This lex Julia is by some attributed to C. J. Caesar, majestas publica being in the year B.C. 48, and this may be the lex referred to in the Digest; some assume a second lex Julia, under Augustus, but perhaps without sufficient grounds.

Under the Empire the term majestas was applied to the person of the reigning Caesar, and we find the phrase "majestas Caesaris" in Tacitus and Suetonius. It was, however, nothing new to apply the term to the emperor, considered in some of his various capacities, for it was applied to the magistratus under the Republic, as to the consul and praetor. Horace even addresses Augustus in the terms "majestas tua," but this can hardly be viewed otherwise than as a person permuted, and very manifestly as a reduplication of the term already by which he held. The extension of the penalties to various new offences against the person of the emperor belongs, of course, to the imperial period. Augustus availed himself of the lex for prosecuting the authors of famosi libelli (cognitionem de famosis libellis, specie leges eius, tractantibus); the proper interference from the Senate to prevent the extension of majestas (for they all seem to be comprised under the term "legem majestatis") did not apply to words or writings, for these were punishable otherwise.

The passage of Cicero is manifestly corrupt, and, as it stands, inconsistent with the context; it cannot be taken as evidence that the lex Majestatis of Sulla contained a clause which prohibited the inscription on various as to which there were other sufficient provisions. (Vid. Injuric.) Sigmiones has attempted to collect the capital of the lex Majestatis of Sulla. Under Tiberius, the offence of majestas was extended to all acts and words which might appear to be disrespectful to the princes, as appears from various passages in Tacitus. The term was in use under the Empire, and seems to have been equivalent to majestas at that period.

An inquiry might be made into an act of majestas against the emperor even after the death of the offender; a rule which was established (as we are informed by Paulus) by M. Aurelius in the case of Drusus, a son of Augustus, who had taken part in the outbreak of Cassius, and whose property was confiscated by the fiscus after his death. (Perhaps the account of Catillitius, and of Vulatus Allicanus, is not inconsistent with the statement of Paulus.) A constitution of S. Severus and Antoninus Caracalla declared that, from the time that an act of majestas was committed, a man could not alienate his property (magnus) to another (magnus) Antoninus (probably Caracalla is still meant) added, that a debtor could not, after that time, lawfully make a payment to him. In the matter of majestas, slaves could also be examined by torture in order to give evidence against their master: this provision, though comprehended in the code of Justinian, continued in use till the imperial times. Legere Juliom Majes-

as evidence in a case of lassa majestas, and the case of Fulvia is cited as an instance. 

As to the phrase patria majestas, see Patria Potestas. 

MALABATHRIM (μαλαβαθρίμ). The Indian malabathron, described in the Periphris of Arrian, is indisputably, according to Adams, the Betel, or, rather, the Aracea-nut enveloped in the leaves of the Betel. There are three species of Betel, Malabathron hydrophilum, mesocarphum, and microcarphum. Horace applies the word to an anointer or performer, "perfunxus milites Malabarthrygo capillos," on which passage Parryion remarks, "Malabatrum unguinti speciem esse sinum," Isidorus says of it, "Filium dictum, quod sine ulla radice inanitis in Indias litteros colligit." It is uniformly called futilum by Apicius. According to Geoffrey, it is the leaf of a kind of wild cinnamon-tree. Sprengel, in like manner, holds it to be a cassia-leaf. From this conflict of authorities, it would appear that the term, though properly signifying what we have mentioned in the beginning of this article, became gradually applied to other and different aromatics.

*MALACHERE (μαλακηρέ). Sprengel, on the authority of Walpole, decides that the edible malake of the Greeks, of μακρήτη of Dioscorides, was the 

Χηλή of Herodotus, or the Galen housewife, who set down as the Altikae rosea. According to Sibthorp, this is the official mallows of the modern Greeks. 

"As emollients, mallows are well known in medical practice, the Marsh-mallow (Althaea officinalis) being one of the most useful among this kind of remedial substances."

MALAGRAYNEUS (μαλαγραγνεύς), a bird briefly noticed by Aristotle. Gesner concludes that it is the "Pica glandaria" of Pliny, namely, the Jay, or Garvulus glandarius, Brisson, the same as the Corpus glandarius, L. 

MALLEUS, dim. MALLE'OLUS (μαλλε'όλος, "sawdust, d. dim. sawdust," a Hammer, a Mallet. In the hands of the farmer, the mallet of wood served to break the crust of the ground, or to pulverise them. The butcher used it in slaying cattle by striking the head, and we often read of it as used by the smith upon the anvil. When several men were employed at the same anvil, it was a matter of necessity that they should strike in time, and Virgil accordingly says of the Cyclopes, "Inter se brachia tollunt in sonum," The scene which he describes is represented in the annexed woodcut, taken from an ancient bas-relief, in which Vulcan, Brontes, and Steropes are seen forging the metal, while the third Cyclops, Pyracon, blows the bellows. Beside the anvil-stand (vid. Incus) is seen the vessel of water in which the hot iron or bronze was immersed.

But, besides the employment of the hammer upon the anvil for making all ordinary utensils, the smith

(γαλάκτων) wrought with this instrument figure called ergα φαράλητα (or βροσφάρεστα), which were either small and fine, some of their parts being heated as thin as paper, and being in very high relief, as in the bronzes of Siris (vid. Loria, p. 389), or of colossal proportions, being composed of separate plates riveted together; of this, the most remarkable example was the statue of the sun of wrought bronze (σφαιρατος κολοσσος; βραχτογενος), very cubits high, which was erected in Rhodes. Another remarkable production of the same kind was the golden statue of Jupiter, which was erected at Olympia by the sons of Cybele. The right-hand figure of Hercules, in the woodcut at page 63, is taken from the remains of a very ancient bronze candelabrum, found in 1812 near Perugia, and now preserved in the Glyptothek at Munich. It consists of embossed plates, finely wrought with the hammer, and the small rivets for holding them together are still visible.

By other artificers the hammer was used in conjunction with the chisel (vid. DOLAHRA), as by the carpenter (pulbans malleus; woodcut, p. 62) and the sculptor.

The term malleolus denoted a hammer, the transverse head of which was formed for holding pitch and tow, which, having been set on fire, was projected slowly, so that it might not be extinguished during its flight, upon houses and other buildings in order to set them on fire, and which was, therefore, commonly used in sieges, together with torches and flambards.

When the shoot of a vine was cut in order to be set in the ground, part of the stem was also cut away and put into it, and here a resemblance to the head of a hammer; hence such cuttings were called malleoli.

*MALINOTHALLIE (μαλινοθάλλη), a plant which, according to Bauhin, some had taken for the Cypereus esculentus. Stockhouse adopts this opinion.

*MALTHE (μαλθή), a fish mentioned by Oppian, Athenaeus, and Elian. All that we can ascertain of it, remarks Adams, is, that it was of the Cetaceous tribe.

MALVA. (Vid. Malaceae.) 

MALUM (μαλοῦ). "According to Macrobius the ancients applied the term mala to all kinds of fruit which have the hard part or kernel within, and the esculent part outside. The various kinds treated of by ancient authors will be found under their several heads."

MALUS (μαλοῦ). The ancients had vessels with

MANCIPIUM.

one two, and three masts. The inscriptions recently discovered at Athens contain a perfect inventory of all the gear issued to triers and treters, and they have been illustrated and deciphered by Ackermans. The conclusion of that two masts were issued from the velox for every mast, and are enabled to correct Hesychius, who calls the foist or mainmast dikdos, whereas this is unquestionably the foremost. The other lexicographers either omit the word, or give an imperfect sense to it. These inscriptions enable us to give it an exact signification. In XI., 92, they give lertos mygiadon. Ackermans thinks that Gains expressly says, that under the law of Gains might be emancipated in the same way as slaves, and the limitations of the lex Zelia Sentia and Furia Caninia did not apply to such manumissions. The person who effected the manumission thereby acquired a kind of paternal right, which was of some importance in the matters of hereditas and tutela.

The term Pliny tells us the mast and the yards were usually of fir. Respecting the mode in which the yard was affixed to the mast, see the article Antenna. We do not find in the inscriptions alluded to, and which are mostly of the era of Demosthenes, who is named in them, any terms by which parts of the mast are described. It seems to have been always named as a whole. The price of the large mast is given in these inscriptions (probably, as Böck conjectures, with hoops, &c.) at 37 drachmae. Pliny attributes the invention of the mast to Daedalus.

MALUS OCULUS. (Vid. Fascinum.) MANCEPS has the same relation to mancipium that auspex has to auspiciwm. It is properly said mancipio, but the word has several special significations. Mancipes were those who bid at the public lotteries of the censors for the purpose of farming any part of the public property. Sometimes the chief of the publicani generally are meant by this term, as they were no doubt the bidders and gave the security and money they shared the undertaking with others, or underlet it. The mancipes would accordingly have distinctive names, according to the kind of revenue which they took on lease, as decumani, portiores, pecuarii. Suetonius says that the father of Petrowas a mancipes of labourers (opera) who went yearly from Ubonium or Apulia. They were mancipes to the state, but they occupied the manum. But the word has several special significations. Mancipes were those who bid at the public lotteries of the censors for the purpose of farming any part of the public property. Sometimes the chief of the publicani generally are meant by this term, as they were no doubt the bidders and gave the security and money they shared the undertaking with others, or underlet it. The mancipes would accordingly have distinctive names, according to the kind of revenue which they took on lease, as decumani, portiores, pecuarii. Suetonius says that the father of Petrowas a mancipes of labourers (opera) who went yearly from Ubonium or Apulia. They were mancipes to the state, but they occupied the manum. But the word has several special significations. Mancipes were those who bid at the public lotteries of the censors for the purpose of farming any part of the public property.

The mancipes thermarum et salinarum occur in the Thesedian Code. MANCIPIATIO (Vid. Mancipium.) MANCIPI RES. (Vid. Dominium.) Dion Cassius says that Tiberius Nero transferred or gave (képhace) his wife to Octavianus, as a father would do; and the transfer of his wife Marcia by the younger Cato to Quintus Hortensius is a well-known story. It is probable that in both these cases the wife was in manum, and, accordingly, might be mancipated, and her children born to her new husband would be in his power.

The situation of a debtor who was adjudicated to his creditor resembled that of a person who was in mancipium causa.

MANCIPIUM. The etymology of this word is the same as that of the word mancipatio, of which Gaius says, "Mancipatio dictur quia mans re capitur." The term mancipium, then, is derived from the act of becoming the owner of a thing; and this corporeal possession is with reference to the transfer of the ownership of a thing. It was not a...
Mancipium.

Mancipium was a form of personal property in ancient Rome, involving the possession of a slave. It was a legal status that allowed a person to own another human being as property. This status could be transferred, either by purchase or through inheritance, and it was distinct from the status of a free citizen.

Mancipium was closely tied to the concept of personal property and was a key element in the legal framework of early Rome. It played a significant role in the social and economic structures of the time, as evidenced by the numerous legal texts that dealt with the subject, including the works of Cicero and others.

The term "mancipium" comes from the Latin word "mancipium," which means "slave." It was a legal term used to describe the status of a person who was owned by another, typically as a result of purchase or inheritance.

The acquisition of mancipium typically involved a transfer of ownership, which could be formalized by a legal document or simply by purchase. The transfer could be made directly between the seller and buyer, or it could be mediated by a third party, such as a mandataris, who acted as an agent for the transfer.

The concept of mancipium was closely linked to the broader legal framework of property law in ancient Rome, which included the transfer of both personal and real property. It was a complex system that involved a variety of legal forms and considerations, and it continued to evolve over time as the legal landscape of Rome changed and developed.

In summary, mancipium was a crucial legal concept in ancient Rome, representing the status of a person as personal property. Its significance lies in its role as a key element in the legal framework of personal property and its implications for the social and economic structures of the time.
question whether this was a case of mandatum; but the opinion of Sabinus prevailed that it was. It was not mandatum if the thing was contra bonos nores, or, in other words, if the object of the mandatum was an illegal act. A mandatum might be general or special: and the mandataris was bound to keep within the limits of the mandatum. The mandator had an utilus actio against such persons as the mandataris contracted with; and such person had the like actio against the mandator, and a direct actio against the mandataris. The mandator and mandataris had also respectively a direct actio against one another in respect of the mandatum: the actio of the mandataris might be for indemnity generally in respect of what he had done bonne. If the mandataris exceeded the limits of the mandatum, he had no actio against the mandator; but the mandator, in such case, had an actio for the amount of damage sustained by the non-ex- ecution of the mandatum, provided it could have been executed. The mandatum might be recalled so long as no part of it was performed (dum adhuc integra res est). In the like case, it was also dissolved by the death of either party; but the mandataris, if the death did not occur during the term of the mandator, in ignorance of his death, he had his actio, of course, against the heirs. According to Cicero, a mandat judicium was "non minus turpe quam furi," which, however, would obviously depend on circumstances. (Vid. Infamia.)

Mandatum is sometimes used in the sense of a contract or engagement. During the Roman Empire, the mandatuum principle were the commands and instructions given to governors of provinces and others. Frontinus² classes the mandatuum principle with lex and senatoria consulta.³

Mandates. (Vid. Latenscula.)

"Mandragoras (μανδραγοράς), the Mandrake, the Wolf's Root, the Wolf's Breath. If the Mandrake (Aconitum), "that the μανδραγορας of Theophrastus is different from that of Dioscorides. Dodonaeus determines the former to be the Atropa Belladonna. According to Sprengel, the M. of Dioscorides is the Mandragoras vernalis, Bertol, and the M. fumana the M. autumnallis. On the Mandragoras, see an interesting Latin MS. of 'Herbarium of Celsus.'"⁴

Mandyas. (Vid. of these was triple, containing 3 maniples, 3 ve- rnas, and 168 men. In these triple maniple the veterans, or triarii proper, formed the front ranks; immediately behind them stood the rostari, inferior in age and renown, while the accessi, less trustworthy than either, were posted in the extreme rear. The battle array may be represented as in the woodcut in the following page."

If the hastati and principes were successively re- pulsed, they retired through the openings left between the maniples of the triarii, who then closed up their ranks so as to leave no space between their maniples, and presented a continuous front and solid column to the enemy; the heavy-armed veterans stood in their most resolute line, with long pikes, now bore the brunt of the onset, while the hastati and accessi behind gave weight and consistency to the mass, an arrangement bearing evidence to a lingering predilection for the principle of the phalanx, and representing, just as we might expect at that period, the Roman tactics in their transition state. The only change made in the common reading of Livy, according to the above explanation, is the substitution suggested by Stroth of "ordo sex- ① (Pro Rom. Am., c. 53.)—2. (De Aquaeclad.)—3. (Galv. ii., 132—159.—Id., iv., 88.—Dig., 17, tit. i.)—4. (Adams, Appendix, s. v.)—5. (Curt., iii., 7, p. 14, ed. Extump.)—6. (Dio, 45, 26.—Virg., Georg., vi., 529—530.)—7. (1860, init. 19.)—8. (Varro, De Re Rust, i., 55.—11. (Epit., iii., 5.)

MANICAR. made of fur, perhaps resembling muffs; the Persians also wore gloves in winter (burnydphor). In an enumeration of the instruments of torture used in the fourth century of the Christian era, we observe "the glove," but its construction or material is not described.

Handcuffs were called manica.⁶

Besides the tunica manica with sleeves reaching either to the elbow or to the wrist, of which a description is given under Chiridio, there was another variety, in which the sleeves came down only a little below the shoulder (see woodcut, page 322). The Exomis had a short sleeve for the left arm only. The sleeves of the Persian tunic (Can- yva) were exceedingly wide.

MANIPULUS. The original meaning of the word, which is back derived from manus, was a "handful or wisps of hay, straw, fern, or the like," and this, according to Roman tradition, affixed to the end of a pole, formed the primitive military standard in the days of Romulus;⁴ hence it was applied to a detachment of soldiers serving under the same ensign (see Varro, Ling., Lat., v., 88; vi., 85, who connects it in this sense directly with manus); and we see when the maniple was resolved into small battalions marshalled—open order, these were termed manipuli, and varied in numbers at different periods according to the varying constitution of the legion.

1. The earliest account of their formation is given in Livy, where the narrative is in itself sufficiently intelligible, although the whole chapter has been elaborately corrupted by Lipsius and others, who were determined to force it into accordance with the statements of Polybius, which refer to the Roman army as it existed 200 years later. According to the plain sense of the passage in question, the legion, in the year B.C. 377, was drawn up in three lines, with the senate in the front line, or hastati, consisted of 15 manipuli, each manipus containing 62 soldiers, a centurion, and a vexillarius. The second line, or principes, consisted, in like manner, of 15 manipuli, this combined force of 30 manipuli being comprehended under the general appellation of centuriones. The third line, or triarii, was drawn up in three sections, each containing 25 men, the second of these was triple, containing 3 maniples, 3 ver- nalas, and 186 men. In these triple maniple the veterans, or triarii proper, formed the front ranks; immediately behind them stood the rostari, inferior in age and renown, while the accessi, less trustworthy than either, were posted in the extreme rear. The battle array may be represented as in the woodcut in the following page."

If the hastati and principes were successively re- pulsed, they retired through the openings left between the maniples of the triarii, who then closed up their ranks so as to leave no space between their maniples, and presented a continuous front and solid column to the enemy; the heavy-armed veterans stood in their most resolute line, with long pikes, now bore the brunt of the onset, while the hastati and accessi behind gave weight and consistency to the mass, an arrangement bearing evidence to a lingering predilection for the principle of the phalanx, and representing, just as we might expect at that period, the Roman tactics in their transition state. The only change made in the common reading of Livy, according to the above explanation, is the substitution suggested by Stroth of "ordo sex- ① (Xen., Cyrop., viii., 8, 17.)—2. (Synt. Epist., 58.)—3. (Verg., Georg., iv., 428.)—4. (Verg., Georg., i., 360.—Plaut., Asin., ii., 2, 39.—Capt., iii., 5, 1.—Most., v., 17.—Non. Marcell., s. v. Mani- car.)—5. (Verg., Georg., i., 400.—Id., ibii., 297.)—6. (Ovid, Fast., iii., 123.)—7. (Rom., 8.)—8. (Auct. Vitr., Orig. Rom., 22—Donat. in Terr., Eru., iv., 71.—Liber, viii., 5, 4.)—9. (Nebulor, Hist. of Rome, i., 409.)—7. (vii., 5.)}
4. We may infer that manipuli maintained its last-mentioned signification under the first emperors of Trajan, when Germanicus, when harrying the mutinous legions "Adiutamentum continui quidem permixtum videbatur, discelerre in manipulis, ut... vexilla preferri, ut id saltem discernere cohabere;" but in Ann., xiv. 58, the word is applied more loosely to a detachment of 60 men, who were despatched under the command of a centurion to Asia for the purpose of putting Plautus to death.

5. Vegetius (A.D. 375) employs manipulus as an antiquated term, equivalent to contubernium, indicating a company of 10 soldiers who mess together in the same tent.

Isidoreus defines a manipulus to be a body of 80 soldiers, which will apply to the period when the legion contained 6000 men. See, on the whole of this subject, Le Beau, Mémoire du Maniple et ses parties in the Mémoires de l'Académie des Inscriptions, &c., t. xxxi., p. 279. The views, however, of this writer are far from being uniformly correct.

MANISIO (σταθός), a post-station at the end of a day's journey.

The great roads, which were constructed first by the kings of Persia and afterward by the Romans, were provided, at intervals corresponding to the length of a day's journey, with establishments of the same kind with the khans or caravanserais which are still found in the East. There were 111 such stations on the road from Sardes to Susa, their average distance from one another being something less than 50 English miles. A road, sited at the station for the accommodation of travelers, is called by Herodotus κατάλος and κατωγυ.

To stop for the night was καταλυομαι. At the ancient roads made by the kings of Persia are still followed to a considerable extent, so also there is reason to believe that the modern khan, which is a square building enclosing a large open court, rounded by balconies with a series of doors opening into plain, unfurnished apartments, and having a fountain in the centre of the court, has been copied by uninterrupted custom from the Persic κατάλος and that, whether on occasion of the arrival of armies or of caravans, they have also served to afford a shelter during the night both to man and beast.

The Latin term manisio is derived from manere, signifying to pass the night at a place in travelling.

On the great Roman roads the mansioe were at the same distance from one another as on those of the Persian empire. They were originally called castra, being probably mere places of encampment formed by making earthen intrenchments. In process of time they included not only barracks and magazines of provisions (hortae) for the troops, but commodious buildings adapted for the reception of travellers of all ranks, and even of the emperor himself, if he should have occasion to visit them.

At these stations the eisarii kept gigs for hire and

2. (Polyb., vi., 39.)
3. (amen., xiv., 58.)
4. (A.D. 375.)
5. (Cic., De Re Militari.)

The practice of marshalling an army in three lines was changed, and the terms hastati, principes, and triarii fell into disuse. The legion, as explained under Act., p. 104, was now divided into 10 cohorts, each cohors into 3 manipuli, and each manipulus into 2 centuries, the manipulus thus constituting the 3rd part of the whole. It ought to be remarked, that the locus classicus on this subject (see p. 104) is a quotation by Anius Gellius from "Ciccius, De Re Militari." This Cicero is generally supposed to be the same person as Ciccius Albanus the annalist; but this is manifestly impossible, for Albanus served during the Second Punic war, and Polybius, who flourished full fifty years later, gives no hint of any such arrangement of the Roman troops.

MANTICORA.

The name was under the superintendence of an officer called mansionarius.

Besides the post-stations at the end of each day's journey, there were on the Roman military ways others at convenient intervals, which were used merely to change horses or to take refreshment, and which were called "stationes" (Stations). There were four or five mutationes to one manesio. The itinerarium a Burdigala Hierusalem usque, which is a road-book drawn up about the time of Constantine, mentions in order the mansiones from Bordeaux to Jerusalem, with the intervening mutationes, and other more considerable places, which are called either citates, vici, or castella. The number of those loggy road-camps between one place and another is also set down.

MANTELE (χειροποτερσ, χειρομανειοτ), a napkin. The circumstance that forks were not invented in ancient times, gave occasion to the use of napkins at meals to wipe the fingers; also, when the meal was finished, and even before it commenced, a napkin was made to be carried in the hands. A basin, called in Latin malleusmum, in Greek χειροποτερσ, χειρομανειοτ (vid. CHERNIPS), was held under the hands to receive the water, which was poured upon them out of a ewer (urceolus). Thus Homer describes the practice, and, according to the account of a recent traveller, that the Greeks are in general, and perhaps for ages, familiar with the use of such a basin, with long legs and claw, which they use with great dexterity in «swizing» their prey. This consists of any kind of insect which they can master. If I have seen them catch wasps and bees. If, when they be in possession of their prey, any other insect settlest within their reach, they first stick the insect to a stone and then carry it about with their legs are provided, and then catch the other.

MANTICE (μαντις). (Vid. DIVINATION.)

MANUBEI. (Vid. SPOLIA.)

MANULEATUS. (Vid. CHRIDOTA.)

MANUM. CONVENTIO IN. (Vid. MARRIAGE, ROMAN.)

MANUMISSIO was the form by which slaves and persons in mancipi causa were released from those conditions respectively.

There were three modes of effecting a justia et legitima manumissio, namely, vindicta, census, and testamentum, which are enumerated both by Gaius and Ulpian as existing in their time. Of these the manumissio by vindicta is probably the oldest, and, perhaps, in the general, the held the slave in length.

It is mentioned by Livy as in use at an early period, and, indeed, he states that some persons refer the origin of the vindicta to the event there related, and derive its name from Vindicius; the latter part, at least, of the supposition is of no value.

The ceremony of the manumissio by the vindicta was as follows: The master brought his slave before the magistrates, and stated the grounds (causa) of the intended manumissio. The licitor of the magistrates laid a rod (festucca) on the head of the slave, accompanied with certain formal words, in which he declared that he was a free man ex jure Quiritium, that is, «vindicatus in libertatem.» The master, with great solemnity, then raised his rod and he bawled pronounced the words "hanc hominem libertum volo," he turned him round (momento turbini exi Marcus Dama) and let him go (emissi e manu), whence the general name of the act of manumissio. The magistrates then declared him to be free, in reference to which Cicero seems to use the word "libertas in libertate.»

As for the explanation of the word manumissio, see VINDICOLE and VINDICATIO.

5. (Vid. Cyrop., i., 3, § 51.—2. (Festus, a, v, 3.—(Pellow's Journal, 1838, p. 153.)—4. (Quintil., i, 5, 57, 5.—(Hor., Sat., H, ii, 81, 81.—Id., ii, viii, 63, 5.—(Martial, xii, 29, 10, 7.—(Suetonius, D. a. 8, 2.—(Cambridge, 7th, 1749, i, 35.—(Athen., iv, 70, 19.—(Philoxenus, Athen., iv, 77, 17.—(Virg., Georg., iv, 577, 17.—(Eur., 702, 11.—(Lamprid., Al. Severus, c, 60, 13, 8.—(Athen., iv, 79.)
The manumission by the census is thus briefly described by Ulpian: "Slaves were formerly man- mitted by census, when at the lustral census (lustrali census) at Rome they gave in their census (some read novem instead of census) at the bidding of their masters." Persons in mancipio might also obtain their manumission in this way.1

In the absence of decisive testimony as to the origin of these two modes of manumission, modern writers indulge themselves in a variety of conjectures. It may be true that originally the manumission by vendita only gave libertas and not civitas; but this opinion is not probable. It may easily be allowed, that in the earliest period the civitas could only be conferred by the sovereign power, and that, therefore, there could be no effectual manumission except by the same power. But the form of the vendita itself supposes, not that the person manumitted was a slave, but that he was a free person, against whose freedom his master made a claim.

The proceeding before the magistrates was in form an assertion of the slave's freedom (manus asservere librali causa), to which the owner made no defence, but he let him go as a free man. The proceeding then resembles the in irce cesso, and was, in fact, a fictitious suit, in which freedom (libertas) was the matter in issue. It followed as a consequence that whenever the magistrates pronounced in favour of freedom ex iure Quiritium, there could be no dispute about the civitas.

In the case of the census the slave was registered as a citizen with his master's consent. The assumption that the vendita must have originally preceded the census, for which there is no evidence at all, is inconsistent with the nature of the proceeding, which is a registration of the slave, with his master's consent, as a citizen. A question might arise whether he should be considered free immediately on being entered on the censors' roll, or not until the lustrum was celebrated;2 and this was a matter of some importance, for his acquisitions were only his own from the time when he became a free man.

The law of the Twelve Tables confirmed freedom which was given by will (testamentum). Freedom (libertas) might be given either directo, that is, as a legacy, or by way of fideicommissum. The slave who was made free directo was called orcinus libertus (or horcinos, as in Ulp., Frag.), for the same reason, perhaps, that certain senators were called orcinus.3 He received his libertas by way of fideicommissum from the testator, but of the person who was requested to manu- mit him (manumissor): if the heres who was requested to manumit refused, he might be compelled to manumit on application being made to the proper authority. Libertas might be given by fideicommissum to a slave of the testator, of his heres, or of his legatee, and also to the slave of any other person. In all of these cases thus given to the slave of any other person, the grant of libertas was extinguished if the owner would not sell the slave at a fair price. A slave who was made conditionally free by testament, was called statu liber, and he was the slave of the heres until the condition was fulfilled. If a statu liber was sold by the heres, or if the ownership of him was acquired by the testator, he had lost the benefit of the condition: this provision was contained in the laws of the Twelve Tables. If a slave was made free and heres by the testator's will, on the death of the testator he became both free and heres, whether he wished it or not. (Vid. Heres.)

The lex Aelia Sentia laid various restrictions on

manumission. Among other things, it enacted that a slave under thirty years of age should not become a Roman citizen by manumission, unless the granting of manumission were approved before a body called consilium, and the ceremony of vendita was observed. This consilium at Rome consisted of five senators and five equites, all puberes; and in the provinces of twenty recuperatores, who were Roman citizens. If an insolvent master manumitted by testament a slave under thirty years, and at the same time made him his heres, the lex did not apply. This lex also annulled all manumissions made for the purpose of cheating creditors and defrauding patrons of their rights. The ceremony of manumitting slaves above thirty years of age had become very simple in the time of Galins:4 it might be in the public road (in transita), as when the praetor or proconsul was going to the bath or the theatre. In fact, it was not the place which determined the validity of such an act, but it was the circumstance of its being done before a competent authority: hence it could take place before municipal magistrates who had the legis actio. The Romans never lost sight of the real groundwork of their institutions, whatever changes might be made in mere form. The lex Aelia Sentia also prevented persons under twenty years of age from manumitting slaves, except as freedmen. This law was made to prevent the approbation of the consilium. (Vid. Aelia Sentia.)

The lex Furia or Fussia Caninia fixed limits to the number of slaves who could be manumitted by will. The number allowed was a half, one third, one fourth, and one fifth of the whole number that the testator possessed, according to a scale fixed by the lex. As its provisions only applied to cases where a man had more than two slaves, those who possessed one slave were not affected by this law. It also provided that the slaves to whom freedom was given should be named. This lex only applied to manumission by testament. It was passed about A.D. 7, and several senatus consulta were made to prevent evasions of it.5 This lex was re- pealed by Justinian.6

A form of manumission "inter amicos" is alluded to by Gains. This was, in fact, no legal manumission, but it was a mere expression of the master's wish, which would have been sufficient in the absence of all positive law. This might be done by inviting the slave to table, writing him a letter, or in any other less formal way. It is stated that originally such a gift of freedom could be recalled, as to which there can be no doubt, as it was not legal freedom; but ultimately the master took care that he had been made free in this manner under his protection, and the lex Junia Norbana gave them the status called Latinitas.

A manumission sacrorum causa is sometimes mentioned as a kind of manumission, whereas the words sacrorum causa point rather to the grounds of the manumission: the form might be the usual form.7

In the absence of authority, it was necessary, in order to effect a complete manumission, that the manumissor should have the quiritanian ownership of the slave. If the slave was merely in bonis, he only became a Latinus by man- umission. A woman in tutela, and a pupillus or pupilla, could not manumit. If several persons were joint owners (socie) of a slave, and one of them manu- mitted the slave in such form as would have affected the vendita, and with the slave had been the sole property of the manumissor, such manumissor lost his share in the slave, which accrued to the other joint owner or joint owners. Justinian enacted

MARGARITA.

If he found no vindex, the plaintiff or creditor, for such a judgment really made him, might not only carry his defendant to his house, and keep him in confinement for sixty days, during which time his name and the amount of his debt were proclaimed at three successive sundays. If no one paid the debt, the defendant might be put to death or sold.1 According to the words of the Twelve Tables, the person must be brought before the preator (in jus), examined as to his condition, and if he was seized first: if, when brought before the preator, he did not pay the money (ni judicatum solvit) or find a vindex, he might be carried off and put in chains, apparently without the formality of an additio. The lex Pubilia, evidently following the analogy of the Twelve Tables, allowed the manus injetio in the case of money paid by a sponsor, if the sponsor was not repaid in six months.2

617
MARRIAGE.

The purpose of preventing the extinction of his family, the Spartan king Anaxandrides was allowed to cohabit with two wives, for whom he kept two separate establishments: a case of bigamy which, as Herodotus' observation, was not at all consistent with Spartan, nor, indeed, with Hellenic law.

Thus the heroes of Homer appear never to have had more than one kononot édës, though they are frequently represented as living in concubinage with one or more polàtes. Solon also seems to have viewed marriage as a matter in which the state had a right to interfere, for we are told that his laws required of a ἀρσενὸν δίδων, though the regulation seems to have grown obsolete in later times; at any rate, there is no instance on record of its application. Plato, too, may be quoted to prove how general was this feeling; for, according to his laws,* any one who did not marry before he was thirty-five was punishable not only with ἀδύμη, but also with pecuniary penalties; and he expressly states that, in choosing a wife, every one ought to consult the interests of the state, and not his own pleasure.

But, independent of any public considerations, there were also private or personal reasons (peculiar to the ancients) which made marriage an obligation. Plato6 mentions one of these, viz., the duty incumbent upon every individual to provide for a continuance of representatives, to perpetuate himself and his race. In the Symbola, the Divinity (τῷ Θεῷ ἀνάγων ἀντίον παραδίδοναι). Another was the desire for almost every one, not merely to perpetuate his own name, but also to prevent his "heritage being desolate, and his name being cut off" (ὅπως μὴ ἡρεμήσωσα τοὺς σφετέρους αὐτῶν αἰῶνας), and to leave some one who might make the customary offerings at his grave.7 Ἡ δὲ ἔργα καὶ ὁ ἐνεμός. We are told that, with this view, childless persons sometimes adopted children.

The choice of a wife among the ancients was but rarely grounded upon affection, and scarcely ever could have been the result of previous acquaintance or familiarity. In many cases a father chose for his son a bride whom the latter had never seen, a supposed child to marry for the sake of checking his extravagances. Tereus6 thus illustrates the practice:

"Pater pratirisendi modi
Mih ciiput forum, uxor ibi ducenda est, Pemphi, hodie inquit: para."

In Plautus' a son promises his father that he will marry in these words:

"Eine duam, pater: etiam si quam aliœ jubebis."

Representations of this sort may indeed be considered as exaggerations, but there must have been scenes in real life to which they in some measure correspond. Nor was the consent of a female to a match proposed for her generally thought necessary: she was obliged to submit to the wishes of her parents, and receive from them, it might be, a stranger for her husband and lord. Sophocles thus describes the lot of women in this respect: "When we are grown up (he makes a female say) we are driven away from our parents and paternal gods."

So also in Euripides,¹⁰ Hermione declares that it is her father's business to provide a husband for her. The result of marriages contracted in this manner would naturally be a want of confidence and mutual understanding between husband and wife, until they

MARRIAGE.

i. means this very shell of his ἀντίου τινι. Androsthenes also confirms its being this very shell that the fine οὐρτήριος pearls are found in: ἐς ἐς ἵνα καλῶτεν καταγείν θερμή, ἐς τῇ μαζαρίτις ἐκθέτω. The Pearl is no more than a modern expression from the animal in which it is found. 4. "The commerce of pearls appears to be of the highest antiquity. History, in fact, apprises us that, from time immemorial, the princes of the East have sought after this kind of ornament with a sort of passion, and have employed it in all parts of their dress, and even in decorating instruments, furniture, &c. The Persians, according to Athenaeus, paid for pearls with their weight in gold. The pearl mussels themselves are not unlike certain mussel shells, which, in spite of the prodigious quantity that have been eaten for so many years, do not appear to suffer any sensible diminution. 5. "The art of forcing shell-fish to produce pearls was known in the first centuries of the Christian era to the inhabitants of the coasts of the Red Sea, as we are told by the philosopher Apollonius, who thought that circums- tances worthy of particular notice. The Indians dived into the sea after they had rendered it calm, and perhaps clearer, by pouring oil upon it. They then enticed the fish, by means of some bait, to open their shells, and having pricked them with a sharp-pointed instrument, received the liquor that flowed from them in small holes made in an iron vessel, in which the pearls were afterwards swept up in a revolution. Beckmann,2 according to Polux5 and Aristotle, 6 contained 6 cutie- less, 31 pints. Polygenus mentions a much larger measure than the name, containing 10 congili, = 7 galls. 3. 471 pints. 7. "MARMOR (μαρμάρος). Marble. "Strictly speaking," observes Adams, "the term Marble should be confined to those varieties of carbonate of lime which are susceptible of a polish; but the term was applied by the ancients to all stones susceptible of a polish, or of being polished. The Roman writers, including the ancient marbles were the Parian, Pentelicus, Chian, and Theban, for an account of which consult the several heads. 8. MARRIAGE (GREEK) (Ταύρος). The ancient Greek legislators considered the relation of marriage as a matter not merely of private, but also of public or general interest. This was particularly the case of Lycurgus, who, as the head of separate interests and happiness to the real or supposed exigencies of the state was strongly exemplified in the regulations on this subject. For instance, by the laws of Lycurgus, criminal proceedings might be taken against those who married too late (γραφὶ ἀντιδεσμὸν) or unsuitably (γραφὶ ἀκακοῦσιν), as well as against those who did not marry at all (γραφὶ ἀλλακτένῳ). These regulations were based on the generally recognised principle that it was the duty of every citizen to raise up a strong and healthy progeny of legitimate children to the state. So entirely, in fact, did the Spartans consider the tekóv-πολικα, or the production of children, as the main object of marriage, and an object which the state was bound to promote, that whenever a woman had no children by her own husband, she was not only allowed, but even required by the laws to cohabit with another man. 9. On the same principle, and for

MARRIAGE.

The marriage of Iphigenia and chorus. 

When at last she was manageable (χειροφόρη), and getting tame, so that I could talk with her, I asked her, "and, and, and..." 

By the Athenian laws, a citizen was not allowed to marry any woman with whom he was not already a kinsman, or had very severe penalties; but proximity by blood (ἀγκόστεο), or consanguinity (συγγένευς), was not, with some few exceptions, a bar to marriage in any part of Greece; direct lineal descent was... 

When there were several coheirs, they were entitled to choose whether their sisters or brothers should marry. For instance, if his heiress had no choice in marriage; she was compelled by law to marry her nearest kinsman not in the ascending line; and if the heiress were poor (ὑπόσκοα), the nearest unmarried kinsman either married her or permitted her to marry someone else. This was the first choice. 

The heiress, in fact, together with her inheritance, seems to have belonged to the kinsmen of the family, so that, in early times, a father could not give his daughter (if an heiress) in marriage without their consent. But this was not the case according to the law of the ancients, if the father was empowered to dispose of his daughter by will or otherwise, just as widows also were disposed of in marriage by the will of their husbands, who were considered their rightful guardians (κύραρος).

The same practice of marrying in the family (αλαξοι), especially in the case of heiresses, prevailed at Sparta; thus Leonidas married the heiress of Cleomenes, as being her ἀγκόστεο or next of kin, and Anaxandrides his own sister's daughter. Moreover, if a father had not determined himself concerning his daughter, it was decided by the king's court who among the privileged persons or members of the same family should marry the heiress. 

The striking resemblance to the Athenian law respecting marriage was that of the ancient custom in Egypt, as detailed in Numbers, and exemplified in Ruth. 

But match-making among the ancients was not, in default of any legal regulations, entirely left to the care and forethought of parents, for we read of women who made a profession of it, and who were therefore called προφυγομένα or προφυγομελιτὶς.

There is no record, however, of any woman who has been thought very honourable, nor to have been held in repute, as being too nearly connected with, or likely to be prostituted to, προφυγογέλος. 

Particular days and seasons of the year were thought auspicious and favourable for marriage among the Greeks. Aristotle speaks of the winter generally being as sober, and at Athens the month Τιμολόγος, partly corresponding to our January, received its name from marriages being frequently celebrated in it. Hesiod recommends marrying on the fourth day of the month:

"Εν θεί τετέρατος μνήσις δέως εἰς οἶκον ἀνδρός," but whether he means the fourth from the beginning or end of the month is doubtful. Euripides speaks as if the time of the full moon were thought favourable, ὅταν αἰχμής τετυχής ἔδηκε κύκλος, in which he is confirmed by the expression ἰδιογυνώς ἄρσης, or the full-moon nights in Pindar. That this prepossession, however, was not general and permanent, appears from Proclus, who informs us that the Athenians selected for marriages the times of new moon (τὰς πρὸς σύνδον ἡμέρας), i.e., when the sun and moon were in conjunction. The influence of opinion, on which it is not worth while to dwell specifically about the proper age for marrying; but, generally speaking, men were expected to marry between 30 and 35, and women about 20, or rather before.

We proceed now to explain the usual preliminaries and accompaniments of marriage in various parts of Greece. The most important preliminary at Athens was the ōργανον, or the match-making. This was, in fact, indispensable to the complete validity of a marriage contract. It was made by the natural or legal guardian (ὁ νύμφας) of the bride elect, and attended by the relatives of both parties as witnesses. The old law of Athens ordained that all children born from a marriage legally contracted in this respect were to be considered legitimate, even if the parents of either were οὐκοδόμοι, or entitled to inherit equally or in gavelkind. It would seem, therefore, that the issue of a marriage without espousals would lose their inheritable rights, which depended on their being born ἐξ ἦτης καὶ γύγκονος γυναικεία: i.e., from a citizen and a legally betrothed wife. The wife's dowry was also settled.

But there were also several ceremonies observed either on or immediately before the day of marriage. 

The first of these were the προτέλευσι γάμων ἐν προγάμεως, and consisted of sacrifices or offerings made to the θεός γαμήλιος, or divinities who presided over marriage. They are generally supposed to have been made on the day before the γάμων or marriage; but there is a passage in Euripides which makes it probable that this was not always the case. The sacrificer was the father of the bride elect; the divinities to whom the offering was made were, according to Pollux, Hera, and Artemis, and the Fates, to whom the bride elect then dedicated the Αὐλία (furnishing house to Diodorus Siculus) they were Zeus and Hera, or another pair of divinities (τοις ἐκ τῶν δισομοιοτέρων), but they probably varied in different countries, and were sometimes the θεοί γυναικάς or local deities. The offerings to Artemis were probably made with a view of propitiation, her as she was supposed to be averse to marriage. (Vid. Brahma, p. 172.)

We may also observe that Pollux uses προγαμήσας as synonymous with προγαμέως, i.e., engaged, betrothed, with τέλος, as if marriage were the τέλος or perfection of man's being: whence τέλειος, connected with or presiding over marriage or a married person, and δόμος μιτέλεος, a house without a husband, or incomplete. Another ceremony of almost general observance on the wedding-day was the bathing both of bride and bridegroom in water fetched from some particular fountain, whether, as some think, the custom of placing the figure of a λυπορεφόρας, or "water-carrier," over the tombs of those who died unmarried. (Vid. Loutron, p. 590.)

After these preliminaries, the bride was generally conducted from her father's to the house of the bridegroom.

MARRIAGE.

brought at a nghtfall, in a chariot (ἐφ' ἄνέκοιτο) drawn by a pair of mules or oxen, and furnished with a κλώς or kind of couch as a seat. On either side of the chariot the bridegroom and one of his most intimate friends or relatives, who, from his office, was called παράστατος or νυμφέος; but, as he rode in the carriage (χώρια) with the bride and bridegroom, he was sometimes called the πάροχος (ὁ ὑκτρων ὁ παραχώρων πάροχος εκεῖνον). Hence Aristophanes speaks of the "blooming Love guiding the supple reins," when Zeus was wedded to Hera, as ἦν πάροχος γαμὸς τῆς ἤνταλκούμενος Ήης.

The nuptial procession was probably accompanied, according to circumstances, by a number of persons, some of whom carried the nuptial torches (δίδθης νυμφευδάς) ; and in some places, as in Boeotia, it was customary to burn the axle of the carriage on its arrival at the bridegroom's house, as a symbol that the bride was to remain at home and not go abroad.1 If the bridegroom had been married before, the bride was not conducted to his house by himself, but by one of his friends, who was therefore called νυμφαδεστός.2

Both bride and bridegroom (the former veiled) were of course decked out in their best attire, with chaplets on their heads,3 and the doors of their houses were decked with ivy and bay.4 As the nuptial procession moved along, the hymnæan song was sung to the accompaniment of Lydian flutes, even in olden times, as beautifully described by Homer5 (vid. Ὀμος, p. 246), and the married pair received the greetings and congratulation of those who met them.6 After entering the bridegroom's house, into which the bride was probably conducted by her mother, bearing a lighted torch, it was customary to shower sweetmeats upon them (καταγάματος) as emblems of plenty and prosperity.7

After came the γάμος or nuptial feast, the ὕποτ γαμήτης, which was generally8 given in the house of the bridegroom or his parents; and, besides being a festive meeting, served other and more important purposes. There was no public rite, whether civil or religious, connected with the celebration of marriage among the ancient Greeks, and therefore no public record of its solemnization. This deficiency, then, was supplied by the marriage feast, for the guests were of course competent to prove the fact of a marriage having taken place; and Homer says they were the best able to judge of their conversation ought to be sweet and agreeable. The song called the Epithalamium was then sung before the doors of the bridal chamber, as represented by Theocritus in his 18th Idyl, where, speaking of the marriage of Helen, he says:

Twelve Spartan virgins, the Laconian bloom, Chaired before fair Helen's bridal room; To the same time with cadence true they beat The rapid round of many twinkling feet,

MARRIAGE.

One measure tripped, one song togeth sung, Their hymenean all the palace rung.

On which passage the scholiast remarks that epithalamia are of two kinds; some sung in the morning, and called κατακομμάτια, and others in the evening (δορθα), and called διαγερμάτια. The day after the marriage, the first of the bride's residence in her new abode, was called the ἔπανα, on which their friends sent the customary presents to the newly-married couple. On another day, the ἕταλλα, perhaps the second after marriage, the bridegroom left his house and apart from his wife at his father's-in-law, and the bride presented him with a garland called ἀσταλτιστέρα, in connexion with which, Pollux1 observes, that the gifts made to the bride after the marriage were called ἄσταλλα. Some of the presents made to the bride by her husband and friends were called ἀνεκτεχνία, as being given on the occasion of the bride first appearing unveiled,2 they were probably given on the ἔπανα, or day after the marriage.

Another ceremony observed after marriage was the sacrifice which the husband offered up on the occasion of his bride being registered among his own phratores (γυμνίαν scil. ἱδων τός φρότοροι αἰσθανένες).

The statement above made of the solemnities connected with marriage cannot, of course, be considered as applicable to all ages and circumstances, but rather as a representation of the customs generally observed at Athens in later times.

At Sparta the betrothal of the bride by her father or guardian (κήρος) was requisite as a preliminary of marriage, as well as at Athens.4 Another custom peculiar to the Spartans, and a relic of ancient times, was the betrothal of the bride to her husband,5 but, of course, with the sanction of her parents or guardians.6 She was not, however, immediately domiciled in her husband's house, but cohabited with him for some time clandestinely, till he brought her, and frequently her mother also, to his home.7 A similar custom appears to have prevailed in Crete, where, as we are told,8 the young men, when dismissed from the care of their fellow-fellows, were immediately married, but did not take their wives home till some time afterward. Müller suggests that the children of this furtive kind of intercourse were called παρθένιοι.

We subjoin some particulars concerning the relation between man and wife among the ancient Greeks, prefacing them with a description of the married life from Lydias.9 The speaker there says, "I have a small two-story house, of equal dimensions on the basement and first floor, both in the male and female apartments (κατὰ τὴν γυναικείαν κατί. λ.). Now, after our little boy was born, his mother used to suckle it; and that she might not meet with any accident in going down the ladder (ἡ κλίματος), whenever it was light she used to carry it in a child's chair; and women clo\o/.

And it was usual for my wife to leave me very frequently and sleep down stairs with the child, to give it the breast and keep it from crying. And one day, after dinner, the little fellow cried and fretted, and I told my wife to go and suckle it; now at first she would not, but at last I got angry with her, and ordered her to go: 'yes,' she answered, 'that you may play with your servant-maids.'10"

Now, though the wife, as appears by this tale, usually took her meals with her husband, she did

MARRIAGE.

not go out with him to dinner, nor sit at table with his guests when he had company.1

The duties of a good housewife are summed up by Plato2 under the heads of ταυτεία, θεραπεία, and παιδευσία. The first of these included the domestics of the house and the superintendence of the furniture, provisions, and servants; the second, in fact, everything that came under the name of housekeeping.2 But a trust of this kind was not reposed in a young wife till she had gained some experience; for what, says Xenophon,3 could a wife, married at fifteen, be likely to know, who had lived in complete seclusion, and had only been taught by her nurses? (Oecon. v. 5.) The θεραπεία included the attendance upon the sick inmates of the house, whether free or slaves.4 The παιδευσία was the physical education of the children, on which Plutarch5 observes that mothers ought themselves to nurture and suckle their children, though frequently female citizens were hired as wet nurses.6 The Spartan nurses were so famous that they were engaged even in foreign states; thus Alcibiades, we are told, was suckled by a Laconian nurse.7 It is scarcely necessary to remark, that we have been speaking of a citizen in good circumstances, to which only our observations can apply.

The education to which women were held by their husbands, and the respect paid to them in ancient Greece, would naturally depend, in some degree, on their intellectual and moral character; but, generally speaking, the Greeks entertained comparatively little regard for the female character. They considered women, in fact, as decidedly inferior to men, qualified to discharge only the subordinate functions in life, and rather necessary as holpates than agreeable as companions. To these notions female education for the most part corresponded, and, in fact, confirmed them; it did not supply the elegant accomplishments and refinement of manners which permanently engage the affections when other attractions have passed away. Aristotle8 states that the relation of man to woman is that of the governor to the subject; and Plato,9 that a woman's virtues may be summed up in a few words, for she has only to manage the house well, keeping what there is in it, and obeying her husband. Nor is it unimportant to remark, that Athenians, in speaking of their women, children, guest and harbouring them; in expressing their love last: a phrase which indicates pretty clearly what was the tone of feeling on this subject. Moreover, before marriage, Grecian women were kept in a state of confinement, which amounted to little short of a deprivation of liberty, so that they are even said to have been watched and guarded in strong apartments, εὔροταν παρθενίστα φθορούστα καλές;11

nor was it thought becoming in them to be seen in public; neither were they permitted on solemn occasions, when they appeared as spectators of, or participators in, religious processions; of which, young men desirous of getting married would naturally avail themselves to determine the object of their choice. Even after marriage the restrictions imposed upon young women of the middle and higher classes were of a very jealous and almost Oriental character. They occupied, as was known, a separate part of the house, and in the absence of their husbands it was thought highly improper for a man even to enter where they were.1 From various passages of the Attic comedians, it would also seem that married women were required to keep at home (οἰκτεραί), and not allowed to go out of doors without the permission of their husbands. Thus, in a fragment of Menander,2 we are told that married women are not allowed to pass the gate of the courtyard of the house, παρὰ γὰρ αὐλὸς θόρα

"Εξελεθρήκαν γυναικὶ νεκρίσας οἰκίας, and Aristophanes3 speaks of their husbands forbidding them to go away. Again, on occasions of great public alarm (e.g., when the news was received at Chersonesus that the Persians had reached Athens), the women are spoken of, not as leaving their houses, but standing at their doors and inquiring after the fate of their husbands, a circumstance that is described as being discrepant to themselves and the city (διαφέρον αὐτῶν κατ' ἡνίκας). From a passage in Plutarch,4 it appears that on this subject there was the same feeling at Thebes as well as at Athens; and the same writer informs us that one of Solon's laws specified the conditions and occasions upon which women were to be allowed to leave their houses. In later times there were magistrates at Athens (the γυναικωνοιοι), charged, as their name denotes, with the superintendence of the behaviour of women. (Vid. Γυναικονοιοὶ.)

But we must observe that the description given above of the social condition and estimation of women in Greece, does not apply to the heroic times as described by Homer, nor to the Dorian state of Sparta. With respect to the former, we have our space to hope that the views of the poet at Homeric times enjoyed much more freedom and consideration than those of later ages, and that the connexion between the sexes was then of a more generous and affectionate character than afterward. For another important distinction, see Dos, Grec.5

Among the Dorians generally, and in Sparta especially, the relation of the wife to the husband, and the regard paid to women, were for the most part the same as that represented by Homer to have prevailed universally among the ancient Greeks and as such, presented a strong contrast to the habits and principles of the Ionic Athenians, with whom the ancient custom of Greece, in this respect, much more resembled that of the East. At Sparta, for instance, the woman was honoured with the title of δεσποινα, or "mistress," an appellation not used unmeaningly or ironically, and which was common among the Thessalians and other nations of northern Greece.6 Moreover, the public intercourse permitted by the Dorians between the sexes was (comparatively at least) of so free and unrestricted a character as to have given occasion for the well-known charges of licentiousness (ἀνεθες) against the Spartan women.7 The influence, too, which the Laconian women enjoyed was so great, that the Spartans were blamed for submitting to the yoke of their wives; and even Aristotle8 thought it necessary to account for the circumstance, in the position which Lycurgus had failed in his attempt to regulate the life and conduct of the Spartan women as he had wished. In short, there was a great contrast and difference between the treatment of women in the Dorian and Ionian states of Greece, which is well described by Müller9 in the following words: "Among the Ionians women were in the greatest esteem, and their shoes shone with a martial light; and though the Æolians allowed their

1. (Ilius, De Pyrr. harred, 39.—Demosth, c. Neer, 1832.)
feathers a more exalted tone, as is proved by the
amatory poetesses of Lesbos, the Dori ans, as well
as Sparta as in the south of Italy, how
only nation I have ever heard the higher attributes of the
pleasing mind as capable of cultivation." In
Sparta, too, the unmarried women lived more in
public than the married. The former appeared with
their faces uncovered, the latter veiled; and at
Sparta, in Crete, and at Olympia, virgins were per-
mitted to be spectators of the gymnastic contests, and
married women only were excluded. The re-
verse of this was the case in Ionia.

The pending investigation will have prepared the
reader for the fact, that the strictest conjugal
fidelity was required, under very severe penalties,
from the wife (vid. Anntvrum), while great laxity
was allowed to the husband. The general practice
is thus illustrated by Plautus: 1

"Nam si vir scortum duzit clam uxorom suam,
Id se recivi uxor, impune est viro.
Uxor viro si clam domo egressa est foras,
Viro fit causa, exigit matrimonio."

In cases of adultery by the wife, the Athenian
law subjected the husband to atyriia if he continued
to cohabit with her; so that she was ipso facto di-
voiced. 2 But a separation might be effected in two
different ways: 3 the wife leaving the husband, or
the husband dismissing the wife. If the latter sup-
posed her husband to have acted without sufficient
justification in such a course, it was competent for
her after dismissal, or, rather, for her guardians,
to bring an action for dismissal (diav apotelentes or
apopomophfij: the corresponding action, if brought by
the husband, was a diav apopolieias). If, however,
a wife were ill used in any way by her husband, he
was liable to an action called a diei ekakwdes, 4 so
that the wife was not entirely unprotected by the
laws: a conclusion justified by a fragment in Athe-
neus, 5 in which married women are spoken of as
relying on its protection. But a separation, wheth-
er it originated from the husband or wife, was con-
sidered to reflect discredit on the latter (.8 $ya di-
vov iatru olp evy peri), independent of the diffi-
culties and inconveniences to which she was sub-
jected by it. At Sparta, barrenness on the part of a
wife seems to have been a ground for dismissal by the
husband; 6 and from a passage in Chrysostom, 7 it has been inferred that women were in the habit of
imposing supposititious children with a view of keep-
ing (aawv) justum matrimonium; not that they
would adopt or, if adopted, it did not (from the ten-
re) require, a different interpretation.

This article has been mainly composed from
Becker's Charites. 8 The duties of an Athenian
wife are stated somewhat in detail by Xenophon. 9

MARRIAGE (ROMAN). MATRIMONIUM, NUPTILE. A legal Roman marriage was called
justum matrimonium; as being con-
formable to jus (citizen) or to law. A legal marriage
was either cum conventione uxoris in manum viri,
or it was without this conventio. But both forms of
marriage agreed in this: there must be connubii-
unum between the parties, and consent: the male
must also be pubes, and the woman viril potens.
The legal consequences as to the power of the
father over his child, justum matrimonium being con-
formable to the forms of the marriage; Secondly, with reference to its legal
consequences.

1. (Müller, Dori ans, ii, 2, § 2.)—2. (Mercat., iv, 6, 2, 3.—
(Fröm. xv., 44*, R.)—9. (i. i. 451.)—10. (Beos ev ad init.)

Unless there was connubium, there could be no
Roman marriage. Connubium is defined by Ulpian
to be "uxores juris et facultas," or the faculty
by which a man may make a woman his lawful
wife. But, in truth, this is no definition at all, nor
does it give any information. Connubium is mere-
ly a term which comprehends all the conditions of a
legal marriage. Accordingly, the term is ex-
plained by particular instances: 4 "Roman men citi-
zens," says Ulpian, "have connubium with Roman
women (Romanae casae); but with Latins and
Peregrines, only in those cases where it has
been permitted. With slaves there is no connu-
biurn."

Sometimes connubium, that is, the faculty of
contracting a Roman marriage, is viewed with ref-
ference to one of its most important consequences,
namely, the patria potestas: for, says Gaius,
"since it is the effect of connubium that the
child follow the condition of their father, it results
that, when connubium exists, the children are not
only Roman citizens, but are also in the power of
their father." Generally, it may be stated that
there was only connubium between Roman citi-
zens: the cases in which it at any time existed be-
tween parties, not both Roman citizens, were ex-
ceptions to the general rule. Originally, at least
at one period of the Republic, there was no
connubium between the patricians and the plebe-
ians; but this was altered by the lex Canuleia,
which allowed connubium between persons of those
two classes.

There was no connubium between many persons
with respect to one another, who had severally
connubium with respect to other persons. Thus
there were various degrees of consanguinity within
which there was no connubium. There was no
connubium between parent and child, whether
the relation was natural or by adoption; and a man
could not marry an adopted daughter or grand-
dughter; even after he had emancipated her. There
was no connubium between brothers and sisters,
whether of the whole or of the half blood; but a
man might marry a sister by adoption after her
emancipation, or after his own emancipation. It
became legal to marry a brother's daughter after
Claudius had set the example by marrying Agrip-
pa; but the rule was not carried farther than the
example, and in the time of Gaius it remained un-
lawful for a man to marry his sister's daughter.

The reason of this was that Romans considered
persons within certain relations of affinity, as between
a man and his soror, nuris, priviga, and noverca.

Any illegal union of a male and female, though
affecting to be, was not a marriage: the man had
no legal wife, and the children had no legal father;
consequently, they were not in the power of their
reputed father. These restrictions as to marriage
were not founded on any enactment; they were a
part of that large mass of Roman law which belongs to jus moribus constitutum.

The marriage of Domitius, afterward the Emp-
or Nero, with Octavia, the daughter of Claudius,
seems at first sight somewhat irregular. Nero was
adopted by Claudius by a lex Curiata, 1 but he was
already his son-in-law; at least, the sponsa 2 are
mentioned before any enactment: they were to
be married under a law which would prevent a man from
adopting his son-in-law; though, if the adoption
took place before the marriage, it would be illegal,
as stated by Gaius.

Persons who had certain bodily imperfections, as
eunuchs, and others who, from any cause, could

Ann., xii., 9.)
MARRIAGE.

never attain to puberty, could not contract marriage; for, though pubertas was in course of time fixed at a positive age (vid. Impress), yet, as the foundation of the notion of pubertas was physical capacity for sexual intercourse, there could be no pubertas if there was a physical incapacity.

The essence of marriage was consent, and the contract between Ulpius, &c., of those who come together and of those in whose power they are; and "marriage is not effected by sexual union, but by consent." Those, then, who were not sui juris, had not, strictly speaking, connubium, or the "uzoris jure duenda facultas" though, in another sense, they had connubium, by virtue of the consent of those in whose power they were, if there was no subjunctio, and the law, there is no doubt that a father could give his child in marriage, unless the child was emancipated, without asking the child's consent.

The lex Julia et Papia Poppea placed certain restrictions on marriage as to the parties between whom it could take place. (Vid. Julia et Papia Poppea.) A man could only have one lawful wife at a time; and, consequently, if he were married, and divorced his wife, a second marriage would be no marriage unless the divorce were effectual.

The marriage cum conventione differed from that sine conventione, in the relationship which it effected between the husband and the wife: in the former case a marriage cum conventione was a necessary condition to make a woman a materfamilias. By the marriage cum conventione, the wife passed into the familia of her husband, and was to him in the relation of a daughter, or, as it was expressed, "in manum conventil." In the marriage sine conventione, the wife's relation to her own family was retained, and she was regarded as a wife, but not a uxor. "Uxor," says Cicero, "is a genius of which there are two species; one is materfamilias, 'quae in manum conventit'; the other is uxor only." Accordingly, a materfamilias is a wife who is in manu, and in the familia of her husband, and, consequently, one of his sui heredes, or in the manum of him in whose power her husband is. A wife not in manu was not a member of her husband's familia, and, therefore, the term could not apply to her. Gellius also states that this was the sole meaning of materfamilias. Matrona was properly, a wife not in manu, and equivalent to Cicero's "tactus modo uxor" and she was called matrona before she had any children. But these words are not so used in these their original and proper meanings.

It does not appear that any forms were requisite in the marriage sine conventione; and, apparently, the evidence of such marriage was cohabitation matrimonio causa. The matrimonio causa might be proved by various kinds of evidence.

In the marriage cum conventione, there were three forms, usus, farreum, and coemptio.

Marriage was effected by usus if a woman lived with a man for a whole year as his wife; and this was by analogy to usucapion of movables generally, in which usus for one year gave ownership. The law of the Twelve Tables provided that, if a woman did not wish to come into the manus of her husband in this manner, she should abstain from him annually for three nights (trinomium), and so break the usus of the year. The Twelve Tables probably did not introduce the usus in the case of a woman cohabiting with a man matrimonio causa, any more than they probably did in the case of other things; but, as in the case of other things, the prohibition of the law must have its full effect, so they established a positive rule as to what time should be a sufficient interruption of usus in the case of matrimonial cohabitation, and such a positive rule was obviously necessary in order to determine what should be a sufficient legal interruption of usus.

Parremus was a form of marriage, in which certain rules were used in the presence of ten witnesses, and were accompanied by a certain religious ceremony, in which painis farrens was employed; and hence this form of marriage was also called confarreatio. This form of marriage must have fallen generally into disuse in the time of Gaius, who remarks that this legal form of marriage (hoc jus) was in use even in his time for the marriages of the famines majoriores and some others. The ceremony of Gaius is defective in the MS., but its general sense may be collected from comparing it with Tacitus and Servius. It appears that certain priestly offices, such as that of flamens dialis, could only be held by those who were born of parents who had been married by this ceremony (confarreati parentes). In the time of Tullius, the ceremony of confarreatio was only observed by a few. As to divorce between persons married by confarreatio see Divortium.

Coemptio was effected by mancipatio, and, consequently, the wife was in manum. A woman who was cohabiting with a man as uxor, might come into his manum by the form of coemptio. In such cases the coemptio was said to be matrimonio causa, and she who was formerly uxor became apud matrimonium filia loco. The other coemptio, which was called fiduciae causa, and which was between a woman and a man not her husband, is considered under Testamentum and Tullia. If, however, an infant was born of the marriage, the case was considered as matrimonio causa, but fiduciae causa, the consequence was that she was in manum, and thereby acquired the rights of a daughter. It is stated by a modern writer, that the reason why a woman did not come in mancipium by the coemptio, but only in manum, is this, that she was not mancipated, but mancipated herself, under the authority of her father if she was in his power, and that of her tutors if she was not in the power of her father; the absurdity of which is obvious, if we have regard to the form of mancipatio as described by Gaius, who also speaks of mancipatio as being the form by which a parent released his daughter from the patria potestas (eius uxor), whereas if they be the children of such in manum uxor, the mancipatio must in all cases have been considered as legally effected by the father or the tutors.

Sponsalia were not an unusual preliminary of marriage, but they were not necessary. "Sponsalia," according to Florintius, "sunt mentio et reiprimenta sancturarum futurarum." Gellius has preserved an example of sponsalia in the story of Servius and De Dotibus, which, from the authority of that great jurist, may be considered as unexceptionable. Sponsalia, according to Servius, was a contract by stipulaciones and sponsones, the former on the part of the future husband, the latter on the part of him who gave the woman in marriage. The woman who was promised in marriage was called sponsa, which is equivalent to promissa; the man who engaged to marry was called sponsus. The sponsalia, then, were an agreement to marry, made in such form as to give each party a right of action in case of non-performance, and the offending party was condemned in such damages as to the judex seemed just. This was the law (jure) of

1. (Cic, Top, 3. 2—2 (Top, 3. 3—(xvili, 6)—4. (Vid. Ulp, Frug, 4.)
MARRIAGE.

MARRIAGE. sponsalia, adds Servius, to the time when the lex Julia gave the civitas to all Latium; whence we may conclude that alterations were afterward made in it. The sponsalia, as the law called them, were not binding, if the parties consented to dissolve the contract; and either party could dissolve the contract, as either could dissolve a marriage, subject, however, to the right of action which the non-consenting party might have. If a person was in the relation of double sponsalia at the same time, he was liable to infamia. (Vid. Insania.) Sometimes a present was made by the future husband to the future wife by way of presents (arrha, arrha sponsalia), or, as it was called, a present nuptias donatio. 1 Sponsalia might be contracted by those who were not under seven years of age. (Vid. Infans, Impubes.) The consequences of marriage were:

1. The power of the father over the children of the marriage, which was a completely new relation; an effect, indeed, of marriage, but one which had no influence over the relation of the husband and wife. (Vid. Patris Potestas.)

2. The liabilities of either of the parties to the punishments affixed to the violation of the marriage union. (Vid. Adulterium, Divortium.)

3. The relation of husband and wife with respect to property, to which head belongs the matters of donatio, donatio inter vivum et uxorem, donatio propter nuptias, &c. Many of these matters, however, are not considered as consequences of marriage, but the consequence of certain acts which are rendered possible by marriage.

In the later Roman history we often read of marriage contracts which have reference to marriage, and generally to the relation of husband and wife viewed with reference to property. A tile of the Digest 3 treats of the marriage of P. Petilus, which might be made either before or after marriage.

The Roman notion of marriage was that of a complete personal unity of the husband and wife (consortium omnis vitae), as shown by a continuous cohabitation, the evidence of continuing consent; for the dissent of either party, when formally expressed, could dissolve the relation. (Vid. Divortium.) Either in the old Roman law or in its latter modifications, the marriage property was taken as an essential part of the notion of marriage, unless we assume that originally all marriages were accompanied with the conventio in manum, for in that case, as already observed, the wife became fillis familiae loco, and passed into the familia of her husband; or if her husband was in the power of his father, she became to her husband's father in the relation of a granddaughter. The legal deduction from this is, that her legal personality was merged in that of her husband, all her property passed to him by a universal succession, and she could not thereforward acquire property for herself. Thus she was entirely removed from her former family as to her legal status, and became as the sister to her husband's children. In other words, when a woman came in manum, there was a dissolution of the matrimonial and the filial relation. It was a good marriage without the relation expressed by the statement of Plutarch (vid. Divortium), that the husband alone had originally the power of effecting a divorce, will consist with this strict legal deduction. It is pos-

sible, however, that, even if the marriage cum conventione was once the only form, there might have been legal means by which a wife in manum could effect a dissolution of the marriage, just as a person in a legal capacity was still able to exchange his personal rights against his legal owner. But conjecture is beyond our province, which is confined to matters of which there is evidence.

When there was no conventio, the woman remained a member of her own family: she was to her husband in the same relation as any other Roman citizen, differing only in this, that her sex enabled her to become the mother of children who were her husband's children and citizens of the state, and that she owed fidelity to him so long as the matrimonial cohabitation continued by mutual consent. But her legal status continued as it was before: if she was not in the power of her father, she had for all purposes a legal personal existence independently of her husband, and, consequently, her property was distinct from his. It must have been with respect to such marriages as these that a great part, at least, of the rules of law relating to dote were established; and to such marriages all the rules of law relating to marriage contracts must have referred, at least so long as the marriage cum conventione existed and retained its strict character.

When marriage was dissolved, the parties to it might marry again; but opinion considered it more decent to be remarried not to marry again. A woman was required by usage (noli) to wait a year before she contracted a second marriage, on the pain of infamia. (Vid. Insania.)

The above is only an outline of the law of marriage, but it is sufficient to enable a student to carry his investigations further.

It remains to describe the customs and rites which were observed by the Romans at marriage (ritus nuptiales or nuptiarum solemnia justa, &c). After the parties had agreed to marry, and the persons in whose potestas they were had consented, a meeting of friends was sometimes held at the house of the maiden for the purpose of settling the marriage contract, which was called sponsalia, and written on tablets (tabula legitima), and signed by both parties. The wife or the wife of a man, was called sponsa, pada, dicta, or spatia. 2 From Juvenal 3 it appears that, at least during the imperial period, the man put a ring on the finger of his betrothed as a pledge of his fidelity. This ring was probably, like all rings at this time, worn on the left hand, and on the finger nearest to the smallest. 4 The last point to he fixed was the day on which the marriage was to take place. Towards the close of the Republic it had become customary to betroth young girls when they were yet children: Augustus therefore limited the time during which a man was allowed to continue betrothed to a girl, 5 and forbade men to be betrothed to girls before the latter had completed their tenth year, so that, the age of puberty being twelve years, a girl might not be compelled to marry a man older than herself. 6 The Romans believed that certain days were unfortunate for the performance of the marriage rites, either on account of the religious character of those days themselves, or on account of the days by which they were followed, as the woman had to perform certain religious rites on the day after her wedding, which could not take place on a dies ater. Not suitable for entry upon marriage were the Calends, Nones, and Ides of every month, all dies

MARRIAGE.

MARRUBIUM

MARRIAGE.

MARRUBIUM

MARRIAGE.

MARRUBIUM.

THE WEDDING-DAY, WHICH IN THE EARLY TIMES WAS NEARLY IDENTICAL IN MANY RESPECTS WITH THAT OF MODERN TIMES, WAS NEWLY BORN ON THE DAY OF THE MARRIAGE. THE BRIDE WAS DRESSED IN A LONG WHITE ROBE WITH A PURPLE COLLAR, WHICH SHE WORE ALONG WITH A DIADEM. HER HEAD WERE CARRIED A GIRDLE (CORONA, CINGULUM, OR ZONE), WHICH HAD BEEN MADE ROUND THE WAIST. THE BRIDE'S VEIL, CALLED NUNCHITACATA, WAS OF A BRIGHT YELLOW COLOUR, AND HER SHOES WERE OF A DIFFERENT COLOUR. HER HAIR WAS DIVIDED ON THIS OCCASION WITH THE POINT OF A SPEAR.

THE ONLY FORM OF MARRIAGE WHICH WAS CELEBRATED WITH SOLEMN RELIGIOUS RITUALS WAS THAT OF CONFARREATIO; THE OTHER FORMS, BEING MERE CIVIL ACTS, WERE PROBABLY SOLEMNIZED WITHOUT ANY RELIGIOUS CEREMONY.

IN THE CASE OF A MARRIAGE BY CONFARREATIO, A SHEEP WAS SACRIFICED, AND ITS SKIN WAS SPREAD OVER TWO CHAIRS, UPON WHICH THE BRIDE AND BRIDEGROOM SAT DOWN. THE MARRIAGE WAS COMPLETED BY PROMULGATING A SOLEMN FORMULA OR PRAYER, AFTER WHICH ANOTHER SACRIFICE WAS OFFERED. A CAKE WAS MADE OF FARE AND THE MOLASAS PREPARED BY THE VESTAL VIRGINS, AND CARRIED BEFORE THE BRIDE WHEN SHE WAS CONDUCTED TO THE RESIDENCE OF HER HUSBAND. IT IS UNCERTAIN WHETHER THIS CAKE WAS IN ANY WAY PREPARED OR HANDLED BY THE BRIDE, AND WHICH WAS IN THE EVENING DISTRIBUTED AMONG THE GUESTS ASSEMBLED AT THE HOUSE OF THE YOUNG BRIDE.

Plutarch speaks of five large candles which were used at marriages; if these were borne in the procession, it must have been to light the company which followed the bride; but it may also be that they were lighted during the marriage ceremony in the house of the bride.

When the procession arrived at the house of the bride, it was accompanied with Garland and flowers, and the bride was carried across the threshold by promulgi, i. e., men who had only been married to one woman, that she might not knock against it with her foot, which would have been an evil omen. BEFORE SHE ENTERED THE HOUSE, she wound wool around the doorposts of her new residence, and anointed them with HARE (ADEPS SULIUS) OR WOLF'S FAT (ADEPS LUPINUS). The husband received her with fire and water, which the woman had to touch. This was either a symbolic purification (for Servius says that the newly-married couple washed their feet in this water, or it was a symbol of purity and cleanliness, as the entrance to the house was not opened until the bride had taken some water. The bride saluted her husband with the words ubi tu CAINA, ego CAINA. After she had entered the house with distaff and spindle, she was placed upon a sheepskin, and here the keys of the house were delivered into her hands. A reparation (culpa nepitialis), given by the husband to the whole train of relatives and friends who accompanied the bride, now concluded the solemnity of the day.

Many ancient writers mention a very popular song, TALASSIA OR TALASSIO, which was sung on weddings; but whether it was sung during the repast or during the procession is not quite clear, though we may infer, from the story respecting the origin of the song, that it was sung during the repast. The song was advancing towards the house of the husband.

It may easily be imagined that a solemnity like that of marriage did not take place among the meretricious and more luxurious races of Italy. Many of these songs which were sung before the door of the bridal apartment, this girl, before whom the bride herself had left the house, and the form including the words was BEAUTIFUL. A FEAST (MESA, VENUS, L. SITELLUM, etc.,) AND OF A RELIGIOUS NATURE, BELONGED TO CONFARREATIO.

*MARRUARIA*.

The rite and ceremonies which have been mentioned above are not described by any ancient writer in the order in which they took place, and the order adopted above rests in some measure merely upon conjecture. Nor is it, on the other hand, clear which of the rites belongs to which of the three forms of marriage. Thus much only is certain, that the most solemn ceremonies, and those of a religious nature, belonged to confarreatio.

The position of a Roman woman after marriage was very different from that of a Greek woman. The Roman presided over the whole household; she was the source of the honour of the house, and, as the materfamilias, she shared the honours and respect shown to her husband. Far from being confused, like the Greek women, to a distinct apartment, the Roman mother, at least during the better centuries of the Roman Republic, occupied the most important place in the household.

MARTYRIA.

The προσώπον of Theophrastus and Dioscorides is not only the same as this, but is also applied to other species. The προσώπον αυτομέτοχος of Theophrastus is the M. Africanum. The ψευδό δικαστήματα (false δίκαια) is the M. pseudo δικαστήμα, called in Attica, at the present day, μαθήματα, and in Laconia, ἄστροπτικά.¹

MARSUPIUM (μαστίσσων, βαλάντων), a Purse.²

The purse used by the ancients was composed of a small leather bag, and was often closed by being drawn together at the mouth (στεφάστα βαλάντα).³ Mercury is commonly represented holding one in his hand, of which the annexed woodcut from an intaglio in the Stosch collection at Berlin presents an example.

MARTIALIS FLAMEN. (Vid. FLAMEN.)

MARTIALES LUDI. (Vid. LUDI MARTIALES.)

MARTYRIA (μαρτυρία) signifies strictly the deposition of a witness in a court of justice, though the word is applied metaphorically to all kinds of testimony. We shall here explain, 1, what persons were competent to be witnesses at Athens: 2, what was the nature of their obligation: 3, in what manner their deposition was given; 4, what was the punishment for giving false evidence.

None but freemen could be witnesses. The incapacity of women may be inferred from the general policy of the Athenian law, and the absence of any example in the orators where a woman's evidence is produced. The same observation applies to minors.

Slaves were not allowed to give evidence, unless upon examination by torture (βίασιν).⁴ There appears to have been one exception to this rule, viz., that a slave might be a witness against a freeman in case of a charge of murder,⁵ though Platner¹² thinks this only applied to the giving information. The party who wished to obtain the evidence of a slave belonging to his opponent challenged him to give up the slave to be examined (ἐξερήτηρ τοῦ δολοῦ). The challenge was called πρόσκλησις. The owner, if he gave him up, was said ἐκδοτικὸν αὐτῷ παραδοθέν. But he was not obliged so to do, and the general practice was to refuse to give up slaves, which, perhaps, arose from humanity, though the opponent always ascribed it to a fear lest the truth should be disclosed. The orators affected to consider the evidence of slaves by their very nature, more valuable and trustworthy than that of freemen; but it must be observed, they always use this argument when the slave had not been examined.⁶

Citizens who had been disfranchised (ἐγαμμένοι) could not appear as witnesses (any more than as jurors or plousios) in a court of justice; for they had lost all honour and property. Moreover, there was no objection to alien freemen.⁷ We learn from Herodotus⁸ that in actions against freemen for neglect of duty to their patrons (ἀνοστασία δικαίων), foreigners were not allowed to put in an affidavit that the action was not maintainable (μὴ εἰσαγωγόν εἰρήν). But this can hardly be considered an exception, for such affidavits gave an undue advantage to the party for whom they were made.

Neither of the parties to a cause was competent to give evidence for himself, though each was compelled to answer the questions put by the other. The law declared τῶν ἀντιδικοίς ἐπικάνονις εἴναι ἀποκριθεὶς λέει τὸ κρατᾶμαν, μαρτυρίαν δὲ μη.⁹ That the friends of the party who pleaded for him (εἰσηγοῦτος) were not incompetent to give evidence, appears from the fragment of the Euphides, and also from Εἰκένθους, who, on his trial for misconduct in the embassy, calls Phocion to assist him both as a witness and an advocate.⁰

The obligation to attend as a witness, both in civil and criminal proceedings, and to give such evidence as he is able to give, arises out of the duty which every man owes to the state; and there is no provision made for the punishment of those (except the parties themselves) were exempted from the obligation. The passages which Platner¹² and Schliemann¹³ cite in support of the contrary view prove nothing more than that the near relations of a party were reluctant to give evidence against him, whereas the fact that they were bound by law to give evidence may be inferred from Demosthenes.¹⁴

The party who desired the evidence of a witness summoned him to attend for that purpose. The summons was called πρόσκλησις.¹⁵ If the witness promised to attend, and failed to do so, he was liable to an action called ἕκεν λειτουργικόν. Whether he promised or not, he was bound to attend; and if his absence caused injury to the party, he was liable to an action (ἰκεώδες). This is the probable distinction between these forms of action, as to which there has been much doubt.¹⁶

The attendance of the witness was first required at the ἀνάκρισις, where he was to make his deposition before the superintending magistrate (ἡγίσμα δικαστηρίων). The party in whose favour he appeared generally wrote the deposition at home upon a whitened board or tablet (κείμενοις γραμματίοις), which he brought with him to the magistrate's office, and, when the witness had deposisted there, put into the box (ἐξέφυρον) in which all the documents in the cause were deposited. If the deposition was not prepared beforehand, as must always have been the case when the party was not exactly aware what evidence would be given, or when anything took place before the magistrate which could not be foreseen, as, for instance, a challenge, or question and answer, as was usual, and no such practice was usual to write down the evidence upon a waxen tablet. The difference between these methods was the same as between writing with a pen or paper, and with a pencil on a slate; the latter could easily be rubbed out and written over again if necessary.¹⁷ If the witness did not attend, his evidence was, nevertheless, put into the box; that is, such evidence as the party intended him to give, or thought he might be the party intended his opinion. For all testimo nial evidence was required to be in writing, in order that there might be no mistake about the terms, and the witness might leave no substrance for himself when convicted of falsehood.¹⁸ The ἀνάκρισις might last several days, and, so long as it lasted, fresh evidence might be brought, but none could be brought after the last day, when the box was sealed the magistrate, and kept so by him till the day of trial.¹⁹

The form of a deposition was simple. The following example is from Demosthenes. Archonemides, son of Archedamias of Anagyrus, testifies that articles of agreement were deposited with him by Androcles of Sphetus, Nauocrates of Carystus, Artemon and Apollodoros, both of Phaeus, and that a similar deposit was made by Aristocles, who had to be paid. We must observe that, whenever a document was put in evidence at the trial, as an agreement, a will, the evidence of a slave, a challenge, or an answer given by either party at the ἀνάκρασις, it was certified by a witness, whose deposition was at the same time produced and read.

The witness, whether he had attended before the magistrate or not, was obliged to be present at the trial, in order to confirm his testimony. The only exception was when he was ill or out of the country, in which case a commission might be sent to examine him. (Vid. Ἐκμαρτγία.) All evidence was produced by the party during his own speech, the κληρονόμος being stopped for that purpose. The witness was sworn before a clerk of the court, and mounted on the raised platform (ἐπίθεμα) of the speaker while his deposition was read over to him by the clerk; he then signified his assent, either by express words, or bowing his head in silence. In the editions that we have of the orators, we see sometimes μαρτγία written (when evidence is produced in open court) as a betting term, which must not be deceived by this, and suppose that sometimes the deposition only was read, sometimes the witnesses themselves were present. The old editors merely followed the language of the orators, who said, "call the witnesses," or "mount up, witnesses," or "the clerk shall read you the evidence," or something similar, varying the expression according to their fancy.

If the witness was hostile, he was required either to depose to the statement read over to him, or to take an oath that he knew nothing about it (μάρτρων ή ἐξωμόνει). One of the other he was compelled to do, or, if he refused, he was sentenced to pay a fine of a thousand drachmas to the state, which sentence was immediately proclaimed by the officer of the court, who was commanded κλητείν ή ἐκκλητείν αὐτόν, i.e., to give him notice that he was in contempt and had incurred the fine.

An oath was usually taken by the witness at the ἀνάκρασις, where he was sworn by the opposite parties. Some orators, who had not attended at the ἀνάκρασις, he might be sworn afterward in court, as was always the case when a witness took the oath of denial (ἐκτός μέτρια). In the passage just cited from Lycurgus, the expression ἀνάκρασις ἃς ἐναφέν means nothing more than touching the altar or its appartenances, and has no reference to voluntary oaths. Whether the witness was always bound to take an oath is a doubtful point.

The oath of the witness (the ordinary νόμος ὁργος) must not be confounded with the oath taken by one of the parties, or by some friend or other person, out of court, with a view to decide the cause or some particular point in dispute.

prosecution against the witness, either by a γραφή, or perhaps by an ἐναγγελία or εργοδοθή.1

After the conviction of the witness, an action might be maintained against the party who suborned him to give false evidence, called δίκη κακατεχνιών.2 And it is not improbable that a similar action might be brought against a person who had procured false evidence to be given on behalf of a defendant who had been summoned, after the conviction of the witness in a γραφή φευγωλατρείας.3

It appears that, in certain cases, a man who had caused a false cause was enabled to obtain a reversal of the judgment (δίκη ανώδυνα) by convicting a certain number of the adverse witnesses of false testimony. Thus, in inheritance cases, the law enacted διὰ ἅνευ τῶν φευγωλατρειῶν, πᾶν ἃν Ἀρχή εἶναι περὶ αὐτῶν, by which the account of the facility afforded to the parties to stop the progress of these causes by affidavits (vid. Di.Marytvia), and also because no money could compensate an Athenian for the loss of an inheritance. The same remedy was given to the law to those who had been convicted in a δίκη φευγωλατρείας or in a γραφή εξίνας. In the last case, the convicting party could compulsorily remain in prison until the determination of his suit.4 We are informed that these are the only cases in which a judgment was allowed to be reversed in this way; but whether there were not more cases than these has been justly doubted by Schlämm. The scholiast on Plato5 is evidently wrong.5 In supposing that it was necessary, under the Athenian law, to call more than half the number of the witnesses. This appears from the passage above cited from Isæus on the estate of Hagnias.

