CONTENTS

VOLUME ONE

Foreword To The Indian Edition

Introduction

FIRST SECTION: THE GREAT ONES AND THE WAY TO THEM

The Great Ones

The Work Of The Christ

The Work Of The Masters

Masters And Pupils

The Path Of Progress

The Ancient Mysteries

SECOND SECTION: RELIGION

The Logos

Buddhism

Christianity

Sin

The Pope

Ceremonial

Prayer

The Devil

Hinduism

Castes

Spiritualism

Symbology

Fire

THIRD SECTION: THE THEOSOPHICAL ATTITUDE

Common Sense

Brotherhood

Helping The World

Criticism

Prejudice

Curiosity

Know Thyself

Asceticism

Small Worries

Killing Out Desire

The Centre Of My Circle

Our Duty To Animals

Sympathy

Our Attitude Towards Children

The Fear Of Death

Co-Operation

A Day Of Life

Meditation

FOURTH SECTION: THE HIGHER PLANES

Nirvana

The Triple Spirit

Buddhic Consciousness

Experience

The Spheres

FIFTH SECTION: THE EGO AND HIS VEHICLES

The Ego And The Personality

Counterparts

Colors In The Astral Body

The Causal Body

The Desire-Elemental

Lost Souls

The Focus Of Consciousness

Force-Centres

The Serpent-Fire

Obsession And Insanity

Sleep

Somnambulism

The Physical Body

Tobacco And Alcohol

VOLUME TWO

Foreword To American Edition

Author's Note

FIRST SECTION: THE AFTER-DEATH LIFE

The Theosophist After Death

The Relation Of The Dead To Earth

Conditions After Death

Animal Obsession

Individualised Animals

Localisation Of States

Heaven-Life Conditions

Karma In The Heaven Life

SECOND SECTION: ASTRAL WORK

Invisible Helpers

Remembering Astral Experience

The Higher Dimensions

THIRD SECTION: THE MENTAL BODY AND THE POWER OF THOUGHT

The Mental Body

A Neglected Power

Intuition And Impulse

Thought-Centres

Thought And Elemental Essence

FOURTH SECTION: PSYCHIC FACULTIES

Psychic Powers

Clairvoyance

The Mystic Chord

How Past Lives Are Seen

Foreseeing The Future

FIFTH SECTION: DEVAS AND NATURE-SPIRITS

The Aura Of The Deva

The Spirit Of A Tree

SIXTH SECTION: THE WORLDS AND THE RACES OF MEN

The Building Of The System

The Planetary Chains

Successive Life-Waves

The Monads From The Moon

The Earth-Chain

Modes Of Individualisation

The Seven Types

Stray Notes On Races

Mars And Its Inhabitants

SEVENTH SECTION: REINCARNATION

Three Laws Of Human Life

The Return To Birth

Personal Characteristics

Bringing Over Past Knowledge

The Intervals Between Lives

EIGHTH SECTION: KARMA

The Law Of Equilibrium

The Method Of Karma

The Karma Of Death

Karma As An Educator

Varieties Of Karma

Animal Karma

NINTH SECTION: THE THEOSOPHICAL SOCIETY AND ITS FOUNDERS

What Is The Theosophical Society?

Theosophy And World-Leaders

Reminiscences

Faithful Unto Death

A Course Of Study In Theosophy

VOLUME ONE

FOREWORD TO THE INDIAN EDITION

Our evening "Talks" at the Theosophical Headquarters at Adyar have become quite an institution, and a very considerable amount of information, due to new research, often arising from some question put by a student, is given in this friendly and intimate circle. Our good Vice-President, Sir S. Subramania Iyer, found so much help and illumination from these talks, that he earnestly wished to share his pleasure with his brethren in the outer world, and gave a sum of money to help in their publication. I cordially endorse his view of their value, and commend this volume and those which will follow it to the earnest study of all our members. A second series is ready for the press, but the date of its issue will depend partly on the reception given to the present.

ANNIE BESANT

INTRODUCTION

I wish that I could help my American readers to realise the conditions under which this book has been produced. The Theosophical Society as a whole does not by any means sufficiently understand or appreciate the work done at its Headquarters, and although for you in America it is away on the other side of the earth, I should like to help you to see it as it is. Readers of the *Messenger* must at least, have some general idea of the appearance of the place, and must know something of the life which is lived here — a long life, a strenuous life, and a life lived under very peculiar conditions. Nowhere else in the world at this present moment is there such a centre of influence — a centre constantly visited by the Great Ones, and therefore bathed in their wonderful magnetism. The vibrations here are marvellously stimulating, and all of us who live here are therefore constant strain of a very peculiar kind, a strain which brings out whatever is in us. Strong vibrations from other planes are playing all the while upon our various vehicles, and those parts of us which can in any sense respond to them are thereby raised, strengthened and purified. But it must be remembered that there is another side to this. There may well be in each of us some vibrations the character of which is too far removed from the level of these great influences to fall into harmony with them, and where that is the case intensification will still take place, but the result may well be evil rather than good. To live at Adyar is the most glorious of all opportunities for those who are able to take advantage of it, but its effect on those who are constitutionally unable to harmonize with its vibrations may be dangerous rather than helpful. If a student can bear it he may advance rapidly; if he cannot bear it he is better away.

The workers here live mostly in the great central building, within the immediate aura of the shrine room and the President. The students live chiefly half-a-mile away at various other houses, though all within the large estate which now belongs to the Society. Each during the day does his own work in his own way, but in the evening we all gather together upon the roof of the central building, in front of the President's rooms, formerly occupied by Madame Blavatsky herself, and there, under the marvellous night sky of India, so infinitely more brilliant than anything that we know in what are miscalled temperate climes, we sit and listen to her teaching. All through the summer of last year, so much of which she spent in a tour through the United States, it fell to my lot to take charge of the meetings of the students here. In the course of that time I delivered many informal little addresses and answered hundreds of questions. All that I said was taken down in shorthand, and this book is the result of those notes. In a number of cases it happened that what was said on the roof at the meetings was afterwards expanded into a little article for *The Theosophist* or *The Adyar Bulletin*; in all such cases I reprint the article instead of the stenographic report, as it has had the advantage of certain corrections and additions. Necessarily a book of this sort is fragmentary in its nature; necessarily also it contains a certain amount of repetition; though this latter has been excised wherever possible. Many of the subjects treated have also been dealt with in my earlier books, but what is written here represents in all cases the result of the latest discoveries in connection with those subjects. The subjects have been classified as far as possible, and this volume represents the first series, containing five sections. The second volume, containing the nine remaining sections, is now in the printer's hands. A list of the subjects of which it will treat will be found at the end of this

volume.
C. W. LEADBEATER
Adyar, July, 1910

FIRST SECTION: THE GREAT ONES
AND THE WAY TO THEM

THE GREAT ONES

STUDENTS OF OCCULTISM — even those who have been students for many years — sometimes seem to fail to realise the Masters as They truly are. I have often found people thinking of Them as some kind of angels or devas, or, at any rate, as so far removed from us by Their greatness that it is scarcely possible for us to derive much help from Them. Their greatness is indisputable, and from that point of view the gulf between Them and ourselves may well seem incalculable in its extent; and yet from another point of view They are very close to us, so that Their sympathy and help are very near and very real. That our thought on the subject may be clear, let us first of all try to define exactly what we mean by the term “Master.”

We mean by it always one who is a member of the Great White Brotherhood — a member at such a level that He is able to take pupils. Now the Great White Brotherhood is an organization unlike any other in the world, and for that reason it has often been misunderstood. It has sometimes been described as the Himalayan or the Tibetan Brotherhood, and the idea has been conveyed of a body of Indian ascetics residing together in a monastery in some inaccessible mountain fastness. Perhaps this has arisen largely from the knowledge of the facts that the two Brothers principally concerned in the foundation and work of the Theosophical Society happen at the moment to be living in Tibet, and to be wearing Indian bodies. To comprehend the facts of the case it may be better to approach its consideration from another point of view.

Most of our students are familiar with the thought of the four stages of the Path of Holiness, and are aware that a man who has passed through them and attained to the level of the Asekha has achieved the task set before humanity during this chain-period, and is consequently free from the necessity of reincarnation on this planet or on any other. Before him then open seven ways among which he must choose. Most of them take him away from this earth into wider spheres of activity, probably connected with the solar system as a whole, so that the great majority of those members of our humanity who had already reached this goal have passed entirely out of our ken.

The limited number who are still working directly for us may be divided into two classes — those who retain physical bodies, and those who do not. The latter are frequently spoken of under the name of Nirmanakayas. They hold themselves suspended as it were between this world and nirvana, and They devote the whole of Their time and energy to the generation of spiritual force for the benefit of mankind. This force They pour into what may be described as a reservoir, upon which the Masters and their pupils can draw for the assistance of Their work with humanity. The Nirmanakaya, because He remains to this extent in touch with the lower planes, has been called ‘a candidate for woe,’ but that is misleading. What is meant is that He has not the joy of the higher work, or of the nirvanic levels. He has chosen to remain upon lower planes in order to help those who still suffer. It is quite true that to come back from the higher life into this world is like going down from the fresh air and glorious sunlight into a dark and evil-smelling dungeon; but the man who does this to help some one out of that dungeon is not miserable and wretched while there, but full of the joy of helping, notwithstanding the greatness of the contrast and the terrible feeling of bondage and compression. Indeed, a man who refused such an

opportunity of giving aid when it came to him would certainly feel far more woe afterwards, in the shape of remorse. When we have once really seen the spiritual misery of the world, and the condition of those who need such help, we can never again be careless or indifferent about it, as are those who have not seen.

Fortunately those of us who have seen and realized this have ever at our command a means whereby we can quite really and definitely help. Tiny though our efforts may be as compared with the splendid outpouring of force of the Nirmanakaya, we also can add our little drops to the great store of force in that reservoir. Every outpouring of affection or devotion produces a double result — one upon the being to whom it is sent, and another upon ourselves, who sent it forth. But if the devotion or affection be utterly without the slightest thought of self, it brings in its train a third result also. Ordinary affection or devotion, even of a high kind, moves in a closed curve, however large that curve may be, and the result of it comes back upon the sender. But the devotion or affection of the truly unselfish man moves in an open curve, and though some of its affects inevitably react upon the sender, the grandest and noblest part of its force ascends to the LOGOS Himself, and the response, the magnificent response of benediction which instantly pours forth from Him, falls into that reservoir for the helping of mankind. So that it is within the power of every one of us, even the weakest and the poorest, to help the world in this most beautiful manner. It is this adding to the reservoir of spiritual force which is really the truth that lies at the back of the Catholic idea of works of supererogation.

The still more limited number of adepts who retain physical bodies remain in even closer touch with us, in order to fill certain offices, and to do certain work necessary for our evolution; and it is to the latter that the names of the Great White Brotherhood and the Occult Hierarchy have sometimes been given. They are, then, a very small number of highly advanced men belonging not to any one nation, but to the world as a whole. On the physical plane They do not live together, though They are of course in continual communication on higher planes. Since They are beyond the necessity of rebirth, when one body wears out They can choose another wherever it may be most convenient for the work They wish to do, so that we need not attach any special importance to the nationality of the bodies which They happen to be wearing at any particular time. Just now, several of those bodies are Indian, one is Tibetan, one is Chinese, two at least are English, one is Italian, one Hungarian, and one Syrian, while one was born in the island of Cyprus. As I have said, the nationality of these bodies is not a matter of importance, but I mention these in order to show that it would be a mistake to think of the ruling Hierarchy as belonging exclusively to one race.

Reverence restrains us from saying much of the great Head of this Hierarchy, in Whose hands is the fate of the continents, in Whose name all initiations are given. He is one of the very few now remaining upon earth of the Lords of the Flame, the Children of the Fire-mist, the great beings who came down from Venus nearly eighteen million years ago to help and to lead the evolution of humanity on our chain. These Great Ones did not take bodies from our then entirely undeveloped humanity, but made for themselves bodies in appearance resembling ours by the force of Their will, a kind of permanent materialization. At that period, and for long after it, no members of our humanity were sufficiently developed to fill any of the higher offices in this Hierarchy, and consequently we needed and received this help from without. Gradually, as humanity has evolved, it has become more and more able to provide for itself, and the great Lords of the Flame have been set free to go to

the help of yet other evolutions. But one of Them still holds this, the highest office of all — the position of the KING Who guides and controls all evolution taking place upon this planet — not only that of humanity and of the animal, vegetable, mineral and elemental kingdoms below it, but also of the great non-human kingdoms of the nature-spirits and the devas, some of which rise so far above it.

Under Him are various Heads of Departments, the broad outlines of whose work are more within our comprehension than His. Though the details are far beyond us, we can form some slight idea of what must be the manifold responsibilities and activities of the Manu of a Root-race; and perhaps we can to some extent image to ourselves the duties of Him who is Minister of Religion in this world-kingdom — who sends forth religion after religion, suiting each to the needs of a particular type of people and to the period of the world's history in which it is launched, sometimes deputing one of His subordinates to found it, sometimes even incarnating Himself for that purpose, as He may see fit. This Minister of Religion is often called in the East the Bodhisattva — one who is about to become a BUDDHA. The previous holder of that high office was He whom we call the Lord Gautama BUDDHA. The attainment of Buddha-hood is not simply the gaining of enlightenment; it is also the taking of a great and definite initiation, and the man who has taken that step cannot again incarnate upon earth, but hands over His work to His successor, and usually passes away altogether from any connection with earth.

The Lord Gautama, however, still remains to a certain extent within touch of the world, in order that He may still be able to help it. Once in each year He still shows Himself to the brotherhood of adepts, and pours down His blessing upon them, to be passed through them to the world at large; and He may still be reached in certain ways by those who know how. Mrs. Besant has told us, in some of her recent writings, how He incarnated over and over again as the great teacher of the earlier sub-races of the Aryan race, how he was Hermes — the founder of the Egyptian Mysteries — also the first and greatest Zoroaster, the original founder of the worship of the sun and fire, and again He was Orpheus, the founder of the Greek Mysteries. Those mentioned of course were not His only births, for in the course of our researches into the past we have seen Him as founder of other religions than these.

The statement made in some of the earlier Theosophical works that He was reborn as Shankaracharya is an error, for from an occult point of view the two great teachers were on entirely different lines. There was, however, a certain reason at the back of the statement in the fact that some of the vehicles prepared by one of them were also utilized by the other, as Madame Blavatsky has explained in the third volume of *The Secret Doctrine*.

The deep reverence and the strong affection felt for the Lord Gautama all over the East are due to two facts. One of these is that He was the first of our humanity to attain to the stupendous height of Buddha-hood, and so He may be very truly described as the first-fruits and the leader of our race. (All previous BUDDHAS had belonged to other humanities, which had matured upon earlier chains.) The second fact is that for the sake of hastening the progress of humanity, He took upon Himself certain additional labours of the most stupendous character, the nature of which it is impossible to comprehend. It is stated that when the time came at which it was expected that humanity would be able to provide for itself some one who was ready to fill this important office, no one could be found who was fully capable of doing so. But few of our earthly race had then reached the higher stages of adeptship, and the foremost of these were two friends and brothers whose development was equal.

These two were the mighty Egos now known to us as the Lord Gautama and the Lord Maitreya, and in His great love for mankind the former at once volunteered to make the tremendous additional exertion necessary to qualify Him to do the work required, while His friend and brother decided to follow Him as the next holder of that office thousands of years later.

In those far-off times it was the Lord Gautama who ruled the world of religion and education; but now He has yielded that high office to the Lord Maitreya, whom western people call the Christ — who took the body of the disciple Jesus during the last three years of its life on the physical plane; and those who know tell us that it will not be long before He descends among us once again, to found another faith. Anyone whose mind is broad enough to grasp this magnificent conception of the splendid reality of things will see instantly how worse than futile it is to set up in one's mind one religion as in opposition to another, to try to convert any person from one to another, or to compare depreciatingly the founder of one with the founder of another. In the last case indeed it is especially ridiculous, because the two founders are either two pupils of the same school, or two incarnations of the same person, and so are entirely in accord as to principles, though They may for the time be putting forward different aspects of the truth to suit the needs of those to whom They speak. The teaching is always fundamentally the same, though its presentation may vary widely. The Lord Maitreya had taken various births before He came into the office which He now holds, but even in these earlier days He seems always to have been a teacher or high-priest.

It is now generally known that the two Masters who have been most intimately concerned with the foundation and the work of the Theosophical Society have taken respectively the offices of temporal and spiritual leader of the new sixth root-race, which is to come into existence in seven hundred years' time. The Manu, or temporal leader, is practically an autocratic monarch who arranges everything connected with the physical-plane life of the new race, and endeavours in every way to make it as perfect an expression as possible of the idea which the LOGOS has set before Him for realization. The spiritual teacher will be in charge of all the various aspects of religion in the new race, and also of the education of its children. It is clear that one of the main objects of the foundation of the Theosophical Society was that these two Masters might gather round Them a number of men who would be intelligent and willing co-operators in this mighty work. Round Them will be grouped others who are now Their pupils, but will by that time have attained the level of adeptship.

We may then set before ourselves as a goal the privilege of being chosen to serve Them in this wonderful work for the world which lies before Them. There will be ample opportunity for the display of all possible varieties of talent, for the work will be of the most varied character. Some of us will no doubt be attracted to one side of it and some to the other, largely according to the predominance of our affection for one or other of its great Leaders. It has often been said that the characteristic of one is power, and of the other love and compassion, and this is perfectly true, though, if it is not rightly understood, it may very easily prove misleading. One of the Masters concerned has been a ruler in many incarnations, and was so even in the earlier part of this one, and unquestionably royal power shows forth in His every gesture and in the very look of His eyes, just as surely as the face of His brother adept beams ever with overflowing love and compassion. They are of different rays or types, having risen to Their present level along different lines, and this fact cannot but show itself; yet we should mistake sadly if we thought of the first as in any degree less loving and

compassionate than His brother, or of the second as lacking anything of the power possessed by the first. Other Masters also will be engaged in this work, and it may well be that some of us may have made our link through one of Them.

It is probable that even the Masters who are by name best known to you are not so real, not so clear, not so well-defined to you as They are to those of us who have had the privilege of meeting Them face to face and seeing Them constantly in the course of our work. Yet you should endeavour by reading and thinking of Them to gain this realization, so that the Masters shall become to you not vague ideals but living men — men exactly as we are, though so enormously more advanced in every respect. They are men most emphatically, but men without failings, and so to us They seem like gods on account of the power, love and compassion radiating from Them. It is most significant that, in spite of the awe necessarily produced by the sense of this tremendous power, in Their presence one never feels in the least afraid or embarrassed, but always uplifted.

The man who stands before one of Them cannot but feel the deepest humility, because of the greatness of the contrast between himself and the Master. Yet with all this humility he yet feels a firm confidence in himself, for since the Master, who is also man, has achieved, that achievement is clearly possible even for him. In His presence everything seems possible and even easy, and one looks back with wonder on the troubles of yesterday, unable now to comprehend why they should have caused agitation or dismay. Now at least, the man feels, there can never again be trouble, since he has seen the right proportion of things. Now he will never again forget that, however dark the clouds may be, the sun is ever shining behind them. The vibrations of the Masters are so strong that only those qualities in you which harmonize with them are called out, so that you will feel the uttermost confidence and love, and the desire to be always in His presence. It is not that you forget that you have undesirable qualities in you, but you feel that now you can conquer them, and you do not in the least mind His knowing all about them, because you are so certain that He understands perfectly, and to understand all is to pardon all.

It may perhaps help us to realize the human side of our Masters if we remember that many of Them in comparatively recent times have been known as historical characters. The Master K. H., for example, appeared in Europe as the philosopher Pythagoras. Before that He was the Egyptian priest Sarthou, and on yet another occasion chief-priest of a temple at Agade, in Asia Minor, where He was killed in a general massacre of the inhabitants by a host of invading barbarians who swooped down upon them from the hills. On that occasion He took immediately the body of a Greek fisherman, which had been drowned in his attempt to escape, and in that body the Master journeyed on to Persia, where he rendered great assistance to the last of the Zoroasters in the founding of the modern form of the Mazdayaznian religion. Later He was the flamen of the Temple of Jupiter in Rome, and later still Nagarjuna, the great Buddhist teacher. We have found Him many times in our researches into the past lives of some members of our group, but almost always as a priest or teacher.

Again, in these researches into the remote past we have frequently found the disciple Jesus, who in Palestine had the privilege of yielding up His body to the Christ. As a result of that act He received the incarnation of Apollonius of Tyana, and in the eleventh century He appeared in India as the teacher Ramanujacharya, who revived the devotional element in Hinduism, and raised it to so high a level.

No doubt some of you have heard a good deal about other Masters besides the two who principally take charge of Theosophical work. Another Master, for example, dictated for us *Light on the Path* and *The Idyll of the White Lotus*, while yet another has taken charge of a great deal of the work in Europe, and has written for us some of the most splendid works in the whole realm of literary activity. Then the one who was once the disciple Jesus stands ready especially to guide the various activities of the Christian Churches. Yet another looks especially after the work here in India.

Thus it may be seen that the evolution of the world is by no means left to itself, to get along as best it may, as people so often rashly suppose; on the contrary, it is being directed. For this Hierarchy of adepts is actually managing it, as far as it is possible to manage it while leaving its inhabitants their own free-will. The members of the Brotherhood, through Their agents, are constantly trying to work with the important people of the world, putting advice and suggestions into their minds, endeavouring to move them onwards towards the great future of Universal Brotherhood when war shall have disappeared. But we must remember that the karma of all the people concerned has to be considered and respected. It would no doubt be easy to force the world along at a far more rapid rate, but that would not be for the real advantage of the people concerned. The Master K. H. once said in a letter which I received from Him: "Of course I could easily tell you exactly what to do, and of course you would do it, but then the karma of the act would be mine and not yours, and you would gain only the karma of prompt obedience."

Men have to learn to be not merely intelligent servants; they have to learn to be co-workers, because they themselves will have the same work to do some day, and if they are to be fit for greater responsibilities in the future they must be willing to take up the smaller responsibilities now. Sometimes, it is true, a really great opportunity or responsibility of worldwide importance comes to one of us, but that may perhaps be once in many hundreds of lives. When it comes we shall take it or miss it, according as we have or have not been in the habit of taking the smaller opportunities of daily life, so that we have got into the habit of doing the right thing, and shall do it automatically at the critical moment. Our opportunities of doing good or harm are usually but small as regards the world as a whole; but when we have learnt invariably and automatically to choose the right in these smaller matters, the Great Brotherhood will feel it safe to trust us in larger matters.

It is indeed well that we should try to understand these Great Ones, not as a mere matter of curiosity and interest, but in order that we may realise Them as They are, and comprehend that They are men just as we are, varying among Themselves just as we vary, although at so much higher a level. Wisdom, power and love are present in all of Them equally, yet They are by no means all alike. They are individuals just as we are. They are at the top of the ladder of humanity, but let us not forget that we are somewhere on its lower rungs, and that one day we also shall reach Their level and stand where They stand.

One important fact about Them is Their all-round development. If we examine ourselves we shall be sure to find that we are to some extent disproportionate in our development — one-sided in certain respects. Some of us are full of scientific faculty and intellectual development, but sadly lacking in devotion and compassion; others are full of whole-souled devotion, but defective on the intellectual side. A Master is perfect along both these lines, as may easily be seen when we think of the splendid intellect of Pythagoras along with the love and compassion of the Master K. H.

We must not misunderstand Their wonderful knowledge. In order to attain the level of adeptship They must have cast off among others the fetter of avidya or ignorance, and it is often said that to cast off ignorance one must attain all-knowledge. Yet we know from personal acquaintance with Them that this is not so in the mere literal sense; for example, there are Masters who do not know all languages, others who are not artists and musicians, and so on. I think that what is really meant by casting off the fetter of ignorance is the acquisition of a power by which They can at any moment command any knowledge upon any subject which They happen to require. They certainly have not all facts stored within Their physical brains but equally certainly They can very quickly obtain any knowledge of which They have need. As to the question of languages, for example, if a Master wishes to write a letter in a language which He does not know, He very frequently employs the brain of a pupil who is acquainted with that language, throwing the ideas into that pupil's brain, and then employing the words in which He sees them clothe themselves. If a man speaks to Them in a language which They do not understand, They can instantly grasp on the mental plane the thought that lies behind the incomprehensible words.

It is often asked whether an ordinary man who met a Master on the physical plane would instantly recognize Him as such. I do not see any reason why he should. He would certainly find the Adept impressive, noble, dignified, holy and serene. He could hardly fail to recognize that he was in the presence of a remarkable man; but to know certainly that that man was an adept it would be necessary to see His causal body, which of course the ordinary man could not do. In that causal body the development would show by its greatly increased size, and by a special arrangement of the colours, which would differ for each of the seven great types. But all this would be quite out of the reach of the ordinary man whom we are postulating.

Adepts have no definite external peculiarities by which They may be recognized, though there is a great calmness and benevolence common to Them all; Their faces are stamped always with a joyous serenity, the peace which passeth all understanding. Most of Them are distinctly handsome men, because Their physical bodies are perfect, for They live in an absolutely hygienic way, and above all They never worry about anything. In the case of most of us there is still a great deal of karma of various kinds to be worked out and among other things this modifies the appearance of our physical bodies. In Their case all karma is long ago exhausted, and consequently the physical body is a perfect expression on the physical plane of the Augoeides or glorified body of the Ego. Not only therefore is the body of a Master usually splendidly handsome, but also any new body that He may take in a subsequent incarnation will be an almost exact reproduction of the old one, because there is nothing to modify it.

Another remarkable fact is that They are able to preserve Their physical bodies very much longer than we can — owing no doubt to the perfect health and absence of worry which we have already mentioned. Almost all of the Masters whom we know appear as men in the prime of life, yet in many cases there is testimony to prove that Their physical bodies must have long passed the ordinary age of man. I have heard Madame Blavatsky say that her Master as He appears now does not look a day older than when she first saw Him in her childhood sixty years before. In one case only, that of a Master who has recently attained adeptship in the body which He is still wearing, there is a certain ruggedness in the face; which is doubtless the result of some remainder of past karma brought over into this incarnation, but I think we may

feel sure that when He chooses to take another body that characteristic will not persist.

Probably They are more silent than most men; busy people have not much time for casual talk, and They are out of all proportion the busiest people in the world. Their pupil Madame Blavatsky was the most brilliant conversationalist that I have ever met, but she never made talk for the sake of making it. So with Them; a Master never speaks without a definite object in view, and His object is always to encourage, to help or to warn. He speaks always gently and with the greatest kindness, though He often betrays a very keen sense of humour; yet the humour itself is always of the kindly order, and is used never to wound, but always to lighten the troubles of the way, or to soften some necessary rebuke. Certainly a man who has no sense of humour would not be likely to make much progress in occult matters.

The number of adepts who retain physical bodies in order to help the evolution of the world is but small — perhaps some fifty or sixty in all. But it must be remembered that the great majority of these do not take pupils, as They are engaged in quite other work. Madame Blavatsky employed the term adept very loosely, for in one place she actually speaks of adepts who have been initiated, and adepts who have not been initiated. In all later writings we have reserved the word “initiate” for those who have passed at least the first of the four great stages upon the Path of Holiness, and the word adept we have restricted to those who have attained the Asekha level, and so have finished the evolution required of them in this chain of worlds. The consciousness of the Asekha rests normally upon the nirvanic or atmic plane while his physical body is awake. But out of the number who have already attained adeptship only the very small proportion above-mentioned retain physical bodies, and remain in touch with the earth in order to help it; and out of this a still smaller proportion are willing under certain conditions to accept men as pupils or apprentices; and it is to these last (the smallest number) only that we give the name of Masters. Yet few though They be Their office is of incalculable importance, since without Their aid it would be impossible for man to enter the portals of initiation.

THE WORK OF THE CHRIST

You ask about the Great One whom we call the Christ, the Lord Maitreya, and about His work in the past and in the future. The subject is a wide one — one also about which it is somewhat difficult for us to speak with freedom, on account of the restrictions with which we are hedged round. Possibly the suggestion may be of use to you that there is what we may call a department of the inner government of the world which is devoted to religious instruction — the founding and inspiring of religions, and so on. It is the Christ who is in charge of that department; sometimes He Himself appears on earth to found a great religion and sometimes He entrusts such work to one of His more advanced assistants. We must regard Him as exercising a kind of steady pressure from behind all the time, so that the power employed will flow as though automatically into every channel anywhere and of any sort which is open to its passage; so that He is working simultaneously through every religion, and utilizing all that is good in the way of devotion and self-sacrifice in each.

The fact that these religions may be wasting their strength in abusing one another upon the physical plane is of course lamentable, but it does not make much difference to the fact that whatever is good in each of them is being simultaneously utilized from behind by the same great Power. This is true of course of all movements in the world; every ounce of the good in them is being used as a channel, while the evil in them is in each case just so much regrettable waste of force which might have been utilized if the people had been more sensible. The section in *The Secret Doctrine* entitled *The Mystery of Buddha* gives a good deal of information as to the relations between the Heads of this department of Religion, and it may give some useful hints as to the Christ also. This is a subject of paramount interest to the members of our Society, since one of our Masters has a specially close relation with that department.

As to the approaching advent of the Christ and the work which He has to do, you cannot do better than read Mrs. Besant's book on *The Changing World*. The time of His advent is not far distant, and the very body which He will take is even already born among us.

All this was decided many thousands of years ago — some of it decided apparently in minute details, though it would seem that there is a good deal of flexibility with regard to other points. The utter certainty with which these Great Ones lay Their plans many thousands of years ahead is one of the most wonderful features of this stupendous work that They do. Sometimes it is open to those of us who have been able to develop the faculties of the higher planes to be allowed a glimpse of Their mighty schemes, to witness the lifting of a tiny corner of the veil which shrouds the future. Sometimes also we have glimpsed Their plans in another way, for in looking back into the records of the distant past we have found Them making prophecies, the fulfilment of which is even now passing before our eyes.

I know of nothing more stirring, more absorbingly interesting, than such a glimpse. The splendour, the colossal magnitude, of Their plans takes away one's breath, yet even more impressive is the calm dignity, the utter certainty, of it all. Not individuals only, but even nations are the pieces in this game; but neither nation nor individual is compelled to play any given part. The opportunity to play that part is given to it or to him; if he or it will not take it there is invariably an under-study ready to step in

and fill the gap. But, whoever may be the instrument, this one thing at least is utterly certain, that the intended end will be achieved; through whose agency this will be done matters very much to the agent but nothing at all to the total progress of the world. Nineteen hundred years ago Appollonius of Tyana was sent out by the Brotherhood upon a mission, one feature of which was that he was to find, in various countries, certain magnetic centres. Objects of the nature of talismans were given to him, which he was to bury at these chosen spots, in order that the force which they radiated might prepare these places to be the centres of great events in the future. Some of those centres have already been utilized, but some have not, and all these latter are to be employed in the immediate future in connection with the work of the coming Christ. So that much of the detail of His work was already definitely planned nearly two thousand years ago, and arrangements even on the physical plane were being made to prepare for it. When once we realize this utter certainty, doubt and hesitation, anxiety and worry, all fade away and we gain a perfect peace and content, and the most absolute confidence in the Powers who are governing the world.

THE WORK OF THE MASTERS

The work of the Masters on Their own planes is not easy for us to comprehend, though we can readily see that Their activity must be tremendous. The number of adepts still retaining physical bodies is but small, and yet in Their hands is the care of all the evolutions which are taking place on this globe. As far as humanity is concerned They seem to divide the world into parishes, but Their parishes are continents, and an adept is appointed to look after each. The Theosophical Society appears to be rather of the nature of a mission sent out from Headquarters, so that those who take part in its activities are working not for any particular parish or any particular form of religion, but for humanity as a whole; and it is upon humanity as a whole, or at least upon humanity in the mass, that the Masters chiefly act. They have a department which devotes itself to endeavouring to influence in the right direction the important people of the world — to affect kings and statesmen in the direction of peace, to impress more liberal ideas upon great preachers and teachers, to uplift the conceptions of artists, so that through them the whole world may be made a little happier and a little better.

But the working of such departments as these is mainly entrusted to Their pupils, They themselves dealing rather with the egos in their causal bodies; They devote themselves to pouring spiritual influence upon them — raying out upon them as the sunlight radiates upon the flowers, and thereby evoking from them all that is noblest and best in them, and so promoting their growth. Many people are sometimes conscious of helpful influences of this description, but are quite unable to trace them to their source. The causal body of the average man has as yet almost no consciousness of anything external to itself on its own plane. It is very much in the condition of the chicken within the egg, which is entirely unconscious of the source of the heat which nevertheless stimulates its growth. When any person reaches the stage where he breaks through his shell, and becomes capable of some sort of response, the whole process takes on a different form, and is enormously quickened. Even the group-souls of animals on the lower part of the mental plane are greatly affected and assisted by such influence, for like sunlight the force floods the entire plane and affects to some extent everything which is within its radius. In pouring out this force the Masters frequently take advantage of special occasions and of places where there is some strong magnetic centre. Where some holy man has lived and died, or where some relics of such a person create a suitable atmosphere, They take advantage of such conditions and cause Their own force to radiate along the channels which are already prepared. When some vast assemblage of pilgrims comes together in a receptive attitude, again They take advantage of the occasion by pouring Their forces out upon the people through the channels by means of which they have been taught to expect help and blessing.

It is owing to assistance of this nature given to us from above that humanity has progressed even to its present position. We are still in the fourth round, which should naturally be devoted to the development of desire and emotion, and yet we are already engaged in the unfolding of the intellect, which is to be the special characteristic of the fifth round. That this is so is due to the immense stimulus given to our evolution by the descent of the Lords of the Flame from Venus, and by the work of the adepts who have preserved for us that influence and steadily sacrificed Themselves in order that we might make the better progress.

Those who understand anything of this work, and most especially those of us who have been privileged to see the Masters doing it, would never for a moment think of interrupting Them in such altruistic labour as this by propounding any personal requests. The vast importance of the work which They are doing, and the enormous amount of it, make it obviously impossible that They should take up personal work with individuals. In the cases where such work has to be done it is always delegated to pupils or performed by means of elementals and nature-spirits. Therefore it becomes emphatically the duty of the student to fit himself to do some of this lower work, for the very good reason that if he does not do so, the work will for the present be left undone, since it would be obviously impossible for the Masters to turn aside from Their far greater work for the whole world to attend to individual cases. The work of the invisible helpers on the astral plane would simply not be done unless there were pupils at the stage where that is the best work that they can do; for so soon as they pass beyond that stage and can do higher work, the higher work will certainly be given to them.

People sometimes ask why the Masters so often work through imperfect instruments; the answer is obviously because They have not time to do the work themselves, and They must therefore employ such instruments as They have, or the work will not be done at all. Take for example the writing of books for the helping of humanity. It is obvious that the Masters could do this very far better than any of Their pupils can, and by doing it They could entirely avoid any possibility of erroneous or imperfect statements. But They have absolutely no time to devote to such work, and therefore if it were not done by pupils it would remain undone. Besides, if the Masters did it They would take away the opportunity of making good karma from those who can do it — certainly not as well as They, but yet after all well enough for the use of those who know so very much less.

We must remember that every Master has at His command only a certain amount of force which, enormous as it seems to us, is still a limited quantity, and it is His duty to employ this force to the best possible advantage for the helping of humanity. Therefore it would, if we may say so without irreverence, be absolutely wrong for Him to waste that force upon anything lower than the very highest that it can reach, or to spend upon individual cases, however deserving, that which can be so much better employed for the welfare of all.

MASTERS AND PUPILS

It has already been said that out of the comparatively small number of adepts who retain Their physical bodies and fill the offices connected with the administration of the world under the Great Hierarchy, there is a still smaller number who accept pupils, and to whom therefore we give the name of Masters. Let us see then what it means to be a pupil of one of these Masters, what is expected of one who aspires to this position and what is the work which he has to do.

First let us have it clearly in our minds that the Masters have absolutely dedicated themselves to the service of humanity, and that They are utterly absorbed in the work to the entire exclusion of every other consideration. In speaking to you on this subject before, I have mentioned that a Master has only a certain definite amount of force to expend, and that though the amount of that force seems to us almost incalculable, He is nevertheless exceedingly careful to use every ounce of it to the best possible advantage. Obviously to take in hand and instruct a pupil will make some demand upon His time and upon this store of energy, and since He regards everything from the standpoint of its use in regard to the promotion of evolution He will not expend this time and energy upon any man unless He can see that it is a good investment.

He will take a man as a pupil; or perhaps we should rather say as an apprentice, when He sees that the amount of time and strength spent in training him will produce more result eventually than any other way of expending the same amount — but not otherwise. For example, a man might have many qualifications which would make him useful as an assistant, but at the same time some one great fault which would be a constant obstacle in his way, which would nullify much of the good that he might otherwise do. No Master would accept such a man as a pupil; but he might say to him: “Go to work and conquer that special fault of yours, and when you have succeeded I will take you as my assistant, and will train you further.”

So many of our earnest students are full of the most benevolent and altruistic feeling, and, knowing themselves to be in this way very different from the majority of mankind, they sometimes say to themselves, “I am so deeply anxious to work for humanity; why will not the Master take me in hand and train me?”

Let us face the facts boldly. The Master will not train you because you are still full of all sorts of minor imperfections. It is quite true, as you no doubt feel within yourselves, that your benevolence, your kindness, your earnest wish to be helpful, are far greater things on the credit side of the account than are all these small faults on the debit side. But try to realize that there are thousands of people in the world who are benevolent and well-meaning, and that you differ from them only in the fact that you happen to have a little more knowledge, and so you are able to direct your benevolence into more definitely useful channels than those others. If these were all the qualifications required for discipleship, each Master might have thousands of pupils, and His whole time would be taken up in endeavouring to bring into shape those few thousands of people, with all their petty little faults on the astral and physical planes, and in the meantime the Master's splendid work with the egos on the higher levels would have to be entirely neglected.

First of all then, to be a pupil of a Master means that one must look upon life as the Master looks upon it, solely from the point of view of what is best for the progress of the world. The pupil must be prepared *absolutely* to forget himself, to sink his personality *entirely*, and he must understand that this is *not a* mere poetical figure or a fashion of speech, but that it means just exactly what it says — that he must have no personal desires whatsoever, and must be willing to order the whole of his life according to the work that he has to do. How many of us are there who are wholeheartedly willing to take even this first step towards accepted discipleship?

Think what it means to become a disciple. When any man offers himself for such a position the Master will at once say whether or not He considers him fit to enter upon the stage of the probationary pupil. If the candidate appears to be reasonably near the possession of the necessary qualifications the Master may take him upon probation, which means that he will remain for a period of some years under very close observation. Seven years is the average time of this probation, but it may be indefinitely lengthened if the candidate should prove unsatisfactory, or on the other hand it may be much shortened if it is seen that he has really taken himself in hand. I have known it to be extended to thirty years; I have known it to be reduced to five years, and even to three, and in one quite exceptional case it was only five months. During this period of probation the pupil is not in any sense in any kind of direct communication with the Master; he is little likely to hear or to see anything of Him. Nor as a general rule are any special trials or difficulties put in his way; he is simply carefully watched in his attitude towards all the little daily troubles of life. For convenience of observation the Master makes what is called a “living image” of each such probationary pupil — that is to say, an exact duplicate of the man's astral and mental bodies. This image He keeps in a place where He can easily reach it, and He places it in magnetic rapport with the man himself, so that every modification of thought or of feeling in the man's own vehicles is faithfully reproduced in the image. These images are examined daily by the Master, who in this way obtains with the least possible trouble a perfectly accurate record of his prospective pupil's thoughts and feelings, and from this He is able to decide when He can take him into the far closer relationship of the second stage — that of the accepted pupil.

Remember that the Master is a channel for the distribution of the forces of the LOGOS, and not indeed a mere unconscious channel but a keenly intelligent co-operator; and He is this because He is himself consciously a part of the Logos. Just in the same way at a lower level the accepted pupil is a channel of the forces of the Master, but he, too, must be not an unconscious channel but an intelligent co-operator, and in order to be this he must also become virtually part of the consciousness of the Master.

An accepted pupil is taken into his Master's consciousness to so great an extent that whatever he sees or hears is within the knowledge of his Master — not that the Master necessarily sees or hears it at the same moment (though that often happens) but that it lies within the Master's memory exactly as it does within the memory of the pupil. Whatever the pupil feels or thinks is within the astral and mental bodies of his Master. When we realize all that this means, we see very clearly why it would be utterly impossible for the Master to accept any pupil until the pupil's thoughts and feelings were such as the Master would wish to harbour within himself.

It unfortunately sometimes happens that there comes into the mind of the pupil some thought which is not fit to be harboured by the Master, and as soon as the Master feels that, He at once erects a barrier and shuts off from himself that

vibration, but to do this diverts His attention for a moment from His other work, and takes a certain amount of energy. Once more we see clearly that it would be impossible for a Master to take into such a relation with himself one who often indulged in thoughts unfit for the Master's mind; to have to be continually or even frequently turned aside from His work in order to shut off undesirable thoughts or feelings would clearly be a quite intolerable tax upon the Master's time and strength.

It is not because of any lack of compassion or patience that a Master could not take such a man; it is simply that it would not be a good use either of His time or His energy, and to make the best possible use of both of them is His simple duty. If a man feels himself worthy to be accepted as a pupil, and wonders why this privilege has not already been extended to him, let him watch himself closely for even a single day, and ask himself whether during that day there has been in him any single thought or feeling which would have been unworthy of the Master. Remember that not only definitely evil or unkind thoughts are unworthy of Him, but also trifling thoughts, critical thoughts, irritated thoughts — above all, thoughts of self. Who of us is sufficient for these things?

The effect which the Master seeks to produce by this wonderfully close association is the harmonizing and attuning of the pupil's vehicles — the same result which an Indian teacher tries to gain by keeping his disciples always in the neighborhood physically. Whatever may be the special kind of exercises of the special course of study prescribed, in all cases the principal effect upon the pupil is that produced not by either exercises or study, but by being constantly in the presence of the teacher. The various vehicles of the pupil are vibrating at their accustomed rates — probably each of them at various rates, due to the constant presence of passing emotions and wandering thoughts of all kinds. The first and most difficult task of the pupil is to reduce all this chaos to order — to eliminate the host of minor interests, and control the wandering thoughts, and this must be achieved by a steady pressure of the will exercised upon all his vehicles through a long period of years.

While he still lives in the world the difficulty of this undertaking is multiplied a hundredfold by the ceaseless pressure of disturbing waves of thought and emotion, which give him no moment of rest, no opportunity to collect his forces in order to make a real effort. This is why in India the man who wishes to live the higher life retires to the jungle — why, in all countries and in all ages, there have been men willing to adopt the contemplative life of the hermit. The hermit at least has breathing-space, has rest from the endless conflict, so that he can find time to think coherently. He has little to hinder him in his struggle, and the calm influences of nature are even to a certain extent helpful.

But the man who lives perpetually in the presence of one already upon the Path has a still greater advantage. Such a teacher has by the hypothesis already calmed his vehicles and accustomed them to vibrate at a few carefully selected rates instead of in a hundred promiscuous frenzies. These few rates of vibration are very strong and steady, and day and night, whether he is sleeping or waking, they are playing unceasingly upon the vehicles of the pupil, and gradually raising him to his teacher's key. Nothing but time and close association will produce this effect; and even then not with every one, but only with those capable of being attuned. Many teachers require to see a reasonable proportion of this result before they will impart their special methods of occult development; in other words, before teaching a pupil something which may easily do him much harm if wrongfully used, they wish to be certain by ocular demonstration that he is a man of the type to which this instruction

is appropriate, and is sufficiently amenable to their influence to be held in the right way by it when the strain comes. A thousand times greater are the advantages gained by those whom the Master selects — who thus have the opportunity of such close and intimate contact with Him.

This then is what is meant by being an accepted pupil of the Master — that the man becomes a kind of outpost of that Master's consciousness, so that the strength of the Great Ones may be poured out through him, and the world may be definitely the better for his presence in it. The pupil is so closely in touch with the Master's thought that he can at any time see what that thought is upon any given subject, and in that way he is often saved from error. The Master can at any moment send a thought through that pupil either in the form of a suggestion or a message. If, for example, the pupil is writing a letter or giving a lecture, the Master is subconsciously aware of that fact, and may at any moment throw into the mind of the pupil a sentence to be included in that letter or a useful illustration for that lecture. In earlier stages the pupil is often unconscious of this, and supposes these ideas to have arisen spontaneously in his own mind, but he very soon learns to recognize the thought of the Master. Indeed, it is eminently necessary that he should learn to recognize it, because there are many other entities on the astral and mental planes who are very ready in the most friendly way and with the best intentions to make similar suggestions, and it is assuredly well that the pupil should learn to distinguish from whom they come.

We must not, however, confuse such use by a Master of his pupil's body with the mediumship which we have so often characterized as objectionable. For example, there have been some occasions on which one or other of our Masters has spoken through our President, and it has been stated that on such occasions sometimes her very voice and manner and even her features have been changed. But it must be remembered that in all such cases she has retained the fullest consciousness and has known exactly who was speaking and why. That is a condition so different from what is ordinarily understood by mediumship that it would be quite unfair to call it by the same name. There can be no objection to such use of a pupil's body, but it is only in the case of a very few pupils that the Masters have ever done this.

When it happens, the President's consciousness is just as fully active in her physical brain as ever, but instead of directing her organs of speech herself she listens while the Master makes use of them. He formulates the sentences in His own brain and then transfers them to hers. While this is being done she can use her own brain-power, as it were passively, to listen, to understand, and to admire; but I conceive that it would hardly be possible for her at absolutely the same moment to compose a sentence upon some quite different subject. I suppose that the highest form of spiritualistic control may more or less approximate to this, but probably very rarely, and hardly ever completely.

The influence of a Master is so powerful that it may well shine through to almost any extent, and any one of the audience who is really impressible might be conscious of His presence even to the extent of seeing His features or hearing His voice, instead of those of His pupil. It is not very probable that any actual physical change takes place, such as would be visible to non-sensitive spectators. In spiritualism I have indeed seen cases in which the medium's voice and manner, and even his very features, were actually physically entirely changed, but that always means a complete suppression of his ego by the entity speaking through him, and this would be quite foreign to the system of training adopted by our Masters.

There is yet a third stage of even more intimate union, when the pupil becomes what is called the “son” of the Master. This is accorded only after the Master has had considerable experience of the man as an accepted pupil, when He is quite certain that nothing can arise in the mind or astral body of the pupil which will ever need to be shut off. For that is perhaps the principal difference which can be readily explained on the physical plane between the position of the accepted disciple and of the “son” — that the accepted disciple, though truly a part of the Master's consciousness, can still be shut off when it seems desirable, whereas the “son” is drawn into a union so close and so sacred that even the power of the Master cannot undo what has been done to the extent of separating these consciousnesses even for a moment.

These then are the three stages of the relation of a pupil to his Master; first, the probationary period, during which he is not in any real sense a pupil at all; second, the period of accepted discipleship; third, the period of “sonship”. It must be clearly understood that these relations have nothing whatever to do with initiations or steps on the Path, which belong to an entirely different category, and are tokens of the man's relation not to his Master but to the Great White Brotherhood and to its august Head. One may find a not inapt symbol of these respective relationships in the position in which an undergraduate stands with regard to the head of his college and to the university as a whole. The university as such requires the man to pass certain examinations, and the precise methods in which he prepares himself for this, are, comparatively speaking, matters of indifference to it. It is the university, and not the head of the college, that arranges the examination and confers the various degrees; the work of the head of the college is simply to see that the candidate is duly prepared. In the process of such preparation he may, as a private gentleman, enter into whatever social or other relations he may think proper with his pupil; but all that is not the business of the university.

Just in the same way the Great White Brotherhood has nothing to do with the relations between the Master and His pupil; that is a matter solely for the private consideration of the Master himself. Whenever the Master considers that the pupil is fit for the first initiation, He gives notice of that fact and presents him for it, and the Brotherhood asks only whether he is ready for the initiation, and not what is the relationship between him and any Master. At the same time it is true that a candidate for initiation must be proposed and seconded by two of the higher members of the Brotherhood — that is to say, by two who have reached the level of adeptship; and it is certain that the Master would not propose a man for the tests of initiation unless He had with regard to him the certainty of his fitness, which could only come from such close identification with his consciousness as that of which I have already spoken.

When a student hears all this there naturally arises in his mind the question, “How can I become the pupil of a Master? What can I do that will attract His attention?” As a matter of fact it is quite unnecessary that we should try to attract His attention, for the Masters are ever watching for those whom They can help to be of use to Them in the great work which They have to do, and we need not have the slightest fear that we shall be overlooked.

I remember very well an incident of the early days of my own connection with the Great Ones a quarter of a century ago. I met on the physical plane a man of great enthusiasm and of the most saintly character, one who believed thoroughly in the existence of the Masters, and devoted his life to the one object of qualifying himself

for Their service. He seemed to me a man in every way so entirely suitable for discipleship, so obviously better than myself in many ways, that I could not understand how it was that he was not already accepted; and so, being young in the work and ignorant, one day when a good opportunity offered itself I very humbly and as it were apologetically mentioned his name to the Master with the suggestion that he might perhaps prove a good instrument. A smile of kindly amusement broke out upon the Master's face, as He said:

“Ah, you need not fear that your friend is being overlooked; no one can ever be overlooked; but in this case there still remains a certain karma to be worked out, which makes it impossible at the moment to accept your suggestion. Soon your friend will pass away from the physical plane, and soon he will return to it again, and then the expiation will be complete and what you desire for him will have become possible.”

And then, with the gentle kindness which is always so prominent a characteristic in Him, He blended my consciousness with His in an even more intimate manner, and raised it to a plane far higher than I could then reach, and from that elevation He showed me how the Masters look out upon the world. The whole earth lay before us with all its millions of souls, undeveloped most of them, and therefore inconspicuous; but wherever amidst all that mighty multitude there was one who was approaching even at a great distance the point at which definite use could be made of him, he stood out among the rest just as the flame of a light-house stands out in the darkness of the night.

“Now you see,” said the Master, “how utterly impossible it would be that any one should be overlooked who is even within measurable distance of the possibility of acceptance as a probationer.”

We can do nothing on our side but steadily work at the improvement of our own character and endeavour in every possible way, by the study of Theosophical works, by self-development, and by the unselfishness of our devotion to the interests of others, to fit ourselves for the honour which we desire, having within our minds the utter certainty that as soon as we are ready the acceptance will assuredly come. We can do nothing but fit ourselves, and we have the certainty that as soon as we are ready we shall be accepted, because we know how great is the need of helpers. But until we can be utilized economically — until, that is to say, the force spent upon us will bring forth, through our action, more result than it would if spent in any other way, it would be a violation of duty on the part of the Master to draw us into close relations with Him.

We may be quite sure that there are in reality no exceptions to this rule, even though we may sometimes think that we have seen some. A man may become a probationary pupil of the Master while he has still some obvious faults, but we may be very sure that in such a case there are good qualities under the surface which far more than counterbalance the superficial evils. Another thing that must be remembered is that, like the rest of us, the Great Masters of Wisdom have a long line of lives behind Them, and in those lives, like others, They have made certain karmic ties, and so sometimes it happens that a particular individual has a claim on Them for some service rendered long ago in the remote past. In the lines of past lives which we have examined we sometimes come across instances of such a karmic link.

One well-known case is that of a certain member who, when a powerful noble in Egypt six thousand years ago, used his influence with the authorities of one of the

great temples to introduce into it as a favoured student a young man who displayed the keenest interest in occult matters. That young student took up occultism with the greatest eagerness and made the most astonishing progress in it, so that in every life thereafter he continued the studies begun in ancient Khem. Between then and now that young student has attained adeptship, and thus passed on far in advance of the friend who then introduced him to the temple. In the work which He has had to do in these later days He needed some one to put before the world certain truths which had to be published, because the time for such unfoldment was fully ripe. He looked round for an instrument whom He could use, and He found His old friend and helper of six thousand years ago in a position in which it was possible to employ him in this work. At once He remembered His ancient debt and repaid it by giving to His friend this wonderful privilege of being the channel of the truth to the world.

Such cases indeed are fairly numerous. We all know how at a period still far earlier one of the founders of the Theosophical Society saved the life of the other, who was at that time the eldest son of Him who is now the Master and teacher of both, and thus established a karmic claim which has drawn those three into close relationship ever since. Again, on another occasion in the remote past our President saved the life of her present teacher when there was a conspiracy to assassinate Him; and in yet another instance one who has but just passed the portals of initiation saved the life of the Bodhisattva, the great Lord Maitreya himself.

Now all these are unquestionably karmic links, and they constitute debts which will be fully repaid. So it may happen to any of us that in some past life we have come into touch with One who is now a Master, or done Him some slight service, and if so, that may well prove to have been the commencement of an association which will ripen into discipleship on our side. It frequently happens that people are drawn together by a strong common interest in occultism, and in later lives, when some of these have out-distanced the others, those who were once friends and fellow-students often fall naturally into the relation of teacher and pupil.

No doubt a man may attract Their attention in many ways; he may bring himself to the portals of the Path by association with those in advance of him, by the force of sheer hard thinking, by devotion, or by earnest endeavour in good works; but all these are after all merely so many divisions of the one Way, because they all of them mean that he is making himself fit for one or other department of the work that is to be done. And so when by any of these methods he reaches a certain level, he inevitably attracts the attention of the Masters of the Wisdom and comes in some way into connection with Them, though probably not upon the physical plane. The Master's usual plan is that he is brought into connection with one or other of Their more prominent pupils, and this is very much the safest way, since it is impossible for any ordinary person to assure himself of the good faith of astral communications.

Unless a man has had very wide experience in connection with mediumship, he would find it very difficult to realize how many quite ordinary people there are upon the astral plane who are burning with the desire to pose as great world-teachers. They are generally quite honest in their intentions, and really think that they have teaching to give which will save the world. Now that they are dead they have fully realized the worthlessness of mere worldly objects, and they feel (quite rightly) that if they could only impress upon mankind in general the ideas which they have now acquired, the whole world would immediately become a very different place. They are also fully persuaded that they have only to publish their discoveries upon the physical plane in order at once to convince everybody of their inherent

reasonableness, and so they select some impressionable lady and tell her that they have chosen her out of all the world to be the medium of a magnificent revelation.

Now it is rather flattering to the average person to be told that he or she is the sole medium in all the world for some mighty entity, the only channel for some exclusive and transcendent teaching; and even though the communicating entity should disclaim any special greatness (which he usually does not) this is put down to praiseworthy modesty on his part, and he is described as at least an archangel, even if not a still more direct manifestation of the Deity. What such a communicating entity forgets is that when he was alive on the physical plane other people were making similar communications through various mediums, and that then he never paid the slightest attention to them, nor was in any way affected by what they said, and so he does not realise that precisely as he, when immersed in the affairs of this world, declined to be moved by those very communications, so will all the world now go on contentedly with its own business and pay no attention to *him*.

Often such entities assume distinguished names from what may almost be called a pardonable motive, for they know human nature well enough to be aware that if John Smith or Thomas Brown comes back from the dead and enunciates a certain doctrine it will have very little chance of acceptance, no matter how excellent and how entirely true it may be; whereas the same words uttered by George Washington, Julius Caesar or the Archangel Michael would be at least respectfully considered and very probably blindly accepted.

Any man functioning on the astral plane has a certain amount of insight into the thoughts and feelings of those with whom he is dealing, and therefore it is not wonderful that when such people come into contact with the Theosophists, and see their minds to be full of reverence for the Masters of Wisdom, they should sometimes personate those very Masters of Wisdom in order to command more ready acceptance for whatever ideas they wish to promulgate. Also it must not be forgotten that there are those who bear no good will to our Masters, and desire to do Them any injury which lies within their power. They cannot of course harm Them directly, and therefore they sometimes try to do so through the pupils whom They love. One of the easiest ways in which they can produce difficulties is by assuming the form of the Master who is so strongly revered by their victim, and in many cases such an imitation is quite perfect, so far as the physical appearance is concerned, except that it always seems to me that they can never quite get the right expression into the eyes. One who has developed the sight of the higher planes cannot be thus deluded, as it is quite impossible for any of these entities to imitate the causal body of the Master.

Most assuredly we shall do well to heed diligently the wise precept in *The Voice of the Silence*, "Seek not thy Guru in those mayavic regions." Accept no teaching from some self-appointed preceptor on the astral plane, but receive all communications and advice which come thence precisely as you would receive similar advice or remarks made by a stranger on the physical plane. Take them for what they are worth, and accept the advice or reject it as your own conscience dictates, without paying attention to its alleged source. Seek rather for teaching which satisfies the intellect, and apply the test of intellect and conscience to any claims which are put forward.

Let it never be forgotten that ours are not the only lines. The two Masters who are most intimately associated with the work of the Theosophical Society represent two different rays or methods of teaching; but there are others besides these. All schools of the higher teaching give a preliminary training to purify the character, but the

particular teachings given and practices recommended differ according to the type of the teacher. But all teachers who belong to the Great White Lodge insist upon the attainment of the highest only by means of the Path of Holiness, and the quenching of desire by conquering it and not by gratifying it.

The pupil will be employed by his Master in many different ways. Some are set to take up the lines of work indicated in the book *Invisible Helpers*; others are employed specifically in assisting the Masters personally in some piece of work which they happen to have undertaken; some are set astrally to deliver lectures to audiences of less developed souls, or to help and teach others who are free temporarily during sleep, or are permanently after death denizens of the astral world. When a pupil falls asleep at night he usually reports himself to his Master, and he is then told if there is any definite piece of work which he can do. If there happens to be nothing special he will take up his usual nocturnal work, whatever that may be. Every invisible helper acquires a number of regular cases or patients who are put under his charge just exactly as are those of a doctor on the physical plane; and whenever there is no unusual work for him to do he simply goes on his ordinary rounds, visits these cases and does his best for them. So that he has always plenty of work of this kind to fill up his time when he is not especially needed, as for some sudden catastrophe which throws out a large number of souls simultaneously into the astral plane in a condition of terror. Most of such training in astral work as the pupils need is usually given by one of the older pupils of the Master.

If it is necessary that the pupil should undertake any special system of psychic development on the physical plane, the Master will indicate it to him either directly or through one of His recognized pupils. What is prescribed in this way differs according to the character and need of the pupil, and it is usually best for us to wait until we are definitely told before attempting any practices of this kind. Even when we are told of them it is best that we should keep them to ourselves, and not discuss them with others, as it is more than probable that they would be unsuited to anyone else. Here in India among the hosts of minor teachers each man has his own methods, the difference depending partly on the different schools of philosophy to which they belong, and partly upon their different ways of looking at the same thing. But whatever their methods are, they usually keep them very secret in order to avoid the responsibility of their being wrongly used.

The harm that may be done by the indiscriminate publication of any of these half-physical systems has been very clearly exemplified in America, where a book by an Indian teacher has obtained a large circulation. This teacher guardedly mentioned certain practices, prefacing his teaching with a carefully expressed warning as to the necessity of preparation by the training of character. But nevertheless what he has written has caused a great deal of suffering, because people have uniformly disregarded his warning as to training and have recklessly tried to carry out the practices which he described. In a tour a few years ago in that country I met quite a number of people who through attempting to follow his directions had made themselves physical wrecks. Some had become insane, some were subject to fits, and others had fallen under the spell of various obsessing entities. In order that such practices as these may be attempted with safety it is absolutely necessary that they be undertaken (as they always are undertaken in India) in the actual presence of a teacher who watches the results and at once interferes when he sees that anything is going wrong. Indeed, in this country it is usual for the pupil to remain in physical proximity to his teacher, because here people understand what I mentioned some

time ago — that the first and greatest work which a teacher has to do is to attune the aura of the pupil to his own — to annul the effect of the ordinary disturbed conditions which prevail in the world, to show him how to abandon all that and to live in a world of absolute calm. One of our own Masters said in one of the earlier letters, “Come out of your world into ours,” and this of course refers not to a place but to a condition of mind.

Remember that everyone who meditates upon the Master makes a definite link with Him, which shows itself to clairvoyant vision as a kind of line of light. The Master always subconsciously feels the impinging of such a line, and sends out along it in response a steady stream of magnetism which continues to play long after the meditation is over. The regular practice of such meditation and concentration is of the utmost help to the aspirant, and the regularity is one of the most important factors in producing the result. It should be undertaken daily at the same hour, and we should steadily persevere with it, even though no obvious effect may be produced. When no effect appears we must be especially careful to avoid depression, because depression makes it more difficult for a Master's influence to act upon us, and it also shows that we are thinking more of ourselves than of the Master.

THE PATH OF PROGRESS

When we state the great truth that all evolution came forth from the Divine, and that we ourselves are but sparks of the divine flame and one day to be reunited to it, people often ask us two not unnatural questions. First they say, "Why should the divine Being have sent us forth, since after all we are part of Him, and so were divine from the beginning? Why in fact did the LOGOS manifest Himself in matter at all, seeing that He was perfect and glorious and all-wise in the beginning? Secondly, if we emanate from the divine Spirit, why were we sent forth into wickedness, and how can man, coming forth from so pure a source, enter into such degradation as we constantly see around us?" Since these questions recur so often, it is worth while for us to consider how they may be answered.

Why the LOGOS manifested Himself is scarcely our business. It is enough for us to know that He has chosen to do so, that we are part of His scheme, and that it is therefore our duty to try to understand that scheme so far as we can; and to adapt ourselves to it. But if there be any who desire to speculate upon this mystery, perhaps no better suggestion can be found for them than that which was given by the Gnostic Doctors:

"God is Love, but Love itself cannot be perfect unless it has those upon whom it can be lavished and by whom it can be returned. Therefore He put forth of Himself into matter, and He limited His glory, in order that through this natural and slow process of evolution we might come into being; and we in turn according to His will are to develop until we reach even His own level, and then the very Love of God itself will become more perfect, because it will then be lavished on those, His own children, who will fully understand and return it, and so His great scheme will be realised and His Will will be done".

As to the further consideration why the emanation should have taken place in this particular way, that again is not our affair, for we are concerned only with the *facts* of evolution, not the reasons for it; yet there seems little difficulty in at least indicating the lines along which an answer may be found. It is quite true that man is an emanation from the substance of the Divine, but it must be remembered that the substance, when it issues forth, is undifferentiated, and from our point of view unconscious; that is, it has within it rather the potentiality of consciousness than anything to which we are in the habit of applying that term.

In its descent into matter it is simply gathering round it the matter of the different planes through which it passes, and it is not until, having reached the lowest point of its evolution in the mineral kingdom, it turns upwards and begins its return to the level whence it came, that it commences to develop that we call consciousness at all. It is for that reason that man began first of all to unfold his consciousness on the physical plane, and it is only after fully attaining that that he begins to be conscious upon the astral and mental planes in turn.

No doubt God might have made man perfect and obedient to the law by one act of His will, but is it not obvious that such a man would have been a mere automaton--that the will working in him would have been God's will, not his own? What the LOGOS desired was to call into existence, from His own substance, those who should be like unto Him in power and glory, absolutely free to choose and yet absolutely

certain to choose the right and not the wrong, because in addition to perfect power they would have perfect knowledge and perfect love.

It is not easy to imagine any other way in which this result could be achieved but that which has been adopted — the plan of leaving man free and therefore capable of making mistakes. From those mistakes he learns and gains experience, and although in such a scheme as this it is inevitable that there should be evil, and therefore sorrow and suffering, yet when the part these play as factors in man's evolution is properly understood we shall see that the Chinese proverb is true which tells us that evil is but the dark shadow of good. Most emphatically it is true that, however black the clouds may look from below, those clouds are by their very nature transient, and above and behind them all the mighty sun, which will at last dissipate them, is always shining, so that the old saying is justified that *all* things, even the most unlikely-looking, are in reality working together for good.

This much at least all who have made any real progress *know* for themselves as an absolute certainty; while they cannot hope to prove it to those who have not as yet had the experience, at least they can bear testimony to it with no uncertain voice, and that testimony is surely not without its value for souls who are still struggling towards the light.

As to the second question, we may fairly point out that it assumes too much. It is not true to say that we are sent forth into wickedness and degradation. In fact, strictly speaking, we are not sent forth at all. What happens is something quite different. The LOGOS pours forth into manifestation the stream of force which we may describe as part of Himself or of His vesture. This stream contains in potentiality the vast hosts of monads, each of which, when fully developed, may itself become a LOGOS. But for such development it is necessary that it should manifest itself through matter of various grades, that the individuality should very slowly and gradually be built up, and then that certain latent qualities should be brought out. This is the process of evolution, and all the great laws of the universe are arranged to facilitate this process. In its earlier stages the manifestation of the monad is entirely controlled by these laws, not having yet developed any sort of individuality or soul of its own.

But there comes a stage in which individuality is attained, and will is beginning to be developed. The plan of the LOGOS is to allow a man a certain amount of freedom (at first a very small amount) in the use of this dawning will, and naturally enough by the law of averages this primitive individual uses his will about as often wrongly as rightly, although he has almost always teachers belonging to earlier evolutions, who tell him the way, in which he should walk. When he uses his will wrongly, (that is to say, in a direction opposed to the current of evolution) the mechanical working of nature's laws brings suffering as the result of such action. Since this happens over and over again, the primitive ego at last learns by experience that he must obey the wiser teaching given to him, and as soon as the determination to do so has become actually a part of himself a wider field of freedom of action opens before him.

In this new field in turn he is sure to act wrongly sometimes as well as rightly, so that the same process is repeated again and again, always involving suffering where mistakes have been made. Whatever of "wickedness and degradation" may exist is always the result of the action of men who have used their freewill wrongly, and are in process of learning how to use it rightly, and as soon as that lesson shall have been universally learned all these evil effects will pass away. It is therefore obvious that whatever of evil exists in the world is entirely the doing of its inhabitants, and is in its

nature temporary. However terrible and deeply rooted it may seem to us, it cannot possibly be permanent, for it is of the essence of things that it must pass away when its causes are removed. For its existence while it lasts we must blame, not the great First Cause, but ourselves, because we are failing to carry out His plan.

We often exhort people to follow the higher course rather than the lower, but I think that the truth is that man always follows the highest about which he is really certain. The difficulty is that in so many cases the higher teaching seems vague and unreal to many people, and so although they profess to believe it, and really think that they do believe it, when it comes to the point of action they find it too vague to trust their lives to it.

For example, many people who think themselves religious are yet to be found seeking position and wealth. That attitude would be entirely reasonable if they were materialists and if they did not pretend to believe in anything higher; but when we find a religious man devoted to the pursuit of worldly objects there is clearly something wrong, something illogical. The fact is that he does not really believe in his religion; he is not thoroughly convinced of its truth, for if he were he could not be following after other things. He is following that about which he is really sure; he is quite certain, without the slightest mental reservation, about the desirability of money and power. He knows that he wants these things, and he thinks he knows that if he gets them they will make him happy. Therefore he devotes all his energy and time to their acquisition, and we must remember that in doing that he is at least developing will and perseverance.

Now if you can in any way manage to make him as sure of the value of the higher things as he is now about the value of pounds, shillings and pence, he will at once turn that will and that perseverance to the service of the higher development, and he will seek after realities with just the same intensity that he is now devoting to the pursuit of shadows. This is precisely what the study of Theosophy will do for him. A man who thoroughly understands Theosophy knows that he is here for a certain purpose, and that it is most emphatically his business to devote himself entirely to the working out of that purpose. He realizes thoroughly that there are things worth doing and aims worth pursuing, and he devotes himself to them with the same avidity which he previously displayed in following the acquisition of money or position.

But in order to do this it is not sufficient merely to be vaguely interested, merely to read a few books. The man must really believe it, must be thoroughly and utterly convinced of its truth. Now the only way in which this utter conviction can come to a man is by means of realizing some part of it, however small, for himself and at first-hand. Without going so far as that, of course, a man may be intellectually convinced of the truth of the doctrine, and may see that nothing else is logically possible; but there are very few of us who have the strength to act upon such a logical conviction about things entirely beyond our ken; for most of us it is really necessary that at least some small portion of the doctrine, some sample of it, as it were, should be definitely seen and known.

We who were the earlier students felt all this just as keenly as do the students of to-day, and when in those early days of twenty-five or twenty-seven years ago we asked Madame Blavatsky whether it was in any way possible that we could verify any of these things for ourselves she at once replied in the affirmative. She told us that if we chose to take the trouble to develop the requisite faculties we might unquestionably

experience for ourselves the truth of a great deal of the teaching. She warned us that the way was long and arduous, and that no one could tell beforehand how long it would take for a man to tread it. But on the other hand she consoled us by saying that the end was absolutely certain, and that it was impossible that any man who started to reach it should fail to attain, though in many cases such attainment might lie, not in this life, but in some other in the future.

This was encouraging in one way, and yet somewhat daunting in another way; but at any rate a certain number of us took her at her word and threw ourselves heart and soul into the endeavour to live the life which was prescribed for us, and to do the work that lay before us. The degrees of our success were very varied, but of all of those who made this effort and persevered with it I think I may say that there was not one who did not obtain some result — enough at any rate to show him that what he had been told was true, and that if the progress which he made was smaller than he had hoped, the fault lay clearly with himself and not with the teachers.

There were those among us, however, who succeeded in verifying for ourselves a large number of the statements made by the Masters — first of all only in a small way, with regard to ourselves, our vehicles, our possibilities, and with regard to the astral life which immediately surrounds us. Then later on by long continued and more strenuous effort we developed the faculties of the mental body, and began for the first time really to understand what had been written for us about the life of the heaven-world. All this at first we had hopelessly misunderstood, because with the faculties then at our disposal we were actually incapable of comprehending it. By a strenuous further effort we reached the faculties of the causal body, and then the world of comparative realities began really to open before us.

We were able then to read the records of the part, and to see from them with absolute certainty how the great scheme of the LOGOS is slowly unfolding itself and working itself out by means of successive births under the guidance of the great laws of evolution and cause and effect. We could see clearly then that we were unquestionably ourselves a part of this great scheme, and therefore it followed that it was alike our duty, our advantage, our privilege, to throw ourselves into scheme and co-operate intelligently in its fulfillment. There was then no doubt for us about the fact of the great evolution and the future of humanity, for it was clear to us that we had risen through the lower Kingdoms, and we could see many stages both below us and above us; all the various stages of human life arranged themselves for us as steps upon a ladder; we could see these steps stretching up and down from the point which we ourselves occupied, and there were being upon every rung of that ladder, beings who were clearly engaged in climbing it.

The Masters who seemed to us to stand at its summit assured us that They were men like ourselves, and that They had passed through the stage where we were now standing; between us and Them there was no break in the continuity, for every step of the ladder was occupied, and we ourselves watched the progress of some of those higher than we from one of these steps to another. When through custom the wonderful light of the higher planes grew less dazzling to us, we were able to see that even beyond the stupendous level occupied by the Masters there arose still greater heights. Above Them stood Manus, Christs, Buddhas, Lipika, great Devas, Dhyan Chohans, and many others of whom we can know nothing except that They exist, and that They, even at Their ineffable elevation, form part of the same mighty chain.

The whole of the past lies before us; we know the halting-places on the road, and the side-paths that branch off from it, and therefore we are justified in our confidence that where these great ones now stand we also shall one day stand. Seeing and understanding the inevitableness of our destiny, we also realize that it will be quite useless to endeavour to resist it. Progress is the law marked out for us. In progress only is our happiness and our safety. As regards the progress that lies before us in this particular chain of worlds the great majority of us are by no means yet what is technically called "safe" or "saved." We reach that desirable position only when we have become members of the Great Brotherhood which lasts from eternity to eternity, by passing the first of the great initiations, that of the Sotapatti or Srotapanna, the man who enters upon the stream.

To have taken that step is to have achieved the most important result, to have passed the most critical point in the whole of human evolution. For in the course of that evolution three points stand out beyond all others. The first is the entrance upon humanity, the attainment of individuality, the gaining of a causal body, the becoming a definite and apparently separate ego. To gain this individuality was the aim of the animal evolution, and its development serves a very definite purpose. The object is to make a strong individual centre, through which eventually the force of the LOGOS can be poured out. When this centre is first formed it is only a baby ego, still but weak and uncertain; in order that it may become strong and definite it has to be fenced round by the intense selfishness of the savage. For many lives a strong wall of selfishness has to be maintained, in order that within it the centre may grow more and more definite.

We may regard this selfishness as a kind of scaffolding, which is absolutely necessary for the erection of the building, but must be destroyed as soon as the building is completed, in order that it may be able to subserve the purpose for which it was erected. The scaffolding is unbeautiful, and if it were left after the building is finished it would make it uninhabitable, and yet without it the building could not have been achieved. The object of the creation of the centre is that through it the force of the LOGOS should radiate out upon the world, and such radiation would be quite impossible if the selfishness persisted, and yet without that selfishness a strong centre could never have been made. We see therefore that this most unlovely of qualities has its place in evolution. Now for us its work is over, and we ought to have got rid of it. But it is useless to be angry with the ordinary man for his selfishness, since it simply means that what was in the savage a necessary virtue is still persisting into the civilized condition. In point of fact the selfish man is an anachronism, a survival of prehistoric savagery. He is hopelessly behind the times.

How then is such a man to make himself unselfish, to bring himself abreast of the advancing current of evolution? The methods adopted by nature to secure this end are many and various, but they are all fundamentally one. For what is necessary is that the man shall realize the unity of all. And often he does this by gradually enlarging the self of which he thinks. Instead of thinking of himself as the unit he begins to regard the family as the unit for which he is working, and within its limits he gradually becomes unselfish. Presently he expands his ideas to include the tribe or clan to which he belongs, and he learns to be unselfish within its limits, while still absolutely selfish and even predatory to all who are outside it, whom he usually regards as natural enemies. Later on in his history he extends his ideas so as to include, in certain respects at least, the nation to which he belongs.

It is somewhere in the course of that stage of transition that the majority of humanity stand at the present moment. In almost all minor matters the ordinary man is still fighting for his family against the interests of all other families, but in a few wider matters he recognizes that his interests are identical with those of those other families, and so in those matters he develops what he calls patriotism and national feeling; but even in those matters he is still absolutely selfish as regards all those other families who happen to speak different languages and to be born in different climes. At some time in the future the average man will extend his ideas of self to include the whole of humanity, and then at last we may say that he has become by slow degrees unselfish.

While he is thus learning to take a wider view of his relation to others, he is also learning something with regard to himself. First he realizes that he is not his physical body, later that he is not his feelings, and further on still that he is not even his mind. This brings him eventually to the realization that he is the ego or soul, and still later on he realizes that even that ego is only apparently separate, and that there is in reality but one transcendent unity.

Thus the man treads the weary round of the seven hundred and seventy-seven incarnations, a time of slow and painful progress and of harrowing uncertainty, but at last after all those struggles the uncertainty ends with that plunge into the stream that makes the man safe forever, and so that is the second and still more important point in his evolution. But before he can take this step the man must have learned consciously to co-operate with nature, he must definitely have taken his own evolution in hand. The knowledge of the unity which makes him unselfish also makes him desire to be useful, for it gives him an incentive to study and to perfect himself — a reason for his actions and a criterion by which he can judge the feelings and thoughts within him, and also the value of all with which he comes into contact.

How then must he begin this work of perfecting himself? Obviously he must first pull up the weeds, that is to say he must eliminate one by one the undesirable qualities which he finds in himself; then he must seek the good qualities and cultivate them. He must definitely set himself to practise helpfulness, even although at first he may be very clumsy in the unaccustomed work. The formation of character is very slow and tedious for him, for there are many forces arrayed against his efforts, forces which he himself has made in the past. He has for many years been yielding himself to the sway of certain undesirable qualities, and so they have gained a great momentum.

Take the case of such a vice as irritability, for example. He has in the past been in the habit of yielding himself to outbursts of anger, and every such outburst makes it more difficult for him to control himself on the next occasion; so a strong habit has been set up, a vast amount of energy moving in that direction has been accumulated. This is stored up, not in the ego as an inherent quality, but in the permanent astral atom; and when he realizes the inadvisability of anger and sets himself against it he has to meet this store of force which he himself has generated during many past lives. Naturally he finds his task a difficult one, and he meets with many failures and discouragements; but the important thing for him to bear in mind is that however many times he may fail, victory is absolutely a scientific certainty, if only he will persevere.

However great the amount of force may be which he has stored up, it must be a finite amount, and every effort which he makes against it reduces it by just so much. But on

his side there is a force which is infinite; if only his will is strong enough he can go on, if necessary through many lives, steadily renewing the force for good with which he combats the evil, and behind him in that effort is the infinite force of the LOGOS Himself, because that evolution is in accordance with His will. Until the man grasps the idea of unity he has no adequate motive for undertaking the hard and distasteful work of character-building, but when he has seen the necessity of this, the reason for trying is just as valid even though he has failed a thousand times as it was in the beginning. No number of failures can daunt the man who understands the scheme, just because he knows that however great the struggle may be the forces of infinity are on his side, and therefore in the end he cannot fail.

To be certain of remembering this purpose of his from life to life he should raise his consciousness to the ego; but during the stages when he is as yet incapable of this he will nevertheless impress that purpose upon the permanent atoms, and so it will be carried over with them from life to life. If the ego can be reached, the man will be born with the knowledge inherent in him; if he can only impress the permanent atoms, the knowledge will not actually be born with him as part of his stock-in-trade, but the moment that it comes before him in any form in his next incarnation he will immediately recognize its truth, seize upon it, and act accordingly. This steady practice of virtue and this persistent increase of knowledge will certainly lead him to the gate of the probationary path, and through that to the great initiation of which we have spoken.

After that initiation the third point is sure to follow — the gaining of the further shore of that stream, in the attainment of adeptship, when the man leaves the merely human evolution and enters upon that which is superhuman. We are told that after a man has entered upon the stream it takes him an average of seven incarnations to reach the fourth step, that of the arhat, the noble, the venerable, the perfect. That period is more often lengthened than shortened, and the lives are usually taken without an intervening stage in the heaven-world. Ordinarily it is only men of this stage who are able thus to dispense with or renounce the life of the heaven-world.

At the same time those who are so happy as to be chosen to take part in the noble task for which the great Masters are preparing us, that of working under the Manu in charge of the development of the sixth root-race, will certainly need many successive incarnations without any intervening periods of celestial rest. The possibility of this is however conditioned by the rule that a man must have experienced celestial consciousness before he can renounce the heaven-life; and furthermore it is not in the least merely a question of voluntarily renouncing a reward, but of being sufficiently advanced to dispense for a time with that part of evolution which for the majority comes most usually in the heaven-life.

When he stands upon the step of arhatship half his path from the first initiation to adeptship may be said to have been trodden, for he has then cast off five of the ten great fetters which hold men back from nirvana. Before him lies the task of casting off the remaining five, and for that also an average of seven incarnations is allowed, but it must be understood that this average is in no sense a rule, for many men take much longer than this, whereas others with greater determination and perseverance move through these initiations in very much less time. A case has been known in which, by beginning very early in life, and by working very hard, a man has been able to take all four of the great initiations in one incarnation, but this is excessively rare, and not one in ten thousand candidates could do it.

It will be remembered that to stand at the level of the arhat involves the power fully to use the buddhic vehicle, and it will also be remembered that when a man raises himself into his buddhic body the causal body vanishes, and he is under no compulsion whatever ever to re-form it. Clearly therefore the seven lives which remain to him before he reaches the level of adeptship need not involve a descent to the physical plane at all, and therefore they may not be what we ordinarily mean by incarnations. Nevertheless in the great majority of cases they are taken upon the physical plane, because the man has work to do upon that plane for the Great Brotherhood.

The candidate spends these fourteen lives in passing through the different stages of the Path of Holiness, and in acquiring all the qualifications which are described in detail in the concluding chapters of *Invisible Helpers*. One who becomes a disciple of one of our Masters takes always, not the path to selfish liberation — the mere balancing of good and evil karma and the vanishing of all desire, so that the man is no longer forced back into rebirth — but the path of renunciation in which, having seen the scheme of the LOGOS, the man throws himself into it and lives only to promote the advancement of his fellow-men.

This has been called “The Path of Woe” because of the constant self-sacrifice which it involves, but in truth this title is somewhat of a misnomer, because although it is true that there is suffering, it is always a suffering of the lower and not of the higher, and if the man should avoid such suffering by supineness or idleness, and leave undone the work which he might have done, there would assuredly be much greater suffering for him at a far higher level, in the shape of remorse. Such suffering as is inevitable in this path arises from the fact that the student is striving to do here and now in the fourth round what will be natural and easy in the seventh round. All our vehicles then will be much more developed, and even the very material of which they are built will be in an entirely different condition, because the physical atom will then have all its seven spirillae active instead of only four of them. Therefore to force our present undeveloped vehicles to do work which will be comparatively easy for those which in millions of years will be fully developed, involves a great deal of strain, and this strain is necessarily productive of a certain amount of suffering.

It is analogous to the suffering and privation which is cheerfully undergone by an athlete when he puts himself in training. If he wishes to compete in some great race or trial of strength, he must make his physical body do more than it would naturally do, and deny it many things which it greatly likes, the absence of which unquestionably causes it considerable discomfort, and perhaps even somewhat of positive suffering. Yet for the purpose which he has in view the athlete quite cheerfully undergoes this; indeed if, for the sake of avoiding these comparatively slight temporary discomforts, he should put aside the opportunity of taking part in the race or contest, it is quite likely that afterwards when he saw his comrades passing onward to victory he would feel a remorse for that self-indulgence, which would involve keener suffering on a higher plane. The analogy holds good in reference to the efforts necessary to progress along the path of renunciation; the man who fell aside from that path because of its difficulties and hardships would undoubtedly suffer far more in the long run from remorse when he saw those of his fellow-creatures going unhelped whom he might have aided, when he saw misery among them which he knew that he might have relieved if he had been less self-indulgent.

There is never any pain to the Self, but only to these lower vehicles, when they are being prematurely adapted. A good analogy may be taken from the growth of crabs and other crustaceans. These creatures have their bones outside for protection, in the form of a shell, while our bones are inside, in the form of a skeleton. A fatal objection to the crustacean scheme is that when the creature grows it has to burst the shell and then wait for another one to grow, which must be both a painful and inconvenient process. So in the process of our growth do we make about ourselves shells of thought, as though we were mental crustaceans. Presently the shell becomes too small, and then we make a long series of efforts to crowd the new growth inside it and make it do somehow; but in the end this always proves impossible, and we have painfully to burst it. This however is inevitable, so chafe not at karma and at nature's changeless laws, for you made the shell yourself in the past, and now you yourself must break it. But if you did not go to the inconvenience of breaking it, you would suffer far more in the unsatisfied feeling that no progress had been made.

Many people are afraid of change, especially of a change of faith, and this arises not only from inherited prejudice, but also from actual fear of doubt — fear that if one once lets go one may be unable to find mental anchorage anywhere. Many a man is quite unable to make rational defence of his belief, or to answer the problems which inevitably arise in connection with it, and yet he is afraid to let it go. Sooner or later he will have to let go, though the widening out of his faith is sure to be accompanied by pain. Truly there would be no suffering for us if we never broke our shells, but then on the other hand there would be no progress.

The life of the disciple is full of joy — never doubt it an instant. But it is not a life of ease. The work which he has to do is very hard, the struggle is a very real one. To compress into a few short lives the evolution of millions of years — the evolution for which the ordinary process of nature allows three rounds and a half — is not a mere holiday task. Our President has written: "Disciples are the crucibles of nature, wherein compounds that are mischievous are dissociated and are recombined into compounds that promote the general good."

It is not *necessary* for any one to become such a crucible; perhaps it would be nearer the fact to say that to become one is a distinction eagerly sought after; nearer still to say that when once a man has *seen* the great sacrifice of the LOGOS there is no other possibility for him but to throw himself into it — to do his tiny best to share in it and to help it at whatever cost to his lower nature. And this is no child's play; it does indeed involve often a terrible strain. But an earnest student will be able to realize that a man may so love his work, and may be so full of joy in it, that outside of it there can be no pleasure worth considering, even though that work may tax almost beyond bearing every faculty and every vehicle — physical, astral or mental — which he possesses.

It must be remembered that when humanity in general has this work to do and this evolution to accomplish, it will be far better fitted for the effort than is the man who is trying now to take a shorter and steeper road. Many of his difficulties are due to the fact that he is attempting with a set of fourth-round bodies to achieve the result for the attainment of which nature will prepare her less adventurous children by supplying them in the course of the ages with the splendid vehicles of the seventh round. Of course even to gain those glorified vehicles these weaker souls will have to do the same work; but when it is spread over thousands of incarnations it naturally looks less formidable.

Yet beyond and above all his struggle the pupil has ever an abiding joy, a peace and serenity that nothing on earth can disturb. If he had not, he would indeed be a faithless servant of his Master, for he would be allowing the temporary strain on the vehicles to overbear his perception of the Self within; he would be identifying himself with the lower instead of with the higher.

There is therefore a certain element of the ridiculous in describing this Path as one of woe, when it is clearly evident that there would be much greater woe for the candidate if this Path were not taken. Indeed, to the man who is really doing his duty true sorrow is unknown: "Never doth any who worketh righteousness, O beloved, tread the path of woe." (*Bhagavad-Gita*, VI, 40.)

This is as regards the inner life of the disciple, but if one is to consider the treatment which he is likely to receive on the physical plane, the name of the path of woe is by no means inappropriate, at least if he has to do any sort of public work in which he tries to help the world. Ruysbroek, the Flemish mystic of the fourteenth century, writes of those who enter upon the Path: "Sometimes these unhappy ones are deprived of the good things of earth, of their friends and relations, and are deserted by all creatures; their holiness is mistrusted and despised, men put a bad construction all the works of their life, and they are rejected disdained by all those who surround them; and sometimes they are afflicted with divers diseases."

Remember, too, how Madame Blavatsky writes: "Where do we find in history that `Messenger' grand or humble, an Initiate or Neophyte, who, when he was made the bearer of some hitherto concealed truth or truths, was not crucified and rent to shreds by the `dogs' of envy, malice and ignorance? Such is the terrible Occult law; and he who does not feel in himself the heart of a lion to scorn the savage barking, and the soul of a dove to forgive the poor ignorant fools, let him give up the Sacred Science." (*The Secret Doctrine*, III, 90.)

The way in which the world usually treats a new truth is first to ridicule it, then to grow angry about it, and then to adopt it and pretend that it has always held that view. In the meantime the first exponent of the new truth has probably been put to death or died of a broken heart.

It is in the course of the training on this Path that the consciousness of the candidate passes through the three halls mentioned in *The Voice of the Silence*. This term is used there to indicate the three lower planes. The first, that of ignorance, is the physical plane, upon which we are born to live and die, and it is very truly described as a Hall of Ignorance, for all that we know in it is the merest outside of things. The second, the Hall of learning, is the astral plane, which is very truly the place of probationary learning, for when the astral centres are opened we see so much more of everything than we do on the physical plane that at first it seems to us that we must indeed be seeing the whole, though further development soon shows us that this is not so.

But *The Voice of the Silence* warns us that beneath each flower in this region, however beautiful it may be, lies coiled the serpent of desire — that lower desire, which the aspirant must stifle in order that he may develop in its place the higher desire which we call aspiration. In the case of affection, for example, the lower, the selfish, the grasping affection must be altogether transcended, but the high, pure, and unselfish affection can never be transcended, since that is a characteristic of the LOGOS Himself, and a necessary qualification for progress upon the Path. What men should cast aside is such love as thinks always "How much love can I gain? How

much does so and so love me? Does he love me as he loves some one else?" The love which we need is that which forgets itself altogether, and seeks only the occasion to pour itself out at the feet of the loved one.

The astral plane is often called the world of illusion, yet it is at least one stage, and a very long stage, nearer to the truth of things than what we see on the physical plane. It often happens that men are easily deluded upon the astral plane, because they are as yet much in the position of babies there, new-born infants with no sense of distance and no developed capacity for locomotion. We must not forget that in the normal course of things people very slowly awaken to the realities of the astral plane, just as a baby awakens to the realities of the physical plane. But those of us who are deliberately and, as it were, prematurely entering upon the Path are developing such knowledge abnormally, and are consequently more liable to error.

Danger and injury might easily come in the course of our experiments but for the fact that all pupils who under proper training are endeavouring to open these faculties are assisted and guided by those who are already accustomed to the plane. That is the reason for the various tests which are always applied to one who wishes to become a worker on the higher planes; that is why also all sorts of horrible sights are shown to the neophyte, in order that he may understand them and become accustomed to them. If this were not done, and if he came across such a thing suddenly, he might receive a shock which would drive him back into his physical body, and this would not only prevent his doing any useful work, but might also be a positive danger to that body. Where the neophyte is deluded on the astral plane it is his own fault, and not that of the plane, because error is due only to his unfamiliarity with the surroundings.

The third hall is the mental plane — the Hall of Wisdom. As soon as a man is free from attachment to astral things he can pass beyond the probationary stage of his learning, and begin to acquire knowledge which is real and definite. Beyond that in turn lies the imperishable world of the buddhic plane, in which for the first time the man learns the true unity of all that to the lower vision seems to be separate.

It has been said, "Thou canst not travel on the Path before thou hast become that Path itself." As long as it is but a Path to us, and we are following it according to directions received, or because we have seen it and chosen it with the intellect only, we have not truly entered it at all. This is only a stage, leading on to the condition when you have become yourself the Law and the Path, and you fulfil its requirements, instinctively doing the right merely because it is the right, and because it is inconceivable that you could do anything else. Then only you have *become* the Path.

A man cannot climb if he does not try; though if he does not climb it is true that he will not fall far. The strong man often makes serious errors; but the very force which enables him to make them also enables him to make great progress when he turns his energies in the right direction. Rapid progress affects the whole organism and is a great strain upon it, and this inevitably finds out whatever weak spots there are in the man. The plans of the Hierarchy will be carried out whatever we may or may not do, for we are but as pawns in the mighty game which is being played; but if we are intelligent pawns, and are willing to co-operate, it gives much less trouble to the authorities, and incidentally to ourselves.

And what will be the end of it all? The attainment of perfection. Yet even that is only relatively and not absolutely the end, for when we have reached in fullest

consciousness the LOGOS of our system and have unified our consciousness with His, there still remains the further Path which leads us to union with still higher Powers. A great authority has told us that at the end of one of the stages of evolution far beyond adeptship the perfect man will be a decad, having a body upon each of the sub-planes of the lowest cosmic plane, the triple LOGOS outside of time and space constituting his Self, and thus completing the ten. But this consummation can only be reached when the man has power to create a body for himself upon each of these planes.

We have been led to understand that of the total number of egos which are engaged in this evolution about one-fifth will fully succeed — that is to say will succeed in attaining the asekha level before the end of the seventh round. Another fifth will by that time, have gained the arhat level, and about an equal number will be on the lower stages of the Path, while a number roughly stated as the remaining two-fifths will have dropped out of this evolution altogether at the critical period at the middle of the fifth round.

All those who have not fully attained the goal, and completed their evolution, will have to resume it upon the next chain of globes, and even those who are the failures of the fifth round will be successes in the next chain. In the same way it is not improbable that some of those who are adepts and Masters now may have been among the failures of the moon-chain — that is to say that They belonged to the humanity of that chain, but were somewhat backward upon it, and so dropped out there, and came on in the fore-front of this later evolution, exactly as a boy who failed to pass an examination one year would be likely to be among the first of his class when he tries the same examination again twelve months later.

Remember that we are now only just past the middle of an evolutionary period, and that is why so very few people comparatively have as yet attained adeptship, just as very few boys in a class would be already fit to pass the final examination of the year after only six months of study. In precisely the same way very few animals are as yet attaining individuality, for the animal who attains individuality is as far in advance of his fellows as is the human being who attains adeptship in advance of the average man. Both are doing at the middle point of evolution what they are expected to be able to do only at the end of it. Those who achieve only at the normal time, at the end of the seventh round, will approach their goal so gradually that there will be little or no struggle.

Undoubtedly to attain in that way is very far easier for the candidate. But that method has the tremendous drawback that the man who attains by it will not have been able to give any help to others, but will on the contrary have required assistance himself. I remember from the days of my childhood a Christian hymn which gave this idea very beautifully. It described how a certain soul went to heaven and enjoyed its bliss, and wandered about there very happily for a time, but at last he noticed that the crown which he wore differed much in splendor from many of the others, and for a long time he wondered why this was so. At last he met the Christ Himself and mustered up courage to ask Him the reason of this peculiarity; and the answer given ran thus:

I know thou hast believed on Me,
And Life through Me is thine;
But where are all those glorious gems

That in thy crown should shine?
 Thou seest yonder glorious throng
 With stars on every brow,
 For every soul they led to Me
 They wear a jewel now.

“They that are wise shall shine as the brightness of the firmament, but they that turn many to righteousness as the stars for ever and ever.”

When we are struggling onwards ourselves we can help others, and we should do all that we can in this direction, not because of the result to ourselves (though that is inevitable) but for the sake of helping the world. The man who drifts with the stream has to be carried along, but when he begins to swim himself he sets free the force that would otherwise have been spent in helping him. That can then be used for the helping of others, quite independently of what he himself may do in that line.

Adeptship sets the man free from the necessity of rebirth, and its achievement also involves the liberation of forces for the aid of others. The man who seeks liberation only for himself may balance his karma perfectly and may kill out desire, so that the law of karma will not longer compel him to rebirth. But though he thus avoids the action of the law of karma he does not escape from the law of evolution. It may be long before he comes under the influence of that law, because by the hypothesis a man who has already at this stage set himself free from all desire must be considerably in advance of the average. There will however inevitably come a time when the slow and steady advance of the law of evolution will overtake him, and then its resistless pressure will force him out of his selfish bliss into rebirth once more, and so he will find himself again upon the wheel from which he had hoped to escape.

It has often been asked how the secrets revealed at initiation are protected from those who are able to read thoughts. There is not the slightest danger that any of these secrets will ever be disclosed in this manner, for at the same time that the secret is told to the initiate the means by which he can guard it is also explained to him. If it could be possible that an initiate could ever be so false as to think of betraying what has been confided to him, even then there would be no danger, for he is in such close touch with the Brotherhood of which he is a part that they would at once know of his foul intention, and before he could speak the treacherous words he would have forgotten utterly that there was anything to betray. There is nothing that is in any way terrible about these secrets, except that the power which goes with them might well be terrible if wrongly used. Initiates always know one another, much in the same way as free-masons do; and, just as with the latter, any initiate could hide his status from those below him, but not from those above him.

However sorely the Brotherhood may be in need of helpers no man can receive initiation until his character is developed to a stage when he is ready for it, and in exactly the same way if a man has raised himself to the level of initiation there is no power which can withhold it from him. It may very often happen, however, that a man is ready in every respect, save for a lack of some one quality; and that lack may hold him back for a very long time, which would probably mean that by the time he acquired the missing quality he would in all other respects be developed in advance of the requirements. So it must not be supposed that all initiates standing upon the same level are invariably equal in all respects. What the world calls a great man is not necessarily developed all round and fit for initiation. Anything in the nature of favouritism or neglect is utterly inconceivable. In this matter no man can give to

another that which he has not earned, nor can any man withhold the due recognition of development won.

THE ANCIENT MYSTERIES

What I can tell you with regard to the ancient mysteries is not derived from any special study of old manuscripts, or of the history of this subject. It happened to me in another life to be born in ancient Greece, and to become initiated there into some of the mysteries. Now a man who was initiated in this way in Greece gave a pledge not to reveal what he had seen, and this pledge is binding, even though it was given in a former incarnation; but Those who stood behind those mysteries have since thought fit to give out to the world much of what was then taught only under the vow of secrecy, and so They have relieved us from our promise as far as those teachings go. Therefore I break no pledge when I tell you something about the instructions which were given in those ancient mysteries. Other subjects were taught, however, which I am not at liberty to name, because they have not yet been made public by the Great Ones.

In the first place, I should like to ask you to notice that all peoples and all religions have had their mysteries, including the Christian religion. I have often heard people say that in the Christian religion, at least, nothing was hidden: that everything was open for the study of the poor and the unlearned. Any one who says that does not know the history of the Christian Church. Now, indeed, everything the Church knows is given out, but that is only because it has forgotten the mysteries which it used to keep hidden. If you study the earliest history of the Church, you will find that old writers speak very distinctly of the mysteries, which were taught only to those who were full members of the Church. There were many points on which nothing was said to those who were only "katechoumenoi," who had just entered the Church, but were still candidates for full membership.

Traces of this we can find still earlier, for you will remember that it is said in the Gospels that the Christ made known to His disciples many things which He gave to the multitude only in parables.

But one of the reasons of the failure of the Christian Church to control her more intellectual sons, as she should have done, is the fact that she has forgotten and lost the supernatural and philosophical mysteries which were the basis of her dogma. To see something of this hidden side of her teachings you have only to read the works of the great Gnostic writers. Then you will find that when we take this side as the inner doctrine for the scholars, and the present form of the Christian religion as the outer doctrine for the illiterate, we get in the two combined a perfect expression of the ancient Wisdom. But to take either of these teachings by itself, and to condemn the other as heresy, gives us only a one-sided view. So every religion has instruction for those who do not get beyond its outer form, but has always also higher instruction for those who penetrate to the inner.

However, when we speak of the ancient mysteries, we generally mean those which were connected with the great religion of ancient Greece. Only a few books exist on this subject. There is a book of Iamblichus, who was himself initiated into the mysteries, and there is a book written by a countryman of mine, Thomas Taylor, a Platonist, and also one by a Frenchman, Monsieur P. Foucart. Although they are very interesting, you will find that they give but little real information. Much that we think we know about the mysteries (I mean from an external point of view) comes to us through the writings of their exponents.

The Christian Church has had the habit — probably justifiable from her point of view — of destroying all books which stood for teachings other than her own, and we must not forget that almost all of our knowledge with regard to early Christian times comes to us through the hands of the monks of the middle ages. They were practically the only educated people of that time, and it was they who copied all the manuscripts. They had very pronounced opinions about what was useful and what was not; so very naturally only that part survived which agreed with their views, this being reported with emphasis, while anything of opposite character was discarded. Above all, the greater part of the knowledge which is accessible to the general world about the mysteries is found in the works of the Church Fathers, who were opposed to them. Without wishing to accuse the Fathers of having purposely misrepresented, we may certainly conclude that they tried to put forward their own view in the best and strongest light. Even at the present day if you wished to know the whole truth concerning the doctrine of some Protestant sect, you would not go to Catholic priests for information; nor, if you wanted good and just explanations concerning Catholicism, would you go to the Salvation Army to get them.

In regard to the mysteries we are in a similar situation, only much worse, because of the many and bitter disputes between the followers of the old religion and its mysteries and the Fathers of the Christian Church. Therefore we may accept only with considerable reserve and with great prudence what the Fathers say in regard to this subject. For example, you will find that they often maintain that the ancient mysteries contain much that is indecent and immoral.

Because I have carefully searched clairvoyantly through the mysteries of Greece, and in a former incarnation was myself an initiate of them, I can say with perfect certainty that there is not even a shadow of truth in those statements. There did exist certain mysteries with which were festivities and a form of Bacchus-worship, which degenerated later on into something very objectionable; but this was only in later times, and those mysteries belonged to quite another branch. They were not in the least related to the mysteries of Eleusis, but were only an imitation of them on a small scale, entirely exoteric.

I have, this evening, to treat a very extensive subject in a short time. I must try to give you a rough sketch of what those Greek mysteries were and what was taught to the initiates.

The fact will be known to you that two divisions are always mentioned: the lesser and the greater mysteries. Everybody knew that those existed, and the number of persons who were initiated was indeed quite a large proportion of the whole population. I think you may read in exoteric books of thirty thousand initiates gathering at one time, and this also shows that the fact that a man was initiated need not be kept secret, but that the outer world knew him as belonging to this numerous class. I mean that, although certain teachings given in the mysteries were always kept secret, the whole Greek and Roman world knew that the greater and lesser mysteries existed, and more or less who belonged to each of them.

But behind those two degrees, the existence of which was generally known, there were all the time the real secret mysteries; and the existence of the third degree, as one might call it, was unknown to the public. If one thinks of the conditions of that time one can readily understand the reason for this. Most of the Roman Emperors, for example, knew of the existence of the lesser and greater mysteries, and insisted upon being initiated. Now we know very well from history that many of the Roman

Emperors were hardly of the character to be allowed to play a leading role in a religious body. But, all the same, it would have been very difficult for the leaders of the mysteries to refuse entrance to an Emperor of Rome. As was once said, one cannot argue with the master of thirty legions. The emperors would certainly have killed anyone who stood in the way of anything they wished. Thus it was desirable that the existence of the third degree should not be known, and nobody knew that there was such a degree before he was deemed, by those who could judge, worthy to be admitted to it.

The teachings of this third degree were never given to the public and never will be. But in the common mysteries, lesser and greater, are many things which can be told. In the first place, then, we were taught certain pithy sayings, or apophthegms, and if I quote you some of those you will understand the nature of the teaching. One of the best known was "Death is life, and life is death." This shows us that the higher life on the other side of death was well known. Another saying was "He who seeks realities in this life shall also seek realities after death; and he who seeks unrealities in this life shall also seek unrealities after death." A great principle of their teaching was that the soul had descended from the higher spheres to the material. The principles of reincarnation were also contained in their instruction. You will remember that this did not appear in the external doctrine of the religions either of Greece or of Rome--that is to say, it was not taught publicly and in so many words — but you will find that this idea of the descent of the soul into matter is imparted in classic mythology. You will remember the myth of Proserpina, who was carried to the under-world while picking the flower of the narcissus.

Let us recall the myth of Narcissus. He was a youth of great beauty who fell in love with his own image reflected in the water, and was therefore changed into a flower and bound to earth. You need not have studied much Theosophy to see what that means. We learn in *The Secret Doctrine* how the Ego looks down upon the waters of the astral plane and the lower world, how it reflects itself in the personality, how it identifies itself with the personality and, falling in love with its image, is bound to earth. So Proserpina, while picking the narcissus, is dragged away to the under-world, and afterwards passes half her life under the earth and half on the earth; that is, as you will see, half in a material body and half out of it.

In the same way, there are numbers of other myths of which it is very interesting to hear the Theosophical explanation. For example, in this old mystery-teaching the minotaur was held to signify the lower nature in man — the personality which is half man and half animal. This was eventually slain by Theseus, who typifies the higher self or the individuality, which has been gradually growing and gathering strength until at last it can wield the sword of its Divine Father, the Spirit. Guided through the labyrinth of illusion which constitutes these lower planes by the thread of occult knowledge given him by Ariadne (who represents intuition) the higher self is enabled to slay the lower, and to escape safely from the web of illusion; yet there still remains for him the danger that, developing intellectual pride, he may neglect intuition, even as Theseus neglected Ariadne, and so fail for this time to realize his highest possibilities.

In ancient Greece the lesser mysteries were especially celebrated in a little place called Agrae, and the initiates were called "mystae." Perhaps you know that their official dress, the token of their dignity, was the skin of a fawn, which in the old symbology represented the astral body.

Its spotted appearance was thought to be emblematic of the many colours in an ordinary astral body. The reason why this was considered a fitting dress for those initiated into the lesser mysteries was because the principal teachings given in them concerned the astral plane. Those who were admitted learned what the astral life of man would be after death.

Much time was spent in making clear by example as well as by teaching what would be the effect in the astral world of a certain mode of life on earth. In the first place they taught by illustrations, on an extensive scale by representations in the temples, by a kind of play or drama in which was shown what, in the astral world, would be the condition of a man who had been, let us say, avaricious or full of sensual desires. In the old days of the mysteries, when the leaders were adepts or pupils of adepts, these representations were something like materializations. That is to say, the teacher, whoever he was, produced them by his own power out of astral or etheric matter, and created a real image for his pupils. But as time advanced, and later teachers were unable to bring about this phenomenon, they tried to represent these teachings in other ways — in some cases by what we should call acting. Members of the priesthood took the roles of different persons, while in other cases puppets were moved by machinery.

In addition to the teaching concerning the astral plane, instructions were also given in the same way as to the system of world-evolution. Among other things, pupils were taught how our solar system and its different parts came into existence. You can easily see how that could be represented, first by materialized nebulae and globes, and how, when this materialization was no longer possible, the arrangement of different globes could be made clear by the use of what we now call an orrery — that is, a model of the solar system.

One of the most important things connected with the mysteries was that they explained the outer religion of the people in quite another way than that given to the general public. If you know anything about the religion of ancient Greece, you will understand that there were many things which badly needed some inner explanation, for certainly their religion does not appear to be very elevated or very reasonable when looked at from the ordinary standpoint. It seems to have been the object that all the stories which made up the outer teaching, many of which seem very extraordinary, should be learnt by the people and retained in their minds — just a few simple, clear conceptions, and nothing more. But all earnestminded people joined the mysteries, and learnt there the real meaning of the stories, which gave the whole thing quite another aspect.