We conclude by noticing a few expressions. Μαρτρείν τινι to testify in favour of a man, καταφρειν τινι to testify against. Μαρτρείνασθαι to cause to be a witness (a word used poetically), διαφρειάσθαι, and sometimes καταφρειάσθαι, to call upon those who are present to take notice of what passes, with a view to give evidence.6 Φευγωλατρείν and ἐφικαρείν are never used indifferently, which affords some proof that testimony was not necessarily on oath. The μάρτως (witness in the cause) is to be distinguished from the κλητήρ on whom merely gave evidence of the summons to appear.

MASTE'RES (μαστήρες). (Vid. Zetittal.) "Mastiche (μαστήριον), Gum Mastic." This is correctly described as the resin of the Lentiscus by Dioscorides and Pliny. It is the Pitsachia Lentiscus. The Chian Mastich is particularly commended by Galen. The wood of the Pitsachia Lentiscus, according to a story much esteemed by the Greeks at the present day for fuel. They call the tree σκίνος. The mastich or gum is only collected in Sicily. The ashes of the wood are used by the Athenian soap-boilers for making the ley for the manufacture of soap. In Zante it is also considered as furnishing the best luxivium. The tanners employ it with valandia in the preparation of leather. In India an oil (γαμήδα) is expressed from the berry. The σκίνος of the modern Greeks is also the σκίνος of Theophrastus. The ancient verb σκινδομαι signifies "to chew mastich" or "the wood of the mastich-tree," in order to sweeten the breath and cleanse the teeth. The gum is now much used by the women of Turkey for the same purpose.7

MASTYGA. (Vid. Flagrum.) MATERFAMILIAS. (Vid. Marriage, Roman, p. 632.)

MARTA'LIA, a festival celebrated at Rome every year on the 11th of June, in honour of the goddess Matuta, whose temple stood in the Forum Boarium. It was celebrated only by Roman matrons, and the sacrifices offered to the goddess consisted of cakes baked in pots of earthenware.8 Slaves were not allowed to take part in the solemnities or to enter the temple of the goddess. One slave, however, was admitted by the matrons, but not to be exposed to a humiliating treatment, for one of the matrons gave her a blow on the cheek, and then sent her away from the temple. Matrons on this occasion took with them the children of their sisters, but not their own, held them in their arms, and prayed for their welfare. The statue of the goddess was then crowned with a garland by one of the matrons who had not yet lost a husband.9 The Greek writers and their Roman followers, who identify the Mater Matuta with Leneuço or Leneuca, explain the ceremonies of the Matraitia by means of the mythological stories which relate to this Greek goddess. But the real import of the worship of the Mater Matuta appears to have been to inculcate upon mothers the principle that they ought to take care of the children of their sisters as much as of their own, and that they should not leave them to careless slaves, the contempt for whom was symbolically expressed by the infliction of a blow on the cheek of the one admitted into the temple.10

MATRIMO'NIUM. (Vid. Marriage, Roman.) MATR'ONA. (Vid. Marriage, Roman, p. 633.)

MAUSOLE'UM. (Vid. Eupus, p. 461.)

MAZ0'NOMUS (μαζονόμος, άφθ. μαζονώμος), from μάζα, a loaf or a cake: properly a dish for distributing bread; but the term is applied also to any large dish used for serving meat to table.11 (Vid. Cena, p. 274.) These dishes were made either of wood,9 of bronze, or of gold.12

MEDIA'SIUNI, the name given to slaves used for any common purpose, and are said by the scholiast upon Horace13 to be those qui in medio statu ac tempore imparati.1 The name is chiefly given to the slaves belonging to the family matricius,14 but is also applied sometimes to slaves in the city.15

"Medica (Medikōs), a plant, the Lucerne of Purple Medick (Medicago sativa). It has its name from Media, according to the ancient authorities, because it was brought from that country into Greece at the time of the Persian war under Darius. It passed into England from France and Switzerland. Some of the English botanists, according to Martyn, called it Burgundy trofoil and Medick fodder.15

"Medica Mală (Medikā malā), the fruit of the Citrus-tree, or Citrus Medica, L. Sprengel and Stackhouse think that the Orange (Citrus aurans) was also comprehended under the term. (Vid. Citrus.)"

MEDICINA (Medicina), the name of that science which, as Celsius says,16 "Sanitatem agri primita."
and whose object Hippocrates defines 1 to be “the deliring sick persons from their diseases, and the diminishing the force of sicknesses, and the not undertaking the treatment of those who are quite overcome by sickness, as we know that medicine is here of no avail.” For other definitions of the art and science of Medicine, see the ancients, see Pseudo-Galen. 2 The invention of medicine was almost universally attributed by the ancients to the gods. 3 Another source of information was the observing the means resorted to by animals when labouring under disease. Pliny 4 gives many instances in which these instinctive efforts taught mankind the use of medicinal drugs and simple surgical operations. The wild goats of Crete pointed out the use of the Dictamus and vulgarary herbs; dogs, when indisposed, sought the Trivicum repens, and the same animal taught to the Egyptians the use of purgatives, constituting the treatment called Syrmatia. The hippopotamus introduced the practice of bleeding, and it is affirmed that the employment of clusters of use about the breast and abdomen, might give some information respecting the means that had afforded them relief. Shortly afterward, these observations of cures were suspended in the temples of the gods, and we find that in Egypt the walls of their sanctuaries were covered with records of this description. The priests kept a register of the cases that were cured, and some of the tablets suspended in their temples are of a curious character, which will illustrate the custom. The following votive memorials are given by Hieron. Mercurialis: 3 “Some days back, a certain Caius, who was blind, learned from an oracle that he should repair to the temple, put up his fervent prayers, cross the sanctuary from right to left, place his hands on the altar, the eyes of the deity, and cover his eyes. He obeyed, and instantly his sight was restored, amid the acclamations of the multitude. These signs of the omnipotence of the gods were shown in the reign of Antoninus. 5 “A blind soldier named Valerius Aperes, having consulted the oracle, was informed that he should mix the blood of a horse in the water of the temple of Antoninus. Of this preparation to be applied to his eyes for three consecutive days: he received his sight, and returned public thanks to the gods.” “Julian appeared lost beyond all hope from a spitting of blood. The god ordered him to take from the altar some seeds of the pine, and to mix them with honey, of which mixture he was to eat for thirty days; he was saved, and came to thank the gods in presence of the people. “The whole science of medicine was divided into five parts, viz.: Ψυχικός, Physiology and Anatomy (vid. PHYSIOLOGY); Αττικός, Epistemology; Οπτικός, Pathology (vid. PATHOLOGY); Τυρειός, Hygiene, or the art of preserving health; Σαντηνικός, Semiology, or the art of diagnosing disease; Πειρατικός, Therapeutics, or the art of healing (vid. THERAPEUTICA). With regard to the medical literature of the ancients, “When,” says Littre, 6 “one searches into the history of medicine and the commencement of the science, the first body of doctrine that one meets with is the collection of writings known under the name of the works of Hippocrates. The science mounts up directly to that origin, and, by a singular circumstance, it had not been cultivated earlier, and had not given rise to even numerous productions, but everything that had been made before the physician of Cos has perished. We have only remaining of them scattered and unconnected works; the works of Hippocrates have alone escaped destruction; and, by a singular circumstance, they have existed in their original state as they were before them. The medical writings of the Greeks separate into two branches; one branch relates to the establishment of the school of Alexandria, and those of that school itself, are completely lost, except some quotations and passages preserved in the later writers; so that the writings of Hippocrates remain alone among the ruins of ancient medical literature.” The Asclepiades, to which we have already referred in the preceding pages, were the first school of medicine, viz., Rhazes, Caelius, and Cos. The first of these appears soon to have undergone a change, and has left no traces of its existence behind. From the second proceeded a collection of observations called Κυθηνος Τουμας, “Cynidian Sentences,” a work of much reputation in early times, which is often mentioned by Hippocrates, and which is constantly referred to by Galen. 7 The school of Cos, however, is by far the most celebrated, on account of the greater number of eminent physicians that sprang from it, and especially from having been the birthplace of the great Hippocrates. We learn from Herodotus that there were also two celebrated medical schools at Croton in Magna Graecia, and Cyrene in Africa, of which we have but very little information. The former is mentioned by Dioscorides, founded about B.C. 400 by Thessalus, the son, and Polybus, the son-in-law of Hippocrates, and hence called also the Hippocratici. These retained their influence till the rise of the Epicurei, founded by Serapion of Alexandria and Phliusinus of Cos in the third century B.C., after which time every member of the profession, during a long period, ranged himself in one of these two sects. In the first century B.C., Theophrastus founded the sect of the Methodici, who held doctrines nearly intermediate between those of the two sects already mentioned. About two centuries later, the Methodici were divided into numerous sects, as the doctrines of particular physicians became more generally known. Not that it had not been multiplied, the Pneumatic and Eclectic; the former founded by Athenæus about the middle or end of the first century A.D.; the latter about the same time, either by Agathinus of Sparta or his pupil Archigenes. The Epicureana (called also Histic) are supposed to have agreed nearly in their tenets with those of the Methodici. 8

1. (De Arte, tom. i., p. 674. 2. (De Medic., tom. i., p. 508. 3. (De Arte, tom. i., p. 58. 4. (De Arte Gyn., tom. i., p. 689.)
MEDICUS.

It only remains to mention the principal medical authors after Hippocrates whose works are still extant, referring for more particulars respecting their writings to the articles on CHIRUROGIA, DERMATICA, PATHOLOGIA, PHARMACEUTICA, PHYSIOLOGIA, SEMIOTICA, and THERAPEUTICA. Celsus is supposed to have lived in the Augustan age, and deserves to be mentioned more for the elegance of his style, and the neatness and judiciousness of his compilation, than for any original contributions to the science of Medicine. Indeed, many persons have doubted whether Celsus were really a professional man, or whether he only wrote his work "De Medicina" as a sort of rhetorical exercise. Dioscorides of Anazarba, who lived in the second century after Christ, was for many centuries the greatest authority in materia medica, and was almost as much esteemed as Galen in Medicine and Physiology. Aristotle in Philosophy, Aretas, who probably lived in the time of Nero, is an interesting and striking writer, both from the beauty of his language and from the originality of his opinions. The next in chronological order, and perhaps the most valuable, as he is certainly the most voluminous, of all the medical writers of antiquity, is Galen, who reigned supreme in all matters relating to his art till the commencement of the middle of the sixth century. Hornes Alexander Pergamus A.D. 131, came early in life to Rome, where he lived in great honour, and passed great part of his days, and died A.D. 201. After him, the only writers deserving particular notice are Orbisius of Pergamus, physician to the Emperor Julian in the fourth century after Christ; Aelius of Amida, who lived probably in the sixth century; Alexander Trallianus, who lived something later; and Paulus Egineta, who belongs to the end of the seventh century.

MEDICUS (Tarpoc), the name given by the ancients to every professor of the healing art, whether physician or surgeon, and, accordingly, both divisions of the medical profession will here be included under that term. In Greece and Asia Minor physicians seem to have been held in high esteem; for, not to mention the apotheosis of Asclepius, who was considered as the father of it, there was a law at Athens that no female or slave should practise it. Aelius mentions one of the laws of Zaleucus among the Epizephyrian Locrians, by which it was ordered that if any one, during his illness, should drink wine contrary to the orders of his physician, he should be rewarded one hundred drachms for his disobedience; and, according to Mead, there are extant several medals struck by the people of Smyrna in honour of different persons belonging to the medical profession. The following observation concerning these medals is given by Kühn:

"Ati, idque haud dubie rectius, verstosius est, non nominum in hisce nummis oblivia minime significant medicus, qui de Smyrnne sua medicinae artis cognitione bene moruerit, sed potius summis illius urbis magistratus.

vitam illustravisse, qui de actibus Atheniensium (published amongst the letters of Hippocrates) be genuine, and if Soranus can be depended on, the same honours were conferred upon that physician as had before been given to Heracles; he was voted a golden crown, publicly initiated into the Eleusinian mysteries, and maintained in the Prytanæum at the state's expense.

As there were no hospitals among the ancients, the chief places of study for medical pupils were the Ἀσκληπεῖα, or temples of Asclepius, where the votive tables furnished them with a collection of medical books. These books (the contributions of different authors) were very strict in examining into and overlooking the character and conduct of their pupils, and the famous Hippocratic oath (which, if not drawn up by Hippocrates himself, is certainly almost as ancient) requires to be inserted here, as being the most curious medical monument of antiquity. "I swear by Apollo the physician, by Asclepius, by Hygieia, and Panacea, and all the gods and goddesses, calling to witness against me the force of this oath, that I will neither impart my knowledge to a woman, nor to any one whom I know to be mykinsman, according to the best of my power and judgment, the solemn promise and the written bond which I now do make. I will honour as my parents the master who has taught me this art, and endeavour to minister to all his necessities. I will consider his children as my own brothers, and will teach them my profession, should they express a desire to follow it, according to the best of my knowledge. I will admit to my lessons, my discourses, and all my other methods of teaching, my own sons, and those of my tutor, and those who have been inscribed as pupils and have taken the medical oath; but no one else. I will preserve such a course of regimen as may be best suited to the condition of my patients, according to the best of my power and judgment, seeking to preserve the patient from anything that might prove injurious. No inducement shall ever lead me to administer poison, nor will I ever be the author of such advice: neither will I contribute to an abortion. I will maintain religiously the purity and integrity both of my conduct and of my art. I will not cut any one for the stone, but will leave that operation to those who cultivate it (ἐπιτραπέζων δ' ἀφιγένεσιν ἔμφιλα καὶ πρόφητας ἔργω). Into whatever dwellings I may go, I will enter them with the sole view of succouring the sick, abstaining from all injurious views and corruption, especially from any immodest action towards women or men, freemen or slaves. If during my attendance, or even unprofessionally in common life, I happen to hear of any circumstances which should not be revealed, I will not, on any account, tell it, even though it were to the advantage of my patient; and let me not speak of the patient on the subject a religious silence. May I, if rigidly observe this my oath, and do not break it, enjoy good success in life, and in [the practice of] my art, and obtain general esteem forever; should I transgress and become a perjurer, may the reverse be my lot." As regards the passage of the oath, given above in the original Greek (ἐπιτραπέζων δ', εἰς τοῦτο ὑμᾶς τὸν ἐπιταγμένον ἔργον μὴ ἀφιέρωσον, ἀλλ' ἄροτρον, ὅπως καὶ λεγοντος τὸν ἐπιταγμένον ἔργον μὴ ἀφιέρωσον), it is not preferable. With regard to the oath itself, it is generally considered to be spurious; but M. Litré, the editor of the new Paris edition of Hippocrates, believes it to be genuine. For a copious and learned explanation of every clause of the oath, see W. C. W. Belcham's edition, Gr. and Lat., Lugd. Bat., 4to, 1654.

Some idea of the income of a physician in those times may be formed from the fact mentioned by Herodotus, that the Ἐγρινατος (after the year B.C. 532) paid Democedes from the public treasury one talent per annum for his services, i.e., (if we reckon, with Hussey, the Ἐγρινατος drachma to be worth

1. Compare Plut., H. N., viii., 37--3. (Vid. C. Aegypt. Histor. Loewen, Scriptor. Hist. Gr., t. ii. 260. (V. C. Viitriol. Hist. Gr., t. iii., 265.)) thought the writer has translated it thus, both here and also in page 241, he does not feel at all sure that the other construction, viz., making πρόφητας ἔργων depend on ἐπιτραπέζων, is not preferable. With regard to the oath itself, it is generally considered to be spurious; but M. Litré, the editor of the new Paris edition of Hippocrates, believes it to be genuine. For a copious and learned explanation of every clause of the oath, see W. C. W. Belcham's edition, Gr. and Lat., Lugd. Bat., 4to, 1654.
MEDICUS.

12. 1 d.), not quite 3444; he afterward received from the Athenians one hundred minae, i.e. (reckoning, with Hussey, the Attic drachma to be worth 9 (d.), rather more than 406l.; and he was finally attracted to Samos by being offered by Polycrates a salary of 6 maxae, or 500 talents of silver, if he might have made it) 497l. 10s. It should, however, be added, that Vahlenkamer doubts the accuracy of this statement of Herodotus with respect to the Athenians and Athenians (and apparently with reason), on the ground that the latter people, at the time of their greatest wealth, only allowed their ambassadors two minae a day, 74l. 6s. 4d. per day, i.e. less than thirty pounds per annum. A physician, called by Flinby both Erasistratus and Clesombrtus, is said by him to have received one hundred talents for curing King Antiochus, which (if we suppose the Attic talents of the standard of Alexander's coinage to be meant, which, according to Hussey, was worth 343l. 18s.) would amount to 34,376l. If, however, the Alexandrian standard, which is found in the coins of the Ptolemies, be meant, it would amount (reckoning the drachma as 1s. 3(d.) to 39,375l.; an almost incredible sum. It seems to have been not uncommon among the Greeks in those times (as afterward in the later Roman Empire: see Archiater) for states to maintain physicians, who were paid for their services, and who, in some cases, had attendants, for the most part slaves, who exercised their calling among people of low condition.

The Romans derived their knowledge of medicine at first from the Etruscans and afterward from the Greeks. In the most ancient times the haruspices practised medicine in connexion with the augurs, and, in the opinion of Sprengel, who regarded the ancient Roman legends as historical facts, it was probably some of these that Amulius sent to Rhea Silvia, when she was pregnant, to examine the nature of her mysterious disease. One of the most ancient customs at Rome, in order to ward off epidemic diseases, and to appease the anger of the gods, was the interring the books bought by Tarchuin the Sybil. In the earlier times of the Roman Republic, physicians are said by Flinby to have been unknown, and for some time afterward the exercise of the profession was in a great measure confined to persons of servile rank; for the richer families, having slaves who were skilled in all sorts of minor matters, certainly possessed that stock of knowledge that understood medicine and surgery.

To this practice, however, there were many exceptions: e.g., the physician who was taken prisoner with Julius Caesar by the pirates at the island of Pharmaeus, and who is called his friend by Plutarch; Archagathus, who, being the first foreign surgeon that settled at Rome, had a shop bought for him at the public expense, and was presented with the jus Quiritium B.C. 219; Aristorius, who is known to have been a physician, and who is called the friend of Augustus; Asclapio, whom Cicero calls his friend; Asclepiades, the friend of Crassus the orator; Eudemos, who is called by Tactitus the friend and physician of Livy; and others. The hatred borne by Cato the censor against the Greek physicians, as well as the Greek philosophers at Rome, is well known, but it is not true that he caused them to be expelled from Rome.1 With respect to the income made by eminent physicians in the early times of Rome, the writer is not aware of any data for ascertaining it; but at the beginning of the Empire, Celsus, in his De Medicina, line 12724, speaks of the income which the physician Atticus, Cassius, and Rubrius gained 250,000 sesterces per annum, i.e. (reckoning, with Hussey, the mille nummi (esterrtum) to be worth, after the reign of Augustus, 7s. 6d.), 1933. 2a. 6d.; that Quintus Curtius made it a favour that he was content to receive from the emperor 500,000 sesterces per annum (or 600,000 sesterces (or 688l. 10s.) by his private practice; and that he and his brother, who received the same annual income from the Emperor Claudius, left between them at their death, notwithstanding large sums that they had spent in beautifying the city of Naples, the sum of thirty millions of sesterces 295,000,000.

Of the previous medical education necessary to qualify a physician at Rome for the legal practice of his profession in the early times, we know nothing; afterward, however, this was under the supervision of the archiater. (Vid. Archiater.)

Two other medical titles that we meet with under the emperors were Iatrosophist (see the word) and Iatrosophistae. When Ambrose afterward had been a physician at the court of Constantinople, given apparently only to physicians, and quite distinct from the use of the word found in the earlier Latin authors.3 Besides Joannes the son of Zacharias, who is better known by his title of Actarius than by his real name, several other physicians are recorded as having arrived at this dignity.

MEDIMNUS (μέδιμνος or μέδομας στρογγ.); the principal dry measure of the Greeks. It was used especially for measuring corn. It had different sizes in the different states of Greece. The Attic medimnus was equal to six Roman modii. (Nepos, Vit, Att., c. 2.—Cic., in Veri., II., iii., 45, 46, where Cicero explains 50,000 modii by 200,000 modii, and 35,000 modii by 216,000 modii.—Siduas, v.—Rheum. Fann, v., 64.

"Hujus dimidium fert arma, ut et ipsa medimus Amphora, terque copit modum."

Suidas makes the medimnus =108 litres, confounding it apparently with the metretes. The medimnus contained 11 gallons. 7¼ pints English. It was divided into the following parts:

MELANTHION \((\text{Melanthion})\), according to Sprengel, the \textit{Nigrella sativa}, or Pepper-wort. The seed of the \textit{Mellanthus} was called \textit{Gith}. Pliny mentions its various uses in medicine.\(^2\)

\*\* MELANURUS \((\text{Melanurus})\), a species of Fish, the \textit{Sparsus Melanurus}, called in Italian \textit{schiana}, in French \textit{oblade}. It is the \textit{Oblada} of Cuvier. It is a silvery fish, striped with blackish, and having a broad black spot on each side of the tail, from which the \textit{Schiana} (the Greek name (which means black tail)) is derived.\(^3\)

**MELIA \((\text{Melia})\).** This term, used by itself, may, according to Adams, be supposed generally to apply to the \textit{Pyrus malus}, or Crab Apple. The \textit{Melia} of Theocritus, he thinks, may be presumed to be the same.\(^4\)

**MELAPARRUS \((\text{Melaparrus})\), the Guinea-fowl or Python, named \textit{Melaphorus} of Linnaeus. It was a bird well known to the ancients, and not uncommon, we may suppose, in the time of Pausanias, who says it was an offering in the mysteries of Isis, of persons in a moderate condition of life. The Greeks expressed the screaming of this bird by \textit{kypakcev}. The description given by Citius, the disciple of Aristotle, as referred to by Athenaeus, was properly applied to the Guinea-fowl by Paulus the discovery of Cassuban and Sealliger. Varro and Pliny confound the \textit{Meleagris} with the \textit{Gallina Aferina}, but Columella distinguishes them from one another. The difference, however, is by no means striking, and indicates merely a variety in the species. Care must be taken not to confound the Turkey with the \textit{Meleagris}, as the former bird was not known in Europe before the discovery of America. \(^5\)

**MELIA \((\text{Melia})\).** (\textit{Vid. Harta}, p. \textit{488}).

**MELIA \((\text{Melia})\), a species of Ash, most probably, according to Sibthorp and others, the \textit{Fraxinus orn}. The \textit{bomelia} of Theophrastus was the \textit{Fraxinus exelior}, as Stackhouse and Schneider have stated.\(^6\)

**MELIA TERRA \((\text{Melica ssp})\), Melian Earth, so called from the island of Melos, where it was obtained. “The Melian earth of the ancients,” says Sir John Hill, “was a fine white marl, of a loose, crumbling texture, and easily soluble in water and other fluids. Some had imagined it to have been of other colours; but that it was really white we have the unquestionable authority of Pliny. The discovery of this error is no more than the confounding of \textit{Meles} with \textit{Melano}, which last comes from the same root, and has no connexion whatever with the former.”\(^7\)

**MELILOTOS \((\text{Melilotus})\), a species of plant, the Melilot, or \textit{Melilotus officinalis}, according to Sprengel. Stackhouse calls it the \textit{Trifolium officinale}, which is only another name for the same plant.\(^8\)

**MELIMELA \((\text{Melimela})\).** Diophanes, a writer mentioned in the \textit{Geoponica}, makes these to have been originally used among the Greeks. They are called \textit{Mela muscaria} by Varro.\(^9\)

MENSA.

"MELINE (mélíṇe), the Panticum millaceum, or Millet."

"MELIS, the Badger, or Ursus males. Galen has been supposed to allude to it, as being an animal useful for ἄρτον καὶ σῶμα."

"MELISSA (mélíssα or -rra), the Bee. (Vid. ATR.)"

"MELISSOPHULLON (mélíssopoullion), a plant, so called because the bees are fond of its leaves, as Dioscorides informs us. It has stalks and leaves, according to the same authority, like black horsetail, the leaves, however, being broader and not so rough, and smelling like citron. This description, Magyns thinks, agrees very well with the Melissa or Beaum, a common herb in English gardens. Varro informs us that the Latin name for this plant was apiastrum; Columella, however, speaks of apiastrum and melissophillum (or meliphyllum) as two different herbae."

"MELOLONTHE (μελολόνθη), a species of Beech, most probably the Scarrabus melolonthi, or Cockchafer."

"MELOPEPON (μελόπεπον). The great difficulty in determining what the melopepones were, arises from the circumstance of the ancient authors who treated of the summer fruits frequently interchanging the names of which they were designing. "Even Ludovico Nonnus," observes Adams, "who has bestowed so much pains in illustrating the Res Cibarum of the ancients, admits himself much at a loss in deciding what the melopepones were, but, upon the whole, inclines to think that they were a peculiar kind of melons. Schneider, in like manner, supposes the melopepones to be referable to the Cucumis melo, L. At all events, it is certain that the ψαλίττων of the Greeks is the melo of Palladius. The term melopepon is now applied to the Squash, a fruit used for food both in the East and in America. May not thus have been the melanepontes of Pliny?"

"MEMACYNON (μεμάκυνον), the fruit of the Vld Strawberry-tree. (Vid. ARBUTUS.)"

"MEMBRANA. (Vid. LIRER.)"

"MENANTHUS (μενανθος). The Bog Bean, an aquatic plant. "This," observes Adams, "is clearly the πρωτόλινθον of the Geoponica. From the union of these two terms the Bog-bean derives its scientific title. The learned authorities erroneously take it for the λιόντων of Dioscorides. It may be supposed that it is the μυρινδής of Nicander, but Sævngel contends that the latter is the Psoralea bituminosa, L., on what authority, however, I cannot discover."

"MENELAIA (μενελαία), a festival celebrated at Therapnae, in Lacedaemonia, in honour of Menelaus and Helen, who were believed to be buried there. Menelaus was to the Lacedaemonians what Nestor was to the Messenians, a model of a wise and just king, and hence they raised him to the rank of one of the great gods, and honoured him and Helen with annual and solemn sacrifices at Therapnae, which continued to be offered in the days of Zozora. These solemnities are sometimes called Εἰμ.νία."

MENSA (τρίτσεια), a Table. The simplest kind of table was one with three legs, round, called cili-

kind, must have denoted one which indicated a higher degree of luxury and refinement, since it implied some priority in the manner of sitting at tables. It is shown in the drinking-scene painted on the walls of a wine-shop at Pompeii. (See woodcut) The term ὑπαργίας, though commonly used in Greece for a table of any

called by a distinct name, ἐπὶ θώμα, it appears that it was very frequently made separate from the tripod or other stand (ἐπὶ θώμα) on which it was fixed. Among the Greeks the tables were not covered with cloths at meals, but were cleaned by the use of wet sponges7 or of fragrant herbs.8

Under the influence of the ideas of hospitality, which have prevailed universally in the primitive states of society, the table was considered sacred.9 Small statues of the gods were placed upon it.10 On this account Hercules was worshipped under the title τραπεζίς and ἐπὶ τραπέζως. The Cretans ate in public; and in the upper part of their ἄπλωσις, or public dining-room, there was a constant table set apart for strangers, and another sacred to Jupiter, called τραπέζα ζεύς, or Δίος ζεύς.11 The two principal courses of a δείπνον and σελινα, or a Greek and Roman dinner, were called respectively πρῶτα τραπεζα, δεύτερα τραπεζα, and mensa prima, mensa secunda. (Vid. SENA, DIPNOS.)

A stone table, supported by four other stones, was sometimes used, as it is in modern times, to cover a grave.12 (Vid. FURUS, p. 457.)

MENSIARII, MENSULAARII, or NUMULAARII, were a kind of public bankers at Rome who were appointed by the state; they were distinct from the argentarii, who were common bankers, and did business on their own account.5 The mensarii had their banks (mensae), like ordinary bankers, in the Forum, or in the name of the errarium they offered ready money to debtors who could give security to the state for it. Such an expediency was devised by the state only in times of great distress. The first time that mensarii (quinquenarii mensarii) were appointed was in 352 B.C., at the time when the plebeians were so deeply involved in debt that they were obliged to borrow money from new creditors in the Forum, and to give up their property to them. (Vid. SENA, DIPNOS.)

On this occasion they were also authorized to ordain that cattle or land should be received as payment at a fair valuation. Such bankers were appointed at Rome at various times, and whenever debts weighed heavily upon the people, but, with the exception of the first time, they appeared to be ordinary commercial institutions founded upon the same principle as those of the Athenians, but which had been trinomi mensarii.10 One class of mensarii, however (perhaps an inferior order), the mensularii or numularii, seem to have been permanently employed by the state, and these must be meant when we read, that not only the errarium, but also private individuals, deposited in their hands sums of money which they had to dispose of.11 As Rome must have often been visited by great numbers of strangers, these public bankers had also, for a certain period, to exchange foreign money and give Roman coinage instead, and also to examine all kinds of coins, whether they were of the proper metal, and genuine or not.12 During the time of the Empire, such permanent mensarii were appointed under the control of the prefect of urb., and formed a distinct class of men.13

Bankers appointed by the state also existed in other ancient towns, and Cicero14 mentions mensarii at Temnos, in Asia Minor, who were appointed by the people.

MENSIARII, a Month. The division of the year into twelve lunar months must have been known to the Greeks from very early times, for in the

Homeric poems the lunar months appear quite familiar to the heroes. The day of the new moon, or the first day of every month (μοναδική), was sacred to Apollo.1 The month itself, however, does not seem to have been subdivided into any other periods than those of the increase and decrease of the moon (τοίς μήνιν ουνυοίς, τοίς δ’ ουνυοίς). In the time of Hesiod the lunar month was reckoned as containing 30 days, although it must have been known to have contained in reality less than 30 days. (Vid. CALENDAR, p. 190.) The discrepancy between the lunar and solar year rendered it necessary every year to intercalate a thirteenth month (μήνιν ουνυόν), which, however, is not mentioned either in Homer or Hesiod, and the time of its introduction is unknown.4 This necessarily produced confusion, in the number of days of a year, to avoid which Solon established the rule at Athens that the months of 30 and 29 days should alternate with each other, and called the thirtieth day (τριμήναι) of a month by αἰς, as such a day only belonged to the month which was ending, and partly to the new month.5 Thus arose a regular lunar year of 354 days, and, in order to make this agree with the solar year, a month was intercalated every third year (τριμήναι). Respecting the names of the Attic months and their division into decades, see CALENDAR and Clinton.6 The Hecatonthemons, or first month of the Attic year, coincides very nearly with our June.7 While in Attica the 12 lunar months were established for religious purposes, the various kinds of business of ordinary life were here, as in other parts of Greece, regulated according to various other phenomena, such as the rising and setting of certain stars,8 the arrival and departure of the birds of passage,9 and the like.

Of the various means that existed for determining the time of the new moon and the lunar year, the Romans, and hence the states derived from those of the Athenians not only in their names, but also in the time of their commencement,14 and it was only in very few instances that the beginning of the months in another Greek state completely coincided with the Attic months. This is the more surprising as they were all lunar months, and should, consequently, have all commenced on the first day of the solstitial months, and in different months of the solstitial months, and in different modes of intercalation to make the lunar year agree with the solar one, so that the difference was not very great. In all parts of Greece, however, the division of a month into decades, and the mode of stating the day of a month, were the same as those customary in Attica.

Among the Spartan months we only know the names of five, viz., Gerastos, Artemisios, Phrygios, Hecatonthemons, and Carneus. The last of these answered to the Attic Metageitnion,18 and the Artemisios to the Attic Elaphellion.17 The others are uncertain. That the Spartan months in their commencement differed by two days from the Attic ones, is clear from Thucydides.16

The chronology of the Boeotians seems to have been very irregular in early times, and the time of the commencement of their months differed from that of the Attic months; but in 371 B.C. their months appear to have perfectly coincided with those of Attica.19 The first month of the Boeotian year was called Bucatius, and coincided with the

MENSO'RES, Methodici.

Att: Gamelion. Besides this first month, the names of six others are known, viz., Hermaeus (Attic Antheaterus), Proterarius (Attic Elaphelobion), Hippodromius (Attic Hecatombaion), Panemus (Attic Metageteion), Alacomenius (Attic Meumaceterion), and Damatius (Attic Pyaneosion). Among the months of the Eleans only the name of one is known with certainty, viz., the Elaphius, which is described as the month in which the vernal equinox took place. But there are two other names, Parthenius and Apolloius, which are likewise believed to be the names of Elean months.

The first of the Delphian months seems to have been the Byesus, which coincided with the Attic Munchexion. It fell at the time of the vernal equinox, and in it the Pythian games were celebrated. Besides this, the names of eight others are known, viz., Theoxeniou, Ileus, Domus, Symelius, Thleu- tius, Bucatius, Heraclius (Attic Thargelion), and Dionysius.

Of the months of the Ceryreans only three are known, viz., Machaneus, Armanitius, Ther- moleus, Droma, &c.

The Sicilian months were Carneius (Attic Metage- tion), Panemos, &c. The Cyprian months are all known, but most of their names seem to belong to the time of the Roman Empire. They are, Eumeus, Janius (anciently Januarius), Cebastus, Autocratorius, Demarcheasius, Plathyatus, Archiereus, Heshtiius, and Romeus.

The Macedonian names, like the Greeks, divided their year into 12 lunar months, and their names and order of succession may be gathered from Josephus and Suidas. Their year began in the autumn, and the months were numbered, as in our calendar, in this order till our November. The names and the order of their months were as follow: Dius, Apelleius, Au- duneus, Peritius, Dystrus, Xanthicus, Artemisius, Dassius, Panemus, Los, Goripnus, and Hyperber- teus. The Macedonian months, after the time of Alexander, were adopted by the Syro-Macedonian cities, and by the Greek cities of Asia generally, and were summed up until the reformation of the Roman calendar by J. Caesar, after which time all the Greeks, both in Europe and in Asia, gradually began to adopt the new Roman calendar, though the ancient names of their months, as well as the ancient time of the commencement of their year, remained in most cases as they had been before. For the account of the Roman months, see Calendar, Roman.

MENSO'RES, Messurers or Surveyors. This name was applied to various classes of persons whose occupation was the measurement of things.

1. It was applied to land-surveyors, who measured and defined the extent of fields, and appear to have been known as the agrimensorae and agrimensores. (Compare Agrimensores.)

2. To persons who measured in the Roman camps the space to be occupied by the tents. They must be distinguished from the metatores, who selected the place for a camp.

3. To a class of officers during the time of the Empire who provided quarters for the soldiers in the towns through which they passed and where they made a temporary stay. They not only assigned to each soldier the house in which he was to be quartered, but also wrote the name of the occupant upon the doorpost, and who effaced or destroyed this name was punished as a fals us.

4. Menso sedericorum is sometimes applied to architects, or more especially to such architects as conducted the erection of public buildings, the plans of which had been drawn up by other architects.

5. Mensores frumentarii was the name of officers who had to measure the corn which was consigned to the treasury for public granaries, and who were employed under the prefectus annonae. Their name is mentioned in various ancient inscriptions.

MENUSIS (μενοςις). (Vid. Ecclesia.)

MERCEDONIUS or MERCIDYT'. (Vid. Cale-endar, Roman, p. 194.)

MEXENDA. (Vid. Cenc., p. 275.)

MEXINES, MEXIES, MEXAIUS, MEXSOES, &c. (p. 476.)

*MEROPS (μερόπ), a species of Bird, the Merops apistern, or Bee-eater. "It is rarely met with in England," says Adams, "but is common in the south of Europe, and hence its frequent mention in the classics." (Vid. Cal. Cens. &c.)

*MESP'ILE (μεσπ'ιλ), or MESP'ILUS (μεσπ'ιλος) the Medlar-tree, (Hippodromius, Mespilus /eunacte/ios, Smith. The two species of Medlar described by Dioscorides, and subsequent writers on the Materia Medica, are referred by Sprengel to the Mespilus azaroides, Smith (Azarola, or Neapolitan Medlar), and the M. germanica (common Medlar)."

METE. (Vid. Circus, p. 253.)

METAGEIT'NIA, a festival celebrated by the Attic demos Melite, in honour of Apollo Metage- niun. The chief solemnities consisted in offering sacrifices, and the festival was believed to commemorate the emigration (γενναίας πρὸς κέραν) of the inhabitants of Melite to Dionis.

METHODO'CI (Μεθοδοκοι), an ancient medical sect, whose history begins with Themison, a pupil of Asklepius, who lived in the first century B.C., and who is said to have received his instruction from his master in many respects, condemned his errors, contributed much to rectify his principles, and introduced a greater precision into his system. He was the first who chose the middle way between the tenets of the Dogmatici and Empirici, the traces of which he believed he discovered in the sect of the Hermolampetici. He was thus summed up by Celsus:"They assert that the knowledge of no cause whatever bears the least relation to the method of cure; and that it is insufficient to observe some general symptoms of distressers; and that there are three kinds of diseases, one bound, another loose (the word in the original is fluxus, which in flux, it must be restrained; if the distemper be complicated, then the most urgent malady must be first opposed. And that one kind of treatment is required in acute, an-

---

1. (Plut. Epit., x., 28, 29.)
2. (Plut. Epit., x., 28, 29.)
3. (Plut. Epit., x., 29.)
4. (Plut. Epit., x., 29.)
other in inveterate distempers; another when diseases are increasing, another when at a stand, and another when inclining to health. That the observation of these things constitutes the art of medicine, which they define as a certain way of proceeding, which the Greeks call method (Méthodos), and affirm it to be employed in considering those things that are common to the same distempers: nor are they willing to have themselves classed either with the rationalists (i.e., the Dogmatici) or with those who regard only experiences (i.e., the Empirici); for they dissent from the first sect in that they will not allow medicine to consist in forming conjectures about the occult things; and also from the other in this, that they hold the observation of experiments to be a very small part of the art. (Futvroy's translation.)

As the seeking after the causes of diseases seemed to him to rest on too uncertain a foundation, for this reason he wished to establish his system upon the analogies and indications common to many diseases (kóntrología), without reflecting that these analogies are often as occult, and even oftener, than all the causes of the Dogmatici. However, this idea of the common analogies of the morbid state had the great advantage of contributing afterward to the perfection of the science of Semiology. If, says Sprengel, Thomson had chosen for his basis analogical indications, he would have been able to recover the morbid states, instead of simple maladies of the solid parts, of which he only admitted a very small number, the system of the Methodici would have been the best of all; but, deceived by the Copernican Philosophy of his master Asclepiades, he would not admit any other common symptoms than those given by the Pythagoreans and the Læcæn, the being confused and relaxed, and the motion of the heart. Thus he was compelled to contradict himself, and commit the more errors the more he tried to escape by the méthodes the tenets both of the Empirici and Dogmatici. Thomson appears to have written several works, which are now lost, but of which the titles are preserved by Cælius Aurelianus. His followers were very numerous, but the only following only deserve notice here: Scorani, the author of several works, of which two only are still extant, Peri Æmiou συγγραμμάτων, "De Signis Fracturantum," and Peri Μετώπως καὶ Ταυνακίων Αδιόνων, "De Utero et Pudendo Mellebri," Cælius Aurelianus, the principal writer of this sect, whose work "De Morbis Acutis et Chronicis" is one of the most valuable of all works on Morbid states. Among the Institutions of the work by the Ταυνακίων Παθὼν, "De Mللullien Passionibus," Theasalus of Tralles, of whom nothing remains, but who was, in a manner, the second founder of the sect, and who (if we may trust Galen, who always mentions him with the greatest contempt) conferred no honour on the medical profession either by his talents or his character.

METOIKOI (Μέτοικοι) is the name by which, at Athens and in other Greek states, the resident aliens were designated, and these must be distinguished from such strangers as made only a transitory stay in a place, for Harpocratio expressively mentions as a characteristic of a μέτοικος that he resided permanently in the place. No city of Greece, perhaps, had such a number of resident aliens as Athens, who, in order to secure some great advantages and conveniences, or a more agreeable mode of living. In the census instituted by Demetrius Phalereus (309 B.C.), the number of resident aliens at Athens was 10,000, in which number women and children were probably not included. These aliens were persons from all parts of Greece, as well as from barbarous countries, such as Lydians, Phrygians, and Syrians, or Attic freedmen (vid. LIBERTI, GREECE), and these people had chosen Athens as their adoptive country. It was an accession of its resources for a nation, and instruction, on account of the facilities it afforded for carrying on mercantile business. The latter class of persons seems to have been by far the most numerous. The jealousy with which the citizens of the ancient Greek republics kept their body clear of intruders is also manifest in their regulations concerning aliens. However long they might have resided in Athens, they were always looked upon as strangers, whence they are sometimes called ἐξοριοί: and to remind them of their position, they had on some occasions to perform certain degrading services to the Athenian citizens. The services (vid. HYDRIA-PHORIA) were, however, in all probability, not intended to hurt the feelings of the aliens, but were simply acts symbolical of their relation to the citizens. Aliens were not allowed to acquire landed property in the state they had chosen for their residence, and were, consequently, obliged to live in hired houses or apartments, and hence the letting of houses was a subject of much speculation and profit at Athens. As the aliens did not constitute a part of the state, and were yet in constant intercourse and commerce with its members, every alien was obliged to become a resident and pay the tax (Me6oSo[), who was not only the mediator between them and the state, through whom alone they could transact any legal business, whether private or public, but, at the same time, answerable (ἐγγυεται) to the state for the conduct of his client. On the other hand, however, the state allowed the aliens to carry on all kinds of industry and commerce under the protection of the laws of the state of Athens, nearly all business was in the hands of aliens, and the state lived on the account lived for the most part in the Piraeus.

Each family of aliens, whether they availed themselves of the privilege of carrying on any mercantile business or not, had to pay an annual tax (περικόλοι or ζημινάριον) of twelve drachmas, or, if the head of the family was a widow, of only six drachmas. If aliens did not pay this tax, if they assumed the right of citizens, and probably, also, if they refused to select a patron, they not only forfeited the protection of the state, but were sold as slaves. (Vid. ΑΟΡΣΤΑΤΙΟΝ ΠΑΡΑΘ). In some cases, however, though they are of rare occurrence, aliens, without having the insolency, might become exempt from the περικόλοι (άρεξ στοιχεον) as well as from other obligations; Extraordinary taxes (ἐλεοφόλας and λετοφόλας) were exacted upon aliens no less than upon citizens, though there must have been a difference between the liturgies performed by citizens and those performed by aliens. In what this difference consisted is nowhere expressly mentioned, but we have reason to believe that, with the exception of the triarchy and gymnasia, the liturgies might devolve upon aliens, though perhaps only on some occasions, as the choregia at the festival of the Lenaea. The extraordinary taxes (ἐλεοφόλας) which aliens had to pay, seem also, in some degree, to have differed from those paid by citizens; and it is clear from Demosthenes that they were taxed higher than citizens of the same census. The aliens were also obliged to take care of the ordinary guards in their own parts of Athens.

2. (De Morb. Chron., i, 1, p. 856; i, 1, p. 183; ii, 7, p. 307, &c.—3. (s. v.)—4. (Ath. Hen., vi, p. 372.)
the fleet, both abroad and at home, for the defence of the city. 1 Respecting these μέτροι which had obtained the ἱστολεία, see CYTAS, p. 259. The heirs of a μέτροι who died in Attica were under the jurisdiction of the polemarch. 2

The preceding account of the condition of the aliens at Athens will apply, with very few modifications, to most other parts of Greece. 3

METRETES (μέτρετης), the principal Greek liquid measure. The Attic metretes was equal in capacity to the amphora, containing 8 gallons. 7.365 pints English. (Vid. AMPHORA.) It was divided into

1 ¼ varia, each = \[ \text{Gill} \quad \text{Fl.} \]
12 = \[ \text{Pint} \quad \text{Fl.} \]
48 = \[ \text{Quart} \quad \text{Fl.} \]
72 = \[ \text{Gallon} \quad \text{Fl.} \]
144 = \[ \text{Kophal} \quad \text{Fl.} \]

(Vid. CHXIS, CHNEX, XESTE, CYTILA.) The smaller liquid measures were of very variable sizes; their names were μέτρον (vid. ΜΥΣΘΕΝ), δόξα (vid. ΟΥΡΑΝΗ), κίνας (vid. ΩΝΑΘΗΣ), κάλυβα (vid. ΜΙΧΗΣ), κολύμπια (vid. ΚΟΛΥΜΠΙΑ). In other places the metretes had a different size. Galen 4 says that the Syrian metretes contained 120 σέκται. The Macedonian metretes is inferred to have been much smaller than the Attic, from the circumstance mentioned by Aristotle 5 of an elephant's drinking 14 of them at once.

METRONEOMI (μετρονομείς) were officers at Athens belonging to that part of the city which was named after the upper police-officers. They were, like all officers of this kind, appointed by lot. Their number is stated differently: some say that there were fifteen (ten for the Piraeus and five for the city); some say twenty-four (fifteen for the Piraeus and nine for the city); and others state that there were only ten men for the Piraeus and five for the city. 6 Böckh 7 would alter all these passages of the grammarians so as to make them say that the whole number of metronomi was fifteen, and that ten were for the city and five for the Piraeus, because the sitophylaces were distributed in the same manner. But there does not appear sufficient ground for such an emendation and, it seems, at any rate, probable that the number of these officials was not so fixed. The grammarians state, was necessarily greater in the port-town than in the city, for there must have been more business for them in the Piraeus than at Athens, which was not the case with the sitophylaces. The duties of the metronomi were to watch that the weights and measures used by tradesmen and merchants had the same size and weight prescribed by the laws, and either to punish offenders or to receive complaints against them, for the real nature of the jurisdiction of the metronomi is not known. 8

METROPOLIS. (Vid. COLONIA, p. 284.)

MEUM (μυὸς), a plant, the MEUM ATHAMANICUM, or the Wild Spikenard; English, Spiguel, Men, or Bald-money. Moses Chassar says of it, "Meum or Spiguel is called Athamantic from the mountain Athanas in Thessaly, where it grows plentifully. The leaves are small, and like those of anise."

*MILAX (μίλαξ), a plant, the Bindweed, of which several kinds are mentioned by the ancient writers.

*The more common form of the name is Milax which see.

MILLIARE, MILLIARUM, or MILLE PAS- SUUM (μιλλα-τος), the Roman mile, consisted of 1000 paces (passus) of 5 feet each, and was, therefore, 1500 feet. Taking the Roman foot at 11 6496 English inches (vid. Ps.), the Roman mile would be 1618 English yards, or 442 yards less than the English. But the mile was not reckoned from, in which the foot is taken at 11 62 inches, the mile would be a little more than 1614 yards. The number of Roman miles in a degree of a large circle of the earth is a very little more than 75. The most common term for the mile is mille passuum, or only the initials M. F.; sometimes the word passuum is omitted. 1 The Roman mile contained 8 Greek stad. 2

The mile-stones along the Roman roads were called milliaria. They were also called lapides; thus we have ad tertium lapidem (or without the word lapidem) for three miles from Rome. Augustus erected a gilt pillar in the Forum, where the principal roads terminated, which was called millium. The mile-stones were not reckoned from, but from the gates of the city. Such central marks appear to have been common in the principal cities of the Roman Empire. The "London stone" in Cannon-street is supposed to have marked the centre of the Roman roads in Britain. 3

MELOS (μῆλος), the Tasse baccata, or Yew-tree. "Nicander," says Adams, "gives a very accurate account of its effects as a poison." 4

*MELOIS (μῆλος), the Ruddle of Kirwan and Alikin, and RED CHALK of Jameson and Philips. It is the Rubrica of the Latins, and not the Minium, as has been supposed. Theophrastus describes two kinds, the αἵτωματος or native, and the τερακι, or factitious; this last is formed from yellow-ochre by burning. The ruddle was used extensively in ancient times for painting ships, and hence Homer calls them μιλτοφάρδας. 5

MIMUS (μίμος) is the name by which, in Greece and at Rome, a species of the drama was designated, though the Roman mimus differed essentially from the Greek μιμος. The mimus seems to have originated among the Greeks of Sicily and southern Italy, and to have consisted originally of extempore representations or imitations of ridiculous occurrences of common life at certain festivals, like the Spartan deicilepsi. At a later period these rude representations acquired a more artistic form, which was supposed to reflect the character of the beholder. The mimus was used extensively in ancient times for painting ships, and hence Homer calls them μιλτοφάρδας. 6

MIMUS (μίμος) is the name by which, in Greece and at Rome, a species of the drama was designated, though the Roman mimus differed essentially from the Greek μιμος. The mimus seems to have originated among the Greeks of Sicily and southern Italy, and to have consisted originally of extempore representations or imitations of ridiculous occurrences of common life at certain festivals, like the Spartan deicilepsi. At a later period these rude representations acquired a more artistic form, which was supposed to reflect the character of the beholder. The mimus was used extensively in ancient times for painting ships, and hence Homer calls them μιλτοφάρδας. 7

*MELOIS (μῆλος), the Ruddle of Kirwan and Alikin, and RED CHALK of Jameson and Philips. It is the Rubrica of the Latins, and not the Minium, as has been supposed. Theophrastus describes two kinds, the αἵτωματος or native, and the τερακι, or factitious; this last is formed from yellow-ochre by burning. The ruddle was used extensively in ancient times for painting ships, and hence Homer calls them μιλτοφάρδας. 8

Among the Romans, the word mimus was applied to a species of dramatic plays as well as to the persons who acted in them. It is certain that the Romans did not derive their mimus from the Greeks in southern Italy, but that it was originally a Latin form. The Greek mimus were written in prose, and the name μιμος was never applied to an actor, but if
used of a person, it signified one who made graces. The Roman mines were imitations of foolish and indecent occurrences, and scarcely differed from comedy except in consisting more of gestures and mimicry than of spoken dialogue, which was not the case in the Greek mines. The dialogue was, indeed, not excluded from the Roman mines, but was only interspersed in various parts of the representation, while the mimic acting continued along with it, and uninterruptedly from the beginning to the end of a piece. At Rome such mines seem originally to have been exhibited at funerals, where one or more persons (mimi) represented in a burlesque manner the life of the deceased. If there were several mimi, one of them, or their leader, was called archimimus. During the latter part of the Republic such farces were also represented in theatres; but it appears that they did not attain any high degree of perfection before the time of Caesar, and it is not until then that writers of mines are mentioned: Cn. Matius, Decius Laberius, and Publ. Syrus were the most distinguished among them. These coarse and indecent performances, of which Sulla was very fond, had greater charms for the Romans than the regular drama; hence they were not only performed on the stage, but even at parades in the houses of patricians. The Romans still performed as farces after tragedies, and during the Empire they gradually supplanted the place of the Atellan farces. The exact time, however, when the Atellane yielded to the mines, is uncertain. It was peculiar to the actors in these mines neither to wear masks, nor the cothurnus, nor the sacos, whereby they are sometimes called planipieds. As the mines contained scenes taken from common life, such as exhibited its most striking features, their authors are sometimes called biologi or ethologi, and the works themselves were distinguished for their richness in moral sentences. That distinguished and living persons were sometimes exposed to ridicule in these mines, is clear from J. Capitolinus.

MINA. (Vid. Talentum.)

MINTUM. (Vid. CinnaBari.)

MINOR. (Vid. Curator, Infans.)

MINTHOS or MINTHE (μινθός, μίνθη), Garden Mint, or Mentha sativa. (Diem.)

MIRMI/NOES. (Vid. Gladiatori, p. 476.)

MISSIO was the technical term used by the Romans to denote the discharge of soldiers from the army, or the time during which they enjoyed the advantages of soldiers. Thus, an ignominious discharge of some of the soldiers from the army was described as missio ignominiosa, or misio gratiosa. Persons who had obtained such a discharge were termed ex favore or missio gratiosa. Persons who had obtained it, if it was discovered, were called upon by the censor to re-enter the army. The same must have been the case with persons who had obtained the missio causaria, and who, after their return home, had recovered from their illness, and had not yet attained the age at which they were altogether exempt from armies.

The missio ignominiosa or cum ignominia was inflicted as a punishment not only upon individuals, but upon whole divisions, and even whole legions of an army, and it might be applied to the highest officers no less than to common soldiers. In dismissing soldiers for bad conduct, it was generally expressed that they were sent away cum ignominia, but sometimes the ignominia was not expressly mentioned, though it was understood as a matter of course. All soldiers sent away in disgrace were stripped of their arms and everything which characterized them as soldiers, and they were neither allowed to remain in the camp nor to return to Rome; they were, in fact, labouring under perfect inanition, and compelled to live in exile. In some cases, however, the sentence might be withdrawn, especially when it was discovered that the man had been led by a mistake to pronounce it.

In all cases of missio it was necessary to release the soldiers from the military oath (sacramentum) which they had taken on entering the service. This act was called exacutratio. During the time of the Republic and the early period of the Empire, the word exacutratio simply signified to release from the military oath, without implying that the war was done cum ignominia; but during the latter period of the Empire, it is almost exclusively applied in soldiers dismissed cum ignominia. From the passage of Tacitus above referred to, it is clear that, at least in his time, exacutratio was sometimes used as synonymous with missio, with this difference, that exacutratio was granted to those who had only served in sixteen campaigns, and, consequently, had no claims to the advantages which were reserved for those who had served in twenty campaigns.

The military oath was taken by all the soldiers of an army at the beginning of every new campaign; and at the end of it, when the troops were dismissd from service, the emperor absolved them from the oath, in cases where the general enjoyed a triumph, the dismissal of the army, and, consequently, the exacutratio also, did not take place until this solemnity was over.

MISSIO. (Vid. Gladiators, p. 476.)

MISSIO MUNIFICANDEM DIKHI (μυμφικαίδες δική), or MIXODEIΣΕΙΣ OIKOU DIKH (μιχυδείσεις οίκου δίκη), is the right to be brought against a guardian for either wasting neglected to make profitable the property of his ward, or for having made no use of it at all. Use might be made of such property either by letting it, if it consisted of lands or houses, or by putting it to interest if it consisted of money. The δική mυμφικαίδες must have been of a twofold character, either public or private, that is, it might be brought against the guardian, during the minor's life, in his own name; or by him, when he assumed the guardianship, in the name of the ward, for an interest in the welfare of the orphan, or it was brought by the or phan himself after his coming of age. Complaints

MOLUS.

of this kind were brought before the first archon. In cases where the guardian would not or could not occupy himself with the administration of the property of his ward, he might request the archon to let the whole substance of his ward's property to the highest bidder, provided the testator had not expressly forbidden this mode of acting in his will. The letting of such property took place by auction, and probably in the presence of a court of justice, and it was very desirable that such objections were made against the terms of letting the property. The person who took the property had to pay an annual per centage for the right of using it, and this per centage frequently amounted to more than 12 per cent. per annum. If one man alone was unwilling to take the whole property on such conditions, it might be divided among tenants who did not fulfil his objections were made against the terms of letting the property. The tenant or tenants of the property of an orphan had to give security (αντωνίου) for it, and to mortgage (αντωνίου) his own estate, and the archon sent special persons, ἀποτυγχατοί, to value his property, and to ascertain whether it was equivalent to that of the orphan. The technical term for letting the property of an orphan, when it was done by the guardian himself, or by the archon, was μοναχιός, and those who took it were said μοναχιοῦντα τοῖς ὁλοῖς (ὅλος here signifies the whole substance of the property). The tenants of the estate of an orphan had the right, and perhaps the obligation, to protect it against any other person. It is not clear what resource was open to an orphan against a tenant who did not perform his obligations, but it is probable that, if any dispute arose, the guardian or the archon alone was answerable, and had to procure justice to the orphan.

ΜΙΣΣΟΤΥΓΧΑΣΙΟΝ (μοναχὸς δίοις), ορΙ ΜΙΣΣΟΤΥΓΧΑΣΙΟΝ (μοναχὸς δίοις), is the name of a private action which might be brought against persons who refused to pay for service, or who hindered the guardian, or by the archon, and after it had been agreed that they should be paid for; and, secondly, against persons who either had not or had imperfictly performed the services for which they were paid. It made no difference whether the service was performed by physical or intellectual powers, as teachers, sophists, actors, authors, and similar persons, provided it was against Athenians. It is not natural to suppose that these persons, like others, made agreements, either written or by word of mouth, respecting the remuneration to be given to them. In case either party thought themselves wronged, they might bring the μοναχὸς δίοις against the offender. Protogoras had written a book called διοι ὑπερ μοναχός, and an instance is recorded of a case of this kind in which he had demanded payment of one of his pupils. It is not improbable that his work contained an account of this lawsuit.

The modius was one sixth of the medimnus. (Vis. ACETABULLUM, CYTHUS, LIQUA, MEDIMNUS, SEXTARI.)

MOXIESIOS ΓΡΑΦΗ (μοξισιος γραφή). (Vis. ALEXANDER.)

MOJLA (μολάς), a Mill. All mills were anciently made of stone, the kind used being a volcanic trachyte or porous lava (pyrites, siliccas, pumicas), such as that which is now obtained for the same purpose at Mayen and other parts of the Eifel in Rhinens Prussia. This species of stone is admirably suited for the mill-purposes, because it is both hard and cavernous, so that, as it gradually wears away, it still presents an infinitude of cutting surfaces.

Every mill consisted of two essential parts, the upper millstone, which was moveable (cataulæon, νόος, το βρέχοντος), and the lower, which was fixed, and by much the larger of the two. Hence a mill is some times called a paw (πατών) in the plural. The mills mentioned by ancient authors are the following:

1. The handmill or quern, called mola manuaria, veratilitis, or trastulits.

The islanders of the Archipelago use in the present day a mill, which consists of two flat round stones about two feet in diameter. The upper stone is turned by a handle (κεραυνος) which is at one side, and has a hole in the middle into which the corn is poured. By the process of grinding, the corn makes its way to the centre, and is poured out in the shape of flour at the rim. The description of this machine exactly agrees with that of the Scottish quern, formerly an indispensable part of domestic furniture. There can be no doubt that this mill was in its most ancient form. In a very improved state it has been discovered at Pompeii. The annexed woodcut shows two which were found standing in the ruins of a bakehouse. In the left-hand figure the lower millstone only is shown. The most essential part of it is the cone, which is surmounted by a projection containing originally a strong iron pivot. The upper millstone, seen in its place on the right hand of the woodcut, approaches the form of an hourglass, consisting of two hollow cones joined together at the apex, and provi-
MOLA.

MONETA.

made of boxwood, is mentioned by Petronius (\textit{mola boxvae piper tritii}).

\textbf{MOLYBDENA.} \textbf{Vid. Plumbago.)}

\textbf{MONETA.} the mint or place where money was coined. The mint of Rome was a building on the Capitoline, and attached to the temple of Juno Moneta, as the erarium was to the temple of Saturn.\footnote{This temple was vowed by Camillus, and dedicated in 344 B.C., on the spot where the house of M. Manlius Capitolinus had once been standing: Some writers consider the art of coined money as having been known to the Italians from the earliest times, and assign its invention to Janus; but this and similar accounts are nothing more than fables. The statement of Pliny, who assigns the invention of coined money to Servius Tullius, has somewhat more of an historical aspect; and he derives the name pecunia from the circumstance that the coins were originally marked with the image of some animal. The earliest Roman coins were of aes (\textit{vid. Eia}), and not struck, but cast in a mould. \textit{(See the representation of such a mould on page 449.)} The moulds, however, were sometimes without any figure, and merely shaped the metal, and in this case the image, as well as the name of the gens, etc., were struck upon it by means of a hammer upon an anvil. While the form was fixed. As the strokes of the hammer were not always equal, one coin, though equal in value with another, might differ from it in thickness and shape. Greater equality was produced at the time when the Romans began to strike their money; but when this custom became general is not known. Respecting the changes which were introduced at Rome at various times in the coinage, see the articles \textit{Azis, Aneus, Tum, and Aurum.}}

In the early times of the Republic we do not read of any officers who were charged with the superintendence of the mint, and respecting the introduction of such officers we have but a very vague statement of Pomponius.\footnote{Their name was triumviri monetales, and Niebuhr thinks that they were introduced at the time when the Romans first began to coin silver, \textit{i.e.}, 269 B.C. The triumviri monetales had the whole superintendence of the mint, and of the money that was coined in it. A great number of coins, both of gold and silver, is signed by one of these triumvirs in the following manner: \textit{VIR. AAAFF, that is, triumvir aureus argentiferus, flavus, or flavo ruber}, or \textit{f.}, that is, \textit{ad pecuniam feream}. Other coins, on the other hand, do not bear the signature of a triumvir monetalis, but the inscription \textit{CUR. X. FL. S.C.}, \textit{i.e.}, \textit{eurator denarium flororum ex senatu consulto, or are signed by pretors, aediles, and quaestors.}}

Cesar not only increased the number of the triumviri monetales to four, whence some coins of his time are signed \textit{VIR. A.A.A.A. E.F.F.F.F.}, but instituted certain slaves of his own with the superintendence of the mint.\footnote{The whole regulation and management of the Roman mint and its officers during the time of the Republic, is involved in very great obscurity. The coinage of money at Rome was not a privilege belonging exclusively to the state, but was also authorized by many individuals. Every Roman citizen had the right to have his own gold and silver coined in the public mint, and under the superintendence of its officers. The individual or gens who had their metal coined, stated its name as well as the value of the coin. This was a kind of 1. (\textit{Sat.}, 74.)—2. (\textit{Liv.}, viii., 20.)—3. (\textit{Macrob.}, Sat., i., 7—8.)—4. (\textit{Plutarch.}, \textit{Cic.}, vi, p. 600.)—5. (\textit{H. N.}, xxxiii., 3.)—6. (\textit{Dig.}, 11., vii., 25.)—7. (\textit{History of Rome}, iii., p. 948.)—8. (\textit{Cic.}, \textit{De Leg.}, ii., 12.)—9. (\textit{Cic.}, \textit{Philipp.}, vii., 1.)}

\textbf{V.} The saw-mill.

When Rome was besieged by the Goths, A.D. 536, and when the stoppage of the aquedocts rendered it impossible to use the public corn-mills (\textit{mola \pi\nu\lambda\sigma\nu\mu\nu\lambda\epsilon\nu\mu
\alpha\iota\nu\mu\rho\sigma\nu\iota\mu\alpha\iota\nu\mu\iota\ota\alpha}) in the Janiculum, so that the citizens were in danger of starvation, Belisarius supplied their place by erecting floating mills upon the Tiber and the Tiberina. These being moored at the distance of two feet each of the water-wheel suspended on its axis between them, was turned by the force of the stream, and put in motion the stones for grinding the corn, by which the lives of the besieged were preserved.\footnote{\textbf{VI.} The pepper-mill. A mill for grinding pepper,}
of guarantee to the public, and nearly all the coin of the republican period coined by a gene or an individual bear a mark stating their value. As long as the Republic itself used pure silver and gold, bad money does not seem to have been coined by any one; but when, in 90 B.C., the tribune Livius Drusus suggested the expedience of mixing the silver which was to be coined with one eighth of copper, some of his contemporaries were given to the pure, and it appears henceforth to have occurred frequently. As early as the year 86 B.C., forgery of money was carried on to such an extent, that no one was sure whether the money he possessed was genuine or false, and the prætor M. Marius Gratidianus saw the necessity of interfering. He is said to have discovered a method of testing the purity of the gold, and of distinguishing the good from the bad demes. In what this means consisted is not clear; but some method of examining silver coins must have been known to the Romans long before this. Sulla inflicted heavy punishment upon the coiner of false money. All Roman money was generally coined at Rome; but in some particular cases the mint was placed at Brundisium, and perhaps at Cesarea. In any case, the coins were used, for we must remember that, during the time of the Republic, subject countries and provinces were not deprived of the right of coining their own money. This right they even retained under the Empire for a long time, though with some modifications; for while some places were allowed to coin their own money, others were obliged to have upon their coins the head of the emperor or of some member of his family. Silver and gold, however, were only coined in places of the first rank. When all Italy received the Roman franchise, all the Italians used the Roman money, and, in consequence, lost the right to coin their own. In Rome, every Roman citizen had a right to have his gold and silver coined, but none had the right to put his own image upon a coin, and not even Sulla ventured to act contrary to this custom. The coins apparently of the republican period with the portraits of individuals were, according to Eckhel, coined at a later time, and by the descendants of those whose portraits are given. Cæsar was the first to whom this privilege was granted, and his example was followed by many others, as we see from the coins of Sext. Pompeius. The emperors assumed the right to put either their own images or those of members of their families upon their coins. In the case of a family, the one of the family, generally speaking, no longer put their name on any coin, and it became the exclusive privilege of the emperor to coin silver and gold. The senators, intrusted with the administration of the aarium, retained the right of only coining copper, whence almost all copper coins of this period are marked with S. C. or EX S.C. But the right of coining gold and silver was now most of the time only exercised by the emperors, who took care that the right of coining all money became the exclusive privilege of the emperors. As, however, the vast extent of the Empire rendered more than one mint necessary, we find that in several provinces, such as Gaul and Spain, Roman money was coined under the superintendence of quaestors or procurators. Roman colonies and provinces now gradually ceased to coin money, and the whole list of denizens of the Empire, from the time of the emperor Aurelian, a great number of cities of the Empire possessed mints in which Roman money was coined and during the latter part of the empire, the superintendents of mints are called procuratores, or prepositi monete.

The persons who were employed as workmen in a mint were called monetarii. Their number at Rome appears to have been very great during the latter part of the Empire, for in the reign of Aurelian they nearly produced a most dangerous rebellion. They seem generally to have been freedmen. In Greece, every free and independent city had the right to coin its own money. Sparta and Byzantium are said to have only coined iron money, but no ancient iron coin has ever been found. Respecting the time when money was first coined in Greece, see *Argenteum*, p. 90. The Greek term for money was ἱππαρίου, from ἱππαριστή, because the determination of its value was fixed by law or contract.

The mint at Athens was called ἀργυροκορδείον. (Vid. *Argyrocopon*.) We do not hear of any officers connected with the management or the superintendence of the Athenian mint. How far the right of coining money was a privilege of the central government of Attica, is unknown. It is ex ante supposed by several writers that the demes of Attica had the right of coining, and it is probable that the government of Athens only watched over the weight and the purity of the metal, and that the people, in their assembly, had the right of regulating everything concerning the coining of money. The Attic gold and silver coins were always of very pure metal. In the 4th and 3rd centuries B.C. Athens, at a time of great distress, used bad metal. This was in the archonship of Antigonus and Callias, B.C. 407 and 406. Individuals who coined bad money were punished with death. (Vid. *Nomisma*.

**MONETAIRI.** (Vid. *Moneta*.)

**MONILE (byōp).** A Necklace. Necklaces were worn by both sexes among the most polished of those nations which the Greeks called barbarous, especially the Indians, the Egyptians, and the Persians. (Vid. *Akkilla.*). Greek and Roman females adopted them more particularly as a bridal ornament.

The simplest kind of necklace was the *monile baccatum*, or bead necklace, which consisted of berries, small spheres of glass, amethyst, &c., strung together. This is very commonly shown in ancient paintings. (See woodcuts, p. 98, 983.) The right-hand figure in the woodcut at page 353, and the head of Minerva on the right, are both slight modifications of the bead necklace, a row of drops hanging below the beads. These drops, when worn, arrange themselves upon the neck like rays proceeding from a centre. To this class of necklaces belongs one in the Egyptian collection of the British Museum (see the next woodcut), in which small gold leaves, formed with the head of a figure in the woodcut immediately underneath this exhibits the central portion of a very ancient and exquisitely wrought necklace, which was found at S. 1. (Aurel. Vict. *De Cæs., ii. 20.—Veget. *Aurel. 45.—(Mura tobi, Herapath, 965, n. s.)—(Polier, Oeum., v. 128.—(Addi tobi, Ethic., v. 5.)—(C bona, Elc, 810, etc.)—(Aristoph., Ran. 673, with the school, and 673.—(Domi cato, c. L. p. 368.—(Locarn, ii. 361.—Claudi. De bis, Cæs. Honor, 297.—(Virg., *En., i. 657.—Lamprond. *Alex. Nov., 41.)
MORATORIUM

We also give here the central portions, exhibiting the patterns of three splendid gold necklaces, purchased from the Prince of Canino for the British Museum. These were found in Etruscan tombs. The ornaments consist of circles, lozenges, rosettes, ivy-leaves, and hippocampi. A heart depends from the centre of one of the necklaces.

The necklace was sometimes made to resemble a serpent coiled about the neck of the wearer, as was the case with that given as a nuptial present by Venus to Harmonia, which was ornamented in so elaborate a manner that Nonnus devotes 50 lines of his Dionysus to its description. This same necklace afterward appears in the mythology as the braid by which Eriphyle was tempted to betray her husband.

The beauty and splendor, as well as the value of necklaces, were enhanced by the insertion of pearls and precious stones, which were strung together by means of linen thread, silk, or wires and links of gold. For this purpose emeralds, or other stones of a greenish hue (amanagrd), were often employed (vires gemmatae). Amber necklaces are mentioned in the Odyssey. Some account of the various kinds of links is given in the article Catenae. The hooks or clasps for fastening the necklace behind the neck were also various, and sometimes neatly and ingeniously contrived. Besides a band encircling the neck, there was sometimes a second, or even a third row of ornaments, which hung lower down, passing over the breast.

Very valuable necklaces were sometimes placed, as dedicated offerings, upon the statues of Minerva, Venus, and other goddesses, and this was in accordance with the description of their attire given by the poets. Horses and other favourite animals were also adorned with splendid necklaces (carera gemmata monilia). (Vid. Torquem.)

MONOPODIUM. (Vid. Menza, p. 612.)

MONOXYLON. (Vid. Letter.)

MONTUMINUM. (Vid. Funus, p. 461.)

MORA. (Vid. Army, Greek, p. 98.)

*MOR'EA* (μορέα or μοράδα), the Ficus Morus, L., or Black Mulberry-tree. It is the sycámus of Theophrastus, a name, however, which was sometimes applied to the Ficus Sycomorus, or Sycomore. The μοραδας of Athenaeus and other late diators was the fruit of the Ficus Morus.

*MORMYRUS* (μόρμυρος), the Sparus Marmurus, L., or Mornere, a species of Sparé. This fish, according to Belon, is very like the melavouros. (Vid. Melaunros.)

*MOR'OXOS* ΑΙΘΟΣ, a species of mineral.

"According to Sprengel, it is called Spieckstein and Seifenstein in Germany. It consists," he says, "of talc, alunite, and silica, with a small proportion of iron and manganese. Dr. Jameson supposes it a variety of fuller's earth. Dr. Hill says it is an indurated clay, and that it is now called French Chalk."

MORTARIIUM, also called PILIA and PILUM (πλης μύθη, μύθη, apparently from the root of ieré or strike), a Mortar.

Before the invention of mills (vid. MOLA), corn was pounded and rubbed in mortars (pistámen), and hence the place for making bread, or the bakehouse, was called pistrinum. Also, long after the introduction of mills, this was an indispensable article of domestic furniture. Hesiod, enumerating the wooden utensils necessary to a farmer, directs him to cut a mortar three feet, and a pestle (πιστρημον, πώλαν, πριθιλιμ) three cubits long. Both of these were evidently to be made from straight portions of the trunks or branches of trees, and the thicker and shorter of them were to be hollowed. They might then be used in the manner represented in a painting on the tomb of Remesies III. at Thebes (see woodcut, left-hand figure, taken from Wilkinson, ii., p. 383); for there is no reason to doubt that the Egyptians and the Greeks fashioned and used their mortars in the same manner. (See also Wilkinson, iii., p. 151, showing three stone mortars with metal pestles.) In these paintings we may observe the thickening of the pestle at both ends, and that two men pound in one mortar, raising their pestles alternately, as is still the practice in Egypt. Pliny mentions the various kinds of stone selected for making mortars, according to the purposes for which they were intended to serve. Those used in pharmacy were sometimes made, as he says, "of Egyptian alabaster."

The annexed woodcut shows the forms of two preserved in the Egyptian collection.

1. (Dioscor., i., 180.—Celina, iii., 18.—Adams, Appendix, s.v.)
MUSCULUS.

MUSCULUS.

of the British Museum, which exactly answer to this description, being made of that material. They do not exceed three inches in height: the dotted lines mark the cavity within each. The woodcut also shows a mortar and pestle, made of baked white clay, which were discovered A.D. 1891, among numerous specimens of Roman pottery, in making the northern approaches to London bridge.1

Besides the uses already mentioned, the mortar was employed in pounding charcoal, rubbing it with glue in order to make black paint (straminium); in making plaster for the walls of apartments; 2 in mixing paints; and in the preparation of many healthful remedies, as the use of the kitchen; 3 and in metallurgy, as in triturating cinnabar to obtain mercury from it by sublimation.4

The philosopher Anaxarchus was pounced to death with iron pestles in a mortar. 5

were fixed little pillars five feet high. Their tops were joined by transverse beams, which formed a gentle slope on either side of the roof, of which they formed the framework. The roof was then entirely covered with pieces of wood two feet broad, which were fastened with metal plates and nails. Around the edge of this roof, square pieces of wood four cubic feet broad were fixed, for the purpose of keeping together the bricks and mortar with which the musculis was then covered. But that these materials, which were intended to protect the musculus against fire, might not suffer from water, the bricks and mortar were covered with skins; and that these skins, again, might not suffer from the fire or the wear and tear of the besieged troops, the musculus, the whole was covered with rags of cloth. The whole of this machine was constructed under the cover of a vinea, and close by the Roman tower. At a moment when the besieged were least expecting any attack, the musculus was moved on against the wall of the town. The men engaged under it immediately began to undermine the wall, and thus to make a breach in it; and while this work was going on, the machine was defended with a lively fire from the besieged against the muniments of the musculus.

MUSUL. (Vid. Mosse.)

MUSEUM (Μουσείον) was the name given to an institution, founded by Tolemy Philadelphia, about B.C. 280, for the promotion of learning and the support of learned men. We learn from Strabo* that the museum formed part of the palace, and that it contained cloisters or porticoes (περίκτηρα), a public theatre or lecture-room (Θέατρον), and a large hall (οἶκος τῆς γλώσσας), where the learned men dined together.

The museum was supported by a common fund, supplied apparently from the public treasury; and the whole institution was under the superintendence of a priest, who was appointed by the king, and after Egypt became a province of the Roman Empire, by the Caesar. Botanical and zoological gardens appear to have been attached to the museum. The Emperor Claudius added another museum to this institution.

MUSONIA. (Museo, Hist.)

MUSEUM (Μουσείον) was the name given to an institution, founded by Tolemy Philadelphia, about B.C. 280, for the promotion of learning and the support of learned men. We learn from Strabo* that the museum formed part of the palace, and that it contained cloisters or porticoes (περίκτηρα), a public theatre or lecture-room (Θέατρον), and a large hall (οἶκος τῆς γλώσσας), where the learned men dined together. The museum was supported by a common fund, supplied apparently from the public treasury; and the whole institution was under the superintendence of a priest, who was appointed by the king, and after Egypt became a province of the Roman Empire, by the Caesar. Botanical and zoological gardens appear to have been attached to the museum. The Emperor Claudius added another museum to this institution.

MUSIC (GREEK). In compiling the following article, little more has been attempted than to give an outline of facts which rest upon positive evidence, and, at the same time, to present them in such a form as to serve for an introduction to the original sources. Hence it necessarily contains, in a great measure, of technical details, which, however, can present no difficulty to persons acquainted with the first elements of the modern theory; and nothing has been said in the way of deduction except in one or two cases, where the interest of the subject and the apparent probability of the conclusions seemed to permit it.

The term Αγωνίας was used by the Greek writers to denote what is now called the Science of Music; μουσική having, as is well known, a much wider signification Αγωνίας ἣν ἐπιστήμην εὐδοκία καὶ πρακτικὴ τῆς τυχούσαν φύσεως. Ημαρισμόν· ἐκ ἐκάστου τοῦ ἐκθέασιν καὶ διαστάσεως, τοιῶν τῶν ἔχωντων, συγκεκριμένων. The following sevenfold division of the subject, which is adopted by the author just quoted, as well as by others, will be partly adhered to in the present article: I. Of Sounds (τῶν ἀκούσματος). II. Of Intervals (τῶν διαστάσεως). III. Of Genera (τῶν γένεων). IV. Of Systems (τῶν συστημάτων). V. Of Modes (τῶν τόνων). VI. Of Transition (τῆς περιτολίας). VII. Of Cost (τοῦ χρώματος). It must be observed that the term τόνος is used in different senses. First it signifies degree of tension, and so pitch, whence its application to denote mode, the mode being scales which differed in pitch: and then it is taken for result of tension; whence its meaning as the name of an interval, tone, because a tone is the interval through which the voice is most naturally raised at one effort.

A sound is said to be musical when it has a determinate pitch (τόνος). When two sounds differ in pitch, one is said to be more acute (δύστονος), the other moregrave (βάστονος); or, in common language, one is called higher, and the other lower. The term μουσικός applied to a sound either signifies simply, that it is capable of being used in a melody; or relatively, that it is capable of being used in the same melody with some other sound, and is possible in the same context of sounds; and this is the most common meaning.

An interval is the difference, or, rather, distance between two sounds of different pitch. When we compare the intervals between two pairs of sounds, we judge them, in certain cases, to be similar or equal. If the more acute sound of one of them be then raised, that interval is said to become greater than the other. It is this property of intervals that makes them comparable in respect of (measure) which enables us to classify them, and enumerate their several kinds.

Intervals are either consonant (σύμφωνα) or dissonant (δισύμφωνα), according as the two sounds may or may not be heard at the same time without offending the ear. Strictly speaking, it is impossible to define the limit between the two classes, and this science to be acknowledged by the later writers, who distinguish various degrees of consonance and dissonance. Originally, the only intervals reckoned consonant were the octave or eighth (διὰ παῦσιν), the fifth (διὰ πέντεν ή δέκαθον), the fourth (διὰ τέσσαρας ή συλλάθης), and any interval produced by adding an octave to one of these. But all intervals less than the fourth, or intermediate between any of them, were considered as dissonant. The principal intervals, less than the fourth, employed in Greek music, were the double tone (δίατονος), nearly equal to the modern major third; the tone and half (τριτόνος), nearly the same as the minor third; the tone (τόνος), equal to the modern major tone; the half tone (μιστόνος), and the quarter tone (διάτονος).

Other writers speak of συμφωνία, or unison: αυτίσμων, or the consonance of the one sound; and συμφωνία, or the consonance of the fourth and fifth; and lastly, the two latter authors consider συμφωνία to be a term which is intermediate between consonance and dissonance, and mentions the tritone or sharp fourth as an example of it.

If two strings, similar in length, and stretched by equal tensions, he made to vibrate, the number of vibrations performed in a given time by each is inversely as the square of its length; and the internal between the sounds produced is found to depend only on the ratio of the lengths, i.e., on the numbers of vibrations. Thus, if the ratio be 2, the interval is an octave; if " 3, a fifth; if " 4, a fourth; if " 2, a major tone. 1. (Vid. Arist., I., p. 3.)—2. (Enl., p. 3.)—3. (Enl., p. 8.)—4. (Enl., p. 6.)—5. (Enl., p. x.)—6. (Enl., p. x.)—7. (Enl., p. i.)
MUSIC.

The discovery of these ratios is attributed, probably with truth, to Pythagoras. But the accounts of the experiments by which he established them are plainly false, since they contradict the known fact that when similar and equal strings are stretched by different tensions, the numbers of vibrations are as the square roots of the tensions.\(^3\)

The \(\mathfrak{r}\)ov or tone was defined to be the difference between the fourth and fifth; so that the corresponding ratio would be determined either by experiment, or by simply dividing \(5\) by \(\mathfrak{r}\).

It is remarkable that each of the four ratios enumerated is a superparticular: i.e., the two terms of each differ from one another by unity. Euclid seems to consider no intervals consonant except such as correspond to superparticular (ενπρόφνοις) or multiple (πολλαπλασιων) ratios; the latter being such as \(\frac{2}{3}\), \(\frac{3}{4}\), &c. On this theory the octave and fourth (\(\mathfrak{r}\)) would be dissonant, but the octaves and fifths (\(\mathfrak{r}\)) consonant.\(^2\) And it is also worthy of notice, that all the intervals employed in the modern theory are either such as correspond to superparticular ratios, or are produced from such by compounding them with the octave. Thus the ratio corresponding to the major third is \(\frac{5}{4}\), minor third \(\frac{4}{3}\), minor tone \(\frac{3}{2}\), major semitone \(\frac{5}{4}\).

It seems, therefore, extraordinary, that analogy should not have led at once to the discovery at least of the major and minor third, as soon as the connection between intervals and ratios had been observed. However, no such discovery was then made, or, if made, it was neglected; and this affords at once an explanation of the fact that intervals less than the fourth were reckoned dissonant; for the διστόνον, or double major tone, is greater than the true consonant major third (which consists of a major and minor tone) by an interval expressed by the ratio \(\frac{6}{5}\), a difference quite sufficient to destroy the consonance of the interval. In fact, when a keyed instrument is tuned according to the equal temperament, the major thirds are too great by an interval little more than half of this (\(\frac{5}{4}\)) nearly, and yet are only just tolerable. This subject is important, because it bears immediately upon the question whether the tuning used by the Greek musicians was natural.

An aggregate of two or more intervals, or, rather, a series of sounds separated from one another by intervals, constituted a system. Systems were named from the number of sounds which they comprehended. Thus an octachord was a system of eight sounds, a pentachord of five, and so on: and usually, though not necessarily, the number of sounds corresponded to the interval between the extreme sounds.

The fundamental system in ancient music was the tetrachord, or system of four sounds, of which the extremes were at an interval of a fourth. In modern music it is the octachord, and comprehends an octave between the extremes. The important and peculiar property of the latter system, namely, the completeness of its scale, was fully understood, as the name of the interval δι’ παρενθὺς sufficiently indicates;\(^1\) but it was not taken in theory for the foundation of the scale, or, at any rate, was considered as made up of two tetrachords.

The genus of a system depended upon the distribution of the intervals. The later and modern systems differ from the tetrachord. The Greek musicians used three genera: 1. The diatonic, in which the intervals between the four sounds were (ascending) semitone, tone, tone:

\[\text{\includegraphics[width=0.5\textwidth]{diatonic.png}}\]

II. The chromatic; semitone, semitone, tone and a half:

\[\text{\includegraphics[width=0.5\textwidth]{chromatic.png}}\]

III. The enharmonic; diesis, diesis, double tone:

\[\text{\includegraphics[width=0.5\textwidth]{enharmonic.png}}\]

(he second note is meant to represent a sound half way between E and F, for which the modern system supplies no notation.)

Of these genera the diatonic was allowed to be the most ancient and natural, and the enharmonic the most modern and difficult; the latter, however, seems soon to have become the favourite, with theorists at least, for Aristoxenus complains that all writers before his time had devoted their treatises almost entirely to it, to the neglect of the two others.

The only difference between the ancient and modern diatonic is, that in the former all the tones are major tones, whereas in the latter, according to the theory generally admitted, major and minor tones occur alternately.\(^2\) The interval called a semitone in the above descriptions is, therefore, strictly neither equal to the modern major semitone, nor to half a major tone, but the ear would hardly appreciate the difference in melody.

Besides these genera, certain colours (\(\gamma\)ρον) or specific modifications of them are enumerated.\(^2\)

The enharmonic had only one χρώμα, namely, the genus itself, as described above: it is commonly called simply δέκαστον.

The chromatic had three: 1st, χρώμα τεντόνιον, or simply χρώμα, the same as the genus; 2d, χρώμα ημιτόνιον, in which intervals of three eights of a tone were substituted for the two semitones; 3d, χρώμα μελανόν, in which intervals of one third of a tone were similarly employed.

The diatonic had two χρώματα: 1st, διάτονον στενόν, or simply διατονόν, the same as the genus; 2d, διάτονον μελανόν, in which interval of three fourths of a tone was substituted for the second semitone (ascending).

The following table will exhibit at one view the intervals between the sounds of the tetrachord, taken in the ascending order, according to each of these χρώματα, the tone being represented by unity, and two tones and a half being supposed to make up a fourth, a supposition which is not exactly true, but is commonly adopted by the ancient writers as sufficiently accurate for their purpose.\(^4\)

I. Diatonic . . . . . . . 1. διάτονον (στενόν) \(\frac{5}{4}\) . \(\frac{4}{3}\) . \(\frac{3}{2}\) .

II. Chromatic . . . . . . . 1. χρώμα (τεντόνιον) \(\frac{4}{3}\) . \(\frac{3}{2}\) . \(\frac{5}{4}\) .

III. Enharmonic . . . . . . . 1. χρώμα . . . . . . . \(\frac{3}{2}\) . \(\frac{4}{3}\) .

There seems to be little evidence that any of these χρώματα were practically used, except the three principal ones, διάτονον, χρώμα, δέκαστον. But it would be wrong to conclude hastily that the others would be impossible in practice, or necessarily unpleasing. In the soft diatonic, for instance, the in-

---

terval which is roughly described as five fourths of a tone, would be greater than a major tone, but less than a minor third; now there are two intervals of this kind, corresponding to the superparticular ratios $\frac{4}{3}$ and $\frac{5}{3}$, which, though, therefore, by analogy, to be consonant or, at any rate, capable of being employed as well as the tone and semitone; and, although they are not used in modern music, or, at least, not admitted in theory,1 nothing but experiment can determine how far the ear might become accustomed to them. These intervals exist in the natural scales of the horn, trumpet, etc., and are, in fact, used instead of the minor third and tone in the harmony of the dominant seventh, both by stringed instruments and voices, when unaccompanied by tempered instruments. If this view be correct, the intervals of the tetrachord in the diatonic scale would probably correspond to the ratios $\frac{12}{7}$, $\frac{15}{7}$, and similar considerations might be applied to the other χρώματα.

The four sounds of the tetrachord were distinguished by the following names: ιώτατο (sc. χιονί) was the lowest; νύτατο was the highest; πορτονύτατο the lowest but one, and παραπορτονύτατο the highest but one. Παραπορτονή was also frequently called λειμάρις, probably because, in some ancient instruments, the corresponding string was struck by the forefinger; and παραπορτονή was afterward called τρίτη in certain cases. These names were used in all the genera; but the name of the genus was commonly added to λειμάρις (thus, λειμάρις διώτατος, χρωματικός, or λειμάρις παραπορτονύτατος, διώτατος, etc.); and sounds which did not belong to a πυχωνος were called ωττονικά.

It is not to be supposed that the tetrachord could long continue to furnish the entire scale used in Parthian music. Another system, called the smaller perfect system, was composed of three conjunct tetrachords, called ιωτάτος, μέσων, and συνυχώμων, with προσαρμοσμένος, thus:

\[
\begin{align*}
&\text{BDEFGA} \\
&\text{EFGBDE} \\
&\text{BCDEFGA}
\end{align*}
\]

and these two together constituted the immutable system (σύστημα ιμματίδος) described by all the writers later than Aristoxenus, and probably known to him.2

The sounds in these systems were named in the way before described, the names of the tetrachords only being added, and μέσων and παραπορτονή being substituted for νύτατο μέσων and νύτατο διώτατον respectively. Thus, taking the sounds in the ascending order, we have,

\[
\begin{align*}
&A \text{ προσαρμοσμένος} \\
&B \text{ ιωτάτο υπάτων} \\
&C \text{ παραπορτονύτατο υπάτων} \\
&D \text{ λειμάρις υπάτων} \\
&E \text{ υπάτων μέσων} \\
&F \text{ παραπορτονή μέσων} \\
&G \text{ λειμάρις μέσων} \\
&A \text{ μέσων}
\end{align*}
\]

1. (Fid. Smith's Harmonics, sect. iv., art. 10.) — 2. (Eucl., p. 17.)

MUSIC.

The interval between μέσων and παραπορτονή is a 9th.

But in the smaller system, μέσων serves also for the lowest sound of the tetrachord συνυχώμων, which terminates the scale, thus:

\[
\begin{align*}
&A \text{ μέσων} \\
&\text{BB τρίτη συνυχώμων} \\
&C \text{ παρανήχθη συνυχώμων} \\
&D \text{ νύτατο συνυχώμων}
\end{align*}
\]

In adapting the modern notation to these scales, we have represented them in the diatonic genus; but the same arrangement of the tetrachords was adopted in the others. Those sounds of the inmutable system which were the same in all the genera, namely, προσελβαμενοσ, τατα ρπατοσ, ντατ ττον, μεση, παραμετροε, γεγα ευνομην, γεγα δεξιευνηνε, and τετα επιεικαλων, were called fixed (ευτατετε), being, in fact, except the first, the extreme sounds of the several tetrachords. The rest, being the intermediate sounds, on the position of which the genus depended, were called movable (κνυμενοι).

Μεση was certainly considered a sort of key-note to the whole system, and προσελβαμενοσ was added to complete the octave below μεση. This addition is supposed to have been made later than the time of Plato, but earlier than Aristoxenus.

The greater of the two systems thus described appears to have superseded the other in practice; in fact, it is evidently the most natural of the two. But it must not be supposed that it was necessarily used in its complete form as the scale of any instrument; it was rather a theoretical canon by which the scales really employed were constructed. With regard to its fitness for use, it may be observed, that in the diatonic genus the effect of such a system would not perceptibly differ, so long as the method only was required, from that of the corresponding notes (given above) as played on a modern instrument with or without temperament. The chromatic scale is quite unlike anything now employed and though it was not considered the most difficult was certainly the least natural (Τεχνηκοτιτον δ τν χαραματα). The modern minor scale, A, B, C, D, E, πF, πG, A, can hardly be considered an exception to the assertion, that the chromatic scale is quite unlike any system now employed, for its essential character, as now used, depends so little upon the chromatic interval between F and πG, that this peculiarity is usually got rid of in melody by raising the F or lowering the πG, according to ear customs. Hence the popular but incorrect way of representing the ascending and descending minor scales. It is impossible to form a decided judgment of the merits of the chromatic scale without a much greater knowledge of the rules of composition than seems now attainable. The effect of the enharmonic must have been nearly the same as that of the diatonic, supposing λεικανω to be left on in each tetrachord, thus:

Indeed, Plutarch relates, on the authority of Aristoxenus, that Olympus was led to the invention of this genus by observing that a peculiar and beautiful character was given to melody when certain notes of the scale, and particularly λεικανω, were left out. It is therefore most probable that this was the original form of the enharmonic scale, and that it was more ancient than the highly artificial chromatic. In this form it would be both natural and easy. But afterward, when additional sounds were interposed between B and C, E and F, it would of course become, as it always described, the most difficult of all the genera, without, however, ceasing to be natural; for these additional sounds could certainly be neither used by a composer nor executed by a singer as essential to the melody, but must rather have been introduced as passing or ornamental notes, so that the general effect of the genus would remain much the same as before. The assertion of Aristoxenus (see p. 28, 55), that no voice could execute more than two quarter tones in succession, evidently supports this view. (Compare what is said by Aristides of the rare use of intervals of three and five quarter tones.)

Thus the enharmonic would derive its distinctive character more from the largeness of the highest interval of the tetrachord than from the smallness of the two others. Aristoxenus expressly mentions that the octave is the interval in which the magnitude of the interval between λεικανω and ντατ had upon the character of the genus, and blames the musicians of his own time for their propensity to diminish this interval for the sake of sweetness (τονυν θ αιτον τ βολολησ γυωλονε αιτε). That a peculiar character really is given to a melody by the occurrence of a larger interval than usual in certain notes of the scale, is a well-known fact, exemplified in many national airs, and easily proved by the popular experiment of playing on the black keys only of a piano forte. (See Burney on the Old Enharmonic.)

The genus of a system is determined as has been explained, by the magnitude of certain interval pairs. The species (ειδος) depended upon the order of their succession. Hence, supposing no system to be used which was not similar to some part of the στουταματου, every system would have as many species as it had intervals, and no more.

The tetrachord, for example, had three species in each genus, thus (diatonic),

1st. ι, ι, ι. 2d. ι, ι, ι. 3d. ι, ι, ι (where 1 stands for a tone).

The species of a system was often described by indicating two sounds of the στουταματου between which a similar one might be found. Of the seven species of the octachord, the first was exemplified by the octave comprehended between ντατ ρπατον and παραμετροε; the second by the between παραμετρον and τετα δεξιευνηνε and so on. The order of the intervals in these seven species would be as follows in the diatonic genus (ascending):

1st. ι, ι, ι, ι, ι, ι. 2d. ι, ι, ι, ι, ι. 3d. ι, ι, ι, ι, ι. 4th. ι, ι, ι, ι, ι. 5th. ι, ι, ι, ι, ι. 6th. ι, ι, ι, ι, ι. 7th. ι, ι, ι, ι, ι.

This distinction of species is important, because it formed originally the chief difference between the modes (τυνων). Unfortunately, there are no means of determining what was the real difference between melodies written in these several scales; and the difficulty of forming any probable hypothesis or this subject is increased by what is said of μεση between which a similar one might be found. Of the seven species of the octachord, the first was exemplified by the octave comprehended between ντατ ρπατον and παραμετροε; the second by the between παραμετρον and τετα δεξιευνηνε and so on. The order of the intervals in these seven species would be as follows in the diatonic genus (ascending):
MUSIC.

same species. Possibly the author of the Problematum does not use the term μέοις in the same sense as Euclid.

However, it is certain that the seven species of the octachord above described were anciently (ὑπὸ τῶν ἀρχαίων) denoted by the names Mixolydian, Lydian, Phrygian, Dorian, Ionian, Hyposelian, and Hypodeorian. And it seems likely that they always differed in pitch as well as species, the Mixolydian being the highest and the Hypodorian the lowest. Hence it is conjectured that there were originally only three modes, corresponding to the three species of tetrachord, and that these were the Dorian, Phrygian, and Lydian; because the octachord in each of these three modes is made up of two similar disjunct tetrachords, which are of the first species in the Dorian, the second in the Phrygian, and the third in the Lydian.

Aristides describes also six enharmonic modes of very ancient origin (τὸς πάντα παλαιότατος πρὸς τὰς ἀρχαίας κέτυχες), consisting of different species of octachords, and quotes the well-known passage in Plato as referring to them. The order of the intervals is given as follows (see the notes of Meibomius upon the passage):

Lydian: 4, 2, 1, 4, 2, 4.
Dorian: 1, 4, 2, 1, 4, 2.
Phrygian: 1, 4, 2, 4, 1, 4.
Iastian: 3, 4, 2, 1, 4, 3.
Mixolydian: 4, 3, 1, 1, 4, 3.
Syntonydian: 4, 3, 2, 1, 4, 3.

It is possible that the Lydian species do not all comprehend exactly an octave; and none of them, except the Lydian, is coincident with any part of the σύνθεσις ἰμικάλουν. That systems were not always restricted to the immutable form, is proved by what Euclid says of compound systems, with more than one μέοις. None of these scales is decidedly unnatural, except, perhaps, the Mixolydian. Of course it is impossible to recognize their characters as described by Plato, in the absence of examples of their application in actual melody. Their principal interest, therefore, consists in the evidence which they afford of the antiquity of enharmonic systems, i.e., of systems formed by omitting certain sounds of the diatonic scale. For, unless we take this view of them, and consider the quarter tones as accidental only, it is impossible to understand how they could be used at all.

The differences of species, considered as the characteristic distinction of modes, is evidently spoken of as a thing antiquated and obsolete, not only by Aristides (who was certainly later than Ciceron), but also by Euclid. As to Aristoxenus, the fragments which remain of his writings contain no allusion to such a distinction at all. In his time, it appears that the number of modes was thirteen; and later writers reckon fifteen.8 The descriptions of these fifteen modern modes are very scanty, but they indicate pretty plainly that they were nothing more than transpositions of the greater perfect system; their names were Hypodorian, Hypoasian, Hypophrygian, Hyporeolian, Hypolydian, Dorian, Iasian, Phrygian, Emeion, Lydian, Mixolydian, Hyperasian, Hyperhymian, Hyperasian, Hyperlydian.

The Hypodorian was the lowest in pitch, and the προσπαλαβομένοι of the others were successively higher by a semitone; and only that part of each scale was used which was within the compass of the voice. It seems likely that the ancient modes mentioned by Euclid, and described above, consisting of octaves, taken as regards their species, from different parts of the σύνθεσις ἰμικάλου, would, as regards pitch, be each so placed as to lie

between ὑπάρχει μέοις and ἑνίκον διακόσμηκας of the modern mode of the same name. For they certainly did always differ in pitch, as the name ἑνίκον shows; and there is no reason to believe that their relative position was ever changed: the system of mutation, moreover, confirms this supposition. But for a complete statement, a critical examination of the dissertation of Böckh, where it is treated at length, is necessary.

The only important results, however, are, first, that the modes did anciently differ in species; secondly, that in process of time this difference either disappeared entirely, or ceased to be their distinguishing mark; and, thirdly, that their general pitch was always different. The ideas conveyed by these general assertions on the local character and effect of the Greek music are excessively vague and unsatisfactory, but an examination into particulars does not tend to make them at all more definite or clear.

There can be little doubt that different rhythms and degrees of slowness or quickness, as well as different metres and styles of poetry, would soon be appropriated to the modes, so as to accord with their original musical character; and these differences would be more pronounced in the name. But there is no record of any system of species, and come to be looked on as their characteristic marks: so that, at length, all the species might even be used in each mode, for the sake of additional variety. With regard to the poetry, indeed, it is certain that particular measures were considered appropriate to different modes, and it has even been attempted to divide Pindar's Ódes into species, and to show that the music must have depended chiefly, if not entirely, upon that of the words, or else have been of a very simple and uniform character, since there is no mention of a notation for it as distinct from the metre of the poetry. Probably, therefore, nothing like the modern system of musical rhythm existed; and, if so, this must have formed one of the most essential points of difference between the ancient and modern music. How the rhythm of mere instrumental music was regulated, or what variety it admitted, does not appear. There is no reason, however, to believe that music without words was practised to any extent, though it was certainly known; for Plato speaks with disapprobation of those who used μέλος καὶ ρυθμόν ὅσον ἤρθατο, ψυλή κηθήσετε τα καὶ ἄλλα τῶν μελῶν καὶ ρυθμῶν.8

On the last two of the heads enumerated in dividing the whole subject, very little real information can be obtained. In fact, they could not be intelligibly discussed without examples, a method of illustration which, unfortunately, is never employed by the ancient writers. Μεταβολή was the transition from one genus to another, from one system to another (as from disjunct to conjunct, or vice versa), from one mode to another, or from one style of melody to another, and the change was made in the same way as in modern modulation (to which μεταβολή partly corresponds), viz., by passing through an intermediate stage, or using an element common to the two extremes between which the transition was to take place.

Mελοποιία, or composition, was the application or use of all that has been described under the preceding heads. This subject, which ought to have been the most interesting of all, is treated of in such a very unsatisfactory way, that one is almost forced to suspect that only an exoteric doctrine is contained in the works which have come down to us. On composition properly so called, there is nothing but an enumeration of different kinds of sequentiae of notes, viz.: 1. ἀναλογοῦ, in which the sounds

MUSIC.

followed one another in a regular ascending or descending order; 2. παλαιός, in which intervals were taken alternately ascending and descending; 3. πετοσία, or the repetition of the same sound several times, was used to extend the range of a single scale. The scale sound was sustained continuously for a considerable time. Besides this division, there are several classifications of melodies, made on different principles. Thus they are divided according to genre, into diatonic, &c.; according to mode, into Dorian, Phrygian, &c.; according to system, into grave, acute, &c.; according to maya, the epithalmian, the acute nomic (μοικός), and the intermediate dihyrambic. Again, melody is distinguished by its character (μορφή), of which three principal kinds are mentioned, ὀθωματική, σαφωτική, and ἔναδοτική, and these latter are respectively explained to mean aptitude for expressing a magnanimous and heroic, or low and effeminate, or calm and refined character of mind. Other subordinate classes are named, as the erotic, epithalamian, comic, and encomiastic. No account is given of the formal peculiarities of the melodies described above, and a concord is consequently impossible, so that what is said of them merely excites our curiosity, without tending in the least to satisfy it.

The most ancient system of notation appears to have consisted merely in the appropriation of the letters of the alphabet to denote the different sounds of the scale; and the only alteration made in it was the introduction of new signs, formed by accenting letters, or inverting, distorting, and mutilating them in various ways, as the compass of the scale was enlarged. A great, and seemingly unnecessary, complexity was caused by the use of two different signs for each sound; one for the voice, and the other for the instrument. These two signs were written, one above the other, immediately over the syllable to which they belonged. They are given by several of the Greek writers, but most fully by Alpyius. The instrumental signs appear to have been chosen arbitrarily; at least, no law is now discoverable in them: but the vocal (which were probably more ancient) follow an evident order. The sings are denoted by the letters of the Ionian alphabet (attributed to Simonides) taken in their natural order; and it is remarkable that these signs would be just sufficient for the sounds comprised in the six modes supposed to be the most ancient, if the compass of each were an octave, and they were pitched at intervals of a semitone above another. Accented or otherwise altered letters are given to the higher and lower sounds. To learn the system perfectly must have required considerable labour, though its difficulty has been much exaggerated by some modern writers. Some specimens of Greek melody expressed in the ancient notation have come down to us. An account of them may be found in the notes to the facsimile copies of old MSS. by Dr T. Percy, where are given modern notes with a conjectural rhythm. The rest of them may also be seen in Bách, with a different rhythm. It is composed to the words of the first Pythian, and is supposed by Bách to be certainly genuine, and to belong to a time earlier than the fifteen modes. Its merits have been very variously estimated: it is likely that all believe there are no sufficient grounds for supposing that they did. The following are the facts usually appealed to on each side of the question. In the first place, the writers who professedly treat of music make no mention whatever of such a practice; this omission constitutes such a very strong prima facie evidence against it, that it must have settled the question at once but for supposed positive evidence from other sources on the other side. It is true that μελονοιδία, which might have been expected to hold a prominent place in a theoretical work, is in disuse, and is perhaps not mentioned by subjects which ought to be explained are enumerated. In fact, there seems to be no Greek word to express it; for ζώνοιδια signifies a well-ordered succession of sounds, and συμφωνία only implies the concord between a singular and a concord, either side. That the Greek musicians were acquainted with συμφωνία is proved by many passages, though we are not aware that they ever mention the concord of more than two sounds. But the subject of concord, so long as succession is not introduced, belongs rather to acoustics than to music. There is, however, a passage, where succession of one octave is denoted by the concord of the unison, "κοµνονια

“Sonnante mistim tibis carmen lyrh
Hac Domum; ilia berbarum,"

is interpreted to mean that the lyre was played in the Dorian mode, and the tibia in the Lydian; so that, if the ancient Dorian and Lydian octave were employed, the former being of the fourth species, while the latter was of the second, and pitched two tones higher, the series of intervals heard would consist of fourths and major thirds, or, rather, double tones.

Again, there are passages such as,

"Alo'edie th'wiw Darofin kel'evnu nomv," which are supposed to indicate that poetry written

We
in one mode, and sung accordingly, was accompanied by instruments in another. For a view of the most that can be made of such arguments, see Böckh, iii., 10. Our knowledge of the real use of the modes is so very imperfect, that not much reliance can be placed on them; and, at any rate, they would only prove the existence of a kind of magnum, modified by taking scales of different (instead of the same) species for the two parts, so as to avoid the succession of intervals absolutely t-e-same. This would certainly be the very lowest kind of counterpoint; but if anything more had been practiced, it would be absolutely impossible to account for the utter silence of the theoretical writers, which is in face of every evidence of harmony. It is only necessary to add that the influence of instruments upon the development of the art ought to be kept in view in considering this question. The Greeks had only two kinds of instrumental music, ádítitus and kúdítáus. The ádítus was always a pipe pierced with holes, so as to have an artificial scale. The simple tuba or trumpet does not appear to have been used as a musical instrument until the scale to which it corresponds was probably unknown; and this may partly account for the major third escaping observation. And anything like the modern system of harmony could probably no more have been invented without the assistance of keyed instruments, than the Elements of Euclid could have been composed in the total absence of drawing materials. For a fair account of ancient musical instruments, see Böckh, iii., 11.

The chief authorities on the subject of this article are the "Antique Musicae Anctores Septem," viz., Aristoxenus, Euclid, Nicomachus, Alypius, Gaudenus, Bacchius, Aristides Quintilianus, and Martianus Capella, edited by Melchior, in one volume (Amsterdam, 1657), to the pages of which the preceding quotations refer; the Harmonics of Ptolemy (with an Appendix by Wallis, Op. Mathemat., tom. iii.); the Dialogue of Plutarch, and a section of the Aristotelic Problematia; Burney, History of Music; Böckh, De Metris Pindari; Drieberg, Musikalische Wissenschaften der Griechen, and Aufzahlung der griechischen Musik; Bode, Gesch. der Lit. Musik in Deutschland (1838).

MUSIC (ROMAN). It may well be believed, that in music as in the other arts, the genius of Greece had left little for Romans to do but admire and imitate. Yet we must not forget that another element had been introduced into the arts of Rome, as well as into her language and government; one which was derived from Etruria, and partook of an Oriental character. Every species of musical instrument found on Greek works of art is found also on Etruscan. No doubt the early Roman music was rude and coarse; still, from the most ancient times, mention is made of hymns and staves in their triumphal processions: so Servius, in his comitia, made two whole centuries of cornemuses and tubicenies; and the several Tabulea allowed at funerals ten players on the flute, and enjoined that "the praise of great men should be sung in mournful songs (nenies) accompanied by the flute."

The year B.C. 365 marks an era in Roman music by its adaptation to theatrical amusements. It is in this year we find mention of a lectisternum, at which actors were first brought from Etruria, who, without verses, danced in dumb show to the sound of the flute. Some time later Livy 1 mentions a curious tale of the desertion of certain Roman flute-players, who were only brought back by an amusing stratagem. We learn from Valerius Maximus 2 that the Roman flute-players were incorporated into a college, and Ovid, speaking of their importance says,

"Temporibus veterum tibiencias usque anorum
Magnus, et in magno semper honore fuit:
Cantabat fanis, cantabat riba ludus,
Cantabat maestis tibia fumeribus."

Nero, as Suetonius 3 tells us, played on the flute, and came in a sort of triumphal procession through Italy, bearing the spoils he had won in 1360 musical contests. The same writer informs us, that the emperor, to preserve his voice, used to lie on his back with a thin plate of lead on his stomach; that he took frequent emetics and cathartics, and at last transacted all business in writing.

There does not appear to be any trace of a Roman musical system entirely distinct from the Greek. A passage in Cicero would lead us to suppose, that the laws of contrast, of light and shade, of loud and soft, of swelling and diminishing, were understood by the Romans, 4 and another passage from Apuleius decidedly proves that the Romans had instrumental music distinct from their vocal; on both of which points there is no clear evidence to decide the question with reference to the Greeks. Still the Romans used instruments, which, according to Coretus, Martianus Capella, Cassiodorus, and Boethius (all of whom flourished between the fourth and sixth centuries of the Christian era), did nothing to improve the science of music, and were little more than copyists of their Greek predecessors.

The great improvement which the Romans introduced (rather a practical than a theoretical one) was a simplification of the musical nomenclature, effected by rejecting the arbitrary signs in use among the Greeks, and substituting for them the first fifteen letters of the Roman alphabet. This simplification they were enabled to make by a reduction of the modes; indeed, it seems very probable that this complicated system had in practice entirely fallen into disuse, as we know that the diatonic genus had usurped the place of the two other genera. (Vid. Music, Greek.)

Of all Latin authors, Boethius gives the most profound account of the subject. His work is a carrying out of the old Pythagorean system, and is a mere abstract speculation on the nature of music, which, viewed as one of the quadrivium, or four mathematical sciences, has its foundation in number and proportion, and is a full and complete system of the work may be seen in Hawkins. 5 It contains, 1st, an investigation into the ratios of consonances; 2d, a treatise on several kinds of proportion; 3d, a declaration of the opinions of different sects with respect to the division of the monochord and the general laws of harmony.

Before this time, St. Ambrose had introduced the practice of singing in the church at Milan. Of the nature of the Ambrosian chant we only know that it consisted in certain progressions, corresponding with different species of the diapason. It is described as a kind of recitation, more like reading than singing.

It was by St. Gregory the Great that the octave was substituted for the tetrachord as the fundamental division of the scale. The first octave was denoted by capital letters, A, B, C, &c.; the second by small letters, a, b, c, &c.; and when it became necessary to extend the system, marked the third by small letters doubled, ab, bb, &c. There is no proof that the Romans, any more than the Greeks, had any notation with reference to time. Where vocal music was united with instrumental, the time was indicated by the movements of the players; the length of a notation of time would make us doubt whether

1. (Font., vi., 657.); 2. (Nero, 94.); 3. De Ortat., iii., 44.; 4- (Hawkins, vol., i., 270.); 5. (p. 385.)
any but a very simple style of merely instrumental music prevailed among them. 1

For a general account of ancient music, the reader is referred to the previous article.

MUSTIUM OPUS. (VID. HOUSE, ROMAN, p. 520.)

"MUSMON (μυσμών), an animal noticed by Strabo, and said to be engendered between a she-goat and a ram. Others held it to be what is now called the "She-goat of Sardinia and Corsica," the original of our sheep, or, according to Aldrovandi, the Spanish Sheep. 2

MUSTAX (μυστάξ), Mustaches. The different parts of the beard (vid. BARRA) had different names, which also varied with its age and appearance. The young beard, first appearing on the upper lip, was called ύπαργον or ύπαργον πρώτον, and the youth just arrived at it, was rubbed with it, was πρώτων ύπαργον. 3 By its growth and development it produced the mustaches, which the Greeks generally cherished as a manly ornament. 4 To this practice, however, there seems to have been one exception. The Spartan Eukri, when they were induced, made a proclamation requiring their citizens to shave off the mustaches and obey the laws. 5 For what reason they gave the former command does not appear.

"MUSTELA (μυστέλα), the Weasel. Pliny speaks of two kinds, the tame or domestic, answering to the γαλάς, and the wild, or λεκτί. "There is considerable difficulty, however," remarks Adams, "in determining what each of the Ictis of the Greeks and Romans was. Schneider, in his commentary on Nicander, pronounces it to be the Ferret; but in his edition of Aristotle's Natural History, he decides, upon the authority of Cetti, an Italian, that the Ictis is a peculiar species of the Ferret, which the Sardinians call Boccamele, namely, the Mustella farinae."

MUTATIONES. (VID. MANNO.)

MUTUUM. The mutuo dato is mentioned by Gaius as an instance of an obligatio "qua re contratitur." It exists when things "qua ponderum mensuravit constant," as coined money, wine, oil, corn, ass, silver, gold, are given by one man to another so as to become his, but on the condition that he shall return the same as soon as he is in want. If the condition is that the same thing shall be returned, it is not mutuum. (VID. COMMUTATUM.) Inasmuch as the thing was in this case so given as to become the property of the receiver, the Roman jurists were led to the absurdity of saying that mutuum was so called for this reason (quod ex meo tuum ficit) in this convention of a certi conditio to the lender, provided he was the owner of the things, and had the power of alienation: otherwise he had no action till the things were consumed. If the borrower lost the things by any accident, as fire, shipwreck, &c., he was still bound: the reason of which clearly was, that by the mutuall loan the things became his own. The lender could have no interest from the borrower, unless the thing he had agreed on, or unless there was delay in returning the thing. The borrowing by way of mutuum and at interest are opposed by Plautus. 6 The accutus consulitn Macedoniam did not allow a right of action to a lender against a filiusfamilias

to whom he had given money "mutua," even after the death of the father. 7

MYAGRAM (μυαγρόν), a plant, which Har loun and Stephens refer to a species of Camelina, and which Sprengel, accordingly, holds to be the Camelina sativa, Grantz. The English name for the Myagram of Linnaeus is, according to Adams, "Golt of Paradise," and Hooker, he says, calls this plant the Camelina sativa. 8

"MYIA" is a term applied more especially to the Mylius edulis, or common Mussel, but which appears to have a more extensive application. 9

MYLAE (μῦλα). "The Pyrite and Malares," says Sir John Hill, "are masses of mineral, saline, and sulphuraceous matter, either in detached pieces of different figures and textures, or in whole veins. They also, as Adams remarks, often contain gold, silver, copper and iron in small quantities. 10

MYOPS (μυόπ). (VID. CERUS.)

MYOSOTIS (μυώσωτις), a plant, of which Dioscorides describes two species. The first of these Sprengel supposes to have been the Parietaria Cretica. The other he decides to be the well-known plant called "Forgot-me-not," or Myosotis palustris. 11

"MYREX. (μυράκ.)""the house," observes Adams, "sets down the myraen of Theophrastus as being the Myrica cordifolia. Sprengel, Schneider, and Dierbach agree in holding it to be the Tamarix Gallica, or French tamarisk-tree. Linnaeus makes a distinction between the Myrica and Tamaris, although Pliny had acknowledged them as synonyms. Greek domestic mythology makes of the notices of the myraen in Homer indicate that it must have been the arbis specie non namis hamilem. 12 I can find nothing, however, in these passages of Homer which would lead me to doubt of its applicability to the French tamaris, a shrub which grows to about 20 feet in height. 13

"MYRIO." (μυρίο), a term applicable both to the Formica fusca, or common Ant, and to the Formica rufo, or Pismire. Dodwell gives an interesting account of the Herculane Act, with which the gardens at Athens abound, and which are employed as a means of exterminating the small red ant that infest the orange and lemon trees. 14

"MYSTES." (μυστης) or M. MYRUS, or M. Ophria, L., a species of Murex or Eel. Rondelet says it wants the spots and scales of the Murana: this accords with Aristotle's description of it. 15

MYSTEA (μυστα), a festival celebrated by the inhabitants of Pellene, in Achaia, in honour of Demeter Mystia. The worship of this goddess was introduced at Pellene from a place called Mystia, in the territory of the Macedonians, and the ceremonies of the Mystia and the Mystices of Pellene lasted for seven days, and the religious solemnities took place in a temple surrounded by a beautiful grove. The first two days men and women took part in the celebration together; on the third day the men left the sanctuary, and the women, remaining in it, performed during the whole day and the following night various rites, and even male dogs were allowed to remain within the sacred precincts. On the fourth day the men returned to the temple, and men and women now received each other with shouts of laughter, and as saluted each other with various railleries. 16 Other particulars are not known.

MYSTAE. (μυστα). (VID. ELEUSINIA.)

MYSYTEIA. As each mystery or mystic festi-
val is described in a separate article, a few gen-
eral observations will only be required under this
head. The names by which they were designated
in Greece are μυστηρια, τελεται, and θρης. The
name θρης (from θρηνω) originally signified only
sacrifices accompanied by certain ceremonies, but
it was afterward applied especially to the cer-
emonies observed in the worship of Dionysus, and,
at a still later period, to mysteries in general.1
Τελετη signifies, in general, a religious festival,2 but
more particularly a lustration or ceremony per-
informed in order to avert some calamity either pub-
lic or private.3 Μυστήριον signifies, properly speak-
ing, the secret part of the worship, but it was also
used in the same sense as τελετη, and for mysti-
with that name.4
Mysteries, in general, may be defined as sacrifices
and ceremonies which took place at night, or in se-
cret, within some sanctuary, which the unintiated
were not allowed to enter. What was essential to
them were objects of worship, sacred utensils, and
traditions with their interpretation, which were
withheld from all persons not initiated. The term
between mysteries properly so called, that is, such in which no one was allowed to
partake unless he had undergone a formal initiation,
and the mystical ceremonies of certain festivals, the
performance of which, though confined to particular
classes of persons or to a particular sex, yet did not
require a regular initiation. Our attention in this
article will be confined to the mysteries properly so
called.
It appears to have been the desire of all nations of
antiquity to withhold certain parts of their reli-
gious worship from the eyes of the multitude, in or-
der to render them the more venerable.4 But that
the ancient mysteries were nothing but the imposi-
tions of priests, who played upon the superstitions
and ignorant, is an opinion which, although enter-
tained by Limburg-Brouwer, the latest writer on the
subject,5 certainly cannot satisfy those who are ac-
customed to seek a more solid and vital principle in
all religious institutions that have ever had any last-
ing influence upon mankind. The persons united
and initiated to celebrate the mysteries in Greece
were neither all priests, nor did they belong to the
important classes of those who celebrated these festi-
vals, but on the contrary, frequently the most dis-
tinguished statesmen and philosophers. It has been
remarked under Eleusisina (p. 396), that it is far
more probable that the mysteries in the various parts
of Greece were remains of the ancient Pe-
lagian religion. The associations for persons
for the purpose of celebrating these mysteries must therefore have been formed at the time when the overwhelming
influence of the Hellenic religion began to gain the
upper hand in Greece, and when persons who still
entertained a reverence for the worship of former
times united together, with the intention of preserv-
and upholding among themselves as much as
possible of the religion of their forefathers. It is
natural enough, that they formed themselves for
this purpose, into societies, analogous to the broth-
hoods in the Church of Rome,6 and endeavoured to
preserve against the profanation of the multitude
which was most dear to them. Hence the se-
cracy of all the Greek mysteries, and hence the fact
that the Greek mysteries were almost invariably con-
ected with the worship of the old Pelasgian divin-
ities. The time when mysteries were established as
must have been after the great changes and
5. (Lobeck, Aphorismen, i., p. 356.)—2. (Aristot., Rhet., ii.,

MYSTRUM. disturbances produced by the Dorian migration, as
though tradition referred their institution to Orph-
ians, the Curetes, the Idaean Dactyles, Dionysus, &c.,
who belong to a much earlier period. These tradi-
ions, however, may in so far be regarded as true,
as the mysteries were only a continuation and prop-
ergation of the old Pelasgian religions. It must, how-
ever, be admitted, that in subsequent times new elements
were added to the mysteries which were originally
foreign to them. The development of philosophy,
and, more especially, the intercourse with the East
and with Egypt, appear to have exercised a consid-
erable influence upon their character.
The most celebrated mysteries in Greece were
those of Samothrace, Eleusis, and Eleutherai. (Vid. Castagni,
Eleusis and Eleutherai.) But several other places and divin-
ities had their peculiar mysteries, e. g., the island of
Crete those of Zeus;4 Argolis those of Hera;5 Athens
those of Athena and Dionysus6 (vid. Dio-

cotyla, and contained 38/4 drachmas; but that the most exact mystrium (τὸ διακοσιοῦνον μυστήριον)
NAVARCHUS.

held 8 scruples, that is, 9'd drachma. According to this, the small mystrum would be 3' of the larger. But in the 13th chapter of the same fragment he makes the large mystrum = 3 of the cotta, and the small mystrum 4th of the large. In c. 4 he makes the large mystrum = 3 oxypha and the small = 1'd drachma. Cleopatra makes the large = 24 2/3 of the cotta, the small = 1 drachma. Also NAUVLIA or MYXON (ναύκλια, μύξον), a variety of the Mullet. Artedi calls it Cygion Myxo an-
thorun. 2

N

NE'NIA. (Vid. Fonix, p. 459.)

*NAPI (ναπί), a term applied by Theophrastus, Galen, and Dioscorides, to the neraigo, or common Mustard. Dr. Milligan, however, in his edition of Celsius, sets it down for the Sinapis alba, or White Mustard. 3

*NARCISSUS (νάρκισσος), a plant. The name is especially referable to the Narcissus poeticus, or Daffodil, but it was most probably applied on some occasions to a cheaper and lister flower, the naseia nigra, or common Mustard. 

*NARDS (νάρδς). "By Nard," says Dr. Harris, "was meant a highly aromatic herb, growing in the Indies, and called Nardostachys by Dioscorides and Galen." It is fully described by Moses Charras. "That the ancient Nards were Valerians, is now, remarks Adams, universally admitted. Sprengel shows that the Indian Nard was the species of Valerian called Patri-

N
NAUMACHIA.

NAUTODICAEA.

The obligation of each naucrarius to equip a ship of war for the service of the Republic may be regarded as the first form of trierarchy.5 As the system of trierarchy became developed and established, this obligation of the naucrariae appears to have gradually ceased and to have fallen into disuse. (Compare Thierarchia.)

NAUCRIA (v. v. Naucraria) (v. v. Navi.).

NAUMACHIA was the name given to the representation of a sea-fight among the Romans, and also to the place where such engagements took place. These fights were sometimes exhibited in the circus or amphitheatre, sufficient water being introduced to float ships, but more generally in buildings especially devoted to this purpose. The first representation of a sea-fight on an extensive scale was exhibited by Julius Caesar, who caused a lake to be dug for the purpose in a part of the Campus Martius, called by Suetonius the "Lesser Codex."5 This lake was afterward filled up in the time of Augustus, on account of the malaria arising from the stagnant water in it.6 Augustus also dug a lake (stagnum) near the Campus Martius, and planted around it a grove of trees (nemus).6 This naumachia was the first permanent one; it continued to be used after others had been made, and was subsequently called the "vetus naumachia."6

Claudius exhibited a magnificent sea-fight on the lake Pueinus.7 Nero appears to have preferred the amphitheatre for these exhibitions. Domitian and Nerva, however, held sea-fights in naumachia, and erected a building of stone around it, in which the spectators might sit to see the engagement.9 Representations of naumachiae are sometimes given on the coins of the emperors.10

The combats in these sea-fights, called Naumacharii,11 were usually captives, or criminals sentenced to death.12 As a sea-fight, as in gladiatorial contests, until one party was killed, unless preserved by the clemency of the emperor. The ships engaged in the sea-fights were divided into two parties, called respectively by the names of different maritime nations, as Tyrians and Egyptians,13 Rhodians and Sicilians,14 Persians and Athenians,15 Oreyreans and Corinthians, Athenians and Syracusans, and Greeks and Phoenicians, and these last were sometimes known as "Punic naumachiae."16

NAUTODICAE.

The shell-fish is graphically described by Aristotle, Oppian, and Philo. It is the Argonauta Argo, L., or the Paper Nautilus.

NAUTODICAE (v. v. Nautilos) are called ὑφαι στραταγματικας by most of the ancient grammarians, while a few others call them diocaeti.4 The concurrent authority of most of them, together with a passage of Lysias, the only Attic orator who mentions the nautaecides, renders it more than probable that they were a magistracy. This can be the less doubtful, as the words διος και διακάτις are sometimes used of magistrates in their capacity of εἰσαγωγείς (v. v. Eἰσαγωγείς). All testimonies of the ancients, however, agree that the naudodice had the jurisdiction in matters belonging to navigation and commerce, and in matters concerning such persons as had entered their names as members of a phratria without both their parents being citizens of Athens, or, in other words, the δικαῖος ἱμπρόφωρος and δικαῖος ἱμπώτης. The time when naudodice were first instituted is not mentioned, but the fact that they had the jurisdiction in matters belonging to navigation and commerce, as well as frequently to matters of a personal nature, as for instance, when father and mother being citizens, shows that their institution must belong to a time when it was sufficient for a man to be a citizen if only his father was a citizen, whatever his mother might be, that is, previous to the time of Pericles (compare Cteet, p. 250), and perhaps as early as the time of Cleisthenes.

The naudodice were appointed every year by lot in the month of Gamelion, and probably attended to the δικαῖος ἱμπρόφωρος only during the winter, when navigation ceased, whereas the δικαῖος ἱμπώτης might be brought before them all the year round.

It is a well-known fact, that the two actions δικαῖος ἱμπρόφωρος and δικαῖος ἱμπώτης which we have here assigned to the naudodice belonged, at least at one time, to the themarchetes.17 Several modern writers, such as Büch, Baumstark, and others, have, therefore, been led to suppose, that all the grammarians who call the naudodice υφαι στραταγματικας are mistaken, and that the naudodice were not εἰσαγωγείς in the cases above mentioned, but δικασταί. But this mode of settling the question does not appear to us to be as satisfactory as that adopted by Meier and Schäfer, who maintain that the latter term is given when the trace occurs of the naudodice; and in the oration against Laerius,18 where all the authorities are mentioned before whom such a case as that of Laerius might be brought, the orator could scarcely have failed to mention the naudodice, if they had still existed at the time. It is, therefore, natural to suppose that the δικαῖος ἱμπρόφωρος, at the time of Philip of Macedon, when they became δικαῖος ἱμπρόφωρος (v. v. ΕἰσμΗΝΟΙ ΔΙΚΑΙ), were taken from the naudodice and transferred to the themarchetes. And as the Republic could not now think it any longer necessary to continue the office of naudodice merely on account of the δικαῖος ἱμπώτης, these latter were likewise transferred to the themarchetes, and the office of the naudodice was abolished. The whole period of Macedon's invasion, when Athens would thus comprehend the time from the legislation of Cleisthenes, or soon after, to Philip of Macedonia. One difficulty, however, yet remains, for naudodice are mentioned by Lucian in a dialogue...
art often show it as worn not only by male and female bacchantes, but also by Pans and Satyrs. It was commonly put on in the same manner as the wig or gorget, by tying the two fore legs over the right shoulder so as to allow the body of the skin to cover the left side of the wearer. In the Dionysiac processions, the fawn’s skin worn by the god, besides its natural spots, which were greatly admired, was enriched with gems.

NEMEANS (vĕlĭ̂pŏs, a precious stone, mentioned in the Orphic poem. De Laet supposes it either an agate or a jasper.

NEFASÌ DIES. (Vid. Dies, p. 362.)

NEGATIVĀ. NEGATORĪA ACTIO. (Vid. Confessoria Actio.)

NEGOTORĪM GESTORĪM ACTIO. This was an action which a man might have against another who had managed his affairs for him in his absence, without being commissioned to do so ( sine mandato). The action was not founded either on contract or delict, but was allowed for convenience' sake (utilitatis causa). The person whose business was transacted by another, and the person who transacted the business, might severally have an action against one another in respect of that which "ex bona fide alterum alteri pravissure operis." The action of the self constituted agent was sometimes called contraria, by analogy to similar actions in other cases. He was bound to make good any loss that was incurred during his administration by dolus or culpa, and in some instances even loss that had been incurred by casus. On the other hand, he had his action for all expenses properly incurred, whether they were to the benefit or disadvantage of the person for whose account he was unfortunate to the absent person; as if he paid for medical attendance on a sick slave, and the slave died, notwithstanding all his care: but various difficulties might easily be suggested as to such cases as these, and the rule must be qualified by the condition of the thing undertaken being a thing profane. When the service was undertaken, though the result might be unprofitable.

NEKROTHAPTALI. (Vid. Funus, p. 459.)

NEKUSII. (Vid. Funus, p. 458.)

NEMEAN GAMES (vîga, vēlîta, or vēsata), one of the four great national festivals of the Greeks. It was held at Nemea, a place near Cleone in Arcadia. He various legends respecting its origin are related in the arguments of the scholiasts to the Nemea of Pinidar, with which may be compared Pausanias and Apollodoros. All these legends, however, agree in stating that the Nemea were originally instituted by the Seven against Thebes in commemoration of the death of Opheltes, afterwards, when the Seven were carried to heaven, by the Nemean heroes at Nemea, and were very thirsty, they met Hypsipyle, who was carrying Opheltes, the child of the priest of Zeus and of Eurydice. While she showed to the heroes the way to the nearest well, she left the child behind, lying in a meadow, which, during her absence, was killed by a dragon. When the Seven, on their return, saw the child, they killed the dragon, and instituted funeral games (αὐτὸν τίτα- λοφος), to be held every third year (τριετερόκος). Other legends attribute the institution of the Nemean games to Heracles, after he had slain the Nemean lion; but the more genuine tradition was that he had either revived the ancient games, or, at least, introduced the alteration by which they were from this time celebrated in honour of Zeus. That Zeus was the god in honour of whom the games were afterwards celebrated, is stated by Pinidar. The games were at first of a warlike character, and only warriors and their sons were allowed to take part in them; subsequently, however, the hare, or open mouse, was introduced by the Greeks (δημοκτήμι πάθησιν ενεργήματος). The games took place in a grove between Cleone and Phlius. The various games, according to the enumeration of Apollodoros, were horse-racing, running in armour in the stadium, wrestling, chariot-racing and discus, boxing, throwing the spear and shooting with the bow, to which the newly added musical contests. The scholiasts on Pinidar describe the agar equestrians as in some way imperfectly as ἵππας and γυναῖκες. The prize given to the victors was at first a chaplet of olive-branches, but afterwards a chaplet of green parsley. When this alteration was introduced is not certain, though it may be inferred from an expression of Pinidar, who calls the parsley (αὐτὸν οὖν) the ἄρδανας, that the new prize was believed to have been introduced by Heracles. The presidency at these games, and the management of them, belonged at different times to Cleone, Corinth, and Argos, and from the first of these places they are sometimes called ἄρδανας Κλεανίσ. The judges who awarded the prizes were dressed in black robes. 

and an instance of their justice, when the Argives
presided, is recorded by Pausanias.1

Respecting the time at which the Nemean games
were held, the scholiast on Pindar2 merely states that
they were held on the 12th of the month of
Panemus, though in another passage he makes a
statement which upsets this assertion. Pausanias3
speaks of winter Nemea, and manifestly distin-
guishes them from others which were held in summer.
It seems that for a time the celebration of the
Nemea was neglected, and that they were revived in
Ol. 53, 2, from which time Enæus dates the first
Nemead. Henceforth it is certain that they
were for a long time celebrated twice in every
Olympiad, viz., at the commencement of every sec-
ond Olympic year in the winter, and soon after the
commencement of every fourth Olympic year in the
summer. This has been shown by Böckh in an
essay über die Zeichenkäle der Danaak. Rote gegen
Maidas, in the transactions of the Berlin Acad.,
1818, 1819.—Histor. Philol. Kazan, p. 92, &c.—Com-
pare Iliced, Handb. der Chronol., ii., p. 686, &c.
About the time of the battle of Marathon, it became
custumary in Argolis to reckon according to Ne-
meads.

In 298 B.C., Philip of Macedonia was honoured
by the Argives with the presidency at the Nemean
games in the year Quinquennium, and the Nemea
was held under the auspices of the Argives.5 The
Emperor Hadrian restored the horse-racing of boys
at the Nemea, which had fallen into disuse. But
after this time they do not seem to have been much
longer celebrated, as they are no longer mentioned
by any of the writers of the subsequent period 6
NEODAMO'DEIS. (Vid. NEXUM, p. 460)
NEO'CORO'I.
NEODAMO'DEIS. (Vid. NoxuM.)
NEPENTHES (vörpentès). Among the many
conjectures which have been started concerning the
Nepenthes, that one appears very plausible which
supposes that it was used in Opium, or the juice of
the Papaver somniferum.7
NEPTUN'ALIA, a festival of Neptune, celebrated
at Rome, of which very little is known.8 The
day on which it was held was probably the 23rd of July.
In the ancient calendar this day is marked as Nept.
ulus et furia, or Nept. lulii, from which we see that
the festival was celebrated with games. Respect-
ing Neptune's worship as the god of sea, the festival
is said to be a commemoration of the lives of
except that the people used to build huts of branch-
and foliage (umbræ), in which they probably feasted,
drank, and amused themselves.10
NEXUM (nêxum). According to Rondelet
and Gneuss, the nêxum of Aristole is a species of
Concha, whereas that of Aelian is a species of
Cochlea. (vid. NEXUM, p. 461)

NEXUM is defined by Mamilius to be "onna quod
librum et as geritur, in quo sinit mancipii." Mu-
cius Scævola has a different definition: "quae
per as et librum fiant ut obligentur, praeter quom qua
mancipio detur." Varro,1 who has preserved both
these definitions, prefers the latter, as being
consistent with the style of the word: "per
obligatur per libram, neque eum sit, inde Nëxum dis-
tur." As an illustration, he adds: "Libor qui suas
operas in servitutem pro pecunia quam debeat dat, dam
solveret, nœx vocatur, ut ab ore obseratur." The
difference in these definitions arises solely from the
different aspect under which the nêxum is viewed.
Every nêxum was in the form of a sale, and, con-
sequently, viewed as to its formal part, nêxum com-
prehended mancipium. The testamentary facio
was also included under nêxum. Viewed as to its ob-
ject and legal effect, nêxum was either the trans-
fer of the ownership of a thing, or the transfer of
a thing to a creditor as a security: accordingly, in
one sense, nêxum included mancipium, as explained
in Mancipium; in another sense, mancipium and
nêxum are opposed in the same way in which sale
and the gift are opposed in the same way in which
the sale of a part of both transactions consisted, in a
transfer per as et libram. This explanation is consistent
with the definitions of the jurists, and the uses of
these two words.

The person who became nêxum by the effect of a
nêxum or nœxum (for this form of the word is also used)
said nœxum inire. The phrases nêxus datio, nœxi liber,
respectively express the contractting and the release
from the obligation.

The Roman law as to the payment of borrowed
money (pecunia certa creditis) was very strict. A
curious passage of Gellius9 gives us the ancient
mode of legal procedure in the case of debt, as fixed
by the Twelve Tables. If the debtor admitted
the debt, or had been condemned in the amount of the
debt by a judex, he had thirty days allowed for
payment. At the expiration of this time he was
liable to the manus injeqtio (vid. MAMNIS INJECTIO),
and ultimately to be assigned over to the creditor
(vadictus) by the sentence of the pretor. The
creditor was required to keep him for sixty days in
chains, during which time he publicly exposed the
debtor, without mention of the nature of the fine,
and proclaimed the amount of his debt. If no person
replied within the period, the creditor, by paying
the debt, the creditor might sell him as a slave or
put him to death. If there were several creditors,
the letter of the law allowed them to out
the debtor in pieces, and to take their share of his
body in proportion to their debt. Gellius says that
there was no instance of a creditor ever having
adopted this extreme mode of recovering his debt.
But the creditor might treat the debtor, who was
addictus, as a slave, and compel him to work out
his debt; and the treatment was often very severe.
It is remarkable, that in this passage Gellius does
not speak of nœxum, but only of addiciti; which is
sometimes alleged as evidence of the identity of
nœxum and addictus, but it proves no such identity.
If a man is here supposed to be, then
the law of the Twelve Tables would be, that
for when a man had once become nœxum with respect
to one creditor, he could not become nœxum to an-
other; and if he became nœxum to several at once,
in this case the creditors must abide by their own
contract in taking a joint security. This law of the
Twelve Tables only applied to the case of a debtor

NEXUS.

being assigned over by a judicial sentence to sever., creditors, and it provided for the settlement of their conflicting claims. The distinction between a nexus and a judicature is obvious enough, that some writers have missed it.

The precise condition of a nexus has, however, been a subject of much discussion among scholars, and it is not easy to reconcile all the passages in which the term occurs so as to deduce from them a consistent view of the matter. Sometimes, indeed, nexus appears to be used in the same sense as adscript, which cannot cause any difficulty if we consider that the effect of being nexus and adscript was the same, as will presently be made probable.

As a nexus was effected per ses et libram, it was in the form of a sale, and, of course, there was an object of sale; and this object of sale might be a thing in the hand of a person. A free person, so far as the law is concerned, might, if he wished to make it so, be the object of a sale, but it requires only a slight acquaintance with Roman law to perceive that this difficulty could be got over by a fiction. As in the case of manumission per vindicium there was a fiction that the slave was free, so there might here be a fiction that the freeman was a slave. If this fiction were adopted as a probable solution, it cannot be denied that there would still be much difficulty in understanding the coemito of a female, who was sui juris, which, as a legal fact, is quite certain, as the formal sale of a freeman with his consent. The notion of a freeman giving himself into the power of another; so far from being foreign to the notions of Roman law, as some writers have asserted, is perfectly consistent with them, as we see in the instance of adrogation.

The nexus, then, being in the form of a sale, the nexus was in a servile condition as a necessary consequence of the nexus, and the opinion that there must be an addition to give effect to the nexus is inconsistent with the notion of the nexus. According to this view, a nexus, as soon as the contract of nexus was made, was in the condition of an addictus, and both were treated as slaves. But it has been urged that "one cannot discover any reason for this self-pledging (nexusm), since every insolvent, even when there was no nexus, must become a slave by a condition (addictus), and how can we understand that the advantage of being nexus not only was such an advantage gained by the plebeians, if the addictio still remained, which might be obtained when there was no nexus; and it cannot be denied that it did remain?" The advantage consists precisely in the difference between a contract which cannot be enforced against a person without the form of legal proceedings, and a contract which once gives a man a power over his debtor without any application to a court of justice. The effect of the abolition of the nexus, in this its special sense, while the addictio still existed, may be illustrated by the supposed case of a landlord's remedy for the recovery of his rent by distress being abolished, which is a question under the contract for letting and hiring remained.

It is remarked by Götting, that the comparison of the adrogatio and the addictio gives the clearest proof of the correctness of Savigny's view, who rejects the notion of a freeman pledging himself. In the case of the adrogatio of a Roman, who is not already in a servile condition, no such person could effect of himself; but, of a Nexus, an adrogatio occurs, and it is effected by the living father and the son together. In the case of coemito, it certainly appears as if the woman of herself effected a self-manicipation; she, however, is not herself auctors, but her guardian is auctor."

There may be some weight in this observation, the point of which appears to be this: there was manipatio in the case of adoption, where the adopted person was in the power of another, but no manipatio in the case of adrogation, where the adopted person was not in the power of another. The tacit conclusion, then, seems to be, that in one case there was no manipatio, and yet a person was brought into the power of another with his own consent, there could be no manipatio when a person consented to put himself into a servile relation to another; for it is, in cases next in point, a voluntary act was voluntary. But this is not a legitimate conclusion. It is easy to see that manipatio in the case of adoption, where the son was in the power of the father, was a sufficient form, considering that the person adopted was only a filiusfamilias; and that adrogation, which was of a person who was a filius, and given in manumission, all required other forms to be observed, because the person adrogated was not a filiusfamilias. (Vid. Adoption.)

A nexus effected no change of family, like an adoption or adrogation; and, while its object was different from that of both of these ceremonies, it is quite consistent for its form to have been the same as the form of the one, and different from the form of the other.

The mode in which Götting explains this matter of the nexus is as follows: "A free citizen can come into a mancipial condition when he cannot pay a loan (as confessum) out of his own means. What in such case he has to give security is, that to which he has bound himself, is called nexus (nameley, a); hence the phrases nexus dato, nexus libertate. The person who does such an act is called nexus (from nexus nexus) iniens, nexus faciens; but after he has received the loan in the above solemn manner, he is nexus obligatus, nexus vincit: as soon as he has failed to fulfil his obligation, and, in consequence of such failure, has been addicted (addictus), and given in manumission, he is nexus mancipii, he is called nexus (adjetive), qui se nexus datit; a more confused account of the thing, or one more remote from legal precision, cannot be imagined."

The lex Pettilia (B.C. 326) alleviated the condition of the nexus. So far as we can understand its provisions, if the borrower did not pay the debt, he was solutus, and it enacted that, for the future, there should be no nexus (cautumque in postterum nec necessitatem), and that no debtor should, for the future, be put in chains. Addictio, however, still continued in force after the lex Pettilia, as we see in several instances. It appears from the lex Gallie, in which the phrase nexus, and in the case of other actions there was only a possessio honorum, but in the case of pecunia certa credita there was personal execution. The enactment of the lex Julia, which introduced the bonorum cession, and gradual changes in society, must have diminished the frequency of the addiction. (Vid. Bonorum Casso.)

Neither the addictio nor the nexus was a slave, and it is not possible in suspense. As to the nexus, it must have been necessary that the effect of the legal act by which the ingenium was made a nexus should be done away with by another legal act; and this seems to be the nexus liberatio which was done per as et libram. It also appears, from a passage in Livy, that a certain person, who was thus adrogated, remained such till the act was released from his obligation per as et libram. In the time of Gaius, an imaginary form of payment per as et libram was retained in cases where the
NEXUM.

It was Niebuhr’s opinion that the nexum, when it became a form of giving security, had not its complete effect until the debtor was unable to pay, and was brought into the condition of a debtor-slave by the additio. An answer to this is contained in a passage already quoted. If required an additio to make a person nexum, what was the use of a nexum when a man might become additius, even when there was no nexum? The only intelligible solution of all these difficulties is, that a nexum had an immediate effect.

It seems to be a legal consequence of a nexum and an additio, that the children, if they were in the power of the creditor, must follow his condition, as in the case of adrogation.

In the case mentioned in Livy, where the son is said to have been nexum for his father’s debt (cum se nexum dedisset), it may be that the father bound his son only, which he could certainly do just in the same way as he could manumit him. If the son was not in his father’s power, he could still bind himself on behalf of his father. The expression in Livy does not enable us to determine which of the two possible cases was the real case, but it seems probable that the son was in the power of the father.

The meaning of the provision in the Twelve Tables, as cited by Gellius, as to cutting the debtor in pieces, has been a subject of much discussion. Taylor has given in his translation of the Twelve Tables, a note ad loc. De Inope Debitore (in partes disseccando), attempts to prove that Gellius misunderstood the old law, and that the words of the Twelve Tables, “partis secundo: si plus minusse secuerint se fraude esto,” mean that the several creditors are entitled to have the “parts,” that is, the “operis” of the additio, divided or distributed among them; and he goes on to explain the rest of the law in these terms: “Commune sit servus corum, qui guidem adfuisset: et sine fraude esto, si ecteris toties proculas suas quoque partis in debitores non vindicarent.” But the arguments of Taylor are by no means satisfactory. The conjecture that the “parts” are the shares of the creditors arising from the sale of the debtor, is also unsupported by any proof. This monstrous enactment, if it were taken literally, shocked all our notions of humanity, but it has been well observed that it is by no means inconsistent with the spirit of the Roman law; and that the fact of an actual division of a debtor’s body not being on record, is no proof of it, and hardly furnishes a presumption against the existence of such a law. The Romans had no prisons for debtors. The creditor was the debtor’s jailer, and we know that in the oldest time he was one of the family, and that several creditors who claimed the body of a debtor, he might be kept by any one for the benefit of himself and the rest till the sixty days were over; but after

that time, if the creditors could not agree among themselves, there was no possible mode of settling their conflicting claims than that which the law of the Decemvirs gave them, and which they might adopt if they chose. Such a law could never be carried into effect, unless the legislator must have well known, and thus, while its terms fully satisfied the claims of the creditors, in practice it may have turned out really favourable to the debtor.

(Vid. the remarks of Gellius on this part of the law.) But the solution of the difficulty is quite a different matter from the fact of its existence, which is in no way to be questioned because we have no direct evidence.

The various authorities on the subject of the nexum and additio are referred to by Reis, Der Rom. Privatrecht, p. 313, &c. The writer of this article has not had the advantage of seeing the essay of Savigny, Ueber das altrömische Schuldbuch, Berlin, 1834, and is only generally acquainted with it from other works. The whole subject is still encumbered with difficulty, as will appear from a reference to the various writers on this subject. The note of Walter appears to contain the true statement as to the difference between the effect of a nexum and a res judicata; but he rejects the notion of a man selling or pledging himself.

NIBUS VITÆREUS. (Vid. Nix.)

*NITRUM (nìr̃vum). ‘It is scarcely necessary to remark,’ says Adams, that the Latin NITRUS and NITRICUS are connected by a modern form from the nitrate of potassa; but it is not an easy to determine its real nature. Geoffroy, indeed, looked upon it as having been of the same nature as the salt of tartar or potash; but it is much more probable that it was a native composition of soda. It appears from Martial and Serapion that it was nearly allied to common salt, which we know to be sodium carbonate of soda. The word NITRUS in anciently mentioned in the Bible, that an effervescence was produced by pouring vinegar upon it, we may also determine, with some confidence, that it was a carbonate. It seems probable, then, that it was a carbonate of soda. This is also the opinion of Coray; no mean authority on such a matter. Dr Kild, however, maintains, that the terms NITRUS and NITRICUS are not applicable to the native carbonate of soda; they were sometimes applied likewise to saltpetre and sal ammonium. He thinks that Pliny, in the following sentence, applies it to the latter: ‘Calcio aspersum redditi o dereem vehementem.’ The *nitrum is called *carborum by Plato, from Chalarda, a lake in Macedonia.

NIX (nìx). Snow, was used by the Greeks and Romans in various ways as an accompaniment to their meals in warm weather. The great antiquity of the practice is shown by Athenæus. They drank water cooled by the admixture of snow. Also, when the wine was mixed in the vase (sid. statua), snow was poured into it instead of water, so as to cool and to dilute it at the same time. Fragments of ice were put into the cups of wine with the same view. Another method of applying the snow was by pouring wine through a strainer or colander filled with snow; by this process the wine was also rendered clear. The “nimbus vitæreus,” mentioned by Martial, seems to have been a glass colander, which was filled with snow so as to look like a cloud, and from which the wine, after passing through the snow, descended in a shower. Moreover, we learn
NOMEN.

that the water which was poured upon the hands of the guests before a splendid dinner was sometimes cooled with snow.

In consequence of this abundant use of snow and ice, they became articles of traffic. They were brought to Rome in large quantities and wagons, kept in stock, and not unfrequently set on fire as a means of escaping the cold.

NOMEN, in a special sense, was applied to the following parts of dress: 1. The knot used in tying on the scarf (vid. CHALVUS) or other articles consisting of a piece of wool, by means of which a brooch (vid. P S AN T I A) a ring, or some jewel, but frequently in the method shown in the woodcut of Diana at page 245. II. The knot of hair (κόρυβος, κράμβος), either at the top or at the back of the head, adopted by both sexes in fastening their long hair, which was turned upward or backward for the summer months.

The knot of head worn by boys of the poorer classes at Rome instead of the golden BULLA.

NOMEN (GREEK) (δυόμα). The Greeks, as is well known, bore only one name, and it was one of the especial rights of a father to choose the names for his children, and to alter them if he pleased. It was customary for every father to carry a name of the grandfather on his father's side. The history of Greece contains many instances of this custom, and Sosithes says, "I gave to my eldest son, as is just διακόν ήν εστι, the name of my father." What custom was generally followed with regard to the other children may be inferred from their names. Sometimes, in the case of those who he called his second son after the name of his wife's father, the third after a relative of his wife, and the fourth after his own grandfather on his mother's side. Mothers seem also sometimes to have assumed the right of giving the names to their children, and it may be, that in the case described by Aristophanes, and supposed in the passage of Isaodotes and Diogen, were called Diodytus and Diosgen. In some cases, lastly, the name of a son was a patronymic formed from the name of the father, as Phocion, the son of Phocos.

The day on which children received their names was the tenth after their birth. (Accesso). In some accounts, a child received its name as early as the seventh, or even fifth day after its birth. (Vid. AMERIODROMA.) The tenth day, called δεκατήρια, however, was a festive day, and friends and relatives were invited to take part in a sacrifice and a repast, where the expressions δεκατήρια χείλες and δεκατήρια στοματα. If in a court of justice proofs could be adduced of a father having held the δεκατήρια, it was sufficient evidence that he had recognised the child as his own.

The fact that every Greek had only one name rendered it necessary to have an innumerable variety of names, and never has a nation shown more taste, ingenuity, and invention in devising them than the ancient Greeks. But, however great the number of names might be, ambiguity and confusion would have attended the use of several. Therefore, the Greeks we are not always certain whether the same name in different passages or writers belongs to one or to several persons. The Greeks themselves were aware of this, and, where accuracy was of importance, they used various means to prevent mistakes. Sometimes they added the name of the father, as Pindarus, the son of Heraclides, in the songs of Plutus, and in the Eclipse of the Sun at Nauinicus; sometimes they added a name of the place or country in which a person was born, in the form of an adjective, as Θεοκλείδης ὁ Ἀρίναος, Ἰβόρδος ὁ Αἰκαρασσεύς, Ἀθαναδίος Ἀπαναίτες, Δικαίρων ὁ Μεσόνις, & c.; sometimes they added an epithet to the name, expressing either the occupation or profession which a person followed, or the name of the school, or the region belonged to. Instances are of such frequent occurrence that it is superfluous to quote any. The custom of adding the father's name was called πατρόθεν υδομάζεσθαι.

In common life the Greeks had yet another means of avoiding ambiguity, and this was the frequent use of names of the same or of similar character. This was done for the sake of certain liaibilities and defects. Thus Demothenes was from his childhood called Βόρας. Aristophanes mentions several names of birds which were used as nicknames; other nicknames are preserved in Athenaeus.

NOMEN (ROMAN). In the earliest history of Rome there occur persons who are designated by only one name, and this is sometimes, and in some cases, a name added to another; while there are many, also, who bear two names. The Romans of a later age were themselves uncertain as to the legitimate number of names borne by the earliest Romans; and while Varro, Appian, and others stated that the earliest Romans used only to have one name, their opponents adduced a great many instances in which persons had two. This question will perhaps be placed in a more proper light, and become more satisfactorily settled, if we consider separately the three distinct elements of which the Roman nation was composed in its origin, and it will then be found that both Varro and his opponents are right or wrong according as their assertions are applied to one or to all of the three tribes.

The Sabines, from the earliest times down to the end of their existence, had two names, one indicating the individual as such (prænomen), e. g., Albus, Volesus, Pompos, Talus, Catus, Titus, Quintus, Appius, &c., and the second the gens to which the individual belonged, which terminated, like the Roman nomina gentilicia, in the suffix -tus, e. g., Tatius, Pomplius, Claudius, &c. It is, moreover, a feature peculiar to the Sabines, that a person sometimes, instead of a praenomen and a nomen gentilicium, had two nomina gentilica, one indicating the gens of his father, and the other that of his mother. The latter sometimes preceded and sometimes followed the former. This custom is clear from Livy, who mentions a Campanian (Sabine) woman, Paculla Minia, who was married to a man who bore the name of Cerrinus from his gens, and one of the sons of these parents was called Minius Cerrinus. Another instance is the name of the Sabine augur Attius Na-
NOMEN

... where, according to Dionysius, Attius is the 

Dionysius, however, must be 
distressed in making Navius an θύμων προσθερεῖσθαι, 
it he meant this to be the same as the Roman pre- 
nomen, which the name Navius never was. In all 
probability, therefore, both Attius and Navius are 
nomina gentilicia. A third instance seems to be 
Minio, 3 Magnus, 4 the son of Decius Magnus. This 
practice must have been very common among the 
Sabines, for in most cases in which the two names of 
a person have come down to us, both have the 
termination ives, as Marius Egnatius, Herius Asi- 
5, Statius Gellius, 6 Obellius Calavus. A more 
complete list of such Sabine names is given by Göt- 
tling, 7 who supposes that a son bore the prse- 
a nomen or gentilicium of his father and mother only as long as 
as he was unmarried, and that at his marriage he 
only retained the nomen gentilicium of his father, 
and, instead of that of his mother, took that of his 
wife. Of this, however, there is not sufficient 
evidence. Thus much is certain, that the Sabine at 
all times had two names, one a real prse- 
omen, or a nomen gentilicium serving as a prse- 
omen, and the other a nomen genteilicium, the 
gentilicium of the father. The Sabine women bore, 
as we have seen in the case of Faucta Minia, like- 
wise two names, e. g., Vestia Oppia, Faucta Clu- 
via, 8 but whether, in case both terminate in ives, 
as they are nomen gentilicium, and whether the one, 
as Götting thinks, is derived from the gens of the 
woman's father, and the other from that of her hus- 
band, it is difficult to say. Meanwhile, it seems 
to have had a cognomen besides their prse- 
nomen and nomen gentilicium; but, wherever this occurs, 
the prse-omen is generally omitted, e. g., Herennius 
Bassus, 9 Calavus Perolla, 9 Vettius Cato, 10 Insteitus 
Cato, Popaeitus Silo, Papius Muilus. 11 Such a cogno- 
men must, as among the Romans, have distin-
guished the several families contained in one gens. 
The Latin in the earliest times had generally, 
even only one name, as is seen in the instances adduced 
by Varro, 10 Romulus, Remus, Faustulus, to which 
we may add the names of the kings of the aborigi-
nines (Latinus, Latinus, Ascantius, Capetus, Capys, 
Pros, Numitor, Amulius, and others. When, 
therefore, Varro and Appian say that the earliest 
Romans had only one name, they were probably 
thinking of the Latins. There was indeed, even at 
an early period, Latins with two names, such as 
Geminius Metius, Metius Saffetus, Vitrivius Vac- 
cus, Turnus Herdonius, &c.; but these names seem 
to be either two nomen gentilicium, or one a nomen 
gentilicium and the other a cognomen, and the 
Latinas do not appear to have had genuine prse- 
nomen, such as occur among the Sabines, and afterward 
among the Romans.

The Etruscans in the Roman historians generally 
bear only one name, as Porsenna, Spurina, which 
apparently conforms to the opinion of Varro; but on 
many ures in the toms of Etruria, such names ter-
mminating in na are frequently preceded by a prse- 
nomen. Muller 12 and Götting, 13 who follows him, are 
of the opinion that an Etruscan never bore a nomen 
gentilicium, and that the name terminating in na are 
mere cognomina or agnomen. Niebuhr, 14 on the 
other hand, thinks, and with more probability, that 
the Etruscan na corresponds to the Sabine and Rome 
ives, and that, accordingly, such names as Por- 
senna, Spurina, Cecina, Perpenna, Vibenna, Er- 
egenna, Mastarna, &c., are real nomen gentilicia.

From this comparison of the three original tribes 
it is clear that, when the Romans became united 
to one nation, they chiefly followed the custom of 
the Sabines, and perhaps that of the Latinas. 15 
Originally every Roman citizen belonged to a gene, and 
derived his name (nomen or nomen gentilicium) from 
his gens. In the Etruscan the nomen gentilicium 
terminated in ives, or with a preceding q, in eius, which 
in later times was often changed into eius, as Annius, 
Annius, and Annæus; Appulius and Appulius, 
Nomina gentilicium terminating in ives or eius, some-
times change their termination into the diminuitive 
ieus and eius, as Opullus, Hostillus, Quintillius, and 
Ocellus, instead of Opullus, Hostillus, Quintillius, and 
Acellus. But if one family had no nomen gentilicium, 
every Roman had a name, called prse-omen, which em- 
cluded the nomen gentilicium, and which was peculiar 
to him as an individual, e. g., Caius, Lucius, Marcus, 
Cneius, Sexius, &c. In early times this name was 
given to boys when they attained the age of puber-
tats, that is, at the age of fourteen, or, according to 
others, at the age of seventeen, 5 when they receiv- 
ed the toga virilis. At a later time it was custom-
ary to give them any name they wished after their 
birth, and to girls on the eighth day. This solemnity 
was preceded by a lestratio of the child, whence the 
day was called dies iuxtricums, dies nominium, or nominalia. 
The prse-omen given to a boy was in most cases that of 
the father, but some- 
times that of the grandfather or great-grandfather. 
Hence we frequently meet with instances like 
Marcus Licinius Crassus. At an earlier period, or 
the C. Octavius, C. F., C. N., C. P., that is, Caius 
Octavius, Caii filius, Caii nepos, Caii prones. 
Sometimes, however, the prse-omen was given 
without any reference to father or grandfather, &c. 
There existed, according to Varro, about thirty 
prse-omen, while nomen gentilicia were innumerable. 
These two names, a prse-omen and a nomen gen-
tilicium, or simply nomen, were indispensable to a 
Roman, and they were, at the same time, sufficient 
to designate him; hence the numerous instances 
of Romans being designated only by these two names, 
even in cases where a third or fourth name was 
possessed by the person. Plebeians, however, in 
many cases, only possessed two names, as C. Ma-
nius, Q. Sertorius, Cn. Pompeius, &c. The prse-
omen was generally given to the male citizens as an indi-
vidual, and gave him, as it were, his caput (vid. Caput) 
at the time when he received it. As women had not 
the full caput of men, they only bore the femi-
line form of the nomen gentilicium, as Cornelia, 
Sempronia, Tullia, Terentia, Porcia, &c. In later 
times, however, we find that women also sometimes 
had a prse-omen, which they received when they 
marrid, and which was the feminine form of the 
prse-omen of their husbands, as Cis Caia, Lucia, 
Pufilia. 5 Caia Cecilia, the wife of L. Tarquinius, 
if the name be historical, is an exception to this 
rule. 5 When Macrobinus states that girls received 
their name (he evidently means the prse-omen) on 
the eighth day after their birth, he alludes, as in the 
case of boys receiving theirs on the ninth day, to 
an innovation of later times, and among the female 
prse-omen given during an early age, we may reck-
n on Prima, Secunda, Tertia, Quarta, Postuma, &c. 
Vestal virgins, at the appointment to their priest-
hood (capito), when they left the patri potestas, re-
ceived, like married women, a prse-omen, e. g., Cis 
Taratia or Caia Suffetia. 5

Every Roman citizen, besides belonging to a gens, was also a member of a familia contained in a gens, and, as a member of such a familia, he had or might have a third name or cognomen. Such cognomen were derived by the Romans from a variety of personal or bodily peculiarities, or from some remarkable event in the life of the person who was considered as the founder of the familia. Such cognomina are Asper, Imperious, Magnus, Maximus, Publizola, Brutus, Capito, Cato, Naso, Labeo, Caesar, Cicero, Scipio, Sulla, Torquatus, &c. These names were in most cases hereditary, and descend- ed to the posterity of a family; in some cases they ceased with the death of the person to whom they were given for special reasons. Many Romans had a second cognomen (cognomen secundum or agnomen), which was given to them as an honorary distinction, and in commemoration of some memorable deed or event of their life, e.g., Africanus, Asiaticus, Hispalus, Cretensis, Macedonius. Names were, at least, at a late period, sometimes given by one general to another, sometimes by the army and confirmed by the chief general, sometimes by the people in the comitia, and sometimes they were assumed by the person himself as in the case of L. Cornelius Scipio Asiaticus. Sometimes also, a person adopted a second cognomen after the death of another, as M. Porcius Cat. Salonianus or Saloinius, who was the son of M. Cato Censorius and of Salonia.

The regular order in which these names followed one another was this: 1 praenomen; 2 nomen gentilicium; 3 cognomen primum; 4 cognomen secundum or agnomen. Sometimes the name of the gens was added to his name, in the ablative case, as Q. Q. Rœmilia, C. Claudius Palatina, Ser. Sulpicius Lemenia. No one was allowed to assume a nomen gentilicium or a cognomen which did not belong to him, and he who did so was guilty of falsum. It must have been in comparatively few cases that persons had a fourth name or agnomen; but the third, others, at least, at a late period, when plebeian aristocracy had become established, thought indispensable to any one who claimed to belong to an ancient family. In the intercourse of common life, however, and especially among friends and relatives, it was customary to address one another, not only by the praenomen or cognomen, as may be seen in the inscriptions of ancient times, but by the praenomen of some other person, one of whose cognomina, provided the person bearing it was sufficiently known or notorious, as we speak of Milton and Johnson, without adding any other distinction, although there are many persons bearing the same name. The most common mode of stating the name of a person, in cases where legal accuracy was not the object, was that of mentioning the praenomen and cognomen, with the omission of the nomen gentilicium, which was easily understood. Thus Caius Julius Caesar would, during the better ages of the Republic and in familiar conversation, be called Caius, otherwise Caius Caesar, or even Caius Julius, but never Julius Caesar, which was only done during the latter period of the Republic and under the Empire. L. Julius Albinus Tibullus, Cornelius Nepos, Menenius Agrippa, &c. A very common mode of stating the name of a person during these latter times was merely to mention his cognomen, and from some cognomina, provided the person bearing it was sufficiently known or notorious, as we speak of Milton and Johnson, without adding any other distinction, although there are many persons bearing the same name. The most common of these cases among the Romans are Verres, Carbo, Cato, Cepio, Cicero, Caesar, Sulla, &c. In the time of Augustus and Tiberius, it became very common to invert the above order of nomen and cognomen, and to say, e.g., Drusus Claudius, or Silvanus Plautius, instead of Claudius Drusus and Plautius Silvanus.

Roman women had likewise sometimes a cognomen, although instances of it are very rare. It was usually some characteristic of men derived from personal peculiarities, such as Rufa and Paulla, sometimes from the nomen gentilicium of their husbands, as Junia Claudilla, Ennia Naviia, Livia Ocellina, and sometimes from the cognomen of their husbands, as Caelia Metella.

During the latter part of the Republic and the early period of the Empire, when the Roman franchise was given to whole countries and provinces, the persons who thus acquired the civitas frequently adopted the praenomen and nomen of the person through whose interest they had obtained the distinction, or of the emperor himself. After the time of Caracalla (A.D. 212), when all the free inhabitants of the Empire had obtained the Roman franchise, such persons did not always retain the name of their ancestors which they had adopted, for it is not improbable that some of them were not allowed to. When adopted, these names were usually prefixed to the praenomen of the person, and considerable length were sometimes given to the cognomen, as P. Cornelius Scipio. But in many cases, the name of the person who had been adopted was retained, and added, without any alteration, to the name of the adoptive father, as in the case of Q. Servilius Cepio Brutos. This was done only in the case of the adopted name of a freedman, and it was a frequent custom when adopted into another gens, added his own nomen gentilicium without any alteration, to that of his adoptive father, as in the cases of C. Plinius Cecilius Secundus and L. Eusius AureliusCommus. Besides this, many other irregularities occurred in cases of adoption during the period of the Empire, but it is not necessary for our purpose to enumerate them here.

Slaves had only one name, and usually retained that which they had borne before they came into slavery. If a slave was restored to freedom, he received the praenomen and nomen gentilicium of his former master, and to these was added the name

---

---
which he had had as a slave. He became thus, in some measure, the gentilis of his former master, in as far as he was given the same nominal title, but he was none of the other claims which a freeborn gentilis had.\(^1\) Instances of such freedmen are Titus Amphius Menander, a freedman of T. Amphius Balbus;\(^2\) L. Cornelius Orychosogonus, a freedman of L. Cornelius Sulla;\(^3\) M. Tullius Laurea and M. Tullius Tiro, freedmen of M. Tullius Cicero. It appears, however, that the emancipator sometimes avoided giving to his freedman his nomen gentilicum, for Dossus had assumed a nomen of J. Cesar whose nomen gentilicum is Licius. If the state emancipated a servus publicus, and gave him the franchise at the same time, any prenomen and nomen were given to him, or he took these names from the magistrate who performed the act of emancipation in the name of the state, and then received a cognomen derived from the name of the city, as Hæmatius or Romanænas.\(^4\)

**NOMIΣΜΑΤΟΣ ΔΙΑΘΕΣΕΩΣ ΚΡΑΤΗ (νομισμα-
τος διαθέσεως κράτη) is the name of the public
action which might, at Athens, be brought against
any one who coinced money either too light in weight
or not consisting of the pure metal prescribed by
the law. The lawful punishment inflicted upon a per-
son in case he was convicted was death.\(^5\) What
action was brought against a coiner without the sanction
of the Republic, and how such persons were punished, is not known.\(^6\)

**NOMOPHΥΛΑΚΕΣ (Νομοφύλακες).** This name
denotes certain magistrates or official persons of
high authority, who exercised a control over other
magistrates, and, indeed, over the whole body of
the people, in being their duty to see that the laws
were duly administered and obeyed. Mention is
made of such officers at Sparta and elsewhere,
and some of the Greek philosophers who wrote on
"legislation appear to have thought that such a body
of men was essential to the well-being of a social
community."\(^7\) Such body existed at Athens, for
they must have had a power too great for the exis-
tence of a democracy. The senate of 60, or the
aρχωνοττική council, performed in some measure
the office of law-guardians;\(^8\) but the only persons
designated by this name appear to have been infe-
tional functionaries (a sort of police), whose business
was to prevent "irregularities and disturbances in
the public assembly."\(^9\) Even their existence has
been doubted by modern writers: some think they
have not existed at all.\(^10\) In the Athenian dem-
ocracy the sovereign power was too great for any
one but the people to exercise it.\(^11\) An
other hypothesis is, that the office was never intro-
duced until the time of Demæt-tus Phæleus, who,
when he was invested with the authority of lawgiver
by Cassander, gave to the Eleven the additional
duty of watching the conduct of all the other
magistrates, with a view to introduce a more aristo-
cratical government. In favour of this opinion, it
has been observed, that the office of noμισματικος
is only mentioned by grammarians, and they refer to
Dinarchus, who was the friend and contemporary of
Demæt-tus.\(^12\)

**NOMOS (νόμος).** This word comprehends the
notion not only of established or statute law, but
likewise of all customs and opinions to which long
prescription or natural feeling gives the force of
law. It expresses the results of the καινον και
μακρον μενον αν φιλοε τε ποιώνου.
In the heroic ages,

The transition from customary or traditio-
nal law to fixed civil ordinances must have taken place
gradually. When people came to unite in cities (κοινωνία), and from compact societies they be-
gan to feel the necessity of having permanent laws
to define and secure their civil rights. The notion
soon sprang up that society was formed for the
good of all classes. "The expression το καρπον,
formerly applied to national leagues and confederacies,
came to denote a united body of citizens, and equal
laws were claimed for all. From this body, indeed,
were excluded all such persons as came under the
definition of πείρικοι, provincials,\(^5\) or serfs, like
the Helots, and all slaves of every kind. It was the
only townswoman (πολίτης) and the freeman who could
enjoy the privileges of a citizen. The eminent (άντιμης μετανοης), though, if he became a resi-
dent (μετανοης), he was, upon certain conditions,
vested with the properties of a freeman; and the
office of πολίτης was never placed on the same footing
as the native. Before any written ones appeared, law
was promulgated by the rots or wise men, who sang
the great deeds of their ancestors, and delivered
their moral and political lessons in verse. Such
was the βρῆκα (declared law) of Sparta and Tarent.
The laws of Charondas were sung as οὐλία (4 Athen.).
The influence exercised by the ancient laws
was in a great degree the power to which they
were divinely inspired, a power which was ascribed
to most of the ἀνατολήν Υδρακτες. Thus the laws
of Minos were said to be a revelation from Jupiter.\(10\)
Lycurgus was the combaiξ of the Delphic god;
Zaleucus of Pallas.\(11\) Some have supposed that
the use of νόμος, in the sense of law, was derived
from the circumstance of laws having been first in
verse, and then in prose.\(12\)

But this is not surprising, when we consider that
pri-
NOMOS.