Let me give you an idea of what I mean, by two or three very simple and short examples. I told you that, for the most part, the aim of those lesser mysteries was to inform the pupils about the effects on the astral plane of a certain mode of life here on earth. You probably know the myth of Tantalus. He was a man condemned to suffer in hell eternal thirst, while water surrounded him on all sides, but receded from his lips as soon as he tried to drink. The meaning of this is not difficult to see, when once we know what the astral life is. Every one who leaves this world of ours full of sensual desires of any kind — as, for example, a drunkard, or some one who has given himself up to sensual living in the ordinary meaning of the word — such a man finds himself on the astral plane in the position of Tantalus.

He has built up for himself this terrible desire which governs his whole being. You know how powerful the desire can be in the case of a drunkard; it conquers his

feelings of honor, his love of his family, and all the better inclinations of his character. He will take money from his wife and children, will even take their clothes to sell them and obtain money to drink.

Remember that when a man dies he does not change at all. His desire is still as powerful as ever. But it is impossible to gratify it, because his physical body, through which only he could drink, is gone. There you have your Tantalus, as you see, full of that terrible desire, always finding that the gratification recedes as soon as he thinks he has it.

Recall also the story of Tityus, the man who was tied to a rock, his liver being gnawed by vultures, and growing again as fast as it was eaten. There you have an illustration of the effect of yielding to desire: an image of the man who is always tortured by remorse for sins committed on earth.

As perhaps a higher example of the same we can take the story of Sisyphus. You know how he was condemned always to roll a stone up a hill, and how, when he reached the top, the stone would always roll down again. That is the condition of an ambitious man after death, a man who has spent his life in making plans for selfish ends, for attaining glory or honor. In his case also death brings no change. He goes on making plans just as he did during life. He works out his plans, he executes them, as he thinks, till the point of culmination, and then he suddenly perceives that he has no longer a physical body, and that all was but a dream. Then he begins again and again, till he has learnt at last that these desires are useless and that ambition must be killed. So Sisyphus goes on uselessly rolling the stone up the hill, till at last he learns not to roll it any more. To have learnt that is to have conquered that desire, and he will come back in his next life without it; without the *desire*, but of course not without the weakness of character which made that desire possible.

So you see that conditions that seem terrible are but the effects in the other world of a wrong life here on earth. That is nature's method of turning wrong into good. Man does suffer, but what he suffers is only the effect of his own action and nothing else; it is not punishment inflicted upon him from outside, but entirely of his own making. And that is not all. The suffering he has to bear is the only means by which his qualities can be directed in the right way for his evolution and progress in another life. This was a point much emphasized in the teaching of the mysteries.

Now in regard to the greater mysteries. Those were celebrated principally in the great temple of Eleusis, not far from Athens. The initiates were named "epoptai," that is, "they whose eyes are opened." Their emblem was the golden fleece of Jason which is the symbol of the mind-body; for the yellow colour in the human aura indicates the intelligence, as every clairvoyant knows. In this degree of initiation the teachings of the former degree were continued. In the first, as you remember, were taught the effects in the astral world of various ways of living. In the greater mysteries the pupil was shown what would be the effect in the heaven-world of a certain line of life, study and aspiration on earth. The whole history of the evolution of the world and of man, in its deeper aspect, was expounded in the greater mysteries. The same method or representation as in the other case was used here; although it was much more difficult to represent on the physical plane what belonged to the mental.

In each of these divisions of the mysteries, the lesser and the greater, there was an inner school which taught practical development to those who were seen to be ready for it. In the lesser mysteries theoretical knowledge about the astral plane was given, but the teachers carefully watched their pupils, and when they noticed one of whose

character they felt sure, who showed that he was capable of psychic development, they invited him into the inner circle in which instruction was given as to the method of using the astral body and consciously functioning in it. When such a man passed on to the greater mysteries he received not only the ordinary teaching about the conditions of the mental plane, but also private instruction as to the development of the mental body as a vehicle.

Those who were thus received, not only into the recognized stages of the mysteries but into their inner schools, were also taught at the end of their course that all of this was in truth but exoteric — that all which they had learnt, incalculable as had been its value, was really only a preparation for the true mysteries of initiation which would lead them to the feet of the Masters of Wisdom, and admit them to the Great Brotherhood which rules the world.

I may explain still further the meaning of some of those symbols which were used in connection with the mysteries. First, we will take what was called the thyrsus — that is, a staff with a pine-cone on its top. In India the same symbol is found, but instead of the staff a stick of bamboo with seven knots is used. In some modifications of the mysteries, a hollow iron rod, said to contain fire, was used instead of the thyrsus. Here again it is not difficult for the student of occultism to see the meaning. The staff or the stick with seven knots represents the spinal cord, with its seven centres, of which we read in the Hindu books. The hidden fire is the serpent-fire, kundalini, of which you may read in *The Secret Doctrine*. But the thyrsus was not only a symbol; it was also an object of practical use. It was a very strong magnetic instrument, used by initiates to free the astral body from the physical when they passed in full consciousness to this higher life. The priest who had magnetized it laid it against the spinal cord of the candidate and gave him in that way some of his own magnetism, to help him in that difficult life and in the efforts which lay before him. In connection with these mysteries, a certain set of objects called the toys of Bacchus are spoken of. When you go over those lists of the toys of Bacchus you will find them very remarkable.

Whilst the child Bacchus (the LOGOS) plays with his toys he is seized by the Titans and torn to pieces. Later these pieces are put together and built into a whole. You will understand that this, however clumsy it may seem to us, is without doubt an allegory, which represents the descending of the One to become the many, and the re-union of the many in the One, through suffering and sacrifice. What, then, are the toys of the child Bacchus when he falls into matter and becomes the many? In the first place we find him playing with dice. Those dice are not common dice, but the five platonic solids; a set of five regular figures, the only regular polygons possible in geometry. They are given in a fixed series, and this series agrees with the different planes of the solar system. Each of them indicates, not the form of the atoms of the different planes, but the lines along which the power works which surrounds those atoms. These polygons are the tetrahedron, the cube, the octohedron, the dodecahedron, and the icosahedron. If we put the point at one end and the sphere at the other we get a set of seven figures, corresponding to the number of planes of our solar system.

You know that in some of the older schools of philosophy it was said: "No one can enter who does not know mathematics." What do you think is meant by that? Not what we now call mathematics, but the mathematics which embraced the knowledge of the higher planes, of their mutual relations and the way in which the whole is built by the will of God. Plato said, "God geometrizes," and it is perfectly true. Those forms are not conceptions of the human brain; they are truths of the higher planes. We

have formed the habit of studying the books of Euclid, but we study them now for themselves, and not as a guide to something higher. The old philosophers pondered upon them because they led to the understanding of the true science of life. We have lost sight of the true teaching, and grasp in many cases only the lifeless form.

Another toy with which Bacchus played was a top, the symbol of the whirling atom of which you will find a picture in *Occult Chemistry*. He also plays with a ball which represents the earth, that particular part of the planetary chain to which the thought of the LOGOS is specially directed at the moment. Also he plays with a mirror. The mirror has always been a symbol of astral light, in which the archetypal ideas are reflected and then materialized. So you see that each of those toys indicates an essential part in the evolution of a solar system.

A few words may be said about the way in which people were prepared for the study of those mysteries by the different schools; for instance, the Pythagorean school, to which I belonged. In the Pythagorean schools, the pupils were divided into three classes. The first was called that of the *akoustikoi* or hearers. This means that they were learners, but it is also true that one of the rules was that they were to keep absolutely silent for two years.

I think this rule would be regarded as a serious drawback by many who join our Society at the present time, but in those olden times a great many people, not only men but women too, submitted to this stipulation. The rule had also another meaning, but it is a fact that during two years the members of the first class were compelled to keep silence. The other meaning was that during all the time, however long, that a man stayed in this class of the *akoustikoi*, he might not give out any teaching, but continued to learn. I have wished that we had some such arrangement in the Theosophical Society, for it sometimes happens that members who do not yet know much themselves want to teach others, and the teaching is not always recognizable as Theosophy.

The second class of Pythagoreans was called that of the *mathematikoi*. They passed their time in studying geometry, numbers and music. They brought these different subjects into relation to one another and worked out the relations between colour and sound, which are very remarkable.

Let us take an example, which shows how our world is a coherent whole and how we can take from different parts which do not seem to have any connection whatever, and bring them into relation with each other. I just spoke about the five platonic polygons. Every one who knows anything about music knows that there is a fixed proportion between the length of the strings which produce certain tones. You know that you can tune a piano according to a certain system of fifths, and you can express the relation of the different tones to one another by the number of vibrations of each tone; so you can express an harmonious chord in mathematical numbers. This was first discovered simply by experiment; later the mathematicians found out what the proportions should be, and again by experiment they were found to be exact. But the peculiarity is that the set of numbers which produces an harmonious chord have the same relation to one another as that which exists between certain parts of these platonic solids. I believe that this point was worked out some time ago in an article in the *Theosophical Review* by one of the English cathedral organists.

It is very remarkable that our scale, so different from the old Greek scale, which consisted of five tones, can still be deduced from the proportion of those five platonic figures, which were studied some thousands of years ago in Greece. One is apt to

think that there cannot be much relation between mathematics and music, but you see that they are both parts of one great whole.

The third class of the Pythagorean school was formed of the *physikoi* — those who studied physics, the inner connection between phenomena, world-building and metaphysics. They learnt the truth about man and nature and, as far as they could learn it, about Him who made both.

There is still one point in the mysteries which we should not forget to consider — the life of the disciples. A life of perfect purity was strictly required. It is a remarkable coincidence that the life in the Pythagorean school is divided into five periods, almost similar to the five steps of the preparatory path of the Hindus, as described by me in *Invisible Helpers*, and by Mrs. Besant in *The Path of Discipleship*. Almost all the forms and symbols of the present Christian religion are derived from the Egyptian mysteries. All the symbolism, for example, that is related to the Latin cross, and to the descent and sacrifice of the LOGOS, is taken from the Egyptian mysteries. I have written about this in *The Christian Creed*.

Though the mysteries of Greece and Rome, of Egypt and Chaldaea, are long ago defunct, the world has never been left without avenues of approach to the inner shrine. Even in the gross darkness of the middle ages the Rosicrucians and some other secret societies were ready to teach the truth to those who were ready to learn; and now in these modern days of hurry and materialism the Theosophical Society still upholds the banner of true knowledge, and acts as a gateway by means of which those who are really in earnest may reach the feet of the Masters of the Wisdom. We have our grades in the Esoteric Section, just as the mysteries had; and behind us, as behind them, stand always the officials of the Great White Brotherhood, who keep in their hands the key to the true initiations.

You must also remember that many things given in those old days only under the seal of secrecy are now made public, and through our Society are given to the world. Many of the greatest and noblest characters of history have passed years in study and work to try to find what is now given us so easily and simply in a few books. Of us is perfectly true what is said in the Bible: “Many prophets and kings have desired to see those things which ye see, and have not seen them; and to hear those things which ye hear, and have not heard them.” (*Luke, X, 24.*) Because this honour is reserved for us and this opportunity is given us, it seems to me that a great responsibility rests upon us, and that we should try to be worthy of the gift. It is good karma which allows this possibility to open before us. If we let it pass, we shall not deserve to have another offered us for thousands of years. If you knew, as I know, with what difficulties we had to contend in former days to learn all those things which are laid before us now, perhaps you would appreciate more the opportunity offered you. Let us try to make use of it to the utmost of our power, and show ourselves worthy of the privilege given us by Theosophy.

SECOND SECTION: RELIGION

THE LOGOS

WE have in the LOGOS of our solar system as near an approach to a personal (or rather, perhaps, individual) God as any reasonable man can desire, for of Him is true everything good that has ever been predicated of a personal deity. We cannot ascribe to Him partiality, injustice, jealousy, cruelty; those who desire these attributes in their deity must go elsewhere. But so far as His system is concerned He possesses omniscience, omnipresence, omnipotence; the love, the power, the wisdom, the glory, all are there in fullest measure. Yet He is a mighty Individual — a trinity in unity, and God in very truth, though removed by we know not how many stages from the Absolute, the Unknowable before which even solar systems are but as specks of cosmic dust. I do not think that we can image Him at all. The sun is His chief manifestation on the physical plane, and that may help us a little to realize some of His qualities, and to see how everything comes from Him. The sun may be considered as a sort of force-centre in Him, corresponding to the heart of man, the outer manifestation of the principal centre in His body.

Although the whole solar system is His physical body, yet His activities outside of it are enormously greater than those within it. I have myself preferred not even to try to make any image of Him, but simply to contemplate Him as pervading all things, so that even I myself am also He, so that all other men too are He, and in truth there is nothing but God. Yet at the same time, although this that we can see is a manifestation of Him, this solar system that seems so stupendous to us is to Him but a little thing, for, though He is all this, yet outside it and above it all He exists in a glory and a splendour of which we know nothing as yet. Thus though we agree with the pantheist that all is God, we yet go very much further than he does, because we realize that He has a far greater existence above and beyond His universe. "Having pervaded this whole universe with one fragment of Myself, I remain". (*Bhagavad Gita*, X, 42).

I do not think that we can find any form of words that will at all express the method of our union with Him. We may in one sense be cells in his Body, but we are certainly very much more than that, for His life and power are manifested through us in a way which is out of all proportion to any such manifestation of our spiritual life as could be supposed to be given through the cells of our bodies. In His manifestation on the lowest cosmic plane we may take it that His first aspect is on the highest level, the second on that below it, and the third in the higher part of the nirvanic plane, so that when an adept gradually raises his consciousness plane by plane as he develops, he comes first to the third aspect and realizes his unity with that moving on only after long intervals to full union with the second and the first.

I myself who speak to you have once seen Him in a form which is not the form of His system. This is something which utterly transcends all ordinary experience, which has nothing to do with any of the lower planes. The thing became possible for me only through a very daring experiment — the utter blending for a moment of two distinct rays or types, so that by means of this blending a level could for a moment be touched enormously higher than any to which either of the egos concerned could have attained alone. He exists far above His system; He sits upon it as on a lotus throne. He is as it were the apotheosis of humanity, yet infinitely greater than humanity. We might think of the Augoeides carried up higher and higher, and to

infinity. I do not know whether that form is permanent or whether it can be seen at a certain level only — who shall say? But that this thing is a tremendous reality — that I know; and, once seen, such a manifestation can never be forgotten.

One little touch of higher experience I may mention, though it is one which is exceedingly difficult to describe adequately. When a man raises his consciousness to the highest subdivision of his casual body, and focuses it exclusively in the atomic matter of the mental plane, he has before him three possibilities of moving that consciousness, which correspond to some extent with the three dimensions of space. Obviously a way is open to him to move it downwards into the second subplane of the mental, or upward into the lowest subplane of the buddhic, if he has developed that sufficiently to be able to utilize it as vehicle.

A second line of movement open to him is the short cut which exists from the atomic subdivision of one plane to the corresponding atomic subdivisions of the planes above and below, so that without touching any intermediate sub-plane the consciousness may pass from that atomic mental downwards to the atomic astral or upwards to the atomic buddhic, again of course supposing the development of this latter to be already achieved. In order to image to oneself this short cut, one may think of the atomic subplanes as being side by side along a rod, the other subdivisions of each plane hanging from the rod in loops, as though a piece of string were wound loosely round the rod. Obviously then to pass from one atomic subdivision to another one could move by the short cut straight along the rod, or down and up again through the hanging loop of string which symbolizes the lower subplanes. But there is yet a third possibility — a possibility not so much yet of *movement* along another line at right angles to both of these others, but rather a possibility of looking up such a line — looking up as a man at the bottom of a well might look up at a star in the sky above him.

For there is a direct line of communication between the atomic sub-plane of the mental in this lowest cosmic plane and the corresponding atomic mental in the cosmic plane. We are infinitely far as yet from being able to climb upwards by that line, but once at least the experience came of being able to look up it for a moment. What is seen then it is hopeless to try to describe, for no human words can give the least idea of it; but at least this much emerges, with a certitude that can never be shaken, that what we have hitherto supposed to be our consciousness, our intellect, is simply not ours at all, but His; not even a reflection of His, but literally and truly a part of His consciousness, a part of His intellect. Incomprehensible, yet literally true! It is a commonplace of our meditation to say, “I am that Self; that self am I,” but to see it, to know it, to feel it, to realize it in this way, is something very different from that verbal recitation.

From Him comes forth all life in the successive outpourings which are described in our books — the first outpouring from His third aspect, which gives to previously existing atoms the power to aggregate themselves into the chemical elements — the action which is described in the Christian Scriptures as the spirit of God moving over the waters of space. When, at a later stage, the kingdoms of nature are definitely established, there comes the second outpouring, from His second aspect, which forms group-souls for the minerals, the plants, the animals, and this is the descent of the Christ principle into matter, which alone renders possible our very existence. But when we think of the human kingdom we remember that the ego itself is a manifestation of the third outpouring which comes from His first aspect, the eternal and all-loving Father.

Every fixed star is a sun like our own, and each one is a partial expression of a LOGOS.

BUDDHISM

In thinking of the Lord BUDDHA we must not forget that He is very much more than merely the founder of a religion. He is a great official of the Occult Hierarchy, the greatest of all save one, and the founder in previous incarnations of many religions before this one which now bears His title. For He was the Vyasa who has done so much for the Indian religion; He was Hermes, the great founder of the Egyptian mysteries; He was the original Zoroaster, from whom came the sun and fire worship; and he was also Orpheus, the great bard of the Greeks.

In this last of His many births, when He came as the Lord Gautama, it does not appear that He had originally any intention of founding a new religion. He appeared simply as a reformer of Hinduism — a faith which was already of hoary antiquity, and had therefore departed much from its original form, as all religions have. It had become hardened in many ways, and appears to have been very far less elastic even than it is now. Even now we all know how strictly drawn are the lines between the castes, what an iron rigidity there is as to forms and ceremonies. We know that even now no man can be converted to Hinduism; the only way to enter that faith is to be born into it.

Imagine a condition in which all this was even far more rigid, in which the feeling was much more intense, in which all the ideas of life had been very much changed from what they were in the days of the original Aryan immigrants, when it was a religion full of joy, and holding out hope for everybody. A little before the time of the Buddha the general opinion seems to have been that practically no one but a brahman had any chance of salvation at all. Now as the number of the brahman was always small, and even now is only something like thirteen millions out of the three hundred million inhabitants of India, it was clearly not a very hopeful religion for the majority of the people, since it indicated to them that they had to work on through very many lives, until they could earn admission into the small and exclusive brahman caste, before they could possibly escape from the wheel of birth and death.

Then came Lord BUDDHA, and by His teaching flung open wide the gates of the sweet law of justice, for He taught that men had departed entirely from the old form of religion. He repeatedly asserted that a man who, though born a brahman, did not live the life which a brahman should, was neither worthy of respect nor in the way of salvation, and that a man of any other caste who did live the true brahman life, should be treated as a brahman, and had in every way the same possibilities before him as though he had been born into the sacred caste.

Naturally enough in the face of teachings which placed all hope of final salvation so indefinitely far away in the future, the ordinary man of the world had become hopeless and consequently careless; on the other hand, the austerity of the brahman, who spent the whole of his life in ceremonies and in meditation, was not to their taste, and indeed was obviously impossible for them. But the BUDDHA preached to them what He called the middle way; He told them that although the life of austerity and of entire devotion to religion was not for them, there was no reason why, because of that, they should relapse into carelessness and evil living. He showed them that a higher life is possible for the man still in the world, and that, though they might not be able to devote themselves to metaphysics and to hairsplitting arguments, they

could still obtain sufficient grasp of the great facts of evolution to form a satisfactory guide to them in their lives.

He declared that extremes in either direction are equally irrational; that on the one hand the life of the ordinary man of the world, wrapped up entirely in his business, pursuing dreams of wealth and power, is foolish and defective because it leaves out of account all that is really worthy of consideration; but that on the other hand the extreme asceticism that teaches each man to turn his back upon the world altogether, and to devote himself exclusively and selfishly to the endeavour to shut himself away from it and escape from it, is also foolish. He held that the middle path of truth and beauty is the best and safest, and that while certainly the life devoted entirely to spirituality is the highest of all for those who are ready for it, there is also a good and true and spiritual life possible for the man who yet holds his place and does his work in the world.

He based His doctrines solely on reason and common-sense; He asked no man to believe anything blindly, but rather told him to open his eyes and look around him. He declared that in spite of all the sorrow and misery of the world, the great scheme of which man is a part is a scheme of eternal justice, and that the law under which we are living is a good law, and needs only that we should understand it and adapt ourselves to it. He taught that all life is suffering, but that man causes his own trouble for himself, because he yields himself perpetually to desire for that which he has not, and He said that happiness and contentment can be gained better by limiting desires than by increasing possessions.

To this end He tabulated His teaching in the most marvellous manner, arranging everything under certain headings which could be readily memorized. This constitutes in reality a carefully graded system of mnemonics. It is so simple in its broad outline that any child can remember and understand its four noble truths, its noble eightfold path, and the principles of life which they suggest; yet it is carried out so elaborately that it constitutes a system of philosophy which the wisest man may study all his life through, and yet find in it ever more and more light upon the problems of life.

He analyzed everything to an almost incredible extent, as may be seen by a study of the twelve nidanas, or by His enumeration of the steps which intervene between thought and action. Each of His four noble truths is represented by a single word, and yet to any one who has ever heard the exposition of the system each of those words inevitably calls up a great range of ideas. The same thing is true of the words signifying the steps of the noble eightfold path, and of the "great perfections" which are spoken of in *The Voice of the Silence*. All of these perfections are simply wisdom, power and love appearing in different forms. They are sometimes reckoned as six, but more commonly as ten. The six are given as perfect charity, perfect morality, perfect patience, perfect energy, perfect truth and perfect wisdom; and the other four which are sometimes added are perfect resignation, perfect resolution, perfect kindness and perfect abnegation.

The religion of Buddhism has practically disappeared from India, yet it has left behind it lasting results, and the country bears everywhere the strong impress of His teachings. Before His coming blood-sacrifices appear to have been universal; even now they still exist, but are comparatively rare, for He taught that such things were not pleasing to any noble deity, but that the Gods desired rather the sacrifice of a holy life.

In looking back upon the record of those times we see that He preached mostly in the open air, and nearly always sitting at the foot of a tree, with the listeners sitting on the ground about Him, or standing leaning against the trees, men and women intermingling, and little children running about and playing upon the outskirts of the crowd. The great teacher had a most wonderful voice, gloriously full and sonorous, and a personality which instantly commanded the attention of all who heard Him, and invariably won their hearts, even in the rare cases where they did not agree with what he said. The audiences were stirred up to great religious fervor, we find them constantly raising cries of "Sadhu, Sadhu," by way of applause, when anything was said which especially moved them, and at the same time raising their joined hands in an attitude of salutation.

Part at least of this influence was due to the tremendously strong vibrations of His aura, which was of very great size, so that the audience were actually sitting within it and being attuned to it while they listened to His discourse. Its magnetic effect was almost indescribable, and while His hearers were within its influence even the most stupid of them could understand to the full whatever He said, though often afterwards when they had passed away from that influence they found it difficult to comprehend it at all in the same way. To this marvellous influence also is due the phenomenon so often described in the Buddhist books — the attainment of the arhat level by such large numbers of His hearers. It is quite a common thing to read in the accounts given in the Buddhist scriptures that after a sermon of the BUDDHA hundreds of men, even thousands, reached the arhat level. Knowing what a very high degree of attainment this means, this seemed to us, when we read it, almost incredible, and we supposed it to be simply a case of oriental exaggeration; but later and closer study has shown us that the accounts are actually true. So remarkable a result seemed to call for further investigation into its causes, and we found that in order to understand all this it was necessary to take into account not this one life only, but the work of many previous incarnations.

We must remember that the Lord Gautama is the BUDDHA of the fourth root-race, even though this last incarnation of His was taken in the fifth. He had been born many times in various Atlantean races, and always as a great teacher. In each of those lives He had drawn around Him many pupils, who had gradually been raised to higher levels of thought and of life, and when He came in India for this last culminating birth He arranged that all those whom at many different times and in many different lands He had influenced should be brought together into incarnation at the same time. Thus His audiences were to a large extent composed of fully prepared and, as it were, highly specialized souls, and when these came under the influence of the extraordinarily powerful magnetism of a BUDDHA, they understood and followed every word which He said, and the action upon them as egos was of the most wonderfully stimulating nature. Therefore it was that they so readily responded; therefore it was that so large a number of them could be and were raised so rapidly to such dizzy heights.

In the third volume of *The Secret Doctrine* we shall find an exceedingly interesting and suggestive section called *The Mystery of Buddha*, which refers to the fact that the BUDDHA prepared His own inner bodies of very high grades of matter, with the fullest development of the spirillae. His buddhic, causal and mental bodies are kept together for other Great Ones to use, because of the exceeding difficulty of producing others equal to them. The Christ used them along with the physical body of Jesus, while the latter waited on higher planes in his own vehicles. Shankaracharya also

used these “remains.” Hence arose the incorrect idea that He was a reincarnation of the BUDDHA. The coming Christ will also use these vehicles, wedding them to another physical body which is even now being prepared for Him.

Buddhism still claims a larger number of adherents than any other religion in the world, and is a living influence in the lives of millions of our fellow-men. It would be quite unfair to judge it by what is written about it by European orientalists. When I was in Ceylon and Burma I compared these accounts with the interpretation given to the doctrines by the living followers of His religion. Learned monks in these countries approach the subject with an accuracy of knowledge at least equal to that of the most advanced orientalists, but their interpretation of the doctrines is very far less wooden and lifeless. By far the best book in English to give one a real idea of the religion as it is held by living men is *The Light of Asia*, by Sir Edwin Arnold; and another book, which makes a good second to it, is *The Soul of a People*, by H. Fielding Hall. Some critics have said that Sir Edwin Arnold has gone a little beyond the bare literal meaning of the words of the text, and is trying to read Christian ideas into them. I do not think this is so, and I have certainly found that he expresses far more closely the feeling and attitude of the Buddhists than any other writer.

Buddhism is now divided into two great Churches, the Northern and the Southern, and both of them have departed to some extent from the original teaching of the BUDDHA, though in different directions. The religion is so plain and straightforward, and so obviously common-sense that almost any person may readily adapt himself to it, without necessarily giving up the beliefs and practices of other faiths. As a consequence of this in the Northern Church we have a form of Buddhism with an immense amount of accretion. It seems to have absorbed into itself many ceremonies and beliefs of the aboriginal faith which it supplanted; so that in Tibet, for example, we find it including a whole hierarchy of minor deities, devas and demons which were entirely unknown to the original scheme of the BUDDHA. The Southern Church, on the other hand, instead of adding to the teaching of the BUDDHA, has lost something from it. It has intensified the material and the abstract sides of the philosophy.

It teaches that nothing but Karma passes over from life to life — that there is no permanent ego in man, but that in his next birth he is in effect a new man, who is the result of the karma of the previous life, and they quote various sayings of the BUDDHA in support of this. It is true that He often spoke very strongly against the persistence of the personality, and that He assured His hearers again and again that nothing whatever which they knew in connection with a man could pass over to another birth. But He nowhere denied the individuality; in fact many of His sayings absolutely affirm it. Take for example a text which occurs in the *Samannaphalasutta* of the *Digha-Nikaya*. When first mentioning the condition and training of the mind that are necessary for success in spiritual progress, the BUDDHA describes how he sees all the scenes in which he was in any way concerned passing in succession before his mind's eye. He illustrates it by saying:

“If a man goes out from his own village to another and thence to another, and from there comes back again to his own village, he may think thus: ‘I indeed went from my own village to that other. There I stood thus; I sat in this manner; thus I spoke, and thus I remained silent. From that village again I went to another, and I did the same there. The same ‘I am’ returned from that village to my own village.’ In the very same way, O King, the ascetic, when his mind is pure, knows his former births. He thinks: ‘In such a place I had such a name. I was born in such a family, such was

my caste, such was my food, and in such and such a way I experienced pleasure and pain, and my life extended through in some other place, and there also I had such and such conditions. Thence removed, the same `I' am now born here.”

This question shows very clearly the doctrine of the BUDDHA with regard to the reincarnating ego. He gives illustrations also in the same Sutta of the manner in which an ascetic can know the past births of others — how he can see them die in one place, and after the sorrows and joys of hell and heaven the same men are born again somewhere else. It is true that in the *Brahmajala Sutta* He mentions all the various aspects of the soul, and says that they do not *absolutely* exist, because their existence depends upon “contact,” that is to say upon relation. But in thus denying the *absolute* reality of the soul He agrees with the other great Indian teachers, for the existence not only of the soul but even of the LOGOS Himself is true only relatively.

Untrained minds frequently misunderstand these ideas, but the careful student of oriental thought will not fail to grasp exactly what is meant, and to realize that the teaching of the BUDDHA in this respect is exactly that now given by Theosophy. It is not difficult to see how various texts might be so emphasized or distorted as to seem to contradict one another, and the Southern Church has chosen to cling rather to the denial of the permanence of the personality than to the assertion of the continuity of the individuality, just as in Christianity some people have acquired the habit of laying stress on particular texts, and ignoring others which contradict them.

Another point as to which there is a very similar misunderstanding is the constantly repeated assertion that nirvana is equivalent to annihilation. Even Max Muller, the great Oxford Sanskritist, was under this delusion for many years, but later in his life with furthers and deeper study he came to understand that in this he had been mistaken. The description which the Lord BUDDHA Himself gives to nirvana is so far above the comprehension of any man who is trained only in ordinary and worldly methods of thought that it is little wonder that it should have been misunderstood at first sight by the European orientalist; but no one who has lived in the East among the Buddhists can for a moment suppose that they regard annihilation as the end which they are striving to reach.

It is quite true that the attaining of nirvana does involve the utter annihilation of that lower side of man which is in truth all that we know of him at the present time. The personality, like everything connected with the lower vehicles, is impermanent and will disappear. If we endeavour to realize what man would be when deprived of all which is included under these terms we shall see that for us at our present stage it would be difficult to comprehend that anything remained, and yet the truth is that everything remains — that in the glorified spirit which then exists, all the essence of all the qualities which have been developed through the centuries of strife and stress in earthly incarnation will inhere to the fullest possible degree. The man has become more than man, since he is now on the threshold of Divinity; yet he is still himself, even though it be a so much wider self.

Many definitions have been given of nirvana, and naturally none of them can possibly be satisfactory; perhaps the best on the whole is that of peace in omniscience. Many years ago when I was preparing a simple introductory catechism of their religion for Buddhist children, the chief Abbot Sumangala himself gave me as the best definition of nirvana to put before them that it was a condition of peace and blessedness so high above our present state that it was impossible for us to understand it. Surely that is far removed from the idea of annihilation. Truly all that

we now call the man has disappeared, but that is not because the individuality is annihilated, but because it is lost in divinity.

The BUDDHA Himself once said: “Nirvana is not being, but also it is not non-being.”

Another difference between the Northern Church of Buddhism and the Southern is that they adopt different version of the scriptures. It is usually stated that the Northern Church adopts the Mahayana and the Southern the Hinayana, but whether even this much may be safely said depends upon the shade of meaning which we attach to a much-disputed word. Yana means vehicle, and it is agreed that it is to be applied to the dhamma or law, as the vessel which conveys us across the sea of life to nirvana, but there are at least five theories as to the exact sense in which it is to be taken.

1. That it refers simply to the language in which the law is written, the greater vehicle being by this hypothesis Sanskrit, and the lesser vehicle Pali — a theory which seems to me untenable. It is true that the Northern Church uses the Sanskrit translation, while the Southern scriptures are in Pali, the language which the Lord BUDDHA spoke when on earth. It is stated that the Pali scriptures which we now possess are not in the original form, but that all the originals existing (in Ceylon at least) were carefully destroyed by the Tamil invaders, so that the Pali scriptures which we now have are a retranslation made from a copy in Elu, then the Vernacular language of Ceylon.
2. Hina may apparently be taken as signifying mean or easy, as well as small. One interpretation therefore considers that the Hinayana is the meaner or easier road to liberation — the irreducible minimum of knowledge and conduct required to attain it, while the Mahayana is the fuller and more philosophical doctrine, which includes much traditional knowledge about higher realms of nature. Needless to say, this interpretation comes from a Mahayana source.
3. That Buddhism, in its unfailing courtesy towards other religions, accepts them all as ways to liberation, though it regards the method taught by its founder as offering the shortest and surest route. According to this view Buddhism is the Mahayana, and the Hinayana includes Brahmanism, Zoroastrianism, Jainism, and any other religions which were existing at the time when the definition was formulated.
4. That the two doctrines are simply two stages of one doctrine — the Hinayana for the Sravakas or hearers, and the Mahayana for more advanced students.
5. That the word Yana is to be understood not exactly in its primary sense of 'vehicle,' but rather in its secondary sense, nearly equivalent to the English word 'career.' According to this interpretation the Mahayana puts before the man the 'grand career' of becoming a Bodhisattva and devoting himself to the welfare of the world, while the Hinayana shows him only the smaller 'career' of so living as to attain nirvana for himself.

There has also been much discussion as to the exact meaning of the terms Adi-Buddha and Avalokiteshwara. I have made no special study of these things from the philosophical standpoint, but so far as I have been able to gather ideas from discussion of the matter with the living exponents of the religion, Adi-Buddha seems to be the culmination of one of the great lines of superhuman development — what might be called the abstract principle of all the Buddhas. Avalokiteshwara is a term belonging to the Northern Church, and seems to be the Buddhists' name for their conception of the LOGOS. European scholars have translated it: “The Lord who looks

down from on high," but this seems to have in it a somewhat inaccurate implication, for it is clearly always the manifested LOGOS; sometimes the LOGOS of a solar system and sometimes higher than that, but always manifest. We must not forget that while the founders of the great religions see and know the things which They name, Their followers usually do not see; they have only the names, and they juggle with them as intellectual counters, and build up much which is incorrect and inconsistent.

The Buddhism of the Southern Church, which includes Ceylon, Burma, Siam and Cambodia, has on the whole kept its religion free from the accretions which have become so prominent in the Northern division of Japan, China and Tibet. In Burma no image appears in the temples except that of the BUDDHA, though of Him there are in some cases hundreds of image, of different material, in different positions, presented by various worshippers. In Ceylon a certain concession seems to have been made to popular feeling, or perhaps to a foreign government during the time of the Tamil kings, for the images of certain Hindu deities are often to be seen in the temples, though they are always placed in a subordinate position and considered as a kind of attendants upon the BUDDHA. We need not however blame the Tibetans very much for the fact that certain superstitions have crept into their Buddhism. The same thing happens in all countries and with all religions, as time goes on. In Italy, for example, numbers of the peasants in the hills still follow what they call the old religion, and continue even in the present day the worship of Bacchus, under an Etruscan name which antedates even the time of the Roman Empire. The Catholic priests quite recognize the existence of this older faith, and set themselves against it, but without avail.

In Southern Buddhism there is remarkably little ceremony of any kind — practically nothing indeed that in any way corresponds to the Christian service. When the people pay their morning visit to the temple they usually call upon the monks to recite for them the three guides and the five precepts, which they then repeat after him, but even this can hardly be called a public service, for it is recited not once at a set time, but for each group of people as they happen to arrive. There is another ceremony called Paritta or Pirit (which means `blessings') but this is not performed in the temple itself nor at any stated times, but it is considered a good work on the part of the laity to celebrate any special occasion by giving a Pirit ceremony — that is to say by erecting and elaborately decorating a temporary building in which the ceremony is held. It consists of the chanting of benedictory verses from the sacred scriptures, and is carried on for a certain number of days, usually a fortnight, by relays of monks who relieve one another every two hours.

Sometimes when a man falls ill one of these Pirit ceremonies is arranged for him, with the idea that it will promote his recovery. It is in reality a mesmeric ceremony, for the monks sit in a circle and hold in their hands a rope which runs round the circle, and they are instructed to recite their texts, keeping clearly in their minds all the time the will to bless. Naturally this rope becomes very strongly magnetized as the ceremony progresses, and strings run from it to a huge pot of water, which of course also becomes highly charged with magnetism. At the conclusion of the ceremony this water is distributed among the people, and the sick man often holds a thread which is connected with the rope.

The Southern Buddhists give a list of five psychic powers which may be gained by the man who is making progress on the Path. (1) The ability to pass through the air and through solid objects, and to visit the heaven-world while still alive. It is however

possible that this may mean nothing more than ability to function freely in the astral body, because it is quite likely that in speaking of the heaven-world they do not really mean the mental plane, but only the higher levels of the astral. (2) Divinely clear hearing — which is evidently merely the astral faculty of clairaudience. (3) The ability to comprehend and sympathize with all that is in the minds of others — which appears to be thought-reading, or perhaps telepathy. (4) The Power to remember former births. (5) Divinely clear vision — that is to say, clairvoyance. To this is added in some lists the attainment of deliverance by wisdom. This must of course mean the attainment of freedom from the necessity of rebirth, but it does not seem to be of the same nature as the other powers, and perhaps should hardly appear in the same category.

Ananda is said to have been the favourite disciple of the Lord BUDDHA, just as John is spoken of as the beloved disciple of the Christ, and no doubt in both cases the special intimacy was the result of relationship in previous lives. Ananda was certainly not so chosen because he was the most advanced, for even after the death of the BUDDHA we hear that when the first great council was held in a cave within the living rock, and the condition of taking part in it was that none should enter who could not pass through the rock, Ananda found himself shut out from it because he had not yet attained this power. But it is said that his grief at this exclusion from a grand opportunity of serving his departed Master was so great that by a supreme effort of will he then and there developed the power which had been lacking, and passed in triumphantly to take his place among his brothers, though a little late.

This shows us that even those who are the most highly advanced of all humanity have still their special friendships, and that therefore to love one person more than another cannot be improper. It is true that such affection as you now feel for your nearest and dearest you will feel later on for the whole world, but at that time you will feel a thousand times more affection for those who are nearest to you. Your love will never be the same for all, although all will be included within it. It is impossible that we should feel towards another as we do towards our Master, for when He becomes a LOGOS we shall be part of His system, and even when far later on we ourselves become LOGOI we shall still be part of Him, for He will represent some far greater system. Although there will always be greater love for some than others, we shall help those whom we love less just as fully as those whom we love more. We shall always do our best for all, just as a doctor equally helps his patient whether he be a friend or not, for anything like dislike or hatred will have ceased aeons before.

At the time of the Lord BUDDHA many other spiritual teachers were sent forth to the world. We find for example Lao-tse, Confucius and Pythagoras, all working in their different spheres. Advantage was taken of the stupendous outpouring of spiritual force at the time to send forth teachers into many parts of the world.

CHRISTIANITY

There is nothing in the principles of Theosophy which is at all in opposition to the true primitive Christianity, though there may be statements which cannot be reconciled with some of the mistakes of modern popular theology. This modern theology attaches immense importance to texts; in fact it appears to me to be based upon one or two texts almost entirely. It takes these and gives to them a particular interpretation, often in direct opposition to the plain meaning of other texts from the same bible. Of course there are contradictions in the Christian scripture just as there must necessarily be in any book of that size, the various parts of which were written at such widely separated periods of the world's history, and by people so unequal in knowledge and in civilization.

It is impossible that all the statements made in it can be literally true, but we can go back behind them all, and try to find out what the original teacher did lay before His pupils. Since there are many contradictions and many interpretations it is obviously the duty of a thinking Christian to weigh carefully the different versions of his faith which exist in the world, and decide between them according to his own reason and common-sense.

Every Christian does, as a matter of fact, decide for himself now; he chooses to be a Roman Catholic, or a member of the Church of England, or a Methodist, or a Salvationist, though each of these sects professes to have the only genuine brand of Christianity, and justifies its claim by the quotation of texts. How then does the ordinary layman decide between their rival claims? Either he accepts blindly the faith which his father held, and does not examine the matter at all, or else he does examine it, and then he decides by the exercise of his own judgment.

If he is already doing that, it would be absurd and inconsistent for him to refuse to examine *all* texts, instead of basing his belief only upon one or two. If he does impartially examine all texts, he will certainly find many which support Theosophical truth. He will find also that the creeds can be rationally interpreted only by Theosophy. Of course in order to make an intelligent comparison between these different systems it will be necessary for him to make some enquiries into the history of his own religion, and to see how the Christian doctrine came to be what it now is.

He will find that in the early Christian Church there were three principal divisions or parties. There were first of all the Gnostic Doctors or teachers, wise and cultured men who held that the Christian Church had its system of philosophy of the same nature as the great Greek and Roman systems which existed at that time. They said that this system, while thoroughly comprehensive and very beautiful, was difficult to understand, and therefore they did not recommend its study to the ignorant. They spoke of it as the Gnosis or knowledge — the knowledge which was possessed by those who were full members of the church, but was not given out to the world at large, and not even told to the more ignorant members of the church while they were in that preliminary stage when they could not receive the sacraments.

Then there was the second division, a body of respectable middle-class people, who troubled themselves not at all about the philosophy, but simply were content to take the words of the Christ as their guide in life. They used as a sacred book a collection of His sayings, some leaves of which have recently been discovered by antiquarians.

Then there was unfortunately a great mass of ignorant and turbulent people who never had any grasp whatever of Christian doctrine, but became members of the church merely because of the prophecies, given by the Christ, of a good time to come. He was very much moved by the sufferings of the poor, and full of compassion and pity for them. He told them constantly, in His teachings, to take comfort, because the poor man who endures the struggle bravely and well will in the future have a better position and greater advancement than the rich man who misuses his opportunities. One can readily see how that doctrine preached to an exceedingly ignorant people might be taken in a one-sided manner. They would take the promises and not the conditions, and their idea of that good time might easily be that they in turn would be the oppressors and would take advantage of the rich man — something which of course the Christ never preached. So it came to pass that He attracted to himself a great crowd of men who for various reasons were against the existing government; and when these ignorant people in turn preached what they called Christianity to others, they naturally intensified and exaggerated their own misconceptions of it. This great mass of the common people, who called themselves “the poor men,” speedily became a vast majority of the infant church, and gained so much power that they were eventually able to throw out the Gnostic Doctors as heretics; for the “poor men” resented the idea that any knowledge which they did not possess could be regarded as an essential part of Christianity.

There is yet another point of view from which the Christian may find Theosophy of the greatest use to him. Just now the minds of many orthodox Christians are much exercised with regard to what they call the higher criticism — that is, the attempt to apply ordinary common-sense and scientific methods to the examination of the religious teaching — the endeavour to understand religion instead of blindly believing it. For many ages the world has been told that ecclesiastical dogmas must be swallowed like pills, and that to attempt to reason about them is impious. There are many men in the world, and they are among the most intellectual of its citizens, who simply cannot accept doctrines thus blindly and uncomprehendingly. Before they can believe they must to some extent understand, and a statement does not become a living fact to them until they can relate it rationally to other facts, and regard it as part of a more or less comprehensive scheme of things.

It is ridiculous to say (as some of the orthodox do) that these people are inherently wicked and that their attitude is inspired by the devil. On the contrary they are precisely the men who truly appreciate God's great gift of reason, and are determined to employ it in the highest of all possible directions — for the elucidation of the truth about religion. The truth is that the critics are of the greatest possible service to religion; they are clearing up points in it which heretofore have been vague; they are stating with accuracy matters in connection with it which were previously very partially understood; they are trying to make a reasonable system out of what has until now been nothing but a mass of meaningless confusion.

If any of our members have orthodox friends who are disturbed by these efforts, who fear lest this liberalizing and rationalizing of their faith should refine it altogether out of existence, let them recommend to them the teachings of Theosophy, for that is the very thing which they need. It will teach them to pause before throwing aside ancestral belief, and it will show them that when properly understood that belief has a real meaning and a real foundation, and that, while some of the vagaries of mediaeval ecclesiastical dogma may be incomprehensible and incredible, the original teaching of the Christ was a magnificent presentment of universal truth.

If they have somewhat outgrown the outer form of their religion, if they have broken through the chrysalis of blind faith, and mounted on the wings of reason and intuition to the freer, nobler mental life of more exalted levels, Theosophy will show them that in all this there has been no loss, but a great and glorious gain. For it tells them that the glow of devotion which has meant so much to them in their spiritual life is more than justified, that the splendour and beauty and poetry of religious thought exist in fuller measure than they have ever hoped before — no longer as mere pleasant dreams from which the cold light of common-sense may at any time rudely awaken them, but as truths of nature which will bear investigation, which become only brighter and more perfect as they are more accurately understood.

Certainly the Christian Bible ought not to be taken literally, for many of its statements are symbolical, and others are simply not true. When we examine clairvoyantly the life of the Founder of Christianity, for example, we can find no trace of the alleged twelve apostles, it would seem that as men they never existed, but that they were introduced into the story for some reason — possibly to typify the twelve signs of the zodiac. The disciple Jesus, whose body was taken by the Christ, was not an illegitimate son, as is implied in the gospel, nor was his father a carpenter. He was in reality of the highest aristocracy of the Jews, a descendant of their own old royal line. He may however have had a tinge of Aryan blood in him, which would be quite enough to cause the exclusive Jews to say that he was not legitimately of the seed of David, and that statement might very easily be taken to mean such an irregular birth as is suggested by the narrative.

The truth is that the four gospels at any rate were never intended to be taken as in any sense historical. They are all founded upon a much shorter document written in Hebrew by a monk named Matthaëus, who lived in a monastery in a desert to the south of Palestine. He seems to have conceived the idea of casting some of the great facts of initiation into a narrative form and mingling with it some points out of the life of the real Jesus who was born 105 B. C., and some from the life of another quite obscure fanatical preacher, who had been condemned to death and executed in Jerusalem about 30 A. D.

He sent this document to a great friend of his who was the chief abbot of a huge monastery at Alexandria, and suggested to him that he, or some of his assistants, might perhaps recast it, and issue it in the Greek language. The Alexandrian abbot seems to have employed a number of his young monks upon this work, allowing each of them to try the task for himself, and to treat it in his own way. A number of documents of very varying merit were thus produced, each incorporating in his story more or less of the original manuscript of Matthaëus, but each also adding to it such legends as he happened to know, or as his taste and fancy dictated. Four of these still survive to us, and to them are attached the names of the monks who wrote them, Matthew, Mark, Luke and John. The splendid passage with which the gospel of St. John opens was not original but quoted, for we found it in existence many years before the time of the Christ in a manuscript which was even then of hoary antiquity.

It was associated in that manuscript with a quotation from the Stanzas of Dzyan, this latter also being translated into Greek.

SIN

You ask what is the real meaning of sin. In the sense in which the word is ordinarily employed, at least by Christian preachers, I think sin may be defined as a figment of the theological imagination. It is popularly supposed to indicate a defiance of divine law — the performance of some action which the actor knows to be wrong. It is exceedingly doubtful whether this phenomenon ever occurs. In almost every conceivable case man breaks the law through ignorance or heedlessness, and not of deliberate intention. When once a man really knows and sees the divine intention he inevitably comes into harmony with it, for two reasons: at an earlier stage because he sees the utter futility of doing otherwise, and later because, seeing the glory and beauty of the design, he cannot but throw himself into its execution with all the powers of his heart and soul.

One of the most serious of the many misconceptions which we have inherited from the dark ages is that what is called “sin” is a perversity to be met with punishment and savage persecution, instead of what it really is, the result of a condition of ignorance that can only be dealt with by enlightenment and education. It may be objected that in daily life we constantly see people doing what they must know to be wrong, but this is a misstatement of the case. They are doing what they have been *told* is wrong, which is quite a different matter. If a man really *knows* that an action is wrong, and that it will inevitably be followed by evil consequences, he is careful to avoid it. A man really *knows* that fire will burn him; therefore he does not put his hand into it. He has been *told* that the fire of hell will burn him as the result of a certain action — say playing cards on a Sunday — but he does not really *know* this, and therefore when he feels the inclination to play cards he does so in spite of the threatened consequences. It will be found that every one who does wrong justifies the wrong action to himself at the time of its commission, whatever he may think about it afterwards in cold blood. So I say that sin as ordinarily understood is a figment of the theological imagination; what really exists is an unfortunate condition of ignorance which often leads to infraction of the divine Law. This ignorance it is our duty to endeavour to dispel by the light of Theosophy.

THE POPE

A magnificent opportunity is waiting for the Pope who shall be ready and brave enough to take it. Instead of fulminating rescripts and bulls against Theosophy and liberalism, he might himself propound the Theosophical interpretation of Christianity. Remember that the Catholic Church possesses what is called the doctrine of development, and also that it has proclaimed the Pope to be the infallible exponent of divine doctrine, the vicegerent of God upon earth. He would therefore be perfectly within his rights if, with regard to the Theosophical interpretation, he should pronounce quite boldly:

“Certainly this which you bring forward is the true meaning of Christian doctrine. We have always known this, and we have plenty of manuscripts in the Vatican Library to prove it. We did not tell you this before, because all through the ages until now men have not been fit for such a revelation. They have been too crude, too rough, too undeveloped to understand a philosophical and mystical interpretation. The outer husk of the religion has been all that could usefully be offered to them. Now one stage more has been attained and the world is ready for this further revelation. The second and inner meaning of our doctrine is therefore put before you, and while we must not condemn those who are still at the stage when they must cling to the outer husk, neither must they on their part be allowed to condemn those who are ready to take the further step and to receive a higher illumination.”

But of course he must indeed be a strong as well as a wise man who should do this, for like all other great personages the Pope is surrounded by enormous masses of thought-forms, and he would find it a matter of extreme difficulty to break through these and make a new departure.

CEREMONIAL

The line of ceremonial is one along which many people come, but of course it must be understood that no religious ceremonial whatever is ever really essential, and the man who wishes to enter upon the Path of Holiness must realize this fully and must cast off belief in the necessity of ceremonies, as one of the fetters which hold him back from nirvana. This does not mean that ceremonies may not be sometimes quite effective in producing the results which are intended, but only that they are never really necessary for any one, and that the candidate for higher progress must learn to do utterly without them. The ceremonial line is an easy road for a certain type of people, and is really helpful and uplifting for them; but there is another type of men who always feel ceremonial as an obstacle between themselves and the deities which they wish to reach.

In Christianity this ceremonial line is the one appointed by its founder, through which his magic is to work. The consecration of the host, for example, is a means by which spiritual force is poured out over the people. There is often a vast amount of devotional feeling at the moment of the consecration, and the working of the magic is assisted by that, though it does not depend upon it. Those who are devotional unquestionably receive more because they bring with them an additional faculty of reception. On the other hand, there is always the probability that ignorant devotion will degenerate into superstition. In a recent enquiry into these matters from the occult point of view, made in Sicily, I found that there was certainly plenty of superstition, and much harmful interference in family matters on the part of the priests; but still on the whole the country was distinctly better than it would have been without it. We should remember also that in history we usually hear much of the worst effects of religious enthusiasm, whereas the good steady progress of many thousands under its influence makes but little impression.

PRAYER

It is difficult to say anything on the question of prayer that would be universally applicable, because there are such very different kinds of prayer and they are addressed to beings who differ very widely in evolution. The founders of most great religions never in any way encouraged their followers to pray to them, and as a rule the latter have been far too enlightened to do anything of the kind. Whether a very strong thought directed towards them would reach them or not would depend upon the line of evolution which they have since followed — in fact upon whether they still remain within touch of this earth or not. If they were still so within reach, and if such a thought did reach them, it is probable that if they saw that it would be good for the thinker that any notice should be taken they would turn in his direction the attention of some of their pupils who are still upon earth. But it is quite inconceivable that a man who had any sort of conception of the magnificent far-reaching work done for evolution by the Great Ones on higher planes could dream of intruding his own petty concerns upon Their notice; he could not but know that any kind of help that he required would be far more fitly given to him by someone nearer to his own level. Even down here on this physical plane we are wiser than that, for we do not waste the time of the greatest scholars of our universities in helping babies over the difficulties of the alphabet.

As regards the saints of any of the churches the position is different, though even with them the ability to hear prayers will depend upon their position in evolution. The ordinary saint, who is simply a good and holy man, will of course take his heaven-life as usual, and will probably take a long one. His life on the astral plane would be likely to be but short, and it would be only during that that it would be possible for a prayer to reach him and attract his attention. If during that time it did so reach him, no doubt he would do anything that he could to satisfy the petitioner but it is by no means certain that it would attract his attention, for he would naturally be fully occupied with his new surroundings.

When he entered upon his long rest in the heaven-world he would be entirely beyond any possibility of being disturbed by earthly things; yet even in such a case a prayer to him might not be without effect in connection with him. Such a man would almost certainly be pouring out a constant stream of loving thought towards humanity, and this thought would be a real and potent shower of blessing, tending generally towards the spiritual helping of those upon whom it fell; and there is no doubt that the man who was earnestly thinking of or praying to that saint would come into rapport with him, and would therefore draw down upon himself a great deal of that force, though entirely without the knowledge of the saint from whom it came. If the saint were sufficiently advanced to have entered upon a special series of births rapidly following one another the case would be different again. He would then be all the time within reach of earth, either living on the astral plane or in incarnation upon the physical, and if the prayer were strong enough to attract his attention at any time when he was for a moment out of his body, he would probably give any help in his power.

But fortunately for the many thousands who are constantly pouring forth their souls in prayer — in the blindest ignorance, of course, but still in perfect good faith — there is something else to depend upon which is independent of all these considerations.

Shri Krishna tells us, in the *Bhagavad Gita*, how all true prayers come to Him, to whomsoever they may have been ignorantly offered; there is a consciousness wide enough to comprehend all, which never fails in its response to any earnest effort in the direction of an increased spirituality. It works through many means; sometimes perhaps by directing the attention of a deva to the suppliant, sometimes through the agency of those human helpers who work upon the astral or mental planes for the good of humanity. Such a deva or helper so used would, if he showed himself, inevitably be taken by the petitioner for the saint to whom he had prayed, and there are many stories which illustrate this.

I myself, for example, have been taken under such circumstances for S. Philip Neri, and a junior helper who was with me on the occasion was supposed to be S. Stanislaus Kostka. Our President, too, has more than once been regarded as an angel by those whom she was assisting.

THE DEVIL

The devil is non-existent. There are persons who imagine themselves to have made pacts with him, sometimes signed with their own blood. The result depends largely upon what sort of entity happened to personate him for the occasion. There are plenty of creatures of various sorts who would hugely enjoy such a joke at the expense of a man; but no such entity, whatever he may be, could possibly have any use for the "soul" of a man — nor would the "soul" of anybody foolish enough to make such a compact be likely to be of any use, either to the owner or anybody else. All these absurd superstitions are disproved by the fact that the man is the ego, and therefore cannot sell himself, and also that there are no buyers in such a transaction; so the whole thing is nothing but foolishness.

There are many entities who may be both willing and able to arrange twenty years of material prosperity for a person. They are generally willing to do it in return for some material consideration, such as the sacrifice of babies, goats or fowls. The ego has no share in these pacts, either in the rare individual cases, or in general fetish worship. These entities cannot possess the human ego, nor could they use it if it could come into their possession. A human body is sometimes convenient for them, and for the sake of being permitted to obsess it they will sometimes enter into an arrangement. The making of a compact of this nature gives the entity a strong hold upon the man; but as soon as he discovers the folly of his action, the proper course for the man to take is to resist such obsession to the utmost. Childish ceremonies, such as signing with his own blood, would of course make no difference whatever.

There is no hierarchy of evil. There are black magicians certainly, but the black magician is usually merely a single solitary entity. He is working for himself, as a separate entity, and for his own ends. You cannot have a hierarchy of people who distrust one another. In the White Brotherhood every member trusts the others; but you cannot have trust with the dark people, because their interests are built upon self.

You must, however, take care what you mean when you speak of evil. The principle of destruction is often personified, but it is only that old forms are broken down to be used as material for building new and higher ones. Here in India there is Shiva, the Destroyer, but no one would think of Him as evil; He is one of the highest manifestations of the deity. The principle of the destruction of forms is necessary in order that life may progress. There is a Great One, a part of whose function it is to arrange when the great cataclysms shall take place — but He works for the good of the world. These things are not to be thought of as in any way evil. The notion of a supposed angel who revolted and was turned out of heaven is very much based upon John Milton. The conception is not at all the same in the Book of Job. In that story the devil is quite a different person from the gloomy hero in the Miltonic conception. Then the Buddhists have Mara — a personification of the karma of the past descending upon the man at once and taking many forms. There is an instant working-out of karma upon the attainment of enlightenment.

The statement that all material things, all differences and limitations are evil is misleading. If by evil you mean what is ordinarily connoted by that word, and not some other and quite different notion of an abstract kind, then matter is not evil. Spirit and matter are equal. Matter is not in opposition to spirit. We find matter

troublesome because of the bodies we have to use; but we are here in order to learn what without the physical life could not be conveyed to us. The physical plane experiences give a definiteness and precision to our consciousness and powers which we could never acquire on any plane unless we had spent the necessary time on this. But why do people bother about evil? There is plenty of good in the world, and it is better to think of that, for your thought strengthens that of which you think. To think and talk so much about black magicians unquestionably attracts their attention to you, and the results are often exceedingly undesirable.

HINDUISM

When ignorant missionaries dilate upon the three hundred and thirty million gods of the Hindus they are making a very gross misrepresentation of a religion which is far more scientific than their own. Hinduism, like every other religion, knows perfectly well that there can be only one God, though there may be countless manifestations of Him. To call these "gods" is of course ridiculous. It is perhaps better to avoid the word "god" altogether, because of the exceedingly unpleasant ideas which have been associated with it by the Christians; but if it is to be used, at least it should never be applied to any being lower than the LOGOS of the solar system. All the good things attributed to the Christian God are true of the LOGOS; there is nothing in the system that is not He, and yet He is much more than His system. We could not possibly grasp the truth about the Absolute; anything which we are able to grasp must after all be small, since our minds are so small. The advice of the Lord BUDDHA to His people was always that they should not trouble themselves about such remote matters, since it was impossible to arrive at any conclusion, and nothing useful came from it.

The images of the Indian deities are usually highly magnetized, and when they are carried round the streets at the festivals their influence upon the people is unquestionably productive of much good. In many of the Hindu temples there are strong permanent influences at work, as is the case for example at Madura. Once when I visited that city some white ashes from the temple of Shiva were given to me, and also a bright crimson powder from the temple of Parvati, and I found that both of these were so powerfully magnetized as to retain their influence for some years and after much travelling.

India is essentially a country of rites and ceremonies. The religion is full of them, and a great many of them are said to have been prescribed by the Manu Himself, though it is quite obvious that many others have been added at a much later date. Some of them appear to be regulations such as would be quite necessary at the beginning of a new race, but now that it is thoroughly established it seems clear that they are useless. In many cases when one watches their performance one can see quite clearly what must originally have been intended, even though now the ceremony has become a mere empty shell, and no result follows upon it. Such things are not without their value for younger souls; indeed there are many who delight in them and obtain great benefit from them; but of course none of them can ever be really necessary, and all such bondage falls away altogether from the really developed man.

Originally every householder was the priest of his own family, but as the civilization became more complex the rites and ceremonies grew more complex also, and therefore a class of specially instructed priests had to spring up, because no one who had anything else to do could possibly remember the wealth of unnecessary detail. In these days it would seem that most people perform them, or have them performed for them, much in the same spirit as they take medicine from a doctor, without understanding what it is, but with the faith that it will somehow do them good. There are, however, many people who cannot put heart and soul into a ceremony unless they do understand it, and these people usually end by breaking away from ceremonies altogether.

It is sad to see priests performing the old ceremonies and using the old forms which once were so effective, and yet producing no result worth mentioning. There seems to be no will in these days. They commence some of their recitations “Om, Bhur, Bhuvar, Swar”; but nothing whatever happens when they recite the words. In the old days the officiant who said this threw some will into it, and raised his own consciousness, as well as that of those present who were responsive, from one plane to the other as he spoke.

I remember seeing this strongly exemplified in the performance of a striking ceremony, when we were examining one of the earlier lives which occurred many thousands of years ago here in India. The people all entered an inner room and stood in absolute darkness. In the beginning of the ceremony the officiant slowly and solemnly uttered those words, and each produced its due effect upon the majority of those who stood around him. The word “Om” brought all the people in close harmony with him, and with the feelings which filled his mind. Then, at the utterance of the word “Bhur,” to their senses the room was filled with ordinary light, and they were able to see all the physical objects in it; when, after an interval, the second word came, astral sight was temporarily opened for them; and the third word produced the same effect upon their mental sight, and brought round them all the bliss and power of the higher plane, and that condition persisted during the recitation of the various verses which followed.

Of course these effects were only temporary, and when the ceremony was over the higher consciousness faded away from those who had taken part in it, but nevertheless it remained for them a tremendous experience, and the effect of it was that on another similar occasion this higher consciousness was more readily and more fully aroused in them. But now nothing of this sort seems to be done anywhere. Now the priest arranges his fuel and utters a solemn invocation to Agni, and then — lights the fire with a match! In the old days that which is represented by Agni really did come, and the fire fell from heaven, to use an old expression. But all outer husks seem to remain.

There is a quite rational and scientific idea underlying the practice of pilgrimage. Great shrines are usually erected on the spot where some holy man has lived or where some great event has happened (such as an initiation) or else in connection with some relic of a great person. In any one of these cases a powerful magnetic centre of influence has been created, which will persist for thousands of years. Any sensitive person who approaches the spot will feel this influence, and its effect upon him is unquestionably good. Where there is a strong vibration at a much higher level than any attained by ordinary humanity, its action upon any man who comes within its influence is to raise his own vibrations for the time towards unison with it.

The pilgrim who comes to such a spot and bathes himself in its magnetism, perhaps for several days together, is certainly the better for it, although different people will be affected in different degrees, according to their power of receptivity. Such a place of pilgrimage is the Bodhi tree at Buddha-gaya, the spot where the Lord Gautama attained His Buddhahood. This is true although the tree which is there now is not the original one. That fell some time in the middle ages, and the present tree is only an offshoot from it. But nevertheless the tremendously strong magnetism of the spot remains and is likely to do so for many a century yet to come.

CASTES

It is said that originally each caste had its distinctive colour; indeed, the actual meaning of *varna* (the Sanskrit word for caste) is colour. I have not studied the question, but at least it is clear that the colours which are usually given do not indicate in any way the auras of the people. Only a young child has a white aura, and even the adepts have various colours in Their tremendous glow; yet for some reason the brahman is traditionally mentioned as white. A kshatriya is said to have some connection with the colour red; there are several reds in the human aura, from the rose of affection to the scarlet of anger and indignation, and the brown-reds of sensuality. But the kshatriya has no more of these than other men. Yellow is traditionally ascribed to the vaishya. But yellow in the aura signifies intellect, and we have no reason to consider the vaishya especially endowed with this quality. A shudra is spoken of as black.

If we adopt the suggestion that these colours had to do with the ancient and primitive races, we shall find the facts more tractable. The Aryans, representing the brahman caste, were undoubtedly much lighter in colour than the people amongst whom they came. The reddish Toltec people who were ruling large portions of the land when the Aryan invasion took place may have some connection with the original kshatriya caste. The aboriginals, who were Lemurians, and are now only represented by some of the hill tribes, were almost black in colour. They may be connected with the shudras. Between them and the Toltecs there appear to have been several waves of different Atlantean sub-races who settled down as traders; and these men were of a yellowish colour, as is the present day Chinaman. Perhaps they were the original vaishyas.

No doubt as we carry further and further back the investigations which we are making in connection with the lines of past lives which we are making in connection with the lines of past lives which are now being examined, we shall obtain more definite information on the subject of the origin of these castes, and of this question of their relation to colour.

SPIRITUALISM

Never forget that the spiritualists are entirely with us on some most important points. They all hold (a) life after death as an actual vivid ever-present certainty, and (b) eternal progress and ultimate happiness for everyone; good and bad alike. Now these two items are of such tremendous, such paramount importance — they constitute so enormous an advance from the ordinary orthodox position — that I for one should be well content to join hands with them on such a platform, and postpone the discussion of the minor points upon which we differ until we have converted the world at large to that much of the truth. I always feel that there is plenty of room for both of us.

People who want to see phenomena, people who cannot believe anything without ocular demonstration, will obtain no satisfaction with us, while from the spiritualists they will get exactly what they want. On the other hand, people who want more philosophy than spiritualism usually provides will naturally gravitate in our direction. Those who admire the average trance-address certainly would not appreciate Theosophy, while those who enjoy Theosophical teaching would never be satisfied with the trance-address. We both cater for the liberal, the open-minded, but for quite different types of them; meantime, we surely need not quarrel.

In what Madame Blavatsky wrote on the subject she laid great stress on the utter uncertainty of the whole thing, and the preponderance of personations over real appearances. My own personal experience has been more favourable than that. I spent some years in experimenting with spiritualism, and I suppose there is hardly a phenomenon of which you may read in the books which I have not repeatedly seen. I have encountered many personations, but still in my experience a distinct majority of the apparitions have been genuine, and therefore I am bound to bear testimony to the fact. The messages which they give are often uninteresting, and their religious teaching is usually Christianity and water, but still it is liberal as far as it goes, and anything is an advance upon the bigoted orthodox position.

Not that some spiritualists are not bigoted also — narrow and intolerant as any sectarian — when it comes to discussing (say) the question of reincarnation! The majority of English and American spiritualists do not yet know of that fact, but the French spiritists, the followers of Allan Kardec, hold it, and also the school of Madame d'Esperance in England. Many students wonder that dead people should not all know and recognize the fact of reincarnation; but after all why should they? When a man dies he resorts to the company of those whom he has known on earth; he moves among exactly the same kind of people as during physical life. The average country grocer is no more likely after death than before it to come into contact with any one who can give him information about reincarnation. Most men are shut in from all new ideas by a host of prejudices; they carry these prejudices into the astral world with them, and are no more amenable to reason and common sense there than here.

True, a man who is really open-minded can learn a great deal on the astral plane; he may speedily acquaint himself with the whole of the Theosophical teaching, and there are dead men who do this. Therefore it often happens that scraps of Theosophy are found among spirit communications. We must not forget that there is a higher spiritualism of which the public knows nothing, which never publishes any account

of its results. The best circles of all are strictly private — restricted entirely to one family, or to a small number of friends. In such circles the same people meet over and over again, and no outsider is ever admitted to make any change in the magnetism; so the conditions set up are singularly perfect, and the results obtained are of the most surprising character. At public séances, to which any one may be admitted on payment, an altogether lower class of dead people appear, because of the promiscuous jumble of inharmonious magnetisms.

SYMBOLOLOGY

Symbology is a very interesting study. To a certain type of mind everything expresses itself in symbols, and to some people they are of the greatest possible help. I myself do not happen to be of that type, and therefore I have not paid special attention to them or made any particular study of them. Some of them however are obvious, and readily comprehensible to any one who understands even a little of the principles of their interpretation. Think, for example, of those which appear on the earlier pages of *The Book of Dzyan*. On the first page is a white disc, signifying the first condition of the unmanifested; on the second page a spot appears in the centre of the white disc, signifying the first manifestation — the First LOGOS, or the Christ in the bosom of the Father; on the third page this spot has expanded into a bar, dividing the disc into two halves and so signifying the first great separation into spirit and matter — also the Second LOGOS, always spoken of as dual or androgynous; on the fourth page another bar has appeared at right angles to the first, giving us the forms of a circle divided into four equal parts or quarters, signifying the emergence of the Third LOGOS, though He is still in a condition of inactivity. On the next page the outer circle falls away, leaving us the equal-armed or Greek cross. This denotes the Third LOGOS ready for action, just about to descend into the matter of His cosmos.

The next stage of this activity is shown by various forms of the symbol. Sometimes the arms of the Greek cross widen out as they recede from the centre, and then we get the form called the Maltese cross. Another line of symbology retains the straight arms of the Greek cross, but draws a flame shooting out from the end of each arm, to signify the burning light within. A further extension of this idea sets the cross whirling round its centre, like a revolving wheel, and when that is done the flames are drawn as streaming backwards as the cross revolves, and in that way we get one of the most universal of all symbols, that of the svastika, which is to be found in every country in the world, and in connection with every religion.

The symbolic meaning of the ordinary Latin cross, as it is used in the Christian Church, has no connection whatever with this line of thought. Its meaning is entirely different, for it symbolizes the Second LOGOS, and His descent into matter, and it is also closely connected with the initiation rites of ancient Egypt. In the case of *The Book of Dzyan* the comprehension of the symbol is enormously assisted by the fact that the book itself is highly magnetized in a peculiar way, so that when the student who is privileged to see it takes one of the pages in his hand a remarkable effect is produced upon him. Before his mind's eye arises the picture of that which the page is intended to symbolize, and simultaneously he hears a sort of recitation of the stanza which describes it. It is very difficult to put this clearly into words, but the experience is a wonderful one.

I have myself seen and handled the copy which Madame Blavatsky describes — from the study of which she wrote *The Secret Doctrine*. That is of course not the original book, but the copy of it which is kept in the occult museum which is under the care of the Master K. H. The original document is at Shamballa, in the care of the Head of the Hierarchy, and is certainly the oldest book in the world. Indeed it has been said that part of it (the first six stanzas, I think) is even older than the world, for it is said to have been brought over from some previous chain. That most ancient part is regarded by some as not merely an account of the processes of the coming into

existence of a system, but rather a kind of manual of directions for such an act of creation. Even the copy must be millions of years old.

Another well-known symbol is that of the "Great Bird," which is used to denote the Deity in the act of hovering over His universe, brooding over the waters of space, or darting onward along the line of His evolution. To repose between the wings of the Great Bird means so to meditate as to realize union with the LOGOS, and it is said that the man who reaches that level may rest there for untold years.

The word Om is another presentation of the same idea; it is the sacred word of the fifth or Aryan root-race. The Atlantean sacred word was Tau, and it has been said that the sacred words given to the root-races in succession are all of them consecutive syllables of one great word, which is the true sacred Name.

Another obvious symbol, the heart, was prominent in the old Atlantean religion. In the innermost shrine of the great temple in the City of the Golden Gate there lay upon the altar a massive golden box in the shape of a heart, the secret opening of which was known only to the high-priest. This was called "The Heart of the World," and signified to them the innermost mysteries that they knew. In it they kept their most sacred things, and much of their symbolism centred around it. They knew that every atom beats as a heart, and they considered that the sun had a similar movement, which they connected with the sun-spot period. Sometimes one comes across passages in their books which give the impression that they knew more than we do in matters of science, though they regarded it all rather from the poetic than from the scientific point of view. They thought, for example, that the earth breathes and moves, and it is certainly true that quite recently scientific men have discovered that there is a regular daily displacement of the earth's surface which may be thought of as corresponding in a certain way to breathing.

Another symbol is that of the lotus, and it is used to signify the solar system in its relation to its LOGOS. There is a real reason for this comparison in the actual facts of nature. The seven Planetary LOGOI, although they are great individual entities, are at the same time aspects of the Solar LOGOS, force-centres as it were in His body. Now each of these great living centres or subsidiary LOGOI has a sort of orderly periodic change or motion of his own, corresponding perhaps on some infinitely higher level to the regular beating of the human heart, or to the inspiration and expiration of the breath.

Some of these periodic changes are more rapid than others, so that a very complicated series of effects is produced, and it has been observed that the movements of the physical planets in their relation to one another furnish a clue to the operation of these great cosmic influences at any given moment. Each of these centres has His special location or major focus within the body of the sun, and has also a minor focus which is always exterior to the sun. The position of this minor focus is always indicated by a physical planet.

The exact relation can hardly be made clear to our three-dimensional phraseology; but we may perhaps put it that each centre has a field of influence practically co-extensive with the solar system; that if a section of the field could be taken it would be found to be elliptical; and that one of the foci of each ellipse would always be in the sun, and the other would be the special planet ruled by the subsidiary LOGOS. It is probable that, in the gradual condensation of the original glowing nebula from which the system was formed, the location of the planets was determined by the formation of vortices at these minor foci, they being auxiliary points of distribution —

ganglia as it were in the solar system. All the physical planets are included within the portion of the system which is common to all the ovoids; so that any one who tries mentally to construct the figure will see that these revolving ovoids must have their projecting segments, and he will therefore be prepared to understand the comparison of the system as a whole to a flower with many petals.

Another reason for this comparison of the system to a lotus is even more beautiful, but requires deeper thought. As we see them the planets appear as separate globes; but there is in reality a connection between them which is out of reach of our brain-consciousness. Those who have studied the subject of the fourth dimension are familiar with the idea of an extension in a direction invisible to us, but it may not have occurred to them that it is applicable to the solar system as a whole.

We may obtain a suggestion of the facts by holding the hand palm upwards bent so as to form a kind of cup, but with the fingers separated, and then laying a sheet of paper upon the tips of the fingers. A two-dimensional being living on the plane of that sheet of paper could not possibly be conscious of the hand as a whole, but could perceive only the tiny circles at the points of contact between the fingers and the paper. To him these circles would be entirely unconnected, but we, using the sight of a higher dimension, can see that each of them has a downward expansion, and that in that way they are all parts of a hand. In exactly the same way the man using the sight of the fourth dimension may observe that the planets which are isolated in our three dimensions are all the time joined in another way which we cannot yet see; and from the point of view of that higher sight these globes are but the points of petals which are part of one great flower. And the glowing heart of that flower throws up a central pistil which appears to us as the sun.

It is not wise for the votary of modern science to ridicule or despise either the learning of old time or the strange and fanciful symbols in which it was expressed, for many of these ancient symbols are pregnant with meaning — often with meaning showing deeper knowledge than the outer world now possesses. The Theosophical student at least will avoid the mistake of despising anything merely because he does not yet comprehend it — because he has not yet learnt the language in which it is written.

FIRE

On higher planes everything is what down here we should call luminous, and above a certain level every thing may be said to be permeated by fire, yet not at all such fire as we know on the physical plane. What we call by that name down here cannot exist without something which either burns or glows, and it is only a kind of reflection or lower expression of a higher abstract thing which we cannot sense. Try to think of a fire which does not burn, but is in a liquid form, something like water. This was known to the followers of the first great Zoroaster, for they had this fire which no fuel on their altars, a sacred fire by means of which they symbolized divine life.

One way of reaching the LOGOS is along the line of fire, and the ancient Parsis knew this well, and raised themselves until they were one with the fire, so as to reach Him by way of it. The only way in which it can be done is through the assistance of certain classes of devas, but at this period of the world's history we are so grossly material that very few can stand the ordeal. The first Zoroaster had around him many who were able to take that way; and, though under present conditions our lower vehicles would probably be destroyed if we should make such an attempt, in new races and on other planets we shall be able to take that way again. All this sounds strange and weird and incomprehensible, because it deals with conditions which are utterly unknown on the physical plane, but the student of occultism will find that in the course of his progress he has to face many things which cannot at all be expressed in words down here.

THIRD SECTION: THE
THEOSOPHICAL ATTITUDE

COMMON SENSE

ABOVE all things and under all circumstances the student of occultism must hold fast to common sense. He will meet with many new ideas, with many startling facts, and if he allows the strangeness of things to overbalance him, harm instead of good will result from the increase of his knowledge. Many other qualities are desirable for progress, but a well-balanced mind is an actual necessity. The study of occultism may indeed be summed up in this: it is the study of much that is unrecognized ordinary man — the acquisition therefore of a great multitude of new facts, and then the adaptation of one's life to the new facts in a reasonable and common-sense way. All occultism of which I know anything is simply an apotheosis of common sense.

BROTHERHOOD

The brotherhood of man is a fact in nature; those who deny it are simply those who are blind to it, because they shut their eyes to actualities which they do not wish to acknowledge. We need waste little time over those who deny it; nature itself will refute their heresy. More subtly dangerous are those who misunderstand it, and their name is legion.

Remember not only what brotherhood means, but also what it does not mean. It emphatically does not mean equality, for twins and triplets are comparatively rare; under all but the most abnormal circumstances, brotherhood implies a difference in age, and consequently all sorts of other differences, in strength, in cleverness, in capacity.

Brotherhood implies community of interest, but not community of interests. If the family be rich all its members profit thereby; if the family be poor, all its members suffer accordingly. So there is a community of interest. But the individual interests of the brothers not only may be, but also for many years must be, absolutely different. What interests has the boy of fourteen in common with his brother of six? Each lives his own life among friends of his own age, and has far more in common with them than with his brother. What cares the elder brother of twenty-five, fighting his way in the world, for all the prizes and anxieties of school-life which fill the horizon of that second brother?

It is not to be expected, then, that because they are brothers men shall feel alike or be interested in the same things. It would not be desirable, even if it were possible, for their duties differ according to their ages, and the one thing which most promotes the evolution of the human family as a whole is that every man should strive earnestly to do his duty in that state of life to which it shall please God to call him, as the Church catechism puts it. This does not in the least imply that every man must always remain in the station in which his karma has placed him at birth; if he can honestly and harmlessly make such further karma as will raise him out of it he is at perfect liberty to do so. But at whatever stage he may be, he should do the duties of that stage. The child grows steadily; but while he is at a certain age, his duties are those appropriate to that age, and not those of some older brother. Each age has its duties — the younger to learn and to serve, and the older to direct and protect; but all alike to be loving and helpful, all alike to try to realize the idea of the great family of humanity. Each will best help his brothers, not by interfering with them, but by trying earnestly to do his own duty as a member of this family.

The brotherhood of our Society ought to be a very real thing. It is important that we should recognize and realize a close fellowship, a feeling of real unity and drawing together. This will be achieved if members will forget their own personal feelings and think chiefly of the interests of others. The heart of the Society is making for itself a body on the buddhic plane, a channel through which the Great Ones can work. The perfection of the channel as such depends upon the attitude of the earnest and devoted members. As yet it is very imperfect, because of the tendency of each member to think too much of himself as a unit, and too little of the good and well-being of the whole. The stones of the wall must be built each in its own place; one standing out of place here, or projecting there, causes roughness, and the wall as a whole is a less perfect wall. We form but a little part of a vast scheme, one wheel as it

were of a machine. It is for us to make ourselves really fit for our little part; if we do that, though we may be quite unfit to take a leading position in the drama of the world, yet what little we do is well done and lasting, and will honourably fill its place in the greater whole.

You are all aware that in seven hundred years' time our two Masters will commence the founding of the sixth root-race, and that even already They are looking about for those who will be suitable assistants for Them in that work. But there is something nearer than that to be done — and it is a work which will afford excellent practice in developing the qualities necessary for that larger work; and this is the development of the sixth sub-race of the Aryan race, which is now just beginning to be formed in North America. Already signs are to be seen of the preparations for this work; different races are being welded together in one; and we too have our part to play in this. We all recognize how important it is that a child's early years should be surrounded by good influences, and it is just the same with the childhood of a race. If we can succeed in starting this young race along right lines much will be gained; and we, even at this distance from America, can be of great help at this critical period of history, if we will.

Part of the scheme very shortly to be realized is the drawing together of the various branches of our fifth sub-race, the Teutonic. Many of us belong to that — the English colonies, the Americans, the Scandinavians, the Dutch and the Germans; and many also in France and Italy, as for example the Normans, who are the descendants of the Norsemen, and also those in southern countries who are descendants of the Goths and Visigoths. What is desired in order to promote the work of the great plan is that all these races should be drawn into much closer sympathy. This has already been achieved to a great extent in the case of England and America; it is very much to be regretted that it cannot be done in the case of Germany also, but for the present that great country seems disposed to hold aloof from the desired coalition, and to stand out for what it considers its own private interests. It is much to be hoped that this difficulty may be overcome.

The great purpose of this drawing together is to prepare the way for the coming of the new Messiah, or, as we should say in Theosophical circles, the next advent of the Lord Maitreya, as a great spiritual teacher, bringing a new religion. The time is rapidly approaching when this shall be launched — a teaching which shall unify the other religions, and compared with them shall stand upon a broader basis and keep its purity longer. But before this can come about we must have got rid of the incubus of war, which at present is always hanging over our heads like a great spectre, paralyzing the best intellects of all countries as regards social experiments, making it impossible for our statesmen to try new plans and methods on a large scale. Therefore one essential towards carrying out the scheme is a period of universal peace. Many efforts have already been made in various ways to bring about this result — for example the Peace Conference; but it seems that some other way will have to be tried.

If we of the fifth sub-race can but put aside our prejudices and stand side by side, a great work lies before us in the future. Ours is the latest sub-race, and therefore contains, generally speaking, the highest egos in evolution. Yet the majority of the people in it are by no means ready to respond to a purely unselfish motive as a means of bringing about the universal peace required.

How then can this best be attained? By making it to the interest of all these nations to insist upon universal peace. Remember that trade suffers during war. We of these various branches of the Teutonic race are the greatest trading nations of the world, and I hope that we may shortly realize that it is to our interest to bind ourselves together, and to stand for peace. Truly this is not a very high motive, for it is merely self-interest; but still when the rulers and great statesmen are moved to desire unity from the abstract love for humanity, this lower motive may help to bring their less developed fellow-countrymen into line with them, and cause them warmly to support any movement which they may set on foot for that object.

All sorts of events are being utilized to help this binding together of our race. For example, the death of Her Majesty the late Queen Victoria was very decidedly utilized for that purpose. Her life did very much in drawing the Colonies together into closer bonds with the Mother-country. Those who saw the Jubilee procession from the psychic standpoint were greatly impressed with the mighty current of high emotion thereby evoked. In her life she did much, but at her death still more was accomplished. By her death she drew close not only our Colonies, but also the United States. I was in America at the time of her death, and really it might have been their own ruler for whom the Americans were mourning, so spontaneous and so sincere were their expressions of the sense of loss. So in her death the great Queen did grand service, as well as in her life.

Each race has its own peculiarities, just as each individual has. If we wish to cooperate in the great work we must learn to allow for these, to be tolerant of them, and to regard them with a kindly interest, instead of sneering at them or letting them get on our nerves. What then can we do practically to help these great national affairs? This at least: that when in our presence unkind or sneering remarks are made about other nations, we can make a point of always putting forward considerations on the other side, and saying something kindly. We may not always be able to contradict the evil thing said, but at least we may supplement it with something that is good.

There are perhaps but few of us, but at least in the course of a year each of us probably meets at least a thousand others, and each of us may to that extent be a centre for helping our own nation to see good in others, and thus, though it may be only in a small way, we may be able to smooth the path and make the way for union easier. Many people are constantly in the habit of speaking with narrow prejudice against the peculiarities of other nations; let us at least take care not to do this, but always bear in mind the importance of promoting friendly feeling. Do not let us despair when we think how little each one of us can do in the matter; let us rather remember that every little effort will be used by Those who are working from behind. No doubt the scheme will be carried out whether or not we take the privilege which is offered to us of helping in it; but that is no reason why we should not do our best.

Nor is it only good people who are used in the promotion of the scheme. All sorts of forces are being used by the Great Brotherhood that stands behind to forward necessary work. Yes, even the very selfishness and the failings of men. "Blindly the wicked work the righteous will of heaven," as Southey writes in *Thalaba*. And "All things work together for good to them that love God." This was spoken as regards personal karma, but the same thing holds good in regard to greater and broader schemes. For example, the bigotry of the Christian Church, evil though it is, has not been altogether valueless, for it has helped to develop strength of faith, since the ignorant cannot believe strongly without being bigoted. Self-seeking in commercial pursuits is evil also, yet it has in it a certain power which can be turned to account by

those who stand behind, for it develops strength of will and concentration, qualities which in a future life may be put to most valuable uses.

We each have an opportunity to help in this scheme, to co-operate on the side of good. If we do not take the opportunity offered to us, another will, and if not that other, then another, but in any case the work will be done.

We know that already some to whom the opportunity has been offered have cast it aside; but that is only all the more reason why we should work with greater vigour, so as to atone for their defection — to do their share as well as our own. Never for a moment must we fear that because of such defection the work will be allowed to suffer. We cannot but regret that our poor friends should lose their opportunities — that from ignorance and lack of clear-sightedness they are working so sadly against their own interests. Yet remember that their folly is but temporary; they will awaken to the truth some day — if not in this life, then in some other. Meantime inside all is well, and the Great Work is going forward.

The evolution of the world is, after all, like any other large undertaking. Think of the making of a railway, for instance. It does not matter to the railway company or to the future passengers which workman lays a certain rail or drives a certain bolt, so long as it is well and truly done; and the overseer will attend to that. It matters very much to the *workman*, for he who works receives the pay, while the other gets nothing. The overseer regrets it when a workman goes off in a fit of temper or of drunkenness and refuses to work for a day; but he thinks, "Never mind, he will come back tomorrow," and meantime he employs some one else. Many have left the work in just that way in an outburst of personality, but they will return. The question is not as to whether the work shall be done — the Masters will see to that in any case; it is only as to who will embrace the opportunity of doing it.

Many people who contend bitterly against the right are merely showing that they are not yet fit to pass this test; they have not yet reached the stage where they can forget themselves utterly in the work; their personalities are still rampant, and so they are capable of being shocked and thrown off their balance, if some new fact comes before them. It is sad, of course, but it is only temporary; they have lost a good opportunity for this life, because they are not yet strong enough for it; but there are many lives yet to come. Meantime others will take their places. Never forget that one thing of importance is that the Masters' work should be done; let us at least be among those who are doing it now, even though there are many who cannot yet see clearly enough to help us. They repudiate the Masters for this life, like a naughty little boy who gets angry with his parents, and in a fit of passion runs away and hides himself; but presently hunger brings the naughty little boy home again, and in the same way hunger for the truth which they have once tasted will bring most of them back to the feet of the Masters in their next lives. Meantime let us stand firm, and fill our hearts with peace even in the midst of strife.

If we would rise to our opportunity we must rub down our corners and get rid of our awkward personalities, and forget them in encouraging good feeling in every possible way. If we hear something said against somebody else let us at once try to put the other side, and this both with regard to nations and individuals. Counterbalance the evil by speaking the good — not to give a false impression, but to give the best possible aspect or interpretation of the facts. Our work is to make the machine run smoothly, and neutralize the friction. Our aim is to be a united whole as a Society,

and to help towards harmony in the outside world. The scheme is great, the opportunity glorious; shall we take it?

Yet beware lest you should make the idea of preparing yourself for grand work in the future an excuse for neglecting the minor opportunities of every-day life. A good example of what I mean is offered by a letter which I recently received, in which the writer says that he finds himself in the position of having to teach a Theosophical Branch, and that he feels it a great responsibility, of which he cannot think himself worthy because his knowledge is at present so imperfect. Now in reply to this I shall say:

Do not be in the least troubled about your position towards your Branch. Assuredly it is a responsibility to teach, but on the other hand it is a very great privilege. Think of it rather in this way, that here are number of hungry souls, and Those who stand behind have been so kind to you as to give you the opportunity of being the channel through which these can be fed. You have the broad principles of the teaching clearly in mind, and your own common sense will keep you from going far wrong in details. I admire your extreme consciousness, but if you keep these main principles steadily before your pupils, you are very little likely to go wrong in your teaching.

We all have the responsibility of which you speak, and those of us who have to write the books and give the lectures feel it far more acutely than you can imagine. Indeed we have sometimes been told by friends that we ought to have attained adeptship before we wrote any books, so that it might be quite certain that there should be no mistakes in them. I can only say that we decided to share our imperfect knowledge with our brothers, even while we still have very much to acquire; and I think that the result has justified our decision. If we had waited until we attained adeptship, it is true that our books would have been perfect — and they are very far from being perfect now — but then you see you would all have had to wait a thousand years or so for them, which would have made a considerable difference to the work of the Society in the present century. It seems to me that the problem that lies before you is an exactly similar one. You also might refrain from teaching until you knew everything; but what would become of your Branch in the meantime?

HELPING THE WORLD

One of the first qualifications which are required for the treading of the Path is single-mindedness or one-pointedness. Even worldly men succeed because they are one-pointed, and we can learn from them the value of determination on our own line. Our goal is not so tangible as theirs, so we have more difficulty in keeping the one-pointed attitude of mind; but in India the importance of the unseen is more easily realized than in the West. It is good to seek the company of those who are more advanced, to whom the realities of the Path are constantly present; also to read and hear and think about our purpose frequently, and unwaveringly to practise the virtues by which alone the perfect knowledge can come to us.

This an age of hurry and scurry; the tendency is for people to do a little of many things, but nothing thoroughly — to flutter from one thing to another. No man now devotes his life to a masterpiece, as was often done in the Middle Ages in Europe, in old days in India.

Occultism changes a man's life in many ways, but in none more than in this; it makes him absolutely one-pointed. Of course I do not mean that it causes him to neglect any duty that he used to do; on the contrary, the never-ceasing watch to fulfil every duty is its first prescription. But it gives him a keynote of life which is always sounding in his ears, which he never forgets for an instant — the key-note of helpfulness. Why? Because he learns what is the plan of the LOGOS, and tries to co-operate in it.

This involves many lines of action. To be able to help effectively he must make himself fit to help; hence he must undertake the most careful self-training, the elimination of evil qualities from himself, the development merit of good ones. Also he must maintain a constant watchfulness for opportunities to help.

One special method of helping the world lies ready to the hand of members of our Society — that of spreading Theosophic truth. We have no right and no desire to force our ideas on any one, but it is our duty and our privilege to give people the opportunity of knowing the real explanation of the problems of life. If when the water of life is offered, a man will not drink, that is his own affair; but at least we should see that none perishes through ignorance of the existence of that water.

We have then this duty of spreading the truth, and nothing should be allowed to interfere with it. This is the work that as a Society we have to do, and we must remember that the duty is binding upon each of us. Our minds must be filled with it, we must be constantly thinking and planning for it, seizing every opportunity that offers. It is not for us to excuse ourselves because some other member seems to be doing nothing; that is his business, and we are in no way concerned in it; but if we ourselves neglect to do our very best, we are failing in our duty. It was not to illumine our own path that this glorious light came to us, but that we also in our turn might be light-bearers to our suffering brothers.

CRITICISM

If we wish to make any progress in occultism, we *must* learn to mind our own business and let other people alone. They have their reasons and their lines of thought which we do not understand. To their own Master they stand or fall. Once more, we have our work to do, and we decline to be diverted from it. We *must* learn charity and tolerance, and repress the mad desire to be always finding fault with someone else.

It is a mad desire, and it dominates modern life — this spirit of criticism. Every one wants to interfere with somebody else's duty, instead of attending to his own; every one thinks he can do the other man's work better than it is being done. We see it in politics, in religion, in social life. For example the obvious duty of a Government is to govern, and the duty of its people is to be good citizens and to make that work of government easy and effective. But in these days people are so eager to teach their Governments how to govern that they forget all about their own primary duty of being good citizens. Men will not realize that if they will but do their duties, karma will look after the “rights” about which they are so clamorous.

How comes this spirit of criticism to be so general and so savage at this stage of the world's history? Like most other evils, it is the excess of a good and necessary quality. In the course of evolution we have arrived at the fifth sub-race of the fifth root-race. I mean that that race is the latest yet developed, that its spirit is dominant in the world just now, and that even those who do not belong to it are necessarily much influenced by that spirit.

Now each race has its own special lessons to learn, its own special quality to unfold. The quality of the fifth-race is what is sometimes called *manas* — the type of intellect that discriminates, that notes the *differences* between thing. When it is perfectly developed, men will note these differences calmly, solely for the purpose of understanding them and judging which is best. But now, in this stage of half-development most people look for differences from their own point of view *not* in order to *understand* them but in order to *oppose* them — often violently to persecute them. It is simply the point of view of the ignorant and unevolved man, who is full of intolerance and self-conceit, absolutely sure that he is right (perhaps he may be up to a certain point) and that everybody else therefore must be entirely wrong — which does not follow. Remember that Oliver Cromwell said to his council: “Brethren, I beseech you in the sacred name of the Christ to think it possible that you may sometimes mistake!”

We too must develop the critical faculty; but we should criticise *ourselves*, not others.

There are always two sides to every question; generally more than two. *Kritein* means to judge; therefore criticism is useless and can only do harm unless it is absolutely calm and judicial. It is not a mad attack upon the opponent, but a quiet unprejudiced weighing of reasons for and against a certain opinion or a certain course of action. We may decide in one way, but we *must* recognize that another man of equal intellect may emphasize another aspect of the question, and therefore, decide quite otherwise. And yet in so deciding he may be just as good, just as wise, just as honest as we ourselves.

Yet how few recognize that; how few rabid protestants really believe Catholics to be good men; how few convinced redhot radicals really believe that an old Tory squire may be just as good and earnest a man as themselves, trying honestly to do what he thinks his duty!

If a man comes to a decision different from our own we need not pretend to agree with him, but we must give him credit for good intentions. One of the worst features of modern life is its eager readiness to believe evil — its habit of deliberately seeking out the worst conceivable construction that can be put upon everything. And this attitude is surely at its very worst when adopted towards those who have helped us, to whom we owe thanks for knowledge or inspiration received. Remember the words of the Master: “Ingratitude is not one of our vices.” It is always a mistake to rush madly into criticism of those who know more than we; it is more seemly to wait and think matters over, to wait and see what the future brings forth. Apply the test of time and the result; “By their fruits ye shall know them.” Let us make a rule to think the best of every man; let us do our work and leave others free to do theirs.

PREJUDICE

Beware of the beginnings of suspicion: it will distort everything. I have seen it come between friends and noticed how a little suspicion soon grows into a giant misunderstanding. Every harmless word is distorted, and mistaken to be the expression of some unkind or improper motive, while all the time the speaker is utterly unconscious of the suspicion. It is the same when opinions differ about books or religion; a slight difference of opinion is fostered by dwelling upon all that tells on one's own side and against the other side, until the result is an absurdly distorted view. One finds it again with colour prejudice although those now wearing white bodies have worn brown ones and *vice versa*, and the habits of one have been or will be the habits of the other. Brotherhood means the getting rid of prejudices; knowledge of the fact of reincarnation ought to help us to overcome our limitations and uncharitableness.

We who are students of the higher life *must* rise above these prejudices. It is a difficult task, because they are ingrained — prejudices of race, of caste, of religion; but they *must* all be rooted out, because they prevent clear sight and true judgment. They are like coloured glass — still more like cheap, imperfect glass; everything seen through them is distorted, often so much so as to look entirely different from what it really is. Before we can judge and discriminate we *must* see clearly.

It is always very easy to attribute some evil motive to others whom we have allowed ourselves to dislike, and to discover some evil explanation for their acts. This tendency forms a very serious impediment in the path of progress. We must tear away our own personalities, for only then shall we be at all able to see the other person as he is. A prejudice is a kind of wart upon the mental body, and of course when a man tries to look out through that particular part of the body he cannot see clearly. It is in reality a congested spot in the mental body, a point at which the matter is no longer living and flowing, but is stagnant and rotten. The way to cure it is to acquire more knowledge, to get the matter of the mental body into motion, and then one by one the prejudices will be washed away and dissolved.

This evil effect of prejudice was what Aryasangha meant when he said, in *The Voice of the Silence*, that the mind was the great slayer of the real. By that he was drawing attention to the fact that we do not see any object as it is. We see only the images that we are able to make of it, and everything is necessarily coloured for us by these thought-forms of our own creation. Notice how two persons with preconceived ideas, seeing the same set of circumstances, and agreeing as to the actual happenings, will yet make two totally different stories from them. Exactly this sort of thing is going on all the time with every ordinary man, and we do not realize how absurdly we distort things.

The duty of the Theosophical student is to learn to see things as they are, and this means control, vigilance and a very great deal of hard work. In the West, for example, people are very much prejudiced along religious lines, for we are born into a certain religion and sedulously taught that all others are superstitions. Our ideas therefore are biased from the first, and even when we do learn to know a little about other religions and respect them it would be difficult for us to imagine ourselves born into them. Those who are Hindus can scarcely think of themselves as being born as Christians or Muhammadans, and just in the same way the Christian or

Muhammadan has an equal difficulty in thinking of himself as a Hindu or a Buddhist, although it is practically certain that in some past life he has been in one or other of these religions.

Many so-called protestant Christians will not even now trust a Roman Catholic, and the more ignorant people are, the greater is their distrust of that to which they are unaccustomed. The peasantry, for example, have an instinctive distrust of all foreigners, and there are many country places in England where, let us say, a Frenchman, unless in poverty and needing help, would certainly be regarded with suspicion. If he is hungry he will be fed, and treated with compassion; but let him come as a fellow-workman and all that he does will be criticised, laughed at, and suspected. Now of course all this comes from ignorance, and occurs because the peasantry are unaccustomed to meeting with foreigners.

The removal of such prejudice is one of the great advantages gained by an intelligent man when he travels. In the Theosophical Society men of different nations are being drawn much more closely together; Indians are learning to trust white people, and white people in turn are learning that Indians are much the same as themselves. I was working in Amsterdam during the Boer war, and though in Holland generally there was a strong feeling at the time against England, there was never the slightest trace of it among the Dutch Theosophical members. It is most interesting to attend one of the European Theosophical Conferences, and to see the really hearty good feeling which exists between men of different nations — how unfeignedly glad they are to see one another, and how they rejoice in one another's company. One sees at once that if such fellow-feeling as exists between the members of the Theosophical Society could only spread to a majority of their fellow-countrymen in the various nations, war would at once become a ridiculous impossibility.

As things are now we form opinions on very slight grounds; you meet a person for the first time, and something that he says, or some trivial gesture, arouses in you a little dislike of him, so that there is a slight wall between you and him. This may seem an unimportant matter, yet if you are not careful that slight bias against the person will grow into a barrier which will for ever prevent you from understanding him. To a certain extent you see him through this thought-form that you have made, and you cannot see him correctly, for it is like looking through a twisted and coloured glass which distorts everything.

Sometimes, but not so often, a prejudice is in favour of the person, as in the case of a mother who can see no harm in what her child does, even though he may seriously harm others. Now whether they be against a person or in favour of him, both of these are equally prejudices, mental delusions which slay the real. The best way to see truly is to begin determinedly to look always for the good in every one, as our prejudices are generally on the other side, and we are sadly prone to see the evil where none exists. We differ from other people in colour, in dress, in manners and customs, and in outer forms of religion, but all these are merely externals, and all that goes to make up the real man behind and beneath all this is much the same in us all. It is not after all so difficult to learn to look behind the outer shells in which people conceal themselves. Thereby they usually make the worst of themselves, for the main faults nearly always lie on the surface, and the real gold is often successfully concealed. One who aspires to make progress must overcome this blindness to the worth of others, this tendency to judge by surface characteristics.

Remember that no one who desires to stand on the side of good as against evil can ever be refused the opportunity, no matter how ignorant or bigoted he may be. The Masters always take the good and use it wherever it appears, even if there is in the same man much that is bad also; and Their use of this force for good greatly helps the man who has generated it. For example, They will use the devotional force which is to be found even in a murderous fanatic, and thus They will allow him to do some good work and consequently to be helped.

We also should imitate the Great ones; we should always try to take the good in everything and everybody. Do not look for and accentuate the evil in any one, but select and emphasize the good. Go on doing your own work to the best of your ability, and do not trouble yourself about the work of another, or about how he is doing it. Even if other people make difficulties in your way, climb over them and do not worry; they are your karma, and after all these things from outside do not really matter. Do not make the mistake of thinking that others are trying to thwart your good purposes. All these people are much like yourself, think of it — would you deliberately choose to do a wicked thing like that?

CURIOSITY

Be so centred in your work that you have no time to find fault with others, or to pry into their affairs. If only each man would mind his own business the world would be infinitely happier.

This prying into other people's affairs works much of evil, and it is quite accurate to say that the person who does it is suffering from a disease. The man who is prying is not usually doing it for the purpose of helping, but simply to satisfy his curiosity about something which does not concern him, which is symptomatic of his disease. Another symptom is that the man cannot keep to himself the information which he has so nefariously acquired, but must everlastingly be pouring it out to others as foolish and as wicked as himself. For it is wicked beyond all doubt, this gossip — one of the wickedest things in the world. Ninety-nine times out of a hundred what is said is an absolute fabrication, but it does an enormous amount of harm.

It is not only the damage done to another person's reputation; that is the least part of the evil. The gossip and his pestilential cronies perpetually make thought-forms of some evil quality which they choose to attribute to their victim, and then proceed to hurl them upon him in an unceasing stream. The natural effect of this will be to awaken in him the evil quality of which they accuse him, if there is anything at all in his nature which will respond to their malicious efforts. In the one case out of a hundred in which there is some truth in their spiteful prattle, their thought-forms intensify the evil, and so they pile up for themselves a store of the terrible karma which comes from leading a brother into sin. Theosophists especially should be careful to avoid these evils, because many of them are making some effort in the direction of developing psychic powers, and if they should use those for the purpose of prying into other people's affairs or for sending evil thoughts to them, their karma would be of the most terrible nature.

Never speak unless you know, and not even then unless you are absolutely certain that some definite good will come of it. Before you speak ask yourself about what you are going to say: "Is it true? Is it kind? Is it useful?" And unless you can answer these three questions in the affirmative, your duty is to remain silent. I am well aware that an absolute following of this rule would reduce the conversation of the world by about ninety per cent, but that would be an unspeakable advantage, and the world would advance much more rapidly.

When we understand the underlying unity of all we cannot be otherwise than helpful, we cannot stand aside from our brother's sorrow. Of course there may be many cases where physical aid is impossible, but at least we can always give the help of sympathy, compassion and love, and this is clearly our duty. For a man who realizes Theosophy harshness is impossible. Any member who acts roughly or coarsely is failing in his Theosophy, and if he fails in patience he is failing in comprehension. To understand all is to forgive all, to love all. Every man has his own point of view, and the shortest road for one man is not by any means necessarily the best for another. Every man has a perfect right to take his own evolution in hand in his own way, and to do with regard to it what he chooses, so long as he does not cause suffering or inconvenience to any one else. It is emphatically not our business to try to put everybody right, but only to see that all is right on our side in our relation with others. Before we undertake an effort to force someone else into our path it will be

best for us carefully to examine *his*, for it may be better for him. We ought to be always ready to help freely to the fullest extent of our power, but we ought never to interfere.

KNOW THYSELF

The old Greek saying *Gnothi seauton*, know thyself, is a fine piece of advice, and self-knowledge is absolutely necessary to any candidate for progress. And yet we must beware lest our necessary self-examination should degenerate into morbid introspection, as it often does with some of the best of our students. Many people are constantly worrying themselves lest unawares they should be "sliding back," as they call it. If they understood the method of evolution a little better they would see that no one can slide back when the whole current is moving steadily forward.

As a torrent comes rushing down a slope, many little eddies are formed behind rocks, or perhaps where the water is whirling round and round, and therefore for the moment some of it is moving backward; but yet the whole body of water, eddies and all, is being swept on in the rush of the torrent, so that even that which is apparently moving backwards in relation to the rest of the stream is really being hurried forward along with the rest. Even the people who are doing nothing towards their evolution, and let everything go as it will, are all the while gradually evolving, because of the irresistible force of the LOGOS which is steadily pressing them onwards; but they are moving so slowly that it will take them millions of years of incarnation and trouble and uselessness to gain even a step.

The method in which this is managed is delightfully simple and ingenious. All the evil qualities in man are vibrations of the lower matter of the respective planes. In the astral body, for example, selfishness, anger, hatred, jealousy, sensuality, and all qualities of this kind are invariably expressed by vibrations of the lower type of astral matter, while love, devotion, sympathy, and emotions of that class are expressed only in matter of the three higher sub-planes. From this flow two remarkable results. It must be borne in mind that each sub-plane of the astral vehicle has a special relation to the corresponding sub-plane in the mental body; or to put it more accurately, the four lower sub-planes of the astral correspond to the four kinds matter in the mental body, while the three higher correspond to the causal vehicle.

Therefore it will be seen that only higher qualities can be built into the causal body, since the vibrations created by the lower can find in it no matter which is capable of responding to them. Thence it emerges that while any good which the man develops within himself records itself permanently by a change in his causal body, the evil which he does and thinks and feels cannot possibly touch the real ego, but can only cause disturbance and trouble to the mental body, which is renewed for each fresh incarnation. Of course the result of this evil does store itself in the mental and astral permanent atoms, and so the man has to face it over and over again, but that is a very different matter from taking it into the ego and making it really a part of himself.

The second remarkable result produced is that a certain amount of force directed towards good produces an enormously greater effect in proportion than the same amount of force directed towards evil. If a man throws a certain amount of energy into some evil quality it has to express itself through the lower and heavier astral matter; and while any kind of astral matter is exceedingly subtle as compared with anything on the physical plane, yet as compared with the higher matter of its own plane it is just as gross as lead is on the physical plane when compared with the finest ether.

If therefore a man should exert exactly the same amount of force in the direction of good, it would have to move through the much finer matter of these higher sub-planes and would produce at least a hundred times as much effect, or if we compare the lowest with the highest, probably more than a thousand times. Remember that even in addition to what has been said as to the effect of force in different grades of matter, we have the other great fact that the LOGOS Himself is by His resistless power steadily pressing the whole system onwards and upwards, and that, however slow this cyclic progression may seem to us, it is a fact which cannot be neglected, for its effect is that a man who accurately balances his good and evil comes back, not to the same actual position, but to the same relative position, and therefore even he has made some slight advance, and is as it were in a position just a little than that which he has actually deserved and made for himself.