Epiplæ of harmony are necessary not only to music and poetry, but to the adjustment of the various relations of civil society; and both meanings may well be derived from νόμος (distributæ summa eique).

As civilization advanced, laws were reduced to writing, in the shape either of regular codes or distinct ordinances, and afterward publicly exhibited, inscribed on the walls of different temples. The first written laws we hear of are those of Zaleucus. The first at Athens were those of Draco, called ἔκτομοι, and by that name distinguished from the νόμοι of Solon. From the origin of this word, one would suppose that it signified ordained or statute law, τοις νόμοις; but it is frequently used like ὕμως, in the sense of natural right or social usage. The rectangular archons were called ἐκτοματίδες, because a great variety of causes fell under their cognizance, and, in the absence of a written code, those who declared and interpret the laws may be properly said to make them.

The laws of Lycurgus were not written. He enjoined that they should never be inscribed on any other than wooden tablets, arranged in pyramidal blocks turning on an axis, called ἄξονες and κύφεις. They were first hung in the Acropolis, but afterward brought down to the Prytaneum. Archives were established for the custody of Athenian laws in the temple of the mother of the gods (ἱερὰ τοῦ μητρίστη), with a public servant (ὑπήκοος) to take care of them. Others were hung up in various public places, so that any citizen might have access to them, to read or take extracts. For instance, laws which concerned the jurisdiction of the archon were hung up in his office; those which concerned the senate (βουλευτικαὶ νόμοι) in the council-room, and so on. After the expiration of the thirty days, or the archon's term, the decree of Euclides was passed by the assembly to restore the ancient laws, and appoint a committee to revise them, and propose any alterations or additions that might seem necessary. The new and old laws were all to be written out in the enlarged Ionian alphabet, which had not come into use in Solon's time; and the whole code was transcribed on the walls of the portico (ἐξ ἑνὸς στού-ν αὐτόγραφον). At the same time it was enacted that no magistrate should be allowed to use an unwritten law (ἀγράφῳ δὲ νόμος τὰς ἄρεις μη χρήσται μᾶλλον ἐπὶ ἱκανύς).

According to these statutes of Solon, and those which were subsequently enacted at various times, the magistrates and the judges at Athens were bound to administer the law, executive and judicial. The heliastic body, acting in their capacity of judges or jurors (as to their legislative, see Νομοθέτες), were sworn per mān dōvō νόμος εἰσίν, καῦ τοῖς νόμοις φασίδισαν, περὶ δὲ δὲ μὲν εἰσὶν, γεννο-μένα λόγοι ἔπεμψαν, δίκαια δὲ κατὰ δίκαιαν ἁγιασμὸν, the parties procured copies or extracts of such laws as were material to the questions to be tried, and brought them before the ἄγιαν δικαστηρίων at the ἀνάκτριον, by whom they were consigned to the κύριος, and produced at the trial, to be read out to the δικαστεία by the γραμματέας. If any man produced before the judges a fictitious law (οὔτε ὅπερ νόμον), he was punishable with death.1

Notes:

As the δικασταὶ (chosen as explained under Δ ΚΑΣΤΕΣ) performed the functions of both judge and jury, it is evident that the important question how the laws of Athens worked, depends on the discretion which in practice they exercised in the interpretation of the written law. This is only to be discovered by a careful perusal of the Attic orators, and it is too long a question to be discussed here. Much light is thrown on the subject by Aristotle, who, in treating of judicial matters, allways has in view the practice of the Athenian courts. He reckons the νόμοι among the ἄγιαν τίθενται, and advises the orator, when the law of the country is against him (ἐὰν ἐναντίον ὦ γεγραμμένον τῷ πλαίσιον), to appeal to the universal law of justice, for (says he) if the written law is contrary to justice, it is not a law, ὥς γὰρ τοιοῦ τί ἐγγυν τοῦ νόμον. From this it may be seen, that the notions entertained by the Athenians of the discretion to be exercised by a judge were somewhat different from our own. There existed a class of persons corresponding to our counsel or attorneys, whose business it was either to explain if it was to expound the laws. The office of the ἐκ νομαὶ related only to religious observances. (Vid. Eρευνητ.) According to the principle of the constitution, every citizen was bound to watch over the preservation of the laws, and to inform against and prosecute any persons who transgressed them. The people, either on the bench or in the assembly, were the ultimate judges.

As to the difference between νόμος and ψιφίσμα, and as to the manner in which laws were enacted or repealed, see Νομοθέτες.

NOMOTHÉTES (νομοθέτης), legislator, is a word which may be applied to any person who caused laws to be written, or in any way influenced the making of laws. The term is commonly applied to great men whose laws have been celebrated for their intrinsic merit, or for the important influence which they exercised over the destinies of their country. Such were Minos of Crete, Dracon at Athens, Lycurgus at Lacri, and Charondas, whose laws were distinguished for their σωφροσύνα, and were received at Rhegium, Catana, and other Chalcedian states. Many more have been honored with this title, either for having improved the laws of their countrymen, or as having, by their writings, their counsel, and their good example, and by training up a new and improved discipline among them. These were the sages or wise men, called by Diogenes Laertius' συνετοὶ τικει καὶ νομοθέται. Pittacus of Lesbos, Phidon of Argos, Thales of Miletus, Bias of Priene, Chilon, who improved the laws of Lycurgus, and Pythagoras, may be reckoned in this class. But the name of νομοθέτης is given to Solon and Lycurgus; for they not only introduced constitutions, but were founders of constitutions (πολιτεῖα), which, though from time to time modified and altered, and sometimes even suspended, remained more or less in force so long as Athens and Sparta existed as republics. So high was the esteem in which Solon was held by the Athenians, as the founder of their social and political code, that the highest forms of honor were bestowed on his name, and his laws, which at different periods, he still continued to be regarded as the lauserni (ὁ νομιστὴς), and the whole body of laws passed under his name. Wachsmuth's remarks, that on this account, whenever a law of Solon is cited, we may suspect that

Notes:

683
NORMA

NOTA CENSORIA

it contains interpolation. On the other hand, we should bear in mind that in all the changes which took place in the Athenian constitution, the reformers aimed at preserving the main principles of Solon’s policy. Clisthenes, who established the δήμος, remodelled the σώμα, and made other changes, is characterized by Aristotle as having for his object "αξιόματα των δημοκρατιῶν.

There is this remarkable difference between the legislation of Solon and that of other Greek lawgivers, that he did not (as they did) endeavour to secure fixity and finally for his institutions. Zaleucus and Charondas are said to have made it a capital crime to propose new laws. Lycurgus forbade young men to censure the laws; and when he went on his last journey, from which he never returned (the story says), he bound his countrymen by an oath to observe all his laws till his return. Solon exactly a similar oath of the Athenians for only ten years.

But Solon also devised regulations by which the laws might undergo periodical revision, and be amended as occasion required. At the first κράτη, every year, any person was at liberty to point out defects in the existing code or propose alterations. If his motion was deemed worthy of attention, the third assembly might refer the matter to a legislative committee, called νομοθέτης. This committee was selected by lot from the hellenistic body; it being the intention of Solon to limit the power of the popular assembly by means of a superior board emanating from itself, composed of citizens of mature age, bound by a stricter oath, and accustomed to weigh legal principles by the exercise of their judicial functions. The number of the committee so appointed varied according to the exigency of the occasion. The people appointed five advocates (οἰκέται) to attend before the board and maintain the policy of the existing institution. If the proposed measure met the approval of the committee, it passed into law forthwith. Besides this, the thesmothetae were officially authorized to review the whole code, and refer all statutes which they considered unworthy of being retained to the νομοθέτης.

Hence appears the difference between φύσιμος and νόμος. The mere resolution of the people in assembly was a ψήφωμα, and only remained in force a year, like a decree of the senate. Nothing was a law that did not pass the ordeal of the νομοθέτης. The democracy of Solon was therefore one of that kind, in which (as Aristotle says), νόμος ἦν ἀνίκητος. νομοθέτης. The democracy of Solon was therefore one of that kind, in which (as Aristotle says), νόμος ἦν ἀνίκητος. νομοθέτης. This part of the censual power appears at first to have extended no farther than to censure and to punish the bad conduct of a citizen in so far as it had an injurious influence on his census, but gradually it acquired the character of a complete superintendence of the whole private and public life of a citizen. This part of their office invested them with a peculiar kind of jurisdiction, which in many respects resembles that which in modern times is exercised by public opinion; for there are innumerable actions which, though acknowledged by every one to be bad and immoral, yet do not come within the reach of the positive laws of a country. Even in cases of real crimes, the positive laws frequently punish only the particular offence, while in public opinion the offender, even after he has undergone punishment, is still incapacitated for public employment, which are granted only to persons of unblemished character. Hence the Roman censors might brand a man with their nota censoria in case he had been convicted of a crime in an ordinary court of justice, and had already suffered punishment for it.

The nota censoria, also called animadversion or nota-lito censoria, together with the punishment and the

wooden rulers (vid. Regula) of equal thickness, one of them being two feet ten inches long, the others each two feet long, and joining them together by their extremities so as to assume the form of a right-angled triangle. This method, though only a close approximation, must have been quite sufficient for all common purposes. For the sake of convenience, the longest side, i.e. the hypotenuse of the triangle, was discarded, and the instrument then assumed the form in which it is exhibited among other tools in the woodcut at p. 252. A

square of a still more simple fashion, made by me cutting a rectangular piece out of a board, is shown on another sepulchral monument, found at Rome and published by Gruter, and copied in the woodcut which is here introduced.

From the use of this instrument, a right angle was also called a normal angle. Anything misshapen was called abnormal.

NOTA CENSORIA was the remark which the censors in their lists wrote by the side of the name of a Roman citizen who deserved censure for misdeemance or immoral conduct. For one importa branch of the power of the Roman censors was to discipline or cura morum, whence they are called by Cicero profecti moribus et magistris veteris disciplinae et severitates. This part of the censual power appears at first to have extended no farther than to censure and to punish the bad conduct of a citizen in so far as it had an injurious influence on his census, but gradually it acquired the character of a complete superintendence of the whole private and public life of a citizen. This part of their office invested them with a peculiar kind of jurisdiction, which in many respects resembles that which in modern times is exercised by public opinion; for there are innumerable actions which, though acknowledged by every one to be bad and immoral, yet do not come within the reach of the positive laws of a country. Even in cases of real crimes, the positive laws frequently punish only the particular offence, while in public opinion the offender, even after he has undergone punishment, is still incapacitated for public employment, which are granted only to persons of unblemished character. Hence the Roman censors might brand a man with their nota censoria in case he had been convicted of a crime in an ordinary court of justice, and had already suffered punishment for it.

with the nota and degraded. For an enumeration of the offences that might be punished by the censors, see Cic. Pro Cael. 49, 50, p. 399, &c.

The punishments inflicted by the censors generally differed according to the station which a man occupied, though sometimes a person of the highest rank might suffer all the punishments at once, by being degraded to the lowest class of citizens. But they could in no case be divided into four classes:

1. Motio e oracio e senatu, or the exclusion of a man from the number of senators. This punishment might either be a simple exclusion from the list of senators, or the person might at the same time be excluded from the tribes and degraded to the rank of an atrarius. The latter course seems to have been seldom adopted; the ordinary mode of proceeding was to separate the censor's name from that of the person, invited to the Senate, and to exclude him from the ranks of the people. In some cases, however, an ex-senator was not disqualified by his ignominy for holding any of the magistracies which opened the way to the Senate, he might at the next census again become a senator.

2. The ademptio equi, or the taking away of the equus publicus from an eques. This punishment might likewise be simple, or combined with the exclusion from the tribes and the degradation to the rank of an atrarius. The motio e tribu, or the exclusion of a person from his tribe. This punishment and the degradation were sometimes inflicted on an atrarius for the same crime; but when, in the course of time, a distinction was made between the tribes rustici and the tribus urbane, the motio e tribu transferred a person from the rustic tribes to the less respectable city tribes; and if the farther degradation to the rank of an atrarius was combined with the motio e tribu, the person suffered twice as much. The fourth punishment was called referre avariorum, or facere aliquem avariorum, and might be inflicted on anyone whom the censors thought to deserve it. This degradation, properly speaking, included all the other punishments, for an eques could not be made an atrarius without being the possessive of an equus; nor could a member of a rustic tribe be made an atrarius unless he was previously excluded from it.

A person who had been branded with a nota censoria might, if he thought himself wronged, endeavour to prove his innocence to the censors (causa agris apud censores); and if he did not succeed, he might try to gain the protection of one of the colleges of the Senate, and to have his case referred to a Committee of a tribunal. If neither of the censors would intercede, he might appeal to the tribunes, or to the people itself. But cases in which this last refuge was resorted to must have occurred very seldom, and where they happened they were mostly unsuccessful attempts; whence Dionysius, with some justice, says that the censorship was an ἀργὸς κοινωνίατος.

NOXALIS ACTIO

NOXALIS ACTIO. If a filiusfamilias or a slave committed theft or injury, the person injured had a right to demand a noxa, a nox, an act or thing wrong done to him, against the father (paterfamilias) or the owner of the slave, as the case might be, but he had no action against the son or the slave. The word noxa (from noc-ec-o) properly signified in jury done; in its legal sense it comprehended every delict. The master might either pay damages to the injured person, or surrender the offender to the injury. This noxa was expressed by the phrase "noxae dare et dederi;" and the acceptance of the offender in satisfaction of the injury was expressed by the phrase "noxae accipere;" in these expressions "noxa" does not mean "punishment," as is sometimes supposed, but the meaning of the expression is, that the person was surrendered in respect of or as a compensation for his noxa. In the Tusc. Inst. 4. 137. it is defined to be the person or thing that does the mischief, and noxia the mischief that is done.

Noxales actiones were given both by leges and by the edict. In the case of furtum they were given by the Twelve Tables, and in the case of damai injuria by the lex Aquilia. In the case of injuria and of vi bonorum raptorum, they were given by the edict. This action was said "capax omnium," which is thus explained by instances: if a son or slave committed noxa, the act was against the father or owner, so long as the offender was in his power; if the offender became sui juris, the injured party had a direct action against him; and if he came into the power of another person, that other person was liable to the act. If a paterfamilias committed noxa, and was adopted (aggregated) to that noxa, which was originally against him (directo), became an action against the adopting person. A paterfamilias or master could have no action against a son or slave in respect of a noxa done to him, the ground of which was that no obligation could be contracted between such parties; and as the foundation of all obligation was wanting in such case, it followed that no one, who had no action against such son or slave if he became sui juris, nor against another person into whose power he might come if another person's slave or son committed noxa, 1.

and then came into the power of the injured person, it was a question between the two schools whether the right of action was extinguished, or only suspended so as to revive in case the offending party was released from the power of the injured person. The opinion of the Proculiani, which was in favour of the suspension only, appears more consistent with the principles on which this right of action was founded.

The moe of the "noxes deditio" was by mancipation. The Proculiani contended that three mancipationes were required by the law of the Twelve Tables (viz. Exoncratio); but the Sabinianni contended that the law only applied to the case of voluntary mancipationes, and that one mancipation was sufficient. If the father or owner made no defence to a noxes actio, the offender was given up by a decree of the prator to the injured person, and thus became his pratorian property (in bonis). It several slaves committed theft, the edict required the master to pay only the amount of damage which would be payable in case a single freeman had committed the theft.

Justian abolished the noxes datio in the case of children, observing that it appeared from the ancient jurists that there might be an action against a filiusfamilias in respect of his delects. NUNDINIÆ (Lit. Cai.); (Vid. Cal. p. 189.)

NUNDUS (γυμνός.) These words, besides denoting absolute nakedness, which was to be ἦπαρτος εἰς ἄλθενσι, were applied to any one who, being without an Amicus, wore only his tunic or imbuta. In this state of nudity the ancients performed the operations of ploughing, sowing, and reaping. Thus this state of nakedness was found naked at the plough when he was called to be dictator, and sent for his toga that he might appear before the senate. The accompanying woodcut is taken from an antique gem in the Florentine collection, and shows a man ploughing in his tunic only. The light and thin clothing of Her. S. Ex. was denoted by the use of the same epithets. (Vid. Co. Vet. 24.)

NUMMULA'RII or NUMULA'RII. (Vid. Mem.)

NUMMUS or NUMUS. (Vid. Sestertius.)

NUMCUPARE. (Vid. Testamentum)

NUNDINÆ is invariably and justly derived by all the ancient writers from nundem and dies, so that it literally signifies the ninth day. In ancient calendaris all the days of the year, beginning with the first of January, are divided into what we may call weeks, each containing eight days; weeks are ark ed by the letters A, B, C, D, E, F, G, H. Now it is admitted on all hands that this division is made to mark the nundinæ, for every eighth day, according to our mode of speaking, was a nundinæ. There were thus always seven ordinary days between two nundinæ. As the judicial business of reckoning, added these two nundinæ to the seven ordinary days, and, consequently, said that the nundinæ recurred every ninth day, and called then nundinæ, as it were novemdiæ. A similar mod of stating the number of days in a week is still cus tomary in Germany, where, in common life, the expression two weeks, and a Thursday, means a week, and a Thursday. French and Italians, in the same manner, call a fort night quinz'e jours and quindici giorni.

The number of nundinæ in the ancient year of ten months was 38; and care was always taken that they should not fall on the calends of Januari, nor upon the nones of any month, and, in order to effect this, the 356th day of the lunar year (dies in tercalariis) was inserted in such a manner as to avoid the coincidence of the nundinæ with the pri ma calendae or the nones. Macrobius says that it was generally believed, that if the nundinæ fell upon the prime calendae, the whole year would be signalized by misfortunes; the nones were avoided because the birthday of King Servius Tullius was celebrated on the 21st of July, and, as it is known that he was born on the nones of some month, though the month itself was not known. Now, as on the nundinæ, the country-folk (plebe una) assembled in the city, the patricians feare lest the plebeians assembled at Rome on the nones might become excited, and endanger the peace of the whole; the nundinæ are called nones from this reason, satisfactory, as Götting has shown, and it is more probable that the calends of January were ill suit ed to be nundinæ, because this day was generally spent by every father in the bosom of his own family, and that the nones were avoided because, a Ovid says, Nonarum tuta deo servât. But at the time when the Julian calendar was introduced these scruples, whatever they may have been, were neglected, and in several ancient calendaris the nundinæ fall on the first of January as well as on the nones. (Vid. Gray, Thesear., viii., p. 7, ann the calendarium given in the article Calendar. Both before and after the time of Caesar, it wasSomething necessary, was to devise some way to transfer the nundinæ from the day on which they should have fallen to another. The nundinæ themselves were, according to Plutarch, sacred to Saturn, and, according to Granius Libinianus, th Flaminica offered at all nundinæ a sacrifice of ram to Jupiter.

It is uncertain to whom the institution of the nundinæ is to be ascribed, for some say that it was Rumulus, and others that it was Servius Tullius who instituted them, while the nature of the thing for which they were originally set apart seems to show that their institution was as old as the Roman year of ten months, or, at least, that they were instituted at the time when the Roman populacio was extended beyond the confines of Rome.

For the nundinæ were originally market-days for the country-folk, on which they came to Rome to sell the produce of their labour, and on which the king settled the legal disputes among them. When therefore, we read that the nundinæ were feriae dies nefasti, and that no comitia were allowed to the assembly, we must conclude that the King was in the presence of the King.

held, we have to understand this of the populus, and not of the plebes; and while for the populus
the nudine were ferie, they were real days of busi-
ness (dies fasti or comitales) for the plebes, who
on these occasions pleaded their causes with mem-
bors of their own order, and held their public me-
tings (the ancient tribunes of the plebes) and de-
bated on such matters as concerned their own or-
der, or to discuss which they were invited by the
senate.1 How long this distinction existed that
the nudine were nefasti for the patricians and fasti
for the plebes, is not quite clear. In the law of
the Twelve Tables they appear to have been reg-
arded as fasti for both orders,2 though, according
to (p. 228. ed. Smith.) later, at a later time by the lex Hortensia, 286 B.C. This
innovation, whenever it was introduced, facilitated the attend ance
of the plebeians at the comitia cen-
turiata. In the ancient calendar, therefore, the
nudine and dies fasti coincide. The subjects
were to be laid before the comitia, whether they were pro-
posed for new laws or the appointment of officers,
were announced to the people three nudine before-
and (trinundine die propone)4.
The nudine being thus at all times days of
business for the plebeians (at first exclusively for
them, and afterward for the patricians also), the
proceedings of the tribunes of the people were con-
 fined to these days, and it was necessary that they
should be terminated in one day,4 that is, if a propo-
sition did not come to a decision in one day, it
was lost, and if it was to be brought again before
the people, the tribunes were obliged to announce it
three nudine beforehand, as if it were quite a
new subject.
Instead of nudinum, the fonn nudinum is some-
times used, but only when it is preceded by a nu-
men or a tribunus, or tribunul, or tribunus
inter, the expressions above referred to.5 It is also used in
the expression intermundinum or inter nudinum,
that is, the time which elapses between two nu-
 dine.6 The word nudine is sometimes used to
designate a market-place, or a time for marketing in
general.
1. NUDINUM. (Vid. NUNDIN.)
2. NUNTIA.TIO. (Vid. OPENS NOV. NUNTIA.TIO.)
3. NUPI.TE. (Vid. MARRIAGE, ROMAN.)
4. NYCTERIS (νυκτερις), the common Bat, or
Vespertilio murinus. "It is not improbable," re-
marks Adams, "that the άπρωνα of the ancient po-
st was the Vespertilio spectrum, or Vampyr."7
5. NYCTICORAX (νυκτικόραξ), a bird described
by Aristotle and other ancient authors. The
Nycticorax, modern naturalists is a species of
Heron, but the νυκτικόραξ of Aristotle would rath-
er appear to have been a species of Owl. It might
be supposed the Styrx nyctea, or Great White Owl,
if it were ascertained that it is found in the south
of Europe.8
6. NYMPHAEA (νυμφαια), a plant. "The de-
scription of it," says Pliny, "which is given by The-
opoilus and others, is not sufficiently precise to enable us
to determine whether he meant to apply it to
the Nymphaea alba or the lutea, i.e. the White or the
Yellow Water Lily. The two species described
by Dioscorides are referable to the two species of
Nymphaea which we have mentioned.
The Nymphaea lutea is now held to be a distinct genus,
and is called Nuphar lutea by Smith, Hooker, and other
late botanists. The term Nuphar is said to be an
Egyptian word, signifying 'the medicine of the
Nile.' It occurs among the synonyms of Dioscorides.
By the Arabians it is called Nenifur, which is a short form of Nuphar. Smith found
the Nuphar lutea growing in the lakes of Thessaly,
as described by Dioscorides.9

O. OATH (GREEK). An oath (δοκε) is an appeal
(a) to some superior being, calling on him to bear
evidence, that the swearer speaks the truth, or intends
to perform the promise which he makes. Hence
the expressions ἵστω Ζεὺς, δῶν μαρτυρίας, and
others of the same import, so frequently used in
the taking of oaths.10 It is obvious that such an appeal
implies a belief, not only in the existence of the
being so called upon, but also in his power and
injunction to punish the false swearer; and the force
of an oath is founded on this belief. Hence an
oath is called δῶν δρόκος. Ζεὺς δρόκος11 is the
god who has regard to oaths, and punishes their
violation. Ζών ἄνων ἐπόμην12 means (according to
Suidas) δοκε ἔρωτην.13
We find early mention in the Greek writers of
oaths being taken on solemn and important occa-
sions, as to treaties or alliances, vows, c Ros., and
agreements, both between nations and individuals.
Thus, when the Greeks and Trojans agree to de-
cide the fate of the war by a single combat between
Menelaus and Paris, they ratify their agreement by
an oath.14 The alliance between Creuse and the
Lacedaemonians is confirmed by an oath.15 So
is the treaty between the Medes and Lydians, whose
rites in swearing (as Herodotus tells us) were
the same as those of the Greeks, with this addition,
that they made an incision in their arms and tasted
each other's blood. We may further notice the
peace of the Athenians and Pelo-
ponnesians, upon which every state was to swear
κτυπώμεν δοκε τοῦ μέγατον,16 the vow of the Ionian
women,17 that of the Phocaeans,18 and the promise of
Sic to Ulysses.19 The reliance placed in an oath
is especially shown in the dialogue between Ἑγες
and Medea in Euripides,20 and the speech of
Minerva in Euripides.21 For other examples we refer
the reader to Sophocles, Ἐδ. Θυρ., 647; Ἐδ. Κόλ.,
1637; Trachin, 1183.—Herod., vi., 74.—Hom., Il.,
ix., 132.
Thus the Greeks (as a nation) were deeply im-
bued with religious feelings, and paid high regard to
the sanctity of oaths, may be gathered from the
whole tenor of their early history, and especially
from the writings of the poets Homer, ᾿Ηέσελυς,
and Pindar.22 They prided themselves on being
superior in this respect to the barbarians.23 The treacherous equivocation practised by the
Persians at the siege of Barca24 would have been repugnant
to the feelings of a people whose greatest hero
declared that he hated like hell one
"Οσ Χρυσόν μὲν καίδη τίνη ὄρασιν, ἀλλὰ ἔδειβε ἑκάστον.25
The poets frequently allude to the punishment of
perjury after death, which they assign to the infer

OATH.

which he was absurdly imitated by others. Aristophanes, so keenly alive to all the foibles of his countrymen, takes notice of this custom, and turns it into ridicule. Hence he makes the sausage-dealer swear νη του Εμου του Αγοραλογο, Socrates με την 'Αληθείαν, &c.

Women also had their favourite oaths. As the men preferred swearing by Hercules, Apollo, &c., so the women writers of ancient Greece, Ceres, and Proserpine, Juno, Hecate, Diana, and Athenian women by Aglauros, Pandrosus, &c.

The security which an oath was supposed to confer, induced the Greeks, as it has people of modern times, to impose it as an obligation upon persons interested with, or authorized in the discharge of some public business. The Athenians, with whom the importance of legislation, &c. was considered to be the greatest perfection, were, of all the Greek states, the most punctilious in this respect. The youth, entering upon his 20th year, was not permitted to assume the privileges of a citizen, or to be registered in the λησισιδόχου γραμματείαν, without taking a solemn oath in the Temple of Aglauros to obey the laws, and never to desert his countrymen in time of danger. (Vid. Dicastes.) As to the oath taken by the Senate of Five Hundred, see Demostenes. As to the oath of the witness, and the voluntary oath, we are not given to precise information, at least apparently, attached to oath in courts of justice, is proved by various passages in the orators. Demostenes constantly reminds his judges that they are on their oaths, and Lycurgus declares that το συνέχεια την δημοκρατίαν ήρως εστίν. The experience of all nations has proved the danger of taking oaths. The history of Athens and of Greece in general furnishes no exception to the observation. While in the popular belief and in common parlance oaths continued to be highly esteemed, they had ceased to be of much real weight or value. It is impossible to read the plays of Aristophanes, orators, and other writers of that period, without seeing that perjury had become a practice of ordinary occurrence. The poet who wrote that verse which incurred the censure of the comedian, η γλώσσα δημοκράτινα, η δε φρονις άνωμος, was not the only person who would thus refine. The bold prolixity described by Aristophanes is too often realized in action. To trace the degeneracy of the Greek character in reference to this important branch of morality by reminding our readers that in a later age the Greeks became a by-word among the Romans for lying and bad faith.

A few expressions deserve notice. Νύ is used by Attic writers in affirmative oaths, μά, in negative. The old form of affirmation, still preserved in the phrase of the Nucum, Nucum, has υπό μά. Νύ is nothing more than another form of val, used with an accusative case, μά being omitted, as it often is in negative oaths. Νύ, however, is never used by the tragedians, who always employ a paraphrase in affirmative oaths, such as φησιν μητροποιεω. Εποικιστής is used affirmative

nal gods or Furies, and we find many proofs of a persuasion that perjury would not prosper in this world. One of the most striking is the story told by Leucthides to the Athenians of Glauceus the Spartan, who consulted the Pythonic oracle whether he should restore a deposit, or deny on oath that he had ever received it; and who, for merly deliberating upon such a question, was cut off with his whole family.

Anciently the person, who took an oath stood up, and lifted his hands to heaven, as he would in prayer; for an oath was a species of prayer, and required the solemn witness of the ceremony. Hence the expressions προς τον βασιλην προσφυξιον, βαπτισμον κατ' Ιερων. In Homer, Juno, making a solemn promise to Sleep, takes the Earth in one hand and Heaven in the other, and swears by Typhon and the subterranean gods. To touch the head, hand, or other part of the body of another, or to throw his own in the air, was a common custom. The hand especially was regarded as a pledge of fidelity, and the allusions to the junction of hands in making contracts and agreements abound in the ancient writers. Other superstitious rites were often superadded, to give greater solemnity to the ceremony, which appear to have been of oriental origin.

The different nations of Greece swore by their own peculiar gods and heroes; as the Thebans by Heroneus, Iolaus, &c., the Lacedaemonians by Castor and Pollux, the Corinthians by Neptune; the Athenians swore principally by Jupiter, Minerva, Apollo (their πατρίς θεός), Ceres, and Bacchus.

The office of taking the oath of the god of the place, or of another, was often solicited by the oath to be taken. Thus Iphigenia, the priestess, swears by Diana in Euripides, ἐπὶ τοὺς Απόλλωνας Μενελαος βιδα Αντιοχους νυμφει δεσμευσεν by a common custom. The hand especially was regarded as a pledge of fidelity, and the allusions to the junction of hands in making contracts and agreements abound in the ancient writers. Other superstitious rites were often superadded, to give greater solemnity to the ceremony, which appear to have been of oriental origin.

The hand especially was regarded as a pledge of fidelity, and the allusions to the junction of hands in making contracts and agreements abound in the ancient writers. Other superstitious rites were often superadded, to give greater solemnity to the ceremony, which appear to have been of oriental origin.
All Roman soldiers, after they were entitled for a campaign, had to take the military oath (sacramentum), which was administered in the following manner: Each tribunus militum assembled his legion, and picked out one of the men, to whom he put the oath, that he would obey the commands of his generals, and execute them punctually. The other men then came forward, one after another, and repeated the same oath, saying that they would follow their tribunes. In the year 216 B.C., the military oath was a real sacramentum (vid. sacramentum), i.e., the soldiers took it voluntarily, and promised (with imprecactions) that they would not desert from the army, and not leave their ranks except to fight against the enemy or to save a Roman citizen. But in the year 216 B.C. the soldiers were compelled by the tribunes to take the (sacramentum), which the tribunes put to them, that they would meet at the command of the consuls, and not leave the standards without their orders, so that in this case the military oath became a jusrandum. But Livy here forgets that, long before that time, he has represented the soldiers taking the same jusrandum. A perfect formula of a military oath is preserved in Gellius. It may be here remarked that any oath might be taken in two ways: either he who took it made it himself, or it was put to him in a set form, and in this case he was said in verba jurare, or jurare verbis conceptis. Polybius speaks of a second oath which was put to all who served in the army, whether freemen or slaves, as soon as the castrametatio had taken place, and by which all promised that they would steal nothing from the camp, and that they would take to the tribunes whatever they might happen to find. The military oath was, according to Dionysius, the most sacred of all, and the law allowed a general to put to death, without a formal trial, any soldier who ventured to act contrary to his oath. It was taken upon the signa, which were themselves considered sacred. In the time of the Empire a clause was added to the military oath, in which the soldiers declared that they would consider the safety of the emperor more important than anything else, and that they loved neither themselves nor their children more than their sovereign.

On the military oath in general, compare Briassonis, De Formul., iv. c. 1–5.

II. Oaths taken in transactions with foreign nations in the name of the Republic.—The most ancient form of the oath of this kind is recorded by Livy, in a treaty between the Romans and Albans. The pater patrum pronounced the oath in the name of his country, and struck the victim with a flintstone, calling on Jupiter to destroy the Roman nation in like manner, as he (the pater patrum) destroyed the animal, if the people should violate the oath. The chieftains or priests of the other nation then swore in a similar manner by their own gods. The oath taken at the entrance of a new public building and the fetialis cast away the stone from his hands, saying, "Si scirens falso, tuus meus discrepi salus urbis arcaeque bonis eicit, ut ego hymn lapseden." Owing to the prominent part which the stone (lapis silex) played in this act, Jupiter himself was called Jupiter Lapis, and hence it was, in after times, not uncommon among the Romans, in ordinary conversations, to swear by Jupiter Lapis. In swearing to a treaty with a foreign nation, a victim (a pig or a lamb) was in the early times always sacrificed by
OATH.

the fetiales (whence the expressions fetus vere, ὑπὲρ τῶν μέτων), and the priest, while pronouncing the oath, probably touched the victim or the altar.\(^1\) (Compare Fetiales.) This mode of swearing to a treaty through the medium of a priest was observed for a long time; and after the second Punic war, the fetiales even travelled to Africa to perform the ancient ceremonies.\(^2\) The jūs fetiale, however, fell into disuse as the Romans extended their conquests; and as, in most cases of treaties with foreign nations, the Romans were not the party that gave the oath, they had any more vested power on their part; but the foreign nation or conquered party was sometimes obliged to promise with a solemn oath (sacramentum) to observe the conditions prescribed by the Romans, and documents recording such promises were kept in the Capitol.\(^3\) But in cases where the Romans had reason to mistrust, they demanded hostages, as being the surest of all modes of security; and the Latin law mentioned them as the most efficacious in the case of a war, which they either took voluntarily, or which was put in their hands by the Romans. In judicicia publica, the witnesses had always to give their evidence on oath.\(^4\) We have no means of ascertaining whether, in all instances of civil causes, witnesses might be compelled to take an oath, but it seems probable that in a civil cause a witness generally did not give his evidence on oath, unless for special reasons, thought it advisable that he should.

False swearing (pejerare, perjurium) was not regarded by the Romans as it is by us. Swearing was merely a matter of conscience, and, regarding, the person who was guilty of false swearing was responsible to the Deity alone. Perjury and false swearing in any case do not appear to have been punished more severely than other breaches of the sacred character of an oath. When, therefore, Valerius Maximus\(^5\) speaks of infamia perjurii, he uses infamia in a popular, and not a strictly legal sense. The manner in which the Romans regarded perjury is implied in an expression of Cicero,\(^6\) who says, Perjurium victoriam est. Hence every oath was accompanied by an excommunication, and perjury, therefore, was an act which belonged more to the jurisdiction of the censors than to an ordinary court of justice. Witnesses convicted of having given false testimony, with or without oath, were punished.\(^7\) (Compare Falsum.)

IV. Oaths or various modes of swearing in common life.—The practice of swearing, or calling upon some god or gods as witnesses to the truth of assertions made in common life or in ordinary conversations, was as common among the Romans as among the Greeks. The various forms used in swearing may be divided into three classes:

1. Simple invocations of one or more gods, as Hercules, Mars, Minerva, Jupiter, Bacchus, Venus, Juno, Ceres, Cautopates, or any deus, or serpent;\(^8\) Pol, Perpel, or Edelpol, that is, per Pollucem; per Jovem Lapidem, or simply per Jovem; per superpos; per deos immortales; medius fidarius, that is, sta me Deus (Alov) fides iuet;\(^9\) sta me deus amert, or dui amert. Sometimes, also, two or a great number of gods were invoked by their names.\(^1\) The goods of men were regarded as for all times, and persons used to swear by their own genius or by that of a friend, and during the Empire by that of an emperor.\(^10\) Women as well as men swore by most of the gods, but some of them were peculiar to one of the sexes. Thus women never swore by Hercules, and men never by Castor. Varro, moreover, said that in ancient times women only swore by Castor and Pollux. In the work of Pomp. to whom we have referred, we find men frequently swearing by Pollux.\(^12\) Juno and Venus were most often invoked by women, but also by lovers and effeminates men in general.\(^13\)
2. Indications of the gods, together with an exception, in case the swearer was stating a falsehood. Exeucrations of this kind are, *Dixi me per- dant;* *dis me interficant;* *dispersam;* *ne vivam;* *ne valvis sim,* &c.

3. Fereons also used to swear by the individuals or things most dear to them. Thus we have in the *testamentum* by his own or another man's head, by his eyes, by his own welfare or that of his children, by the welfare of an emperor, &c.

Respecting the various forms of oaths and swearing, see Briasiconus, *De Formulis,* viii, c. 1–18.

O.B.E. (Vid. Tribus, Greec.)

OBEILCUS (βελεικος) is a diminutive of OBEILCUS, which properly means a sharpened thing, or a shaft. The term is given to certain works of Egyptian art. (Herodotus uses *βελειας* in the sense of an obelisk.) A detailed description of such works would be inconsistent with the plan of this work, but some notice of them is required by the fact that several of them were transported to Rome under the emperors. Ammianus Marcellinus says that an obelisk is a very ugly thing, consisting of a small pyramid or boundary-stone, rising with a small inclination on all sides to a great height; and in order that it may imitate a solar ray by a gradual diminution of its bulk, it terminates in a prolongation of four faces united in a sharp point. It is very carefully smoothed.

Most ancient writers consider obelisks as emblematic of the sun's rays.

An obelisk is, properly, a single block of stone, cut into a quadrilateral form, the sides of which diminish gradually, but almost imperceptibly, from the base to the top of the shaft, but do not terminate in an apex upon the top, which is crowned by a small pyramid, consisting of four sides terminating in a point. The Egyptian obelisks were mostly made of the red granite of Syene, from which place they were transported to many different parts of Egypt. They were generally placed in pairs at the entrance to a temple, and occasionally in the interior, and were usually covered with hieroglyphical inscriptions.

Obelisks were first transported to Rome under Augustus, who caused one to be erected in the circus, and another in the Campus Martius. The former was restored in 1809, and is called at present the *Obelisk of Augustus.* It is erected in about 116 feet, and without the base about 78 feet. The obelisk in the Campus Martius was set up by Augustus as a sun dial. It stands at present on the Monte Citorio, where it was placed in 1792. Its whole height is about 110 feet, and without the base about 71 feet. Another obelisk was brought to Rome by Caius Julius, and placed on the Vatican in the Muro de Casa Valeriana. It stands at present in the field of St. Peter's, where it was placed in 1586, and its whole height is about 132 feet, and without the base and modern ornaments at the top about 83 feet. But the largest obelisk at Rome is that which was originally transported from Heliopolis to Alexandria by Constantine, and conveyed to Rome by his son Constantius, who placed it in the Circus Maximus.

There are eight other obelisks at Rome besides those mentioned above, but none of them are of historical importance. There are also obelisks in various other places, as at Constantinople, Arles, Florence, Catania in Sicily, &c., some of which are works of Egyptian art, and others only imitations.

There are two small obelisks in the British Museum, which were brought by the French from Cairo.

OBELOS. (Vid. Ver.)

OBLIGATIONES. Obligatio is defined to be "a bond of law by which we are under a necessity of paying (solemnde) anything according to the laws of our state." This definition has only reference to one part of an obligation, namely, the right of action, which is inseparable from the notion of a legal obligation. According to Paulus, the substance of an obligation consists in another person binding himself to give us something, or to do something, or to secure or make good something (ad damnum alicuius, vel faciendum, vel prestandum). This "binding" must, however, be understood of a "legal binding," that is, the party who fails to perform what he has engaged to do, or to be liable to legal consequences. In other words, the duty which one owes may be enforced by suit or action. Any agreement which is binding according to positive morality, but which, for any reason, cannot be legally enforced, is not properly an obligation, but still the Romans gave such agreement the name of obligatio, and added the term naturalis, by which it is opposed to civil and praetoria or honoraria.

The obligations arise those which were created by enactments (legibus), or generally were established by the jus civile; praetoria or honoraria were those which owed their origin to the jurisdiction of the praetor. Viewed with reference to the events on which the law operated to give obligations a binding force, obligations arose either from contract or quasi contract, and delict (malfactum, delitiurn), or quasi delict. According to Gaius, every obligation arises either from contract or delict.

Contract (*contractus*) was made in four ways—verbis, litteris, and consensu.

As an example of a contract re, Gaius mentions mutumum. (Vid. Mutuum.) Also, if a man received what was not due from a person who paid by mistake, the payer had his remedy for the recovery just as if the act had been fraudulent. But "this kind of obligation," observes Gaius, "does not appear to arise from contract, because he who gives with the intention of payment rather intends to dissolve or put an end to (distrahere) a transaction (negotium) than to commence or to constitute (constahere) a transaction.

In such a case the English law has a fiction of a promise to pay on the part of the person who has received the money.

To the contracts made re, there also belong Commissam, Deposition, and Pronos.

The obligatio verba was contracted by oral question and answer between the parties. The form of words was: Darit Spondeas? Spondeas; Dalis! Dabo: Promittis? Promittis! Fidepromittis! Fidepromittis! Fidejubes! Fidejubeo! Facies! Faciam! The words were accomplished, were so peculiarly Roman, that their legal effect could not be preserved if their meaning was transferred into another language; nor could a valid obligation with a peregrinus be made by the use of the word spondeo.

The evidence of such an obligation must have been the presence of witnesses.

It is to this form of contract by question and answer...
OBLIGATIONES.

A stipulation which contained an impossible condition was invalid (*inuita*). As the stipulation was effected by words, it was a necessary consequence that the parties should have power to speak and hear, and on this ground was founded the rule of law that a mutus and a surdus could not be parties to a stipulation. As to the ability of papal folk, it was fancies with reference to obligations, see *lexpurae* and *impans*. The stipulator might have another party to the contract on his behalf, who was called ad-stipulator. The ad-stipulator had the same right of action as the stipulator, and, therefore, a payment in respect of the stipulation could be made to him as well as to the stipulator; and the stipulator had an actio major against the ad-stipulator for the recovery of anything that he had received.

There were some peculiarities in the adstipulatio. The right of action did not pass to the heirs of the adstipulator, and the adstipulation of a slave for his master had no effect, though in all cases he could acquire his master by stipulation. The same rule of law applied to apply to him who was in *mancipio*, for he was servi loco. If a son who was the power of his father became his adstipulator, he did not acquire anything for his father, though he acquired for him by stipulation. Still his adstipulatio gave the son a right of action, provided he was released from the power by his father, and himself dimittimur, as, for instance, by the father’s death, or by being inaugurated fiamm flamis. The same rule of law applied to a filiafamilias and to a wife in manu.

Those who were bound for the promissor were called sponsores, fidepromissores, fidujetesores. (Vid. *Intratics*.)

The case of an obligatio literis is illustrated by Gaius' by the instance of nomina transcripticia, as when a creditor who has a debt due from a person in respect of a sale, or a letting, or a partnership, enters it in his book (*codice, or tabula expensi et accept* ) as a debt (*expensum illi fert* & *expensum nullius non dict*, cum tabulas non recitavit). This was called "Nomen transcripticia, a re in persam".

A creditor clearly allowed to this literarium obligatio in his Oratione Roscio Comedo. He says, speaking n‘the plaintiff’s demand, "his claim is for a certain sum of money (pecunia certa), and this must be either *data* (a case of obligatio re), or *expensam laeae* (the literarium obligatio), or stipulata (an obligatio verba)."

Some difficulty arises about the mode of converting an obligation of a different kind into an obligatio literis. The subject is discussed by Unterholzner in an ingenious essay, which, however, was written before the publication of the MS. of Gaius, and it has since been discussed by other writers. Unterholzner conjectured that a third party, with the consent of the debtor and creditor, made the entry in his own book, but he does not appear to have supported this assumption. Theophilus represents the literarium obligatio as a novatio or change of an obligation of one kind into an obligation of another kind, and this, he says, was effected both by words and writing (*bygaus kal gpygriai*). It was effected, according to him, by the creditor writing to the debtor (*pydeus bygaus gore avtes* to ask his consent to the old obligation being made into a new one of a different kind, and by the debtor consenting. As stated by him, the obligatio literis might be an obligatio contracted by a letter of the creditor to the debtor, and the debtor’s reply. In principle, there would be no objection to its being contracted by the debtor’s consent expressed by a subscription in the creditor’s books. The literarium obligatio of Theophilus, however, rather seems to correspond to the other kinds of literarium obligatio referred to by Gaius, where he says, "this obligation can be contracted by chartography and syngrapha, that is, if a man writes that he owes a sum of money which will not be payable till a certain event happens on the same account.

It is not impossible that Gaius means that the creditor might convert an obligation of another kind into that of pecunia expensa by the bare entry of it in his book; for it is no objection to this, as Unterholzner has it, "that a unilateral writing on the part of the creditor should have the effect of putting another person in another obligation," for an obligatio was already contracted, which the creditor would have to prove; but if he could prove it, the law gave him all the advantage of a creditor for pecunia certa, if he had complied with certain forms. Gaius certainly may be understood as asserting that this obligation was contracted simply *expensum ferendo*; "it seems to be the general opinion that this literarium obligatio required the consent of the debtor either orally in the presence of witnesses or by letter; and this is not inconsistent with Gaius; for, though he says that the debtor is bound by the "*expensum ferendo*", that does not exclude his consent, but merely shows what regards it necessary in order to make the consent legally binding.

The obligations consensuum were emoto and vendito, locatio, condicito, societas, mandatum. All obligations by contract, of course, required consent and the evidence of consent; but "these obligations," says Gaius, "are said to be contracted simply *expensum ferendo*, because no peculiar form of words or writing was required, but the consent of the parties to the transaction was sufficient." Accordingly, such transactions could take place between persons at a distance from one another, and a verborum obligatio required the presence of the parties. The actions founded on these obligations consensuum were of the nature of *tutelum*.

A legal obligatio implies a right of action against the person who owes the duty (*qui obligatur*). This right of action (*ex contractu*) might be acquired by any person who was sui juris. It might also be acquired for him by those who were in his potestas, manus, and mancipium; and by free men and slaves when a man possessed bona fide with certain exceptions. This right of action might also be acquired by a man through the acts of a free man who was his agent, so far that he could require the cession of the obligatio so acquired.

An obligatio was terminated (*totiurum*) in various

\[1. \text{Gaius, iii., 100, 105.} \text{— Dig. 45, tit. 1, s. 111: "De Verbo-} \]
\[\text{rum Obligationibus."} \text{—} \text{2. (Dig. 45, tit. 1, s. 5, § 1.) — 3. \text{(Cic., Pro Rosc. Com., 3.) — 4. (Illi., 182. s. — Compare Cic., Pro Rosc. Com., 4., 5.) — 5. (e. 5.— 7.)} \text{—} \text{("Ueber die Rede des Cicero} \]
\[\text{vor den Schauspeler Q. Roscius," Zeitschrift, i., 248.)} \]
ways. The most common way was by payment (solutio) of what was due. A man, with the consent of the creditor, might pay another's debt, but the two schools differed as to the legal consequence of such payment. The Proculian, as usual, adhering strictly to fundamental principles, maintained that the debtor was still in delicto; but, if the money was demanded of him by the creditor, he had a good plea of dolus malus (exceptio doli maili).

An obligation might be terminated by acceptatio. An obligation contracted per as et libram might be determined in the same way, and also one arising "ex judicati causa." (Vid. Nexum.) An obligation might also be determined by novatio, which is the change of an existing duty (debitum) into another duty. Novatio was the original form of the former obligation.1 This is explained by the following instance: 2 If I stipulate that Titius shall give me what is due from you, a new obligation arises by the intervention of a new person, and the former obligation is determined by being replaced by the latter; and sometimes a former obligation may be determined by a subsequent stipulation, though the stipulated debt might be an original stipulation from the same person, it required the addition of something to effect a novatio, as the addition of a condition, or the circumstance of adding to or subtracting from the time contained in the terms of the covenant. As to the case of a condition, it was the law in the time of Gaius that the condition must be passed before the stipulation was made; and if the stipulation was from the same person, it required the addition of something to effect a novatio, as the addition of a condition, or the circumstance of adding to or subtracting from the time contained in the terms of the covenant. As to the case of a condition, it was the law in the time of Gaius that the condition must be passed before the stipulation was made; and if the stipulation was from the same person, it required the addition of something to effect a novatio, as the addition of a condition, or the circumstance of adding to or subtracting from the time contained in the terms of the covenant.

An obligation was also determined by the litis contestatio, if the proceedings had taken place in a legimimum judicium. It is stated general was fulfilled, and till that time the former obligation continued. The opinion of the great jurist Servius Sulpicius as to the condition immediately effecting a novatio, was not law in the time of Gaius (alio jure utinam).

An obligation was also determined by the litis contestatio, if the proceedings had taken place in a legimimum judicium. It is stated general was fulfilled, and till that time the former obligation continued. The opinion of the great jurist Servius Sulpicius as to the condition immediately effecting a novatio, was not law in the time of Gaius (alio jure utinam).

The obligationes quasi ex contractu are not enumerated by Gaius, but they are discussed in the Institutes of Justinian. 2 These obligationes do not properly arise either from contract or delict, but inasmuch as they are founded on acts which are not delicts, they must be considered as belonging to contract rather than to delict, if we will refer them to one of these classes. But, in fact, these quasi contracts belong to neither class. Instances of these quasi contracts, enumerated in the Institutes, are "absentis negotiorum gestio" (vid. Negotiorum Gestorum Actio), the "judicium," a "novatio," and the "de jure utinam thing has been bequeathed and given to several persons, and some other instances.

These quasi contracts are arranged in the Institutes of Justinian after obligationes ex contractu, and the obligationes quasi ex delicto are placed immediately after the obligationes ex delicto. Instances of these obligationes quasi ex delicto are enumerated in the Institutes, as "ex jure litem quam facetis," and the case of "de jure effusum," and others.

We may now examine more closely the meaning of the term obligation, and other terms used in relation to the law of contracts. Its etymology (leg-o, to bind) points merely to the obligatory part of a contract, or to the duty owed by one of the parties to the contract (the creditor) to the other party (creditor), or to the duties mutually owing from the one to the other. The word which, as opposed to obligation or "binding," expresses the determination of such binding, is "solutio;" 3 and, generally, some form of the word "solvit" is the appropriate term to express the legal termination of the obligation. But, inasmuch as duties owing by one party to the contract, or duties mutually owing by the parties to the contract, imply a right in the other party to the contract, or imply mutual rights in the parties to the contract, the word obligation is often used to express both the rights and the corresponding duties which arise out of the contract. Consistency with this, we find the right of the creditor spoken of as his obligation, and the duty of the debtor as his obligation. There is no special name in the Roman law for a right against a determinate person or determinate persons. The name for ownership or property is dominium, to which is opposed the name obligationes as descriptive of rights against determinate persons.

It is correctly remarked (Austin, An outline of a course of Lectures on General Jurisprudence), "that in the writings of the Roman lawyers the term obligation is never applied to a duty which answers to a right in rem." But as the duty answering to a right in rem is only the duty of forbearance, that is, of not doing anything, there is no great

---

OBLIGATIONS.

ence in the want of a name: as soon as an act is done which is an infringement of the right, or, in other words, a delictum, in one sense in which the Romans used this word), an obligation arises by force of such act (obligatio ex delicto), and gives the injured person a right of redress or in error various other.

A contract, as it will appear from what has been said, required the consent of all the parties to.

Those obligations which were said to be founded on "consent" (consensus) were said to be founded only because consent was sufficient, and no peculiar form of words or expression was required; whereas, in the obligation of contract (contractus), "verba" were necessary, either in writing, by words, or writing were required. In those contracts where particular forms were not required in order to convert them into obligations, any words or acts were sufficient which were evidence of consent. What words and acts are evidence of consent, cannot, of course, be determined generally in any system of jurisprudence. But certain acts or events exclude the notion of consent, even if the formal parts of a contract have been most scrupulously observed; constraint by force or threats (ins, metus), and fraud (dolus), and, in many cases, error (error, ignotiam), either render the agreement absolutely null, or give the party who has been constrained by fraud, error, or constraint of defence against the claims of the other party.

An obligation supposes two persons, the person to whom the duty is due, the creditor, and the person from whom it is due, the debtor. But there may be more than two parties to an obligation, either as creditors or debtors, or both, all of whom may be comprehended under the common name of rei. With reference to a person who is under the same obligation, a person may be called corrus. But since there are several parties to an obligation, there are properly several obligations, and this is the case whether the creditor is one and the debtors are several, or the creditors are several and the debtor is one, or both the creditors and debtors are several. In the obligation pro rata, the claims of the several creditors, or the duties of the several debtors, are determinate parts of a whole, which is made up by the parts being united in one formal obligation. There are cases where several creditors may claim the whole (solutum), and where several debtors may claim the whole (solidum): where a creditor claims the whole against several debtors, there are, in fact, several obligations binding on the several debtors. If he can only claim the whole once, he may claim it from any of the debtors; but when he has been satisfied by one debtor, his whole claim is extinguished.

An obligation may be unilateral, that is, may only give a right of action to one of the parties to it, as in the case of mutuum, stipulatio, and others; or it may be bilateral, that is, it may give a right to each party against the other, as emtio, venditio, locatio, conductio.

It remains to explain some other terms which are of frequent occurrence.

The most general name for any agreement is conventio, pactio, pactum conventum, and its essence is consent: "conventio verbum generale est, ad omnia pertinentes, de quibus negotii contrahendi transgendique causa consentiunt, qui inter se agent." Conventions, then, were juris gentium, and, as a good man may introdud into species. There are conventions which were the foundation of a right of action were called contractus, of which the Roman law acknowledged the four kinds already mention-
ed. As these contractus are distinguished by particular names, they have been named by modern writers contractus nominati, as opposed to other contracts presently to be mentioned, which they have named innominati. Contractus nominati, as has been shown, were contracts made or acknowledged by certain forms: if these forms were wanting in the conventio, it could not belong to the class of contractus nominati; but if the matter of the conventio was a civil negotium, or a civilis causa, it formed an obligation, and was the foundation of an action "praescriptivus verba" or "in facias, actio"; or, as it is clearly expressed by the action quum pactum est confregit, quotes contractinge existunt, quorum appellations nulla juris civilis prohibe sunt. All the events upon which these actions could arise may be reduced to the four following heads: "aut do titi ut des, aut do ut facias, aut facio ut des, aut facio ut facias." An example of the first class will show the difference between these innominate and the nominata: what is an obligation, and how to make a man money for a thing, this is buying and selling, is a name contract; but if I give a man a thing for another thing, this is exchange, and it is an innominate contract, but still it is the foundation of a civil obligation. These innominate contracts take the name of contracts from their resemblance to proper contracts. It was because in the case of any one of such contracts, it is necessary to form them into a separate class. These contracts, as it will appear from the description just given of them, have their foundation in an act (a giving or doing) by one of the parties, and so far resemble contracts re. Accordingly, the contract is a giving of something, as a thing relates a thing given or done by the debtor; and the creditor may have his action (condicio) for the recovery of a thing which he has given, and for which the debtor has not made the return (a giving or an act) agreed upon. The creditor has also his action generally (praescriptivus verba) for the completion of the contract, or for compensation to the amount of the injury sustained by the non-performance of the act.

All other conventiones were simply pacta, the characteristic of which is that they were not originally the foundation of actions, but only of pleas or answers (exceptiones); that is, if an agreement (conventio, pactio) could not be referred to the one of these other acts of contracts, it did not give a right of action. These conventions were either of actions or of exceptions. Conventions were contractus when they were made with certain forms; when they were not made with these forms, but still on good consideration (causa), they were the foundation of a civil obligation. When there was no causa, there was no obligation created by such conventio, and it is added, "therefore a nuda pactio does not produce an obligation, but an exception" whence it follows that a nuda pactio is a pactio sine causa, or a pactio for the benefit of one party only. Sometimes nuda conventio is used as equivalent to nuda pactio. It is a mistake to say that pactum by itself means a one-sided contract. Pactum is a term as general as conventio (pactus est) et est plurius in idem pactum conventus, and is a part of all contracts, as conventio is. There might be a pactum or pactio relating to marriage, the establishment of a servitus in provincial lands, and other matters. But pactum, as included in the law of obligations, obtained a limited signification; and it was used to sign two agreements not included among the contractus, but still binding agreements, as Leising found.

1. Dig., 19, tit. 5.—"De praescriptiva verba," &c.—Dig., 2. tit. 14, a. 7, q. 4.3.—Dig., 15, tit. 5, a. 15.4.—Dig., 2, tit. 9, a. 1.1.5.—(Guiss., ii., 31.)
ed on a cause. Some of these obligatory pacta were the foundation of an actio civilis, and some of them were protected by the praetor: ait praetor: "Pacta conventa qua neque dolo malo neque adversus leges pluchiius sanctus consulta edicta decreta princi- pium neque quo fasus cuorum flat facta crunt serva- bo." The parties to a pactum were said to be "pactici." Anything might be the subject of a "pactum" which did not involve an illegality. If an illegal pactum was made, it was still illegal, though it had been confirmed by a stipulatio or any other form. The matter relating to pacta is not arranged in the Di- gest under the head of Obligationes et Actiones, but in the same book with the titles De Jurisdictione, &c.

Savigny contends that the notion of agreement, or of contract in its general sense (sertrag), is too narrowly conceived by jurists in general. He de- fines agreement to be the "union of several persons in one concordant declaration of will whereby their legal relations are determined." Consequently, the notion of contract or agreement must be extended to other things than to contracts which produce obligations: for instance, tradition is characterized by all the marks of an agreement; and the fact that the declaration of their will by the parties to the tradition is insufficient is one reason why the concept is ac- quired, does not in the least affect the essence of the agreement. In like manner, easements (servi- tutes) take their rise from agreement. The imper- fect conception of an agreement has arisen from not separating in some cases the obligatory agreement from those acts for which such obligatory agree- ment is generally sufficient, and of which it is an accompaniment. This becomes more apparent if we consider the case of a gift, which is a real agreement, but without any obligation: it is merely a giving and receiving by mutual consent. This general notion of agreement is contained in the words of Ulpian already quoted, in which he de- defines pacto to be "duorum pluriumerum," &c. It does not seem, however, that the Romans applied the term pactum, pactum, and conventio to any agree- ments except those which were the foundation of obligations.

Policittatio is a proffer or offer on the part of a person who is willing to agree (policittatio offerentis solius promissum). A policittatio, of course, cre- ated no obligation. The word is frequently used with reference to promises made by a person to a state, city, or other body politic, such as the prom- ise to erect a building, to exhibit public shows, &c. Such policittations were binding when there was a causa, as a promise made with reference to a dignity (honor) conferred or to be conferred. A policittat- tio sine causa was also obligatory if the person began to do what he promised, as he laid the foundation of a building or cleared the ground. (Huis teatro ex griavorem policittationum multa de- bentur).

A person who vowed anything was also bound (voto obligatus).

Obul. (Vis. D:ach.:ma)

Obi:sodiA:us corona.

(Vid. Corona, p. 309.)

Obso:ni:um. (Vis. Obsonium.)

Oc:rea.

Ocupatio. The word is used by Cicero to ex- press the acquisition of ownership by occupation, or the taking possession of that which has no own- er. Among the modes of acquiring ownership "naturali ratione," that is, by such means as are in all nations acknowledged to be lawful means of ac- quiring ownership, Galus enumerates the taking possession of those things que nullius sunt, as, an- imals of the chase, birds and fishes, and such things are said "occupantis tertii." Ochne (Oxyn), the Pear-tree, or Pyrus commun. Theoricius has òxvafa. (Vid. Pyrus.)

Ochra (Oxren), our Yellow Ochre, i. e., the ochre brown iron ore of Jameson. It was much used by the ancient painters, and likewise as a medicine.

Ochrus (Oxrop), the Pisum Ochrysa, a species of Pease that grows plentifully among corn in Italy and Sicily.

Ocimoelides (Oxmeides), a plant, which Mat- thiolus and Bauhin hold to be a species of Lychnis, an opinion, however, which is rejected by Dodo- neaus. Sprengel agrees with Lobelius and Dale- champ in referring it to the Saponaria Oceymides.

Ocimum or Ocyrum (Oxum, Oxum), a plant, which Adams makes the same with the Ocy- rum Basilicum, or Sweet Basil.

Ocra (Oxren), a Greave, a Leggin. A pair of greaves (Oxmeides) was one of the six articles of armour which formed the complete equipment of a Greek or Etruscan warrior (Vid. Arma, p. 94), and likewise of a Roman soldier as fixed by Servius Tullius. They were made of bronze, brass, or tis, or of silver and gold, with a lining proba- bly of leather, felt, or cloth. Another method of fitting them to the leg was as not to hurt it was by the interposition of that kind of sponge which was also used for the lining of helmets (Vis. Gales, p. 468), and which Aristotle describes as being remark- able for thinness, density, and firmness. The greaves, lined with these materials, as they were fitted with great exactness to the leg, probably re

OENOPHORUM.

gured, in many cases, no other fastening than their own elasticity. Often, nevertheless, they were further secured by two straps, as may be seen in the woodcut at p. 94. Their form and appearance will be best understood from the preceding woodcut. The upper figure is that of a fallen warrior, represented among the sculptures now at Munich, belonging to the temple in Δέσποινα. In consequence of the bending of the knees, the greaves are seen to project a little above them. This statue also shows very distinctly the ankle-rings (ἐποιχία), which were used to fasten the greaves immediately above the feet. The lower portion of the same woodcut represents the interior view of a bronze shield and a helmet. The greaves are represented in the form in which they were sometimes worn by men in life, as those of a warrior, Signor Campanari in the tomb of an Etruscan warrior, and which are now preserved in the British Museum. These greaves are right and left.

That the Greeks took great delight in handsome and convenient greaves may be inferred from the epithet ἐποχιαῖος, as used by Homer, and from his mention of or the use of the greaves being especially the ankle-rings, which were sometimes of silver.1 The modern Greeks and Albanians wear greaves, in form resembling those of their ancestors, but made of softer materials, such as velvet, ornamented with gold, and fastened with hooks and eyes.

Among the Romans, greaves made of bronze, and richly embossed, were worn by the gladiators. Some such have been found at Pompeii.2 It appears that in the time of the emperors greaves were not entirely laid aside as part of the armour of the soldiers.3 At an earlier period the heavy-armed wore a single greave on the right leg.4 Legins or greaves of leather were sometimes worn, but not as greaves of the same form already described, and designated by the same names both in Greek and Latin, were worn by agricultural labourers5 and by huntsmen.

[Image 0x0 to 378x656]

CEUS. (Bid. House, Rom., p. 517.)

Og or OlE (τὰ ὅγα), the Pyrus sordus, or Service-tree. Its fruit is called ola by Sprengel.

CÉNANTHE (οἴνοχος), a plant, about which many conjectures have been formed. Sprengel prefers that of Lobelius, who held it to be the Pediculararis L. "From my acquaintance, however," observes Adams, "with the Cénanthe pinnatifidae, or Parley's Waterdropwort, I cannot help thinking the two species are identical."

"From my acquaintance, however," observes Adams, "with the Cénanthe pinnatifidae, or Parley's Waterdropwort, I cannot help thinking the two species are identical."

The Cénanthe crocea, a species very similar in appearance, but very different in quality, is entirely out of the question, although Dr. Milligan holds it to be the Cénanthe of Celsius. The term oivochos is likewise applied to the flowers of the wild vine.

OLLY, the Olive-tree. (Bid. Etna and Côte.)

OLLA, ant. AULA,4 dim. OLLULA (λίβας; χρωστικόν, χρώστικον, dim. χρύστικον), a vessel of any material, round and plain, and having a wide mouth: a pot, a jar.

Besides being made of earthenware5 (σωλάρωσιν, testa) and bronze (χρωστικόν, χρώστικον), the ancients also made these vessels of different kinds of stone, which were turned upon the lathe. At Pleurs, a village near Chiavenna, on the north of the Lake of Como, the manufacture of vessels from the potstone found in a neighbouring mountain is still carried on, and has probably existed there from the time of Pliny, who makes express mention of it.6 Some of these vessels are nearly two feet in diameter, and, being adapted to bear the fire, are used for cooking (Oculus observare ollam pulis, ne auturatur)."

The following wodcut is taken from a vase in the British Museum, which was found at Canino in Etruria. The painting upon it represents the story of Medea boiling an old woman with a stone, and per- sumed the daughters of Pelas to put him to death.12

Olympiad.

The pot has a round bottom, and is supported by a tripod, under which is a large fire. The ram, restored to youth, is just in the act of leaping out of the pot. Instead of being supported by a separate tripod, the vessel was sometimes made with the feet all in one piece, and it was then called in Greek τρίπος (vid. Taurus), γυροπός, and επιγαίρις.

Beside being placed upon the fire in order to boil water or cook victuals, the ancients used pots to carry fire, just as is now done by the modern inhabitants of Greece, Italy, and Sicily. They also used small pots containing fire and pitch, to annoy the enemy in sieges by throwing them from slings and military engines.

A late traveller in Asia Minor informs us that the Turks wash their hands in the following manner: A boy or servant pours water upon the hands, the water falling into a vessel which is placed underneath to receive it. So in the Odyssey, a servant brings water in a golden eper (προφοίρα), and pours it upon the hands of the guest over a jar (δεῖρα) of silver. Numerous passages of ancient authors show that this practice has always prevailed in the same countries.

The Argives and Eginetans drank out of small, coarse pots of their own manufacture, rather than purchase cups of superior quality from Athens.

Olive were also used to hold solids and keep them in store, while amphora rendered the same service in regard to liquida. (Vid. Amphora.) Thus grapes were kept in jars as at present. Although pots were commonly made solely with a view to utility, and were therefore instituted of ornament and without handles, yet they were sometimes made with two handles (διστύρο) like amphora; and, when they were well turned upon the wheel, well baked, smooth and neat, and so large as to hold six congi (4½ gallons nearly), they were, as we learn from Plato, considered very beautiful.

Pots were used, as with us, in gardening.

Another very remarkable use of these vessels of earthenware among the Greeks was to put infants into them to be exposed, or to be carried away.

OLYMPIAD.

The lid of the olla was called κοίνης and σφαίρα. It generally corresponded in the material and the style of ornament with the olla itself.

*OLOLYGON (δολογεύω), "the name of an animal," says Adams, "mentioned by Theocritus. The scholiast calls it a swallow; some have referred it to the lark; and others have supposed it a frog. From the probable derivation of the word (i.e., from δολογεύω), I am disposed to agree with the scholiast."

*OLOST'ION (δολοστίον), a plant mentioned by Dioscorides. "Little, however, can be made," says Adams, "from his brief description of it. It is decidedly not the Stellaria Holostea, or Greater Stichwort, as Ruellius supposed; nor the Plantago albi, as Dodonaeus suggested. Whether or not the Holostea umbellata of the Fabricius and Sprengel contend, possesses the requisite character, I dare not venture to decide, as I have no acquaintance with that plant."

OLYMPIAD (Ολυμπιάς), the most celebrated chronological era among the Greeks, was the period of four years, which elapsed between each celebration of the Olympic games. The olympiads began to be reckoned from the victory of Corbus in the footrace, which happened in the year B.C. 776. Timeaus of Sicily, however, who flourished B.C. 264, was the first writer who regularly arranged events according to the conquerors in each olympiad, with which era he compared the years of the Attic archons, the Spartan ephors, and that of the Argive priestesses. His practice of recording events by olympiads was followed by Polybius, Diodorus, Pausania, Diodorus of Sicily, and sometimes by Pausania, Elian, Diogenes Laertius, Arrian, &c. It is twice adopted by Thucydides and Xenophon.

The names of the conquerors in the footrace were usually only to designate the olympiad, not the conquerors in the other contests. Thucydides, however, designates two olympiads by the name of the conquerors in the panathenaeum; but this appears only to have been done on account of the celebrity of these victors, both of whom conquered twice in the panathenaeum. Other writers, however, adhere so strictly to the practice of designating the olympiad only by the conqueror in the footrace, that even when the same person had obtained the prize in other contests as well as in the footrace, they only mention the latter. Thus Diodorus and Pausanias only record the conquest of Xenophon of Corinth in the footrace, although he had also conquered at the same festival in the pentathlon.

The writers who make use of the era of the olympiads usually give the number of the olympiad (the first corresponding to B.C. 776), and then the name of the conqueror in the footrace. Some write where. 1 Hence the exposure of children was called ἐκχυτρεῖσθαι, and the miserable women who practised it ἐκχυτρόσται.

In monumental inscriptions the term ολλα is frequently applied to the pots which were used to hold the ashes of slaves or inferiors in a family, and which were either exposed to view in the niches of the Columbarium, or immersed in such a manner as to show the lid only. Some good specimens of cinerary ollas are preserved in the British Museum, in a small apartment so constructed as to exhibit accurately the manner of arranging them. (Vid. above, p. 287, 288, 461, and numerous plates in Bartoli's Antiqu. Napoli.)

OLYMPIC GAMES.

The north and northeast by the mountainous Cretan and Olympus, on the south by the river Alpheus, and on the west by the Cladeus; and all the other rivers, which run into the Alpheus. Olympic does not appear to have been a town, but rather a collection of temples and public buildings, the description of which does not come within the plan of this work.

The origin of the Olympic games is buried in obscurity. The legends of the Eleian priests attributed the institution of the festival to the Idian Heraclids, and referred it to the time of Cronus.

According to their account, Rhéas, the mother of the newborn Zeus to the Idian Daedali, also called Curetes, of whom five brothers, Heracles, Peumus, Ephemerides, Isias, and Idas, came from Idas in Crete to Olympia, where a temple had been erected to Cronus by the men of the Golden Age; and Heracles, the eldest, conquered his brothers in a frothrace, and was crowned with the wild olive-tree. Heracles hereupon established a contest, which was to be celebrated every five years, because he and his brothers were five in number. Fifty years after Deucalion's flood they said that Clymenus, the son of Cardis, a descendant of the Idian Heraclids, came from Crete and celebrated the festival; but that Endymion, the son of Rhæthus, deprived Clymenus of the sovereignty, and offered the kingdom to him on the understanding that he should celebrate the games; that, a generation after Endymion, the festival was celebrated by Pelops, the son of the honor of the Olympic Zeus; that when the sons of Pelops were scattered through Peloponnesus, Amythaon, the son of Crethus and a relative of Endymion, celebrated it; that to him succeeded Peithas and Nucleus in conjunction, then Augias, and at last Heracles, the son of Amphitrion, after the taking of Elis. Afterward Cylon is mentioned as presiding over the games, and then they are said to have been discontinued till their revival by Iphitus. Most ancient writers, however, attribute the institution of the games to Heraclids, the son of Amphitrion, while others represent Atreus as their founder.

Strabo rejects all these legends, and says, that the festival was first instituted after the return of the Heraclids to the Peloponnesus by the Ætolians, who united themselves with the Eleians. It is impossible to say what credit is to be given to the ancient traditions respecting the institution of the festival; but they appear to show that religious festivals had been celebrated at Olympia from the earliest times, and it is difficult to conceive that the Peloponnesians would have so attached such importance to this festival, unless Olympia had long been regarded as a hallowed site. The first historical fact connected with the Olympic games is their revival by Iphitus, king of Elis, who is said to have accomplished it with the assistance of Lycurgus, the Spartan lawyer, and Cleothidas of Pisa; and the names of Iphitus and Lycurgus are perpetuated on a gold plate, in commemoration of the event, which disc Paucanias saw in the Temple of Hera at Olympia. It would appear from this tradition, as Thirlwall has remarked, that Sparta concurred with the two states most interested in the establishment of the festival, and mainly contributed to procure the consent of the other Peloponnesians.

The celebration of the festival may have been discontinued in various periods, through troubles consequent upon the Doric invasion, and we are told that Iphitus was commanded by the Delphic oracle to revive it as a remedy for treasonable commotions and for pestilence, with which Greece was visited.

Many of the ancient writers did not consider history to begin till the Olympian of Corebus, and regarded as fabulous the events said to have occurred in preceding times. The old olympiad era appears only to have been used by writers, especially by historians. It does not seem ever to have been adopted by any state in public documents. It is never found on any coins, and scarcely ever on inscriptions. There are only two inscriptions published by Böckh in which it appears to be used. A new olympiad era, however, came into use under the Roman emperors, which is found in inscriptions and was used in public documents. This era begins in Oly. 227, 3 (A.D. 131), in which year Hadrian had added the Olympicion at Athens; and, accordingly, we find Oly. 227, 3, spoken of as the first olympiad, Oly. 228, 3 (A.D. 132), as the second olympiad, &c.

OLYMPIC GAMES (Greek, Ολυμπιακα). The greatest of the national festivals of the Greeks. It was celebrated at Olympia in Elis, the name given to a small plain to the west of Pisa, which was bounded on

---

OLYMPIC GAMES.

was then afflicted. Iphitus thereupon induced the Eleans to sacrifice to Hercules, whom they had formerly regarded as an enemy, and from this time the games were regularly celebrated. Different dates are assigned to Iphitus by ancient writers, some placing his revival of the Olympic at B.C. 894, and others, as Callimachus, at B.C. 922. The interval of four years between each celebration of the festival was called an Olympiad; but the olympiads were not employed as a chronological era till the victory of Corèbus in the footrace, B.C. 776. (Vid. Olympiad.)

The most important point in the renewal of the festival by Iphitus was the establishment of the sacred truce for the duration of the games. All men who had been guilty of a crime which was inscribed in a circle on the disc mentioned above. The proclamation was made by peace-heralds (στυνοδρόμοι), first in Elis and afterward in the other parts of Greece; it put a stop to all warfare for the month in which the games were celebrated, and which was called λειψανομα. The territory of Elis itself was considered especially sacred for a month, and no alien or foreigner could enter it without incurring the guilt of sacrilege. When the Spartans, on one occasion, sent forces against the fortress Phryreum and Lepreum during the existence of the Olympic truce (ἐν ταῖς Ὀλυμπιακαῖς στρατιωτικαῖς), they were fined by the Eleans, according to the Olympic law, 2000 mine, behind which they had been found. Phlius and the Eleans themselves did not abstain from arms, and it is not probable that such a privilege would have existed without imposing on them the corresponding duty of refraining from attacking the territory of their neighbours. The later Greeks do not appear to have admitted this claim of the Eleans, as we find many cases in which their country was menaced with war.

The Olympic festival was probably confined at first to the Peloponnesians; but, as its celebrity extended, the other Greeks took part in it, till at length it became a festival for the whole nation. No one was allowed to contend in the games but persons of pure Hellenic blood; barbarians might be spectators, but slaves were entirely excluded. Amorians, who had been branded by their own states with atimia, or had been guilty of any offence against the divine laws, were not permitted to contend. When the Hellenic race had been extended by colonies to Asia, Africa, and other parts of Europe, persons sentoned in the games from very distant places, as the Cretans, Phrygians, and Thracians, as conquerors came from the colonies than from the mother-country. After the conquest of Greece by the Romans, the latter were allowed to take part in the games. The emperors Tiberius and Nero were both conquerors, and Pausanias' speaks of a Roman senator who gained the victory. During the freedom of Greece, even Greeks were sometimes excluded, as as had been the case at Athens; but after the Greek war there was no appearance to the Eleans to deserve this punishment. The horses of Hieron of Syracuse were excluded from the chariot-race through the influence of the mistoles, because he had not taken part with the other Greeks against the Persians. 8 All the Lacedaemonians were excluded in the 90th Olympiad because they had not paid the fine for violating the Elean territory, as mentioned above; 1 and similar cases of exclusion are mentioned by the ancient writers.

No women were allowed to be present, or even to cross the Alpheus during the celebration of the games, under penalty of being buried down from the Taypean rock. Only one instance is recorded of a woman having ventured to be present, and she, although detected, was pardoned in consideration of her father, brothers, and son having been victors in the games. An exception was made to this law in favour of the priestess of Demeter Chamyne, who was permitted to enter Ephesus and go to the Heillanodie. It would appear from another passage of Pausanias that virgins were allowed to be present, though married women were not (παρθένους δὲ οὐκ ἔχοντι θεασάσθαι); but this statement is opposed to all others on the subject, and the reading of the passage seems to be doubtful. 6 Women were, however, allowed to send chariots to the games in the time of Phidias, and a prize for the women's chariots was Cynice, the daughter of Archidamus and sister of Agesilaus. 6 The number of spectators at the festival was very great; and these were drawn together, not merely by the desire of seeing the games, but partly through the opportunity it afforded them of carrying on commercial transactions with the Eleans, and of living in the midst of Greek festivals with the Mohammedan festivals at Mecca and Medina. Many of the persons present were also deputies (θεωροὶ) sent to represent the various states of Greece; and we find that these embassies vied with one another in the number of their offerings, and the splendour of their general appearance, in order to show the superiority of their native cities. The most illustrious citizens of a state were frequently sent as θεωροὶ. 6

The Olympic festival was a Pentasternia (πενταστροφικός), that is, according to the ancient mode of reckoning, a space of four years elapsed between each festival, in the same way as there was only a space of two years between a πενταστροφική. According to the scholiast to Pindar, 4.) the pentasternia was celebrated at an interval sometimes of 49, sometimes of 50 years; in the former case in the month of Apolloius, in the latter in that of Parthenius. This statement has given rise to much difference of opinion from the time of J. Scaliger; but the explanation of Eiclips in his commentary on Pindar, has been found satisfactory, that the Pentasternia was celebrated on the first full moon after the summer solstice, which sometimes fell in the month of Apolloius, and sometimes in Parthenius, both of which he considers to be the names of Elean Olympic months; consequently, the festival was usually celebrated in the Attic month of Hecatomphalum, in the 5th year after the introduction, five days, from the 11th to the 16th days of the month inclusive. The fourth day of the festival was the 14th of the month, which was the day of the full moon, and which divided the month into two equal parts (δισευμενίς μηδοῖς). 6

The festival was under the immediate superintendence of the Olympic Zeus, whose temple at Olympia was regarded with veneration, and the games celebrated by Phidias, was one of the most splendid works of art in Greece. 6 There were also temples and altars

Olympic Games.

The Olympic Games were a major event in ancient Greece, held in honor of Zeus, the god of the sky and thunder. The games were held in ancient Olympia, on the northwestern coast of the Peloponnese, and began in 776 BC. They were held every four years, and the first recorded competition was the footrace. The games were divided into two parts, the footraces and wrestling, and these were held in honor of the gods Zeus, Hera, and Athena. The victors were awarded victor's wreaths of olive branches, and the winners of the footrace were crowned with a golden crown. The contests included running (800m, 1500m, 4219km), the long jump, the discus throw, the javelin, and the pentathlon. The games were also held in honor of the war gods, and the Olympic victors were awarded victor's shields. The games were suspended during war and plague, and were last held in 393 AD. After the games were abolished, the victors were awarded victor's wreaths of olive branches, and the winners of the footrace were crowned with a golden crown.
olympic games

the superintendence of Pantonos, king of Pisa; and the 104th, celebrated under the superintendence of the Pisans and Arcadians. These olympiads the Eleans called αὐνωναίδες, as celebrated contrary to law.1

The hellanodicea were chosen by lot from the whole body of the Eleans. Pausanias2 has given an account of their numbers at different periods; but the commencement of the passage is, unfortunately, corrupt. At first, he says, there were only two judges chosen from all the Eleans, but that in the 25th ol. (75th ol. 1) nine hellanodicea were appointed, three of whom had the superintendence of the horseraces, three of the pentathlon, and three of the foot-races. The number of the oldest judge was added. In the 103d ol. the number was increased to 12, as at that time there were 12 Elean phylae, and a judge was chosen from each tribe; but, as the Eleans afterward lost part of their lands in war with the Arcadians, the number of phylae was reduced to eight in the 104th ol. and, accordingly, there were then only eight hellanodicea. But in the 108th ol. the number of hellanodicea was increased to 16, and remained the same to the time of Pausanias.3

The hellanodicea were instructed for ten months before the festival by certain of the Elean magistrates, called νομοδόλακες, in a building devoted to the purpose near the market-place, which was called Ελείνη.4 Thus, Pausanias5 says, "The whole expenses of a festival having been provided for a certain sum, the superintendence of the hellanodicea was a certain number of ἄλεντα, with an ἀλάντοργας at their head, who formed a kind of police, and carried into execution the commands of the hellanodicea." There were also various other minor officers under the control of the hellanodicea.

All free Greeks were allowed to contend in the games who had complied with the rules prescribed to candidates. The equestrian contests were necessarily confined to the wealthy; but the poorest citizens could contend in the athletic contests, of which Pausanias6 mentions an example. This, however, was not considered as conducive to the good of the state, and special seats appropriated to them.7 Under the direction of the hellanodicea was a certain number of ἄλεντα, with an ἀλάντοργας at their head, who formed a kind of police, and carried into execution the commands of the hellanodicea.8 There were also various other minor officers under the control of the hellanodicea.