It will be clear from these considerations that, if any one is so foolish as to want to get really backwards against the stream, he will have to work hard and definitely towards evil; there is no fear of "sliding" back. That is one of the old delusions which remains from the times of the belief in the orthodox devil, who was so much stronger than God that everything in the world was working in his favour. Really the exact opposite is the case, and everything round a man is calculated to assist him, if he only understands it.

So many of our most conscientious people are just like the child who has a little garden of his own, and constantly pulls up his plants to see how the roots are growing — with the result of course that nothing grows at all. We must learn not to think of ourselves personally, nor of our personal progress, but enter the path of development, go on working for others to the best of our ability, and trust our progress to take care of itself. The more a scientist thinks about himself the less mental energy he has for the problems of science; the more a devotee thinks about himself the less devotion has he to lavish upon his object.

Some self-examination is necessary, but it is a fatal mistake to spend too much time in self-examination; it is like spending all one's time in oiling and tinkering at the machinery. We use what faculties we have, and in the use of them others will develop and true progress will be made. If you are learning a language, for example, it is a mistake to try to learn it from books quite perfectly before you make any attempt to speak it; you must plunge into it, and make mistakes in it, and in the effort you will learn in due course to speak without mistake. So in the course of time what is called renunciation will come naturally, and even easily. No doubt when men first attempt to live the higher life they do definitely renounce many things which are pleasures to others — which still have a strong attraction even for them; but soon the man finds that the attraction of such pleasures has ceased, and that he has neither time nor inclination for the lower enjoyments.

Learn above all things not to worry. Be happy, and make the best of everything. Try to raise yourself and help others. Contentment is not incompatible with aspirations. Optimism is justified by the certainty of the ultimate triumph of good, though if we take only the physical plane into account it is not easy to maintain that position. One's attitude in this matter depends chiefly upon the level at which one habitually keeps one's consciousness. If it is centred chiefly in the physical plane one sees little but the misery, but when it becomes possible to centre it at a higher level the joy beyond always shines through. I know the BUDDHA said that life was misery, and it is quite true on the whole with regard to the manifested life down here, yet the

Greeks and Egyptians managed to extract much joy even from this lower life by taking it from the philosophical point of view.

We never lose anything by making the best of things, but gain very much in happiness and in the power of making others happy. As our sympathy and our love grow we shall be able to receive within ourselves all the streams of emotion and of thought which come to us from others, and yet we shall remain within ourselves unaffected, calm and joyous, like the great ocean which receives the waters of many rivers and yet remains always in equilibrium.

The inner life of an aspirant ought not to be one of continual oscillation. Outer moods change constantly because they are affected by all sorts of outside influences. If you find yourself depressed, it may be due to any one of half-a-dozen reasons, none of them of any real importance. The physical body is a fertile source of such ills; a trifling indigestion, a slight congestion in the circulation, or a little over-fatigue may account for many conditions which *feel* quite serious. Even more frequently depression is caused by the presence of some astral entity who is himself depressed, and is hovering round you either in search of sympathy or in the hope of drawing from you the vitality which he lacks. We must simply learn to disregard depression altogether — to throw it off as a sin and a crime against our neighbors, which it really is; but, anyhow, whether we can succeed fully in dispersing its clouds or not we must learn simply to go on as though it were not there.

Your mind is your own mind, into which you should allow entrance only to such thoughts as you, the ego, choose. Your astral body is also your own, and you should not allow in it any sensations except those which are good for the higher self. So you must manage these vibrations of depression, and absolutely decline to give harbourage to them. They must not be allowed to impinge upon you. If they do so impinge they must not be permitted to effect a lodgment. If, to some slight extent, in spite of your efforts, they do hang about you, then it is your duty to ignore them and to let no one else know that they even exist.

Sometimes people tell me they have had moments of splendid inspiration and exaltation, and glowing devotion and joy. They do not realize that these are precisely the moments when the higher self succeeds in impressing himself upon the lower, and that all that which they feel is *there all the time*, but the lower self is not always conscious of it. Realize by reason and by faith that it is always there, and it becomes as though we felt it, even in the time when the link is imperfect and down here we feel it not.

But many a man, while admitting the truth of this in the abstract, yet says that he cannot perpetually feel this happiness because of his own defects and constant failures. His attitude in fact is very much that adopted in the litany: "Have mercy upon us miserable sinners." Now we are all sinners in the sense that we all fall short of what we ought to do, and constantly do what we ought not to do, and constantly do what we ought not to do but there is no need to aggravate the offense by being *miserable* sinners. A miserable person is a public nuisance, because he is a centre of infection, and is spreading misery and sorrow all round upon his unfortunate neighbours — a thing which no man has a right to do. Any man with just the same feelings, who contrives to keep himself reasonably happy even while making determined efforts to reform, is not injuring others in at all the same way.

People who think and speak of themselves as miserable worms are going exactly the right way to make themselves miserable worms, for what a man thinks, that he is. All

such talk is usually hypocrisy, as you may easily see from the fact that the man who so readily calls himself a miserable worm in church would feel distinctly insulted if anybody else called him so in ordinary daily life. And whether it is hypocritical or not it is certainly nonsense, for we passed the reptilian stage of evolution long ago, if we ever were in it. Anyone who understands at all the influence of thought will realize that a man who really thinks himself a miserable worm has already deprived himself of any power of rising out of that state, while the man who realizes strongly that he is a spark of the divine life will feel ever hopeful and joyous, because in essence the divine is always joy. It is a great mistake to waste time repentance; what is past is past, and no amount of remorse can undo it. As one of our own Masters once said, "The only repentance that is worth anything whatever is the resolve not to do it again."

ASCETICISM

Some mistaken ideas seem prevalent among our members upon the subject of asceticism, and it may be worth while to consider what it really is, and how far it may be useful. The word is usually taken to signify a life of austerities and of mortification of the body, though this is somewhat of a departure from the original meaning of the Greek word *asketes*, which is simply one who exercises himself as an athlete does. But ecclesiasticism impounded the word and changed its sense, applying it to the practice of all sorts of self-denial for the purpose of spiritual progress, on the theory that the bodily nature with its passions and desires is the stronghold of the evil inherent in man since the fall of Adam, and that it must therefore be suppressed by fasting and penance. In the grander Oriental religions we sometimes encounter a similar idea, based on the conception of matter as essentially evil, and following from that the deduction that an approach to ideal good or an escape from the miseries of existence can be effected only by subduing or torturing the body.

The student of Theosophy will at once see that in both these theories there is dire confusion of thought. There is no evil inherent in man except such as he has himself generated in previous births; nor is matter essentially evil, since it is just as much divine as is spirit, and without it all manifestation of the Deity would be impossible. The body and its desires are not in themselves evil or good, but it is true that before real progress can be made they must be brought under the control of the higher self within. To torture the body is foolish; to govern it is necessary. "The men who perform severe austerities..... unintelligent, tormenting the aggregated elements forming the body, and Me also, seated in the inner body — know these demoniacal in their resolves." (*Bhagavad-Gita*, XVII, 5, 6). And again, "The austerity done under a deluded understanding, with self-torture... that is declared of darkness." (*Ibid*, XVII, 19).

There appears to be a widely-spread delusion that to be really good one must always be uncomfortable — that discomfort as such is directly pleasing to the LOGOS. Nothing can be more grotesque than this idea, and in the above quoted texts from the *Bhagavad-Gita* we have a hint that it is perhaps worse than grotesque, for it is there said that they who torment the body are tormenting the LOGOS enshrined in it. With us in Europe this unfortunately common theory is one of the many horrible legacies left us by the ghastly blasphemy of Calvinism. I myself have actually heard a child say: "I feel so happy that I am sure I must be very wicked" — a truly awful result of criminally distorted teaching. Our Masters, who are so far above us, are full of joy; full of sympathy, but not of sorrow. We also must feel sympathy with others, but not identify ourselves with their sorrow. A man in great trouble can judge nothing clearly. To his vision all the world seems dark, and it appears as if no one should be happy. When he is in great joy, all the world appears bright, and it seems as if no one ought to be unhappy. Yet nothing is changed, not even he himself, but only his astral body. All the world is going on just the same, whether you are happy or unhappy. Do not identify yourself with your astral body, but try to get out of this web of illusion, these personal moods.

No doubt this ludicrous theory of the merit of discomfort comes partly from the knowledge that in order to make progress man must control his passions, and from the fact that such control is disagreeable to the unevolved person. But the discomfort

is very far from being meritorious; on the contrary, it is a sign that the victory is not yet achieved. It arises from the fact that the lower nature is not yet dominated, and that a struggle is still taking place. When the control is perfect there will no longer be any desire for the lower, consequently no struggle and no discomfort. The man will live the right life and avoid the lower because it is perfectly natural for him to do so — no longer because he thinks he ought to make the effort, even though it may be difficult for him. So that the discomfort exists only at an intermediate stage, and not it, but its absence, is the sign of success.

Another reason for the gospel of the uncomfortable is a confusion of cause and effect. It is observed that the really advanced person is simple in his habits, and often careless about a large number of minor luxuries that are considered important and really necessary by the ordinary man. But such carelessness about luxury is the effect, not the cause, of his advancement. He does not trouble himself about these little matters because he has largely outgrown them and they no longer interest him — not in the least because he considers them as wrong; and one who, while still craving for them, imitates him in abstaining from them, does not thereby become advanced. At a certain stage a child plays with dolls and bricks; a few years later he has become a boy and his play is cricket and football; later again when he is a young man these in turn lose much of their interest, and he begins to play the game of love and life. But an infant who chooses to imitate his elders, who throws aside his dolls and brick and attempts to play cricket, does not thereby transcend his infancy. As his natural growth takes place he puts away childish things; but he cannot force the growth merely by putting these away, and playing at being older.

There is no virtue whatever merely in becoming uncomfortable for discomfort's sake; but there are three cases in which voluntary discomfort may be a part of progress. The first is when it is undertaken for the sake of helping another, as when a man nurses a sick friend or labours hard to support his family. The second is when a man realizes that some habit to which he is addicted is a hindrance in his upward way — such a habit, say, as tobacco-smoking, alcohol-drinking, or corpse-eating. If he is in earnest he gives up the habit instantly, but because the body is accustomed to that particular form of pollution it misses it, cries out for it, and causes the man a great deal of trouble. If he holds firm to his resolution his body will presently adapt itself to the new conditions, and when it has done so there will be no further discomfort. But in the intermediate stage, while the battle for mastery between the man and his body is still being fought, there may be a good deal of suffering, and this must be taken as the karma of having adopted the vice which he is now forsaking. When the suffering passes the karma is paid, the victory is won, and a step in evolution is achieved.

I am aware that there are rare cases (when people are physically very weak) in which it might be dangerous to relinquish a bad habit instantaneously. The morphine habit is an instance in point; one who is a victim to its horrors usually finds it necessary gradually to decrease the dose, because the strain of abrupt cessation might well be great than the physical body could endure. It would seem that there are certain pitiable cases in which the same system of gradual decrease must be applied to the flesh-eating habit. Doctrine tell us that while the digestion of flesh takes place chiefly in the stomach, that of most forms of vegetable food belongs to the work of the intestines; and therefore a person in very weak health sometimes finds it advisable to give to these various organs a certain amount of time to adjust themselves to the necessary change, and to practise, as it were, the functions which they are now

required to fulfil. The steady pressure of the will, however, will soon bring the body into subjection and adapt it to the new order of things.

The third cases in which discomfort may have its use is when a man deliberately forces his body to do something which it dislikes, in order to make sure that it will obey him when necessary. But it must be distinctly understood that even then the merit is in the ready obedience of the body, and not in its suffering. In the way a man may gradually learn indifference to many of the minor ills of life, and so save himself much worry and irritation. In this training himself in will, and his body in obedience, he must be careful to attempt only such things as are advantageous. The Hatha Yogi develops will-power, assuredly, when he holds his arm above his head until it withers; but while he gains enormously in will-power he also loses the use of his arm. The will-power can be developed just as well by some effort the result of which will be permanently useful instead of permanently hampering — by the conquest, for example, of irritability or pride, impatience or sensuality. It would be well if all who feel a yearning for asceticism would take to heart the words of wisdom in the *Bhagavad-Gita*:

“Purity, straightforwardness, continence and harmlessness are called the austerity of the body. Speech causing no annoyance, truthful, pleasant and beneficial.....is called the austerity of speech. Mental happiness, equilibrium, silence, self-control, purity of nature — this is called the austerity of the mind.” (XVII, 14, 15, 16).

Note especially that in this last verse mental happiness is described as the first characteristic of the austerity of the mind — the first sign of the perfect self-control necessary for one who wishes to make real progress. It is emphatically our duty to be happy; morbidity, gloom or depression mean always failure and weakness, because they mean selfishness. The man who allows himself to brood over his own sorrows or wrongs is forgetting his duty to his fellows. He permits himself to become a centre of infection, spreading gloom instead of joy among his brethren; what is this but the grossest selfishness? If there be any one who feels a yearning for asceticism, let him take up this mental austerity advised in the scripture, and resolve that whatever may be his private troubles or sufferings he will forget himself and them for the sake of others, so that he may ever be pouring forth upon his fellow-pilgrims the radiant happiness which comes from the fuller knowledge of the Theosophist, ever helping them towards the realization that “Brahman is bliss.”

SMALL WORRIES

Unnecessary worry appears to be the key-note of modern life. Not only those who are making special efforts to progress are making themselves unreasonably uncomfortable, but the same vice is quite common even in ordinary life. The astral body of the average man is a sad sight for a clairvoyant. The illustration in *Man Visible and Invisible* (p. 131) shows what an astral body ought to be — merely a reflection of the colours of the mental, indicating that the man allows himself to feel only what his reason dictates. But if that be too much to expect at this stage of evolution, the picture on p.102 gives us an assortment of colours which represents an average astral body when comparatively at rest. In it there are many hues which show the presence of undesirable qualities — qualities which should be weeded out as soon as may be; but that side of the subject is treated in the book, and it is to another feature that I wish now to draw attention.

I have said that the illustration shows what an ordinary undeveloped astral body would look like if comparatively at rest; but one of the evils of what we have agreed to call civilization is that hardly any astral body ever is even comparatively at rest. Of course it is understood that the matter of an astral body must always be in perpetual vibration, and each of the colours that we see in the drawing marks a different rate of that vibration; but there should be a certain order in this, and a certain limit to it. The more developed man (on p. 131) has five rates of vibration, but the ordinary man shows at least nine rates, with a mixture of varying shades in addition. That is clearly not so good as the other, but the case of the majority of people in the West is really far worse than that. To have even nine rates of simultaneous vibration is already bad enough, but in the astral body of many a man and woman one might easily observe fifty rates or even hundred. The body should be divided into a few fairly definite areas, each swinging steadily at its normal rate, but instead of that, its surface is usually broken up into a multiplicity of little whirl-pools and cross-currents, all battling one against the other in the maddest confusion.

All these are the result of little unnecessary emotions and worries, and the ordinary person of the West is simply a mass of these. He is troubled about this thing, he is annoyed about that, he is in fear about a third, and so on; his whole life is filled with petty little emotions, and all his strength is frittered away on them. A really great emotion, be it good or bad, sweeps over the whole of a man's astral body and for the time brings it all to one rate of vibration; but these small worries make little vortices or centres of local disturbance, each of which persists for a considerable time.

The astral body which thus vibrates fifty ways at once is a blot upon the landscape and a nuisance to its neighbors. It is not only a very ugly object — it is also a serious annoyance. It may be compared to a physical body suffering from some unusually aggravated form of palsy, with all its muscles jerking simultaneously in different directions. But to make the illustration even partially adequate we should have to assume that this palsy was contagious, or that every one who saw its unfortunate results felt an irresistible tendency to reproduce them. For this horrible chaos of catastrophic confusion produces an unpleasant and most disturbing effect upon all sensitive people who approach it; it infects their astral bodies and communicates to them a painful sensation of unrest and worry.

Only a few have yet unfolded the faculties which enable them to see this maleficent influence in action; a larger number are vaguely conscious of discomfort when they approach one of these fussy persons; but probably the majority feel nothing definite at the time of meeting, though later in the day they will probably wonder why they are so inexplicably fatigued. The effect is there and the harm is done, whether it be immediately perceptible or not.

A person who is so foolish as to allow himself to get into this condition does much harm to many, but most of all to himself. Frequently the perpetual astral disturbance reacts through the etheric upon the dense physical vehicle, and all sorts of nervous diseases are produced. Nearly all nerve troubles are the direct result of unnecessary worry and emotion, and would soon disappear if the patient would but hold his vehicles still and possess his soul in peace.

But even cases where a strong physical body is able successfully to resist this constant irritation from the astral, its effect upon its own plane is no less disastrous. These tiny centres of inflammation which thus cover the whole astral body are to it what boils are to the physical body — not only themselves causes of acute discomfort, sore spots the least touch upon which produces terrible pain, but also *weak* spots through which the life-blood of vitality drains away, and through which also blood-poisoning from without may take place. A person whose astral body is in this distracted condition can offer practically no resistance to any evil influence which he may encounter, while he is quite unable to profit by good influences. His strength flows out through these open sores, at the same time that all sorts of disease-germs find entrance by them. He is not using and controlling his astral body as a whole, but allowing it to break up into a number of separate centres and control *him*. His little worries and vexations establish themselves and confirm their empire over him until they become a legion of devils who possess him so that he cannot escape from them.

This is a painfully common condition; how is a man to avoid falling into it, and if he is already in it, how is he to get out of it? The answer is the same to both questions; let him learn not to worry, not to fear, not to be annoyed. Let him reason with himself as to the utter unimportance of all these little personal matters which have loomed so large upon his horizon. Let him consider how they will appear when he looks back upon them from the next life, or even twenty years hence. Let him lay well to heart the words of wisdom, that of all the outward things that happen to a man “nothing matters much, and most things matter not at all.” What he himself does or says or thinks *is* of importance to him, for that forms his future; what other people do or say or think matters to him nothing whatever. Let him abstract himself from all these little pin-pricks of daily life, and simply decline to be worried by them.

It will need some resolution at first, for it requires effort to conquer a well-established bad habit. He will find his mind muttering to him over and over again: “Mrs. Jones spoke evil of me; perhaps she is doing it now; perhaps other people may believe her; perhaps it may do me harm,” and so on *ad infinitum*. But he must reply: “I don't care *what* Mrs. Jones has said, though I am sorry the poor woman should make such bad karma. I absolutely decline to think of it or of her. I have my work to do, and have no time to waste in thinking of foolish gossip.”

Or it may be that forebodings of coming evil are constantly thrusting themselves into his brain: “Perhaps next year I may lose my position; perhaps I shall be starving; perhaps I shall be bankrupt; perhaps I may lose the affection of some friend.” This also should be met firmly: Perhaps all these things may happen, but also perhaps

they may not, and it is useless to try to cross a bridge before one come to it. I shall take all reasonable precautions, and when that is done I decline to think further of the matter. Worrying cannot affect whatever may be coming, but it can and certainly will make me unfit to meet it. Therefore I refuse to worry; I definitely turn my back on the whole subject.”

Another common form of worry which leads to the most serious results is the folly of taking offense at something which somebody else says or does. Ordinarily common-sense would lead a man to avoid this mistake, and yet those who do avoid it are few. It needs only that we should think dispassionately about the matter, and we shall see that what the other man has said or done cannot make any difference to us. If he has said something which has hurt our feelings, we may be sure that in nine cases out of ten he has not meant it to be offensive; why then should we allow ourselves to be disturbed about the matter? Even in the rare cases when a remark is intentionally rude or spiteful, where a man has said something purposely to wound another, it is still exceedingly foolish of that other to allow himself to feel hurt. If the man had an evil intention in what he said, he is much to be pitied, for we know that under the law of divine justice he will certainly suffer for his foolishness. What he has said need in no way affect us, for, if we think of it, no effect whatever has really been produced.

The irritating word does not in any way injure us, except in so far as we may choose to take it up and injure ourselves by brooding over it or allowing ourselves to be wounded in our feelings. What are the words of another, that we should let our serenity be disturbed by them? They are merely a vibration in the atmosphere; if it had not happened that we heard them, or heard of them, would they have affected us? If not, then it is obviously not the words that have injured us, but the fact that we heard them. So if we allow ourselves to care about what a man has said, it is we who are responsible for the disturbance treated in our astral bodies, and not he.

The man has done and can do nothing that can harm us; if we feel hurt and injured and thereby make ourselves a great deal of trouble, we have only ourselves to thank for it. If a disturbance arises within our astral bodies in reference to what he has said, that is merely because we have not yet gained control over those bodies; we have not yet developed the calmness which enables us to look down *as soul* upon all this, and go on our way and attend to our own work without taking the slightest notice of foolish or spiteful remarks made by other men. This is the merest common-sense, yet not one in a hundred will act upon it.

That fact is that any one who wished to become a student of occultism must not have any personal feelings that can be offended under any circumstances whatever. A man who has them is still thinking of himself; whereas our duty is to forget ourselves in order to remember the good of others. Nothing can offend you if you have resolved not to be offended — if you are thinking only how to help the other man, and not at all of yourself.

Another variant of the disease is less personal and therefore is so far less blameworthy, but hardly less prejudicial to progress. It is the habit of fussing over trifles in business or in household affairs. This always involves a lack of discrimination and of the sense of perspective. It is quite true that a household or a business must be orderly, that things must be done punctually and exactly; but the way to achieve this is to set up a high ideal and press steadily towards it — not to irritate every one by ceaseless, useless worry. The person who is so unfortunate as to be afflicted with a disposition of this kind should make a most determined fight against it, for until he

conquers it he will be a force working always for friction and not for peace, and so will be of little real use in the world. His symptoms differ slightly from those of the more personal worrier; in his case there are fewer of the carbuncular vortices, but there is a perpetual tremor, an unrest of the whole astral body which is equally disquieting to others, equally subversive of happiness and advancement for the fusser himself.

The man *must* learn to be master of his mind and his feelings, and steadily reject every thought and emotion which his highest self does not approve. A chaos of petty emotions is unworthy of a rational being, and it is to the last degree undignified that man, who is a spark of the Divine, should allow himself to fall under the sway of his desire-elemental — a thing that is not even a mineral yet.

I have already said that this disastrous astral confusion is often prejudicial to physical health; but it is invariably worse than prejudicial to progress on the path — it is absolutely fatal to it. One of the first great lessons to be learnt on that path is perfect self-control, and a long stage on the way to that is complete absence of worry. At first, from mere habit, the matter of the astral body will still be swept readily into unnecessary vortices, but every time that happens the man must firmly obliterate them, and restore the steady swing of the feelings which he, as an ego, really desires to have.

Let him fill himself so entirely with the divine love that it may be ever pouring from him in all directions in the shape of love for his fellow-men, and then there will be no room for unnecessary vibrations; he will have no time to worry over trifling personal matters if his whole life is spent in the service of the LOGOS, in trying to help forward the evolution of the world. To make any real progress or to do any real work a man must turn from the lower and reach towards the higher; he must come out of *our* world into *Theirs* — out of the restlessness into the peace which passeth understanding.

KILLING OUT DESIRE

We are often told that we must kill out desire; but it should be remembered that that is a gradual process. The lower and coarser desire which are meant by the Sanskrit word *kama* must certainly be killed out entirely before any sort of advancement can be made, but in the English sense of the word we all of us still have certain desire, and are likely to have them for a very long time to come. We desire keenly, for example, to serve the Master; to become His pupils; to help humanity. These also are desires, but they should not be killed. What is necessary is to kill out the lower and reach up to the higher, that is to say, to purify our desires and to transmute them into aspirations.

Later on another transmutation will take place. For example, now we desire to make progress; but a time will come when we shall be so sure of it that we shall cease to desire, because we know that all the time it is going on as rapidly as is possible for us, and because we mean that it shall so go on. Desire is then transmuted into resolution. At this point there can be no more regret for anything; you do your best and you know that in response to that the best must come. Some people desire earnestly to gain this quality or that; do not waste your power in desiring and wishing, but *will* instead.

In the same way it is said that we should slay the lunar form, that is to say the astral body. But that does not mean that the astral body must be destroyed or that we must be without feelings and emotions. If that could be so we should have no sympathy and no understanding of others. What is intended is that we should keep it completely under control, that we should have the faculty to slay the lunar form at *will*. Purity is necessary, but it means not only the abstinence from specified faults, but absolute selflessness. Ambition, for example, is a very common form of desire, but in it there is always a thought of self. The adept cannot be ambitious. His will is one with the will of the LOGOS, and he wills evolution. We are all parts of the LOGOS, and our wills are part of His. It is only when we do not realize this that we set up desires in our own separate lines. The regulations for our lives were very well summed up by the Lord BUDDHA in one little verse of four short lines:

Sabbapapassa akaranam
Kusalassa upasampada
Sachitta pariyo dapanam
Etam Buddhana sasanam.
Cease from all evil;
Learn to do well;
Cleanse your own heart;

This is the religion of the BUDDHAS.

THE CENTRE OF MY CIRCLE

Of all the many obstacles that stand in the way of the aspirant who wishes to enter upon the Path, the most serious, because the most far-reaching and fundamental, is self-centredness. Note that by this I do not mean the crude and ugly selfishness, which definitely seeks everything for itself even at the cost of others. I am, of course, supposing that that at least has been left behind long ago. But in those who have left it behind, there still lingers this other evil — so subtle and so deeply-rooted that they do not recognize it as an evil at all — indeed, they are not even aware of its existence. But let a man examine himself honestly and impartially, and he will find that all his thought is self-centred; he thinks often of other people and of other things, but always in their relation to himself; he weaves many imaginary dramas, but he himself occupies always a prominent role in them. He must always be in the centre of his little stage, with the limelight playing upon him; if he is not in that position he at once feels hurt, annoyed, angry, and jealous of any other person who happens for the moment to be attracting the attention of those who ought to be worshipping at *his* shrine. To change so fundamental a quality is to change for him the root of all things, to make himself into an altogether different man. Most people cannot for a moment face the possibility of such a radical change because they do not even know that the condition exists.

Now, this attitude is absolutely fatal to any kind of progress. It must be utterly changed, and yet so few are making any attempt to change it. There is one way out of this vicious circle, and only one; and that is the way of love. That is the only thing in the life of the ordinary man which ever changes this condition for him, which seizes upon him with a strong hand and for the time being alters his whole attitude. For a time, at least, when he falls in love, as it is called, some other person occupies the centre of his circle, and he thinks of everything in all the world in its relation to her, and not in its relation to himself. The divinity at whose shrine he offers this worship may in truth seem to the rest of the world to be but a very ordinary person, but for him she is temporarily the incarnation of grace and beauty; he sees in her the divinity which is in truth hers, because it lies latent in all of us, though normally we do not see it. It is true that in many cases after a time his enthusiasm fades and he transfers it to another object; but nevertheless for the time he has ceased to be self-centred, for the time he has had a wider outlook.

Now this, which the ordinary man thus does unconsciously, the student of occultism must do consciously. He must deliberately dethrone himself from the centre of the circle of his life, and he must enthrone the Master there instead. He has been in the habit of thinking instinctively how everything will affect him, or what he can make of it, how he can turn it to his profit and pleasure. Instead of that he must now learn to think of *everything* as it affects the Master, and since the Master lives only to help the evolution of humanity, that means that he must regard everything from the stand-point of its helpfulness or hindrance to the cause of evolution. And though at first he will have to do this consciously and with a certain effort, he must persevere until he does it just as unconsciously, just as instinctively as heretofore he centred everything around himself. To use the words of a Master, he must forget himself utterly only to remember the good of other.

But even when he has dethroned himself and enthroned the work which he has to do, he must be exceedingly careful that he does not delude himself, that he does not return to the old self-centredness in a subtler form. Many a good and earnest Theosophical worker have I known who committed this very mistake, who identified Theosophical work with himself, and felt that anyone who did not exactly agree with his ideas and his methods was an enemy of Theosophy. So often the worker thinks that his way is the only way, and that to differ from him in opinion is to be a traitor to the cause. But this means only that the self has crept skilfully back into its old place in the centre of the circle, and that the work of dislodging it must be begun all over again. The only power which the disciple should desire is that which makes him seem as nothing in the eyes of men. When he is the centre of his circle he may do good work, but it is always with the feeling that *he* is doing it, even largely with the object that it may be he that does it; but when the Master is the centre of his circle he will do the work simply in order that it may be done. The work is done for the sake of the work and not for the sake of the doer. And he must learn to look upon his own work precisely as though it were that of some one else, and upon the work of some one else precisely as though it were his own. The one thing that is important is that the work should be done. It matters little who does it. Therefore, he ought neither to be prejudiced in favour of his own work and unduly critical of that of another, nor be hypocritically depreciatory of his own work in order that others may praise it. To quote the words of Ruskin with regard to art, he ought to be able to say serenely: "Be it mine or yours, or whose else it may, this also is well."

Another danger there is, too, which is special to the Theosophical worker — the danger of congratulating himself too soon that he differs from the rest of the world. Theosophical teaching puts a new complexion upon everything, so naturally we feel that our attitude is quite different from that of most other people. There is no harm in thinking this obvious truth, but I have found that some of our members are apt to pride themselves upon the fact that they are able to recognize these things. It does not in the least follow that we, who find ourselves able to recognize them are, therefore, better than others. Others men have developed themselves along other lines, and along those lines they may be very far in advance of us, though along our line they may be very far in advance of us, though along our line they lack something which we already have. Remember, the adept is the perfect man who is fully developed along all possible lines, and so while we have something to teach these others we also have much to learn from them, and it would be the height of folly to despise a man because he has not yet acquired Theosophical knowledge, nor even perhaps the qualities which enable him to appreciate it. Therefore, in this sense also we must take care not to be the centre of our own circle.

A good plan that you may adopt in order to keep yourself from slipping back into the centre may be to remember, as a symbol of what ought to be your attitude, what I have before explained to you with regard to the occult view of the course and influence of the planets. You remember how I explained to you that each planet is a minor focus in an ellipse, the major focus of which is within the body of the sun. You are like that minor focus; you are going upon your own course and doing the work appointed to you, and yet all the time you are but a reflection of the major focus, and your consciousness is centred within the sun, for the Master of whom you are a part is a member of the Great Hierarchy which is ever doing the work of the LOGOS.

While a man is the centre of his own circle he is perpetually making the mistake of thinking that he is the centre of everybody else's. He constantly supposes that in

everything which other people say or do they are somehow thinking of him, or aiming their remarks at him, and with many this becomes a kind of obsession, and they seem totally unable to realize that each of their neighbours is as a rule also entirely wrapped up in himself and not thinking of them at all. So the man makes for himself a great deal of totally unnecessary trouble and worry, all of which might be avoided if we would but see things in a sane and rational perspective. Again, it is because he is the centre of his own circle that he is liable to depression, for that comes only to one who is thinking of himself. If the Master be the centre of his circle, and all his energies are centred upon serving Him, he has no time for depression, nor has he the slightest inclination towards it. He is far too eagerly wishing for work that he can do. His attitude should be that indicated by our President in her *Autobiography* — that when a man sees a piece of work waiting to be done he should say, not as the ordinary man usually does: “Yes, it would be a good thing, and somebody ought to do it. But why should I?” — but rather he should say: “Somebody ought to do this. Why should it not be I?”

As he evolves his circle will widen, and in the end there will come a time when his circle will be infinite in extent, and then in a sense he himself will again be its centre, because he has identified himself with the LOGOS, who is the centre of all possible circles, since every point is equally the centre of a circle whose radius is infinite.

OUR DUTY TO ANIMALS

While you are trying to do your best for all those around you, do not forget that you also have a duty towards forms of life lower than the human. In order that you may be able to do that, try to understand your lower brothers, try to understand the animals, just as you try to understand on a higher level the children with whom you have to deal. Just as you learn, if you want to help a child, to look at things from the child's point of view, so, if you want to help the animal evolution, try to see what is the animal's point of view. In all cases and with all forms of life our business is to love and to help, and to try to bring nearer the golden age when all shall understand one another and all shall co-operate in the glorious work that is to come.

There is no reason why our domestic animals should not be trained to help man, and to work in his service, so long as the work is not painful or excessive. But all the creatures around us should be trained in the way best for themselves; that is to say, we should always remember that their evolution is the object of the divine Will. So that while we should surely teach our animals all that we can, because that develops their intelligence, we must take care that we instil into them good qualities and not evil. We have various creatures brought among us. We have the dog, the cat, the horse and other originally wild animals given into our care — brought to us for affection and help. Why? That we may train them out of their ferocity, and into a higher and more intelligent state of life — that we may evoke in them devotion, affection and intellect.

But we must take good care that we help, not hinder; we must see that we do not increase in our animal the ferocious qualities which it is the business of its evolution to get rid of. For example, a man who trains a dog to hunt and kill is intensifying within him the very instincts which must be eliminated if the animal is to evolve, and in this way he is degrading a creature given into his charge instead of helping him on his way, even though at the same time he may be developing the animal's intelligence; and thus, though he may do a little good, he is at the same time doing a great deal of harm which far more than counterbalances it. The same thing is true of a man who trains his dog to be ferocious in order that he may be an efficient protector of his property.

A man who treats an animal harshly or cruelly may possibly be evolving his intellect, since the animal may learn to think more keenly in order to see how to avoid the cruelty. But along with whatever evolution may be gained in this way, there is also the development of the exceedingly undesirable qualities of fear and hatred. Thus when, later on, that animal wave of life goes up into humanity, we shall have a humanity starting terribly handicapped — starting with these awful qualities of fear and hatred ingrained in it, instead of a humanity all aspiring, devotional, loving and gentle, such as we might have had if the men to whom the animal part of that evolution was committed had done their duty.

We have also our duty towards other and even lower forms of life than that. There is the elemental essence, which is surrounding us everywhere; that elemental essence progresses by means of our thought, and of the action which we produce upon it by our thoughts, passions, emotions and feelings. We need not trouble ourselves especially about that, because if we carry out our higher ideals, if we try to see to it that all our thought and all our emotion shall be of the highest possible type, then

that also will, at the same time and without further difficulty, be the discharging of our duty towards the elemental essences which are influenced by our thought; they will be raised and not depressed; the higher qualities which we alone can reach will be set in motion, vivified and helped at their respective levels.

All through evolution the assistance of the higher is expected in the development of the lower, and it is not only by individualizing them that man has helped the members of the animal kingdom. In Atlantean days the very formation of their species was largely given over into his hands, and it is because he failed to do his duty properly that many things turned out rather differently from what was originally intended. His mistakes are largely responsible for the existence of carnivorous creatures which live only to destroy one another. Not that he was responsible for *all* carnivorous creatures; there were such among the gigantic reptiles of the Lemurian period, and man was not in any way directly engaged in their evolution; but it was in part his work to assist in the development from those reptile forms of the mammalia which play so prominent a part in the world now. Here was his opportunity to improve the breeds and to curb the undesirable qualities of the creatures that came under his hands; and it is because he failed to do all that he might have done in this direction that he is to some extent responsible for much that has since gone wrong in the world. If he had done all his duty it is quite conceivable that we might have had no carnivorous mammals.

Mankind has for so long treated animals cruelly that the whole animal world has a general feeling of fear and enmity towards men. Men have generated in this way an awful karma, which comes back upon them in terrible suffering, in various forms of disease and of insanity. Yet, even after all this bad behaviour on the part of man, few animals will harm him if left alone. A serpent, for example, will not usually do any injury to a human being, unless he is first hurt or frightened; and the same thing is true of nearly all wild animals, except the very few who may regard man as food, and even they usually will not touch man if they can get anything else. Except when it is absolutely necessary in self-defence or in defence of another the destruction of any form of life ought always to be avoided, as it tends to retard nature's work. That is one of the reasons why all consistent Theosophists refuse to share the sin of slaughter by eating meat or fish, or by wearing such things as are obtained only by the slaughter of animals, like sealskin or the feathers of birds. Silk used to be obtained by the wholesale slaughter of silk-worms, but I hear that there is now a new way of obtaining it without destroying the worm.

SYMPATHY

Never set yourself against the law of nature. Lately, man has gone astray from nature very much, and materialism has become widely spread. Many scientific men who know a great deal more about nature are very much less in sympathy with her than were their less instructed forefathers. In the useful, and indeed necessary, study of the exterior many have forgotten the interior; but men will pass through this intermediate stage of misunderstanding and come back into sympathy. The older people, who had a closer kinship with nature, carried on little of detailed examination, which would have seemed irreverent to them. Because we have become irreverent, have lost the living feeling, we pry remorselessly. We must take care not to lose the precision that we have gained by this intermediate stage, but must recover the sympathy. By sympathy one may find out a great deal which science alone can never discover. In the teaching of children, we need to make them feel that we understand them, even though in doing so we may sacrifice some scholastic advantages. The average child regards grown-up people as foreign entities, strange arbitrary beings.

All this is true also in connection with our studies of nature. The nature-spirits are afraid of us, if we study them too scientifically; we must go with them into their life, and then they will be interested in the life of humanity also. In their blind way, flowers and other things feel joy and friendliness. Emerson said that it appeared to him that when he returned home, the trees in his garden felt glad to see or feel him again, and no doubt it was quite true. The trees and animals do know the people who love them. In India people speak of the "lucky hand" in planting, meaning that things will grow for some people, but not for others. One must be in sympathy with the purpose of the LOGOS. If we are actively helping in the progress of all, we are living in His will, which penetrates nature, and this is felt by nature at once; but if we put ourselves in opposition to evolution, nature shrinks back from us like a sensitive child.

OUR ATTITUDE TOWARDS CHILDREN

What is your attitude towards your children? Remember that these are egos, sparks of the divine life. They have been entrusted to you, not that you may domineer over them and brutally ill-treat them, and use them for your own profit and advantage, but that you may love them and help them in order that they may be expressions of that divine life. What an outpouring of love then you ought to feel! How beyond all words your patience and compassion should be! How deeply you should feel the honour of being trusted to serve them in this way! Remember always that you are not the older and they the younger, but that as souls you are all about the same age, and therefore your attitude must not be that of a selfish and cruel dictator, but of a helpful friend. You do not regard your friend differently when he puts on a new coat; remember therefore that when you meet a child you are meeting a soul wearing a new coat, and you should try by perfect kindness and love to draw out the best that is in it, and to help it to fit on its new coat. Remember always that true good means good for all, and that good is *never* gained at the cost of suffering to others. That which is so gained is not really good at all.

THE FEAR OF DEATH

The fear of death is a stern reality in the minds of many people. A far larger number suffer from it than one would suppose, and still more from the fear of what may happen to us after death. Naturally this is especially to be found among people who have ideas of hell, and of probable punishment if they do not believe this or that. It is a gross and degraded form of superstition, but still the suffering is real, and what is even worse is the fear as to the fate of *others* after death. Many a mother's whole life is embittered by doubts and fears as to what may happen to her son. He goes far away from her, perhaps; he falls into the ordinary habits of men of the world, and does many things contrary to the narrow religious teaching in which she has been brought up, and so she thinks that he must suffer eternal torture. While it is true that there is no eternal hell for him, there is certainly much real earthly suffering for her.

But we know the law of karma, and realize that the states after death are simply a continuation of the life which we are now living, although on a higher plane and without a physical body; and when in addition we learn that what we commonly call life is only one day in the real and greater life, then all these things assume quite a different perspective. We know then that progress is absolutely certain. A man may stumble, he may set himself against the forces of progress, but he will be carried on by them in spite of himself, though when he resists there will be much of bruising and trouble for him. We see at once that this knowledge eliminates fear.

The so-called loss of a loved one by death is really only a temporary absence, and not even that as soon as a man develops the power to see on the higher planes. Those whom we think we have lost are with us still, even though with our physical eyes we cannot see them; and we should never forget that, although we may sometimes be under the delusion that we have lost them, they are not in the least under the delusion that they have lost *us*, because they can still see our astral bodies, and as soon as we leave the physical vehicle in sleep we are with them and can communicate with them exactly as when they were on the physical plane.

We need not worry ourselves about saving our souls; rather on the other hand, as a Theosophical writer once said, we may not be entirely beyond the hope that some day our souls may save us. There is no soul to be saved in the ordinary sense in which the words are used, because we ourselves are the souls; and furthermore there is nothing to be saved from except our own error and ignorance. The body is nothing but a vestment, and when it is worn out we cast it aside.

CO-OPERATION

It is part of the scheme of the LOGOS that at a certain stage in its evolution humanity must begin to guide itself. Therefore all the future BUDDHAS, Manus and Adepts will be members of our own humanity, the Lords from Venus having gone on to other worlds. Therefore also the LOGOS actually counts upon us all, upon you and upon me. We may have ninety-nine faults and only one virtue, but if that one virtue is needed in the Theosophical work (and what virtue is not needed?) we shall surely have the opportunity to use it.

We should then value our co-workers for what they can do, and not be constantly blaming them for what they cannot do. Many people have earned the right to do some particular kind of work, notwithstanding that their defects may be greater than their virtue. People often make a sad mistake in comparing their work with that of others, and wishing that they had the same opportunities. The truth is that each one has his own gifts and his own powers, and it is not expected of any man that he should do as much as some other man, but only that he should do his best — just his own best.

The Master once said that in reality there are only two classes of men — those who know and those who do not know. Those who know are they that have seen the light and have turned towards it, through whatever religion they have come, at however great a distance from the light they may as yet find themselves. Many of them may be suffering much in their struggle towards that light, but at least they have hope before them, and while we sympathize deeply with them and strive to help them we yet realize that they are by no means in the worst case. The people really to be pitied are those who are quite indifferent to all higher thought — those who do not struggle because they do not care, or think, or know that there is anything for which to strive. These are they in truth who constitute “the great orphan humanity.”

A DAY OF LIFE

It is not wise to specialize beyond a certain point, because one can never really get to the end of any subject, and it tends more and more to narrow the mind and the outlook, to produce a one-sided and distorted development, and to cause one to view everything out of its due proportion. We are in the habit of thinking of a life-time as a long period, but really it is only a day in greater life. You cannot finish a really great piece of work in one day; it may need many days, and the work of one particular day may at the time show no appreciable result; but nevertheless every day's work is necessary to the completion of the great task, and if a man should idle day after day because the completion of the work seems so far off he would certainly not succeed in getting it done.

There are many to whom Theosophy comes late in life, who feel themselves somewhat discouraged by the outlook, thinking they are too old now to take themselves in hand seriously or to do any valuable work, that the best that they can do now is to go quietly on to the end of this incarnation in the hope that they may have a better opportunity in the next.

This is a sad mistake, and that for various reasons. You do not know what kind of incarnation karma is preparing for you next time you return to earth. You do not know whether by any previous action you have deserved the opportunity of being born into Theosophical surroundings. In any case the most likely way to secure such a birth is to make use of the opportunity which has come to you now, for, of all that we have learned about the working of this great law of cause and effect, this one fact stands out most clearly — that the result of taking an opportunity is invariably that another and wider opportunity is given. If therefore you neglect the opportunity put before you by your encounter with Theosophy now, it is possible that in the next incarnation the chance may not come to you again.

If a man sets to work earnestly and permeates his spirit as thoroughly as possible with Theosophical ideas, that will build them well into the ego, and will give him so great an attraction towards them that he is certain, even though he may not remember them in detail, to seek for them instinctively, and to recognize them, in his next birth. Every man therefore should begin Theosophical work just as soon as he hears of it, because whatever of it he contrives to achieve, however little it may be, will be just so much to the good, and he will begin to-morrow where he has left off this time. Also by trying to do what he can with such vehicles as he has, obstinate and unresponsive though they may prove through lack of pliability, he will assuredly do much to earn for himself more pliable vehicles for next time. So no effort is lost, and it is never too late in any given life to enter upon the long, long upward path, and to make a commencement in the glorious work of helping others.

With an eternal life before us it would be a mistake to worry because the present day is drawing near its evening, or in despair to neglect the preparations for the coming day. *Light on the Path* says: "Kill out desire of life." This is often misunderstood, but its meaning should be plain. You cannot lose your life; why then should you desire it? It cannot possibly be taken from you. At the same time the quotation means that you should kill out desire for particular bodily conditions.

MEDITATION

I think that our members sometimes mistake with regard to meditation, because they have not thoroughly understood the exact way in which it works. They sometimes think that because they do not feel happy and uplifted after a meditation it is therefore a failure and entirely useless, or they find themselves dull and heavy and incapable of meditation. There seems no reality in anything for them, no certainty about anything, and they feel that they are making no progress. They suppose that this must be somehow their own fault and they reproach themselves for it; but they often ask what they can do to improve matters and to restore the joy they used to feel.

Now the fact is that that experience in regard to meditation is that of all seekers after the spiritual life; you will find that the Christian saints constantly speak of their sufferings at periods of what they call "spiritual dryness," when nothing seems any use and they feel as though they had lost sight of God altogether. Imagine that I am sitting looking through a wide-open window upon a beautiful hill-side, but the sky is dull grey, heavy with a vast pall of cloud probably miles in thickness. I have not seen the sun for three days. I cannot feel his rays, but I know he is there, and I know that some day these clouds will roll away as others have done, and I shall see him again. What is necessary for the life of the world is that he should be *there*, not that I should see him; it is far pleasanter to see him and to feel the warmth of his rays, but it is not a necessity of life. I know just exactly how these people feel, and it is cold comfort to be told that our feelings do not matter, even though there is a very real sense in which it is true.

I think it is helpful to remember that our meditation has several objects — for example:

1. To ensure that, however deeply we may be immersed in the affairs of the world, we shall devote at least some time each day to the thought of a high ideal.
2. To draw us nearer to the Master and to the LOGOS, so that from Them strength may be poured upon us and through us to benefit the world.
3. To train our higher bodies, so that they may have constant practice in responding to the highest vibration — to do the same thing for them that a carefully arranged system of gymnastics or regular exercises does for the physical body.

Now you will observe that all these objects are attained just the same whether we feel happy or not. A mistake that many people make is to suppose that a meditation which is unsatisfactory *to them* is therefore ineffectual. It is just like a little child performing daily her hour of practice upon the piano. Sometimes perhaps she partially enjoys it, but very often it is a weariness to her, and her only thought is to finish it as quickness to her, and her only thought is to finish it as quickly as possible. She does not know, but we do, that every such hour is accustoming her fingers to the instrument, and is bringing nearer and nearer the time when she will derive from her music an enjoyment of which now she does not even dream. You will observe that this object is being attained just as much by the unpleasant and unsatisfactory hour of practice as by that which she enjoys. So in the work of our meditation sometimes we feel happy and uplifted, and sometimes not; but in both cases alike it has been acting for our higher bodies as do the exercises of physical culture or training for our

physical body. It is pleasanter when you have what you call a “good” meditation; but the only difference between what seems a good one and a bad one lies in its effect upon the feelings, and not in the real work which it does towards our evolution.

The reason of the temporary dullness is not always in ourselves — or rather, it is not always attributable to anything that can reasonably be called our fault. Often it is purely physical, resulting from over-fatigue or a nervous strain; often it is due to surrounding astral or mental influences. Of course it is our karma to be subjected to these, and so in that more remote way we are responsible; but we must just do the best we can with them, and there is no need for us to be despondent, or to waste our time in reproaching ourselves.

Another reason also may be that at certain times the planetary influences are more favourable for meditation than at others. I know nothing of this myself, for I have never considered the planetary influences in these matters, but have always forced my way to what I desired; but I have heard a friend say that an astrologer told him that on certain occasions when Jupiter had certain relations with the moon this had the effect of expanding the etheric atmosphere and making meditation easier, or at least making it appear more successful. The astrologer gave him a list, which he consulted after taking notes of the conditions of his meditations daily for three or four weeks, when he found that the results exactly agreed with the influences which were said to be acting. Certain aspects with Saturn, on the other hand, were said to congest the etheric atmosphere, making the work of meditation difficult, and this also was verified in the same way.

The highest thought that we can have is that of the supreme Lord of all, but of course we must not suppose that our thought changes in the least the attitude of the Supreme towards us. We who are students ought to be far beyond the stage at which a man thinks that he can produce change in the Supreme — a thought which belongs only to the ignorant and unphilosophical among the Christians. We ourselves however are certainly affected by opening ourselves to Him. If you open the window of your room to the sun, the condition of your room is much changed by the power of the sun, but the sun is no way changed by your opening the window. Open the windows of your soul to God.

During meditation one may try to think of the Supreme Self in everything and everything in it. Try to understand how the Self is endeavouring to express itself through the form. One method of practice for this is to try to identify your consciousness with that of various creatures, such as a fly, an ant, or a tree. Try to see and feel things as they see and feel them, until as you pass inwards all consciousness of the tree or the insect falls away, and the life of the LOGOS appears. We are very much more than the tree or the ant; therefore there is no danger of our being unable to withdraw our consciousness when the experiment is finished. We do not after all imprison it in the form of the tree or the ant; we expand it to take in the life in every form. The man who does this for the first time is usually surprised when he realizes the limitations under which animals act. He had thought an animal acted in a certain way for what seemed quite obvious reasons, but when he really enters into the animal he finds that its motives and intentions are wholly different. The disciple has to go through this process also with lower classes of human beings, because without it he could not perfectly help them.

This enables us to get down to the bed-rock of the Self, and clears away the darkness and loneliness which often comes over us at one stage of our progress. When we

know quite certainly that we are part of a whole we do not so much mind where this particular fragment of it may be, or through what experiences it may be passing. Whatever loneliness we may have, we feel, we know, that we are never alone; the Master is always there waiting to help where help is possible. We must give up the clinging to the particular forms; and have no motive but to do the will of the LOGOS. We must never allow the feeling of loneliness to make us forget the Master or lose faith in Him, for no progress is possible unless we have the fullest confidence in the Master whom we choose to serve. If we have only a half-hearted questioning faith in him we cannot progress. We need not make the choice of Master unless we will; but having made it we *must* have faith in the Teacher and His message.

In controlling the mind first turn away the senses from outward sounds and sights, and become insensitive to the waves of thought and emotion from others. That is comparatively easy, but the next stage is very difficult, for when this is done there come up from within disturbances which spring from the uncontrolled activity of the mind. The meditation of many of our beginners consists mostly of a continuous struggle to come back to the point. Here comes in the advice given in *The Voice of Silence*. "The mind is the slayer of the real; let the disciple slay the slayer." You must not of course destroy your mind, for you cannot get along without it, but you must dominate it; it is *yours*, not *you*. The best way to overcome its wandering is to use the will. It is often suggested that the pupil should help himself by making a shell round him; but after all shells are but crutches. Develop will, and you will be able to dispense with them. The astral body tries to impose itself upon you in the same way, and to make you believe that its desires are yours; but with that also we must deal in a precisely similar manner.

There is no limit to the degree to which will may be developed. There are decided limitations to the extent to which the strength of the physical body can be increased, but there seem to be no limitations in the case of the will. Fortunately we can train it in the ordinary small things of daily life every day and all day long, and we can have no better practice than this. It is much easier for a man to screw up his courage to face a dramatic martyrdom before a crowd of people than to go on doing the tiresome daily duty with tiresome people day after day and year after year. This latter needs much more will-power than the former. Be careful however that you do not make others suffer in your efforts to develop your own will. Sometimes people have shown will-power by leaving home and friends and going out to face all kinds of difficulties and privations in order to do Theosophical work. That is quite right if a man is absolutely free to do it; but a man who left his wife and family for that purpose, or an only son who left parents that were dependent upon him, would evidently be neglecting his duty in a way which no one has a right to do, even for the sake of the noblest motives.

As a result of determined meditation we begin to build into our bodies the higher kinds of matter. At this stage we often feel grand emotions, coming from the buddhic level and reflected in the astral body, and under their influence we may do fine work and show great self-sacrifice. But then is needed the development of the mental and causal bodies in order to steady and balance us; otherwise the grand emotions that have swayed us in the right direction may very readily become a little twisted and sway us along some other and less desirable lines. With feeling alone we never obtain perfect balance or steadiness. It is well that the high feelings should come, and the more powerfully they come the better, but that is not enough; wisdom and steadiness

must also be acquired because we need directing power as well as motive force. The very meaning of buddhic is wisdom, and when that comes it swallows up all else.

Illumination may mean three quite different things. First, a man, by setting himself to think intensely and very carefully over a subject may arrive at some conclusion with respect to it. Secondly, he may hope to obtain some illumination from his higher self — to discover what the ego really thinks on its own plane about the matter in question. Thirdly, a highly developed man may come into touch with Masters or devas. It is only in the first case that his conclusions would be likely to be vitiated by his thought-forms. The higher self would be able to transcend these, and so would a Master or a deva.

All these would have no difficulty in presenting things as they really are; but we must remember that we have not only to absorb the information, but also to bring it down into the physical brain, and as soon as it reaches that brain it will begin to be coloured by prejudices. What we can do in meditation depends upon what we are doing all day long. If we have built up prejudices in ordinary life we cannot escape from them during the time of meditation; but if we patiently endeavour to root out our prejudices and to learn that the ways of others are just as good as our own, we are at least on our way towards establishing a gentle and tolerant attitude which will assuredly extend itself to the special time of our meditation. It is easy for us to see the disadvantages of any new ideas or suggestions; these leap to the eyes. But look for the good also, which does not always so readily emerge.

During meditation the ego regards the personality much as at any other time — he is slightly contemptuous usually. Remember your physical meditation is not for the ego, but for the training of the various vehicles to be a channel for the ego. If the ego is at all developed he will meditate also upon his own level; but it does not follow that his meditation will synchronize with that of the personality. The force coming down is always that of the ego, but only a small part, giving a one-sided conception of things. The yoga of a fairly well-developed ego is to try to raise his consciousness first into the buddhic plane and then through its various stages. He does this without reference to what the personality happens to be doing at the time. Such an ego would probably also send down a little of himself at the personal meditation, though his own meditations are very different.

For the development of the powers of the soul, thought-control is an essential prerequisite. When the thought is controlled and the will is strong a good deal may be achieved in various directions. Much help may be given both to the living and to the dead, and those who are sick or sorrowful may be greatly helped and strengthened. It is well for each member to make it a daily practice to devote a certain time to the sending out of such thoughts to people who are personally known to him — in addition, I mean, to the ordinary meditation which he undertakes for the sake of his own development. The same thing can be done to some extent in group meditation; the thoughts of all may be concentrated for a few minutes upon some one who is known to be in trouble or suffering, and a determined effort made to send strength and consolation. The same power used in a different way will often cure physical diseases.

As to the development of astral sight and hearing, one hardly regards that as an end in itself, but rather as a means to an end. It seems best to utilize to the utmost all the powers that we already possess, and wait for these others to unfold themselves as the result of study and unselfish work. Such powers are undoubtedly a help, though they

may be a danger if they come before the character is fully developed. For any one who wishes to hasten their unfoldment I should recommend the process which I describe in the last chapter of *The Other Side of Death*.

Where a house is large enough to permit it, it is a good idea to set apart a room especially for meditation. I see no harm in holding group-meetings in such a room if the group be earnest and harmonious, but *not* if there is to be anything of the nature of discussion or wrangling. If you are trying experiments with mediums of any sort I should advise the use of some other room. You ask whether you should enter such a room when you feel worried; don't be worried, don't even admit the possibility of being worried. I advise you not to make a thought-form, "I am worried, therefore I must not enter," rather to take exactly the opposite line, "I am about to enter, therefore I am no longer worried." You will find that much more effective.

FOURTH SECTION: THE HIGHER
PLANES

NIRVANA

IT has often been said that in the final consummation all individual souls merge into the Great Soul, and our students sometimes find it difficult to reconcile this with other statements which seem to imply that the individuality is maintained, in some form or other, even up to the very greatest heights. The fact is that no experience which we can have, and no ideas which we can formulate down here in our physical brain, will at all express the glorious realities of nirvana and the planes beyond it. We know so little of that transcendent glory, and what little we do know can never be put into adequate words. Perhaps, however, it is in a certain sense somewhat misleading to speak of individual souls as merging into the Great Soul. Every monad is fundamentally a spark of the divine triad; he cannot merge into that of which he is already a part. Surely a better explanation of what happens would be to say that as he evolves the spark develops into flame; he becomes more and more conscious of his unity with the divine, and so the LOGOS is able more and more to manifest Himself through him.

This much at least I can say, that up to the highest level of consciousness which any of our students have yet attained — up even to what is commonly called nirvana itself, there is no loss of individuality, of the power to think, to plan and to act. Long before that there is an entire loss of the sense of *separateness*, but that is a very different thing. Sir Edwin Arnold wrote of that beatific condition “the dewdrop slips into the shinning sea.” Those who have passed through that most marvelous of experiences know that, paradoxical as it may seem, the sensation is exactly the reverse, and that a far closer description would be that the ocean had somehow been poured into the drop!

That consciousness, wide as the sea, with “its centre everywhere and its circumference nowhere,” is a great and glorious *fact*; but when a man attains it, it seems to him that his consciousness has widened to take in all that, not that he is merged into something else. And he is right, for that which he had ignorantly supposed to be *his* consciousness was never his at all, but only the shining of the divine power and wisdom and love through him, and he is now at last beginning to realize that stupendous fact. The truth is that what is commonly understood by individuality is a delusion and has never existed, but all that is best and noblest in that conception is maintained up to adeptship and far beyond, even into the realm of the great Planetary Spirits, for They are assuredly individuals, though mighty beyond our feeble powers of conception.

Even though the attempt be foredoomed to failure, let me endeavour to give some slight idea of an experience which some of us once had in connection with this lofty plane. Before we ourselves by our own efforts were able to touch it, a Master, for certain purposes of His own, enfolded us in His higher aura, and enabled us through Him to know something of glories of nirvana.

Try to imagine the whole universe filled with and consisting of an immense torrent of living light, and in it a vividness of life and an intensity of bliss altogether beyond all description, a hundred thousand times beyond the greatest bliss of heaven. At first we feel nothing but the bliss; we see nothing but the intensity of the light; but gradually we begin to realize that even in this dazzling brightness there are brighter spots — nuclei, as it were — which are built of the light because there is nothing but

the light, and yet through them somehow the light gleams out more brightly, and obtains a new quality which enables it to be perceptible upon other and lower planes, which without this would be altogether beneath the possibility of sensing its effulgence. And by degrees we begin to realize that these subsidiary suns are the great Ones, that these are Planetary Spirits, Great Angels, Karmic Deities, Buddhas, Christs and Masters, and that through Them the light and the life are flowing down to the lower planes. Gradually, little by little, as we become more accustomed to the stupendous reality, we begin to see that, in a far lower sense, even we ourselves are a focus in that cosmic scheme, and that through us also, at our much lower level, the light and the life are flowing to those who are still further away — not from it, for we are all part of it and there is nothing else anywhere — but further from the realization of it, the comprehension of it, the experience of it.

If we can see and grasp even a little of the glory, we can to some extent reflect it to others who are less fortunate. That light shines for every one, and it is the only reality; yet men by their ignorance and by their foolish actions may so shut themselves away that they cannot see it, just as the sun floods the whole world with light and life, and yet men may hide themselves in caves and cellars where that light cannot be seen. Just as a mirror properly placed at the mouth of such a cave or cellar may enable those within to participate, at least to some extent, in the benefits of the light, so may we, when we see the light, reflect it to others who have so placed themselves that they cannot perceive it directly.

No words that we can use can really give even least idea of such an experience as that, for all with which our minds are acquainted has long ago disappeared before that level is attained. There is of course at that level a sheath of some sort for the spirit, but it is impossible to describe it in any words. In one sense it seems as though it were an atom, and yet in another it seems to be the whole plane. Each man is a centre of consciousness and therefore must have some position; that focus in the stream of the life of the LOGOS must, one would say, be in one place or another. Yet he feels as if he were the whole plane and could focus anywhere, and wherever for the moment the outpouring of this force stops, that is for him a sheath. The man still feels absolutely himself, even though he is so much more; and he is able to distinguish others. He is able to recognize with perfect certainty the Great Ones whom he knows, yet it is rather by instinctive feeling than by any resemblance to anything that he has seen before; but if he focusses his consciousness upon one of These he gets the effect of the form of the man he knows it in the Augoeides, two planes below.

THE TRIPLE SPIRIT

The Monads are clearly all centres of force in the LOGOS, and yet each possesses a very distinct individuality of his own. In the average man the monad is but little in touch with the ego and the lower personality, which are yet somehow expressions of him. He knows from the first what is his object in evolution and he grasps the general trend of it, but until that portion of him which expresses itself in the ego has reached a fairly high stage, he is scarcely conscious of the details of life down here, or at any rate takes little interest in them. He seems at that stage not to know other monads, but rests in indescribable bliss without any active consciousness of surroundings. As evolution progresses, however, he grasps matters on the lower lane much more fully, and finally takes them entirely into his own hands, and at that stage he knows both himself and others, and his voice within us becomes for us the Voice of the Silence. That voice differs for us at different stages. For us now in this lower consciousness it is the voice of the ego; when we identify ourselves with the ego it is the voice of the spirit; when we reach the spirit it is the voice of the monad, and when in the far-away future we identify ourselves wholly with the monad it will be the voice of the LOGOS; but in every case we have to subject the lower and rise above it, before the voice of the higher can be heard.

This monad resides permanently upon the second of our planes, and when he descends upon the third, the plane of nirvana, he manifests himself as the triple spirit, and this triple spirit is a reflection or (even more truly) an expression of the LOGOS as He manifests Himself in our set of planes. His first manifestation on our highest plane is also triple. In the first of these three aspects He does not manifest Himself on any plane below the highest, but in the second He descends to the second plane and draws round Himself a garment of its matter, thus making a quite separate expression of Him. In the third aspect He descends to the upper portion of the third plane, and draws round Himself matter of that level, thus making a third manifestation. These three are the “three persons in one God,” of which Christianity teaches, telling us in its Athanasian creed that we should worship “One God in Trinity and Trinity in Unity, neither confounding the persons nor dividing the substance” — that is to say, never confusing in our minds the work and function of the three separate manifestations, each on its own plane, yet never for a moment forgetting the eternal unity of the “substance,” that which lives behind all alike on the highest plane, at the level where these three are one.

Now an exact repetition of this process takes place in the case of man, who is in very truth made in the image of God. The spirit is triple upon the third plane, and the first of its three manifestations does not descend below that level. The second manifestation descends one stage, on to the fourth plane, and clothes itself with its matter, and then we call it buddhi. Just as before, the third aspect descends two planes, and shrines itself in matter of the highest level of the mental plane, and we call that manas, and this trinity of atma-buddhi-manas, manifesting in the causal body, is what we call the ego.

Never forget that the ego is not the manas only, but the spiritual triad; at our present stage of evolution he rests in his causal body on the higher levels of the mental plane, but as he passes onwards his consciousness will be centred on the buddhic plane, and afterwards, when he attains adeptship; on the nirvanic. But it must not be supposed

that when this further development takes place the manas is in any way lost. When the ego draws himself up into the buddhic plane, he draws up manas with him into that expression of manas which has all the time existed on the buddhic plane, but has not been fully vivified until now. In the same way when he draws himself up into the nirvanic plane, manas and buddhi exist within him just as fully as ever, so that now the triple spirit is in full manifestation on its own plane in all its three aspects. Therefore the spirit is truly seven-fold, for he is triple on his own plane, dual on the buddhic, and single on the mental, and the unity which is his synthesis makes seven. Though he draws back into the higher he retains the definiteness of the lower.

This is probably what Madame Blavatsky meant when she spoke of the auric egg, but she surrounded this idea with great mystery, and it seems likely that she was under some pledge not to write freely about it. She never clearly explained the triple spirit, but evidently endeavored to suggest the idea without clearly expressing it, for she laid great stress upon the fact that, just as the astral plane may be said to be a reflection of the buddhic, so may the physical be said to be a reflection of the nirvanic, and then she furthermore emphasized the fact that there are three bodies or vehicles of man on the physical plane — apparently going out of her way to make this agree, and for that purpose dividing the physical body of man into two parts, the dense and the etheric, and adding as a third principle the vitality which flows through them. Now as this vitality exists on all the planes, and might just as well be made into additional principles on the astral and mental planes as on the physical, it would seem that some reason is required for her rather peculiar arrangement, and perhaps this reason may be found in her desire to indicate the triple spirit without actually mentioning it. I think the President has said that when Blavatsky spoke about the sacred auric egg she meant the four permanent atoms within an envelope of matter of the nirvanic plane.

BUDDHIC CONSCIOUSNESS

A selfish man could not function on the buddhic plane, for the very essence of that plane is sympathy and perfect comprehension, which excludes selfishness. A man cannot make a buddhic body until he has conquered the lower planes. There is a close connection between the astral and the buddhic, the former being in some ways a reflection of the latter; but it must not therefore be supposed that a man can leap from the astral consciousness to the buddhic without developing the intervening vehicles.

Certainly on the highest levels of the buddhic plane a man becomes one with all others, but we must not therefore assume that he feels alike towards all. There is no reason to suppose that we shall ever feel absolutely alike towards everybody; why should we? Even the Lord BUDDHA had His favorite disciple Ananda; even the Christ regarded Saint John the Beloved in a different way from the rest. What is true is that presently we shall come to love every one as much as we now love our nearest and dearest, but by that time we shall have developed for those nearest and dearest a type of love of which we have no conception now. The buddhic consciousness includes that of many others, so that you may put yourself down into another man and feel exactly as he does, looking upon him from within instead of from without. In that relation you will feel no shrinking even from an evil man, because you will recognize him as a part of yourself — a weak part. You will desire to help him by pouring strength in that weak part of yourself. What is required is really to be in this attitude and to do it, not merely to talk about it or think vaguely of it; and it is not easy to acquire this power.

EXPERIENCE

It is not necessary for every ego to go through every experience, for when you rise to the buddhic level you can gain the experience of others, even of those who have opposed progress. We shall feel by sympathy. We could withdraw if we did not want to feel another's suffering; but we should choose to feel it because we want to help. On the buddhic plane we enfold the man in our own consciousness, and though he knows nothing of such enfoldment it will to a certain extent lessen his sufferings. In all probability we have all had most of the experiences of the savage and half-civilized stages. An adept would necessarily wish to remove or relieve suffering, but we may easily imagine a case in which he would see that the good which was being produced by the suffering so enormously outweighed the present pain that to interfere would not be kindness but cruelty to the sufferer. He would see the whole, not only the part. His sympathy would be deeper than ours, but he would not express it in action except when action was useful.

THE SPHERES

In any diagram which represents the various planes we usually draw them as lying one above the other like the shelves of a book-case. But then in explaining that diagram we are careful to say that this must not be taken literally, since all the planes interpenetrate and all of them are about us here all the time. That is perfectly true, and yet there is a sense in which the shelf-like arrangement is true also. We may perhaps draw an analogy from the condition of affairs which we find existing upon the surface of the physical earth. We may take the solid matter for all practical purposes as existing only under our feet, as the lowest stratum of physical matter, though of course it is true that countless millions of particles of solid matter are also floating in the air over our heads.

We may say that, roughly speaking, the liquid matter of the earth (chiefly water) lies upon the surface of the solid matter, though again it is true that a large amount of water interpenetrates the earth beneath us, and also that millions of tons of water are raised above the surface of the earth in the form of clouds. Still, the great bulk of the liquid matter of the earth lies on the top of its solid matter in the form of the ocean, lakes and rivers. Then the gaseous matter of our earth (chiefly the atmosphere) lies upon the surface of the water and of the solid earth, and extends much further away into space than either the liquid or the solid.

All three conditions of matter exist here at the surface of the earth where we live, but the water in the form of clouds extends further above that surface than does ordinary dust, and again the air, though interpenetrating both the others, extends much further away still. This is by no means a bad analogy to explain the arrangement of the matter of the higher planes.

What we call our astral plane may also be considered as the astral body of the earth. It certainly exists all around us, and interpenetrates the solid earth beneath our feet, but it also extends far away above our heads, so that we may think of it as a huge ball of astral matter with the physical earth in the middle of it, much as the physical body of a man exists within the ovoid form which is filled with astral matter, except that in case of the earth the proportionate size of its astral body outside the physical is enormously greater than in the case of man. But just as in the case of the man densest aggregation of astral matter is that which is within the periphery of the physical body, so in the case of the earth by far the greater part of its astral matter is gathered together within the limit of the physical sphere.

Nevertheless, the portion of the astral sphere which is exterior to the physical, extends nearly to the mean distance of the moon's orbit, so that the astral planes of the two worlds touch one another when the moon is in perigee, but do not touch when the moon is in apogee. Incidentally, it follows that at certain times of the month astral communication with the moon is possible, and at certain other times it is not.

The mental plane of our earth bears about the same proportion to the astral as the latter does to the physical. It also is a huge globe, concentric with the other two, interpenetrating them both, but extending much further from the centre than does the astral globe. It will be seen that the effect of this is that, while matter of all the planes exists together down here, there is a certain amount of truth in the illustration

of the shelves, for beyond the limit of the physical atmosphere there is a considerable shell which consists only of astral and mental matter, and outside of that again another similar shell which consists of mental matter only.

When we reach the buddhic plane the extension becomes so great that what we might call the buddhic bodies of the different planets of our chain meet one another, and so there is but one buddhic body for the whole chain, which means that in the buddhic vehicle it is possible to pass from one of these planets to another. I presume that when investigations in a similar way are extended to the nirvanic plane it will be found that that matter extends so much further that other chains are included in it as well — perhaps the entire solar system.

All this is true as far as it goes, and yet it does not convey a really accurate idea of the true position of affairs, because of the fact that our minds can grasp only three dimensions, whereas in reality there are many more, and as we raise our consciousness from plane to plane, each step opens before us the possibility of comprehending one more of these dimensions. This makes it difficult to describe exactly the position of those who have passed away from the physical life to other planes. Some of such people tend to hover round their earthly homes, in order to keep in touch with their friends of the physical life and the places which they know; others, on the other hand, have a tendency to float away and to find for themselves, as if by specific gravity, a level much further removed from the surface of the earth.

The average person passing into the heaven-life, for example, tends to float at a considerable distance above the surface of the earth, although on the other hand some of such men are drawn to our level. Still, broadly speaking, the inhabitants of the heaven-world may be thought of as living in a sphere or ring or zone round the earth. What Spiritualists call the summer-land extends many miles above our heads, and as people of the same race and the same religion tend to keep together after death just as they do during life, we have what may be described as a kind of network of summer-lands over the countries to which belong the people who have created them.

People find their own level on the astral plane, much in the same way as objects floating in the ocean do. This does not mean that they cannot rise and fall at will, but that if no special effort is made they come to their level and remain there. Astral matter gravitates towards the centre of the earth just as physical matter does; both obey the same general laws. We may take it that the sixth sub-plane of the astral is partially coincident with the surface of the earth, while the lowest, or seventh, penetrates some distance into the interior.

The conditions of the interior of our earth are not easy to describe. Vast cavities exist in it, and there are races inhabiting these cavities, but they are not of the same evolution as ourselves. One of these evolutions, which is at a level distinctly lower than any race now existing upon the surface of the earth, is to some extent described in the seventeenth life of Alcyone, published recently in *The Theosophist*; the other is more nearly at our level, yet utterly different from anything that we know.

As the centre of the earth is approached, matter is found to exist in a state not readily comprehensible to those who have not seen it; a state in which it is far denser than the densest metal known to us, and yet flows as readily as water. But yet there is something else within even that. Such matter is far too dense for any forms of life that we know, but nevertheless, it has connected with it an evolution of its own.

The tremendous pressures which exist here are utilized by the Third LOGOS for the manufacture of new elements; in fact, the central portions of the earth may with great truth be regarded as His laboratory for temperatures and pressures are obtainable there of which we on the surface have no conception. It is there that, under His direction, troops of devas and nature-spirits of a particular type combine and separate, arrange and rearrange the ultimate physical atoms, working along the wonderful double spiral which is symbolized in Sir William Crookes' lemniscates. From this point also, incredible as it seems to us, there is a direct connection with the heart of the sun, so that elements made there appear in the centre of the earth without passing through what we call the surface; but it is useless to speak of this until the higher dimensions of space are more generally understood. As in the case of the physical, the densest astral matter is far too dense for the ordinary forms of astral life; but that also has other forms of its own which are quite unknown to students of the surface.

In investigating the interior of the earth we did not find a central shaft running from pole to pole, such as has been described by some mediums, nor did we find a number of concentric spheres resting upon cushions of steam. At the same time there are certain forces which do play through concentric layers, and it is not difficult to see what were the natural phenomena which deceived those who, in perfect good faith, made that statement.

There is unquestionably a force of etheric pressure just as there is of atmospheric pressure, and it can be utilized by man as soon as he can discover some material which is ether-proof. The same pressure exists in the astral world. The most ordinary example of this is what happens when a man leaves his body in sleep or in death.

When the astral body is withdrawn from the physical, we must not suppose that that physical body is left without an astral counterpart. The pressure of the surrounding astral matter — and that really means the action of the force of gravitation on the astral plane — immediately forces other astral matter into that astrally empty space, just as, if we create a vortex and draw out the air from a room, other air flows instantly from the surrounding atmosphere. But that astral matter will correspond with curious accuracy to physical matter which it interpenetrates. Every variety of physical matter attracts astral matter of corresponding density, so that solid physical matter is interpenetrated by what we may call solid astral matter — that is, matter of the lowest astral sub-plane; whereas physical liquid is interpenetrated by matter of the next astral sub-plane — astral liquid; while physical gas in turn attracts its particular correspondence — matter of the third astral sub-plane from the bottom, which might be called astral gas.

Take the case of a glass of water; the tumbler (being solid matter) is interpenetrated by astral matter of the lowest sub-plane; the water in the tumbler (being liquid matter) is interpenetrated by astral matter of the second sub-plane, counting from the bottom upwards; while the air which surrounds both (being gaseous matter) is interpenetrated by astral matter of the third sub-plane, counting from the bottom upwards.

We must also realize that just as all these things, the tumbler, the water, and the air, are interpenetrated by physical ether, so are their astral correspondences further interpenetrated by the variety of astral matter which corresponds to the different types of ether. So when a man withdraws his astral body from the physical there is an inrush of all three varieties of astral matter, because man's physical body is

composed of solid, liquid and gaseous constituents. Of course there is ether in the physical body as well, so there must also be astral matter of the higher sub-planes to correspond to that.

That temporary astral counterpart formed during the absence of the real astral body is thus an exact copy of it so far as arrangement is concerned, but it has no real connection with the physical body, and could never be used as a vehicle. It is constructed of any astral matter of the required kind that happens to be handy; it is merely a fortuitous concourse of atoms, and when the true astral body returns it pushes out this other astral matter without the slightest opposition. This is one reason for the extreme care which ought to be exercised as to the surroundings in which we sleep, for if those surroundings are evil, astral matter of the most objectionable type may fill our physical bodies while we are away from them, leaving behind it an influence which cannot but react horribly upon the real man when he returns. But the instant inrush when the body is abandoned shows the existence of astral pressure.

In the same way, when the man has finally left his physical body at death, what he leaves is no longer a vehicle, but a corpse — not in any true sense a body at all, but simply a collection of disintegrating material in the shape of a body. Just as we can no longer call that truly a body, so we cannot call the astral matter which interpenetrates it truly a counterpart in the ordinary sense of the word. Take an imperfect yet perhaps helpful analogy. When the cylinder of an engine is full of steam, we may regard the steam as the living force within the cylinder, which makes the engine move. But when the engine is cold and at rest, the cylinder is not necessarily empty; it may be filled with air; yet that air is not its appropriate living force, though it occupies the same position as did the steam.

Astral matter is never *really* solid at all — only relatively solid. You know that the mediaeval alchemists always symbolized astral matter by water, and one of the reasons for that was its fluidity and penetrability. It is true that the counterpart of any solid physical object is always matter of the lowest astral sub-plane, which for convenience we often call astral solid matter; but we must not therefore endow it with the qualities with which we are familiar in solids on this plane. The particles in that densest kind of astral matter are further apart relatively to their size than even gaseous particles; so that it would be easier for two of the densest astral bodies to pass through each other than it would be for the lightest physical gas to diffuse itself in the air.

On the astral plane one has not the sense of jumping over a precipice, but simply of floating over it. If you are standing upon the ground, part of your astral body interpenetrates the ground under your feet; but through your astral body you would not be conscious of this fact by anything corresponding to a sense of hardness, or by any difference in your power of motion. Remember that upon the astral plane there is no sense of touch that corresponds to ours upon the physical. One never touches the surface of anything, so as to feel it hard or soft, rough or smooth, hot or cold; but on coming into contact with the interpenetrating substance one would be conscious of a different rate of vibration, which might of course be pleasant or unpleasant, stimulating or depressing. When on awakening in the morning we remember anything corresponding to our ordinary sense of touch, it is only that in bringing the remembrance through, the physical brain adopted the means of expression to which we are accustomed.

Though the light of all planes comes from the sun, yet the effect which it produces on the astral plane is entirely different from that on the physical. In astral life there is a diffused luminosity, not obviously coming from any special direction. All astral matter is in itself luminous, and an astral body is not like a painted sphere, but rather a sphere of living fire. It is also transparent, and there are no shadows. It is never dark in the astral world. The passing of a physical cloud between us and the sun makes no difference whatever to the astral plane, nor of course does the shadow of the earth which we call night.

The invisible helper would not pass through a mountain, if he thought of it as an obstacle; to learn that it is not an obstacle is precisely the object of one part of what is called "the test of earth." There cannot be an accident on the astral plane in our sense of word, because the astral body, being fluidic, cannot be destroyed or permanently injured, as the physical body can. An explosion on the astral plane might be temporarily as disastrous as an explosion of gunpowder on the physical, but the astral fragments would quickly collect themselves again.

People on the astral plane can and do pass through one another constantly, and through fixed astral objects. Remember that on the astral plane matter is so much more fluidic and so much less densely aggregated. There never can be anything like what we mean by a collision, and under ordinary circumstances two bodies which interpenetrate are not even appreciably affected. If, however, the interpenetration lasts for some time, as it does, for example, when two persons sit side by side through a service in a church or a performance in a theatre, a considerable effect may be produced.

There are many currents which tend to carry about persons who are lacking in will, and even those who have will but do not know how to use it. During physical life the matter of our astral bodies is constantly in motion, while after death, unless the will is exercised for the purpose of preventing it, it is arranged in concentric shells with a crust of the coarsest matter on the outside. If a man wishes to be of service on the astral, this shelling must be prevented, for those whose astral bodies have been thus re-arranged are confined to one level. If the re-arrangement has already occurred, the first thing that is done when a person is taken in hand is to break up that condition and set him free on the whole of the astral plane. For those who are acting as invisible helpers on the astral plane there are no separate levels; it is all one.

In India the idea of service on the astral plane is not so widely known as in the West; the idea of service to God for the attainment of liberation is more prominent than that of service to one's fellowmen. Atmospheric and climatic conditions make practically no difference to work on the astral and mental planes. But being in a big city does make a great difference, on account of the masses of thought-forms. Some psychics require a temperature of about eighty degrees in order to do their best work, while others do not work well except at a lower temperature.

If necessary, occult work can be done anywhere, but some places afford greater facilities than others. For example, California has a very dry climate with much electricity in the air, which is favourable for the development of clairvoyance. Here in Adyar there is no resistance to our thought-forms on account of the environment, because we are all thinking more or less along the same lines. But we must remember that there may always be resistance on the part of the person to whom we are sending thoughts, for some persons have for a whole life-time built round themselves

such shells of selfishness that one cannot penetrate them even when one wishes to do them good.

FIFTH SECTION: THE EGO AND HIS
VEHICLES

THE EGO AND THE PERSONALITY

There are still many of our members who do not fully understand the problem of the higher and the lower self. Nor is this wonderful; for we are repeatedly told that there is only one consciousness, and yet we often clearly feel two, so it is not remarkable that students should be uncertain as to the real relation between these two, and should wonder whether the ego is entirely dissociated from his physical body and has an existence of his own among his fellows on his own plane.

This problem of the lower and higher self is an old one, and it is undoubtedly difficult to realize that there is after all only one consciousness, and that the apparent difference is caused only by the limitations of the various vehicles. The whole consciousness works on its own higher mental plane, but in the case of the ordinary man only partially and vaguely as yet. So far as it is active it is always on the side of good, because it desires that which is favorable to its evolution as a soul. It puts a portion of itself down into lower matter, and that portion becomes so much more keenly and vividly conscious in that matter that it thinks and acts as though it were a separate being, forgetting its connection with that less developed yet far wider self-consciousness above. So sometimes it seems as though the fragment worked against the whole; but the man who is instructed declines to be deluded, and reaches back through the keen alert consciousness of the fragment to the true consciousness behind, which is as yet so little developed.

Undoubtedly the ego is only very partially expressed by his physical body, yet we should not be accurate in speaking of him as dissociated from that body. If we figure the ego as a solid body and the physical plane as a surface, the solid body if laid upon that surface could manifest itself through that surface only as plane figure, which would obviously be an exceedingly partial expression. We can see also that if the various sides of the solid were laid upon the surface successively we might obtain expressions which differed considerably, though all of them would be imperfect, because in all cases the solid would have an extension in an entirely different direction, which could by no means be expressed in the two dimensions of the superficies. We shall obtain a nearly accurate symbolism of the facts as far as the ordinary man is concerned if we suppose the solid to be conscious only so far as it is in contact with the surface, although the results gained through the manifestation of such consciousness would inhere in the solid as a whole, and would be present in any later expression of it, even though that might differ considerably from previous expressions.

It is only in the case of those already somewhat advanced that we can speak of the ego as having a conscious existence among his fellows on his own plane. From the moment that he breaks off from his group-soul and commences his separate existence, he is a conscious entity; but the consciousness is of an exceedingly vague nature. The only physical sensation which occasionally comes to some persons is at the moment of awakening in the morning. There is a state intermediate between sleeping and waking in which a man is blissfully conscious that he exists, and yet is not conscious of any surrounding objects, not capable of any moment. Indeed, he sometimes knows that any movement would break the spell of happiness and bring him down into the ordinary waking world, and so he endeavours to remain still as long as possible.

That condition — a consciousness of existence and of intense bliss — closely resembles that of the ego of the average man upon the higher mental plane. He is wholly centred there only for the short time which intervenes between the end of one life in the heaven-world and the commencement of his next descent into incarnation; and during that short period there comes to him the flash of retrospect and prospect — a glimpse of what his last life has done for him, and of what his next life is intended to do. For many ages these glimpses are his only moments of full awakening, and it is his desire for a more perfect manifestation, his desire to feel himself more thoroughly alive and active, which drives him into the effort of incarnation. It is not desire for life in the ordinary sense of the word, but rather for that complete consciousness which involves the power to respond to all possible vibrations from the surroundings on every plane, so that he may attain the perfection of sympathy.

When the ego is still undeveloped the forces of the higher mental plane pass through him practically without affecting him, as he cannot respond to more than a very few of these extremely fine vibrations. It needs powerful and comparatively coarse vibrations to affect him at first, and these do not exist upon his own plane, and for that reason he has to put himself down to lower levels in order to find them. Therefore full consciousness comes to him at first only in the lowest and densest of his vehicles, his attention being focussed for a long time down in the physical plane; so that, although that plane is so much lower than his own and offers so much less scope for activity, in those early stages he feels himself much more alive when he is working there. As the consciousness increases and widens its scope he gradually begins to work more and more in matter one stage higher — that is, in astral matter.

At a much later stage, when he has attained to clear working in astral matter, he begins to be able also to express himself through the matter of his mental body and the end of his present effort is achieved when he works as fully and clearly in the matter of the causal body on the higher mental plane as he does now on the physical plane.

These stages of full development of consciousness must not be confounded with the mere learning to use to some extent the respective vehicles. A man is using his astral body whenever he expresses an emotion; he is using his mental body whenever he thinks. But that is very far from his being able to utilize either of them as independent vehicles through which consciousness can be fully expressed. When a man is fully conscious in his astral body, he has already made a considerable amount of progress; when he has bridged over the chasm between the astral consciousness and the physical, day and night no longer exist for him, since he leads a life unbroken in its continuity. For him death also has ceased to exist, since he carries that unbroken consciousness not only through night and day, but also through the portals of death itself and up to the end of his life upon the astral plane.

One step of further development lies open to him — the consciousness of the heaven-world; and then his life and memory are continuous during the whole of each descent into incarnation. Yet one step more raises the full consciousness to the level of the ego on the higher mental plane, and after that he has always with him the memory of all his lives, and he is capable of consciously directing the various lower manifestations of himself at all points of his progress.

It must not be supposed that the development of any of these stages of consciousness is ever sudden. The actual rending of the veil between two stages is usually a fairly

rapid process, sometimes even instantaneous. A man who has normally no memory of what happens on the astral plane may unintentionally, by some accident or illness, or intentionally by certain definite practices, bridge over the interval and make the connection, so that from that time onward his astral consciousness will be continuous, and his memory of what happens while the physical body is asleep will therefore be perfect. But long before such an effort or accident is possible for him the full consciousness must have been working in the astral body, even though in the physical life he knew nothing of it.

In exactly the same way a man must have been for a long time thoroughly practised in the use of his mental body as a vehicle before he can hope to break the barrier between that and the astral, so that he can have the pleasure of continuous recollection. By analogy this lead us to see that the ego must have been fully conscious and active on his own plane for a long time before any knowledge of that existence can come through to us in our physical life.

There are many in whom the ego has already to some extent awakened from the condition of mere bliss which was described above, and is at least partially conscious of his own surroundings, and therefore of other egos. From that time on he leads a life and has interests and activities on his own plane; but even then we must remember that he puts down into the personality only a very small part of himself, and that that part constantly becomes entangled in interests which, because they are so partial, are often along different lines from the general activities of the ego himself, who consequently does not pay any particular attention to the lower life of the personality, unless something rather unusual happens to it.

When this stage is reached he usually comes under the influence of a Master; indeed often his first clear consciousness of anything outside himself is his touch with that Master. The tremendous power of the Master's influence magnetises him, draws his vibrations into harmony with its own, and multiplies manifold the rate of his development. It rays upon him like sunshine upon a flower, and he evolves rapidly under its influence. This is why, while the earlier stages of progress are so slow as to be almost imperceptible, when the Master turns His attention upon the man, develops him and arouses his own will to take part in the work, the speed of his advancement increases in geometrical progression.

Of that stream of divine influence poured upon the ego by the Master, the amount which can be passed on to the personality depends upon the connection between it and the ego, which is very different in different cases. There is almost infinite variety in human life. The spiritual force rays upon the ego, and some little of it certainly comes through into the personality, because though the ego has put forth a part of himself he does not cut himself off entirely from it, notwithstanding the fact that in the case of all ordinary people the ego and the personality are very different things.

The ego in ordinary men has not much grasp of the personality, nor a clear conception of his purpose in sending it forth; and, again, the small piece which meets us in the personality grows to have ways and opinions of its own. It is developing by the experience which it gains, and this is passed on to the ego; but along with this real development it usually gathers a good deal which is hardly worthy of that name. It acquires knowledge, but also prejudices, which are not really knowledge at all. It does not become quite free from these prejudices — not only of knowledge (or rather its absence) but of feeling and action as well — until the man reaches adeptship. It

gradually discovers these things to be prejudices, and progresses through them; but it has always a great deal of limitation from which the ego is entirely free.

As to the amount of the spiritual force which is passed to the personality, one can only decide in a particular case by using clairvoyance. But something of it must flow through always, because the lower is attached to the higher, just as the hand is attached to the body by the arm. It is certain that the personality must get something, but it can have only what it has made itself able to receive. It is also a question of qualities. The Master often plays upon qualities in the ego which are much obscured in the personality, and in that case of course very little comes down. As only those experiences of the personality can be handed on to the spiritual or permanent ego which are compatible with his nature and interests, so only those impulses to which it is able to respond can express themselves in the personality. Remember, though, that the former tends to exclude the bad and the latter the good — or rather we should call them the material and the spiritual, for nothing is bad.

One may sometimes see by clairvoyance many of these influences at work. On a certain day, for example, we may see a characteristic of the personality much intensified, with no outward reason. The cause is often to be found in what is taking place at some higher level — the stimulation of that quality in the ego. Sometimes a man finds himself overflowing with affection or devotion, and quite unable on the physical plane to understand why. The cause is usually, again, the stimulation of the ego, or it may be that the ego is taking some special interest in the personality for the time being.

In meditation we sometimes draw such attention on the part of the ego, though it is well to keep in mind that we must try to reach up to join that higher activity, rather than to interrupt it to draw down its attention to the lower. The higher influence is certainly invited by right meditation, which is *always* effective, even though on the physical plane things may seem to be very dull and quite without zest. The reaching upwards of the ego himself often means his neglect to send energy down to the personality, and this, of course, leaves the latter feeling rather dull and in the shade. The extent, then, to which the personality is influenced by the effort of the Master depends upon two things principally — the strength of the connection at the time between the ego and the personality; and the particular work which the Master is doing upon the ego, that is, the particular qualities upon which He is playing.

Meditation and the study of spiritual subjects in this earthly life make a very great difference in the life of the ego. The ordinary person who has not taken up spiritual matters seriously has only a thread of connection between the higher and the lower self. The personality in his case seems to be all, and the ego, though he undoubtedly exists on his own plane, is not at all likely to be doing anything actively there. He is very much like a chicken which is growing inside an egg. But in the case of some of us who have been making efforts in the right direction, we may hope that the ego is becoming quite vividly conscious. He has broken through his shell, and is living a life of great activity and power. As we go on, we shall become able to unify our personal consciousness with the life of the ego, as far as that is possible, and then we shall have only the one consciousness; even down here we shall have the consciousness of the ego, who will know all that is going on. But with many people at the present day there is often considerable opposition between the personality and the ego.

There are other things to be taken into account. It is by no means always accurate to judge the ego by his manifestation in the personality. An ego of intensely practical

type may make much more show on the physical plane than another of far higher development, if the energy of the latter happens to be concentrated almost exclusively upon the causal or buddhic levels. Therefore people who see only on the physical plane are frequently entirely wrong in their estimation of the relative position of others.

If you have to deal with a fairly advanced ego, you will sometimes find him rather inconsiderate of his body. You see whatever is put down into the personality is so much taken from *him*! I have again and again seen cases in which the ego was to some extent impatient and withdrew into himself somewhat; but on the other hand in cases such as these there is always a flow between the ego and the personality, which is not possible with the ordinary man. In the ordinary man the part is, as it were, put down and left, though not of course quite cut off; but at this more advanced stage there is a constant communication between the two along the channel. Therefore, the ego can withdraw a great deal of himself whenever he chooses, and leave a very poor representation of the real man behind. So the relation between the lower and the higher self varies much in different people and at different stages of development.

As to the work of the ego, he may be learning things on his own plane; or he may be helping other egos — there are many kinds of work for which he may need an accession of strength. And then he may forget for a time to pay his personality proper attention, just as even a good man may occasionally, under some special pressure of business, forget his horse or his dog. Sometimes when that happens the personality reminds him of its existence by blundering into some foolishness which causes serious suffering. You may have noticed that sometimes, after you have completed a special piece of work that has needed the co-operation of the ego to a large extent — as, for example, lecturing to a large audience — he takes away the energy and leaves the personality with only enough to feel rather dispirited. For a time he admitted that there was some importance in the work, and therefore poured down a little more of himself, but afterwards he leaves the poor personality feeling rather depressed.

Of course, depression comes much more often from other reasons, such as the presence of an astral entity in a low-spirited condition, or of some non-human beings. And joy also is not always due to the influence of the ego, for the fact is that the man does not think much about his own feelings when he is in a fit condition to receive an influx of power. Joy may be produced by the proximity of harmonious nature-spirits, or in a variety of other ways. The channel between the ego and personality is by no means always open. Sometimes it appears to be almost choked up — a condition of affairs which is quite a possibility in view of its narrowness in most cases. Then the force may break through again on some occasion, such as that of a conversion. But for many of us there is a constant flow in some measure. Meditation, conscientiously done, opens the channel and keeps it open. Always remember, though, that it is better to try to go up to the ego than to bring it down to the personality.

Every ego has a certain knowledge of his own. He obtains a glimpse, between lives, of his past and future; in the undeveloped man this awakens the ego for a moment, after which he falls asleep again. During physical life the ordinary ego is to some extent capable of brooding watchfulness and a little effort, but is still in a sleepy condition. With a developed man the ego is fully awake. The ego in course of time discovers that there are a good many things which he can do, and when this happens he may rise into a condition in which he has a definite life on his own plane, though

in many cases it is even then but dreamy. It is the ego's purpose to learn to be fully active on all planes, even the physical.

Suppose you have an ego whose principal method of manifesting himself is by affection. That quality is what he wants exhibited by his personality, and if you down here try to feel strong affection and make a specialty of that, the ego will promptly throw more of himself down into the personality, because he finds in it exactly what he desires. Be careful to provide what he needs, and he will quickly take advantage of it. Egos on their own plane can help other egos, when they are sufficiently developed to do so. The ego of the ordinary person has rather a vegetable consciousness or life, and seems to be only just aware of other egos. The personality will not know what the ego does, unless they have been unified. The ego may know the Master while the personality does not. The study of inner things, and living the life, wakes up the ego. Purely unselfish devotion belongs to the higher planes and concerns him.

I do not think the experiences of the personality can be transmitted to the ego, but the essence of them may. He cares little for the details, but he wants the essence of it. Any of those thoughts that we consider evil are impossible for the ego. For precise definition he must come down into the physical body. He devotes himself more especially during the heaven-life to the assimilation of the experiences of the personality, but he is doing it all the time. When you take up the study of Theosophy, and live the life, you begin to call the attention of the ego by sending up vibrations to which he can respond. The ordinary man has in his life little that appeals to the ego.

High unselfish affection and devotion belong to the highest astral sub-plane, and these reflect themselves in the corresponding matter of the mental plane, so that they touch the causal, not the lower mental. Thus only unselfish thoughts affect the ego. All the lower thoughts affect the permanent atoms, but not the ego; and corresponding to them you would find gaps in the causal body, not bad colors. Selfishness below shows in it as absence of affection or sympathy, and when the good quality develops the gap will be filled up. In the causal body you can see whether a man can possibly fail in this or that quality. Try to develop the qualities the ego wants, and he will come down to help.

As is said in *Light on the Path*, watch for the ego, and let him fight through you, and yet at the same time never forget that you are the ego. Therefore identify yourself with him and make the lower give way to you the higher. Yet do not be too greatly disheartened if you should fall even many times, for even failure is to a certain extent a success, since we learn by it and so are wiser to meet the next problem. We cannot always succeed now at every point, though we surely shall do so ultimately. But never forget that it is not expected of us that we shall always succeed, but only that we shall do our best.

COUNTERPARTS

When the ego descends into incarnation, he draws round himself a mass of astral matter, not yet formed into a definite astral body; this takes, in the first place, the shape of that ovoid which is the nearest expression that we can realize of the true shape of the causal body. But when the further step downward and outward into physical incarnation is taken, and a little physical body is formed in the midst of that astral matter, it immediately begins to exert a violent attraction over it, so that the great majority of the astral matter (which previously may be thought of as fairly evenly distributed over the large oval) now becomes concentrated into the periphery of that physical body.

As the physical body grows, the astral matter follows every change, and thus we find man presenting the spectacle of an astral body, ninety-nine percent of which is compressed within the periphery of his physical body, only about the remaining one percent filling the rest of the ovoid form. In the plates in *Man, Visible and Invisible* we have sketched in the outline of the physical body merely in pencil so that it shows but slightly, because my especial desire in that book was to emphasize the colors of the ovoid, and the way in which they illustrate the development of man by the transfer of vibrations from the lower bodies to the higher; but in reality that astral counterpart of the physical body is very solid and definite, and quite clearly distinguishable from the surrounding ovoid.

Note, therefore, that the astral matter takes the exact form of the physical matter merely because of the attraction which the latter has for the former. But we must further realize that although we may speak of the lowest sub-plane of the astral as corresponding to solid physical matter, it is yet very different in texture, for all astral matter bears to its corresponding physical matter something the same sort of relation that the liquid bears to the solid. Therefore the particles of the astral body, whether in the finest or coarsest parts of it, are constantly in motion among themselves, just as are particles of flowing water; and it will consequently be seen that it is quite impossible for the astral body to possess specialized organs in the same sense as does the physical body.

No doubt there is an exact counterpart in astral matter of the rods and cones which make up the retina of the physical eye; but the particles which at one moment are occupying that particular position in an astral body may, a second or two later, be moving through the hand or the foot. One does not, therefore, see upon the astral plane by means of the astral counterpart of the physical eyes, nor does one hear with the astral counterpart of the physical ears; indeed, it is perhaps not exactly correct to apply the terms "seeing" and "hearing" to astral methods of cognizance, since these terms are commonly held to imply specialized sense-organs, whereas the fact is that every particle in the astral body is capable of receiving and transmitting vibrations from one of its own type, but its own type only. Thus when one obtains a glimpse of astral consciousness, one is surprised to find oneself able to see on all sides simultaneously, instead of only in front as one does on the physical plane. The exact correspondence of the astral body to the physical therefore is merely a matter of external form, and does not at all involve any similarity of function in the various organs.

But the attraction continued all through life sets up a kind of habit or momentum in the astral matter, which causes it to retain the same form even while it is withdrawn temporarily from the attraction of the physical body at night and permanently after death; so that even through the long astral life the lineaments of the physical body which was put aside at death will still be preserved almost unchanged. Almost — because we must not forget that thought has a powerful influence upon astral matter and can readily mould it, so that a man who habitually thinks of himself after death as younger than he actually was at the time of that death will gradually come to present a somewhat younger appearance.

A questioner asks, “If the arm of a man, the branch of a tree, or the leg of a chair were cut off, would in each case the astral counterpart also be removed, and can we, by breaking an astral counterpart, produce a fracture in a physical object? That is to say, if with the hand of my astral body I break the astral counterpart of a chair, will the physical chair also be broke?”

The three cases given are not quite analogous. Both the tree and the man have the life within them which makes the astral body in each case a coherent whole. It is strongly attracted by the particles of the physical body, and therefore adapts itself to its shape, but if part of that physical body be removed, the coherence of the living astral matter is stronger than the attraction towards that severed portion of the physical.

Consequently the astral counterpart of the arm or branch will not be carried away with the severed physical fragment. Since it has acquired the habit of keeping that particular form, it will continue for a short time to retain the original shape, but will soon withdraw within the limits of the maimed form.

In the case of an inanimate body, such as a chair or a basin, there would not be the same kind of individual life to maintain cohesion. Consequently when the physical object was broken the astral counterpart would also be divided; but it would not be possible to break an astral counterpart, and in that way to affect the physical object. In other words the act of fraction must begin on the physical plane.

One could of course move a purely astral object by means of an astral hand if one wished, but not the astral counterpart of a physical object. In order to perform this latter feat it would be necessary to materialize a hand and move the physical object, when the astral counterpart would of course accompany it. The astral counterpart is there because the physical object is there, just as the scent of a rose fills the room because the rose is there. To suggest that by moving the astral counterpart one could also move the physical object is like suggesting that by moving the smell one could move the physical rose which causes the smell.

The astral body changes its particles as does the physical, but fortunately the clumsy and tiresome process of cooking, eating and digesting food is not a necessity on the astral plane. The particles which fall away are replaced by others from the surrounding atmosphere. The purely physical cravings of hunger and thirst no longer exist there; but the desire of the glutton to gratify the sensation of taste, and the desire of the drunkard for the exhilaration which follows, for him, the absorption of alcohol — these are both astral, and therefore they still persist, and cause great suffering because of the absence of the physical body through which alone they could be satisfied.

So far as we are at present aware the astral body does not appear to be susceptible to fatigue.

The ordinary man while possessing a physical body naturally never has the opportunity of working for any length of time consecutively upon the astral plane, for his nights of astral work alternate with days of physical work. I knew, however, of one case of a man who, having the right to take a rapid reincarnation, had to wait upon the astral plane twenty-five years for the special conditions which he required. He spent the whole of this time in working for the help of others, without any intermission except the occasional attendance at classes held by pupils of our Masters; and he assured me that he had never felt the slightest sense of fatigue — that in fact he had forgotten what it meant to be tired.

We all know that excessive or long-continued emotion tires us very quickly in ordinary life, and since emotion is an expression of the astral, that may perhaps lead some to suppose that fatigue of the astral body is possible. I think, however, that it will be found that what is subject to fatigue is merely the physical organism through which everything in us which manifests on this plane must pass. What we call mental fatigue is a parallel case. There is no such thing as fatigue in the mind; what we call by that name is only fatigue of the physical brain through which that mind has to express itself.

A spectator who has not been able to raise his sight above the astral level will of course see only astral matter when he looks at the aura of his fellow-men. He will see that this astral matter not only surrounds the physical body but also interpenetrates it, and that within the periphery of that body it is much more densely aggregated than in that part of the aura which lies outside. This is due to the attraction of the large amount of dense astral matter which is gathered together there as the counterpart of the cells of the physical body.

When during sleep the astral body is drawn from the physical this arrangement still persists, and then any one looking at the astral body with clairvoyant vision would still see, just as before, a form resembling the physical body surrounded by an aura. That form would now be composed only of astral matter, but still the great difference in density between it and its surrounding mist would be quite sufficient to make it clearly distinguishable, even though it is itself only a form of denser mist.

There is a considerable difference in appearance between the evolved and the unevolved man. Even in the case of the latter the features and shape of the inner form are recognizable always, though blurred and indistinct; but the surrounding egg scarcely deserves the name for it is in fact a mere shapeless wreath of mist, having neither regularity nor permanence of outline.

In the more developed man the change is very marked, both in the aura and the form within it. This latter is much more distinct and definite — a closer reproduction of the man's physical appearance; while instead of the floating mist-wreath we see a sharply defined ovoid form preserving its shape unaffected amidst all the varied currents which arc always swirling round it on the astral plane. Though the arrangement of the astral body is largely changed after death by the action of the desire elemental, such alteration does not in any way affect the recognizability of the form within the egg, though the natural changes which take place tend on the whole to make the form grow somewhat fainter and more spiritual in appearance as time passes on.

COLORS IN THE ASTRAL BODY

Any comparatively permanent color in the astral body means a persistent vibration, which in the course of time produces its effect upon the mental body, and also upon the causal body, so that the higher qualities developed by the life on the lower planes are gradually built into the permanent causal body, and so become qualities of the soul itself. The colors may be mingled to any extent; for example, affection (rose) mingled with religious devotion (blue) will give a lovely violet. It is only the *good* thought or feeling which can produce an effect in the causal body, and so be permanently stored up as part of the man. Other kinds of thought and feeling remain in the lower vehicles and are comparatively impermanent. The size a thought-form shows the strength of the emotion.

THE CAUSAL BODY

No number of physical bodies could fully contain the causal body, any more than any number of lines can make a square, or any number of squares can make a cube. The ego puts himself down into his various bodies with the hope of gaining two things — to make the causal body learn to respond to more vibrations, and also to increase its size. Most people are not more than just conscious in the causal body. The strings of such egos cannot be played upon directly, but are affected from below by way of overtones. Most men can at present only work on the matter of the third sub-plane of the mental (the lowest part of their causal bodies), and indeed only the lower matter even of that is usually in operation. When they are on the Path, the second sub-plane opens up. The adept uses the whole causal body while his consciousness is on the physical plane. A rough and ready way of deciding at what stage a man stands is to look at the causal body. It shows also how he arrived there. Men develop unequally — we are all undeveloped in some way. An animal has a minimum-sized causal body as soon as he is individualized; then it has to be developed both as to size and color.

THE DESIRE-ELEMENTAL

Much of the matter of the astral body is vivified by elemental essence, which is cut off for the time being from the general mass which belongs to the plane, and becomes the man's expression on that plane. This is a living, though not an intelligent essence. But it has a kind of instinct which Mr. Sinnett calls "dawning intelligence," which guides it into getting what it wants. Blindly and without reason, but instinctively, it seeks its ends, and shows great ingenuity in obtaining its desires and in furthering its evolution.

Evolution for it is a descent into matter; its aim is to become a mineral monad. Therefore, its object in life is to get as near to the physical plane as it can, to come into contact with as many of the vibrations of the coarser kind as possible. It knows nothing of *you*; it could not know or imagine anything of you; but it does realize that it is apart from the general stock, and that it is good to be apart. It is not a devil, and you must not get the idea that it is to be hated.

It is part of the Divine Life, just as you are; but its interests are diametrically opposed to yours. *It* wants to evolve downwards; *you* want to evolve upwards. It desires to preserve its separate life, and it feels that it can do so only by means of its connection with you. It is conscious of a something which is your lower mind, and realizes that if it can englobe, as it were, this mind, and persuade you that its and yours interests are one, you will increasingly supply it with the sensations it desires. When it gets the matter sufficiently entangled to suit its purpose, you cannot withdraw it, the result being that some of this matter of the lower mind is then lost to you altogether in the life after death.