All persons who were about to contend had to prove that they had undergone the preparatory training (προγυμνασία) for ten months previous, and the truth of this they were obliged to swear to in the βοδελτήριον at Olympia before the statue of Zeus "Ornos. The fathers, brothers, and gymnastic teachers of the competitors, as well as the competitors themselves, had also to swear that they would be guilty of no crime (κακόπαραγμα) in reference to the contests.1

All competitors were obliged, thirty days previous to the festival, to undergo certain exercises in the gymnasium at Elis, under the superintendence of the hellanodicea. The different sections of the course prescribed to them had to follow one another, were written by the hellanodicea upon a tablet (λευκοί) exposed to public view.2

The competitors took their places by lot, and were, of course, differently arranged, according to the different contests in which they were to be engaged. The herald then proclaimed the name and country of each competitor, who wore a plain tunic and already to begin the contest, the judges exorted them to acquit themselves nobly, and then gave the signal to commence. Any one detected in bribing a competitor to give the victory to his antagonist was heavily fined; the practice appears to have been not uncommon, from the many instances recorded. The name of the victor, and that of his father and of his country, were then proclaimed by a herald before the representatives of assembled Greece. The festival ended with processions and sacrifices, and with a public banquet given by the Eleans to the conquerors in the Prytaneum.11

The most powerful states considered an Olympic victory a most sacred exploit. The number of citizens who obtained honour upon the state to which he belonged; and a conqueror usually had immunities and privileges conferred upon him by the gratitude of his fellow-citizens. The Eleans allowed his statue to be placed in the Altis, or sacred grove of Zeus, which was adorned with numerous such statues, erected by the conqueror or their families, or at the expense of the state, or at their own cost. On his return home, the victor entered the city in a triumphal procession, in which his praises were celebrated frequently in the loftiest strains of poetry. (Compare Athl., p. 120.)

Sometimes the victory was obtained without a contest, in which case it said to be ἀκούσσημα. This was the case with the winners in the antelope- or stag-hunt; they were assigned the victor, or came too late, or when an athlete had obtained such celebrity by former conquests, or possessed such strength and skill, that no one dared to oppose him.12 When one state conferred a crown upon another state, a
OLYMPIC GAMES.

proclamation to this effect was frequently made at the great national festivals of the Greeks.1

As persons from all parts of the Hellenic world were assembled together at the Olympic games, it was the best opportunity which the artist and the writer possessed of making their works known. It in fact, to some extent, answered the same purpose as the presses does in modern times. Before the invention of printing, the reading of an author's works to as large an assembly as could be obtained, was one of the easiest and surest modes of publishing them; and this was a favourite practice of the Greeks and Romans. Accordingly we find many instances of literary works thus published at the Olympic festival. Herodotus is said to have read his history at this festival; but, though there are some reasons for doubting the correctness of this statement, there are numerous other writers who thus published their works, as the sophist Hippias, Prodicus of Ceos, Anaximenes, the orator Lysias, Dion Chrysostom, &c.2 It must be borne in mind that these recitations were not contests, and that they formed, properly, no part of the festival. In the same way painters and other artists exhibited their works at Olympia.3

The Olympic games continued to be celebrated with much splendour under the Roman emperors, by many of whom great privileges were awarded to the victors in the games. In the sixteenth year of the reign of Theodosius, A.D. 394 (Ol. 293), the Olympic festival was forever abolished; but we have no account of the names of the victors from Ol. 249. Our limits do not allow us to enter into the question of the influence of the Olympic games upon the national character, but the reader will find some treatment of the subject in Thriftall's Hist. of Greece, vol. i., p. 390, &c.

There were many ancient works on the subject of the Olympic games and the conquerors therein. One of the chief sources from which the writers obtained their materials must have been the registers of conquerors in the games, which were diligently preserved by the Eleians (Ἡλείων ἡς τοὺς Ὀλυμπια- κοὺς ονομαζόμενα) and their sons. One of the most ancient works on this subject was by the Elean Hippias, a contemporary of Plato, and was entitled Ἀναγραφή Ὀλυμπιακῶν.4 Aristotle also appears to have written a work on the same subject. There was a work by Timaeus of Sicily, entitled Ολυμπιονικά ἡ χρονικά πραξίδια, and another by his son Timarchus (born B.C. 276), also called Ολυμπιονικά.5 This work was coextensive with the Olympic games, and was written in the time of Alexander the Great, who was a great lover of the games. It was not, however, regularly celebrated as an Olympic festival till the time of the Emperor Commodus. It commenced on the first day of the month Hyperberetes (October), with which the year of Antiochus began. It was under the presidency of an archon, and the celebration of it was abolished by Justin, A.D. 521. The writings of Libanius, and of Chrysostom, the Christian father, who lived many years at Antioch, give many particulars respecting this festival.

There were also many ancient works on the Greek festivals in general, in which the Olympic games were of course treated of. Thus the work of Diodorus, the inquirers,10 contained a division entitled Ὀλυμπιακά.11

One of the most important works on the Olympic games was by Phegon of Tralles, who lived in the reign of Hadrian; it was entitled Περί τῶν Ὀλυμπιακῶν, or, Οἰκονομίαι καὶ Χρονικῶν Συναγωγῆς, was composed in 16 books, and extended from the first Olympiad to Ol. 229. We still possess two considerable fragments of it. The important work of Julianus, Aelianus, Ἐλληνικά διάγωνων ἡ πρώτη, &c., is preserved to us by Eusebius; it comes down to Ol. 249.24

OLYMPIC GAMES.

his χρονικά ἱστορία, carried down the Olympic conquerors to Ol. 362.

In modern works much useful information on the Olympic games is found in Cornini's Dissert. Agitativa, and in Böckh's and Dissen's editions of Pindar. See also Meier's article on the Olympic games, and Rathgeber's articles on Olympia, Olympicien, and Olympischer Jupiter in Erath and Gruber's Encyclopädie.—Diss. Über die Anordnung der Olympischen Spiele, in his kleine Schriften, p. 165: and Krause, Olympia oder Darstellung der großen Olympiaischen Spiele, t. i., p. 595. In course of time, festivals were established in several Greek states in imitation of the one at Olympia, to which the same name was given. Some of these are only known to us by inscriptions and coins; but others, as the Olympic festival at Antioch, obtained great celebrity. After these Olympic festivals had been established in several places, the great Olympic festival is sometimes designated in inscriptions by the addition of "in Pisa," in Hel- 1. We subjoin from Krause an alphabetical list of these smaller Olympic festivals. They were celebrated at

Rhea in Macedonia. This festival was in exist- ence in the time of Alexander the Great.2

Alexandra. In later times the number of Alex- andrian conquerors in the great Olympic games was greatly increased by other states.

Anazarbus in Cilicia. This festival was not in- troduced until a late period.4

Antioch in Syria. This festival was celebrated at Daphne, a small place 40 stadia from Antioch, where there was a large sacred grove watered by many fountains. The festival was originally called Daphne, and was sacred to Apollo and Artemis, as was the Olympic festival. That it was the inhabitants of Antioch who had purchased from the Eleians, in A.D. 44, the privilege of celebrating Olympic games. It was not, however, regularly celebrated as an Olympic festival till the time of the Emperor Commodus. It commenced on the first day of the month Hyperberetes (October), with which the year of Antiochus began. It was under the presidency of an archon, and the celebration of it was abolished by Justin, A.D. 521. The writings of Libanius, and of Chrysostom, the Christian father, who lived many years at Antioch, give many particulars respecting this festival.

Athens. There were two festivals of the name of Olympia celebrated at Athens, one of which was in existence in the time of Pindar,5 who celebrates the ancestors of the Athenian Timotheus as con- querors in it, and perhaps much earlier. It was celebrated to the honour of Zeus, in the spring, be- tween the great Dionysia and the Bendidia.6 The other Olympic festival at Athens was instituted by Hadrian, A.D. 131, from which time a new Olympic era commenced.7 (Vid. OLYMPIAD.)

Aetad in Pamphylia. This festival is only known to us by coins.

Cyprus in the Propontis.11

Cyrene in Africa.12

Dium in Macedonia. These games were instituted by Archelaus, and lasted nine days, correspond- ing to the number of the nine Muses. They were celebrated with great splendour by Philip and the Great Alexander.13

1. (Compare Böckh, Inser., n. 247, p. 361, 362, n. 1085, p. 564.)

2. (Compare Arrian, Anab., l., i., 3.)

Suidas, s. v. Ασκητοφανῆς.
EPHNESUS. This festival appears by inscriptions, in which it is sometimes called Αδριανά Ὑλημα ἐν Φιλοφ., to have been instituted by Hadrian. 1

Elis. Besides the great Olympic games, there appear to have been smaller ones celebrated yearly. 2

Magnesia in Lydia. 3

Neoepolis. 4

Nicopolis in Epirus. Augustus, after the conquest of Antony off Actium, founded Nicopolis, and instituted games to be celebrated every five years (δισεκατοετῶς) in commemoration of his victory. These games are sometimes called Olympic, but more frequently bear the name of Actia. They were sacred to Apollo, and were under the care of the Macedonians. (vid. AKTEIA.)

Olympus in Thessaly, on the mountain of that name. 5

Pergamos in Mysia. 6

Side in Pamphylia. 7

Smyrna. Pausanias 8 mentions an agon of the Smyrneans, which Corinii supposes to be a Olympic festival. The Marmor Ovonomise expressively calls, in praise of the Smyrnaeans, Φίλος της Αθηνας και Μαρκον″, and they also occur in inscriptions. 9

Tarsus in Cilicia. This festival is only known to us by coins. 10

Tegea in Arcadia. 11

Thessalonica in Macedonia. 12

Thorata in Lydia. 13

Tyrus in Phoenicia. 14

*OLYRA (δημος), Didymus describes this as ηδος σπερματος παραπλησίου κριθης. "In fact," says Adams, "it can scarcely admit of a doubt that it was a variety of Spelti, namely, Triticum Spelta, L."

*OPHMAX (ὑφημαξ), a species of precious stone, most probably, according to Sir John Hill, the Beryllus oleaginosus of Pliny. Theophrastus informs us that it was one of the gems used for engraving seals. 15

*ONITIS (ονίτις), a plant, which the Scholarist on Nicander and Hesychius agree in identifying with the Πυργινω, or Sweet Marjoram, the Oronamis ὑπηχαλλής. 16

ONOBRYCHYS (ονόβρυχος), the Onobrychis satis, called, in English, Cock's Head or Saintfoin. 17

*ONOS (ονός), the Ass, or Equus Asinus, L. "The wild Ass," says Adams, "is the Para of Scripture, and the ἄρτανος of the Greeks." The "domestic ass," says Smith, "supposed to be derived from the wild hear on of the Desert and the horse of Asia, enters at a remote period into the circle of human economic establishments. The first-mentioned, as might be expected, resided in the same regions where the dawn of civilization first commenced, and, gifted with inferior powers of resistance, is presumed to have been subjigated several ages before the second, because we find it peopling the Pentateuch often after the horse is noticed; such as in the sacrifice of Abraham; in his visits to Egypt, where he received presents from Abimelech; and in the spoils of Shechem, where

asses are numbered with other cattle, but horses are not mentioned. Yet that noble animal, by nature provided with greater physical capabilities, with more intelligence, and more instinctive capacities for adapting his existence to the circumstances of domestication in every region, is, in his servitude, grown larger, more adorned, more acute, and more educational than in a state of nature; while the ass, in similar circumstances, has degenerated from his pristine character, becoming, even in the greater part of Persia, smaller in stature, less fleet, less intelligent, and, by his own impulses, less the associate of man. When the horse, from thorough domesticity, is again cast upon his own resources, he resumes his original independency of pace and place; he becomes a savage beast, supporting the herd under his care, without altogether losing his acquired advantages; the ass, on the contrary, although never a spontaneous associate in his domestication, is nowhere known to have again become wild, or to have sought his freedom with a spirit of persevering vigilance; and in cases where, by accident, he has found himself in freedom, he has made the attempt to return to his original state, though the circumstances restore him to the filiation of the hyrasm or the kulan. When emancipated, he becomes, without effort, the prey of the lion, the tiger, the hyena, or the wolf, and in America he has been known to succumb under the beak of a condor. It is evident that the difference in the relative condition of the horse and ass, or of the wild ass and the wild horse, is not entirely referable to human neglect and want of kindness, but, in part at least, must be ascribed to inferior sensibility and weaker intellectual power, both being alike evinced by the hardness of his hide, by his satisfaction with coarser food, and his passive stubbornness." 18

*Phistiodes of fish, the same with the ψάρια of Athenaeus, and probably the Bacchus of Pliny. The name would appear to have been applied to more than one species of the Gadus, but more especially to the Gadus merluccius, or Hake. Adams considers it doubtful whether the Greeks were acquainted with the Gadus eglefinus, or Haddock. 19

*ONOSMA (ονόσμα, called also ονόσμα and ονος) a plant, was celebrated on the 14th of the month of Nioniiem. Haradonin says of it, "Νήλοι αισθητοι κατα τον ἄναθασαν δεξιοτερον." Stephens also holds it to be a species of Alkanet Sprengel maintains that it is either the Anchusa uniflora, or Lithospermum carolini-purpureum. 20

*ONYX, i. In mineralogy the term onyx was applied. 1. To a semiprecious stone of a fine grained texture, namely, the Onyx ageate of Cleveland: 2. To a variety of gypseous alabaster, from which small vases were formed. (vid. ALABASTER.)

*II. A term used by Dioscorides, Galen, and the other writers on the Materia Medica, to signify the operuitis, or cover of the Strumbus lenticulatus. 21

OPALIA, a Roman festival in honour of Opis, which was celebrated on the 14th of the month of January (Dec. 19th), being the third day of the Saturnalia, which was also originally celebrated on the same day, when only one day was devoted to the festival. It was believed that Opis was the wife of Saturnus, and for this reason the festivities were celebrated at the same time. The worshippers of Opis paid their visit, in a manner which touched the earth on purpose, of which she was the goddess. 22

The *opus of Pliny,* observes Dr. Moore, "is too well characterized, and its peculiar lustre or opalescence too accurately described by him, to leave any doubt that it was what we call precious Opal. Pliny is not the only one among the ancients, as Jameson supposed, who makes mention of this gem. The Orphic poem commends the beauty of the *βρατάλιος,* and evidently alludes to its other name *παιδέως,* in saying that it has the delicate complexion of a lovely youth (*μετροφί τέρενα χρών παιδὸς.* This gem also, Pliny says, the Indians so well imitated in glass, that the counterfeit could hardly be detected. The Opal was perhaps too highly valued to be frequently engraved. There are very few engraved specimens of this mineral preserved in collections. But that it sometimes was used as a ringstone, we learn from the story Pliny tells of a senator named Nonius, who, possessing an opal valued at 20,000 sesterces, which Antony coveted, was proscribed in consequence, and fled, saving of his whole fortune this ring alone."

*O'PPIA NUNTIA'TIO* was a summary remedy provided by the edict against a person who was making an opus novum. An opus novum consisted in either adding something in the way of building (adfaciendo), or taking away something so as to alter the appearance of a thing (*iacies operis.* The object of the nuntiatio was either the maintenance of the *opus* (*opus jeas,* or to prevent damage (*damnum,* or to protect the public interest (*publicum jus,*). The owner of the property which was threatened with damage by the opus novum, or he who had an easement (*servitutum*) in such property, had the jus nunciation. Nuntiatio consisted in protesting against and forbidding the progress of the opus novum on the spot where the work was proceeding, and in certifying the owner or possessor of the property who was there present on his account. The nuntiatio did not require any application to, or interference on the part of the praetor. It was a rule of law that the nuntiatio must take place before the work was completed: after it was completed, the operis novi nuntiatio had no effect, and redress could only be obtained by the interdict quod vi aut consensu aut res tantum esse.*

If the opus novum consisted in building on the complainant's ground, or inserting or causing anything to project into his premises, it was better to apply at once to the praetor, or to prevent it per manum, that is, as it is explained "iactu lapilli,* which was a symbol of the use of force for self-protection.

The edict declared that after a nuntiatio nothing should be done until the nuntiatio was declared illegal (*nuntiatio missa or remissa fat*) or a security (*satisfactio de opere restituto*) was given. If the person to whom the notice was given persevered, even if he had a right to do what he was doing, yet, as he was acting against the praetor's edict, he might be compelled to undo what he had done. By this means the parties were kept within the jurisdiction of the praetor. In cases where there was danger from the interruption of the work, or the person who was making the opus novum denied the right of the nuntians, he was allowed to go upon giving a cautio or security for demolition or restoration, in case the law was against him. When the cautio was given or the nuntians waived it, the party was entitled to an interdictum prohibitorum for his protection in prosecuting the work.

The effect of the nuntiatio ceased when the cautio was given; when the nuntians died, when he alienated the property in respect of which he claimed the jus nuntiandi, or when the praetor per-

OPTIMATES.

Of the different parts of fishes, the roe was the most esteemed for this purpose. It is still prepared from the fish in the same waters adjoining Myrus in Ionia, which were given to Themistocles by the King of Persia. A jar was found at Pompeii containing carviage made from the roe of the tunny.

Some of the ancient republican or establishments for curing fish, were on the southern coast of Spain; but the Greeks obtained their chief supply from the Hellespont, and more especially Byzantium first rose into importance after its establishment by the Milesians in consequence of the active prosecution of this branch of industry. Of all seas, the Exuine was accounted by the ancients the best suited to the culture and the cult of fish. A minute discussion of their qualities, illustrated by quotations, may be seen in Athenaeus.

Plato mentions the practice of salting eggs, which was no doubt intended to convert them into a kind of opsonia. The treatise of Apicus, De Opsonis, is still extant in ten books.

Some of the ancient records are in the habit of going to market (κει τῷ πώλῳ) themselves in order to purchase their opsonia (ὀψωνίῳ, ϑαυμασκέα). (Vid. Macellum, Tininiœramulium.) But the opulent Romans had a slave, called opsonator (ὀψωνιος), whose office it was to purchase for his master. It was his duty, by learning what flavours were most acceptable to his master, and that he himself aspired to, to supply new dishes, which not only gratified his own appetite, but indeed became his master's diet, and the Levant. The principal ports on the Exuine engaged in this traffic were Sinope and Panticeaeum.

Among the fish used for curing were different kinds of stagone (ἄντακος), tunny (τυμπροβός), scaber, σκληρος, a name still in use, with some modification, among the descendants of the ancient Phocæans. There were, however, differences between the kinds, and the culture of them was aided by their migratory habits, as in the autumn they passed through the Bosporus towards the south, and in spring returned to the Exuine in order to deposit their spawn in its tributary rivers. At these two seasons they were caught in the greatest quantity, and, having been cured, were shipped in the Milesian ports for sale; and sent both to the Levant and the Levant. The principal ports on the Exuine engaged in this traffic were Sinope and Panticeaeum.

The treatment of Apicus, De Opsonis, is still extant in ten books.

Some, and possibly all, who were going to market (κει τῷ πώλῳ) themselves in order to purchase their opsonia (ὀψωνίῳ, ϑαυμασκέα). (Vid. Macellum, Tininiœramulium.) But the opulent Romans had a slave, called opsonator (ὀψωνιος), whose office it was to purchase for his master. It was his duty, by learning what flavours were most acceptable to his master, and that he himself aspired to, to supply new dishes, which not only gratified his own appetite, but indeed became his master's diet, and the Levant.

Among the fish used for curing were different kinds of stagone (ἄντακος), tunny (τυμπροβός), scaber, σκληρος, a name still in use, with some modification, among the descendants of the ancient Phocæans. There were, however, differences between the kinds, and the culture of them was aided by their migratory habits, as in the autumn they passed through the Bosporus towards the south, and in spring returned to the Exuine in order to deposit their spawn in its tributary rivers. At these two seasons they were caught in the greatest quantity, and, having been cured, were shipped in the Milesian ports for sale; and sent both to the Levant and the Levant. The principal ports on the Exuine engaged in this traffic were Sinope and Panticeaeum.

Plato mentions the practice of salting eggs, which was no doubt intended to convert them into a kind of opsonia. The treatise of Apicus, De Opsonis, is still extant in ten books.

Some of the principal opsonia, or establishments, for curing fish, were on the southern coast of Spain; but the Greeks obtained their chief supply from the Hellespont, and more especially Byzantium first rose into importance after its establishment by the Milesians in consequence of the active prosecution of this branch of industry. Of all seas, the Exuine was accounted by the ancients the best suited to the culture and the cult of fish. A minute discussion of their qualities, illustrated by quotations, may be seen in Athenaeus.

OPTIMO. (Vid. Ostiariio.)

OPTIMATES. The word is synonymous with optimi, and, accordingly, signifies the best men in the state, whether of noble or plebeian origin. But at Rome, where the reverence for the morts et instituta majorum formed such a prominent feature of the national character, the name optimates was applied to a political party, which we may call the conservative or aristocratic party, in contradistinction to the popular party, with its desire for change and improvement. As long as the patricians and plebeians were the only two parties in the Republic, there was no occasion for the appellation of optimates, though Livy, applying expressions very common in his own days, makes M. Horatius Barbatus distinguish between populares and optimates instead of between patricians and plebeians. But at the time when a new nobility, consisting of wealthy plebeians as well as patricians, had been formed, and occupied the place formerly held by the patricians, the term optimates began to be applied frequently to persons belonging to this new order of nobles, and mostly comprehended the or to senatorius and the ordo equester. When, at a later period, the term still more extensively applied, senatorius, nobles, and equester were so often spoken of as synonyms, that the name optimates was used in a narrower sense, and only comprised the party consisting of the senate and its champions, in opposition to the popular party, which was now sometimes designated by the name of plebs. There is a locus classicus on optimates in Cicero, but in the same passage he uses the terms populares and optimates, and the two terms, optimates, he rather follows the etymology of the conventional meaning which the word had assumed in his days. His object in so doing was to remove from the party of the optimates, to which he himself belonged, the odium attached to it by the popular party. ORACULUM (ἀρακολογος, χρυσοτριμος) was used by the ancients for the revelation made by the deity to a person, as the place in which such revelations were made. The deity was in none of these places believed to appear in person to man, and to communicate to him his will or knowledge of the future, but all oracular revelations were made through some kind of medium, which, as we have already said, was a sort of diviner, who went from place to place oracles existed. It may, on first sight, seem strange, that there were, comparatively speaking, so few oracles of Zeus, the father and ruler of gods and men. But although, according to the belief of the ancients, Zeus himself was the first source of all oracular revelations, yet he was too far removed from man to communicate to him his will or knowledge of the future; other gods, therefore, especially Apollo, and even heroes, acted as mediators between Zeus and men, and were, as it were, the organs through which he communicated his will. The fact that the ancients consulted the will of the gods on all important occasions of public and private life arose from the conviction that they knew the issue of what they were going to undertake, and partly from the great reverence for the gods, so peculiar to the ancients, by which they were led not to undertake anything of importance without their sanction; for it should be borne in mind that an oracle was not, merely a revelation to satisfy the curiosity of man, but, at the same time, an oracle, a sort of divination, of a divine, knowledge of what man was intending to do or not to do. We subjoin a list of the Greek oracles, classed according to the deities to whom they belonged.

I. ORACLES OF APOLLO.

1. The Oracle of Delphi was the most celebrated of all the oracles of Apollo. Its ancient name was Pytho, which is either of the same root as πυθόν, to consult, or, according to the Homeric hymn on Apollo, derived from πυθέω, to putrefy, with reference to the nature of the locality. Respecting the topography of the Temple of Apollo, see Paussanias and Müller. In the innermost sanctuary (τὸν υπαρτὸν ήθος or μενηθνω) there was the statue of Apollo.

which was, at least in later times, of gold; and before it there burned upon an altar an eternal fire, which, according to the description of Pausanias, in the roof of the temple was covered all over with laurel garlands, and upon the altar garland was burned as incense. In the centre of this temple there was a small opening (χίασµα) in the ground, from which, from time to time, an intoxicating smoke arose, which was believed to come from the well of Castas, which vanished into the ground close by the sanctuary. Over this chasm there stood a high tripod, on which the tripod of the temple by the prophets (προφητης), took her seat whenever the oracle had to be consulted. The smoke rising from under the tripod affected her brain in such a manner that she fell into a state of delirious intoxication, and the sounds which she uttered in this state were believed to contain the revelations of Apollo. These sounds were carefully written down by the prophets, and afterward communicated to the persons who had come to consult the oracle. The pythia (the προφητης) was always a native of Delphi, and when she had once entered the service of the god she never left it, and was never allowed to marry. In early times she was always a young girl, but after one had been seduced by Echecrates the Thessalian, the Delphians made a law that in future no one should be elected as prophet who had not been a virgin. The pythia was still elected, but, in remembrance of former days, the old woman was always dressed as a maiden. The pythia was generally taken from some family of poor country-people. At first there was only one pythia at a time; but when Greece was in its most flourishing state, and when the number of those who came to consult the oracle was very great, there were always two pythiae, who took it in turns to sit on the tripod alternately, and a third was kept in readiness in case some accident should happen to either of the others. The effect of the smoke on the whole mental and physical constitution is said to have sometimes been so great, that in her delirium she leaped from the tripod, was thrown into convulsions, and after a few days died.

Six oracle were only given once every year, on the seventh of the month of Byias (probably the same as Πυθώς, or the month for consulting), which was believed to be the birthday of Apollo; but as this one day, in the course of time, was not found sufficient, certain days in every month were set apart for the purpose. The order in which the persons who came to consult were admitted was determined by lot, to such individuals or states as had acquired claims on the gratitude of the Delphians, or whose political ascendency seemed to give them higher claims than others. Such was the case with Croesus and the Lydians, with the Lacedaemonians, and with Philip of Macedon. It appears that those who consulted the oracle had to pay a certain fee, for Herodotus states that the Lydians were honoured with ἀνάλειψεν by the Delphians. The pythia always spent three days before she ascended the tripod in preparing herself for the solemn act, and during this time she fasted, and bathed in the Castalian well, and dressed in a simple manner; she also burned in the temple laurel leaves and flour of barley upon the altar of the god. Those who consulted the oracle had to sacrifice a ram before an ox, or a sheep, and it was customary for them to throw thereon that these visions should be healthy in body and soul, and to ascertain this they had to undergo a peculiar scrutiny. An ox received barley, and a sheep chieke-pease, to see whether they ate them with appetite; water was poured over the goats, and if this put them into a thorough tremble, the victim was good. The victim which was thus found eligible was called δοσις. Wachsmuth states that there were no certain conclusions, and that when the laurel garlands were found to be covered with ribands of wool, but the passages from which this opinion is derived only speak of such persons as came to the temple as suppliants.

The Delphians, or, more properly speaking, the noble families of Delphi, had the superintendence of the oracle. Among the Delphian aristocracy, however, there were five families which traced their origin to Deucalion, and from each of these one of the five priests, called δοσις, was taken. Three of the names of these families only are known, viz., the Cleomantids, the Thracids, and the Laphriads. The δοσις, together with the highpriest or prophetess, held their offices for life, and had the control of all the affairs of the sanctuary and of the sacrifices. That these noble families seem to have had a proper influence upon the oracle is manifest from numerous instances, and it is not improbable that they were its very soul, and that it was they who dictated the pretended revelations of the god.

Most of the oracular answers which are extant are in hexameters, and in the Ionic dialect. Sometimes, however, Doric forms also were used. The hexameter was, according to some accounts, invented by Phemoneus, the first pythia. This musical form was chosen partly because the words of the god were thus rendered more venerable, and partly because it was easier to remember verse than prose. Some of the oracular verses had metrical defects, which the faithful among the Greeks accounted for in an ingenious manner.

In the times of Theopompus, however, the custom of giving the prophecies in prose seems to have prevailed, as they were henceforth generally in prose, and in the Doric dialect spoken at Delphi. For, when the Greek states had lost their political liberty, there was little or no occasion to consult the oracle on matters of a national or political nature, and the affairs of ordinary life, such as the sale of slaves, the cultivation of a field, marriages, voyages, loans of money, and the like, on which the oracle was then mostly consulted, were little calculated to be spoken of in lofty poetical strains. When the oracle of Delphi lost its importance in the eyes of the ancients, the number of persons who consulted it materially decreased, and in the days of Plutarch ony pythia was, as of old, sufficient to do all the work, and oracles were only given on one day in every four years.

The divine agency in Pytho is said to have first been discovered by shepherds who tended their flocks in the neighbourhood of the chasm, and whose sheep, when approaching the place, were seized with convulsions. Persons who came near the

ORACULUM.

place showed the same symptoms, and received the power of prophecy. This, at last, induced the people of Delphi to call in a new oracle. Under the direction of the Homeric hymn on Apollo, this god was himself the founder of the Delphic oracle, but the local legends of Delphi stated that originally it was in the possession of other deities, such as Gaia, Themis, Phoebe, Poseidon, Night, Cronos, and that it was given to Apollo as a present. Other traditions, ancient and modern, perhaps the most ancient and generally the most approved, treated of Apollo as having gained possession of the oracle by a struggle, which is generally described as a fight with Python, a dragon, who guarded the oracle of Gaia orThemis. The oracle of Delphi, during its best period, was believed to give its answers and advice to every one who came with a pure heart, and had no evil designs: if he had committed a crime, the answer was refused until he had atoned for it; and he who consulted the god for bad purposes was sure to accelerate his own ruin. No religious institution in all antiquity obtained such a paramount influence, not only in Greece, but in all countries around the Mediterranean, in all matters of importance, whether relating to religion or to politics, to private or to public affairs. The capacity of Delphi was not founded on a subject of a religious nature, the answer was invariably of a kind calculated not only to protect and preserve religious institutions, but to command new ones to be established, so that it was the preserver and promoter of religion throughout the ancient world. Colonies were seldom or never founded without having obtained the advice and directions of the Delphic god. Hence the oracle was consulted in all disputes between a colony and its metropolis, as well as in cases where several states claimed to be the metropolis of a colony.

The Delphic oracle had at all times a leaning in favour of the Greeks of the Dorian race, but the time when Athens and Sparta entered upon their struggle for the supremacy in Greece; at this time the partiality for Sparta became so manifest, that the Athenians and their party began to lose all reverence and esteem for it, and the oracle became a mere instrument in the hands of a political party to promote the interests of Greece. Many believed that the oracle had lost the powers which it had possessed in former days, but it still continued to be consulted down to the times of the Emperor Julian, until at last it was entirely done away with by Theodosius. Notwithstanding the general obscurity and ambiguity of many of the oracles given to Delphi, there were many, also, which convey so clear and distinct a meaning, that they could not possibly be misunderstood, so that a wise age at the bottom of the oracles cannot be denied. The manner in which this agency has been explained at different times, varies greatly according to the spirit of the age. During the best period of their history, the Greeks, generally speaking, believed in the oracle and its counsel, and its directions. When the sphere in which it had most benefited Greece became narrowed and confined to matters of a private nature, the oracle could no longer command the veneration with which it had been looked upon before. The pious and believing heathens, however, thought that the god, and no human power had any care upon the oracle, and that he was beginning to withdraw from it; while freethinkers and unbelievers looked upon the oracle as a skilful contrivance of priestcraft which had then outgrown itself. This continues to be the opinion of the Pausania and modern writers. The early Christian writers, seeing, that some extraordinary power must in several cases have been at work, represented it as an institution of the evil spirit. In modern times opinions are very much divided. Hüllmann, for example, has endeavoured to show that the oracle of Delphi was entirely managed and conducted by the aristocratical party, and that it ceased to be a genuine oracle, as forming a sort of hierarchic senate for all Greece. If so, the Delphic senate surely was the wisest of all in the history of the ancient world. Klausen, on the other hand, seems to be inclined to allow some truly divine influence, and, at all events, thinks that, even in so far as it was merely managed by men, it acted in most cases according to lofty and moral principles.

The modern literature on the Delphic oracle is very rich; the most important works are: C. F. Wilster, De Religione et Oracle Apollois Delphi, Hafniae, 1837.—H. Piotrowski, De Graeciae Oracle Delphi, Lipsiae, 1839.—R. N. Klausen, in Erzehr und Grunder Encyclopedia, i. vii. 267.—P. K. D. Unni, in Theologische Zeitschrift für das Deutschen Altertum, Berlin, 1837.—W. Götte, Das Delphische Orakel, in seinem politischen, religiösen und sittlichen Einfluss auf die alte Welt, Leipzig, 1839.

2. Oracle at Abe, in Phocis. An oracle was believed to have existed here from very early times, and was held in high esteem by the Phocians. Some writers believe the Persian invasion, the Phocians gained a victory over the Thessalians, in which they obtained, among other spoils, four thousand shields, half of which they dedicated in the Temple of Apollo at Abe, and half in that of Delphi. The oracle was, like many others, consulted by Creusus, but he does not seem to have found it agreeing with his wishes. In 467 B.C. Xerxes the Temple of Abe was burned down, and, like several temples destroyed in this invasion, it was never rebuilt. The oracle itself, however, remained, and before the battle of Leuctra it promised victory to the Thebans; but in the Phocian or sacred war, when some Phocians fugitives who had taken refuge in the temple were murdered, the oracle was consulted by the Thebans. But even after this calamity the oracle seems to have been consulted, for the Romans, from reverence for the oracle, allowed the inhabitants of Abe to govern themselves. Hadrian built a small temple by the side of the old one, some walls of which were still standing as ruins in the time of Pausanias.

3. Oracle on the Hill of Poon, in the territory of Thebes. The oracle was here given through the medium of a man called ποιμαντις, and the first promontas was said to have been Teneros, a son of Apollo. The oracles were usually given in the Αἰολικος dialect; but when Mys, the Carian, consulted the god, the answer was given in the Carian language, and the oracle became the property of the Carian writers. In 81 B.C., Mys, who generally wrote down the oracles, the Carian was obliged to do it himself. When Alexander the Great destroyed Thebes, the oracle also perished. In the time of Plutarch the whole district was completely desolate.

8. **Oracle of Apollo at Delphi.**

The oracle at Delphi, one of the most famous in ancient Greece, was considered the most sacred of all the gods. The Delphic Oracle was believed to be the voice of Apollo, and its prophecies were sought by leaders of states and individuals alike. The oracle was consulted by men and women, and its answers were often interpreted by priests. The temple of Apollo at Delphi was one of the Seven Wonders of the Ancient World.

The oracle was located on a hill outside of the town of Delphi, on the Gulf of Corinth. The temple of Apollo at Delphi was dedicated to the god Apollo, who was believed to have descended from heaven and spoken through the priestess, known as the Pythia.

The temple itself was built on a hill, and its entrance was through the Propylaia, a gateway decorated with statues of the gods. Inside the temple, the sanctuary was divided into two sections: the cella, which housed the statue of Apollo, and the pronaos, where the statue of Athena was placed.

The Oracle of Delphi was consulted by sending a victim, usually a young boy called a “hecte,” into the temple. The Pythia sat in a cell called the “triphylion,” and when the victim entered, the Pythia would become possessed by Apollo. The priest would then interpret the responses of the god, which were often cryptic and required interpretation by other priests.

The oracle was consulted by kings and leaders of states, as well as individuals seeking guidance in times of crisis. The prophecies were often interpreted by priests, who would then translate the responses into a form that could be understood by the person seeking advice.

The oracle of Delphi was one of the most important religious centers in ancient Greece, and its influence extended far beyond the borders of Greece. It was consulted by leaders of states, and its prophecies were often sought by leaders of other cultures as well.

The oracle of Delphi was eventually destroyed by Romans in 39 AD, when it was burned by Emperor Claudius. The temple was later restored by Emperor Domitian, but it never regained its former glory.

The oracle of Delphi continued to be consulted by leaders and individuals until the 4th century AD, when it was finally abandoned. The site was later used as a quarry, and much of the temple was destroyed.

The Oracle of Delphi was one of the most influential religious centers in ancient Greece, and its prophecies continue to be studied and interpreted by scholars to this day.
at victims might be obtained anywhere. The spot where the oracles were given at Olympia was before the altar of Zeus 1. It was especially those who intended to take part in the Olympic games that consulted the oracle about their success, but other subjects were also brought before it.

2. Oracle of Zeus at Dodona. Here the oracle was given from sounds produced by the wind. The sanctuary was situated on an eminence. 2 Although in a barbarous country, the oracle was in close connection with the great gods. 3 There are columns according much more so than afterwards. 4 Zeus himself, as well as the Dodonæans, were reknowned among the Pelasgians, which is a proof of the ant-Hellenic existence of the worship of Zeus in these parts, and perhaps of the oracle also. 5 The oracle was given from lofty oaks covered with foliage, 6 whence ἕσσυλκες mentions the speaking oaks of Dodona as great wonders. Tree-beeches, however, are also mentioned in connexion with the Dodonæan oracle, which, as Hesiod 7 said, dwelled in the stem of a beech-tree. Hence we may infer that the oracle was not thought to dwell in any particular or single tree, but in a grove of oaks and beeches. The will of the god was made manifest by the rustling of the leaves of certain trees, which are therefore represented as elegant tangle-groves. In order to render the sounds produced by the winds more distinct, brazen vessels were suspended on the branches of the trees, which, being moved by the wind, came in contact with one another, and thus sounded till they were stopped. 8 Another mode of producing the sounds was this: There were two columns, a stone and a bronze, a stone being in a basin on a stone, and the other a boy with a scouge in his hand; the ends of the scouge consisted of little bones, and, as they were moved by the wind, they knocked against the metal basin on the other column. 9 According to other accounts, oracles were also obtained at Dodona through pigeons, which, sitting upon oak-trees and great oaks, were supposed to make sounds. 10 The sounds were in early times interpreted by men, 11 but afterward, when the worship of Dion was connected with that of Zeus, by two or three old women, who were called πελειάδες or πελεαί, because pigeons were said to have brought the command to found the oracle. In the time of Herodotus 12 the oracle was held by the priests of Promenides, Timarcte, and Nicandria. They were taken from certain Dodonæan families, who traced their pedigree back to the mythical ages. There were, however, at all times priests called τόμωροι 13 connected with the oracle, who on certain occasions interpreted the sounds; but how the functions were divided between them and the Pelasgæ was not clear. In the historical times, the oracle of Dodona had less influence than it appears to have had at an earlier period, but it was at times inaccessible to bribes, and refused to lend its assistance to the Doric interest. 14 It was chiefly consulted by the neighbouring peoples, the Ἑλληνοι, Acarnanians, and Epirites, 15 and by those who were not to go to Delphi or other great oracles. 16

There appears to have been a very ancient connexion between Dodona and the Beotian Iasmenos. 17

The usual form in which the oracles were given at Dodona was in hexameters; but some of the oracles are said to have been given in prose. In 219 B.C., the temple was destroyed by the E鈚elians, and the sacred oaks were cut down, 18 but the oracle continued to exist and to be consulted, and does not seem to have become extinct until the third century of our era. In the time of Strabo, the Dodonæan prophetesses are expressly mentioned, though the oracle was already decaying, like all the others. 19

3. Oracle of Zeus Ammon, in an oasis in Libya, not far from the boundaries of Egypt. According to the traditions current at Dodona and Thebes in Egypt, it was founded by the latter city, and the form in which the god was represented at Thebes and in the Ammonium was the same; he had in both places the head of a ram. 20 The Greeks became acquainted with this oracle through the Cyreans, and Sparta was the first city of Greece which formed connexion with it. 21 Its example was followed by the Thebans, Olympians, Dodonæans, and Boeotians. Although in Hellenic times the frequent theories to the Ammonium even before Ol. 91, 22 and called one of their sacred vessels Ammonis. 23 Temples of Zeus Ammon were now erected in several parts of Greece. His oracle in Libya was conducted by men who also gave the answers. 24 Their number appears to have been very great, for, on some occasions, they were packed together in a procession, their number is said to have been about one hundred. 25 In the time of Strabo, the oracle was very much neglected and in a state of decay. The Greek writers who are accustomed to call the greatest god of a barbarous nation Zeus, mention several oracles of this divinity in foreign countries: 26

III. ORACLES OF OTHER GODS.

The other gods who possessed oracles were consulted only concerning those particular departments of the world and human life over which they presided. Demeter thus gave oracles at Patrae in Achaea, but only concerning sick persons, whether their sufferings would end in death or recovery. Before the sanctuary there were two doors, which were opened by a wall. Into this well a mirror was let down by means of a rope, so as to swim upon the surface. Prayers were then performed and incense offered, whereupon the image of the sick person was seen in the mirror either as a corpse or in a state of recovery. At Phare, in Achaea, there was an oracle of Hermes. He was also the god of the middle of the market-place. Incense was offered here, oil-lamps were lighted before it, a copper coin was placed upon the altar, and after this the question was put to the god by a whisper in his ear. The person who consulted him shut his own ears, and immediately left the market-place. The first remark that he heard made by any one after leaving the market-place was supposed to give the answer to the question.

There was an Oracle of Pluto and Cora at Charax or Acharaca, not far from Nysa, in Caria. The two deities had here a temple and a grove, and near the latter there was a subterraneous cave of a miraculous nature, called the cave of Charon; for persons suffering from illness, and placing confidence in the

power of the gods, travelled to this place, and stayed for some time with experienced priests, who lived in a place near the cave. These priests then slept a night in the cavern, and afterward prescribed to their patients the remedies revealed to them in their dreams. Often, however, they took their patients with them into the cave, where they had to stay for several days in quiet, and without taking any food, and were sometimes allowed to fall into the prophetic sleep, but were prepared for it, and received the advice of the priests; for to all other persons the place was inaccessible and fatal. There was an annual panegyris in this place, probably of sick persons who sought relief from their sufferings. On the middle of the festive day, the young men of the gymnasion, naked and anointed, used to drive a bull into the cave, which, as soon as it had entered, fell down dead.1

At Epidauros Limera, oracles were given at the festival of Ino. (Vid. Inol.) The same goddess had an oracle at Cetylon, in which she made revelations in dreams to persons who slept a night in her sanctuary.4 Hera Acræa had an oracle between Lechaon and Pagæ.2

IV. ORACLES OF HEROES.

1. Oracle of Amphiarœus, between Potniae and Thebes, where the hero was said to have been swallowed up by the earth. His sanctuary was situated on an island in a stream called Amphiarœas, the name of which perhaps suggests that upon which birds never settled, and birds or cattle never took any food in the neighbourhood.4 The oracles were given to persons in their dreams, for they had to sleep in the temple after they had prepared themselves for this incubatio by fasting one day, and by abstaining from wine for three days.2 The Thebans were not allowed to consult this oracle in its own temple, but it was consulted in the temple of Athena, rather than as their prophet.7 Another oracle of Amphiarœus was at Oropus, between Boeotia and Attica, which was most frequently consulted by the sick about the means of their recovery. Those who consulted it had to undergo lustrations, and to sacrifice a ram, on the skin of which they slept a night in the temple, where in their dreams they expected the means of their recovery to be revealed to them.8 If they recovered, they had to throw some pieces of money into the well of Amphiarœus in his sanctuary. The oracle was said to have been founded by the Thebans.9

2. Oracle of Amphiæolus. He was the son of Amphiarœus, and had an oracle at Mallos, in Cilicia, which Pausanias calls the most trustworthy of his time.10

3. Oracle of Trophonios at Lebadeia, in Boeotia.1 Those who wished to consult this oracle had first to purify themselves by spending some days in the sanctuary of the good spirit and good luck (ἀγαθοῦ Ἐλατο Λαυρίου καὶ θεὸς Τῷ Τόξ.; to live sober and pure, to abstain from warm baths, but to bathe in the river Hercyana, to offer sacrifices to Trophonius and his children, to Apollo, Cronos, King Zeus, Heracles, ocha, and to Demeter, who was said to have nursed Trophonius; and during these sacrifices a soothsayer explained from the intestines of the victims whether Trophonius would be pleased to admit the consultant. In the night in which the consultant was to be allowed to descend into the cave of Trophonius, he had to sacrifice a ram to Agma, and in case the signs of this sacrifice were favourable, the hero was thought to be pleased to admit the person into his cave. What took place after this was as follows: Two boys, 13 years old, led him again to the river Hercyana, and bathed and anointed him. The priests then made him drink from the well of Trophonius, and he might forget all his former thoughts, and from the well of recollection (Μνημονεύτ., that he might remember the visions which he was going to have. They then showed him a mysterious representation of Trophonius, made him worship it, and led him into the sanctuary, dressed in linen garments, with girdles around his body, and wearing a peculiar kind of shoes (σαρδής) which were customary at Lebadeia. Within the sanctuary, which stood on an eminence, there was a cave, into which the person was now allowed to descend by means of a ladder. Close to the bottom, in the side of the cave, there was an opening into which he put his feet, whereupon the other parts of the body were likewise drawn into the opening by some invisible power. What the persons here saw was different at different times. They returned through the same opening at which they had entered, and the priests now placed them on the throne of Mnemosyne, asked them what they had seen, and led them back to the sanctuary of the good spirit and good luck. As soon as they had recovered from their fear, they were obliged to write down their vision on a little tablet which was dedicated in the temple. This is the actual account of the accidents which a young woman, who had descended into the cave, and writes as an eyewitness.1 The answers were probably given by the priests according to the report of what persons had seen in the cave. This oracle was held in very great esteem, and did not become extinct until a very late period; and though the army of Sulla had plundered the temple, the oracle was much consulted, and many of the soldiers who were at Plataia in 370 B.C., were the only one among the numerous Boeotian oracles that had not become silent.9

4. Oracle of Calchas, in Daunia, in southern Italy. Here answers were given in dreams, for those who consulted the oracle had to sacrifice a black ram, and slept a night in the temple, lying on the skin of the victim.7

5. Oracles of Asclepius (Esculapius). The oracles of Asclepius were very numerous; but the most important and most celebrated was that of Epidauros. His temple here was covered with votive tablets, on which persons had recorded their recovery by spending a night in the temple. In the temples of Esculapius and Serapis at Rome, recovery was likewise sought by incubatio in his temple.8 F. W. Heer has written an essay, Die Kultur des Sommerwalds aus dem Alterthon, in which he endeavours to show what is now called Mesmerism, or animal magnetism, was known to the priests of these temples where sick persons spent one or more nights for the purpose of recovering their health. Other oracles of the same kind are mentioned in that essay, together with some of the cures which are vouched for by ancient authors.

6. Oracle of Heracles at Bura, in Achaea. Those who consulted it prayed and put their questions to the god, and then cast four dice painted with figures, and the answer was given according to the position of these figures.3

7. Oracle of Passiphæ at Thalmai, in Laconia, where answers were given in dreams while persons spent the night in this temple.8

8. Oracle of Phrygus, in Iberia, near Mount Cau-
ORACULUM.

ORATIONES PRINCIPUM.

causa, where no rams were allowed to be sacrificed.1

V. ORACLES OF THE DEAD.

Another class of oracles are the Oracles of the Dead (νεκροφΘρους or ψευδοφΘρους), in which those who consulted called up the spirits of the dead, and offered sacrifices to the gods of the lower world. One of the most ancient and most celebrated places of this kind was in the country of the Thesprotians, near Lake Orestis, where the oracle of this class was at Heraclis, on the Propontis.2

Respecting the Greek oracles in general, see Wachsmuth, Hellen. Alterth., ii., 2, p. 260, &c.—Klausen in Erasch und Graber's Encycol., s. t. Oraked.

VI. ITALIAN ORACLES.

Oracles in which a god revealed his will through the mouth of an inspired individual did not exist in Italy. The oracles of Calchas and Åeschylus, mentioned above, were of Greek origin, and the former was in a Greek heroum on Mount Garganus. The Romans, in the ordinary course of things, did not feel the want of such oracles as those of Greece, for they had recourse to their own oracles, and from the will of the gods, such as the Sibylline books, augury, haruspices, signs in the heavens, and the like, which are partly described in separate articles, and partly in Divinatio. The only Italian oracles known to us are the following:

1. Oracle of Fannius.—His oracles are said to have been given in the form of poems, and collections of his vaticinia seem to have existed at an early period.3 The places where his oracles were given were two groves, the one in the neighborhood of Tibur, round the well of Albunea, and the other on the Aventine.4 Those who consulted the god in the grove of Albunea, which is said to have been the place where all the Italians, had to observe the following points: The priest first offered a sheep and other sacrifices to the god. The skin of the victim was spread on the ground, and the consular was obliged to sleep upon it during the night, after his head had been three sprinkled with pure water from the well, and touched with the branch of a sacred beechnut. He was, moreover, obliged, several days before this night, to abstain from animal food and from matrimonial connexions, to be clothed in simple garments, and not to wear a ring on his fingers. After he fell asleep on the cheesepkin, he was believed to receive his answer in wonderful visions, and in converse with the god himself.5 Ovid6 transfers some of the points to be observed in order to obtain the oracle on the Albunea, to observe the oracle on the Aventine. Both may have had much in common, but from the story which he relates of Numa, it seems to be clear that on the Aventine certain different ceremonies also were observed.

2. Oracles of Fortuna existed in several Italian towns, especially in Latium, as at Antium and Frenez. The oracles of Fortuna were worshipped, and their statues used to be honoured so that when oracles were given.7 At Preneste the oracles were derived from lots (sortes), consisting of sticks of oak with ancient characters graven upon them. These lots were said to have been found by a noble Prenestine of the name of Varrucus Sulficus, inside of a cleft rock, which he had left open at the command of a dream by which he had been haunted. The lots, when an oracle was to be given, were shaken up together by a boy, after which one was drawn for the person who consulted. From this method of giving oracles, certain lots of one or two were frequently used, and at least with the vulgar, in great esteem as late as the time of Cicero, while in other places of Latium they were mostly neglected. The Etruscan Carve, in early times, had likewise its sortes.8

3. An Oracle of Mars was, in very ancient times, according to Dionysius,9 at Tyra Matinae, from which Daneby inferred that one of these oracles, here given resembled that of the pigeon oracle at Dodona; for a woodpecker (picus), a bird sacred to Mars, was sent by the god and settled upon a wooden column, whence he pronounced the oracle.

On Roman oracles in general, see Niebuhr, Hist. of Rom., i., p. 508, &c.

Of the small handkerchief used for wiping the face, and appears to have been employed for much the same purposes as our pocket-handkerchief. It was made of silk or linen. In the Etym. Mag.10 it is explained by πρόεσθων ἐκμαγεῖν. Augustus introduced the practice of giving oraria to the Roman people to use ad favorum, which appears to mean for the purpose of waving in the public games (votis), or perhaps for our hands and handkerchiefs for the same purpose.9

ORATIO'NES PRINCIPUM. The orations of the Roman emperors under the Empire; but those which are denounced under this head have reference to legislation only, and were addressed to the senate. Under the Christian emperors, particularly, these orations were only a mode of promulgating law as constituted by the emperor; and we have an instance of this even in the reign of Probus ("Leges, qua Probus edict, senatus consultus proprius consecrarebat") Under the earlier emperors, the orations were in the form of propositions for laws addressed to the senate, andFormerly known in appearance, though not in reality, the legislative, that is, the sovereign power. This second kind of orations are often cited by the classical jurists, as in the following instance from Gaius:11 "Ex oratione divi Hadriani senatus consultum factum est.

Many of the orations of the Roman emperors, such as those quoted by the Augustan History, were, merely communications to the senate, such, for instance, as the announcement of a victory.12 These orations are sometimes called litterae or epistolae by the non-juridical writers; but the juridical writers appear to have generally avoided the use of epistle in this sense, after not to have understood orations with the rescripta, which were often called epistolae. It appears that the Roman jurists used the terms libellus and oratio principis as equivalent; for the passages which have been referred to in support of the opinion that these two words had a different sense,13 show that libellus and oratio principis are the same, for the oratio is here spoken of by both names. These orations were not written down, but were noted as the emperor himself, but apparently they were commonly in the form of a written message, which was read by the quaestors:14 in the passage last referred to, these imperial messages are called indifferentí libri et epistolae. Accordingly, we read of litterae and orations being sent by the emperor to the senate.15 The mode of proceeding upon which these orations may be collected from the praemium.

of the senatus consultum contained in the Digest. The orations were the foundation of the senatus consultum which were framed upon them, and when the orations were drawn up with much regard to detail, they contained, in fact, the provisions of the subsequent senatus consultum. This appears from the fact that the oratio and the senatus consultum are often cited indifferently by the classical jurists, as appears from numerous passages. The oratio is cited as containing the reasons or grounds of the law, and the senatus consultum for the particular provisions and words of the law. To the time of Sulpicius the Digest was concluded, the oration of Seneca, the Orator, which is an oration founded on the senatus consultum, is mentioned; and numerous orations of these two emperors are cited. But after this time they seem to have fallen into disuse, and the form of making and promulgating law by imperial constitutions was the ordinary mode of legislation. There has been much discussion on the amount of the influence exercised by the orations principium on the legislation of the senate. But it seems to be tolerably clear, from the evidence that we have, and from the nature of the case, that the oratio might either recommend generally some legislative measure, and leave the details to the senate, or it might contain all the details of the proposed measure, and so be in substance, though not in form, a senatus consultum; and it often became a senatus consultum on being adopted by the senate, which, in the case supposed, would be merely a matter of form. In the case of an oratio, expressed in more general terms, there is no reason to suppose that the recommendation of the emperor was less of a command; it was merely a command in more general terms.

Cicero remarks that a certain kind of causes belong to jus civile, and that jus civile is conversant about laws (lex) and custom (mes) appertaining to things public and private, the knowledge of which, though neglected by most orators, seems to me to be necessary for the purposes of oratory. In his treatise on the Orator, and particularly in the first book, Cicero has given his opinion of the duties of an orator, and his requisite qualifications, in the form of a dialogue, in which Lucius Licinius Crassus and M. Antonius are the chief speakers. Crassus was himself a model of the highest excellence in oratory; and the opinions attributed to him as to the qualifications of an orator were those of Cicero himself, who, in the introductory part of the first book, declares that in his opinion no man can deserve the title of a perfect orator unless he has acquired a knowledge of all important things and all of arts, for it is out of knowledge that an orator must beborn and expand; and if it is not founded on matter which he has fully mastered and understood, it is idle talk, and may almost be called perurile. According to Crassus, the province of the orator embraces everything: he must be enabled to speak well on all subjects. He must have a knowledge of the jus civile, necessarily for the orator must have a knowledge of that which Crassus illustrates by instances; and he should not only know the law and the jus civile as being necessary when he has to speak in causes relating to private matters and to private judicia, but he should also have a knowledge of the jus publicum, which is conversant about a state and such, and he should be familiar with the events of history, and instances derived from the experience of the past. Antonius limits the qualifications of the orator to the command of language, pleasure and power. It is the task of an orator to adapt himself to the voice and action, and of an advocate to convince in causes in the Forum and on occasional occasions. He farther requires the orator to have competent voice and action, and sufficient grace and ease. Antonius contends that an orator does not require a knowledge of the jus civile, and he instances the case of himself, for Crassus allowed that Antonius could satisfactorily conduct a cause, though Antonius, as a car, and of age was admitted, had never learned the jus civile, and had never felt the want of it in such cases as he had defended (in iure).

The profession, then, of the orator, who, with reference to his undertaking a client's case, is also called patronus, was quite distinct from that of the jurisconsultus (viz. iurisconsulti), and also from that of the advocate, at least in the time of Cicero, and even later. An orator who possessed a competent knowledge of the jus civile would, however, have an advantage in it, as Antonius admits; but as there were many essentials to an orator which were of difficult attainment, he says that it would be unwise to distract him with other things. Some requisites of oratory, such as voice and gesture, could only be acquired by discipline; whereas certain knowledge of the law of a case (jus utili) could be got at any time from the jurisconsulti (periti) or from books. Antonius thinks that the Roman orators in this manner acted more wisely than the Greek orators, who, being ignorant of law, had the assistance of practitioners called Pragmatici: the Roman orators intrusted the maintenance of the law to the high character of their professional jurists.

So far as the profession of an advocate consists in the skilful conduct of a cause, and in the supporting of his own side of the question by proper argument, it must be admitted, with Antonius, that a very moderate knowledge of law is sufficient; and, indeed, even a purely legal argument requires not so much the accumulation of a vast store of legal knowledge, as the power of the orator, and the manner when it has been collected. The method in which this consummate master of his art managed a cause is stated by himself; and Cicero, in another passage, has recorded his merits as an orator. Servius Sulpicius, who was the greatest lawyer of his age, had a good practical knowledge of the law, but others had this also, and it was something else which distinguished Sulpicius from all his contemporaries: "Many others, as well as Sulpicius, had a great knowledge of the law; he alone possessed it as an art. But the knowledge of law by itself would never have helped him to this, without the possession of that art which teaches us to divide the whole of a thing into its parts, by exact definition to work that is imperfectly seen, and to divide nature of a thing's substance, for all of its parts, to see ambiguities, then to disentangle them: lastly, to have a rule by which truth and falsehood are distinguished, and by which it shall appear what consequences follow from premises, and what do not." With such a power Sulpicius combined a knowledge of letters and a pleasing style of speaking. As a forensic orator, then, he must have been master of the orator's art; and still, among the Romans, his reputation was that of a juris, while Antonius, who had no knowledge of the law, is put on a level, as an orator (patronus), with L. Crassus.
Oratory was a serious study among the Romans. The master of the art, Cicero, tells us by what painful labour he attained to excellence. Roman oratory reached its perfection in the century which preceded the Christian era. Its decline dates from the establishment of the imperial power under Augustus and his successors; for though there were many good speakers, and more skilful rhetoricians under the Empire, the oratory of the Republic was rendered by circumstances unsuitable for the senate, for popular assemblies, or for cases of crimes and high misdemeanours.

In the dialogue De Oratoribus, which is attributed to him, one of the speakers, attempts to assign the reasons for the low state of oratory in the time of Vespasian, when the dialogue was written, compared with its condition in the age of Cicero and of Cicero's predecessors. He attributes its decline to the neglect of the discipline under which children were formerly brought up, and to their absence from the schools of rhetoric and debate, which profess to teach the oratorical art.

This gives occasion to speak more at length of the early discipline of the old orators, and of Cicero's course of study as described in the Brutus. The old orators learned their art by constant attendance on some eminent orator and by actual experience of business: the orators of Messala's time were formed in the schools of rhetoric, and their powers were developed in exercises on fictitious matters. These, however, it is obvious, were only secondary causes. The immediate causes of the decline of eloquence appear to be indicated by Maternus, another speaker in the dialogue, who attributes the former flourishing condition of eloquence to the political power which the Romans exercised over the Greek world, and to the party struggles and even the violence that are incident to such a state of society. The allusion to the effect produced by the establishment of the imperial power is clear enough in the following words, which refer both to the imperial and the republican periods:

"cum mazzis omnibus modis oratorum una non esset, quamquam orator superior, quantum erat populi persuasio poterat."

ORBUS. (Vid. Julius Lexes, p. 557.)

ORCA. (Vid. Stelleta.)

ORCHE'SIS (drapheis). (Vid. Saltatio.)

ORCHESTRA. (Vid. Thateum.)

ORCHILUS (Ovyijvpos), a species of Bird. In the Lexicon of Phutius it is explained by &bathalos, and Gesner holds that it is identical with the ptbathos, &bathalos, and ptbathios, although it is to be remarked that Aristotel treats separately of the &bathalos. Gesner applies all these terms to the Regulus, or Golden-crested Wren. It must be admitted that this term is applied with equal frequency to small birds, or Passeres, are so brief, that they often cannot be recognised or distinguished from one another with any degree of accuracy. But, at the same time, Aristotle's description of the tovaphos is so graphic that no ornithologist can fail to recognise the Golden-crested Wren in it. Aristophanes also seems to be acquainted with the bird as is evident from the following passage :

"Orchis (drapheis)." Slithorp seems to have settled that the xtvos dravhes of Galen and Dioscorides is the Orchis papilionaceae. The xtvos cannot be ascertained with any certainty. Fuchsius refers this last, and Stackhouse the xtvos of Theophrastus, to the Orchis maria, or Meadow Orchis.

OSTREUM.

Some attained great skill in their art, as Cypassus, whom Ovid addresses, "Ponemd in milie modos perfecta capillus, Comere sed sola digna Cypassus des."

and Nape, whom Ovid also describes as skilled "Colligere incertos et in ordine ponere crimina."

The branches. the they Gesner Thau chorus species 322, e., must under' have cup (Festus, 'Fast. li., Skiras, garlands, sacrifice, youths, -10. i>axo(l>opi.Ka baxo(ji6poL, vines Skiras nysus and vine-branches, Adams makes it the Brambling, or Fringilla montifringilla.7

ORTYGOMÉTRA (ortygyométra). According to Geemer and Hardonin, it is the bird called in Italy Re de Quails, or "King of the Quails." Ornithologists now give the name of Ortygometra cress to the common Landrail.7

ORTYX (orty7), the Tetra coturnis, L., or Quail.6

ORYX (ordé). "Dr. Shaw inclines to the opinion, that the Oryx of the Greeks, or Thau of the Hebrews, was the Buffalo. It is much more probable, however, that it was a species of Antelope. It is generally described in the Synaggettia of Opian."

ORYZA (óry7a), the Oryza sativa, or Rice.6

OSCHOPHORIA (oschóphoria). According to Ostraca, the Greek H. and Dionysus, 13 and according to others, in honour of Dionysus and Ariadne.10 The time of its celebration is not mentioned by any ancient writer, but Corrinn14 supposes, with great probability, that it was held at the commencement of the Attic month Pyanepnat. It is said to have been instituted by Theseus. Its name is derived from σχοφος, σχζι, or σχζη, a branch of vines with grapes, for it was a vintage festival; and on the day of its celebration, two youths, called σχοφφεροι, whose parents were alive, and who were elected from among the noblest and wealthiest citizens,14 carried, in the disguise of women, branches of vines with fresh grapes from the Temple of Dionysus in Athens to the ancient Temple of Athena Skiras in Phalerus. These youths were followed by a procession of persons who likewise carried vine-branches, and a chorus sang hymns called σχοφφαιρα, σχοφφοι, σχοφφη, which were accompanied by dances.14 In the same way as the young men offered on this occasion, women also took part; they were called δευτεροφφεροι, for they represented the mothers of the youths, carried the provisions (διφα και σειρα) for them, and related stories to the spectators. During the sacrifice, the staff of the herald was adorned with garlands, and when the libation was performed, the spectators cried out Ελεξει, ιοβ, ιοβ.15 The ephebi taken from all the tribes on this day a contest in racing from the city to the Temple of Athena Skiras, during which they also carried the σχζη and the victor received a cup filled with five different things (πενταμολος, πενταπλως or πενταλτικ), viz. wine, honey, cheese, flour, and a little oil.1 Accord- ing to other accounts, only the victor drank from this cup. The story which was symbolically represented in the rites and ceremonies of this festival, and which was said to have given rise to it, is related by Plutarch2 and by Proclus.3

OSSCELLUM, a diminutive through ocellum from or, meaning "a little face," was the term applied to faces or heads of Bacchus, which were suspended in the vineyards to be turned in every direction by the wind. Whichever way they looked, they were supposed to make the vines in that quarter fruitful.4 The left-hand figure in the annexed woodcut is taken from an ocellum of white marble a the British Museum. The back of the head is wanting, and it is concave within. The mouth and pupils of the eyes are perforated. It represents the countenance of Bacchus with a mild and propitious expression (molle, homestim). A fillet, spirally twisted about a kind of wreath, surrounds the head, and descends by the ears towards the neck. The metallic ring by which the marble was suspended still remains. The other figure is from an ancient gem,6 representing a tree with four oscilla hung upon its branches. A Sýrnax and a Peum are placed at the root of the tree.

From this noun came the verb oscillo, meaning "to swing." Swinging (oscillatio) was among the bodily exercises practised by the Romans.2

OSTIALRIUM was a tax upon the doors of houses, which appears to have been sometimes levied in the provinces.8 Cicero9 calls it accersisima exactio. There was a similar tax, called columnarium, imposed upon every pillar that supported a house.10

OSTIUM. (Vid. Janrt.)

OSTRACISMUS. (Vid. Vaniéméft, Greek, p. 135.)

OSTRACODERMA (bártapádo7cema). "This term," says Adams, "in its most extensive sense, comprehended two great orders of marine animals, namely, the skeróstraka and the malakóstraka. Under the skeróstraka were ranked oysters, urdlins, mussels, &c.; and under the malakóstraka, crabs of all kinds, craw-fish, &c. It must be borne in mind, however, that the general term bártapádo7cema is often applied in a restricted sense to the skeróstraka, or Testacea, and that bártapádo7cema are occasionally used in the same sense, i.e., are applied to the Testacea."11

OSTRACKON (bártapayov). (Vid. Fícilr.)

OSTREUM (bártapé7c), a term most properly applied to the Ostrae edulis, or common Oyster, but sometimes to the whole class of Orustaa, or bártapádo7cema. "The Greeks, and more especially the..."
ROMANS, when they levied contributions upon land and sea, throughout the then known world, to cover the table of a Lucullus or an Apicius, held oysters in very high estimation, and attached no small importance to the localities from which they were imported. Those of the Hellespont, of Venice, of the Bay of Cumæ in Italy, and of Rutupiae (Richborough) in England, were the kinds which they preferred. 1 They also attached a very great value to those which brought from these different places, and perhaps from quarters still more remote, were transported in large boats (lacussus lignæus) and deposited in the Lucrine lake, where they grew remarkably fat. The first Roman who entertained the notion of establishing this sort of park or oyster-bed was Scævulus Oratia, at Bâle, in the time of the Ma¯roclus. To distinguish them he preferred those oysters which have the edges of the mouth of a deep brown, almost black, and that they gave them a particular name, that of Callithelphara, a word which is nevertheless supposed to be corrupted. The Romans ate oysters raw, and also cooked with various seasonings, into which entered pepper, thyme, salt, oil, wine, &c. But it is not probable that they made so great a consumption of them as do modern nations.

*OSTRÆÆTES (spathaæ). Sprengel supposes this to be petrified oysters; but it would rather seem to have been a peculiar stone of the Olaris kind. 2

*OSTRÆYA (spathaæ), a species of tree, which Suetonius said he had brought from the Roman province of the Iberian Peninsula, as from Horne-tree. Sprengel, however, more correctly prefers the Ostræa vulgaris, which, according to Sibthorp, still retains its ancient name in Greece. 3

*OTIS (Stias, the Bastard. "It is the Tarde of Pliny, and hence its scientific name of Otis Tarde. The name Otis, which generally is attached to the name of the feathers."

"The Greek name comes from the long feathers near the ears (otis, ōtis, "an ear")."

OULAMOÜ (oûlaomou). (Vid. ARMY, GREEK, p. 98.)

ΟΥΣΙΑΣ ΔΙΚΗ (oûsias diKH). (Vid. ΕΟΥΣΙΑΙΣ ΔΙΚΗ.)

ΟΥΑΤΙΟ, a lesser triumph; the terms employed by the Greek writers on Roman history are eba, évna, πεδος, δριμαδος. The circumstances by which it was distinguished from the more imposing solemnity (vid. Ταύρανθος) were the following: The general did not enter the city in a chariot drawn by four horses, but on foot; he was not arrayed in the gorgeous gold-embroidered robe, but in the simple toga of a magistratus; his robes were encircled with a wreath, not of laurel, but of myrtle; he bore no sceptre in his hand; the procession was not heralded by trumpets, headed by the senate, and thronged with victorious troopers, but was enlivened by a crowd of flute-players, attended chiefly by knights and plebeians, frequently without solemnity, and occasionally the sacrifice, not of a bull, but of a sheep. 4 The word ovatio seems clearly to be derived from the kind of victim offered; and we need pay little respect to the opinion of Festus, 5 who supposes it to have been formed from the glid shout O! O! frequently reiterated, nor to that of Dionysius, whose system required him to trace every custom to a Cretian origin, and therefore maintains that it is corrupted from the Bacchalian ebous. Dionysius makes another mistake in assigning a bay chaplet to the conqueror on these occasions, since all the Roman writers agree with Plutarch in representing

P.EAN.

that the myrtle crown, hence called ovatis corona, was a characteristic of the ovation. 1 (Compare CORONA, p. 311, 312.)

In later times the victor entered upon horse-back, and the ovations celebrated by Octavianus, Drusus, Tiberius, &c., are usually recorded by Dion Cassius by a reference to this circumstance. 2

An ovation was granted when the advantage gained, although not completely terminated, was not such as to constitute a legitimate claim to the higher distinction of a triumph, or when the victory had been achieved with little bloodshed, as in the case of Postumius Tubertus, who first received this honour; 3 or when hostilities had not been regularly proclaimed; 4 or when the war had not been completely terminated, which was one of the ostensible reasons for receiving Octavianus on his return from Sicily; 5 or when the contest had been carried on against base and unworthy foes; and hence, when the servile bands of Athenion and Spartacus were destroyed by Perperna and Crassus, these leaders celebrated ovations only, although the latter, by a special resolution of the senate, was permitted to wear such a crown. 6

OVILE (Vid. COMITIA, p. 297.)

OVINIA LEX. (Vid. LEX, p. 584.)

"OVIS (ob), the common Sheep, or Capra Ovis. The term ob, πρόβατον, and μίλων are applied indiscriminately to this animal by the Greek writers.

"The Aria of Pliny is applied by Buffon to the animal known to the Romans as the Bovis of Sicily and the Deer of the Ganges."

OXY'BAPHUM. (Vid. AETERBALUM.)

P. F. T.

PACTIO, PACTUM. (Vid. OBLIGATIONS, p. 675, 676.)

"PADIUS (pàdōs, the Pennus Padus, or Birchen-tree.

P.EAN (pàtōn, pàtiw, pàtiw), a hymn or song, which was originally sung in honour of Apollo, and seems to be as old as the worship of this deity. The etymology of the word is doubtful. Some suppose that it obtained its name from Pennon, the god of lightning; but in the Homeric poems Pean is always spoken of as a separate divinity, distinct from Apollo. Other writers, with still less probability, connect it with pàtiw, "to strike."

The Pean was always of a joyous nature, and its tune and sounds expressed hope and confidence. The sound of it appears to have been invariably connected with the sacred fire. Apollo was one of the gods who were sung with the Pythian mode, of whom the best known were Homer, who sang it to his god, as a composition representing a song to Apollo at the end of the sacrificial feast, in order to appease his wrath. 1 From these passages it is clear that the Pean was a song of thanksgiving when danger was passed, and also a hymn to propitiate the god. It was sung at the solemn festivals of Apollo, and especially at the Hyacinthia (εἰς ταύτην τινα τοῦ παιδόπωρον), and at the Peon from very early times in the Pythian temples. 2

1. (Festus, n.°. Ovatis Corona.—Pisistr. II., N., xi, 29.—Plut., Gell., ii. cc.—2. (Serv. in Virg., Ec. iv., 543.)—3. (Dion Cass., xliii., 21.—Id. n., xi, 12.—Id. l., vi, 53.—Id. n., xvi, 2.)—4. (Plut., Marcell., c. 25.—Dionyss. Hal., v., 47.—Gell., v., 6.—Liv. mii., 10.—Id. xxv., 21.)—6. (v. r. Ovatis.)

4 T
Laek was also sung as a battle-song both before an attack on the enemy and after the battle was finished. This practice seems to have chiefly prevailed among the Dorians, but was also common among the other nations of Greece. The origin of it is said to have arisen from the fact that Apollo sung it after his victory over the Fhydonian dragon. The pean sung previous to an engagement was called by the Spartans πειάν ευματίριος. The scholiast on Thucydides says that the pean which was sung before the battle was sacred to Ares, and the one sung after to Apollo; but there are strong reasons for believing that the pean, as a battle-song, was in later times not particularly connected with the worship of Apollo. It is certain that the pean was in later times sung to the honour of other gods besides Apollo. Xenophon relates that the Lacedaemonians on one occasion sang a pean to Poseidon, to propitiate him after an earthquake, and also that the Greek army in Asia sung a pean to Zeus.

In still later times peans were sung in honour of mortals. Thus Aratus sung peans to the honour of the Macedonian Antigonus; a pean, composed by Alexius, was sung at Delphi in honour of the Macedonian Cratorus; and the Rhodians celebrated Polemeus I., king of Egypt, in the same manner. The Chalcidians, in Plutarch's time, still continued to celebrate in a pean the praises of their benefactor Tithus Flaminius.

The practice of singing the pean at banquets, and especially at the end of the feast, when libations were poured out to the gods, was very ancient. It is mentioned by Alcman, who lived in the seventh century B.C. The pean continued to be sung on such occasions till a late period.

PEDAGOGIA. (Vid. PEDAGOGUS.)

PEDAGOGUS. (Vid. PEDAGOGIA.)

The office of tutor in a Grecian family of rank and opulence was assigned to one of the most trustworthy of the slaves. The sons of his master were committed to his care on attaining their sixth or seventh year, their previous education having been conducted by females. They remained with the tutor (magister) until they attained the age of puberty. His duty was rather to guard them from evil, both physical and moral, than to communicate instruction, to cultivate their minds, or to impart accomplishments. He went with them to and from the school or the Gymnasium; he accompanied them out of doors on all occasions; he was responsible for their personal safety, and for their avoidance of bad company. The formation of their morals by direct supervision and attendance belonged to the παιδαγογος as public officers, and their instruction in the various branches of learning, i.e., in grammar, music, and gymnastics, to the δασκαλοι or praeceptores, whom Plato, Xenophon, Plutarch, and Quintilian expressly distinguish from the pedagogi. These latter even carried the books and instruments which were requisite for their young masters in studying under the sophists and professors.

The account of the office is insufficient to explain why the παιδαγογος so often appears on the Greek stage, both in tragedy, as in the Medea, Phaedra, and Ion of Euripides, and in comedy, as in the Bacchides of Plautus. The condition of slavery ac-

PAINTING

The term pagani is often used in opposition to milites, and is applied to all who were not soldiers, even though they did not live in the country (mules, scribes), to the humble and base (the Pagani de Getulia, Pliny, De nat. Hist., vii., 5, 28, 29). The pagani or citizen was applied as a term of reproach to soldiers who did not perform their duty, in the same way as Julius Cæsar addressed his rebellious soldiers on one occasion as Quirites. The Christian writers gave the name of pagani to those persons who adhered to the old Roman religion, because the latter continued to use a great number of pagan gods, even after Christianity became the prevailing religion of the inhabitants of the towns.

PAIDONOMOS (paidonômos) was a magistrate at Sparta, who had the general supervision of the education of the boys. His office was consid-
ered very honourable, and he was always chosen from the noblest citizens. He had to make a general inspection of the boys, and to puny very severely all those who had been negligent or idle, for which purpose ματιωφόροι were assigned to him by Lycurgus. Those who were refractory he might bring before the ephebi. The more immediate injunctions of the gymnastic exercises of the boys belonged to magistrates called σφικτά. 1 (Vid. Bde.)

PAIDOTRIBAI (paidotribai). (Vid. Gymnast. un. p. 483.)

PAINTING (Pictura; Ars delineandi; Γραφή, Γραφείο, Ζωγραφία). I. The art of imitating the appearances of bodies upon an even surface, by means of the arrangement and mixture of colours, was an art most extensively cultivated by the ancients, but especially by the Greeks, among whom it was certainly carried to the highest degree of technical development.

II. Authorities.—The principal original sources of information upon the history of ancient art, are Pliny, Varro, Pliny, and Vitruvius. The writings of Lucian, Athenaeus, Pliny, Plutarch, the elder and younger Philostratus, and Cicero, contain many hints and maxims invaluable to the historian of art. The best modern works on the subject are: Junius, „De Pictura Veterum," and the „Catalogus Artificium," Roter, 1694, folio, which contain almost all the passages relating to the origin of the art; the Catalogue is the more valuable portion of the work. Silius, „Catalogus Artificium," Dresden, 1837, 8vo, an indispensable supplement to the Catalogue of Junius; this excellent work, written equally for the scholar and the artist, has been translated into English under the title of a „Dictionary of the Artists and Makers of Art" in Ancient Times, in a way in which translation demands notice; the term enameled is throughout erroneously used in the place of encaustic. Müller, „Handbuch der Archäologie der Kunst," Breslau, 1835, 8vo, 2d ed., a most useful work, but written more for the antiquary than for the artist; Böttger, „Ideen zur Archäologie der Male- res," Dresden, 1837, 8vo, 2d ed., is the first attempt to explain the earliest times until Polygnotus and his contemporaries, inclusive; Durand, „Histoire de la Peinture Ancienne," London, 1725, folio, a translation of book xxxv. of Pliny, with copious notes; Carlo Dati, „Vite dei Pittori Antichi," Florence, 1697, 4to, the lives of Zeuxis, Parrhasius, Apelles, and Proteogenes; Thiersch, „Geschichte der speziellen Kunst der Griechen und Römer," Munich, 1829, 2d ed.; Raoul Rochette, „Recherches sur l'emploi de la Peinture," &c., Paris, 1836, 4to, and the lectures of Fuseli upon ancient painting, and of Flaxman upon sculpture. Other works have been written upon general and particular subjects bearing more or less upon painting, such as those of Flacourt, Racinese, and especially Fries, on the history of painting in the ancients; Joh. Jacobs, Creuzer, Grund, Caylus, Levesque, Millin, D'Hancarville, Quatremére de Quincy, Inghamiri, Visconti, Millingen, and others too numerous to mention here. Of the celebrated work of Winckelmann, „Geschichte der Kunst des Alterthums," only a very small portion is devoted to painting.

III. Painting in its various branches, has played, like the origin of painting in Greece, though they may have no real historical value, are at least interesting to the lovers of art. One legend, which is recorded by Pliny, 2 and is advertised to by Athenagoras, 3 relates the origin of the delineation of a

2. See the preceding note.
PAINTING.

shadow or shade (σκια, σκιαγραφία), which is the essential principle of design, the basis of the imitative and plastic arts. The legend runs as follows: The daughter of a certain Dibutades, a potter of Sicyon, at Corinth, struck with the shadow of her lover, who was about to leave her, cast by her lamp upon the wall, drew its outline (umbram ex facie lineis circumscripta) with such force and fidelity, that her father cut away the plaster within the outline, and then, after baking the wall in clay, which he baked with the rest of his pottery. This singular production, according to tradition, was still preserved in Corinth until the destruction of the city by Mummus. There seem to be, however, other claimants to the honour of having invented skiagraphy (σκιαγραφία). Athenagoras mentions Saurias of Samos, who traced his horse's shadow in the sun with the point of his spear, and Orato of Sicyon, whom he styles the inventor of drawing or outline (γραφή), for he was the first to practise the art upon tablets with prepared grounds (ἐν πίνακι λεκτοκομίῳ).

Pliny mentions, upon the testimony of Aristotle, that Euchir (Εὔχηρ), a relation of Deaedium, invented painting in Greece. Although Pliny's account of the origin and progress of painting in Greece is not strictly accurate, the general formation can still not be considered as authentic matter of history; and the existence of several of the most ancient artists, mentioned by Pliny and many Greek writers, is very questionable. Besides those already spoken of, we find mention of Philocles of Egypt; Oleanthes, Arichides, and Cleophas of Corinth; Telephanes of Sicyon, Eugrammus, and others. Upon the meanings of some of these names, see Büttiger, Ideen zur Archäologie, p. 138, and Thiersch, Epoch, &c., note 22.

Sculpture is generally supposed to be a more ancient art than painting; but this arises from an imperfect comprehension of the nature of the two arts, which are one in origin, end, and principle, and differ only in their development. Design is the basis of both; colour is essential to neither, nor can it be said to belong more particularly to the latter (γραφή) than to the former (πλαστική). Coloured works in plastic, in imitation of nature, were in ancient times as common, and probably more so, than coloured designs; the majority of the illustrations upon the vases are colourless. The staining of the human body, or the application of colours, is mentioned in connexion with the origin of painting; but simple colouring and painting, strictly speaking, are quite distinct; the distinction between "to colour," χρώματι, colorum inducere, and "to paint," γράφειν, pingere, delineare. The colouring of the early wooden images, the ancient Σάκχαι or Σάκχαρι, the πλάθος and the δαίμονα, must have certainly preceded any imitations or copies of the real sentiments of forms upon an even surface by means of colour and light and shade combined. But this is not a stage in the art of painting, and these figures were most probably coloured by the artists who made them, by the old πλάθος or χρώματα ψευδής; the existence, however, of the art of design is established by the existence of the plastic art. It is perhaps to this species of painting, or the Phany utilitas of the days, 4 Plaste laudissimae suae tumf, Demophilus et Gorgasus idemque pictores.

We will now, as briefly as possible, consider the gradual development of painting, and the information relating to its progressive steps, preserved in ancient writers. The simplest form of design or drawing (γραφή) is the outline of a shadow, without any intermediate markings, or the shape of a shadow itself (a silhouette), in black, white, or in colour (umbram hominis linea circumcincta): this kind of drawing was termed σκιαγραφία. But this simple figure or shade, σκια (σκιαγράμμα), when in colour, was also essentially a monochrom (μοιχοχρόματον). The next step was the outline, the "pictura linearis," the monogram (μοιχογράμματος); this is said to have been invented by Philocheles of Egypt or Cleanthes of Corinth, but first practised by Arichides of Corinth and Telephanes of Sicyon; it was the complete outline with the inner markings, still without colour, such as we find upon the ancient vases, or such as the celebrated designs of Flaxman, which are perfect monograms. These outlines were most probably originally practised upon a white ground (ἐν πίνακι λεκτοκομίῳ), for Pliny remarks that they were first coloured by Cleophas of Corinth, who used "testa trita," by which we should perhaps understand that he was the first to draw them upon a coloured or red ground, such as that of the vases.

The next step is the more perfect form of the monochrom, alluded to above; in this, light and shade were introduced, and in its most perfect state it was, in everything that is essential, a perfect picture. These "monochromata" were practised in all ages, times, and countries. The speaking of Zeus, 5 says, "πίνακι et monochromata ex alto;" ex alto, that is, in gray and yellow, similar to the chiaroscuro of the Italians. They are described by Quintillian, 6 qui singulis pinzur coloribus, alia tamen ementioria, alia reduceorae fecerunt. They were painted also red in red. Pliny 7 tells us that the old masters painted them in vermillium, "Cum veteres, quae igitur nonces colorum, pingebant," and also in red lead, but that afterward the rubrica or red ochre was substituted for these colours, being of a more delicate and more agreeable tint.

Hygiemon, Dimias, and Charmadas are mentioned by Pliny 8 as having been famous ancient monochromists; their age is not known, but they most probably practised the simpler forms, such as we find upon the most ancient vases. Four monochroms in the latter style, red in red, were discovered in Herculanenum. 9 They are paintings of a late date, and are of considerable merit in every respect, but the colours have been nearly destroyed by the heat, and the pictures are in some places defaced; they are painted upon marble. They were probably painted by the ancient masters of Athens. ΑΛΕΞΑΝΔΡΟΣ ΑΘΗΝΑΙΟΣ ΕΥΡΑΦΕΝ is an inscription upon one of them, 7 which represents five females, with their names attached, two of whom are playing at the ancient game with the ball (εὐραφεῖος). These tablets are in the collection of ancient paintings of the Museo-Borbonico at Naples, Nos. 408, 409, 410, 411.

The next step in the development towards the full development or establishment of the art of painting (γραφή) was the proper application of local colours in accordance with nature. This is, however, quite a distinct process from the simple application of a variety of colours before light and shade were properly understood, although each subject may have had its own absolute colour. The local colour of a head is the essential step towards assuming a particular light or position, which colour depends upon, and changes with the light and the surrounding objects; this was not thoroughly understood until a very late period, but there will be occasion to speak of this hereafter. Probably Eumenes of Athens, and certainly Cimon of Cieone, belonged to the class of ancient tetrachromats of
PAINTING.

polychromats, for painting in a variety of colours, without a due, or, at least, a partial observance of the laws of light and shade, is simply polychromy; and a picture of this latter description is a much more simple effect than the rudest forms of the monochrom in chiaro oscuro. There are a few examples of this kind of polychrom on the most ancient vases. In the works of Eumamus of Athens, however, there must have been some attention to light and shade, and in those of Cimon of Cleone still more. The names of Eumamus and Cimon are generally connected with each other, but Eumamus must have preceded Cimon some time. He was the first, according to Pliny, who distinguished the male from the female in painting: "qui primus fuit in arte pictoriae sexalem discrimen curare," (v. 2, 133); "omnes similari eausum." The most obvious distinction which here suggests itself can be scarcely added to by Pliny, or Eumamus must belong to a very early period, for we find that distinction very decidedly given on even the most ancient vases, whenever the figure is naked. That Eumamus dared or ventured to imitate all figures, may imply that he made every difference between the male and the female, giving also to each sex a characteristic style of design, and even in the compositions, draperies, attitudes, and compositions of his figures, clearly illustrating the dispositions and attributes of each, exhibiting a robust and vigorous form in the males, and making the females slighter and more delicate. Thus the art of Eumamus of Athens was an imperfect state of the art of so early a period, and they may also be very evident, notwithstanding ill-arranged composition, defective design, crude colour, and a hard and tasteless execution.

IV. Painting in Asia Minor and in Magna Graecia.—It is singular that the poems of Homer do not contain a mariner of painting at all. Homer, nor is there mention of a school similar to Decelius, or Hephaestus, or Vulcan, who might represent the class of painters. This is the more remarkable, since Homer speaks of rich and elaborate embroidery as something not uncommon; it is sufficient to mention the splendid diaphus of Helen, in which were worked many battles of the Greeks and Trojans. Homer's view of painting as an art is actual painting in principle, and is a species of painting in practice; and it was considered such by the Romans, who termed it "pictura tessitis," "tessitis stragulio, magnificis operibus picto," that is, painted with the needle, embroidered, acu picto (pingiabal acu; pictus acut). The various allusions also to other art, similar in nature to painting, are sufficient to prove that painting must have existed in some degree in Homer's time, although the only kind of painting he notices is the "red-checked" and "purple-checked ships" (nubes melispodris; nubes fœnivoparous), and an ivory ornament for the arms of horses, which a Macedonian or Carian woman colours with purple. The description of the ship of Ajax, painted in gold, with figures of coloured metals, satisfactorily establishes the fact that the plastic art must have attained a considerable degree of development in the time of Homer, and therefore determines also the existence of the art of design (ars delineandi; argaphos). Painting seems to have made considerable progress in Asia Minor, while it was still in infancy in Greece, for Candaules, king of Lydia (B.C. 715), is said to have purchased at a high price a painting of Bulpencus, which represented a battle of the Magnesians. This tradition, however, is rejected by Muller, for the insufficient reason that Pliny, in the second passage quoted, uses the expression "Magnetum exiti or caxiidi" instead of "Magnetum proctiunum," as in the first; since the only known description of Magnesia took place, according to Archiocus, through the Trerces, under Ardis, the successor of Gyges, after Olym. 28 (B.C. 677), over 40 years after the death of Candaules. This date is, however, doubtful; but, supposing the contrary, the expression "in qua erat Magnetum proctimum" is sufficiently clear and decisive, independently of it. It would appear, from the expression of Pliny, that Candaules paid the painter as much gold coin as would cover the picture. This painting of Eumamus of Athens is not an isolated fact in evidence of the early cultivation of painting in Asia; there is a remarkable passage in Ezekiel, who prophesied about 600 B.C., relating to pictures of the Assyrians: "Men portrayed upon the wall, the images of the Chaldeans portrayed with vermillon, girded with girdles upon their loins, exceeding in dyed attire upon their heads, all of them princes to look, after the manner of the Babylonians of Chaldea, the land of their nativity." The old Ionic or Asiatic painting, the "genus pictura Asiaticum," as Pliny terms it, most probably flourished at the same time with the Ionic architecture, and continued as an independent school until the sixth century B.C., when the Ionians lost their liberty, and with their liberty their art. Herodotus' mention of pictures of old glory made the painter Phoces (B.C. 544), the inhabitants collected all their valuables, their statues and votive offerings from the temples, leaving only their paintings, and such works in metal or of stone as could not easily be removed, and fled with them to the island of Chios; from which we may conclude that paintings there were not few, but that this art was also common among them. Herodotus' also informs us that Mandrocles of Samos, who constructed for Darius Hystaspis the bridge of boats across the Bosporus (B.C. 508), had a picture painted representing the passage of Darius' army, and the king seated on a throne, reviewing the troops as they passed, which he dedicated in the Temple of Hera at Samos.

After the conquest of Ionia, Samos became the seat of the arts. The Heraeum in Samos, in which the picture of Mandrocles was placed, was a general depository for works of art, and in the time of Strabo appears to have been particularly rich in paintings, for he terms it a "picture-galler)' (nevnechron). Consecrated or votive pictures on panels or tablets (mvkevai auktys eikous) constituted a considerable portion of the avthvora or votive offerings in the temples of Greece, most of which, in a later period, had a distinct building or gallery (oklum) attached to them, disposed for the reception of pictures and works of this class.

After the decline of the Ionic art, it flourished among the Greeks in Italy and Sicily, and especially in Crotone, Sybaris, and Tarentum. Aristotle speaks of a magnificent cloth or pallium (iiwvros) of Alecithenes of Sybaris, which measured 150 cubits, was of the richest purple, and in it were worked the representations of cities, of gods, and of men. It came afterward into the possession of the tyrant Dionysius the elder, who sold it to the Carthaginians for 120 talents. This is sufficient evidence of the existence of painting among the Italoti, and even of painting of a high degree.

PAINTING.

Pliny would induce us to believe that painting was established throughout Italy as early as the time of Tarquinius Priscus. He mentions some most ancient paintings at Cere; and a naked group of Helen and Atalanta, of beautiful forms, painted upon the wall of a temple at Lanuvium, and some paintings by the same artist in the Temple of Juno at Ardea, accompanied with an inscription in ancient Latin characters, recording the name of the artist and the gratitude of Ardea.

V. Painting in Greece.—Cimon of Cleone is the first important character we meet with in the history of painting in Greece. His exact period is very uncertain, but he was probably a contemporary of Solon, and lived at least a century before Polygnotus. It is not at all necessary, as Pliny supposes, that he must have preceded Bularchus, which would place him two centuries earlier, as he may have easily acquired the art in one of the Ionian cities, for in the time of Solon there was a very extensive intercourse between Greece and the Asiatic colonies. The superior quality of the works of Cimon, to which Pliny and Plutarch bear sufficient testimony, is his being known for assigning him a place among the painters; but he has been connected with Dorynus of Colophon, who copied the works of Polygnotus, is quite out of the question. This has been inferred from the occurrence of the name Cimon in connexion with that of Dorynus in Simonides; but, as Müller has observed, Minos ought to be there most probably substituted for Kipias.

Cimon is said to have imitated the inventions of Eumenes; he was the first who used the shortening (catagraphe), and drew the figure in a variety of attitudes; he first made muscular articulations, indicated the veins, and gave natural folds to drapery. The term "catagraphe," which Pliny uses, evidently signifies any oblique view of the figure or countenance whatever, whether in profile or otherwise, in technical language, foreshortenings.

We learn from Plutarch* that Cimon was much better paid for his works than any of his predecessors. This alone implies a great superiority in his works and a vast improvement in art. He appears to have emancipated painting from its archaic rigidity; and his works probably occupied a middle place between the productions of the earlier school and those of Polygnotus. At the time of Polygnotus (B.C. 460), partly on account of the changes which took place in the Greek character subsequent to the Persian invasion, and partly in consequence of his own great works in Athens and at Delphi, painting attracted the attention of all Greece; but, previous to this time, the only cities that had paid any considerable attention to it were Egin, Sicyon, Corinth, and Athens. Sicyon and Corinth had long been famous for their paintings upon vases and upon articles of furniture; the school of Athens was of much later date than the others, and had attained no celebrity whatever, until the arrival of Polygnotus from Thasos raised it to that pre-eminence which, through various circumstances, it continued to maintain for more than two centuries, although the name of the great painters of Greece were natives of Athens.

It has been attempted hitherto, as far as our space would admit of, to trace the progressive steps of Grecian painting from its infancy until it attained that degree of development requisite to entitle it to the name of an independent art; but, before entering upon the consideration of the painting of the Greeks in its complete development, it will be well to examine both their technical systems and their mythical means.

VI. Technique.—Vehicles, Materials, &c. Plin. vii. 33—35. The Greeks painted with wax, resin, and in water-colours, to which they gave a great consistency, according to the material upon which they painted, with gums (glycerina, glycerinum, and the white of eggs) and turpentine. These were the most common. It does not appear that they ever painted in oil; the only mention of oil in ancient writers in connexion with painting is the small quantity which entered into the composition of encaustic varnish, to temper it. They painted upon wood, clay, plaster, stone, parchment, and canvas; the last was, according to one account, not used till the time of Nero; and though this appearance appears to be doubtful ("depictam in tabula epigraphiam rei"), the use of canvass must have been of late introduction, as there is no mention of it having been employed by the Greek painters of the best periods. They generally painted upon panels or tablets (pictores, vtrteca, tabula, tabella), and very rarely, if ever, upon walls; and an attempt has been made to prove that what is now used was common among the ancients, who called it &pomic (akin to ualbarrows). Even in the time of Pliny, when wall-painting was common, those only who painted casel-pictures (tabulae) were held in esteem: "nec nulla gloria artificem est nisi eorum qui tabulas picturae," that is, those who painted history or fable upon panels, in what is termed the historic or great style, as opposed to those who painted stories with figures in the scenes of Plutarch. These panels, when finished, were fixed into frames of various descriptions and materials, and encaised in walls. The ornamental panel-painting in the houses of Pompeii is evidently an imitation of this more ancient and more costly system of decorating walls. The wood of which these panels or tablets were generally made was called lignum, lignum picturae, or luti; and they were ground or prepared for painting with chalk or white plaster; this prepared ground was termed leukoma, which term was applied, also, to the tablet itself when thus prepared (έν ποιοι ηλευκοκύμβωσ). The style or ceurium used in drawing and for spreading the wax colours, pointed at one end and dipped in the wax, is termed styrum; and they are called styri, stilos, luti, or kitaei. The colour of the Greeks and the Romans; it was generally made of metal. There is a representation of an instrument of this description in one of the paintings of Hereculanus. Hair-pencil (penicillus, penicilium) was termed vnpoupa&; and appaarently, also, robiov gudfe ov rov robiov. Vol. ii. Lebronne, Eneustice, Journ. des Sav., Sept., 1833, on the meaning of robiov. The ancients used also a palette very similar to that used by the moderns, although it appears that there is no absolute mention of the palette in any ancient author. The fact, however, is sufficiently attested by the figure of Painting discovered in the so-called Pantheon at Pompeii, which holds the palette and brushes in her right hand. In the same work (plate 98), a female who is painting is represented holding something in her left hand and applying it to the picture. She is said to be the muse of Painting.

fault for a modern practitioner to understand how a large and valuable picture could be produced by such a method, unless these colours of cera, which painters of this class, according to Varro, kept in partitioned boxes, were a species of wax crayons, which were worked upon the panel with the broad end of the cestrum (which may have had a rough edge), within an outline or monogram previously drawn or cut in with the pointed end, and were after-ward fixed, and toned or blelled by the action of the air. Painters were the habit of defining the word ἐνάκαιων, "burned in," upon pictures executed in encaustic, as Νικαίος ἐνάκαιων, Λυκιός ἐνάκαιων.

VIII. Polychrome.—The practice of varnishing and polishing marble statues has been already incidentally noticed. The custom was very general; ancient statues are often painted, and what is now termed polychrome sculpture was very common in Greece, for the acrolithic and the chryselephantine statues were both of this description. Many works of the latter class, which were of extraordinary magnificence and costliness, are described by Pausanias. The term polychromy, thus applied, was apparently unknown to the ancients; this word, however, appears to denote the dyed marbles or chiaroscuro effects, and has been assigned to statues of that class, by writers of a later period, who had never seen any examples of encaustic painting. It is a fact that the ancients were great varnishers, and the word ἐνάκαιων is often found upon pictures executed in encaustic. This word means also by Plato, οἱ ἀνθρώποις γράφοντες, and in such a case it is clear that they were occasionally entirely painted, in exact imitation of nature. Anadikos remarks, that the ancients had a habit of improving a rich or beautiful colour to any particular part, but by giving its local colour to each part, that the whole is made beautiful (ἄλλοι άρθε ν' η τά προσάκωντα ἐκείνως ἀποδιδότων, τό δὲν θαλὸν πολυοδώ). This was, however, not a general practice, is evident from the dialogue between Lycius and Polystratus, in Lucian, where it is clearly, though indirectly, stated, that the Venus of Cytium by Praxiteles, and other celebrated statues, were not coloured, although they may have been ornamented in parts, and covered with an encaustic varnish.

The practice of colouring statues is undoubtedly as ancient as the art of statuary itself; although they were perhaps originally coloured more from a love of beauty than for any decorative purpose, the resemblance of the representation. The Jupiter of the Capitol, placed by Tarquinius Priscus, was coloured with minimum. In later times the custom seems to have been reduced to a system, and was practised with more reserve. Considerable attention also seems to have been paid to the effect of the object as a work of art. Praxiteles being asked which of his marble works he most admired, answered, those which Nicias had a hand in, "quibus Nicias manus ad moveriet," so much, says Pliny, did he attribute to his circumloquium. Nicias, therefore, who painted in encaustic, seems in his youth to have been an ἀγαλμάτων ἐγκαταστής, or painter of statues, and, from the approval of Prax- itelese, and apparently in this description of painting or colouring, it is certain that he had achieved a great name.

This view differs very materially from those which have been hitherto advanced upon this subject, but it has not been adopted without mature consideration.

In the "circumloquium" of Nicias, the naked form was, most probably, merely varnished, the colouring being applied only to the eyes, eyebrows, lips, and hair, to the draperies, and the various ornaments of dress; and there can be little doubt that fine statues, especially of females, when carefully and tastefully coloured in this way, must have been extremely beautiful; the encaustic varnish upon the white marble must have had very much the effect of a pale transparent flesh. Gold was also abundantly employed upon ancient statues; the hair of the Venus de Medicis was gilded; and in some, glass eyes and eyelashes of copper were inserted, examples of which are still extant.

The practice, also, of colouring architecture seems to have been extensively practised by the Greeks, and very general among the Romans. It is evident that they were perfectly well aware what effect the art had. In the ancient statues, for instance, which were white, the heads and hands were varnished a brown, and the rest of the body a black. It is evident that the art was well understood, and that it was adopted with great skill and taste. The effect of the art was very striking, and it was employed in a variety of ways, as in the decoration of temples, and other public buildings, and in the ornamentation of the walls of houses. It was also employed in the decoration of vases, and in the painting of pictures. It was also used in the decoration of the walls of houses, and in the decoration of vases, and in the painting of pictures. It was also used in the decoration of the walls of houses, and in the decoration of vases, and in the painting of pictures.

I. (t. c.)—2. (Plin., ii. N., xxxv., 10, 39.)—3. (De Gloria Art. Ant. stat. are also often painted, and what is now termed polychrome sculpture was very common in Greece, for the acrolithic and the chryselephantine statues were both of this description. The custom was very general; ancient statues are often painted, and what is now termed polychrome sculpture was very common in Greece, for the acrolithic and the chryselephantine statues were both of this description. Many works of the latter class, which were of extraordinary magnificence and costliness, are described by Pausanias. The term polychromy, thus applied, was apparently unknown to the ancients; this word, however, appears to denote the dyed marbles or chiaroscuro effects, and has been assigned to statues of that class, by writers of a later period, who had never seen any examples of encaustic painting. It is a fact that the ancients were great varnishers, and the word ἐνάκαιων is often found upon pictures executed in encaustic. This word means also by Plato, οἱ ἀνθρώποις γράφοντες, and in such a case it is clear that they were occasionally entirely painted, in exact imitation of nature. Anadikos remarks, that the ancients had a habit of improving a rich or beautiful colour to any particular part, but by giving its local colour to each part, that the whole is made beautiful (ἄλλοι άρθε ν' η τά προσάκωντα ἐκείνως ἀποδιδότων, τό δὲν θαλὸν πολυοδώ). This was, however, not a general practice, is evident from the dialogue between Lycius and Polystratus, in Lucian, where it is clearly, though indirectly, stated, that the Venus of Cytium by Praxiteles, and other celebrated statues, were not coloured, although they may have been ornamented in parts, and covered with an encaustic varnish.

The practice of colouring statues is undoubtedly as ancient as the art of statuary itself; although they were perhaps originally coloured more from a love of beauty than for any decorative purpose, the resemblance of the representation. The Jupiter of the Capitol, placed by Tarquinius Priscus, was coloured with minimum. In later times the custom seems to have been reduced to a system, and was practised with more reserve. Considerable attention also seems to have been paid to the effect of the object as a work of art. Praxiteles being asked which of his marble works he most admired, answered, those which Nicias had a hand in, "quibus Nicias manus ad moveriet," so much, says Pliny, did he attribute to his circumloquium. Nicias, therefore, who painted in encaustic, seems in his youth to have been an ἀγαλμάτων ἐγκαταστής, or painter of statues, and, from the approval of Prax- itelese, and apparently in this description of painting or colouring, it is certain that he had achieved a great name.

This view differs very materially from those which have been hitherto advanced upon this subject, but it has not been adopted without mature consideration.

In the "circumloquium" of Nicias, the naked form was, most probably, merely varnished, the colouring being applied only to the eyes, eyebrows, lips, and hair, to the draperies, and the various ornaments of dress; and there can be little doubt that fine statues, especially of females, when carefully and tastefully coloured in this way, must have been extremely beautiful; the encaustic varnish upon the white marble must have had very much the effect of a pale transparent flesh. Gold was also abundantly employed upon ancient statues; the hair of the Venus de Medicis was gilded; and in some, glass eyes and eyelashes of copper were inserted, examples of which are still extant.

The practice, also, of colouring architecture seems to have been extensively practised by the Greeks, and very general among the Romans. It is evident that they were perfectly well aware what effect the art had. In the ancient statues, for instance, which were white, the heads and hands were varnished a brown, and the rest of the body a black. It is evident that the art was well understood, and that it was adopted with great skill and taste. The effect of the art was very striking, and it was employed in a variety of ways, as in the decoration of temples, and other public buildings, and in the ornamentation of the walls of houses.
PAINTING.

The words καλός and καλή, found frequently upon the ancient vases, are explained to be simple acclamations of praise and approbation, supposed to be addressed to the person to whom the vase was presented; the words are frequently preceded or followed by a name, evidently that of the person for whom the vase was designed. The inscription also ἡ παίς καλή has been found on some vases, which have probably been designed as presents for young females. D'Hancarville supposes that vase-painting was interrupted about the time of the destruction of Corinth, and that the art of manufacturing vases began to decline towards the reign of Trajan, and arrived at its last period about the time of the Antonines and Septimius Severus. Vase-painting had evidently ceased long before the time of Pliny, for in his time the painted vases were of immense value, and were much sought after; but the manufacturer of the vases themselves appears to have been still extensive, for he himself mentions fourteen celebrated potteries of his own time, eight in Italy and six elsewhere. The vases, however, appear to have been merely remarkable for the fineness or durability of the clay and the elegance of their shape. For the composition of the clay with which these fictilia were made, see Por- trix.

Even in the time of the Empire, painted vases were termed "opus antiquum," and were sought for in the ancient tombs of Campania and other parts of Magna Graecia. Suctonius mentions the discovery of some vases of this description in the time of Julius Caesar, in clearing away some very ancient tombs at Capua. It is also remarkable, that not a single painted vase has yet been discovered in either Pompeii, Heracleaenum, or Stabiae, which is of itself almost sufficient to prove that vase-painting was not practised, and also that painted vases were extremely scarce. We may form some idea of their value from the statement of Pliny, that they were more valuable than the Murrhine vases. (Vid. Murrhina Vasa.) The paintings on the vases, considered as works of art, vary exceedingly in the detail of the execution, although in style of design they may be arranged in two principal classes, the black and the yellow; for those which do not come strictly under either of these two heads are either too few or vary too slightly to require a distinct mention. The vases which have been as yet discovered, have been found in ancient tombs at Capua and Nola.

The black vases, or those with the black figures upon the stained reddish-yellow terra-cotta, the best of which were found at Nola, are the most ancient, and their illustrations consist principally of representations from the early mythological traditions; but the style of these vases was sometimes imitated by later artists. (Plate 56, vol. iv. of D'Hancarville is an example.) The inferior examples of this class have some of them traces of the original and cean upon them, which appear to have been made when the clay was still soft; some also have lines or scratches upon the figures, which have been added when the painting was completed.

The style of the design of these black figures, or the black monograms, is the most ancient, and that of the Egyptian or Dedalian style. The varieties in this style are occasionally a purple tint instead of the black; or the addition of a red sash or a white vest, and sometimes a white face and white hands and feet. A curious and interesting example of this kind of polychromy, in black, red, and white, was discovered near Athens in 1813, representing on one side a Mi-

ne with a spear and shield, in the Dedicilian style, and on the reverse, in a somewhat better style, a young man driving a biga of most ancient construction; it is supposed to represent Eichthunius. Near the Minerva is the following inscription, written from right to left: ΤΟΝ ΑΘΕΕΝΟΝ ΑΘΟΝ ΕΜΙ, τον ἀδερφὸν ἵκον εἶμι, "I am the prize of the Athena" (Panathenea). It is supposed to represent a Dysyphos.

The vases with the yellow monograms, or, rather, the black monograms upon the yellow grounds, can constitute the mass of ancient vases. Their illustrations are executed with various degrees of merit: those of inferior execution, also of this class, have traces of the graphis upon them, which appear to have been drawn upon the soft clay; the only one upon us, independent of that of the clay, is the dark-back-ground, generally black, which renders the figures very prominent. The designs upon the better vases are also merely monograms, with the usual dark-backgrounds, but there is a very great difference between the execution of these and that of those just alluded to; there are no traces whatever of the graphis upon them; their outlines are drawn with the hair pencil, in colour, similar to that of the back-ground, which is a species of black varnish, probably asphaltum; or perhaps, rather prepared with the guggates lapsi (jet!) (χαρακτήρ), of Pliny, for he remarks that it is indelible when used on this kind of earthenware.

The best of these vases, which probably belong to about the time of Alexander, are conspicuous for a very correct style of design, although they are invariably carelessly executed, especially in the execution of the monograms, which are a surprising facility of hand. The celebrated vase of Sir W.
Hamilton's collection, now in the British Museum, the paintings of which represent Homer's and the compositions in the gardens of the Hesperides, and the race of Atalanta and Hippomenes, exhibits, for design, composition, and execution, perhaps the finest specimen of ancient vase-painting that has yet been discovered: the style of design is perfect, but the execution, though on the whole laborious, is in many parts very careless.

The following is an example of the more perfect monochromes upon ancient vases, and examples of the polychromes are very rare. In Sir W. Hamilton's collection there are a few examples in which various colours have been added after the ordinary monogram has been completed, for they are not incorporated with the vase, as the black and ground tints are, but are subjects of the same, and have been rubbed off. They consist of white, red, yellow, and blue colours. These vases are apparently of a later date than the above, for the style of design is very inferior.

The museums of Naples, Paris, London, and other cities, afford abundant examples of these ancient vases; the Museo Borbonico at Naples contains almost all that has been discovered. That the vases were designed as examples of ancient mythology, and the execution is generally inferior to the composition.

No opinion of the style of the designs upon ancient vases can be formed from the generality of the great works purporting to illustrate them which have been published of late years. Very few are at all remarkable for lines and proportions, especially of the extremities, and in some even the composition is not faithfully imitated. This is particularly the case with the splendid works published by Dubois-Maissonneuve, Laborde, and some others, in which the illustrations are drawn with a care, precision, and uniformity of character quite foreign to the meaning of the vases; nor do they appear to be drawn rather according to common and perfect standards of the different styles, than to be the faithful imitations of distinct original designs. Plates 25 and 26 of the first volume of Maissonneuve, purporting to be faithful imitations of the design upon the celebrated Nola vase (in the Museum at Naples, No. 25), are not even correct in the proportion of Troy, but bear but little resemblance to the original. This remark is applicable, also, to the work of D'Hancarville and other productions; and yet, in a less degree. Perhaps the work which illustrates most faithfully the style of the designs upon ancient vases, as far as it goes, is that in course of publication by Gerhard.2 The specimens, also, of ancient paintings published by Raoul Rochette3 have every appearance of being faithful imitations of the originals.

X. Remains of Ancient Painting.—There is a general prejudice against the opinion that the painting of the Greeks equalled their sculpture; and the earlier discoveries of the remains of ancient paintings at Pompeii and Heraclea had tended rather to intensify this prejudice. In the vases from these cities the style of the paintings discovered in these cities was condemned both by Pliny and Vitruvius, and yet almost every species of merit may be discovered in them. What, therefore, must have been the productions which the ancient themselves esteemed their immortal works, and which, and singly, were estimated equal to the wealth of cities?

These remains of Pompeii and Heraclea induced Sir Joshua Reynolds to form a decided opinion upon ancient painting. He remarks,4 "From

PAINTING.

Aldobrandine, originally the property of the Aldo-
brandini family, which was found on the Esquiline
Mount during the pontificate of Clement VIII., II-
polito Aldobrandini, and was placed by Pius VII. in
the Vatican: this painting, which is on stucco, and
contains ten rather small figures in three groups, is
a work of considerable merit in composition, draw-
ing, and colour, and is executed with great freedom;
and the following paintings of the Museo Borbonico
at Naples, which are conspicuous for freedom of
execution and general technical excellence: the
two Nereids found in Statib, Nos. 561 and 562,
Cat.; Telephus nourished by the roe, &c., from
Herculaneum, No. 495; Chiron and Achilles, also
from Herculaneum, No. 790; Briesis delivered to
the heralds of Agamemnon, from Pompeii, No.
694; and the nine Funambuli or rope-dancers, which
are executed with remarkable skill and fa-
cility. (Mus. Borb., Ant. d'Ercol., and Zahn con-
tain engravings from these works; for fac simile
of ancient paintings, see "Recueil de Peintures an-
tiques, imitées fidèlement pour les couleurs et pour
le trait, d'après les dessins coloriés fait par P. S. Bar-
toli," &c., Paris, 1757, folio.)

XI. Period of Development. Essential Style.—
With the period of the Pliny (c. 46) painting was
developed in all the essential principles of imi-
tation, and was established as an independent art
in practice. The works of Polygnotus were con-
spicuous for expression, character, and design; the
more minute discriminations of tone and local col-
our, united with dramatic composition and effect,
were not accomplished until a later period. The
limited space of the arx, and the necessarily precludes
anything like a general notice of all the various pro-
ductions of Greek painters incidentally mentioned
in ancient writers. With the exception, therefore,
of occasionally mentioning works of extraordinary
celebrity, the notices of the various Greek painters
of whom we have any satisfactory knowledge will be
restricted to those who, by the quality or pecu-
liar character of their works, have contributed to
wards the establishment of any of the various styles
of painting practised by the ancients.

Polygnotus is frequently mentioned by ancient
writers, but the passages of most importance rela-
ting to his style are in the Poetica of Aristotle4 and
in the Imagines of Lucian.4 The notice in Pliny5
is very cursory: he mentions him among the many
writers, as having been the first who, in a true
commencement of his history, and simply states
that he added much to the art of painting, such as
opening the mouth, showing the teeth, improving
the folds of draperies, painting transparent vests for
women, or giving them various coloured head-
dresses. Aristotle speaks of the general character
of the design and expression of Polygnotus, Lucian
of the colour; in which respect both writers award
him the highest praise. Aristotle,4 speaking of imi-
tation, remarks, that it must be either superior,
inferior, or equal to its model, which he illustrates
by the cases of three painters: "Polygnotus," he
says, "paints men better than they are, Pasion
worse, and Dionysius as they are." This passage
alludes evidently to the general quality of the design
of Polygnotus, in which respect both writers award
an exalted and ideal character. In another passage6
he speaks of him as an ἀγαθὸς ἠθοποιός, or an ex-
cellent delineator of moral character and expression,
and assigns, in this respect, a complete superi-
ority over Zeuxis. From the passage in Lucian, we
may infer that Polygnotus, Euphranor, Apelles, and
Aëtion were the best colourists among the an-
cients, according to the general opinion (ἀρχαῖα ἡ
τέχνη ποιησίας τα τέχνης, καὶ εἰπών ποιη-
τος τα τέχνης τῶν αὐτῶν). He notices, also, in
the same passage, the truth, the elegance, and the flow-
ing lightness of the draperies of Polygnotus.

Pausanias mentions several of the works of Po-
ygnotus, but the most important were his two great
paintings, or series of paintings, in the Lesche of
the Temple of Apollo at Delphi, to a description
of which Pausanias devotes six chapters.1 On
the right, as you entered, was the overthrow of Troy,
and the Greeks sailing to their native land; on
the other side was painted the descent of Ulysses to
Hades, to consult the soul of Tiresias concerning his
safe return to his native country. These paint-
ings, in the composition of which Polygnotus seems
to have illustrated every existing poem upon the
subjects, were termed the Iliad and Odyssey of
Polygnotus. They excited the wonder and admi-
ration of Pausanias, although they had been already
painted six hundred years when he saw them.

Polygnotus has been termed the Michael Angelo
of antiquity. From the method adopted by Pausanias
in describing these pictures, their composition has
been generally condemned. It is, however, by no
means the case that they were conceived as a whole,
of pictures painted upon panels of wood, and inserted
into the wall, according to the ancient practice;
but, even supposing them to have been distinct
groups painted upon the walls themselves, as they
have been treated by the brothers Riepenhausen,3
their composition should not be hastily condemned.

The painting of the destruction of Troy (and the
other works similar in style) seems to have consisted
of three rows of figures, with the names of each writ-
ten near them, in distinct groups, covering the whole
wall, each telling its own story, but all con-
tributing to relate the tale of the destruction of Troy.
It is evident, from this description, that we
cannot decide upon either the merits or the demer-
its of the composition, from the principles of art
which guide the rules of composition of modern
times. Neither perspective nor composition, as a
whole, are to be expected in such works as these,
for they did not constitute single compositions, nor
was any unity of time or action aimed at; they
were painted histories, and each group was no far-
ther connected with its contiguous groups, than
that they all tended to illustrate different facts of
the Trojan war.

The style of Polygnotus was strictly ethical, for his
whole art seems to have been employed in illustrat-
ing the human character; and that he did it well,
the surname of Ethographer (Ἐθογραφός) was given to him
by Aristotle and others, sufficiently testifies. His
principles of imitation may be defined to be those
of individual representation, independently of any
accidental combination of accessories; neither the
prictic nor the anecdotic, nor a general and indiscriminate
picture of nature, formed any part of the art of Pol-
ygnotus or of the period. Whatever, therefore, was
not absolutely necessary to illustrate the principal
object, was indicated merely by a symbol: two or
three warriors represented an army, a single hut an
encampment, a ship a fleet, and a single house a
city; and, generally, the laws of basso-relievo were
the laws of painting, and both were still, to a great extent, subservient to
architecture.

The principal contemporaries of Polygnotus were
Dionysius of Colophon, Philesteus and Panana
of Athens, brothers of Phidias, and Micon, also of
Athens.

Dionysius was apparently an excellent portrait

1. (Böttiger and Mayer, Die Aldobrandinische Hochzeit, Dres-
den, 1810.)—2. (Sir W. Gell, Pompeiana, pl. 39 and 40.)—3. (c.
5 and 6.)—4. (c. 7.—5. (xxxv., 35.)—6. (c. 2.)—7. (c. 6.)

PAINTING.

painter, the Holbein of antiquity; for, besides the testimony of Aristotle, quoted above, Plutarch remarks, that the works of Dionysius wanted neither force nor spirit, but that they had the appearance of being too much laboured. Polygnotus also painted portraits, for Plutarch mentions that he painted his mistress Elpinice, the sister of Cimon, as Lacedaemon, in a picture in the Athenian Prytaneion, or Prytaneum at Athens, which received its name from the paintings of Polygnotus, Micon, Panenus, and others, executed in the fifth periods of Cimon and Pericles; this colonnade was previously called στοά Πεισιστάκης. What these paintings were we learn from Pausanias, viz., the battle of the Athenians and Spartans at CRETE; the panel of this piece is not known, but it seems only Polygnotus and Euripides who were engaged in the effect of the combination of light and shade with colour is also clearly expressed in the words which follow: "primaeque gloriam penicillo jure consorti," also, "neque ante cum tabula ulius ostenditque, qui teneat ocus." We may almost imagine the works of a Rembrandt to be spoken of; his pictures riveted the eye by their very painting and the quality of his works, he was renowned the schoolmaster of all artists; he was in the habit of writing upon his works, "It is easier to find fault than to imitate," μεταθαιστην τα μαλλαιν η μεθησατα, which Pliny relates of Zeuxis. Ltd, combined a certain degree of ideal form with the rich effect of Apollodorus. Quintilian says that he followed Homer, and was pleased with powerful forms even in women. Ciceron also praises his design. Zeuxis painted many celebrated works, but the Helen of Croton, which was painted from five of the most beautiful virgins in the city, was the most renowned, and under which he inscribed three verses in the third book of the Iliad. Stobaeus relates an anecdote of the painting of an Attic virgin, by Zeuxis, which is also reported to have observed to one who did not understand why the picture was so much admired "Take my eyes, and you will see a goddess." We learn from another anecdote, recorded by Plutarch, that Zeuxis painted very slowly.

PAINTING.

The remarks of Quintilian respecting the style of this period are very curious and interesting, although they do not accord entirely with the testimonies from Greek writers quoted above. He says that, notwithstanding the simple colouring of Polygnotus, which was little more than a rude four-coloured scheme, and the fact that this was afterwards accomplished, there were those who even preferred his style to the styles of the greatest painters who succeeded him; not, as Quintilian thinks, without a certain degree of affectation.

XII. Establishment of Painting. Dramatic Style.  
In the succeeding generation, about 420 B.C., through the influence of the dramatic poets, particularly that of Sophocles and Euripides, Zeuxis of Heraclea, dramatic effect, was added to the essential style of Polygnotus, causing an epoch in the art of painting, which henceforward comprehended a unity of sentiment and action, and the imitation of the local and accidental appearances of objects, combined with the historic and generic representations of Polygnotus. The contemporaries of Apelles, and of Polygnotus, who carried out their principles, were Parrhasius of Ephesus, Eupompos of Sicymn, and Timanthes of Cyzicus, all painters of the greatest fame. Athens and Sicymn were the principal seats of the art at this period.

Apollo and Plutarch, says Plutarch, invented the "element of the ancient Aympygi, that imperceptible transition which, without opacity, confusion, or hardness, united local colour, deimit, shade, and reflexes." This must, however, not be altogether denied to the earlier painters; for Plutarch himself attributes the same property to the works of Dionysius (Ioyn, εν αυτή και τόνως), though in a less degree. The distinction is, that what in the works of Dionysius was really merely a gradation of light and shade, or gradual diminution of light, was in those of Dionysius the gradation into tints, the tint gradually changing according to the degree of light. The term was termed τόνως, the latter δόρωος; but the English term tone, when applied to a coloured picture, comprehends both; it is equivalent to the "splendor" of Pliny.

Apollodorus first painted men and things as they really appeared; this is what Pliny means by "Hanc sublimem antiquamque eximiae artel," and the effect of the combination of light and shade with colour is also clearly expressed in the words which follow: "primaeque gloriam penicillo jure consorti," also, "neque ante cum tabula ulius ostenditque, qui teneat ocus." We may almost imagine the works of a Rembrandt to be spoken of; his pictures riveted the eye by their very painting and the quality of his works, he was renowned the schoolmaster of all artists; he was in the habit of writing upon his works, "It is easier to find fault than to imitate," μεταθαιστην τα μαλλαιν η μεθησατα, which Pliny relates of Zeuxis.

Zeuxis combined a certain degree of ideal form with the rich effect of Apollodorus. Quintilian says that he followed Homer, and was pleased with powerful forms even in women. Ciceron also praises his design. Zeuxis painted many celebrated works, but the Helen of Croton, which was painted from five of the most beautiful virgins in the city, was the most renowned, and under which he inscribed three verses in the third book of the Iliad. Stobaeus relates an anecdote of the painting of an Attic virgin, by Zeuxis, which is also reported to have observed to one who did not understand why the picture was so much admired "Take my eyes, and you will see a goddess." We learn from another anecdote, recorded by Plutarch, that Zeuxis painted very slowly.

Parrhasius is spoken of by ancient writers in terms of the very highest praise. He appears to have combined the magic tone of Apollodorus and the exquisite design of Zeuxis with the classic invention and expression of Polygnotus; and he so circumscribed all the powers and ends of art, says Quintilian, that he was called the "Legislator." He was himself not less aware of his ability, for he in the term opos, he was "the lawgiver," and, in fact, he was always admirable works of art, still the execution of them was carried on in the invention. As an instance of the ingenuity of his invention, Pliny mentions a sleeping Cyclops that he painted upon a small panel, yet conveyed a notion of his gigantic form by means of some small satyrs, who were painting measuring his thumb with a thyrusus. He was celebrated also for his paintings of Apollo and the glorification of which are admirable remarks of Fuseli upon this picture, Lectura i. Timanthes defeated Parrhasius in a professional contest, in which the subject was the
combat of Ulysses and Ajax for the arms of Achilles. 1

Eupompos of Sicyon was the founder of the celebrated Sicyonian school of painting which was afterward established by Pammphilius. Such was the influence of Eupompos's style, that he added a third, the Sicyonic, to the only two distinct styles of painting then recognized, the Heidelic or Grecian, and the Asiatic, but subsequently to Eupompos distinguished as the Attic and the Ionic; which, with his own style, the Sicyonic, henceforth constituted the three characteristic styles of Grecian painting. 2 We may judge, from the advice which Eupompos gave Lysippus, that the predominant characteristic of this style was individuality; for upon being consulted by Lysippus whom of his predecessors he should imitate, he is reported to have said, pointing to the surrounding crowd, "Let nature be your model, not an artist." 3 This celebrated maxim, which eventually had so much influence upon the arts of Greece, was the first professed deviation from the principles of the generic style of Polygnotus and Phidias.

XIII. Period of Refinement. 4 The art of this period was adopted the Alexandrian, because the most celebrated artists of this period lived about the time of Alexander the Great, was the last of progression or acquisition; but it only added variety of effect to the tones it could not improve, and was principally characterized by the diversity of the styles of so many contemporary artists. The decadence of the art immediately succeeded the necessary consequence, when, instead of excellence, variety and originality became the end of the artist. "Floruit circa Philippum, et usque ad successorum Alexandri," says Quintillian, "picture praecipue, sed diversiss virtutibus;" and he then enumerates some of the principal painters of this age, with the excellences for which each was distinguished. Protagoras was distinguished for high finished; Pammphilius and Melanthus for composition; Antiphas of facility; Theon of Samos for his prolific fancy; and for grace Apelles was unrivaled; Uprhanor was in all things excellent; Pausias and Nicias were remarkable for chiaroscuro of various kinds; Nicomachus was celebrated for a bold and rapid pencil; and his brother Aristides surpassed all in the depth of expression. There were also others of name and reputation, as Phylaxus of Eritria, Aesclapiodorus of Athens, Athenion of Maronia, Echion, Cydas, Philochares, Theonemestus, Pyricues, &c. This general revolution in the theories and practice of painting appears to have been greatly owing to the principles taught by Eupompos at Sicyon. Pammphilius of Amphipolis succeeded Eupompos in the School of Sicyon, and was the most celebrated school of art in Greece. Pammphilius had the reputation of being the most scientific artist of his time; and such was his authority, says Pliny, 5 that chiefly through his influence, first in Sicyon, then throughout all Greece, noble youths were taught the art of drawing before all others. "Graphic, hoc est, picture in box," that is, drawing, in which the whole celebrity depended, at that time, consisted in 'drawing lines or outlines with the graphite upon tablets of box; the first exercise was probably to draw a simple line (Gammai &; ekkhin) 6 It was considered among the first of liberal arts, and was practised exclusively by the freeborn, for there was a special edict prohibiting slaves from exercising it. The course of study in this school occupied ten years, and the fee of admission was an Aesclapiodorus, for pictures of the two, 360, 300 each; and he gave also to Theonemestus (otherwise unknown) for every picture of a hero, 100 minae. Aesclapiodorus was a native of Athens; he was celebrated for composition or grouping; Plutarch 7 classes him with Euphranor and Nicias.

Pausias of Sicyon painted in encaustic with the cresset, and seems to have surpassed all others in this manner. Pliny gives "primum in hoc genere nobiliss," 8 from which it would appear that he was the only one of his time himself earlier than Euphranor or Nicias, who both excelled in this style; he was, however, the pupil of Pammphilius and the contemporary of Apelles. Pausias was conspicuous for a bold and powerful effect of light and shade, which he enhanced by contrasts and striking foreshortenings. A large picture of a 9

710
PAINTING.

bull, of this description, was very celebrated; he painted a black bull upon a light ground; the animal was powerfully foreshortened, and its shadow was thrown upon a part of the surrounding crowd, by which a remarkable effect was produced.

Apelles was a native of Ephesus or Colophon, according to the general testimony of Greek writers, although Pliny² terms him of Cos. Pliny asserts that he surpassed all who either preceeded or succeeded him; the quality, however, in which he surpassed all other painters will scarcely bear a definition; it has been termed grace, elegance, beauty, copia, venustas, or beauty of style. Apelles says: "His great prerogative consisted more in the unison than the extent of his powers; he knew better what he could do, what ought to be done, at what point he could arrive, and what lay beyond his reach, than any other artist. Grace of conception and refinement of taste were his elements, and went hand in hand with grace of execution and taste in finish; powerful and seldom possessed singly, irresistible when united."

The most celebrated work of Apelles was perhaps his Venus Anadyomene, Venus rising out of the waters.

"In Veneris tabula summam sibi ponit Apelles." The beautiful goddess was represented squeeazing the water with her fingers from her hair, and her only veil was the silver shower which fell from her shining locks. Ovid elegantly alludes to it in the following lines.

"Sic matuttis siccat dignitibus Venus osa capillos, Et modo materinis tectum tuider que aquis."

So great, indeed, was the admiration of the ancients for this picture, that, according to the same poet, Venus chafed to owe it her great reputation for beauty.

"Si Venerem Cos nonquam pinniset Apelles, Merus sub aquarum ulla lateris aquis."

Apelles excelled in portrait, and, indeed, all his works appear to have been portraits in an extended sense; for his pictures, both historical and allegorical, consisted nearly all of single figures. He enjoyed the exclusive privilege of painting the portraits of Alexander. One of these, which represented Alexander wielding the thunder-bolt of Jupiter, termed the Alexander Καρανόπροφόρος, so pleased the monarch that he ordered twenty talents of gold to be given to him. Plutarch³ says that this picture was the origin of the saying that there were two Alexanders, the one of Philip the invincible, the other of Apelles the imitable. It appears to have been a master-piece of effect; the hand and lightning, says Pliny, seemed to start from the picture; and Plutarch⁴ informs us that the complexion was browner than Alexander's, thus making a finer contrast with the fire in his hand, which apparently constituted the light of the picture. Pliny⁵ tells us that Apelles glazed his pictures in a manner peculiar to himself, which was both to beautify and imitate him. When his works were finished, he covered them with a dark transparent varnish (most probably containing asphaltum), which had a remarkable effect in harmonizing and toning the colours, and in giving brilliancy to the shadows. Sir J. Reynolds discovered in this account of Pliny "an artist-like description of the effect of glazing or scrambling pictures," and practised what Pliny and the rest of the Venetian painters.⁶ There is a valuable though incidental remark in Cicerón⁷ relating to the colouring of Apelles, where he says that the tints of the Venus Anadyomene were not blood, but a resemblance of blood. The females, and the pictures generally, of Apelles, were most probably simple and unadorned; their absolute merits, and not their effect, constituted their chief attraction. Clemens Alexandrinus¹⁰ has preserved a memorable reproof of Apelles to one of his scholars, who, in a picture of Helen, had been lavish of ornament: "Youth, since you could not paint her beautiful, you have made her rich."

Protogenes of Caunus, a contemporary of Apelles, was both statuary and painter; he was remarkable for the beauty of his pictures. Pliny remarks, that the excessive detail and finish of the works of Protogenes, vying with nature itself, inspired him with a certain feeling of horror ("non sine quodam horrore tractatus"). His most celebrated work was his figure of layus with his dog; Pliny⁹ and Plutarch⁴ both mention that Protogenes was occupied with the painting of this picture; and Pliny says he painted it over four times ("quater colorum induti"); from which it would appear that the way in which the ancients imboided their colours in their pictures can have differed little, if at all, from the manner practised by the majority of the artists of the modern schools of painting. The four times of Protogenes most probably owe their origin to the fact of its first representing the fire, then the burning, and, lastly, scumbling with glazing. Plutarch⁴ says that when Apelles saw this picture, he was at first speechless with astonishment, but presently remarked that it was a great and a wonderful work, but that it was deficient in those graces for which his own pictures were so famous.

Ephesus was then as celebrated equally as painter and statuary; he was, says Pliny⁵ in all things excellent, and at all times equal to himself. He was distinguished for a peculiarity of style of design; he was fond of a muscular limb, and adopted a more decided anatomical display generally, but he kept the body light in proportion to the head and limbs. Pliny says that Euphranor first represented heroes with dignity. Parrhasius was said to have established the canon of art for heroes; but the heroes of Parrhasius were apparently more divine, those of Euphranor more human. We have examples of both these styles in the Apollo and the Laocoon, and in the Meleager and the Gladiator, or the Antinous in the baths of Commodus. Parrhasius was a painter of style which Euphranor apparently allowed when he said that the Thees of Parrhasius had been fed upon roses, but his own upon beef.⁸ Euphranor painted in encaustic, and executed many famous works; the principal were, a battle of Minos, and a picture of the twelve gods.⁹

Nicias of Athens was celebrated for the delicacy with which he painted females, for the rich tone of chiaroscura which distinguished his paintings. He also painted in encaustic. His most celebrated work was the venus, or the region of the shades of Homer (necromantia Homeri), which he declined to sell to Ptolemy I. of Egypt, who had offered sixty talents for it, and preferred presenting to his native city, Athens, as he was then sufficiently wealthy. Nicias painted some of the marble statues of Praxiteles.¹⁰

Athenion of Maronea, who painted also in encaustic, was, according to Pliny,¹¹ compared with, and even preferred by some to, Nicias; he was more austere in colouring, but in his austerity more pleasant.

PAINTING.

“Pyreicus para vindicat arte locum,” says Property 1 (Pyreicus is the emendation of Weckler, on the authority of Cod. Vit., 1. 4. With the exception of Pyreicus, the line is unintelligible.) Pornography, or obscene painting, which in the time of the Romans was practised with the grossest license, 2 prevailed especially at no particular period in Greece, but was apparently tolerated to a considerable extent 2: all times. Parrhasius, Aristides, Pausianias, Nicophanes, Oenarephanes, Arelius, and a few other πορνογράφοι are mentioned as having made themselves notorious for this species of license. 3

Of the few painters who still maintained the dignity of the dying art, the following may be mentioned: Mydon of Soli; Neæcas, Leonticus, and Timæon of Sicyon; Arceclus, Erigonus, and Pasias, of uncertain country; and Metrodorus of Athens, equally eminent as painter and as philosopher. The school of Sicyon, to which the majority of the distinguished painters of this period belonged, is especially mentioned by Plutarch 4 as the one which still retained any traces of the purity and the greatness of art of the renowned ages. It appears to have been still active in the time of Aratus, about 250 B.C., who seems to have instilled some of his own enterprising spirit into the artists of his time. Aratus was a great lover of the arts, but his projects for destroying the portraits of the Tyrants of Sicyon; one only, and that partially, was saved. 6

It was already the fashion in this age to talk of the inimitable works of the great masters; and the artists generally, instead of exerting themselves to imitate the master-pieces of past ages, seem to have been content to admire them. All works bearing a great resemblance to them were sold at enormous prices, and it is said that Aratus bought up some old pictures, but particularly those of Melanthius and Pamphilus, and sent them as presents to Ptolemy III. of Egypt, to conciliate his favour, and to induce him to join the Achæan league. Ptolemy, who was a great admirer of the arts, was gratified with these presents, and presented Aratus with 150 talents in consideration of them. 7 These were, however, but the finest of the first works of the great painters of Greece which had found their way into Egypt. Ptolemy Soter had employed agents in Greece to purchase the works of celebrated masters. 8 Athenaeus also expressly mentions the pictures of Sicyonian masters which contributed to add to the pomp and display of the celebrated festival of Ptolemy Philadelphia at Alexandria.

From the time of Alexander the spirit of the Greeks animated Egyptian artists, who adopted the standard of Grecian beauty in proportion and character. Antiphilus, one of the most celebrated painters of antiquity, was a native of Egypt, perhaps of Naukratis, and appears to have lived at the court of Ptolemy Soter. Many other Greek painters also were established in Egypt, and both the population and arts of Alexandria were more Greek than Egyptian. 9

Among the most remarkable productions of this period were the celebrated ship of Hiero II. of Syracuse, which had Mosaic floors, in which the whole history of the fall of Troy was worked with admirable skill; 5 and the immense ship of Ptolemy Philopator, on the prow and stern of which were carved

---

712
polysal figures eighteen feet in height; and the whole vessel, both interior and exterior, was decorated with painting of various descriptions.

Nearly a century later than Atratus we have still mention of two painters at Athens of more than ordinary distinction. Heracleides a Macedonian, and Metrodorus, a Athenian. The names of several painters, however, of these times are preserved in Pliny, but he notices them only in a cursory manner. When Paulus Emilius had conquered Perseus, B.C. 168, he commanded the Athenians to send him their most distinguished painter to perpetuate his triumph, and their most approved philosophers. The sons of Metrodorus the painter, professing that he was preeminent in both respects. Heracleides was a Macedonian, and originally a ship-painter; he repaired to Athens after the defeat of Perseus. Plutarch, in his description of the triumph of Paulus Emilius, says that the paintings and statues brought by him from Greece were so numerous that they required 250 vessels to carry a part of them, and that the spectacle lasted the entire day. P. Emilius appears at all times to have been a great admirer of the arts, for Plutarch mentions that after his first consulship he took especial care to have his sons educated in the arts of Greece, and, among others, in painting and sculpture, and that he accordingly consecrated a family band of figures (συγγραφοι) in his family; from which it is evident that the migration of Greek artists to Rome had already commenced before the general spoliations of Greece. Indeed, Livy expressly mentions that many artists came from Greece to Rome upon the occasion of the ten days' games appointed by Fulvius Nobilior, B.C. 186, and many of the most eminent Greek painters even before this time; for the picture of the feast of Gracchus's soldiers after the battle of Beneventum, consecrated by him in the Temple of Liberty on the Aventine, B.C. 213, was in all probability the work of a Greek artist. The system adopted by the Romans of plundering Greece of its works of art, reproached by Polybius, was at length carried to a pracese proceeding in The Carthaginians before them had plundered all the coast towns of Sicily, and the Persians, and even the Macedonians, carried off all works of art as the lawful prize of conquest. The Roman conquerors, however, at first plundered with a certain degree of moderation, as Marcellus at Syracuse, and Paulus Emilius at Perseus, and many of the wps of war acquired by them were dispersed among the patrons of public edifices and temples at Rome, to the number of 3000 statues, and so many pictures of whatever was valuable in it. Among the numerous robberies of Verres, Cicero mentions particularly twenty-seven beautiful pictures taken from the Temple of Minerva at Syracuse, consisting of portraits of the kings and tyrants of Sicily.

Yet Rome was not the only destruction of Corinth, B.C. 146, carried off or destroyed more works of art than all his predecessors put together. Some of his soldiers were found by Polybius playing at dice upon the celebrated picture of Dionysus by Aristides. Many valuable works, also, were purchased on this occasion by Attalus III., and sent to Pergamum; mentions that Paulus lived to reach Rome on his death, B.C. 153, as he besought all the Roman people. Scaurus, in his edithe, B.C. 58, had all the public pictures still remaining in Sicily transported to Rome on account of the debts of the former city, and he adorned the great temporary theatre which he erected upon that occasion with 3000 bronze statues. Verres ransacked Asia and Africa, and sent to Rome a large number of works of public edifice in Sicily of whatever was valuable in it. The school of painting at Corinth appears to have been the only one that had experienced no great change, for works of the highest and most admirable kinds were still there produced. The course of painting seems to have been much more capricious than that of sculpture, in which master-pieces, exhibiting various beauties, appear to have been produced in nearly every age from Phidias to Hadrian. A decided decay in painting on the other hand, is repeated in both stories in the time of the best Roman writers. One of the causes of this decay may be, that the highest excellence in painting requires the combination of a much greater variety of qualities; whereas invention and design,
PAINTING

identical in both arts, are the sole elements of sculpture. Painters, also, are addicted to the per
nicious vice of painting off copies of the works from which sculptors, as well as the copy.

The Romans generally have not the slightest claims to the merit of having promoted the fine
arts. We have seen that, before the spoliations of Greece and Sicily, the arts were held in no con
sideration in Rome; and even afterward, until the time of the emperors, painting and sculpture seem to
have been practised very rarely by Romans; and yet the works of our old masters are chiefly
characterized by their bad taste, being mere mecha
nical records and gaudy displays of colour, although
the city was crowded with the finest productions of
ancient Greece.

There are three distinct periods observable in the history of painting in Rome. The first, or great
period of Graeco-Roman art, may be dated from the conquest of Greece until the time of Augustus,
when the artists were chiefly Greeks. The second, from the time of Augustus to the so-called Thirty
Tyrants and Diocletian, or from the beginning of
the Christian era until about the latter end of the
third century, during which time the great majori
ty of Roman works of art were produced. The third
comprehends the state of the arts during the exca
reate; when Rome, in consequence of the wealth of the Empire, and the changes in its condi
tions, very materially, suffered similar spoliations to those which it had previously inflicted upon
Greece. This was the period of the total decay of the imitative arts
among the ancients.

The establishment of Christianity, the division of the Empire, and the incursions of barbarians,
were the first great causes of the important revolu
tion which happened in the arts, and the se
rious check they received; but it was reserved for
the fanatic fury of the iconoclasts effectually to
destroy all traces of their former splendid.

Of the first of these three periods sufficient has been already said; of the second there remain still
a few observations to be made. About the begin
ning of the second period is the earliest age in
which we have any notice of portrait-painters (imag
inum pictores) as a distinct class. Pliny mentions
particularly Dionysius and Sophas as the most cele
brated at about the time of Augustus, or perhaps
carlier, who filled picture-galleries with their works;
the former was named the anthropographer,
because he painted nothing but men. About the same
age, also, Lala of Cysicus was very celebra
ted; the portraits he produced were of soldiers,
but received greater prices than the other two.

Portraits must have been exceedingly numerous
among the Romans; Varrus made a collection of
the portraits of 700 eminent men. The portraits
or statues of men who had performed any public
service were placed in the temples and other pub
lic places, and several edicts were passed by the emperors commanding the Roman citizens to
employ their earnings upon portraits. The portraits of authors, also, were placed in
the public libraries; they were apparently fixed above the cases which contained their writings, below
which chairs were placed for the convenience of
readers. They were painted, also, at the begin
ning of manuscripts. Respecting the images of
wax portraits, which were preserved in "armaria" in
the atria, it is probable that there was an interest
in that inPolybius. We have seen already,
with some reservation, what was said of Aetion, as already mentioned, not a single painter of
this period rose to eminence, although some were,
of course, more distinguished than others; as

“Doves of the Capitol” is supposed to be a copy.  
Another musivarius of antiquity was Dioscorides of Samos, whose name is found upon two mosaics of Pompeii.  
Five others are mentioned by Müller.  
There are still many great mosaics of the ancients extant.  
(See the works of Clamant, Fu- 
retti, and Laborde.)  
The most interesting and 
most valuable is the one lately discovered in 
Pompeii, which is supposed to represent the battle of 
Issus.  
This mosaic is certainly one of the most 
valuable relics of ancient art, and the design and composition of the work are so superior to its 
extinction, that the original has evidently been the 
production of an age long anterior to the degenerate 
period of the mosaic itself.  
The composition is simple, forcible, and beautiful, and the design exhibits 
itself in many respects merits of the highest order.  
(See Niccolini, Quadro in museo scoperto in Pom- 
peii.—Mazois, Pompeï, iv, 48 and 49; and Müller, 
Denkmäler der alten Kunst, i, 55.)

PALA (παλή), a Spade.  
The spade was but 
little used in ancient husbandry, the ground having 
been broken and turned over by the plough, and 
also by means of common hoes and spades.  
(Plut. Loo, RASTRUM.)  
But in some cases a broad cut- 
ing edge was necessary for this purpose, as, for 
example, when the ground was full of the roots 
of rushes or other plants.  
Also in gardening it 
was an indispensable instrument, and it was then 
made on the same principle as the ploughshare, 
vis., by casting its extremity with iron.  
The an- 
exed woodcut, taken from a funereal monument at 
Rome, exhibits a decked countryman with his 
faux and bidens, and also with a spade, modified by the 
addition of a strong crossbar, by the use of which he 
was enabled to drive it nearly twice as deep into 
the ground as he could have done without it.  
In this form the instrument was called bipalium, 
being employed in trenching (pastinatio), or, when 
the ground was full of roots to a considerable depth, in 
loosening them, turning them over, and extirpating 
them, so as to prepare the soil for planting and 
other trees.  
By means of this implement, which is 
still used in Italy, and called venta, the ground was 
dug to the depth of two spades, or nearly two feet.  
Cato mentions wooden spades (pales lignæa) among 
the implements necessary to the husband- 
man.  
One principal application of them was in 
The term *pala* was applied anciently, as it is in modern Italian, to the blade or broad part of an oar. (Vid. *Ramus*.) In a ring, the broad part which held the gem was called by that name.

**PALESTRA** (παλαγή) properly means a place for wrestling (παλαιστής, παλαιστή), and appears to have originally formed a part of the gymnasion. The word was, however, used in different senses at various periods, and its exact meaning, especially in relation to the gymnasion, has occasioned much controversy among modern writers. It first occurs in Herodotus, who says that Clisthenes of Sicyon built a dronos and a palaestra, both of which he calls by the general name of palaestra. At Athens, however, there was a considerable number of palaestrae, quite distinct from the gymnasion, which were called by the names either of their founders, or of the teachers by whom instruction there took place; thus, for example, we read of the palaestra of Taurinae. Kraneus contends that the palaestrae at Athens were appropriated to the gymnastic exercises of boys and youths (παιδεὶς καὶ μειρώκαι), and the gymnasion to those of men; but Becker has shown that this cannot be the true distinction, although it appears that certain places were, for obvious reasons, appropriated to the cultivation of boys. But that the boys exercised in the gymnasion as well, is plain from many passages (παις ὄρατο ὕπο γυμνασίου), while, on the other hand, we read of men visiting the palaestra.

It appears most probable that the palaestrae were, during the flourishing times of the Greek republics, chiefly appropriated to the exercises of wrestling and of the pancratium, and were principally intended for the athletes, who, it must be recollected, were persons that contended in the public games, and therefore needed special training. This is expressly stated by Plutarch, who says that the place in which all the athletes exercise is called a palaestra; and we also learn from Pausanias that there were as many palaestrae as there were gymnasia, and especially devoted to the athletes. In Athenaeus we read of the great athletes Damippus coming out of the palaestra; and Galen (τοῦ γόν. διὰ μικρός σφάιρας γυμνασίου, c. 5) places the athlete in the palaestra.

The Romans had originally no places corresponding to the Greek gymnasia and palaestrae; and when, towards the close of the Republic, wealthy families provided stadia of their own, and public places for exercise in their villas, they called them indifferently gymnasia and palaestrae.

The word was thus used by the Romans as synonymous; and, accordingly, we find that Vitruvius gives a description of a Greek gymnasion under the name of *palaestra*.
The first part of the solemnities, as described by Ovid, was a public purification by fire and smoke. The things burned in order to produce this purifying smoke were the blood of the October-horse, the ashes of the calves sacrificed at the festival of Corces, and the shells of beans. The smoke was also sprinkled with water; they washed their hands in spring-water, and drank milk mixed with must.

As regards the October-horse (equus October), it must be observed, that in early times no bloody sacrifice was allowed to be offered at the Palilia, and the blood of the October-horse, mentioned above, was the blood of a horse which was devoured after the horse sacrificed in the month of October to Mars in the Campus Martius. This blood was preserved by the vestal virgins in the Temple of Vesta, for the purpose of being used at the Palilia.

When, towards the evening, the shepherds had fed their flocks, branches of bay were used as brooms for cleaning the stables that had been used, and the stables were adorned with bay boughs. Hereupon the shepherds burned sulphur, rosemary, fir-wood, and incense, and made the smoke pass through the stables to purify them; the flocks themselves were likewise purified by this smoke. The sacrifices which were offered on this day consisted of cakes, milk, and other kinds of food. The festival was concluded by a feast in the open air, at which the people sat or lay upon benches of turf, and drank plentifully.

In the city of Rome the festival must, at least in later times, have been celebrated in a different manner; its character of a shepherd-festival was forgotten, and it was merely looked upon as the day on which the calves of the autumnal sacrifice were slaughtered, as is still observed.

In the reign of Caligula, it was decreed that the day on which the emperor was born should be celebrated under the name of Palilia, as if the Empire had been revived by him, and had commenced its second existence. Athenaeus says that before his death, when the Palilia was still celebrated in a proper manner, he offered a prayer to Mars. Whether this change of name was occasioned by the decree in the reign of Caligula just mentioned, is unknown.

PALIMPSESTUS. (Vid. Liber.)

PALIA. (Vid. Pallium.)

PALLACE (palliak). (Vid. Concordia, Greek.)

PALLIA 'TA FABULÀ. (Vid. Comedia, page 300.)

PALLIUM, dim. PALLIOLUM, poet. PALLA' (παλά'νος, dim. παλανίων; Ion. and poet. παλλα'νος), a blanket or whittle, a sheet, a pall. The English cloak, though commonly adopted as the proper translation of these terms, conveys no accurate conception of the form, material, or use of that which they denominate. The pallium is usually made of flax, which is cut always a rectangular piece of cloth, exactly so, at least, nearly square (τετράγωνα ἱματα, quadrangularia). Hence it could easily be divided without loss.
or waste either into four parts or into twelve. It was indeed, used in the very form in which it was taken from the loom (vid. Tit. 1.), being made entirely by the weaver (δι' ἰατρόν ἐφέρα), without any aid from the tailor except to repair (σαρείε, ἀνέστιο) the injuries which it sustained by time. Although it was often ornamented, more especially among the northern nations of Europe, with a fringe (vid. Fix. 9.), yet this was commonly of the same piece with the pall or blanket itself. Also, whatever additional riches and beauty it received from the hand of the dyer, was bestowed upon it before its materials were woven into cloth, or even spun into thread. Most commonly it was used without having undergone any process of this kind. The raw material, such as wool, flax, or cotton, was manufactured in its natural state, and hence blankets and sheets were commonly white (χειλα ἱππότης), although, from the same cause, brown, drab, and gray were also prevailing colours. The more splendid and elegant tints were produced by the application of the murex (murecta, conchylita, purpurea, vestis, πορφυρόν, ἀλονγυ, ἱππότης), the kermes (coscinus, κόκκινον), the argol (fuscatus), and the saffron (croceus, κρώκοτον). (Vid. Crocota.) Pale green was also worn (ὑδρικός). Black and gray pallia were either made from the wool of black sheep, or were the result of dyeing the part of the dyer's work in mourning (μελανα ἱππότης, φαίνει ἐβάτη), and thus by sorceresses. The pallium of one colour (διόξυρον ἱππότης, literally "the self-coloured blanket") was distinguished from the variegated (πολυκλων), and of this latter class the simplest kinds were the striped (διάδοτων), in which the effect was produced by interweaving strips or flowers in the woof (διόξαντες πεποικίλων). By the same process, carried to a higher degree of complexity and refinement, whole figures, and even historical or mythological subjects, were introduced, and in this state of advancement the weaving of pallia was the elegant and worthy employment of females of the first distinction, and of Minerva, the inventor of the art, herself. The greatest splendour was imparted by the use of gold thread, and the loan of this was a mark of high distinction. A purple blanket for Ulysses, which also displayed a beautiful hunting-piece wrought in gold. The epithet διπλός, which is commonly applied by the poets to these figured pallia, probably denoted that they were made on the principle of a quilt or a Scotch carpet, in which two cloths of different colours are so intermixed as to form one double cloth, which displays a pattern of any kind, according to the fancy of the artist.

Although pallia were finished for use without the intervention of the tailor, they were submitted to the embroiderer (Φυγγρη; πολλήτερης, πλευματίδος), and still more commonly to the fuller (vid. Fillo), who received them both when they were new from the loom and when they were sufficed through use. Hence it was a recommendation of this art of toire to be, when the desired order was performed, that the operation should be washed (ἐπολυκακαίον). The men who performed the operation are called αἶλονδίκες, i. e., the wavers, in an inscription found in the stadium at Athens. Another appellation which they bore, φιτ., of σταβίς, the treading, is well illustrated by the woodcut representing them at their work in p. 463.

Consider pallium and palla, ἱππότης and φάκρα, as generically applied to the various kinds of foils or materials which include, under denoting distinctions which do pended on the materials of which the cloth was made. Among the Greeks and Romans, for by far the commonest material was wool. The blanket made of it (lanum pallium) was called from the root of lanum, wool) in Latin Lati., in Greek Χαλαία; and as the blanket varied, not only in colour and ornament, but also in fineness, in closeness of texture (μάτιον λεκτητής), and in size, some of these differences were expressed by the diminutives of χαλαία, such as χαλανός, χαλανίς, χαλανικός, χαλανικίων, and χαλανικίων. In like manner, we find the sheet not only designated by epithets added to the general terms in order to denote that it was made of flax, e. g., μάτιον λανυκόν, λίνον υπελατά, etc., and also distinguished by the specific terms λινετον, λινετόν, etc., and its diminutive σιλοντόν, etc. A coarse linen sheet was also called φάκων, and a fine one ὅδον, διμ. δόβην. These specific terms are no doubt of Egyptian origin, having been introduced among the Hebrews, the Greeks, and the Romans, together with the articles of merchandise to which they were applied. On the same principle, a cotton sheet is called palla caracontes, and a silk shawl is denominated pallium Scicium, and ὅδονον Σωμ. κ. αν. 20.

The following instances of the application of sheets and blankets to the purposes of common life, show that their uses were still more various among the Greeks and Romans than with us; and although, in some of these cases, the application may have been accidental, it serves not the less that account to demonstrate the form and properties of the thing spoken of, and the true meaning of the various names by which it was called: 1. They were used, as we use them, to spread over beds and covers, and to cover the body during sleep (μάτιον, λιατομος), φάκος, χαλανίς, χαλανικός (palla sensu stricto). In many of these cases, it is to be observed that the same cloth was worn as a garment by day served to sleep in at night, in exact accordance with the practice which to the present day prevails among the Bedouin Arabs, who constantly use their large bykes for both purposes. (Vid. Lect., Loxis, Taph.)

PALLIUM

PALLIUM

This was an affectation of Eastern luxury. When the people at Jerusalem spread their bykes upon the ground, 1 they intended thereby to recognise Jesus as a king. (Vid. TAPES.)

III. They were hung over doors, 2 and used as awnings or curtains. 3 Thus Antigonus, sitting in his tent, heard two common soldiers reviling him, a blanket or sheet (παλλίων). 4 As soon as he was informed of it, he and Agamemnon 5 holds it in his hand "a great purple φόρτον " to serve as a banner floating in the air.

V. Gallia, especially of linen and cotton, were used for sails (φέρεσκες, λατέρκορον φόρτον). 6

VII. When Antony's ships were on fire, his soldiers, having failed to extinguish it by water, which they could not obtain in sufficient quantity, threw upon it their thick blankets (ματρία αὐθών τὰ παλλία). 7

VIII. Thick coarse blankets, which had not been to the fuller (ματρία δύναμτα), 8 were wrapped round ice and snow to keep them from melting. (Vid. NIX.)

X. A fine white blanket was sometimes used as a shroud (παπάφλοιον, 9 ἡμιπαλλία). 10

X. In Asia, horses and other animals used to ride upon were covered with beautiful pallia, especially upon occasions of ceremony or of rejoicing. Cyrus had 200 horses covered with striped cloths. 11 When the Persian ambassador, a few years ago, went to the levee in London, his horses were in like manner covered ἀμάντισσαί ἡμιπαλλία. 12 (Vid. TAPES.) For the same purpose a most distinguish the use of woollen horsecloths in Europe. 13

XI. The newly-born infant was wrapped in a blanket (φόρτον). 14 (Vid. INCUBULA.)

XII. Lastly, the blanket was the most common article of the AMICIUS. (Vid. CIAMUS.) Hence we find it continually mentioned in conjunction with the TUNICA, which consisted of the _intars._ Such phrases as "coat and waistcoat," or "shoes and stockings," are not more common with us than such as those which follow in ancient authors: tunica palliunm; 15 ἡμιπαλλία καὶ χιτών, in the will of a certain philosopher; 16 τὸ ματρία καὶ τὸ χιτωνάκος; φόρος ἔστε χιτίων; χλαῖνος ἐστε χίτωνά καί. 17 The passages referred to in the note also exemplify the practice of naming these two articles of dress together. 18

But, although the pallium and tunica were always regarded as essential parts of an entire dress, yet each of them might be worn without the other. Cases in which the tunic was retained and the blanket laid aside are explained under the article NEMOS. It is also evident that the pallium would not be the most convenient kind of dress when the wearer of it had occasion to run; and we find that in such circumstances he either put it away entirely, 1 or folded it up as a Scottish Highlander folds his plaid, and threw it round his neck or over his shoulder. 2 Telemachus, in like manner, puts off his purple pallium, together with his swordbelt, when he is preparing to try his father's bow. 3 On the other hand, to wear the blanket without the under-clothing indicated manner, as in the case of Socrates, 4 Agesilas, 5 and Gelon, king of Syracuse. 6

The blanket was no doubt often folded about the body simply with a view to defend it from cold, and without any regard to gracefulness of appearance. It is thus seen on the persons of Polynices and Parthenopaeus in the celebrated intaglio, now preserved at Berlin, representing five of the heroes who fought against Thebes, and copied on an enlarged scale in the annexed woodcut. The names of the several heroes are placed beside them in Etruscan letters.

PALLIUM

bind the back and under the right arm, leaving it bare, and then thrown again over the left shoulder. Of this we see an example in a bas-relief engraved by Dodwell. Another very common method was to fasten the blanket with a brooch (vid. Fibula) over the right shoulder (ἡμιπολιτώσις), leaving the right side of the blanket free. A third was to fasten it under the left arm, so as to leave that arm at liberty also, or over the left shoulder, so as to cover the left arm. We see Phocians attired in the last-mentioned fashion in the admired statue of him preserved in the Vatican at Rome. (See woodcut.) The attachment of the blanket by means of the brooch caused it to depend in a graceful manner (dēmasia ex húmeris), and contributed mainly to the grace and elegance of the costume, which we so much admire in ancient sculptures.

When a person sat, he often allowed his blanket to fall from his shoulder, so as to envelop the lower part of his body only.

The sagum of the northern nations of Europe (see woodcut, p. 171) was a woollen pallium, fastened, like that of the Greeks, by means of a brooch, or fibula, instead of shoulder-straps to substitute for brooches. The Gauls wore in summer one which was striped and checkered, so as to agree exactly with the plaid which still distinguishes their Scottish descendants; in winter it was thick, and much more simple in colour and pattern. The Greeks and Romans also wore different pallia in summer and in winter. The thin pallium made for summer wear was called "παλλίας," and was worn as a cloak by sailors. Women wore this garment as well as men. "Phocion's wife," says Εἰκάστης, "wore Phocion's blanket!" but Xanthippe, as related by the same author, would not wear that of her husband Socrates.

When the means were not wanting, women wore blankets, which were in general smaller, finer, and of more splendid and beautiful colours than those of men. But when the means were wanting, although men also sometimes displayed their fancy in these respects the female costume. Thus Alcibiades was distinguished by his purple blanket, which trailed upon the ground; for a train was one of the ornaments of Grecian as well as Oriental dress (καρδασία). The general rule being that the upper garment should reach the knee, but for the sake of respectability in some cases the instructor was conspicuous by its gay colour or of this part of this dress. The works of ancient art show that weights (glances) were often attached to the corners of the pallium to keep it in its proper place and form.

Philosophers wore a coarse and cheap blanket, which, from being exposed to much wear, was

called τραπαλία and τραπαλίων (palliatrum). The same was worn, also, by poor persons, by the Spartans, and in a later age by monks and hermits (παπικής τράπαλιας, σαγμα τραπαλιακός). These blanket-covers (τραπαλιοφόροι) often went without a tunic and they sometimes supplied its place by the greater size of their pallium. It is recorded of the philosopher Antisthenes that "he first doubled his blanket," in which contrivance he was followed by his brother Cynics, and especially by Diogenes who also slept and died in it, and who, according to some, was the inventor of this fashion. The large pallium, thus used, was called διάφλος (diaphlos), and also Exomias, because being worn without the tunic, it left the right shoulder bare, as seen in the picture of Plato in which he is shown in the raw state. In concealing grief, or any other violent emotion of the mind.

In the case of rain: III. In offering sacrifices, and in other acts of religion. Of this custom Timanthes availed himself in his famous picture of the sacrifice of Iphigenia. It is obvious how convenient the pallium was for concealing weapons or poison. The use of this garment to envelop the whole person gave rise to the metaphorical application of the word παλλιάς, meaning to hide or dissemble.

(Vid. ABOLLA.)

Under the Roman Republic and the early emperors, the Toaa was worn by men instead of the pallium. They were proud of this distinction, and therefore considered that to be palliatus or sugurus instead of being togaus indicated an affectation of Grecian or even barbarian manners (Grecus palliatus, barbarus palliatus). Censius, on his return from the north of Europe, offended the Romans (to- gatus) by addressing them in a plaid (versicola sagello) and trowsers. (Vid. BRACC, A.)

A small square cloth (pallium) was, however, worn by the Romans on their heads instead of a hat, when they were sickly or infirm. and some of them even adopted the Greek pallium instead of the Roman toga.

Among the Greeks as among ourselves, the man ufacture of sheets, blankets, and other kinds of cloth employed different classes of work-people. The coarser kinds of blankets were made in Megara, where this was the staple trade of the country, the work being performed by slaves. At Athens there was a general cloth-market, called ἅμαμα- ris (Harmois, Harmoum).

PALMA. I. (Vid. PES.) II. (Vid. PHOENIX.) PALIMPSES. (Vid. PES.)

PALLIAMENTUM, according to Varro and
Festus, originally signified any military decoration; but the word is always used to denote the cloak worn by a Roman general commanding an army, his principal officers and personal attendants, and the toga or garm of peace. It was the practice for a Roman magistrate, after he had received imperium from the comitia curiata, and offered up his vows in the Capitol, to march out of the city arrayed in the paludamentum (exire paludatus), attended by his lictors in similar attire (paludatus lictorius); nor could he begin again the gates until he had formally divested himself of this emblem of military power, a ceremony considered so solemn and so indispensible that even the emperors observed it. Hence Cicero declared that Verres had sinned "contra aesopus, contra omnes divinas et humanas religiones," because, after leaving the city in his paludamentum (cum paludatus esset), he stole back in a litter to visit his mistress.

The paludamentum was open in t. l. t., reached down to the knees or a little lower, p. r. hung loosely over the shoulders, being fastened across the chest by a clasp. A foolish contradiction has arisen among antiquaries with regard to the position of this clasp, some assigning it to the right shoulder, others on the left, l. t., parties appealing to ancient statues and sculptures in support of their several opinions. It is evident, from the nature of the garment, as represented in the three following illustrations, that the buckle must have shifted from place to place, according to the movements of the wearer; accordingly, in the first cut, which contains two figures from Trajan's column, one representing an officer, the other the emperor with a tunic and fringed paludamentum, we observe the clasp on the right shoulder, and this would manifestly be its usual position when the cloak was not used for warmth, for thus the right hand and arm would be free and unembarrassed; but in the second cut, copied from the Racolta Medall, representing also a Roman emperor, we perceive that the clasp is on the left shoulder; while in the third, the noble head of a warrior from the great mosaic of Pompeii, we see the paludamentum flying back in the charge, and the clasp nearly in front. It may be said that the last is a Grecian figure; but this, if true, is of no importance, since the chlamys and the paludamentum were essentially, if not absolutely, the same. Nonius Marcellus considers the two terms synonymous, and Thukidus tells how the splendid naumachia exhibited by Claudius was viewed by Agrippina dressed chlamyde aurata, while Pliny and Dion Cassius, in narrating the same story, use respectively the expressions paludanto auretis et ouchodi daipropo.

The colour of the paludamentum was commonly white or purple, and hence it was marked and remembered that Crassus, on the morning of the fatal battle of Carrhae, went forth in a dark-coloured mantle.

PALUS, a Pole or Stake, was used in the military exercises of the Romans. It was stuck into the ground, and the tirones had to attack it as if it had been a real enemy; hence this kind of exercise is sometimes called Palaria. Juvenal alludes to it when he says, "Quis non vidit vulnera pali?" and Martial speaks of it under the name of stipes, "Aut nudi stipitis ictus hostis."

PAMBOIO'TIA (Pamboitica), a festive panegyric of all the Boeotians, which the grammarians compare with the Panathenaea of the Athenians and the Panonia of the Ionians. The principal object of the meeting was the common worship of Athena Itonia, who had a temple in the neighbourhood of Coronea, near which the panegyric was held. From Polybius, it appears, that during this national festival no war was allowed to be carried on, and that in case of a war a truce was always concluded. The panegyric is also mentioned by Plutarch. It is a disputed point whether the Pamboeotia had any...
thing to do with the political constitution of Creotia, or with the relation of its several towns to Thebes, which was at their head. The question is discussed in Sainte Croix, Des gouvernements fédérés, p. 211, &c.—Raoul Rochette, Sur la forme et l'administra-
de l'état fédératifs des Béotiens, in the Mém. de l'Acad.
des Inscrips., vol. vii. (1827), p. 214, &c.—Wach-
smuth, Hell. Alt., i., p. 128, &c.

**PANATHENAEA (Παναθηναϊκά.), the greatest and most solemn of all the festivals celebrated in Attica in honour of Athena, in the character of Athena Polias, or the protectress of the city. It was said to have been instituted by Erichthonius, and its original name, down to the time of Theseus, was believed to have been Attēnae; but when Theseus united all the Atticans into one body, the festival, which then became the common festival of all Atticans, was called Panathenaea. The origin of the festival is thus: In Attēnae, it would seem as if the name of the festival was derived from that of the city; but the original name Attēnae was undoubtedly derived from that of the goddess, and the subsequent appellation Panathenaea merely signifies the festival of Athena, common to, or celebrated by, all the Attic tribes conjointly. Panathenaea are indeed mentioned as having been celebrated previously to the reign of Theseus. Phidias, however, was the first who assumed the name common in their own days to a time when it was not yet applicable. The Panathenaea, which, as far as the character implied in the name is concerned, must be regarded as an institution of Theseus, were celebrated once in every year. All writers who have occasion to speak of this festival agree in distinguishing two kinds of Panathenaea, the greater and the lesser. The former, it is stated, was held every fifth year (πενταετρικός), while the latter were celebrated once in every year. Libanias, by mistake, calls the lesser Panathenaea προτετρικός.

The time when the lesser Panathenaea (which are mostly called Panathenaea, without any epithet, while the greater are generally distinguished by the adjective μεγάλα) were celebrated, is described by Proclus, in a vague manner, as following the celebration of the Bendida; from which Meursius infers that the Panathenaea were held on the day after the Bendida, that is, on the 20th of Thargelion. Petius, on the other hand, has shown from Demosthenes that the Panathenaea must have fallen in the month of Hecatomboeon, and Corinii has found, in the same inscription of Demosthenes, that the festival must have commenced before the 20th of this month, and we may add that it was probably on the 17th. Clinton has revived the opinion of Meursius.

The great Panathenaea were, according to the unanimous accounts of the ancients, a pantæastria, and were held in the third year of every olympiad. Proclus states that the great Panathenaea were held on the 28th of Hecatomboeon. This statement, however, must not lead us to suppose that the great Panathenaea only lasted for one day; but Proclus, in mentioning this particular day, was probably thinking of the most solemn day of the festival on which the great procession took place, and which was, in all probability, the last day of the festival, for it is expressly stated that the festival lasted for several days. We have, moreover, every reason to suppose, with Böckh, that the great Panathenaea took place on the same day of the month of Hecatomboeon on which the lesser Panathenaea were held, and that the latter were not held at all in those years in which the former were celebrated. Now if, as we have supposed, the lesser Panathenaea commenced on the 17th, and the last day of the great Panathenaea on the 20th, we may, perhaps, be justified in believing that the lesser, as well as the greater Panathenaea, lasted for twelve days, that is, from the 17th to the 28th of Hecatomboeon. This time is not too long, if we consider that the ancients themselves call the Panathenaea the longest of all festivals, and if we bear in mind the great variety of games and ceremonies that took place during the season. When the discussion between the Parthenon and the lesser Panathenaea was introduced is not certain, but the former are not mentioned before Ol. 66, 3, and it may, therefore, be supposed that they were instituted a short time before Ol. 66, perhaps by Pisistratus, for about this time certain innovations were made in the celebration of the Panathenaea, as is mentioned below. The principal difference between the two festivals only consisted in that the greater Panathenaea were a solemn, and that on this occasion the peuples of Athens were carried to her temple in a most magnificent procession, which was not held at the lesser Panathenaea.