So, you see, here is the desire-elemental seeking its own ends; not knowing that it is injuring you by trying to entangle your lower mind. The more it can do this the better for it, for the more mental matter it can entangle the longer will be its astral life — that life still enduring even after you have passed into the heaven-world. In Theosophical phraseology it has been known as the shade. *Your* business is not to allow yourself to be deceived; it understands nothing of your evolution, and is not responsible for it; it simply tries to turn you to its own purpose. You ought to understand the situation, and refuse to be drawn. Do let us realize this: that this elemental is not ourselves. It is never *you* who desire these lower things, but this creature.

It is not so much that we have to make a great fight against it, but we should shake ourselves free, saying: "This is not I; I do not want this lower thing." Somebody wants it. Yes, it is this elemental; and you are responsible for its likes and wants, for in your last life you made it what it is. Not that this particular collection of astral matter and elemental essence existed then; it did not, for it was newly gathered together at your birth this time. But it is an exact reproduction of the matter in your astral body at the end of your last astral life. Nevertheless it is not you; and you must ever bear this in mind all through life, and even more during the life after death, for then it has still greater power to deceive you.

But you may think that by thus refusing to allow it to influence you, you are checking its evolution. Not at all. You are doing better for the elemental if you control the lower passions, and take a firm stand of your own. It is true you do not develop a

very low part of it; but you may drop the lower and evolve the higher. An animal can supply the lower kinds of vibrations even better than you can yourself, whereas none but man can evolve the higher type of essence.

After the death of the physical body the ordinary man, who has never heard all this, finds himself when he wakes up on the other side in a totally unexpected condition of affairs, and is generally more or less disturbed thereby. Finally, he accepts these conditions which he does not understand, thinking them necessary and inevitable. Some no doubt are, but some are not, and with knowledge the latter could be transcended.

The elemental is afraid, because it knows that the death of the physical body means that the term of its separated life is limited; it knows that the man's astral death will more or less quickly follow, and with it the loss to it of vivid and intense sensations. Consequently it adopts the best plan it can think of for the preservation of the man's astral body. It evidently knows enough of astral physics to realize that the coarsest matter can hold together longest, and best stand friction. So it arranges the matter in rings, the coarsest on the outside. And in so doing it is right, from its point of view. During physical life the astral body is like swirling, boiling water, but after death it arranges the matter in a series of graduated sheaths, so that full circulation is impossible.

Now there are no sense organs in the astral body. There are in it organs corresponding to the physical sense-organs, but you do not see, hear and smell with them. You hear and see all over the surface of the body. Each sub-plane has its own matter; and it is by means of the matter of that sub-plane in your body that you can respond to its vibrations. Whatever matter is on the outside (or surface) of your body responds to these vibrations, and you see or hear by it alone. Consequently, what has happened is this: the elemental has, by this arrangement of the matter of your body, shut you up, as it were, in a box of astral matter, which enables you to see and hear things of the lowest and coarsest plane only. If you object to being shut up in this way, it endeavours to make you believe that unless you do thus firmly root yourself into the lower matter you will float off, and lose yourself in a nebulous vagueness.

But if, on the other hand, you were to set your will to oppose it, then at once there would be a difference. The particles of the astral body would be kept all intermingled, as in life; and you would, in consequence, be free of all the sub-planes.

The final struggle with it takes place at the conclusion of the astral life, for then the ego endeavours to draw back into himself all that he put down into incarnation at the beginning of the life which has just closed — to recover as it were the principal which he has invested, plus the interest of the experience which has been gained and the qualities which have been developed during that life. But when he attempts to do this he is met with determined opposition from this desire-elemental, which he himself has created and fed.

Though it can hardly be described as intelligent, it has a strong instinct of self-preservation, which leads it to resist with all the force at its command the extinction which threatens it. In the case of all ordinary mortals it attains a certain measure of success in its efforts, for much of the mental faculty has during life been governed by the lower desires and prostituted to their service, or in other words the lower mind has been so seriously entangled by desire that it is impossible for it to be entirely freed. The result of the struggle is therefore that some portion of the mental matter and even of causal matter is retained in the astral body after the ego has completely

broken away from it. When a man has during life completely conquered his lower desires and succeeded in absolutely freeing the lower mind from desire, there is practically no struggle, and the ego reclaims in full both principal and interest; but there is unfortunately an opposite extreme when he is able to reclaim neither.

So our business, both during life and after death, is to control this desire-elemental, and not let *it* control us. Realize that you are a god in the making. All the power and force of the universe are on your side. The result is certain. Range yourself on the side of the Law, and all will be simplified.

Absolute control of passions is eminently desirable, but is obtained by few. You have to keep your temper on the astral plane. You see many dreadful things, and if you have not all feelings thoroughly under control you may easily do something for which you will be sorry. Down here people often commit casual brutality and think nothing of it; a callous schoolmaster, for example, beats a child without realizing his wickedness; but on the astral plane the heinousness of such a crime is at once obvious, and even the awful horrors of the karma which it entails may often be seen. On the astral you see the full effects of even an unkind word. Tremendous and violent passions may often attract low kinds of beings, who enter into the thought-forms and enjoy the vibrations. Such animated thought-forms may last for years, and even produce poltergeist phenomena.

LOST SOULS

It is an unspeakable relief to be set free by the commonsense of Theosophical teaching from the awful nightmare of the doctrine of eternal damnation which is still held by the more ignorant among the Christians, who do not understand the real meaning of certain phrases attributed in their gospels to their Founder. But some of our students, filled with glad enthusiasm by the glorious discovery that every unit must finally attain perfection, find their joy somewhat damped by gruesome hints that, after all, there are conditions under which a soul may be lost, and they begin to wonder whether the reign of divine law is really universal, or whether there is not some method by which man contrive to escape from the dominion of the LOGOS and destroy himself. Let such doubters take comfort; the Will of the LOGOS is infinitely stronger than any human will, and not even the utmost exertion of perverse ingenuity can possibly prevail against Him.

It is true that He allows man to use his free-will, but only within certain well-defined limits; if the man uses that will well, those limits are quickly widened, and more and more power over his own destiny is given to him; but if he uses that will for evil, he thereby increases his limitations, so that while his power for good is practically unbounded, because it has in it the potentiality of infinite growth, his power for evil is rigidly restricted. And this not because of any inequality in the incidence of the law, but because in the one case he exerts his will in the same direction as that of the LOGOS, and so is swimming with the evolutionary tide, while in the other he is struggling against it.

The term "lost souls" is not well chosen, for it is almost certain to be misunderstood, and taken to imply much more than it really means. In every-day parlance, the word "soul" is used with exasperating vagueness, but on the whole it is generally supposed to denote the subtler and more permanent part of man, so that to the man in the street to lose one's soul means to lose oneself, to be lost altogether. That is precisely what can never happen; therefore the expression is misleading, and a clear statement of the facts which it somewhat inaccurately labels may be of use to students. Of such facts there seem to be three classes; let us consider them one by one.

1. Those who will drop out of this evolution in the middle of the fifth round. This dropping out is precisely the aeonian (*not* eternal) condemnation of which the Christ spoke as a very real danger for some of His unawakened hearers — the condemnation meaning merely the decision that they are incapable as yet of the higher progress, but not implying blame except in cases where opportunities have been neglected. Theosophy teaches us that men are all brothers, but not that they are all equal. There are immense differences between them; they have entered the human evolution at various periods, so that some are much older souls than others, and they stand at very different levels on the ladder of development. The older souls naturally learn much more rapidly than the younger, and so the distance between them steadily increases, and eventually a point is reached where the conditions necessary for the one type are entirely unsuitable for the other.

We may obtain a useful working analogy by thinking of the children in a class at school. The teacher of the class has a year's work before him, to prepare his boys for a certain examination. He parcels out the work — so much for the first month, so much for the second, and so on, beginning of course with what is easiest and leading

gradually up to what is more difficult. But the boys are of various ages and capacities; some learn rapidly and are in advance of the average, while some lag behind. New boys, too, are constantly coming into his class, some of them barely up to its level. When half the year has run its course, he resolutely closes the list for admissions, and declines to receive any more new boys.

That took place for us at the middle point of this fourth round, after which the door was shut for passage from the animal kingdom into the human, save for a few exceptional cases, which belong, as it were, to the future; just as you have a few men attaining adeptship, who are not belated remnants of the moon's adepts, but people in advance of the rest of humanity. In the same way there are a few animals at the stage of individualization, which the generality are expected to reach at the end of the seventh round. On the next planet an arrangement will be made by which these exceptions will have the opportunity of taking primitive human bodies.

A little later the teacher can already clearly foresee that some of his boys will certainly pass the examination, that the chance of others is doubtful, and that there are yet others who are sure to fail. It would be quite reasonable if he should say to these last:

“We have now reached a stage when the further work of this class is useless for you. You cannot possibly by any effort attain the necessary standard in time for the examination; the more advanced teaching which must now be given to the others would be entirely unsuited for you, and as you could not understand it you would be not only wasting your own time but would be a hindrance to the rest of the class. It will therefore be better for you at once to transfer yourselves to the next class below this, perfect yourselves there in the preliminary lessons which you have not thoroughly learned, and come back to this level with next year's class, when you will be sure to pass with credit.”

That is exactly what will be done in the middle of the fifth round. Those who cannot by any effort reach the prescribed goal in the time which remains will be put back into a lower class, and if the class-room doors are not yet open they will wait in peace and happiness until the appointed time. They may be described as lost *to us*, lost to this particular little wave of evolution to which we belong; they are no longer “men of our year” as we say at College. But they will very certainly be “men of the next year” — even leading men in it, because of the work that they have already done and the experience that they have already had.

Most of these people fail because they are too young for the class, although they were too old to be put in the first place into the class below. They have had the advantage of going through the first half of the year's work, and they will therefore take it up again next time readily and easily, and will be able to help their more backward fellow-pupils who have not had their advantages. For those who are too young for the work there is no blame in failure.

But there is another large class who might succeed by determined effort, but fail for want of that effort. These exactly correspond to the boy who drops behind his class not because he is too young, but because he is too lazy to do his work. His fate is the same as that of the others, but it is obvious that while they were blameless because they did their best, he is blame-worthy precisely because he did not do his; so he will carry with him a legacy of evil karma from which they are free. It is to men of that class that the Christ's exhortations were addressed — men who had the opportunity and ability to succeed, but were not making the necessary effort.

It is of these that Madame Blavatsky speaks in such vigorous terms as “useless drones who refuse to become co-workers with Nature, and who perish by millions during the manvantaric life-cycle.” (*Secret Doctrine*, III, 526.) But note that this “perishing” is merely from this “manvantaric life-cycle,” and that it means for them delay only, and not total extinction. Delay is the worst that can happen to people in the ordinary course of evolution. Such a delay is undoubtedly most serious, but, bad though it be, it is the best that can be done under the circumstances. If either through youth, or through laziness and perversity, these people have failed, it is clear that they need more training, and this training they must have. Obviously that is best for them, even though it means many lives — lives, many of which may be dreary, and may even contain much suffering. Still, they must go through to the end, because that is the only way by which they can attain the level which the more advanced races have already reached through similar long-continued evolution.

It was with the object of saving as many people as possible from that additional suffering that the Christ said to His disciples: “Go ye into all the world and preach the gospel to every creature; he that believeth and is baptised shall be saved, but he that believeth not shall be damned.” For baptism and its corresponding rites in other religions are the sign of the dedication of the life to the service of the Brotherhood, and the man who is able to grasp the truth, and consequently sets his face in the right direction, will certainly be among the “saved” or “safe,” who escape the condemnation in the fifth round; while those who do not take the trouble to see the truth and follow it will assuredly fall under that condemnation. But remember always that the “damnation” means only rejection from this “aeon” or chain of worlds, a throwing back into the next of the successive life-waves. “Lost souls,” if you will; lost to us, perhaps, but not to the LOGOS; so they would be better described as temporarily laid aside. Of course it must not be supposed that the “belief” which saves them is the knowledge of Theosophy; it does not matter in the least what their religion is, so long as they are aiming at the spiritual life, so long as they have definitely ranged themselves on the side of good as against evil, and are working unselfishly onward and upward.

2. Cases in which the personality has been so much emphasized that the ego is almost shut out from it. Of these are two varieties — those who live only in their passions, and those who live only in their minds; and as both types are by no means uncommon it is worth while to try to understand exactly what happens to them.

We often speak of the ego as putting himself down into the matter of the lower planes, yet many students fail to realize that this is not a mere figure of speech, but has a very definite and very material side to it. The ego dwells in a causal body, and when he takes upon himself in addition a mental and an astral body, the operation involves the actual entangling of a portion of the matter of his causal body with matter of those lower astral and mental types. We may regard this “putting down” as kind of investment made by the ego. As in all investments, so in this; he hopes to get back more than he puts out, but there is a risk of disappointment — a possibility that he may lose something of what he invests, or under very exceptional circumstances there may even be a total loss which leaves him, not indeed absolutely bankrupt, but without available capital.

Let us consider the elaboration of this analogy. The ego possesses in his causal body matter of three levels — the first, second and third sub-planes of the mental; but for the enormous majority of mankind there is as yet no activity beyond the lowest of these three types, and even that is usually very partial. It is therefore only some of

this lowest type of causal matter that can be put down to lower levels, and only a small fraction even of that part can be entangled with mental and astral matter.

The ego's control over what is put down is very weak and imperfect, because he is still half asleep. But as his physical body grows up his astral and mental bodies are also developed, and the causal matter entangled with them is awakened by the vigorous vibrations which reach it through them. This fraction of a fraction which is fully entangled gives life and vigor and a sense of individuality to these vehicles, and they in turn react strongly upon it and arouse it to a keen realization of life. This keen realization of life is exactly what it needs, the very object for which it is put down; and it is the longing for this keen realization when it has it not which is spoken of as *trishna* (the thirst for manifested life, the desire to feel oneself really vividly alive), the force which draws the ego down again into reincarnation.

But just because this small fraction has had these experiences, and is therefore so much more awake the rest of the ego, it may often be so far intensified as to think itself the whole, and forget for the time its relation to "its Father which is in heaven." It may temporarily identify itself with the matter through which it should be working, and may resist the influence of that other portion which has been put down, but is not entangled — that which forms the link with the great mass of the ego on his own plane.

In order to understand this matter fully we must think of that portion of the ego which is awakened on the third sub-plane of the mental (remembering always how small a fraction even that is of the whole) as itself divided into three parts: (*a*) that which remains on its own plane; (*b*) that which is put down, but remains unentangled in lower matter; and (*c*) that which is thoroughly entangled with lower matter and receives vibrations from it. These are arranged in a descending scale, for just as (*a*) is a very small part of the real ego, so (*b*) is but a small part of (*a*), and (*c*) in turn a small part of (*b*). The second acts as a link between the first and third; we may symbolize (*a*) as the body, (*b*) as the arm stretched out, and (*c*) as the hand which grasps, or perhaps rather the tips of the fingers which are dipped into matter.

We have here a very delicately balanced arrangement, which may be affected in various ways. The intention is that the hand (*c*) should grasp firmly and guide the matter with which it is entangled, being fully directed all the time by the body (*a*) through the arm (*b*). Under favourable circumstances additional strength, and even additional matter, may be poured from (*a*) through (*b*) into (*c*), so that the control may become more and more perfect. (*C*) may grow in size as well as strength, and the more it does so the better, so long as the communication through (*b*) is kept open freely and (*a*) retains control. For the very entanglement of the causal matter which constitutes (*c*) awakens it to a keen activity and an accuracy of response to fine shades of vibration which it could gain in no other way, and this, when transmitted through (*b*) to (*a*), means the development of the ego.

Unfortunately the course of events does not always follow the ideal plan of working above indicated. When the control of (*a*) is feeble, it sometimes happens that (*c*) becomes so thoroughly immeshed in lower matter that (as I have said) it actually identifies itself with it, forgets for the time its high estate, and thinks of itself as the whole ego. If the matter be of the lower mental plane, we shall then have down here on the physical plane a man who is wholly materialistic. He may be keenly intellectual perhaps, but not spiritual; he may very likely be intolerant of spirituality and quite unable to comprehend or appreciate it. He may probably call himself

practical, matter-of-fact, unsentimental, while in reality he is hard as the nether millstone, and because of that hardness his life is a failure, and he making no progress.

If the matter in which he is so fatally entangled be astral, he will be (on the physical plane) one who thinks only of his own gratification, who is absolutely ruthless when in pursuit of some object which he strongly desires, a man utterly unprincipled and of brutal selfishness. Such a man lives in his passions, just as the man immeshed in mental matter lives in his mind. Cases such as these have been spoken of in our literature as "lost souls," though not irretrievably lost. Madame Blavatsky says of them:

"There is, however, still hope for a person who has lost his Higher Soul through his vices, while he is yet in the body. He may still be redeemed and made to turn on his material nature. For either an intense feeling of repentance, or one single earnest appeal to the Ego that has fled, or best of all, an active effort to amend one's ways, may bring the Higher Ego back again. The thread of connection is not altogether broken." (*Secret Doctrine*, III, 527.)

These are cases in which (*c*) has asserted itself against (*b*), and pressed it back towards (*a*); the arm has become attenuated and almost paralyzed, its strength and substance being withdrawn into the body, while the hand has set up for itself, and makes on its own account jerky and spasmodic movements which are not controlled by the brain. If the separation could become perfect it would correspond to an amputation at the wrist, but this very rarely takes place during physical existence, though only so much of communication remains as is necessary to keep the personality alive.

As Madame Blavatsky says, such a case is not entirely hopeless, for even at the last moment fresh life may be poured through that paralyzed arm if a sufficiently strong effort be made, and thus the ego may be enabled to recover some proportion of (*c*), as he has already recovered most of (*b*). Nevertheless, such a life has been wasted, for even if the man just contrives to escape serious loss, at any rate nothing has been gained, and much time has been frittered away.

It may well be thought incredible that such men as I have described could in any case escape serious loss; but, fortunately for our possibilities of progress, the laws under which we live are such that to achieve a really serious loss is no easy matter. The reason for that may perhaps be made clear by the following considerations.

All the activities that we call evil, whether they are working as selfish thoughts on the mental plane or as selfish emotions on the astral plane, invariably show themselves as vibrations of the coarser matter of those planes, belonging to their lower levels. On the other hand, every good and unselfish thought or emotion sets in vibration some of the higher types of matter on its plane; and because that finer matter is far more easily moved; any given amount of force spent in good thought or feeling produces perhaps a hundred times as much result as precisely the same amount of force sent out into the coarser matter. If this were not so, it is obvious that the ordinary man could never make any progress at all.

We shall probably do the quite undeveloped man of the world no injustice if we assume that ninety per cent of his thought and feeling is self-centred, even if not actually selfish; if ten per cent of it is spiritual and unselfish, he must already be rising somewhat above the average. Clearly if these proportions produced corresponding results, the vast majority of humanity would take nine steps

backwards for every one forwards, and we should have a retrogression so rapid that a few incarnations would deposit us in the animal kingdom out of which we evolved. Happily for us the effect of ten per cent of force directed to good ends enormously outweighs that of ninety per cent devoted to selfish purposes, and so on the whole such a man makes an appreciable advance from life to life. A man who has even one per cent of good to show makes a slight advance, so it will be readily understood that a man whose account balances exactly, so that there is neither advance nor retrogression, must have been living a distinctly evil life; while to obtain an actual descent in evolution a person must be an unusually consistent villain.

Thanks to this beneficent law the world is steadily but slowly evolving, even though we see round us all the while so much that is undesirable; and even such men as I have described may not after all fall very far. What they have lost is rather time and opportunity than actual position in evolution; but to lose time and opportunity means always additional suffering.

To see what they have lost and what they have failed to do, let us revert for a moment to the analogy of investment. The ego expects to recover that which he puts out to interest in lower matter — the block that we have called (*c*) — and he expects it to be improved both in quality and quantity. Its quality is better because it has become much more awake, and capable of instant and accurate response to a far more varied gamut of vibrations than before — a capacity which (*c*) when reabsorbed necessarily communicates to (*a*), though of course the store of energy which made such a powerful wave in (*c*) creates only a ripple when distributed throughout the substance of (*a*). (It should be noted here that although the vehicles, containing as they do the grosser as well as the finer types of the matter of their respective planes, can respond to and express evil thoughts and emotions, and although their excitement under such vibrations can produce perturbation in the entangled causal matter (*c*), it is quite impossible for that matter (*c*) to reproduce those vibrations or to communicate them to (*a*) or (*b*), simply because matter of the three higher mental levels can no more vibrate at the rate of the lowest plane than the string of a violin turned to a certain pitch can be made to produce a note lower than that pitch.)

(*C*) should also be increased in quantity, because the causal body, like all other vehicles, is constantly changing its matter, and when special exercise is given to a certain part of it, that part grows in size and becomes stronger, precisely as a physical muscle does when it is used. Every earth-life is an opportunity carefully calculated for such development in quality and quantity as is most needed by the ego; a failure to use that opportunity means the trouble and delay of another similar incarnation, its sufferings probably aggravated by the additional bad karma incurred.

Against the increment which the ego has a right to expect from each incarnation we must offset a certain amount of loss which in the earlier stages is scarcely avoidable. In order to be effective the entanglement with lower matter must be very intimate, and it is found that when that is so, it is scarcely ever possible to recover every particle, especially from the connection with the astral vehicle. When the time comes for separation from that it is almost always a shade and not a mere shell that is left behind on the astral plane; and that very distinction means that something of the causal material is lost. Except in the case of an unusually bad life, however, this amount should be much smaller than that gained by growth, and so there should be on the whole a profit on the transaction. With such men as I have described — men living entirely in their passions or their minds — there would be no gain either in quality or quantity, since the vibrations would not be such as could be stored in the

causal body; and on the other hand, as the entanglement had been so strong, there would certainly be considerable loss when the separation took place.

We must not allow the analogy of the arm and hand to mislead us in thinking of (b) and (c) as permanent appanages of the ego. During a life-period they may be considered as separate, but at the end of each life-period they withdraw into (a), and the result of their experience is distributed, as it were, through the whole of its substance; so that when the time comes for the ego to put part of himself out into incarnation once more, he does not stretch out again the old (b) and (c), for they have been absorbed in him and become part of him, just as a cupful of water emptied into a bucket becomes part of the water in the bucket and cannot be separated from it.

Any coloring matter which was present in the cup is distributed (though in paler tint) through the whole bucketful of water; and that coloring matter may be taken as symbolizing the qualities developed by experience. Just as it would be impossible to take out again from the bucket exactly the same cupful of water, so the ego cannot again put out the same (b) and (c). The plan is one to which he was accustomed before he became a separate ego at all, for it is identical with that pursued by the group-soul, except that the latter puts down many tentacles simultaneously, while the ego puts forth only one at a time. Therefore the personality in each new incarnation is a different one, though the ego behind it remains the same.

3. Cases in which the personality captures the part of the ego which is put down, and actually breaks away are happily excessively rare, but they have happened, and they represent the most appalling catastrophe that can occur to the ego concerned. This time (c), instead of repelling (b) and driving it gradually back into (a), by degrees absorbs (b) and detaches it from (a). This can only be accomplished by determined persistence in deliberate evil — black magic, in short. Reverting to our former analogies, this is equivalent to amputation at the shoulder, or to the loss by the ego of nearly all his available capital. Fortunately for him he cannot lose everything, because (b) and (c) together are only a small proportion of (a), and behind (a) is the great undeveloped portion of the ego on the first and second mental sub-planes. Mercifully a man, however incredibly foolish or wicked, cannot completely wreck himself, for he cannot bring that higher part of the causal body into activity until he has reached a level at which such evil is unthinkable.

Now that the central point of our immersion in matter is passed, the whole force of the universe is pressing upwards towards unity, and the man who is willing to make all his life an intelligent co-operation with nature gains as part of his reward an ever-increasing perception of the reality of this unity. But on the other hand it is obvious that men may set themselves in opposition to nature and, instead of working unselfishly for the good of all, may debase every faculty they possess for purely selfish ends; and of them also, as of the others, the old saying is true, "Verily I say unto you, they have their reward." They spend their lives in striving for separateness, and for a long time they attain it, and it is said that that sensation of being utterly alone in space is the most awful fate that can ever befall the sons of men.

This extraordinary development of selfishness is the characteristic of the black magician, and it is among their ranks only that men can be found who are in danger of this terrible fate. Many and loathsome are their varieties, but they may all be classed in one or other of two great divisions. They both use such occult arts as they possess for purely selfish purposes, but these purposes differ.

In the commoner and less formidable type the object pursued is the gratification of sensual desire of some sort, and naturally the result of a life devoted to nothing but that is to centre the man's energy in the desire body; so that if the man who works on these lines has succeeded in killing out from himself every unselfish or affectionate feeling, every spark of higher impulse, naturally nothing is left but a remorseless, ruthless monster of lust, who finds himself after death neither able nor desirous to rise above the lowest sub-division of the astral plane. The whole of such mind as he has is absolutely in the grip of desire, and when the struggle takes place the ego can recover none of it, and finds himself seriously weakened in consequence.

By his carelessness in permitting this he has for the time cut himself off from the current of evolution, from the mighty wave of the life of the LOGOS, and so, until he can return to incarnation, he stands (what appears to him to be) outside that life in the condition of avichi, the waveless. Even when he does return to incarnation it cannot be among those whom he has known before, for he has not enough available capital left to provide ensoulment for a mind and body at his previous level. He must now be content to occupy vehicles of a far less evolved type, belonging to some earlier race; so that he has thrown himself far back in evolution and must climb over again many rungs of the ladder.

He will probably be born as a savage, but will most likely be a chief among them, as he will still have some intellect. It has been said that he may even throw himself so far back that he may be unable to find upon the world in its present condition any type of human body low enough for the manifestation which he now requires, so that he may even be incapacitated from taking any further part in this scheme of evolution, and may therefore have to wait in a kind of condition of suspended animation for the commencement of another.

Meanwhile what of the amputated personality? It is no longer a permanent evolving entity, but it remains full of vigorous and wholly evil life, entirely without remorse or responsibility. As the fate before it is disintegration amidst the unpleasant surroundings of what is called the "eighth sphere," it naturally tries to maintain some sort of existence on the physical plane as long as possible. Vampirism of some kind is its sole means of prolonging its baneful existence, and when that fails it has been known to seize upon any available body, driving out the lawful owner. The body chosen might very probably be that of a child, both because it might be expected to last longer and because an ego which had not yet really taken hold could be more easily dispossessed. In spite of its frenzied efforts its power seems soon to fail, and I believe there is no instance on record of its successfully stealing a second body after its first theft is worn out. The creature is a demon of the most terrible type — a monster for which there is no permanent place in the scheme of evolution to which we belong.

Its natural tendency therefore is to drift *out* of this evolution, and to be drawn by the irresistible force of law into that astral cesspool which in earlier Theosophical writings was called the eighth sphere, because what passes into it stands outside the ring of seven worlds, and cannot return into their evolution. There, surrounded by loathsome relics of all of the concentrated vileness of the ages that are past, burning ever with desire, yet without possibility of satisfaction, this monstrosity slowly decays, its mental and causal matter being thus at last set free — never indeed to rejoin the ego from which it has torn itself, but to be distributed among the other matter of the plane to enter gradually into fresh combinations, and so put to better uses. It is consoling to know that such entities are so rare as to be practically

unknown, and that they have the power to seize only those who have in their nature pronounced defects of kindred type.

But there is another type of the black magician, in outward appearance more respectable, yet really even more dangerous, because more powerful. This is the man who instead of giving himself up altogether to sensuality of one kind or another, sets before himself the goal of a more refined but not less unscrupulous selfishness. His object is the acquisition of an occult power higher and wider indeed, but to be used always for his own gratification and advancement, to further his own ambition or satisfy his own revenge.

In order to gain this he adopts the most rigid asceticism as regards mere fleshly desires, and starves out the grosser particles of his astral body as perseveringly as does the pupil of the Great White Brotherhood. But though it is only a less material kind of desire with which he will allow his mind to become entangled, the centre of his energy is none the less entirely in his personality, and when at the end of the astral life the time of the separation comes, the ego is able to recover no whit of his investment. For the man therefore the result is much the same as in the former case, except that he will remain in touch with the personality much longer, and will to some extent share its experiences so far as it is possible for an ego to share them.

The fate of that personality, however, is very different. The comparatively tenuous astral integument is not strong enough to hold it for any length of time on the astral plane, and yet it has entirely lost touch with the heaven-world which should have been its habitat. For the whole effort of the man's life has been to kill out such thoughts as naturally find their result at that level. His one endeavour has been to oppose natural evolution, to separate himself from the great whole and to war against it; and as far as the personality goes he has succeeded. It is cut off from the light and life of the solar system; all that is left to it is the sense of absolute isolation, of being alone in the universe.

We see therefore that in this rarer case the lost personality practically shares the fate of the ego from which it is in process of detaching itself. But in the case of the ego such an experience is only temporary, although it may last for what we should call a very long time, and the end of it for him will be reincarnation and a fresh opportunity. For the personality however the end of it is disintegration — the invariable end of that which has cut itself off from its source; but through what stages of horror the lost personality passes before that is reached, who shall say? Yet be it remember that neither of these states is eternal — that neither of them can in any case be reached except by deliberate life-long persistence in evil.

I have heard from our President of yet another even more remote possibility, of which I have never myself seen an instance. It is stated that, just as (c) may absorb (b) and revolt against (a), set up on its own account and break away, it is (or at any rate has been in the past) just within the limits of practicability that the deadly disease of separateness and selfishness may infest (a) also, that it too may be absorbed into the monstrous growth of evil, and may be torn away from the undeveloped portion of the ego, so that the causal body itself may be hardened and carried away, instead of only the personality.

If this be so, it constitutes yet a fourth group, and would correspond not to an amputation, but to an entire destruction of the body. Such an ego could not reincarnate in the human race; ego though it be, it will fall into the depths of animal life, and would need at least a whole chain-period to regain the status which it had

lost. But this, though theoretically possible, is practically scarcely conceivable. Yet it will be noted that even *then* the undeveloped part of the ego remains as the vehicle of the monad.

We learn then that millions of backward egos, unable as yet to bear the strain of the higher evolution, will fall out in the middle of the fifth round and come along on the crest of the following wave; that those who live selfishly, whether in the intellect or the passions, do so at their own proper peril, and at the serious risk of much sorrow and loss; that those who are so foolish as to dabble in black magic may bring upon themselves horrors before which imagination shrinks appalled; but that the term "lost soul" is, after all, a misnomer, since every man is a spark of the divine fire, and therefore can never under any circumstances be lost or extinguished. The will of the LOGOS is man's evolution. In our blindness we may for a time resist Him, but to Him time is naught, and if we cannot see to-day He waits patiently till to-morrow, but always in the end His will is done.

THE FOCUS OF CONSCIOUSNESS

The consciousness in man can only be focussed in one vehicle at a time, though he may be simultaneously conscious through the others in a vaguer way. If you will hold up a finger in front of your face you will find that you can so focus your eyes as to see the finger perfectly. At the same time you will see the wall and furniture behind the finger, but not perfectly, because they are out of focus. In a moment you can change the focus of your eyes so that you will see the wall and the furniture perfectly; in that case you will still see the finger, but will see it only dimly, because it in turn is now out of focus.

Precisely in the same way if a man who has developed astral and mental consciousness focusses himself in the physical brain as in ordinary life, he will see perfectly the physical bodies of his friends, and will at the same time see their astral and mental bodies, but only somewhat dimly. In far less than a moment he can change that focus so that he will see the astral quite fully and perfectly. In that case he will still see the mental and physical bodies, but not in full detail. The same thing is true of the mental sight and of the sight of higher planes.

You ask how it is possible for an entity functioning on the astral plane to be aware of a physical accident or to hear a physical cry. It would not be the physical cry that he would hear; physical sounds assuredly produce an effect upon the astral plane, though I do not think that we should be quite correct in calling that result sound. Any cry which had in it strong feeling or emotion would produce a strong effect upon the astral plane, and would convey exactly the same idea there as here. In the case of an accident the rush of emotion caused by the pain or the fright would flame out like a great light, and could not fail to attract the attention of a seer if he were anywhere near. A case in which this very thing occurred is related in *Invisible Helpers* — a case in which a boy fell over a cliff; and was supported and comforted by Cyril until physical help could be brought.

FORCE-CENTRES

In each of our vehicles there are certain force-centres which in Sanskrit are called chakrams — a word which signifies a wheel or revolving disc. These are points of connection at which force flows from one vehicle to another. They may easily be seen in the etheric double, where they show themselves as saucer-like depressions or vortices in its surface. They are often spoken of as corresponding to certain physical organs; but it must be remembered that the etheric force-centre is not in the interior of the body, but on the surface of the etheric double, which projects a quarter of an inch beyond the outline of the denser matter.

The centres which are usually employed in occult development are seven, and they are situated in the following parts of the body: (1) the base of the spine; (2) the navel; (3) the spleen; (4) the heart; (5) the throat; (6) the space between the eyebrows; and (7) the top of the head. There are other force-centres in the body besides these, but they are not employed by students of the white magic. It may be remembered that Madame Blavatsky speaks of three others which she calls the lower centres: there are schools which use these, but the dangers connected with them are so serious that we should consider their awakening as the greatest of misfortunes.

These seven are often described as corresponding to the seven colors and to the notes of the musical scale; and in the Indian books certain letters of the alphabet and certain forms of vitality are mentioned as attached to each of them. They are also poetically described as resembling flowers, and to each of them a certain number of petals is assigned.

It must be remembered that they are vortices of etheric matter, and that they are all in rapid rotation. Into each of these open mouths, at right angles to the plane of the whirling disc or saucer, rushes a force from the astral world (which we will call the primary force) — one of the forces of the LOGOS. That force is seven-fold in its nature, and all its forms operate in all the centres, though in each of them one of the forms is always greatly predominant.

This inrush of force brings the divine life into the physical body, and without it that body could not exist. These centres through which the force can enter are therefore actually necessary to the existence of the vehicle, and so are in operation in every one, but they may be whirling with very different degrees of activity. Their particles may be in comparatively sluggish motion, just forming the necessary vortex for the force and no more, or they may be glowing and pulsating with living light so that an enormously greater amount of force passes through them, with the result that various additional faculties and possibilities are opened to the ego as he functions on that plane.

Now those forces which rush into the centre from without set up at right angles to themselves (that is to say, in the surface of the etheric double) secondary forces in undulatory circular motion, just as a bar-magnet thrust into an induction coil produces a current of electricity which flows round the coil at right angles to the axis or direction of the magnet. The primary force itself having entered the vortex, radiates from it again at right angles, but in straight lines, as though the centre of the vortex were the hub of a wheel, and the radiations of the primary force its spokes.

The number of these “spokes” differs in the different force-centres, and determines the number of “petals” which each of them exhibits.

Each of these secondary forces, which sweep round the saucer-like depression, has its own characteristic wave-length, just as has light of a certain colour; but instead of moving in a straight line as light does, it moves along in certain relatively large undulations of various sizes, each of which is some multiple of the smaller wave-lengths within it, though the exact proportions have not as yet been calculated. The number of undulations is determined by the number of spokes in the wheel, and the secondary force weaves itself under and over the radiating currents of the primary just as basket-work might be woven round the spokes of a carriage-wheel. The wave-lengths are infinitesimal, and probably some thousands of them are included within one of the undulations. As the forces rush round in the vortex, these undulations of different sizes, crossing one another in this basket-work pattern, produce an appearance which is not inaptly described in the Hindu books as resembling the petals of a flower; or it is still more like certain saucers or shallow vases of wavy iridescent glass which I have seen in Venice. All of these undulations or petals have that shimmering iridescent effect, like mother-of-pearl, yet each of them has usually its own predominant color.

In the ordinary men, in whom these centres are just active enough to be channels for sufficient force to keep his body alive, these colors glow with a comparatively dull light; but in those in whom the centres have been aroused and are in full activity they are of blinding brilliancy, and the centres themselves, which have gradually grown from a diameter of about two inches to the size of an ordinary saucer, are blazing and coruscating like miniature suns.

The first centre, at the base of the spine, has a primary force which radiates out in four spokes, and therefore arranges its undulations so as to give the effect of its being divided into quadrants, with hollows between them. This makes it seem as though marked with the sign of the cross, and for that reason the cross is often used to symbolize this centre, and sometimes a flaming cross is taken to indicate the serpent-fire which resides in it. When aroused into full activity this centre is fiery orange-red in color, corresponding closely with the type of vitality which is sent down to it from the splenic centre. Indeed, it will be noticed that in the case of every one of these centres a similar correspondence with the color of its vitality may be seen.

The second centre, at the navel or solar plexus, receives a primary force with ten radiations, so it vibrates in such a manner as to divide itself into ten undulations or petals. It is very closely associated with feelings and emotions of various kinds. Its predominant color is a curious blending of various shades of red, though there is also a great deal of green in it.

The third centre, at the spleen, is devoted to the specialization, subdivision and dispersion of the vitality which comes to us from the sun. That vitality is poured out again from it in six horizontal streams, the seventh variety being drawn into the hub of the wheel. This centre therefore has six petals or undulations, and is specially radiant, glowing and sun-like.

The fourth centre, at the heart, is also of a glowing golden color, and each of its quadrants is divided into three parts, which gives it twelve undulations, because its primary force makes for it twelve spokes.

The fifth centre, at the throat, has sixteen spokes, and therefore sixteen apparent divisions. There is a good deal of blue in it, but its general effect is silvery and gleaming, with a kind of suggestion as of moon-light upon rippling water.

The sixth centre, between the eyebrows, has the appearance of being divided into halves, the one predominantly rose-colored, though with a great deal of yellow about it, and the other predominantly a kind of purplish-blue, again closely agreeing with the colors of the special types of vitality that vivify it. Perhaps it is for this reason that this centre is mentioned in Indian books as having only two petals, though if we are to count undulations of the same character as those of the previous centres we shall find that each half is subdivided into forty-eight of these, making ninety-six in all, because its primary force has that number of radiations.

The seventh, the centre at the top of the head, is when stirred into full activity perhaps the most resplendent of all, full of indescribable chromatic effects and vibrating with almost inconceivable rapidity. It is described in Indian books as thousand-petalled, and really this is not very far from the truth, the number of the radiations of its primary force in the outer circle being nine hundred and sixty. In addition to this it has a feature which is possessed by none of the other centres — a sort of subsidiary whirlpool of gleaming white flushed with gold in its heart — a minor activity which has twelve undulations of its own.

I have heard it suggested that each of the different petals of these force-centres represents a moral quality, and that the development of that quality brings the centre into activity. I have not yet met with any facts which confirm this, nor am I able to see exactly how it can be, because the appearance is produced by certain quite definite and easily recognizable forces, and the petals in any particular centre are either active or not active according as these forces have or have not been aroused, and their development seems to me to have no more connection with morality than has the development of the biceps. I have certainly met with persons in whom some of the centres were in full activity, though the moral development was by no means exceptionally high, whereas in other persons of high spirituality and the noblest possible morality the centres were not yet vitalized at all, so that there does not seem to me to be any connection between the two developments.

Besides the keeping alive of the physical vehicle, these force-centres have another function, which comes into play only when they are awakened into full activity. Each of these etheric centres corresponds to an astral centre though as the astral centre is a vortex in four dimensions it has an extension in a direction quite different from the etheric, and consequently is by no means always co-terminous with it, though some part is always coincident. The etheric vortex is always on the surface of the etheric body, but the astral centre is frequently quite in the interior of that vehicle.

The function of each of these etheric centres when fully aroused is to bring down into physical consciousness whatever may be the quality inherent in the astral centre which corresponds to it; so, before cataloguing the results to be obtained by arousing the etheric centres into activity, it may be well to consider what is done by each of the astral centres, although these latter are already in full activity in all cultured people of the later races. What effect, then, has the quickening of each of these astral centres produced in the astral body?

The first of these centres, that at the base of the spine, is the home of that mysterious force called the serpent-fire or, in *The Voice of the Silence*, the World's Mother. I will say more about this force later; for the moment let us consider its effects on the astral

centres. This force exists on all planes, and by its activity the rest of the centres are aroused. We must think of the astral body as having been originally an almost inert mass, with nothing but the vaguest consciousness, with no definite power of doing anything, and no clear knowledge of the world which surrounded it. The first thing that happened, then, was the awakening of that force in the man at the astral level. When awakened it moved on to the second centre, corresponding to the navel, and vivified it, thereby awakening in the astral body the power of feeling — a sensitiveness to all sorts of influences, though without as yet anything like the definite comprehension that comes from seeing or hearing.

Then it moved on to the third, that corresponding to physical spleen, and through it vitalized the whole astral body, enabling the person to travel consciously, though with only a vague conception as yet of what he encountered on his journeys.

The fourth centre, when awakened, endowed the man with the power to comprehend and sympathize with the vibrations of other astral entities, so that he could instinctively understand their feelings.

The awakening of the fifth, that corresponding to the throat, gave him the power of hearing on the astral plane — that is to say, it caused the development of that sense which in the astral world produces on our consciousness the effect which on the physical plane we call hearing.

The development of the sixth, that corresponding to the centre between the eyebrows, in a similar manner produced astral sight — the power to perceive definitely the shape and nature of astral objects, instead of vaguely sensing their presence.

The arousing of the seventh, that corresponding to the top of the head, rounded off and completed for him the astral life, and endowed him with the perfection of its faculties.

With regard to this centre a certain difference seems to exist according to the type to which men belong. For many of us the astral vortices corresponding to the sixth and seventh of these centres both converge upon the pituitary body, and for those people the pituitary body is practically the only direct link between the physical and the higher planes. Another type of people, however, while still attaching the sixth centre to the pituitary body, bend or slant the seventh until its vortex coincides with the atrophied organ called the pineal gland, which is by people of that type vivified and made into a line of communication directly passing through the intermediate astral plane in the ordinary way. It was for this type that Madame Blavatsky was writing when she laid such emphasis upon the awakening of that organ.

Thus these centres to some extent take the place of sense-organs for the astral body, and yet without proper qualification that expression would be decidedly a misleading one, for it must never be forgotten that though, in order to make ourselves intelligible, we constantly have to speak of astral seeing or astral hearing, all that we really mean by those expressions is the faculty of responding to such vibrations as convey to the man's consciousness, when he is functioning in his astral body, information of the same character as that conveyed to him by his eyes and ears while he is in the physical body.

But in the entirely different astral conditions specialized organs are not necessary for the attainment of this result. There is matter in every part of the astral body which is capable of such response, and consequently the man functioning in that vehicle sees

equally well the objects behind him, above him, and beneath him, without needing to turn his head. The centres, therefore, cannot be described as organs in the ordinary sense of the word, since it is not through them that the man sees or hears, as he does here through the eyes and ears. Yet it is upon their vivification that the power of exercising these astral senses depends, each of them as it is developed giving to the whole astral body the power of response to a new set of vibrations.

As all the particles of the astral body are constantly flowing and swirling about like those of boiling water, all of them in turn pass through each of the centres or vortices, so that each centre in its turn evokes in all the particles of the body the power of receptivity to a certain set of vibrations, and so all the astral senses are equally active in all parts of the body. But even when these astral senses are fully awakened it by no means follows that the man will be able to bring through his physical body any consciousness of their action.

While all this astral awakening was taking place, then, the man in his physical consciousness knew nothing whatever of it. The only way in which the dense body can be brought to share all these advantages is by repeating that process of awakening with the etheric centres. That is to be achieved precisely in the same way as it was done upon the astral plane — that is to say, by the arousing of the serpent-fire, which exists clothed in etheric matter on the physical plane, and sleeps in the corresponding etheric centre, that at the base of the spine.

In this case the arousing is done by a determined and long-continued effort of the will, and to bring that first centre into full activity is precisely to awaken the serpent-fire. When once that is aroused, it is by its tremendous force that the other centres are vivified. Its effect on the other etheric centres is to bring into the physical consciousness the powers which were aroused by the development of their corresponding astral centres.

When the second of the etheric centres, that at the navel, comes into activity the man begins in the physical body to be conscious of all kinds of astral influences, vaguely feeling that some of them are friendly and others hostile, or that some places are pleasant and others unpleasant, without in the least knowing why.

When the third centre, that at the spleen, is awakened, the man is enabled to remember his vague astral journeys, though sometimes only very partially. The effect of a slight and accidental stimulation of this centre is often to produce half-remembrance of a blissful sensation of flying through the air.

Stimulation of the fourth, that at the heart, makes the man instinctively aware of the joys and sorrows of others, and sometimes even causes him to reproduce in himself by sympathy their physical aches and pains.

The arousing of the fifth, that at the throat, enables him to hear voices, which sometimes make all kinds of suggestions to him. Also sometimes he hears music, or other less pleasant sounds. When it is fully working it makes the man clair-audient as far as the etheric and astral planes are concerned.

When the sixth, between the eye-brows, becomes vivified, the man begins to see things, to have various sorts of waking visions, sometimes of places, sometimes of people. In its earlier development, when it is only just beginning to be awakened, it often means nothing more than half-seeing landscapes and clouds of color. The full arousing of this brings about clairvoyance.

The centre between the eye-brows is connected with sight in yet another way. It is through it that the power of magnification of minute physical objects is exercised. A tiny flexible tube of etheric matter is projected from the centre of it, resembling a microscopic snake with an eye at the end of it. This is the special organ used in that form of clairvoyance, and the eye at the end of it can be expanded or contracted, the effect being to change the power of magnification according to the size of the object which is being examined. This is what is meant in ancient books when mention is made of the capacity to make oneself large or small at will. To examine an atom one develops an organ of vision commensurate in size with the atom. This little snake projecting from the centre of the forehead was symbolized upon the head-dress of the Pharaoh of Egypt, who as the chief priest of his country was supposed to possess this among many other occult powers.

When the seventh centre is awakened the man is able by passing through it to leave his body in full consciousness and also to return to it without the usual break, so that his consciousness will be continuous through night and day. When the fire has been passed through all these centres in a certain order (which varies for different types of people) the consciousness becomes continuous up to the entry into the heaven-world at the end of the life on the astral plane, no difference being made by either the temporary separation from the physical body during sleep or the permanent division at death.

Before this is done, however, the man may have many glimpses of the astral world, for especially strong vibrations may at any time galvanize one or other of the centres into temporary activity, without arousing the serpent-fire at all; or it may happen that the fire may be partially roused, and in this way also partial clairvoyance may be produced for the time. For this fire exists in seven layers or seven degrees of force, and it often happens that a man who exerts his will in the effort to arouse it may succeed in affecting one layer only, and so when he thinks that he has done the work he may find it ineffective, and may have to do it all over again many times, digging gradually deeper and deeper, until not only the surface is stirred but the very heart of the fire is in full activity.

THE SERPENT-FIRE

As we know it, this serpent-fire (called in Sanskrit kundalini) is the manifestation on the physical plane of one of the great world-forces — one of the powers of the LOGOS. You know that what we call electricity is a manifestation of one of His forces, and that that force may take various forms, such as heat, light and motion. Another of His forces is vitality — what is sometimes called prana, but this is not interchangeable with any of those other forms which we have just mentioned. We may say then that vitality and electricity are as it were the lower ends of two of His streams of force.

This serpent-fire may be taken as the lower end of another of His streams, the physical-plane manifestation of another of the manifold aspects of His power. Like vitality, it exists on all planes of which we know anything; but it is the expression of it in etheric matter with which we have to do. It is not convertible into either vitality or electricity, and does not seem to be affected in any way by either. I have seen as much as a million and a quarter volts of electricity put into a human body, so that when the man held out his arms towards the wall huge flames rushed out from his fingers, yet he felt nothing unusual, nor was he in the least burnt unless he accidentally touched some external object; but even this enormous display of power had no effect whatever upon the serpent-fire.

In *The Voice of the Silence* this force is called “the Fiery Power” and “the World's Mother.” There is much reason for all these strange names, for it is in very truth like liquid fire as it rushes through the body, and the course through which it ought to move is a spiral one like the coils of a serpent. It is called the World's Mother because through it our various vehicles may be vivified, so that the higher worlds may open before us in succession.

In the body of man its home, as we have said, is at the base of the spine, and for the ordinary person it lies there unawakened, and its very presence unsuspected, during the whole of his life; and it is indeed far better to allow it thus to remain dormant until the man has made definite moral development, until his will is strong enough to control it and his thoughts pure enough to enable him to face its awakening without injury. No one should experiment with it without definite instruction from a teacher who thoroughly understands the subject, for the dangers connected with it are very real and terribly serious. Some of them are purely physical. Its uncontrolled movement often produces intense physical pain, and it may readily tear tissues and even destroy physical life. This, however, is the least of the evils of which it is capable, for it may do permanent injury to vehicles higher than the physical.

One very common effect of rousing it prematurely is that it rushes downwards in the body instead of upwards, and thus excites the most undesirable passions — excites them and intensifies their effects to such a degree that it becomes absolutely impossible for the man to resist them, because a force has been brought into play in whose presence he is as helpless as a swimmer before the jaws of a shark. Such men become satyrs monsters of depravity, because they are in the grasp of a force which is out of all proportion to the ordinary human power of resistance. They may probably gain certain supernormal powers, but these will be such as will bring them into touch with a lower order of evolution with which humanity is intended to hold no commerce and to escape from its awful thralldom may take them more than one

incarnation. I am not in any way exaggerating the horror of this thing, as a person to whom it was all a matter of hearsay might unwittingly do. I have myself been consulted by people upon whom this awful fate has already come, and I have seen with my own eyes what happened to them. There is a school of black magic which purposely uses this power in this way, in order that through it may be vivified those lower force-centres which are never used by the followers of the Good Law.

Even apart from this greatest of its dangers, its premature unfoldment has many other unpleasant possibilities. It intensifies everything in man's nature, and it reaches the lower and evil qualities more readily than the good. In the mental body, for example, ambition is very readily aroused, and soon swells to an incredibly inordinate degree. It would be likely to bring with it a great intensification of the power of intellect, but at the same time it would produce abnormal and satanic pride, such as is quite inconceivable to the ordinary man. It is not wise for a man to think that he is prepared to cope with any force that may arise within his body; this is no ordinary force, but something resistless. Assuredly no uninstructed man should ever try to awaken it, and if such a one finds that it has been aroused by accident he should at once consult some one who fully understands these matters.

It may be noticed that I have specially and intentionally refrained from explaining how this arousing is to be done, or mentioning the order in which the force (when aroused) should be passed through these various centres, for that should by no means be attempted except at the express suggestion of a Master, who will watch over His pupil during the various stages of the experiment.

I most solemnly warn all students against making any effort whatever in the direction of awakening these tremendous forces, except under such qualified tuition, for I have myself seen many cases of the terrible effects which follow from ignorant and ill-advised meddling with these very serious matters. The force is a tremendous reality, one of the great basic facts of nature, and most emphatically it is not a thing to be played with, or to be lightly taken in hand, for to experiment with it without understanding it is far more dangerous than it would be for a child to play with nitroglycerine. As is very truly said in the *Hathayogapradipika*: "It gives liberation to yogis and bondage to fools." (III, 107.)

In matters such as these, students so often seem to think that some special exception to the laws of nature will be made in their case, that some special intervention of providence will save them from the consequences of their folly. Assuredly nothing of that sort will happen, and the man who wantonly provokes an explosion is quite likely to become its first victim. It would save much trouble and disappointment if students could be induced to understand that in all matters connected with occultism we mean just exactly and literally what we say, and that it is applicable in every case without exception. For there is no such thing as favoritism in the working of the great laws of the universe.

Everybody wants to try all possible experiments; everybody is convinced that he is quite ready for the highest possible teaching and for any sort of development, and no one is willing to work patiently along at the improvement of character, and to devote his time and his energies to doing something useful for the work of the Society, waiting for all these other things until a Master shall announce that he is ready for them. The old aphorism still remains true: "Seek ye first the kingdom of God and His righteousness, and all these things shall be added unto you."

There are some cases in which the fire wakes spontaneously, so that a dull glow is felt; it may even begin to move of itself, though this is rare. In this latter case it would be likely to cause great pain, as, since the passages are not prepared for it, it would have to clear its way by actually burning up a great deal of etheric dross — a process that cannot but engender suffering. When it thus awakes of itself or is accidentally aroused, it usually tries to rush up the interior of the spine, instead of following the spiral course into which the occultist is trained to guide it. If it be possible, the will should be set in motion to arrest its onward rush, but if that proves to be impossible (as is most likely) no alarm need be felt. It will probably rush out through the head and escape into the surrounding atmosphere, and it is likely that no harm will result beyond a slight weakening. Nothing worse than a temporary loss of consciousness need be apprehended. The really appalling dangers are connected not with its upward rush, but with the possibility of its turning downwards and inwards.

Its principal function in connection with occult development is that by being sent through the force-centres in the etheric body, as above described, it vivifies these centres and makes them available as gates of connection between the physical and astral bodies. It is said in *The Voice of the Silence* that when the serpent-fire reaches the centre between the eye-brows and fully vivifies it, it confers the power of hearing the voice of the Master — which means in this case the voice of the ego or higher self. The reason for this statement is that when the pituitary body is brought into working order it forms a perfect link with the astral vehicle, so that through it all communications from within can be received.

It is not only this one; all the higher force-centres have presently to be awakened, and each must be made responsive to all kinds of astral influences from the various astral sub-planes. This development will come to all in due course, but most people cannot gain it during the present incarnation, if it is the first in which they have begun to take these matters seriously in hand. Some Indians might succeed in doing so, as their bodies are by heredity more adaptable than most others; but it is really for the majority the work of a later round altogether. The conquest of the serpent-fire has to be repeated in each incarnation, since the vehicles are new each time, but after it has been once thoroughly achieved these repetitions will be an easy matter. It must be remembered that its action varies with different types of people; some, for example, would see the higher self rather than hear its voice. Again, this connection with the higher has many stages; for the personality it means the influence of the ego, but for the ego himself it means the power of the monad, and for the monad in turn it means to become a conscious expression of the LOGOS.

It may be of use if I mention my own experience in this matter. In the earlier part of my residence in India twenty-five years ago I made no effort to rouse the fire — not indeed knowing very much about it, and having the opinion that, in order to do anything with it, it was necessary to be born with a specially psychic body, which I did not possess. But one day one of the Masters made a suggestion to me with regard to a certain kind of meditation which would evoke this force. Naturally I at once put the suggestion into practice and in course of time was successful. I have no doubt, however, that He watched the experiment, and would have checked me if it had become dangerous. I am told that there are Indian ascetics who teach this to their pupils, of course keeping them under careful supervision during the process. But I do not myself know of any such, nor should I have confidence in them unless they were specially recommended by some one whom I knew to be possessed of real knowledge.

People often ask me what I advise them to do with regard to the arousing of this force. I advise them to do exactly what I myself did. I recommend them to throw themselves into Theosophical work and wait until they receive a definite command from some Master who will undertake to superintend their psychic development, continuing in the meantime all the ordinary exercises of meditation that are known to them. They should not care in the least whether such development comes in this incarnation or in the next, but should regard the matter from the point of view of the ego and not of the personality, feeling absolutely certain that the Masters are always watching for those whom They can help, that it is entirely impossible for any one to be overlooked, and that They will unquestionably give Their directions when They think that the right time has come.

I have never heard that there is any sort of age limit with regard to the development, and I do not see that age should make any difference, so long as one has perfect health; but the health is a necessity, for only a strong body can endure the strain, which is much more serious than anyone who has not made the attempt can possibly imagine.

The force when aroused must be very strictly controlled, and it must be moved through the centres in an order which differs for people of different types. The movement also, to be effective, must be made in a particular way, which the Master will explain when the time comes.

I have said that the astral and etheric centres are in very close correspondence; but between them, and interpenetrating them in a manner not readily describable, is a sheath composed of a single layer of physical atoms much compressed and permeated by a special form of vital force. The divine life which normally descends from the astral body to the physical is so attuned as to pass through this with perfect ease, but it is an absolute barrier to all other forces — all which cannot use the atomic matter of both the planes. This web is the natural protection provided by nature to prevent a premature opening up of communication between the planes — a development which could lead to nothing but injury.

It is this which under normal conditions prevents clear recollection of what has happened during sleep, and it is this also which causes the momentary unconsciousness which always occurs at death. But for this merciful provision the ordinary man, who knows nothing about all these things and is entirely unprepared to meet them, could at any moment be brought by any astral entity under the influences of forces to cope with which would be entirely beyond his strength. He would be liable to constant obsession by any being on the astral plane who desired to seize upon his vehicles.

It will therefore be readily understood that any injury to this web is a serious disaster. There are several ways in which injury may come, and it behooves us to use our best endeavours to guard against it. It may come either by accident or by continued malpractice. Any great shock to the astral body, such for example as a sudden terrible fright, may rend apart this delicate organism and, as it is commonly expressed, drive the man mad. (Of course there are other ways in which fear may cause insanity, but this is one.) A tremendous outburst of anger may also produce the same effect. Indeed it may follow upon any exceedingly strong emotion of an evil character which produces a kind of explosion in the astral body.

The malpractices which may more gradually injure this protective web are of two classes — the use of alcohol or narcotic drugs and the deliberate endeavour to throw

open the doors which nature has kept closed, by means of such a process as is described in spiritualistic parlance as sitting for development. Certain drugs and drinks — notably alcohol and all the narcotics, including tobacco — contain matter which on breaking up volatilizes, and some of it passes from the physical plane to the astral. (Even tea and coffee contain this matter, but in quantities so infinitesimal that it is usually only after long-continued abuse of them that the effect manifests itself.)

When this takes place in the body of man these constituents rush out through the force-centres in the opposite direction to that for which they are intended, and in doing this repeatedly they seriously injure and finally destroy the delicate web. This deterioration or destruction may be brought about in two different ways, according to the type of the person concerned and to the proportion of the constituents in his etheric and astral bodies. First, the rush of volatilizing matter actually burns away the web, and therefore leaves the door open to all sorts of irregular forces and evil influences.

The second result is that these volatile constituents, in flowing through, somehow harden the atom so that its pulsation is to a large extent checked and crippled, and it is no longer capable of being vitalized by the particular type of force which welds it into a web. The result of this is a kind of ossification of the web, so that instead of having too much coming through from one plane to the other, we have very little of any kind coming through.

We may see the effects of both these types of deterioration in the case of men who yield themselves to drunkenness. Some of those who are affected in the former way fall into delirium tremens, obsession or insanity; but those are after all comparatively rare. Far more common is the second type of deterioration — the case in which we have a kind of general deadening down of the man's qualities, resulting in gross materialism, brutality and animalism, in the loss of all finer feelings and of the power to control himself. He no longer feels any sense of responsibility; he may love his wife and children when sober, but when the fit of drunkenness comes upon him he will use the money which should have bought bread for them to satisfy his own bestial cravings, the affection and the responsibility having apparently entirely disappeared.

The second type of effect is very commonly to be seen among those who are slaves of the tobacco habit; again and again we find that they persist in their self-indulgence even when they know perfectly well that it causes nausea and misery to their neighbors. We shall recognize the deterioration at once when we think that this is the only practice in which a gentleman will persist when he is aware that it causes acute annoyance to others. Clearly in this case the finer feelings have already been seriously blunted.

All impressions which pass from one plane to the other are intended to come only through the atomic sub-planes, as I have said; but when this deadening process sets in, it presently infects not only other atomic matter, but matter of even the second and third sub-planes, so that the only communication between the astral and the etheric is when some force acting on the lower sub-planes (upon which only unpleasant and evil influences are to be found) happens to be strong enough to compel a response by the violence of its vibration.

Nevertheless, though nature takes such precautions to guard these centres, she by no means intends that they shall always be kept rigidly closed. There is a proper way in which they may be opened. Perhaps it would be more correct to say that the intention is not that the doors should be opened any wider than their present position, but that

the man should so develop himself as that he can bring a great deal more through the recognized channel.

The consciousness of the ordinary man cannot yet use pure atomic matter either in the physical body or in the astral, and therefore there is normally no possibility for him of conscious communication at will between the two planes. The proper way to obtain that is to purify both the vehicles until the atomic matter in both is fully vivified, so that all communications between the two may be able to pass by that road. In that case the web retains to the fullest degree its position and activity, and yet is no longer a barrier to the perfect communication, while it still continues to fulfill its purpose of preventing the close contact between lower sub-planes which would permit all sorts of undesirable influences to pass through.

That is why we are always adjured to wait for the unfolding of psychic powers until they come in the natural course of events as a consequence of the development of character, as we see from the study of these force-centres that they surely will. That is the natural evolution; that is the only really safe way, for by it the student obtains all the benefits and avoids all the dangers. That is the Path which our Masters have trodden in the past; that therefore is the Path for us to-day.

OBSESSION AND INSANITY

We must distinguish carefully between obsession and insanity. The latter is a break in the connection between the ego and his vehicles, while the former is the ousting of the ego by some other entity. Only a weak ego would permit obsession — an ego, I mean, who had not much hold upon his vehicles. It is not as a rule true that children are more easily obsessed than adults, because though it is true that the hold of the ego upon its bodies is less strong in childhood, it is also true that the adult is far more likely to have in him qualities which attract undesirable entities and make obsession easy. In the case of a little child, any entity trying to obsess the body would have first to face the elemental who is in charge of the building of it, and he is not at all likely to succeed in ousting that. After the age of seven, when the elemental has been withdrawn, obsession might take place if the ego was very weak; but it is fortunately rare.

Obsession may be permanent or temporary, and it is undertaken for various reasons. Often some dead person is filled with burning anxiety to come again into touch with the physical plane, generally for the satisfaction of the lowest and grossest desires, and in his desperate yearning he seizes upon any vehicle which he can steal. Sometimes, on the other hand, obsession is a definite and calculated act of revenge — not always upon the person obsessed. I knew a case in which man who hated another deliberately went to work to obtain control of and obsess his enemy's favorite daughter; I know also of another instance even worse than that. Sometimes the obsessing entity is not human at all, but only a nature-spirit who desires experience of human life. In any and all cases obsession should be determinedly resisted by the victim.

Insanity is an entirely different matter. Let us try to look at it from the occult point of view. Every cell in the physical brain and every particle of its matter has its corresponding and interpenetrating astral matter; and behind (or rather within) that, it has also the still finer mental matter. Of course the brain is a cubical mass, but for the purposes of our examination let us suppose that it could be spread out upon a surface so that it should be only one particle thick. Then further suppose that the astral and mental matter belonging to it could also be laid out in layers in a similar manner, the astral layer a little above the physical, and the mental a little above the astral.

Then we should have three layers of matter of different degrees of density, all corresponding one to the other. Now suppose that each physical particle is joined to the corresponding astral particle by a little tube, and each astral particle is joined to its corresponding mental particle in the same way, and even (higher up still) each mental particle to something which corresponds to it in the causal body. So long as these tubes were perfectly in alignment there would be clear communication between the ego and his brain; but if any one of the sets of tubes were bent, closed, or knocked partially aside, it is obvious that the communication might be wholly or partially interrupted.

From the occult standpoint, therefore, we divide the insane into four great classes, each of course having many sub-divisions.

1. Those who are insane merely from a defect of the dense physical brain — from its insufficient size, perhaps, or from some accident like a heavy blow, or some growth which causes pressure upon it or from gradual softening of the tissue.
2. Those whose defect is in the etheric part of the brain, so that its particles no longer correspond perfectly with the denser physical particles, and so cannot properly bring through the vibrations from the higher vehicles.
3. Those in whom the astral body is defective instead of the etheric — in whom its tubes are bent, as it were, so that there is a want of accurate adjustment between its particles and those of the vehicles either above or below it.
4. Those in whom the mind-body itself is in some way out of order, and consequently is unable to bring through the instructions or wishes of the ego.

It makes a very great difference to which of these classes an insane person belongs. Those of the first and second types are quite sensible when out of the body during sleep, and of course also after death, so that the ego loses only the expression of himself during waking life. Those of the third type do not recover until they reach the heaven-world, and the fourth class not until they return into the causal body; so that for this last class the incarnation is a failure. But fortunately more than ninety per cent of the insane belong to the first and second classes.

Three questions are asked upon the unsavory subject of obsession; I will proceed to answer them. The first is: "What is the best way to get rid of an excarnate human being who persists in occupying one's body?"

I should simply and absolutely decline to be so obsessed. The best and kindest plan would be to have an explanation with the dead person, to enquire what he wants and why he makes such persistent attempts. Quite probably, he may be some ignorant soul who does not at all comprehend his new surroundings, and is striving madly to get into touch again with the only kind of life that he understands. In that case if matters are explained to him, he may be brought to a happier frame of mind and induced to cease his ill-directed efforts. Or the poor creature may have something on his mind — some duty unfulfilled or some wrong unrighted; if this be so, and the matter can be arranged to his satisfaction, he may then be at peace.

If, however, he proves not to be amenable to reason, if in spite of all argument and explanation he refuses to abandon his reprehensible line of action, it will be necessary gently but firmly to resist him. Every man has an inalienable right to the use of his own vehicle, and encroachments of this nature should not be permitted. If the lawful possessor of the body will confidently assert himself and use his own will-power no obsession can take place.

When such things occur, it is almost always because the victim has in the first place yielded himself to the invading influence, and his first step therefore is to reverse that act of submission, to determine strongly to take matters into his own hands again and to resume control over his property. It is this reassertion of himself that is the fundamental requirement, and though much help may be given by wise friends, nothing which they can do will take the place of the development of will-power on the part of the victim, or obviate the necessity for it. The exact method of procedure will naturally vary according to the details of the case.

The second question runs thus: "I have long been troubled by entities who constantly suggest evil ideas and make use of coarse and violent language. They are always urging me to take strong drink, and goading me on to the consumption of large

quantities of meat. I have prayed earnestly, but with little avail, and am driven to my wits' end. What can I do?"

You have indeed suffered greatly; but now you must make up your mind to suffer no more. You must take courage and make a firm stand. The power of these dead people over you is only in your fear of them. Your own will is stronger than all theirs combined if you will only know that it is; if you turn upon them with vigor and determination they must yield before you. You have an inalienable right to the undisturbed use of your own vehicles, and you should insist on being left in peace. You would not tolerate an intrusion of filthy and disgusting beings into your house on the physical plane; why should you submit to it because the entities happen to be astral? If an indolent tramp forces himself into a man's house, the owner does not kneel down and pray — he kicks the tramp out; and that is precisely what you must do with these astral tramps.

You will no doubt say to yourself that when I give you this advice I do not know the terrible power of the particular demons who are afflicting you. That is exactly what they would like you to believe — what they will try to make you believe; but do not be so foolish as to listen to them. I know the type perfectly, and mean, despicable, bullying villains they are; they will torment a weak woman for months together, but will fly in cowardly terror the moment you turn upon them in righteous anger! I should just laugh at them, but I would drive them out, and hold not a moment's parley with them. Of course they will bluster and show fight, because you have let them have their own way for so long that they will not tamely submit to expulsion; but face them with iron determination, set your will against them like an immovable rock, and down they will go. Say to them: "I am a spark of the divine fire, and by the power of the God within me I order you to depart!" Never let yourself think for an instant of the possibility of failure or of yielding; God is within you and God cannot fail.

The fact of their demanding meat shows what low and coarse entities they are; you should avoid all flesh food and alcohol, because these things minister to such evil beings and make it more difficult for you to resist them.

The third question is: "If it is possible for a man to become obsessed while he has temporarily lost control of his body during a fit of anger, is it not also possible for obsession to take place when one is out of the body during sleep?"

I would submit that the circumstances are entirely different. Sleep is a natural condition, and though the ego leaves the body, he always maintains a close connection with it, so that under ordinary circumstances he would quickly be recalled to it by any attempt that might be made upon it. There are individual cases in which the ego is not so easily recalled, and a sort of temporary obsession is possible which may cause somnambulism, but these cases are abnormal and comparatively rare. A fit of anger on the other hand is unnatural — an infraction of the natural laws under which we live. In this case it is the astral which has escaped from control; the desire-elemental has rebelled against his master and has broken away from the hold of the ego exercised through the mental body, which alone keeps him safe as part of an astral mechanism. The rightful owner being dispossessed, the astral body is in the condition of a vessel whose helm has been abandoned; anyone who happens to be at hand can seize the wheel, and it may be a difficult matter to recover it.

SLEEP

I am asked what is the real cause of sleep.

I have not the detailed physiological knowledge which is needed to answer this question fully. But I have always understood that the necessity of sleep is due to the fact that the bodies grow tired of one another. The astral vehicle, which so far as we know is practically incapable of fatigue upon its own plane, since it can work incessantly for twenty years without showing signs of it, very soon becomes tired of the heavy labour of moving the particles of the physical brain, and needs a considerable period of separation from it to enable it to gather strength to resume the irksome task.

The physical body, on its side, also becomes worn out, because while it is in a waking condition it is always spending force a little faster than it can draw it in. With every thought or feeling, and with every muscular exertion, certain slight chemical changes appear to take place. The ordinary machinery of a healthy body is all the while working to counteract this change and to restore the condition previously existing, but in this it never quite succeeds. So that with every thought or action there is a slight, almost imperceptible loss, and the cumulative effect eventually leaves the physical body too exhausted to be capable of further thought or work. In some cases even a few moments of sleep will give the recuperative powers an opportunity to reassert themselves and regain the ground that they have lost, thus restoring the balance sufficiently to enable the machine to go on working.

Students often ask what is the best time for sleep. Unquestionably the rule of nature is that the day is for work and the night is for rest, and no infringement of nature's laws can ever be a good thing. One of the serious evils of our modern unnatural life is that noon is no longer, as it should be, the centre of the day. If a man lived by himself and could regulate his own affairs he could, no doubt, return at once to that obviously natural condition; but, surrounded as we are by a mighty so-called civilization which is in many ways distorted and unnatural, we are unable to follow our individual predilections in this matter, and must to some extent adapt ourselves to the general custom, evil though it be.

It is impossible to lay down rules as to the amount of sleep which is necessary for man, because there is so much difference in constitutions; but when it is possible that sleep should be taken between 8 P. M. and 5 A. M. Some men need the whole of that time, while others may find themselves perfectly healthy on a smaller allowance. Such details of life each man must decide for himself according to his circumstances.

People often ask whether there is any way in which they can control their dreams. The dreamer cannot usually change the course of his dream while it is going on; but the dream-life can indirectly be controlled to a very considerable extent. If a man's thought be pure and high while waking, his dreams will be pure and good also, and a specially important point is that his last thought as he sinks to sleep should be a noble and elevating one, since that strikes the keynote which largely determines the nature of the dreams which follow. An evil or impure thought draws round the thinker evil and impure influences, attracts to him all the gross and loathsome creatures who come near him. These will, in turn, react upon his mind and his astral body, and disturb his rest by awakening all kinds of low and earthly desires. If, on the

other hand, a man enters the portals of sleep with his mind fixed upon high and holy things, he thereby draws round him the elementals created by like efforts in others; his rest is peaceful, his mind open to impressions from above and closed to those from below, for he has set it working in the right direction.

The dreaming of ordinary events does not interfere with astral work, because that dreaming is all taking place in the physical brain, while the real man is away attending to other business. Of course if the man, when out in his astral body, devotes himself to thinking over the events of his physical life, he will be unable during the time of such thought to do any other work, but that is a totally different thing from a mere ordinary dream of the physical brain, though when the man wakes in the morning it is frequently difficult for him to distinguish between the two sets of recollections. It really does not matter what the physical brain does so long as it keeps itself free from impure thoughts, but it is undesirable that the man himself should waste his time in introspection when he might be working on the astral plane.

SOMNAMBULISM

You ask what is the cause of sleep-walking. I have never had the opportunity of observing a case of somnambulism, so I am unable to speak from direct knowledge; but from reading accounts of such cases I should imagine that the phenomena may be produced by several widely different causes. There are instances in which it appears that the ego is able to act more directly upon his physical body during the absence of the intermediate mental and astral vehicles — instances in which a man during his sleep is able to write poetry or to paint pictures which would be far beyond his powers when awake.

There are other cases in which it is obvious that the dim consciousness inherent in the physical body is working uncontrolled by the man himself, so that it performs quite meaningless acts, or carries out to some extent the idea which was dominant in the mind before falling asleep. To this class belong the stories of servants who have risen in the middle of the night to light the fire, of ostlers who have harnessed horses in their sleep, and so on.

Again, there are cases in which some outside intelligence, whether incarnate or discarnate, has seized upon the body of a sleeping man and used it for his own ends. This would be most likely to happen with a person who is what is called mediumistic — that is to say, whose principles are more loosely joined together than usual, and therefore more readily separable; but oddly enough there seems to be a type of somnambulism which is due to a directly opposite condition, when the principles fit more tightly than usual, so that when the man would naturally visit some neighboring spot in his astral body, he takes the physical body along with him as well, because he is not wholly dissociated from it. Somnambulism is probably also connected with the whole complex problem of the various layers of consciousness in man, which under perfectly normal circumstances are unable to manifest themselves.

THE PHYSICAL BODY

Physical immortality is not a possibility, for that which has a beginning must also have an end, and birth, growth, decay and death are the rules of the physical universe. No reasonable being could desire to retain the same body continuously; it is precisely as though a small child should wish to wear the same suit of clothes during the whole of his life. As man evolves, his successive vehicles will become purer and nobler, and better fitted to meet the needs of his increasing capacity, so that even if a man could keep the same body he would check his growth by doing so, just as the child's growth would be checked by always wearing something of iron rigidity which was much too tight for him.

At the same time it is our duty to take the best possible care of our bodies and to improve them as much as we can. Never ill-treat the physical body. Take care of it as you would of a valuable horse, giving it enough rest and food, and keeping it scrupulously clean. It can do only a certain amount of work; for example, a very strong body might walk a hundred miles without resting but it could not walk a thousand. In meditation put it into a comfortable position and then forget about it. You cannot forget it if it is uncomfortable, as it would constantly call you back.

What should you eat? Well, so long as you avoid alcohol and corpse-eating it probably does not matter very much. Certain vegetables are coarser than others, and therefore when there is a choice it is as well to abstain from them. Among those I should class onions, mushrooms and cabbages. Rice is very pure food, but wheat, barley and oats give more nutriment in the same amount. I consider eggs undesirable, though I should unhesitatingly take them if no other food was to be had.

There is no sort of question that vegetarianism is better in every way than the devouring of flesh. It furnishes more real nutriment, diminishes the liability to disease, gives greater strength, and does not stimulate the lower nature. The vegetarian diet makes it far easier for a man to develop his higher qualities. It is known that our Masters make a single physical body last much longer than an ordinary man can do, by living always in accordance with hygienic laws and absolute freedom from worry. In that respect we should all try to copy them as nearly as we can, but to endeavour to retain the same body indefinitely has always been a mark of those who follow the selfish path.

There are various undesirable means by which such men have prolonged physical life — sometimes by vampirism, merely depleting the vitality of others, and sometimes by the complete transference to themselves of a succession of other human lives. But it is hardly necessary to warn Theosophists against proceedings of this nature. It is obvious that a person adopting such a plan would be one who is *not* evolving; and even if he succeeded he would only be as it were patching and enlarging an old coat, but with all his efforts it would remain an old coat still.

TOBACCO AND ALCOHOL

The evil effect of the tobacco habit is obvious in the physical, the astral and the mental bodies. It permeates the man physically with exceedingly impure particles, causing emanations so material that they are frequently perceptible to the sense of smell. Astrally, it not only introduces impurity, but it also tends to deaden many of the vibrations, and it is for this reason that it is frequently found to "soothe the nerves," as it is called. But, of course, for occult progress we do not want the vibrations deadened nor the astral body weighed down with foul and poisonous particles. We need the capacity of answering instantly to all possible vibrations, and yet at the same time we must have perfect control, so that these desires shall be as horses guided by the intelligent mind to draw us where we will, not to run away with us wildly, and carry us into situations where our higher nature knows that it ought never to be found. Therefore, for any person who is really anxious to develop his vehicles, tobacco is undoubtedly a bad thing.

Also it has a singularly deteriorating influence upon the man on the physical plane. It is absolutely the only thing, so far as I know, that a gentleman will deliberately do when he knows it to be offensive to others. But the hold which this noxious habit gains upon its slaves appears to be so great that they are utterly incapable of resisting it, and all their gentlemanly instincts are forgotten in this mad and horrible selfishness. The effect on the astral body after death is also very bad; the man is shut up for a long time as though in prison, and higher vibrations cannot reach him.

The chief objection which is always brought by the more self-indulgent Theosophist against remarks such as these is that our great founder Madame Blavatsky herself smoked. I know this to be true, but it does not in the least alter the facts which I have stated above, which I know just as surely from long-continued personal observation. Madame Blavatsky was in every way so entirely *sui generis*, so emphatically a case apart, that I do not think it reasonable for us to presume that we can safely do what she did. I have often heard her say: "No one but my Master understands my case; do what I tell you, not what I do." Also she once told me that she smoked incessantly "to quiet the vibrations of this old body, and prevent it from shaking itself to pieces." The effects on the physical plane during life and on the astral after death are precisely as I have described them, and it does not seem worthwhile incurring them for the sake of a petty indulgence.

I think that Mrs. Besant's remarks about alcohol in *Man and His Bodies* are fully justified. There is no doubt whatever that from the point of view of the astral and mental bodies its use is always an evil; and there is also no doubt at all that very undesirable entities are attracted by it. Of course many people who are estimable in other respects have certain most unpleasant habits, such as the drinking of alcohol, the eating of meat or the smoking of tobacco; but the fact that they are otherwise good people does not make these things good and sensible. It is, of course, untrue that any of these things are physical necessities, but a man may accustom his system to the use of almost any kind of drug, until that system, being habituated to it, expects it and misses it if it does not get it. We know that exactly the same habit may be set up with opium and arsenic, but that does not make opium and arsenic good things to take. It is, however, generally quite useless to attempt to argue with any man as to his personal habits; he is usually determined to cling to such habits

because he likes them, and he cares very little whether they are good in themselves, or even good for him.

You ask my opinion about the regulation of the sale of liquor. In all civilized countries some control is exercised over the sale of poisons, and they are allowed to be supplied only upon a doctor's certificate. The poison of alcohol does many thousands of times more harm than all other poisons put together, so surely the regulations governing its sale ought to be no less strict.

It is perfectly true that every man will have to develop self-control for himself, but I really do not see how that affects our attitude with regard to the making of laws. You surely would not suggest that in order to teach people not to steal, we should continually at every street corner throw in their way special temptations to induce them to steal, and then stand by without any interference to see whether they would develop sufficient strength of mind to resist our temptations.

Yet that is exactly what is now being done with regard to the consumption of alcohol. We allow, encourage and specially license a number of men to make a tempting display in our streets with the avowed object of trying to induce as many people as possible to degrade themselves by the habitual use of this poison. If at last mankind is so far evolving as to develop some sort of conscience with regard to the weaker brethren, it would seem well for us to encourage their advancement rather than to range ourselves against it. If we feel it right to care for and to help the insane, even to the extent of restraining them for their own good and for that of the public, it is surely well for us also to treat the victim of that terrible form of insanity known as drunkenness along exactly the same lines. But it must not be forgotten that the Theosophical Society takes no part whatever in any political movement, although of course its members as private individuals are perfectly free to take any side that they like in political questions.

VOLUME TWO

FOREWORD TO AMERICAN EDITION

The long-promised second series of Adyar Talks has at length been published after many unavoidable delays. After careful consideration it was thought best to abandon the use of the title *The Hidden Life* and to issue the volume as *The Inner Life, Volume II*. Some of these informal talks to the classes at Adyar have already appeared in *The Theosophist*, but many of the chapters contain facts which have not been published before, such as "Mars and its Inhabitants."

The manuscript of *The Hidden Side of Things*, which promises to be a book of some seven hundred pages, is ready for the printer, and we are only waiting an opportune time to publish it.

ADYAR, June 29, 1911

AUTHOR'S NOTE

While the President was absent from Adyar on a tour through England and America last year, it fell to my lot to take charge of the daily meetings of the students here. In the course of that time I delivered many informal little addresses and answered hundreds of questions. All that I said was taken down in shorthand, and this book is the result of those notes. In a number of cases it happened that what was said on the roof at the meetings was afterwards expanded into a little article for *The Theosophist* or *The Adyar Bulletin*; in all such cases I reprint the article instead of the stenographic report, as it has had the advantage of certain corrections and additions. Necessarily a book of this sort is fragmentary in its nature; necessarily also it contains a certain amount of repetition; though this latter has been excised wherever possible. Many of the subjects treated have also been dealt with in my earlier books, but what is written here represents in all cases the result of the latest discoveries in connection with those subjects. The subjects have been classified as far as possible, and this volume is the second series, containing the nine remaining sections.

ADYAR, July, 1911

**FIRST SECTION: THE AFTER-DEATH
LIFE**

THE THEOSOPHIST AFTER DEATH

WHEN a member of the Theosophical Society finds himself upon the astral plane after having permanently laid aside his physical body, it will be well for him to begin by taking stock, as it were — by seeing what is his position, what is the life before him, and how he can make the best use of it . He will do wisely to consult on these matters some friend who has had wider experience than himself, and in practice this is what dead members almost always do. Remember that when the member enters upon the astral plane after death he is not making his first appearance there. Usually he has already done much work there during the sleep of the physical body, and is therefore on familiar ground. As a general rule his first instinct is to make straight for our beloved President, which is probably quite the wisest thing for him to do, as there is no one better qualified to give him sound advice. So many possibilities open out in astral life that one cannot lay down any general rule, though a man cannot go far wrong who tries to make himself useful to those around him. There are plentiful opportunities for learning, as well as for work, and the new-comer will have to decide how he can best apportion his time between them.

The astral world will not be altered for the convenience of members of the Theosophical Society, any more than the physical world is, and they, like every one else, will have to encounter what happens to be there. If a drunken man is walking along a certain road, those who happen to pass along that road will meet him, whether they are members or not, and the astral plane does not, in this respect, differ from the physical. The members, being instructed in regard to the rules governing life on astral plane, ought to know better than the uninstructed how to deal with such unpleasant beings as happen to come in their way, but they are just as likely as any one else to meet them. They have, however, probably met such beings many times while functioning upon the astral plane during life, and there is no more reason to be afraid of them than before; indeed, meeting them then upon their own level, it will be far easier to come to an understanding with them and to give them such help as they are able to receive.

There is practically no difference between the condition of the ordinary person and the psychic after death, except that the psychic, being somewhat more familiar with astral matters, would feel more at home in his new environment. To be psychic means to be able to bring through into the physical consciousness something of the wider life; it is therefore in the condition of the physical vehicle that there is an inequality between the psychic and the ordinary person, but when the physical is dropped that inequality no longer exists.

THE RELATION OF THE DEAD TO EARTH

A dead man is often aware of the feelings of the family that he has left. If you try to think exactly what it is that can be manifested through the astral body, you may easily see how much he is likely to know. He does not necessarily follow in detail all the events of the physical life; he does not necessarily know what his friends are eating, or in what occupations they are engaged. But he knows whether they are glad or sorry, and he is at once aware of such feelings as love or hate, jealousy or envy.

When a drunkard hovers about a gin-shop it is only by partial materialisation (that is, by drawing round himself a veil of etheric matter) that he can draw in the odour of the alcohol. He does not smell it in at all the same sense as we do; and that is why he is always anxious to force others into the condition of drunkenness, so that he may be able partially to enter their physical bodies and obsess them, so that through those bodies he can once more directly experience the taste and the other sensations which he so ardently desires.

In the astral body there are exact counterparts of the eyes and the nose and the mouth, but we must not therefore think that the astral man sees with those eyes, hears with those ears, or can smell or taste through the nose or mouth. All the matter of the astral body is constantly in rapid motion from one part of it to another, so that it is quite impossible for any astral particles to be specialised in the same way as certain nerve-ends are specialised in the physical body. The senses of the astral body act not through special organs, but through every particle of the body, so that with astral sight a man can see equally well with any part of his body, and can see all around him simultaneously, instead of only in front of him. He could grasp at the astral counterpart of the hand of a living man, but as the two hands would pass through one another without any sense of contact, there would be no object in his doing so. It is, however, perfectly possible for him to materialise a hand which, though invisible, can be felt just as the ordinary physical hand can be, as may often be observed at séances.

There are three subdivisions of the astral plane from which it may be possible (though not desirable) for disembodied men to see and follow events taking place upon the physical plane. On the lowest sub-plane the man is usually occupied in other ways, and concerns himself little with what takes place in the physical world, except, as is explained in our literature, when he haunts vile resorts; but, in the next subdivision, he has very close touch with the physical plane, and may quite probably be conscious of a good many things in connection with it, though what he sees is never the physical matter itself, but always the astral counterpart of it. In rapidly diminishing degree this consciousness is also possible as he ascends through the next two sub-planes; but beyond that, it would be only by the special effort to communicate through a medium that contact with the physical plane could be gained, and from the highest sub-plane even that would be extremely difficult.

The extent of a man's power to see and follow physical events from the astral plane is determined by his character and disposition, as well as by the stage of development to which he has attained. Most of those whom we ordinarily call good people, living out their lives to their natural end, sweep through all these lower stages before awakening to astral consciousness, and they are therefore unlikely to be conscious of

anything physical at all. Some few, however, even of these are drawn back into touch with this world by great anxiety about some one left behind.

Less developed persons have in their composition of the matter of these lower sub-planes, and are therefore much more likely to be able to follow to some extent what goes on upon earth. Most of all is this the case if they are people whose whole turn of thought is essentially of this world — who have in them little or nothing of spiritual aspiration or of high intellect. This downward tendency grows with the using, and a man who is at first happily unconscious of what lies below him may be so unfortunate as to have his attention attracted to it, frequently by selfish manifestations of the grief of the survivors. He then exerts his will to keep himself from rising out of touch with this life to which he no longer belongs; and in such a case his power of seeing earthly things increases for a time, and then he suffers mentally when he presently finds such power slipping from him. Such suffering is entirely due to the irregularity introduced into the astral life by his own action, for it is absolutely unknown in the ordinary and orderly evolution after death.

If it is complained that in this way the departed does not see the physical world exactly as it really is, we must answer that neither the departed nor we on this plane ever see the physical world as it really is at all, for we (or most of us) see only the solid and liquid portions thereof, and are altogether blind to the far vaster gaseous and etheric parts; while the departed does not see the physical matter at all, nor even the whole astral counterpart of it, but only that portion of the latter which belongs to the particular sub-plane upon which he is at the time. The only man who gets anything like a comprehensive view of affairs is he who has developed etheric and astral sight while still alive in the physical body.

Another difficulty in the way of the disembodied is that he by no means always recognises with any certainty the astral counterpart of the physical body even when he sees it. He usually requires considerable experience before he can clearly identify objects, and any attempt which he makes to deal with them is liable to be very vague and uncertain, as is often seen in haunted houses where stone-throwing, trampling, or vague movements of physical matter take place. This power of the identification of objects is thus largely a question of experience and knowledge, but it is little likely to be perfect unless he has known something of such matters before death.

A correspondent writes to ask whether a dead man can enjoy the astral counterpart of a play at a theatre, and whether there will be room for him there if the building is already full of people.

Certainly a theatre full of people has its astral counterpart, which is visible to dead people. The play, however, is not likely to afford them any enjoyment, since they cannot see the costumes and the expression of the actors at all as we see them, and the emotions of these actors, being only simulated and not real, make no impression upon the astral plane. Astral bodies can and constantly do interpenetrate one another fully, without in the least injuring one another. If you will think for a moment you will see that this must be so. When you sit next to any person in a railway carriage or in a tram-car your astral body and his must necessarily interpenetrate to a very large extent. There is not the slightest difficulty in such interpenetration, since the astral particles are enormously farther apart in proportion to their size even than physical particles are. At the same time they seriously affect one another as far as their rates of vibration are concerned, so that to sit in close proximity to a person of impure, jealous or angry thought is exceedingly prejudicial.

A dead friend can, therefore, quite easily enter a theatre which is full of people — more especially as the people are seated upon the ground or the platforms, while the astral entity is far more probably floating about in the air.

The man who commits suicide runs away from school before the appointed lesson is learnt; he is guilty of the great presumption involved in taking into his own hands a decision which should be left to the working of the Great Law. The consequences of so great a rebellion against nature are always of a momentous character. They are certain to affect the next life, and quite probably more lives than one. The circumstances surrounding a suicide immediately after death are the same as they would be for the victim of an accident, since both of them arrive upon the astral plane with equal suddenness. But there is the enormous difference that the man, who dies by accident, not expecting death, is thrown into a condition of unconsciousness and usually passes through the lowest sub-plane without knowing anything of its varied unpleasantness. The suicide, on the contrary, has acted deliberately, and is generally painfully aware of much that is horrible and repugnant to him. He cannot be saved from the sights and feelings which he has brought upon himself; but he may often be helped to understand them, and may be inspired with patience, perseverance and hope by the good offices of some kind friend.

While fully recognising that suicide is a mistake, and a most serious one, we are not called upon judge our brother who commits that mistake. There is a wide difference between different cases, and it is impossible for us to know the various factors which enter into each, although every one of them is duly taken into account in the working of the law of eternal justice.

In trying to estimate the conditions of a man's life on the astral plane after death, there are two prominent factors to be considered — the length of time which he stays upon any particular sub-plane and the amount of his consciousness upon it. The length of a man's stay upon any sub-plane depends, as has been said, upon the amount of matter belonging to that sub-plane he has built into himself during earth-life.

But the amount of consciousness that a person will have upon a given sub-plane does not invariably follow precisely the same law. Let us consider an extreme example of possible variation, in order that we may grasp its method. Suppose a man has brought over from his past incarnation tendencies requiring for their manifestation a large amount of the matter of the lowest sub-plane, and has in his present life been fortunate enough to learn in his earliest years the possibility and the necessity of controlling these tendencies. It is improbable that such a man's efforts at control would be uniformly and entirely successful; but if they were, the substitution of finer for grosser particles would progress steadily though slowly.

This process is at best a gradual one, and it might well happen that the man died before it was half completed. In that case there would undoubtedly be enough matter of the lowest sub-plane left in his astral body to ensure him no inconsiderable residence there; but it would be matter through which in this incarnation his consciousness had never been in the habit of functioning, and, as it could not suddenly acquire this habit, the result would be that the man would rest upon that sub-plane until his share of its matter was disintegrated, but would be all the while in a condition of unconsciousness — that is, he would practically sleep through the period of his sojourn there, and so would be entirely unaffected by its many disagreeables.

It will be seen that both these factors of post-mortem existence — the sub-plane to which the man is carried and the degree of his consciousness there — depend not in the least on the nature of his death, but upon the nature of his life, so that any accident, however sudden or terrible, can scarcely affect them. Nevertheless, there is reason behind the familiar old prayer of the Church: “From sudden death, good Lord, deliver us;” for though a sudden death does not necessarily affect the man's position upon the astral plane in any way for the worse, at least it does nothing to improve it, whereas the slow wasting away of the aged or the ravages of any kind of long-continued disease are almost invariably accompanied by a considerable loosening and breaking up of the astral particles, so that when the man recovers consciousness upon the astral plane, he finds some at any rate of his chief work there already done for him.

The great mental terror and disturbance which sometimes accompany accidental death are in themselves a very unfavourable preparation for the astral life; indeed, cases have been known in which such agitation and terror persisted after death, though that is happily rare. Still, the popular desire to have some time in which to prepare for death is not a mere superstition, but has a certain amount of reason at the back of it. Naturally, to anyone who is leading the Theosophical life it will make but little difference whether the transition from the physical plane to the astral comes slowly or quickly, since he is all the time doing his best to make as much progress as possible, and the object before him will remain the same in either case.

To sum up then: it seems clear that death by accident does not necessarily involve any lengthy residence on the lowest level of the astral plane, though it may in one sense be said slightly to prolong such residence, since it deprives the victim of the opportunity of burning out the particles belonging to that level during the sufferings of a lingering disease. In the case of young children it is exceedingly unlikely that in their short and comparatively blameless young lives they will have developed much affinity for the lowest subdivisions of astral life; indeed, as a matter of practical experience they are hardly ever to be found in connection with that sub-plane at all. In any case, whether they die by accident or disease, their life on the astral plane is a comparatively short one; the heaven-life, though much longer, is still in reasonable proportion to it, and their early reincarnation follows as soon as the forces which they have been able to set in motion during their short earth-lives work themselves out, precisely as we might expect from our observation of the action of the same great law in the case of adults.

Nothing that is likely to be done in *ordinary* life to his physical corpse *need* make any difference whatever to the man living on the astral plane. I am obliged to make these two reservations because, in the first case, outside of ordinary life there are certain horrible magical rites which would very seriously affect the condition of the man on the other plane, and in the second, although the state of the physical corpse *need* not make any difference to the real man, it nevertheless sometimes does, by reason of his ignorance or foolishness. Let me endeavour to explain.

The length of a man's astral life after he has put off his physical body depends mainly upon two factors — the nature of his past physical life, and his attitude of mind after what we call death. During his earth-life he is constantly influencing the building of matter into his astral body. He affects it directly by the passions, emotions and desires which he allows to hold sway over him; he affects it indirectly by the action upon it of his thoughts from above, and of all the details of his physical life (his continence or his debauchery, his cleanliness or his uncleanness, his food and his

drink) from below. If, by persistence in perversity along any of these lines, he is so stupid as to build for himself a coarse and gross astral vehicle, habituated to responding only to the lower vibrations of the plane, he will find himself after death bound to that plane during the long and slow process of that body's disintegration. On the other hand if, by decent and careful living, he gives himself a vehicle mainly composed of finer material, he will have very much less post-mortem trouble and discomfort, and his evolution will proceed much more rapidly and easily.

This much is generally understood, but the second great factor — his attitude of mind after death — seems often to be forgotten. The desirable thing is for him to realise his position on this little arc of his evolution — to learn that he is at this stage withdrawing steadily inward towards the plane of the true ego, and that consequently it is his business to disengage his thought as far as may be from things physical, and fix his attention more and more upon those spiritual matters which will occupy him during his life in the heaven-world.

By doing this he will greatly facilitate the natural astral disintegration, and will avoid the sadly common mistake of unnecessarily delaying himself upon the lower levels of what should be so temporary a residence.

Many people, however, simply will not turn their thoughts upwards, but spend their time in struggling with all their might to keep in touch with the physical plane which they have left, thus causing great trouble to anyone who may be trying to help them. Earthly matters are the only ones in which they have ever had any living interest, and they cling to them with desperate tenacity even after death.

Naturally, as time passes on, they find it increasingly difficult to keep hold of things down here, but instead of welcoming and encouraging this process of gradual refinement and spiritualisation they resist it vigorously by every means in their power. The mighty force of evolution is eventually too strong for them, and they are swept on in its beneficent current, yet they fight every step of the way, thereby not only causing themselves a vast amount of entirely unnecessary pain and sorrow, but also seriously delaying their upward progress.

Now, in this ignorant and disastrous opposition to the cosmic will a man is much assisted by the possession of his physical corpse as a kind of fulcrum on this plane. He is naturally in close *rapport* with it, and if he is so misguided as to wish to do so, he can use it as an anchor to hold him down firmly to the mud until its decomposition is far advanced. Cremation saves the man from himself in this matter, for, when the physical body has been thus properly disposed of, his boats are literally burned behind him, and his power of holding back is happily greatly diminished.

We see therefore that, while neither the burial nor the embalming of a corpse can in any way force the ego to whom it once belonged to prolong his stay upon the astral plane against his will, either of those causes is a distinct temptation to him to delay, and immensely facilitates his doing so if he should unfortunately wish it. No ego of any advancement would allow himself to be detained upon the astral plane, even by a proceeding so foolish as the embalming of his corpse.

Whether his physical vehicle was burned or allowed to decay slowly in the usual loathsome manner, or indefinitely preserved as an Egyptian mummy, his astral body would pursue its own line of quick disintegration entirely unaffected.

Among the many advantages gained by cremation the principal are that it entirely prevents any attempt at partial and unnatural temporary reunion of the principles, or

any endeavour to make use of the corpse for the purposes of the lower magic — to say nothing of the many dangers to the living which are avoided by its adoption.

CONDITIONS AFTER DEATH

Students often ask whether for the ordinary man a subconscious or an active existence is more desirable on the astral plane. This depends upon the nature of the active existence, and upon the stage of development of the ego concerned. The ordinary man dies with a certain amount of unexhausted desire still in his composition, and this force must work itself out before it is possible for him to sink into a subconscious condition. If the only activity possible for him is that of the lower desires, it is obviously better for him that nothing should be allowed to interfere with his sinking into comparative unconsciousness as soon as possible, since any new karma that he makes is little likely to be of an advantageous kind.

If, on the other hand, he is sufficiently developed to be able to be of use to others on the astral plane, and especially if he has already been in the habit of working there during sleep, there is no reason why he should not usefully employ the time of his enforced sojourn there, though it would be inadvisable to set in motion new forces which would lengthen that sojourn. Those who are working under the direction of the pupils of the Masters of Wisdom will naturally avail themselves of their counsel, since they have had much experience along these lines, and can in turn consult others of still wider knowledge.

The astral life may be directed by the will, just as the physical life may be, always within the limits prescribed in each case by karma — that is to say, by our own previous action. The ordinary man has little will-power or initiative, and is very much the creature of the surroundings which he has made for himself, on the astral plane as on the physical; but a determined man can always make the best of his conditions and live his own life in spite of them. What has, after all, been caused by his will can gradually be changed by his will, if time permits.

A man does not rid himself of evil tendencies in the astral world any more than he would in this life, unless he definitely works to that end. Many of the desires which are so strong and persistent in him are such as need a physical body for their satisfaction, and since he has that no longer, they often cause him acute and prolonged suffering; but in process of time they wear themselves out, they become as it were atrophied, and die down because of this impossibility of fulfilment. In the same way the matter of the astral body slowly wears away and disintegrates as the consciousness is gradually withdrawn from it by the half-unconscious effort of the ego, and thus the man by degrees gets rid of what ever holds him back from the heaven-world.

But the worst of his trouble is that the man is generally not alive to the necessity of getting rid of the evil which detains him. It is obvious that if he realises the facts of the case and gives his mind to the work, he can greatly expedite both the processes referred to the above. If he knows that it is his business to kill out earthly desires, and to withdraw into himself as quickly as may be, he will earnestly set himself to do these things; instead of which he usually in his ignorance broods over the desires and so lengthens their life, and clings desperately to the grossest particles of astral matter as long as he possibly can, because the sensation connected with them seems nearest to that physical life for which he is so passionately longing. Thus we see why one of the most important parts of the work of the invisible helpers is to explain facts to the

dead, and also why even a merely intellectual knowledge of Theosophical truths is of such inestimable value to a man.

The dead man when he first arrives upon the astral plane by no means always realises that he is dead, and even when that fact comes home to him it does not follow that he at once understands how the astral world differs from the physical. In the physical world man is the slave of a number of imperious necessities; he must have food and clothing and shelter; in order to procure these he must have money; and in most cases in order to obtain money he must do some kind of work. All this is so much a matter of course to us down here that the man who is set free from this slavery finds it difficult for a long time to believe that he is really free, and in many cases he continues unnecessarily to impose upon himself fetters which he has in reality cast aside.

So we sometimes see the newly dead trying to eat — sitting down to or preparing for themselves wholly imaginary meals, or building for themselves houses. I have actually seen a man in the summer-land building a house for himself stone by stone, and even though he made each of these stones for himself by an effort of his thought, he did not yet grasp the fact that he might just as well have made the whole house for himself, with the same amount of trouble, by a single effort of the same kind. He was gradually led to see that, by the discovery that the stones had no weight, which showed him that his present conditions differed from those to which he had been used on earth, and so led him to investigate further.

In the summer-land men surround themselves with landscapes of their own construction, though some avoid that trouble by accepting ready-made the landscapes which have already been constructed by others. Men living on the sixth sub-plane, upon the surface of the earth, find themselves surrounded by the astral counterparts of physically existing mountains, trees and lakes, and consequently are not under the necessity of manufacturing scenery for themselves; but men upon the higher subplanes, who float at some distance above the surface of the earth, usually provide themselves with whatever scenery they desire, by the method that I have described.

The commonest example of this is that they construct for themselves the weird scenes described in their various scriptures, and therefore in those regions we constantly find ourselves in presence of clumsy and unimaginative attempts to reproduce such ideas as jewels growing upon trees, and seas of glass mingled with fire, and creatures which are full of eyes within, and deities with a hundred heads and arms to correspond. In this way, as a consequence of ignorance and prejudice during their physical life, many men do a great deal of valueless work when they might be employing their time in the helping of their fellows.

To the man who has studied Theosophy and therefore understands these higher planes, one of their pleasantest characteristics is the utter restfulness and freedom which comes from the absence of all these imperious necessities which make a misery out of physical life. The dead man is the only absolutely free man, free to do whatever he wills and to spend his time as he chooses, free therefore to devote the whole of his energies to helping his fellows.

ANIMAL OBSESSION

We are familiar with the idea that an ego on its way down into reincarnation may sometimes be drawn aside from its course and indefinitely delayed at astral levels by the attraction of the group-soul of some kind of animal with whose characteristics it is in too close affinity. We know that the same affinity sometimes seizes upon a soul upon the astral plane after death, and detains it in very intimate association with an animal form, and also that as the result of gross cruelty it is possible to be karmically linked to an animal, and to suffer most horribly with it. All this was described by Mrs. Besant as follows, in a letter to an Indian paper, which was reproduced in *The Theosophic Gleaner*, vol. XV, page 231:

“The human ego does not reincarnate in an animal, for reincarnation means the entering into a physical vehicle which thereafter belongs to and is controlled by the ego. The penal connection of the human ego with an animal form is not reincarnation; for the animal soul, the proper owner of the vehicle, is not dispossessed, nor can the human ego control the body to which it is temporarily attached. Nor does the human ego become an animal, nor lose its human attributes, while undergoing its punishment. It does not have to evolve up again through the successive lower stages of humanity, but on being set free at once takes the grade of human form to which its previous evolution entitles it. (See the cases of Jada Bharata, and of the Rishi's wife set free by the touch of Rama's feet — cases which show that the popular idea that the man *becomes* a stone or an animal is erroneous.)

“The facts are these. When an ego, a human soul, by vicious appetite or otherwise, forms a very strong link of attachment to any type of animal, the astral body of such a person shows the corresponding animal characteristics, and in the astral world — where thoughts and passions are visible as forms — may take the animal shapes. Thus, after death, in *Pretaloka* the soul would be embodied in an astral vesture resembling, or approximating to, the animal whose qualities had been encouraged during earth-life. Either at this stage, or when the soul is returning towards reincarnation, and is again in the astral world, it may in extreme cases be linked by magnetic affinity to the astral body of the animal it has approached in character, and will then, through the animal's astral body, be chained as a prisoner to the animal's physical body. Thus chained, it cannot go onwards to *Svarga* if the tie be set up while it is a Preta; nor go onwards to human birth if it be descending towards physical life. It is truly undergoing penal servitude, chained to an animal; it is conscious in the astral world, has its human faculties, but it cannot control the brute body with which it is connected, nor express itself through that body on the physical plane. The animal organisation does not possess the mechanism needed by the human ego for self-expression; it can serve as a jailor, not as a vehicle. Further the animal soul is not ejected, but is the proper tenant and controller of its own body. Shri Shankaracharya hints very clearly at this difference between this penal imprisonment and becoming a stone, a tree or an animal. Such an imprisonment is not reincarnation, and to call it by that name is an inaccuracy; hence, while fully conversant with the above facts, I should always say that the human ego cannot reincarnate as an animal, cannot become an animal. This is not the only experience a degraded soul may have in the invisible world, of which hints may be found in the Hindu Shastras, for . . . the statements made are partial and very incomplete.

“In cases where the ego is not degraded enough for absolute imprisonment, but in which the astral body is strongly animalised, it may pass on normally to human re-birth, but the animal characteristics will be largely reproduced in the physical body — as witness the ‘monsters’ who in fact are sometimes repulsively animal, pig-faced, dog-faced, etc. Men, by yielding to the most bestial vices, entail on themselves penalties more terrible than they for the most part realise, for nature's laws work on unbrokenly and bring to every man the harvest of the seeds he sows. The suffering entailed on the conscious human entity thus cut off for the time from progress and from self-expression is very great, and is of course reformatory in its action; it is somewhat similar to that endured by other egos, who are linked to bodies human in form, but without healthy brains — those we call idiots, lunatics, etc. Idiocy and lunacy are the results of vices other in kind from those that bring about the animal servitude above explained, but the ego in these cases also is attached to a form through which he cannot express himself.”

These instances are the explanation (or at least a part of the explanation) of the widely-spread belief that a man may under certain circumstances reincarnate in an animal body. In Oriental books, what we should call three stages of *one* life are quite commonly spoken of as separate lives. It is said that when a man dies to the physical plane he is reborn at once on the astral plane — meaning simply that his specially and wholly astral life begins then; and in the same way what we should describe as the passing into the heaven-life is called a death on the astral plane and a rebirth at the higher level. This being so, it is easy to understand that one of the abnormal cases above mentioned might be described as ‘rebirth as an animal,’ although it is not at all what we should mean by such a term if we employed it in Theosophical literature.