The solemnities, games, and amusements of the Panathenaea were: rich sacrifices of bulls, foot, horse, and chariot races, gymnastic and musical contests, and the lampadophoria; rhapsoëasts recited the poems of Homer and other epic poets, philosophers disputed, cock-fights were exhibited, and the people indulged in a variety of other amusements and entertainments. It is, however, not to be supposed that all these solemnities and games took place at the Panathenaea from the earliest times. Gymnastic contests, horse and chariot races and sacrifices are mentioned in the legends belonging to the period anterior to the reign of Theseus. The prize in these contests was a vase filled with oil from the ancient and sacred olive-tree of Athena on the acropolis. A great many of such vases, called Panathenaeic vases (ἀμφορὲς Παναθηναῖκοι), have in late years been found in Etruria, Southern Italy, Sicily, and Greece. They represent on one side the figure of Athena, and on the other the various contests and games in which these vases were given as prizes to the victors. The contests themselves have been accurately described from these vases by Ambrosch, and the probable order in which they took place has been defined by Müller.

The poems of Homer were only read by rhapsoids at the great Panathenaea; and this custom commenced in the time of Pisistratus or of his son Hippocrates, after whose poems had been collected. Afterward the works of other epic poets were also recited on this occasion. Songs in praise of Har-modius and Aristogiton appear to have been among the standing customs at the Panathenaea. Musical contests in singing, and in playing the flute and the cithara, were not introduced at the Panathenaea until the time of Pericles; they were held in the Od-ium. The first who gained the victory in these contests was Phrynias, in Ol. 81, 1.

The victors in the musical contests was, as in the gymnastic contests, a vase, but with an additional chaplet of olive-branches. Cyclic choruses and other kinds of dances were also performed at the Panathenaea, and the pyrrhic dance in armour is expressly mentioned. Of the discussions of philosophers and orators at the Panathenaea we still possess some testimonies, the Μνημεία, the Μνημεία of Isocrates, and that of Aristides. Herodotus is said to have recited his history to the Athenians at the Panathenaea. The management of the games and contests was intrusted to persons called διδολοθέται, whose number was ten, one being taken from every tribe. Their office lasted from one great Panathenaea to another. The list of persons who have held the office has been preserved, on the statement of Diogenes Laertius, that dramatic representations also took place at the Panathenaea, but this mistake has been clearly refuted by Böck. The lampadephoria, or torch-race of the Panathenaea, has been confounded by many writers, and even by Vachon, with the Pyrrhic dance. On which day it was held, and in what relation it stood to the other contests, is unknown, though it is clear that it must have taken place in the evening. It has been supposed by some writers that the lampadephoria only took place at the great Panathenaea, but this rests upon the feeble testimony of Libinnus, while all other writers mention this lampadephoria as a part of the Panathenae in general, without the epithet μυγδαλικη, which is itself a sufficient proof that it was common to both festivals. The same is implied in a statement of the author of the Etymologicum Magnum. The prize of the victor in the lampadephoria was probably the lamps itself, which he dedicated to Hephaistos. It is impossible to determine the exact order in which the solemnities took place. We may, however, believe that those parts which were the most ancient preceded those which were of later introduction. Another instance, in this respect, are the sculptures of the Parthenon (now in the British Museum), in which a sort of the she-Bull of the Panathenaea is represented in the great procession. But they neither represent all the solemnities—for the lampadephoria and some of the gymnastic contests are not represented—nor can it be supposed that the artists should have sacrificed beauty and symmetry merely to give the solemnities a more promulgated representation, one at a festival. In fact, we see in these sculptures the flute and cithara players represented as accompanying the chariots and men on horseback, though the contests in chariot and horse racing probably preceded the musical contests. But we may infer, from the analogy of other great festivals, that the sacrifice came with the sacrifices. The sacrifices at the Panathenaea were very munificent; for each town of Attica, as well as every colony of Athens, and, during the time of her greatness, every subject town, had to contribute to this sacrifice by sending one bull each. The meat of the victims appears to have been distributed among the people; but before the feasting commenced the herald prayed for the welfare and prosperity of the Republic. After the Battle of Marathon the Plataeans were included in this prayer.

The chief solemnity of the great Panathenaea was the magnificent procession to the Temple of Athena Polias, which, as stated above, probably took place on the last day of the festival season. The opinion of Creuzer, that this procession also took place at the lesser Panathenaea, is opposed to all ancient authorities with the exception of the scholiasts on Suidas, Aelian, and Porphyry. But these scholiasts are evidently in utter confusion about the whole matter. The chief of this procession was represented in the frieze of the Parthenon, the work of Phidias and his disciples. The description and explanation of this magnificent work of art, and of the procession it represents, would lead us too far. The chief object of this procession was to carry the statue of Athena to the temple. This peplos was a crocus-coloured garment for the goddess; and made by maidens called έργατικα. (Compare ARRHYPHORA.) In it were woven Eucalus and the giants, as they were conquered by the goddess. Proclus says that the figures on the peplos represented the Olympic gods on horseback; the giants, and this, indeed, is the subject represented on a peplos worn by an Athena preserved in the Museum of Dresden. On one occasion, in later times, when the Athenians overwhelmed Demetrius and Antigonus with their flat-ties, they also decreed that their images, along with those of the gods, should be woven into the peplos. The peplos was made in various navies, but was considered from the mast of a ship; and this ship, which was at other times kept near the Areopagus, was moved along on land, it is said, by subterraneous machines. What these machines may have been is involved in utter obscurity. The procession proceeded from the Ceramicus, near a place called the Aeropagus, at the foot of the Demeterian at Eleusis, and thence along the Pelas- gic wall and the Temple of Apollo Pythius to the Pryx, and thence to the Acrropolis, where the statue of Minerva Polias was adored with the peplos.

In this procession nearly the whole population of Attica appears to have taken part, either on foot, or in chariots, or in chariots, as may be seen in the frieze of the Parthenon. Adult men carried olive-branches, and were called φαλαφοροι; young men attended, at least in earlier times, in armour; and maidens who belonged to the noblest families of Athens carried baskets, containing offerings for the goddess, which were afterwards called λαμπαδευρια. This part of the procession was also attended by aliens in this procession, and the duties they had to perform, see HY- DRYPHORA.

Men who had deserved well of the Republic were rewarded with a gold crown at the great Panathenaea, and the herald had to announce the event during the gymnastic contests. Prisoners, also, were allowed to enjoy freedom during the great Panathenaea. (Compare J. Meursii, Panathenaea, liber singularis, Lugd. Bat., 1819; C. Hoffmann, Panath., naikos, Cassel, 1835, 8vo; H. A. Müller, Panathenaea, Bonn, 1837, 8vo; C. O. Müller's Dissertation, Qua anna tempore Panathenaea minora celebrata sint, which.

PANCRATIUM.

Hence from (Lucan, Philostr., Paus.,)
the given struggle required, was Ctesiph.,
desired exercises were which even
very time 
and

Hygin., Paus., appeared to united.

The Panraetum, or the native Minotaurus.

The ancient physicians, it had very rarely a beneficial influence upon health.

At Sparta the regular pancratium was forbidden, but the name was there applied to a fierce and
irregular fight, not controlled by any rules, in which even biting and scratching were not uncommon, and
in which, in short, everything was allowed by which one of the parties might hope to overcome
the other. In Homer we neither find the game nor the name of the pancratium mentioned, and, as it
was not introduced at the Olympic games until Ol. 334, but the Greeks regarded Theseus as the in-
vventor of the pancratium, who, for want of a sword, was said to have used this mode of fighting against
the Minotaur.

Other legends represented Hercules as having been victor in the pancratium, and
later writers make other heroes also fight the pancratium; but these are mere fictions. After the pancre-
tium was once introduced at Olympia, it soon found its way also into the other great games of Greece,
and in the times of the Roman emperors, we also find it practised in Italy. In Ol. 145 the pancratium
for boys was introduced at the Olympic games, and the first boy who gained the victory was Philed-
mus, a native of a town in Troas. This innovation had been adopted before in others of the national
games, and in the 61st Pythiad (Ol. 198) we find a Hebrew boy of the name of Olaides as victor in
the pancratium in the Pythian games. At the Isthmian games the pancratium for boys is not men-
tioned till the reign of Domitian; but this may be merely accidental, and the game may have been
practised long before that time.

Philostratus says that the pancratium of men
was the most beautiful of all athletic contests; and
the combatants who mainly have come down to the spectators a variety of beautiful and exciting spec-
tacles, as all the arts of boxing and wrestling appeared here united. The combatants in the
pancratium did not use the cestus, or if they did, it was the Iapetos malakptor (vid. CCEB), so that the hands remained free, and wounds were not easily inflicted.

The name of these combatants was pancratistae (μαχαίρατος) or pommatoi.11 They fought naked,
and had their bodies anointed and covered with sand, by which they were enabled to take hold of
one another.1 In cases where the contents of the pancratistae were not regulated by strict rules, it
might, as at Sparta, sometimes happen, that the fighters made use of their teeth and nails; but such irregularities probably did not occur at any of the great public games.

When two pancratistae began their contest, the first object which each of them attempted to ac-
complish was to gain a favourable position, each trying to make the other clumsy so that the sun
might shine in his face, or that other incovenien-
ces might prevent his fighting with success. This struggle (λέιν τε τής στάσεως) was only the
introduction to the real contest, though, in certain cases, this preparatory struggle might terminate
the whole game, as one of the parties might wear out the other by a series of stratagems, and compel
him to give up further resistance. Sostras of Sicyon had gained many a victory by such tricks.

When the real contest began, each of the fighters
might commence by boxing or wrestling, according-
ly as he thought he should be more successful in
the one than in the other. The victory was not de-
cided until one of the parties was killed or lifted
data fager, thereby declaring that he was unable to
continue the contest either from pain or fatigue.6
It usually happened that one of the combatants, by
some trick or other, made his antagonist fight on
the ground, and the wrestling which then commenced was called ἀνακλινότα triumph, and continued till one of
the parties declared himself conqueror or was
strangled, as was the case at Olympia with Ar-
richos or Arrachron, of Phigalia in Ol. 54. A lively description of a struggle of this kind is given
by Philostratus. Sometimes one of the fighters fell
down on his back, on purpose that he might
ward off the attacks of his antagonist more easily,
and this is perhaps the trick called ἄποφθεξις. The usual mode of making a person fall was to put
one foot behind his, and then to push him backward, or to seize him round his body in such a manner
that, the upper part being the heavier, the person lost his balance and thus fell. Hence the expressions 
μι
να ὀληχωμένον, μοσολαδών, μέντο αλήθει, ἡ μύτῳ έχει, αδ μηρῶν στή, &c. The annexed wooden re-

1 (Mercurialis, De Arte Gymnast., v. 7.)—2. (Paus., v. 8, § 2.)—3. (Schol. ad Finz., Nen., v. 8, § 5.)—4. (Paus., v. 8, § 1.)—5. (Hygin., Fab., 57.)—6. (Lucan, Pharsal., v. 613, &c.)—7. (Paus., v. 8, § 8.)—8. (Corinii, Dia-
and, Justinian (Novell, c.v., c. i, provided πανεπιστολαριαν, be, as some suppose, a mistake for πανεκστολον) made it one of the seven solemnities (πενεκπολοι) which the consuls had to provide for the amusement of the people.

Several of the Greek pancretiasteis have been immortalized in the epimedium odes of Pindar, namely, Timoecides of Athens, Melissaus and Strepsiades of Thessaly. The latter changed, however, comprises extracts from such writers as of the publication. But, besides these, the names of a great many other victors in the pancretan are known.

The diet and training of the pancretiasteis was the same as that of other athletes. (Vid. Anth. Pal. vol. xii.)

PANDECTE.

PANDECTE.

Said to be 422. Under each title are placed the extracts from the several jurists, numbered 1, 2, 3, and so on, with the writer's name and the name and division of the work from which the extract is made. These extracts are said to amount to 9123. No name corresponding to liber or titulus is given to these subdivisions of tituli which are formed by the extracts from the several writers, but Justinian called them "leges," and, though "leges" in the strict sense of the term, they were, in fact, "law;" and in the same sense the emperor calls the jurists "legislators." The fifty books differ materially, both in bulk, number of titles, and number of extracts. The glossators and their followers, in referring to the Digest, sometimes indicate the title and sometimes the book, number and second part comprises seven books, and so on.

The number of writers from whose works extracts were made is thirty-nine, comprehending those jurists from whom extracts were made at second hand, as Qu. Mucius Scaevola, the pontifex, from whom four fragments, and Eliaus Gallus, from whom one fragment is taken, but omitting Servius of Stilpcrius Rufus, who is represented by Alfenus, distinguishing Eliaus Gallus from Julius Aquila, Ve- nuleius from Claudius Saturninus; assuming that there is only one Pomponius, and omitting Sabinus, whose name is erroneously inserted in the Florentine Index.

The following is the list of jurists from whose writings the Digest was constructed, as it is given in the Palingenesia of Hommelius, who has arranged the matter taken from each writer under his name, and placed the names in alphabetical order. The dates of the jurists are chiefly found on the authority of Zimmern. The figures in the third column indicate the proportions contributed to the Digest by each writer. The letters A, B, C, D, E, F, refers to the names of Hommelius: (a) denotes that the contribution is under one page of the Palingenesia. This list in Eludes Sabinus. The extracts from many of the writers are few and short: those from Ulpian, which are more than a third of the whole, Paulus, Papinian, Julianus, Pomponius, Q. Cervidius Scaevola, and Gaius are the largest.

Sextus Caesarius, Africanus . . . Hadrian and the Antonini . . .

Gaius . . . Hadrian and the Antonini . . .

The work is thus distributed into fifty books, which are subdivided into titles, of which there are

The distribution of the matter of the Digest into books and titles has evidently been made according to a plan, as will be obvious on inspecting the list of tituli prefixed to the editions. Thus the 28th book treats of treatments, of the institution of a hero, etc., and the 29th of military treaties, and of codicil, etc.; in fact, of matters appertaining to universal succession by testamentary disposition, etc. These books of the Digest, according to the Code and the Edictum Petriatum.

It has long been a matter of dispute whether the compilers of the Digest were guided by any, and if so, by what principles in the arrangement of the several extracts under the respective titles. This subject is examined in a very learned essay by Bluhme, entitled "De Digesti Fragmenv in den Pandakentiteln." The investigation of course, founded on the titles of the several works of the jurists, which, as already observed, are given at the head of each extract: thus, for instance, in the beginning of the third book, the first seven extracts are headed as follows: "Ulpianus Libro sexagesimo quarto ad Edictum; Idem Libro primo Videconmissionum; Idem Libro quarto ad Salinum; Idem Libro quinto ad Sabinum; "Paulus Librio primo ad Sabinum; "Julianus Libro trigesimo tertio Digestorum; "Paulus Libro secundo ad Sabinum."

These will serve as samples of the whole, and will explain the following remarks from Bluhme, whose conclusions are these: "The compilators separated all the writings from which extracts were to be made into three parts, and formed themselves of the contents. They read through in order the books that had fallen to its lot, yet so that books which were closely related to their contents were extracted at the same time. The books were compared with the Code of Justinian, and what was selected for the new compilation was placed under a title taken either from the Code, the Edict, or, in case of necessity, from the work itself which was extracted. What came under the same title was compared; repititions were erased; contradictions were got rid of; and alterations were made when the contents of the extracts seemed to require it. When the three committees had finished their labours, the present Digest was formed out of the three collections of extracts. In order to accomplish this, they made that collection the fowch winch of each title which contained the most numerous, or, at least, the longest extracts. With these they compared the smaller collections, striking out, as they had done before, repetitions and contradictions, making the necessary additions, and giving more exact definitions and general principles. What remained over of the smaller collections without having had an appropriate place assigned to it, was placed after the first collection, and its place in the series after the first collection was generally determined by the number of extracts."

"The Digest does not seem to have been subjected to any farther revision."

Bluhme remarks, that although the constitutions of Deo Austore, Imperatoriam, Tanta, and Cordi contain much information on the economy of the Digest and the mode of proceeding of the compilers, only the two following facts are distinctly stated: 1. That the extracts from the writings of the jurists were arranged according to the titles of the Code and the Edict. 2. That the extracts were compared with the Code. Accordingly, everything else must be proved from an examination of the work itself, and this is the object of Bluhme's labours in these pages. He endeavours to examine the extracts in the titles De Verborum Significatione and De Regulis Juris, he will find a regular order observable in the titles of the juristic works from which the extracts are taken. Gen.
PANEGYRIS.

ently, the series of the books quoted shows that the original order of the works from which the extracts were to be made has not been altered; and the several works generally follow in both these titles in the same order. A similar remark applies to the title De Verborum Obligationibus, though there is a variation in all the three titles as to the relative order of the three masses, which are presently to be mentioned. "In the remaining titles of the Digest," adds Bluhme, "at first sight it appears as if one could find no other distinction in the titles of the extracts than this, that one part of them has a certain kind of connexion, and another part merely indicates a mettli assembly of books out of which the extracts have been made. But, on a closer examination, not only the titles are very many, but the mass, though indistinguishable, but this comparison leads to the certain conclusion that all the writings which were used in the compilation of the Digest may be referred to three classes. The Commentaries on Sabinius (ad Sabiniun), on the Edict (ad Edictum), and Papinius's writings, are at the head of these three classes. It may accordingly etocate the three masses respectively by the names Sabiniun, Papinius, and the Edict. In each of these classes, the several works from which extracts are made always follow in regular order." This order is shown by a table which Bluhme has inserted in his essay.

This article, if read in connexion with the articles Corpus Juris, and Papyrus, will give some general notion of the legislation of Justinian, the objects of which cannot be expressed better than in the following words:

"Justinian's plan embraced two principal works, one of which was to be a selection from the jurists, and another from the Constitutiones. The first, the Pandect, was very appropriately intended to comprehend the law to the period on which the work since the date of the Twelve Tables which in itself, and without supposing the existence of any other, might serve as a central point of the whole body of the law. It may be properly called a code, and the first complete code since the time of the Twelve Tables, though a large part of its contents is not new. It may accordingly etocate the three classes, as the Compilation of particular cases. Instead of the insufficient rules of Valentinian III, the excerpts in the Pandect are taken immediately from the writings of the jurists in great numbers, and arranged according to their matter. The Code also has a more comprehensive plan than the earliest codes, since it comprehends the laws of all persons and places and of all times. The Pandect and the Code, ought properly to be considered as the completion of Justinian's design. The Institutions cannot be viewed as a third work, independent of both: it serves as an introduction to them, or as a manual. Lastly, the novel is single and subsequent additions and alterations were, in all probability, accidental circumstances that a third edition of the Code was not made at the end of Justinian's reign, which would have comprised the novel that had a permanent application."1

There are numerous manuscripts of the Digest, both in libraries of the Continent and of Great Britain. A list of the MSS. of the Corpus Juris in the libraries of the three colleges, which are principally the colleges at Oxford and Cambridge, is given by Dr. Häch in the Zeitschrift.2 But the MSS. of the Digest generally contain only parts of the work, and are not older than the twelfth century. The MS. called the Florentine is complete, and probably as old as the seventh century. It had been kept at Amalfi time out of mind, and was given to the Pisans by

Lotharius the Second, after the capture of Amalfi, A.D. 1137, as a memorial of his gratitude to them for their aid against Roger the Norman. The Pisans kept it till their city was taken by the Florentines under Gino Caponi, A.D. 1406, who carried this precious MS. to Florence, where it is still preserved. An exact copy of this MS. was published at Florence in 1536, and this is the Digestum seu Pandectarum Libri Quattuoraginta Ex Florentinis Pandectis representati; Florentiae In Offic. na Laurentii Tarrentini Dacia Typographi MDLIII Cum Summi Pontif. Car. I. Imp. Henrici II. Gallorum Regis, Eduardi VI. Anglie regis, Cosmi Medicis Ducis Florent. I. Privilegio." The facts relating to the history of the MS. appear from the dedication of the work, by which it is also Wachsmuth's opinion (p. 140); others from the Attic king Pandion; others, again, from the Attic tribe Dias, so that the Pandia would have been in the same relation to this tribe as the Panathenaea to Athens; and others from Διος, and call it a festival of Zeus. Welcker3 considers it to have been originally a festival of Zeus at Naxos, in connexion with the Naxos festival, the Panathenaea, and thinks that when the constitution, of which this festival was, as it were, the central point, became dissolved, the old festival remained, though its character was changed. It was celebrated at Athens in the time of Demosthenes.4 Taylor, in his note on this passage, strangely con- jures up the image of the Dionysia, at which the Dionysus festival was held on the 19th of Munychion, while the Pandia took place on the 14th of Elephobion.5

Pandectes (πανεκτείς) (Vid. CAUPOPA.)

PANE'GYRIS. (Vid. CAUPOPA.)

sumed that such a meeting was never held without a fair, at which all sorts of things were exhibited for sale.\(^1\) In later times, when the love of gain had become stronger than religious feeling, the fair appeared to have become more prominent characteristic of a pantomimus than before; hence the Olympic games are called *mercatus Olympiacus*, or *ludi et mercatus Olympiorum*.\(^2\) Festive orations were also frequently addressed to a pantomimus, whence they are called *λόγοι παντομικοί*. The Pantomyclics of Isocrates, though it was never delivered, is an imaginary discourse of this kind. In later times, any oration in praise of a person was called pantomicus, as that of Pliny on the Emperor Trajan.

Each pantomimus is treated of in a separate article. For a general account, see Wachsmuth, *Hellen. Ait.,* i., p. 104, &c.—Boeckh ad *Pind.,* v., p. 175, &c.—Herrmann, *Polit. Ant.,* § 10.

**PANELLENI*A (πανελλήνια), a festival, or, perhaps, rather a pantomimus of all the Greeks, which seems to have been instituted by the Emperor Hadrian, with the well meant but impracticable view of reviving a national spirit among the Greeks.\(^3\)

\(^3\)PANICUM, Panic. (Vid. Meline.)

**PANIONIA (πανιώνια), the great national pantomime of the Ionians on Mount Mycale, where their national god Poseidon Heliconius had his sanctuary, called the Panionium.\(^4\) One of the principal objects of this national meeting was the common worship of Poseidon, to whom splendid sacrifices were offered, for victory. As a chief point in the conduct of the sacrifices, they always appointed a young man of Priene, with the title of king, and it is mentioned as one of the peculiar superstitions of the Ionians on this occasion, that they thought the bull which they sacrificed to be pleasing to the god if it tore at the moment it was killed.\(^5\) But religious worship was not the only object for which the Ionians assembled. As a chief point in the conduct of the sacrifices, they always appointed a young man of Priene, with the title of king, and it is mentioned as one of the peculiar superstitions of the Ionians on this occasion, that they thought the bull which they sacrificed to be pleasing to the god if it tore at the moment it was killed. But religious worship was not the only object for which the Ionians assembled. But religious worship was not the only object for which the Ionians assembled.\(^6\)

Diodorus says that in later times the Ionians used to hold their meeting in the neighbourhood of Ephesus instead of at Mycale. Strabo, on the other hand, who speaks of the Panionic pantomime as still held in his own time, does not only not mention any such change, but appears to imply that the pantomime was at all times held on the same spot, viz., on Mount Mycale. Diodorus, therefore, seems to consider the Ephesian pantomime (vid. *Ephesia*) as having been instituted instead of the Panionia. But both pantomimes existed simultaneously, and were connected with the worship of two distinct divinities, as is clear from a comparison of two passages of Strabo, viii., 7, p. 220; xiv., i., p. 174.\(^7\)

**PANOPHIA (πανοφιλά), a panoply or suit of armour.**\(^8\) The articles of which it consisted, both in the Greek and in the Roman army, are enumerated

PANTOMIMUS.

As regards their mode of acting, we must first state that all pantomimes wore masks, so that the features of the countenance were lost in their acting. All the other parts of their body, however, were called into action, and especially the arms and hands, whence the expressions manus loquacieissima, digit. elosaei, χείρας παρδάους, &c. Notwithstanding their acting with masks, the ancients agree that their actions expressed actions, feelings, passions, &c., more beautifully, correctly, and intelligibly than it would be possible to do by speaking or writing. They were, however, assisted in their acting by the circumstance that they only represented mythological characters, which were known to every spectator.1 There were, moreover, certain conventional gestures and movements which everybody understood. Their costume appears to have been like that of the dancers in a ballet, so as to show the beauty of the human form to the greatest advantage, though the costume, of course, varied according to the various characters which were represented. See the manner in which Planes is described by Velleius2 to have danced the character of Glauceus. In the time of Augustus there was another dance of a different kind, in which a stage was represented and he represented all the characters of the story, both male and female, in succession.3 This remained the custom till towards the end of the second century of our era, when the several parts of a story began to be acted by several pantomimes dancing together. Women, during the earlier periods, were never to be seen as pantomimes on the stage, though they did not scruple to act as such at the private parties of the great. During the latter time of the Empire women acted as pantomimes in public, and in some cases they threw aside all regard to decency, and appeared naked before the public. The Christian writers, therefore, represented these exhibitions as the school of every vice and licentiousness.4

Mythological love-stories were from the first the favourite subjects of the pantomimes, and the evil effects of such sensual representations upon women are described in strong colours by Jovinian.5 Every representation was based upon a text written for the stage, and the pantomimes could not change the characters, and was mostly written in the Greek language. Some of them may have represented scenes from, or the whole subjects of, Greek dramas; but when Armobius states that whole tragedies of Sophocles and Euripides were used as texts for pantomimic representations, he perhaps only means to say that a pantomimus sometimes represented the same story contained in such a tragedy, without being obliged to act or dance every sentiment expressed in it. The texts of the pantomimes or cautica were sung by a chorus standing in the background of the stage, and the sentiments and feelings expressed by this chorus were represented by the pantomimic in his dance and gesticulation. The time was indicated by a tambour; the music was typically pastoral, consisting of wood or metal, which either the dancer or one of the chorus wore. The whole performance was accompanied by musical instruments, but in most cases by the flute. In Sicily pantomimic dances were called δαλαλος, whence, perhaps, the modern words hall and ballet.6

PARADISUS.

1. Papaver (μύκων), the Poppy. "With the aid of Matthias, Bautin, and Sprengel," observes Adams, "I would arrange the poppies of the ancients as follows: 1st. The μύκων, or domesticated, is the Papaver Rhaes, or common red Poppy. 2d. The βοδας is the Papaver dubium, or long, smooth-headed Poppy. 3d. The κερατίς is the Glaucom Luteum, Scop. 4th. The ψιρώδης is the Gratiola officinalis, L., called English-Hedge-butterfly. 7 As regards the acquaintance of the ancients with Opium, consult the articles Nefe'sth and PHARMACEUTICA, p. 656, 755.1

3. Papilio (ψιρώδης), the Butterfly. "The metamorphosis of the Butterfly is distinctly described by Aristotle. The beautiful allegory of Psyche is derived from it."2

5. Papyrus, I. (Vid. Leeks.)

6. The Cyperus Papyrus, L. The Papyrus is an aquatic plant, growing abundantly in the waters of the Nile. Its roots are large and tortuous; its stem is triangular, gradually tapering as it proceeds, and is always cut longitudinally before it is used. It is very slender, and is surmounted by a fine tuft of fine filaments, which are again subdivided into others, bearing small, seedy flowers; the whole of the umbrella forming a beautiful floating plume. Paper was made from the inner stem of the plant. The plates or pellicles obtained near the centre were the best, and each cut diminishes in value as it was distant from that part of the stem. (Vid. Leeks.)

7. Parabasis. (Vid. Comedia.)

8. Parabolon or Parabolion (παραβαλον), a small fee paid by the appellant party on an appeal (έρεσε) from an inferior to a superior tribunal; as, for instance, from an arbitrator or a magistrate to the emperor, or from the senate of five hundred, to the jury or heliastic court. As to the sum to be paid and other particulars, we are uninformed.4

10. Paradisu (παραδουσα) was the name given by the Greeks to the parks or pleasure-grounds which surrounded the country residences of the Persian kings and satraps. They were generally stocked with animals for the chase, were full of all kinds of trees, watered by numerous streams, and enclosed with walls.4 These parades were frequently of great extent; thus Cyrus, on one occasion, reviewed the Greek army in his paradise at the city of Cæsar. On another occasion the Greeks were alarmed by a report that there was a great army in a neighbouring paradise.7

11. Pollux says that παραδουσα was a Persian word, and there can be no doubt that the Greeks obtained it from the Persians. The word, however, seems to have been used by other Eastern nations, and not to have been peculiar to the Persians. Gege-
case the **paragraphe** would answer to our plea to the **jurisdiction**.

The **paragraphe**, like every other answer (**antéfapae**), made by the defendant to the plaintiff's charge, was given in writing, as the word itself implies. If the defendant merely denied the plaintiff's allegations, or (as we might say) pleaded the general issue, he was said to **dehendis** or to the **in extremis**, or to **προσωποποιησις** or **προσωποποιητης**. In this case a court was to be held to try the preliminary question, whether the cause could be brought into court or not. Upon this previous trial the defendant was considered the **actor**, and hence is said by **Demosthenes** to **καταγγειλω του τεκνου**. He began, and had to maintain the ground on which he relied upon. If he succeeded, the whole cause was at an end; unless the objection was only to the form of the action, or some other such technicality, in which case it might be recommenced in the proper manner. If, however, the plaintiff succeeded, the jury merely decided **εισαγωγη** ειναι την **δικαιον**, and then the original action, which in the mean time had been suspended, was proceeded with; if verdicts on the trial of the **paragraphe** were liable to the **εμποδια** on failure to obtain a final part of the votes.

The course of proceeding on a **paragraphe** was obviously calculated to delay the progress of the cause, and was therefore not looked on with favour by the defendants. **Prophetaes**, **κυρωσιας**, **παραγοαν**. \(\text{το \ εκ των \ νων, \ εκεινης, \ δελαγα, \ πλεα,} \) legal objections were then stated by the plaintiff, and the manoeuvres of defendants to defeat justice. Hence we find in the extant **paragrapaikoi λογοι**, that the defendant, in order to remove the prejudice of the defendants against himself, not only supports the ground of the **paragraphe**, but discusses the general merits of the cause, and endeavors to show that there is no foundation for the plaintiff's complaint; and there is no doubt that the defendants were materially influenced by such discussion, however in strictness irrelevant. The same observation applies to the **διαμαρτυρια**. (Vid. Heres. Grec.)

There was no such thing as this proceeding by **paragraphe** until after the expulsion of the thirty tyrants, when a law was passed, on the proposal of Archias, \(\alpha_{ν} \text{ τοις \ δια ινοκος} \), **κερι γενομενοι παραγραφησαι, τοις \text{δε \ αρχιοντε}ς\) \(κερι \text{τουτων \ πρωτων \ εισφερεσ} \), ιδιου των τεποματων παραγραφαμενον; \(\text{σωτηρια} \) \(\text{την \ εισφορα \ φωτωλιν} \). The object of this law appears to have been, to enable any person against whom an information or prosecution might be brought, or action commenced, for any matter arising out of the late political troubles, to obtain the benefit of the general amnesty, by specially pleading the same, and bringing in the defence in any court of law before the court. The same privilege was afterward extended to other grounds of defence (See the opening of the speech of Isoetes against Callimachus.) Before this time all special objections to the adversary's course of proceeding seem to have been called **αντεφαπαι**, and sometimes **εμποδια**, because an oath was taken by the party who tendered them.

**PARAGRAPHE.**

**PARAGRAFD.**
PARANOMAS GRAPHE.

PARACATABA (parakatabol), a sum of money required of a plaintiff or petitioner in certain cases, as a security that his complaint or demand was not frivolous, or made on slight and insufficient grounds. Such was the deposit made in certain inheritance cases, viz., a tenth part of the value of the property sought to be recovered. (Vid. ἡξεχ., Glossa.)

Thus, if I deliver my goods to a friend, to be taken care of for me, or if I deposit money with a banker, such delivery or bailment, or the money deposited, may be called parakatabol. The word indicates both the paying of the deposit and the money deposited; and, being a word of more general import, we find it used to denote other kinds of deposits, as the πρατωτολια and παρατασθένεις.

PARACATATHEΣE (parakatathē) generally signifies a deposit of something valuable with a friend, but is more especially employed in the law of bailment. In this last point it is highly probable that there was some foundation for this anecdote of Sophocles. He might, perhaps, have given offence to his sons by that penuriousness which is said to have been his practice of keeping a penny off. A Greek poet, and, lying under the suspicion of being assisted by his father, might possibly be induced, by a mean jealousy, to bring this charge against him. The play of Ódipus Colonus appears to exhibit the wounded feelings of the writer. (See more especially τ. 337, 441.)

ΠΑΡΑΣΟΦΙΑΔΟΣ. An indictment for procuring an illegal, or, rather, unconstitutional measure or law. We have seen (vid. Νομοθετες) that any Athenian citizen was at liberty to make a motion in the popular assembly to pass a new law or amend an old one. In order to check rash and hasty legislation, the mover of any law or decree, or the deposition of the θεσμος before whom he was tried; for it was a τιμωριος δικαίος. A person thrice so convicted lost the right of proposing laws in future. The cognizance of the cause belonged to the thesmotheteis. The prosecutor was compelled to take an oath, called by the same name as that taken to obtain delay in courts of justice (στυγκοστη), to the effect that he would not assist or use any means to enforce the proposed measure, which otherwise might have come into force immediately.

Examples of such prosecutions are the speech of Demosthenes against Timocrates, and that of Æschines against Ctesiphon. They both comment on the importance of the prosecution, as tending to preserve the existing laws and maintain constitutional liberty. Not, however, the mania for legislation appears to have increased so greatly at Athens in later times, that Demosthenes4 declares that ψυφομνατων αθροισιων διαφοροιν οι νιμων. This arose...
PARAPRESBEIA.

from the relaxation of that precautionary law of Solon, which required every measure to be approved by the "onomas theor," before it could pass into law. (Vid. Nomocraea, note 1.) It is obvious that while the people in assembly had the power of making decrees which could remain in force for a year, if they wished to evocate the law of Solon, all they had to do was to renew their decree from year to year, and thus, in practice, the "onomas theor" became "nomos.

If the year had elapsed, the propounder of the law could not be punished, though the law itself might be repealed in the ordinary way by the institution of proceedings before the "onomas theor," before whom it was defended by the five spondoi. The speech against Leptines was made in a proceeding against the law itself, and not against the mover. As the author of the second argument says, pares, bovus of the law, that is, the person might represent the cias, distinguished the assembly. Besides, it was only for a year, to say nothing of the decree, which might be renewed in the same manner, and which of course is also a "onomas theor." Thus, in this state, the power of the assembly would be very great.

Modern times have adopted the same form. Besides, it was only for a year, to say nothing of the decree, which might be renewed in the same manner, and which of course is also a "onomas theor." Thus, in this state, the power of the assembly would be very great.

Modern times have adopted the same form. Besides, it was only for a year, to say nothing of the decree, which might be renewed in the same manner, and which of course is also a "onomas theor." Thus, in this state, the power of the assembly would be very great.

PARAPRESBEIA (parapresbeia) signifies any corrupt conduct, negligence, or neglect of duty on the part of an ambassador, for which he was liable to a certain punishment or was required to return home. 9 Ambassadors were usually elected by the people in assembly; they either had instructions given to them or not; in the latter case they were consult with the Assembly of the Senate of Five Hundred, and afterward to the people in assembly. 10 This done, they were juncti officio; but still, like all other persons who had held an office of trust, they were liable to render an account (euthus) of the manner in which they had discharged their duty. 11 The persons to whom such account was to be rendered were the "nomes," the officers associated with them, called euthus. A pecuniary account was only rendered in cases where money had passed through the hands of the party; in other cases, after stating that he had neither spent nor received any of the public money, the accounting party was discharged, unless there was a reason for thinking that he had been proceeded against for pecuniary misconduct. Hence, they themselves had power to summon the party at once to appear as a criminal, and undergo the aneira in their office (ogeniemen), upon which they would direct the synegoroi to prosecute; and this probably was the ordinary course of case in any pecuniary malversation. Accusations, however, of a more general nature were not so commonly preferred by individuals, giving information to the magistrates with the purpose of giving any citizen an opportunity of so doing, caused them to become the means of proclamation in public assembly; with that such person was about to render his account, and to ask if any one intended to accuse him. If an accuser appeared, his charge would be reduced to the form of a graftaph, and the prosecution would be conducted in the usual way, the "nomos" being the same itself. The magistrates who were annually elected rendered their accounts at the end of the office year; but ambassadors, who were extraordinary functionaries, had no time limited for this purpose. Besides, they were delayed giving an account of his embassy to Philip for three years. 12 We can hardly suppose, however (as Thrilwall states), that the time of rendering the account was optional with the ambassador himself, since, not to mention the power of the moved, it was open to any man to move for a special decree of the people, that the party should be called to account immediately. The graoth para-theoretic, it was the usual thing, that it might be referred to magistrates. Besides, it was not to be committed to prison, or compelled to give bail for his appearance. This course was taken by Hyperides against Philocrates, who avoided his trial by voluntary exile. 4 PARAPRESBEIA: GRAPHE. (Vid. PARAPRESBEIA.)

PARASANG (parasang), a Persian measure of length, frequently mentioned by the Greek writers. It is still used by the Persians, who call it "farsakh" (farang), which has been changed in Arabic into "farsakh" (farsakh).

According to Herodotus, the parasang was equal to 30 Greek stadia. Suidas and Hesychius assign it the same length; and Xenophon must also have calculated it at the same, as he says 13 that 16,050 stadia are equal to 535 parasangs (16,050 — 535 = 30).

Agathias, however, who quotes the testimony of Herodotus and Xenophon to the parasang being 30 stadia, says that in his time the Iberi and Persians made it only 21 stadia. Strabo 14 also states that some writers reckoned it at 60, others at 40, and others at 30 stadia; and Pliny 15 informs us that the Persians themselves assigned different length to this. Modern English travellers estimate it variously at from 3 to 4 English miles, which nearly agrees with the calculation of Herodotus.

The etymology of parasang is disputable. Rödiger 16 supposes the latter part of the word to be the same as the Persian "sang," a "stone," and the former part to be connected with the Sanscrit "pura," "end," and thinks that it may have derived its name from the stones placed at the end of certain distances on the public roads of Persia.

PARASEMON (parasmon). (Vid. Insigne.)

PARASTI (parastis) properly denotes persons who dine with others. In the early history of Greece the word had a very different meaning from that in which it has been generally understood. It will be remembered that the term "stada" is only compounded of the root "kynos" (kynos) and the suffix "la" (la); says Athenaeus; 17 and he proves from various decrees (physiographe) and other authorities that anciently the name "parastis" was given to distinguished persons who were appointed as assistants to certain priests and to the highest magistrates. As regards the priestly and civil parasites, the accounts of their office are so obscure that we are scarcely able to form a definite notion of it. An ancient law 18 ordained

that each of the priestly parasites should select from the *boukhai* the sixth part of a medimnus of barley, and supply with it the Athenians who were present in the temple, according to the custom of their fathers; and this sixth of a medimnus was to be given by the parasites of Anchare in one mess. The meaning of this very obscure law is discussed by Preller.\(^1\) Thus much, however, is clear, that the parasites were elected in the deme of Attica from among the most distinguished and most ancient families. We find their number to have been twelve, so that it did not coincide with that of the deme. This may be given by the parasites of Anchare in one mess. The meaning of this very obscure law is discussed by Preller.\(^1\)

Chief parasites were distributed salt at public expense. This is well attested by Plutarch, in the Persis of Phlius and the Florinio of Terence. From the various statements in comedies and the treatise of Plutarch, De Adulteris et Amor.\(^2\) Discrimine, we see that parasites always tried to discover where a good dinner was to be had, and for this purpose they lounged about in the market, the palæstra, the baths, and other public places of resort. After they had fixed upon a person, who was in most cases, probably, an inexperienced young man, they would in many cases invite him to invite them. No humiliation and no abuse could deter them from pursuing their plans. Some ex-amples of the most disgusting humiliations which parasites endured, and even rejoiced in, are mentioned by Athenaeus\(^3\) and Plutarch.\(^4\) During the time of the Roman emperors, a parasite seems to have been a constant guest at the tables of the wealthy.

\*Parasit.[it]e.[it]

\*Parasit.[it]e.\(^5\) (vid. Eleven.\(^6\)).

\*Parazoniurn.\(^7\) (vid. Zona.\(^8\)).

\*Pardalis.\(^9\) Opian describes two species of *Pardalis*, namely, the greater and the lesser. According to Buffon, the former is the Panther, and the latter the Leopard. He remarks, on the contrary, that the little Panther was called simply *Pard* or *Pardus*, and that, in process of time, the large Panther obtained the name of *Leopard* or *Leopards.*\(^10\) "The Greeks," says Smith, speaking of the Panther and Leopard, "knew one of these from the time of Homer, which they named *Pardalis*, as Memnon is said in the Iliad to have been the Panther which discovered the wood of this animal. This they compared, on account of its strength and cruelty, to the lion, and represented it as having its skin varied with spots. Its name, even, was synonymous with spotted. The Greek translators of the Scriptures used the name *Pardalis* as synonymous with *Namer*, which word, with a slight modification, signifies the Panther, at present, among the Romans. The name *Pardalis* gave place among the Romans to those of *Panthera* and *Varia*. Those are the words they used during the two first ages, whenever they had occasion to translate the Greek passages which mentioned the *Pardalis*, or when they themselves mentioned this animal. They sometimes used the word *Pardus* for *Panthera*. It is highly probable, moreover, that the little Panther was called simply *Pard* or *Pardus*, and that, in process of time, the large Panther obtained the name of *Leopard* or *Leopards.*\(^10\) The term *Panthera*, although of Greek root, did not then, preserve the sense of the word *pădr̩yos*, which is constantly marked as

\[^{6}\] (Ptolemaeus Fragm., p. 115, &c.—2. (Athen., vi., p. 235.)——3. (Ptol., Sob., 24.) 4. (Compare Pollux, vii., c. 7.)——5. (Athen., v., p. 255.1)
PARIES.

The hurdles (Sophann, the Kpx<->v (Demosth., to ia is rolxog," (Demosth., was Among shorter e., the
(talists dalis, in small different probable are various advice (TiiipeSpoi), beck "-2.) and should Golden Camelopardalis.*
was this smaller species that Bochart would apply the word ράφρινοι. But there are found in the country known to the ancient two animals with spotted skins: the common Panther of naturalists, and another animal, which, after Daubenton, is named the Guepard (for Hunting Leopard).

The Arabian authors have there also known and distinguished two of these animals: the first under the name of Nemor, the other under that of Fehd; and although Bochart considers the Fehd to be the Lynx, Cuvier rather inclines to think it the Hunting Leopard. The Guepard, then, would be the Panther, and there is nothing stated by the Greeks repugnant to this idea.1 u

of the large fishes mentioned by Ælian and Oppian, and by Suidas under eτρος. Many conjectures have been made respecting it, the most probable of which, according to Adams, is, that it was the Squalus tigrinus, a species of Shark.2

*PARD' ALOS (πάρδαλος), a bird noticed by Aristotle. "Aldrovandi and Buffon agree in holding it to be the Tringa squatorota, L., or the Gray Flower; but the same Trail prefers the Chaloræus plumatus, or Golden Plumed Shoveler, recently described by Bocbeck had advanced his opinion that it is the common Starling, or Sturnus vulgaris. This opinion, however, is entitled to no credit.19

*PARD' ION (πάρδονα). Schneider follows Pallas in referring this to the Camelopard, or Giraffe Camelopardalis.4

PAREDRI (πάρεδρον). Each of the three superintendents was at liberty to have two assessors (παρεδρον), chosen by himself, to assist him, by advice or otherwise, in the performance of his various duties. The assessor, like the magistrate himself, had to undergo a dokumasia in the Senate of Five Hundred and before a judicial tribunal before he could be permitted to enter upon his labours. He was also to render an account (εύθυνον) at the end of the year. The office is called an ἄρμος by Demosthenes.16 The duties of the archon, magisterial and judicial, were so numerous, that one of the principal objects of having assessors must have been to enable them to get through their business. We find the παρέδρον assisting the archon at the λῆξε δίκαιος.20 He had authority to keep order at public festivals and theatres, and to impose a fine on the one who practised disorderly.21 As the archons were chosen by lot (αλητοτάτω), and might be persons of inferior capacity, and not very well fitted for their station, it might often be useful, or even necessary, for them to procure the assistance of clever men of business.22 And perhaps it was intended that the παρέδρον should not only assist, but in some measure check and control the power of their principals. They were described as being ἄρμοι, συμβολοι καὶ ψηφάδες.23

PAREDRI (πάρις). Demosthenes accuses Stephanus of buying his place of t' Ἀρχον βασιλεύ,1 It was usual to choose relatives and friends to be assessors; but they might at any time be dismissed, for the good cause.24 The thematheose, though they had no regular πάρεδρον, used to have χειροκίνητους "συνθολοὺς," who answered the same purpose.25 The office of πάρεδρον was called παρεδρία, and to exerc else it παρεδρείαι.

From the πάρεδρον of the archons we must distinguish those who assisted the εύθυνον in examining and auditing magistrates' accounts. The εύθυνον were chosen in ten, and each of them: those two assessors.26 (Vid. Eutyches.)

PAREIAS (παρείας), a species of Serpent, ascribed to Ēsculapius. 26 Gesner concludes that it was the serpent called Baron in certain parts of Italy. According to the author of the Etymologicum Magn. it is innocuous.27

PAREISGRAPHE (παρεισγραφή) signifies a fraudulent enrolment in the register of citizens. For this an indictment lay at Athene, called ἐξωταγραφας; and, besides, the δήμαρχος might, by their διαφοράς, eject any person who was illegally enrolled among them. From their decision there might be an appeal to a court of dicasia; of which the speech of Demosthenes against Eubulides furnishes an example. If the disaster confirmed the decision of the δήμαρχος, the appellate party was entitled to a slave. Spurious citizens are sometimes called παρεγγραμμένοι, παρεγγραμμένοις.28 The expression παρεισγραφής γραφή is not Attic.29

ΠΑΡΕΙΣΓΡΑΠΗΣ ΓΡΑΦΗ. (Vid. Pareisgraph.)

PARENTALIA. (Vid. Funeus, p. 462.) PARIES (τεχνογενή), whence the epithet τεχνογονής, "full of houses," applied to cities; τοίχος,30 whence τοιχοποιος, "a mason," τοιχοκοπος, "bricklayer," τοιχοπλαστος, "a builder," τοιχουργις, "a thief," and τοιχωρία, "burlary"), the wall of a house, in contradistinction from μύρος, the wall of a city. Among the numerous methods employed by the ancients in constructing walls, we find mention of the following:

I. The paries crassitius, i. e., the wattled or the lath-and-plaster wall, made of canes or hurdles (vid. Cretan) covered with clay.11 These were used in the original city of Rome to form entire houses;12 afterward they were coated with mortar instead of clay, and introduced like our lath-and-plaster walls in the interior of houses.

II. Vitruvius13 mentions as the next step the practice, common in his time among the Gauls, and continued to our own in Devonshire, of drying square lamps of clay, and building them into walls, which were strengthened by means of horizontal bond-timbers (jugamenta) laid at intervals, and which were then covered with thatch.

III. The paries formaceus, i. e., the pisé wall, made of rammed earth. (Vid. Forma.)

IV. In districts abounding with wood, loghouses were common, constructed, like those of the Siberies and of the modern Americans in the back settlements, of the trunks of trees, which were more or less squared, were then laid upon one another in a horizontal position, and had their interstices filled with chips (schidias), moss, and clay. After this

manner the Colchians erected houses several stories high.

V. The *paries lateritus*, i. e., the brick wall. (Vid. Litter.) Among the Romans, the ordinary thickness of an outside wall was 18 inches (pesquies), being the length of the common or Lydian brick; but, if the building was more than one story high, the walls at the bottom were either two or three bricks thick (dipinthis aut triplinthis), according to circumstances. The Egyptians sometimes exhibited a checked pattern, and perhaps other devices, upon the walls of their houses by the alternation of white and black bricks. The Romans, probably in imitation of the Etrurians, often cases the highest part of a brick wall with a range of terra cotta [structure and terra festaces], eighteen inches high, with projecting cornices, and spouts for discharging the water from the roof. (Vid. *Antepitx.*)

VI. The *reticulata structure*, i. e., the reticulated, or resembling network. This structure consists in placing square or lozenge-shaped stones side by side upon their edges, the stones being of small dimensions, and cemented by mortar (materas, c. cale et arena). In many cases the mortar has proved more durable than the stone, especially where volcanic tufa is the material employed, as at Baiae in the Bay of Naples, and in the villa of Hadrian near Tivoli. This kind of building is very common in the ancient edifices of Italy. Vitruvius says it was universally adopted in his time. With this construction were considered more pleasing to the eye, but less secure than those in which the stones lay upon their flat surfaces. The front of the wall was the only part in which the structure was regular, or the stones cut into a certain form, the interior being rubble-work or concrete (*fartura*), i. e., fragments and chippings of stone (*cementae, p.425*) imbedded in mortar. Only part of the wall was reticulated; it gave it firmness and durability, the sides and base were built of brick or of squared stones, and horizontal courses of bricks were laid at intervals, extending through the length and thickness of the wall. These circumstances are well exemplified in the annexed woodcut, which is copied from the drawing of a wall at Pompeii, executed on the spot by Mr. Mocatta.

VII. The *structure antiqua* or *inseria*, i. e., the wall of irregular masonry, built of stones, which were not squared or cut into any exact form. The necessary consequence of this method of construction was, that a great part of the wall consisted of mortar and rubble-work.1

VIII. The *emplention*, i. e., the complicated wall, consisting in fact of three walls joined together. Each side presented regular masonry or brickwork; but the interior was filled with rubble (*fartura*). To bind together the two outside walls, and thus render the whole firm and durable, large stones or courses of brickwork (*coagmenta*) were placed at intervals, extending through the whole thickness of the wall, as was done also in the structure reticulata. *Pallad.*

IX. The *paries e lapide quadrato*, i. e., the aslar wall, consisting entirely of stones cut and squared by the chisel. (Vid. *Dolabr.*). This was the most perfect kind of wall, especially when built of marble. The construction of such walls was carried to the highest perfection by the architects of Greece; the temples of Athens, Corinth, and many cities of Asia Minor still attest in their ruins the extreme skill bestowed upon the erection of walls. Considerable excellence in this art must have been attained by the Greeks even as early as the age of Homer, who derives one of his similes from the “nicely-flinted stones” of the wall of a house.2 But probably in this the Greeks only copied the Asians; for Xenophon came to a deserted city in Mesopotamia, the brick walls of which were capped by a parapet of polished shell marble.3 Instead of using mortar, as in the last four kinds, the ancients gave solidity to their aslar walls by cutting the stones so exactly as to leave no perceptible space between the surfaces. The stones, or mortice often united a stone to that which was above it, and the stones which were placed side by side were fastened together with iron cramps (anchis ferris) and lead.4 Hence the Coliseum at Rome, and the other grand remains of ancient architecture throughout Europe, have been regarded by the moderns as the highest perfection of the ancient art, and, like the pickaxe over all those points where cramps and tenons were known to be inserted. As a further method of making the walls firm and compact, the Greeks placed at intervals bond-stones, which they called *diarios*, because they extended through the whole thickness of the wall. The walls of the temple at Cyzicus, faced with the marble (the Proconnesian) for which that locality has always been renowned, were ornamented with a gold thread placed over all the seams of the stones.5 Besides conferring the highest degree of beauty and solidity, another important recommendation of aslar walls was, that they were the most secure against fire, an advantage to which St. Paul alludes in connexion with the spiritual purposes of the stones, for material and for workmanship (*kolon tyton*), and the gold and silver which were exhibited in the walls of such a temple as that just mentioned, with the logs of wood, the thatch, the straw and cane, employed in building walls of the first four kinds.6 Vitruvius also strongly objects to the *paries crutibus* on account of its great combustibility.

Charts in a single passage of his Topica,7 uses four epithets which were applied to walls. He opposes the *paries solidus* to the *fornicatus*, and the *communis* to the *directus*. The passage, at the same time, shows that the Romans inserted arches

by the artist into rectangular compartments, he filled, according to his taste and fancy, with an endless variety of landscapes, buildings, gardens, animals, &c. 1 (Vid. Painting, p. 715.)

Another method of decorating walls was by incrusting them with slabs of marble (crustio). The blocks designed for this purpose were cut into thin slabs by the aid of sawmills. (Vid. Mola.) Various kinds of sand were used in the operation, according to the hardness of the stone, emery (mazzia) being used for the hardest. This art was of high antiquity, and probably Oriental in its origin. The brick walls of the Mausoleum at Halicarnassus, built as early as 355 B.C., were covered with slabs of Proconnesian marble, 2 and this is the most ancient example we possess. In the time of Titus, slabs of a uniform colour were sometimes curiously inlaid with variously-coloured materials in such a way as to represent animals and other objects. In short, the beautiful invention now called Florentine Mosiac was then in use for the decoration of the walls of apartments. (Vid. Emblem.)

The common kind of Mosiac was also sometimes used in walls, as well as in floors and ceilings. The greatest refinement was the attempt to produce the effect of mirrors, which was done by inserting into the wall pieces of black glass manufactured in imitation of obsidian. 3 (Vid. House, Roman, p. 516, 520; Painting, p. 715.)

PARTEM. 4 (Vid. Palilia.)

FARMULAE. 5 A round shield, three feet in diameter, carried by the scutae in the Roman army (see p. 104). Though small, compared with the Clupera, it was so strongly made as to be a very effectual protection. 6 This was probably owing to the use of iron in its framework. In the Pyrrhic dance it was raised above the head and struck with a sword, so as to emit a loud ringing noise. 7 The parma was also worn by the Ecurrae. 8 For the sake of state and fashion, it was sometimes adorned with precious stones. 9

We find the term parma often applied to the target (vid. Cætra), which was also a small round shield, and, therefore, very similar to the parma. 10 Virgil, in like manner, applies the term to the clipeus of the Palladian, because the statue being small, the shield was small in proportion. 11

1. (Vitruv. viii, 5.)—2. (Plin., H. N., xxxvi, 6, s. 9.)—3. (Vitr., vii, 5.)—4. (Ovid, Met., iv, 66.)—5. (Plin., H. N., xxxvi, 6, s. 40.)

Walls were adorned, especially in the interior of buildings, in a great variety of ways. Their plane surface was broken by panels. (Vid. Abacus.) However coarse and rough their construction might be, every unevenness was removed by a coating two or three inches thick, of mortar or of plaster with rough cast, consisting of sand, together with stone, brick, and marble, broken and ground to various degrees of fineness. 8 Gypsum also, in the state which we call plaster of Paris, was much used in the more splendid edifices, and was decorated with an endless variety of tasteful devices in bas-relief. Of these ornaments, wrought in stucco (opus alburnum), specimens remain in the "Baths of Titus" at Rome. When the plasterer (tector, kowirjol) had finished his work (truldwatos, i.e.; travelling, opus tectorium), in all of which he was directed by the use of the square (vid. Nom.,) the rule, and the line and plummet (vid. Parpenticulum), and in which he aimed at producing a surface not only smooth and shining, but as little as possible liable to crack or decay, 9 he was often succeeded by the painter in fresco (udo tectorio 10). In many cases the plaster or stucco was left without any additional ornament; and its whiteness and freshness were occasionally restored by washing it with certain fine calcareous or aluminous earths dissolved in milk (paratonium, terra Selinumius). 11 A painted wall was commonly divided

7 His specimen also shows the alternation of courses of brick and stone, which is the characteristic of Roman masonry. The "paries solidus," i.e., the wall without openings for windows or doorways, was also called "a blind wall; 12 and the paries communis, 13 was the boundary between two tenements and common to both, was called intergerivus, al. intergerivus; 14 and in Greek (pedroivos) or pebroivos. 15 The walls, built at right angles to the party-wall for the convenience of the respective families, were the parietes directi.

A woodcut, representing a portion of the supposed Thermæ at Trévès, exemplifies the frequent occurrence of arches in all Roman buildings, not only when they were intended for windows or doorways, but also when they could serve no other use than to strengthen the wall. In this "paries fornicatus" each arch is a combination of two or more concentric arches, all built of brick.

3 (Vitr.)—4. (Vitruvius, viii, 5.)—5. (Plin., H. N., xxxvi, 6, s. 9.)—6. (Vitruv., viii, 5.)—7. (Plin., H. N., xxxvi, 6, s. 35.)
The arched woodcut represents a votive parma, as a distinct class of citizens, appear at Sparta after the first Messenian war, and in connexion with the foundation of Tarentum; but the legends as to who they were differ from another. (Hesychius) says that they were the children of Spartan citizens and female slaves; Antiocchus 1 states that they were the sons of those Spartans who took no part in the war against the Messenians. These Spartans were made Helots, and their children were called parthenia, and declared to be mere. When they grew up, and were capable of bearing arms, their degrading position at home, they emigrated, and became the founders of Tarentum. Ephorus 2 , again, related the story in a different manner. When the Messenian war had lasted for a considerable number of years, the Spartan women sent an embassy to the camp of their husbands, complained of their long absence, and stated that the Republic would suffer for want of an army. Some report that as the war should continue much longer. Their husbands, who were bound by an oath not to leave the field until the Messenians were conquered, sent home all the young men in the camp, who were not bound by that oath, and requested them to cohabit with the maidens at Sparta. The children thus produced were called Partheniae by the Spartans, and were called Tarentines by the Helots, and were called the colony of Tarentum. 3 (Vid. Ephorus.) These stories seem to be nothing but the product of ancient historians. The Spartans, at a time of great distress, had perhaps allowed marriages between Spartans and slaves or Laconians, or had admitted a number of persons to the franchise, but afterward endeavoured to curtail the privileges of these new citizens, which led to insurrection and emigration. 4

*PARTHENON (παρθένων), a species of plant, which in Spengel makes the name of the Matricaria chamomilla, the same with the Pyreticum chamomilla. Hooker, in English, Feverfew. Sibthorp, in some hesitation, however, advocates the same opinion. 5

*PASSER (πασερ), the Sparrow. "The Greek term πασερ is used by Paulus Egineta in the same sense as the Roman by the writer of the story of the Spartan children, belonging to the order of small birds. It is more particularly applied to the Passer domesticus, or House Sparrow. Genner supposed the πασερ and πασερ λέγων many varieties of it; but it is more probable that the latter was the Hedge Sparrow, or Ac centor modularis, Cuvier." 6

PASSUS, a measure of length, which consisted of five Roman feet. 7 (Vid. Paus.) The passus was not the step, or distance from heel to heel, when the feet were not at their utmost ordinary extension, but the distance from the point where the heel leaves to that in which it is set down. The mille passuum, or thousand paces, was the common name of the Roman mile. 8 (Vid. Milliar.)

PARTEMUS (παρθέμος). The shawl, richly interwoven with gold (χρυσόπαστρος), and displaying various symbolic or mythological figures, was much used in religious ceremonies to conduct to their splendid array, and to veil their solemnity. The maidens who carried the figured peplus in the Panathenaea at Athens were called παρθέμοι. In Egypt, the priests of Isis and Osiris, who probably fulfilled a similar role, were called παρθέμοι.

5 A
office, were denominated παντοφόροι, and were incorporated. They appear to have extended themselves, together with the extension of the Egyptian worship, over parts of Greece and Italy, so that "the College of the Pastophori of Industria," a city of Liguria, is mentioned in an inscription found near Turin. The Egyptian college was divided into minor companies, each containing ten pastophori, and each having at its head a leader who was called δρακινας quadruplex, because he was appointed for five years. Besides carrying the παντός, or sacred ornamental shawl, they performed other duties in connexion with the worship of the temple. It was the office of this class of priests to raise the shawl with the performance of an appropriate chant, so as to discover the god seated or standing in the adyton, and generally to show the temple with its sacred utensils, of which, like modern sacristans, they had the custody. In consequence of the supposed influence of Isis and her priesthood in healing diseases, the pastophor paid a high rank as physicians.

It must be observed, that, according to another interpretation of παντός, the pastophori were so denominated from carrying, not a shawl, but a shrine or small chapel, containing the image of the god. Supposing this etymology to be correct, it is no less true that the pastophori sustained the various offices which have been here assigned to them.

It was indispensably requisite that so numerous and important a body of men should have a residence appropriated to them in the temple to which they belonged. This residence was called πατρουφον. The common use of the term, as applied by the Greeks to Egyptian temples, led to its application to the corresponding part of the Temple at Jerusalem by Josephus, and by the authors of the Alexandrine version of the Old Testament.

PATERA.

PATERA. (Vid. Fam., Marriage (Rom.) Patric Potestas.)

PATERA, dim. PATELLA (φαλά), a round dish, a plate, a saucer. Macrobius, explaining the difference between the patera and the Carchesium, says that the former received its name from its flat, expanded form (planum ac patens). The patera of the most common kind are thus described by Festus:

"Vasa picta parva, sacrificis faciendis eptus" (Nigra patella, Rubicunda testa). They were small plates of the common red earthenware, on which an ornamental pattern was drawn in the manner described under the article Fictile, and which were sometimes entirely black. Numerous specimens of them may be seen in the British Museum, and in other collections of ancient fictile vases. The more valuable paterae were metallic, being chiefly of bronze; but every family, raised above poverty, possessed one of silver (πηγαγυ), together with a silver salt-cellar. (Vid. Salinum.) In oculent houses there was a plate of gold (ψυχτικ). These metallic plates were often adorned with figures, engraved or embossed upon them. A beautiful specimen is presented in the woodcut to the article Libra; and the accompanying woodcut exhibits a highly ornamented dish, also of bronze, designed to be used in the worship of Mars, and found at Pompeii. The view of the upper surface is accompanied by a side view, showing the form and depth of the vessel. The ornamental patera sometimes represented leaves of form, which probably diverged from the centre (πτερατα). Gems were set in others.

We read also of an amber dish (electrinum), having in the centre the countenance of Alexander the Great, and his history represented on the border. The annexed woodcut contains a view and section of a plate of white marble in the British Museum, which was found in the ruins of Hadrian's Villa, and purchased by Mr. Townley. It is 11 inches in diameter, and 1¾ high. It is cut with skill and delicacy, the marble not being much more than a quarter of an inch thick. In the centre is sculptured a female bacchante, in a long tunic and with a scarf (vid. Chlamys) floating over her head. This centre-piece is encircled by a wreath of ivy. The decorations indicate the appropriation of the plate to the worship of Bacchus.

Plates were sometimes made so as to be used with either side downward, and were then distinguished by the epithet αψιθέατος. In these the upper surface was ornamented as well as the upper. The Massilians and other Ionic Greeks commonly placed the under surface uppermost. Plates were further distinguished from one another by being either with or without a base (πτερατον), a boss in the middle (ορθολοντ, μεσοφαξις, φοίτος), feet (βαλανωρ, and handles. In the preceding woodcut the
PATHOLOGIA.

bronzepaterahasonehandle:boththepaterae
are made to stand upon a low base.

Small plates were sometimes used in cooking, an operation more commonly performed in pots (vid. Olla) and basins or bowls. (Vid. PARTINA.) They were used at meals to eat upon as we use them, although it appears that very religious persons abstained from this practice on account of the customary employment of them in sacrificing to the gods. A larger plate, in the round dish, was used to bring to table such an article of food as a flat fish. Mustard and ointments were brought in saucers.

The Greeks also drank wine out of plates or saucers, as we see in the woodcut on p. 326, which represents a symposium, and in which the second and third figures from the right hand have each a saucer. It was, however, one of the refinements of luxury among the Asians, that the cup-bearer used the plate as a waiter to hold the cup into which he poured the wine; and, as the plate was without a handle (ἀνεμός ὑπόν), he took hold of it adroitly with three of his fingers.

The use of paterae at meals no doubt gave origin to the employment of them in sacrifices. On these occasions it was, whether in the round dish, or in the plate, (paterae) or any liquid intended to be poured out as a libation. We find them continually represented in conjunction with the other instruments of sacrifice upon coins, gems, altars, bas reliefs, and the friezes of temples. In the ancient Doric temple at Rome, now dedicated to St. Adrian, the tasteful patera and the crown of the bull are alternately sculptured on the metopes.

Plates of the most precious materials and of the finest workmanship were given as prizes at the public games.

PATHOLOGIA (Παθωλογία), one of the five parts into which, according to some authors, the science of medicine is divided and regarded as (τίτλος, disease, and ἄδεια, a discourse), had for its especial object the whole doctrine of disease, in what it consists, from what springs, what changes it effects in the human frame, &c. It would be impossible here to attempt anything like a complete analysis of the larger works of this subject; it will, perhaps, be sufficient to notice the doctrines of the two principal physicians of antiquity, Hippocrates and Galen, and to give a list of such of their treatises on the subject as are still extant, referring the reader for a more detailed account to the Histories of Medicine by Le Clerc and Sprengel, and especially to the work by Sophocles ab Oeconomus, entitled "Specimen Pathologiæ Generalis Vo- terum Graecorum," Berol., 8vo, 1833. Hippocrates, says Sprengel, in his pathology occupied himself much less about the immediate than the remote causes of diseases. It is true that he admitted the theory of elementary humours, but he very rarely makes use of it in the explanation of the causes of different affections. He bases his opinions on the manner in which we find in his writings very few speculations upon the essence of diseases. In the treatise Περὶ τῶν ἐν Κεφάλῃ Τραύματον, "De Capitis vul- nerus," he explains inflammation by the blood's flowing into parts into which it had not penetrated before. In another passage he has recourse to the elementals, attributes to air for barrenness. He points out two general causes, heat and cold, moisture and emptiness, and refers all external irritations to these two causes. He explains the formation of urinary calculi in a very simple manner: these extraneous bodies are owing to the accumulation of sandy particles contained in the urine. Galen, in a very important passage, says that "Hippocrates never desired to explain the variety of diseases according to his imagination; he was convinced that it was always safer to refer them to phenomena that were plainly recognised. Thus he never proposes his own method of cure but when he believes it founded on experience." He rendered a great service to pathology by not multiplying to infinity, like the physical theories of the Cidian school (vid. Medicina, p. 629), the number of causes. He observed with scrupulous attention the essential difference which exists between the same symptoms according as they arise from different causes. It is upon these principles that he founded his excellent axioms of diagnosis, and declared that physicians had not sufficient experience to recognise the curious and minute causes of the sequellae of the emptiness of the vessels, of some other irritation, or of pain and the intensity of the malady; nor could they discern the accidents occasioned by the constitution of the individual. Thus he established between active and passive symptoms a distinction which he believed to be more important than the causes and symptoms of diseases according to species founded upon pure subtilities. He devoted his whole attention to the remote causes of disease, particularly to the air and winds. He began by explaining the action of heat and cold upon the human body, and then pointed out the changes that the influence of the season and weather occasions in the human frame. He thought a dry atmosphere more healthy than a very damp one, and explained the variations of the weather in the different seasons as a sufficient cause for a number of diseases peculiar to each part of the year. Many of these principles have perhaps only been founded upon a single observation; indeed, sometimes his observations were perhaps incorrect, because they were based upon insufficient experiments. Withal he seems to have been well acquainted with a disease in a town, situated opposite to such or such a quarter of the heavens, he did not fail to attribute it to the influence of the climate. For this reason he attributed abortion and hydrocele to the north wind, and the fecondity of women to the east wind. He even went so far as to think that water possessed particular qualities according to the different countries where it was met with and the winds to which it was exposed. The Humoral Pathology, as it is called, or the theory according to which all maladies are explained by the mixture of the four cardinal humours, viz., Blood, Bile, Mucus or Phlegm (φλέγμα), and Water, is found in the writings of some of the most celebrated physicians developed by Plato. The common source of all these humours is the stomach, from whence they are attracted by different organs when diseases develop themselves. To each of these four humours was assigned a particular source; the bile is prepared in the liver, the mucus in the head, and the water in the spleen. The bile containing all the acute diseases; the mucus contained in the head occasioned catarrhs and rheumatism; 18 dropsy depends upon an affection of the

---

The following is Sprengel's analysis of the Pathology of Galen. He defines health to be that state in which the body is exempt from pain, and performs its usual functions without obstacle; and disease to be the contrary to this, viz. that state of the body (...).

When the blood is in too great a quantity, it is of importance to determine whether this superabundance is absolute, or only with reference to the strength of the patient. Hence arise two kinds of plethora which the modern schools have adopted. Galen gives to every disorder of the humours the name of perturbation, which takes place every time that a stagnant humour is exposed to a high temperature without evaporating. For this reason, suppuration, and even the sediment of urine, are proofs of putridity. In every fever there is a kind of putridity which gives out an unnatural heat, which becomes the cause of fever, because the heart, and afterward the arterial system, takes part in it. All fevers arise from a deterioration of humours, with the exception of the epidemic fever, which proceeds

from a particular affection of the \( \text{πνεύμα} \). Among the intermittent fevers, Galen attributes the quoad vitam to the disorder of the phlegm, the sudor to that of the bile, and the paroxysm of the putrefaction to the black bile, or atvabile. This last humour being the most difficult to set in motion, requires also the most time to bring on the attack. A very extraordinary thing, says Sprengel, is, that this arbitrary hypothesis is really supported by a great number of facts; and hence it has found, even in modern times, many supporters of no common merit. Galen, like Hippocrates, especially in fever, attributed the inflammation very simply by the introduction of the blood into a part which did not before contain any. If the \( \text{πνεύμα} \) insinuates itself at the same time, the inflammation is then \( \text{πνεύματος} \), \( \text{πνευματοδύος} \): it is, on the other hand, rare, \( \text{φλεγμονόδυος} \), when the blood penetrates alone; \( \text{ασθένμα}, \text{ομυμα δύος} \, \text{αποθελωμα}, \text{ατριμα} \) when it is accompanied by phlegm; \( \text{εγκεφαλικός}, \text{ενυποπαθής} \) when bile is joined with it; and \( \alphaικτός, \text{οσμόνεος} \) if accompanied by atvabile. He made the same division of hemorrhage as is admitted in the present day; he divides it into that which is produced by anastomosis, dilatation, etc.

The following are the titles of the works relating to Pathology that are found in the collection of writings that bear the name of Hippocrates, but of these none are undoubtedly genuine (see Choulant, Hippokrates, ii. 75. 2). "On the introduction of the blood in the veins, and the mode in which it is retained in different parts, and which is almost always accompanied by phlegm" (De Med., Lib. vii., c. viii., 646.).—1. De \( \text{πνεύμα} \) (vid. \( \text{Paho} \)).

PATRIA POTES TAS.

‘Ωδηρα.1 In the same bowl the bowl was commonly brought to table,2 an example of which is λεκάνων τῶν ἀρχαίων κριον, i.e., “a basin of stewed hare.”

But it is to be observed, that dishes (vid. Lank., Patras) were used to bring to table those articles of food, the form and solidity of which were adapted to such vessels.

The silver bowl was sometimes ornamented, as with ivy-leaves (hederata),4 or by the insertion of mirrors (speculatae). These bowls weighed from .10 to .20 lbs. each. Vitellius, wishing to obtain an earthenware bowl for his table, had a furnace set up purposely to bake it.5

A method of divination by the use of a basin (άκουσαντες) is mentioned by Tzetzes on Lycochron, v. 818.

PATRES. (Vid. Patrich.)

PATRIA POTES TAS. Potestas signifies generally a power or faculty of any kind by which we do anything; he says Paulus,1 has several significations: when applied to magistratus, it is imperium; in the case of children, it is the patria potestas; in the case of slaves, it is dominium. According to Paulus, then, potestas, as applied to magistratus, is equivalent to imperium. Thus we find potestas associated with the adjectives prætoria, consularis. But potestas is applied to magistratus not in the same sense, as for instance to questors and tribunit pleas;2 and potestas and imperium are often opposed in Cicero. Thus it seems that this word potestas, like many other Roman terms, had both a wider signification and a narrower one. In its wider signification it might mean all the power that was delegated to any person by the state, or the extent of that power. In its narrower significations, it was, on the one hand, equivalent to imperium; and, on the other, it expressed the power of those functionaries who had not the imperium. Sometimes it was used to express a magnetistas, as a person,3 and hence, in the Italian language, the word potes-tas signifies a magnetistas.

Potestas is also one of the words by which is expressed the power that one private person has over another, the other two being manus and mancipium. The potestas is either dominica, that is, ownership, as exhibited in the relation of master and slave (vid. servus), or patria, as exhibited in the relation of father and child. The mancipium was fixed after the infantology of the potestas dominica. (Vid. Manchipum.)

Patria potestas, then, signifies the power which a Roman father had over the persons of his children, grandchildren, and other descendants (filiifamilias, filifamiliares), and generally all the rights which he had by virtue of his paternity. The foundation of the patria potestas was a legal marriage, and the birth of a child gave it full effect. (Vid. Mariage, Roman.)

It does not seem that the patria potestas was ever viewed among the Romans as absolutely equivalent to the dominica potestas, or as involving ownership of the scutum; and yet the original notion of the patria seems very near to that of the dominica potestas. Ovid says that the father had the power of life and death over his son as a member of his familia: he could sell him, and so bring him into the mancipi causa; and he had the jus noxii dandi as a necessary consequence of his being liable for the delicts of his child. He could also give his daughter in marriage, or give a wife to his son, don vorce his child, give him in adoption, and emancipate him at his pleasure.

The father could exerethenate his son, he could substitute another person as heir to him (vid. Heirs), and he could, by his will, appoint him a tutor.

The general rights and disabilities of a filiusfamilias may be thus briefly expressed: “The child is incapable, in his private rights, of any power or dominion; in every other respect he is capable of legal rights. The incapacity of the child is not to be reckoned as a legal incapacity, inasmuch as the child could acquire by contract, for instance; but everything that he acquired was acquired for his father.”

As to matters that belonged to the jus publicum, the son laboured under no incapacities; he could vote at the comitia tributa, he could fill a magistracy, and he could be a tutor for the tutor was considered a part of jus publicum.

The child had connubium and commercium, like any Roman citizen who was sui juris, but these legal capacities brought to him no present power or ownership. His marriage was legal (justum), but if it was accompanied with the in manum conventio, his wife came into the possession of the father, and not of the son. The sons of children were in all cases in the power of their grandfather when the son was.

Inasmuch as he had commercium, he could be a witness to mancipationes and testaments, but he could not have property nor servitutes. He had the testamenti facio, as already stated, so far as to be a witness to a testament, but he could not make a testament, for he had nothing to dispose of; and he could not have a heres.

He could, as already observed, acquire rights for his father by contract, but none for himself, except in the case of an adscriptulus, an instance which shows the difference between a son and a slave. (Vid. Quaestiones.) But he could not incur obligations and could be sued like a paterfamilias.

The foundation of these rules of law was the maxim that the condition of a master could be improved by the acts of his slaves, but not made worse; and this maxim applied equally to a son and a slave. Between the father and the son no civilitas existed, for there could exist no recognition of the master, consequently, could have a right of action against the other. Some writers have supposed that there was a difference between the capacities and incapacities of a filiusfamilias and a filiafamilias as to obligations; but the reasons alleged by Savigny seem conclusively to show that there was no difference at all.

The incapacity of the child to acquire for himself, and his capacity to acquire for his father, as well as their mutual incapacity of acquiring rights of action against one another, are viewed by some modern writers as a consequence of a legal unity of person, while others affirm that there is no trace of such a fiction in the Roman law, and that the assumption was made to explain the rule of law. Indeed, the fiction of such a unity is quite unnecessary, for the fundamental maxim already referred to, that a man may be made richer, but not poorer, by his slaves and children, is a simple positive rule. Though the child could not acquire for himself, yet all that he did acquire for his father became his own property; and he was incapable of his father’s death, a circumstance which material by distinguishing the acquisitions of a son from those of a slave; and, accordingly, the son is sometimes, though not with strict propriety, considered as a kind of joint owner with his father.

1. (Savigny, System, 36c, in., 59.)
The rule as to the incapacity of a filiusfamilias for acquiring property was first varied about the time of Augustus, when the son was empowered to acquire for himself and to treat as his own whatever he got in military service. This was the cas-
trense peculium. It was not without reason to which the son was considered as a person sui juris. But if the filiusfamilias died without having made any dispo-
sition of this peculium, it came to the father, and this continued to be the law till Justinian altered it; but in this case the property came as peculium, not as hereditas. The privileges of a filiusfamilias as to the acquisition of property were extended under Constantine to his acquisitions made during the discharge of civil offices; and as this new privi-
lege was framed after the analogy of the castrrense peculium, it was designated by the name quasi castr-
trense peculium. Farther privileges of the same kind were also given by Constantine and ex-
tended under subsequent emperors (bona qua patri
non acquiruntur).

The patri potestas began with the birth of a child in lawful marriage. If a Roman had by mis-
take married a woman with whom he had no con-
nubium, thinking that connubium existed, he was allowed to prove his case (causa erroris probatio),
upon doing which, the child that had been born and the wife also became Roman citizens, and from that time the son was in the power of the father. This cause probatio was allowed by a senator comprising, as it appears from the context, and a comparison with Ulpian's Fragments, an amendment of the lex Eliá Sentia. Other in-
stances of the cause probatio are mentioned by
Gaius.

It was a condition of the patri potestas that the child should be born in marriage. By the old law, then, the subsequent matrimony did not legitimize a child born before the marriage. But it seems to have early become the fashion for the emperor, as an act of grace, to place such child on the same footing as legitimate children. The legitimation per subsequens matrimonium only be-
came an established rule of law under Constantine, and was introduced for the advantage of children whose parents became Roman citizens after their birth. In the time of Theodosius II., the rule was estab-
lished by which a child was legitimated per obla-
tionem curiae. To these two modes of legitima-
tion Justinian added that per rescriptum principis. The child thus legitimated came into the familia and the potestas of his father as if he had been born in lawful marriage.

The patri potestas could also be acquired by either of the modes of adoption. (Vid. Adoptio, Roman.)

The patri potestas was dissolved in various ways. It was dissolved by the death of the father, upon which event the grandchildren, if there were any, who had hitherto been in the power of their grandfather, came into the power of their father, who was now sui juris. It could also be dissolved in whole or in part during the lifetime of the father. A maxima or media capacita diminuitio, either of the parent or child, dissolved the patri potestas; though, in the case of either party sustaining a capi-
titas diminuitio by falling into the hands of an en-
emy, the relation might be revived by postliminium. A father who was adrogated, and, consequently, sustained a minima capacita diminuitio, came, together
with his children, who had hitherto been in his power, to the power of his adoptive father. The emancipation of the child by the father was a common mode of dissolving the patri potestas, and was accompanied by the minima capacita diminuitio.

If a son was elected flamén dialis, or a daughter
was chosen a vestal, the patri potestas ceased; and in the later period it was also dissolved by the son's attaining certain civil or ecclesiastical dignity. The potestas of the father might cease without the son becoming sui juris, as in the case of the son being given in adoption.

The term patri potestas strictly expresses the power of the father, as such, which arises from the parental relation; but the term also imports the rights of the child as a filiusfamilias or filifamilias. Of these rights the most important was the capacity of being the suus heres of the father. Gener-
ally the parent could dispose of his child at his pleasure, and thus deprive him of the rights of au-
gration; but the law in this respect was altered by Justinian, who made the consent of the child neces-
sary.

PatriCII. This word is evidently a deriva-
tive from pater, which frequently occurs in the Ro-
man writers as equivalent to senator. Patricii therefore signifies those who belonged to the pa-
tres "patres cos (senatores) voluit nominari, pa-
triosque corum liberos," though it seems to be a mistake in these writers to suppose that the patri-
cii were only the offspring of the patres in the sense of senators, and necessarily connected with them by blood. The connexion was, as we shall see hereafter, a much wider one, but, in conse-
tquence, the use of patres and patricii are sometimes used as convertible terms, so that patricii stands for sen-
ators. The words patres and patricii have thus radially the same meaning, and some of the an-
cestors believed that the name patres was given to that particular class of the Roman population from the fact that they were fathers of families; others that they were called so from their age, or be-
cause they had the title of patres of the whole na-
tion, or because they were Roman citizens, as fathers did among their children. But most writers refer the name to the patrocinium which the patricians exercised over the whole state, and over all classes of persons of whom it was composed.

In considering who the patricians were, we have to distinguish three periods in the history of Rome. The first is down to the establishment of the plebeians as a sec-
ond order: the second, from this event down to the time of Constantine, during which time the patri-
cians were a real aristocracy of birth, and, as such, formed a distinct class of Roman citizens opposed to the plebeians, and afterward to the new plebian aristocracy of the nobles: the third period extends from Constantine down to the middle ages, during which the patricians were no longer an aristocracy of birth, but were persons who merely enjoyed a title, first granted by the emperors, and afterward by the popes also.

First Period: from the foundation of the city to the establishment of the plebeian order. Niebuhr's re-
searches into the early history of Rome have estab-
lished it as a fact beyond all doubt, that during this period the patricians were the whole power of Ro-
man citizens; that they were the populus Romanus; and that there were no other real citizens besides them. The other parts of the Roman population, namely, clients and slaves, did not belong to the patri-
cians. The senators or patres (in the narrower

1. (Juv. Sat. xvi. 51)—2. (Gaius, i. 67.)—3. (vili. 4.)
7432
The patricians, who acted as their representatives. The burghers or patricians consisted originally of three distinct tribes, which afterward became united into the sovereign populace. These tribes had founded settlements upon several of the hills of Rome, and had occupied the suburbs of the city of Rome. Their names were Rhamnes, Tarquinius, and Luceres, or Rarnnenses, Titienes, and Lucerenses. Each of these tribes consisted of ten curiae, and each curia of ten gentes, and of the same number of decuriae, which were established for representative and military purposes. (Vid. Sueton.) The patricians, who had settled on the Palatine Hill, said to have been founded by Romulus. As long as it stood alone it contained only one hundred gentes, and had a senate of one hundred members. When the Titii, or Sabine settlers on the Quirinal and Viminal Hills, under King Tatius, became united with the Rhamnes, the number of gentes, as well as that of senators, increased to two hundred. These two tribes, after their union, continued probably for a considerable time to be the patricians of Rome, until the third tribe, the Luceres, which chiefly consisted of Etruscans, who had settled on the Caelian Hill, also became united with the other two as a third tribe. When this settlement was made is not certain; but it is probable it occurred without the consent of the Rhamnes; others, that it took place at a later time. But the Etruscan settlement was in all probability older than that of the Sabines, though it seems occasionally to have received new bands of Etruscan settlers even as late as the establishment of the Republic.