In recent investigations our attention has been drawn to a type of case differing somewhat from either of the above in that the link with the animal is intentionally made by the human being, in order to escape from something which he feels to be far worse. No doubt this type also was known to the ancients, and forms one of the classes referred to in the tradition of animal incarnations. Let me endeavour to explain it.

When a man dies, the etheric part of his physical body is withdrawn from the denser part, and shortly afterwards (usually within a few hours) the astral breaks away from the etheric, and the man's life on the astral plane is begun. Normally the man is unconscious until he has freed himself from the etheric, and so when he awakens to a new life it is that of the astral plane. But there are some people who cling so desperately to material existence that their astral vehicles cannot altogether separate from the etheric, and they awaken still surrounded by etheric matter.

The etheric body is only a part of the physical, and is not in itself a vehicle of consciousness — not a body in which a man can live and function. So these poor people are in a very unpleasant condition, suspended as it were between two planes. They are shut out from the astral world by the shell of etheric matter which surrounds them, and at the same time they have lost the physical sense-organs by which alone they can come fully into touch with the world of ordinary earth-life.

The result is that they drift about, lonely, dumb and terrified, in a thick and gloomy fog, unable to hold intercourse with the denizens of either plane, glimpsing sometimes other drifting souls in their own unfortunate positions, yet powerless to communicate even with them, incapable of joining them or of arresting their aimless wandering as they are swept on and engulfed in the rayless night. Now and again the

etheric veil may part sufficiently to permit one glance into lower astral scenes, but that is rarely encouraging, and indeed is often mistaken for a glimpse into hell; sometimes for a moment some familiar earthly object may be half-seen — usually from passing contact with a strong thought-image; but such rare and tantalising liftings of the fog only make its darkness the more soul-shaking and hopeless when it shuts down again.

All the while the poor soul cannot realise that if he would but let go his frenzied grasp on matter he would slip at once (through a few moments of unconsciousness) into the ordinary life of the astral plane. But it is just that feeling that he cannot bear — the feeling of losing even the miserable half-consciousness that he has; he clings even to the horrors of this grey world of all-embracing fog rather than let himself sink into what seems to him a sea of nothingness and complete extinction. Occasionally, as the result of wicked and blasphemous teaching on earth, he fears to let himself go lest he should fall into hell. In either case, his suffering, his hopelessness and utter dreariness are usually extreme.

Out of this unpleasant but self-imposed predicament there are several ways. There are members of our band of invisible helpers who devote themselves specially to seeking out souls who are in this painful condition, and trying to persuade them to let themselves sink out of it; and there are also many kindly people among the dead who take this up as a sort of branch of astral slum work. Sometimes such efforts are successful, but on the whole few of the victims have faith and courage enough to let go their hold on what to them is life, poor apology though it be. In process of time the etheric shell wears out, and the ordinary course of nature reasserts itself in spite of their struggles; and sometimes in sheer despair they anticipate this result, deciding that annihilation is preferable to such a life, and so recklessly letting themselves go — the result being an overwhelming but pleasant surprise to them.

In their earlier struggles, however, there are some who are so unfortunate as to discover unnatural methods of reviving to some extent their touch with the physical plane instead of sinking into the astral. They can do this readily through a medium, but usually the medium's `spirit-guide' sternly forbids them access. He is quite right to do so, for in their terror and their great need they are often utterly unscrupulous, and they would obsess and even madden the medium, fighting as a drowning man fights for life; and all absolutely uselessly, since the eventual result could only be to prolong their sufferings by strengthening that material part of which most of all they should get rid.

Occasionally they contrive to seize upon some one who is unconsciously a medium — some sensitive young girl, usually; but they can be successful in such an attempt only when the ego of the young girl has weakened his hold on his vehicles by allowing the indulgence of undesirable thoughts or passions. When the ego's relations with his vehicles are normal and healthy he cannot be dispossessed by the frantic efforts of such poor souls as we have been describing.

An animal, however, has no ego behind him, though he has a fragment of a group-soul which may be said to stand for him in the place of an ego. The hold of this fragment upon his vehicles is by no means what that of an ego would be, and so it comes to pass that what for the moment we may call the `soul' of the animal can be dispossessed much more easily than that of a man. Sometimes, as I have said, the human soul wandering in the grey world is unfortunate enough to discover this, and so in his madness he obsesses the body of an animal, or if he cannot quite drive out

the animal soul he contrives to gain partial control, so as to share the tenement to some extent with the rightful owner. In such a case he is once more in touch with the physical plane through the animal; he sees through the animal's eyes (often a very remarkable experience) and he feels any pain inflicted upon the animal; in fact, so far as his own consciousness is concerned, he is the animal for the time being.

An old and respected member of one of our English Branches related that he had received a visit from a man who came to ask for advice under peculiar circumstances. The visitor was a man who gave the impression of having seen better days, but he had fallen into such abject poverty that he was compelled to take any work that offered, and thus it happened that he had become a slaughter-man at a huge *abattoir*. He declared that he was absolutely unable to execute his loathsome task, because when he prepared to slaughter the creatures he was constantly checked by cries of heart-rending anguish, and by voices which said: "Have mercy upon us! Do not strike, for we are human beings entangled with these animals, and we suffer their pain." So, since he had heard that the Theosophical Society occupied itself with unusual and uncanny matters, he came to it to ask for advice. No doubt this man was somewhat clairaudient, or perhaps simply sensitive enough to catch the thoughts of these poor creatures who had associated themselves with the animals, and these thoughts naturally symbolised themselves to him as audible cries for mercy. No wonder he was unable to continue his occupation.

This may well give pause to the devourer of flesh, to the man who calls the murder of animals 'sport,' and most of all to the vivisector; the man who kills or tortures an animal may be inflicting unspeakable suffering upon a human being.

I have little doubt that the possibility for a material-minded man of this uncanny blunder is at least part of the rationale of the belief of various tribes that certain creatures must never be killed "lest one should unawares be dispossessing the spirit of an ancestor." For the man who thus entangles himself with an animal cannot abandon that animal's body at will; even if he learnt enough to make him desire to withdraw, he could do so only gradually and by considerable effort, extending probably over many days. It is usually only at the death of the animal that he is set free, and even then there remains an astral entanglement to shake off. After the death of the animal such a soul sometimes struggles to obsess another member of the same herd, or indeed any other creature whom he can seize in his desperation.

I have noticed that animals obsessed or semi-obsessed by human beings are often shunned or feared by the rest of the herd, and indeed they are themselves often half-maddened by anger and terror at the strangeness of the thing and at their own helplessness. The animals most commonly seized upon seem to be the less developed ones — cattle, sheep and swine. More intelligent creatures, such as dogs, cats and horses, would presumably not be so easily dispossessed — though my attention was once drawn to a peculiarly horrible instance in which a Catholic priest had in this way attached himself to a cat. Then there is the well-known case of the monkey of Pandharpur, who betrayed so curious a knowledge of Brahmana ceremonies. But in most cases the obsessing soul has to be satisfied with what he can get, for the effort to overpower even the more stupid beasts usually taxes his powers to the utmost.

This obsession of an animal seems to be the modern substitute for the awful life of the vampire. In the time of the fourth root-race, men who had a mad clinging to material life sometimes contrived to maintain a low and unspeakably horrible form of it in their own physical bodies by absorbing living blood from others. In the fifth

race that happily seems no longer to be possible, but people of the same type occasionally fall into this snare of animal obsession — bad enough, indubitably, but still not so utterly gruesome and disgusting as vampirism. So even in its very worst and lowest aspects the world is improving!

I have known of isolated cases of two other types of animal connection; one in which a wicked dead person was in the habit of temporarily seizing the body of a certain animal for specific evil purposes, and another in which an Oriental magician had, as an act of revenge for an insult to his religious faith, mesmerically linked his unhappy victim to an animal form after death. This could be done only if there existed in the victim some weakness through which such a magician could seize upon him, and if he had intentionally done something which gave him a karmic hold upon him. Normally neither of these cases would be at all possible.

All obsessions, whether of a human or an animal body, are an evil and a hindrance to the obsessing soul, for they temporarily strengthen his hold upon the material, and so delay his natural progress into the astral life, besides of course making all sorts of undesirable karmic links. This grey life, like almost all other unpleasant possibilities connected with the life after death, can come only as the result of ignorance of the real conditions of that life. The more we learn of life and death, the more emphatic appears the duty of making every effort to spread the knowledge of Theosophy, for it becomes ever clearer and clearer that in that knowledge is life and happiness and progress for all.

INDIVIDUALISED ANIMALS

When an individualised animal dies he has a happy astral life of considerable length, during which he usually remains in the immediate neighbourhood of his earthly home and in the closest touch with his especial friend and protector — able to see and enjoy the society of his friend as fully as ever, though himself invisible to the latter, his memory of the past being of course just as perfect as it was on earth. This will be followed by a still happier period of what has sometimes been called dozing consciousness, which will last until in some future world the human form is assumed. During all this time he is in a state analogous to that of a human being in the heaven-world, though at a somewhat lower level. He creates his own surroundings, even though he may be but drowsily conscious of them, and they will undoubtedly include the presence of his earth-friend in his very best and most sympathetic mood. For every entity which comes into connection with it, whether only just entering upon human evolution or preparing to pass beyond it, the heaven-world means the highest bliss of which that entity is, at his level, capable.

LOCALISATION OF STATES

The idea of location applies to the sub-planes of the astral, but only to a limited extent. Matter of all the stages undoubtedly surrounds us here on the surface of the earth, and the living man, employing his astral body during the sleep of the physical, comes into touch with them all simultaneously, and is able to receive impressions from them all. That is, if I, using my astral body during sleep, look at another living man's astral body, I see the whole of it, including of course matter of every sub-plane. But in the case of the average dead man, there has been a rearrangement of the matter of his astral body, consequent upon the proceedings of what is commonly called the desire-elemental, and broadly speaking only one type of astral matter is available to receive impressions.

What we usually call 'sight' on the astral plane is not really sight at all, for that word implies the use of an organ specialised to receive certain vibrations. Astral cognition is arranged on an entirely different scheme. It has often been said that a man can 'see' with any part of his astral body — that is, every particle of that body is capable of receiving impressions from without and transmitting them to the consciousness within. But every particle is not capable of receiving every possible impression.

For example, I became cognizant of the lowest kind of astral matter only by means of matter of the same subdivision existing in my own astral body; and I receive its vibrations through the particles of that lowest type of matter which happen to be at the moment on the surface of my astral body. Since during life all the particles of the astral body are constantly in motion among themselves, much as are the particles of a boiling liquid, it inevitably happens that all the subdivisions of matter are represented upon the surface of the astral body, and that is why I am able to see all the stages simultaneously. The ordinary man after death has for practical purposes only one type of matter outside, because of the concentric shell arrangement; therefore his view of the astral world around him is a very imperfect one.

If he, immured in a shell of matter of the lowest stage, looks at a living man's astral body, he can see only that part of it which consists of that lowest type of matter; but as he has no means of realising the limitation of his faculties, he inevitably assumes that he sees the whole of the other man's astral body, and therefore that the other man is a person possessing no characteristics but those eminently unsatisfactory ones which alone express themselves through matter of that particular subdivision.

He is living in the midst of all sorts of high influences and beautiful thought-forms, but is almost entirely unconscious of their existence, because those particles of his astral body which could respond to their vibrations are carefully shut in where they cannot be reached. That lowest type of astral matter corresponds to the solid subdivision of physical matter, and the astral counterpart of any solid physical object is composed of that lowest subdivision of astral matter — the seventh class of astral matter, if we number the sub-planes from above downwards. The astral counterparts of the floor, walls and furniture of a room are all of the lowest type of astral matter, and consequently the man newly dead usually sees these counterparts vividly, and is almost entirely unconscious of the vast sea of thought-forms which encompasses him, because nearly all those forms are built out of combinations of the finer types of astral matter.

In process of time, as the consciousness steadily withdraws inward; the shell of this coarsest type of matter atrophies and begins to disintegrate, and matter of a somewhat higher type is as it were uncovered, and becomes the surface through which impressions can be received. Since this usually happens gradually, it means that the man finds the counterparts of physical objects growing dimmer and dimmer, while the thought-forms become more and more vivid to him, so that without necessarily moving at all in space, he finds himself living in a different world. If while this process is going on he should encounter you at intervals he will be sensible of what will appear to him as a great improvement in your character — not that you have necessarily changed, but that he is becoming able to appreciate the higher vibrations of that character, and is losing the power to receive the lower ones. Your disposition may remain just what it was, but the dead man having commenced by seeing only its worst features, will pass it all slowly in review until presently he reaches a condition in which only the best and highest side of it is within his consciousness.

This then is what is meant by passing from one sub-plane to another — that the man loses sight of one part of the wonderful complexity which is the astral world, and that another part of it comes into his view. It is after all only a repetition on a smaller scale of what happens to each one of us as we pass from plane to plane. The whole astral world and the whole mental world are both of them around us here and now, yet so long as our consciousness is focussed in the physical brain we are blankly unconscious of them. At death the consciousness is transferred to the astral body, and at once we find ourselves seeing the astral part of our world, having lost sight of the physical. When later on we lose the astral body in turn, and live in the mental body, we are then conscious (though only partially) of the mental part of our world, and have altogether lost for the time both the astral and the physical. Just as it is possible for the man living on the astral plane to defy the desire-elemental and insist upon keeping the particles of his astral body in constant motion, just as they were during his physical life, so it is possible for the man still in physical life to train himself to have at his command the physical and astral and mental consciousness practically simultaneously; but this means considerable advancement.

To sum up the foregoing, then: `rising higher' in the ordinary spiritualistic sense is simply raising the consciousness from one stage of the astral to another, the matter of the astral body having in the first place been arranged after death by the desire-elemental. In such a case the consciousness can act only through the shell of matter which lies outermost, and consequently at first the dead man is confined to the perception of the lowest subplane, and can only become conscious of a higher subplane when that outer coating of denser matter is in great part worn away.

Consequently such a man in the earlier part of his post-mortem existence is naturally shut off from all the best and pleasantest part of astral life; and when he escapes from that condition he may in one sense be said to have risen higher.

A Theosophist, who comprehends the conditions of the astral plane, altogether declines to permit the rearrangement of his astral body by the desire-elemental in the first place; or if that should happen during the momentary unconsciousness which immediately succeeds death, those of us who are trying to help the man immediately break up the elemental's arrangement and restore the astral body to exactly the condition in which it was during life, with all its varieties of matter mingled in the natural way, so that the dead man can perceive the whole of the astral plane, instead of only one subdivision of it. In this way his astral life is perfect from the first, and he

can be a much more useful person than if he were confined to the consciousness of one subdivision only.

Still, as I explained in *The Inner Life*, Vol. I, in the chapter on spheres, there is just this much of truth behind the idea of location as connected with the sub-planes. Here on the surface of the earth we are in presence of matter in the solid, liquid, gaseous and etheric conditions. But it is undoubtedly true that, broadly speaking, the solid matter forms the basic, that the liquid matter is usually resting upon it, and that the gaseous matter rests upon both of these lower forms. There is a certain amount of solid matter and a great deal of liquid matter floating in the air above us, but still it remains broadly true that the zone of solid matter is limited by the surface of the earth, and the zone of liquid matter by the upper surface of the clouds, while the zone of gaseous matter extends a great many miles above that, and the zone of specialised etheric matter a great deal farther still. So that although all classes of matter exist around us here, we might yet say that in one sense each has a zone of its own, and that in each case the zone of a finer type of matter extends somewhat farther from the centre of the earth than the zone of the denser type of matter next below it.

A similar condition exists with regard to astral matter. All possible kinds of it exist here close about us, and the great majority of the denizens of the astral world spend most of their lives comparatively near to the surface of the physical earth; but as they withdraw into themselves, and their consciousness touches the higher types of matter, they find it easier and more natural than before to soar away from that surface into regions where there are fewer disturbing currents. I was once brought into touch with the case of a dead man who informed a friend of mine, during a series of spiritualistic séances, that he frequently found himself about five hundred miles above the surface of the earth. In this case the questioner was one who was well versed in occultism, and who would therefore know well how to conduct his enquiries and the investigations of his friend on the other side intelligently and scientifically; so that there might well be some truth in his friend's assertions. The finer types of astral matter extend almost to the orbit of the moon, whence the name that the Greeks gave to the astral plane — the sublunar world. In fact, so nearly does the limit of astral matter coincide with that orbit, that the astral envelopes of the moon and the earth usually touch one another at perigee, but not at apogee. I knew, likewise, of a case in which a dead man reached the moon, but could not then return. That was because the continuity of astral matter failed him — the tide of space had flowed in between, as it were, and he had to wait until communication was re-established the approach of the satellite to its primary.

HEAVEN-LIFE CONDITIONS

The principal difficulty in understanding the conditions of the heaven-world comes from our inveterate habit of thinking of the personality as the man. If two friends are bound by ties of affection, we must try to remember that the bond is between the souls and not the bodies — that they are friends now on earth because in quite different bodies they have known and loved each other perhaps for thousands of years. That fact draws their physical bodies together on this plane, but it does not enable them to understand more of one another than their physical capabilities permit; and further, each wears three heavy veils, in the shape of the mental, astral and physical bodies, to conceal his real self from the other.

When one of them dies he passes on to the astral plane, and there he meets his living friend face to face during the sleep of the latter. Even already he can see somewhat more of his friend than before, because for each of them, during those hours of sleep, the heaviest of the three veils has been withdrawn. The dead man is still dealing with the personality of his friend only, and therefore if some great sorrow should fall upon the waking life of that friend, it would inevitably be reflected in his astral life, and the dead man would perceive it. For our sleeping and waking lives are in reality but one, and during our sleep we are aware of that fact, and have the continuous memory of both open before us. You will see, therefore, that the astral body of his living friend (with which the dead man is dealing) is the astral body of the personality, and he is therefore fully conscious of what is happening to that personality.

When the heaven-world is reached all this is changed. The dead man is then functioning in his mental body — the same mental body which he has used during his past earth-life; but he does not meet there the mental body which his friend is using during life. On the contrary, the dead man himself by his thought builds for his friend an entirely separate mental body, and it is the ego of his friend which ensouls it, working from its own level and from the causal body. This is an additional opportunity for mental-plane activity for the friend, and is entirely separate in every way from the personality of his physical life.

It is not possible for one man to ensoul more than one physical body at one time, but it is quite possible for him to ensoul simultaneously any number of the thought-forms which other people may make of him on the mental plane in the course of their heaven-life. I think it is a misunderstanding of this fact which had led some to think that several physical bodies may be incarnations of one man.

You will see, therefore, that any sorrow or trouble which may fall upon the personality of the living man, and may conceivably influence his mental body, will not in the least affect his other thought-form which his ego is using as an additional mental body. If in that manifestation he knows at all of such sorrow or trouble, he will regard it as he would from the causal body — that is to say, it will not be to him a sorrow or trouble at all, but only a lesson, or the working out of some karma. There is no delusion at all in this view of his, because he is seeing the matter as it really is, from the point of view of the ego on his own plane. It is our lower personal view that is the delusion, because we see sorrow and trouble where in reality there are only the steps on our upward way.

The two friends may know far more of each other at that level, because each has now only one veil, that of the mental body, cast over his individuality; but there is still that veil. If the dead man has known only one side of his friend during life, it will be only through that side that the friend can express himself in the heaven-world. He can express that side of himself much more fully and satisfactorily than ever before; but he is largely confined to that side. Still, it is a fuller expression than the dead man has ever been able to see upon the lower planes. He by no means forgets that there is such a thing as suffering, because he remembers clearly his past life; but he understands now many things that were not clear when he was on the physical plane, and the delight of the present is for him so great that sorrow seems to him almost like a dream.

It is asked how we who still live on earth converse with our friends in heaven; if by we you mean our personality, that does not converse with friends in heaven. The real ego does do so, as has been said, but in the veil of this personality we know nothing of that.

Suppose that a good Catholic mother died, who dearly loved her daughter, and that after the mother had reached the heaven-world, her daughter embraced Theosophy. The mother would go on imagining her daughter as merely orthodox; would she not in this be under a delusion? Yes, she would, for this is an instance of one of the possible limitations to which I have previously referred. If the mother could see only such of her daughter's thought as could be expressed by orthodox ideas, there would naturally be points in the new revelation which had come to the daughter which the mother would be little able to grasp. But in so far as the ego of the daughter profited by what the personality had learnt, there would be a tendency on her part gradually to widen out and perfect the conception of the mother, but always along the lines to which the mother was accustomed. There would be no sense of difference of opinion, and no avoidance of subjects of religion.

You will understand that I am speaking here of the ordinary person; in the case of a more advanced man who was already fully conscious in the causal body, he would put himself down consciously into the thought-form provided for him by a friend in the heaven-world, as into an additional mental body, and work through it with definite intention; so that if such a man should acquire additional knowledge he could directly and intentionally communicate it to that friend. In this way the Masters work on such of their pupils as take the heaven-life, and alter their characters immensely.

A man's condition in the heaven-life depends upon the amount of spiritual force in him. Of two people of the same class or type the more spiritual would naturally remain a longer time; but it must be borne in mind that the force may be used up quickly or slowly according to the necessities of each man's evolution. Those who have devoted themselves especially to the work of serving the Great Ones, and through them humanity, are likely in this respect to have experiences differing somewhat from the ordinary. It is evident that our Masters have already, many millennia ago, formed a special band of servers and helpers from those who have offered themselves for such work, and They use this body of men as a kind of regiment of pioneers to be sent wherever special work of that kind is needed.

Those who have read the lives of Alcyone, as published in *The Theosophist*, will realise that the hero of that remarkable story is a member of that band — or perhaps we should rather say of one of those bands; and for that reason it will be found that

over and over again the same set of people come together in all sorts of different places, in their successive incarnations. It is obvious that in a group of a hundred people there must be many divergences; some of them will assuredly generate more spiritual force than others, and their karma would naturally be such as to take them into differing surroundings, yet the one great fact that they are devoted to service overpowers all these considerations, and they are brought together in order that they may be utilised as a whole.

Be sure that in this there is no injustice, and that no one of them, for this or any other reason, escapes one jot of the karma which is legitimately due to him. Indeed, those who offer themselves for service not infrequently suffer considerably in the course of that service — sometimes because it is necessary that their past karma should be cleared up quickly, in order that they may be free to do higher work without any hindrance from it, and in other cases because their work may have made it impossible for them to reap life after life the karma that would otherwise have come to them, and so a considerable accumulation may descend upon them at once in some gigantic catastrophe. Instances of the working of both these methods may be found in the lives of Alcyone.

In the case of the great bulk of humanity there is no special interference from without, and the heaven-life of each works itself out at whatever may be its ordinary rate. Naturally this difference in the time of working out involves also a difference of intensity which is shown by a greater or less brilliancy in the light of the mental body. The more developed man, especially if he has before him the idea of service, usually generates karma during his heaven-life, and thus he may modify it even while it is in progress.

It is true that Madame Blavatsky states in *The Key To Theosophy* that it is impossible for a materialist to have any heaven-life, as he had not while on earth believed in any such condition; but it seems probable that she was employing the word materialist in a more restricted sense than that in which it is generally used, for in the same volume she also asserts that for them no conscious life after death is possible at all, whereas it is a matter of common knowledge among those whose nightly work lies upon the astral plane that many of those whom we usually call materialists are to be met with there, and are certainly not unconscious.

For example, a prominent materialist intimately known to one of our members was not long ago discovered by his friend in the highest subdivision of the astral world, where he had surrounded himself with his books and was continuing his studies almost as he might have done on earth. On being questioned by his friend he readily admitted that the theories which he had held while on earth were confuted by the irresistible logic of facts, but his own agnostic tendencies were still strong enough to make him unwilling to accept what his friend told him as to the existence of the still higher spiritual state of the heaven-world. Yet there was certainly much in this man's character which could find its full result only in the heaven-world, and since his entire disbelief in any life after death has not prevented his astral experience, there seems no reason to suppose that it can check the due working out of the higher forces in him upon the mental plane.

We constantly find down here that nature makes no allowance for our ignorance of her laws; if, under an impression that fire does not burn, a man puts his hand into a flame, he is speedily convinced of his error. In the same way a man's disbelief in a future existence does not affect the facts of nature, and in some cases at least he

simply finds out after death that he was under a mistake. The kind of materialism referred to by Madame Blavatsky was probably something much coarser and more aggressive than ordinary agnosticism — something which would render it exceedingly unlikely that a man who held it would have any qualities requiring a heaven-life in which to work themselves out; but no such case as that has yet come under our observation.

KARMA IN THE HEAVEN LIFE

In the earlier days of our study of Theosophy we were led to look upon all other worlds but the physical as almost exclusively the theatre of results and not of causes. It was supposed that man spent his physical life to a large extent in generating karma, and his existence on the astral and mental planes in working it out, and the suggestion that a man could by any means make any more karma, even on the astral plane, was regarded as almost heretical.

As the years rolled on and some of us became able to study astral conditions at first-hand, it became obvious that this idea had been an error, since it was manifestly possible for us in working on that plane to perform actions of various sorts which produced far-reaching results. We soon saw also that not only the man still attached to a physical body could produce these results, but that they were equally within the power of one who had cast off that vehicle. We found that any developed man is in every way quite as active during his astral life after physical death as during his physical life before it; that he can unquestionably help or hinder not only his own progress but that of others quite as much after death as before, and consequently that he is all the time generating karma of the greatest importance.

This modified view of after-death conditions gradually found its way into our literature, and may be considered now as universally accepted by all Theosophists. But for many years after we had corrected our misconceptions upon this important point, we still held to the idea that in the heaven-world at least man could do practically nothing but enjoy the conditions which he had made for himself during the previous stages of his existence. Broadly speaking, this is true for the ordinary man, though we do not always realize that even in the course of that enjoyment the inhabitant of the heaven-world is affecting others, and therefore producing results.

One who has succeeded in raising his consciousness to the level of the causal body has already unified the higher and lower selves (to use the older terminology), and to him the statements made as to average humanity naturally do not apply. Such an one has the consciousness of the ego at his disposal during the whole of his physical life, and that is not at all affected by the death of the physical body, nor even by the second and third deaths in which he leaves behind him the astral and the mental bodies respectively. For him the whole of that series of incarnations is only one long life, and what we call an incarnation is to him a day in that life. All through his human evolution his consciousness is fully active, and it naturally follows that he is making karma just as much at one period of it as at another; and while his condition at any one moment is the result of the causes which he has set in motion in the past, there is no instant at which he is not modifying his conditions by the exercise of thought and will.

Men who have reached that level are at present rare; but there are others who possess a similar power in a minor degree. Every human being, after he has passed through his life on the astral and lower mental planes, has a momentary flash of the consciousness of the ego, in which he sees his last life as a whole, and gathers from it the impression of success or failure in the work which it was meant to do; and along with this he has also a forecast of the life before him, with the knowledge of the general lesson which that is to teach, or the specific progress which he is intended to

make in it. Only very slowly does the ego awaken to the value of these glimpses, but when he comes to understand them he naturally begins to make use of them.

Thus by imperceptible degrees he arrives at a stage in his evolution when this glimpse is no longer momentary — when he is able to consider the question much more fully, and to devote some time to his plans for the life which lies before him. His consciousness gradually increases, and he comes to have an appreciable life on the higher levels of the mental plane each time that he touches them. When he arrives at this stage he soon finds that he is one among a vast number of other egos, and that he can do something else with his life among them besides making plans for his own future. He may and does live a conscious life among his peers, in the course of which he influences them in many ways, and is himself influenced in turn. Here therefore is a possibility of making karma, and of making it on a scale which is entirely out of his reach on these lower planes, for every thought on those higher mental levels has a force quite out of proportion to that of our limited thought during physical life.

This of which I am speaking is quite distinct from the consciousness which comes with the unifying of the higher and lower selves. When that feat has been performed the man's consciousness resides in the ego all the time, and from that ego it plays through whatever vehicle he may happen to be using. But in the case of a man who has not yet achieved that union the consciousness of the ego on his own plane comes into activity only when he is no longer hampered by any lower vehicles, and exists only until he puts himself down again into incarnation; for as soon as he takes up a lower body his consciousness can manifest for the time only through that body.

Short of that perfect consciousness of the ego, there are stages of development which it is necessary to note. The ordinary 'man in the street' has usually no definite and reliable consciousness outside of the physical plane. His astral body may be fully developed and quite capable of being used as a vehicle in any and every way; yet he is probably not in the habit of so using it, and therefore his experiences of the astral world are of a vague and uncertain character. He may sometimes remember one of them vividly, but on the whole the time of the sleep of the physical body is for him a blank.

The next stage beyond this is that of the gradual development of the habit of using the astral body, accompanied as time goes on by some recollection of what is done in it. The end of this is the opening of the astral consciousness, though usually that comes only as the result of definite efforts along the line of meditation. When this opening is attained the man's consciousness is continuous through night and day, and up to the end of the astral life, so that he avoids the usual temporary suspension of consciousness at the death of the physical body.

The next stage beyond this — a long stage usually — is the development of the consciousness of the mental body, and when that is achieved, each personality remains conscious from physical birth until the end of its life in the heaven-world. But even then it is only the consciousness of the personality, and not yet of the ego, and still another step must be taken before complete unification is attained.

It is clear that men who have reached any of these stages are making karma as far as their consciousness reaches; but what as to the ordinary man, who has not yet quite succeeded in linking even the astral consciousness to the physical? In so far as he has any activities on the astral plane during sleep, he must be producing results. If he feels, even blindly, love and affection towards certain persons, and goes out towards

them during sleep with vague thoughts of good-will, he must inevitably affect them to a certain extent, and the effect must be a good one. Therefore there is no possibility of avoiding a reaction upon himself which will also be good. The same is true if the feeling unfortunately be one of dislike or of active hatred, and the result for him in that case cannot but be painful.

When, after death, he lives entirely in the astral world, his consciousness is usually much more definite than it has been during the sleep of his physical body, and he is correspondingly better able to think and act with determination in regard to other men, and so his opportunities of making good or bad karma are the greater. But when such a man ends his astral life and passes into the heaven-world he reaches a condition where activity is no longer possible for him. He has encouraged activities in his mental body, during life, in certain directions only, and now that he comes to live entirely in that mental body he finds himself enclosed within it as in a tower, shut off from the world around him and able to look out upon it only through the windows in it which he has opened by means of those activities.

Through those windows the mighty forces of the plane play upon him; he responds to them and leads a life of vivid joy — which is, however, confined to those particular lines. But, though he is thus shut away from the full enjoyment of the possibilities of the mental world, it must not be supposed that he is in the slightest degree conscious of any curtailment of his activities or his feelings. He is, on the contrary, filled with bliss to the very utmost of which he is capable, and it is to him incredible that there can be any greater joy than that which he is himself experiencing. True, he has shut himself in within certain limits; but he is quite unconscious of those limits, and he has all that he can possibly desire or think of within them. He has surrounded himself with images of his friends, so that through these images he is actually in closer connection with them than he has ever been on any other plane.

Let us see then what are his possibilities for making karma in this curiously limited life — limited, we must remember, from the point of view of the mental world only, for along the lines of its special directions its possibilities are far greater than those of physical life. A man under such conditions cannot originate a fresh line of affection or devotion, but his affection and devotion along the lines which he has already decided will be distinctly much more powerful than they ever could have been while he was labouring under the heavy limitations of the physical body.

An ordinary man such as we have described is, quite unintentionally and unconsciously to himself, producing three separate results, during the whole of his heaven-life. Let us take as an example the emotion of affection. He feels this strongly for certain friends, and it is probable that even after his death those friends still think of him with kindly remembrance, and thus his memory is not without its effect even upon their personalities. But entirely apart from this is the effect to which I have above referred — that he makes an image of each friend and, in so doing, draws forth a strong response from the ego of that friend. The affection which he pours upon that ego (manifesting through the thought-form which he has made for it) is a mighty power for good, which bears no inconsiderable part in the evolution of that ego. It evokes from him an amount of affection which would not otherwise be stirred up in him; and the steady intensification of that most admirable quality throughout the centuries of the heaven-life raises the friend considerably in the scale of evolution. To do this for another ego is unquestionably an act which generates karma, even though the man who has set all this machinery in motion has done so uncomprehendingly.

Occasionally the action of such a force upon the ego of a surviving friend may manifest itself even in the personality of that friend upon the physical plane. The action is upon the ego through the special thought-form; but the personality of the surviving friend in this world is a manifestation of the same ego, and if the ego be considerably modified it is at least possible that that modification may show itself in the physical manifestation on this lower plane. It may be asked why the thought of the man in the heaven-world should not act upon his friend precisely as does the thought of a living man — why the vibrations sent forth from his mental body cannot strike directly upon the mental body of his friend, and why it should not generate a thought-form which would travel through space and attach itself to his friend in the ordinary way. If he were moving freely and consciously about the mental plane that is precisely what would happen, but the reason that it does not lies in the peculiar condition of the man in the heaven-world.

The man in the heaven-life has shut himself out absolutely from the rest of the world — from the mental plane as much as from the lower levels, and he is living inside the shell of his own thoughts. If his thoughts could reach us in the ordinary way, ours could reach him in precisely the same way, but we know that that is not so. The thought-form which he makes of his friend is within his own shell, and therefore he can act upon it; and, since the ego of the friend has poured himself down into that thought-form, the force reaches the ego of the friend in that way, and from that ego it may, as we have said, to some extent manifest itself even in the personality of the friend down here. The shell is as regards the mental plane much like the shell of an egg on the physical plane. The only way to get anything into the shell of an egg, without breaking it, would be to pour it in from the fourth dimension, or to find a force whose vibrations are sufficiently fine to penetrate between the particles of the shell without disturbing them. This is true also of this mental shell; it cannot be penetrated by any vibrations of matter of its own level, but the finer vibrations which belong to the ego can pass through it without disturbing it in the least; so that it can be acted upon freely from above, but not from below.

The thought-form made by the dead man may be considered as a kind of additional artificial mental body, made for and presented to the friend upon whom the love is being poured forth. The personality down here knows nothing of this, but the ego is fully conscious of it and plunges down into it with delight and avidity, realising incidentally that this affords him an additional opportunity of manifestation, and therefore of evolution. From this it follows that the man who has made himself generally beloved — the man who has many real friends — will evolve with far greater rapidity than a more ordinary man; and this again is obviously the karma of his development within himself of the qualities which make him so lovable.

So much for the direct result of his action upon individuals; but there are also two aspects of its general action which must not be ignored. A man who thus pours out a great flood of affection, and evokes in response other floods from his friends, is distinctly improving the mental atmosphere in his neighborhood. It is good for the world and for the humanity evolving in it that its mental atmosphere should thus be charged with such feelings, for they play upon all its inhabitants — devas, men, animals, plants — and on every one of these widely different forms of life they have their influence, and always an influence for good.

The second and more important of the results produced for the world at large will be readily comprehensible to those who have studied the book on *Thought-forms*, as an attempt is there made to indicate the outpouring which flows down from the LOGOS

in response to a thought of unselfish devotion. It has often been explained that such response comes not only to the individual who originated the thought, but that it also helps to fill the reservoir of spiritual force, which is held by the Nirmanakaya at the disposal of the Masters of Wisdom and their pupils, to be used for the helping of mankind. What is true of devotion is true also of unselfish affection, and if every outrush of such affection or devotion during the comparatively limited physical life produces so magnificent a result, it is easy to see that a far stronger outrush, sustained through a period of perhaps a thousand years, will make to that reservoir a really considerable contribution, and this will bring to the world a benefit which is not calculable in any terms that we can use upon the physical plane.

So it is clear that while a man's power for good augments as his consciousness in these higher worlds increases, even the quite ordinary man, who has as yet no special development of consciousness, is nevertheless capable of doing an enormous amount of good during his sojourn upon the higher planes. During his long stay in the heaven-world he may benefit his fellow-men, and so make a large amount of good karma for himself; but, in order to do that, he must be a man of unselfish love or unselfish devotion. It is this quality of unselfishness, of self-forgetfulness, which puts the power into his hands; and that, therefore, is the virtue which every man must cultivate now in full consciousness, in order that after death he may use to the best advantage those far longer periods whose conditions it is now so impossible for him to realize.

SECOND SECTION: ASTRAL WORK

INVISIBLE HELPERS

PEOPLE often write to us, applying to be admitted to the band of invisible helpers, and asking what preparation is necessary. Those who desire to take up this work should familiarise themselves thoroughly with the book written under that title, and should especially take care to develop within themselves the qualifications which are there described. I have little to add to what I have there written, except that I should advise every one who wishes to take up work on the astral plane to learn as much as he can beforehand of the conditions of life on that plane.

In the astral life we are absolutely the same persons as we are down here, but with certain limitations removed. Our interests and activities on that plane resemble those on the physical; a student is still studious; an idle person is still idle; an active helper on the physical plane is still a helper there. Some people still gossip there just as venomously as ever, and are still continuing to make just the same bad karma by doing so. Most dead people haunt for a long time the places to which they have been accustomed in life. Many a man hovers round his ancestral home, and continues daily to visit the astral counterpart of the temple which he used to support. Others drift round and make pilgrimages, without trouble or expense, to all the great shrines which during life they have in vain wished to visit.

There is perfect continuity in the astral life. That life is in many ways much more real than this, or at least much nearer to reality, and this physical existence is only a series of breaks in it during which our activity is greatly limited and our consciousness but partially operative. To most of us in this lower life the night seems a blank, and in the morning we remember nothing of what we have done; but we must not therefore suppose that we are equally dense on the astral plane. That wider consciousness fully includes this, and every night we remember vividly not only what we did on all previous nights, but also all that we have done on the intermediate days. It is the physical brain which is dull and clogged, and it is upon return to it that we lose our memory of all except that with which it has been directly concerned. The astral life is much more vivid and its emotions are far stronger than any that we know down here. What we ordinarily call an emotion is only the comparatively small fragment of one which remains after the greater part of it has been exhausted in setting in motion the clumsy physical particles, so it is not difficult to see how far more intense and real that other life must be.

And yet, although this is quite true and true of everybody, ordinary people usually do very little in the way of real work on the astral plane. They do not know, in fact, that they can work, and even if they did know they would probably see no particular reason why they should. A man may spend a very enjoyable time in the astral world, just drifting about and experiencing various pleasurable emotions. That seems to most people the only thing to do, and it needs a powerful motive to rouse them out of that, and make them take the trouble of devoting their time to the helping of others. We must admit that for the ordinary man this motive does not exist; but when we have begun to study Theosophy, and in that way learn the course of evolution and the purpose of things, there arises within us an earnest desire to help forward that evolution, to accomplish that purpose, and to put our fellow-men in the way of understanding it also, in order that thereby their troubles may be lightened and the path of their progress made easier.

Now, when a man thus awakens to his duty, how is he to set about it? We are all of us capable of such work, to a greater or less extent, though probably not in the habit of doing it. All people of ordinary culture and development have their astral bodies in working order, just as all reasonably healthy people possess the necessary muscles and the necessary strength in them to enable them to swim; but if they have not learnt how to use them they will need a certain amount of instruction before they can usefully or even safely take to the water. The difficulty with the ordinary person is not that the astral body cannot act, but that for thousands of years that body has been accustomed to being set in motion only by impressions received from below through the physical vehicle, so that men do not realise that the astral body can work on its own plane and on its own account, and that the will can act upon it directly. People remain 'unawake' astrally because they get into the habit of waiting for the familiar physical vibrations to call out their astral activity.

There are several ways in which a man may begin to help. Suppose, for example, that a relation or friend dies. In order to reach and to help him during sleep all that is necessary is to think of him before retiring to rest, with the resolve to give him whatever assistance he most needs. We do not need any help in order to find him, or to communicate with him. We must try to understand that as soon as we leave the physical body at night we stand side by side with a departed friend, exactly as we did when he was with us on the physical plane. One great thing to remember is the necessity of curbing all sorrow for the so-called dead, because it cannot but react upon him.

If a man allows himself to despair about the dead, the feeling of despair will affect them very strongly, for emotions play through the astral body, and consequently those who are living in their astral vehicles are much more readily and deeply influenced by them than people who have a physical body to deaden their perceptions. The dead can see us, but it is our astral body that they see; consequently they are at once aware of our emotions, but not necessarily of the details of our physical condition. They know whether we are happy or miserable, but not what book we are reading, for example. The emotion is obvious to them, but not necessarily the thought which causes it. The dead man carries on with him his affections and hatreds; he knows his old friends when he meets them, and he also often forms new friendships among new companions whom he meets for the first time on the astral plane.

Not only must we avoid sorrow, but also excitement of any kind. The invisible helper must above all things keep perfectly calm. I have known a worthy lady who was full of the most earnest desire to help, and in her eagerness to do so keyed herself up into a tremendous state of excitement. Now, excitement shows itself in the astral body in great increased size, violent vibration and the flashing forth of fiery colours. So the newly-dead person, who was quite unused to astral surroundings, and consequently in a state of timidity and nervousness, was horrified to see a huge flaming, flashing sphere come rushing at him with evident intention. Naturally he took this for the theological devil *in propria persona*, and fled shrieking before it to the ends of the earth, though for a long time it increases his terror by persistently following him.

One case in which it is often possible for even a beginner to make himself useful is that of some friend or neighbour who is known to be about to die. If one has access to him physically, and if his illness is of a nature which makes it possible to discuss with him the conditions of death and of its after-states, a little rational explanation of these will often very greatly relieve his mind and lighten his burdens. Indeed, the

mere meeting with a person who speaks confidently and cheerfully about the life beyond the grave is frequently the greatest consolation to one who finds himself approaching it.

If, however, for any reason, this physical communication is impossible, much may be done during sleep by acting upon the dying man from the astral plane. An untrained person seeking to give such help should follow the rules laid down in our books; he should fix the intention of aiding that particular person in his mind before going to sleep, and he should even decide as far as possible upon the arguments which should be presented and even the very words which should be used, for the more precise and definite the resolution is made while awake, the more certain it is to be faithfully and accurately carried out in the astral body during sleep.

The explanation to be given to the sick man is necessarily the same in both cases. The main object of the helper is to calm and encourage the sufferer, to induce him to realise that death is a perfectly natural and usually an easy process, and in no case a formidable or terrible leap into an unknown abyss. The nature of the astral world, the way in which a man ought to order his life in it if he wishes to make the best of it, and the preparation necessary for progress toward the heaven-world which lies beyond; all these should be gradually explained by the helper to the dying man. The helper should always remember that his own attitude and state of mind produces even more effect than his argument or his advice, and consequently he must be exceedingly careful to approach his task with the greatest calmness and confidence. If the helper himself is in a condition of nervous excitement he is quite likely to do more harm than good, as did the poor lady whom I have just mentioned.

The assistance offered should be continued after death. There will be a certain period of unconsciousness then, but it may last only for a moment, though often the moment expands into a few minutes, or several hours, and sometimes even into many days or weeks. A trained pupil naturally observes for himself the condition of the 'dead' man's consciousness and regulates his assistance accordingly; the untrained man will do well to offer such assistance immediately after death, and also to hold himself in readiness to give it for several succeeding nights, in order that he may not fail to be at hand when his services are needed. So many diverse circumstances affect the duration of this period of unconsciousness that it is scarcely possible to lay down any general rule in the matter.

We should at least determine each night to comfort someone who is in trouble, and if we know the exact nature of the trouble we must do our best to adapt our measures to the needs of the case. If the sufferer be weak and exhausted, the helper should use his will to pour into him physical strength. If, on the other hand, he is excited or hysterical, the helper should endeavour to enfold him in a special aura of calm and gentleness — wrap him up, as it were in a strong thought-form of peace and harmony, just as one would wrap up a person in a blanket.

It is often difficult for one who tries to help to believe that he can have been successful, when he wakes in the morning and remembers nothing whatever of what has taken place. As a matter of fact some measure of success is absolutely certain, and as the helper goes on with his work he will often receive cheering little indications that he is producing definite results in spite of his lack of memory.

Many a member has set himself to try this, and for a long time has known nothing as to results, until one day it has happened to him to meet physically the person whom he has been trying to assist, and to be much comforted to see the improvement in

him. Sometimes it happens that the friend dates the commencement of his recovery from a particular night on which he had a pleasant or a remarkable dream; and the helper is startled when he remembers that it was on that very night that he made a specially determined effort to help that man. The first time that this happens, the helper probably persuades himself that it is a mere accident; but when a sufficient number of coincidences have accumulated he begins to see that there is something more in it than that. The beginner therefore should do his best, and be content to wait as far as result are concerned.

There is another simple experiment which has greatly helped some beginners in gaining confidence. Let a man resolve to visit astrally some room which is well known to him — one, let us say, in a friend's house; and let him note carefully the arrangement of the furniture and books. Or if, without previously intending it, the experimenter finds himself during sleep in a spot which he recognises (that is, in ordinary parlance, if he dreams of a certain place) he should set himself to observe it with great care. If when he remembers this in the morning it seems to him that everything in that room was exactly as when he last saw it physically, there is nothing to prove that it was not really a mere dream or memory; but if he recollects some decided change in the arrangements, or if there is something new and unexpected, it is distinctly worth his while to go physically in the morning to visit that room, in order to test whether his nocturnal vision has been correct.

All those of us who are definitely engaged in astral work have necessarily at one time or another taken in hand a number of cases which needed help. Such help may occasionally be of the nature of a surgical operation — something which can be done once for all, and then put aside; but far more often what is needed is comfort, reassurance and strengthening which must be repeated day after day in order that it may gradually sink into the texture of some wounded nature and transmute it into something braver and nobler. Or sometimes it is knowledge which must be given little by little as the mind opens to it and is able to bear it. Thus it comes that each worker has a number of chronic cases, clients, patients — call them what you will — whom he visits every night, just as a doctor upon earth makes a regular round among his patients.

It often happens also that those who have been thus helped are filled with gratitude towards the worker, and attach themselves to him in order to second his efforts, and to pass on to others the benefits which they have thus received. So it comes that each worker is usually the centre of a small group, the leader of a little band of helpers for whom he is always able to find constant employment. For example, a large number of people who die are much in the position of children afraid of the dark. One may reason with them, and argue patiently and convincingly that there is nothing whatever to fear; but a hand that the child can hold is of more practical use to him than a whole chapter of arguments.

The astral worker, with a score of other cases needing immediate attention, cannot possibly spend the whole night in standing by and comforting one nervous or doubting patient; but he can detach for that purpose one of his earnest followers who is not so busily occupied, and is therefore able to devote himself to that charitable work. For to comfort the child in the dark no brilliant scientific knowledge is needed; what he wants is a kindly hand and the sense of companionship. So that work can be found in the astral world for any number of workers, and everyone who wishes, man, woman or child, may be one of them. For the larger and more comprehensive varieties of work, and for the direction of the work, much knowledge is of course

required; but a heart full of love and the earnest desire to help is equipment enough to enable any one to become one of the minor comforters, and even that humble effort brings in its train a blessing beyond all calculation.

When the astral worker finally lays aside the physical body for this incarnation, he finds himself among an army of grateful friends who rejoice unreservedly that he is now able to spend the whole of his life with them instead of only a third of it. For such a worker there will be no sense of strangeness or newness in the condition of the life after death. The change for him means only that he will then be able to devote the whole of his time to what is even now by far the happiest and most effective part of his work — a part which he takes up every night with joy and lays aside every morning with regret — the real life, in which our days of physical existence are but dull and featureless interludes.

There are one or two other points with regard to the astral life which it is desirable for the worker to try to understand. One of these is the method of what I suppose we must call speech — the communication of ideas on the astral plane.

It is not always easy to understand down here the substitute for language which is used in the astral world. Sound in the ordinary sense of the word is not possible there — indeed it is not possible even in the higher part of the purely physical plane. As soon as one rises above the air into the etheric regions, there is no more possibility of sound as we understand the word. Yet the symbol of sound is used very much higher, for we constantly find references to the spoken word of the LOGOS, which calls the worlds into manifestation.

If in the morning we remember an experience of the previous night, such as the meeting with a friend or the attendance at a lecture, it will always seem to us that we heard a voice in the usual terrestrial way, and that we ourselves replied to it, also audibly. In reality this is not so; it is merely that when we bring through a recollection to the physical brain we instinctively express it in terms of the ordinary senses. Yet it would not be correct to say that the language of the astral world is thought-transference; the most that could be said is that it is the transference of a thought formulated in a particular way.

In the mental world one formulates a thought and it is instantly transmitted to the mind of another without any expression in the form of words. Therefore on that plane language does not matter in the least; but helpers working in the astral world, who have not yet the power to use the mental vehicle, must depend on the facilities offered by the astral plane itself. These lie as it were half way between the thought-transference of the mental world and the concrete speech of the physical, but it is still necessary to formulate the thought in words. It is as though one showed such formulation to the other party in the dialogue, and he replied (almost simultaneously, but not quite) by showing in the same way his formulated reply. For this exchange it is necessary that the two parties should have a language in common; therefore the more languages an astral-plane helper knows, the more useful he is.

The pupils of the Masters, however, have been taught to form a special kind of temporary vehicle, in order to meet these difficulties. They habitually leave their astral bodies with the physical; they travel about in their mental bodies, and they materialise a temporary astral body from surrounding matter when they need it for astral work. All who have been taught to do this have the advantage of the mental-plane method of thought-transference so far as understanding another man is

concerned, though their power to convey a thought in that way is limited by the degree of development of that other man's astral body.

Apart from definitely trained pupils, there are very few people who consciously work in the mental body — for to do so means years of practice in meditation and special effort. We know that a man in the heaven-world shuts himself up within a shell of his own thoughts, and that these thoughts then act as channels through which the life of the mental world can affect him. But we cannot call this functioning on the mental plane, for that involves the free moving about on that plane, and the observation of what exists there.

Fortunately, the mental elemental does not rearrange the mental body after death, so that we have not the same kind of trouble with it as with the desire-elemental on the astral plane. Indeed, the elemental essence of the mental plane differs greatly from that of the astral. It is a whole chain behind the other, and therefore it has not the same force. It is trying to deal with, for it is largely responsible for our wandering thoughts, as it darts constantly from one thing to another; but at least it does not make a shell of any sort, although certain portions of the mental body may become hardened, as I have explained when dealing with that subject.

When a man function in the mental vehicle he leaves the astral body behind him in a condition of suspended animation, along with the physical. If he finds it necessary he can easily surround that torpid astral body with a shell, or he can set up in it vibrations which render it impervious to all evil influences. It is unquestionably possible for any man in process of time, by meditation upon the LOGOS or the Master, to raise himself first to the astral and then to the mental levels; but none can say how long it will take, as that depends entirely upon the past of the student.

It is quite possible for any person when upon the astral plane after death to set himself to study, and to acquire entirely new ideas. I have known people who learnt Theosophy for the first time in the astral world. I have even heard of a case in which a lady learnt music there, but that is unusual. Probably some dead person gave her lessons, or it may be that the teacher was a living musician who was on the astral plane at the same time as the lady. In astral life people often think that they are playing on astral instruments, but in reality they are only making vibrations by their thought, which produce the effect of sound. There is a special class of devas who respond to music and express themselves through it, and sometimes they are willing to teach people to whom music is the first and only thing in life.

Most dead people shut themselves out from many of the possibilities of the plane, by accepting the rearrangement of the body at death, which prevents them from seeing anything belonging to the higher levels. The Theosophist will not allow this rearrangement, because he intends to work, and therefore he must be free to move through all the sub-planes. We cannot get rid of elemental essence, but we can subdue the desire-elemental, draw in the finer types of matter, and make the ego strong to keep the upper hand. The essence wants violent emotion, so as to evolve downwards — which, it must be remembered, is its proper and legitimate course of evolution. If it knew of our existence, we should appear to it to be evil beings and tempters, trying to prevent the evolution which it knows to be right for it. If we steadfastly refuse to allow our astral body to vibrate at the rate peculiar to the coarser matter, that coarser matter will gradually be discharged from the body, which will become finer in texture, and the desire-elemental will be of a less active kind.

The rearrangement which the desire-elemental produces after death is over the surface of the counterpart of the physical body, not over the surface of the egg which surrounds it. The elemental tries to inspire a feeling of terror in the man who is jolting him out of this arrangement, in order to deter him from doing so. This is one reason why it is so useful to have knowledge of these matters before death.

There is no such thing as sleep in the astral world. The need of sleep on the physical plane is that it calms the physical centres and allows them time to rebuild themselves chemically, so that the astral body can work more freely, through a better vehicle; but on the astral plane there is no fatigue, unless we may call by that name the gradual slackening down of all the energies when the end of the astral life is approaching.

It is possible to forget upon the astral plane, just as it is upon the physical. I mean in this case not the loss of memory between two planes, which is so common, but the actually being unable to remember on the astral plane to-night some of the details of what one did last night or last year. Indeed, perhaps it is even easier to forget on the astral plane than on the physical, because that world is so busy and so populous.

Knowledge of a person in the astral world does not necessarily mean knowledge of the physical life of that person. For example, many of us know Madame Blavatsky in her new body exceedingly well on the astral plane, yet none of us have yet seen that body physically. She often uses her old form, though generally the new astral body now.

REMEMBERING ASTRAL EXPERIENCE

When you leave your body to-night, you will remember all that you did last night and during the day — in fact, you will have the whole of your present waking memory, *plus* that of your nightly astral life. The astral memory includes the physical, but your physical brain does not remember the astral experience, for the simple reason that it had no share in it.

A special link must be made, or rather an obstacle must be removed, in order to bring the memory through into the physical brain. In the slow course of evolution the power of perfect memory will come to every one, so that there will no longer be any veil between the two planes. Apart from this full development sometimes something occurs which the man feels that he ought to remember on the physical plane, and in that case he makes a special effort to impress it upon the brain, in order that it may be remembered in the morning. There are some events, too, which make such a vivid impression upon the astral body that they become impressed upon the physical brain by a kind of repercussion.

It is comparatively rarely, however, that such an impression is perfect, and there may be many stages of imperfection. This is one source of what we call dreams, and we know how confused and incomplete and even ridiculous they may often be. One form of distortion which frequently occurs in the case of the unpractised helper is that he confuses himself with the person to whom he has been giving assistance.

I remember a case of a member of our band who was deputed to assist the victim of an explosion. He was warned a few minutes beforehand, and had time enough to make an effort to calm and steady the man's mind, and then immediately after the outburst had taken place he was still on hand to continue the same process; but in the morning, when he described the event to me, he declared that it seemed exactly as though he himself had been the victim of the explosion. He had identified himself so closely with his patient that he felt the shock and the sensation of flying upwards exactly as, we must presume, the victim felt them. In another case the same member was called upon to assist a soldier who was driving an ammunition waggon down an execrable mountain road, and was thrown off and killed by the wheels passing over his body. In this case also our member entirely identified himself with the soldier, and his memory of the event was that he had dreamed of driving such a waggon and being thrown from it and killed, just as the real driver had been.

In other cases what is remembered is not at all what really happened, but rather a sort of symbolic description of it, sometimes quite elaborate and poetical. This comes evidently from the image-making characteristic of the ego — his faculty of instantaneous dramatization — and it sometimes happens that the symbol is recollected without its key; it comes through untranslated, as it were, so that unless the helper has a more experienced friend at hand to explain matters, he may have only a vague idea of what he has really done. A good instance of this came before my notice many years ago — so many that, as I made no record of it at the time; I am not now quite certain of one or two of its points, and am therefore obliged to omit some of it, and make it a little less interesting than I think it really was.

The helper came to me one morning to relate an exceedingly vivid dream which he felt sure was in reality something more than a dream. He remembered having seen a

certain young lady drowning in the sea. I believe that he had the impression that she had been intentionally thrown in, though I do not think that he had any vision of the person who was supposed to have done this. He himself could not directly assist her, as he was present only in the astral body, and did not know how to materialise himself; but his keen sense of the imminence of the peril gave him strength to impress the idea of danger upon the young lady's lover, and to bring him to the scene, when he at once plunged in and brought her ashore, delivering her into the arms of her father. The helper remembered the faces of all these three characters quite clearly, and was able so to describe them that they were afterwards readily recognisable. The helper begged me to look into this case, so that he might know how far his clear remembrance was reliable.

On doing so, I found to my surprise that the whole story was symbolic, and that the facts which had really occurred were of a different nature. The young lady was motherless, and lived practically alone with her father. She seems to have been rich as well as beautiful, and no doubt there were various aspirants to her hand. Our story, however, has to do only with two of these; one, a most estimable but bashful young fellow of the neighbourhood, who had adored her since childhood, had grown up in friendly relations with her, and had in fact the usual half-understood, half-implicit engagement which belongs to a boy-and-girl love affair. The other was a person distinctly of the adventurer type, handsome and dashing and captivating on the surface, but in reality a fortune-hunter of false and unreliable type. She was dazzled by his superficial brilliancy, and easily persuaded herself that her attraction for him was real affection, and that her previous feelings of comradeship for her boy friend amounted to nothing.

Her father, however, was much more clear-sighted than she, and when the adventurer was presented to him he seems to have received him with marked coolness, and declined altogether, though kindly enough, to sanction his daughter's marriage with a gentleman of whom he knew nothing. This was a great blow to the young lady, and the adventurer, meeting her in secret, easily persuaded her that she was a terribly ill-used and misunderstood person, that her father was quite unbearably tyrannical and ridiculously old-fashioned, that the only thing left for her to do as a girl of spirit was to show that she meant what she said by eloping with him (the aforesaid adventurer) after which of course the father would come round to a more sensible view of life, and the future would take on the rosier of hues.

The foolish girl believed him, and he gradually worked upon her feelings until she consented; and the particular night upon which our friend the helper came upon the scene was that which had been chosen for the elopement. In true melodramatic style the adventurer was waiting round the corner with a carriage, and the girl was in her room hurriedly preparing herself to slip out and join him.

Not unnaturally, when it came actually to the point her mind was much disturbed, and she found it very difficult to take the final step. It was this fluttering of the mind, this earnest desire for aid in decision, which attracted the notice of the helper as he was drifting casually by. Reading her thoughts, he quickly grasped the situation, and at once began to try to influence her against the rash step which she contemplated. Her mind, however, was in such a condition that he was unable to impress himself upon her as he wished, and he looked round in great anxiety for someone who should prove more amenable to his influence. He tried to seize upon the father, but he was engaged in his library in some literary work of so engrossing a character that it proved impossible to attract his attention.

Fortunately, however, the half-forgotten lover of her youth happened to be within reach, wandering about in the starlight and looking up at her window in the approved style of young lovers all the world over. The helper pounced upon him, seeing the condition of his sentiments, and to his great delight found him more receptive. His deep love made him anxious, and it was easy enough to influence him to walk far enough to see the carriage and the adventurer in waiting around the corner. His affection quickened his wits, and he instantly grasped the situation, and was filled with horror and dismay. To do him justice, at that supreme moment it was not of himself that he thought, not that he was on the eve of losing her, but that she was on the eve of throwing herself away and ruining the whole of her future life. In his excitement he forgot all about convention; he made his way into the house (for he had known the place since childhood), rushed up the stairs and met her at the door of her room.

The words which he said to her neither he nor she can remember now, but in wild and earnest pleading he besought her to think before doing this terrible thing, to realise clearly into what an abyss she was about to throw herself, to bethink herself well before entering upon the path of destruction, and at least, before doing anything more, to consult openly with the loving father whom she was requiting so ill for his ceaseless care of her.

The shock of his sudden appearance and the fervour of his objurgations awakened her as from a sort of trance; and she offered scarcely any resistance when he dragged her off then and there to her father as he sat working in his library. The astonishment of the father may be imagined, when the story was unfolded before him. He had had not the slightest conception of his daughter's attitude, and she herself, now that the spell was shaken off, could not imagine how she had ever been able really to contemplate such a step. Both she and her father overflowed with gratitude to the loyal young lover, and before he left her that night she had ratified the old childish engagement, and promised to be his wife at no remote date.

This was what had really happened, and one can see that the symbolism chosen by the ego of the helper was by no means inapt, however misleading it may have been as to the actual facts.

Sometimes nothing comes through that can be called an actual memory, but only the effect of something that has been seen or that has happened. A man may wake in the morning with a strong feeling of elation and success, without in the least being able to recall in what he has succeeded. This generally means some good piece of work well done, but it is often impossible for the man to recover the details. At other times he may bring back with him a feeling of reverence, a sense of great holiness. This usually means that he has been in the presence of some one much greater than himself, or has seen some direct evidence of the greater power. Sometimes, on the other hand, a person may wake with a feeling of terrible fear. That is sometimes due only to the alarm of the physical body at some unaccustomed sensation; but it is sometimes also due to having encountered something horrible in the astral world. Or again it may arise merely from sympathy with some astral entity who is in a state of terror, for it is a frequent thing on the astral plane that one person should be strongly influenced by sympathy with another's condition.

Few people, however, when in the astral body, care whether the physical brain remembers or not, and nine out of ten much dislike returning to the body. But if you

specially wish to get into the habit remembering, the procedure which I should recommend is the following:

To make the link, first remember, when you are out of the body that you wish to do so. Then you must determine to come back into the body slowly, instead of with a rush and a little jerk, as is usually the case. It is this jerk that prevents one from remembering stop yourself and says, just before you awake: "There is my body; I am just about to enter it. As soon as I am in it I will make it sit up and write down all it can remember." Then enter it calmly, sit up instantly and write down all you are able to remember *at once*. If you wait a few minutes, all will usually be lost. But each fact that you bring through will serve as a link for other memories. The notes may seem a little incoherent when you read them over afterwards, but never mind that; it is because you are trying to give an account in physical words of the experiences of another plane. In this way you will gradually recover the memory though it may take a long time; great patience is necessary.

You should try to remember when out of the body that you are in the astral world, and that it would be a comfort to the physical consciousness if some memory could be carried through. Be systematic in your efforts. Every time that you succeed in bringing something through, it will make it easier to remember next time, and will bring nearer the period when there will be habitual automatic recollection. At present there is a moment of unconsciousness between sleeping and waking, and this acts as a veil. It is caused by the closely-woven web of atomic matter through which the vibrations have to pass.

In coming back to the physical body from the astral world there is a feeling of great constraint, as though one were being enveloped in a thick, heavy cloak. The joy of life on the astral plane is so great that physical life in comparison with it seems no life at all. Many men who can function in the astral world during the sleep of the physical body regard the daily return to the physical world as men often do their daily journey to the office. They do not positively dislike it, but they would not do it unless they were compelled.

When the man is free in the mental world, the astral life similarly seems a state of bondage, and so on, until we reach the buddhic world, which is in its essence bliss. After once reaching that level, although the man on the physical plane is still cramped and unable to express the bliss, he nevertheless has it all the time and he knows that all others who are unable to feel it now will feel and know it at some future time. Even if only for a moment you could feel the reality of the higher planes, your life would never again be the same.

Astral pleasures are much greater than those of the physical world, and there is danger of people being turned aside by them from the path of progress. It is quite impossible to realise while one is confined in the physical body the great attractiveness of these pleasures. But even the delights of the astral life do not present a serious danger to those who have realised a little of something higher. After death one should try to pass through the astral levels as speedily as possible, consistently with usefulness, and not yield to its refined pleasures any more than to the physical. One must not only overcome physical desire by knowledge of the astral or the heaven-life, but also go beyond even them and this not merely not for the sake of the joy of the spiritual life, but in order to replace the fleeting by the everlasting.

THE HIGHER DIMENSIONS

If there are seven dimensions at all, there are seven dimensions always and everywhere, and it makes no difference to that fundamental fact in nature whether the consciousness of any individual happens to be acting through his physical body; his astral body or his nirvanic vehicle. In the last case he has the power to see and understand the whole thing. In any of the other cases his capacities are limited. There is therefore no such thing as a three-dimensional or four-dimensional object or being. If space has seven dimensions, every object must exist within that space, and the difference between us is merely in our power of perception.

Physically we see only three dimensions, and therefore we see all objects and beings very partially. One who has the power to see four dimensions still sees objects only partially, although he sees more of them than the other man. We find ourselves in the midst of a vast universe built of matter of varying degrees of tenuity, which exists in a space of (let us suppose) seven dimensions. But we find ourselves in possession of a consciousness which is capable of appreciating only three of those dimensions, and only matter of certain degrees of tenuity. All matter of other and higher degrees is for us as if it did not exist. All dimensions beyond the three are also to us as though they did not exist.

But our lack of perceptive power does not in any way affect the objects themselves. A man picks up (let us say) a piece of stone. He can see only the physical particles of that stone, but that in no way affects the undoubted fact that that stone at the same time possesses within it particles of matter of the astral and mental and other higher planes. In just the same way that stone must theoretically possess some sort of extension, however small, in all the seven dimensions; but that fact is in no way affected by the other fact that the man's consciousness can appreciate only three of those dimensions.

To examine that object the man is using a physical organ (the eye) which is capable of appreciating only certain rates of undulation radiated by certain types of matter. If he should develop what we call astral consciousness he would then be employing an organ which is capable of responding only to the vibrations radiated by another and finer part of that piece of stone. If in developing the astral consciousness he had lost the physical — that is, if he had left his physical body — he would be able to see only the astral and not the physical. But of course the object itself is not affected in any way, and the physical part of it has not ceased to exist because the man has for the time lost the power to see it. If he developed his astral consciousness so that he could use it simultaneously with the physical, he would then be able to see both the physical and astral parts of the object at the same time, though probably not both with equal clearness at absolutely the same moment.

Now, just as all the higher forms of matter exist in every object, although untrained people cannot see them, so all the dimensions of space must appertain to every object, although the number of those dimensions that we can observe depends upon the condition of our consciousness. In physical life we can normally conceive only three, though by careful special training the brain may be educated into grasping some of the simpler fourth-dimensional forms. The astral consciousness has the power of grasping four of these dimensions, but it by no means follows that a man who opens his astral consciousness immediately perceives the extension of every

object in four dimensions; on the contrary, it is quite certain that the average man does not perceive this at all when he enters the astral plane. He realises it only as a certain blurring — a kind of incomprehensible difference in the things that he used to see; and most men go through their astral lives without discovering more than that of the qualities of the matter which surrounds them.

We should say, then, not that the possession of astral vision at once causes the man to appreciate the fourth dimension, but rather that it gives him the power to develop that faculty by long, careful and patient practice, if he knows anything about the matter and cares to take the trouble. Entities belonging to the astral plane, and presumably ignorant of any other (such as nature-spirits, for example) have by nature the faculty of seeing the fourth-dimensional aspect of all objects. But we must not therefore suppose that they see them perfectly, since they perceive only the astral matter in them and not the physical, just as we with our different kind of limitation perceive only the physical and not the astral.

It has never been taught, so far as I am aware, that the entities of the astral plane are conscious of us upon the physical plane. They quite clearly and definitely are *not* conscious of physical matter of any kind. But they are conscious of the astral counterpart of that physical matter, which for all practical purposes comes to very nearly the same thing, though not quite.

I should not expect the higher dimensions to manifest themselves as qualities of matter to our physical consciousness, though it is conceivable that some of them might do so in certain special cases. The density of a gas, for example, might be a measure of its extent in the fourth dimension.

If an object passes through a wall, the question of the fourth dimension is not raised, nor are the properties connected with it employed at all. But in order that the object may so pass through, either it or a portion of the wall corresponding in size to it must be disintegrated — that is, reduced either to the atomic or to one of the etheric conditions, so that the particles may pass freely among one another without hindrance. That is entirely a three-dimensional method. Another and quite different feat is not to disintegrate at all either the object or the wall, but to bring the entire object in by another direction altogether, where there is no wall. But that direction is unknown to us in our physical consciousness.

If one had a cup made of porous earthenware, one could not doubt fill it with water by the process of reducing the water to steam and forcing it through the sides of the cup; that would be equivalent to the ordinary process of disintegration and reintegration, for the water, reduced to a higher state for the purpose of being forced through the pores of the cup, would resume its natural condition when it had passed through. But it would also be possible to fill the cup by the simpler process of taking off the lid and pouring in the water from above, and in this case the water need not be change in any way, because it is introduced into the cup from a direction in which there is no wall to penetrate. These are simply two ways of producing the same result, and they do not mutually exclude each other.

THIRD SECTION: THE MENTAL BODY
AND THE POWER OF THOUGHT

THE MENTAL BODY

After reading *Man Visible and Invisible* students have sometimes remarked that the list of qualities there given seems incomplete, and that nothing is said as to some others which are at least equally common — such for example as courage, dignity, cheerfulness, truthfulness, loyalty. The reason that these were not included in that first account is that they have not, as have those other qualities, readily distinguishable colours; but it must not therefore be supposed that their presence or absence would be indistinguishable by clairvoyant vision. Such qualities are indicated by differences in the structure of the mental body, or by changes in its surface; but it might be said, broadly speaking, that they are represented rather by form than by colour.

It will be remembered that, in the drawings of the mental body given in the book above mentioned, the colours which indicate some of the principal qualities are shown, and something is said as to their general arrangement in the vehicle. In a general way, all the colours denoting good qualities are to be found in the upper half, and those denoting unpleasant qualities are mostly in the lower half. The violet of high aspiration, the blue of devotion, the rose-colour of affection, the yellow which indicates intellect, and even the orange of pride or ambition — all these belong to the upper part, while thoughts prompted by anger, selfishness or jealousy gravitate towards the bottom of the ovoid. While the illustrations there given fairly indicate what would be the appearance of the mental body if it ever were really at rest, there is considerable variation from those types when the man is in the act of thinking strongly or definitely.

The mental unit may be regarded as the heart and centre of the mental body, and upon the relative activity of the different part of that unit the appearance of the body as a whole to a great extent depends. The various activities of the mind fall naturally into certain classes or divisions, and these divisions are expressed through different parts of the mental unit. Mental units are by no means all the same. They differ greatly according to the type and the development of their owners. If such a mental unit lay at rest the force radiating from it would make a number of funnels in the mental body, just as the light shining through the slide in a magic lantern makes a large radiating funnel of light in the air between the lantern and the sheet.

In this case the surface of the mental body may be likened to the sheet, because it is only at the surface that the effect becomes visible to one who is looking at the mental body from the outside; so that, if the mental unit were at rest, we should see on the surface of the mental body a number of pictures in colour, representing the various types of thought common to the person, with presumably dark spaces between them. But the mental unit, like all other chemical combinations, is rotating rapidly on its axis and the effect of this is that in the mental body we have a series of bands, not always quite clearly defined, nor always of the same width, but still readily distinguishable, and usually in about the same relative position.

Where aspirational thought exists, it invariably shows itself in a beautiful little violet circle at the top of the ovoid of the mental body. As the aspirant draws near to the gateway of the Path this circle increases in size and radiancy, and in the initiate it is a splendid glowing cap of the most lovely colour imaginable. Below it comes often the blue ring of devotional thought, usually rather a narrow one, except in the case of the

few whose religion is really deep and genuine. Next to that we may have the much broader zone of affectionate thought, which may be of any shade of crimson or rose-colour, according to the type of affection which it indicates. Near the zone of affection, and frequently closely connected with it, we have the orange band which expresses proud and ambitious thought; and again in intimate relation with pride comes the yellow belt of intellect, commonly divided into two bands, denoting respectively the philosophical and the scientific types of thought. The place of this yellow colour varies much in different men; sometimes it fills the whole of the upper part of the egg, rising above devotion and affection, and in such a case pride is generally excessive.

Below the group already described, and occupying the middle section of the ovoid, is the broad belt devoted to concrete shapes — the part of the mental body from which all ordinary thought-forms issue. The principal colours here is green, shaded often with brown or yellow according to the disposition of the person.

There is no part of the mental body which varies more widely than this. Some people have their mental bodies crowded with a vast number of concrete images, whereas others have only few. In some they are clear and well-outlined, in others they are vague and hazy to the last degree; in some they are classified and labelled and arranged in the most orderly fashion, in others they are not arranged at all, but are left in hopeless confusion.

In the lower part of the ovoid come the belts expressing all kinds of undesirable thoughts. A kind of muddy precipitate of selfishness too often fills the lower third or even the half of the mental body and above this is sometimes a ring portraying hatred, cunning or fear. Naturally, as men develop, this lower part vanishes, and the upper gradually expands until it fills the whole body, as shown in the illustrations in *Man Visible and Invisible*.

Degrees in the feeling which prompts thought are expressed by brilliance of colour. In devotional feeling, for example, we may have the three stages of respect, reverence and worship; in affection we may have the stages of good-will, friendship and love. The stronger the thought the *larger* is the vibration; the more spiritual and unselfish the thought the *higher* is the vibration. The first produces brilliancy, the second delicacy of colour.

Within these different rings or zones we usually see more or less clearly marked striations, and many qualities of the man can be judged by an examination of these striations. The possession of a strong will, for example, brings the whole mental body into far more level definite lines. All the striations and radiations are steady, firm and clearly distinguishable, whereas in the case of a weak and vacillating person this firmness and strength of line would be conspicuously absent; the lines separating the different qualities would be indeterminate, and the striations and radiations would be small, weak and wavy. Courage is shown by firm and very strongly-marked lines, especially in the orange band connected with pride. Dignity also expresses itself principally in the same part of the mental body, but by a calm steadiness and assuredness which is quite different from the lines of courage.

Truthfulness and accuracy are portrayed very clearly by regularity in the striations of the part of the mental body devoted to concrete forms, and by the clearness and correctness of the images which appear there. Loyalty shows itself by intensification both of affection and of devotion, and by the constant formation, in that part of the ovoid, of figures of the person to whom the loyalty is felt. In many cases of loyalty,

affection and devotion, a very strong permanent image is made of the objects of these feelings, and that remains floating in the aura of the thinker, so that, when his thought turns towards the loved or adored one, the force which he pours out strengthens that already existing image, instead of forming a new one as it would normally do.

Joy shows itself in a general brightening and radiancy of both the mental and the astral bodies, as also in a peculiar rippling of the surface of the body. General cheerfulness shows itself in a modified bubbling form of this, and also in a steady serenity which is pleasant to see. Surprise, on the other hand, is shown by a sharp constriction of the mental body, accompanied by an increased glow in the bands of affection if the surprise is a pleasant one, and by a change of colour usually involving the display of a good deal of brown and grey in the lower part of the ovoid when the surprise is an unpleasant one. This constriction is usually communicated to both the astral and the physical bodies, and often causes singularly unpleasant feelings, which affect sometimes the solar plexus (resulting in sinking and sickness) and sometimes the heart-centre, in which case it brings palpitation or even death; so that a sudden surprise may occasionally kill one who has a weak heart. Awe is the same as wonder, except that it is accompanied by a profound change in the devotional part of the mental body, which usually swells out under this influence, and has its striations more strongly marked.

At the moment when a person's thought is strongly directed into one or another of these channels, the part of the mental body which corresponds to that thought usually bulges outwards in form in addition to brightening in colour, and so disturbs for the time the symmetry of the ovoid. In many people such bulging is permanent, and that always means that the amount of thought of that type is steadily increasing. If, for example, a person takes up some scientific study, and therefore suddenly turns his thoughts in that direction much more than before, the first effect will be such protuberance as I have described; but if he keeps the amount of his thought on scientific subjects steadily at the same level which he has now adopted, the protruding portion will gradually sink back into the general outline of the ovoid, but the band of its colour will have become wider than before.

If however the man's interest in scientific subjects steadily increases in force, the protrusion will still remain in evidence even though the band has widened. The general effect of this is that in the undeveloped man the lower portion of the ovoid tends always to be larger than the upper, so that the mental and astral bodies have the appearance of an egg with the small end uppermost; while in the more developed man the qualities expressing themselves in the higher part are always tending to increase, and consequently we have for the time the effect of an egg with its smaller end pointing downwards. But the tendency always is for the symmetry of the ovoid to re-assert itself by degrees, so that such appearances are only temporary.

Reference has frequently been made to the ceaseless motion of the matter in both the mental and astral bodies. When the astral body, for example, is disturbed by any sudden emotion, all its matter is swept about as if by a violent hurricane, so that for the time being the colours become very much mixed. Presently, however, by the specific gravity of the different types of matter which reflect or emit these various colours, the whole arrangement will sort itself once more into its usual zones. Even then the matter is by no means at rest, as the particles are all the time rushing round these zones, though comparatively rarely leaving their own belt and intruding on another. But this movement within its own zone is entirely a healthy one; one in

whom there is no such circulation is a mental crustacean, incapable of growth until he bursts his shell. The activity of the matter in any particular zone increases in proportion to the amount of thought devoted to the subject of which it is an expression.

If the man should permit his thought upon any given subject to stagnate, that stagnation will be faithfully reproduced in the matter appropriate to the subject. If a prejudice should grow up in man, thought on that particular subject ceases altogether and a small eddy forms in which the mental matter runs round and round until it coagulates and becomes a kind of wart. Unless and until this wart is worn away or forcibly rooted out, the man cannot use that particular part of his mental body, and is incapable of rational thought on that subject. This foul thickened mass blocks all free movement either outward or inward; it prevents him on the one hand from seeing accurately, or from receiving any reliable new impressions on the matter in question, and on the other from sending out any clear thought with regard to it.

These diseased spots in the mental body are unfortunately also centres of infection; the inability to see clearly increases and spreads. If part of the man's mental body is already stagnant, the other parts are likely to be affected; if a man allows himself to have a prejudice on one subject he will probably soon develop prejudices on others, because the healthy flow of mental matter has been checked and the habit of untruth has been formed. Religious prejudice is the commonest and the most serious of all and it completely prevents any approach to rational thought with regard to the subject. Unfortunately a very large number of people have the whole of that part of their mental bodies which should be occupied with religious matters inactive, ossified and covered with warts, so that even the most rudimentary conception of what religion really is remains utterly impossible for them until a catastrophic change has taken place.

It may be remembered that in *Man Visible and Invisible* drawings were given of the astral bodies of men of the devotional and scientific types. Variants of these with which we frequently meet are the intuitional person and the matter-of-fact person. The latter has generally much of yellow in his mental body, and his various bands of colour are usually regular and in order. He has far less emotion and less imagination than the intuitional man and therefore often in certain ways less power and enthusiasm; but on the other hand he is far less likely to make mistakes, and what he does will generally be well and carefully done. In the vehicle of the intuitional man we find much more of blue, but the colours are generally vague and the whole body ill-regulated. He suffers much more than the steadier type, but sometimes through that suffering he is able to make rapid progress. Of course, both the glow and enthusiasm and the steadiness and regularity have their place in the perfect man; it is only a question of which is acquired first.

Mystical thought and the presence of psychic faculties are indicated by colours of which we have no equivalents on the physical plane. When a man begins to develop along occult lines, the whole of his mental body must be rapidly purified and brought into thorough working order, for every part of it will be needed, and every part must be absolutely at its best if he is to make any real progress. It is eminently necessary that he should be able to make strong and clear thought-forms, and in addition to this it is a great help and comfort to him if he is able to visualise them clearly. The two acts must not be confused; one man may be able to make a stronger and clearer thought-form than another, and yet not be able to visualise it so well. The formation of a thought is a direct act of the will, working through the mental body; the

visualisation is simply the power to see clairvoyantly the thought-form which he has made. Let him think strongly of any object, and the image of it is there in the mental body — just as much there whether he can visualise it or not.

It must be remembered that all mental work done on the physical plane must be done through the physical brain, so that in order to succeed it is necessary not only to develop the mental body, but to get the physical brain into order, so that the mental body may readily work through it. It is well known that certain parts of the brain are connected with certain qualities in the man and with his power to think along certain lines, and all these must be brought into order and duly correlated with the zones in the mental body.

Another point, the greatest of all, is that there is another connection to be made and kept active — the connection between the ego and his mental body; for he is the force behind, which makes use of all these qualities and powers. In order that we may think of anything we must first remember it; in order that we may remember it we must have paid attention to it; and the paying of attention is the descent of the ego into his vehicles in order to look out through them. Many a man with a fine mental body and a good brain makes little use of them because he pays little attention to life — that is to say, because the ego is putting but little of himself down into these lower planes, and so the vehicles are left to run riot at their own will. I have written elsewhere of the cure for this state of affairs; put very briefly it comes to this: Give the ego the conditions which he desires, and he will promptly put himself down more fully, to take advantage of them. If he desires to develop affection, give him the opportunity by cultivating affection to the fullest extent on these lower planes, and at once the ego will respond. If he desires principally wisdom, then endeavour by study to make yourself wise upon the physical plane, and once more the ego will appreciate your effort and be delighted to co-operate. Find out what he wants and give it to him, and you will have no reason to complain of his response.

A NEGLECTED POWER

People who have not made a special study of the matter never understand what a tremendous power there is in thought. Steam-power, water-power, these are real to them, because they can see them at work; but thought-power is vague and shadowy and intangible to them. Yet those who have taken the trouble to look into the subject know very well that one is just as real as the other.

This is true in two senses — directly and indirectly. Everybody, when it occurs to him, recognises the indirect action of thought, for it is obvious that a man must think before he can do anything, and the thought is the motive power of his act just as the water is the motive power of the mill. But people do not generally know that thought has also a direct action on matter — that whether or not a man translates his thought into a deed, the thought itself has already produced an effect.

Our readers are already aware that there are many kinds of matter finer than those which are visible to physical sight, and that the force of man's thought acts directly upon some of these and sets them in motion. A thought shows itself as a vibration in the mental body of man; that vibration is communicated to external matter, and an effect is produced. Thought therefore is itself a real and definite power; and the point of vivid interest about it is that everyone of us possesses this power. A comparatively small number of rich men have concentrated in their hands the steam-power and the electric power of the world; money is needed to buy its use, and therefore for many it is unattainable. But here is a power which is already in the hands of everyone, poor and rich, young and old alike; all we have to do is to learn to use it. Indeed, we are all of us using it to some extent even now, but because we do not understand it we often unconsciously do harm with it instead of good, both to ourselves and to others.

Those who have read the book called *Thought-Forms* will remember how it is there explained that a thought produces two principal external effects — a radiating vibration and a floating form. Let us see how these affect the thinker himself, and how they affect others.

The first point to remember is the force of habit. If we accustom our mental bodies to a certain type of vibration they learn to reproduce it easily and readily. If we let ourselves think a certain kind of thought to-day, it will be appreciably easier to think that same thought to-morrow. If a man allows himself to begin to think evil of others, it soon becomes easy to think more evil of them and difficult to think any good of them. Hence arises a ridiculous prejudice which absolutely blinds the man to the good points in his neighbours, and enormously magnifies the evil in them.

Then his thoughts begin to stir up his emotions; because he sees only the evil in others he begins to hate them. The vibrations of mental matter excite those of the denser matter called astral, just as the wind disturbs the surface of the sea. We all know that by thinking over what he considers his wrongs a man can easily make himself angry, though we often seem to forget the inevitable corollary that by thinking calmly and reasonably a man can prevent or dismiss anger.

Still another reaction upon the thinker is produced by the thought-form which he generates. If the thought be aimed at someone else, the form flies like a missile towards that person, but if the thought be (as is so often the case) connected chiefly with the thinker himself, the form remains floating near him, ever ready to react

upon him and reproduce itself — that is to say, to stir up in his mind the same thought once more. The man will feel as though it were put into his mind from without, and if it happens to be an evil thought he will probably think that the devil is tempting him, whereas the experience is nothing but the mechanical result of his own previous thought.

Now see how this fragment of knowledge can be utilised. Obviously every thought or emotion produces a permanent effect, for it strengthens or weakens a tendency; furthermore, it is constantly reacting upon the thinker. It is clear therefore that we must exercise the greatest care as to what thought or emotion we permit to arise within ourselves. We must not excuse ourselves, as so many do, by saying that undesirable feelings are natural under certain conditions; we must assert our prerogative as rulers of this kingdom of our mind and emotions. If we can get into the habit of evil thought, it must be equally possible to get into the habit of good thought. We can accustom ourselves to look for the desirable rather than the undesirable qualities in the people whom we meet; and it will surprise us to find how numerous and how important those desirable qualities are. Thus we shall come to like these people instead of disliking them, and there will be at least a possibility that we may do them something approaching to justice in our estimate of them.

We may set ourselves definitely as a useful exercise to think good and kindly thoughts, and if we do we shall very soon begin to perceive the result this practice. Our minds will begin to work more easily along the grooves of admiration and appreciation instead of along those of suspicion and disparagement; and when for the moment our brains are unoccupied, the thoughts which present themselves will be good instead of bad, because they will be the reaction of the gracious forms with which we have laboured to surround ourselves. "As a man thinketh in his heart, so is he;" and it is obvious that the systematic use of thought-power will make life much easier and pleasanter for us.

Now let us see how our thought affects others. The radiating undulation, like many other vibrations in nature, tends to reproduce itself. Put an object in front of a fire, and presently that object becomes hot; why? Because the radiations of rapid vibration coming from the incandescent matter in the grate have stirred the molecules of the object into more rapid oscillation also. Just in the same way if we persistently pour the undulation of kindly thought upon another, it must in time awaken a similar vibration of kindly thought in him. Thought forms directed towards him will hover about him and act upon him for good when opportunity offers. Just as a bad thought may be a tempting demon either to the thinker or to another, so a good thought may be a veritable guardian angel, encouraging virtue and repelling vice.

A grumbling and fault-finding attitude towards others is unfortunately sadly common at the present day, and those who adopt it never seem to realise the harm that they are doing. If we study its result scientifically we shall see that the prevalent habit of malicious gossip is nothing short of wicked. It does not matter whether there is or is not any foundation for scandal; in either case it cannot but cause harm. Here we have a number of people fixing their minds upon some supposed evil quality in another, and drawing to it the attention of scores of others to whom such an idea would never otherwise have occurred.

Suppose they accuse their victim of jealousy. Some hundreds of people at once begin to pour upon this unhappy sufferer streams of thought suggesting the idea of jealousy. Is it not obvious that if the poor man has any tendency towards that

unpleasant quality, it cannot but be greatly intensified by such a cataract? And if, as is commonly the case, there is no reason whatever for the spiteful rumour, those who so eagerly spread it are at any rate doing their best to create in the man the very vice over the imagined presence of which they gloat so savagely.

Think of your friends by all means, but think of their good points, not only because that is a much healthier occupation for you, but because by doing so you strengthen them. When you are reluctantly compelled to recognise the presence of some evil quality in a friend, take especial care *not* to think of *it*, but think instead of the opposite virtue which you wish him to develop. If he happen to be parsimonious or lacking in affection, carefully avoid gossiping about this defect or even fixing your thought upon it, because if you do, the vibration which you will send him will simply make matters worse. Instead of that, think with all your strength of the quality which he needs, flood him with the undulations of generosity and love, for in that way you will really help your brother.

Use your thought-power in ways such as these, and you will become a veritable centre of blessing in your corner of the world. But remember that you have only a limited amount of this force, and if you want to have enough to be useful you must not waste it.

The average man is simply a centre of agitated vibration; he is constantly in a condition of worry, of trouble about something, or in a condition of deep depression, or else he is unduly excited in the endeavour to grasp something. For one reason or another he is always in a state of unnecessary agitation, usually about the merest trifle. This means that he is all the time wasting force, frittering away vainly that for the profitable use of which he is definitely responsible — that which might make him healthier and happier.

Another way in which he wastes a vast amount of energy is by unnecessary argument; he is always trying to make somebody else agree with his opinions. He forgets that there are always several sides to any question, whether it be of religion, of politics, or of expediency, that the other man has a perfect right to his own point of view, and that anyhow it does not matter, since the facts of the case will remain the same, whatever either of them may think. The great majority of the subjects about which men argue are not in the least worth the trouble of discussion, and those who talk most loudly and most confidently about them are usually precisely those who know least.

The man who wishes to do useful work, either for himself or for others, by means of thought-power, must conserve his energies; he must be calm and philosophic; he must consider carefully before he speaks or acts. But let no one doubt that the power is a mighty one, that any one who will take the trouble may learn how to use it, and that by its use each one of us may make much progress and may do much good to the world around him.

You should understand this power of thought, and the duty of repressing evil, unkind or selfish thoughts. Thoughts will produce their effect, whether we wish it or not. Each time you control them it makes control easier. Sending out of thoughts to others is as real as giving money; and it is a form of charity which is possible for the poorest of men. A wise man produces his results intentionally. To radiate depression is wrong, and it prevents higher thoughts from coming in. It causes much suffering to sensitive people, and is responsible for much of the terror of children at night. It is not right to cloud a young life, as so many do, by allowing bad and miserable

thoughts to fall upon it. Forget your depression, and send strengthening thoughts to sick people instead.

Your thoughts are not (as you might suppose) exclusively your own business, for your vibrations affect others. Evil thoughts reach much farther than evil words, but they cannot affect a man who is entirely free from the quality which they carry. The thought of the desire for drink could not enter the body of a purely temperate man, for example. It would strike upon his astral body, but it could not penetrate, and it would then return to the sender.

The will can be trained to act directly upon physical matter. The example of this which is most likely to be within your own experience is that a picture which is much used for purposes of meditation may often be observed to change in expression; the actual physical particles are unquestionably affected by the power of the strong sustained thought. Madame Blavatsky used to make her pupils practise this, telling them to suspend a needle by a silk thread, and then learn to move it by the force of the will. A sculptor also uses this power of thought in an entirely different way. When he sees a block of marble he makes a strong thought-form of the statue which he can carve out of it. Then he plants this thought-form inside the block of marble, and proceeds to chip away the marble which lies outside the thought-form, until only that portion of it which is interpenetrated by it remains.

Make it a practice to set apart a little time each day which shall be devoted to formulating good thoughts about other people, and sending them to them. It is capital practice for you, and it will unquestionably do good to your patients also.

INTUITION AND IMPULSE

You ask how you are to distinguish impulse from intuition. I fully appreciate your dilemma. At first it is difficult for the student to do this, but take comfort from the thought that the difficulty of decision is only a temporary matter. As you grow you will reach a stage at which you will be absolutely certain with regard to intuition, for the distinction between that and impulse will be so clear that mistake will be impossible.

But since both come to the brain from within, they seem at first exactly alike, and therefore great care is necessary, and it is hard to arrive at a decision. One or two considerations may perhaps help you. I have heard Mrs. Besant say that it is well always to wait awhile whenever the circumstances permit such a course, because if we wait a little an impulse usually grows weaker, while an intuition is unaffected by the passage of time. Then an impulse is almost always accompanied by excitement; there is always something personal about it, so that if it is not at once obeyed — if anything crosses — it there arises a feeling of resentment; whereas a true intuition, though decided, is surrounded by a sense of calm strength. The impulse is a surging of the astral body; the intuition is a scrap of knowledge from the ego impressed upon the personality.

Sometimes the sudden impression is not really from within at all, but from without; a message or suggestion from some one on a higher plane — most commonly some passing dead person, or perhaps a departed relation. It is well to treat such advice precisely as though it were given on the physical plane — to take it if it commends itself to our reason, and ignore it if it does not; for a person is not necessarily wiser than we merely because he happens to be dead. In this matter as in all others we must regulate our actions by strong, sturdy common-sense, and not rush off wildly after imaginations and dreams.

At this stage I should advise you always to follow reason when you are certain of the premises from which you reason. You will learn in time and by experience whether your intuitions can invariably be trusted. The mere impulse has its birth in the astral body, while the true intuition comes directly from the higher mental plane, or sometimes even from the buddhic. Of course the latter, if you could only be sure of it, might be followed without the slightest hesitation, but in this transition stage through which you are passing one is compelled to take a certain amount of risk — either that of sometimes missing a gleam of higher truth through clinging too closely to the reason, or that of being occasionally misled by mistaking an impulse from an intuition. Myself, I have so deep-rooted a horror of this last possibility that I have again and again followed reason as against intuition, and it was only after repeatedly finding that a certain type of intuition was always correct that I allowed myself to depend fully upon it. You too will no doubt pass through these successive stages, and you need not be in the least troubled about it.

THOUGHT-CENTRES

In the higher levels of the mental plane our thoughts act with greater force because we have the field almost to ourselves. We have not many other thoughts to contend with in that region. All people when thinking of the same thing tend to come to some extent into *rapport* with one another. Any strong thought anywhere in the world may be attracted to you, and you may be influenced by the thinker of it. Strong thought acts fairly constantly, and is more likely to act in connection with those subjects about which comparatively few are thinking, because in those cases the vibrations are more distinctive, and have freer play. Any sudden idea or vision which comes to you may be simply the thought-form of some person who is keenly interested in the subject in hand. The person may be at any distance from you, though it is true that physical proximity makes such transference easier.

There is such a thing as a kind of psychometrisation of a thought-form. Masses of thought on a given subject are very definite things, which have a place in space. Thoughts on the same subject and of the same character tend to aggregate. For many subjects there is a thought-centre, a definite space in the atmosphere; and thoughts on one of these subjects tend to gravitate to its centre, which absorbs any amount of ideas, coherent and incoherent, right and wrong. In this definite centre you would find all the thought about a given subject drawn to a focus, and might then psychometrise the different thought forms, follow them to their thinkers, and acquire other information from them.

It is easy to see that when one thinks of something a little difficult, one may attract the thought of another person who has studied the same subject, and even the person himself if he be on the astral plane. In the latter case the person may be either conscious or unconscious. Plenty of people, either dead or asleep, do try to help others along their particular lines; any one of such, seeing another struggling with some kind of conception, would be likely to go and try to suggest the way in which he thinks that other man ought to think of it. It does not follow, of course, that his ideas would be correct.

If you think you will see that this is perfectly natural. You would help people on this physical plane simply from pure good-nature. So also after death. You feel the same sympathies without a physical body; and though your idea may be wrong or right, you give it. I do not know of any method that is open to the ordinary student for ascertaining the exact source of an idea which strikes him. One has to develop the astral and mental sight in order to see the thought-form, and trace from whom it comes. It is connected by vibration with its creator.

Sometimes such an idea may come in symbolic form; the serpent and elephant, for example, are often used to signify wisdom. There are many sets of symbolisms. Each ego has his own system, though some forms seem general in dreams. It is said that to dream of water signifies trouble of some sort, though I do not see any connection. But even though there be no real connection, an ego (or for that matter some other entity who desires to communicate) may use the symbol if he knows that it is understood by the personality. Water has no necessary relation to trouble, but an ego who could not convey a clear message to his personality, and knew that it held that peculiar belief about water, might very likely impress such a dream on its brain when he wished to warn it of some impending misfortune. When a passing thought crosses

the mind, it is usually caused by suggestion. The power of thought and the multiplicity of thought-forms are tremendously great, and yet they are but little understood and taken into account.

In the ease of a particular idea coming into the mind, any one of half-a-dozen things may have happened. It is only speculation to offer suggestions in any particular case without actual knowledge of what took place. One is quite likely to be affected by one's own thought-forms. You may make thought-forms about a subject which will hover about you and persist proportionately to the energy you put into them; and these often react upon you just as though they were new suggestions from outside. In a place like Adyar any new-comer will find a mass of thought-forms already floating about, and probably he may accept some of these ready-made rather than set to work to produce new ones for himself. One should take up thought-forms with caution. I have seen a man take up thought-forms and be converted by them when they were quite wrong, and he himself had before been perfectly accurate in his opinion. Sometimes, however, it is advantageous to try to put oneself in touch with a thought-form at the beginning of study.

There are upon the astral plane vast numbers of thought-forms of a comparatively permanent nature, often the result of the accumulative work of many generations of people. Many such thought-forms refer to alleged religious history, and the seeing of them by sensitive people is responsible for a great many quite genuine accounts given by untrained seers and seeresses — such for example as Anne Catherine Emmerich. She had visions in the most perfect detail of the events of the passion of Jesus exactly as it is recorded in the Gospels, including many events which we know never really occurred. Yet I have no doubt that the statements of that seeress were perfectly genuine; she was not labouring under an hallucination, but only under a mistake as to the nature of what she saw.

To read the records clearly and correctly needs special training; it is not a matter of faith or of goodness, but of a special kind of knowledge. There is nothing whatever to show that the saint in question had this particular form of knowledge; on the contrary, she probably never heard of such records at all. She would therefore most likely be quite incapable of reading a record clearly, and certainly, if she did happen to see one, she would be unable to distinguish it from any other kind of vision.

In all probability what she saw was a set of such collective thought-forms as we have described. It is well-known to all investigators that any great historical event upon which much is supposed to depend has been constantly thought of and vividly imaged to themselves by successive generations of people. Such scenes would be, for the English, the signing of Magna Charta by King John, and for the Americans the signing of the Declaration of Independence.

Now these vivid images which people make are real things, and are clearly to be seen by anyone who possesses a little psychic development. They are definite forms existing in the first place upon the mental plane, and wherever there is any strong emotion connected with them they are brought down to the astral plane and materialised there in astral matter. They are also perpetually strengthened by all the new thoughts which are ever being turned upon them. Naturally, different people imagine these scenes differently, and the eventual result is often something like a composite photograph; but the form in which such an imagination was originally cast largely influences the thought of all sensitives upon subject, and tends to make them image it as others have done.

This product of thought (often, be it observed, of quite ignorant thought) is much easier to see than the true record, for while, as we have said, the latter feat requires training, the former needs nothing but a glimpse of the mental plane, such as frequently comes to almost all pure and high-minded ecstasies. Indeed in many cases it does not need even this, because the thought-forms exist upon the astral levels as well.

Another point to be borne in mind is that it is not in the least necessary for the creation of such a thought-form that the scenes should ever have had any real existence. Few scenes from real history have been so strongly depicted by popular fancy in England as have some of the situations from Shakespeare's plays, from Bunyan's *Pilgrim's Progress*, and from various fairy stories, such as Cinderella or Aladdin's Lamp. A clairvoyant obtaining a glimpse of one of these collective thought-forms might very easily suppose that he had come across the real foundation of the story; but since he knows these tales to be fictions he would be more likely to think that he had simply dreamt of them.

Now, ever since the Christian religion materialised the glorious conceptions originally committed to its charge, and tried to represent them as a series of events in a human life, devout souls in all countries under its sway have been striving as a pious exercise to picture the supposed events as vividly as possible. Consequently we are here provided with a set of thought-forms of quite exceptional strength and prominence — a set which can hardly fail to attract the attention of any ecstatic the bent of whose mind is at all in their direction. No doubt they *were* seen by Anne Catherine Emmerich, and by many another. But when such clairvoyants come, in the course of their progress, to deal with the realities of life, they will be taught, as are those who have the inestimable privilege of the guidance of the Masters of Wisdom, how to distinguish between the result of devout but ignorant thought and the imperishable record which is the true memory of nature; and then they will find that these scenes, to which they have devoted so much attention, were but symbols of truths higher and wider and grander far than they had ever dreamt, even in the highest flights which were made possible for them by their splendid purity and piety.

THOUGHT AND ELEMENTAL ESSENCE

Elemental essence when moulded by thought adopts a certain colour — a colour which is expressive of the nature of the thought or feeling. Of course all that this really means is that the essence composing the thought-form is for the time compelled to vibrate at a certain definite rate by the thought which is ensouling it. The evolution of the elemental essence is to learn to respond to all possible rates of undulation; when therefore a thought holds it for a time vibrating at a certain rate, it is helped to this extent, that it has now become habituated to that particular rate of oscillation, so that next time it comes within reach of a similar one, it will respond to it much more readily than before.

Presently those atoms of essence, having passed back again into the general mass, will be caught up again by some other thought, and will then have to swing at some totally different rate, and so will evolve a little further by acquiring the capacity to respond to the second type of undulation. So by slow degrees the thoughts, not only of man, but also of nature-spirits and devas, and even of animals so far as they do think, are evolving the elemental essence which surrounds them — slowly teaching here a few atoms, and there a few atoms, to respond to this or that different rate of oscillation, until at last a stage will be reached when all the particles of the essence shall be ready to answer at any moment to any possible rate of vibration, and that will be the completion of their evolution.

It is for this reason that the occultist avoids when possible the destruction of an artificial elemental, even when it is of evil character, preferring rather to defend himself or others against it by using the protection of a shell. It is possible to dissipate an artificial elemental instantly by an exertion of will-power, just as it is possible on the physical plane to kill a poisonous snake in order that it may do no further harm; but neither course of action would commend itself to an occultist, except in very unusual circumstances.

Whether the thought ensouling it is evil or good makes no difference whatever to the essence; all that is required for its development is to be used by thought of some kind. The difference between the good and the evil would be shown by the quality of essence which it affected, the evil thought or desire needing for its appropriate expression the coarser or denser matter, while the higher thought would require correspondingly finer and more rapidly vibrating matter for its covering. There are plenty of undeveloped people always thinking the coarser lower thoughts, and their very ignorance and grossness are made use of by the great Law as evolutionary forces to help on a certain stage of the work that is to be done. It is for us, who have learnt a little more than they, to strive ever to think the high and holy thoughts which cause the evolution of a finer kind of elemental matter, and so to work in a field where at present the labourers are far too few.

FOURTH SECTION: PSYCHIC
FACULTIES

PSYCHIC POWERS

THE possession of psychic powers does not necessarily involve high moral character, any more than does the possession of great physical strength. It is quite true that the man who enters the Path of Holiness will presently find such powers developing in him, but it is quite possible to gain many of the powers without the holiness. Powers can be developed by any one who will take the trouble, and a man may learn clairvoyance or mesmerism just as he may learn to play the piano, if he is willing to go through the necessary hard work. It is far better and safer for the vast majority of people to work at the development of character, to try to fit themselves for the Path, and to leave the powers to unfold in due course, as they certainly will. Some people are in too much of a hurry to do this, and set themselves to force the powers sooner. Well, if they are quite certain that they desire them only for the sake of helping others, and that they are wise enough to use them rightly, it may be that no harm will come of it; but it is not easy to be quite certain on these points, and the slightest deflection from the right line will mean disaster.

If a man must try to obtain the powers, there are two ways open to him; of course there are many more than two methods, but I mean that they all fall under two heads — the temporary and the permanent. The temporary method is to deaden the physical sense in some way — actively by drugs, by self-hypnotisation, or by inducing giddiness, for example, or passively by being mesmerized — so that the astral senses may come to the surface. The permanent way is to work at the development of the ego, so that he may be able to control the lower vehicles and use them as he wishes.

It is somewhat like controlling a troublesome horse. A man who knows nothing of riding may so stupefy a horse with drugs that he can somehow keep on his back, but that will not in the least enable him to control any other horse. So a man who stupefies his physical body may use his astral senses to some extent, but that will in no way help him to manage another physical body in his next birth. The man who will take the far greater trouble of learning to ride properly can then manage any horse, and the man who develops his ego until it can manage one set of vehicles will be able to control any others that are given to him in future lives. This latter course means real evolution; the other does not necessarily involve anything of the sort. It does not follow that everyone who is on the Path must have psychic powers; they are not absolutely necessary until a certain stage of it is reached.

Short of the real psychic powers there are various other methods by which men endeavour to obtain some of the same results. One of these, for example, is the repetition of invocations. Charms and ceremonies may sometimes produce an effect; it depends upon the way in which they are performed. I have seen a man who was able to answer questions in rather a curious way; he first entranced himself by repeating charms over and over again, and his invocations not only influenced himself, but also attracted nature-spirits who went for the desired information, obtained it and put it into his mind.

Lord Tennyson, by repeating his own name over and over again and drawing his consciousness further and further within himself, raised himself into touch with the ego, and then all this life seemed to him child's play, and death nothing but the entrance into a greater life.

The result of many repetitions may often be to throw oneself into the trance condition; but this is not a training of the ego. Its effects last at most only for one life, whereas the powers which result from real spiritual development reappear in subsequent bodies. The man who entrances himself by the repetition of words or charms may probably return as a medium or at least a mediumistic person in his next life, and it must be remembered that mediumship is not a power, but a condition.

Such repetitions may easily lead on to the coarser physical mediumship (by which I mean the sitting for materialisation and sensational phenomena of all sorts) which is frequently injurious to health. I do not know that mere trance-speaking injures the body quite so much, though considering the feebleness of the platitudes which are usually the staple of the communications it might certainly be thought likely to weaken the mind!

Let us consider what it is that is required from a physical medium. When an entity on the astral plane, whether it be a dead man or a nature-spirit, wants to produce any result on dense physical matter — to play on a piano for example, to cause raps, or to hold a pencil in order to write — he needs an etheric body through which to work, because astral matter cannot act directly on the lower forms of physical matter, but requires the etheric matter as an intermediary to convey the vibrations from the one to the other — much in the same way as a fire cannot be lighted with paper and coals alone; the wood is needed as an intermediary, otherwise the paper will all burn away without affecting the coal.

That which constitutes a man a physical medium is a want of cohesion between the etheric and the dense parts of the physical vehicle, so that an astral entity can easily withdraw a good deal of the man's etheric body and use it for his own purposes. Of course he returns it — in fact its constant tendency is to flow back to the medium, as may be seen from the action of the materialised form — but still the frequent withdrawal of part of the man's body in this way cannot but cause great disturbance and danger to his health.