The distinction of these three tribes did not take place at once: the union between Latins and Sabines is ascribed to the reign of Romulus, though it does not appear to have been quite perfect, since the Latins on some occasions claimed a superiority over the Sabines. The Luceres existed for a long time as a separate tribe without enjoying the same rights as the other two tribes until Tarquinus Priscus, one of the Luceres, caused himself to be elected to a footing of equality with the others. For this reason he is said to have increased the number of senators to 300 (compare Sueton.) and to have added two vestal virgins to the existing number of four. The Luceres, however, are, notwithstanding this equalization, sometimes described as the patres majorum gentium or patres majorum gentium; though this name is also applied to other members of the patricians, e.g., to those plebeian families who were admitted by Tarquinus Priscus into the three tribes, and in comparison with these, the Luceres are again called patres majorum gentium. That this distinction between patricians major and minor gentes was kept up in private life at a time when it had no value whatever in a political point of view, is clear from Cicero. Tullius Hostilius admitted several of the noble gentes of Alba among the patricians (in patres leges), viz., the Tullii (Julii!), Servili, Quinctii, Goganni, Curiaitis, and Ceiellii, to which Dionysius (in his Genealogy Metiliae) Anius, Tarquinus Priscus, and the Tullii, and Tarquinii Priscus the Tullii, and Servius Tullius the Octavia, and even Tarquinii Superbus seems to have had similar intentions. We do not hear the number of gentes was increased by these adoptions, and must therefore suppose that some of them had already become extinct, and that the vacancies which thus arose were filled up with these new burghers. During the time of the Republic, distinguished strangers and wealthy plebeians were occasionally made Roman citizens, and particularly by Claudius and his gens, and Domitius Aenobarbus. As regards the kings period, the Roman historians speak as if the kings had had the power of raising a gens or an individual to the rank of a patrician; but it is evident that no king could not do this without the assent of the senate and the curiae, and hence Livy makes Caecilus Metellus sayationem in patres, aut ab regibus lecti, which lectio, of course, required the sanction of the body of patricians. In the time of the Republic, such an elevation to the rank of patrician could only be granted by the senate and the populace. Since there were no other Roman citizens but the patricians during this period, we cannot speak of any rights or privileges belonging to them exclusively; they are all comprehended under Civitas (Roman) and gens. Respecting their relations to the kings, see Comitia Curiata and Suetonius. During this early period we can scarcely speak of the patricians as an aristocracy, unless we regard their relation to the clients in this light. (Vid. Clcins.)

Second Period: from the establishment of the plebeian order to the time of Constantine. At the time when the plebeians became a distinct class of citizens, who shared certain rights with the patricians, the latter lost in so far as these rights no longer belonged to them. Besides, the number of plebeian patricians was equal to that of the patricians, and the greater number of rights, and those the most important ones, still remained in the exclusive possession of the patricians, who alone were cives op-tima pura, and were the patres of the nation in the same sense as before. All civil and religious offices were in their possession, and they continued, as before, to be the populus, the nation now consisting of the populus and the plebeians. This distinction, which Livy found in ancient documents, seems, however, in the course of time, to have fallen into oblivion, so that the historian seems to have scarcely aware of it, and uses populus for the whole body of citizens, including the plebeians. Under the Antonines, the term populus signified all the citizens within the limits of the city; in an inferior and collateral relation to the plebeians or the community, the patricians now were a real aristocracy of birth. A person born of a patrician family was and remained a patrician, whether he was rich or poor, whether he was a member of the senate or an esquire, or held any of the great offices of the state or not; there was no sentence which could make a patrician a plebeian. As regards the census, he might, indeed, not belong to the wealthy classes, but his rank remained the same. Instances of reduced patricians in the latter period of the Republic are the father of M. Annius Scaurus, and the family of the Sullas previous to the time of the great dictator of that name. The only way in which a patrician might become a plebeian was when, of his own accord, he left his gens and curia, and gave up the sacra, etc. A plebeian, on the other hand, or even a stranger, might, as we stated above, be made a patrician by a lex curiata. But this appears to have been done very seldom; and the
consequence was, that in the course of a few centuries the number of patrician families became so rapidly diminished, that towards the close of the Republic there were not more than fifty such families.\(^1\) Julius Cæsar, by the lex Cæsaria, raised several plebeian families to the rank of patricians, in order that they might be able to continue to hold the offices which they were entitled to by the tenure of their order.\(^2\) Augustus soon found it necessary to do the same by a lex Senenia.\(^3\) Other emperors followed these examples: Claudius raised a number of senators, and such persons as were born of illustrious parents, to the rank of patricians;\(^4\) Vespasian, Titus, and other emperors did the same.\(^5\) The expression for this act of raising persons to the rank of patricians was in patricio or in familiam patriciorum egeri.

Although the patricians, throughout this whole period, had the character of an aristocracy of birth, yet their political rights were not the same at all times. The first centuries of this period are an almost uninterrupted struggle between patricians and plebeians, in which the former exerted every means to retain their exclusive rights, but which ended in the transformation of the two classes into that of the two orders. (\textit{Vid. Pless.}) Only a few insignificant priestly offices, and the performance of certain ancient religious rites and ceremonies, remained the exclusive privilege of the patricians, of which they were the prouder, as in former days their religious power and significance were the basis of their political superiority.\(^6\) At the time when the offices of the patricians and plebeians ceased, a new kind of aristocracy began to arise at Rome, which was partly based upon wealth and partly upon the great offices of the Republic, and the term nobles was given to all persons whose ancestors had held any of the curule offices. (Compare \textit{Novi Homines}.) This aristocracy of nobles threw the old patricians, as a body, still more into the shade, though both classes of aristocrats united, as far as was possible to monopolize all the great offices of the state;\(^7\) but, although the old patricians were obliged in many cases to make common cause with the nobles, yet they could never suppress the feeling of their own superiority; and the veneration which historical antiquity alone can bestow, always distinguished them as individuals from all others. Even when they gradually gained the upper hand, is seen from the measure adopted about the first Punic war, by which the expenses for the public games were no longer given from the esarum, but were defrayed by the ediles; and as their office was the first step to the great offices of the Republic, that measure was a tacit exclusion of the poorer citizens from those offices. Under the emperors the position of the patricians as a body was not improved; the filling up of the vacancies in their order by the emperors began more and more to assume the character of an especial honour, conferred upon a person for his good services or merely for personal distinction, so that the transition from this period to the third had been gradually preparing. The ancient political and religious privileges which the patricians at first possessed alone, but afterward were compelled to share with the plebeians, see \textit{Pless}, and the articles treating of the several Roman magistracies and priestly offices, compare also \textit{Gens, Curia, Senatus}.

\textit{In their dress and appearance the patricians were scarcely distinguished from the rest of the citizens, unless they were senators, curule magistrates, or equites, in which case they wore, like others, the ensigns peculiar to these classes. The only thing by which they appear to have been distinguished in their appearance from other citizens, was a peculiar kind of shoes, which covered the whole foot and was generally of leather, and did not as high as the shoes of senators and curule magistrates. These shoes were fastened with four strings (\textit{corniciae} or \textit{lora patricia}), and adorned with a lunula on the top.\(^8\) Festus\(^9\) states that multus was the name of the shoes worn by the patricians; but the passage of Varro which he adduces only shows that the mulloii (shoes of a purple colour) were worn by patricians.\(^{10}\) }

\textit{Third Period: from the time of Constantine to the Middle Ages. From the time of Constantine the dignity of patrician was a personal title, which con- ferred on the person to whom it was granted a very high rank and certain privileges. Hitherto patricians had been only genuine Roman citizens, and the dignity had descended from the father to his children; but the new dignity was created at the beginning of the Christian era, when Constantine was not a Roman senator, and was not a Roman citizen; but the dignity which was conferred on him was not given to him as a patrician in the old sense of the word. \textit{Patricius, patricius, patricius codicillare or honorarii.\(^{11}\) All of them, however, were distinguished in their appearance and dress from ordinary persons, and seldom appeared before the public otherwise than in a carriage. The em- perors were generally very cautious in bestowing this great distinction, though some of the most arbitrary despots conferred the honour upon young men, and even upon eunuchs. Zeno decreed that no one should be made patricius who had not been consul, prefect, or magister militum.\(^{12}\) Justinian, however, did away with some of these restrictions. The elevation to the rank of patrician was testified to the person by a writ called diploma.\(^{13}\) }

This new dignity was not confined to Romans or subjects of the Empire, but was sometimes granted to foreign princes, such as Odoacer, the chief of the Heruli, and others. When the popes of Rome had established their authority, they also assumed the right of bestowing the title of patricius wholeheartedly upon persons, and many of the German emperors were thus distinguished by the popes. In several of the Germanic kingdoms the sovereigns imitated the Roman emperors and popes by giving to their most distinguished subjects the
trite of patricians, but these patrici were at all times much lower in rank than the Roman patrici, a title of which kings and emperors themselves were proud.

Patrimi ET Matrimi, also called Patrimi et Matrimes, were those children whose parents were both alive (matrimes; called by Dionysius apuleius), in the same way as pater patrum signified father, while Servius, however, confines the term patrimi et matrimes to children born of parents who had been married by the religious ceremony called confraratio: it appears probable that this is the correct use of the term, and that it was only applied to such children so long as their parents were alive. We know that the children of former patricians who had been married by confraratio, and as the children called patrimi et matrimes are almost always mentioned in connexion with religious rites and ceremonies, there seems to be a strong probability that the term was also applied to the children of such marriages, who would probably be thought more suitable for the service of the gods than the offspring of other marriages.

Patriommi (patronum) were magistrates at Sparta, who exercised, as it were, a paternal power over the young citizen. If a freedman were instituted by Cleomenes, who destroyed the power of the sygovia by establishing patriommi in their place. The sygovia, however, was not abolished by Cleomenes, as it is again spoken of by Pausanias, and also in inscriptions. The patriarchi were mentioned by Philostratus among the principal magistrates along with the gymnarch and tetrarch. They also spoke of by Plutarch. Their number is uncertain; but Böckh has shown that they succeeded to the powers which the ephori formerly possessed, and that the first patriarchus was the káivnu of the state, that is, gave his name to the year, as the first ephor had formerly done.

PATRONUS. The act of manumission created a new relation between the manumissor and the slave, which was analogous to that between father and son. The manumissor became, with respect to the manumitted person, his patron, and the manumitted person became the libertus of the manumissor. The word patronus (from pater) indicates the relation of the relation of father and son. If the manumissor was a woman, she became patrona; and the use of this word instead of matrona appears to be explained by the nature of the paternal rights. Viewed with reference to the early ages of Rome, this paternal relation must be considered a part of the ancient clientia; but from the time of the Twelve Tables at least, which contained legislative provisions governing the subject of paternal rights, we may consider the relation of patrons and liberti as the same both in the case of patrician and plebeian manumissores.

The libertus adopted the gentle name of the manumissor. Cicero's freedman Tito was called M. Tulius Tito. The libertus owed respect and gratitude to his patron, and in ancient times the patron might punish him in a summary way for neglecting those duties. This obligation extended to the children of the libertus, and the duty was due to the children of the patron. In later times the patron had the power of relegating an ungrateful freedman to a certain distance from Rome, a law probably passed in the time of Augustus.

In the time of Nero it was proposed to pass a senatus consultum which should give a patron the power of reducing his freedman to slavery if he misconducted himself towards his patron. The measure was not enacted, but this power was given to the patron under the later emperors. The lex Aelia Sentia gave the patron a right of prosecuting his freedman for ingratitude (ut ingratum accusare). An ingratus was also called libertus impius, as being deficient in pietas.

If the libertus brought an action against the patron (in jus vocavit), he was himself liable to a special action on the case; and he could not, as a general rule, institute a capital charge against his patron. The libertus was bound to support the patron and his children in case of necessity, and to undertake the management of his property and the tutela of his children: if he refused, he was in gratu.

If a slave were the property of several masters, and were manumitted by all of them, and became a Roman citizen, all of them were his patroni.

The manumissor could secure to himself further rights over his libertus by a stipulatio, or by taking an oath, the patron. The effects of such agreements were gifts from the libertus to the patronum (dona et munera) and services (opera). The oath was not valid unless the person was a libertus when he took it. If, then, he took the oath as a slave, he had to repeat it as a freeman, which seems to be the meaning of the passage of Cicero in which he speaks of an agreement. These opera were of two kinds, officiales, which consisted in respect and affection, and fabriales, which are explained by the term itself. The officiales determined by the death of the patronus, unless there was an agreement to the contrary; but the fabriales, being of the nature of money or money's worth, passed to the hands of the libertus, like any other property. The patronus, when he commanded the opera of his libertus, was said "ei operae indicere or imponere." The patron could not command any services which were disgraceful (turpes) or dangerous to life, such as prostitution or fighting in the amphitheatre; but if the libertus exercised any art or calling (artifex), even if he learned it after his manumission, the opera in respect of it were due to the patron.

The lex Julia et Papia Poppaea released freedmen (except those who followed the ars ludica, or hired themselves to fight with beasts) from all obligation as to gifts or opera who had begotten two children and had them in their power, or one child five years old or more.

If liberty was given directly by a testament, the testator was the manumissor, and his paternal rights would consequently belong to his children: if it was given indirectly, that is, per fideicommissum, the person who performed the act of manumission was the patronus. In those cases where a slave obtained his freedom under the lex Julia et Papia, Silanus, who assigned him a patronus; and if this was not done, that person was the patron of whom the libertus had last been the slave.

The paternal rights were somewhat restricted...
ATRONUS.

when the act of manumission was not altogether the free act of the manumissor. For instance, the manumissor per fidicommision had all the patronal rights, except the power to prosecute for ingrate, the right to be supported by the libertus, and to stipulate for munera and operae: his rights against the property of the libertus were, however, the same as those of any other manumissor. If a slave had given money to another person in order that this other person might purchase and manumit him, and the master had no patrocinium, and the libertus did not even lose the name of patron, if he refused to perform the act for which he had received the money, and allowed the slave to compel him to perform his agreement, which the slave could do by a constitutio of M. Aurelius and L. Verus. If a master manumitted his slave in consideration of a sum of money, he retained all patronal rights, but he could not stipulate for operae. A person who purchased a slave, and on the occasion of the purchase agreed to manumit him, had all patronal rights except the right of prosecuting for ingratitude in case the slave compelled him to perform his agreement, which the slave could do by a constitutio of M. Aurelius and L. Verus.

It was the duty of the patron to support his freedman in case of necessity, and if he did not, he lost his patronal rights: if he consigned the freedman who he had purchased to him, if he took a capital charge upon him. The lex Aelia Sentia, among its various provisions, contained several that related to the rights and duties of the patron.

A capitis diminutio, either of the patron or the libertus, dissolved the relation between them. (See Tacit., Hist., ii, 92, where "jura libertorum" means "jura patronorum" or jura in libertos." The relation was dissolved when the libertus obtained ingenitas by the natalium restitutioni, but not when he merely obtained the jus aureorum annulorum. (Vid. Ingenius.)

The most important of the patronal rights related to the property of liberti who died intestate or having made a testament.

The subject, so far as concerns the Ante-Justinian period, may be distributed under the two following heads: 1. The ordinary rules of law, and, 2. the extraordinary: the former comprehend the rules of the old civil law, and the edict on the bonorum possessio; and the latter, the bonorum possessio contra tabulas liberti and contra suas non naturales, the bonorum possessio contra tabulas libertae, and the right to a vicarius part which was given by the lex Papia Poppaea.

By the law of the Twelve Tables, if a freedman died intestate without sui heredes, the patronus was his heir. This right was viewed as a right of agnation. The legitima patronorum tutela was not expressly mentioned in the Twelve Tables, but it was a legal consequence of the rule as to inheritance. It was also to her property, because a mother could not have sui heredes; yet Ulpius himself says that, whether the mother was ingenua or libertinæ, the children could succeed to her inheritance by the senatus consultum Orfitianum. This apparent contradiction is removed by the supposition that the senatus consultum Orfitianum gave the children in such cases an equal right with the patronus.

These patronal rights belonged both to a patronus and a patrona, and to the liber of a patronus. The male children of the patronus had the same rights as the patronus himself; but the females had only the rights which the Twelve Tables gave to the males, and they had not the bonorum possessio contra tabulas testamenti liberti but ab intestato. Consultum Poppas.--If the libertus died intestate these rights were given them by the lex Papia Poppaea. A faculty which is raised by a passage in Justinian's legislation on the patronal rights is discussed by Unterholzer. It seems that the children of a patrona had not, by the Twelve Tables, the same rights as the children of a patronus: but the lex Papia Poppaea probably made some change in this respect.

In order that these patronal rights should exist, it was necessary that the libertus must have been made free by a Roman citizen, and have become a Roman citizen by the act of manumission. Accordingly, if a person obtained the citizenship, it was necessary that he should have a special grant of the ius patronatus in order that he might have patronal rights against his then freedmen, who must also be Roman citizens, to be able to sue after his death. The capitis diminutio, as already observed, either of the patron or the libertus, destroyed the patronal rights to the inheritance.

If there were several patroni or patronae, they divided the inheritance equally, though their shares in the libertus when a slave might have been unequal. These patronal rights resembled a joint-tenancy in English law, for the survivor or survivors of the patron had all the patronal rights to the exclusion of any children of a deceased patronus. A son of a patron also claimed the inheritance to the exclusion of the grandson of a patron. If the patroni were all dead, leaving several children, the hereditas was divided among all the children equally (in capite), pursuant to the law of succession in the case of agnation.

A senatus consultum, which was passed in the time of Claudius, allowed a patron to assign his patronal rights to the inheritance of a libertus to any of his children whom he had in his power, to the exclusion of the rest. The Edict extended the bonorum possessio to patroni. The patronal rights of the civil law were founded on an assumed cognatio: those of the Edict were founded on an assumed cognatio. The Edict called to the bonorum possessio of liberti, 1. their children; 2. their heredos legitimi; 3. their cognati, who must, of course, be descendants; 4. the familia of the patronus; 5. the patronus and patrona, and their children and parents, by which provision was made in case the patronus or patrona had sustained a capitis diminutio, and so could not be called in the manner of order; 6. the husband or wife of the freedwoman or freedman; 7. the cognatio of the manumissor.

Originally, if the freedman made a will, he could pass over (preterire) the patron. But by the Edict, unless he left him as much as one half of his property, the patron or his male children could obtain the bonorum possessio contra tabulas one half of the same. If the liber had no sui heredes except an adopted child, or a wife in manum, or a narus in the manus of his son, the patron had a bonorum possessio of one half against these sui heredes. But if the libertus had children of his
PATRONIUS.

PAUPERIES.

ven blood (naturales) either in his power at the
time of his death, or emancipated, or given
in adoption, and if these children were made heredes
by his testament, or, being præteriti, claimed the
honorum possessio contra tabulas, the patron had no
claim on the freedman’s property. The patron
was not excluded if the children of the freedman
were excluded.

By this lex Papia Poppea, if a freedman had a
property amounting to a hundred thousand sestertii
and fewer than three children, the patronus had an
equal share (siritis pars) with the children, whether
the freedman died testate or intestate; and a
patrona ingenua who had three children enjoyed the
same privilege. Before the lex Papia, patronus had
only the rights which he would have enjoyed had
this but lex ingenua patronus who had two chil-
dren, and libertinae patronus who had three children,
the same footing with respect to the honorum
possessio contra tabulas, and with respect to an
adopted son, a wife in manu, or a nurse in manu
filii, as the edict had placed patroni. The lex
did the same for daughters of the patronus who had
three rights which he would have enjoyed had
not a libertina, who had three children, the
same rights that it gave to a patronus.

According to the old law, as the libreta was in
the legitima tutela of her patron, she could make no
disposition of her property without his consent (pa-
tronus auctore). The lex Papia freed a liberta from
this tutela if she had four children, and she could
consequently, then make a will without the consent
of her patronus, but the law provided that the
patronus should have an equal share with her survi-
viving children.

In the case of a liberta dying intestate, the lex
Papia gave no farther rights to a patronus who had
child, than she would have had in the case of an
adoptei, and therefore, if there had been no capitis
diminuito of the patronus or the liberta, the patrona
inherited the property, even if she had no children, to
the exclusion of the children of the liberta. If the
liberta made a will, the lex Papia gave to the patronus,
who had the number of children required by that law,
the same rights which the edict gave to the patronus
contra tabulas liberti. The same lex gave to the
daughter of a patronus who had a single child, the
same rights that the patronus had contra tabulas
liberti. (Gaius, iii., 53—a passage which Unter-
holzner proposes to correct, but on very insufficient
grounds.)

The laws of law as to the succession of the
patroni to the property of Latin liberti differed in
various respects from those that have been explain-
ed. Being viewed as a peculiun, it had the inci-
dents of such property. It came to the extranei
heredes of the manumissor, but not to his exerherated
children, in both which respects it differed from
the property of a libertus who was a civis Romanus. If
the owner of the libertus was still alive, the
proportion to their interests in the former slave,
and it was consistent with this doctrine that the share
of a deceased patronus should go to his heres. The
senatus consultum Largianum, which was passed in
the time of Claudius, enacted that the property of
Latini should go first to those who had manumitted
them and to their liberti who were expressly
exerherated, according to proximity, and then ac-
cording to the old law, to the heredes of the manu-
misso. The only effect of this senatus consultum
was to prefer liber, who were not expressly Ex-
heredated, to extranei heredes. Accordingly, an em-
ancipated son of the patronus, who was præteritus,
and who could not claim the bonorum possessio of
his father’s property contra tabulas testamenti, had
a claim to the property of a Latinus pro or to the
extranei heredes.

As to the deditii under the lex Elia Sentia,
two were rules. The property of those who
on their manumission would have become Roman
citizens, but for the impediments thereto, came to
their patroni as if they had been Roman citizens:
they had or not, however, the testamenti facio. The
property of those who on their manumission would
have become Latinis, but for the impediments thereto,
came to their patroni as if they had been Latinis:
on this Gaius remarks that in this matter the legis-
lator had not very clearly expressed his intentions
He had already made a similar remark as to a pro-
vision of the lex Papia.

As to the meanings of the word patronus,
we have:

CILIEES AND OVARII.

The subject of the patronatus is one of consid-
erable importance towards a right understanding of
many parts of the Roman polity. This imperfect
outline may be filled up by referring to the authori-
ties given in note 1.

PAVIMENTUM. (VID. HOUSE, ROMAN, p. 519.)

If Bucephalus (or the Peacock, or Pavo Cristatus,
L. "It is impossible to determine with precision the
epoca of the domestication of the Peacock; we
know well, however, that it must have been of
the remotest antiquity, since the fleets of Solomon,
in their distant voyages, brought back, every three
years, to Palestine, peacocks, which are enumerated
among the riches of which the vessels contained. We are informed by Pliny that
the orator Hortensius was the first Roman who had
a peacock killed at his table, when he entertained
the College of Pontiffs at a sumptuous banquet.
The first who bred and fattened peacocks for culinary
purposes was Aufidius Lorcus, who realized by this
business the fortune which he made, as Caelius
asserts, by forwarding an expedition of the
vessels.

In the feasts of the Emperors Vitellius and Helio-
galus, enormous dishes were frequently served up,
composed of ragouts of the tongue's and brains of
peacocks. Buffon says that at first they were
very rare in Europe. At Athens they were exhib-
ited for many years at every festival of the new
moon as an object of curiosity, and people used to
run in crowds from the neighbouring towns and
cities to behold them. This was after the time of
Alexander; for that monarch, though well acquaint-
ed with Greece, had never seen them until he
marched into India, where he found them flying
wild to the farthest borders of the Siwash or
Pendjub. Towards the latter end of his reign he
had so greatly multiplied in Greece, that Aristotle speaks
of them as perfectly well known in that country.

The Peacock was sacred to Juno, and was nurtured
in honour of the goddess, in great numbers, at her
temple in Samos. It is represented, also, on the
coins of this island. According to one explanation,
the bird was sacred on the account of the great 
fulness of the vault of heaven, and hence the Peacock
was consecrated to Juno Urania as to the Queen of
the Skies. Others, however, suppose the bird to have
been held sacred to the goddess, from its announc-
ing by its cry the changes of weather, &c.

PAUPERIES, ACTIO DE. (VID. PAUPERIUS.)

PAUPERIES is the legal term for mischief
done by an animal (quadrumpanum) contrary to the
nature of the animal, as if a man's ox gored another

PECUARIIL

PEDUM.

PECULATUS is properly the misappropriation or theft of public property. Labeo defines it thus: "pecunia publica aut sacrarum factum, non ad eo factum, cujus periculo est." The person guilty of this offence was peculator. Cicero enumerates peculares with scriari, venefici, testamentarii, and funes. The origin of the word appears to be pecus, a term which originally denoted that kind of movable property which was the chief sign of wealth. Originally trials for peculatus were before the popular or the senate. In the time of Cicero, matters of peculatus had become one of the questions perpetuo, which imply some lex De Peculatu, and such a lex is by some writers enumerated among the leges Sullianae, but without stating the authority for this assertion. Two leges relating to peculatus are cited in the Digest, lex Julia Peculatus and lex Julia de Residuo. But the property may be the same lex, though quoted as two leges, just as the lex Julia de Adulteris comprised a provision De Fundo Donati, which chapter is often quoted as if it were a separate lex. Matters relating to sacrilegus were also comprised in the lex Julia Peculatus (ne quis ex pecunia sacra, religiosa publicae ausaret, &c.); matters relating to the debasement of the coinage, the erasing or cancelling of Pompeian coins, were regulated by lex de Residuo applied to those who had received public commission for public purposes, and had retained it (apud quem pecunia publica resedit). The penalty under this lex, on conviction, was a third part of the sum retained. The punishment, which under the lex Julia Peculatus was originally aequis et ignis interdictio, was changed into deportatio: the offender lost all his rights, and his property was forfeited. Under the Empire sacrilegus was punished with death. A "sacrilegus" is one who plunders public sacred places.

PEDANEUS JUDEX. (Vid. Judex Pedaneus.)

PEDARI. (Vid. Senatus.)

Fedica, formed from pes on the same analogy with manica (περισκέλος, lom. et Ati. rei.), a fetter, an ankle ring.

Fetters were worn for the sake of restraint by latives, criminals, and captives, and by horses instead of a halter. Another kind of fetter was the noose (laqueus curtas) used to catch birds, which was the appropriate employment of winter. For the sake of ornament, fetters or ankle-rings were worn by females. (Vid. Periscelis.)

PED/SEQUI were a class of slaves, whose duty it was to follow their master when he went out of his house. This name does not appear to have been given to any slave who accompanied his master; but the pedesqui seem to have formed a special class, which was almost the lowest of all. There was a similar class of female slaves, called pedesqui.

PEDUM (πέδον, λαυροδέντος), a Crook. Its curved extremity was used by the shepherds to lay hold of the sheep or goats, principally by their legs, so as to preserve them from running into danger, or

man. In such cases the law of the Twelve Tables gave the injured person an action against the owner of the animal for the amount of the damage sustained. The owner was bound either to pay the full amount of damages, or to give up the animal to the injured person (noxas dare). Pauperies excepted the notion of injury; it is defined to be "darmnum sine injuria faciens factum," for an animal could not be said to have done a thing: injury. The actio pauperie belonged to the class of noxales actions.1

PAUSAII was the name given to the priests of Isis at Rome, because they were accustomed, in the processions in honour of Isis, to make pauses (pauca) at certain chapels or places, called mansiones, by the road's side, to sing hymns and perform other sacred rites.2

The porticus, or commander of the rovers in a vessel, was sometimes called pauxaria,3 because the rovers began and ceased (pauca) their strokes according to his commands. (Vid. Porticus.)

*PAUSTA, a species of Olive. Virgil calls its berry bitter, because it was to be gathered before it was quite ripe, it having then a bitter or austere taste.3

PECHYS (πεχύς) (Vid. Custodes.)

PECENT (πεκέντ), a Comb. The Greeks and Romans used combs made of boxwood,4 which they obtained, as we do, from the shores of the Euxine Sea. The mountain ridge of Cyrtos, in Galatia, was particularly celebrated for this product. (Vid. Buxum.) The Egyptians had ivory combs,5 which also came into use by degrees among the Romans.6

The golden comb ascribed to the goddesses is, of course, imaginary.7 The wooden combs found in Egyptian tombs are toothed on one side only; but the Greeks used them with teeth on both sides, as appears from the remains of combs found at Pompeii,8 and from the representation of three combs, exactly like our small-tooth combs, on the Amylean marbles.9

The principal use of the comb was for dressing the hair in doing which the Greeks of both sexes were remarkably careful and diligent.10 (Vid. Com., p. 293.) To go with uncombed hair was a sign of affliction.11 The use of the comb in cutting the hair is alluded to by Plautus.12

A comb with iron teeth was used in cornfields, to separate the grain from the straw while it was yet standing. This method of reaping was called pectens, a species of grotto of El Kab, in Egypt, represents a man combing the flax for the purpose of separating the linseed from the stem. The rake used in making hay is called rarus pecten,13 because its teeth are far apart; but this may only be a poetical use of the term.

Two portions of the Greek lyre were called the combs; they may have been two rows of pegs, to which the strings were tied. In a figurative or metaphysical sense, the term was applied to the fingers of a man14 and to the ribs of a horse.15 The use of the comb in weaving, and the transference of its name to the plucked string, are explained under Telam.

PECUARIIL were a class of the publicani who farmed the public postes (pecuia publica).
to rescue them when they were in want of assistance. The accompanying woodcut is taken from a painting found at Civita Vecchia. It shows the crook in the hand of a shepherdess, who sits upon a rock, tending sheep and other cattle. (See also woodcut of Oedipus.)

The herdsman also used a crook, but less curved, with a heavy head, and hence called καλαίφρους; he threw it at any of the herd which strayed from the rest.  

An account of its connexion with pastoral life, the crook is continually seen in works of ancient art in the hands of Pan, and of satyrs, fauns, and shepherds. It was also the usual attribute of Thalia, as the muse of pastoral poetry.

*PEG'ANON (πηγανών), the herb Rue. The two species described by Dioscorides are, in all probability, the Ruta montana and kariotis, the Mountain and Garden Rue. Linnaeus named the former the Peganum harnala. Schneider thinks that the πηγανών of Theophrastus applies to the Ruta graveolens and montana.

PEGMA (πηγμα), a Pageant, i. e., an edifice of wood, consisting of two or more stages (tabulata), which were raised or depressed at pleasure by means of balance-weights (pondera reducita). These great machines were used in the Roman amphitheatres, the gladiators who fought upon them being called pegasares. They were supported upon wheels, so as to be drawn into the circus, glittering with silver and a profusion of wealth. At other times they exhibited a magnificent though dangerous contrast of their most splendid contrivances, and werewolves sometimes happened to the musicians and other performers who were carried upon them. When Vespasian and Titus celebrated their triumph over the Jews, the procession included pageants of extraordinary magnitude and splendour, consisting of three or four stages above one another, hung with rich tapestry, and inlaid with ivory and gold. By the aid of various contrivances, they represented battles and their numerous incidents, and the attack and defence of the cities of Judea.

The pageant was also used in sacrifices. A bull having been slain on one of the stages, the high-priest placed himself below, in a cavern, so as to receive the blood upon his person and his garments, and in this state he was produced by the flames before the worshippers.

The pegmata mentioned by Cicero may have been movable bookcases.

*PELAMYS (πέλαμις), a species of Scomeri or Thunny. According to Pallus, the πέλαμις mentioned by Strabo as a fish of the Black Sea, is the Mugil cephalus, Linn. A species of πέλαμις is at the present day denominated Palymede by the fishermen at Marseilles. The σάρδα was a pickle made from the fish of this species.

*PELARGUS (πελαργός), the common Stork, or Ciconia alba. Belon, the same as the Arlois Ciconia. L. Aristotle errs in making the Stork a hyperbating bird. Eleian and Pliny state, more correctly, that it migrates like the Crane. (Vid. Ciconia.)

PELATAI (πελαταί) are defined by Pollux and other authors to be free labourers working for hire, like modern servants in Europe, in contradistinction to the Helots and Penestae, who were bondmen or serfs, having lost their freedom by conquest or otherwise. Aristotle thus connects their name with πέλατα, he says, from παλαργ, οι, γνώμα δια πανίν παραμόνες: i. e., persons who are obliged by want to attach themselves to others. Timeus gives the same explanation: Πελάτης, δ' άντι τροφος &c. In the home of their master, by means of the regulations expressed by the two terms are by no means similar. Plutarch also uses the word rather loosely for Helots; and we are told of a nation of Ilians (the Ardiai) who possessed 300,000,000 of land in Greece. It was compared by Theopompos with the Helots of Laconia.

*PELECAN (πελεκάν), the Pelican, called also, in Greek, πελεκάνος. It is the Onocrotalus of Pliny, and hence its scientific name of Pelecanus onocrotalus. The Greek name is derived from the πέλας shapeless bill of the bird (πελεκάνος, "an axe").

*PELÉIAS (πελέας), a plant, with Stockhouse and Sprengel refer to the Coronilla campestris, or Joint-plodded Calea. Dioscorides enumerates the πελεκάνος among the synonyms of the Hedyosurus (fūnusonos).

*II. (πελεκάνος), a plant, the Bisortula Pelicanus Stockhouse, however, makes it the same with the preceding.

*PELÉIAS (πελέας), the Rock Dove or Stock Pigeon, the Columba livia, Brisson. It is particularly tardy, and hence Homer gives it the epithet of τρόφον.

PELLEX. (Vid. Concubina, Roman.)

PELLIS (πέλης, δομα, δομα), the hide or skin of a quadruped.

Before weaving was introduced into Europe, there is reason to believe that its inhabitants were universally clothed in skins. The practice continued among the less civilized nations, and is often ascribed by the poets to heroes and imaginary beings. The following is an enumeration of the skins which were thus employed either in fiction or in real life: 1. The skin of a horse (λεκτρον). The story of the Nemean lion may have been founded in fact. The existence of these animals in Northern Greece, Thessaly, and Macedonia, is attested by Herodotus and Aristotle, and that they were comparatively abundant in Asia Minor is manifest from the descriptions in the Homeric poems. Hence Agamemnon, to compare his walk out from his tent by night, puts on, instead of a blanket (vid. Pallium), the hide of a great lion, while Meenlaus clothes himself
that of a leopard. For this purpose the claw of the lion were carefully retained, and sometimes covered with thin plates of gold. The manner of wearing the skin is described in the article Armenia, p. 93. 2. The skin of the tigress was worn in the same manner as the lion's, covering the back from head to foot, and with the claws gilded. 3. The leopard's or panther's skin (the so-called ermine) was worn, not only by Mencius as above quoted, but by Paris, who adorns himself with it in the day, and in sight of the two armies. It is also attributed to Jason. It was greatly admired on account of its spots, and was thrown over the left shoulder like a pallium (Vid. Dionysius, p. 365.)

The high-priest of the Egyptians wore a leopard's skin on great occasions. 4. Pan wore the skin of the lion in his puny form. This custom of wearing a garment resembling the human figure is witnessed by Phidias, who is the middle figure in the woodcut at p. 719. It was adopted as a defence from the nightly cold by Dolon. 5. The foxskin is attributed only to barbarous nations, such as the Scythe.

6. The ermine derives its name from Armenia, with which country the ancients, especially the Ionians, carried on a trade in furs. Ermine skins were considered at great value, delicacy and softness, and were taken to Persia to make robes for the grandees by being sewed together.

7. The doe'skin, worn by Pan over his left side. (Vid. Nereis.) 9. The bear's skin was constantly worn instead of the blanket (χαλκάδα) by Anceus, one of the Argonauts. 10. The bull's hide was employed in like manner (Vid. Armenia, p. 93), especially among the Thracians. 11. The goatskin (αλιγά, υάκος) is mentioned, not only as the attribute of divine and mythological beings (Vid. Aesopus), but as the common clothing of the goatherd and the labouring man. Nevertheless, the language of Varro implies that his countrymen had ceased to clothe themselves in goatskins, which were abandoned to the less refined inhabitants of Tithula and Sardinia. The uncoated goatskin garment of the Sardinius was called mastrucea. The term σιφόρα or σιφώρα denoted an article of domestic furniture, which was made by sewing together several goatskins with the hair on.

12. The sheepskin (βία, νικός, διψήφα) was worn not only by the Laocoonian Helots, but frequently by the laborious poor, as is still the case in many parts of Europe. The lamb'skin was called υπάρηξ, and a dress, supposed to have had a sheepskin sewed to it below, κατωεική.

The preceding statement shows that, as civilization advanced among the Greeks and Romans, the use of hides for clothing was gradually abandoned, the pallium or blanket being substituted for them, and worn very much after the same fashion. Skins, however, continued to be used as coverings for beds and couches, and as clothing for slaves and the poor, especially in the country. The northern nations of Europe retained the use of them in the highest ranks of society (peltata Gétarum curis), while the Greeks and Romans constantly regarded it as a sign of rusticity and savage barbarism to be so clothed. Hence it was matter of censure and indignation when Rufinus, prime minister of the Emperor Honorius, first occupied the seat of justice in a furred robe (maren captiva petilia judic. leges). Nevertheless, the taste which now prevails for the beautiful furs of the north of Europe and Asia, as is shown by Mr. Akin in his admirable essay on this subject, was made at this time a rapid progress throughout the Roman Empire.

*PELLICIAS (πελλίας or -ιας), "a tesiaceous fish, of the genus Chaura. Athenaeus says it is so called from πελώμως, as indicating its great size. Cassaubon, however, contends that the name is de rived from Pelorus, the Sicilian promontory. Its French name is Pelourde.*

PELLTA (πελτή), a small Shield. Iphicrates, ob serving that the ancient Cephus was cumbersome and inconvenient, introduced among the Greeks a much smaller and lighter shield, from which those who bore it took the name of pelotaes. (Vid. Armenia, p. 94; Army, p. 99.) It consisted principally of a frame of wood or wickerwork, covered with skin or leather, without the metallic rim. (Vid. Antyx.) Light and small shields of a great variety of shapes were used by numerous nations before the adoption of them by the Greeks. The round target (Vid. Extra) was a species of the pelta, so that the ancient Spaniards were all, as Strabo says, pelaste. The pelta is also said to have been quadrangular.

The Mosynoci, on the southern shore of the Euxine Sea, used peltae (γέφυρα) made of the hides of white oxen with the hair on, and in shape resembling an ivy-leaf. A light shield of similar construction was part of the national armour of Thrace and of various parts of Asia, and was, on this account, attributed to the Amazons, in whose bands it appears on the works of ancient art sometimes elliptic, as in the bronzes of Siris (woodcut, p. 602), and at other times variously situated on the margin, but most commonly with a semicircular indentation on one side (lunatis pelita)15. An elegant form of the pelta is exhibited in the annexed woodcut, taken from a sepulchral urn in the Capitoline Museum at Rome, and representing Penthesilea, queen of the Amazons, in the act of offering aid to Priam.

Notwithstanding the general absence of metal, the pelta was sometimes ornamented. That borne

---

the pentathlon, and although its invention was attributed to Peloes. These accounts are fabulous.

The pentathlon was not practised until the time when the great national games of Greece began to flourish. The persons engaged in it were called pentathlētai (πένταθληται). The pentathlon consisted of five distinct kinds of games, viz., lepting (λεπτίνα), footrace (δρόμος), the throwing of the discus (δίσκος), the throwing of the javelin or lance (λαίτη) and wrestling (παλέα), which were all performed in one day and in a certain order, one after the other, by the same athlete.

The pentathlon was introduced in the Olympic games in Ol. 18, and we may presume that soon after this it was also introduced at the other national games, as well as at some of the other important festivals, such as the Etrida in Thespis.

The order in which the different games of the pentathlon followed one another has the subject of much discussion in modern times. The most probable opinion, however, is Böckh's, which has been adopted by Dissen, Krauce, and others, although G. Hermann has combated it in a little essay in the German journal, "Sitzungsberichte" of Lipsiae, 1822. The order adopted by Böckh is as follows: 1. The διάλα. This was the most prominent part of the pentathlon, and was sometimes used to designate the whole game. It was accompanied by flute-music. Other writers, as Pausanias himself, and Plutarch, speak as if the whole pentathlon was applied instead of the discus. They describe in these passages the whole game seems to be mentioned instead of that particular one which formed the chief part of it. 2. The footrace. 3. The discus. 4. The throwing of the spear. 5. Wrestling. In later times, probably after Ol. 77, the footrace may have been the fourth game instead of the discus. Böckh, however, doubts this.

From a passage in Demosthenes, it appears that the Pentestae sometimes accompanied their masters to battle, and fought on horseback, as their knights or vassals: a circumstance which need not excite surprise, as Thessaly was so famous for cavalry. The Pentestae of Thessaly also resembled the Laconians, Helots in every respect, for they often rose in arms against their lords. There were Pentestae among the Macedonians also.

PENTETRAE. (Vid. Temple.)

*PENIA (πενία), an insect noticed by Aristotle, which Schneider suggests may have been the Phaenoria geometrica.*

PENTACOSIOMIDINI. (Vid. Census.)

PENTALITHOS (πεντάλιθος). (Vid. Gymnasi-

*PENTAPHYLLON (πεντάφυλλον). "We may be certain," says Adams, "that we are not far from the truth in setting this down for the Tormentilla officinalis, or common Tormentil, although the re-
spective parts of the plant are variously named. It is likely, Pententilla, be so great, that, in all probability, the ancients sometimes applied the same name to both.")

PENTATHLON (πενταθλον, quingymnium) was, next to the pancratium, the most beautiful of all athletic performances. It does not appear to have been known in the heroic ages of Greece, although Appius Claudius, according to the account of latter times, describes Perseus as killing Ajaxis in

PENTECOSTE.

The sacrifice of the two lambs, which is made on the first day after the Passover and kept in the temple, was either awarded to him who had been victorious in all the five games, or to the person who had conquered his antagonist in at least three of the games; but nothing can be determined on this point with any certainty. That the decision as to who was to be rewarded was considered difficult by the Greeks themselves, seems to be implied by the fact that at Olympia there were three hellanodicae for the pentathlon alone.  

As regards the trapezus mentioned above, several statements of ancient writers suggest that the whole of the pentathlon was not always performed regularly, and from beginning to end; and the words by which they designate the abridged game, trapezus, ἀποτραπέζιον, and τριάτερα περενειν, lead us to suppose that the abridged contest only consisted of three games, and most probably of those three which gave to the pentathlon its peculiar character, viz., leaping, and throwing the discus and the spear. The reason for abridging the pentathlon in this manner may have been the wish to save time, or the circumstance that athletes who had been conquered in the first three games were frequently discouraged, and declined continuing the contest. When the trapezus was introduced at Olympia is not mentioned. We know, however, that Keay supposed that the ten probability, from Pausanias, that it was in Ol. 77. The pentathlon required and developed very great elasticity of all parts of the body, whence it was principally performed by young men; and it is probably owing to the fact that this game gave to all parts of the body their harmonious development, that Aristotle calls the pentathl the most handsomely executed of all the Olympic contests, for the same reason, also regarded as very beneficial in a medical point of view; and the Elean Hysmon, who had, from his childhood, suffered from rheumatism, was cured by practising the pentathlon, and became one of the most distinguished athletes. (Compare G. Fr. thiellg., De pentathlo vix quoque commentat. Berlin, 1827.—Kraume, Gymnastik und Agonistik der Hellesen, p. 470—497.)

PENTHEKOSTH', a duty of two per cent. levied upon all exports and imports at Athens. Thus it was levied on corn, which, however, could only be imported, exportation being prohibited by law; and also on woollen cloth, and other manufactured goods. On imports the duty was payable on the unloading of the exports, probably, when they were purchased at the port. It was collected by persons called πενταχωρολογοι, who kept a book in which they entered all customs received. Domesthenes refers to their entry (ἀπογραφὴ) to prove that a ship was not laden with more than a certain quantity of goods. The merchant who paid the duty was said πενταχωροευθεῖας. All the customs appear to have been let to farm, and probably from year to year. Thus a system of "vested interests," called πολεοτητα, acting under the authority of the senate. The farmers were called τελωνας, and were said ομωσεῖται τὴν πενταχωρίαν. They might either collect the duty themselves, or employ others for that purpose. Several persons often joined together in the speculation, in which case the principal, in whose name the bidding took place, and who was responsible to the state, was called ἄρχωνς or τελωνίαρος.

Sureties were usually required. Whether the customs on different articles of merchandise were farmable or not, appears somewhat uncertain. The corn-duty, at least, was farmable for a certain time; and this was the case with another tax. With respect to the amount of the revenue derived from this source, the reader may consult Böckh, Staatsanweis. der Ath., i., 337—342. The πενταχωρία has been thought by some to be the same with the ἀθλημάτων mentioned by Pox-lux; but this was more probably a duty paid for the use of the harbour, whether goods were unloaded or not. Other persons, who sold the service as the εκατονταρχησ, mentioned by Xenophon, as being paid by foreign ships entering the Piræus, and alluded to by Aristophanes. Böckh's conjecture, that, besides a personal harbour duty, a duty was levied of one per cent. on all the goods on board, appears less probable; for it would be unreasonable to exact a custom duty on goods not landed; and if they were to be landed, why should the πενταχωρία be required in addition to the εκατονταρχησ?

PENTECOSTYS (πεντεκοστός). (Vid. Amyt., Grec., p. 98.)

*PENTELICUM MARMOR (Πεντέλεικος ἱθήκος), Pentelic Marble, obtained from Mount Pentelicus, near Athens, the modern name of which is Pentele. With this marble the Parthenon was built, as also the Temple of Ceres at Eleusis. Many celebrated statues and other works of art were covered with it. Its grain is finer and whiter than the Parian, but it does not retain its polish and beauty so well as the latter, being less homogeneous, and, consequently, more liable to decomposition.

*PEPERI (πέπερι), Pepper. "Theophrastus describes the two kinds of pepper, δίστονθαν ὁ δ' αὐτοῦ το γένος, τὸ μὲν γάρ στρογγυλόν, τὸ δὲ προμάκης. The former is quite different from the latter, the first being the Pclesus and Pliny give a full account of the ancient peppers, containing, however, some errors, arising from want of information. Dr. Hill says the oldest Greek writers knew the three kinds of pepper in use at present, and have described them very well, although they erred in supposing them the fruit of the same plant in different degrees of maturity; the plant, which produces both the black and white kinds is named Piper nigrum; that which produces the long, Piper longum."
armament which the Orientals rent as an expression of rage or grief.妇女 of high rank wore their shawls so long as to trail upon the ground (Τραπεζίας λευκόπετον; "Elbow pale of color"). A shawl was sometimes wrapped about the head during sleep. Farnham's vases. Each of the females in this group wears a shift falling to her feet (vid. TUNICA), and over it an ample shawl, which she passes entirely round her body, and then throws the loose extremity of it over her left shoulder and behind her back, as is distinctly seen in the sitting figure. The shawl was also often worn so as to cover the head while it enveloped the body, and more especially on occasion of a funeral (see woodcuts, p. 458), or of a marriage, when a very splendid shawl (παρακλήτος) was worn by the bride. The following woodcut may be supposed to represent

the moment when the bride, so veiled, is delivered to her husband at the door of the nuptial chamber.

He wears the Pallium only; she has a long shawl beneath her shawl, and is supported by the proma. Thus one represented Aurora and Night, but with this difference, that the one arose expanding a shawl dyed with saffron (παρακλήτος Ὅμος), whereas a black one enveloped the other (μελάνωμετός Νές). In reference to the bridal shawl, the epithet παρακλήτωρ was given to Venus.

Of all the productions of the loom, shawls were those on which the greatest skill was bestowed. So various and tasteful were the subjects which they represented, that poets delighted to describe them. The art of weaving them was entirely Oriental (Βαρβαρον ψάφωμα): those of the most splendid dyes and curious workmanship were imported from Tyre and Sidon: a whole book was written by Pocion concerning the Shaws at Carthage. Hence "Shawls" (παρακλήτοι) was one of the titles of works of an imaginative or descriptive character, and was adopted to intimate the variety of their subjects, and the beautiful mode of displaying them. A book, intended to depict some of the characters in the Iliad, and denominated "The Shawl," was ascribed to Aristotle. As a specimen of the subjects delineated, a shawl may be mentioned which defined the frame of the world. Euripides describes one which represented the sun, moon, and stars, and which, with various others containing hunting-pieces and a great variety of subjects, belonged to the Temple of Apollo at Delphi, and was used to form a magnificent tent for the purpose of an entertainment; for it is to be observed, that shawls of this kind were not only kept by wealthy individuals, but often constituted a very important part of the treasures of a temple, having been presented to the divinity on numerous occasions by suppliants and devotees. (Vid. Donaria, p. 760. Panathen., Pastophorus.)

PER CONDUCTIONEM. This legis actionis, says Gaius, was also continued, and gave notice to the defendant to be present on the thirteenth day after the notice, in order that a judex might be appointed. It was an act in personam, and applicable to those cases in which the plaintiff required the defendant to give something (qua intendit darse opertere). This legis action was introduced by a lex Sisilla in the time of the pontificate of Sisilla, and by a lex Sempronia in the case of any definite thing. Gaius observes that it does not appear why this form of action was needed, for in a case of darse opertere there was the sacramentum and the per judices postulationem. The name condictio was applied to actions in personam, after the legis actiones fell into disuse, though improperly, for the notice (demandatio) whence the legis actio took its name was discontinued.

PER JUDICIS POSTULATIO'NEM was one of the legis actiones. The passage in Gaius is wanting in which this form of action is described. It was applicable to a great variety of cases, and is some cases the same as the sacramentum was applicable. (Vid. Per Conductionem.)

PER MANUS INJECTIO'NEM. (Vid. Manus injectio.)

PER PIGNORIS CAPIO'NEM or CAPTIO'NEM. This was one of the legis actiones, or old forms of procedure, which in some cases was found on custom (mes). In others on enactments (lex). It was founded on military usage, and was applied in the case of men who were empowered to demand money from the states on custom (mes), in others on enactments (lex). It was founded on military usage, and was applied in the case of men who were empowered to demand money from the states on
PERDA.

PERDA (περδά), the Perch. The River Perch, or Perda fluviatis, is noticed by Aristotle, Zeller, Discordiales, Playn, &c.; the Sea Perch, or Perda marine, is noticed by Aristotle, Oppian, Ovid, Pliny, Marcelius Sideta, &c.

PERCNOPTERUS. (Vid. Aquila.)

PERCNOUS. (Vid. Aquila.)

PERDICION (περίδικος), a plant, most probably, as Adams thinks, the Petallium of the Wall, or Parietaria officinalis, which Sibthorpe says still retains the name of περίδικος in Greece. It is the Parietaria officinalis of Dioscorides.

PERDIX (περδήκος), the Partridge, or Tetrao Perdix.

“Athenaeus, I believe, is the only ancient author who takes notice of the Red-legged Partridge, or Tetrao rubus, L., sometimes called Perdix Graca. Gesner mentions that it is called ‘the Quail’ by the Italians.” The Tetrao rubus is brought from Capehaliana to Zante, says Sibthorpe, where it is kept in cages to sing, or, rather, call. The Red-legged and Gray Partridge were both seen in the vicinity of Salonica by Mr. Hawkins. The former frequented entirely the rocks and hills, the latter the cultivated ground in the plain.

PERDEULLO. (Vid. Majestas, p. 608.)

PERDEUULLONIS DUUMVIRI were two officers or judges appointed for the purpose of trying persons who were accused of the crime of perduellionis. The crime was the same as the quaestores pannici, and Walter agrees with him, though in a later part of his work he admits that they were distinct. It appears from a comparison of the following passages—Liv., i., 26.—Dig., 1, tit. 2, s. 2, s. 23.— Fest., s. v. Parici and Sororum—either that some of the ancient writers confound the duumviri perdullionis and the quaestores pannici. In the year 33 B.C., when the quaestores were the same persons; for, in giving an account of the same occurrence, some writers call the judges quaestores pannici, while others call them duumviri perdullionis. After the establishment of the Republic, however, there can be no doubt that they were two distinct offices, for the quaestores were appointed regularly every year, whereas the duumviri perdullionis were at times elected, and only in cases of emergency, as had been the case during the kingly period.

Livy represents the duumviri perdullionis as being appointed by the kings, but from Junius Gracchans it appears that they were proposed by the king and appointed by the populuses (reges populi suffragio creabant). During the early part of the Republic they were appointed by the comitia curiata, and afterward by the comitia centuria, on the proposal of the consules. In the case of Rarius (B.C. 63), however, this custom was violated, as the duumviri were appointed by the prator instead of by the comitia centuria. In the time of the emperors, no duumviri perdullionis were ever appointed.

The punishment for those who were found guilty of perdullionis was: they were either hanged on the arbore infausto, or thrown from the Tarpeian Rock. But when the duumviri found a person guilty, he might appeal to the people (in early times the populuses, afterward the comitia centuria), as was done in the first case which is on record, and in the last, which is that of Rarius, whom Cicero

1. (Aristot., H. A., vi., 14.—Id. ib., ii., 12.—Ellian, N. A., xiv. 23.—Discor. M. M., ii., 35.—Plin. xxxix., 9.—Id. 12.—10.—Id. 24.—Apothec. Scal., 5.—H. P., i., 11.—Discor. iv., 86.—Adams, Append., s. v.)—3 (Aristot., h. a., i., 3.—Adams, Append., s. v.)—4—(Græc. Rh. Hist., ii., 3, 5.—Livy, ii., 41.—id., vi., 20.—Dom. Cass., xxxvii., 27.—Id. 5, 36.—8 (Dig., i., tit. 12.—Compare Tzet, Ann., xxii., 22.—Dop. 1, tit. 3, s. 2, s. 23.—Cic., Pro Rabs, 4, &c.)—10.—(Dop. Cass., i. c.—Cic., i. c.—Suet., Julia, 12.)—(Livy, i., 26.)
defended before the people in the oration still extant. Marcus Horatius, who had slain his sister, was acquitted, but was nevertheless obliged to undergo some symbolical punishment, as he had to pass under a yoke with his head covered. The house of those who were executed for perfidiosity was razed to the ground, and their relatives were not allowed to mourn for them.

PERGRINUS, a stranger or foreigner. In ancient times the word pergrinus was used as synonymous with hostis, but in the times of which we have historical records, a pergrinus was any person who was not a Roman citizen, though it belonged to a few citizens, for the Greek cities and Suevic nations were called peregrini, and even the plebeians of old time, who were sometimes called peregrini, were either connected with Rome by ties of hospitality, or they were not. Respecting the former, [vid. HOSPITIUM. The latter, if they had any business to transact at Rome, required a patronus, who undertook the management of their causes in the courts of justice. When the dominion of Rome became extended over a great part of Italy, whole nations were driven into the relation of client to some influential Roman, who then acted as their patronus. But in B.C. 247 a second praeator (praetor peregrinus) was appointed for the purpose of administering justice in matters between such peregrini as had taken upon their abode at Rome. (Vid. PRETOR.) Whether a peregrinus had committed the same crimes as a Roman, and in a part of the town in which he was employed, or the same time the tribune C. Papirius, in B.C. 66. The same measure was sometimes also adopted by the early emperors. As peregrini were not citizens, they had none of the rights of citizens; their presence at Rome was merely an act of toleration on the part of the Romans.

During the last period of the Republic and the first centuries of the Empire, all the free inhabitants of the Roman world were, in regard to their political rights, either Roman citizens, or Latins, or peregrini, and the latter had, as before, neither commercium nor connubium with the Romans. They were either free provincials or citizens who had forfeited their civitas, were expelled a second time by the tribune C. Papirius, in B.C. 66. The same measure was sometimes also adopted by the early emperors. As peregrini were not citizens, they had none of the rights of citizens; their presence at Rome was merely an act of toleration on the part of the Romans.

It should be observed that scholars do not agree as to the real meaning of peregrus: Scaliger describes it as a part of a house built out into the street, as in some old houses of modern times; Ern esti, the term peregrus is applied to the upper part of a house, which was occasionally used by poor philosophers as an observatory. But neither of these two definitions is so applicable to all the passages in which the word occurs as 'that which we have proposed.

PERCYMYNON (πέρυκυμνόν), the common Honeysuckle or Woodbine, the Lonicera pericymon. Some botanical writers, however, prefer the other species, namely, the L. caprifolium. PERIDEIPNON (περίδειπνον). (Vid. FORA, p. 458.)

PERIOCIE (περιοικε). This word properly denotes the inhabitants of a district lying around some particular locality, but it is generally used to designate a dependent population, living without the walls or in the country provinces of a dominant city, and, although personally free, deprived of the enjoyment of citizenship, and the political rights conferred by it. The words σύνοικος and μετοίκοι have an analogous meaning.

A political condition such as that of the περιοικοι of Greece, and like the vassalage of the Germanic nations, could hardly have originated in anything else than foreign conquest, and the περιοικοι of Laconia furnish a striking illustration of this. Their origin dates from the Dorian conquest of the Peloponnesus, when the old inhabitants of the country, the Achaeans, submitted to their conquerors on certain conditions, by which, according to Ephorus,

they were left in possession of their private rights of citizenship (i.e., the right of intermarriage with the Dori ans, and also of their political franchise. They suffered, indeed, a partial deprivation of their lands, and were obliged to submit to a king of foreign race, but still they remained equal in law to their conquerors, and were eligible to all offices of state except the sovereignty. And now, they partial not have 3.)—the as the Perioci in the next generation after the conquest, either from the loss of dominion on the part of the Dorians, or from an unsuccessful attempt by the Achaio ns to regain their independence, the relation between the two parties was changed. The Achaio ns were reci ded from citizens to vassals; they were made tributary to Sparta (or Tyrrhenia), and their lands were subjected to a tax, perhaps not so much for the sake of revenue as in token of their dependence; they lost their rights of citizenship (i.e., as that of intermarriage with the Dorians, the right of voting in the general assembly, and their eligibility to important offices in the state, such as that of a senator, &c. It does not, however, appear that the Perioci (especially in the historic times) were generally an oppressed people, though kept in a state of political inferiority to their conquerors. On the contrary, the most distinguished among them were even elevated above them, and invested with naval command, but probably only because they were better suited for it than the Spartans themselves, who did not set a high value on good sailsmanship. Moreover, the Perioci sometimes served as heavy-armed soldiers or troops of the line: at the battle of Platea, for instance, they supplied 10,000 men, 5000 hoplites and 5000 lighthouse men, which were trained in a difference of rank connected with a difference of occupation among the Perioci themselves. Again, at Spacteria 292 prisoners were taken, of whom 120 were Spartans and the rest Perioci. We also read of calos calos kalapous, or "accomplished and well-born" gentlemen, among the Perioci, serving as volunteers in the Spartan service. But still it is not to be expected, it is not natural, that more competent to the discharge of high functions in a state, and bearing its burdens, should patiently submit to an exclusion from all political rights. Accordingly, we find that, on the rising of the Helots in B.C. 464, some of the Perioci joined them. When the Thebans invaded Laconia (B.C. 389), the Perioci were ready to help them. In connexion with the last war, however, the Perioci were neutral; the Perioci were most bitter against the ruling Spartans. From these and other facts, it appears that the Perioci of Laconia, if not an oppressed, were sometimes a disaffected and discontented class; though, in cases of strong excitement, or of general danger to the whole of Greece, they identified themselves with their conquerors. The very relation, indeed, which existed between them, was sufficient to produce in Sparta a jealousy of their subjects, with corresponding feelings on their part. Nor can we suppose that the Dorians would willingly permit the Perioci to acquire strength and opulence, or even to settle in large towns. In fact, it is stated by Isocrates that the Dorians intentionally weakened the Achaeans, by dispersing them over a great number of hamlets, which they called palle, though they were less powerful than the country parishes of Attica, and were situated in the most unproductive parts of Laconia, the best land of which was reserved for the Spartans. It is not, however, necessary to understand the distance at which many of them lived from Sparta as speaking of a uniform practice; and another of his statements, to the effect that the ephors could put any of the Perioci to death without trial, is either a perversion of the truth, or arose from his confounding the Perioci with the Helots.

Still the grievances of the Perioci were not, after all, intolerable, nor do they seem to have been treated with wantonness or unreason. As an example of the distance at which many of them lived from Sparta, it must have rendered it impossible for them to share in the administration of the state, or to attend the public assemblies; a circumstance which must in some measure have blunted their sense of their political inferiority. Nor were they subjected to the restraints and severe discipline which the necessity of maintaining their political supremacy imposed upon the Spartans, making them more like an "army of occupation in a conquered country" or a "beleaguered garrison" than a society of men united for civil government and mutual advantage. By way of compensation, too, the Perioci enjoyed many advantages (though not considered as privileges) which the Spartans did not. The trade and manufactures of the country were exclusively in their hands. They had the monopoly of the public facility and profit, as they occupied maritime towns. The cultivation of the arts, also, as well in the higher as in the lower departments, was confined to the Perioci, the Spartans considering it beneath themselves; and many distinguished artists, such as embossers and brass-founders, were found in the Laconian schools, all of whom were probably Perioci. Nor is there wanting other evidence, though not altogether free from doubt, to show that the Spartan provincials were not in the least checked or shackled in the development of their intellectual powers. Moreover, it seems natural to suppose that they enjoyed civil rights in the communities to which they belonged, and which otherwise would scarcely have been called palle; but whether or not those cities had the power of electing their own chief magistrate is a matter of conjecture. Ephorus, indeed, informs us that, on the conquest of the Peloponnese by the Dorians, they divided the country of Laconia into six districts, four of which were left in the possession of the Achaeans, and governed by magistrates sent from Sparta; but we have no means of knowing whether in this or any other country we can draw any conclusions with respect to the government of Laconia in general from the example of Cythera, to which a Spartan officer was annually sent, under the peculiar title of Kypriokhor, or the "Justice of Cythera."

The number of Laconians (as they are called) or subject cities is said to have formerly amounted to 1000. Though the last war, as Cythera, the port of Sparta; whence the whole district of Laconia is called the palle. Many, however, lay more inland, as Thuria and Cardamyle, which seems to have belonged to the old Messenia. On the inhabitants of the district of Sciros (the Exarxis, on the confines of Arcadia, seem to have been distinct from the other palle), and in battle were posted by the cities on the left wing. An enumeration of the Perioci is given in the "History of Greece" by Clinton.

The Perioci also occupied the island of Cythera, at the port of which the Lacedaemonian merchants usually put in on their voyages home.
of Egypt and Libya. 1 We have said that Periæci living in these towns were the descen- sants of the old inhabitants of the country; but we must not suppose they were exclusively so. Some of them, on the contrary, were foreigners, who had either accompanied the Dorians on their invasion of Laconia, or been afterward invited by them to supply the place of the dispossessed Achæans. One of these cities, Bola, is even said to have been founded by a Hareclid chief, 2 and another, Genor- thea, was peopled by colonists sent from Sparta, after it was evacuated by the old inhabitants. 3

The number of Periæci in the Persian war is thus determined by Clinton: 4 "At the battle of Plataea, in B.C. 479, the Periæci supplied 10,000 men. If it be assumed that the Periæci of the same period lived in 12 towns, in each of which the Spartan force bore to the whole number on the same occasion, or five eighths of the whole number of citizens, this would give 16,000 for the males of full age, and the total population of this class of the inhabitants of Laconia would amount to about 60,000 persons.

In the earlier part of Spartan history, the Periæcian towns of the coast (Laconiae ora castella et pisci) were detached from Sparta by T. Quintius Flaminius, and placed under the protection of the Achæan league. 5 Subsequently to this the Emperor Augustus released 24 towns from their subjection to Sparta, and formed them into separate communities, under laws of their own. They were consequently called Eleutheræum or Periæca. But, even in the time of Pausanias, some of the Laconian towns were not aboriginis, but dependant upon Sparta (oivteivnov ISta Tonyv). A class of Periæci, and also of Helots, has been said by Müller to be the basis of the Dorian form of government: we may therefore expect to find an odier Dorian and a Periæcian state as at Sparta, as, for instance, Elis and Argos, and the Boeotian Thebes: the dependant towns of which states were aboriginis communities, as Thespiae under Thebes, the Triphylian cities in Elis, and Oronce under Argos, though they could not be called aboriginis. 6 From the last-mentioned town, independently of Sparta, we must at once infer that it was the chief city of the country, nor did the former body stand in the same relation to the patricians as the Laconian provincials did to the Spartan citi- zens. Modern history furnishes fit objects of comparison in the Norman conquest of England and the city of Aigburth. 7 The burgs or free towns of the Middle Ages lived in, and grew up about them a distinct and large community living without the city, chiefly formed of the emanci- pated vassals of the dominant class, and called "Pfalzburgers," or citizens of the "pale," the sub- 

urbs in which they lived being surrounded by palasades. The Norman conquest of England presents a striking parallel to the Dorian conquest of Lacon- gia, both in its achievement and consequences. The Saxons, like the old Achæans, were deprived of their lands, excluded from all offices of trust and dignity, and reduced, though personally free, to a state of political slavery. The Normans, on the contrary, of whatever rank in their own country, were all nobles and warriors compared with the conquered Saxons, and for a long time enjoyed exclusively the civil and ecclesiastical administration of the land.

For farther details, see Arnold, Thucyd., lib. i., c. 101, and Appendix ii.—Thierry, Histoire de la Conquête de la Grèce, ii., chs. xiv.-vii.

PERIPOLO. 8 (Vid. Ephraïm, p. 406.)

PERISCHELIS (περίσχελις). 9 Much controversy has arisen with regard to the true meaning of this word. The etymology points out merely that it was something worn round the leg (περὶ σχῆς), but from the context of the passage in Horace where it is found, we must at once infer that it was a bracelet or bangle, decorating the leg in the same manner as the bracelet adorns the wrist and the necklace the throat. The anklet is frequently represented in the paint- ings of Greek figures on the walls of Pompeii, as in the following representation of a Nereid. 10

It must be observed, however, that the Greek lexicographers Heacylius, Photis, and Suidas inter-

as it was necessary to make the head correspond to the stature of an actor which was heightened by the cothurnus.

I. TRAGIC MASKS.—It may at first seem strange to us, that the ancients, with their refined taste in the perception of the beautiful in form and expression, should by the use of masks have deprived the spectators in their theatres of the possibility of observing the beauty of the face and the expression of the human countenance, which, being poor and ugly, is much to theatrical illusion. But it must be remembered, that in the large theatres of the ancients it would have been impossible for the greater part of the audience to distinguish the natural features of an actor. The features of the masks were, for this same reason, very strong and marked. Again, the dramatic personae of most of the ancient tragedies bore heroes or gods, and their charactors were as well known to the spectators that they were perfectly typical. Every one, therefore, knew immediately, on the appearance of such a character or the stage, who it was, and it would have been difficult to a Greek audience to imagine that a god or hero should have had a face like that of an ordinary actor. The use of the cothurnus also rendered a proportionate enlargement of the theatre impossible; or else the figure of an actor would have been ridiculously disproportionate. Lastly, the solemn character of ancient tragedy did not admit of such a variety of expressions of the countenance as modern tragedies, the object of which seems to be to exhibit the whole range of human passions in all their wild and self-devouring play. How widely different are the characters of ancient tragedy! It is, as Müller justly remarks, perfectly possible to imagine, for example, the Orestes of Eschylus, the Ajax of Sophocles, or the Medea of Euripides, throughout the whole tragedy with the same countenance, though it would be difficult to assert the same of a character in any modern drama. But there is no necessity for supposing that the actors appeared throughout a whole piece with the same countenance; for, if circumstances required it, they might surely change masks during the intervals between the acts of a piece. Whether the open or half-open mouth of a tragic mask also contributed to raise the voice of the actor, as Gellius thinks, cannot be decided here, though we know that all circumstances united to compel a tragic actor to acquire a loud voice. Some ancient tragedians were thus, for the most part, typical of certain characters, and, consequently, differed according to the age, sex, rank, and other peculiarities of the beings who were represented. Pollux, from whom we derive most of our information on this subject, enumerates twenty-five typical or standing masks of tragedy, six for old men, seven for young men, ten for females, and three for slaves. The number of masks which were not typical, but represented certain individuals with their personal peculiarities, such as the blind Thamyris, the hundred-eyed Argus, &c., must have been much more numerous, for Pollux, by way of example, mentions thirty of such peculiar masks. The standing masks of tragedy are divided by Pollux into five classes.

PELSONA.

of the hair was called δύος. The cheeks of this mask were flat, and hanging downward. A second mask for old men, called λευκός ἄνθρωπος, had gray hair, floating around the head in locks, a full beard, and a prominent forehead, above which the hair formed a small δύος. The countenance was probably pale, the adjective of the root to indicate. A third mask, called σταροπόλακος, had black hair interspersed with gray, and was somewhat pale. It probably represented a hero of from 40 to 50 years of age, and in a suffering condition. The fourth mask, μέλας ἄνθρωπος, represented a hero in his full vigour, with black and curly hair and beard, strong features, and a high δύος. This was probably the mask most used by the comic maskmakers, as it was very much advanced in age. For a secondary class of heroes there were two other masks, the ξανθός and the ξανθώτερος ἄνθρωπος: the former represented a fair man with floating locks, a low δύος, and a good colour in his countenance; the second, or fairer man, was pale, and of a sickly appearance.

3. Tragic masks for young men.—Among these are included 1. The ξυπατός, a mask intended to represent a man who had just entered the age of manhood, and was yet unbearded, but of a blooming and brownish complexion, and with a rich head of hair. The name πάγχρωτος probably indicates that the masks might be used in a great variety of parts. 2. The μετέπειτας στέφος, or έπαθός, or έφορος, a fair youth. The second, called xypatos character: his hair was curly, and formed a high δύος: his character was indicated by his raised eyebrows. 3. Επάθωμος πάρολος resembled the preceding mask, but was somewhat younger. The counterpart of these two was, 4. The απαλός, a young man of a delicate and white complexion, with his hair smooth, like that of a youthful god. 5. Πιναρός. There were two masks of this name, both representing young men of an escarce appearance, of yellow complexion and fair hair; the one, however, was taller and younger, and his hair was more curly than that of the other. 6. Δεσφός, a mask quite pale, with hollow cheeks, and fair, floating hair. It was used to represent sick or wounded persons. 7. The πάρωρος might be used for the πάγχρωτος if this character was to be represented in a suffering or melancholy situation.

3. Tragic masks for male slaves.—Pollex mentions three, viz.: the διηθέρας, which had no δύος, but a soft, wavy, and youthful character. The countenance was pale, the beard gray, and the hair was sharpe, and the expression of the eyes melancholy. The σφαγωτόν, or the pointed beard, represented a man in his best years, with a high and broad forehead, a high δύος, hardened features, and a red face. The ιπατός, or the pug-nose, was an impudent face, with fair, rising hair of a red colour, and without eyebrows.

4. Tragic masks for female slaves.—Of these five specimens are mentioned, viz.: the σολία κατάκους, in earlier times called παράχρωμος, represented an old woman with long white hair, with noble but pale features, to indicate a person who had seen better days; the γραπτὸν ἐκθέμων, an old freedwoman, whose long locks seems to indicate domestic slavery; the οἰκετεύς μεσσαρός, a domestic slave of a middle age; and, lastly, the διηθέρας, a young female slave.

5. Tragic masks for free women.—The first of these, called κατάκους, represented a pale lady, with long black hair, and a sad expression in her countenance. She generally shaded the sufferings of the principal hero in a play. The second, called χορος άνθρωπος, resembled the former, with the exception that her hair was half shorn. She was a woman of middle age, and was probably intended to represent the wife of the chief hero, if he was not too advanced in age. The third is the μέσοκουρος πρόφατος, representing a newly-married woman in full bloom, with long and floating hair. The fourth is the κύριος πάθρενος, a maiden of mature age, with short hair divided on the middle of the forehead, and hiding slightly the whole head. The colour of her countenance was rather pale. There was another mask of the same name, but it differed from the former by the following circumstances: the hair was not divided on the forehead or curled, but wildly floating, to indicate that she had much suffering to go through. The last is the κώρη, or young girl in the play. She was represented by the beauties of a maiden's face in their full bloom, such as the face of Danae, or any other great beauty was conceived to have been.

The account which Pollux gives of the tragic masks comprehends a great number, but it is small in comparison with the great variety of masks which the Greeks must have used in their various tragedies, for it is evident that many of the masks which are known to the Greeks as a being of a particular character, and for a particular purpose, must have been represented by a particular mask, so that the spectators were enabled to recognise him immediately on his appearance. For this very reason, the countenances of the gods, heroes, and heroines must, in point of beauty, have been as similar as a possible the representations in statues and paintings, to which the eyes of the Greeks were accustomed; and the distorted masks, with widely open mouths, which are seen in great numbers among the paintings of Herculeanum and Pompeii (see the annexed woodcut from Museo Borbon), would give but a very inadequate idea of the charactes in the masks used at Athens during the most flourishing period of the arts.

All the representations of tragic masks belonging to this period do not show the slightest trace of exaggeration or distortion in the features of the countenance, and the mouth is not opened wider than would be necessary to enable a person to pronounce such sounds as oh or ha. In later times, however, distortions and exaggerations were carried to a very great extent, but they were more particular in comic masks, so that they, in some degree, were more caricatures than representations of ideal or real countenances.2

The annexed woodcut represents some masks, one apparently comic and the other tragic, which are placed on the statue of the chorus in the celebrated mosaic found at Pompeii.

II. Comic Masks.—In the old Attic comedy, in which living and distinguished persons were so often brought upon the stage, it was necessary that the masks, though to some extent they may have been caricatures, should in the main points be faithful portraits of the individuals whom they were intended to represent, as otherwise the comic poets could not have been attained. The chorus, on the other hand, as well as certain fantastic dramatic personae, rendered sometimes a complete masquerade necessary; as in those cases when the choruses appeared with the heads of birds or

of frogs, &c. We may remark here, by the way, that the chorus of tragedy appeared generally without masks, the Eumenides of Aeschylus being probably only an exception to the general rule. The masks of the characters in the old Attic comedy were therefore, on the whole, faithful to life, and free from the burlesque exaggerations which we see in the masks of later times. A change was made in this, as the masks, instead of representing something distinct from the person upon the stage, and still more, shortly after, by the extension of this law to all Athenian citizens. The consequence of such laws was, that the masks henceforth, instead of individual, represented classes of men, i.e., they were masks typical of men of certain professions or trades, of a particular age or station in life, and some were grotesque caricatures.

A number of standing characters or masks was thus introduced in comedy. Pollex gives a list of such standing masks, which are divided, like those of tragedy, into five classes.

1. Comic masks for old men.—Nine masks of this class are mentioned. The mask representing the oldest man was called πάπτως πρώτος: his head was shaved to the skin, he had a mild expression about his eyebrows, his beard was short and low, and his eyes melancholy. His complexion was pale, and the whole expression of the countenance was mild. 2. The πάπτως έτερος was of a more emaciated and more vehement appearance, sad and pale; he had hair on his head and a beard, but the hair was red and his ears broken. 3. The ηγεμόν, likewise an old man, with a thin crown of hair round his head, and a long nose, and a flat countenance. His right eyebrow was higher than the left. 4. The προσδότης had a long and floating beard, and likewise a crown of hair round his head; his eyebrows were raised, but his whole aspect was that of an idle man. 5. The ἄριστος was bald-headed, but had a beard and raised eyebrows, and was of angry appearance. 6. The παροιόκεφος resembled the mask called λευκοοφαίνω, but his lips were contorted, the eyebrows contracted, and the head without any hair. 7. The ταύριος deuterōs had a pointed beard, but was otherwise without hair. 8. The σφυροκόμων, or pointed beard, was likewise bald-headed, had extended eyebrows, and was looking ill-tempered. 9. The λευκοοφαίνω was conspicuous on account of his long chin, and the form of his eyebrows expressed great curiosity. The annexed comic mask, representing an old man, is taken from the Μουσείο Βορέας.

2. Comic masks for young men.—Pollex enumerates ten marks of this kind: 1. The πάρεηστος formed the transition from the old to the young men; he had but few wrinkles on his forehead, showed a muscular constitution (γυμναστικός), was rather red in the face, the upper part of his head was bald, his hair was red, and his eyebrows raised. 2. The νεανίσκος μέλας was younger than the preceding one, and with low eyebrows. He represented a young man of good education, and fond of gymnastic exercises. 3. The νεανίσκος άλόσω, or the thick-haired young man, was young and handsome, and of a blooming countenance, his eyebrows were extended, and there was only one wrinkle upon his forehead. 4. The νεανίσκος άνάτολος, his hair was like that of the πάρεηστος, but he was the youngest of all, and represented a tender youth brought up in seclusion from the world. 5. The ἄγριος, or rustic young man, had a dark complexion, broad lips, a pug-nose, and a crown of hair round his head. 6. The εἰκάστως στρατηγός, or the formidable soldier, with black hair hanging over his forehead. 7. The εἰκάστως δήστερος was the same as the preceeding, only younger and of a fair complexion. 8. The θυγατέρα, or the fat gentleman, and 9. the παράσημος, or parasite, were dark, and had aquiline noses. Both were apparently of a sympathizing nature; the parasite, however, had broken ears, was merry-looking, and had a wicked expression about his eyebrows. 10. The εἰκονικός represented a stranger in splendid attire, his beard was shaved, and his cheeks pierced through. The σιλεύκωφος was another parasite.

3. Comic masks for male slaves.—Of this class seven masks are mentioned: 1. The mask representing a very old man was called πάπτως and had gray hair, to indicate that he had obtained his liberty. 2. The ηγεμόν θεράτων had his red hair plated, raised eyebrows, and a contracted forehead. He was among slaves the same character as the προσδότης among freemen. 3. The κάτω τρίγυρος or θνθολός, or youths and half-bald, with a grizzled beard and red hair and raised eyebrows. 4. The οὔλος λευκός, or the thick-haired slave, had red hair and a red countenance; he was without eyebrows, and had a distorted countenance. 5. The θεράτων μέσος was bald-headed and had red hair. 6. The θεράτων τέττις was bald-headed and dark, but had two or three slips of hair on his head and on his chin, and his countenance was distorted. 7. The τει- τσος ηγεμόν, or the fierce-looking slave, resembled the ηγεμόν θεράτων, with the exception of the hair.

4. Comic masks for old women.—Pollex mentions three, viz.: the γυαλίδων δερματός or λικαίον, a tall woman with many but small wrinkles, and pale but without animated eyes; the σφηξ γάζας, or the fat old woman with large wrinkles, and a band round her head keeping the hair together; and the γυαλίδων ελεύθερον, or the domestic old woman. Her cheeks were hollow, and she had only two teeth on each side of her mouth.

5. Comic masks for young women.—Pollex mentions fourteen, viz.: 1. The γυνή λειτηκτη, or the talkative woman; her hair was smoothly combed and was raised, and the woman, who was pale, but without animated eyes; the σφηξ γάζας, or the fat old woman with large wrinkles, and a band round her head keeping the hair together. 2. The γυνή άλοσω was only distinguished for her fine head of hair. 3. The κόρη had her hair combed smoothly, had high and black eyebrows, and a white complexion. 4. The γυμνοσκυλή had a whiter complexion than the former, her hair was bound up above the forehead, and she was intended to represent a young woman who had not been married more than once. 5. Another mask of the same name was only distinguished from the former by the irregular manner in which the hair was represented. 6. The σταροπόλακας λεκτή, an elderly woman who had once been a prostitute, and whose hair was partly gray. 7. The κόρη resembled the former, but had a better head of hair. 8. The τελειον εκατέρων was more red in the face than the παροιόκεφος and had eyebrows raised. 9. The εκατέρων was of a less good appearance, and wore a band round the head. 10. The διάχρονον εκατέρων derived the name from the gold with which her hair was adorned. 11. The διάμεσον εκατέρων from the variegated band wound around her head. 12. The λαμπαδόν, from the circumstance of her hair being dressed in such a manner, that it stood upright upon the head in the form of a lampas.
The *aías* *περίκομψος* represented a female slave new y bought, and wearing only a white chiton. 14. The *παραψιφιστόν* was a slave distinguished by a pug-nose and her hair: she attended upon hetere, and wore a crocus-coloured chiton.

Numerous as these masks are, the list cannot by any means be considered as complete, for we know that there were other standing masks for persons following particular kinds of trade, which are not mentioned in Pollux. Mazes of Megara, for example, is said to have invented a peculiar mask, called after his own name *μαῖσιν*, another for a slave, and a third to represent a cook. From this passage of Athenaeus we also learn that Stephanus of Byzantium wrote a work *εἰς την προφοραν*.

In V *Masks used in the Satyric Drama*.—The masks used in this species of the Greek drama were intended to represent Satyrs, Silenus, and similar companions of Dionysus, whence the expressions of the contenances and form of their heads may easily be imagined. Pollux only mentions the gray-headed Satyr, the bearded Satyr, Silenus, and the roarer, and adds that the characters of all the other Satyric masks either resembled these, or were sufficiently expressed *a* their names, e.g., the Papposilenus was an old man with a very predominant animal character. A grotesque mask of a Satyr, together with one of the finest specimens of a tragic mask, is contained in the Townly Gallery in the British Museum, and is represented below.

As regards the earliest representations of the regular drama among the Romans, it is expressly stated by Diomedes" that masks were not used, but merely the galerus or wig, and that Roscins Gallus, about the year 100 B.C., was the first who introduced the use of masks. It should, however, be remembered, that masks had been used long before that time in the Attic, 1 so that the innovation of Roscius must have been confined to the regular drama, that is, to tragedy and comedy. As for the forms of Roman masks, it might be presumed that, being introduced from Greece at so late a period, they had the same defects as those used in Greece at the time when the arts were in their decline, and this supposition is confirmed by all works of art, and the paintings of Herculaneum and Pompeii, in which masks are represented; for the masks appear unnaturally distorted, and the mouth always wide open. The expressions of Roman writers also support this supposition. We may mention here that some of the oldest MSS. of Terence contain representations of Roman masks, and from these MSS. they have been copied in several modern editions of that poet, as in the edition published at Urbino in 1726, fol., and in that of Ducrè. The cut annexed contains representations of four of these masks prefixed to the Andria.

When actors at Rome displeased their audience and were hissed, they were obliged to take off their masks; but those who acted in the Attelane were not obliged to do so. 15. The Roman mimnes never wore a *Visor* or *Machinal*.

PE/RTICA, the pole used by the AGRIMENSORES, was also called DECUMEBUS because it was ten feet long. On account of its use in assigning lands to the members of a colony, it is sometimes represented on medals by the side of the augural plough. 16

PES (n. o. e.), a foot. The Greeks and Romans, like many other nations, fixed their standards of length originally from the different parts of the human body, and the names which were thus given to the measures were retained after the measures themselves had been determined with greater nicety. The foot was the basis of their whole system of measures of length; and as the value of the Greek foot is easily obtained when that of the Roman is known, it will be convenient to notice the latter first.