The etheric double is the vehicle of vitality, the life-principle, which is perpetually circulating through our bodies; and when any part of our etheric double is withdrawn that life-circulation is checked and its current broken. A terrible drain on vitality is then set up, and that is why the medium is so often in a state of collapse after a séance, and also why so many mediums in the long run become drunkards, having first taken to stimulants in order to satisfy the dreadful craving for support which is caused by this sudden loss of strength.

It can never under any circumstances be a good thing for the health to be constantly subjected to such a drain as this, even though in some cases the more intelligent and careful "spirits" try to pour strength into their medium after a séance, in order to make up for the loss, and thus support him without absolute breakdown for a much longer period than would otherwise be possible.

In cases of materialisation, dense physical matter, probably chiefly in the form of gases or liquids, is frequently borrowed from the body of the medium, who actually decreases temporarily in size and weight; and when it takes place, naturally that is a further source of serious disturbance to all the functions.

Of the mediums with whom I used to have sittings thirty years ago one is now blind, another died a confirmed drunkard, and a third, finding himself menaced apoplexy and paralysis, escaped with his life only by giving up séances altogether.

Another form of materialisation is that in which the astral body is temporarily solidified. The ordinary materialising "spirit" takes his material from the medium, because that, being already specialised, is more easily arranged into human form, and more readily condensed and moulded than free ether would be. No one connected with any school of white magic would think it right to interfere with the etheric double of any man in order to produce a materialisation, nor would he disturb his own if he wished to make himself visible at a distance. He would simply condense, and build into and around his astral body a sufficient quantity of the surrounding ether to materialise it, and hold it in that form by an effort of will as long as he needed it.

When part of the etheric double is removed from the physical, as in the case of materialisation of the ordinary kind, a connecting current is visible to any one capable of seeing matter in the etheric condition; but the method of connection with the astral body is entirely different, for nothing in the nature of a cord or current of astral matter joins the two forms. Yet it is difficult to express in terms of this plane the exact nature of the exceeding closeness of the sympathy between them; perhaps the nearest approximation we can get to the idea is that of two instruments tuned to exactly the same pitch, so that whatever note is struck upon one of them instantly evokes a precisely corresponding sound from the other.

There is no harm in using will-power to cure diseases, so long as no money or other consideration is taken for what is done. There are several methods; the simplest is the pouring in of vitality. Nature will cure most diseases if the man can be strengthened and supported while she is left to do her work. This is especially true of the various nervous diseases which are so painfully common at the present day. The rest-cure, which is often advised for them, is quite the best thing that can be suggested, but recovery might often be greatly hastened if vitality were poured into the patient in addition. Any man who has surplus vitality may direct it by his will to a particular person; when he is not doing that, it simply radiates from him in all directions, flowing out principally through the hands. If a man is depleted of strength so that his spleen does not do its work properly, the pouring in of specialised vitality is often of the greatest help to him in keeping the machinery of the body going until he is able to manufacture it for himself.

Many minor diseases can be cured merely by increasing the circulation of the vitality. A headache, for example, is generally due either to a slight congestion of blood, or to a similar congestion of the vital fluid; in either case a clairvoyant who can see the obstruction may deal with it by sending a strong current through the head, and washing away the congested matter. A man who cannot see can also produce this result, but since he does not know exactly where to direct this force he generally wastes a great deal of it.

Sometimes people perform cures by imposing their own magnetic conditions upon others. This is based on the theory (which is quite correct) that all disease is in harmony of some sort, and that if perfect harmony can be restored the disease will disappear. So in this case the person who wishes to effect a cure first raises his own vibrations to the highest degree which is possible for him, fills himself with thoughts of love and health and harmony, and then proceeds to enfold the patient within his aura, the idea being that his own powerful vibrations will overbear these of the patient, and gradually bring him into the same harmonious and healthy condition. This method is often effective, but we must remember that it involves imposing the

whole of the personality of the magnetiser upon the patient, which may not always be desirable for either of the persons concerned.

One should take care not to be caught or entangled on the astral plane, as a man easily may be, and that through his virtues as well as his vices, if he be not exceedingly cautious. For example, it is possible to affect others by thought, and thus obtain whatever is wanted from them, and the temptation of this power to an ordinary man would be overwhelming. Again, you could easily *force* those whom you love out of a wrong path into a right one if you wished, but this you must not do; you may only persuade and argue. Here again is a temptation. You may by force prevent your friend from doing wrong, but often the weakening effect of the compulsion on his mind will do him more harm than the wrong-doing from which you save him. Drunkenness can be cured by mesmerising the man, but it is far better to persuade him gradually to conquer the weakness for himself, since this is a thing which he will have to do in some life. It is said that in some cases the man has yielded himself to this awful habit for so long that his will power is entirely in abeyance, and he actually has not the strength to refrain; and it is claimed that for such a man mesmerism is necessary, for it is the only method of giving him an opportunity to reassert himself as a human being, and to regain some sort of control of his vehicles. This may be so, and I can well understand the desire to save by any lawful means the soul which has come to so dire a pass; yet even then I would counsel the greatest care in the use of mesmerism, and in the choice of the mesmerist.

A man can use the faculties of his astral body without moving away from his physical vehicle. That is called the possession of astral powers in the waking state, and is a definite stage in development. But it is more usual for the astral body to leave the physical when it is intended to operate or observe at a distance from the physical body.

The Indian term "sky-walker" generally refers only to one who is able thus to travel in his astral body. But sometimes also it means levitation, in which the physical body is lifted and floats in the air. In India this happens to some ascetics, and some of the greatest of Christian saints have in deep meditation been thus raised from the ground. It involves, however, the expenditure of a good deal of force. When a disciple is commissioned to undertake some special work for humanity, the adepts may give to him for the purpose some extra force, but though he is left free to use it as he pleases, he must not fritter it away uselessly. So it happens that even those who can produce these strange effects at will do not do so to amuse themselves or others, but only for real work. It would be quite possible for some disciple to use this force for the purpose of carrying his physical body through the air to a distant place; but as that would mean a tremendous expenditure of force, it is not likely that he would so use it unless definitely directed to do so.

On the other hand there have been cases in which such powers were used — for example, to save a man from undeserved suffering. There was once a case in which a young man was accused of the forgery of an important document. He was to a certain extent technically guilty, although quite innocent of any evil intention. He had very foolishly imitated a certain signature upon a blank sheet of paper, and then some one who was unfriendly to him had obtained possession of the sheet of paper, written in certain instructions above the signature, and then cleverly cut the paper so as to make it appear to be a letter conveying orders. The accused had to admit that the signature was in his writing, but his account of the circumstances under which it was written was not unnaturally disbelieved, and it seemed impossible for him to escape

the most terrible consequences. But it happened that one of our Masters was called as a witness to testify to the handwriting of the prisoner. The sheet was handed to Him with the question:

“Do you recognise that handwriting as that of the prisoner?”

The Master just glanced at it, and instantly returned it, saying:

“Is this the sheet which you intended to give me?”

In that instant the sheet had become an absolute blank! The counsel for the prosecution of course supposed that in some utterly incomprehensible way he had mislaid the paper; but for want of it the prosecution fell through, and so the young man was saved.

CLAIRVOYANCE

The possession of clairvoyant power is a very great privilege and a very great advantage, and if properly and sensibly used it may be a blessing and a help to its fortunate holder, just as surely as, if it is misused, it may often be a hindrance and a curse. The principal dangers attendant upon it arise from pride, ignorance, and impurity, and if these be avoided, as they easily may be, nothing but good can come from it.

Pride is the first great danger. The possession of a faculty which, though it is the heritage of the whole human race, is as yet manifested only very occasionally, often causes the ignorant clairvoyant to feel himself (or still more frequently herself) exalted above his fellows, chosen by the Almighty for some mission of world-wide importance, dowered with a discernment that can never err, selected under angelic guidance to be the founder of a new dispensation, and so on. It should be remembered that there are always plenty of sportive and mischievous entities on the other side of the veil who are ready and even anxious to foster all such delusions, to reflect and embody all such thoughts, and to fill whatever *role* of archangel or spirit-guide may happen to be suggested to them. Unfortunately it is so fatally easy to persuade the average man that he really is a very fine fellow at bottom, and quite worthy to be the recipient of a special revelation, even though his friends have through blindness or prejudice somehow failed hitherto to appreciate him.

Another danger, perhaps the greatest of all because it is the mother of all others, is ignorance. If the clairvoyant knows anything of the history of his subject, if he at all understands the conditions of those other planes into which his vision is penetrating, he cannot of course suppose himself the only person who was ever so highly favoured, nor can he feel with self-complacent certainty that it is impossible for him to mistake. But when he is, as so many are, in the densest ignorance as to history, conditions and everything else, he is liable in the first place to make all kinds of mistakes as to what he sees, and secondly to be the easy prey of all sorts of designing and deceptive entities from the astral plane. He has no criterion by which to judge what he sees, or thinks he sees, no test to apply to his visions or communications, and so he has no sense of relative proportion or the fitness of things, and he magnifies a copy-book maxim into a fragment of divine wisdom, a platitude of the most ordinary type into an angelic message. Then again, for want of common knowledge on scientific subjects he will often utterly misunderstand what his faculties enable him to perceive, and he will in consequence gravely promulgate the grossest absurdities.

The third danger is that of impurity. The man, who is pure in thought and life, pure in intention and free from the taint of selfishness, is by that very fact guarded from the influence of undesirable entities from other planes. There is in him nothing upon which they can play; he is no fit medium for them. On the other hand all good influences naturally surround such a man, and hasten to use him as a channel through which they may act, and thus a still further barrier is erected about him against all which is mean and low and evil. The man of impure life or motive, on the contrary, inevitably attracts to himself all that is worst in the invisible world which so closely surrounds us; he responds readily to it, while it will be hardly possible for the forces of good to make any impression upon him.

But a clairvoyant who will bear in mind all these dangers, and strive to avoid them, who will take the trouble to study the history and the rationale of clairvoyance, who will see to it that his heart is humble and his motives are pure — such a man may assuredly learn very much from these powers of which he finds himself in possession, and may make them of the greatest use to him in the work which he has to do.

Having first taken good heed to the training of his character, let him observe and note down carefully any visions which come to him; let him patiently endeavour to disentangle the core of truth in them from the various accretions and exaggerations which are sure at first to be almost inextricably confused with them; let him in every possible way test and check them and endeavour to ascertain which of them are reliable, and in what way these reliable ones differ from others which have proved less trustworthy — and he will very soon find himself evolving order out of chaos, and learning to distinguish what he can trust and what he must for the present put aside as incomprehensible.

He will probably find in course of time that he gets impressions, whether by direct sight or only by feeling, in reference to the various people with whom he comes into contact. Once more the careful noting down of every such impression as soon as it occurs, and the impartial testing and checking of it as opportunity offers, will soon show our friend how far these feelings or visions are to be relied on; and as soon as he finds that they are correct and dependable he has made a very great advance, for he is in possession of a power which enables him to be of far more use to those among whom his work lies than he could be if he knew only as much about them as can be seen by the ordinary eye.

If, for example, his sight includes the auras of those around him, he can judge from what it shows him how best to deal with them, how to bring out their latent good qualities, how to strengthen their weaknesses, how to repress what is undesirable in their characters. Again, his power may often enable him to observe something of the processes of nature, to see something of the working of the non-human evolutions which surround us, and thus to acquire most valuable knowledge on all kinds of recondite subjects. If he happens to be personally acquainted with some clairvoyant who has been put under regular training he has of course a great advantage, in that he can without difficulty get his visions examined and tested by one upon whom he can rely.

Generally speaking, then, the course to be recommended to the untrained clairvoyant is that of exceeding patience and much watchfulness; but with this hope ever before his eyes, that assuredly if he makes use of the talent entrusted to him it cannot but attract the favourable notice of Those who are ever watching for instruments which can be employed in the great work of evolution, and that when the right time comes he will receive the training which he so earnestly desires, and will thus be enabled definitely to become one of those who help the world.

Special training should be arranged from early childhood for clairvoyant children. The modern system of education tends to suppress all psychic faculties, and most young people are overstrained by their studies. In Greece and Rome these psychic children were promptly isolated as vestal virgins or postulants for the priesthood, and specially trained. There is a natural tendency in the present day, apart from education, to repress these faculties. The best way to prevent the loss of these to the world is to put the boys into some sort of monastery where the monks know about the higher life and try to live it, for family life is not suitable for this development.

Where such clairvoyance appears it ought to be encouraged, for many additional investigators are wanted for the Society's work, and those who begin young are likely to adapt themselves to it most readily.

People who are psychic by birth generally use the etheric double a great deal. People who possess what has sometimes been called "etheric sight" — that is, sight capable of observing physical matter in a state of exceedingly fine subdivision, though not yet capable of discerning the subtler matter of the astral plane — frequently see, when they look keenly at any exposed portion of the human body, such as the face or the hand, multitudes of tiny forms, such as dice, stars, and double pyramids. These belong neither to the thought-plane nor to the astral, but are purely physical, though of exceeding minuteness. They are simply the physical emanation from the body, which is always taking place — the waste matter, consisting largely of finely-divided salts, which is constantly being thrown out in this manner. The character of these tiny particles varies from many causes. Naturally loss of health often alters them entirely, but any wave of emotion will affect them to a greater or lesser extent, and they even respond to the influence of any definite train of thought.

Professor Gates is reported as saying (*a*) that the material emanations of the living body differ according to the states of the mind as well as the conditions of the physical health; (*b*) that these emanations can be tested by the chemical reactions of some salts of selenium; (*c*) that these reactions are characterised by various tints or colours according to the nature of the mental impressions; (*d*) that forty different emotion-products, as he calls them, have already been obtained.

People sometimes see animated particles quivering with intense rapidity, and dashing about in the air before them. This again shows the possession of much increased physical power, not of mental. It is unfortunately only too common for the person who gains for the first time a glimpse of astral or even of etheric matter to jump at once to the conclusion that he is at least upon the mental level, if not upon the nirvânic, and holds in his hand the key to all the mysteries of the entire solar system. All that will come in good time and these grander vistas will assuredly open before him one day; but he will hasten the coming of that desirable consummation if he makes sure of each step as he takes it, and tries fully to understand and make the best of what he has, before desiring more. Those who begin their experience with nirvânic vision are few and far between; for most of us, progress must be slow and steady, and the safest motto for us is *festina lente*.

I should not advise anyone to allow himself to be thrown into mesmeric sleep for the purpose of gaining clairvoyant experiences. The domination of the will by that of another produces effects that few people realise. The will of the victim becomes weaker, and is more liable to be acted upon by others. In the scheme of things no man is *forced* to do anything; he is taught by receiving always the result of his actions; and it is better to allow clairvoyant powers to come gradually in the natural course of evolution, rather than to try to force them in any way.

We must not always assume that a man who sees something pertaining to higher planes is necessarily becoming clairvoyant. By clairvoyance, for example, we may undoubtedly see an apparition, but on the other hand there are various other ways in which a man may see or suppose himself to see something which to him would be exactly the same as an apparition.

The apparition of a dead person may be (*a*) one's own imagination, (*b*) a thought-form produced by another person, (*c*) or by the person seen, (*d*) an impersonation,

(e) the etheric double of the person, or (f) the real person actually there. In the last case one of three things must have happened — that is, supposing that the apparition is a dead or sleeping person in his astral body, and that the man who sees him is himself in his physical body and wide awake. Either (a) the dead man has materialised himself, in which case of course he is for the time a physical object, which may be seen by any number of people with ordinary physical sight; (b) the dead man is in his astral body, in which case only those possessing astral sight can perceive him; he has probably succeeded by some special effort in temporarily opening that sight for the person to whom he wishes to show himself, and is therefore most likely visible to that one person only, and not to any others who may happen to be present; or, (c) the dead man has mesmerised the living, so as to impose upon him the idea that he sees a figure which is not really visible to him, though it may be really present.

If the apparition be an etheric double, it will not stray far away from the dense body to which it belongs or used to belong. An unpractised apparition — one who is new to the astral plane — often shows traces of the habits of his earth-life. He will enter and depart by a door or a window, not yet realising that he can pass through the wall just as easily. I have even seen one squeeze through the crack of a locked door; he might as well have tried the key-hole! But he moves as he has been accustomed to move — as he *thinks* of himself as moving. For the same reason an apparition often walks upon the earth, when he might just as well float through the air.

It is a mistake to think that if you see a vision, it must necessarily mean something for you, or be specially sent to you. If you for the moment become sensitive, you see what happens to be there.

Suppose I am sitting in a room, and a curtain is drawn across the window, so that the street outside is invisible to me. Suppose the wind lifts the curtain for a moment, so that I get a glimpse of the street, I shall then see whatever happens to be passing at that moment. Let us imagine that I see a little girl in a red cloak, carrying a basket. That little girl is probably going about her own business, or perhaps her mother's; should I not be very foolish if I chose to fancy that she had been *sent* there especially for me to see, and began to worry myself as to what could be symbolised by the red cloak and the basket? A flash of clairvoyance is usually just the accidental lifting of a curtain, and generally what is seen has no special relation to the seer. There may occasionally be instances in which the curtain is intentionally lifted by a friend because something of personal interest is passing; but we must not be too ready to assume that that is the case.

Among the real psychic powers, however, which are attained by slow and careful self-development, there are some which are of very great interest. For example, for one who can function freely in the mental body there are methods of getting at the meaning of a book, quite apart from the ordinary process of reading it. The simplest is to read from the mind of one who has studied it; but this is open to the objection that one gets not the real meaning of the work but that student's conception of the meaning, which may be by no means the same thing. A second plan is to examine the aura of the book — a phrase which needs a little explanation for those not practically acquainted with the hidden side of things.

An ancient manuscript stands in this respect in a somewhat different position from a modern book. If it is not the original work of the author himself, it has at any rate been copied word by word by some person of a certain education and understanding,

who knew the subject of the book, and had his own opinions about it. It must be remembered that copying (done usually with a stylus) is almost as slow and emphatic as engraving; so that the writer inevitably impresses his thought strongly on his handiwork. Any manuscript, therefore, even a new one, has always some sort of thought-aura about it which conveys its general meaning, or rather one man's idea of its meaning and his estimate of its value. Every time it is read by anyone an addition is made to that thought-aura, and if it be carefully studied the addition is naturally large and valuable.

This is equally true of a printed volume. A book which has passed through many hands has an aura which is usually better balanced than that of a new one, because it is rounded off and completed by the divergent views brought to it by its many readers; consequently the psychometrisation of such a book generally yields a fairly full comprehension of its contents, though with a considerable fringe of opinions *not* expressed in the book, but held by its various readers.

On the other hand, a book used in a public library is not infrequently as unpleasant psychically as it usually is physically, for it becomes loaded with all kinds of mixed magnetisms, many of them of a most unsavoury character. The sensitive person will do well to avoid such books, or if necessity compels him to use them he will be wise to touch them as little as may be, and rather to let them lie upon a table than to hold them in his hand.

Another factor to be remembered with regard to such book is that a volume written upon a special subject is most likely to be read by a particular type of person, and these readers leave their impress upon the aura of the volume. Thus a book violently advocating some sectarian religious views is not read except by persons who sympathise with its narrowness, and so it soon develops a decidedly unpleasant aura; and in the same way a book of an indecent or prurient nature quickly becomes loathsome beyond description. Old books containing magical formulae are often for this reason most uncomfortable neighbours. Even the language in which a book is printed indirectly affects its aura, by limiting its readers largely to men of a certain nationality, and so by degrees endowing it with the more prominent characteristics of that nationality.

In the case of a printed book there is no original copyist, so that at the beginning of its career it usually carries nothing but disjointed fragments of the thought of the binder and bookseller. Few readers at the present day seem to study so thoughtfully and thoroughly as did the men of old, and for that reason the thought-forms connected with a modern book are rarely so precise and clear-cut as those which surround the manuscripts of the past.

The third method of reading requires some higher powers, in order to go behind the book or manuscript altogether and get at the mind of its author. If the book is in some foreign language, its subject entirely unknown, and there is no aura around it to give any helpful suggestion, the only way is to follow back its history to see from what it was copied (or set up in type, as the case may be) and so to trace out the line of its descent until one reaches its author. If the subject of the work be known, a less tedious method is to psychometrise that subject, get into the general current of thought about it, and so find the particular writer required, and see what he thinks. There is a sense in which all the ideas connected with a given subject may be said to be local — to be concentrated round a certain point in space — so that by mentally visiting that point one can come into touch with all the converging streams of

thought about that subject, though these are linked by millions of lines with all sorts of other subjects.

Another interesting power is that of magnification. There are two methods of magnification which may be used in connection with the clairvoyant faculty. One is simply an intensification of ordinary sight. It is obvious that when in common life we see anything, an impact of some sort is made upon the retina — upon its physical rods and cones. The effects there produced, or the vibrations set up, are transmitted, in some way by no means thoroughly understood, by the optic nerve to the grey matter of the brain. Clearly before the true man within can become conscious of what is seen, these impressions made upon the physical brain-matter must be transmitted from that to the etheric matter, from that in turn to the astral, and from that to the mental — these different degrees of matter being, as it were, stations on a telegraph-wire.

One method of magnification is to tap this telegraph-wire at an intermediate station — to receive the impression upon the etheric matter of the retina instead of upon the physical rods and cones, and to transfer the impression received directly to the etheric part of the brain. By an effort of will the attention can be focussed in only a few of the etheric particles, or even in one of them, and in that way a similarity of size can be attained between the organ employed and some minute object which is to be observed.

A method more commonly used, but requiring somewhat higher development, is to employ the special faculty of the centre between the eyebrows. From the central portion of that can be projected what we may call a tiny microscope, having for its lens only one atom. In this way again we produce an organ commensurate in size with the minute objects to be observed. The atom employed may be either physical, astral or mental, but whichever it is it needs a special preparation. All its spirillae must be opened up and brought into full working order, so that it is just as it will be in the seventh round of our chain.

This power belongs to the causal body, so if an atom of lower level be used as an eye-piece a system of reflecting counterparts must be introduced. The atom can be adjusted to any subplane, so that any required degree of magnification can be applied in order to suit the object which is being examined. A further extension of the same power enables the operator to focus his own consciousness in that lens through which he looks, and then to project it to distant points. The same power, by a different arrangement, can be used for diminishing purposes when one wishes to view as a whole something far too large to be taken in at once by ordinary vision.

THE MYSTIC CHORD

Questions have often been asked as to the method by which a person at a distance of some thousands of miles can be instantly found by a trained clairvoyant. Apparently this remains somewhat of a mystery to many, so I will endeavour to give an explanation of the plan commonly adopted, though it is not easy to put it quite plainly. A clear expression of super-physical facts cannot be achieved in physical words, for the latter are always to some extent misleading even when they seem most illuminative.

Man's various forces and qualities, manifesting in his bodies as vibrations, send out for each vehicle what may be called a keynote. Take his astral body as an example. From the number of different vibrations which are habitual to that astral body there emerges a sort of average tone, which we may call the keynote of the man on the astral plane. It is obviously conceivable that there may be a considerable number of ordinary men whose astral keynote is practically the same, so that this alone would not suffice to distinguish them with certainty. But there is a similar average tone for each man's mental body, for his causal body, and even for the etheric part of his physical body; and there have never yet been found two persons whose keynotes were identical at all these levels, so as to make exactly the same chord when struck simultaneously.

Thus the chord of each man is unique, and it furnishes a means by which he can always be distinguished from the rest of the world. Among millions of primitive savages there may possibly be cases where development is as yet so slight that the chords are scarcely clear enough for the differences between them to be observed, but with any of the higher races there is never the least difficulty, nor is there any risk of confusion.

Whether the man be sleeping or waking, living or dead, his chord remains the same, and he can always be found by it. How can this be so, it may be asked, when he is resting in the heaven-world, and has therefore no astral or etheric body to emit the characteristic sounds? So long as the causal body itself remains, it has always attached to it its permanent atoms, one belonging to each of the planes, and therefore, wherever he goes, the man in his causal body carries his chord with him, for the single atom is quite sufficient to give out the distinctive sound.

The trained seer, who is able to sense the chord, attunes his own vehicles for the moment exactly to its notes, and then by an effort of will sends forth its sound. Wherever in the three worlds that man who is sought may be, this evokes an instantaneous response from him. If he be living in the physical body, it is quite possible that in that lower vehicle he may be conscious only of a slight shock, and may not in the least know what has caused it. But his causal body lights up instantly; it leaps up like a great flame, and this response is at once visible to the seer, so that by that one action the man is found, and a magnetic line of communication is established. The seer can use that line as a kind of telescope, or if he prefers he can send his consciousness flashing along it with the speed of light, and see from the other end of it, as it were.

The combination of sounds which will produce a man's chord is his true occult name; and it is in this sense that it has been said that when a man's true name is called he

instantly replies, wherever he may be. Some vague tradition of this is probably at the back of the idea so widely spread among savage nations, that a man's real name is a part of him, and must be carefully concealed, because one who knows it has a certain power over him, and can work magic upon him. Thus also it is said that the man's true name is changed at each initiation, since each such ceremony is at once the official recognition and the fulfilment of a progress by which he has, as it were, raised himself into a higher key, putting an additional strain upon the strings of his instrument, and evoking from it far grander music, so that thence-forward his chord must be sounded differently. This name of the man must not be confused with the hidden name of the Augoeides, for that is the chord of the three principles of the ego, produced by the vibrations of the âtmic, buddhic and mental atoms, and the monad behind them.

In order to avoid such confusion we must keep clearly in mind the distinction between two manifestations of the man at different levels. The correspondence between these two manifestations is so close that we may almost consider the lower as the repetition of the higher. The ego is triple, consisting of âtmâ, buddhi, manas, three constituents each existing on its own plane — the âtmâ on the nirvânic, the buddhi on the buddhic, and the manas on the highest level of the mental. This ego inhabits a causal body, a vehicle built of the matter of the lowest of the three planes to which he belongs. He then puts himself further down into manifestation, and takes three lower vehicles, the mental, astral and physical bodies. His chord in this lower manifestation is that which we have been describing, and consists of his own note and those of the three lower vehicles.

Just as the ego is triple, so is the monad, and this also has its three constituents, each existing on its own plane; but in this case the three planes are the first, second and third of our system, and the nirvânic is the lowest of them instead of the highest. But on that nirvânic level it takes to itself a manifestation, and we call it the monad in its âtmic vehicle, or sometimes the triple âtmâ or triple spirit; and this is for it what the causal body is for the ego. Just as the ego takes on three lower bodies (mental, astral, physical), the first of which (the mental) is on the lower part of his own plane, and the lowest (the physical) two planes below, so the monad takes on three lower manifestations (which we commonly call âtmâ, buddhi, manas), the first of which is on the lower part of his plane, and the lowest two planes below that. It will thus be seen that the causal body is to the monad what the physical body is to the ego. If we think of the ego as the soul of the physical body, we may consider the monad as the soul of the ego in turn. Thus the chord of the Augoeides (the glorified ego in his causal body) consists of the note of the monad, with those of its three manifestations, âtmâ, buddhi, manas.

It must be understood that the chord cannot be accurately considered as sound in the sense in which we use that word on this plane. It has been suggested to me that an analogy which is in some respects better is that of the combination of lines in a spectrum. Each of the elements whose spectrum is known to us is instantly recognisable by it, in whatever star it may appear, no matter how great the distance may be — so long as the lines are bright enough to be seen at all. But the chord of which we have been speaking is not actually either heard or seen; it is received by a complex perception which requires the practically simultaneous activity of the consciousness in the causal body and in all the lower vehicles.

Even with regard to ordinary astral perception it is misleading (though practically unavoidable) to speak of "hearing" and "seeing." These terms connote for us the idea

of certain sense-organs which receive impressions of a well-defined type. To see implies the possession of an eye, to hear implies the existence of an ear. But no such sense-organs are to be found on the astral plane. It is true that the astral body is an exact counterpart of the physical, and that it consequently shows eyes and ears, nose and mouth, hands and feet, just as the latter does. But when functioning in the astral body we do not walk upon the astral counterparts of our physical feet, nor do we see and hear with the counterparts of our physical eyes and ears.

Each particle in an astral body is capable of receiving a certain set of vibrations — those belonging to its own level, and those only. If we divide all astral vibrations into seven sets, just like seven octaves in music, each octave will correspond to a sub-plane, and only a particle in the astral body which is built of matter belonging to that subplane can respond to the vibrations of that octave. So “to be upon a certain sub-plane in the astral” is to have developed the sensitiveness of only those particles in one's astral body which belong to that subplane, so that one can perceive the matter and the inhabitants of that sub-plane only. To have perfect vision upon the astral plane means to have developed sensitiveness in all particles of the astral body, so that all the sub-planes are simultaneously visible.

Even though a man has developed the particles of one sub-plane only, if those are fully developed he will have on that sub-plane a power of perception equivalent to all of our physical senses. If he perceives an object at all, he will in that one act of perception receive from it an impression which conveys all that we learn down here through those various channels which we call the senses; he will simultaneously see, hear and feel it. The instantaneous perception which belongs to higher planes is still further removed from the clumsy and partial action of the physical senses.

In order to see how the chord helps the clairvoyant to find any given person, it must also be understood that the vibrations which cause it are communicated by the man to any object which is for some time in close contact with him, and therefore permeated by his magnetism. A lock of his hair, an article of clothing which he has worn a letter which he has written — any of these is sufficient to give the chord to one who knows how to perceive it. It can also be obtained very readily from a photograph, which seems more curious, since the photograph need not have been in direct contact with the person whom it represents. Even untrained clairvoyants, who have no scientific knowledge of the subject, instinctively recognize the necessity of bringing themselves *en rapport* with those whom they seek by means of some such objects.

It is not necessary for the seer to hold the letter in his hand while examining the case, or even to have it near him. Having once held the letter and sensed the chord, he is able to remember it and reproduce it, just as any one with a good memory might remember a face after seeing it once. Some such link as this is always necessary to find a person previously unknown. We had recently a case of a man who had died somewhere in the Congo district, but as no photograph of him was sent by the friend who wrote about him, it was necessary first to seek that friend (somewhere in Scandinavia, I think) and make a contact in a roundabout way through him.

There are, however, other methods of finding people at a distance. One which is most effective requires higher development than that just described. A man who is able to raise his consciousness to the atomic level of the buddhic plane there finds himself absolutely in union with all his fellowmen — and therefore of course among the rest with the person whom he seeks. He draws his consciousness up into this unity along

his own line, and he has only to put himself out again along the line of that other person in order to find him. There are always various ways of exercising clairvoyance, and each student employs that which comes most naturally to him. If he has not fully studied his subject, he often thinks his own method the only one possible, but wider knowledge soon disabuses him of that idea.

HOW PAST LIVES ARE SEEN

As a series of past lives of enthralling interest has recently been published in *The Theosophist*, many enquiries have been received as to the exact method by which the record of such lives is read by the investigators. It is not easy to explain the matter satisfactorily to those who have not themselves the power to see them, but some attempt at a description of the process may at least help students on the way towards comprehension.

To begin with, it is by no means easy to explain what the record is which is to be read. A suggestion leading towards an idea of it may perhaps be obtained by imagining a room with a huge pier-glass at one end. Everything which took place in that room would be reflected in that mirror. If we further suppose that mirror to be endowed with the properties of a kind of perpetual cinematograph, so that it records all which it reflects, and can afterwards under certain circumstances be made to reproduce it, we have advanced one stage towards understanding how the record presents itself. But we must add to our conception qualities which no mirror ever possessed — the power to reproduce all sounds as a phonograph does, and also to reflect and reproduce thoughts and feelings.

Then we must further try to understand what the reflection in a mirror really is. If two persons stand in relation to a mirror so that each sees in it not himself but the other, it is obvious that the same area of glass is reflecting the two images. Therefore if we suppose the glass to retain permanently every image which has ever been cast upon it (perhaps it actually does!) it is again clear that the same part of the glass must be simultaneously recording those two images. Move up and down and from side to side, and you will soon convince yourself that *every* particle of glass must be simultaneously recording every part of every object in the room, and that what you happen to see in it depends upon the position of your eye. Hence it also follows that no two people can ever see at the same moment exactly the same reflection in a mirror, any more than two people can see the same rainbow, because two physical eyes cannot simultaneously occupy exactly the same point in space.

What we have supposed to happen with regard to the particles of our mirror does really happen with regard to every particle of every substance. Every stone by the roadside contains an indelible record of everything that has ever passed it, but this record cannot (so far as we yet know) be recovered from it so as to be visible to the ordinary physical senses, though the more developed sense of the psychometrist perceives it without difficulty.

How is it possible, men ask, for an inanimate particle to register and reproduce impressions? The answer is that the particle is *not* inanimate, and that the life which ensouls it is part of the Divine Life. Indeed, another way in which one may attempt to describe the record is to say that it is the memory of the LOGOS Himself, and that each particle is somehow in touch with that part of that memory which includes the events which have taken place in its neighbourhood, or what we may call within sight of it. It is probable that what we call *our* memory is nothing but a similar power of coming into touch (though often very imperfectly) with that part of *His* memory which refers to events which we happen to have seen or known.

So we might say that every man carries about with him on the physical plane two memories of anything which he has seen — his brain-memory, which is often imperfect or inaccurate, and the memory enshrined in any unchanged particles of his body or of the clothes that he wears, which is always perfect and accurate, but is available only for those who have learnt how to read it. Remember also that the brain-memory may be inaccurate, not only because it is itself imperfect, but because the original observation may have been defective. Also that it may have been coloured by prejudice: we see, to a large extent, what we wish to see, and we can remember an event only *as it appeared to us*, though we may have seen it partially or wrongly. But from all these defects the record is entirely free.

It is obvious that a man's physical body can have neither a memory nor a record of a past incarnation in which it did not participate; and the same is true of his astral and mental bodies, since all these vehicles are new for each new incarnation. This at once shows us that the lowest level at which we can hope to get really reliable information about past lives is that of the causal body, for nothing below that can give us first-hand evidence. In those previous lives the ego in his causal body was present — at least a certain small part of him was — and so he is an actual witness; whereas all lower vehicles were *not* witnesses, and can only report what they have received from him. When we recollect how imperfect is the communication between the ego and the personality in the ordinary man, we shall at once see how entirely unreliable such second, third, or fourth-hand testimony is likely to be. One may sometimes obtain from the astral or mental bodies isolated pictures of events in a man's past life, but not a sequential and coherent account of it; and even those pictures are but reflections from the causal body, and probably very dim and blurred reflections.

Therefore to read past lives with accuracy the first thing necessary is to develop the faculties of the causal body. Turning those faculties upon the causal body of the man to be examined, we have before us the same two possibilities as in the case of the physical man. We can take the ego's own memory of what happened, or we can as it were psychometrise him and see for ourselves the experiences through which he has passed. The latter method is the safer, for even the ego, since he has seen these things through a past personality, may have imperfect or prejudiced impressions of them.

This then is the mechanism of the ordinary method of investigating past lives — to use the faculties of one's own causal body, and by its means to psychometrise the causal body of the subject. The thing could be done at lower levels by psychometrisation of the permanent atoms, but as this would be a much more difficult feat than the unfolding of the senses of the causal body it is not at all likely ever to be attempted successfully. Another method (which, however, requires much higher development) is to use the buddhic faculties — to become absolutely one with the ego under investigation, and read his experiences as though they were one's own — from within instead of from without. Both of these methods have been employed by those who prepared the series of lives which appear in *The Theosophist*, and the investigators have also had the advantage of the intelligent co-operation of the ego whose incarnations are described.

The physical presence of the subject whose lives are being read is an advantage, but not a necessity; he is useful if he can keep his vehicles perfectly calm, but if he becomes excited he spoils everything.

The surroundings are not specially important, but quiet is essential, as the physical brain must be calm if impressions are to be brought through clearly. Everything

which comes down to the physical level from the causal body *must* pass through the mental and the astral vehicles, and if either of these is disturbed it reflects imperfectly, just as the least rippling of the surface of a lake will break up or distort the images of the trees or houses upon its banks. It is necessary also to eradicate absolutely all prejudices, otherwise they will produce the effect of stained glass; they will colour everything which is seen through them, and so give a false impression.

In looking at past lives it has always been our custom to retain full physical consciousness, so as to be able to make a note of everything while it is being observed. This is found to be a much safer method than to leave the physical body during the observations, and then trust to memory for their reproduction. There is however a stage at which this latter plan is the only one available, when the student, though able to use the causal body, can do so only while the physical vehicle is asleep.

The identification of the various characters encountered in these glimpses of the past sometimes presents a little difficulty, for naturally egos change considerably in the course of twenty thousand years or so. Fortunately, with a little practice it is possible to pass the record in review as rapidly or as slowly as may be desired; so when there is any doubt as to identification we always adopt the plan of running quickly along the line of lives of the ego under observation, until we trace him to the present day. Some investigators, when they see an ego in some remote life, at once feel an intuition as to his present personality; but though such a flash of intuition may often be right, it may certainly also sometimes be wrong, and the more laborious method is the only one which is thoroughly reliable.

There are cases in which even after many thousands of years the egos of ordinary people are instantly recognisable; but that does not speak particularly well for them, because it means that during all that time they have made but little progress. To try to recognise twenty thousand years ago some one whom one knows at the present day is rather like meeting as an adult some one whom one knew long ago as a little child. In some cases recognition is possible; in other cases the change has been too great. Those who have since become Masters of the Wisdom are often instantly recognisable, even thousands of years ago, but that is for a very different reason. When the lower vehicles are already fully in harmony with the ego, they form themselves in the likeness of the Augoïdes, and so change very little from life to life. In the same way when the ego himself is becoming a perfect reflection of the monad, he also changes but little, but gradually grows; and so he is readily recognisable.

In examining a past life the easiest way of all would be to let the record drift past us at its natural rate, but that would mean a day's work to look up the events of each day, and a lifetime spent upon each incarnation. As has been said, it is possible to accelerate or retard the passage of events, so that a period of thousands of years may be run through rapidly, or on the other hand any particular picture may be held as long as is desired, so that it may be examined in detail. The acceleration or retardation may perhaps be compared to the hastening or slackening of the movement of a panorama; a little practice gives the power to do this at will, but as in the case of the panorama, the whole record is really there all the time.

What I have described as the unrolling of the record rapidly or slowly at will is in reality a movement not of the record, but of the consciousness of the seer. But the impression which it gives is exactly as I have stated it. The records may be said to lie upon one another in layers, the more recent on the top and the older ones behind. Yet even this simile is misleading, because it inevitably suggests the idea of thickness,

whereas these records occupy no more space than does the reflection on the surface of a mirror. When the consciousness passes through them, it does not really move in space at all; it rather puts on itself, as a kind of cloak, one or other of the layers of the record, and in doing so it finds itself in the midst of the action of the story.

One of the most tiresome tasks connected with this branch of enquiry is the determination of exact dates. In fact, some investigators frankly decline to undertake it, saying that it is not worth the trouble, and that a round number is sufficient for all practical purposes. Probably it is; yet there is a feeling of satisfaction in getting even details as accurate as possible, even at the cost of tedious counting up to very high numbers. Our plan is of course to establish certain fixed points and then use those as a basis for further calculation.

One such fixed point is the date 9,564 B.C., when the sinking of Poseidonis took place. Another is the date 75,025 B.C., for the commencement of the great previous catastrophe. In the course of the investigation of the lives of Alcyone we have thus established a number of points, up to the date of 22,662 B.C., and as those lives were worked backwards, and the intervals were therefore counted one by one and not all at once, the scheme was not too insufferably tedious, as it certainly would be with very large numbers. In certain cases astronomical means are also employed. A description of these different methods will be found in my book on *Clairvoyance*.

It is on the whole somewhat easier to read lives forwards than backwards, because in that case we are working with the natural flow of time instead of against it. So the usual plan is to run rapidly to some selected point in the past, and then work slowly forwards from that. It must be remembered that at first sight it is rarely possible to estimate accurately the relative importance of the minor events of a life, so we often skim over it first, to see from what actions or occurrences the really important changes flow, and then go back and describe those more in detail. If the investigator himself happens to be one of the characters in the life which he is examining, there opens before him the interesting alternative of actually putting himself back into that old personality, and feeling over again just what he felt in that ancient time. But in that case he sees everything exactly as he saw it then, and knows no more than he knew then.

Few of those who read the life-stories, which are often somewhat meagre outlines, will have any conception of the amount of labour which has been bestowed upon them — of the hours of work which have sometimes been given to the full comprehension of some trifling detail, so that the picture finally presented may be as nearly a true one as is possible. At least our readers may be sure that no pains have been spared to ensure accuracy, though this is often no easy task when we are dealing with conditions and modes of thought as entirely different from our own as though they belonged to another planet.

The languages employed are almost always unintelligible to the investigator, but as the thoughts behind the words lie open before him that matters little. On several occasions those who were doing the work have copied down public inscriptions which they could not understand, and have afterwards had them translated on the physical plane by someone to whom the ancient language was familiar.

A vast amount of work is represented by the sets of lives which are now appearing; may that labour bring its fruit in a more vivid realisation of the mighty civilisations of the past and a clearer comprehension of the working of the laws of karma and reincarnation. Since the first set of lives which appeared have culminated in the

initiation of the hero in his present incarnation, they are surely a valuable study for those whose aspiration is to become the pupils of a Master of the Wisdom, for their own progress should be the more rapid when they have learnt how a brother has attained the goal towards which they are striving. This progress has been made the more easy for them because that brother has taken the trouble to record for us in that most admirable little book *At the Feet of the Master* the teachings which led him to that goal.

About a hundred and fifty of those who are at present members of the Theosophical Society are the prominent characters in the drama which lies before the readers of *The Theosophist*; and it is deeply interesting to note how those who in the past have often been linked by the ties of blood-relationship, though born this time in countries thousands of miles apart, are yet brought together by their common interest in Theosophical study, and bound to one another more closely by their love for the Masters than they could ever have been by any mere earthly connection.

There are two sources of possible error in examining the records clairvoyantly; first, personal bias, and secondly, limited views. There are fundamental differences of temperament, and these cannot but colour the views taken of other planes. The adept has a perfect perception of life, but below that level we are sure to have some prejudices. The man of the world magnifies unimportant details and omits all the important things, because he is in the habit of doing that in daily life; but on the other hand a man starting on the Path may, in his enthusiasm, lose for a time his touch with the ordinary human life from which he has emerged. Even then he has made a great advance, for those who see the inside of things are nearer to the truth than those who see only the outside.

The statements of clairvoyants may and must be coloured by opinions already formed, as was clearly the case with Swedenborg, who used a very narrow Christian terminology to describe the facts of the astral plane, and unquestionably saw many things through strong thought-forms which he had made in previous years. He started with certain definite preconceptions, and he made everything which he saw fit into those preconceptions. You know how it is possible down here on the physical plane to start with some preconception about a man and distort his most innocent words and actions to fit that preconception — to read into them ideas of which the unfortunate man never even dreamt. The same thing is possible on the astral plane if one is careless.

Theosophical investigators are thoroughly on their guard against this danger of personal bias, and use constant checks of all kinds to avoid it. To minimise the chance of error from this source the Masters usually select people of radically different types to work together.

Secondly, there is the danger of a limited view — of taking a part for the whole. For example, there has been much said of the corruption and black magic of later days in Poseidonis, but there existed there, at that very time, a secret society that was quite pure and had high aims. If it had happened that we had seen only this society, we might easily have thought of Poseidonis as a most spiritual country. It is possible, you see that such limited views may be taken as applying to a whole region or community. Generalisations must be checked and verified. There is, however, a general aura of a time or a country, which usually prevents any great mistakes of this sort. A psychic who has not been trained to sense this general aura is often unconscious of it, and thus the untrained man falls into many errors. In fact, long

continued observation shows that all untrained psychics are sometimes reliable and sometimes unreliable, and those who consult them always run a risk of being misled.

The records must not be thought of as originally inhering in matter of any kind, though they are reflected in it. In order to read them it is not necessary to come into direct contact with any particular grouping of matter, since they can be read from any distance, when a connection has once been made.

Nevertheless it is also true that each atom retains the record, or perhaps only possesses the power to put a clairvoyant *en rapport* with the record, of all that has ever happened within sight of it. It is by means of this quality that psychometry is possible. But there is this very curious limitation attached to it that the normal psychometer sees by means of it only what he would have seen if he had been standing at the spot from which the object psychometrised has been taken. For example, if a man psychometrises a pebble which has been lying for ages in a valley, he will see only what has passed during those ages in that valley; his views will be limited by the surrounding hills, just as if he had stood for all those ages where the stone lay, and had witnessed all those things.

True, there is an extension of the psychometric power, by which a man may see the thoughts and feelings of the actors in his drama as well as their physical bodies, and there is also another extension by which, having first established himself in that valley, he may make it the basis of further operations, and so pass over the surrounding hills and see what lies beyond them, and also what has happened there since the stone was removed, and even what occurred before it in some manner arrived there. But the man who can do that will soon be able to dispense with the stone altogether. When we use the senses of the causal body on the counterparts of physical things, we see that every object is thus throwing off pictures of the past.

As we develop our inner consciousness and faculties, our life becomes a continuous one; we reach the consciousness of the ego, and then we can travel back even as far as the group-soul in which we lived the animal stage of our life, and look through animal eyes at the human beings of that period and the different world that flourished then. But there are no words to tell what is seen in that way, for the difference of outlook is beyond all expression.

Short of that continuous consciousness, however, there is no detailed memory — not even of the most important facts. For example, a person who knows the truth of reincarnation in one life does not necessarily carry his certainty over to the next. I forgot it myself, and so did Mrs. Besant. I did not know anything of it in this life, until I heard of it from outside, and then I instantly recognised its truth. Whatever we have known in the past will spring up in the mind in this way as a certainty when it is next presented before us.

As a child I used constantly to dream of a certain house, which I afterwards learned was a house which I had lived in a previous life. It was quite unlike any with which I was at that time familiar on the physical plane, for it was built round a central courtyard (with a fountain and statues and shrubs) into which all the rooms looked. I used to dream of it perhaps three times a week, and I knew every room of it and all the people who lived in it, and used constantly to describe it to my mother, and make ground-plans of it. We called it my dream-house. As I grew older I dreamt of it less and less frequently, until at last it faded from my memory altogether. But one day to illustrate some point my Master showed me a picture of the house in which I had lived in my last incarnation, and I recognised it immediately.

Any one may intellectually appreciate the necessity of reincarnation; but actually to prove it one must become, in the causal body, cognisant of the past and future. The only way of casting off the fetter of doubt is by knowledge and intelligent comprehension. Blind belief is a barrier to progress, but this does not mean that we are wrong in accepting intelligently the statements of those who know more than ourselves. There are no authoritative dogmas which must be accepted in the Theosophical Society. There are only statements of the results of investigation, which are offered in the belief that they will be as helpful to other minds as they have been to the investigators.

FORESEEING THE FUTURE

It is very difficult to explain how the future is foreseen, but there is no doubt whatever as to the fact. Apart from apparently accidental pictures and flashes of intuition, often effective but not under control, there are two ways in which the future may definitely be foreseen by means of the higher clairvoyance. One is quite readily explicable and comprehensible; the other is not explicable at all.

Even with only physical senses we may see enough to foretell certain things. If, for instance, we see a man leading an extravagant life of debauchery, we may safely predict that, unless he changes, he will presently lose both health and fortune. What we cannot tell by physical means is whether he will change or not. But a man who has the sight of the causal body could often tell this, because to him the reserve forces of the other would be visible; he could see what the ego thought of it all, and whether he was strong enough to interfere. No merely physical prediction is certain, because so many of the causes which influence life cannot be seen on this lower plane. But when we raise our consciousness to higher planes we can see more of the causes, and so can come much nearer to calculating the effects.

Obviously if *all* the causes could be perfectly seen and judged, all their results would be readily calculable. Perhaps none but the LOGOS can see *all* causes in His system, but an adept would surely be able to see all that could affect an ordinary man! So it is probable that by this method an adept could foretell the life of that man quite accurately. For the ordinary man has little will-power; karma assigns to him certain surroundings, and he is the creature of those surroundings; he accepts the fate marked out for him, because he does not know that he can alter it. A more developed man takes hold of his destiny and moulds it; he makes his future what he wills it to be, counteracting the karma of the past by setting fresh forces in motion. So his future is not so easily predicable; but no doubt even in this case an adept, who could see the latent will, could also calculate how he would use it.

That method of foretelling the future is entirely comprehensible, and it is clear that the chief events of any life could be prophesied along that line. But there is another way for which we cannot so easily account. One has only to raise the consciousness to a plane sufficiently high, to find the limitation which we call time disappearing, and the past, present and future spread out before us like an open book. How that can be reconciled with our freedom of action I am not prepared to say, but I can testify that the fact is so; when this sight is employed the future is simply *there*, down to the minutest detail. I believe myself that we *are* free to choose, though only within certain limits; yet a power, far higher than we, may well know how we *shall* choose. You know what your dog will do under certain conditions, but that does not in the least *make* him do it; so a power as much higher than man, as man is than the dog, may know quite well how man will use his fragment of free-will.

For it is only a fragment; the plan of the LOGOS is to trust us with a little freedom, and see how we use it. If we use it well and wisely, a little more is given to us; and so long as we continue to use it in harmony with His great intention of evolution, we shall find more and more freedom of choice coming to us. But if we are so foolish as to use it selfishly, so as to bring harm to ourselves and hinder His plan, we shall find ourselves cramped in our action and forced back into line. A child must have freedom to walk, even though that involves a risk of falling, or else he will never learn; but no

one would let him make his experiment on the edge of a precipice. So we have freedom enough to do ourselves a little harm if we use it wrongly, but no freedom enough to destroy ourselves altogether.

Times of choice certainly come to us, but between those times we have often little option. When we have made our choice we must abide by its consequences. Looked at from above, human destiny seems rather like a network of railway lines. A man starts out on a locomotive, and chooses his line of rail; but when he has chosen it he must run along it, and cannot swerve to the right hand or the left until he reaches the first set of points. Then he may descend and set the points as he will, but having once set them and started on his way he must accept the consequences of his decision; he has no power to turn aside until the next point of choice comes in his way. We must not confuse free-will with freedom of action.

Now to possess fully the power of forecasting the future by either of the methods described means considerable development; but isolated pictures reflected from both of them may often be had at very much lower levels. What is called in Scotland second-sight appears to be an example; by that, a future event is often seen with quite a wealth of detail.

I remember reading of a case where a seer told a skeptic that a certain man known to them both would die at a given time, and furthermore gave a detailed description of his funeral, mentioning the pall-bearers by name. The skeptic ridiculed the whole prediction, but when the appointed time came the man indicated did die as had been prophesied. The skeptic was astonished, but still more annoyed, and he determined that the rest of the story should *not* come true, for he himself would interfere to falsify it. He therefore got himself appointed as one of the pall-bearers! But when the day came and the party was just about to start, he was called aside for a moment, and when he returned he found that the procession had already moved away, and that the pall-bearers were those who had been seen in the vision.

I have myself had similar pictures of scenes in the future — scenes of no interest to myself, and of no use so far as I could see; but they have always happened exactly as I had seen them, in every case where I have had the opportunity of verifying them.

The LOGOS has thought out the whole life of His system, not only as it is now, but as it has been at every moment in the past, and as it will be at every moment in the future. And His thought calls into existence that of which He thinks. These thought-forms are said to be on the cosmic mental plane — two whole sets of seven planes above our set of seven. He thinks out what He intends each of the planetary chains to do; He comes down to smaller details, for He thinks of the type of man for every root-race and sub-race, from the beginning of all, through the Lemurian, the Atlantean, the Aryan and the succeeding races. Thus we may say that on that cosmic mental plane the whole of the system was called into existence simultaneously by that thought — an act of special creation; and it must all be now simultaneously present to Him. So that it may well be that His mighty consciousness to some extent reflects itself even on very much lower levels, and somehow we sometimes catch faint glimpses of those reflection.

FIFTH SECTION: DEVAS AND
NATURE-SPIRITS

THE AURA OF THE DEVA

THE devas are a mighty kingdom of spirits, the next above humanity, just in the same way as the animal kingdom is the next one below it. You may think of them as great and glorious angels, but of course they are of many different kinds, and different degrees of evolution. None of them are so low down as to have physical bodies such as we have. The lowest kind are called kamadevas, and they have astral bodies, while the next higher variety have bodies made of lower mental matter, and so on. They will never be human, because most of them are already beyond that stage, but there are some of them who have been human beings in the past. When men come to the end of their evolution as men, and become something greater than human, several paths open before them and one of these is to join this beautiful deva evolution.

Devas and men differ in appearance. For one thing devas are more fluidic — capable of far greater expansion and contraction. Secondly, they have a certain fiery quality which is clearly distinguishable from that of any ordinary human being. The only kind of human being with whom it might be possible to confound them would be the highly-developed — an arhat, for example, who had a large and well-arranged aura; but even then one who had seen both would not be likely to mistake them. The aura of the ordinary man is capable of a certain amount of temporary expansion. It has a definite size, which is the same as that of a section of the causal body, and as the causal body grows, that section becomes larger, and the man has a larger aura; but such increase comes only gradually.

If you remember the plates in *Man Visible and Invisible*, you will recollect that the ordinary man, as far as the causal body is concerned, is far from being fully developed. When you look at the causal body of the developed man, you will see that it is full of colour, so the first stages of improvement in the case of the ordinary man consists in its filling up, not its enlargement. He must get the ovoid filled with different colours, and then expansion begins.

If any sudden rush of feeling comes over the ordinary man, it shows itself, as depicted in the book, by the flashing in the aura, and out from it, of the colour of the quality expressed — rose for affection, blue for devotion or green for sympathy; and also in the pulsating bands of that colour, and in the general intensification of everything connected with that emotion. It does not do more than that for the ordinary man; an exceedingly vivid rush of affection, for example, fills the aura with rose and sends out thought-forms of that colour in the direction of its object; but it does not usually appreciably increase, even temporarily, the size of the aura.

The developed man, however, has already filled the causal body with colour, so in his case the effect produced by such a rush of affection or devotion or sympathy is not only to suffuse the body with colour and cause a great outrush of thought-forms, but also to produce a considerable temporary expansion, though the aura afterwards contracts to its normal size. Each such outrush of feeling makes the aura permanently just a little larger than before. The more it increases the more power the man has to feel. Intellectual development also increases the aura, but in that case yellow is the predominant colour.

Remember that utterly unselfish affection or devotion belongs not to the astral but to the buddhic plane, and that is why when a wave of such feeling rushes over a man it causes great temporary expansion of his aura; yet it never increases to the same tremendous extent as with a deva. The fluctuations in the aura of a deva are so great as to be startling to those who are not used to them. One who recently did us the honour to pay us a visit at Adyar, to give us information about the foundation of the sixth root-race, had normally an aura of about one hundred and fifty yards in diameter; but when he became interested in the teaching which he was giving to us, that aura increased until it reached the sea, which is about a mile away from us.

No human being could feel sufficient emotion to produce such an increase as this. Even in the case of a Master the proportionate temporary enlargement would never be so great. I do not mean anything derogatory to the deva, when I say that the Master is steadier, and that the permanent growth of His aura would be as great as that of the deva, but the temporary expansion less in proportion. The texture of the deva's aura is, as it were, looser. The same extent of aura in a human being contains more matter, because it is more condensed or concentrated. The deva in question was no further advanced than an arhat, whose aura might probably extend a third of the distance. But it might easily happen that a clairvoyant who had not seen either before might realise only that he was surrounded by a cloud of glory in either case, and he probably would not know the difference.

Expansion and growth take place in the astral and mental bodies as well as in the causal. These three bodies are all of the same extent, although you must remember one is dealing with only sections, and even sections of sections. There used to be a theory afloat that the causal body of the ordinary was about the size of a pea, and that it gradually increased; but that is not correct. The undeveloped causal body is the same size as any other, until the expansion begins.

As I have said, the aura of a deva has fiery characteristics which are not easy to describe, though very readily recognisable. All of the colours are more fluidic, and of the nature of flame rather than of cloud. A man looks like an exceedingly brilliant, yet delicate cloud of glowing gas, but a deva looks like a mass of fire.

The human form inside the aura of a deva is very much less defined than in a man. He lives more in the circumference, more all over his aura than a man does. Ninety-nine per cent of the matter of a man's aura is within the periphery of the physical body, but the proportion is far less in the case of a deva. Devas usually appear as human beings of gigantic size. Somebody has suggested that there are devas who look as though they were feathered. There is some justification for this idea; I know exactly the appearance that that man was trying to describe, but it is not easy to put it into words. The great green devas whom I saw in Ireland have a very striking appearance, being enormous in size and most majestic. One cannot describe them accurately; in words it is only possible to approximate. The painters usually represent angels with wings and feathers, but I think where these are mentioned in the Christian scriptures they are always symbolical, for when real angels appear they are sometimes mistaken for human beings (as by Abraham, for example); so obviously they could not have had wings.

In many cases a deva may be distinguished by the form which he happens to be taking inside his ovoid. It is nearly always a human form. You remember that nature-spirits take human form almost invariably, but with a peculiarity of some sort — always a little odd. I should be disposed to say the same of the devas; but it would be

wrong to think of their forms as in any way distorted, for they have a great dignity and majesty.

The devas produce thought-forms as we do, but theirs are not usually so concrete as ours until they reach a high level. They have a wide generalising nature, and are constantly making gorgeous plans. They have a colour-language, which is probably not as definite as our speech, though in certain ways it may express more.

As regards the size of the aura, that of an ordinary man extends about eighteen inches on each side of the body. If he puts his elbow against his side and stretches out his arm and hand, his finger-tips will be near the circumference. The average Theosophist may be a trifle larger than the quite uninterested person; but there are fine, large auras outside the Society as well. Intense feeling means a larger aura.

We may have a distortion of the aura — it may be a little out of shape. As I have explained before, most people have the small end of the egg upwards, but we who are students tend to grow larger at the top, because the characteristics which we are developing express themselves in matter which naturally floats in the upper part of the aura because of its specific gravity. The increased size of the aura is a prerequisite for initiation, and the qualifications should be visible in it. The aura of a Buddha is said in the books to be three miles in radius; at one stage below His, I have myself seen one which extends about two miles. It naturally increases with each initiation.

The devas do not come along our line of development, and do not take such initiations as we do, for the two kingdoms converge at a point higher than the adept. There are ways in which a man can enter the deva evolution, even at our own stage, or lower.

You ask if the devas are often near at hand and willing to teach men. They are usually quite willing to expound and exemplify subjects along their own line to any human being who is sufficiently developed to appreciate them. Much instruction is being given in this way; but most people have not prepared themselves for it yet, and so are unable to profit by it. We know nothing of any rule or limit for the work of the devas; they have more lines of activity than we can imagine.

There are usually plenty of them here at Adyar. We have many great advantages here, where the Masters come so frequently. In order to see them, all that is required is a little clairvoyance at the right moment. There is a stimulus from these Beings, which some feel in one way and some in others. Perhaps in the earlier incarnation of the Lord Gautama as the first Zoroaster, the fire which is one of the signs of His development may have been one of the reasons why He was mistaken for a deva. It is said that during meditation flames leapt from the aura of the Lord Buddha; but we must remember that an ordinary thought-form would often appear flame-like to a person who was not used to such things. The shining of the Christ at the transfiguration is a similar case.

There are plenty of glorious influences all around us here, but their effect upon each one of us can be in proportion to his receptivity. We can take from all this just what we make ourselves fit to take, and no more. A person who is thinking of himself all the while may bathe in this glowing magnetism for a year, and not be one iota the better for it. He may even be the worse; for these tremendously strong vibrations tend to intensify a man's qualities, and sometimes the undesirable are strengthened as well as the desirable; or he may be altogether upset, and become unbalanced and hysterical. To a man who is wise enough to take it, a stay at Adyar is an opportunity

such as few men have ever had during history; but what we make of it depends entirely upon ourselves.

THE SPIRIT OF A TREE

The spirit of a great tree, such as a banyan, not infrequently externalises itself, and when it does so it usually takes on a gigantic human form. I have noticed one near here, for example, whose form is about twelve feet high, and looked like a woman the last time I saw it. Its features were quite clear, but its form was misty. There are also nature-spirits which cling round a tree, and do not at all like to be disturbed. I have heard it said that nature-spirits do not cling round the trees which man fells for timber; but such observations as I have been able to make do not bear out this contention, and it seems to me that it must have been invented by men who wished to destroy the tree without feeling any unpleasant twinges of conscience.

Although it takes so fine a form, the spirit of a tree is not individualised, nor even within measurable distance of individualisation. Nevertheless, it is already much higher than the lower forms of animal life, and when it passes into the animal kingdom it will come straight into some of the mammalian groups. It has its likes and dislikes, and these show in its aura, though the colour and definition are naturally altogether vaguer and dimmer than in the case of an animal. Indeed, in animals who glow with affection its colour is often remarkably strong; stronger in the case of some animals than that which is shown by some human beings, because it is so much more concentrated and one-pointed.

The strong attraction which some people feel for particular kinds of trees or animals depends often upon the line of animal and vegetable evolution through which those people have risen.

SIXTH SECTION: THE WORLDS AND
THE RACES OF MEN

THE BUILDING OF THE SYSTEM

OUR solar system has seven planes which, when taken together, form the lowest of the great cosmic planes. There was a time when this cosmic plane consisted only of what was to it atomic matter, that is to say, of the bubbles in koilon. That was the condition existing on what we may call the site of the solar system. When the Solar LOGOS chose to manifest Himself, when He came forth out of eternity into time, and wished to form this system, He commenced first of all by defining an area, the limit perhaps of His own aura.

Within that area He began His work upon the bubbles in koilon (which seem to have been already constructed, probably by some still greater LOGOS) using them as the atoms of our highest plane, and creating the universe in seven breaths. For example, He did not make the physical-plane matter directly from the astral-plane matter, but withdrew into Himself some of the matter of the astral plane and then breathed it out again in a new combination. Thus there is what is sometimes called a fresh tanmatra as well as a fresh tattwa for each plane.

The shortest and clearest definition of these words which I have ever heard was given by the late T. Subba Rao. He said:

“The tanmatra is the modification in the consciousness of the LOGOS, and the tattwa is the effect produced in matter by that modification. You have seen how on a sandy shore a little wave comes quietly in, runs up on the sand and retires. But it has left behind it a tiny ridge to mark its limit. If the tide is rising, the next wave which comes in goes a little further up the beach, makes its mark in turn and then retires. You may think of the tanmatra as imaged by that wave, which is the temporary modification of the ocean, and you may think of the little ridge made in the sand as symbolising the tattwa.”

The meaning of the word tattwa appears to be “thatness,” or “inherent quality.”

Though the atoms of the various planes as we descend are thus not made directly from one another it is nevertheless true that the atoms of the lower planes could not be made as they are unless the bubbles of which they are composed had already had the experience of passing through all the others above. The atom of the second plane already consists of forty-nine of these bubbles, and the atom of the third or nirvanic plane of two thousand four hundred and one. This proportion persists all the way down, so that the same energy which makes forty-nine astral atoms makes only one physical atom, the bubbles being arranged differently.

If we could take a physical atom and put it back plane by plane up to the highest, it would be found to consist of about fourteen thousand million of these bubbles. But when the LOGOS is making the planes, the matter of one plane is drawn up and disintegrated down to the original bubbles, and then recombined to make the matter of the next lower plane. It is probable that the force by which some greater LOGOS formed the bubbles in koilon is what Madame Blavatsky calls *fohat*, for you remember that that is spoken of as digging holes in space, and the holes may be these infinitesimal bubbles, instead of solar systems, as we at first supposed.

I do not know whether each bubble is rotating round its own axis or not. Remember, it is not like a soap-bubble, which is a film of water with an outer and inner surface,

enclosing air inside it; it is like a bubble in soda-water, which has only one surface, where the air meets the water. To the highest sight that we can as yet bring to bear upon it, it appears to be absolutely empty, so we cannot tell whether there is any interior motion going on in it or not. It seems to have no proper motion of its own, but it can be moved as a whole from without, singly or *en masse*, by an exertion of the will. No two of these bubbles ever under any circumstances touch each other.

The drawing of the physical atom which is given in the frontispiece to *The Ancient Wisdom* is not quite accurate; it is far too flat — too much like a locket in appearance. The drawing given in *Occult Chemistry* is far better. The atom in reality is nearly globular, and its projecting points lie almost on the surface of a sphere. It looks somewhat like a wire cage, composed of ten endless wires, which lie completely separate and never touch one another — that is, if any one of them were taken out and uncoiled, and laid out flat, it would be a circle. The arrangement is rather complicated, and a diagram is necessary in order to make it clear. A model would be still better, but no one has yet had the time or the patience to make one.

By reference to the illustration in *Occult Chemistry* it will be seen that three of these ten wires are thicker than the rest, for in them the seven sets of spirillae do not fit accurately over one another (as they do in the other wires), because in every seven hundred turns there are four more atoms. This means an increase of one in every one hundred and seventy-five bubbles, and it is this which makes those three seem larger than the rest. A scientific man, in criticising the *Koilon* article, said that in dealing with such minute particles it was impossible to be so accurate, but that is only because he did not understand that it is a mere question of counting and comparison.

The atom has three movements of its own: (1) rotation on its axis; (2) an orbital motion, for it is continually running round in a small circle; (3) a pulsation like a heart, a constant expansion and contraction. These three movements are always going on, and are unaffected by any force from outside. A force from outside — a ray of light for example — will set the atom as a whole moving violently up and down, the phase of this movement being proportional to the intensity of the light, and its wavelength being determined by the colour of the light. A curious feature is that when this happens one of the seven minor wires of the atom begins to glow — the which corresponds to the colour of the light which is setting the whole atom in motion.

The atom exists because of the force which the LOGOS is pouring through it, precisely as a little revolving column of dust and leaves, at the corner of the street, exists because of the whirling wind which made it. The existence of matter depends therefore absolutely upon the continuance of an idea in the mind of the LOGOS; if He chose to withdraw His force from the physical plane — to cease thinking it — every physical atom would instantly disintegrate, and the whole physical plane would disappear in an instant like the light of a candle when it is blown out.

Besides this force which holds the atom together in its spiral form, a number of the forces of the LOGOS are also playing round its coils — or perhaps we should rather say, one of His forces is playing at a number of different levels. There are seven orders of this force, which are eventually, at the end of the seventh round, to play fully round the seven sets of spirillae; but some of them are not yet in activity, since this is only the fourth round.

There is some reason to believe that what the scientific people call electrons may be what we call astral atoms, for they have said that in a chemical atom of hydrogen there are probably somewhere between seven hundred and a thousand of these

electrons. Now it happens that in a chemical atom of hydrogen there are eight hundred and eighty-two astral atoms. This may of course be only a coincidence, but that seems somewhat improbable. If this suggestion be true it follows that in some of their experiments our scientific men must be actually disintegrating physical matter, and throwing it back on to the astral plane; in which case it would seem that they must presently be forced to admit the existence of astral matter, though they will naturally think of it as nothing but a further subdivision of physical matter.

I do not know whether in such cases the disintegrated physical atoms re-form themselves; but in our experiments, when by an effort of the will the physical atom is broken up into astral or mental atoms, it means only that for a moment the human will is set against the divine will which formed that atom. It requires a distinct effort to hold the atom temporarily in a different form, and the moment that the human will is withdrawn the divine will re-asserts itself and the physical atom is there once more. This, however, seems to apply only to the breaking up of the ultimate atoms of the plane; when for experimental purposes we break up a chemical atom into physical ultimate atoms, it remains in that condition, and does not return to its original state.

In interstellar space (between solar systems) we are given to understand that atoms lie far apart and equidistant; and I believe that that is their normal condition when undisturbed. That is what is meant by speaking of the atoms as free. Within the atmosphere of a planet they are never found in at all that state, for even when not grouped in forms, they are at any rate enormously compressed by the force of attraction.

A man has a causal body on the atomic mental plane, but the mental atoms composing it will be crushed together by attraction into a very definite and quite dense shape, even though they are in no way altered in themselves, and are not grouped into molecules. Such a body could exist comfortably on its own atomic plane in the neighbourhood of a planet, where the atomic matter is in the compressed condition; but it would not at all be able to move or function in this far-away space where the atoms remain absolutely free and uncompressed.

The conditions in interplanetary space are probably not exactly the same as in interstellar space, for there may be a great deal of disturbance due to cometic and meteoric matter, and also the tremendous attraction of the sun produces a considerable compression within the limits of his system. Indeed, the vortex made in the first place by the LOGOS is of course still in action; and part of its action was to draw in matter from the surrounding space and compress it. I have no information upon the question as to whether atoms floating within the limits of the solar system would or would not be necessarily all vivified by elemental essence. It seems to me most probable, however, that only those atoms which make the mental, astral and physical bodies (the latter of course, including the atmosphere and the lower varieties of ether) of the sun and the various planets and comets would be so vivified.

At any rate, as we began by saying, the LOGOS chooses His area — an area of size stupendous beyond our comprehension. Astronomy tells us that the distance between solar systems is so enormous as to be out of all proportion to the systems themselves. It is nevertheless probable that the LOGOI of those systems are actually in touch with one another, and that the solar system existing in the centre of each of these inconceivably vast spheres represents the condensation of matter which was originally scattered throughout the whole of that prodigious area, in a condition of

the minutest possible subdivision — perhaps in the condition of the ultimate bubbles which are atoms of our highest plane.

At a certain stage in that condensation or compressed — a stage when the radius of His globe still extent far beyond the orbit of the outermost planet of our system as it is to-day — He sets up within it a whirling motion accompanied by intense electrical action, thus making a kind of colossal vortex in many dimensions. The compression of the whirling mass is continued through what to us would be untold ages, in the course of which He breathes the seven breaths of which we have previously spoken, and thereby groups the bubbles into the atomic matter of the various planes.

Eventually there comes a point at which He sends through it a kind of electrical shock, which precipitates it into a lower condition of matter, so that instead of being a mere aggregation of atoms it becomes definitely a combination of them, usually a mass of glowing hydrogen.

Here we have the nebular stage, through which various systems in our universe are at this moment passing, as may be seen by means of any large telescope. As our nebula revolved round its axis it gradually cooled, contracted and flattened down, so that eventually it became rather a huge revolving disc than a sphere. Presently fissures appeared in this disc and it broke into rings, presenting somewhat the appearance of the planet Saturn and its surroundings, but on a gigantic scale. At a chosen point in each of these rings a subsidiary vortex was set up, and gradually much of the matter of the ring was gathered into this. The concussion of the fragments generated an amount of heat which reduced them to a gaseous condition and thus formed a huge glowing ball, which gradually, as it cooled, condensed into a planet.

The planet formed upon the ring in this particular part of the system was, however, not the earth but the moon. We think of the moon as the satellite of the earth, comparing it in our minds with the satellites of Mars, Jupiter or Saturn; but in reality the comparison is unfair, for the moon is more companion planet than a satellite. No other satellite in the solar system bears at all the same proportion to its primary as the moon does to the earth, even though it is now much smaller than it used to be, as will be presently explained. It was the one physical planet of the lunar chain, and our present humanity inhabited it in the distant past, although we were then a stage further back, and were in the animal kingdom.

The earth came into existence when the active life of the moon was already over. A new vortex was set up not far away from the moon, and the rest of the matter of the ring was gradually gathered into it. The resultant collisions once more produced a ball of glowing gas, which enfolded the body of the moon and very soon reduced it to a similar condition. As this combined mass gradually cooled, condensation took place round the two vortices, but by far the larger part of the matter was attracted to the new one which became the earth, leaving the moon a much smaller body than it had been and altogether denuded of air and water.

The moon was still, from the intense heat, in a plastic condition like hot mud, and the earth in its earlier stages was subject to the most tremendous volcanic convulsions. In the course of these, enormous masses of rock, often many miles in diameter, were thrown up into space to vast distances in all directions. The majority of these fell back upon the earth, but some of them struck the moon while still in its plastic condition and produced upon it many of those huge depressions which we now call lunar craters. Any one who will take the trouble of throwing a few small pebbles into mud at the right stage of consistency will find that he obtains in that way an effect

precisely similar to that which we observe upon the surface of the moon. Some of the lunar craters are really craters, but not many.

The moon is now like a vast cinder, hard but porous, of a consistency not unlike that of pumice-stone, though harder. Hardly any physical action of any sort is now taking place upon the surface of the moon. It is probably slowly disintegrating, and we are told that in the course of our seventh round it will break up altogether, and its matter will be used (with presumably some of our own) to build a new world which will be the only physical globe of the next incarnation of our chain. To that new globe whatever remains of the earth will act as a satellite.

The moon has often been described in Theosophical literature as the eighth sphere, because it is not one of the seven planets of our chain upon which evolution is taking place. It is therefore what is called a "dead end," a place where only refuse gathers, and it is a kind of a dust-heap or waste-paper-basket to the system — a kind of astral cesspool into which are thrown decaying fragments of various sorts, such as the lost personality which has torn itself away from the ego, who has allowed it to slip out of his grasp in the manner which I explained in the first volume of this book, in the article on *Lost Soul*.

THE PLANETARY CHAINS

Our solar system at the present moment contains ten chains, each consisting of seven globes, and these are evolving side by side, though at different stages. Seven of them are represented upon the physical level by one or more globes, but the three others exist only on higher levels. The number of globes on the physical plane which a chain has at any given time depends upon the stage of its evolution. The globes of each chain present us with a small cycle of evolution descending into denser matter and then ascending out of it, and in an exactly analogous manner the successive incarnations of a chain also descend into denser matter and then ascend out of it. Our own chain is at the present moment at its lowest level of materiality, so that of its seven planets three are on the physical plane, two on the astral and two on the lower mental.

We usually employ the letters of the alphabet to denote these globes in their order; so we should represent the present condition of affairs by saying that globes A and G are on the lower mental plane; globes B and F on the astral, and globes C, D, and E upon the physical level, C and E being smaller than D. It will be observed that in travelling round the chain the life-wave is steadily involving itself more and more in matter as it descends from A to D, but is rising again and casting off successive veils of matter as it passes from D to G.

This is the condition of affairs during the fourth and most material incarnation of each chain. But in the third and fifth incarnations each chain has its first and seventh planets on the higher mental, its second and sixth on the lower mental, its third and fifth on the astral, and only one planet, the fourth, on the physical plane. The second and sixth incarnations of each chain are one stage higher; their fourth planet is upon the astral plane, while the third and fifth are upon the lower mental, the second and sixth upon the higher mental and the first and seventh at the buddhic level. The first and seventh incarnations of a chain are one stage higher still, in that their lowest planets are on the lower mental plane and their first and seventh planets at the stage which we call nirvanic.

It is not easy for us to attach any meaning to the idea of a planet upon planes so exalted as the nirvanic or buddhic, and we are perhaps scarcely justified in using the term. All that we mean is that there is a certain location in space where the evolution of certain groups of monads is taking place through agencies which work on those exalted levels.

Each of these seventy planets may be regarded as having a definite location in space and as revolving round, or in some way depending upon, our sun. Of these seventy planets only twelve are physical, and even of those twelve one is not yet recognised by science and two others have only lately been discovered.

The existence of Vulcan was accepted by some astronomers a century ago, but as it cannot now be found, the scientific men of the present day hold that the earlier observations were incorrect. No astronomer had dreamt of the two planets beyond the orbit of Neptune at the time when they were first mentioned in Theosophical writings, but now their existence is admitted in consequence of the deflections which they have produced in certain cometary orbits.

Madame Blavatsky says that Neptune is not in our solar system, but there can be no question that it revolves round our sun. Madame Blavatsky therefore must have been speaking in some occult or symbolical sense when she used those words. From the occult point of view also, the Neptunian chain is clearly part of our system, being one of the ten chains which compose it; so we are unable at the moment to attach any meaning to Madame Blavatsky's statement. That does not in the least imply that it is really meaningless or inaccurate.

We have frequently found that passages in her writings, which we had been for a long time compelled to put aside as incomprehensible and apparently contrary to known facts, had nevertheless a definite meaning and a certain sense in which they were true, though these were discoverable only when (by penetrating to higher planes) fresh aspects of the subject were brought into view. No doubt in due time this will prove to be the case with this enigmatical statement about Neptune.

Besides those on the seventy planets of which we have spoken, there are other evolutions taking place, every inch of place being utilised. Even in the koilon itself there may be an evolution going on of which we know nothing and can imagine nothing. We know as yet so little of this marvellous system to which we belong; all this teaching of Theosophy which has so changed our lives is but the lifting of a tiny corner of the veil. All space is filled with life, and there are even lower orders than that of the physical plane. It sometimes happens that a human being comes into touch with that lower evolution, but that is always undesirable. Yet it would be a great mistake to speak of the inhabitants of this lower world as wicked. Certainly that evolution brings harm to us if we become entangled with it, but that is because it is not meant for us.

Of the seven chains that have physical planets, taking them in order, beginning with the nearest to the sun and working outwards, we have first Vulcan, with only one physical planet, which is small and must be very hot. The Vulcan chain is in its third incarnation, but we are given to understand that its scheme of evolution is not destined to bring the entities concerned with it to as high a level as will be ultimately attained by the inhabitants of our own planet.

Mercury is the next planet, and belongs to the earth-chain.

Venus is the only physical planet of the chain of which it is a part. It is in the seventh round of its fifth incarnation, and it represents the most advanced degree of evolution yet attained by humanity in this solar system. Being so far advanced, it has been able to afford assistance to other and less developed evolutions; from it, as we know, descended the Lords of the Flame, who gave so great a stimulus to the progress of humanity in the middle of our third root-race.

It is a remarkable fact that the astronomers of a hundred and fifty years ago recorded several observations of a satellite of Venus, whereas now it is quite certain that no such orb exists. The usual supposition is that those earlier astronomers erred. But this is scarcely likely in view of the number and character of the witnesses, and also their repeated observations. It was seen by astronomers as well known as Cassini and Short, in 1761, and that not once but many times, and with different telescopes. It was observed by Scheuten during the whole of its transit along with Venus in the same year; it was seen four times by Mouton, and again in 1764 by Rödkier, Horrebow and Montbaron. It was estimated to have a diameter of about two thousand miles. It is surely more probable that all these astronomers were right in their observations, for we are told that in our seventh round the moon will

disintegrate and we shall be left without a satellite. It may be only a coincidence that Venus is in its seventh round, but it is a curious one.

The next planets are our Earth and Mars, and these two, along with Mercury, are the three physical planets of a chain which is in its fourth incarnation. Our Earth is the lowest and most material of the series — planet D, while Mars is our planet C and Mercury our planet E. A good many of the more advanced members of our present humanity were not upon the planet Mars when the life-wave last swept over it, as will be explained later; but the great bulk of the human race has certainly passed through a series of incarnations on that planet, and we have left behind us many traces of our occupation, of which the present inhabitants are abundantly availing themselves. When our present occupancy of the earth ends for a time, we shall all pass on to the somewhat less material life of the planet Mercury, where the average level of consciousness may be somewhat more extended than it is here, since ordinary humanity will then possess what is now called etheric sight. There are no grounds whatever, so far as I know, for the statement made by a recent writer that the real names of Mercury and Venus have been interchanged. Indeed, we know a great deal about these planets which makes the idea inconceivable.

Next come the asteroids — material which will make a world some time; but we do not count them now.

The giant of the solar system, Jupiter, has a chain of its own. It is in an early stage of its evolution, being very much too hot for life, such as we know, to exist on its surface; but its satellites are inhabited. Its surface has seas of molten metals, and similar conditions exist on all the outside giant planets. It has a density about that of water, if you take the whole mass; but what we see is really the outside of a mass of cloud thousands of miles in depth — so we get a false estimate of the actual size of the planet itself. The Jupiter scheme is at present in the second round of its third incarnation. We are told that this system will eventually raise its humanity to an extremely high level.

Next we come to Saturn, with its wonderful system of rings and satellites. It is the only physical planet of its chain. It also is in an early round of its third incarnation, and we understand that the development connected with it is slower than most of the others, but that it will ultimately reach exalted levels.

As to the schemes to which the outer planets Uranus and Neptune belong, we have but little information, though we know that the latter is in its fourth incarnation, because of the fact that to it belong also the two other physical planets whose orbits lie outside its own. The conditions existing on all these gigantic outer members of the solar systems must be altogether so entirely different from those on the small inner planets that it is practically impossible to form any idea of the sort of life which must be lived by their inhabitants, even in the future when the globes have cooled down.

SUCCESSIVE LIFE-WAVES

The conception of the successive life-waves which pour out from the LOGOS should not be a difficult one, yet it frequently happens that some confusion seems to arise in the mind of the student in connection with it.

Perhaps this comes partially from the fact that the term “life-wave” has been employed in our literature in three distinct senses. First, it has been used to denote the three great outpourings of Divine Life by means of which our solar system came into existence — by which its evolution is carried on. Secondly, it has been applied to the successive impulsions of which the second outpouring is formed; and it is in this sense principally that I shall employ the term now. Thirdly, the expression has been accepted as signifying the transference of life from one planet of our chain to another in the course of evolution.

A life-wave of this third type does not at all correspond to the life-wave of the second type, but consists of synchronous portions of seven of the latter, treated as though they constituted a single entity. As we all know, we have with us at the present time seven kingdoms in manifestation — the human, the animal, the vegetable, the mineral, and the three elemental kingdoms which precede the mineral.

We must realise that all these are manifestations of the same life — the one life of the LOGOS manifesting in that second great outpouring which comes from His second aspect after the primitive matter has been prepared for its reception by the action of the first outpouring which comes from the third aspect (see *The Christian Creed*, p. 40). That second outpouring comes forth in a series of successive waves, following one another as the waves of the sea follow one another. Each of these waves has reached its present stage by passing through all the earlier stages, and in each of those it has spent a period of time corresponding to the life of a chain of seven worlds, sometimes called a manvantara.

This Sanskrit word manvantara literally means the period between two Manus, and so it might be applied at various levels. We see from *The Secret Doctrine* that each root-race has its Manu, a great adept who takes charge of it, and superintends its formation and growth. But there is also a Manu for the world-period which includes the seven root-races; and yet again there is a still greater Manu who superintends the progress of the life-wave (using that term in its third sense) through all the seven planets of the chain; and since one complete journey through all those seven globes has been called a round, He is spoken of as the Round-Manu.

Seven such rounds complete one life-period for a planetary chain — one incarnation of the chain, as it were; and over this enormous period there is a Great One who presides, and to Him also this title of Manu is accorded. Higher still there is One who presides over the seven successive chains, which may be regarded as the seven incarnations of our chain, making one complete scheme of evolution; but He is usually spoken of not as a Manu, but as the LOGOS of seven chains, or sometimes as the Planetary LOGOS. So we have here a graduated hierarchy of mighty adepts, extending up to Divinity itself.

It is obvious, therefore, that the term manvantara might indicate various periods of time, corresponding to the levels at which it was employed; but in our Theosophical literature it has generally been used to indicate the duration of one chain — the time

occupied by the life-wave in making seven rounds. To the greater period of the seven successive incarnations of the chain, the name of mahamanvantara (which means simply great manvantara) has sometimes been given.

The following table may be of use to our students, as summarizing the system of evolution:

- 7 Branch Races make — One Sub-race.
- 7 Sub-races make — One Root-race.
- 7 Root-races make — One World-period.
- 7 World-periods make — One Round.
- 7 Rounds make — One Chain-period.
- 7 Chain-periods make — One Planetary Scheme.
- 10 Planetary Schemes make — Our Solar system.

It is scarcely practical for us at present to endeavour to estimate in years the exact length of these enormous expanses of time. In exoteric Hindu books definite numbers are given, but Madame Blavatsky tell us that it is impossible to rely fully upon these, as other and esoteric considerations are involved, which the writers do not take into account. We have no direct information upon these points, but there is some reason to suspect that the time of the rounds is not an invariable quantity, but that some are shorter than others. It has been thought that those in front of us will probably not be so long as those through which we have passed; but here again we have no certain information, and it seems useless to speculate.

At all these stages there are always seven life-waves in action. In every one of these chains is a human kingdom, and it is always accompanied by its brothers, an animal, a vegetable and a mineral kingdom. But each of these is steadily evolving; so that the life-wave which is ensouling the animal kingdom of the present day will in the next chain have arrived at the human level and will provide the causal bodies for the humanity of that chain. In the same way the life-wave which ensouls our vegetable kingdom now will ensoul the animal kingdom then, and so on.

It of course follows from this that we were the animal kingdom of the moon-chain, and the vegetable kingdom of the chain previous to that, That is not precisely an accurate method of expression, because we as separate egos did not exist then; but that wave of essence which in the first chain ensouled the mineral kingdom, in the second chain the vegetable, and in the third chain the animal, has now been employed in the formation of those causal bodies which we are inhabiting at the present day.

What then will be the future progress of that wave, and how will it appear in the next chain? It will not appear there at all, for we must remember that at the close of this human evolution man finds always before him the seven paths which open the way to still further development. I have tried to explain these, so far as they may at present be described, in the concluding chapter of *Invisible Helpers*.

I need not repeat here what I then wrote, but I may add to it a fragment of information which has since come to my knowledge. One of those paths, which we had then to leave blank, leads to what we have called a staff appointment. Every general has, quite apart from the regular officers who hold various commands under him, a special set of officers who form his staff, whose duty it is to be in personal attendance upon him, and to be ready at any moment to do anything that he may require, or to fill any vacancy that may occur. The Solar LOGOS also has His staff — a number of adepts who are not in the service of any particular chain, yet ever

prepared to be sent to the aid of any that need assistance. To join this body is one of the seven possibilities which lie before him who has "reached the further shore."

When the time comes for our chain to disintegrate and for the life from it to pass into the fifth chain, we shall already have moved on to a stage beyond the human, along one or other of these seven paths. Consequently the humanity which will commence as primitive man in the fifth chain will not be ourselves at all, but will be the wave next behind us — that which is ensouling our present animal kingdom.

In the same way our vegetable monad will have evolved a stage higher, and will ensoul the animal kingdom of that new chain; while the life-wave which is now animating the mineral kingdom will by that time have risen to the level of the vegetable kingdom. Thus we see that of the seven life-waves which we now know, six will be present in the fifth chain, but each will have gained a stage in its development.

Our present human life-wave, having obtained the object of its immersion into matter, has passed out of this series of chains altogether, though some of those who were its members may still retain a voluntary connection with it for the purpose of helping its evolution. But since each of our waves has moved on a stage, how is the place of the hindmost supplied? Are we to suppose that the first elemental kingdom will no longer be represented in the new chain? By no means; for we find that a fresh life-wave from the LOGOS is following close behind the others, and so this new influx completes the seven.

Precisely the same process has taken place in connection with each chain in succession. In each of them one life-wave has attained its goal, and passed off through seven channels to some entirely higher form of manifestation; and each of those behind it has moved forward one stage, and place of the hindmost has in each case been filled by a fresh influx of life from the LOGOS.

Each of these waves enters in each chain-period at the lowest level of the kingdom which it is ensouling, and passes out of that kingdom at its highest point. A fresh influx of life from the LOGOS enters the first elemental kingdom in each chain, and there are six such influxes in our scheme, so that we have altogether thirteen successive life-waves at work in this scheme of seven chains, though never more than seven of them are in operation simultaneously. All are moving steadily onward but always preserving the same distance between them, and we can take up any particular wave at any point in its progress and follow it backwards or forwards as we desire.

Take for example the seventh of these waves. It enters into the first incarnation of the chain as the first elemental kingdom; in the second chain it has reached the level of the second elemental kingdom, and in the lunar chain it ensouls the third. In our present chain it animates our mineral kingdom, while in the fifth and sixth chains it will ensoul respectively the vegetable and animal kingdoms. In the seventh chain it will arrive at the level of humanity, and will then pass off through its seven channels, as the other humanities have done. We have then the complete history of this life-wave before us, from the time when it emerged into manifestation in the first elemental kingdom, until it is again attaining divine levels at the end of its appointed evolution.

We have not before us in our scheme the complete evolution of any other wave than this. If, for example, we trace back our own life-wave, we shall find that it ensouled the animal kingdom in the moon-chain, the vegetable kingdom in the second chain, and the mineral kingdom in the first chain. Where then did it gain the evolution of

the three elemental kingdoms? For it must obviously have advanced through those stages before it manifested as the mineral. It has passed through them in some previous scheme of chains — we know not where or when. It is evident that the only entirely new impulse is that first chain of our scheme was the seventh life-wave, for all the others which form part of that first chain had already gone through some portion of their evolution in anterior schemes of worlds. Its humanity must evidently have passed through the six antecedent stages in that unknown past, and it came here only to acquire the finishing touch to its education which prepared it to pass off along the seven paths which lay open before it.

But our life-waves stretch onward into the future as well as back into the past. The eighth wave, for example, which entered for the first time in the second chain as a fresh impulse from the Divine Life, has no time in our scheme of evolution to reach the human level. In our present chain it is ensouling the third elemental kingdom, and causing us a great deal of trouble in the shape of desire-elementals. In the seventh chain that wave will be ensouling the animal kingdom, and it will therefore attain humanity in the first chain of some unknown scheme of globes, hidden at present in the womb of the future.

Naturally the remaining waves, from the ninth to the thirteenth, are also unfinished, so that out of all the waves which use our scheme as the theatre of their evolution only one finds time to complete all its stages — a fact which, if we can realise all that it involves, gives us a deeply impressive illustration of the vastness of the resources of nature, a glimpse into the illimitable eternities through which, never hastening yet never resting, her unfoldment proceeds with such splendid precision.

Now that we have clearly in our minds the steady progress of these life-waves, we must immediately proceed to modify our conception by the introduction into it of another important factor. In each case of transference from one kingdom to another, there is always a certain part of the life-waves which does not succeed in passing, and is therefore left behind. We may perhaps understand that most easily if we begin by thinking of the future of our own humanity.

We know that the goal set before us is the attainment of that level of initiation which has been called adeptship — the position of the asekha, “the one who has no more to learn” with regard to our planetary chain. But we also know that it will not be the whole of humanity that will succeed in this lofty aim, but only a certain part of it. We are told that in the middle of the next round a separation will occur between those souls who are strong enough to undertake the higher stages of evolution and those who are not.

This separation has been prefigured by the many legends of a “last judgment” at which the future destiny of the souls for this aeon would be decided. The diseased imagination of the mediaeval monk, always seeking an opportunity to introduce grotesquely exaggerated horrors into his creed in order to terrify an incredibly ignorant peasantry into more liberal donations for the support of Mother-Church, distorted into “eternal damnation” the perfectly simple idea of aeonian suspension.

Those who are left behind at this period have sometimes been described as “the failures of the fifth round,” though perhaps even this is somewhat too harsh a term. There may well be some among them who by greater exertion might have qualified themselves to pass onward, and these are rightly spoken of as failures; but the majority will be left behind simply because they are too young to go on, and so not strong enough for the more difficult work.

The facts of the case may be stated quite simply. The lower classes of monads passed only gradually from the animal kingdom into the human during the earlier half of our present chain-period. Some of them are still, consequently, at an early stage of the human evolution, and are therefore exceedingly unlikely to overtake the classes which are so far in advance of them. We have been given to understand that it is just possible for even the lowest savage to reach before the middle of the fifth round the level necessary for continued evolution, but in order to do this he must never once fail to take advantage of each opportunity as it is offered to him, and the number who will do this will be infinitesimally small. It is calculated that the proportion who will be prepared to go on will amount to about three-fifths of the total population of the earth (not merely of the physical population, it will be understood, but of the total number of egos who constitute the human life-wave evolving through this chain) while the remaining two-fifths will be left behind.

The surroundings in the world at that time will be specially adapted for the rapid progress of the more advanced egos, and will therefore be wholly unsuitable for entities at a much lower stage of evolution, as the gross vibrations of violent passion and of strong coarse feelings which are necessary for the development of the inert and half-formed astral body of the savage will be no longer available. We can easily imagine many ways in which this unsuitability would show itself. In a world of high intellectual and spiritual development, where war and the slaughter of animals have long been things of the past, the existence of savage races, full of undisciplined passions and desire for conflict, would obviously introduce many serious difficulties and complications; and though no doubt means might be devised for their repression, that very repression would debar them from the activities requisite for their early stage of evolution.

Obviously, therefore, the kindest and best thing to do with those who are thus backward is simply to drop them out from this evolution, and let them prepare to take their place in next year's class — in the next planetary chain. Such entities will not suffer in any way; they will simply have a very prolonged period of rest in such heaven-life as they may be capable of appreciating, and no doubt, even though their consciousness during this period will probably be but partially awakened, a certain amount of inner progress will be going on.

From that condition they will descend into the earlier stages of the evolution of the next chain, and will be among the leaders of primitive humanity there. We should not think of them as in any way put back, but merely as assigned to the position to which they really belong, where their progress is easy and certain. It is to this class that Madame Blavatsky referred when she spoke of vast numbers of "lost souls"; though this term "lost souls," when employed in this connection, sometimes misleads students who have not yet grasped the full splendour and certainty of the evolutionary scheme.

We may think then of each life-wave in its passage through the chain as breaking up into wavelets. Consider what will be the progress made by our own life-wave. Broadly speaking, this represents the animal kingdom of the moon, though the failures of the lunar humanity have naturally joined it, and may be expected to be among its leaders.

The whole of the wave which ensouled that lunar animal kingdom should theoretically have entered humanity during the earlier part of this chain, and should by the end of the seventh round attain the goal appointed for it.

We who are now human beings in this chain ought all of us to attain adeptship, and pass away from this scheme of evolution altogether by one of the seven paths which open before the adept, while what is now our animal kingdom ought by the end of this chain to attain individualisation, and therefore to be ready to furnish the humanity for the next chain, the fifth of the scheme.

We know, however, that two-fifths of our humanity will fall out in the middle of the fifth round, because it is obviously too far behind the rest to enable it even with the greatest efforts to attain the goal during this chain. This two-fifths will enter the next chain along with the members of our present animal kingdom, and will therefore constitute part of that future humanity.

One of the great reasons why the division between the more advanced and the less advanced must be made in the middle of the fifth round is that the later races will be in much closer touch with the adepts and the great devas than we are now. It will therefore be necessary for them to hold themselves always in an impressible condition, in readiness to receive and respond to an outpouring of influences. This in its turn requires that they shall live a peaceful and contemplative life, which would be an impossibility if there were still left in the world savage races who would attack and kill the man in a state of contemplation. The more powerful vibrations of that time would not rouse the higher nature of the savage, but would only stimulate and intensify his lower passions, so that he would gain nothing by being on earth at that period, while he would make impossible the progress of the more developed people.

But the other three-fifths of our present humanity, which may be described as successful in so far as it does not drop out at the day of judgment in the fifth round, will yet not all of it succeed, in the sense of attaining the asekha level. It is thought that probably about one-fifth of the whole number (that is to say, one-third of those who have not dropped out) will fully achieve; but that means that two-thirds of the successes will still at the end of our chain of worlds have further work to do, before they have reached the level intended for them. They also will have to enter the next chain, though they will not need the earlier stages of its evolution: so they will probably appear at about its middle point, much as the higher classes of monads who came over from the moon entered our present evolution at its middle point. The matter will, however, be complicated for them by the fact that, just as on this chain the point set before us for attainment is higher than that of the moon-chain, so will the level of achievement expected on the fifth chain be higher than ours. With that, however, we have no concern for the moment.

The actual distribution at the end of our planetary chain will probably be into several well-defined classes, somewhat as follows; though obviously each of these might be further subdivided:

1. Those who, having intelligently studied evolution and determined to take the shorter and steeper Path to the goal, have already attained adeptship in previous rounds.
2. Those who attain the asekha level in the seventh round. These are the highest class of the men who have moved along with the ordinary stream of evolution — the vanguard of those who have followed the usual path. They may be taken as corresponding, for our chain, to the first class of the moon-men.
3. Those who have fallen short of this perfect attainment, but yet have succeeded in reaching the arhat level in the seventh round. They correspond for our chain to the

second class of the moon-men, and will need very few births in the next incarnation of the chain before they also gain the level of liberation.

4. Those who, while they passed the examination at the middle of the fifth round, have not yet succeeded in raising themselves above the three lower levels of the Path Proper. These may perhaps be taken to correspond for our chain with the animal-men of the moon, who had only just contrived to separate themselves from the animal kingdom, and consequently had much preparatory work to do in the new chain.

5. Those who, while they succeeded in attaining humanity in our earth-chain, yet failed to raise themselves sufficiently to justify their continuance in that chain after the middle of the fifth round. There will, no doubt, be several subdivisions or classes among these.

6. Those who have failed altogether to gain the level of humanity. These will be some of the very lowest of the monads, who had only just reached the animal kingdom on the moon, and have been slowly rising during the earth-chain, but have not succeeded in attaining individualisation.

It is not only in the case of humanity that we find this failure to attain the destined level. The same thing appears to happen in connection with every kingdom all through the course of evolution. While the majority of each wave of monads fulfil the destiny appointed for them, there is in each a minority who fall behind, and a much smaller minority who run far in advance of that destiny. For example, just as a few men are now rising far above their fellows and attaining adeptship, so a few animals are even already breaking away from their group-souls and becoming individualised, though the great body of the animal life-wave will arrive at individualisation only towards the end of the seventh round, and will form the humanity of the fifth chain. The men who are approaching adeptship are always those who are in close touch with the existing adepts as Their pupils; the animals who are approaching humanity are usually those who are in close touch with the existing humanity as pets specially developed in affection and intelligence.

In the earlier days of the Theosophical teaching we supposed that even if an animal by specially rapid development should become individualised here and now, he would still have to wait until the next chain before he could secure a human body. Later investigations, however, have shown us that exceptions to this rule are at this stage still possible, and that animals who are fortunate enough to attain individualisation during this present world-period may be accommodated with primitive human bodies at the commencement of the occupation by our life-wave of the next planet in our present chain. It is obvious that the number of animals prepared to take advantage of this (which, so far as we can see, appears likely to be their final opportunity of entering the human life of this chain) must be relatively exceedingly small; but still it is a possibility which we must take into account if we wish correctly to comprehend the course of evolution.

I have once seen a case in which there were special features that made an even earlier incarnation possible — a case of an animal which had shown in earth-life not only great intelligence, but also unusually strong devotion to his human friend, a devotion which of course continued in the astral life and was even stronger there than ever. The animal's power of definite thought was such that during life he frequently travelled great distances in his astral body when asleep, to visit his master on his journeys. In this case definite progress was made in the astral life after death, and the

response to our efforts was much greater than we had hoped, for the astral life gave us a better opportunity than was possible on the physical plane to grasp the exact limits of the animal's lines of thought. They were few, narrow and curiously limited; but yet they extended much further *along their lines* than one would suppose.

Certain new lines of thought opened up in the astral life, and the developments were exceedingly interesting. An almost immediate incarnation in this world was clearly possible, but there were some curious combinations which made the matter difficult to arrange. The animal would have been a primitive savage in many ways, and yet could only have been incarnated in immediate personal relation with his master, for whom his attachment was so strong that it would have been impossible to keep him away from him. This presented serious difficulties, but still they might somehow have been overcome, but for the fact that it was impossible to guarantee the sex of the savage!

Presumably among the animals that succeed there will also be various classes, corresponding in a general way in this evolution to the various classes of monads in the lunar evolution; and some of the animal essence at present ensouling the lowest forms of life will certainly fail to attain the human level in this chain, and will therefore correspond in the animal kingdom to our "failures of the fifth round." As to whether these forms also will disappear from the earth at that same period in the fifth round we have no direct information, but analogy would seem to require that this should be so. The same differentiation into classes, according to the measure of success achieved, has been observed in connection with all the lower kingdoms, so that in reality each life-wave ought to be symbolised as breaking up constantly into ripples or wavelets, some of which in time join the preceding or succeeding waves, though the majority move steadily along their appointed course.

The seven life-waves which ensoul our seven kingdoms have always for their principal field of action the planet to which the attention of the LOGOS is for the moment directed; but a certain small proportion of their action is always manifesting in the other worlds of the chain also. Thus, although the attention of the Planetary LOGOS is now fixed upon our earth, there are yet representatives of all the kingdoms simultaneously existing upon every one of the six other globes of our chain. These are often described as the seed from which the forms will develop when the life-wave reaches the planet — that is to say, when the special attention of the Planetary LOGOS is turned to it once more.

These forms have remained in existence upon their respective planets ever since they were first filled by the lunar animal-men in the first round, and in this way the trouble of what might be called fresh creation for each globe in each round is avoided. The life ensouling these forms during the comparative obscurity of those planets is still part of the great wave, and is still moving onward in connection with it. It serves other functions besides that of providing the seed for the incoming wave, since it is also employed as a means of more rapid evolution for certain classes of monads.

It is by the special treatment thus given that it is possible for the second-class monad to overtake the first class and become one of its members. Under certain conditions of strong desire for advancement, if he is seen to be striving with exceptional vigour to improve himself, he may be separated from the great masses of his fellows on this planet, and passed by the authorities into what is called the Inner Round, and may take his next incarnation among the limited population of Mercury. In that case he

will spend there about the same time that he would otherwise have devoted to incarnations in one root-race, and will then pass on to the astral planet F. After a similar stay there he will be transferred to globes G, A and B successively, and then to Mars and to the Earth.

As in each of these spheres he will have made a stay about equivalent to the normal period of a root-race, the life-wave will have left the Earth before his return, but he will overtake it upon the planet Mercury, and will then join the ranks of the first-class monads and share the remainder of their evolution and their varied opportunities of more rapid development. Entities engaged upon this special line of evolution form the majority of the small population of Mercury and Mars at the present time. In the latter planet there is also a certain residuum of primitive mankind which was unprepared to pass on when the life-wave left for the Earth — a race which represents a stage of humanity lower than any at present existing within our cognisance. It will probably be extinct long before we reach Mars in the fifth round, since there appear to be no other egos needing manifestation at that level for the moment.

In the same way we find that all the kingdoms are represented upon the astral and mental globes. It is not very easy for us to grasp with our physical consciousness what can be the condition of the life of the lower kingdoms on these higher planes; the idea of the evolution of a mineral on the mental plane, for example, suggests nothing readily comprehensible to the ordinary mind. We may perhaps help ourselves towards the understanding of it by remembering that every mineral must have its astral and mental counterparts, and that the special types of matter which form these are also on their respective planes manifestations of the mineral monad, and we may suppose that through such manifestations that monad is evolving during its existence on these loftier levels.

The group-soul must always contain within itself latent possibilities connected with the higher planes through which it has descended; and it may be that in those stages of evolution these potentialities are being developed by some method quite outside those with which we are familiar. Without the unfolding of psychic faculties we cannot expect to understand in detail the hidden growth in these exalted spheres of finer matter; the important point is that we should realise that although the great life-wave resides only upon one globe of our group at a given time, the remaining planets are by no means dormant, and useful progress is continually being made in every part of our chain.

I have tried to make the above description of the successive life-waves as clear as possible; but lest it should still present some difficulties to the mind of a reader unaccustomed to the study of this system of cosmogony, I append a little diagram which I think may be of assistance. The vertical columns indicate the successive incarnations of the chain; the horizontal divisions represent the various kingdoms of nature; the diagonal arrows are the successive waves of evolution which have come forth from the LOGOS. The Roman numbers attached to each of these arrows apply to those arrows only, and not to the squares in which they happen to come. It will be seen that there are thirteen of these arrows. Their length appears to vary, but that is only because we are regarding them solely from the point of view of our own scheme of evolution.

THE SUCCESSIVE LIFE-WAVES

DIAGRAM III.

Within the limits of that scheme arrow No. I appears to cross only one kingdom — the human. That does not at all mean that the wave represented by that arrow has not passed through the six previous stages; it means only that those six previous stages have been experienced in some other scheme. Just the same thing is true at the opposite corner of the diagram. Arrow No. XIII crosses only one kingdom — the first elemental; it will inevitably in due course have to pass through all the other kingdoms, but it cannot do so in this scheme of evolution, because that is already at an end. So far as our diagram is concerned it appears in that one kingdom only.

If we take the column representing any one chain — let us say the fourth, which denotes our present stage of evolution — we shall find in running the eye down it that seven arrows pass through it, indicating the seven kingdoms now existing around us. We can follow any one of those arrows either backwards or forwards, and so can trace any of our kingdoms either in the past or in the future. We should note that waves No. I to No. VI come to us from some other scheme of evolution, while waves No. VII to No. XIII are fresh emanations from the LOGOS.

THE MONADS FROM THE MOON

Those who have studied the Theosophical system are aware that we divide humanity into various classes according to the age of the ego, and the degree of his development. *Transaction* No. 26 of the London Lodge gives this arrangement very clearly, and it is also to be found in Chapter XII of *The Ancient Wisdom*; but our students will see that the author of the last-named work has altered the numbering of the classes so as to bring it more nearly into agreement with that adopted in *The Secret Doctrine*.

Mrs. Besant separates from the rest those entities to which the London Lodge *Transaction* had given the titles of the first and second classes, and calls them solar monads, so that she begins her list of the lunar monads with those that the *Transaction* had called the third class, and to it she gives the name of the first class; consequently in *The Ancient Wisdom* the fourth class of the *Transaction* is called the second and the fifth becomes the third. Madame Blavatsky's fourth class covers Mr. Sinnett's sixth and seventh, while the remainder of her classes includes entities which he did not take into account at all. His classification dealt only with members of the lunar animal kingdom, which would become human on our earth-chain; hers took in everything which passed over from the lunar chain to this. Her fifth class represents the vegetable kingdom of the moon, and her sixth class its mineral kingdom, while her seventh includes all three of its elemental kingdoms.

Since the writing of *The Ancient Wisdom* and *The Pedigree of Man*, Mrs. Besant has thought it advisable to adopt clearly descriptive English names in place of those which have previously been used. To those who fully succeeded upon the moon-chain, and attained the arhat level prescribed for them, she gives the title of Lords of the Moon. Those whom she had previously called solar monads (whom Mr. Sinnett had described as first and second class pitris) are now to be called moon-men of the first and second orders respectively. The first order of moon-men has many subdivisions, as we shall see directly. What she previously called the first-class monads (Mr. Sinnett's third class) are now described as lunar animal-men. Her second, third and fourth classes (corresponding, as above stated, to Mr. Sinnett's fourth, fifth, sixth and seventh) are now described as the first, second and third divisions of the lunar animals. This completes the list of the entities constituting our present humanity, as Madame Blavatsky's lower classes (of which Mr. Sinnett took no account) will not attain the human level in the present chain.

These classes are arranged in the order of their advancement, and they differ not only in appearance but also in the methods by which that advancement is attained. Among other points there is great difference in the length of the intervals between successive incarnations, and in the way in which these intervals are spent; but this part of the subject will be treated in the section on reincarnation.

To understand how these classes are distinguished we must remember that for each chain of worlds a definite level of attainment is laid down, and to reach that is to gain full success. In our present chain of worlds the level assigned is that of the aseka adept, but in the moon-chain it was the fourth step of the Path, that of the arhat. Those who fully attained that on the lunar chain had achieved the purpose of the LOGOS, and so were free to take one or other of the seven paths which always open before the perfected humanity of each chain.

Below them were people standing at many different stages, whom we must to some extent attempt to classify. Broadly speaking, the animal kingdom of one chain makes the humanity of the next. Our present humanity is composed of the successful portion of the animal kingdom of the moon-chain, *plus* those members of the lunar humanity who failed to reach the required level.

We have already attempted to show into what classes men must inevitably distribute themselves at the end of evolution upon our own earth-chain. A similar arrangement existed at the end of the lunar chain.

Those who had attained the arhat level were the full successes, and they passed off along one or other of their seven paths. We do not certainly know that these are the same as the seven which open before our own adepts, but at least one of them shows decided resemblance; for just as some of our adepts will remain in close touch with the next chain and incarnate on it in order to help its inhabitants in their evolution, so one of the seven classes of the Lords of the Moon stayed to help us in our chain. The members of this class are those called in *The Secret Doctrine* the Barhishads.

Moon-men (first order). Next below this level comes a large and diversified group to which we are at present giving the title of moon-men (first order), though for convenience in following out the several destinies of its subdivisions it will probably be found necessary presently to assign separate names to them. It includes some who, though they had not succeeded in reaching the arhat level, were on some of the lower steps of the Path; others who had not yet gained that Path, though they were approaching it; the failures who had dropped out of the lunar humanity (corresponding to the two-fifths of our humanity who will drop out in our fifth round) ; and the most advanced representatives of the lunar animal kingdom, who had succeeded in fully developing the causal body. We may later give distinctive names to these subdivisions, but for the present we will merely number them.

1. Those who, although they had not attained arhatship, were already upon one or other of the various steps of the Path. These also, like the Lords of the Moon, have long ere this attained adeptship and passed away altogether from the field of our consideration.
2. Those of the lunar-chain animal kingdom who attained individualisation in the fourth round of the moon-chain. All these also have by this time attained adeptship. The Masters best known to us in connection with Theosophical work belong to this class, and in it we may also include the majority of those who became arhats under the influence of the preaching of the Lord Buddha.
3. Those who attained individualisation in the fifth round of the moon-chain. These are now the distinguished people of the world — not by any means only those whom the world *calls* distinguished, but those who, along one line or another, are considerably in advance of their fellows. In our Theosophical ranks this means those who are either already on the Path or approaching it; in the outer world it means men who are either great saints or of specially high intellectual or artistic development.
4. Those who attained individualisation in the sixth round of the moon-chain. We have here a fairly large class of people, distinctly gentlemen, persons of refined feeling, with a high sense of honour, and rather above the average in their goodness, intellect, or religious feelings. Typical instances of this class are our country gentlemen and professional men, our clergy or our officers in the army and navy. They have strength, but they are by no means free from the possibility of using their

power wrongly. They may not do at all what people around them think they ought to do, and therefore they may often not be considered respectable; but at least they will do nothing low or mean.

5. Those who attained individualisation in the seventh round of the moon-chain. The members of this class do not differ greatly from those of the last, except that they are somewhat nearer the average in goodness or intellectual development or religious feeling. They turn their intelligence to rather more material ends, as city merchants perhaps. They represent the great division which we commonly call the upper middle class — gentlemen still, yet with a life slightly less elevated than that of the professional man.

All these classes which have been mentioned are in reality subdivisions of one class — the first order of the moon-men — and all the way through they melt into one another by almost indistinguishable gradations, so that the lowest ego of any one of them differs but little from the highest ego of the next class below. Not only are the lines between them thus not clearly marked, but there is even a good deal of interpenetration. Egos belonging by right to the mercantile class get astray among the professions, while those of the higher type find themselves forced into business. As they say in India: “In these days castes are mixed.”

I have divided them according to the round of the lunar chain in which they became human. When that happens in any of the earlier rounds it usually means that the newly-formed ego proceeded to take human incarnations in the next following round. For example, those who were individualised in the fourth round of the moon-chain came into human incarnation in the middle of the fifth, and continued to incarnate through the remainder of the fifth, the whole of the sixth, and half of the seventh. In the same way those individualised in the fifth round took up their series of human incarnations in the middle of the sixth; and those individualised in the sixth took birth in the seventh. Those individualised in the seventh round had their first experience of human life on the earth-chain, and of course had to be correspondingly primitive on their arrival here.

Moon-men (second order). Below this huge class comes the second order of the moon-men, whose members, having been individualised at a somewhat earlier stage in their animal life, had not yet fully developed a causal body, but had already what might be described as the skeleton of such a vehicle — a number of interlacing streams of force which indicated the outline of the ovoid that was yet to come. These egos had consequently a somewhat curious appearance, almost as though they were enclosed in a kind of basket-work of the higher mental matter.

At the present day these are represented by the great mass of the *bourgeoisie*; what is usually called the lower middle class, a typical specimen of whom would be the small shop-keeper or shop-assistant. This class may be described as on the whole well-intentioned, but usually narrow, conventional and dull. They often make a fetish of what they call respectability. A man who is deadly respectable usually does nothing whatever that counts, either for good or for ill. He may go on at a dead level of monotony for many lives, guiding himself always by the canon of what he supposes other people will think of him.

We may sometimes see a *bourgeois* soul even in the higher classes, and when such souls attain power in any country, it indicates that that country is engaged in expiating its evil karma. The reign of such a king as George III in England was the karma of the murder of king Charles I and of the other horrors of puritanism; and the

result was the division between England and America, which is only now being healed. Since people of this level cannot learn the lesson of any particular sub-race as rapidly as the higher classes, they usually take many incarnations in each before passing on to the next.

Lunar Animal-men. The next group we call the lunar animal-men — those egos who had individualised from the earliest stage of the animal kingdom at which individualisation was possible. They consequently commenced their human life without anything which could properly be called a causal body, but with the monad floating above a personality to which it was linked only by certain threads of nirvanic matter. It was they who in the first round filled the forms made by the Lords of the Moon, and thus did pioneer work for all the kingdoms.

In considering them we come at last to what are called the working-classes, who make the enormous majority of humanity in every country. Why they alone should receive the honourable title of workers is not clear, for they would assuredly rebel with promptitude and vigour if they were called upon to work as many hours a day as does any successful man of the higher classes; but it is usually taken to signify those who work with their hands rather than with their heads. The particular type with which we are dealing at the moment — those who were animal-men on the moon — may be said to work with both, for they are the skilled workmen of the world — belonging to the proletariat, but representing the best class of it; men of determination and good character, self-respecting and reliable.

Below that again we have three classes, whose members had not yet succeeded in breaking away from their group-souls, and were consequently not then individualities, though they had every prospect of becoming so during our present earth-chain. These are still labelled as animals.

First-class Moon-animal. These attained humanity during the second round of the earth-chain, and are at the present day represented by the vast mass of unskilled labour, on the whole well-meaning but usually careless and improvident. Along with them we must group the higher types of savages — men like the Zulus and some of the better kinds of American Indians and negroes.

Second-class Moon-animals. This is a lower type which gained individuality only in the third round the earth-chain. We see it exemplified now in savages of comparatively mild type, in some of the hill-tribes of India, and among ourselves in the wastrels, the unemployable, the drunkards, and many of the slum-dwellers of our great towns.

Third-class Moon-animals. These are the lowest specimens of humanity, but little removed even now from the animal kingdom, which they left only during the earlier world-periods of this present round, or even in the earlier races on this earth. It is represented now by the lowest and most brutal of savages, and among ourselves by habitual criminals, by bomb-throwers and wife- and child-beaters. To this group also may be added a few of those who at various stages were individualised through hatred or fear.

Below all these come the three classes which furnish our present lower kingdoms; the lunar vegetable kingdom, which is now our animal; the lunar mineral, which is now our vegetable; and the lunar elemental kingdoms, the most advanced of which has become our mineral kingdom.

It is to those whom we have called the animal-men that the pioneer work on the earth-chain was assigned. Although on the moon they broke away from the animal kingdom, and must therefore be considered as potentially human, on the first globe of the first round of our earth-chain they entered into evolution not at the human level but at that of the first elemental kingdom. They passed rapidly from that into the second and third, and then successively through the mineral, vegetable and animal kingdoms until they reached the human.

In each of these kingdoms they established the forms, taking the idea of them from the minds of the Lords of the Moon, who, on behalf of the LOGOS, were directing the evolution of that globe. We might rather say, perhaps, that these primitive entities flowed into the moulds made by the instructors, and materialised these moulds for the use of those who followed them; for close behind them all the time was pressing the next class of monads — the highest of those who had not yet in the lunar chain broken away from the group-souls. And behind them in turn came all the rest.

When our animal-men had completed this work on the first globe in that first round, they moved on to the second globe and repeated exactly the same process there in denser matter; when that was finished they passed to the third, and then to the fourth, and so on, running again through the tedious evolution from the first elemental kingdom up to the human in each of the globes, in order that the forms might be duly prepared for those that followed. At the end of the first round their task was over, and they entered the first globe of the second round at the level of primitive humanity, though it was so primitive that the advantage is scarcely a perceptible one.

In the course of that second round the first class of the lunar animals had reached the human level, and the same thing happened in the third round to the second class of lunar animals; but here a fresh complication is introduced by the entry in the middle of the third round of the second order of moon-men, who had succeeded on the moon-chain in setting up a kind of framework for the causal body. Coming in at this stage, they soon pushed themselves to the front and took the lead.

Students will remember that the fourth world-period of the fourth round differs from all the rest in that it is to some extent a recapitulation of all the earlier stages. A large number of entities appear to have been on the brink of individualisation, but could not quite attain it in the ordinary course of evolution before that middle point of the fourth round when the door was to be shut. A special opportunity was therefore given to them, and the conditions of the first, second and third rounds were reproduced in miniature in the first, second and third root-races of this present world-period.

If we examine humanity as it appeared on Mars in this fourth round, we find that it did not differ radically in appearance from that of the present day; and this is true of all its root-races from the first to the seventh. But if we look at the humanity of the first root-race on our own globe in this present round, we shall see that its members are utterly unlike any kind of men that we know. They are mere drifting masses of cloud — just the men of the first round over again. In the same way men of our second root-race have the curious formless pudding-bag appearance which had not until then been seen on any world of our chain since the second round. In the third root-race came over again all the business of the descent into denser matter and the separation of the sexes which had distinguished middle of the third round.

All this was done only for the sake of backward entities, and it must not be forgotten that *only they* took part in it — which accounts for the sin of the mindless, the

extreme degradation of the forms, and other things. None of the humanity of previous rounds (and previous parts of this round) appeared during that period at all; all its members came in only when the changes in the middle of the third root-race had brought matters back to something resembling the conditions to which they were accustomed — though even then the physical vehicles were of so low a type that some of the arrivals declined to occupy them. The whole of the plan of the earlier races of this globe was in fact the offering of a final opportunity to the laggards, and it was to a large extent successful. Many entities who had not been fully able to take advantage of these conditions in those earlier rounds were able to do something with them now, especially with the aid of the tremendous impetus given to evolution by the descent of the Lords of the Flame from Venus.

In this fourth round the third class of lunar animals attained their individuality, and in the middle of the third root-race on this globe the less developed of the first order of moon-men began to return to incarnation also. From that time until the middle of the Atlantean period, and perhaps even somewhat beyond it, the monads of that first order came rapidly into incarnation, and of course at once took up a position in the forefront of evolving humanity.

It is hoped that this attempt at explanation will facilitate the work of those who are studying this most interesting subject. There is, it is true, much complication in detail, but the broad principles are clear, and a student who keeps those in mind will soon grasp the scheme as a whole.

THE EARTH-CHAIN

We have just passed the middle point of the evolution of our chain of worlds. There are to be seven rounds — seven journeys round the seven globes. Three of those journeys have been completed, and we are now on the fourth (the middle) globe of the fourth round. The middle point of our world-period ought to be the culmination of the fourth or Atlantean root-race, and as we are now at a comparatively early period in the history of the fifth root-race it is evident that we have only just passed that middle period. We do not know, however, whether the middle point in evolution corresponds to the middle point in time, for we do not know whether all the rounds or all the race-periods are of the same length. As I have mentioned before, the probabilities seem to be that they differ, perhaps even differ considerably; and there is reason to hope those lying in front of us may be somewhat shorter than those which are behind us.

As I have already said, it is useless even to speculate on the actual length in years of these enormous periods. Some years ago we took considerable pains to verify one of the remote dates given in *The secret Doctrine*, that of sixteen and a half million years since the separation of the sexes in the middle of the third root-race. We found that separation to be a long process which extended over more than million years and was taking place at different times in different parts of the world. Selecting a time when it seemed to have been fairly achieved, we calculated from that time to the present by observing certain astronomical changes, and our result was within a hundred thousand years of Madame Blavatsky's. As this was an observation made years after her death, and by methods absolutely different from any that I have known her to use, I think we may accept it as a very good corroboration.

From what we saw in the course of that enquiry we came to the conclusion that all those earlier radical changes in the constitution of man extended over really enormous periods of time, but that the later changes connected with the development of civilizations passed much more rapidly, so that these latter could be counted by thousands of years, while the former required actually millions. Without then pledging ourselves to anything in the way of dates as regards the earlier part of this stupendous evolution, let us glance rapidly over the work done so far in this earth-chain.

Before the solar system was brought into manifestation, the LOGOS formed the entire scheme of it in His mind, and by doing so brought it all simultaneously into existence upon His mental plane. At what level that mental plane may be we cannot tell; it may be what we call the mental cosmic plane, or it may be higher still. To it Madame Blavatsky, so far as it concerns our solar system, has given the name of “the archetypal world,” and the Greeks seem to have called it “the intelligible world.” All that we hear or read as to an instantaneous creation of the whole system out of nothing refers to this formation of cosmic thought-forms.

Indeed, from one point of view it seems as though we were in truth an expression of the Planetary LOGOS Himself, and as though the evolution were taking place within His body, as though the globes were centres in that body, or rather, not the globes that we see, but the spirit of them — their higher principles. From this point of view globe A would be the expression of His brain or mental body, and all these forms would exist in His mind. For our mental plane is not only the third subdivision of the

lowest cosmic plane; it is also at the same time the lowest subdivision of an aspect or manifestation of the LOGOS. We may take it that He manifests Himself along seven lines or through seven aspects, and that each of these that we call planes is the lowest form of one of these aspects, so that the atomic part of our mental plane is really the lowest subplane of the mental body of the Planetary LOGOS.

Before the Manu of a chain or of a round commences the task appointed for Him, He examines the part of that mighty thought-form which refers to His work, and brings it down to some level within easy reach for constant reference. The same thing is done at a somewhat lower level by the Manu of each world and of each root-race. Each Manu at His own level has before Him the model towards which He has to build, and He endeavours to make His race or His world, as the case may be, as nearly as possible an exact copy of what the LOGOS intended it to be. As He has to build with existing materials He can usually approach the required perfection only by degrees; and so the earlier efforts at the formation of a race, for example, are often only partially successful.

In the first round of the earth-chain the Manu in charge brought down all the archetypes for the whole of the chain. Although many of these will not be fully perfected down here until the seventh round, the germs of all of them were already there even in the first round. For every kingdom in nature He selected a certain set of forms, which He wished to have vivified during the first round, with the view of developing from them at later stages everything which the LOGOS wished the earth-chain to produce. The scheme of these forms, materialized down to a level where they could use them, was handed over to certain of the Lords of the Moon, who were entrusted with the work of setting the activities of the first chain in motion. They made these forms in each of the seven worlds of that first round, and as they made them the animal-men from the moon entered them, solidified and used them, and from them generated others which could be inhabited by the moon-animals which occupied the stages below them.

On each of the planets these lunar animal-men began at the lowest level, with the forms necessary for the first elemental kingdoms. Then they passed through in rapid succession the second and third elemental kingdoms, and then the mineral, vegetable and animal until they reached the human. Having done this on each planet they attained humanity for the last time on the seventh planet of the lunar chain. Since then they have rested from that particular kind of labour, for on the second round and afterwards they were human from the beginning.

The conditions during that first round were different from any that have prevailed since. First, the life was in all cases a stage higher, for when the planets were first brought into existence they were at the same level as those of the moon-chain. Globes A and G, for example, which are now on the lower levels of the mental plane, were then the theatre for life belonging to the higher levels. The globes themselves were built even then of the lower mental matter, but it was not in a condition to be inhabited by beings at its own level — not sufficiently condensed nor sufficiently at rest. Globes B and F, though composed of astral matter, were then utilised only for forms of lower mental matter.

Mars and Mercury were still in a condition largely gaseous and etheric, and only astral bodies were employed by the entities who lived their lives upon these two planets. Our own planet D already contained a good deal of solid physical matter, but in a condition of heat so intense that there were still lakes and seas and even showers

of molten metal, so that it would have been quite impossible for people with bodies in the slightest degree like ours to live there at all. The inhabitants, however, used only vehicles of etheric matter, and therefore were not at all incommoded by these conditions. In the interval between the first and the second round the matter of the various globes had time to settle down into a more orderly condition, so that each of them could be inhabited by entities using vehicles at the level its of its own matter.

It is difficult for us to imagine what the evolution of that first chain can have been; it is even difficult for those of us who have repeatedly watched it to give any account of it in words upon the physical plane. It is by no means easy to realize even the present condition of globe A. We can understand that the men of that globe are living in their mental bodies, and we can imagine to some extent that the group-souls of animals and vegetables may somehow or other exist at such a level; but what can a mineral be upon the mental plane? It would correspond to our *thought* of a mineral. Yet perhaps we should be wrong to assume that such a thought-form as we could make of gold would be the only representative of gold on that level; the thought-form which exists there is that of the *Manu*, and is moulded by a power altogether beyond comparison with that of our mentality.

Every article which exists on the physical plane must also exist in a certain sense upon all the planes above it, since it is a manifestation of the divine life, and must therefore have its connecting link through all the planes. It must be on these higher correspondences of the minerals that certain effects are produced which constitute for them the evolution of those less material globes; but the idea is not one which can readily be explained or made to gear in with the conceptions of the physical brain. It is the bringing down of the mind-energies flowing from the LOGOS — from His cosmic mental plane to that prakritic mental which is our mental plane. It is His idea of a mineral, materialized as low down as our thought of the etheric body of a mineral.

When the whole thing was brought down upon globe D in the first round the etheric body of a mineral was formed, but even then it was not a whole etheric body, because at this early stage only some of the sub-planes were fully vivified. The very atoms also were more sluggish, since only one set of spirillae was in activity. In each round an additional force was poured into the atoms, and that brought an additional set of spirillae into play, so that now as we are in the fourth round we have four sets of spirillae in activity; but even now our atom is as nothing in comparison with that which will exist in the seventh round, when all the sets of spirillae will be fully working, and the entire atom will be what the LOGOS intends it to be.

The man of globe A in the first round can hardly be called a man at all; he is a thought. He is what will some day be a mind-body — the germ of a mind-body, bearing perhaps the same relation to its later possibilities as the embryonic form of an infant after the first month bears to the fully developed human body. He has marvellously little consciousness at this early stage.

As we have said, on the astral globe B in the first round everything was brought down to the lower mental level and fixed definitely there, with a little commencement of astralisation. On Mars men had definite astral bodies, but they were as yet imperfect, for only matter of certain subplanes was then to be had. A little touch of etheric matter was also introduced, though only certain kinds of ether were available. On the Earth in this round men had etheric bodies, but they were mere drifting shapeless clouds, though towards the end of the world-period they began to aggregate around

themselves gaseous matter as well as etheric. They appear to have absorbed from the intensely heated surrounding atmosphere whatever they required in the way of nutriment.

They seem to have had a succession of manifestations which I suppose we must take as corresponding to races — apparently, however, only root-races, for there were but seven; and one incarnation (if we can call it an incarnation) for each individual lasted through the whole race. It appears, however, that the world-periods were enormously longer then even than they are now, but it is not easy for us, with our ideas of what life means, to understand how these most primitive of men could contrive to evolve at all. The condition of the world has already been described, but we may note that some of the chemical elements were already beginning to combine. By the end of the world-period the temperature was considerably reduced, perhaps to about a thousand degrees Fahrenheit on the average, though it remained much hotter than that in certain districts, and in others it had even got down to the level of boiling water.

On globe E (Mercury) they had apparently only the three higher ethers — not four as they had had upon the earth. But they had obviously progressed, and were much more alive than they had been, though even now their consciousness seemed amoebalike. Nevertheless, it is clear that man was already beginning in a blind way to work both upwards and downwards — downwards to densify his lower vehicles and upwards to make them more conscious. Primitive though everything was, it is clear that each globe was an advance on that which had preceded it. But in all cases it appears that he had not yet the full consciousness even of any subdivision of matter in which he happened to be working. The impression given rather is that each subdivision was again subdivided, and that he was able to use only this fraction of a part.

There seems little to be said with regard to evolution on globes F and G, except that there for the first time we begin to notice the curious phenomenon of failures. On every globe from the first a certain small portion of each kingdom had been intentionally left behind, in order to act as seed for the next occupation of the planet in the following round. If this were not done all the trouble of making the forms afresh would have to be undertaken on each globe in each round; whereas by the present scheme a certain population is always left on each planet, from which the race can be reproduced in the next round when necessary. The great wave of life moves from planet to planet, as the LOGOS wills it. When He fixes His attention upon one globe, the life flames out there and evolution pushes rapidly forward. When he withdraws His eyes from it the life fades away, the wheels of progress slacken and the wave passes on to the globe to which His attention has been turned. But the life does not die out altogether.

A small population, human, animal, vegetable, still remains, but does not increase. It usually maintains its numbers at about the same level through the untold millions of years until that planet is entered again. When the life-wave reaches it once more, when a vast number of egos are ready to incarnate in it, the stagnant race suddenly becomes wondrously prolific, and great changes and vast improvements of all kinds are quickly introduced, and vehicles are soon evolved fit to receive the coming inrush of a far more highly evolved humanity. Meantime the small and comparatively torpid race has been providing for those who are engaged in the inner round to which I have already referred. As I have said, in the earlier globes of the first round this seed was purposely left behind; but towards the end of that round there were egos who did not

achieve quite what was expected of them — who were not fit to go on to globe G at the time when the normal evolution of globe F was over.

Such entities were left behind, and worked on steadily among the remnant, passing perhaps, in, process of time, to join the remnant of globe G; possibly also, by means of some extraordinary impulse, occasionally being able to hurry on to try to overtake the life-wave, but more often continuing to lag behind, until they are overtaken by the life-wave on its next journey round the globes. In this latter case they usually find themselves in a class of monads lower than that to which they had previously belonged. This process is a kind of reversal of the procedure of the inner round. In the inner round the ego runs on ahead of the life-wave, and by making an extra journey round the globes raises himself one class higher. These laggards fall behind the life-wave and, by losing one round, drop into an inferior class. A certain proportion of these failures appear on every planet and in all the various kingdoms — mineral essence that ought to have reached the vegetable level, vegetable life that should have touched the animal, animal life that should have become individualized.

No matter of the lower planes is ever carried over from planet to planet. When, for example, we leave this planet in order to incarnate upon Mercury, only the egos will be carried over. Those egos will draw round themselves mental and astral matter belonging to their new planet, and they will obtain physical bodies by entering the baby vehicles provided by some of those who are already inhabiting Mercury.

Just at first those vehicles will be of but poor quality, no doubt; but it will not be the first-class monads who require them, for it is a law of this system of evolution that those who reach the highest level on one planet are never born in the early races of the next planet. They do not need such primitive evolution as those early races would give, and so they join the evolution of the planet when a certain proportion of its people have evolved to somewhere near their level, and can provide them with fitting vehicles.

Exactly the same thing happens as egos pass from chain to chain. The most developed of the lunar inhabitants are not found in the first round of the earth-chain, but come in only in the middle of the fourth. The egos who incarnate in the first root-race on any planet are those who have not progressed beyond the middle of the evolution on the previous planet, just as it was the animal-men from the moon who did all the work in this first round of the earth-chain of which we have been speaking.

In connection with this first round it may be well to explain the apparent difference which exists between the Theosophical teaching and the theories of Darwin. In this first round, when form appeared for the first time so far as our planetary chain is concerned, the human shape was evolved from the animal, just as the Darwinian theory suggests, though it is also true that in our present fourth round the process was reversed, and the human form existed on this globe before those of any of the mammals which we now know.

For the inconceivably slow process of natural selection from accidental variation we substitute an intelligent direction both of the selection and of the variations; for we hold that the forms evolved only in order that they may be a fitter expression for the evolving life within. Our attitude towards Darwinism is that we agree in broad outline with its discoveries, but carry them much further, since we propound a spiritual as well as a material evolution.

In the second round the forms made in the first round were already there, so that it was not necessary to repeat the building process. Each subplane of each plane is divided into seven, so that in each plane there are forty-nine subdivisions. In this second round man was working at and through the first and second subdivisions of each of the subplanes, so that while he had matter of all the planes in him it was only the two lower subdivisions of the two lower sub-planes that were active. Man may be said to be building his lower quaternary gradually through the earlier half of his evolution.

In this second round the races were much more definite, and were clearly distinguishable one from another. Men were no longer mere drifting clouds of etheric or gaseous matter, but had succeeded in developing a certain amount of solidity, though they were still unpleasantly jelly-like in consistency and indeterminate in shape. Madame Blavatsky compares them to pudding-bags, because of the curious shapeless projections which they had instead of arms and legs. At the beginning of the round they put out these projections temporarily, just as an amoeba does; but constant repetition of the process at last made the projections permanent, and moulded them into some approximation to the form into which they were destined finally to settle. Many of these people were so light and tenuous that they were able to drift about in the heavy atmosphere of the time. Others rolled along rather than crept, but none of them were able to maintain themselves in an upright position without assistance.

Man was still lamentably incomplete as regards his higher vehicles. He had what he considered a mind, and something else that might stand for a feeble astral body, but his consciousness was still dim and vague and he had little thinking power; he was all instincts and almost no reason.

In this round the animal-men maintained and improved their human position, and by the end of it the first class of the animals had definitely attained humanity. Just as all the archetypes of the mineral kingdom had been fully brought down in the first round, though not yet fully worked out, so were all the vegetable archetypes brought down in this second round, though it was long after that before they were all realized. It is probably chiefly to the vegetation of this period that we owe our coal deposits.

In the course of the third round we come to more comprehensible conditions. Even in the earlier globes man became more human in shape than he had been before, though even then he was still cloudy, gigantic and far from beautiful. On Mars in this third round man had for the first time what may be called a recognizably human body, though at first it was still etheric, and more like some kind of reptilian monkey than like man as we know him now. He was still somewhat jelly-like, and if one pressed in his skin by a poke of the finger the hole remained for a long time before it filled out again. He had rudimentary bones — more gristle perhaps than bone, but he was not stiff enough to stand, and so he lay about groveling and wallowing in the soft warm mud at the sides of the rivers.

Mars had much more water than that it has now, and much of the country was pretty, though the vegetation was peculiar. The atmosphere was what we should now consider unbreathable — full of chlorine and quite suffocating. All the animal archetypes were brought down in this round, though many of them were not worked out until the middle of our present round.

On the earth in the third round great changes took place. Even from the beginning men were more compact and began to try to stand upright, though they were still

shaky and uncertain, and always fell back to all-fours when pursued or frightened. They began to have hair and bristles upon the body, but they were still loose and flabby. Their skins were dark and their faces scarcely human; strangely flattened with eyes small and set curiously far apart, so that they could see sideways as well as in front. They had the lower jaw very heavily developed, and practically no forehead, but just a roll of flesh like a sausage where the forehead should have been, the whole head sloping backwards curiously.

The arms were much longer in proportion than ours, and could not be perfectly straightened at the elbows, a difficulty which existed with the knees also. The hands and feet were enormous and misshapen, and the heels projected backwards almost as much as the toes did forwards, so that the man was able to walk backwards as rapidly and certain as in the other direction. This curious form of progress was facilitated by the possession of the third eye at the back of the head, which still remains to us in a rudimentary form as the pineal gland.

Even yet men had scarcely any reason, but only passions and instincts. They knew nothing about fire, and were unable to count. They ate chiefly certain slimy creatures of reptilian nature, but they also dug up and ate some kind of primitive truffle, and I have seen them tearing off the tops of gigantic tree-ferns in order to eat the seeds.

Towards the middle of the occupation of this planet the separation of the sexes took place, and soon after that the second order of moon-men began to come into incarnation. They were in the first place born of the existing humanity, but they soon established a new type for themselves, becoming smaller, more compact, lighter in colour and generally speaking much more what we should now call human in appearance.

There was constant war between them and the earlier and more gigantic inhabitants, who caught and ate them whenever opportunity offered, but the later arrivals, having much more intellect, were presently able to dominate their gigantic congeners, and to keep them in some sort of order. Indeed, practically the whole of the world presently passed into their control, and the earlier races had either to adapt themselves to the more civilized life or to be driven off into the less desirable parts of the country.

The world was still far from being as quiescent as at the present time. Earthquakes and volcanic outbursts were still painfully common, and life was distinctly precarious. The configuration of the land was entirely different, and mountains seem to have attained stupendous heights, unknown to us now. There were enormous waterfalls, and great whirlpools were also common.

When the race passed on to Mercury we find on the whole a decided improvement. Much more affection appeared, and men showed distinct traces of unselfishness, sharing their food instead of snarling over it as they had frequently done at the earlier stages. The presence of the moon-men had given a great impetus to progress, and though the bulk of humanity were still very animal and undeveloped, traces of co-operation and rudimentary civilization already began to appear. There is not much to be said with regard to the sixth and seventh planets, so we will turn to the consideration of our present fourth round.

On globe A in this fourth round mind became definite on the lower mental level, and so we may say that in this round man began really to think. The result at first was by no means good. In the previous rounds he had not been sufficiently developed to originate thought-forms to any great extent, and so the elemental essence of the globes had been affected only by the thoughts of the devas, which left everything

harmonious and peaceful. Now that man began to interject his selfish and jarring thoughts, this comfortable condition was very largely disturbed. Strife, unrest and disharmony were introduced, and the animal kingdom drew decisively apart from man, and began to feel fear and hatred towards him.

All the archetypes for humanity were brought down at the beginning of this round — among others, archetypes of races which have not yet come into existence. From examining these it is possible to see what the men of the future will be like. They will have finer vehicles in every way, and will be distinctly more beautiful in appearance, expressing in their forms the spiritual forces.

When the life-wave reached Mars in this fourth round, it found in possession of the planet, besides the ordinary seed-humanity, another and most unpleasant race, which is spoken of in *The Secret Doctrine* as the “water-men, terrible and bad.” They were descended from the type which had been left behind in the previous round as not fit to make progress, and they had since then been engaged in developing the evil side of their nature. They were the usual half-reptile, half-ape, but with a horrible tarantula-like appearance about the eyes, and a fiendish delight in cruelty and evil. They seem also to have had a certain amount of low-class mesmeric power, and were a kind of primitive edition of the Malakurumbas as described by Madame Blavatsky in her account of the hill tribes of the Nilgiris.

When the life-wave came around, the incoming humanity soon established itself sufficiently strongly to free itself from the fear of these monstrous savages. It was to resist possible attacks from them that the first fortifications were erected by man, and it was also to be able to defeat their malignity that men began first to build primitive cities and live together in considerable numbers. At first they built them principally of wood and mud, though sometimes of piles of unhewn stone.

At this period some of the Lords of the Moon incarnated among them and taught them many things — among others the use of fire, which, however, they did not yet know how to produce for themselves. The greater Beings lighted their fires for them, and then they kept them perpetually alight. Very early a stringent law was made that a public fire should always be kept burning in a building specially dedicated to it, and the young girls who could not as yet either work or fight were usually left to watch it. From this no doubt arose the first idea of a sacred fire ever to be kept burning as a religious duty, and of the appointment of vestal virgins to guard it.

Sometimes, however, it happened that, from a great flood or tempest or some other catastrophe, a whole district was left for a time without fire, and then the people often had to travel far in order to obtain and carry back to their homes this prime necessity. Some bold spirit conceived the idea of obtaining fire in such an emergency from the crater of a volcano, and many lives were at one time and another lost in such attempts. This was in the fourth root-race.

The men of the fifth root-race were comparatively advanced, for they built their houses of hewn stone, though without mortar. They were a proud and warlike people, but had some curious ideas. They appear to have had no initiative whatever, and they regarded anything new with horror, as exceedingly immoral and repulsive. They had no perseverance, and even yet but little reasoning capacity. Everything was done on impulse, and nothing was under control in any way, so long only as it was nothing new. Yet in many ways they would compare favourably with some races which exist on earth now.

The men of the sixth race were a much more powerful set of people, with a considerable amount of will and determination. They soon dominated the fifth, taking up its civilization and carrying it much further. They succeeded in subduing the whole of the planet and brought it under one rule, although the enormous majority of its inhabitants belonged to the fifth race. These people had much more mind than the others, and possessed some inventive genius, but it was their tendency to do everything by fits and starts, and not take up a piece of work and carry it through. There was some psychic development among them, but it was usually uncontrolled. Want of control, in fact, was a permanent characteristic of this Martian civilization. Everything was erratic, even though the people were capable in certain ways.

The people of the seventh race in turn got the power into their hands, not by force, but rather by superior mental development and cunning. They were not so warlike as the sixth, and they were always smaller in number, but they knew more in many ways than the sixth. They were coming nearer to modern ideas; they had a more definite sense of right and wrong; they were less fierce and more law-abiding; they had a definite policy and lived according to it.

Their supremacy was entirely intellectual, and they possessed to a high extent the art of combination. Their social polity seems to have been something like that of ants or bees, and in some ways they would compare favourably with many races of the present day. It was in this race that we first noticed writing as a fairly common accomplishment. They knew something of art, for they had both statues and pictures, though totally different in every way from ours. They were also the first race who took the trouble to make good roads.

I believe that I have already explained why the earlier races of our present world-period differ from all the rest. We were in fact recapitulating the first, second and third rounds for the benefit of those monads who, though considerably behind the rest, could by a special effort of this sort be helped to overtake them. During the third root-race was repeated all that had happened in the middle of the third round — the materialization of men on to the physical plane and their separation into sexes. After this had been fully achieved, and a reasonable continuity of form had been arrived at, a number of special efforts were made, by the authorities in charge of the evolution, to consolidate humanity and set it definitely on its way to the higher spiritual advancement which lies before it on the upward arc of the chain.

The first step was the descent of seven of the leading Lords of the Moon, in order to provide vehicles for the seven great types or rays of men. We are told in *The Secret Doctrine* how each stood on his own lot, and cast off shadows which were inhabited by the men of the lower race. This somewhat mystical statement means simply that these great men duplicated, by an effort of the will, their own etheric doubles; in fact, they materialised round themselves an additional etheric double, made it permanent and then stepped out of it.

The other entities of lower race who were just being brought down to the physical level eagerly seized upon these vehicles, entered them and tried to use them. Not being yet fully adapted to them, they found it difficult to maintain their position, and were constantly slipping out. As soon as this happened, some other entity would seize the etheric body, and slip into it as though it were an overcoat, only presently to find it slipping from him in turn, and to see it seized by somebody else. Many of these etheric doubles were made, and by degrees the less developed people learnt how to

inhabit them permanently, so that the process of further materialization could be undertaken, and in this way gradually bodies were produced which served to express the seven great types and their sub-types.

The bodies of the children of these entities were by no means equal to those of their fathers, but still certain types were established, and however much the forms deteriorated they were still habitable. As soon as these lines were definite the special classes of monads from the moon, who had been individualized at an earlier stage for the purpose, were brought down to take possession of them. These were the three classes who had been individualized on globes A, B and C of the lunar chain, and I have already described how the first of these classes, the orange-coloured group, refused to do its duty precisely because the forms were still in so unsatisfactory a condition. Because of this refusal the forms destined for them had to be occupied by an altogether lower class; and the consequence was that, instead of maintaining the advancement which had been gained by so much effort, the forms were allowed to drop back again into a condition even worse than before. Their undeveloped possessors even intermingled with some of the animal forms. This is what Madame Blavatsky called the sin of the mindless, and the result of it gave us various types of anthropoid apes.

The fifth, sixth, and seventh subraces of the third root-race were much more what we should now call human than their predecessors. The description previously given of a third-round man would fit aptly enough the man of the fifth Lemurian subrace. These have been often spoken of as the egg-headed people, from the resemblance of their skulls to an egg with the small end up. They had still but little forehead, and the eyes were set near the top of the egg.

The men of the sixth subrace were chiefly remarkable for their colour. They were no longer black or brown-black like the fifth subrace, but blue-black shading towards the end of the race into a distinct but rather livid blue.

The seventh subrace, beginning as grey-blue, passed down through various greyish shades into a kind of grey-white. A fair idea of the type of their faces may be obtainable from the statues which they themselves erected, some few of which still remain upon Easter Island. They had long horse-like faces, the tip of the nose being at first above the centre, and at the end of the race exactly in the centre, of a line drawn from the top of the forehead to the chin. The forehead was still a mere roll of bone, though growing a little higher towards the end of the subrace. They had thick clumsy lips and broad and flat noses, characteristics which have survived in a less aggravated form among the negroes who are perhaps now their nearest representatives.

No race of pure Lemurian blood now exists; though the pigmies of Central Africa appear to represent a long-isolated fragment of the fourth subrace, decreased to their present stature during millions of years in accordance with that curious law which appears to impose diminution of size upon the last relics of a dying race. Most negro tribes have a considerable admixture of Atlantean blood; in the case of the Zulus, for example, we have in general build and bearing a close representative of the Tlavatli subrace of the Atlanteans, although the colour and some of the faces are Lemurian. The men of this seventh subrace were great builders in a rough cyclopean fashion, and they had also a certain rude idea of art.

It was during the period of this third root-race that there occurred one of the greatest events connected with human evolution — the descent of the Lords of the Flame

from Venus. It has already been mentioned that Venus is considerably further advanced in evolution than our earth-chain, and in consequence of that fact many of her adepts are able to move freely about the solar system, and to go and offer assistance wherever it is needed.

The determined effort had been made to bring up the backward members of our humanity, by affording the additional opportunity to those who needed it of running once more through such evolution as the first, second and third rounds can give; and when that was over this further tremendous stimulus of the descent of these Great Ones was brought to bear as a final effort, to individualize as large a number as possible of the more backward entities before what is called "the shutting of the door," the period when for the sake of further evolution no more entities could be admitted from the animal kingdom into the human.

This band of Great Ones then arrived from Venus and at once took charge of evolution. Their Leader is called in Indian books Sanat Kumara, and with Him came three lieutenants and some five and twenty other adepts as assistants. About a hundred ordinary human beings who were in some way affiliated to these Great Ones, or perhaps had been individualized by Them, were also brought over from Venus, and merged into the ordinary humanity of the earth.

It is these Great Ones who are spoken of in *The Secret Doctrine* as projecting the spark into the mindless men and awakening the intellect within them. We must not allow ourselves to be misled by this rather curious expression into supposing that the Lords threw some part of Themselves into the human bodies. They acted rather in the nature of a magnetic stimulus; They shone upon the people as the sun shines upon flowers, and drew them up towards Themselves, and so enabled them to develop the latent spark and to become individualized.

Another point worthy of notice is that none of the Lords from Venus took incarnation in our humanity at all. They did not (and indeed could not) take human bodies; They build for Themselves instead vehicles like the highest ideals of the human form in appearance, yet absolutely unlike it in that they were uninfluenced by time and incapable of change or decay. I have myself seen several of these marvellous vehicles, and although they have been worn upon this earth for sixteen million years they still remain precisely as on the day when they were made. They must be regarded as a kind of permanent materialization; bodies built like statues, and yet to the sight and the touch presenting the appearance of ordinary living men.

I know that in *The Secret Doctrine* Madame Blavatsky mentions some of the sons of mind, who came to this earth to help, as incarnating among the people whom they were trying to benefit; but she applies this title to the Lords of the Moon as well as to the Lords of the Flame, and it was the former only who entered into ordinary human bodies and so for the time became part of another race. The great Lords of the Flame have done Their work long ago, and most of Them have passed away from us to take up Their tasks elsewhere. Only a very few still remain with us, holding some of the highest offices of the Hierarchy which works for the good of humanity.

But for the help kindly given to us by these great Leaders the world would have been a very different place to-day. Without Them not only would millions, who became human under the impetus which They gave, be still in the animal kingdom, but all the rest of humanity would be far behind the position in which it now stands. This fourth round is that which is especially destined to the development of the desire-principle in man; it is only in the next or fifth round that he is intended to devote

himself to the unfolding of the intellect. Owing, however, to the stimulus given by the Lords of the Flame the intellect has already been considerably developed, and we are therefore for a whole round in advance of where we should have been but for Their help. At the same time it should be said that the intellect of which we are now so proud is infinitesimal compared to that which the average man will possess at the culminating point of the next or fifth round.

Among other plans for the helping on of evolution, the Lords of the Flame brought from Their planet certain additions to our kingdoms. They imported wheat as a specially desirable food-stuff for humanity, and they also brought in bees and ants — the former to modify the vegetable kingdom and assist in the fertilization of flowers, as well as to provide a pleasant and nutritious addition to human food. It will be noted that both bees and ants live in a manner quite different from that of the purely terrestrial creatures, in that with them a group-soul animates the entire ant or bee community, so that the community acts with a single will, and its different units are actually members of one body in the sense in which hands and feet are members of the human frame. It might indeed be said of them that they have not only a group-soul but a group-body also.

Our human evolution has attempted to imitate all these importations, but with somewhat indifferent success. In imitating bees we have produced wasps; and in imitating ants we have produced what are commonly called “white ants,” as well as curious little ant-flies which are almost indistinguishable from them. The nearest that we have been able to get to wheat is rye, but the crossing of the wheat with other native terrestrial grasses has given us oats and barley.

After this comes the history of the mighty Atlantean race, to which even to-day belong the majority of earth's inhabitants. Towards the middle part of this race came in the first order of moon-men, ship-load after ship-load of them, each taking their places just where they could themselves evolve best, and where they could be of the greatest use to the rest of evolving humanity, to the forefront of which they naturally immediately gravitated.

Later than the great Atlantean race came the wonderful history of the Aryans — a grand civilization built up by the great Manu Vaivasvata. Although as yet comparatively in its youth, it already dominates the world, but its greatest glory lies still in advance of us. Soon, under another Manu even better known to us, the sixth root-race will be born. But the story of all this will be found in Mrs. Besant's new book *Man: Whence, How and Whither*, which contains details of the results of all the recent investigations into the subject.

MODES OF INDIVIDUALISATION

Those who have been following the recent discoveries and investigations will remember that in an article not long ago I mentioned the existence, within one of the great classes of monads, of two types which, though equal to one another in development, differ greatly in their intervals between lives, one of them habitually taking nearly double the length of heaven-life which is customary with the other. As the amount of spiritual force generated is roughly equal in the two cases, it follows that one type of man must exhaust that force more speedily than the other. Into the same portion of time, as we measure it, he compresses a double amount of bliss; he works as it were at higher pressure, and therefore concentrates his experience and gets through nearly twice the amount in any given period, so that his seven hundred years is fully equivalent to the twelve hundred of a man of the other type.

The fundamental difference between these two varieties results from the way in which, in each case, individualization was attained. We know that the monad manifests itself upon the nirvanic plane as the triple spirit, and that, when an ego is called into existence as an expression of this triple spirit, its manifestation is arranged in a certain well-recognised form which has frequently been explained in our literature. Of the three aspects one, the spirit itself, remains upon its own plane; the second, the intuition (or, as our President has now decided to call it, the itself through the matter of the buddhic or rational pure reason) puts itself down one stage and expresses plane;¹ the third, intelligence, puts itself down two planes, and expresses itself through matter of the upper part of the mental plane.

The personality is also triple in its manifestation, and is an accurate reflection of the arrangement of the ego; but like all other reflections, it reverses itself. The intelligence reflects itself in the lower mind on the lower part of the same mental plane: the pure reason mirrors itself in the astral body, and, in some way much more difficult to comprehend, the spirit in turn reflects itself upon the physical plane.

It is obvious that, when an ego is formed, all three of these manifestations of the spirit must be called forth, but the first connection may be made through any one of the three. It has previously been explained that individualization from the animal kingdom usually takes place through association with the humanity of the period. Such examples of it as we occasionally see taking place round us at the present time will serve as instances for us. Some particular domestic animal, well treated by its human friends, is stimulated by its constant contact with them up to the point where it breaks away from the group-soul to which it has previously belonged. The process has been fully described in *Man Visible and Invisible* and *The Christian Creed*, and I need not repeat that description here. But a point which is not mentioned in those earlier works is the possibility that the first connection may be made in various ways — between the lower mind and the higher; between the astral body and the pure reason; or between the physical body and the spirit itself.

A domestic animal (when well treated) usually develops intense affection for its master, and a strong desire to understand him, to please him, and to anticipate what

¹ Our President has recently decided to endeavour as far as possible to replace the Sanskrit terms in our literature by English words; from this point onwards, therefore, I shall use the words "pure reason" in place of "buddhi," and "rational plane" instead of "buddhic plane".

he is going to do. Sometimes, for a few minutes, the master turns affectionate thought upon the animal, or makes a distinct effort to teach him something; and in these cases there is a direct and intentional action passing from the mental or astral body of the master to the corresponding vehicle of the animal. But this is comparatively rare, and the greater portion of the work is done without any direct volition on either side, simply by the incessant and inevitable action due to the proximity of the two entities concerned. The astral and mental vibrations of the man are far stronger and more complex than those of the animal, and they are consequently exercising a never-ceasing pressure upon the latter.

We can see therefore that the character and type of the master will have a great influence on the destiny of the animal. If the master be an emotional man, full of strong affections, the probability is that the development of any domestic animal of his will be chiefly through its astral body, and that the final breaking of the link with the group-soul will be due to some sudden outburst of intense affection, which will reach the rational aspect of the floating monad belonging to it, and will thus cause the formation of an ego. If, on the other hand, the master be unemotional and if the chief activities in his nature are of the intellectual type, it is the nascent mental body of the animal which will be stimulated, and the probabilities are that individualization will be reached because that mental development rises to a level too great to permit any longer of enfoldment within the group-soul. In yet another case, if the master be a man of great spirituality or of intensely strong will, while the animal will develop great affection and admiration for him, it will yet be the *will* within the animal which is principally stimulated. This will show itself in the physical body by intense activity, and indomitable resolution to achieve whatever the creature may attempt, especially in the way of service to his master.

It is difficult to rid oneself of the idea that the distance between the spirit and the physical body must be far greater than that between the lower mind and the intelligence, or between the astral and rational bodies. But this is not really so, for it is not a question of distance in space at all, but of the conveying of a sympathetic vibration from the reflection to the original. When we think of it in this way; it is obvious that each reflection must be in direct connection with its original, whatever the distance between them may be — in closer connection than it is with any object which is out of the direct line, no matter how much nearer in space the latter object may be. The desire of the animal to rise constitutes a steady upward pressure along all these lines, and the point at which that pressure finally breaks through the restrictions, and forms the required link between the monad and its personality, determines certain characteristics of the new ego which thus comes into existence. The actual formation of the link is usually instantaneous if the first connection is made through affection or will, but it is much more gradual when it is a case of mental development; and this also makes a considerable difference in the current of the future evolution of the entity.

In the course of the recent investigations we discovered that, out of a great mass of people who were individualized practically simultaneously at a certain point in the moon-chain, those who had attained individualization gradually by intellectual development came into incarnation upon earth roughly about one million years ago, and have since taken between any two lives an average interval of about twelve hundred years; whereas those who had attained individualization through an instantaneous uprush of affection or will did not come into terrestrial incarnation until about four hundred thousand years later, though as they have since taken an

average interval between lives of about seven hundred years their condition at the present time is practically the same.

I cannot emphasise too strongly that this difference of interval must not in the least be supposed to indicate that those who came in later generate less of spiritual force during their earth-lives. If there be any difference, it appears to be in favour of the men of shorter interval, for they (being as a rule more devotional) seem to be able to generate even *more* force in a given space of time than the others. Perhaps it would express the facts still better to say that they produce in a way a different *kind* of force; probably both are necessary, each as a complement to the other. The difference of interval between lives means merely that they take their bliss in a much more concentrated form, and therefore work out the result of an equal expenditure of force in much less time. Indeed, it appears very much as though the period of their respective entries upon terrestrial life had been arranged especially in order that, after running through about the same number of incarnations, they might arrive at the same point, and be able to work together.

Later investigations have convinced us that there is far greater flexibility with regard to these intervals between lives than we at first supposed. It is quite true that the amount of force which a man has to work out, first in the astral plane and then in the heaven-world, is precisely what he has developed during his earthly life — *plus* of course such further force of the same kind as he may generate during his astral or heaven-lives respectively. But it is evident that the rate at which this amount of force exhausts itself is by no means always the same. The necessity of bringing groups of people into incarnation together, in order not only that they may work out mutual karmic inter-relations, but also that they may all learn to labour together towards one great end, is evidently a dominant factor in regulating the rate of the expenditure of force.

A study of the lives of Alcione will show that this must be so, since it is unquestionable that a number of people, living each his or her own life, must inevitably generate widely-varying amounts of spiritual force; yet in life after life of that entrancing story it is contrived that these people shall come back together, in order that they may pass through similar preparatory experiences, and that the bonds of affection between them may be knit so strongly that they will be incapable of misunderstanding or mistrusting one another, when the strain of the real work comes upon them in the future.

Besides the differences in the mode of individualization which I have just mentioned, there are also differences in the *degree* of individualization, which corresponds to the stage of development at which it takes place. It has been explained in Theosophical literature that as an animal group-soul gradually evolves within its own kingdom it breaks up into smaller and smaller subdivisions. Quadrillions of flies or mosquitoes are attached to one group-soul, millions of rats or mice, hundreds of thousands of rabbits or sparrows. But when we come to such animals as the lion, the tiger, the leopard, the deer, the wolf or the wild boar, only a few thousand will be found to belong to one soul, while among domesticated animals such as sheep and oxen the number is smaller still.

Individualization is possible only from seven kinds of animals — one for each of the seven great lines or types. Of these we already know certainly the elephant, the monkey, the dog and the cat; and the horse is possibly a fifth. Up to each of these heads of types leads a long line of wild animals, which has not yet been fully

investigated; but we know that wolves, foxes, jackals and all such creatures culminate in the dog, and lions, tigers, leopards, jaguars and ocelots in the domestic cat. When we reach these seven individualisable animals we find usually only a few hundred attached to each group-soul, and as their development continues the souls break up rapidly. The pariah dog of India or Constantinople is nothing but a half-tamed wolf, and a thousand of such creatures may well represent only one soul; but in the case of the really intelligent pet dog or cat one soul hovers over not more than ten or a dozen bodies.

Now it makes much difference at what stage of this higher animal life individualization takes place, and this is dependent largely upon the opportunities which offer themselves. Even a pariah dog is presumably capable of individualization, but it could be only a very low type of individualization. The animals of the moon-chain were not the same as those of to-day, and so we cannot draw exact parallels; but assuredly the pariah dog could at most individualize into nothing more than a separated fragment of the group-soul with a monad hovering over it, connected perhaps by a line or two of spiritual matter — corresponding therefore to the animal-men from the moon, who led the way in filling the forms in the first round. On the other hand the really intelligent and affectionate pet dog or cat, whose owner looks after him properly and makes a friend of him, would certainly, when he individualized, obtain a causal body at least equivalent to that of the first order of moon-men, while various intermediate types of domestic animals would produce the basket-work causal body, such as that obtained by the second order of the moon-men.

It will be seen therefore that the amount of real work done in the attainment of any given level is practically always the same, though in some cases more of it is done in one kingdom and less in another. It has already been made abundantly clear, in the course of our investigations, that entities attaining to the culminating point in one kingdom do not enter the lower levels of the next higher kingdom. The life which ensouls an oak-tree, a banyan, or a rose-bush will pass directly into the mammalian order when it enters the animal kingdom; whereas the life which leaves the vegetable kingdom at a much lower level may pass into the stage of insects and reptiles.

In just the same way, a being who reaches the summit of intelligence and affection possible in the animal kingdom will overleap the absolutely primitive conditions of humanity, and will show himself as a first-class individuality from the beginning of his human career; whereas one who leaves the animal kingdom at a lower level will quite naturally have to begin correspondingly lower down in the scale of humanity. This is the explanation of a remark once made by one of our Masters, when referring to the cruelty and superstition shown by the great mass of humanity: "They have individualized too soon; they are not yet worthy of the human form."

The three methods of individualization which I have already mentioned, through the development of affection, intellect, and will, are the normal lines which we may suppose to have been intended in the scheme of things. Individuality is, however, occasionally attained in certain other ways which we may perhaps define as irregular methods, since it would seem that they can scarcely have been part of the original plan.

For example, at the beginning of the seventh round of the moon-chain a certain group of beings were at the point of individualization, and were drawn towards it by their association with some of the perfected inhabitants whom we call the Lords of

the Moon. An unfortunate twist, however, entered into their development, and they began to take so great a pride in their intellectual advance, that that became the prominent feature in their character, so that they were working not to gain the approval or affection of their masters, but to show their advantage over their fellow-animals, and to excite their envy. It was this latter motive which pushed them on to make the efforts which resulted in individualization, and so the causal bodies which were formed showed almost no colour but orange. The authorities in charge of that stage of evolution nevertheless allowed them to individualize, apparently because if they had been permitted to continue their evolution in the animal kingdom any further, they would have become worse instead of better. We have therefore the extraordinary spectacle of a detachment of egos (what we have lately been calling a ship-load), numbering about two millions, who had individualized themselves entirely by pride, and who, though clever enough in their way, possessed but little of any other quality.

The fruitage of the first, second and third globes of the seventh round of the lunar chain was intended to play a certain part in the development of humanity on the earth. At a certain stage in the development of that planet we know that seven of the Lords of the Moon — one belonging to each great type — descended to the earth and began to cast off etheric bodies for the shaping of the new race. The entities who occupied these vehicles intermarried, and when their descendants became numerous these three ship-loads of egos were called upon to descend and occupy these vehicles, and thus establish the type of the humanity that was to come. “One-third refuses; two-thirds obey.” It was the members of this orange-coloured ship-load from planet A of the lunar chain who declined these lowly vehicles, while the golden-coloured egos from globe B and the rose-coloured group from globe C accepted the conditions, entered into the vehicles, and fulfilled their destiny.

The future career of these orange-coloured egos showed clearly enough the undesirability of the line along which they had come, for not only did they refused to take the primitive bodies which were assigned to them (thus leaving them to be occupied by very much lower animal types, and so leading to the sin of the mindless), but all through their history their arrogance and unruliness caused constant trouble to themselves and to others who were infected by their foolishness. Eventually the law of evolution forced them to occupy bodies in many respects considerably worse than those which had at first been offered to them; and though that lesson taught them something, and they seem to have recognised that a mistake had been made, even when they mingled with ordinary humanity we find them invariably in opposition, and perpetually making trouble by standing upon their own dignity at inopportune moments. By constant collision with natural laws the great majority of them have by degrees been driven more or less into line with the rest of humanity; but even now we may distinguish some of them by the occasional recrudescence of their old objectionable characteristics; they are still “turbulent and aggressive, independent and separative, prone to discontent and eager for change,” as our President has described them.

Some few of the cleverest of them have made no inconsiderable mark upon human history, for they developed into the celebrated “Lords of the Dark Face” of Atlantis, of whom we read so much in *The Secret Doctrine*; and later such special distortions became world-devastating conquerors, caring nothing for the thousands who were slain or starved in the course of the gratification of their mad ambition, or (later still)

equally unscrupulous American millionaires, well called by their parasites “Napoleons of finance.”

Another abnormal method in which individuality has been gained is through fear. In the case of animals who have been cruelly treated by man, there have been cases in which the cunning developed by strenuous efforts to understand and avoid the cruelty has caused the breaking away from the group-soul, and produced an ego possessing only a very low type of intellectuality — an ego who, when he puts himself down into the lower planes, must inevitably, because of the nature of his permanent atoms, draw round him mental and astral vehicles capable only of expressing the less desirable passions.

A variant of this case is the type of ego in which the attitude caused by the cruelty has been rather that of intense hatred than of fear. That force also is strong enough to develop such intelligence as may be necessary to injure the oppressor, and in that way also individuality has been secured. It is not difficult to imagine the kind of human being that would be produced along such lines as these, and this is the explanation of the existence of the fiendishly cruel and blood-thirsty savages of whom we sometimes hear, of the inquisitors of the Middle Ages, and of those who torture children in the present day. Of them it is distinctly true that they have come into humanity far too soon, and are displaying under its guise an exaggerated form of some of the very worst characteristics of the most unpleasant types of animals.

Yet another variant is the entity who is individualized by an intense desire for power over others, such as is sometimes shown by the chief bull of a herd. An ego developed in such a way often manifests great cruelty, and appears to take pleasure in it, probably because to torture others is a manifestation of his power over them.

On the other hand those who have been individualized at a comparatively low level along one of the regular lines — as by affection — provide us with a type of equally primitive but joyous and good-natured savages — savages, in fact, who are *not* savage but kindly, as are many of the tribes to be found in some of the islands of the Southern Seas.

As we look at these early stages of our development upon the Moon-chain, it often seems as though the mode of individualization of an ego depended upon mere chance — upon “the accident of environment.” Yet I do not believe that this is so; even for animals the environment is *not* accidental, and there is no room for chance in a perfectly-ordered universe. I should not be surprised if further investigation should reveal to us that the very mode of the individualization was somehow pre-determined either for or by the monad himself, with a view to preparation for whatever portion of the great work he is to undertake in the future. There will come a time when we shall be part of the great Heavenly Man — not in the least as a myth or a poetic symbol, but as a vivid and actual *fact*, which we ourselves have seen. That celestial body has many members; each of these members has its own function to fulfil, and the living cells which are to form part of them need widely-different experiences to prepare them. It may well be that from the dawn of evolution the parts have been chosen — that each monad has his destined line of evolution, and that his freedom of action is concerned chiefly with the rate at which he shall move along that line. In any case our duty is clear — to push ahead as rapidly as we can, watching ever to discern the divine purpose, living only to fulfil it, striving always to help onwards the great scheme of the LOGOS by helping our fellowman.

THE SEVEN TYPES

The seven great types or rays do not correspond to the planes, for each type is to be found upon all the planes. One may symbolize the planes as horizontal, as they are usually represented in Theosophical diagrams; and then if we proceed to draw seven vertical columns cutting across the seven planes at right angles, those columns will symbolize the types. This will cut up our diagram into forty-nine square, and in reality each of these forty-nine has also forty-nine subdivisions in the same manner, because each plane has seven sub-planes, and each type has seven sub-types, which are produced by the influence upon it of each of the other types in turn. A diagram which clearly explains this may be found in *The Secret Doctrine*, Vol. III, p. 483.

There are seven great types of men, coming out from the seven great Planetary LOGOI. Each of us belongs to one of these, but each has also a sub-ray from one of the other types.

If a man belongs to the blue or devotional type, and has the wisdom ray as his sub-type, he will be wise in his devotion; but if his sub-ray be also devotional, he may be blindly devoted having no discrimination, and therefore unable to see any blemish in the object of his worship.

Yet though each of us, as has been said, has come out through one or other of the seven Planetary LOGOI, it does not at all follow that he will return through the same LOGOS. Each of the great root-races will produce as its flower and result what is called in the sacred books a Heavenly Man, one mighty Being who actually includes within Himself all those members of the root-race who have made themselves worthy of such inclusion — includes them precisely as our physical body includes millions of cells. True, we have all of us incarnated in other root-races, but we belong to that root-race in which we finally succeed in attaining adeptship, and it will be of the Heavenly Man which represents that race that we shall form a part.

For each root-race there is a Manu and a Bodhisattva, and these are respectively the brain and the heart of the Heavenly Man of the root-race. We who work in the Theosophical Society are most of us following along one or other of these two lines, and so we shall find ourselves grouped round one or other of those centres in that glorious future. But in the Heavenly Man, as in the man on earth, there are seven centres, and each of these centres is represented by an official of the Occult Hierarchy. Some men will be drawn to one of these centres, and some to another, so that there is the fullest possibility of development for all possible types and dispositions.

These Heaven-born Men so formed are the true inhabitants of the solar system, the mind-born sons of the Planetary LOGOI, destined themselves to be the Planetary LOGOI of the future, and of them we shall be living, conscious component parts; and yet at the same time each of us will have the fullest liberty and the highest possible activity. Incomprehensible, of course, to our present power of thought, but utterly true, nevertheless. Well for us if we can attain our level and take our part along with the great Masters who are the leaders of our Society. If that be too high for us at present, there will be other opportunities in the future — others, and yet others, stretching away in endless vistas. Yet those of us who are earnest students in this Society have now a glorious opportunity, of which we should do well to take the

fullest advantage; for if we lose it who knows how many lives of hard work it will take us to earn such another? Soon the Teacher of angels and men will show Himself upon earth once more; happy are we in that we are allowed to help (even though it be ever so little) to prepare the way for His coming; happier yet will be those of us who shall see Him face to face, who will be privileged to work under Him in the service of humanity when that day of the Lord shall dawn!

STRAY NOTES ON RACES

THE IRISH RACE

The Irish are not of Atlantean stock, but belong to the fourth sub-race of the fifth root-race. It is true that Ireland was part of the Atlantean continent, and that the earliest inhabitants were of the Rmoahal, the first sub-race of the fourth root-race; but no recognisable trace now remains of these aborigines, who were a small dark people somewhat of the type of the Laplanders of the present day. Nor is there much now left to bear witness to the first invasion from Africa of a host led by an Ethiopian queen; but there are still some tokens of the next arrivals — a race called the Firbolgs — big, hairy-faced men who appear to have come down from Iceland — probably people of the same stock as the Ainus of Japan. The great majority of the Irish nation (not counting the Scottish immigrants of Ulster) is composed of the descendants of two races — the Tuatha-de-Danaan and the Milesian. The Tuatha-de-Danaan were men of the Caucasian stock, practically identical with the early Greeks, and they reached Ireland by a circuitous northern route, having moved up gradually through Russia, and round by Sweden and Norway, in the manner of the curious slow, wholesale migrations of those earlier days. They were a handsome race with oval faces, clear complexion, mostly dark hair, and deep blue or almost violet eyes. Sometimes the hair was lighter and the eyes were grey, but the other type was the more common, and one may often see it exactly reproduced among the Irish peasants of to-day.

The Tuatha-de-Danaan were not only so much handsomer, but also intellectually and spiritually so very much in advance of the mixed race which they found in Ireland that they were regarded by the latter as of celestial lineage, and to this day tradition speaks of them as a race of gods who ruled Ireland during a golden age, which is by no means so entirely legendary as historians generally suppose. Ireland was unquestionably the seat of a high civilization and a centre of philosophy and learning while the neighbouring island of England was largely covered by dense forests and peopled by naked savages who painted themselves blue.

The Tuatha-de-Danaan reigned in Ireland through many ages of power and great glory, but their civilisation waned in time, as all others do, and at last they were overcome by an invasion of the Milesians from Spain — a race far inferior to them in culture, spirituality and general development, but having the rude physical strength of youth and much knowledge of the lower magic. These were a bullet-headed people, rugged and often positively ugly of face, with light or vividly red hair — a type which may also still be seen sometimes among the peasantry of the southern part of the country almost in its original purity. Far inferior as they were to the Tuatha-de-Danaan, the Milesians were still a variant of that same fourth sub-race of the Aryans; and since these two types are its main constituents, it is to that sub-race that we must assign the Irish of the present day — Celts, near of kin to the Highlander of Scotland, the Welshman, the Cornishman or the Breton.

At present there is unfortunately a wide-spread poverty and general lack of prosperity among the Irish nation in its native Erin — a condition of affairs which the Irish usually attribute to oppression by the conquering English. This “oppression,” so far as it is a fact, and not a figment of the imagination, comes from the radical difference between the two races, which causes a curiously complete lack of mutual

understanding. The stolid matter-of-fact Anglo-Saxon cannot possibly comprehend the point of view of the imaginative and poetical Irishman, and the motives of the latter are always a sealed book to the former. The average English peasant lives almost entirely upon the physical plane, and his thought runs naturally along lines connected with his every-day interests and experiences. The average Irish peasant of the south and west lives very much upon the astral plane, and cares comparatively little about physical conditions so long as he has the accustomed astral atmosphere about him. His thoughts are usually far away from the mechanical daily round, and occupied with legends of the past, or with the stories of saints and angels and fairies.

I well remember the plaintive amazement of an English landlord who, shocked at the condition of some of the cabins on his estate, had built for his labourers neat little staring brick cottages with all the latest improvements. With great difficulty he persuaded some of the peasants to try the new dwellings upon which they looked with such strong disfavour, but after a day or two every one of them went back again to the old cabins with their mud floors and leaking roofs, vowing that there was no home like the old home, with all its inconveniences. The truth was that they thought so little of the physical that these inconveniences were hardly felt at all, and weighed as nothing in the balance against the comfortable homelike feeling of the astral radiations of the old walls, to which they had been accustomed from childhood. But the Englishman knew nothing about astral vibrations, and could only marvel at the stupidity and obstinacy of people who actually preferred a miserable and unquestionably filthy old hovel to a new and clean cottage.

The drunkenness which is so sadly common among the peasantry is largely referable to the same cause; it is not physical but astral sensation which is sought, and to some extent obtained, by means of the absorption of alcohol. The average Irish peasant may perhaps drink more than his English compeer, but his thoughts are on the whole far purer and more elevated. To him all women are sacred for the sake of the Virgin Mother to whom he prays, and statistics show that crimes against the weaker sex are far rarer in Erin than in Albion. The Englishman endeavours to be accurate; the Irishman cares little for accuracy, but prefers to say rather what is most courteous, or what he thinks will please. In a word, they represent two different sub-races; their development runs along quite different lines, and only the wisest and most liberal of each can possibly understand and make allowance for the peculiarities of the other.

It is probable that many causes combine to produce the poverty and general lack of prosperity of the Irish. Without raising any of the vexed questions about which party opinions clash, the occultist may examine with interest at least one cause which is never suspected by those who discuss the subject in this prosaic twentieth century; and that is the working of a curse pronounced against the race (or perhaps one should rather say a spell laid upon it) no less than two thousand years ago at the time of the Milesian conquest. Students of early Irish history will remember how persistently it is stated that the invading Milesians were able to hold in thrall the distinctly superior race which they had overcome, because they cast upon it the glamour of a great illusion. This legend has a basis of fact. The priests of the Milesian religion were well acquainted with certain types of magic, and as the country was conquered they occupied it with strongly magnetized centres. They established one of these every few miles, until they had a net-work of them covering the whole southern and western part of the land, and even now, after the lapse of two thousand years, a strong influence radiates from them.

Great crowds of nature-spirits of a certain type are still irresistibly attracted to these centres, gambol round them and are permeated by their influence, and unconsciously become its ministers, and spread it all over the country wherever they go.

The spell which the Milesian priests laid upon the people was two-fold — the curses of disunion and lethargy — that they should never be able effectively to combine together, but always quarrel among themselves, and that they should apathetically submit to the domination of whoever wielded or inherited the magnetic power. If any English ruler had ever known enough of magic to understand and utilise this heritage of the Milesian priests, the history of Ireland might have been different. As the Anglo-Saxon is usually blankly ignorant and blatantly incredulous with regard to all that side of nature, a very curious thing has happened. Consciously or unconsciously the Roman Church has come into that heritage, and profits by what still remains of the power of that ancient spell, and her rule is unquestioned through all the districts where long ago those priests of an older faith established their magnetic centres.

THE SPANISH RACE

The whole question of racial Karma is a difficult one, and I do not think that we have as yet sufficient information at our command to enable us to speak definitely upon the subject. This much is certain — that whenever we find markedly unusual conditions surrounding a race, we may conclude that the Manu in charge of that portion of evolution has in hand a number of egos who need just those conditions for their progress. The law of cause and effect must obviously govern national as well as individual affairs, though its action is complicated by the fact that the egos who form the race when the effect arrives are usually not those who were there when the cause was set in motion.

For example, it may be not unreasonable to suppose that the fact that Spain has somewhat ignominiously lost the whole of South America and Mexico, has a definite karmic relation to the awful cruelty and rapacity shown in her conquest of those countries; yet we imagine that the Spaniards who suffered loss when those countries freed themselves can hardly in all cases have been reincarnations of those who wrought such appalling havoc under Cortes and Pizarro. On the other hand, it is very probable that some of them may have been, for we know that people of the lower classes return very much sooner than those of the first class, and usually have to incarnate several times in the same branch-race before they have learnt all its lessons.

THE JEWISH RACE

The peculiar conditions of the Jewish race exist primarily because at this particular stage the Manu needs them for the proper training of some of the egos under his care. We can only guess at the racial karma which made those conditions possible. Perhaps the explanation is to be found in the fact that the Jewish race is descended from those Atlantean Semites who were drawn away into Arabia, apart from their fellows, by the Manu of the Fifth root-race when he was making his first segregation. That first attempt was not wholly successful, and a second segregation took place into the Gobi district, from which in due time was produced the first sub-race of the new root-race. When a second sub-race was needed, the Manu sent emissaries to the descendant of those who had been left behind in Arabia, hoping to mingle with theirs the blood of the new root-race; but they were so strongly impressed with the idea (which he himself had originally implanted in them) that they were a chosen race, set

apart from the world and forbidden to intermarry with others, that in the name of his own teaching they now rejected his overtures, and he had to seek elsewhere for what he wanted.

The particular sub-race from which the Jewish nation is directly descended had moved across from Arabia to the Somali Coast, in order to avoid conquest by those who followed the new teaching of the Manu. They then split off even from that dissenting band, and made their way along the shores of the Gulf of Aden and the Red Sea, until they entered upon the territory of Egypt. The Pharaoh of the time received them hospitably, and assigned them a tract of land on which to dwell, and they settled down there for some centuries; but as a later Pharaoh sought to levy from them some impost to which they objected, and also to force them to perform for him certain unpaid labour, as his other subjects did, they protested against his claims, and continued their migration by crossing the Sinaitic desert and settling themselves in southern Syria, dispossessing, after much fighting, other robber tribes of much the same blood as themselves.

The karma of that rejection has left them ever since a race apart, the same egos to a large extent incarnating again and again in that line instead of passing from race to race in the usual way. Whether some blind perception of this difference may help to account for the treatment they have received at the hands of other races I cannot definitely say, but it may also be partially due to the fact that because of the tradition of that original selection by the Manu they have always had a feeling somewhat similar to that of the Brahmans — that they are superior to all the rest of the world; and the rest of the world has not always appreciated the attitude which they adopted in consequence of that belief.

They were originally a nomad tribe like the Bedouin Arabs, and lived largely by robbery, their deity being confessedly but a private tribal god who fought against the gods of other nations and was perpetually vaunting himself as superior to them, although it will be remembered that in one case he was not able to overcome certain other races “because they had chariots of iron” (*Judges*, I, 19). Just like all other elemental tribal deities, he required constant sacrifices of blood, and in order that he might receive plenty of these he was always exceedingly jealous lest any of his followers should desert him, and make their offerings to other deities. The requiring of blood-sacrifices is an invariable criterion as to the status of a deity; no entity in the least deserving of respect or worship ever made such an abominable demand. It will be found that he often suggested mean and dishonourable plans — which is quite a common thing for a tribal deity to do, but would of course be utterly impossible for any higher entity.

The carrying away into captivity in Babylon of a number of these turbulent people was quite the best thing that could happen to them. They then for the first time came into contact with a highly civilized race, and for the first time heard of a supreme God of whom everything was part. Then they characteristically tried to identify their own tribal deity with this Supreme Being, and so caused much confusion. When they returned from this captivity they rewrote their scriptures from the memory of the older men, and then they put into them a certain admixture the higher ideas about a supreme deity.

The Founder of Christianity took possession of a Jewish body; all the earlier teachers of the religion were of the same race, and so, unfortunately, they brought over into Christianity this mixed conception of a god who is full of irreconcilable

characteristics, being at the same time jealous, cruel and revengeful, and yet omniscient, omnipresent and compassionate. Even at the present day the Christian church still reads in its highest service the ridiculous old Jewish commandments, with which is incorporated the statement of the jealousy of the deity, while in another part of the very same service she acclaims him as “God of God, Light of Light, very God of very God.” If the Christians could only have left these primitive Jewish conceptions alone, and taken with reference to God the teachings of their Founder, who spoke of Him always as the Father in heaven, many of the troubles of the Church would have been avoided.

THE ATLANTEANS

The Atlanteans had as a race no sense of the abstract, and were unable to generalise; for example, they had no multiplication table; arithmetic was to them a system of magic, and a child had to learn elaborate rules without ever knowing the reason for them. For example, he was taught that if 8 came beneath 8 in the particular form of magic which we now call addition, the figure 6 must be noted as the result, and the next figure to the left-hand side in the result must be increased by 1. If however the particular magic happened to be subtraction, a cipher was the result; if it was division the figure 1 appeared; if it was multiplication the figure 4 was the result, and the next figure to the left must be altered by 6. But he never knew that 8 plus 8 equals 16, or that 8 times 8 equals 64! A similar elaborate set of rules had to be memorized for every conceivable position of all the figures up to 10. These four sets or types of mathematical magic had to be learnt just as though they were four conjugations of a verb. Most of their calculations, however, were made by means of machinery — a kind of abacus or framework something like that now used by the Chinese and Japanese, by means of which it is even now possible to make quite elaborate calculations — as, for example, to take the square root of any number.

The Atlanteans were clever at amassing facts, and had prodigious memories; also they invented a good deal of quite complicated machinery, though most of it would seem to us now quite clumsy in its action. We see another curious trace of their limitations in the religion which the Egyptians inherited from them. They had observed and noted most of the types of elemental essence and nature-spirits, and they had named them all, and invented special forms of spells for each, by which it could be controlled; and they went on elaborately learning all these, with the feeling that if any but the right spell was applied to a particular elemental, he would probably prove destructive. Yet they never realized that the force behind the spells was in every case the human will, and that a determined exertion of that, without any spell at all, would have been equally effective in all these different places. *The Book of the Dead* contains great numbers of these, and only that portion of it which it was thought would be needed by each dead person was placed along with him in his tomb.

The Turanian sub-race of the Atlanteans made a series of experiments in what is now called democracy, and carried it to even wilder lengths than its most rabid exponents at the present day have yet suggested. The results were so utterly intolerable that the whole race broke up into anarchy and chaos; and China even now bears the impress of the violent reaction in the direction of aristocratic government which followed. The Turanians had their animal passions very strongly developed, and were in many ways not what we should call pleasant people.

MARS AND ITS INHABITANTS

The present condition of the planet Mars is by no means unpleasant. It is a smaller planet than the Earth and more advanced in age. I do not mean that it is actually older in years, for the whole chain of worlds came into existence — not simultaneously indeed — but within a certain definite area of time. But being smaller it lives its life as a planet more quickly. It cooled more rapidly from the nebulous condition, and it has passed through its other stages with corresponding celerity. When humanity occupied it in the third round it was in much the same condition as is the Earth at the present time — that is to say, there was much more water than land on its surface. Now it has passed into comparative old age, and the water surface is far less than that of land. Large areas of it are at present desert, covered with a bright orange sand which gives the planet the peculiar hue by which we so readily recognize it. Like that of many of our own deserts, the soil is probably fertile enough if the great irrigation system were extended to it, as it no doubt would have been if humanity had remained upon it until now.

The present population, consisting practically of members of the inner round, is but a small one, and they find plenty of room for themselves to live without great effort, in the equatorial lands, where the temperature is highest and there is no difficulty as to water. The great system of canals which has been observed by terrestrial astronomers was constructed by the second order of moon-men when they last occupied the planet, and its general scheme is to take advantage of the annual melting of enormous masses of ice at the outer fringe of the polar snow-caps. It has been observed that some of the canals are double, but the double line is only occasionally apparent; that is due to the fore-thought of the Martian engineers. The country is on the whole level, and they had great dread of inundations; and wherever they thought that there was reason to fear too great an outrush of water under exceptional circumstances the second parallel canal was constructed to receive any possible overflow and carry it away safely.

The actual canals themselves are not visible to terrestrial telescopes; what is seen is the belt of verdure which appears in a tract of country on each side of the canal only at the time when the water pours in. Just as Egypt exists only because of the Nile, so do large districts on Mars exist only because of these canals. From each side of them radiate at intervals water-ways, which run some miles into the surrounding country and are then subdivided into thousands of tiny streamlets, so that a strip of country a hundred miles in width is thoroughly irrigated. In this area are forests and cultivated fields, and vegetation of all sorts starts forth in the greatest profusion, making upon the surface of the planet a dark belt which is visible to us even forty million miles away when the planet is at its nearest and favourably situated.

Mars is much farther from the centre of the system than we are, and consequently the sun appears to its inhabitants scarcely more than half the size that it does to us. Nevertheless the climate of the inhabited portions of the planet is very good, the temperature during the day at the equator being usually about 70° Fahrenheit, though there are not many nights in the year when there is not a touch of frost. Clouds are almost unknown, the sky being for most of the year entirely clear. The country is therefore to a large extent free from the unpleasantness of rain or snow.

The Martian day is a few minutes longer than our own and their year is nearly twice as long as ours, and the variation of the seasons in the inhabited part is but slight.

In physical appearance the Martians are not unlike ourselves, except that they are considerably smaller. The tallest men are not above five feet in height and the majority are two or three inches shorter. According to our ideas they are somewhat broad in proportion, having very great chest capacity — a fact which may possibly be due to the rarity of the air and the consequent necessity of deep breathing in order fully to oxygenate the blood. The whole civilized population of Mars is one race, and there is practically no difference in features or complexion, except that, just as among ourselves, there are blondes and brunettes, some of the people having a faintly yellowish skin and black hair, while the majority have yellow hair and blue or violet eyes — somewhat Norwegian in appearance. They dress mostly in brilliant colours, and both sexes wear an almost shapeless garment of some very soft material which falls straight from the shoulders down to the feet. Generally the feet are bare, though they sometimes use a sort of metal sandal or slipper, with a thong round the ankle.

They are very fond of flowers, of which there is a great variety, and their towns are built on the general plan of the garden-city, the house usually being one-storeyed only, but built round inner courtyards and straggling over a great deal of ground. These houses look exteriorly as though built of coloured glass, and indeed the material which is used is transparent, but it is somehow so fluted that while the persons inside enjoy an almost unimpeded view of their gardens, no one from outside can see what is going on in the house.

The houses are not built up in blocks, but the material is melted and poured into moulds; if a house is to be built, a sort of double mould of it is first made in metal faced with cement, and then the curious glasslike substance is melted and poured into this mould, and when it is cold and hardened the moulds are taken away, and the house is finished except for a certain amount of polishing of the surface. The doors are not exactly like ours, since they have no hinges or bolts, and are opened and shut by treading on certain spots in the ground, either without or within. They do not swing on hinges, but run back into the wall on each side. All these doors and all furniture and fittings are of metal. Wood seems to be used scarcely at all.

There is only one language in use over the whole planet, except for the few savage tribes, and this language, like everything in their world, has not grown up as ours have done, but has been constructed in order to save time and trouble. It has been simplified to the last possible extent, and it has no irregularities of any sort. They have two methods of recording their thoughts. One is to speak into a small box with a mouthpiece on one side of it, something like that of a telephone. Each word so spoken is by the mechanism expressed as a kind of complicated sign upon a little plate of metal, and when the message has been spoken the plate falls out and is found to be marked in crimson characters, which can easily be read by those who are familiar with the scheme. The other plan is actually to write by hand, but that is an enormously more difficult acquirement, for the script is a very complicated kind of shorthand which can be written as rapidly as one can speak. It is in this latter script that all their books are printed, and these latter are usually in the shape of rolls made of very thin flexible metal. The engraving of them is exceedingly minute, and it is customary to read it through a magnifier, which is fixed conveniently upon a stand. In the stand there is machinery which unrolls the scroll before the magnifier at any desired rate, so that one reads without needing to touch the book at all.

On every hand one sees signs of a very old civilization, for the inhabitants have preserved the tradition of all that was known when the great life-wave of humanity occupied the planet, and have since added to it many other discoveries. Electricity seems to be practically the sole motive power, and all sorts of labour-saving machines are universally employed.

The people are on the whole distinctly indolent, especially after they have passed their first youth. But the comparatively small size of the population enables them to live very easily. They have trained various kinds of domestic animals to a far higher condition of intelligent co-operation than has yet been achieved upon earth, so that a great deal of servant's and gardener's work is done by these creatures with comparatively little direction.

One autocratic ruler governs the whole planet, but the monarchy is not hereditary. Polygamy is practised, but it is the custom to hand over all children to the State at a very early age to be reared and educated, so that among the vast majority of the people there is no family tradition whatever, and no one knows who are his father and mother. There is no law compelling this, but it is considered so decidedly the right thing to do and the best for the children that the few families who choose to live somewhat more as we do, and to educate their children at home, are always regarded as selfishly injuring their prospects for the sake of what is considered mere animal affection.

The state is thus in the position of universal guardian and schoolmaster, and the school authorities of each district are instructed-carefully to sort the children according to the aptitudes which they display, and their line of life is decided for them in this manner — a very wide range of choice, however, being allowed the individual child as he approaches years of discretion. But children who show at the same time great intellect and wide general capacity are set apart from all the rest, and trained with a view of becoming members of the ruling class.

The King has under him what may be called viceroys of large districts, and they in turn have under them governors of smaller districts, and so on down to what would be equivalent here to the head-man of a village. All these officials are chosen by the King from this group of specially educated children, and when the time of his own death is considered to be approaching it is from the already appointed officials that he chooses his successor.

They have brought their scientific medical studies to such perfection that disease has been eliminated, and even the ordinary signs of the approach of old age have been to a large extent got rid of. Practically no one appears old, and it would seem that they hardly feel old; but, after a life somewhat longer than our own the desire to live gradually fades away, and the man dies. It is quite customary for a man who is losing interest and feels that death is approaching (this corresponds to what we should call a centenarian) to apply to a certain scientific department which corresponds to what we might call a school of surgery, and ask to be put painlessly to death — a request which is always granted.

All these rulers are autocratic, each within his own sphere, but appeal to a higher official is always possible, though the right is not frequently exercised, because the people usually prefer to acquiesce in any fairly reasonable decision rather than to take the trouble involved in an appeal. The rulers on the whole seem to perform their duties fairly well, but again one gets the impression that they do so not so much from

any pre-eminent sense of right or justice as to avoid the trouble that would certainly ensue from a flagrantly unjust decision.

One of the most remarkable things about this people is that they have absolutely no religion. There are no churches, no temples, no places of worship of any sort whatever, no priest, no ecclesiastical power. The accepted belief of the people is what we should call scientific materialism. Nothing is true but what can be scientifically demonstrated, and to believe anything which cannot be so demonstrated is regarded as not only the height of folly, but even as a positive crime, because it is considered a danger to the public peace.

Martian history in the remote past was not unlike our own, and there are stories of religious persecutions, and of peoples whose beliefs were of so uncomfortable a nature that they forced them not only into feverish energy for themselves, but also into perpetual interference with the liberty of thought of other people. Martian public opinion is quite determined that there shall never again be any opportunity for the introduction of disturbing factors of that sort, and that physical science and the lower reason shall reign supreme; and though there, as here, events have occurred which material science cannot explain, people find it best to say nothing about them. Nevertheless on Mars, as in other places, there are a certain number of people who know better than this, and many centuries ago a few of these joined themselves together into a secret brotherhood to meet and discuss such matters. Very gradually and with infinite precaution, they took other recruits into this charmed circle, and so came into existence, in this most materialistic of worlds, a secret society which not only believed in superphysical worlds but practically of their existence, for its members took up the direct study of mesmerism and spiritualism, and many of them developed a good deal of power.

At the present time the secret society is very widely spread, and the head of it at this moment is a pupil of one of our Masters. Even now after all these centuries its existence is not officially known to the authorities, but as a matter of fact they have something more than a suspicion of it, and they have learnt to fear it. None of its members are actually identified as such, but many are strongly suspected, and it seems to have been observed that when any of these strongly suspected people have in the past been injured or unjustly put to death, the persons who were concerned in bringing about that result have invariably died prematurely and mysteriously, though never in any case has their death been traceable to any physical-plane action on the part of the suspected member. Consequently, although such a belief is no doubt somewhat of an infringement of the principles of pure reason by which everything is supposed to be governed, it has come to be generally understood that it is safest not to pry too closely into the beliefs of people who seem to differ in some degree from the majority, so long as they do not openly make profession of anything which would be considered subversive of the good morals of materialism.

Driven far away from the pleasant equatorial regions into inhospitable lands and impenetrable forests, there still exist some remnants of the savage tribes who are descended from those left behind when the great life-wave left Mars for the earth. These are primitive savages at a lower stage than any now living on the exterior of our earth, though bearing some resemblance to one of our interior evolutions.

Some at least of the members of the secret society have learnt how to cross without great difficulty the space which separates us from Mars, and have therefore at various times tried to manifest themselves through mediums at spiritualistic séances,

or have been able, by the methods which they have learnt, to impress their ideas upon poets and novelists.

The information which I have given above is based upon observation and inquiry during various visit to the planet; yet nearly all of it might be found in the works of various writers within the last thirty or forty years, and in all such cases it has been communicated or impressed by someone from Mars, although the very fact of such impression was (at least in some cases) quite unknown to the physical writer.

Of our future home, Mercury, we know much less than of Mars, for visits to it have been hurried and infrequent. Many people would think it incredible that life such as ours could exist on Mercury, with a sun that appears at least seven times as large as it does here. The heat, however, is not at all so intense as would be supposed. I am informed that this is due to the presence of a layer of gas on the outskirts of the Mercurian atmosphere, which prevents most of the heat from penetrating. We are told also that the most destructive of all possible storms on Mercury is one which even for a moment disturbs the stability of this gaseous envelope. When that happens a kind of a whirl-pool is set up in it, and for a moment a shaft of direct sunlight comes from the sun through its vortex. Such a shaft instantly destroys whatever life comes in its way, and burns up in a moment everything combustible. Fortunately such storms are rare. The inhabitants whom I have seen there are much like ourselves, though again somewhat smaller.

The influence of gravity both on Mars and Mercury is less than half what it is on earth, but while on Mars I did not notice any particular way in which advantage had been taken of this. I observed Mercury that the doors of the houses were quite a considerable height from the ground, needing what for us would be a respectable gymnastic feat to reach them, though on Mercury it is only a slight spring that is required. All the inhabitants of that planet are from birth possessed of etheric sight; I remember that the fact was first brought to my notice by observing a child who was watching the movements of some crawling creature; and I saw that when it entered its abode he was still able to follow its movements, even when it was deep down under the ground.

SEVENTH SECTION:
REINCARNATION

THREE LAWS OF HUMAN LIFE

THE ordinary ego is by no means yet in a position to choose a body for himself. The place of his birth is usually determined by three factors, or perhaps it would be better to say by the combined action of three forces. First comes the law of evolution, which cause an ego to be born under conditions which will give him an opportunity of developing exactly those qualities of which he stands most in need. But the action of this force is limited by the second factor, the law of karma. The ego may not have deserved the best possible opportunity, and so he has to put up with the second or third best. He may not even have deserved any great opportunity at all, and so a tumultuous life of small progress may be his fate.

A third factor also comes into play — the force of any personal ties of love or hate that the ego may have previously formed. This may modify the action of the first and second forces, for by it a man may sometimes be drawn into a position which he cannot be said to have deserved in any other way than by the strong personal love which he has felt for some one higher in evolution than himself.

A man who has worked much beyond the ordinary — a man who had already entered the Path which leads to adeptship — may be able to exercise a certain amount of choice as to the country and family of his birth; but such an one will be the first to put aside entirely any wish of his own in the matter, and resign himself absolutely into the hands of the great eternal law, confident that whatever it brings to him must be far better for him than any selection of his own.

Parents cannot choose the soul who shall inhabit the body to which they give birth, but by so living as to offer an unusually good opportunity for the progress of an advanced ego they can make it exceedingly probable that such an ego will come to them.

THE RETURN TO BIRTH

The whole of our solar system is a manifestation of its LOGOS, and every particle in it is definitely part of His vehicles. All the physical matter of the solar system taken as a totality constitutes His physical body; all the astral matter within it constitutes His astral body; all the mental matter, His mental body, and so on. Entirely above and beyond His system He has a far wider and greater existence of His own, but that does not in the least affect the truth of the statement which we have just made.

This solar LOGOS contains within Himself seven planetary LOGOI, who are as it were centres of force within Him, channels through which His force pours out. Yet at the same time there is a sense in which they may be said to constitute Him. The matter which we have just described as composing His vehicles also composes theirs, for there is no particle of matter anywhere in the system which is not part of one or other of them. All this is true of every plane; but let us for a moment take the astral plane as an example, because its matter is fluid enough to answer the purposes of our inquiry, and at the same time it is near enough to the physical to be not entirely beyond the Limits of our physical comprehension.

Every particle of the astral matter of the system is part of the astral body of the solar LOGOS, but it is also part of the astral body of one or other of the seven planetary LOGOI. Remember that this includes the astral matter of which your astral body and mine are composed. We have no particle which is exclusively our own. In every astral body there are particles belonging to each one of the seven planetary LOGOI, but the proportions vary infinitely. The bodies of those Monads which originally came forth through a planetary LOGOS will continue all through their evolution to have *more* of the particles of that LOGOS than of any other, and in this way people may be distinguished as primarily belonging to one or other of these seven great Powers.

In these seven planetary LOGOI certain psychic changes periodically occur; perhaps they correspond to in-breathing and out-breathing, or to the beating of the heart with us down here on the physical plane.

However that may be, there seem to be an infinite number of possible permutations and combinations of them. Now since our astral bodies are built of the very matter of their astral bodies, it is obvious that no one of these planetary LOGOI can change astrally in any way without thereby affecting the astral body of every man in the world, though of course more especially those in whom there is a preponderance of the matter expressing that particular LOGOS; and if it be remembered that we are taking the astral plane merely as an example, and that exactly the same thing is true on all the other planes, we shall then begin to have an idea how important to us the motions of these planetary Spirits are.

Madame Blavatsky writes of a certain order of supernal Beings whom she calls the Lipika, or Lords of Karma. We are told that their agents in the administration of karma are the four (really seven) great rulers who are known as the Devarajas or Regents of the Earth. Each one of them is at the head of a certain vast group of devas and nature-spirits, and even of elemental essence. Once more for purposes of explanation let us confine ourselves to astral plane, but always with the memory at the back of our minds that the same thing applies to all the other planes as well. Astral matter as a whole is specially under the control of one of these Great Ones, but

the second sub-plane of *every* plane is also to a certain extent under the direction of the same Great One, because that sub-plane holds the same relation to the plane of which it is a part as the astral plane does to the whole set of planes. Therefore for every sub-plane there are two influences — the influence of the ruler of the plane as a whole, and the sub-influence of the ruler of the sub-plane.

Now out of this astral matter, every particle of which belongs to the garment of one or other of the seven planetary LOGOI, and is at the same time under the predominating influence of the Devaraja of the astral plane, and also under the subordinate influence of another Devaraja who indirectly rules its sub-plane, our astral bodies have to be built. In order to help us to grasp this, let us think of the sub-planes of the astral plane as horizontal divisions, and of the types of matter belonging to the seven great planetary LOGOI as perpendicular divisions crossing these others at right angles. (There are still further subdivisions, but we will take no account of them for the present, in order that the broad idea may stand out clearly). This then even already gives us forty-nine distinctly marked varieties of astral matter, because on each of its sub-planes we have matter belonging to each of the planetary LOGOI.

Even taking no account of the further subdivisions, we see that we have already the possibility of an almost infinite number of combinations; so that whatever may be the characteristics of the ego he is able to find an adequate expression for himself.

Let us consider the case of an ego who is about to descend into incarnation. We must think of him as resting upon the higher part of the mental plane in his causal body, and having no vehicle lower than that. Since the death of his last physical body he has been drawing steadily inwards, first into his astral and then into his mental vehicle, and at the end of the heaven-life he has cast off even the latter. He then rests for a certain period on his own plane — a period which varies, according to the stage of his development, from two or three days of unconsciousness in the case of an ordinary undeveloped man to a long period of years of conscious and glorious life in that of exceptionally advanced people. Then he begins once more to turn his attention downwards and outwards. As in the course of his upward movement he has withdrawn his attention from the physical and the astral planes respectively, the permanent atoms have passed into a dormant condition, and have ceased the vigorous vibration which is their usual characteristic. The same thing happens to the mental unit at the end of the heaven-life, and during his rest on his own plane the ego has these three appendages within himself in a quiescent condition.

When he turns his attention once more to the mental plane, the mental unit immediately resumes its activity, and because of that it at once gathers round it such matter as is required to express that activity. Precisely the same thing happens when he turns his attention to the astral atom, and puts his will into that. It attracts to itself material capable of providing him with an astral body of exactly the same type as that which he had at the end of his last astral life. It is necessary to have this fact clearly in mind, that what he thus acquires as he descends is not a ready-made astral body, but simply the material out of which he is to build an astral body in the course of the life which is to follow.

In the case of lower-class monads with unusually strong astral bodies, who reincarnate after a very short interval, it sometimes happens that the shade or shell left over from the last astral life still persists, and in that case it is likely to be attracted to the new personality. When that happens it brings with it strongly the old

habits and modes of thought, and sometimes even the actual memory of that past life.

The astral matter is at first evenly distributed throughout the ovoid; it is only when the little physical form comes into existence in the middle of the ovoid that the astral and mental matter are attracted to it, and begin to mould themselves into its shape, and thereafter steadily grow along with it. At the same time with this change in arrangement the mental and astral matter are called into activity, and emotion and thought appear.

The aura of the little baby is comparatively colourless, and it is only as the qualities develop that the colours begin to show. This is the material which is given to him out of which to fashion his astral vehicle, the material which he has earned by the desires and emotions which he allowed to play through him in his previous life; but he is by no means compelled to utilise all this material in building for himself his new vehicle. If he is left entirely to himself, the automatic action of the permanent atom will tend to produce for him, from the materials given, an astral body precisely similar to that which he had in the last life; but there is no reason whatever why all these materials should be used, and if the child is wisely treated and reasonably guided he will be encouraged to develop to the fullest all the germs of good which he has brought over from his previous life, while the evil germs will be allowed to slumber. If that is done these latter will gradually atrophy and drop away from him, and the ego will unfold within himself the opposite virtues, and then he will be free for all his future lives from the evil qualities which those germs indicated. Parents and teachers may help him towards this desirable consummation, not so much by any definite facts which they teach him as by the encouragement which they give to him, by the rational and kindly treatment uniformly accorded to him, and above all by the amount of affection lavished upon him.

We must remember that while the higher vehicles, the mental and the astral body, are expressions of the man at his present stage of evolution (as far as that can be expressed in the matter of their respective planes), the physical body is a vehicle or a limitation imposed upon him from without, and is therefore pre-eminently the instrument of karma. The evolutionary force comes into play in the selection of its materials, but even in this it is at every turn limited and hampered by the karma of the past. The parents have been chosen because they are fitted to give such a body as will be suitable for the development of the ego committed to them, but with every pair of parents there are manifold possibilities. Each of them represents a long line of ancestry, and often a particular parent may be chosen, not for anything that he is or has in himself, but because of some quality which appeared to an unusual degree in one of his ancestors — because he possesses a power which he has not used, though it is latent in his physical body because it is physically descended from that ancestor. In that parent, and in many preceding generations, the faculty to express that quality may have slept entirely without effect, but when there comes into the line an ego which possesses the quality, the faculty to express it leaps out from the dormant into the active condition, and we have a case of what is called reversion to a remote type.

In the formation of the physical body there are three principal forces at work: first, the influence of the ego who is intending to take up the new form; secondly, the work of the building elemental formed by the Lords of Karma; and thirdly, the thought of the mother. Now suppose that an etheric body is about to be formed for an ego in the process of his descent into incarnation. He is himself an ego of a certain type and sub-type, and these characteristics of his are impressed upon his physical permanent

atom, and this in turn determines which of the perpendicular divisions of etheric matter shall enter into the composition of that etheric body and in what proportion they shall be used. This quality of his, however, does not determine which of the horizontal divisions shall be employed, and in what proportion; that matter is in the hands of the four Devarajas, and will be determined according to the past karma of the man. Each of these Devarajas has vast hosts of assistants at his command, so that no one of the births which are momentarily taking place upon earth is ever overlooked. The Devarajas make a thought-form, the building elemental mentioned above, which is charged exclusively with the production of the most suitable physical body that can be arranged for the man. For his evolution he requires a body which has within it certain possibilities; for that purpose he may be born of a parent who himself possesses these qualities, and therefore can directly hand them on, or he may be born of a parent whose ancestors, on one side or the other, possessed them, so that the unawakened germs which can respond to them may be handed on by that parent to his offspring.

Remember that this elemental, which is put in charge of the development of the physical body, is the joint thought-form of the four Devarajas, and that its primary business is to build the etheric mould into which the physical particles of the new baby-body are to be built. In building this new etheric body it has four varieties of etheric matter which it can use (the four over which its creators respectively preside) and the type of the etheric body which is produced depends upon the proportion in which these constituents are employed. Remember that the elemental has no power of choice with regard to the perpendicular subdivisions, but it has every freedom with regard to the horizontal kinds of matter.

It is quite impossible for us at our present level to understand the working of so mighty a consciousness as that of a Devaraja, so we can only chronicle the fact, without pretending to explain it, that the elemental in doing its work appears somehow not to be entirely separated from the minds which projected it. In some way inexplicable to us it still remains to some modified extent within their consciousness, and in rare cases, where a developed ego is (even at an early age) beginning to take active possession of his body, it would seem that he may come into direct contact with them, and call down upon himself by their consent more karma than they had originally apportioned to him.

One who can do that while the elemental is still at its work can also retain during later life this touch with the karmic deities, and therefore his power to appeal to them for further modifications. So far as we have seen, however, this possible modification may be only in the direction of the increase of the karma to be worked out, not in that of its decrease. The awakening of consciousness, which enables an ego thus to come into touch with the Devarajas and to co-operate willingly with them so far as their work with himself is concerned, may commence at any time; so that an ego who was not in touch with them during the working of the elemental which built his physical body may yet, by stupendous efforts along the line of self-development and usefulness, attract their attention later in life and evoke from them a definite response.

The germ which is to expand into the physical body of the man has within itself two constituents, with two sets of potentialities. (The student must be careful not to confound this physical germ which comes from the parents with the physical permanent atom which the ego brings with him). It is essentially an ovum, which has

within itself all the possibilities of the maternal ancestry, but it has been pierced by a spermatozoon which brings with it all the potentialities of the paternal ancestry.

These two sets of possibilities are wide, as may easily be seen if we reflect upon the number of ancestors which any one of us must have had, say a thousand years ago. But wide though they be, they have their limitations. For example, take the case of one of our gardeners here at Adyar — a man of what is called the coolie or unskilled labourer class. Going back a thousand years that man's ancestors must have been counted by millions; yet all those millions must have been of the coolie class. They must have included all possible varieties of coolie, good and bad, clever and stupid, kind and cruel; but they were all coolies, and therefore all had the limitations of the brain and the qualities belonging to that class.

From among these potentialities the elemental has to make its selection. For that purpose it has two questions to consider, quality and form. Of these the former is infinitely more important. The latter is concerned chiefly with the matter of the lower sub-planes. But the quality of the etheric matter selected for the building of that higher part of the physical body will to a large extent determine the capacities of that body during that incarnation — whether it will be naturally clever or stupid, placid or irritable, energetic or lethargic, sensitive or unresponsive.

So the first work of the thought-form or elemental of the Devarajas is to select which of these possibilities shall be brought into prominence in the building of the new physical body — especially in the building of its brain. The mere outer form is a minor consideration, though also an important one, but this too is part of the work of the elemental. If the man has deserved the limitation of deformity in his physical body or of weakness in some of its organs — the heart, the lungs, the stomach — it is through the elemental that his karma is adjusted. Its instructions (if we may use such a term) are to build a body of a certain kind and degree of strength, and with certain characteristics brought into prominence. But these are not instructions given to it to carry in its mind, for it has no mind ; they are rather itself, its very life, for when those instructions have finally been carried out it ceases to be, because the work for which it was created is done.

It is a well-known fact to students of embryology that in their earlier stages the germs of a fish, a dog and a man are practically indistinguishable. They all grow in the same manner, but the difference between them is that one of them stops at one stage of that growth, while the others go on further. The reason for this obvious fact is not clear to those who adopt the materialistic view. They have to postulate that matter coming from a particular source, although in every way identical in appearance with matter coming from a totally different source, nevertheless possesses within it some inherent qualities which compel it to reproduce the form from which it came.

The compulsory force is not an inherent quality in the matter, which is in truth identical and composed of precisely the same chemical elements, but it is the divine life pressing forward to ensoul this matter, and moulding it for itself into the form which is suited for it at that particular stage of its development. As soon as the entity becomes individualized, and therefore commences to make individual karma, this additional factor of the moulding thought-form of the karmic deities comes into play, and takes possession of the growing germ, even before its own ego can grasp it.

The form and color of this elemental vary in different cases. At first it accurately expresses in shape and size the baby body which it has to build, as that body should look (as far as the elemental's work is concerned) at the time of its birth.

Clairvoyants, seeing this doll-like little figure hovering about (and afterwards within) the body of the mother, have sometimes mistaken it for the soul of the coming baby, instead of the mould of its physical body. When the foetus has grown to the size of the mould, that much of its task is successfully achieved, and it sheds that outer husk of itself and unfolds the form of the next stage at which it has to aim-- the size, shape and condition of the body as it ought to be (taking only the elemental's work into account) at the time when it proposes to leave it. All further growth of the body after the elemental has retired is under the control of the ego himself.

In both of these cases the elemental uses itself as the mould. Its colours represent to a large extent the qualities which it is calculated to evoke in the body which it has to build, and its form is also usually that which is destined for him. It exists only for its work, and when the amount of force with which it has originally been supplied is exhausted, there is no longer any power left to hold together the particles, and it simply disintegrates.

This elemental takes charge of the body from the first, but some time before physical birth takes place the ego also comes into contact with his future habitation, and from that time onwards the two forces are working side by side. Sometimes the characteristics which the elemental is directed to impose are but few in number, and consequently it is able to retire at a comparatively early age, and to leave the ego in full control of the body. In other cases, where the limitations are of such a character that a good deal of time is necessary for their development, it may retain its position until the body is seven years old. Egos differ greatly in the interest which they take in their physical vehicles, for some hover over them anxiously from the first and take a good deal of trouble about them, while others are almost entirely careless with regard to the whole matter.

When a child is still-born, there has usually been no ego behind it, and consequently no elemental. There are vast hosts of souls seeking reincarnation, and many of them are still at so early a stage of their evolution that almost any ordinary surroundings would be equally suitable for them; they have so many lessons to learn that it matters little with which one they begin, and almost any conceivable set of surroundings will teach them something which they sorely need. Nevertheless it does sometimes happen that there is not at a given time any ego able to take advantage of a particular opportunity, and in that case, though the body may be formed to a certain extent by the thought of the mother, as there is no ego to occupy it, it is never really alive.

In building the form the elemental takes the etheric matter which it needs from that which it finds ready within the body of the mother. That is one reason for the necessity of the greatest care on the part of that mother during the time the child's body is being formed. If she supplies nothing but the best and purest materials, the elemental will find itself compelled to choose from those. Another factor which has an exceedingly powerful influence is the thought of the mother during this period, for that also moulds the shape which is slowly growing within her. Again this shows us why the mother's thought must at that time be especially pure and high, why she must be kept away altogether from all coarse or agitating influences, why only the most beautiful forms and colours should surround her, and the most harmonious conditions should prevail in her neighbourhood.

If the elemental's instructions do not include some special development in the way of features, such as unusual beauty or unusual ugliness, that part of the shaping of the new body will most likely be done by the thought of the mother — and by the

thought-forms which are constantly floating round her. If she thinks often with devoted love of her husband there is a strong probability that the child will resemble its father; if on the contrary she looks often at her reflection in the mirror and thinks much about herself, it is probable that the child will bear considerable resemblance to her. Equally, if it happens that she is constantly thinking with devoted affection or admiration of some third person, the child is likely to resemble that person — always supposing that the elemental has no definite instructions in this matter. When the children grow older their physical bodies are influenced largely by their own thoughts, and as these differ from those of the mother, we often see that considerable changes in physical appearance take place, the child in some cases growing more beautiful and in other cases less so as the years roll by. “As a man thinks, so is he” is true on the physical plane as well as on others; and if the thought is always calm and serene, the face will surely reflect it.

To an advanced ego all the earlier stages of childhood are naturally exceedingly wearisome. I remember that the late Mr. T. Subba Rao complained quite bitterly about it when he first took his new body. He declared that, do what he would, he could not make that baby body sleep more than twenty hours out of the day, and the rest of the time he actually had to wait near it and watch it squirming about, and listen to its plaintive ululations, and endure to be fed through it with tasteless and nauseous varieties of pap! Sometimes a really advanced person decides to avoid all this by asking someone else to give him an adult body, a sacrifice which any of his disciples would always be delighted to make for him.

But this method also has its drawbacks. However wearisome it may be to pass through childhood, at least in that way a man grows a body for himself, which is as nearly as may be an expression of him, and agrees with all his little peculiarities; but one who takes an adult body finds it already full of peculiarities of its own, which have worn in it deep grooves of habit that cannot readily be changed. It cannot but be to some extent a misfit, and it takes a long time to make its vibrations synchronise with his own. An ego coming into incarnation has always to adapt himself to a new set of conditions, but when he comes to birth in the ordinary way this can at least be done gradually, as the child grows up; but one who takes an adult body has instantly to adapt himself to all these fresh surroundings, which is often a very difficult business. In this case he has retained his old astral and mental bodies; but they are naturally counterparts of his previous vehicle, and they have to be adapted to the new form. Once more, if that form be a baby this can be done gradually, but if it is an adult form it must be done immediately, which means an amount of strain that is distinctly unpleasant.

PERSONAL CHARACTERISTICS

I have looked up many cases, and I find that for the ordinary man there seems to be but little continuity of personal appearance life after life; but I have known cases of strong similarity as well as great unlikeness. As the physical body is to some extent an expression of the ego, and that remains the same, there must be some cases where it expresses itself in similar forms; but racial, family and other characteristics usually override this tendency. When an individual is so advanced that the personality and ego are unified, the personality tends to have impressed upon it the characteristics of the glorified form in the causal body, which is relatively permanent.

When the man is an adept and all his karma is worked out, the physical body is the nearest possible presentment of that glorified form. The Masters will therefore remain recognisable through any number of incarnations. I have noticed that one of the Masters who comparatively recently attained adeptship is as yet not quite like the others, having somewhat rugged features. I am sure that will be different in the next incarnation. I should not expect to see much difference in the bodies of our Masters, even if They should choose to take others, and even though they might be of another race. I have seen prototypes of what bodies are to be like in the seventh Race; they will be transcendently beautiful.

The glorified form in the causal body is an approach to the archetype, and comes nearer to it as man develops. The human form appears to be the model for the highest evolution in this particular solar system. It is varied slightly in different planets, but is broadly speaking the same in general outline. In other solar systems forms may possibly be quite unlike it; we have no information on that point.

BRINGING OVER PAST KNOWLEDGE

We do not yet know with any certainty the laws which govern the power to impress the detailed knowledge of one life upon the physical brain of the next. Such evidence as is at present before us seems to show that details are usually forgotten, but that broad principles appear to the new mind as self-evident. Many of us have exclaimed when for the first time in this incarnation we read a Theosophical book: "This is exactly what I have always felt, but I did not know how to put it into words!" In some cases there seems scarcely that much of memory, yet as soon as the teaching is presented it is instantly recognised as true. Mrs. Besant as Hypatia must unquestionably have known a great deal of this philosophy which was not clearly formulated in her present brain during the orthodox or free-thought periods of this incarnation.

If any reliance at all is to be placed upon exoteric tradition, even the BUDDHA Himself, who descended from higher planes with the definite intention of taking birth to help the world, knew nothing clearly of His mission after He had entered His new body, and regained full knowledge only after years of searching for it. Undoubtedly He could have known from the first had He chosen, but He did not choose; He submitted Himself to what seems to be the common lot.

It is possible that in His case there may be another explanation. The body which was born of King Suddhodana and Queen Maya may not in its earlier years have been inhabited by the Lord BUDDHA. He may have acted as the Christ did; He may have asked one of His disciples to take care of that vehicle for Him until He needed it, and He may have entered it Himself only at the moment when it fainted after the long austerities of the six years of searching for truth. If this be so, then the reason that Prince Siddartha did not remember all that the Lord BUDDHA previously knew was because He was not the same person. But in any case we may be sure that the ego, who is the true man, always knows what he has once learned; but he is not always able to impress it upon his new brain without the help of a suggestion from without.

Fortunately for our students it seems to be an invariable rule that one who has accepted occult truth in one life always comes into contact with it in the next, and so revives his dormant memory. I suppose we may say that the opportunity of thus recovering the truth is the karma of having accepted it, and of having earnestly tried to live according to it in the previous incarnation. There is, however, every probability that much of what we now call distinctively Theosophical belief will be the ordinary accepted knowledge of the day by the time that we return to take up again our work on the physical plane, so it may be that we shall all be educated in it as a matter of course. If that be so, the difference between those who have studied it this time and those who have not will be that the former will take it up with enthusiasm and make rapid progress, while to the latter it will mean no more than does the science of to-day to the entirely unscientific mind. In any case, let no one for a moment suppose that the benefit of our study and hard work can ever be lost.

THE INTERVALS BETWEEN LIVES

A certain amount of misconception exists among students with regard to the average interval which elapses between two incarnations. It seems probable that we misunderstood the information given on this subject in the early days of the Society, and the statements then made have been copied without comment even into some of the later books. Most of the closer students have come to know more or less accurately the facts of the case, but so far as I am aware nothing resembling a tabulation of averages for the various classes of egos has yet been published.

At the end of the chapter on the heaven-world (then called devachan) in Mr. Sinnett's monumental work *Esoteric Buddhism*, the statement is made that the whole period between death and the next physical birth varies greatly in the case of different persons, but rebirth in less than fifteen hundred years is spoken of as almost impossible, while the stay in devachan which rewards a very rich karma is said sometimes to extend to enormous periods. This statement is based upon passages in the same letters from which is derived all the rest of this most interesting book, and there is no question whatever that Mr. Sinnett has quite accurately reported what was told to him. The same general idea is put forward by Madame Blavatsky in *The Secret Doctrine* (II, 317): "Let us remember that, save in the case of young children and of individuals whose lives have been violently cut off by some accident, no spiritual entity can reincarnate before a period of many centuries has elapsed."

In those earlier days we took this fifteen hundred years as an average for humanity, but later investigations have clearly shown us that it could not have been meant exactly in that way. To make the statement square with the observed facts, it must be either greatly limited or greatly extended. If confined to a small group of the most advanced of the human race it would be approximately correct; and on the other hand, if it were extended to include not only humanity but the vast hosts of the deva kingdom, it might again be taken as coming very near to the truth. In the case of the quotation from *The Secret Doctrine* the expression *spiritual* entities may be read as implying that Madame Blavatsky was speaking only of highly developed persons; but the passage from *Esoteric Buddhism* gives us fifteen hundred years almost as a minimum.

We are given to understand that the letters upon which *Esoteric Buddhism* was founded were written by various pupils of the Masters under Their general direction; and so, while there is plenty of room for inaccuracies to creep in (as we know that they have crept in) it is impossible to suppose that the writers did not know facts quite readily accessible to anyone who can watch the process of reincarnation. We must remember that the letter was written not to the world at large but quite definitely to Mr. Sinnett, with possibly a view to the few others who were at that time studying with him. To state such an average *for them* would be reasonably exact, and perhaps this is what was done; but we certainly cannot accept it as the mean proportion for the whole human race at the present time.

It is probably impossible to arrive at a really accurate average, for in order to do that it would be necessary to know at least approximately the number in each of the different classes of monads. Something of the nature of an estimate for each of the main classes may be given, though even then it must be remembered that there will necessarily be wide individual variations on each side of it.

Three principal factors have to be taken not account; the class to which an ego belongs, the mode in which he has attained individualization, and the length and nature of his last life. Let us then take up the various classes of humanity in their order, using the nomenclature decided upon by Mrs. Besant in the table facing page 213.

Lords of the Moon. At the head of that list appear the Lords of the Moon — those who attained the arhat level at some time or other during the evolution of the moon-chain. For that humanity, as for all others, seven paths open when they have attained the level assigned to their chain; and in this case one of those paths brought a certain proportion of the Lords of the Moon over to the earth-chain to direct the earlier stages of its evolution. All of these, however, have long since attained adeptship, and we need therefore take no account of them in the consideration of our present subject.

Moon-Men (First Order). The next class is the first order of the Moon-men, and that is a class so large and varied that it will be necessary for us to discuss it in the several subdivisions given in the chapter on monads from the moon.

1 & 2. The first class, as given there, includes those who even on the moon-chain were already on the Path; and the second consists of those who were individualized in the fourth round of the moon-chain. In our present chapter we need not consider either of these classes, since their members have attained adeptship, and so the question of incarnations and the intervals between them no longer concerns them.

3. Those who attained individualization in the fifth round of the moon-chain.

Among these, those who are already on the Path are usually taking a continuous succession of incarnations, so that for them the question of the interval between lives does not arise. If, however, they are for some reason not as yet taking the special series of lives which usually follows upon initiation, their intervals are very long — probably at the least fifteen hundred or two thousand years, or even more. Though not so usual as the series of rapid incarnations, this does sometimes occur; for among the cases known to us those who passed the first initiation some considerable time ago, one ego has been taking successive incarnations in physical life ever since, with scarcely any break, while another has been away from physical life for two thousand three hundred years; and yet the result so far as progress on the Path is concerned seems to have been exactly the same.

The apportioning of the different stages of a long interval like this varies considerably in different cases. The stay upon the astral plane is short, or the ego may even pass through it rapidly and unconsciously. Most of the time is passed in the highest level of the heaven-world, and then, after that is over, a certain proportion of conscious life in the causal body precedes the next descent into birth. This life of the ego on its own plane is at this stage only about one-tenth of the entire interval between the earth-lives. But this again is a matter in which no two instances are alike.

In the case of those who are approaching the Path the general interval is not far from twelve hundred years if the ego has been individualized slowly by intellectual development, and is therefore passing through its blissful experiences at the ordinary rate. If, however, the ego has been individualized suddenly by a rush of emotion or by a stupendous effort of will, and is consequently taking his bliss in the more concentrated form, his interval is about seven hundred years. Both these types are little likely to stay long upon the astral plane; probably five years represents for them an astral life of fair average duration. At the other end of their stay in the heaven-

world there most likely comes a certain period of conscious life in the ego on its own plane, but this does not exceed half a-century at most.

During their more recent lives we find that it has been the tendency of those people who take the normal interval of twelve hundred years to incarnate successively in the different sub-races. Often we find them running twice through the same set of sub-races, first in male and then in female vehicles, or *vice versa*.

The fates of various people differ greatly. Some go on steadily life after life, but nothing particular happens to them. Others are constantly in trouble, shock following shock; and yet both are advancing along the line which is best for them. It often happens that if a man dies young, he is born again in the same sub-race, and when a man goes round the sub-races twice, he usually takes the other sex on the second journey. Broadly speaking, the Indians represent the first sub-race of the Aryan root-race, the Arabs the second, the Parsis the third, the Romance nations the fourth and the Teutons the fifth. If a man takes a birth in France, he does not need one in Italy or Spain, and the same is true of Germany and England.

Students taking the seven hundred years interval seem to have more the habit of attaching themselves to one sub-race and returning to it whenever possible, and diverging into others only occasionally in order to develop special qualities. As a general rule successive incarnations in the same race intensify its characteristics; equilibrium is brought about by incarnating in various races, or by travel and living among different people. With regard to this matter, the idiosyncrasies of the ego play a considerable part. I mentioned elsewhere how the strong prepossession in the mind of the Jews that they are a special and chosen people tends to bring them back into the same race; and pride of race generally, if unusually intense, is likely to work in that direction.

Even pride of family is not without its result also, and I have known of several cases in which, when abnormally developed, it has brought the ego back into the line of his direct descendants two or three times before he got free. In the beginning of these studies it was given to us as a general rule that a man usually takes not less than three and not more than seven incarnations in one sex before passing over to the other. Although the many researches which we have since undertaken have to a large extent confirmed this general rule, they have also shown us a great number of exceptions to it, some people taking long lines of incarnations in one sex before turning to the other, and others for a time incarnating alternately in male and female bodies; but most of these were in the case of egos who were already advanced somewhat beyond the average, and were therefore probably receiving special treatment.

Evidently there is no hesitation in modifying the general rule to suit particular cases, when for any reason that is seen to be desirable. Though the laws governing reincarnation are allowed to work mechanically upon the vast majority of undeveloped egos, it seems clear from the instances observed that as soon as any one ego makes a little progress of any sort and so becomes hopeful from the evolutionary point of view, considerable elasticity is introduced into the arrangements, and within certain definite limits he is born into the sex, race and conditions which are best suited to give him an opportunity of strengthening the weak points in his character.

In the case of men who have distinguished themselves greatly along artistic, scientific or religious lines, the interval is usually much the same, though the apportioning may differ slightly. The general tendency is to a longer astral and a shorter causal life,

especially in the case of the religious and the artistic. A great philosopher sometimes enormously extends his life in the heaven-world; I remember that Madame Blavatsky has somewhere stated that Plato would be likely to stay away from earth for at least ten thousand years, though I imagine that this is an entirely exceptional case.

4. Those who attained individualisation in the sixth round of the moon-chain; typical examples of whom are the country gentlemen and professional men.

Their intervals vary greatly, say from six hundred to a thousand years, of which perhaps twenty or twenty-five may be spent upon the astral plane, and all the rest in various stages of the heaven-world. There is probably just a touch of consciousness in the ego on its own plane, but only a touch.

5. Those who individualized in the seventh round of the moon-chain — the upper middle class. This class generally has an interval between lives of perhaps five hundred years, of which about twenty-five are passed on the astral plane and the rest in the heaven-world. In such a case there is no conscious life in the causal body, though of course, like all other human beings, they have the flash of memory and of prescience which is always vouchsafed to each ego when he touches his own plane between two physical incarnations.

Moon-men, Second Order. The bourgeoisie. Their interval between lives is commonly two hundred to three hundred years, of which about forty are usually spent upon the astral plane, and the rest in the lower levels of the heaven-world.

In this, as in all the other types, individualization may have been obtained by intelligence or by emotion, and there will be a corresponding difference in the average length of the intervals between successive incarnations, but in all these lower classes the difference caused by the mode of individualization is much less in proportion than in the higher class.

Moon Animal-men. The pioneers of the first round of the earth-chain, represented now by the skilled workers of the world. Such men have usually an interval between lives varying from one hundred to two hundred years, about forty of which are spent on the middle level of the astral plane, and the rest on some of the lower sub-planes of the heaven-world.

Moon-animals, First class. Now the un-skilled labourers.

Their interval between lives varies from sixty to a hundred years, of which from forty to fifty are spent on the lower parts of the astral plane, and the remainder on the lowest division of the heaven-world.

Moon-animals, Second class. The drunkards and the unemployable.

Such people are generally absent from the world some forty or fifty years, which they spend entirely on the astral plane — usually on the lowest subdivision but one.

Moon-animals, Third class. The lowest of humanity.

Their interval between lives is often about five years, spent on the lowest sub-plane of the astral — unless they are earth-bound by crime, which not infrequently happens.

In all the cases mentioned above, a certain difference is produced by the mode of individualization, but this difference is much less in proportion in the lower classes. Still on the whole those individualized through intellect tend always to take the longer of the two intervals mentioned as possible for them, whereas those who come along other paths tend to take the shorter.

A third factor which exercises great influence is the length and nature of the individual life. Obviously an ego who casts aside his physical body in childhood has not had the opportunity in that body to generate a sufficient amount of spiritual force to keep him on the higher planes for the length of time common to his type.

Generally speaking, then, a man who dies young will have a shorter interval than his neighbour who lives to old age. Generally speaking, again, the man dying young is likely to have a greater proportion of astral life, because most of the strong emotions which work themselves out in astral life are generated in the earlier part of the physical existence, whereas the more spiritual energy which finds its result in the heaven-life is likely to continue until the end or near the end of the period spent upon earth.

The character of the man during his earth-life is a consideration of the utmost importance. Some men lead a long life in which there is scarcely anything of spirituality, and that naturally tends to shorten the interval between their incarnations and brings it far below what is common for their class. Probably, too, in such a case quite an undue proportion of the interval would be spent on the astral plane. The averages given, therefore, *are* only averages, and it must be clearly understood that a wide range on each side of them is usually possible, so that the various classes may considerably over-lap one another.

We have only recently come to understand the importance, in this regard, of strong mutual affection. From our study of past lives it has become clear to us that egos are closely associated in families or group, and that this connection tends on the whole to equalise the intervals between the lives of the members of such a group. It is evidently considered necessary that they should prepare for future work together by constant association as they evolve, and it is manifest that intervals which would otherwise be shorter or longer are so dealt with as to bring the entire party into incarnation together, not once but many times.

This unquestionably involves an increase or decrease of the rate at which the spiritual force discharges itself, and it is clear that this must be a matter of careful regulation by the Authorities in charge of evolution. Though we have not yet discovered the exact law which regulates it, there is little doubt that when we do we shall find that it works automatically, so that the maximum of result may be achieved without injustice to any individual concerned.

There seems to be a type of students who are always yearning to discover injustice in the working of the evolutionary machinery; but those who have spent many years in the investigation of the processes of nature know more and more certainly as they go on that injustice is an impossibility, and that any case in which we think we descry it is only a case in which our knowledge is as yet imperfect. Those who have probed the mysteries of nature most deeply are precisely those who have acquired the utter certainty that He who doeth all things doeth all things well.

EIGHTH SECTION: KARMA

THE LAW OF EQUILIBRIUM

WHEN we are considering the life of man we have three principal forces to take into account, all interacting and limiting one another: the steady pressure of evolution, the law of cause and effect which we call karma, and the free-will of man. The action of the evolutionary force has, so far as we can see, no reference whatever to the man's pleasure or pain, but only to his progress, or rather his opportunities for progress. One would say that it was absolutely indifferent as to whether the man was happy or unhappy, and that it might press him sometimes into one of these conditions and sometimes into the other, according to what was best calculated to afford opportunity for the development of the particular virtue on the formation of which he is for the moment engaged. Karma appears as the manifestation of the action of the man's free-will in the past. He has accumulated energies which either afford opportunities for the evolutionary force, or limit it in its operation. Then the man's present use of such free-will as he possesses is a third factor.

The doctrine of karma explains that advancement and well-being are the results of well-doing; but there should be no mistake as to exactly what is meant by well-doing and well-being respectively. The object of the entire scheme is, so far as we are concerned, the evolution of humanity; and consequently the man who does best is he who does most to help forward the evolution of others as well as his own. The man who does this to the utmost extent of his power and opportunity in one life will certainly find himself in the next in possession of greater power and wider opportunities. These are not unlikely to be accompanied by worldly wealth and power, because the very possession of these usually gives the opportunity required, but they are by no means a necessary part of the karma; and it is important for us to bear in mind that the result of usefulness is always the opportunity for further and wider usefulness, and we must not consider the occasional concomitants of that opportunity as themselves the reward of the work done in the last incarnation.

One instinctively shrinks from the use of such words as reward and punishment, because they seem to imply the existence, somewhere in the background, of an irresponsible being who deals out both at will. We shall get a truer idea of the way in which karma works if we think of it as a necessary readjustment of equilibrium disturbed by our action — as a kind of illustration of the law that action and reaction are always equal. It will also help us much in our thinking if we try to take a broader view of it — to regard it from the point of view of those who administer its laws rather than from our own.

Though the inevitable law *must* sooner or later bring to each man unerringly the result of his own work, there is no immediate hurry about it; in the counsels of the eternal there is always time enough, and the first object is the evolution of humanity. Therefore it is that one who shows himself a willing and useful instrument in forwarding that evolution always receives as his "reward" the opportunity of helping it still further, and thus, in doing good to others, to do best of all for himself. Of course if the thought of self-advancement were his *motive* for thus acting, the selfishness of the idea would vitiate the action and narrow its results; but if, forgetting himself altogether, he devotes his energies to the single aim of helping in the great work, the effect upon his own future will undoubtedly be as stated.

A definite protest ought once for all to be entered against the theory that suffering is the necessary condition of spiritual progress. Exercise is the condition of attaining physical strength, but it need not be painful exercise; if a man is willing to, take a walk every day, there is no need to torture him on the tread-mill in order to develop the muscles of his legs. For spiritual progress a man must develop virtue, unselfishness, helpfulness — that is to say, he must learn to move in harmony with the great cosmic law; and if he does this willingly there is no suffering for him but that which comes from sympathy with others.

Granted that at the present time most men refuse to do this, that when they set themselves in opposition to the great law suffering invariably follows, and that the eventual result of many such experiences is to convince them that the path of wickedness and selfishness is also the path of folly; in *this* sense it is true that suffering conduces to progress in those particular cases. But because we wilfully elect to offend against the law, and thereby bring down suffering upon ourselves, we have surely no right so to blaspheme the great law of the universe as to say that it has ordered matters so badly that without suffering no progress can be made. As a matter of fact if a man only will, he can make far more rapid progress without suffering at all.

It must, however, be remembered that any man who has once realized the glorious goal which lies before us can never be perfectly happy until he has attained that goal, and that he finds an ever-present source of dissatisfaction in his own failings. Now even dissatisfaction is a modified form of suffering; and from that no man can hope to be free until the imperfection has been outgrown. “God, Thou hast made us for Thyself, and our hearts are ever restless till they find their rest in Thee.”

Whether it is comforting or the reverse to know that one's sufferings are deserved may be a matter of opinion; but that in no way alters the undoubted fact that unless they had been so deserved they could not possibly come to us. It is lamentable that so many people should adopt the unphilosophical and indeed childish attitude which leads them to assume that any idea which does not fall in with their particular sectarian preconceptions cannot possibly be true. Unintelligent people constantly say: “The Theosophical teaching about karma does not seem to me so comfortable as the Christian idea of forgiveness of sins,” or “The Theosophical heaven-world does not seem so real and beautiful as the Christian, and so I will not believe in it.”

They evidently think poor creatures that their likes and dislikes are powerful enough to alter the laws of the universe, and that nothing of which they do not approve can possibly *be* on any plane. We, however, are engaged in studying the facts of existence, which after all are not modified because Mr. and Mrs. So-and-so would rather believe them to be otherwise than they are. If it were possible for anyone to be an innocent victim there would be no certainty of the operation of the great law of cause and effect anywhere in the universe, which would be a far more terrible thing for us than having to work out the results of any amount of sin committed in former lives. It can never be too strongly emphasized that the law of karma is not the vindictive vengeance of some angry deity, but simply an effect naturally and inevitably following upon its cause in obedience to the action of universal law.

Every individual will have to pay to the utmost every debt that he contracts, and to every individual the most perfect justice will be done; but for this purpose it is not always necessary that a vast crowd of egos should be perpetually meeting one another in successive lives. If one man so acts towards another as seriously to hasten

or retard his evolution, if he does anything which produces upon the other a marked or permanent effect, it is fairly certain that the two must meet again in order that the debt may be adjusted. It is obvious that that may be done in various ways.

A man who murders another may conceivably sometimes himself be murdered in turn in another incarnation; but he can cancel the karma much more satisfactorily if he happens to have an opportunity in that next incarnation of saving the life of his former victim at the cost of his own. It would seem that sometimes he may cancel it without losing his own at all; for among the many lines of lives which have been examined we found at least one case in which a murderer apparently fully expiated his fault by patiently devoting the whole of a later life to the service of the person whom he had previously slain.

There is a vast amount of minor karma which appears to go into what may be described as a kind of general fund. The schoolboy who mischievously pinches a classmate will certainly not have to meet that classmate a thousand years hence under other skies in order to be pinched by him in return, though it is unquestionable that even in so small a matter as this perfect justice will be done to both the parties. Constantly as we pass on through life we shower small kindnesses upon those whom we meet; carelessly and often unconsciously we do them small injuries in thought and word and deed. Every one of these brings its corresponding result of good or evil to ourselves, and we too, though we knew it not, were the agents of karma in those very actions. The small kindness which we attempt will prove a failure if the recipient does not deserve even that much of help; the careless slight will pass unnoticed by its victim if there has been nothing in his past for which it is a fitting retribution.

It is not easy to draw the line between these two classes of karma — that which necessitates personal adjustment and that which goes into the general fund. It is certain that whatever influences a person seriously belongs to the first category, and small everyday troubles belong to the second; but we have at present no means of knowing exactly how much influence must be exerted in order that an action may rank in the first-class.

We must remember that some of the greatest and most important of all karma can never be personally repaid. In all our line of lives, past and future, no benefit can be greater than that which the Masters have conferred upon us in giving us access to the Theosophical teaching; yet to Them as individuals we can make absolutely no return, since They are far beyond the need of anything that we can do. Yet even this stupendous debt must be discharged like all the rest; but the only way in which we can ever repay it is by handing on the knowledge to others. So we see that here is another kind of karma which may be said to go into the general fund, though not quite in the same sense as before.

A querent asks: "If it is a man's karma to have scarlet-fever, by what mechanism is the result brought about?"

I do not think that, in the sense in which the questioner means it, it ever is a man's karma to have scarlet-fever. It is his karma in a given incarnation to have as the result of his actions in past lives a certain amount of physical suffering, and if a scarlet-fever germ happens to be at hand when he is in a sensitive condition, it may be permitted to fasten upon him, and part of that debt of suffering may be discharged in that way. But if such a germ does not happen to be there at the moment, one of cholera or tuberculosis will do just as well, or instead of a disease there may be a

broken limb caused by a bit of orange-peel on the pavement or by a passing motor car.

I am aware that there are books which lay down with great precision the exact type of karma which follows upon certain action — as, for example, that if a man is rude to his father in one incarnation he will be born lame of the right leg in the next, whereas if it is with his mother that he has a difference of opinion it will be the left leg which is affected, and so on. But in the many lines of lives which we have examined in order to study the working of karma we have found no such rigidity. On the contrary, we were especially struck no less by the wonderful flexibility of karma than by its unerring certainty. By no possible effort can the man escape a single feather-weight of the suffering destined for him, but he may often avoid it in one shape only to find it inexorably descending upon him in a different form, from some unsuspected quarter.

Just as a debt of ten pounds can be paid in a single note, in two smaller notes, in gold or silver, or even in a bag-full of copper, so a certain amount of karma may come in one terrible blow, in a number of successive but less severe blows of various kinds, or even in a long series of comparatively petty annoyances; but in any and every case the full tale must be paid.

The same sin, committed under the same circumstances by two exactly similar people, must result in the same *amount* of suffering, yet the *kind* of suffering might be almost infinitely varied, according to the requirements of the case. Take as an example one of the very commonest of failings, and let us think what would be the probable result of selfishness. This is primarily a mental attitude or condition, so we must look for its immediate result on the mental plane. It is undoubtedly an intensification of the lower personality at the expense of the individuality, and one of its results will therefore certainly be the accentuation of that lower personality, so that selfishness tends to reproduce itself in aggravated form, and to grow steadily stronger.

Thus more and more of the higher would be lost in each life through entanglement with the lower, and persistence in this fault would be a fatal bar to progress; for nature's severest penalty is always deprivation of the opportunity for progress, just as her highest reward is the offering of such opportunity. So here we have already a glimpse of the way in which selfishness may itself bring about its own worst result, in so hardening the man as to make him insensible to all good influences, and to render his further progress impossible until he had conquered it.

There would also be the karma on the physical plane of all the unjust or unkind *acts* which the man's selfishness might lead him to commit; but the worst penalty that those could bring upon him would be trivial and evanescent beside the effect upon his own mental condition. It is possible that one result might be that he would be drawn by affinity into the society of selfish people, and so through suffering from this vice in others he would learn how heinous it is in himself. But the resources of the law are endless, and we mistake if we imagine it as cramped down to the line of action on which we in our ignorance think it ought to be administered.

A large proportion of the man's suffering is what Mr. Sinnett calls "ready-money karma" — that is to say, it is not due to the result of actions in past lives, and not in any real sense necessary at all. But his actions, in spite of examples put before him and advice freely given to him, are so foolish, and his ignorance is so invincible, so apparently perverse, that he is constantly involving himself in suffering the causes of

which are transparently obvious and readily evitable. I do not think that I exaggerate when I say that nine-tenths of the suffering of the ordinary man is utterly unnecessary, for it is not the result of the distant past, but is simply the outcome of the mistaken action or foolish attitude of this present life.

Another point to be taken into account is that man in his calculations so often fails to discriminate between good and evil effects. The average man regards death as the greatest of all evils, either for himself or for his friends; yet in many cases karma grants it as a reward. It is, indeed, hardly ever an evil or a punishment, but simply an incident — a kind of move in the game, inevitable at certain intervals, but at all times available as a temporary solution of a difficult position when it is seen to be desirable. It is rarely a matter of anything approaching the importance which is commonly attributed to it.

If we can conceive two newly-formed egos standing side by side, absolutely primitive and karmaless, and one of them should kill the other, or, indeed, act in any way with regard to the other, a result would be produced which would be, strictly speaking, undeserved. I doubt whether any such condition ever exists, for I think that the individualized animal brings over something of karma into his first human birth.

Many animals have a sense of right and wrong, or at least a knowledge that some things ought to be done and that others ought not to be done; and they are capable of feeling ashamed when they have done what they think to be wrong. They have in many cases a power of choice; they can exercise (or *not* exercise) patience and forbearance; and where there is a power of choice there must be responsibility, and consequently karma. The savage animal becomes a savage and cruel man; the gentle and patient animal becomes a gentle and kindly man, however primitive he may be. This serious difference is clearly the consequence of karma made in the animal kingdom. Such karma must inhere in the group-soul, but must be equally distributed through it, so that when a portion breaks off as an individual, it will carry within it its share of that karma.

It may be said that that only pushes our difficulty a little farther back, for there must be a first step sometime, and we must technically consider the result of that first step as unjust.

Not necessarily. Let us suppose the first step to be a fight between two animals. The wish to kill or wound would be equally present in both; the karma of that wish would in the case of the vanquished be worked out at once by death, whereas the victor would still owe a debt which would probably be discharged later by his own death by violence. In considering the case of humanity, however, we need not indulge in any such speculations.

We have behind us a great mass of accumulated energy of both kinds, desirable and undesirable, and I can hardly imagine any conceivable "accident" that would not suit as an expression for some part of its infinite variety. Therefore shipwreck or financial ruin does not discriminate, because it need not; there is always something which can work itself out in that way in the whole mass of karma which lies behind an ordinary man. In the rare cases where there is nothing remaining which can so work itself out, the man cannot be injured, and is therefore what is commonly called miraculously saved.

Nothing could be more wildly absurd than the idea that anything we can do can prevent the working out of karma. For example, if a child is born under circumstances which lead to its being cruelly treated, no doubt such treatment is in

accordance with its previous karma; but if kindly intervention delivers it from the demons in human form who torment it, then that intervention also is in accordance with its karma. If it were not, then the well-intentioned effort to rescue it would fail, as we know it sometimes does. Our obvious duty is to do all the good we can, and to render all the help within our power in every direction; and we need have no haunting fear that in doing so we are interfering with the work of the great karmic deities, who are assuredly perfectly capable of managing their business with absolute exactitude, whatever we do or do not do.

Does karma seem merciless? If that adjective can be correctly applied to the working of Nature's laws, I suppose we must admit that it is so, just as the law of gravitation is. If a child slips over the edge of a precipice, no matter how sad may be the circumstances surrounding the slip, he usually falls to the bottom of that precipice just as effectually as would an older and more responsible person; if a man seizes a red-hot iron bar, he is equally burnt whatever may have been his object in seizing it, or whether he knew that it was hot or not. Yet it would hardly occur to us to think of the bar or the precipice as merciless, or to blame the law of gravitation or the law of the radiation of heat. Does not exactly the same thought apply in the case of karma?

THE METHOD OF KARMA

It is scarcely possible to put into words the appearance presented to clairvoyant vision on the higher planes by the working of this law of karma. It seems as though the man's action built cells or channels stored with energy, through the reactions of which he can be reached by the law of evolution. The appearance is as though all sorts of forces are playing round him, but they are able to influence him only by acting through these energies which he has himself set in motion. He is continually adding to the number of these cells or channels of energy, and so is continually modifying the possibilities of reaching him. It is in meeting and dealing with all these kaleidoscopic changes, and yet in spite of them all getting in its work and accurately performing its task, that the marvellous and all but incredible adaptability and versatility of karma is exhibited.

There is another aspect of karma the consideration of which I have found helpful in the effort to understand its working; but it belongs to a plane so high that it is unfortunately impossible to put it clearly into words. Imagine that we see each man as though he were absolutely alone in the universe, the centre of an incredibly vast series of concentric spheres. Every thought, or word, or action of his sends out a stream of force which rushes towards the surfaces of the spheres. This force strikes the interior surface of one of the spheres, and, being at right angles to it, is necessarily reflected back unerringly to the point from which it came.

From which sphere it is reflected seems to depend upon the character of the force, and this also naturally regulates the time of its return. The force which is generated by some actions strikes a sphere comparatively near at hand, and is reflected back very quickly, while other forces rush on almost to infinity, and return only after many lives. But in any case they inevitably return, and they can return nowhere but to the centre from which they came forth. Each man makes his own spheres, and the play of his forces is in no way affected by the action of those sent up by his neighbor, for they cross one another without interfering, just as do the rays of light from two lamps. And the medium through which they move is frictionless, so that the amount of force which returns is precisely that which the man himself has generated.

The prarabdha karma of an individual, that is, the karma selected by the authorities for him to discharge in his present life, divides itself into two parts. That which is to express itself in his physical body is made by the Devarajas into the thought-form or elemental which builds the body, of which we have spoken in a previous section; but the other and far larger block which is to indicate his fate through life, the good or evil fortune which is to come to him — this is made into another thought-form which does not descend; hovering over the embryo, it remains upon the mental plane. From that level it broods over the man and takes or makes opportunities to discharge itself by sections, sending down from itself a flash like lightning to strike, or a finger to touch, sometimes far down on the physical plane, sometimes a sort of extension which reaches only the astral plane, and sometimes what we may call a horizontal flash or finger upon the mental plane.

This elemental goes on discharging itself until it is quite empty; and then, like the other, it fades into nothingness, or more correctly is disintegrated and returns to the matter of the plane. The man can modify its action by the new karma which he is constantly making, by the new causes which he is perpetually setting up. The

ordinary man has usually scarcely will enough to create any strong new causes, and so the elemental empties itself of its contents according to what may be described as its original program, taking advantage of convenient astrological periods and surrounding circumstances, which make its work easier or more effective; and so the horoscope of the man may work out with considerable exactitude. But if the man be sufficiently developed to possess a strong will, the elemental's action is likely to be much modified, and the life will by no means follow the lines laid down in the horoscope. Sometimes the modifications introduced are such that the elemental is unable fully to discharge himself before the time of the man's death; and in that case whatever is left of him is again absorbed into the great mass of the sanchita karma — that which has not yet been worked out; and out of that another and more or less similar elemental is made ready for the beginning of the next physical life.

The great mass of the accumulated karma can also be seen hovering over the ego. Usually it is not a pleasant sight, because by the nature of things it contains more evil than good result. In the earlier days of their development in the remote past, most men have done many things that they should not have done, and thereby have laid up for themselves as a physical result a good deal of suffering on this lowest plane. In the present day all civilized beings have risen at least to the level of good intention, and consequently there is much less of directly evil karma being made by such people. We all do foolish things at times; we all make mistakes; but still on the whole the average civilized being is trying to do good and not harm, and therefore on the whole is likely to be making more good karma than bad. But by no means all of the good karma goes into that great accumulated mass, and so we get the impression in that of a preponderance of evil over good.

The result of most good thoughts or good actions is to improve the man himself, to make one or other of his bodies vibrate in response to higher forces, or to bring out in him qualities of courage, determination, affection, devotion, which he did not possess in so full a measure before. All this effect then shows in the man himself and in his vehicles, but not in the mass of piled up karma which is waiting for him. If, however, he does some good action definitely with the thought of its reward in his mind, good karma for that good action will come to him, and will store itself up with the rest of the accumulation until such time as it may be brought forward and materialized into activity. This good karma naturally binds the man to earth just as effectually as evil karma, and consequently the man who is aiming at real progress learns to do all actions absolutely without thought of self or of the result of his action, because if there is no thought of self, results of the ordinary kind cannot touch him.

Not that the man can escape the benefit of a good deed, any more than he can escape the result of an evil deed; but if the man thinks of the reward that will come to him he will receive the benefit in the shape of that reward, whereas if he forgets himself entirely and does this thing out of the fulness of his heart, because it is the right thing to do and therefore he can do no other, then the whole force of the result is spent in the building of his own character, and nothing of it remains to bind him to the lower planes. The fact is that in each case the man gets what he wants. As the Christ said Himself: "Verily I say unto you, they have their reward." The man who thinks of good result to himself obtains that good result; the man who is not thinking of himself at all, or thinking only of making himself a channel for the forces of the LOGOS, is made into a better channel as the result of the action which that thought prompted.

Another complication is introduced by the fact that many people do good deeds in the name of and for the sake of some other, and in that way they make that other a

partaker with them of the results. Many a man does a good deed in the name of the Christ, or if he be a Theosophist, in that of the Master, and justice demands that in such a case, since it is the thought of the Christ or the Master which has produced this result, something of the effect must go to the great person in question. In this way vast stores of helpful magnetism are constantly at the disposal of those Great Ones to whom many send thoughts of affection and devotion, in whose name many kindly deeds are done. Naturally it would be utterly impossible that the result of such action should in any way bind the Great One. It simply provides him with additional spiritual force for the work which he has in hand.

THE KARMA OF DEATH

It is by no means certain that in the majority of cases a time for death is definitely appointed by the Lords of Karma at all. The whole arrangement is far more elastic and adaptable than most students suppose. The clue to its comprehension lies in never forgetting that there are three great types of karma, which the Indians call *sanchita*, *prarabdha* and *kriyamana*.

The first is the whole vast mass of unexhausted karma, good or bad, which still waits to be worked out; let us call it mass-karma. The second is that particular part of the first which has been selected to be worked out in this incarnation; let us call it the man's destiny for this life. The third is the new karma which we are constantly making by our present actions.

It is the karma of the second type that the astrologer or the palmist tries to read; and his calculations, are often invalidated by intrusions from the other two varieties. It is quite certain that nothing can happen to a man which is not in the great mass of his karma, but unquestionably something may happen which was not originally included in his destiny for this life.

Suppose the case of a man on board a vessel which is about to be wrecked, or in the first car of a train which is about to come into collision. It may or may not be in the destiny appointed for this particular life that that man should die about this time. If it is, he will no doubt be killed; if it is not, he may be saved, if such saving does not involve too great an interference with the ordinary laws of nature. I think we may say that he probably *will* be saved if the prolongation of his physical life would appreciably hasten his evolution. It is intended that in each life some lesson should be learnt, some quality developed. If that life-work is already done — or if, on the other hand, it is obvious that the man will not succeed in doing it this time, no matter how long he lives — he has nothing to gain by continued physical life, and he may just as well be delivered from it.

Also, if there be in the vast mass of his previous karma some debt that can be adequately cancelled by whatever of physical or mental suffering may be involved in such a death, the opportunity of that cancellation may very well be taken when it thus offers itself, even though it may not have been included in the original plan for this particular life. But if in the whole of the mass-karma there is nothing that will fit in with such a death, the man simply *cannot* die that way, and he will inevitably be saved, even though it be by means which seem miraculous. We hear of such cases — cases in which a huge beam has fallen so as just to save a man from being crushed by the superincumbent weight of the wreckage, or in which when an ocean steamer has gone down with all hands, one man has somehow floated ashore on a hen-coop.

We must not forget the influence on our destiny of that third variety of karma which we are making for ourselves every day. A man may be doing such good work that for the moment he cannot be spared; he may or he may not have acted so as to deserve release from the physical plane at that particular period. Our tendency is to attach an altogether exaggerated importance to the time and the manner of our death. If for a moment we try to imagine how the matter must present itself to the Great Beings in charge of our evolution, we shall gain a much truer appreciation of relative values. To

them the progress of the egos in their charge is the one matter of importance. They know the lessons to be learnt, the qualities to be developed.

They must regard it much as a schoolmaster regards the amount of work which a boy has to do before qualifying himself for entrance to the university. The schoolmaster divides that work according to the time at his disposal; so much must be done in each year, and the year's work in turn must be subdivided into terms and even into days. But he will allow himself a considerable amount of latitude with regard to these minor divisions; he may decide to devote two days instead of one to some specially difficult point, or he may close a lesson earlier than he intended if its object is clearly achieved.

Our lives are exactly these days of school life, and, the lesson may be lengthened or shortened as the teacher sees to be best. Death is merely the release from school at the end of one day's lesson. We need not trouble ourselves about it in the least; we should thankfully accept it whenever karma permits it to us. We must realize that the one important thing is that the appointed lesson should be learnt. The sections into which that lesson shall be divided, the length of the various lesson-hours, and exactly when they shall begin or end — all these are details which we may well leave to the agents of the Great Law.

From this point of view no death can be described as premature, for we may always be absolutely certain that what comes to us from without is what is best for us. Our business is to do our very best with each life, and to make every effort to retain it as long as possible. If we ourselves cut it short by recklessness or improper living, we are responsible, and the effect will assuredly be prejudicial; but if it is cut short by something entirely beyond our control, we may be sure that the curtailment is for our good.

Nevertheless what has been written in some of our books about "premature" death is quite true. In extreme old age desire fades away, and so something of the work of the astral life is already done before the man leaves the physical plane. A similar result is achieved by long sickness, and so in either of these cases the astral life is likely to be comparatively short and without serious suffering. This may be called the ordinary course of nature, and it is only by comparison with it that an earlier death may be spoken of as "premature." If a person dies in youth, desire is still strong, and therefore a stronger and more strenuous astral life may be expected — a condition on the whole less desirable. But if the Powers behind decided that an earlier death is best, we may feel sure that They know of other considerations which outweigh the prolongation of the astral life.

It seems probable, therefore, that in the majority of cases the exact time and manner of a man's death is *not* decided before or at his birth. Astrologers tell us that in many instances they cannot actually foretell the death of the subject whose horoscope they are examining. They say that at a certain time malefic influences are strong, and the man *may* die then, but if he does not, his life will continue until a certain other occasion when evil aspects threaten him, and so on. In the same way a palmist will tell us that at such and such points there are serious breaks or markings upon the life-line; they may indicate death, or it may be only serious illness. It is likely that these uncertainties represent points which were left open for later decisions, depending largely upon the modifications introduced by the action of the man during his life, and by the use which he makes of his opportunities. At any rate we may be

well assured that whatever decision is made it will be a wise one, and that, whether in death or in life, all things are working together for our good.

KARMA AS AN EDUCATOR

No man can ever receive what he has not earned, and all things come to us as the result of causes which we ourselves have set in motion. If we have caused anything we have also caused its result, for the cause and the effect are like the two sides of a coin — we cannot have one without the other; indeed, the result comes upon us as part of our original action, which may be said in this case to be still continuing. Everything which comes to us is our own doing, good and bad alike; but it is also being employed definitely for our good. The payment of the debt is being utilized to develop the man who owes it, and in paying it he may show patience, courage, and endurance in the face of adverse circumstances.

People constantly grumble against their circumstances. A man will say:

“I cannot do anything, situated as I am, with so many cares, with so much business, with so large a family. If only I had the liberty which so-and-so has!”

The man does not realize that these very hindrances are part of his training, and that they are put in his way just in order to teach him how to deal with them. He would like no doubt to have some opportunity of showing off the powers which he has already developed, but what is needed is that he should develop the powers which he has not, and this means hard work and suffering, but also rapid progress. There is assuredly no such thing as punishment and reward, but there is the result of our actions, which may be pleasant or unpleasant. If we upset the equilibrium of nature in any way it inevitably readjusts itself at our expense.

An ego sometimes chooses whether he will or will not take certain karma in the present life, though often the brain-mind may know nothing of this choice, so that the very adverse circumstances at which a man is grumbling may be exactly what he has deliberately chosen for himself in order to forward his evolution. When he is becoming a disciple, and is therefore somewhat out of the stage of evolution which is normal at present, he often dominates and largely changes his karma — not that he can escape his share, or any least portion of it, but that he gains much new knowledge and therefore sets in motion new forces in many directions, which naturally modify the working of the old ones. He plays off one law against another, thus neutralizing forces whose results might hinder his progress.

It has often been said that the disciple who takes steps to hasten his own progress thereby calls down suffering upon himself. That is not perhaps quite the best way to put it. All that he does is to take his own evolution earnestly in hand, and to endeavour, as rapidly as may be, to eradicate the evil and develop the good within himself, in order that he may become ever a more and more perfect living channel of the divine love. It is true that such action will assuredly attract the attention of the great Lords of Karma, and while Their response will be to give him greater opportunity, it may and often does involve a considerable increase of suffering in various ways.

But if we think carefully we shall see that this is exactly what might be expected. All of us have more or less of evil karma behind us, and until that is disposed of, it will be a perpetual hindrance to us in our higher work. One of the earliest steps in the direction of serious progress is therefore the working out of whatever of this evil still remains to us, and so the first response of the Great Ones to our upward striving is

frequently to give us the opportunity of paying off a little more of this debt (since we have now made ourselves strong enough to do it) in order that it may be cleared out of the way of our future work. The manner in which this debt shall be paid is a matter which is entirely in Their hands and not in ours; and we can trust Them to manage it without inflicting additional suffering upon others — unless of course those others have also some outstanding karmic debt which can be discharged in this way. In any case the great karmic deities cannot act otherwise than with absolute justice to every person concerned, whether directly or remotely.

VARIETIES OF KARMA

The karma of service done is always the opportunity for more service. This is one of the rules which emerge with the greatest certainty from our study of the working of karma in the many past lives which have been examined. When a man leads a particularly good life it by no means follows that in the next one he will be rich or powerful or even comfortable; but it does absolutely follow that he will have wider opportunities for work. Clearly the LOGOS wants His work done, and if we wish for opportunities of progress we must show that we are willing to work.

Knowledge brings responsibility, along with opportunity. To yield to what you know to be wrong, or to go back a step in order to gain force for a greater spring forward, is to miss your opportunity. Lives may pass before you gain the same opportunity again. If you neglect the knowledge or vision which points out to you a fault, you will certainly be born in the next life without that knowledge or vision. Knowledge should always be used; it is a mistake to think that you can postpone your activity and retain the knowledge.

We may make for ourselves most unpleasant future conditions if we choose to behave foolishly, but it is practically impossible for us who are now cultured people to throw ourselves back in a future birth into the position of savages or people of really low class. We may waste our time and make no progress, but unless we actually take to the practice of black magic, and use tremendous power in the wrong direction, we cannot throw ourselves back as far as that. Through misconduct or through neglect of opportunities we may be born in an uncomfortable position in our own class, or even in one a little lower, but it would upset the scheme of things if we could be thrown back into the savage state. Exceptional actions sometimes produce exceptional results, but as a general rule violent ups and downs are not practical; obviously it would be impossible for a cultured man to work out the kind of karma which in his position he must have made, if he were thrown back into the narrow conditions of an ignorant agricultural labourer. For the plans of the LOGOS an ever-increasing number of cultured people are needed, and therefore when once a man is born into a noble position he is on whole likely to continue to be so born.

There are, however, certain kinds of action which bring unusually horrible karma as their results. For example, the karma of cruelty of any kind, whether to men or to animals, is always especially awful in character; it often brings with it chronic physical ailments, accompanied by most acute sufferings, and often also it produces insanity — this last more especially when the cruelty is of a refined and intentional character. We have found, for example, that many members of the ignorant mob who tortured Hypatia in Alexandria have been reborn in Armenia, and have themselves suffered all sorts of cruelties at the hands of the Turks. People who are now, apparently by accident, burnt to death with awful sufferings are often those who have burnt others in the middle ages, or looked on with glee at those ghastly scenes of martyrdom.

Any injury done to a highly developed person reacts terribly upon the doer. We should indeed be careful about our attitude towards any Great One who may come, for He, being far in advance of us, is likely to be misunderstood — to be different from what we have expected, and therefore not to be appreciated. One reason why the Great Ones do not more often come amongst men is that the karma of misjudging

and ill-using Them is dreadful, and the fools among mankind are sure to incur it. I have myself seen a case in which a great soul, born where he was not understood, fell when young into the hands of a brutal and incompetent pedagogue who shamefully abused him. I have also been allowed to see the karma which will follow upon that cruelty, and I shudder when I think of it. Truly may it be said of that miserable wretch, in the words attributed to the Christ, that before he had “offended one of these little ones, it had been better for him that a millstone had been hanged about his neck, and he had been drowned in the depths of the sea.”

Closely associated with this is the subject of the karma of ingratitude, which is always exceptionally heavy — most of all when the ingratitude is shown to an occult teacher. People are constantly pressing forward, desiring to come into touch with the Masters, to attract Their attention; and they sometimes think that the pupils of those Masters try to hold them back, or at any rate decline to assist them in their efforts to approach. The pupil of the Masters exists only to help others, and nothing pleases him more than to draw another to the Feet where he has learned so much himself. But when he sees from the type of the aspirant that he does not yet understand those Great Ones, that his attitude towards Them is captious, irreverent, presumptuous, he will take no responsibility in the matter, for he knows that serious disaster is certain to result. A man of such temperament is sure to make bad karma anywhere; it would be foolish to put him into a position where he can multiply it a hundredfold.

For example, I have noticed cases in which people who have been deeply devoted to our President change their minds, and begin to abuse and slander her. That is a wicked thing, and it makes far worse karma than would be the maligning of a person to whom they owed nothing. I do not mean that people have no right to change their minds. If a man finds that he can no longer conscientiously follow our President, he has a full right to withdraw himself from among her disciples; we may regret his blindness, but we have no word of blame for him, for each man must do what he sees to be right. For such a departure there is no evil karma but that of the loss of opportunity — the ordinary result of failing in a test and making a serious mistake. But if after dropping away the man begins venomously to attack her and to circulate scandalous falsehoods against her, as so many have done, he is committing a very grave sin, and the karma of his action is exceedingly heavy. Vindictiveness and lying are always wicked; but when a man directs them against one from whose hands he has received the cup of life, they become a crime the effects of which are appalling.

The fact that a man has a large amount of bad karma behind him makes anything like occult advancement impossible for him until it is worked off. For example, those who are deeply involved in karmic debts are not likely to be candidates for membership in the community of the sixth root-race. No one could become an adept if he had evil karma behind him, because he must be free from any necessity for rebirth. A man who can function freely in his buddhic or rational vehicle, and so drop the causal body, need never again take up the latter; but naturally this cannot be done until all the karma of the lower planes is exhausted. The Master sends out all of HIS forces in open curves; but any lower thought of self causes the force sent out to travel in a closed curve, so that, whether it be good or bad, it has to return to its source and the man must come back to receive it.

A man is not free from the binding results on lower planes until he is perfectly selfless on those planes. A man who when helping another feels perfectly the unity with him, obtains the result of his action on the rational plane only, and not lower down. Do not forget also that we are making karma on the astral plane, for a man can

make karma wherever his consciousness is developed, or wherever he can act or choose. I have seen cases where actions done on the astral plane have borne karmic fruit in the next physical life. Another point to remember is that there is always a general karma belonging to an order or a nation, and that each individual in that order or that nation is, to a certain extent, responsible for the action of the whole. For instance, a priest has a certain responsibility for all that the collective priesthood does, even though he may not personally approve of it.

ANIMAL KARMA

Students often ask questions upon the working of karma in connection with the animal kingdom, saying that since it is scarcely conceivable that animals can have made much karma of any kind, it is difficult to account for the extreme differences to be observed in their conditions — one being well and kindly treated, while another is subjected to all kinds of brutalities, one always protected and well-fed, while another is left to starve and to fight for the bare right of living.

There are two points to be borne in mind in this connection: first, an animal often *does* make a good deal of karma; second, the well-treated animal has not always so much advantage as he appears to have, for association with man does not always improve the animal or tend to evolve it in the right direction. The sporting dog is taught by the hunter to be far more savage and brutal than it could ever become in any form of life that could come to it by nature; for the wild animal kills only to satisfy his hunger, and it is only man who introduces into animal life the wickedness of killing for the sake of the lust of destruction. However much his intelligence may be developed, it would have been far better for this unfortunate creature if he had never come into contact with humanity; for through him his group-soul *has* now made karma — karma of the most evil kind, for which other dogs which are expressions of that group-soul will have to suffer later in order that gradually the savagery may be weeded out.

The same may be said of the lap-dog who is pampered by some foolish mistress so that he gradually loses all the canine virtues, and becomes an embodiment of selfishness and love of ease. In both these cases man is criminally abusing his trust with regard to the animal kingdom, and is deliberately developing the lower instead of the higher instincts in the creatures committed to his care, thereby making bad karma himself, and leading a group-soul to make bad karma also. Man's duty towards the dog is clearly to evolve in him devotion, affection, intelligence and usefulness, and to repress kindly but firmly every manifestation of the savage and cruel side of his nature, which a brutalised humanity has for ages so sedulously fostered.

Questioners sometimes speak as though they thought that a dog or a cat receives a certain incarnation as a reward of merit. We are not as yet dealing with a separated individuality, and therefore there is for that particular animal no past in which individual karma in the ordinary sense of the word can have been generated — nothing either to merit or to receive a reward. When a particular block of that monadic essence which is evolving along the line of animal incarnation which culminates in (let us say) the dog, has reached a fairly high level, the separate animals which form its manifestation down here are brought into contact with man, in order that its evolution may receive the stimulus which that contact alone can supply.

The block of essence ensouling that group of dogs has in the matter so much of karma as is involved in having so governed its manifold expressions that it has been able to reach the level where such association is possible; and each dog belonging to that group-soul has his share of the result. So that when people ask what an individual dog can have done to merit a life of ease or the reverse, they are allowing themselves to be deceived by the illusion of mere outward appearance, and forgetting

that there is no such thing as an individual dog, except during the latter part of that final incarnation in which the definite breaking away of a fresh soul from the block has occurred.

Some of our friends do not realize that there may be such a thing as the commencement of an entirely new piece of karma. When an injury is done by A to B, they always fall back on the theory that at some previous time B must have injured A, and is now imply reaping what he has sown. That may be so in many cases, but such a chain of causation must begin somewhere, and it is quite as likely that this may be a spontaneous act of injustice on A's part, for which karma will assuredly have to repay him in the future, while B's suffering, though undeserved as far as A is concerned, is the payment for some other act or acts which he has committed in the past in connection with some one else.

In the case of the ill-treatment of an animal by a man this is certain — that it cannot be the result of previous karma on the part of the particular animal, because if it were an individual capable of carrying over karma it would not have been again incarnated in animal form.

But the group-soul of which it is a part must have acquired karma, or the thing could not happen. Animals do often intentionally cause each other terrible suffering. It is reasonably certain from various considerations that the prey killed by a wild beast for food, in what may be called the natural necessary course of business, does *not* suffer appreciably; but in the unnecessary and intentional fights which so often occur between animals — bulls, stags, dogs or cats, for example — great pain is wilfully inflicted, and that means bad karma for the group-soul, karma that must in the future be paid by it through some of its manifestations.

Not for one moment, however, not by one tittle, does that lesson the guilt of the human beast who treats the animal cruelly, or causes him to fight or inflict pain on other creatures. Most emphatically there is karma, and exceedingly heavy karma, stored up for himself by the man who thus abuses the power to help which has been placed in his hands, and in many and many a life to come he will suffer the just result of his abominable brutality.

If one takes the trouble necessary to obtain a complete grasp of such knowledge as is already available in Theosophical literature on the subjects of karma and of animal reincarnation, the main principles upon which their laws work will be found clear and readily comprehensible. I fully recognize how small and general such knowledge is, and I realize that many cases are constantly occurring in which the details of the method in which the karma works itself out are entirely beyond our ken; but you may see enough to show you that what we have been taught as to the inevitability and the absolute justice of the great law is one of the fundamental truths of nature. Secure in that certainty, you can afford to wait for the more detailed comprehension until you gain those higher faculties which alone will give the power to see the working of the system as a whole.

Assuredly, as we progress, the divine light will illumine for us many corners that as yet remain in shadow, and we shall gradually but surely grow towards a perfect knowledge of the divine truth which even now is enfolding us, guarding and guiding us. All those who have had the privilege of studying these subjects under the guidance and with the help of the great Masters of the Wisdom are so fully persuaded of this that even where at present they do not see fully, they are more than willing

and ready to trust to that great Power of which as yet only dim glimpses can be vouchsafed to human eye.

NINTH SECTION: THE
THEOSOPHICAL SOCIETY AND ITS
FOUNDERS

WHAT IS THE THEOSOPHICAL SOCIETY?

IT would appear that some of its members have not quite comprehended the position of this Theosophical Society to which they belong. It is not a Society which is formed merely for the promotion of learning in some special branch, like the Royal Asiatic or the Royal Geographical Societies; still less is it a Church, which exists only to spread some particular form of doctrine. It has a place in modern life which is all its own, for its origin is unlike that of any other body at present existing. To understand this origin we must glance for a moment at the hidden side of the history of the world.

All students of occultism are aware that the evolution of the world is not being left to run its course haphazard, but that its direction and administration are in the hands of a great Hierarchy of Adepts, sometimes called the White Brotherhood. To that Brotherhood belong Those whom we name the Masters, because They are willing under certain conditions to accept as pupils those who prove themselves worthy of the honour. But not all Adepts are Masters; not all will take such pupils; many of Them, though equal in occult rank, have the whole of Their time occupied in quite other ways, though always for the helping of evolution.

For the better surveillance and management of the field of action, They have mapped out the world into districts, much as the Church divides its territory into parishes (though these are parishes of continental size), and an Adept presides over each of these districts just as a priest does over his parish. But sometimes the Church makes a special effort, not connected specially with any one of its parishes, but intended for the good of all; it sends forth what is called a "home mission," with the object of stirring up faith and arousing enthusiasm all over a country, the benefits obtained being in no way a matter of personal gain to the missionaries, but going to increase the efficiency of the ordinary parishes.

In a certain way the Theosophical Society corresponds to such a mission, the ordinary religious divisions of the world being the parishes; for this Society comes forth among them all, not seeking to take away from any one of them those people who are following it, but striving to make them understand it and live it better than they ever did before, and in many cases giving back to them on a higher and more intelligent level the faith in it which they had previously all but lost. Yes, and other men too, who had nominally no religion — who, though at heart of the religious type, have yet been unable to accept the crudities of orthodox teaching — have found in Theosophy a presentation of the truth to which, because of its inherent reasonableness and wide tolerance, they are able heartily to subscribe. We have among our members Hindus, Buddhists, Jains, Parsis, Jews, Muhammadans and Christians, and no one of them all has ever heard or read from any of the officials of our Society a word against the religion to which he belongs; indeed, in many cases the work of the Society has produced a distinct revival of religious interest in places where it has been established.

Why this should be so is readily comprehensible when we remember that it is from this same great Brotherhood that all the religions of the world have their origin. In this true though hidden government of the world there is a department of Religious Instruction, and the Head of that department has founded all the different religions either personally or through some pupil, suiting the teaching given in each case to the people for whom it was destined, and to the period in the world's history which

had then been reached. They are simply different presentations of the same teaching, as may at once be seen by comparing them. The external forms vary considerably, but the broad essentials are always the same. By all the same virtues are commended; by all the same vices are condemned; so that the daily life of a good Buddhist or a good Hindu is practically identical with that of a good Christian or a good Muhammadan. They do the same things, but they call them by different names; one spends much time in prayer, and the other in meditation, but really their exercises are the same, and they all agree that the good man must be just, kindly, generous and true.

It is said that some hundreds of years ago the leading officials of the Brotherhood decided that once in every hundred years, in what to us is the last quarter of each century, a special effort should be made to help the world in some way. Some of these attempts can be readily discerned — such, for example, as the movement initiated by Christian Rosenkreutz in the fourteenth century, simultaneously with the great reforms in Northern Buddhism introduced by Tsong-kha-pa; the remarkable renaissance of classical learning and the introduction of printing into Europe in the fifteenth; the work of Akbar in India in the sixteenth, at the same time with the publication of many works in England and elsewhere by Lord Bacon, and the splendid development of the Elizabethan age; the founding of the Royal Society, and the scientific work of Robert Boyle and others after the Restoration in the seventeenth; the activities in the eighteenth (the secret history of which on higher planes is known to but few) which escaped from control and degenerated into the French Revolution; and in the nineteenth the foundation of the Theosophical Society.

This Society is one of the great world-movements, destined to produce effects far greater than any that we have yet seen. The history of its work so far is but a prologue to that which is to come, and its importance is out of all proportion to what it has hitherto appeared to be. It has this difference from all movements that have preceded it, that it is first, the herald of the Coming Christ, and secondly, the first definite step towards the founding of a new root-race. Many of our students are aware that the Master M., the great Adept to whom both of our founders owe special allegiance, has been selected to be the Manu of that race, and that His inseparable friend the Master K. H. is to be in charge of its religious teaching.

It is evident that in the work which these two Great Ones will have to do They will need an army of devoted subordinates, who must above all things be loyal, obedient and painstaking. They may possess other qualities also, but these at least they *must* have. There will be scope for the keenest intelligence, the greatest ingenuity and ability in every direction; but all these will be useless without the capacity of instant obedience and utter trust in the Master. Self-conceit is an absolute bar to progress in this direction. The man who can never obey an order because he always thinks he knows better than the authorities, the man who cannot sink his personality entirely in the work which is given him to do, and co-operate harmoniously with his fellow-workers — such a man has no place in the army of the Manu. Those who join it will have to incarnate over and over again in rapid succession in the new race, trying each time to bring their various bodies nearer and nearer to the model set before them by the Manu — a very laborious and trying piece of work, but one that is absolutely necessary for the establishment of the new type of humanity which is required for the race. The opportunity of volunteering for this work is now open to us.

Those who wish to join in it must begin to differentiate their aims from those of the ordinary man of the world. If we are to be selected for *that* work, we must show ourselves ready and willing by doing *this* which is now offered to us. The great Head of the department of Religious Instruction, the Lord Maitreya, who has already spoken as Krishna to the Indians and as Christ to the Christians, has decided soon to pay another visit to the world for the healing and the helping of the nations, and for the revival of spirituality on the earth which has well-nigh lost it. One great work which the Theosophical Society has to do is to try to prepare men for His coming, so that more may be able to profit by the unequalled opportunity which His presence will give. The religion which He founded when He came down in Judaea two thousand years ago has now spread widely over the world; but when, after He left His physical body, His followers gathered together to discuss the situation, we are told that the number of the names was only a hundred and twenty. A single preacher was His herald then; now it is a world-wide Society of twenty thousand members. May we hope to do a little better this time — to keep Him with us longer than three years before the wickedness of the world drives Him away, to draw round Him a somewhat larger body of followers before He leaves us? That is yet to be seen; but it depends largely upon the energy, effort and selflessness of members of the Theosophical Society now.

Besides its primary object of spreading occult truth throughout the world, the Theosophical Society has also this secondary object — that it may act as a kind of net to draw together out of all the world the people who are sufficiently interested in occultism to be willing to work for it. Out of that number a certain proportion will be found who desire to press on further, to learn all that the Society has to teach, and to make real progress. Probably not all of those will succeed, but some certainly will, as some have done in the past; and from those who thus obtain a footing the Adepts Themselves may choose those whom They consider worthy of the great privilege of working under Them in the future. Such selection cannot of course be guaranteed to any one who passes even into the innermost groups of the Society, since the choice is absolutely in the hands of the Masters; we can say only that such selections have been made in the past, and that we know that many more volunteers are required.

Many have joined the Society without knowing anything of the inner opportunities which it offers, or the close relation with the great Masters of Wisdom into which it may bring its members. Many have come into it almost carelessly, with but little thought or comprehension of the importance of the step which they have taken; and there have been those who have left it equally carelessly, just because they have not fully understood.

Even those have gained something, though far less than they might have gained if they had had greater intelligence. The Countess Wachtmeister tells how once when some casual visitors called to see Madame Blavatsky and offered to join the Society, she immediately sent for the necessary forms and admitted them. After they had gone, the Countess seems to have said half-remonstratingly that not much could be expected from them, for even she could see that they were joining only from motives of curiosity or courtesy.

“That is true,” said Madame Blavatsky, “but even this formal act has given them a small karmic link with the Society, and that, little as it is, will mean at least something for them in the future.”

Some have committed the incredible folly of leaving it because they disapproved of the policy of its President, not reflecting first of all, that that policy is the President's business and not theirs; secondly, that as the President knows enormously more in every direction than they do, there is probably for that policy some exceedingly good reason of which they are entirely unaware; and thirdly, that Presidents and policies are after all temporary, and do not on any way affect the great fundamental fact that the Society belongs to the Masters and represents Them, and that to abandon it is to desert Their standard. Since They stand behind it, and intend to use it as an instrument, we may be sure that They will permit no serious error. It is surely not the part of a good soldier to desert from the ranks because he disapproves of the plans of the General, and to go off and fight single-handed. Nor is such fighting likely to be specially efficient or useful to the cause which he professes to champion.

Some have deserted simply from a fear that if they remained in the Society they might be identified with some idea of which they disapprove. This is not only selfishness but self-conceit; what does it matter what is thought or said of any of us, so long as the Master's work is done and the Master's plan carried out? We must learn to forget ourselves and think only of that work. It is true that that work will be done in any case, and that the place of those who refuse to do it will quickly be supplied. So it may be asked, what do defections matter? They do *not* matter to the work, but they matter very much to the deserter, who has thrown away an opportunity which may not recur for many incarnations. Such action shows a lack of all sense of proportion, an utter ignorance of what the Society really is and of the inner side of its work.

This work which our Masters are doing, this work of the evolution of humanity, is the most fascinating thing in the whole world. Sometimes those of us who have been able to develop the faculties of the higher planes have been allowed a glimpse of that mighty scheme — have witnessed the lifting of a tiny corner of the veil. I know of nothing more stirring, more absorbingly interesting. The splendour, the colossal magnitude of the plans take away one's breath, yet even more impressive is the calm dignity, the utter certainty of it all. Not individuals only, but nations, are the pieces in this game; but neither nation nor individual is compelled to play any given part. The *opportunity* to play that part is given to it or to him; if he or it will not take it, there is invariably an understudy ready to step in and fill the gap.

At this present time a magnificent opportunity is being offered to the great Anglo-Saxon race — to the whole Teutonic sub-race, if it will only sink its petty rivalries and jealousies and take it. I hope with all my heart that it will do so; I believe that it will; but this I know, that if unfortunately it should fail, there is another nation already chosen to assume the sceptre which in that case would fall from its hands. Such failure would cause a slight delay, while the new nation was being pushed rapidly forward to the necessary level, but at the end of a few centuries exactly the same result would have been achieved. That is the one thing that is utterly certain — that the intended end will be achieved; through whose agency this will be done matters very much to the agent, but nothing at all to the total progress of the world.

Let us throw ourselves *into* that work, not out of it, trying ever to do more and more of it, and to do it better and better. For if we do well now in comparatively small matters — in Lodge activities, in propaganda work, in the service of those around us — we may be permitted to do something much grander — to help to smooth the way for the coming of the Lord; if we have the glorious privilege of earnestly and humbly making ourselves useful then, we may presently be entrusted with even greater

responsibilities in connection with that new root-race, and of us will be true what was said of old: "Well done, good and faithful servant; thou hast been faithful over a few things; I will make thee ruler over many things; enter thou into the joy of thy Lord."

THEOSOPHY AND WORLD-LEADERS

A thoughtful Theosophist cannot but wonder sometimes how it is that Theosophy, though unquestionably representing the most advanced theory of existence and the most complete statement of the highest wisdom at present available, yet does not seem to appeal at all to many of the most eminent leaders of the world's thought and progress, whether it be along the lines of science, art, literature, philosophy or religion. These men of the keenest intellect, these others of the noblest spirituality, surely they ought to be the very first to welcome the splendid effulgence of Theosophy, the clarity and common-sense of its system, the light which it throws upon all the problems of life and death, the beauty of the ideals which it puts before us. But the fact remains that they do *not* welcome it, but on the contrary many of them treat it with indifference, or even contempt. Their attitude is a remarkable phenomenon; how can we explain it?

Again, as to ourselves, putting aside such an altogether abnormal person as our President, we know quite well that we who are Theosophists are in intellect far behind the great leaders of scientific and philosophical thought, just as in spirituality and devotion we are far behind some of the great saints of whom we hear in the various religions. Yet we have the inestimable privilege of finding ourselves in the Theosophical Society, we can understand, believe and assimilate its teachings, while these others apparently cannot. We are clearly no better than they; along certain lines we are obviously less developed; why should this great and glorious reward come to us and not to them?

It is a great and glorious reward; let us make no mistake as to that. The strongest adjectives in the language, the most poetical description that we can conceive, would fail adequately to convey what Theosophy is to those who can grasp it, what it does for those who put it into practice. Since it does all this for us who are commonplace folk, why does it leave these much higher and grander people cold and Unmoved?

They *are* higher and grander; here is another point about which no mistake must be made. The intellect of the great scientific man is a very wonderful and wholly desirably thing, the culmination of ages of development. The spirituality, the utter unworldliness and the deep devotion of the saint are beautiful and precious beyond all words, and such saintship comes only as the crown of many lives of earnest effort along that special line. These are indeed gifts which none can despise or gainsay; "more to be desired are they than gold, yea, than much fine gold; sweeter also than honey and the honeycomb."

Yet their possessors have not the inestimable pearl of Theosophy, and we have it — we who stand on the plain, and look up to them on the mountain heights. Clearly these great men have much that we have not — much at least that in us is as yet merely rudimentary; what have we that they have not, that we are worthy of so great an honour?

This is what we have — *the knowledge of the direction in which to put forth our forces*. We have it because from the Theosophical teaching we understand something of the scheme of things, something of the plan upon which the world is built, something of the object and method of evolution — and that not only in a broad and

general sense, but also in sufficient detail to make it practically applicable to the life of the individual.

But why is all this so much clearer to us, the small people, than to these greater ones? By our own doctrine we know how “utter-true the faultless balance weighs,” how none can have even the smallest benefit to which he is not entitled; what have we done to merit this greatest of all rewards — we who are very much like thousands of other people, full of ordinary human faults, neither better nor worse than the great majority of our fellow-men?

Whatever it is that we have done, it must evidently have been in some other life than this. Many of us can bear testimony that when we first met with Theosophy (this time) something within us leapt up at once in glad response to its appeal, in eager recognition of kinship to its thought. Yet we all know that there are many other better people than we in whom it evokes no response whatever — who cannot understand the depth of our enthusiasm for it.

We usually (and quite correctly) explain this by saying that we have met with these glorious truths before; that we have known of and studied these things in a former life, and that our unappreciative friends have not. But that does not solve the problem; it only moves it a stage further back. Why, in that former life did we study these things, while our more gifted friends did not?

The answer is that the world is still at an early stage of its evolution, and that man has not yet had time to unfold all qualities. He must take them in some sort of order; he must begin somewhere; and men differ because they have chosen different points from which to begin. We have our qualities and our powers (such as they are), and our attraction to these subjects, because it is in that direction that we have been putting out our every effort in the far-away past. No one possesses any quality that he has not worked to unfold within himself. So if our greater friends are “gifted” in certain ways, it is because they have earned their gift by hard work in previous lives. Just as by study in another life we have acquired *our* “gift” — the power to understand and appreciate something of Theosophical truth — so have they acquired their shining powers of intellect or devotion by practicing these qualities long ago.

We have taken different lines then, we have spent our time in developing different qualities. Now we each have what we have earned, but naturally each finds himself without those other qualities at which he has *not* been specially working. We are all imperfect, but not all imperfect in the same direction. Manifestly we must aim in the future at an all-round development, so that each must acquire the qualities which others now possess, but he as yet does not.

Another very interesting point, which has been somewhere well put by our President, is that the great leaders of thought at the present day are fulfilling a certain function in the world's evolution which they could not so well fill if they knew all that we know. This is the fifth sub-race of the fifth root-race, and the fullest possible unfoldment of the lower mind is the task at the moment set before humanity. These leaders who intensify it, glory in it, almost worship it, are doing the work which they are appointed to do for the majority of mankind. It is precisely because they believe in intellect so thoroughly, because they think that there is nothing beyond it, that they can so intensify it and carry it to so high a place. It is because they know just so much, and no more, that they are convenient pawns to be used in this particular part of the cosmic game. For, as Omar Khayyam says:

“We are but pieces in the game He plays
Upon this chequer-board of nights and days;
Hither and thither moves, and checks, and slays,
And one by one back in the closet lays.”

These great men are the appointed leaders of a certain stage, and they are doing their work nobly; we cannot expect them to turn aside from that now to listen to us and our message. There will come a time in the future when they *will* listen, and then the magnificent intellectual development which they are now acquiring will carry them far and rapidly along the road of occult progress.

These three things it is clear that man must have before he can hope to reach perfection: intellect, spirituality, and discrimination — which last quality may in this case be defined as the knowledge of how to use the other two wisely. If any one of these be absent, the working of the others cannot but be to some extent defective. We constantly see that this is so. The scientific man evolves intellect to a very high level, but if the spiritual side of his nature is entirely undeveloped he may use intellect for personal ends instead of for the good of all; or he may be unscrupulous in the pursuit of knowledge, as is the vivisector. The saint reaches a high level of devotion and spirituality, yet for lack of intellect he may often make himself ridiculous by superstition, he may be narrow-minded, and even a persecutor. And both the saint and the scientist may waste their energies in quite wrong direction for want of a clear knowledge of the great plan of the LOGOS — the very thing that Theosophy gives.

What a man is now is the consequence of what he has done and thought in the past. If he has devoted his energy to the development of intellect — well and good, he has the intellect for which he has worked; but, since in addition to that he needs spirituality and discrimination, he must now devote himself to working for the acquisition of those faculties. If he has so far spent his time chiefly in devotion he has gained great power in that direction, but he must now proceed to unfold those other qualities of intellect and discrimination to which he has not yet turned his attention. If in previous lives he has studied the great scheme of things, he comes back this time with power to comprehend and the intuition to accept the truth, and that is indeed well for him; but he still needs to unfold from within himself the qualities to which the other men have been devoting themselves.

Unfortunately man at these early stages of evolution is so constituted that he is apt to boast of what he himself possesses, and to try to exalt his own qualities by minimizing those of others instead of imitating what is best in them. So it happens that the saint and the man of science rarely appreciate one another, and not infrequently there is a good deal of mutual contempt and misunderstanding. It is for us to be careful that we do not allow ourselves to fall into the same snare. Let us remember that we set before ourselves as a goal the attainment of adeptship, and that the adept is the perfect man in whom *all* these different good qualities exist in the highest degree.

Before we reach adeptship we have to develop as much spirituality as the greatest of the saints, and far more — as much intellect as the most brilliant man of science, and far more. So our attitude towards those who already possess these most desirable attributes should be not carping criticism, but the most generous appreciation and admiration of all that is good, while our own quality — that of knowledge of the direction in which evolution is moving — will prevent us from imitating the mistakes

in addition to the excellencies of those who, while far advanced along other lines, are as yet scarcely even on the threshold or ours.

All these qualities are necessary, and we have much hard work before us to develop those in which we are at present lacking. Yet I think we may congratulate ourselves upon the choice which we made in other lives, when we devoted ourselves to the study of the great scheme as a whole, to the endeavour to understand the plan of the LOGOS, and in our humble way to co-operate with Him.

For that has brought us (or *should* have brought us) contentment with our lot, the power to make the best of everything, and to see the best in everything. Most men are eager to see the worst in everybody, to pounce upon flaws in everything, to find something at which to carp and cavil. We who are Theosophists should cultivate a spirit exactly the reverse of this; we should see the hidden deity in every one and everything, and our eagerness should ever be to discover in all of them not what is evil, but what is good. If these others despise us; if the scientific man ridicules us as superstitious and refuses to listen to our explanations; if the devotional person regards us with horror as unorthodox, and insists on clinging to a less noble presentation of his deity than that which we offer him; let us on our side take heed that we do not make a corresponding mistake. They have their weak points, no doubt, and one of them is this prejudice which renders them unable to appreciate the truth; let us be courteous enough gracefully to ignore such failings, and focus our attention upon the splendid qualities in which they really excel — those qualities in which we must use our most strenuous endeavour to imitate them.

For since we see that the LOGOS wills to use in His service our intellect and our devotion, we have the strongest conceivable motive to develop them as rapidly as we can, and we shall be saved much trouble, much mortification and waste of energy by the knowledge which we already have of the direction in which He wills that these forces should be employed. All that we have is from Him, and therefore all that we have we hold on His behalf and at His disposal, to be used ever and only in His service.

REMINISCENCES

I first heard of Theosophy through coming across a second-hand copy of Mr. Sinnett's book *The Occult World*, but my first communication from one of the Masters was obtained in a somewhat unusual way. For some years before this I had been engaged in the investigation of spiritualism, and in the course of that enquiry I had come into contact with most of the prominent mediums of that day, and had seen every one of the ordinary phenomena about which one reads in books upon that subject. One medium with whom I had much to do was Mr. Eglinton; and although I have heard stories told against him, I must bear witness that in all my own dealings with him I found him most straightforward, reasonable and courteous.

One of his specialities was slate-writing, and I found it a very useful phenomenon to show to any enquirer who adopted the skeptical attitude. The method was this. On the way to the séance I took the skeptic into a stationer's shop and induced him to buy two new school slates, and to have them packed in one parcel with a tiny crumb of slate pencil enclosed between them. I advised him to assure himself that the parcel was securely tied, and to seal the knots with his own seal if he had one. Then I told him to carry the parcel, and on no account whatever to let it pass out of his personal custody either before or during the séance. If during the performance it was necessary to sit with joined hands, I advised him to sit upon his parcel. Thus the séance commenced, and usually after a very short time there would be raps or some other indication that the force had gathered.

We sat usually at a small square wooden table without any cloth upon it, and Eglinton's plan was to take an ordinary slate, lay upon it a crumb of pencil and then slip it under the table, holding the slate against the under surface of the table. As this was in broad daylight, and we were alone in the room with the medium, there was no opportunity for substitution of previously prepared slates, or anything of that sort. The slate being held in this way, writing would appear on the surface which was pressed close against the table — writing in answer to any question which we chose to ask.

After this had been going on for some little time I asked insinuatingly whether the kind spirits could write on *our* slates. Nearly always the answer was in the affirmative, though once or twice I have been told that the power was not strong enough. Then I turned to the skeptic and asked him to produce his sealed package of slates, but on no account to allow it to go out of his hands. Usually he held it out in both his hands above the table, and Mr. Eglinton would place one hand lightly upon the package.

Under those conditions I asked the skeptic to formulate a mental question, and then while he still held the package of slates we heard the writing rapidly going on inside. When the usual three little taps announced that the message was finished, I said to the skeptic:

“Now examine your slates and your string, and make sure that no one has thrown you into an hypnotic trance and tampered with your parcel; then cut it open and read your answer.”

Generally we found the two sides of the slates which had been pressed together filled with writing more or less in relation to the mental question which had been

formulated. Usually the skeptic was tremendously impressed and even dumbfounded for the time; but within a week he generally wrote to say that of course we had somehow or other been deceived, and we had not really seen what we thought we saw.

Mr. Eglinton had various so-called controls — one a Red Indian girl who called herself Daisy, and chattered volubly whether opportunity offered or not. Another was a tall Arab, named Abdullah, considerably over six feet, who never said anything, but produced remarkable phenomena, and often exhibited feats showing great strength. I have seen him simultaneously lift two heavy men, one in each hand. A third control who frequently put in an appearance was Ernest; he comparatively rarely materialized, but frequently spoke with direct voice, and wrote a characteristic and well-educated hand. One day in conversation with him something was said in reference to the Masters of the Wisdom; Ernest spoke of Them with the most profound reverence, and said that he had on various occasions had the privilege of seeing Them. I at once enquired whether he was prepared to take charge of any message or letter for Them, and he said that he would willingly do so, and would deliver it when opportunity offered, but he could not say exactly when that would be.

I may mention here that in connection with this I had later a good example of the unreliability of all such communications. Some considerable time afterwards some spiritualist wrote to *Light* explaining that there could not possibly be such persons as the Masters, because Ernest had positively told him that there were not. I wrote to the same newspaper to say that I had it on precisely the same valueless authority that there *were* Masters, and that Ernest knew Them well. In each case Ernest had evidently reflected the thought of the questioner, as such entities so often do.

To return to my story, I at once provisionally accepted Ernest's offer; I said that I would write a letter to one of these Great Masters, and would confide it to him if my friend and teacher, Mr. Sinnett, approved. At the mention of this name the "spirits" were much perturbed; Daisy especially was very angry, and declared that she would have nothing to do with Mr. Sinnett under any circumstances; "Why, he calls us spooks!" she said, with great indignation. However I blandly stuck to my point that all I knew of Theosophy had come to me through Mr. Sinnett, and that I therefore did not feel justified in going behind his back in any way, or trying to find some other means of communication without first consulting him.

Finally, though with a very bad grace, the spirits consented to this, and the séance presently terminated. When Mr. Eglinton came out of his trance, I asked him how I could send a letter to Ernest, and he said at once that if I would send the letter to him he would put it in a certain box which hung against the wall, from which Ernest would take it when he wished. I then posted off to Mr. Sinnett, and asked his opinion of all this. He was at once eagerly interested, and advised me promptly to accept the offer and see what happened.

Thereupon I went home and wrote three letters. The first was to the Master K. H., telling Him with all reverence that ever since I had first heard of Theosophy my one desire had been to place myself under Him as a pupil. I told Him of my circumstances at the time, and asked whether it was necessary that the seven years of probation of which I had heard should be passed in India. I put this letter in a small envelope and sealed it carefully with my own seal. Then I enclosed it in a letter to Ernest in which I reminded him of his promise, and asked him to deliver this letter for me, and to bring back an answer, if there should be one. That second letter I

sealed in the same manner as the first, and then I enclosed that in turn with a short note to Eglinton, asking him to put it in his box and let me know whether any notice was taken of it. I had asked a friend who was staying with me to examine the seals of both the letters with a microscope, so that if we should see them again we might know whether any one had been tampering with them. By return of post I received a note from Mr. Eglinton, saying that he had duly put the note for Ernest into his box, and that it had already vanished, and further that if any reply should come to him he would at once forward it.

A few days later I received a letter directed in a hand which was unknown to me, and on opening it I discovered my own letter to Ernest apparently unopened, the name "Ernest" on the envelope being marked out, and my own written underneath it in pencil. My friend and I once more examined the seal with a microscope, and were unable to detect any indication whatever that any one had tampered with the letter, and we both agreed that it was quite impossible that it could have been opened; yet on cutting it open I discovered that the letter which I had written to the Master had disappeared. All that I found inside was my own letter to Ernest, with a few words in the well-known hand-writing of the latter written on its blank page, to the effect that my letter had been duly handed to the Great Master, and that if in the future I should ever be thought worthy to receive an answer Ernest would gladly bring it to me.

I waited for some months, but no reply came, and whenever I went to Eglinton's séances and happened to encounter Ernest I always asked him when I might expect my answer. He invariably said that my letter had been duly delivered, but that nothing had yet been said about an answer, and that he could do no more. Six months later I did receive a reply, but not through Ernest, and in it the Master said that though He had not received the letter (nor, as He remarked, was it likely that He should, considering the nature of the messenger) He was aware of what I had written and He now proceeded to answer it.

He told me that the seven years of probation could be passed anywhere, but He suggested that I might come out here for a few months, to see whether I could work with the Headquarters staff. I wished to say in answer to this that my circumstances were such that it would be impossible for me to come to Adyar for three months, and then return to the work in which I was then engaged; but that I was perfectly ready to throw up that work altogether and to devote my life absolutely to His service. Ernest having so conspicuously failed me, I knew of no way to get this message to the Master but to take it to Madame Blavatsky, and as she was to leave England on the following day for India, I rushed up to London to see her.

It was with difficulty that I induced her to read the letter, as she said very decidedly that such communications were intended only for the recipient. I was obliged to insist, however, and at last she read it and asked me what I wished to say in reply. I answered to the above effect, and asked her how this information could be conveyed to the Master. She replied that He knew it already, referring of course to the exceedingly close relation in which she stood with Him, so that whatever was within her consciousness was also within His when He wished it.

She then told me to wait by her, and not to leave her on any account. I waited patiently all through the afternoon and evening, and even went with her quite late at night to Mrs. Oakley's house, where a number of friends were gathered to say farewell Madame Blavatsky sat in an easy chair by the fireside, talking brilliantly to those who were present, and rolling one of her eternal cigarettes, when suddenly her

right hand was jerked out towards the fire in a very peculiar fashion, and lay palm upwards. She looked down at it in surprise, as I did myself, for I was standing close to her, leaning with an elbow on the mantelpiece; and several of us saw quite clearly a sort of whitish mist form in the palm of her hand and then condense into a piece of folded paper, which she at once handed to me, saying, "There is your answer." Every one in the room crowded round, of course, but she sent me away outside to read it, saying that I must not let anyone see its contents. It told me that my intuition of throwing up everything and coming out here was a right one; that that was what He had wished me to do, but could not ask it unless I offered. I was further told to take a steamer a few days later and to join Madame Blavatsky in Egypt, which of course I did.

In Cairo we took up our quarters in the Hotel d'Orient. Here it was that I first saw one of the members of the Brotherhood. While sitting on the floor at Madame Blavatsky's feet, sorting out some papers for her, I was startled to see standing between us a man who had not entered by the door. It was He who is now the Master D. K., though at that date He had not taken the degree which made Him an adept.

Our stay in Egypt with Madame Blavatsky was in many ways a most remarkable experience, as she constantly told us much of the inner side of what we saw there. She had been in Egypt before, and was well acquainted with some of the officials, with the Prime Minister, Nubar Pasha, with the Russian Consul Monsieur Hitrovo, and especially with the curator of the museum, Monsieur Maspero. I remember particularly how we went through the museum with this last gentleman, and how Madame Blavatsky was able to give him a great mass of most interesting information about the various curiosities which were under his care.

Madame Blavatsky understood Arabic, and she used to amuse us greatly by translating for our benefit the private remarks which were being made by the grave and dignified Arab merchants, as they sat talking to one another in the bazaar. After they had for some time been calling us Christian dogs, and speaking disrespectfully of our female relatives for many generations, she blandly asked them in their own language whether they thought that this was the way in which a good son of the Prophet should speak of those from whom he hoped to gain much in the way of business. The men were always covered with confusion, not having expected that any European could possibly understand them.

Arabic, however, seems to have been the only Oriental language with which she was acquainted; she did not know Sanskrit, and many of the difficulties of our Theosophical terminology arise from the fact that in those days she would describe what she saw or knew, and then ask any Indian who happened to be near what was the Sanskrit name for it. Very often the gentleman who provided her with the term had not clearly understood what she meant; and even when he did, we must remember that she asked adherents of different schools of philosophy, and that each answered according to the shade of meaning applied to the term in his teaching.

Many curious phenomena were constantly taking place around her at this period. First, she was herself the most striking of all the phenomena, for her changes were protean. Sometimes the Masters Themselves used her body, and wrote or spoke directly through her. At other times when her ego was elsewhere engaged, one or other of two pupils of lower degree than herself would take the body, and there were even certain occasions when another woman used to be in charge. I have myself frequently seen all these changes take place, and I have seen the new man who had

entered the body looking round to discover the condition of affairs into which he had come — trying to take up the thread of conversation, for example. Yet with all this, she was in no sense of the word like an ordinary medium, for the true owner of the body stood at the back all the time in full consciousness, and thoroughly understood what was going on.

Extraordinary phenomena, however, also occasionally occurred. While we were crossing the desert by train from Ismailia to Cairo a letter fell in the railway carriage, referring to the subject-matter of the conversation then proceeding, and conveying by name to each one present a kindly message of encouragement. I and another member of the party happened to be looking up at the time when this letter came, and we both saw it appear in the air, just in the circular space in the roof of the carriage in which a lamp is usually put at night. It came, just as the other had done, as a vague ball of whitish mist which condensed into a piece of paper and fluttered down.

I remember another occasion on which she bought in the scent-bazaar at Cairo a tiny bottle of attar of roses, for use in the shrine-room here, paying £2 for it. When we were sitting at lunch in the hotel half-an-hour afterwards, at a small table reserved for our party in an alcove, two English sovereigns fell out of space upon the table, and Madame Blavatsky explained that she had been told she ought not to spend money upon Them in this way, as we should need every shilling that we had before we reached Adyar — a statement which certainly proved true.

At one time and another I have seen a good many of the phenomena which were so closely associated with Madame Blavatsky. I have seen her precipitate drawing and writing, and I have also seen her find a missing object by occult power. On several occasions I have seen letters fall out of the air in her presence; and I must also state that I have seen such a letter fall here in this house at Adyar when she was six thousand miles away in England, and again that I myself have several times had the privilege of being employed by the Master to deliver just such letters after her departure from the physical plane.

In those early days of the Society messages and instructions from the Masters were frequent, and we lived at a level of splendid enthusiasm which those who have joined since Madame Blavatsky's death can hardly imagine. Those of us who have had the inestimable privilege of direct touch with the Masters have naturally retained that enthusiasm, but we have been unable under less favourable circumstances to keep it up among the rank and file of the members. Perhaps now we may be about to witness a recrudescence of it; may we all be worthy to take part in the glorious times that are coming!

FAITHFUL UNTO DEATH

Long ago in old Atlantis, in the great City of the Golden Gate, there reigned a mighty King. One day there came to him a soldier whom he had sent out to head an expedition against a troublesome tribe on the borders of that vast empire. The soldier reported victory, and as a reward the King gave him the position of captain of the Palace guard, and placed specially in his charge the life of his own only son, the heir apparent to his throne. Not long afterwards the newly-appointed captain had an opportunity of proving his faithfulness to his trust, for when he was alone with the young Prince in the Palace gardens a band of conspirators rushed upon them and tried to assassinate his charge.

The captain fought bravely against heavy odds and, though mortally wounded, succeeded in protecting the Prince from serious harm until help arrived, and he and the unconscious Prince were borne together into the presence of the King. The Monarch heard the story and, turning to his dying captain, said:

“What can I do for you who have given your life for me?”

The captain replied:

“Grant me to serve you and your son forever in future lives, since now there is the bond of blood between us.”

And with a last effort he dipped his finger in the blood which flowed so fast from his wounds, and touched with it the feet of his sovereign and the forehead of the still unconscious Prince. The King held out his hand in benediction, and replied:

“By the blood that has been shed for me and mine, I promise that both you and he shall serve me to the end.”

So was the first link forged between three leaders of men of whom we have all heard; for that great King is now the Master M., the Prince his son has been known to us as Helena Petrovna Blavatsky, and the Captain of the guard as Henry Steele Olcott. Through all the ages since, through many strange vicissitudes, the link has been kept unbroken and the service has been rendered, as we know that it will be through ages yet to come.

Since then as Gashtasp, King of Persia, he protected and assisted in the foundation of the present form of Zoroastrianism, and later as the world-renowned King Asoka he issued those wonderful edicts which remain until this day graven upon rocks and pillars in India to show how real were his zeal and his devotion. And when, at the end of that long and strenuous life, he looked back upon it with sorrow to see how far short of his intentions even his wonderful achievements had fallen, his Master showed him, for his encouragement, two visions, one of the past and one of the future. The vision of the past was the scene in Atlantis when the link between them was forged; the vision of the future showed his Master as the Manu of the Sixth Root-Race and our President-Founder as a lieutenant serving under Him in the exalted work of that high office. So Asoka died content in the certainty that the closest of all earthly ties, that between the Master and His pupil, would never be severed.

Having thus taken a prominent part in the spreading of two of the great religions of the world, Zoroastrianism and Buddhism, it was appropriate that he should be so closely associated with the work of this great movement which synthesizes all

religions — the Theosophical Society. Never himself the spiritual teacher, he has always been the practical organizer who made the teacher's work possible. In his recent life as in all those others, his ruling principle was always that of passionate loyalty to the Master and to the work which he had to do. When first I met him more than a quarter of a century ago that was the dominant feature in his character; through all the years that I have known him that above all other motives ruled his actions; it inspires the last letter which I received from him, written only a few weeks before his death; it has been still his most salient characteristic in the astral world in which he has since been living.

If we turn to the outward details of this last life of his, we still find the same keynote of devotion to duty. The Assistant Secretary of the United States Treasury wrote to him with regard to his public work for the Government:

“I wish to say that I have never met with a gentleman intrusted with important duties, of more capacity, rapidity and reliability than have been exhibited by you throughout. More than all, I desire to bear testimony to your entire uprightness and integrity of character, which I am sure have characterized your whole career, and which to my knowledge have never been assailed. That you have thus escaped with no stain upon your reputation, when we consider the corruption, audacity and power of the many villains in high position whom you have prosecuted and punished, is a tribute of which you may well be proud, and which no other man occupying a similar position and performing similar services in this country has ever achieved.”

He showed the same energy and capacity in his work for the Theosophical Society. Few of our members realize the extent and the success of his labours, for much of what he did can be properly appreciated only by those who have travelled in those Eastern lands which he loved so well. To his untiring exertion was due the rebuilding and enlargement of the Society's Headquarters at Adyar. It was he who founded the great library there, and on the occasion of its opening gathered together to bless its inception priests of all the leading religions of the world — the first occasion in history on which such representatives had met in fraternal accord, each freely acknowledging the others as standing on an equal footing with himself.

To him is due the great movement for Buddhist education in the island of Ceylon, in consequence of which up to the present, 287 Buddhist schools have been founded, in which over 35,000 children are being taught. He it was who brought together on a common platform of belief the Northern and Southern Schools of Buddhism, separated for more than a thousand years; he it was who took up the education of the neglected pariah class.

Many and great were the difficulties in his way in holding together and directing so complex a movement as the Theosophical Society; yet in every land he was always popular, by every nation he was eagerly welcomed. His utter devotion to the welfare of the Society and the transparent honesty of his purpose could not fail to impress all who met him. I speak of him with feeling, for I had special opportunities of knowing him well. I shall never forget his fatherly kindness to me, when as a comparatively young man, quite new to Indian life, I first went to reside at the Headquarters at Adyar.

Since then I have met him in many countries; I have passed weeks alone with him (except for an interpreter and a servant) in a bullock-cart in the jungles of Ceylon; I went with him on the journey which carried Theosophy into Burma in 1885. Under circumstances like these one quickly gets to know a man with far greater intimacy

than is afforded by years of ordinary social life, and I can unreservedly bear testimony to the whole-souled devotion of the man — to the fact that during all this time his one anxiety was the furthering of the Theosophical work, his one thought how to please the Master by doing with all his might that which had been given him to do.

His passing from among us is too recent for its details to have been forgotten; we all know how courageously he bore his sufferings, how all through his illness his constant thought was still the welfare of the dear Society to which his life had been devoted. We remember how when the time came for him to leave the body three of the great Masters stood beside him, as well as his old colleague and friend, H. P. Blavatsky; we have all read the magnificent speech of his successor at his cremation. That cremation was a grand and worthy ceremony. The pyre was of sandalwood and his body was covered with the American flag and the Buddhist flag, the latter a standard which he himself had invented, bearing in their right order the special colours of the aura of the Lord BUDDHA.

He was unconscious for a while after death, but soon became fully awake and active. As I was always deeply attached to him, his Master told me to act as a kind of guide to him when necessary, and to explain to him whatever he wished. He had always been keenly interested in the powers and possibilities of the astral plane, and as soon as he could see it clearly, he was full of eager and insatiable desire to know how everything is done, to understand the rationale of it, and to learn to do it himself. He has an unusually strong will in certain directions, and that made many of the experiments easy to him even when they were quite new. He is most at home in work which involves the use of power in some way — to fight, to cure, to defend. He is full of big schemes for the future, and is just as enthusiastic as ever about the Society which he loves.

His attention has been attracted by the strong thought about him involved in writing this; he stands beside me now, and insists that I shall convey to the members his most earnest advice to give whole-hearted loyalty and support to his noble successor, to put aside at once and forever all pitiable squabbling over personalities, all unprofitable wrangling over matters which are not their business and which they cannot be expected to understand, and to turn their attention to the one and only matter of importance — the *work* which the Society has to do in the world. His message to them is: “Forget yourselves, your limitations and your prejudices, and spread the truths of Theosophy.”

Of his future we can say little as yet. By the time that these lines are before the reader, it is probable that he will be again in incarnation. He has earnestly wished this, in order that he may work along with Madame Blavatsky in her present incarnation. How far his desire will be granted, I cannot yet tell. Certainly he will be employed wherever the Masters think that he will be most useful. His great talent is organization, and we have seen that he has already practiced it in Zoroastrianism, in the great missionary enterprise of Buddhism and in the foundation of the Theosophical Society. No doubt he may have similar work to do in connection with the next great religion, and again at the establishment of the Sixth Root-Race. Be that as it may, the great man whom in his last life we knew as Henry Steele Olcott will be ready to bear his part in all such activities, to lead us as he led us before, devoted as ever to the service of his Master, faithful as ever through life and through death.

A COURSE OF STUDY IN THEOSOPHY

It is desirable that one who wishes to study Theosophy thoroughly should acquaint himself in the course of time with the whole of Theosophical literature. This is no light task; and the order in which the books are taken is of importance if a man wishes to get out of them the best that he can.

But at the same time it must be remembered that no order can be prescribed which will be equally suitable for every one; there are those who can usefully absorb information only along devotional lines, and there are those who must have a scientific and non-emotional presentation of the truth. The best thing that I can do, therefore, is to prescribe such a plan of reading as I have found to be on the whole most generally useful, leaving room for considerable variation to suit individual idiosyncrasies.

It seems to me of great importance to have a clear outline of the whole scheme thoroughly in the mind before endeavouring to fill in the details.

No one can know how strong is the evidence for any one part of the Theosophical teaching until he knows the whole of that teaching, and sees how each separate portion is confirmed and strengthened by the rest, and is indeed a necessary part of the scheme as a whole.

My advice, therefore, is that the beginner should read first the elementary literature, not troubling himself unduly with details, but seeking rather to take in and assimilate the broad ideas contained in it, so as to see all that they imply and to realize them as facts in nature, thereby putting himself into what may be called the Theosophical attitude, and learning to look at everything from the Theosophical point of view.

To this end the student may take *An Outline of Theosophy*, *The Riddle of Life*, *Hints to Young Students of Occultism*, and various lectures by Mrs. Besant and myself which have been issued as propaganda pamphlets.

When he feels himself fairly certain of these, I should recommend next Mrs. Besant's *Popular Lectures on Theosophy* and then her *Ancient Wisdom*, which will give him a clear idea of the system as a whole. Another book which might be useful to him at this stage is *Some Glimpses of Occultism*.

He can then proceed to follow details along whichever line most commends itself to him.

If he is interested chiefly in the ethical side, the best books are: *At the Feet of the Master*, *Light on the Path*, *The Voice of the Silence*, *The Path of Discipleship*, *In the Outer Court*, *The Laws of the Higher Life*, *The Three Paths and Dharma*, and *The Bhagavad-Gita*.

One who wishes to study the life after death will find what he wants in: *The Other Side of Death*, *The Astral Plane*, *Death and After*, *The Devachanic Plane*.

If he is approaching the matter from the scientific side, the following books will suit him: *Esoteric Buddhism*, *Nature's Mysteries*, *Scientific Corroborations of Theosophy*, *Occult Chemistry* and *The Physics of the Secret Doctrine*.

If he cares for the study of comparative religion he should read: *Universal Text-book of Religion and Morals*, *Four Great Religions*, *The Great Law*, *The Bhagavad-*

Gita, Hints on the Study of the Bhagavad-Gita, The Upanishads, The Wisdom of the Upanishads, An Advanced Text-book of Hindu Religion and Ethics, The Light of Asia, A Buddhist Catechism, Buddhist Popular Lectures and The Religious Problem in India.

If he thinks chiefly of the Christian presentation of these truths, the best books are: *Esoteric Christianity, The Christian Creed, Fragments of a Faith Forgotten* and *The Perfect Way*.

If one wishes to investigate the origin and early history of Christianity, in addition to the books on the subject already mentioned, Mr. Mead's works will specially appeal to him: *Did Jesus Live B.C. 100?*, *The Gospel and the Gospel*, *Orpheus and Plotinus*.

The student who is interested in applying Theosophy to the world of modern thought, and to political and social questions, may profitably turn to *The Changing World, Some Problems of Life, Theosophy and Human Life, Occult Essays* and *Theosophy and the New Psychology*.

If, as is the case with most enquirers, his main interest centres round the wider knowledge and the grasp of life resulting from a study of occultism, he should read, in addition to many of the books mentioned above: *A Study in Consciousness, An Introduction to Yoga, Clairvoyance, Dreams, Invisible Helpers, Man Visible and Invisible, Thought-Forms, The Evolution of Life and Form, Thought-Power — Its Control and Culture, The Other Side of Death* and the two volumes of *The Inner Life*.

It will be desirable that he should comprehend the subjects dealt with in the manuals on *Reincarnation, Karma*, and *Man and his Bodies*. Indeed, these should be taken at an early stage of his reading.

The earnest student, who intends to live Theosophy, as well as merely to study it intellectually, should also have knowledge of the inner purpose of the Theosophical Society.

He will gain this from Mrs. Besant's *London Lectures of 1907* and *The Changing World*, from *The Inner Life* (2 vols.), as well as from the study of Colonel Olcott's *Old Diary Leaves*, and Mr. Sinnett's *Occult World* and *Incidents in the Life of Madame Blavatsky*.

I myself think that the greatest book of all, Madame Blavatsky's *Secret Doctrine*, should be left until all these others have been thoroughly assimilated, for the man who comes to it thus thoroughly prepared will gain from it far more than is otherwise possible. I know that many students prefer to take it at an earlier stage, but it seems to me more an encyclopedia or book of reference.

Four books which are now in preparation should be added to the above list as soon as they appear: *A Text-book of Theosophy*, which endeavours to state the Theosophical teaching in the simplest possible form, and without technical terms; *The Hidden Side of Things*, which shows how knowledge of occultism changes our view with regard to all sorts of small practical matters in every-day life, *Man: Whence, How, Whither?* which gives a detailed account of the past evolution of man, and shows something of the future which lies before him; *First Principles of Theosophy*, which is to approach the whole subject from the scientific standpoint, and to present it from an entirely new point of view.

The course I have indicated above means some years of hard reading for the ordinary man, but one who has achieved it and tries to put into practice what he has learnt will certainly be in a position to afford much help to his fellow-men.

END

A quick note: Hi! I'm Julie, the woman who runs Global Grey - the website where this ebook was published for free. These are my own editions, and I hope you enjoyed reading this particular one.

To support the site, and to allow me to continue offering these quality (and completely free) ebooks, please think about [donating a small amount](#) (if you already have - thank you!). It helps with the site costs, and any amount is appreciated.

Thanks for reading this and I really hope you visit [Global Grey](#) again - new books are added regularly so you'll always find something of interest :)
